THE Rs. 1-crore plant of the Permanent Magnets Ltd, which is designed to produce 3.6 million numbers of finished permanent magnets a year, was formally inaugurated in Borivli, a suburb of Bombay, on Saturday. The factory—the first of its kind in India—has started production well according to the original schedule. When the plant goes into full production, it will be able to meet the country's requirements which are at present being met entirely from imports. With the rapid industrialisation of India, increasing quantities of permanent magnets will be needed for industry, defence, mining, communications and transport. The ready availability of permanent magnets will also promote a large number of small and medium-scale industries in entirely new fields. The Italian firm of Centro Magneti Permanenti is collaborating in the venture. The first samples of the product manufactured by Permanent Magnets have proved to be of high quality, fully conforming to international standards.

In his welcome address, Mr. Madanmohan R. Ruia, chairman, said that the Company has decided to produce new varieties of magnets from powder metallurgy which are popularly known as Ferrite or Ceramic magnets. The Company has also plans for early expansion because market research indicates a big demand for magnets. As far as land and other facilities for future expansion are concerned, Permanent Magnets has made all necessary provisions. After expansion, the Company will be in a position to earn valuable foreign exchange through exports. The Rs. 100-paid share of Permanent Magnets is quoted around Rs. 200.

Automobile Products Disappoints

THE Automobile Products of India Ltd has reported extremely disappointing results for the year ended July 1962. The overall sales turnover declined from Rs. 4.39 crores to Rs. 3.26 crores, and the net turnover—after allowing for the value of components transferred at cost to Premier Automobiles—fell from Rs. 4.18 crores to Rs. 2.60 crores. In 1960-61, the Company earned a gross profit of Rs. 19.44 lakhs, but in 1961-62 it incurred a loss of Rs. 19.72 lakhs. After providing for depreciation on fixed assets at Rs. 14.76 lakhs (against Rs. 11.76 lakhs), the loss amounts to Rs. 34.48 lakhs, against a profit of Rs. 7.68 lakhs. With the loss of Rs. 14.62 lakhs brought forward from the previous years and making some minor adjustments, a total loss of Rs. 49.32 lakhs is being carried forward. Dividends have again been skipped. The preference dividends in arrears add up to Rs. 11.14 lakhs.

The directors' report refers to several factors which contributed to the Company's disappointing performance in 1961-62. The reduction in turnover caused by the cancellation of the Meadows diesel engines project could not be made up completely within the year. Machinery for manufacturing Lambretta engine components was originally scheduled for delivery towards the end of 1960,

but the bulk of machinery was delivered only by the middle of 1961. This, in turn, caused delay in completing the training of skilled personnel, and most of the machines went into production only towards the end of 1961. So there was a substantial loss of turnover in the Lambretta division as well. In the initial stages of manufacture of Lambretta engine components, the rate of scrapping on the critical parts was high with the resultant excess consumption of materials. Moreover, the prices of Lambretta scooters continued to be rigidly controlled by the Government at the 1956 levels in spite of the steady increase in the cost of production. It was only in October 1962 that the Government sanctioned an increase of Rs. 83 in the price of the 150 c.c. scooter and Rs. 50 in the case of the 48 c.c. scooterette. The Government is still considering the revision of the price of 175 c.c. F.L.I. three-wheeler.

The directors say that in the current financial year, both production and sales have shown a steady improvement. Effective steps taken to reduce overhead expenditure and consumption of materials and other consumables have shown encouraging results. Automobile Products has been successful in obtaining an outlet for its products in the export market. It has already started exporting brake linings in small quantities, and the directors are optimistic about effecting an initial shipment of Lambretta scooters to one of the Far East countries in the near future. During the year, Rs. 3 lakhs was received from Premier Automobiles Ltd in connection with the cancellation of the Company's licence to manufacture Meadows diesel engines. This amount has been taken into capital reserves which raises Automobile Products' reserves and surplus to Rs. 33.03 lakhs. The Company issued 250,000 rights equity shares against which applications for 89,720 equity shares have so far been received, and these have been allotted in full. The Rs. 10-paid share of Automobile Products is currently quoted around Rs. 6.72.

Canara Bank Does Well

THE Canara Bank Ltd has done well in 1962. Its deposits have risen by 35.5 percent from Rs. 37.56 crores to Rs. 50.88 crores which takes it into the category of major scheduled banks. Advances have also recorded an impressive increase of Rs. 6.54 crores from Rs. 20.39 crores to Rs. 26.93 crores. The credit ratio works out to 52.9 percent, against 54.2 percent at the end of 1961. Investments in Government and other securities at Rs. 17.80 crores show a rise of Rs. 3.42 crores over the previous year's Rs. 14.38 crores. The bank issued additional capital of Rs. 25 lakhs during the year, raising the total paid-up capital to Rs. 75 lakhs. Including the share premium of Rs. 13.80 lakhs, the bank's total reserves at the end of 1962 stood at Rs. 76 lakhs—Rs. 1 lakh more than the paid-up capital. This brings the total capital funds to Rs. 1.51 crores or 3 percent of the deposits. This ratio looks low, compared with the 6 percent suggested by the Reserve Bank, but this is due partly to the sharp increase in the bank's deposits during the year.

In spite of the impressive increase in deposits as well as advances, the bank's profit, after taxation, is down, though only slightly, from Rs. 21.24 lakhs to Rs. 20.58 lakhs. The profit margin has been badly squeezed by the increase in working costs as a result of the implementation of the Desai award, burden of the deposit insurance premium, higher rate of corporate tax and contributions to the

National Defence Fund. With Rs. 47,239 brought forward from the previous year, the disposable surplus amounts to Rs. 21.69 lakhs. The dividend has been maintained at 15 percent, less tax, but since it is on the increased capital, it absorbs a substantially larger amount of Rs. 8.29 lakhs, against Rs. 5.40 lakhs in the previous year. The preference dividend accounts for another Rs. 59,000, against Rs. 62,000. The allocation to the reserve fund has been reduced from Rs. 6.70 lakhs to Rs. 5.50 lakhs and that to the contingency fund from Rs. 4.50 lakhs to Rs. 1 lakh. A sum of Rs. 5.14 lakhs, against Rs. 4 lakhs has been set aside for bonus to staff, leaving Rs. 53,000, to be carried forward. The bank's capital was raised from Rs. 50 lakhs to Rs. 75 lakhs through a two-for-five rights issue at a premium of Rs. 15 a share. The Rs. 50-paid share of Canara Bank is currently quoted around Rs. 81.50 cum-dividend, offering a gross return of a little over 10 percent on fresh investment.

Phaltan Sugar Earns Less

THE preliminary figures about the working results of the Phaltan Sugar Works Ltd for the year ended September 1962, which were released along with the announcement of a cut in the dividend from 18 percent to 14 percent, showed that the Company had fared badly. In spite of an increase of about 40 percent in sales from Rs. 1.24 crores to Rs. 1.73 crores, the gross profit is down by about 14.5 percent from Rs. 14.45 lakhs to Rs. 12.35 lakhs. According to the directors' report, the fall in the profit is due to low production on account of lower yield, the fall in realisation on sugar following decontrol in November 1961 and the losses on export quota sales. Besides, the working results were adversely affected by the breakdown of machinery during the year. The heavier burden of taxation amounting to Rs. 7 lakhs (against Rs. 3.80 lakhs) also affected the disposable surplus. This provision included Rs. 1.15 lakhs representing the agricultural income tax for 1960-61 under the Maharashtra Agricultural Income Tax Act.

The directors state that the Company is not likely to have any income chargeable under the Act in 1961-62. With a view to effecting economy, Phaltan Sugar has started manufacturing raw sugar for the export market during the current 1962-63 season. The results achieved so far are reported to be satisfactory. The Company's expansion and replacement programme has begun and is likely to be completed by the 1963-64 season. The directors feel that the working results will considerably improve when the programme is completed. The Company is also making efforts to find suitable lines for diversification of its activities. The directors expect these efforts to bear fruit in the near future. Against a paid-up capital of Rs. 50 lakhs—all in equity shares of Rs. 50 each—the Company has free reserves amounting to Rs. 49.87 lakhs. The Rs. 50-paid share of Phaltan Sugar is quoted nominally around Rs. 80.

Sirsilk Skips Dividend Again

THE working of Sirsilk Ltd for the year ended September 1962, shows considerable improvement over the previous year's performance. The gross profit has risen by 45 percent from Rs. 36.42 lakhs to Rs. 52.87 lakhs, although sales are slightly down by about 4 percent

from Rs. 2.87 crores to Rs. 2.76 crores. The result could have been still better but for the closure of the factory for two months during the year due to a strike. The latter lasted for three months. Better results are attributed to the increased working efficiency of the plant and improvement in the quality of the Company's products. Provision for depreciation has been raised from Rs. 36 lakhs to Rs. 46.58 lakhs, which includes arrears of Rs. 3.13 lakhs for 1960-61 and Rs. 4.26 lakhs for previous years. Depreciation has been computed under the "straight line" method. Under this method, total arrears of depreciation, since the Company was started, amount to Rs. 2.22 crores. After taking into account Rs. 2.21 lakhs, being the provision for liabilities and credit balances pertaining to previous years written back, the directors have set aside Rs. 8 lakhs for contingencies (against Rs. 20,000). The remaining balance of Rs. 85,759 is being carried forward, against Rs. 47,843 brought in. Both the preference and ordinary dividends have been skipped over for yet another year. The arrears of preference dividends make a formidable total of Rs. 96.59 lakhs.

The directors state that the Company's factory resumed work towards the end of October as a result of the Government's intervention in the labour strike. All pending disputes, including those before the labour tribunals, are being referred to a retired Supreme Court judge for arbitration. Negotiations for technical collaboration with the Celanese Development Company in New York, for implementing the Company's expansion and modernisation programme, are in an advanced stage and are expected to be finalised shortly. The terms of the collaboration agreement are stated to have been approved in principle by the Government of India. The Rs. 10-paid share of Sirsilk is currently quoted around Rs. 8; it touched a high of Rs. 11.31 last year.

I.C.I.C.I. Repeats Dividend

THE Industrial Credit and Investment Corporation of India Ltd has maintained the dividend for 1962 at Rs. 6.50 a share, less tax. According to the preliminary report, the profit, after providing for depreciation and taxation, amounts to Rs. 46.38 lakhs, against Rs. 46.52 lakhs in the previous year. Out of this, Rs. 11.60 lakhs (against Rs. 11.50 lakhs) has been allocated to the special reserve. The Rs. 100-paid share of the Corporation is currently quoted around Rs. 88 cum-dividend, offering a gross return of about 8 percent. The highest price recorded by the share last year was Rs. 94.

Outlook for Shree Vallabh Glass

THE Rs. 75-paid share (the face value is Rs. 100) of Shree Vallabh Glass Works Ltd is currently quoted around Rs. 89. This looks encouraging when viewed against the background of the general slump in the stock market which has pushed several new issues to well below their paid-up value. The optimism of the shareholders of Vallabh Glass seems well justified. The Company has announced that it has started putting its laminating safety glasses on the market. The Company claims to be the first enterprise in India to market this product. Its estimated annual sales are placed between Rs. 25 lakhs and Rs. 30 lakhs. The Company has received the licences for importing the required raw materials. It has already received huge orders for defence as well as from motor-car manufacturers. The

work of modernisation of the Andheri plant is in full swing. The Company has on hand defence orders for "Tufex" toughened glass. It has ordered machinery worth Rs. 7 lakhs from abroad for expanding its activities for manufacturing various types of toughened glasses. The installation and erection of the Company's plant in Anand, Gujarat State, for manufacturing sheet, wired and figured glasses is said to be progressing according to schedule. The Company has also finalised an expansion scheme for manufacturing polished plate glass and has also a project for production of various types of refractories for which it is negotiating with some leading manufacturers abroad, with a view to securing technical assistance.

New Capital Issues

FOUR companies are the latest to be given consent by the Control-

ler of Capital Issues to raise capital totalling Rs. 6.41 crores. Two are new companies. One is a Central Government undertaking. Three companies are issuing equity shares and one equity plus preference shares. The consent in all cases is valid for 12 months. The following are the details:

Hindustan Allied Chemicals Ltd., Andhra Pradesh, will raise capital of Rs. 6 crores: Rs. 4.5 crores in equity shares and Rs. 1.5 crores in 9.3 percent (subject to tax) preference shares, for cash at par except equity shares of Rs. 47.5 lakhs, which will be offered for consideration other than cash to the foreign collaborator, Allied Chemical Corporation of the U.S.A., against the supply of technical know-how, in addition to equity shares of Rs. 1.425 crores for cash. The proceeds will be used for manufacturing fertilisers.

Flender Macneill Gears Ltd., Calcutta, is issuing shares worth Rs. 30 lakhs in equity shares of Rs. 10

each. Of this, Rs. 15 lakhs will be offered to Macneill Barry Ltd for cash. The balance of Rs. 15 lakhs will be subscribed by A. Freidr Flender and Co. of West Germany up to Rs. 13.13 lakhs in cash and Rs. 1.87 lakhs for consideration other than cash. The new Company will manufacture reduction gears and couplings.

Hindustan Teleprinters Ltd., Madras, a Central Government undertaking, is to issue further capital of Rs. 7.80 lakhs divided into 7,800 equity shares of Rs. 100 each to be subscribed privately by the Central Government for cash at par. The proceeds will be used for manufacturing teleprinters and ancillary equipment.

Khan Bahadur W. Rahman Tea and Lands Co. Private Ltd., Calcutta, is raising capital of the value of Rs. 3.64 lakhs divided into 3,640 equity shares of Rs. 100 each, to be issued on capitalisation of general reserves to a like extent in the ratio of one such share for every two held.

EXPERT ATTENTION TO YOUR EXPORT PROBLEMS

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers.

We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel.

We can collect and negotiate for

EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward".

We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries.

With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

RURAL PRODUCTION BECOMES WASTE— WHEN IT CAN'T REACH THE CONSUMER

A new road link to a village means a closer link with the world—and added prosperity. Village industries become more profitable, new agricultural schemes such as market gardening develop and the standard of living rises. ● Road Transport speeds perishable commodities to market, saving time and special packing costs; eliminating multiple handling and wastage. ● The Indian Roads and Transport Development Association, champion of an adequate and efficient transport service, has stressed the need for greater outlay on road construction and relaxation of restrictions on transport operation. A large part of the nation's produce is wasted each year because of the lack of roads and truck transport facilities. ● With better roads and modern vehicles, Road Transport operators can deliver the goods.

THE BETTER THE ROAD—
THE LOWER THE COST

MIXED REACTION TO THE RAILWAY BUDGET

Wednesday Evening.

THE settlement in the Calcutta stock market today has been uneventful. The carry-forward charges are about normal and turnover remains small. Reactions to the Railway Budget for 1963-64 are mixed. The increase in freight rates on goods and parcels is regretted because it will raise production costs further. The surplus in the Railway Budget has, nevertheless, been interpreted somewhat bullishly; most of it will be used to improve the ways and means position of the Central Government, so it is hoped that new taxes in the forthcoming Central Budget will be somewhat less. It is also thought that if the railways can keep up the improvement in traffic by further development, trade and industry will benefit.

There has been a mild reaction during the past week and share prices have declined in shrinking turnover. In fact, most of the gains achieved earlier have been virtually wiped out. An encouraging factor is the absence of selling pressure. Indications are that trading is slowly becoming normal. Hence the authorities have further relaxed the restriction on trading. Except in the case of Indian Iron, all minimum prices have been scrapped. The technical position has improved as most of the outstanding business has been squared up. The load of floating stocks has been reduced.

There is, however, a cautious undertone which is understandable since the Central Budget is only a few days away. The earlier optimism that the new tax measures may not be very stiff has suffered because of the Prime Minister's statement to the Congress Parliamentary Party that the public must be prepared to bear heavier tax burdens. But the stock market hopes that in framing the tax proposals, the Finance Minister will try to give incentives for increasing production.

Lyons Range is worried about the growing shortage of funds. Rumours that the Central Budget may propose a tax on bank deposits, advances or cheques have disturbed the sentiment. As such an impost will hit savings and capital formation severely, it is hoped that it will not be levied. If banks are to be encouraged to open branches in new areas, nothing should be done to discourage the growth of the banking habit.

Indian Iron have reacted after an earlier improvement. In the engineering section, attention has been concentrated on Indian Standard Wagon, Braithwaite, Burn and Jessop, Texmaco have enjoyed influential support but the scrip have reacted towards the close. Interest has also been taken in Britannia Engineering, Kumardhubi, Dalmia Iron and J. K. Steel. Bank shares have been neglected.

Indian Aluminium have rallied smartly in the miscellaneous section on increasing its profits and paying a higher ordinary dividend. In clearing shares, Hindustan Motors, Indian Copper, Dunlop Rubber and Indian Cable have been steady. Alkali Chemicals, Angelo Brothers, Associated Battery and British Paints have recovered. Goodyear India have been steady on news of a rights issue. National Pipes and Tubes have been bought on repeating the ordinary dividend. Martin Burn have been steady in spite of the dividend cut. In electric shares, Calcutta Electric

have been taken. Among new scrip, Hindustan Twyford, Isaac Holdens, Asiatic Oxygen and India Carbon have been supported.

The recent public issue of 12,250 ordinary shares by National-Standard Duncan Ltd has been over-subscribed. For deciding the allotment, lots have been taken in the case of applications for 10 and 20 shares. Five shares each will be allotted to 35 percent and 66.6 percent of the applications in the above groups, respectively. An allotment of 5 shares has also been made to all applicants for 30 to 50 shares. Allotments in other cases are 10 against 60 to 110 shares, 15 against 120 to 160 shares, 20 against 200 to 210 shares, 25 against 250 to 260 shares, 30 against 300 to 360 shares, 40 against 450 to 550 shares, 75 against 1,000 shares and 150 against 2,500 shares. Arrangements are in hand to issue all allotment and regret letters, together with refund pay orders.

Among paper shares, Titaghar have gained. Interest has also been taken in Sirpur, Orient and Bengal. Turnover has increased in jute shares on hopes of good dividends. Champdany have met with support on the news that the Company has decided to refund soon a portion of the capital. Gourepore, Fort Gloster, Birla, Chitavalah, Union, Anglo-India, Kamarhatti and Howrah have been steady.

In coal shares, support has been confined to Bengal, East Indian, Burrakur, Amalgamated and Central India. In the cotton mill section, Dunbar have gained on dividend hopes. Interest has been shown in Jay Shree Textiles and J. K. Rayon. Sugar shares have been neglected. In tea shares, buyers have been difficult to locate despite the scrapping of minimum prices.

In Government securities, short-dated stocks have been steady due to scattered support. Prices of medium and long-dated loans have been easier. State Government loans have been freely offered without attracting support. Little interest has been taken in preference shares and debentures.

Bombay

PRICES RECOVER ON
BROAD FRONT
RESTRICTIONS RELAXED
FURTHER

Wednesday Evening.

THE Bombay stock market has started the new account with a steady undertone during the week. Share prices have recovered on a broad front, partly because of replacement buying and partly because of short-covering. The authorities have relaxed restrictions on trading to a great extent. The remaining minimum prices for Tata ordinary, Indian Iron, Century and National Rayon have been scrapped. The compulsory carry-over for Century, National Rayon and Tata ordinary has also been removed. In view of the decline in selling pressure and the squaring up of the outstanding business, it is hoped that trading will continue to be normal.

At the close, investors and operators have turned cautious in view of the Budget uncertainties. Although it is hoped that the Central Finance Minister will not increase the financial burden on companies by imposing heavy taxes, there has been a general inclination not to enter into fresh commitments until the Budget proposals are known. Selling pressure has abated because of encouraging corporate news.

Tata ordinary have improved to Rs. 119 and Indian Iron to Rs. 21.24. Replacement buying has helped increase the price of Tata Locomotive. Interest has also been taken in Alcock Ashdown, Premier Construction and Larsen and Toubro. Mukand Iron have been supported on prospects of a rights issue in the proportion of one new share for every share held at a premium of Re. 1 a share.

Cotton mill shares have become steadier because of the improved off-take of cloth in the domestic market. It is also hoped that vigorous measures will be taken to step up the export of cloth and yarn. Century, Bombay Dyeing, Tata Mills, Svadeshi and Kohinoor have recovered. Interest has been taken in India United ordinary, Morarjee and Standard.

Miscellaneous shares have moved up in sympathy with the general trend. Among cement shares, Digvijay have been bought on prospects of a rights issue. Associated Cement have been transacted. Sugar shares have been subdued on fears of a cut in production during the current year. Belapur and Voltas have been freely available. Mining shares showed little change. Steamship company shares have been fractionally higher and support has been confined to Scindia Steam.

Rayon shares have been very steady. National Rayon have gained at Rs. 369 on prospects of expansion. It is believed that the Company has taken steps to set up a new pulp wood plant. Gwalior Rayon and Baroda Rayon have been bought. Bombay Burmah have recovered on replacement buying. Interest has been shown in Voltas and Tata Oil. Chemical shares have been steady, and Colour-Chem have improved sharply. Indian Dyestuff and Tata Chemical have been steadier. Bigger interest has been shown in selected cash shares. Permanent Magnets have gained on hopes of expansion. Scattered support has been extended to bank and insurance shares. Electric company shares have been generally easier. Ahmedabad and Bombay Suburban have been transacted.

Madras

PRICES STEADY IN
SMALL TURNOVER
SECURITIES DECLINE
ON PRESSURE

Tuesday Evening.

ALTHOUGH the undertone of the Madras stock market has been steadier during the past week, turnover has been small. The improvement has taken place in response to firmer advices from Dalal Street. Selling pressure has generally declined, but investors have been

cautious because of the forthcoming Central Budget. Prices of selected tea and coffee shares have been steadier on good crop reports. Textile shares have shown mixed trends. Business has been negligible in miscellaneous shares. Sugar shares have been dealt in cautiously.

Government securities have been quiet, and prices of State loans have declined on pressure. There has virtually been no interest in preference shares and debentures. Scattered support has been extended to Vellore and Ellore among electric companies. In the plantation section, Blue Mountain have gained at Rs. 2.53, Periakaramalai at Rs. 3.05 and Consolidated Coffee at Rs. 15.93. Mysore Coffee have declared a taxable ordinary dividend of 15 percent and United Nilgiri a taxable ordinary dividend of 7.5 percent. Kumerode have paid a taxable ordinary dividend of 15 percent. Interest has been taken in Peermade, Thirumbadi, Hailey-buria and Chembra.

In the cotton mill section, South India Viscose have gained sharply on hopes of good working results. The scrip have been bought up to Rs. 147. Travancore Rayon have hardened to Rs. 26.75. Madras, Bangalore Woolen and Anglo-French have been steady. Among sugar shares, interest has largely been confined to E.I.D. at Rs. 39.20 and to Mysore at Rs. 51.30. In the miscellaneous section, Aluminium Industries have been taken at Rs. 21.30, Ashok Leyland at Rs. 7.65, India Cement at Rs. 6.20 and Mettur Chemical at Rs. 13.35. Madras Rubber and Mysore Paper have improved on good working results. Seshasayee Paper and Parry's Confectionery have been steady at lower levels. Travancore Chemical and Manufacturing has decided to redeem the 6½ percent redeemable cumulative preference shares for Rs. 3 lakhs.

London

ERRATIC TREND IN PRICES

GILT-EDGED DULL

London, 20th February.

THE past week witnessed erratic trends in the London stock market. Buyers were initially encouraged by the latest survey of the National Institute of Economic and Social Research which came out with the recommendation that the U.K. Chancellor of the Exchequer should introduce tax cuts to the tune of £400 million. Prices moved smartly ahead in response to increased buying but just before the week-end came the latest statement from the Fed-

eration of British Industries with its somewhat gloomy picture of current business experience. Since then, most of the earlier gains were considerably reduced and, in some cases, wiped out. The January trade figures did not help matters and the market continued to ease. Gilt-edged securities were dull as they always are when there is any mention of inflation. The Government's recommendation of a big spending policy brought in sellers. Dollar stocks followed Wall Street trends which, on most days, were towards higher levels. The dollar premium was again above the 8-percent level. Gold shares met with selective support at times and coppers were firm. Tins moved narrowly. Oils were overshadowed by the much talked of Russian oil-for-ships proposal. Teas met with some support but the strength of Tebrau was the only feature of rubbers.

The Truth about Man-Made Fibres...I

How Man-Made Fibres Can Help Conserve Foreign Exchange

83,00,00,000 RUPEES...enough foreign exchange to buy 450 jet fighters...were spent in 1961 alone on securing cotton and other fibres for the textile industry. In the crisis before us, full production of food and cloth becomes urgent. Increasing the production of textiles to meet India's needs is possible, but we need not pay so high a price for imports.

Man-Made Fibres Can Do It

A million bales of cotton worth Rs 70 crores had to be imported last year to meet deficiencies in India's production. This drain on foreign exchange can be stemmed if man-made fibres like rayon and nylon are

With progressive indigenous manufacture of rayon and nylon tyre-cord, huge additional savings in foreign exchange will be made possible.

Raw Materials No Problem

Initially the annual outlay of exchange on raw materials for filament yarn and staple fibre would be Rs 2.8 crores and Rs 9.1 crores respectively. This however will soon dwindle to a mere Rs 2.75 crores with self-sufficiency in wood pulp, caustic soda and sulphuric acid. The nylon industry today provides for its own raw materials through export. With a caprolactum plant in construction, it will soon be self-sufficient.

Exchange Will Be Earned

With optimum production of man-made fibres, the demand

for fibres will be met and prices will stabilize. Self-sufficiency achieved, Indian textiles will gain new dimensions in texture and utility and will even earn a sizeable surplus in foreign exchange by entering the overseas markets at increasingly competitive prices.

Therefore, it stands to reason: if the entire textile industry can achieve self-sufficient production with Rs 29 crores of foreign

exchange now, why must Rs 83,00,00,000 be wasted on imports every year?

Man-Made Fibres Meet India's Vital Needs

The Association of Man-Made Fibre Industry, Resham Bhavan, Vir Nariman Road, Bombay I

MARTIN BURN LOOK BACK TO OVER 180 YEARS OF SERVICE TO INDIA

... TO BE ABLE TO COMPUTE THIS SERVICE BY DECADES, not by years alone ... to recall that our credit has consistently been the development of our country's resources through engineering and allied enterprises ... to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to move forward.

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE :

THE INDIAN IRON & STEEL CO. LTD. : With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO., LTD. HOWRAH WORKS : Pioneers in foundry practice in India, in structural steelwork fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.

BURN & CO. LTD., REFRACTORY & CERAMIC GROUP : Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA : The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD. : Established in 1819, the Company has a ship-building yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD. : A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

LIGHT RAILWAY COMPANIES : Some of the first feeder light railways in India, with six systems in five states.

ELECTRIC SUPPLY COMPANIES : Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHAN BURN CRANE COMPANY LTD. : A collaboration with The Vaughan Crane Company Ltd. of Manchester—manufactures hand operated and electric overhead travelling cranes and chain pulley blocks.

Money

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Wednesday, 20th February.

THE aggregate level of advances has shown a fair increase in the Calcutta money market during the past week. Much of the increase is on account of the jute and sugar mills. But the credit given to the cotton textile industry and to the iron, steel and engineering units has also risen. Advances against food-grains and seeds are slightly smaller. In the interbank market, conditions are somewhat easier and the call rate quotes between 5½ percent and 5½ percent.

The exchange market has been quiet. The supply of tea bills has been moderate, but that of gunny bills remains poor. The demand for remittance has been fairly small. The trend in sterling is mixed. It has shown some improvement in relation to the U.S., Dutch, Belgian, French and Swedish currencies. But it has weakened in comparison with the Canadian, West German, Swiss and Danish currencies.

SILVER WAS STEADIER IN CALCUTTA during the past week due to good upcountry demand. The price rose from the previous week's level of Rs. 268.75 to Rs. 276.25, quoted today for ready delivery. The London and New York prices were 108d and 125.5 cents.

DURING THE WEEK ENDED 15TH February, Government of India Treasury bills for Rs. 12,21,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 19th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.365 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 23rd February.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 20th February to 23rd February at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 13th February to 16th February, amounted to Rs. 54,25,000.

THERE WERE DECLINES OF RS. 2.27 crores to Rs. 2,208.55 crores in active notes and of Rs. 18 lakhs to Rs. 2,226.65 crores in the total note issue, according to the return of the Reserve Bank of India during the week ended 15th February, 1963. Notes held in the Banking Department consequently rose by Rs. 2.11 crores to Rs. 18.12 crores. An increase of Rs. 7 crores to Rs. 95.08 crores in foreign securities was offset by an equivalent decline to Rs. 1,896.4 crores in rupee securities of the paper currency reserve. Deposits of the Government of India fell by Rs. 2.93 crores to Rs. 86.38 crores while other Government accounts rose by Rs. 96 lakhs to Rs. 79.05 crores. Balances held abroad in the Banking Department were Rs. 65 lakhs smaller at Rs. 10.01 crores. Balances of scheduled

banks at Rs. 79.05 crores showed a rise of Rs. 3.63 crores. Loans to scheduled banks fell from Rs. 43.72 crores to Rs. 37.55 crores, of which advances against usance bills were Rs. 25.52 crores (Rs. 27.72 crores). Ways and means advances stood at Rs. 27.44 crores, against Rs. 24.51, crores.

THE RETURN OF THE STATE BANK OF India for the week ended 8th February, 1963, shows a drop of Rs. 8.52 crores to Rs. 551.58 crores in total deposits. Investments in Government securities are down by Rs. 21.36 crores to Rs. 223.27 crores, while other authorised investments are up by Rs. 3 lakhs to Rs. 10.07 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 8.20 crores to Rs. 302.86 crores. Cash and balances are, in consequence, shown at Rs. 22.19 crores or Rs. 90 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 8th February, 1963, shows Demand and Time liabilities at Rs. 932.95 crores (Rs. 19.16 crores on account of borrowings from banks) and Rs. 1,274.18 crores (Rs. 19.43 crores), compared with Rs. 947.45 crores (Rs. 20.06 crores) and Rs. 1,270.68 crores (Rs. 18.88 crores) in the previous week. Cash has increased by Rs. 1.39 crores to Rs. 50.67 crores, while balances with the Reserve Bank have declined by Rs. 7.77 crores to Rs. 78.04 crores. There is a drop of Rs. 14.87 crores to Rs. 622.16 crores in investments. Advances and bills discounted at Rs. 1,522.02 crores show a rise of Rs. 19.17 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 69.0 percent, against 6.1 percent and 67.8 percent.

TREASURY BILL MATURITIES

Details of 91 day bills outstanding with the public on 22-2-63.		Issue Date	Maturity Date	Amount ('000's Rs.)	Average Acceptance Rate

New Delhi

INDIA ASKS FOR MORE AID TO FINANCE THIRD PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THE Budget session of the Lok Sabha commenced on Monday with the inaugural speech delivered by the President, Dr. S. Radhakrishnan. The Railway Budget was presented on Tuesday, and the Central Budget will be placed before Parliament on 28th February. Three and a half days, that is, 28th February and 1st, 2nd and 4th March have been allotted for the discussion of the Railway Budget and five days, that is, 8th, 12th, 13th, 14th and 15th March for a general discussion of the Central Budget. Voting on the demands for grants for the Railway Budget will take place on 5th and 6th March and for the Central Budget from 16th March to 16th April. The Finance Bill will be considered and passed in two and a half days ending 19th April.

The unrealistic policy of the Government, and particularly of the Planning Commission, is gradually becoming obvious. The States—under the annual plan for 1963-64—are expected to raise additional resources of about Rs. 100 crores. The Uttar Pradesh Budget has left an uncovered deficit of Rs. 5 crores. The State Finance Minister, however, said that taxation measures to bridge the gap would be placed before the House "in due course". But past experience does not hold out much hope that the State Governments would be able to raise much additional revenue through taxation.

Meanwhile, indications are that the Central Government has asked for foreign aid amounting to \$1,000 million from the western countries for the third year of the third plan, stating that it is neither possible nor practicable to prune the plan. The defence budget, is meanwhile, estimated at Rs. 900 crores. Official arguments against cutting unnecessary expenditure are not always convincing. The so-called re-orientation of the community development programme, the wasteful expenditure on khadi and prohibition and the frequent tours of Deputy Ministers—accompanied by their wives—are regarded as an integral part of the development and defence effort, while the Indian masses are being asked every day to practise austerity. New Delhi should explain why telephone exchanges require to be inaugurated by a Central Minister and why the foundation of a bridge is supposed to remain insecure unless it is laid by a Minister. A steady stream of "distinguished visitors" has continued to pour into India even during the emergency. It is time the Government appreciated that it was not enough to raise more taxes. What is needed is to harness the resources properly, with a view to avoiding wasteful expenditure.

The western aid-giving countries, by and large, are not convinced that India will be able to spend all the money she has been asking for. Furthermore, aid later on leads to a drain on India's resources which is so strongly objected to by Messrs Malaviya and C. Subramaniam. To sum up, India should be happy if she is able to get as much aid as she did during 1962-63.

ADMINISTRATION

Study on Bhopal Plant

The Indian Institute of Public Administration has set up a com-

mittee on case studies. The Secretary to the Central Cabinet, Mr. S. S. Khara, is chairman of the committee. Its members are Professors S. V. Kogekar, Principal of the Ferguson College, Poona, M. V. Mathur of Rajasthan University and Mr. V. K. N. Menon of the Institute. It is explained that "the programme marks the beginning of a continuing effort to promote a deeper and wider understanding by the students, the administrators and the interested public of the functioning of the Indian administration in its environmental and institutional setting".

The first case study was undertaken by the chairman of the committee, Mr. S. S. Khara, on the establishment of the heavy electrical plant in Bhopal. The study traces the history of the industrial policy resolution and discusses the apparatus to implement it. Its "comments" are of considerable interest. The study says:

"Although the necessity for setting up a heavy electrical equipment plant was recognised as early as 1948, a final decision on this was taken only eight years later, in 1956. It was estimated in 1948 that the establishment of the project would result in foreign exchange savings of about Rs. 5 crores a year. With the inauguration of the first five year plan, the number of hydro-electric schemes in the country multiplied and the demand for heavy electrical equipment increased considerably. Had the decision been taken in 1948, more than Rs. 45 crores in foreign exchange could have been saved.

"A part of the delay in the realisation of the objective was caused by the controversy between the Central Ministries of Production and Commerce and Industry whether the plant should be set up in the public sector or the private sector. The Central Ministry of Commerce and Industry was interested to locate it in the private sector, while the newly-established Ministry of Production was eager to expand the sphere of Governmental operations in the industrial field. Under the industrial policy resolution of 1948, the manufacture of heavy electrical equipment fell in the category of private enterprises, subject to Government regulation and control. Considered in this context and in the face of the different responsibilities allocated to them, the differences between the points of view of the Ministries of Production and Commerce and Industry appear to spring from the impersonal nature of the decision-making process in the Government. When the Government decided in 1954 to set up a State factory, the focus of controversy was shifted to the items scheduled to be produced in the factory. On this matter, too, the Ministry of Production and the Ministry of Commerce and Industry could not see eye to eye.

"The procedural delays involved in taking the decision will be better appreciated if it is remembered that when the matter was being considered, the Government was a new entrant in the field of industrial development. Thus, there was a natural reluctance on the part of

the Government to set up a State heavy electrical equipment factory, lest it should be encroaching on the hitherto undisputed domain of the private sector.

"In spite of the delay in taking a decision on this question, Parliament's interest was limited to seeking information, and even the short discussion on the demand for grants of the Ministry of Production did not create a sensational debate in the House. The case for the early establishment of the project seems to have gone by default, mainly because this was one of the several projects which were being considered at that time and the House seems to have been satisfied with the answers provided by the Minister of Production.

"Once it was decided to establish the heavy electrical equipment factory in the public sector, things seem to have proceeded at a quick pace. In November 1955, an agreement was signed with the consultants. They made a quick survey of the sites within a short period of eight weeks and submitted their recommendations to the Government. The Government decided in the first week of March 1956 to locate the factory in Bhopal.

"Although the consultants had given the first preference to the site in Bihar, which satisfied all the technical considerations, the Government decided to locate the factory in Bhopal—the second choice of the consultants. In this, the Government was influenced by such considerations as regional development and diversification of heavy industries to achieve a balanced development of the country, since a steel plant was scheduled to be set up in Bihar.

"The case study highlights several aspects of the process of decision-making in the Government of India. It brings out the highly impersonal nature of this process and the lack of any concentrated motive or bias on the part of the civil servants. It shows how all the three decisions were taken mainly on economic and technical considerations, although pressures, both political and economic, attempted to influence these decisions. The impersonal process of decision-making, however, has as its corollary the inadequacy of programme orientation on the part of civil servants. The civil servants are responsible for results to the executive and through it to the people and their representatives in Parliament.

"The case indicates the checks and cross-checks which exist within the Government to avoid pitfalls in decision-making. It shows the roles, attitudes and relationships of the generalists and the specialists and the administrative Ministries having seemingly conflicting responsibilities. It also throws light on the efficacy of formal methods of administrative consultation and co-ordination, in particular the committee system for facilitating speedy decisions. The system of ad hoc consultative committees seems to have worked well in tapping expert advice from different sources but in no way does it appear to

have speeded up very much the process of decision-making.

"It seems necessary to add that while the case study illumines these administrative concepts and issues, it does so within the limitations imposed by the case. For instance, the study illustrates the process of preparation and assessment of material by the civil servants for a final decision to be taken by the Cabinet but it does not purport to determine the relative influence of the civil servants and the Ministers on decision-making. Similarly, though the case study depicts the part played by the committee system in decision-making on important issues, it is by no means implied that speedier methods of consultation were not adopted. Quite often, important points were cleared through telephonic conversations, every word of which was recorded on the files for further reference. Nevertheless, every important decision was taken only at committee meetings. Again, while the study brings out the advisory rôle of the specialists in helping the generalists to arrive at decisions, it makes no claims to weigh their relative impact on the final decision."

Although the programme for further similar studies is not yet available, a case study on the steel industry in the public sector would be both welcome and revealing.

SHIPPING

Exchange for Liberty Vessels

The Government of India proposes to release foreign exchange to enable shipping companies to buy Liberty ships, seven of which have already been acquired by the Jayanti Shipping Company. Under the plan, ships so acquired will save foreign exchange since they will be loaded with cargo while coming to India after purchase. They will also earn foreign exchange while carrying cargo to Japan, where they will be sold as scrap after two years. The foreign exchange thus earned should pay for their purchase price which is placed at £75,000.

Jayanti Shipping is financing some purchases from its own resources. Foreign exchange may be released for ten more ships, all of which will be used in the coastal trade. This, it is explained, is a stop-gap arrangement, pending the construction of 12 special 1,000-tonner cargo boats of 22 feet draft to suit the shallow water at Calcutta port. Part of the Belgian credit is being used on the project.

NEYVELI POWER-STATION

Steel from Russia

An agreement was signed last week for the supply of steel required for the expansion of the thermal power-station in Neyveli, Madras State, under the third five-year plan. Under the agreement, Russia will supply 1,174 metric tons of steel for the expansion scheme. The capacity of the Neyveli power-station will be expanded under the third plan from 250 megawatts to 400 megawatts. Russia has also agreed to assist in the expansion programme. The expansion of the power-station is estimated to cost Rs. 15 crores.

MARINE DIESEL ENGINES

New Factory for Madras

Madras has been selected as the site for establishing the Central

Defence Ministry's marine diesel engine manufacturing factory. The latter is to be set up in collaboration with the well-known West German firm, M.A.N. The factory will make engines for large sea-going vessels and inland watercraft.

CZECH CREDIT

Details to be Finalised

The Secretary to the Central Ministry of Heavy Industries, Mr. Swaminathan, left for Prague last week with a team of three others. The team will finalise the details of the various projects for which Czech credit of Rs. 23.10 crores has been made available. These projects are the foundry-forge and the heavy machine tool plants in Ranchi, the high-pressure boiler plant in Tiruchirappalli and the heavy power equipment plant in Ramachandrapuram, near Hyderabad.

WEST GERMANY

Technical Team in Capital

A two-man West German mission is now in New Delhi. It is discussing with the Government India's technical assistance requirements for the current year.

BUDAPEST FAIR

India to Participate

The Government of India has decided to participate in the Budapest Trade Fair to be held from 7th May to 27th May, 1963. The intention is to show there the growing export potential of India so that demand for various exportable goods may be created.

PARLIAMENT

Bills for Budget Session

A Bill to create Legislatures and Councils of Ministers in the Union Territories of Himachal Pradesh, Manipur, Tripura, Pondicherry and Goa, Daman and Diu, is among the 17 new Bills to be introduced in the Budget session of Parliament.

There will also be the Finance Bill, 1963, to give effect to the financial proposals for the coming year,

and the Foreign Exchange (Regulation) Amendment Bill, 1963, to give more powers to the Enforcement Directorate.

The Government proposes to arm itself with powers to make the provisions of the Prevention of Food Adulteration Act more stringent. Through another Bill, the Drugs and Magic Remedies (Objectionable Advertisements) Amendment Bill, 1963, the Government will seek authority to make rules specifying diseases, etcetera, to which the scope of prohibition in the Act could be extended.

By another Bill, the Delhi Development (Amendment) Bill, 1963, the Government will make provisions to implement the master plan for Delhi and to ease the present "cumbersome procedure". Another legislation, the Slum Areas (Improvement and Clearance) Amendment Bill, 1963, is meant to quicken the pace of slum clearance work in Delhi and to give protection to *amladars* against eviction.

To expedite the removal of unauthorised squatters from public lands, the Public Lands (Eviction of Unauthorised Occupants) Bill, 1963, will be placed before Parliament.

Another Bill, the Indian Trade Unions (Amendment) Bill, 1963, will provide for the settlement of disputes among rival office-bearers of a trade union by labour courts. The Industrial Employment (Standing Orders) Amendment Bill, 1963, will make the model standing orders framed by the appropriate Government applicable in all industrial establishments covered by the Act till the standing orders in relation to such establishments are certified by the officers concerned.

The Navy (Amendment) Bill, 1963, is meant to provide for reinstatement in civil employ of persons belonging to the Naval Reserve Forces on termination of their service or training with the Navy.

The Export (Quality Control and Inspection) Bill, 1963, is to provide for sound development of the export trade through quality control and inspection.

Other Bills are: The Court of Wards (Rulers of Indian States) Bill, 1963, to manage the properties of Rulers of former princely States, the Drugs (Amendment) Bill, 1963, to provide for the introduction of Ayurvedic and Unani medicines within the scope of the parent Act

and the Institutes of Technology (Amendment) Bill, 1963, to include the College of Engineering and Technology, New Delhi, within the scope of the parent Act.

Other business before Parliament includes the discussion on the President's address, consideration of a motion for constituting a committee of Parliament for public undertakings and a discussion on a motion on the prices of essential commodities.

ACID PLANTS

Contracts for Simon-Carves

The Government of India has ordered two nitric acid and two associated sulphuric acid pre-concentration plants to be set up by the British firm of Simon-Carves Ltd. The contracts, it is said, are worth about £300,000. The design and supply of the equipment will be decided by the firm in consultation with the Government of India's officials in Britain.

ROAD BRIDGE

Gammon India Wins Contract

Gammon India Ltd, of Bombay, has been awarded a £2-million contract for the design and construction of a road bridge linking Bombay city with Thana district. The Company, a member of the British Gammon group specialising in constructional and engineering work in the Commonwealth countries, is expected to import much of the plant and equipment required for the work from Britain. The bridge will be 6,015 feet long and will be completed in four years' time. Spanning the Thana creek, it will provide a fast route from Bombay city to the new industrial region of Thana district and will open up what is at present an isolated agricultural area.

GRAND TRUNK ROAD

New Bridge over Sone

A two-mile-long bridge is to be constructed across the Sone river in Bihar to meet the long-felt need for through and speedy road communication between Delhi and Calcutta. The Grand Trunk Road (National Highway No. 2) is the direct route connecting Delhi with Calcutta. This

highway is bridged throughout its entire length except at the point where it crosses the Sone river at Dehri-on-Sone. Through traffic between Delhi and Calcutta has at present either to detour from the Grand Trunk Road between Sasaram and Barhi via Arrah-Patna-Bakhtiyarpur so as to cross the Sone river on the road-decking provided under the railway bridge in Koelwar—thereby undergoing an additional mileage of about 120 miles—or to cross the river with the help of pilot trains run between Dehri-on-Sone and Sone Nagar by the railways. With the construction of the proposed high level road bridge in Dehri-on-Sone, all these difficulties will be removed and a through road communication between Delhi and Calcutta will be established.

TECHNICAL TRAINING

Indo-Swiss Centre

The Indo-Swiss training centre for precision mechanics, which is being established in Chandigarh, Punjab, as a joint project of the Central Scientific Instruments Organisation and the Swiss Foundation for Technical Assistance, Zürich, is expected to start functioning from August 1963. In the beginning, the centre will admit 35 persons a year for giving training. The Swiss Foundation will provide the services of eight Swiss technicians for a period of five to six years or more to train young men in a three-year course in approved traditions and methods of the Swiss industrial training institutions. This will enable them to become skilled mechanics capable of producing the precision instruments urgently needed for scientific and technical education, research and industry.

Apart from providing the Swiss instructors and a principal for the training centre, the Foundation will also make available machine tools and other workshop equipment valued at over Rs. 16 lakhs. The Council of Scientific and Industrial Research will provide suitable buildings for the centre. These are expected to be ready by August 1963.

BANGALORE

Stock Exchange Recognised

The Government of India has decided to grant recognition to the Bangalore Stock Exchange Ltd under Section 4 of the Securities Contracts (Regulation) Act, 1956. The recognition, which will be effective from 16th February, 1963, will be granted on the following conditions:

- (1) The membership security deposit of Rs. 2,500 shall be increased to Rs. 5,000; and
- (2) Dealings shall not be permitted on the Stock Exchange except for spot delivery and for delivery and payment within a period not exceeding 14 days following the date of the contract.

The recognition will be for five years in the first instance and cover the area of the Bangalore Municipal Corporation.

Simultaneously with the recognition of the Stock Exchange, the Government has declared Section 13 of the Securities Contracts (Regulation) Act, 1956, to apply to the area included in the municipal limits of Bangalore city with effect from 16th February, 1963. As a result of the application of the Section, "every contract in securities in this area which is entered into after this date otherwise than between the members of the Bangalore Stock Exchange Ltd, which has been recognised by the Government, or through or with such members, shall be illegal."

London

BRITAIN PREPARES TO COUNTER THE FAILURE IN BRUSSELS

(FROM OUR LONDON CORRESPONDENT)

THE comings and goings in the weeks following President de Gaulle's veto on Britain joining the European Economic Community as a full member had, for their main purpose, the formulation of a new economic policy for a fruitful future for Britain outside the European Common Market. Whether this is going to prove a success remains to be seen, but it certainly has, with some assistance from the Opposition, achieved the immediate object of uniting all sections of Conservative opinion behind the Prime Minister. This was demonstrated at the close of the two-day debate in the House of Commons, when the Government scored its highest majority in an important division for over a year, defeating the Opposition's "no confidence" motion in the Government's ability to cope with the post-Brussels situation by no less than 106 votes.

The debate was productive of several good speeches from both sides with comparatively little attempt to score purely Party points. Opening the proceedings, Mr. Macmillan outlined a six-point plan to counter the failure of Britain's efforts to enter the European Common Market. The main feature is a conference of the Commonwealth Trade Ministers in London shortly before the next meeting of the General Agreement on Tariffs and Trade in Geneva in the early summer. In preparation for this, Mr. Macmillan will see Mr. Diefenbaker, Prime Minister of Canada, when he visits London at the end of this month to receive the Freedom of the City, and he also hopes to receive visits soon from Mr. Menzies, Prime Minister of Australia, and Mr. Holyoake, Prime Minister of New Zealand. Mr. Macmillan made it clear that the Commonwealth trade conference was not to be regarded as a substitute for what Britain had hoped to obtain through membership of the European Common Market. The main object is to make effective the "Kennedy Round" of tariff reductions to be proposed by the United States under the G.A.T.T.

Five Points

The remaining five points in the Government's plan are the following:

- (1) Co-operation with the European Free Trade Association, the United States, and the Common Market in the "Kennedy Round" of American tariff cuts.
- (2) Maintenance of Britain's membership of the European Free Trade Association.
- (3) Work for world commodity agreements.
- (4) Expansion of the home economy—without inflation—on the basis of a national incomes policy.
- (5) Changes in the technique and structure of industry, with particular attention to areas of temporary unemployment.

British agriculture came in for special attention from the Prime Minister. He thought the whole agricultural community recognised that the present system of open-ended subsidy on a number of items—combined with free entry, often at far lower prices—had serious drawbacks. Efforts must be made to cure these defects without losing sight of the main purpose—a higher standard of living to the agricultural community,

and a strong and prosperous agricultural industry, all the time improving its methods of production and distribution. The record of the industry since the second World War was remarkable. But methods must be looked into from time to time. The mere fact that the Common Market negotiations failed did not relieve the Government of that responsibility or the need to fit agricultural policy into overseas trading arrangements.

Mr. Macmillan continued: "We have been saying for some time that whether we joined the Common Market or not, some changes in our support system are inevitable. The amount of support—particularly by the Exchequer—must be brought under control. The Minister of Agriculture will be ready at the beginning of this year's price review to discuss with agricultural representatives what can be done in the full spirit of our pledges to work out new and constructive ideas. Many of these steps will involve special consultation and agreements with our overseas suppliers, including Commonwealth countries."

Sales to Europe

Turning to the effect of the breakdown on the general economy, the Prime Minister remarked: "We shall not obtain automatically the larger market for which we hoped, at least not on the favourable terms for which we hoped. That does not mean we cannot win it by our own efforts. Our sales to Europe have shown very large increases in spite of the tariff. We have already leaped over the wall to a large extent. If, as we hope, the collective decision of the 'Six' is to keep the tariff reasonably low, the tariff should not be more insurmountable than in the past. But it will be there. We must face that fact and try to reduce our internal costs by all possible means. I am not going to embark on the economic problem of how to expand without inflation. But one vital condition for a lasting solution is to adopt in principle and make effective in practice a reasonable incomes policy. We must now try to increase consumer demand as the basis for an increase in export demand. We shall have to do it in conditions where we shall not have a competitive stimulus of European imports into this country."

The new situation that has been created has impressed on British industry the need for a complete rethinking of its plans for the future. The Grand Council of the Federation of British Industries has lost no time in getting down to this question, following a long exchange of views

with Mr. Edward Heath, the Lord Privy Seal. In a statement issued to its 8,000 member-firms, the Grand Council says that "the break is clear and final" and that it will be quite unrealistic for British industry to imagine that the question of joining up with the European Common Market can be reopened, or that there is any prospect of going ahead with some other form of association. A new situation may arise some day if the attitude of France changes, but meanwhile the chapter has to be regarded as definitely closed.

"There are no longer the same uncertainties to hamper business decisions," the statement says. "We face the challenge with confidence and have initiated action to take stock of the situation and review past policies." Among the subjects which will be reviewed in the light of the new developments will be British industry's attitude to the freeing of international trade and payments on a multilateral basis. Relations with the Commonwealth countries, the Common Market and Britain's partners in the E.F.T.A. are also to be studied.

While official negotiations with the E.E.C. are finished, industrial relations remain friendly. Recently, a meeting was held in Paris between the F.B.I. and the main European industrial federations, including the French. A programme of work on common problems was laid out. Tariffs are not the only factor in European trade which affects the flow of commerce, it is explained. Such methods as standardisation between certain industries of the main west European countries can have a powerful effect on trade, and these are to be pressed forward. The F.B.I. Council is also giving further study to the question of export incentives. While the Forbes Committee came out against special incentives, the view is gaining ground that a switch to a turnover tax on the French "value added" model might form a useful basis for encouraging exports.

Decisions Held Up

Sir Norman Kipping, Director-General of the F.B.I., said that the Federation had been particularly conscious of the many important business decisions which had been held up for a long time by the uncertainty over future trade relationships. It is not only in Britain but also in Europe and the Commonwealth that managements have been uncertain where the most suitable location of a subsidiary plant or a commercial link may be. Many Commonwealth companies, for instance, have calculated that if the

United Kingdom went into Europe, British capital resources would be locked up there for some years to come, so that it might be more fruitful for them to link up with an American company. All that uncertainty is now past.

Before the meeting with Mr. Heath, Sir Norman explained, a number of F.B.I. members had held the view that there might well be a chance for reopening the European negotiations at a more favourable moment. The suggestion of an "association" or of some lesser relationship under the current Dutch and Belgian plans had been much discussed. After the meeting with Mr. Heath, no such hopes could be entertained any longer. The break was clearly final.

As to the spirit in which the private meeting of the Grand Council had taken this realisation, Sir Norman interpreted it in three words: "We shall fight." He said 16 per cent of British exports were at present being sent to the E.E.C. across the tariff barrier. An intensive effort was going to be made to maintain this trade. It should not be forgotten that Britain's partners in the European Free Trade Association were taking about another 16 per cent of Britain's exports, and there was scope for further development.

Long List of Subjects

The F.B.I. statement sets out a long list of subjects in connection with which policies may call for review. For instance, firms will have to examine again what measures are necessary for improving efficiency, strengthening competitive power, and keeping costs down. It may be necessary to revise the taxation and rating system, which is in many ways not yet tailored to the needs of a flexible and expanding economy relying on world trade. Neither the Government nor industry is yet doing all that is needed to be done about education, training, research and development. As for communications, a decision on the Channel link and resolute action on docks and harbours are more urgent than ever.

Apparently, all Commonwealth Governments have agreed to Mr. Macmillan's proposal for a meeting of their Trade Ministers in London. Most have already sent acceptances, even though the invitations were only sent out very recently, and other replies are on the way. It is usual for the Trade Ministers to meet for a day before the G.A.T.T. meetings. This time the meeting will last longer and cover rather more ground. The main purpose of the meeting is to compare notes and, so far as possible, align attitudes for the G.A.T.T. meeting. This will begin the organisation of the discussions with the United States on the "Kennedy Round" of tariff negotiations likely to start next spring. It will also try to speed up discussions on world commodity agreements and moves to help the trade of the underdeveloped countries. The Commonwealth Ministers—apart from dealing with these matters—will also see what bilateral trading improvements are possible among themselves.

Protection of your valuables no more a problem.

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

NEW COTTON EXPORT QUOTA ANNOUNCED

(FROM OUR BOMBAY CORRESPONDENT)

THE Government of India has released for export a further quota of 75,000 bales of Bengal Deshi and also 25,000 bales of short-staple cotton (other than Bengal Deshi) having a staple length not above $\frac{3}{4}$ inch. Both the quantities will be available for shipment by 31st August. Twenty percent of each of the above quota will be reserved for co-operative societies. As before, export will continue to be on a first-come-first-served basis, with an individual shipper's share fixed at a maximum of 5 percent of the permissible quota, that is, 3,000 bales for Bengal Deshi and 1,000 bales for the other variety. The export quota is welcome, but the announcement has been made not a day too soon. The previous export quota for 200,000 bales of Bengal Deshi cotton had been exhausted by 11th January, and overseas enquiries held out the prospect of further business. Furthermore, the statistical position of Deshi cotton showed that there existed a sizable exportable surplus. The 1962-63 crop of Deshi cotton is placed at 430,000 bales. Including the carry-over of 110,000 bales from the previous season, the total supply comes to 540,000 bales. The domestic consumption rarely exceeds 190,000 bales. Allowing for a normal carry-over of about 50,000 bales, it should be easily possible to release about 300,000 bales of Deshi cotton for export. Of this, the Government has released 275,000 bales, including the latest quota of 75,000 bales. While the export quota for Deshi cotton was generally anticipated, that for short-staple cotton has come as a pleasant surprise. It appears that this quota has been released partly because of the not-so-very satisfactory quality of cottons like Wagad and Kalagin and partly because of the accumulation of stocks of Dholeras.

Co-operative societies in Gujarat had been complaining about the marked increase in their stocks of short-staple cotton. While the trade is pleased with the release of the further export quota, it is critical of the Government's decision to increase

the share of the co-operative societies from the normal 5 percent to 20 percent. There are very few co-operative societies—hardly half a dozen—participating in the export trade, and they are not well-equipped for handling this business. It is no secret that only 2 percent to 3 percent of the quota is directly exported

TEA PRICES EASIER AT COCHIN AUCTIONS

THE past year was not as good for tea producers in south India as 1961. The crop was estimated to be about the same. But prices, particularly for dusts, were lower. Although the export duty was reduced rates of excise duty are still higher, say Messrs Carritt Moran and Co. Private Ltd while discussing the Cochin tea price trends in 1962 in their monthly tea sale review. During August, a sale had to be postponed due to the lack of shipping facilities to the U.K. and the Continent caused by the Calcutta pilots' strike, and November saw the border troubles due to the Chinese aggression aggravated by the River Steamer Companies' strike. Offerings on the market, however, reached a record level.

After the low prices ruling in December 1961, the market reacted and started off the New Year on a dearer note. This tendency continued for most of the first quarter but there was some irregularity following quality. To some extent, buying was selective during this time, with emphasis on the brighter mediums and high-grown teas, the plainer varieties being in limited demand. Towards the end of March and early in April, after a spell of very good prices for Nilgiris, the market cracked as a reaction to the high level to which it had earlier been forced, and when the fall came it was steeper than the rise, regular buyers having left the market as rates were unrealistic compared with the world levels. Medium and plain tea prices

by the societies and the rest of the quota licences are sold to the leading shippers at a premium. The increase in the share of the co-operative societies will only increase unofficial deals in licences. Not many will perhaps object to extending all possible help to co-operative societies, but it is also necessary to ensure that the export effort does not suffer on that score. While the quota announcement has been followed by a rise of Rs. 15 to Rs. 25 a candy in the prices of Deshi cotton, cotton futures have suffered a moderate setback which is due to hasty bull liquidation induced mainly by technical considerations and the approaching maturity of the March contract.

also fell following quality, but not to the same extent, because on 26th April the export duty was reduced, which enabled exporters to take up larger quantities at rates above normal for the time of year. Offerings during May and June were of the standard to be expected, and prices ruled accordingly, but at levels much below the previous year. A recovery set in during July when an unusual improvement in quality was seen for the time of year due to the late arrival of the monsoon, and the month closed with a much healthier undertone than had been noticed for a good many weeks.

The strong demand continued until the end of August, when prices ruled easier with quality. This was aggravated by the lack of shipping facilities to London caused by the Hooghly pilots' strike, and the drastic action of postponing one sale. Godowns, meanwhile, were full, almost to overflowing. Prices revived after this and moved upwards gradually until the Chinese invasion and the strike of the River Steamer Companies' crews in Pakistan took place almost simultaneously. The latter threatened a shortage of spot tea while the former, coupled with the Cuban situation, made buyers worry about the long-term prospects. Although quality was only about average for the time of year, prices soared until the strike ended and the cease-fire sounded at the end of November, when a marked downswing occurred early in December, followed by a revival

CAPITAL, 21st February, 1963.

in the last auction of the year. The general level of prices for the year was much below that of 1961 and, as anticipated, the hardest hit were the producers of plain tea, the "concertina" having widened quite considerably. Whereas the overall leaf average dropped from Rs. 4.68 a kilogram to Rs. 4.58 a kilogram, Nilgiri averages were some 30nP higher. Dust prices ruled much lower throughout the year, in fact lower than had been seen for some years, and the average price declined by 70nP a kilogram to Rs. 3.75 a kilogram. Clean, grainy dusts were, however, well supported while the more fibrous types proved difficult to sell.

The firm says that it will undoubtedly be in producers' interests not only to manufacture a higher percentage of export grades, to their own and the country's advantage, but to improve standards at the same time. The old maxim "good tea is made in the field" still holds good, it concludes.

Ceylon Tea Exports to U.K. and U.S.A. Rising

(BY A SPECIAL CORRESPONDENT)

IN the last issue of *Capital*, this correspondent pointed out that although there has been a shortfall in the north Indian crop, the Doars district has actually produced more tea for disposal at satisfactory prices. So in spite of the recent dull trading in the Stock Exchanges, Doars scrip met with some small enquiry.

A report from Madras said recently that the Ceylon Tea Board had approached India with a proposal to initiate a joint drink-more-tea campaign. Latest information indicates that Ceylon is still making considerable headway in the American markets. Ceylon is also gaining in Britain and Ireland. For years India has supplied good quality tea to the latter. Economically weak, the Irish always imported good teas. But now that the purchasing power of the people is improving with industrial expansion, Ireland will spend more money on quality tea, but from all accounts the consumption of Ceylon tea has made rapid strides since 1958. By 1958, Ceylon had already captured approximately 13.6 percent of the Irish tea trade. The present percentage is said to be well over 20 which, on the above showing, is not surprising. As for per capita consumption, the Irish are considered to be the largest consumers, after the U.K.

The next annual Bulletin of Statistics issued by the International Tea Committee is not due until June. The last publication noted imports by Ireland (in million lbs) from:

India	Ceylon
15.8	1958 3.3
16.3	1959 3.0 approximately
13.7	1960 4.2
14.3	1961 5.3

These figures confirm that Ceylon is gaining ground while India is unfortunately losing.

India's earning from tea exports remain somewhat puzzling. The 1952-53 season was perhaps one among the worst on record and exports earned only Rs. 81 crores. The boom period in 1954-55 yielded Rs. 148.50 crores and 1956-57 a little over Rs. 145.13 crores. But in spite of the general increase in production in subsequent years, 1961-62 is reported to have earned only Rs. 122.40 crores.

Teas from south India do not average out as high in price as production from the north. But with the urgent call for foreign exchange, it seems curious that until the current season the receipts from exports appear to have stagnated.

CAPITAL, 21st February, 1963.

U.S. BURLAP FIGURES BRING GUNNY PRICES DOWN

THERE has been a fair amount of speculative activity in the jute goods market during the past week, although genuine business has been poor. Prices have fluctuated rapidly, and the U.S. burlap consumption and stock figures for January have had a depressing influence. They show a considerable decline in consumption when normally at this time of year it is above average. Consumption has dropped to 67.5 million yards, while stocks have risen to 306 million yards. The mills have continued to accept orders for specialties, which are the only really profitable line at present. They have tried to sell both hessian and heavy goods for near shipment, but whenever they have appeared as sellers, bazaar speculators have underquoted them.

Shipments from Calcutta last month were poor, and this was reflected in the overall increase in the Indian mills' stocks at the end of January. The increase was partly explained by the fact that in January there were many holidays, which affected loading in the port and so nearly a week was lost. It is true that no sound inference can be drawn from the statistics of a single month, but the latest figures indicate that so far there has been no great improvement. The decline is probably the result of U.S. buyers curtailing their purchases. In the circumstances, it is wondered how long the mills can continue maximum production.

It is said that a number of mills are not in favour of continuing the present high rate of production. But they are doing so because the large fibre crop has to be consumed, and because a decrease in output might raise jute goods prices. Many point out, however, that if production were cut, the large stocks would prevent prices from rising too high. Those favouring a cut say that losses are being incurred on many fabrics, and they are only balanced by profits on others; if there is any further reduction in prices, there would be a danger of overall losses. It is also pointed out that if the mills have to carry unsold gunny stocks for a longer period, it would put a severe strain on their finances, which are already overstrained by the very large stocks of raw jute.

Turnover of Buffer Stock

Although the mills have for some time been in a position to "turn over" limited quantities of their buffer stock holdings, only a few have taken advantage of the facility. The difficulty was that they actually had to receive replacement jute before any release from the buffer stock was made, and storage facilities being short, this was not feasible. The Jute Buffer Stock Association has now reviewed the situation, and in future will allow a turnover of a maximum of 15 percent at any one time, the release of jute depending on the production and registration of replacement contracts. Many mills urgently need some of the stocks held in their buffer stock go-downs, particularly the Tossa and Daissee fibres. Others have indicated that the stocks are showing signs of deterioration. They will now be able to take delivery of these stocks within a reasonable time.

Mills now also have the option of buying back their buffer stock holdings of Pakistani cuttings. This is a direct release by the J.B.S.A., and has been prompted by the shortage of such cuttings due to the non-availability of import licences. The mills

which manufacture cotton bagging will welcome this opportunity of using Pakistani cuttings.

Raw Jute Easier

The Calcutta raw jute market, after opening on a steady note, has shown signs of weakening later. Tossa and Daissee, however, are unchanged, and their prices continue to rule about Rs. 3 or Rs. 4 above the minimum levels. Mesta and white jute are available at the minimum price or below it. Only small business has been reported as the mills expect a fall in prices. Most sellers are not keen to reduce their rates. Considering the rate at which jute is still arriving in the receiving centres, it appears to be fairly certain that some have been withholding supplies. All growers, of course, have not held back jute. There is always the man who is satisfied with and accepts what he can get, and the man who sells lest by waiting he is forced to accept an even lower price. The general tendency, however, has been to hold back supplies, as the pressure to sell for cash has not been so marked this time as in previous seasons. Operators, in many instances, appear more independent than they have ever been.

THE JUTE MARKETS

Manufactured Goods: Sacking opened strongly last Thursday on reports of a small Government order for B Twills, but hessian was neglected and rates tended to decline. February B Twills started at Rs. 117, which represented a premium of Rs. 1.75 over the October-December position. As for hessian, 40in. 100z. stood at Rs. 51.45 and Rs. 48.50, respectively, for the near and forward positions, but after the opening fell back another 25nP. Sacking too declined after the initial excitement, and in the ready position prices dropped by 75nP. There was a slight improvement with the approach of shipping dates as local shorts covered, but in the absence of overseas enquiries, rates began to fall back rapidly. By Monday morning, B Twills were down to Rs. 115.90 and 11-porter hessian to Rs. 51.15. The U.S. burlap stock and consumption figures for January were considered unfavourable and caused a slump in both sections towards the close. B Twills fell right back to Rs. 114.20, with 40in. 100z. dropping to Rs. 50.55.

Opening quotations on Wednesday morning were as follows:

	Feb.	March	Apr.	May	June	July	Oct.
40in. 70oz.	39.60	38.60	37.60	36.80	36.00	35.00	34.00
40in. 80z.	42.50	41.50	40.30	39.50	38.50	37.50	36.50
40in. 100z.	49.75	48.60	47.10	46.05	44.80	43.50	42.25
B Twills	113.35	113.80	113.80	113.80	113.80	113.25	112.75
Cornacks	117.00	116.50	116.50	116.25	115.75		
Heavy Cess							
(Plain)	111.75	113.00	113.50	113.50	113.50	113.25	112.75

Liverpools	128.75	128.00	128.00	127.50	127.00		

Raw Jute: The fibre market opened firm, with sellers reserved and most prices above the minimum. Tossa and Daissee were at a premium of about Rs. 4 and sellers were looking for higher rates. Mills showed little interest, so as the week progressed, prices in general eased. After the week-end, white jute and mesta were available below the minimum rates but Tossa continued firm. Wagon arrivals in Cossipore showed a marked improvement over the previous week, and a total of 640 were

logged. Imports on an all-India basis amounted to about 60,000 maunds daily.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		Current		T.S.D.

THE U.K. JUTE MARKETS

QUIETER TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan was reported to be steadier at the beginning of the past week due to Polish buying. But the quantity bought was only about 20,000 bales. The quieter trend again appeared later in the week. Shippers generally are offering medium and lower grades at the current E.P.C. levels. The Dundee market is quiet with little or no movement taking place in fibre. A substantial quantity of jute is available ex-warehouse, but spinners are not buying this, since they hold large raw material stocks. Afloat jute is also being offered at prices well below the current shipment levels, but this is not attracting any attention from spinners here.

There is nothing at present to indicate that much change is likely to take place in the raw jute prices in the immediate future. The industry is now waiting for an announcement from the Pakistani Government concerning its policy on the next jute crop. Already speculative offers are being made in the U.K. Mill Lightnings were quoted at £112 and Mill Hearts at £96 for August-September shipment. This has brought out no buying interest, since the price margin between these grades is too wide.

Prices being quoted in Dundee are still very irregular with Mill Firsts at £146 10s, Mill Lightnings at £118, Mill Hearts at £93 and Grade Hearts at £79 10s, c.i.f. U.K. for February-March shipment. Afloat parcels of Mill Lightnings are available at £110. Grade Tossa-2/3 was offered at £127 10s and Grade Tossa-4 at £111. Dacca Tossa-5 was quoted at £128 and Dacca Tossa-6 at £113. Outport Tossa-2/3 was lowest at £97 and Outport Tossa-4 at £87 5s, for February-March shipment. Cuttings are steady with S.N.C. at £54 and N.C. at £46 10s. A few offers of Siamese jute are being made, but prices are still considered to be too high for this type of fibre. Grade A was lowest at £81, grade B at £74 and grade C at £71, delivered mill Dundee for February-March and March-April shipment.

Little change took place in prices of Calcutta goods during the past week. Quotations are at 78s for

40in. 100z. and at 61 for 70oz. a 100 yards, f.o.b. Calcutta, for February shipment, at 77s 3d and 59s 6d March and at 76s and 57s 9d April-June. B Twills are at 177s 9d, 176s 6d and 176s 3d for the respective shipment periods.

Due to the recent easier trend in raw jute prices in Pakistan, the selling rates of certain fine and medium yarns and fine rove yarns were reduced by about £5 a ton as from 9th February. Prices of cloths related to these yarns were correspondingly reduced. This is the first major yarn price change since 19th September, 1962.

The lower prices now in force have brought out more buying interest at the Dundee market. Orders are being placed for forward delivery, and producers are now well placed for maintaining full production during the first half of the year. Supplies of yarns are difficult to obtain and consumers have to think of their requirements very far ahead.

THE PAKISTANI JUTE MARKETS

FIBRE REMAINS DULL

(FROM OUR DACC A CORRESPONDENT)

WITH the market continuing dull and inactive, interest . dealers has been focussed on the size of the new crop. Obviously, this will have its effects not only on prices for new crop jute but also for the rest of the season. The Pakistani Commerce Minister recently announced some restrictions on the sowing of raw jute in border areas. Before the announcement had a chance to strengthen the market, the weather all over the jute-growing areas became cloudy and, in some places, there were scattered rains. This will produce ideal conditions for sowing, which is almost certain to encourage growers to sow early and extensively. A bearish factor was the strong protest in the Press and in the Provincial Assembly against the Commerce Minister's announcement. It is maintained that it is unfair on the poor border cultivator to stop him from growing jute since he can grow nothing else in that area.

Whether or not the Commerce Minister withdraws his announcement, the fact remains that it is extremely difficult to control cultivation in the border areas or for that matter, to control cultivation anywhere. Not only is there an added inducement in the border areas since the situation is ideal for the smuggling of jute into India, but it is highly probable that smuggling during the next season will increase since the Indian mills are beginning to realise how badly they need better quality long jute. The need for this comes mainly from broad looms. With more competition in the world markets, greater stress is being laid on quality.

While overseas buyers and, in fact, most people outside Pakistan are encouraging cultivation of a large crop, there is no doubt that, in the interest of Pakistan, it will be better if there remains some control on prices since the latter have already reached an uneconomic level. Since it is impossible to remove price control completely, the answer appears to be to try to maintain a crop at a level which will keep prices slightly higher than they have been during the current season.

In the loose sector, prices continue in most places at the minimum with arrivals extremely small and buying interest even smaller. In the pucca bale market, some activity is reported but this is very limited. Cuttings have lost further ground.

Modern construction projects require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, MILLS

tubular scaffolding has a versatile use: storage racks; temporary buildings; open-air auditoriums or bridges—apart from its normal use as a construction aid.

WHICH FOOT RESTS SURER?

The special spring-steel fittings quickly secure the tubes—with only a $\frac{1}{2}$ " spanner as the tool. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle-grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by the Indian Tube Company (1953) Limited.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

Books

TAXATION ON FOREIGN INVESTMENT

Investing in India: Taxation (Compiled and published by the Indian Investment Centre, National Insurance Building, Parliament Street, New Delhi 1. Price Rs. 3, pages 182.)

The Indian Investment Centre occasionally brings out brochures discussing the scope and prospects for foreign investors. The latest one discusses the salient features of the direct taxes on both individuals and companies, and points out the incentives provided in the existing tax legislation to promote foreign investment. The main merit of the book is that it explains the different types of direct taxes in a simple way. It does not attempt a short-cut by incorporating only the provisions of different direct tax laws, but makes a genuine, and successful, effort to explain the complicated laws with the help of hypothetical illustrations. Many would-be foreign investors who are perplexed by the magnitude and complexity of the growing tax legislation in India, will find it a useful guidebook embodying all the impor-

tant information they require for starting either a new company or a joint industrial venture. Apart from a discussion on the method of calculating personal and corporate taxation, double taxation relief and a detailed analysis of the administration of direct taxes, etcetera, there is a useful chapter on incentives to industries. The tax concessions announced since 1948 have been discussed in detail. But whether direct taxes are high or low, has been left for readers to decide.

RURAL CREDIT

Rural Credit Follow-up Survey, 1959-60. (Published by the Reserve Bank of India, Bombay 1. Price Rs. 8.75, pages 296.)

In accordance with the recommendation of the Committee of Direction of the All-India Rural Credit Survey, 1951-52, the Reserve Bank has been conducting rural credit follow-up surveys every year since 1957-58 in a few selected districts. Four follow-up surveys have been completed so far. The present report is on the fourth rural credit follow-up survey with 1959-60 as the period of reference. The field investigation was undertaken in the districts of Bilaspur, Midnapore, Mohindergarh, Tanjore, Bhagalpur, Bijapur, Barmer, Kanpur and Krishna from July 1960 to July 1961. Prepared on the basis of district reports, the report is divided into three parts. The first part covers in the first six chapters some of the important aspects of the demand for credit. The second part analyses the working of co-operative institutions at various levels in the subsequent five chapters. In the concluding part—covering the last two chapters—an assessment is made of the comparative position of important items shown in the demand side and the performance of co-operatives.

The report records that a third of the family expenditure in Krishna was financed through borrowing while in other districts it was not below one-fifth. Interest rates were from 12 percent to 18 percent. The average borrowing a family was as high as Rs. 479. Borrowing from the Government was insignificant while the share of co-operative finance was also low; in Tanjore, for example, it was only 8 percent. The bulk of credit requirements was met from the money lender. The report says that rural indebtedness is increasing.

PETROLEUM HANDBOOK

The Indian Petroleum Handbook, 1962. (Compiled and published by Petroleum Information Service, 11 Parliament Street, New Delhi 1. Pages 164.)

There are not many handbooks on important and basic industries which contain exhaustive information about a particular industry within a single volume. The Petroleum Information Service shows how such handbooks on leading industries can be compiled intelligently, giving details about boards of directors, annual turnover, capital structure, main products, etcetera. The handbook also contains useful sections on petroleum prices, legislation relating to the industry, oil exploration as well as petrochemicals projects. The scope of the publication has been extended by including the salient features of some international oil companies.

COMPANY AND PUBLIC NOTICES

PUNJAB MINERALS COMPANY LIMITED

NOTICE is hereby given to the members of the above named Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Friday, the 15th March, 1963, at 11-00 A.M. for the following purposes:—

THE CRITERIA FOR A SOUND BUDGET

WHEN the Finance Minister, Mr. Morarji Desai, presents the Central Budget for 1963-64 this evening, he is expected to give what may be the first clear sign of how the Government's fiscal and economic policies are to be reshaped by the emergency. Although more than four months have passed since the Chinese launched their offensives in N.E.F.A. and Ladakh, the discussion on the economic implications of defence has so far been confined to generalities. It has in fact been based on two broad assumptions. The first is that defence expenditure will have to be doubled, which is understood to mean that it will have to be raised by Rs. 375 crores in the coming year. The second is that the third plan programmes will nevertheless continue largely intact; according to the decisions cheerfully ratified by the standing committee of the National Development Council last month, this means that the Central and State outlays on the plan would have to be increased by nearly Rs. 300 crores (from the Rs. 1,446 crores proposed for 1962-63 to Rs. 1,744 crores in 1963-64). Mr. Desai is thus expected to perform a trick which fiscal magicians round the world would envy: somehow to raise the larger proportion of the extra Rs. 700 crores or so which the Centre and the States together have threatened to spend in 1963-64. As he has looked round for new fiscal weapons these past few months, he has been liberally showered with suggestions and assurances from statisticians and theory-mongers round the country. Sundry members of both tribes have taken the liberty of informing the Finance Minister that the task he faces is really not too difficult: instead of the Government exchequers appropriating only 11 per cent of national income, they now have to appropriate "a mere" 5 per cent more. And 16 per cent—it is added, for good measure—"is after all what even the advanced countries do."

The statistical obfuscations apart, the events of the past few days have not made the outlook by

if the targets for defence and development are to be fulfilled. The past year has been a period of exceptional difficulties for the economy. Although a few crops like jute have been excellent, agricultural progress on the whole is poor. The difficulties which industry has faced, because of the shortage of power, transport, fuel and imported materials, remain acute. The increase in exports has been small, so the scarcity of foreign exchange has worsened. The one redeeming feature is that prices have not increased much, as large supplies of P.L. 480 foodgrains have been readily available for pumping into the markets. But here again the inflationary pressures now incipient, partly because of local crop failures and partly because of heavy deficit financing since the Chinese attacks, cannot any longer be ignored.

All this makes the Finance Minister's task for the coming year much more difficult. If the economy were healthy and the investment mood were expansionist, he could have been sure of an automatic and very substantial increase in revenues. But signs of health and expansion are few, even though, as Mr. Mackay Tallack pointed out, something has been done to ease the bottlenecks which have restricted economic growth. For example, the railways' expansion programmes are being speeded up; the shortage of coal in some areas is less acute than it was six months ago; and advance planning for the expansion of power facilities has begun. But the results of these decisions will take time to mature. Meanwhile, a major threat, as Mr. Mackay Tallack emphasised, is that the full impact of the import restrictions has not yet been felt. "There are some most dangerous shortages developing and

when, as in the case of the engineering industry, indigenous materials are also in short supply, there may be serious repercussions on production of a very essential type."

The repercussions can be avoided if India can quickly secure more foreign aid for financing maintenance imports; and if exports can be increased. For the former, the large U.S. loan of \$240 million negotiated on Monday is extremely welcome, but nobody can say for certain whether it will enable the Government to reverse its recent prophecy that the next import policy, due to be announced a month hence, will be even more restrictive than the present one. As for exports, they have shown a modest increase during the past year, but that is partly due to fortuitous circumstances (such as the exceptional demand for jute goods following the shortages of the earlier years). Whether the increase can be maintained depends, as Mr. Mackay Tallack emphasised, on "the main problem of cost and quality"—in other words, at least partly on whether Mr. Desai reduces the taxes on exportable goods. The encouraging rise in tea exports, which has followed the reduction of the export duty in the last Budget, serves as an excellent example of what fiscal concessions can do to promote sales abroad. The economic situation makes it fairly clear what the priorities in the Budget this evening should be: to get the domestic economy back into a mood of optimism and expansion, to increase exports, and to encourage the inflow of foreign investment. Declining confidence at home and declining exchange reserves abroad—these may constitute the two most serious threats to economic progress in the coming year.

STATES AS FISCAL COWARDS

THE Budgets for 1963-64 presented by the Governments of West Bengal, Maharashtra, Uttar Pradesh, Andhra Pradesh and Bihar are disappointing in that none of the States has done much to raise more revenue. When their representatives met the Central Finance Minister, Mr. Morarji Desai, in New Delhi three weeks ago, he urged them to do their utmost to raise new resources as their expenditure would be rising. Not only has the financial assistance given by the Centre to the States been cut by Rs. 50 crores to Rs. 400 crores; the Centre has also made it clear that it will not be able to increase the sum. The expenditure of the States meanwhile is going to rise quite sharply. Many of them will spend more on plan projects during 1963-64; in addition, they will have to meet certain costs connected with the emergency and the defence effort.

Under the third plan, it was decided that the target for additional taxation in the States would be Rs. 610 crores, which works out to an annual average of Rs. 122 crores. During 1961-62, the first year of the plan, the States proposed additional taxation which would yield only Rs. 20 crores in a full year. As the general elections were approaching, they could not find the courage to impose a stiffer burden. In 1962-63, new tax measures were proposed which were expected to yield about Rs. 71 crores in a full year. Now, for the coming financial year, 1963-64, West Bengal has proposed new taxes totalling Rs. 3.50 crores and Maharashtra has devised new levies totalling Rs. 95 lakhs. Andhra Pradesh, Uttar Pradesh and Bihar have made no new tax proposals, although they have vaguely hinted at the possibility of doing so during the coming financial year. Andhra Pradesh hopes to obtain an additional Rs. 6 crores by reorganising the sales of neera shops and by imposing a levy on non-agricultural land in urban areas. Some say that the State Governments have not tried to raise much extra revenue because they think that the Central Government will raise a lot more. The argument seems illogical, considering that the States will derive only a small part of any increase in the Central revenue. In any case, Mr. Desai has clearly told the States that they must themselves raise the resources they need. The latter cannot expect to benefit greatly from the new scheme for a centralised borrowing programme. In any case, some States appear to be convinced

that their share in small savings collections will decline during 1963-64.

While West Bengal and Maharashtra have made some effort to secure more revenue, their choice of levies is unfortunate. The new burdens will fall on sectors which are already heavily taxed. These two States have concentrated their attention on the sales tax and the duties on electric power. The levies fall mainly on the urban sector and they will tend to raise production costs as well as consumer prices. It is regrettable that nothing has been done to secure more revenue from the agricultural sector which has always escaped lightly for political reasons. One would have thought that the emergency had provided an excellent opportunity for distributing the tax burden more equitably. The agricultural sector, after all, has benefited from a substantial increase in irrigation, credit and storage facilities, and from the subsidised supply of fertilisers, seeds and implements. In addition, the prices of farm products have risen over the years. It is only fair, therefore, that agriculture should have contributed more money to the State exchequers, especially through an increase in land revenue.

West Bengal: New Taxes

The West Bengal Budget has taken credit for an additional tax revenue of only Rs. 3.50 crores. This is to be achieved, firstly, by extending the scope of sales tax; secondly, by shifting the tax now being levied at the point of retail sale to the point of wholesale sale to check evasion; and, thirdly, by enhancing the sales tax on luxury goods. These measures are expected to yield Rs. 2.5 crores. The raising of the duty on electricity for industrial consumption is expected to fetch the remaining Rs. 1 crore. The reliance thus placed on urban taxation by West Bengal's Finance Minister, Mr. S. D. Banerji, is unfortunate. The extension and increase of sales tax will be inflationary, and so will be the enhanced duty on power consumption. Already there have been increases in the costs of raw materials and labour and in interest rates; corporate taxation is burdensome and may become more so if the worst fears about the Central Budget come true. A rise in power rates will add to the strain on industries and ultimately show up in the prices of finished products. This may be especially harm-

CAPITAL, 23th February, 1963.

ful in the case of export commodities like jute goods, which have to compete in foreign markets. It may also affect the growth of new small and medium-sized industries. Mr. Banerji admits that *per capita* taxation in West Bengal is the highest in India, but feels convinced that there is "reasonable scope" for additional taxation. This is debatable except in the case of the rural sector.

A glaring lacuna in the Budget proposals is the absence of the rates and other details of new taxation. The Finance Minister has contented himself merely by saying that he will raise an extra Rs. 2.50 crores through sales tax and an extra Rs. 1 crore through the increase in the duty on electricity. He has added that "the rates of tax to be levied under West Bengal Sales Tax Act are to be fixed by notifications". Does this mean that the new changes will not be placed before the legislature and the latter will not be given an opportunity to discuss them before they are enforced? It is to be hoped that no such curtailment of the legislature's rights is contemplated. The total tax revenue of the State has been increasing steadily, thanks to the handsome yields from taxes like electricity duty, sales tax and the tax on entry of goods in local areas.

Although there is a revenue surplus of Rs. 7.27 crores, the Budget shows a negative closing balance of Rs. 9.22 crores for 1963-64. It makes a provision of Rs. 64.53 crores for plan expenditure during 1963-64. Central assistance, which was originally to be Rs. 29.7 crores, was scaled down to Rs. 26.40 crores because of the emergency. Efforts have been made to shift the emphasis to production, and the provision for social services has been restricted to the maintenance cost of schemes already completed or being completed. The axe has also fallen on education, the allocation being Rs. 5.71 crores, against Rs. 8.23 crores in the revised estimates for 1962-63. However, in view of the importance of education, the Finance Minister hopes to raise the allocation later by at least Rs. 1 crore. A welcome feature of the Budget is the saving of Rs. 1 crore on the costs of administration—more specifically by a 10 percent cut in contingency expenditure. Although the saving by itself is not very big, it is gratifying because it might mark the reversal of the tendency for administrative expenditure to rise out of proportion to productive expenditure. Vigorous collection of arrears of land revenue and sales tax is expected to fetch Rs. 2 crores, while the additional receipts from State enterprises may be Rs. 1.5 crores.

Mr. Banerji has ably presented West Bengal's case for a fairer allocation of Central funds to the States. The present pattern of distributing federal revenues, based on the Third Finance Commission's recommendations, has been unfair to industrial States. It has brought about a fall in West Bengal's share of the divisible pool while the State has to bear the increased costs of supporting industry and trade. By classifying income tax paid by companies as corporation tax, the Central Government had already lifted the major portion of the collections from the divisible pool. The basis for distribution of the States' shares of income tax, according to the Third Finance Commission, is 80 percent for population and 20 percent for collection. This has deprived West Bengal of its rightful share. Furthermore, the Constitution has, broadly speaking, bifurcated the field of taxation, as a result of which the Centre can tax the industrial sector and the States the agricultural sector. This dichotomy has hit industrial States like West Bengal, whose agricultural sector is shrinking.

The wealth produced in this State yields substantial corporation tax, which flows entirely into the Central Exchequer, while the increased income tax and excise duty collected here go to other States with larger populations via the divisible pool. At the same time, the State has to undertake huge expenditure to provide the security and social services which are necessary for a highly industrialised region. It also has to spend large sums on the service industries such as transport, roads and power. Even with such high expenditure, the ancillary services remain extremely inadequate. The emergency has now put a special burden on West Bengal since most of the industries here are directly contributing to the defence effort. To ignore its special needs or its claims for larger

CAPITAL, 28th February, 1963.

allocations is seriously to hamper the economic growth of a region which is of vital importance.

WEST BENGAL BUDGET		
	Revised 1962-63	Budget 1963-64
Opening balance	1.70	1.50
Revenue receipts	105.74	117.06*

*The figure does not take into account the sum of Rs. 3.50 crores to be raised by fresh taxation.

Maharashtra Acts Mildly

The Maharashtra Budget for 1963-64 has estimated revenue receipts at Rs. 159.71 crores, and revenue expenditure at Rs. 160.47 crores. It thus shows a deficit of Rs. 76 lakhs, which will increase to Rs. 91 lakhs after taking supplementary demands of Rs. 15 lakhs into account. The deficit is sought to be converted into a small surplus of Rs. 4 lakhs through additional taxation, which is estimated to yield Rs. 95 lakhs. Sales tax on the bulk purchase of electricity, it is expected, will yield Rs. 55 lakhs, the increase in the rate of electricity duty applicable to low-tension industrial consumers will bring Rs. 10 lakhs, and certain changes in the electricity duty schedule are likely to add another Rs. 8 lakhs. An increase in the rate of sales tax will fetch an extra Rs. 15 lakhs and a tax on goods carried by road by private carriers will yield Rs. 7 lakhs. The capital expenditure on plan account is estimated at Rs. 56.55 crores. With receipts totalling Rs. 41.35 crores, the deficit on capital account amounts to Rs. 15.20 crores. It is proposed to meet this from miscellaneous capital receipts, by raising open market loans and by withdrawals from reserves.

The 1961-62 Budget showed a revenue deficit of Rs. 7.52 crores, with revenue receipts and expenditure placed at Rs. 118.75 crores and Rs. 126.27 crores, respectively. But the current year is expected to end with a modest surplus of Rs. 40 lakhs, the receipts and expenditure being placed at Rs. 145.13 crores and Rs. 144.73 crores, respectively. These figures show a considerable buoyancy in revenues, which in turn reflects the encouraging progress the State has made in the economic sphere. In his Budget speech, the Finance Minister, Mr. S. G. Barve, has expressed the fear that due to the emergency, the Central Government is likely to restrict the State's share in small savings to what it had received in 1962-63, and that the State's share in the proceeds of the centralised open market borrowing may also be smaller than what Maharashtra might have raised on its own. Besides, the Centre has already indicated that its assistance to the State during 1963-64 will be maintained at last year's level of Rs. 28 crores. In spite of these limitations, the entire framework of the State plan has been kept almost intact, with some reorientation of the objectives to suit the needs of the present emergency. The outlay for 1963-64, at Rs. 81.25 crores, is 20.8 percent of the total third plan outlay of Rs. 390.20 crores for this State, compared with 17.2 percent in the second year (1962-63) and 14.2 percent in the first year (1961-62) of the plan. A special feature of the Budget is the provision of Rs. 2.5 crores towards meeting "unforeseen expenditure arising out of the present emergency" and the setting aside of an additional Rs. 1.5 crores for capital expenditure of a similar nature.

In setting his new tax demands at the modest figure of Rs. 95 lakhs, the Finance Minister no

doubt feels that he cannot be accused of having missed the opportunity of mobilising the resources required for economic development and defence. He probably thinks that Maharashtra's record in raising additional taxation is already creditable. Against the total target under the plan of Rs. 52 crores, the levies imposed in the first two years alone have yielded Rs. 45.55 crores. Apart from the levy on bulk purchases made by power distributing licensees and users of electrical energy, Mr. Barve's latest tax fare is mainly in the nature of marginal adjustments. But urban consumers of electricity will feel aggrieved because they have been called upon to carry the bulk of the additional burden; there is no justification for the argument that the extension of power to rural areas is a welfare measure and needs to be subsidised. The impost on private carriers is also wrong because it will act as a further disincentive to road transport which needs all possible encouragement as the railways are unable to cope with the increase in goods traffic.

Maharashtra's record in the implementation of the plan is impressive. The State has made significant progress both in industrial and agricultural production. In purely financial terms, with the outlay of Rs. 81.25 crores proposed for 1963-64, the State's overall performance will rise to 52 percent. The sector-wise allocation of plan expenditure in 1963-64 will be: agriculture Rs. 11.37 crores, community development and co-operation Rs. 6.66 crores, irrigation and power Rs. 38.72 crores, industry and mining Rs. 2.23 crores, transport and communications Rs. 5.53 crores and social services Rs. 16.08 crores. The slight reorientation of the plan in view of the national emergency has meant that greater attention has been paid to the infra-structure for industrial enterprise—facilities such as developed land, water and power supplies and efficient communications. This has led to some curtailment of social services and building programmes which come lower in the priority scale. Maharashtra has, however, reason to feel happy over the Finance Minister's assurance that the tax-collecting machinery will be tightened, austerity in Government expenditure is to be enforced and the savings campaign will be intensified.

IMPROVING RAIL TRANSPORT

BY and large, the Indian railways can claim that they are improving their performance. In 1962-63, they expect to carry over 15 million tons of additional freight traffic, against only 4 million tons in the previous year, an improvement which has noticeably eased the bottlenecks in some areas. The increase in carrying capacity has been achieved mainly by additions to capital assets, and partly by better utilisation. Over the past ten years, the number of goods locomotives used for moving one million tonne-kilometres a day has come down from 34 to 23 on the broad gauge and from 92 to 55 on the metre gauge. Wagon usage has similarly declined from 1,408 to 1,028 on the broad gauge and 3,289 to 2,247 on the metre gauge. Both tonne-kilometres performed and passenger traffic handled have risen ahead of the actual capital-at-charge. The expense-earnings ratio, after eliminating extraneous factors on both sides is 61.05 percent, against 67.68 in 1950-51—reflecting, it is claimed, "the effect of the sustained measures of economy." The validity of this generalisation is doubtful, but the fact remains that the railways' three principal physical assets—locomotives, wagons and track—are being used more intensively as a result of modernisation. If the financial trends still cause anxiety, the reasons are two. One is that the railways have spent too lavishly on their staff. The second is that passenger fares are too low; passenger services have not been paying their way since 1957-58. On a unit basis, the average cost of hauling a passenger vehicle one kilometre rose by 40 percent on the broad gauge and 27 percent on the metre gauge. The modest increases in fares, including the 10 percent rise since July 1962, have failed to offset this trend.

A World Bank mission reviewing this problem in mid-1961 noted that the essential cause of tran-

Bihar Cuts Plan Outlay

The Bihar Budget for 1963-64 shows an overall surplus of Rs. 50 lakhs, against a surplus of Rs. 20 lakhs for 1962-63. In the revenue account, the total revenue estimate is for Rs. 87.8 crores and expenditure has been estimated at Rs. 85.5 crores. In the capital account, receipts have been placed at Rs. 52.2 crores and disbursements at Rs. 55 crores. In view of the shortfall in resources, the total outlay on the plan has been estimated at Rs. 50.5 crores for 1963-64, against Rs. 61.4 crores for 1962-63. According to the original estimate, the total outlay on the plan should have been Rs. 71 crores. The Bihar Government will be spending nearly half the total estimated outlay for the third plan in the first three years of the plan period.

Andhra will Raise More

The Andhra Budget for 1963-64 shows a surplus of Rs. 10 lakhs on revenue account but a deficit of Rs. 9.70 crores on capital account. The Budget estimates a revenue income of Rs. 118.36 crores and a revenue expenditure of Rs. 118.26 crores. The plan outlay has been estimated at Rs. 55.27 crores, against Rs. 64 crores for 1962-63. To the plan outlay, the State Government proposes to contribute Rs. 20.87 crores out of its own resources. Although the State Finance Minister has proposed no new tax for the time being, he expects to increase the total revenue by a further Rs. 6 crores in due course.

U.P. Taxes Postponed

The Uttar Pradesh Government has presented a deficit Budget of Rs. 4.97 crores for 1963-64, despite a cut of Rs. 10.36 crores in the original plan outlay of Rs. 103 crores. Hence the total plan expenditure during the next financial year has been estimated at Rs. 92.64 crores. The total revenue has been estimated at Rs. 201.82 crores and the total expenditure at Rs. 206.79 crores. The State Finance Minister has proposed no new tax but he has hinted at the possibility of levying fresh taxation in the course of the next financial year.

sport deficiency during the second plan was a lack of funds to enable the railways to carry out the programmes planned by them. They were thus "destined to fall short from the beginning". But, even if the lessons have been learnt, they are still not being applied because ambitious plans for other sectors of the economy make such heavy claims on resources that there is not enough left to provide adequately for transport development. To quote again from the World Bank assessment, the programme the railways have drawn up for themselves "adequately reflects" the requirements of carrying capacity flowing from the targets set out in the third plan. The mission had doubts, however, whether adequate funds have in fact been provided to the railways to put through the minimum necessary expansion. In relation to coal movement, which accounted for 40 percent of the railway's total goods traffic, the mission thought that the country might well be faced with a far greater crisis than any experienced so far unless railway expansion was accelerated.

The World Bank, with its massive investments in the Indian economy, has a natural interest in preventing the sorry results forecast by its mission, not least because of the stake it has acquired in the viability of the coal industry since it made a loan of \$35 million in 1961 to support the development of private-sector mining. This presumably explains the initiative it has taken to have the problems of coal transport competently and comprehensively surveyed by an expert team, and its readiness to foot the \$750,000 bill for this enquiry. As the terms of reference adopted for the survey show, the problem is to be studied from two angles simultaneously: (1) assessing the total demand for carrying capacity; and (2) the possibilities of reducing and rationalising this demand by appropriate policy decisions. The need for rationalisa-

tion arises, first, from the fact that 80 percent of coal production is concentrated in a small area, setting physical limits to rail movements. Secondly, any possibility of reducing capital investment on transport obviously has to be explored because of the pressure on resources.

The improvement in railway performance over the past year cannot disguise the fact that India's transport plans have always underestimated the potential demand. This involves looking into such matters as the policy on industrial location because of a feeling among some economists that deliberate dispersal in pursuit of the aim of regional development is aggravating the strain on the railways and leading to avoidable increases in production costs. Larger questions of policy apart, there is a clear need to get down to brass tacks on such questions as the movement of coal in bigger quantities at a time, whether through block rakes or any other arrangement, to reduce the strain on transport capacity inherent in catering to demand piecemeal. As the difficulties with block rakes have shown, no such device will work without a great deal of adjustment and preparation on the part of the railways, producers and consumers alike. For instance, the loading of block rakes calls for the installation of static overhead bunkers which is economic only in collieries with a certain minimum output. The number of such collieries out of the total of 848 units in the industry is no more than 60. Again, before collieries are persuaded to invest in mechanical loading facilities, they need an assurance that the railways will in fact be in a position to supply open wagons. At present, units with mechanical equipment are obliged to incur additional costs on manual loading, because of the high proportion of closed wagons, ranging from 15 percent in the Gomoh area to 67 percent in Asansol.

There is, besides, some doubt whether overhead bunkers are really the best solution since mobile equipment like excavators would have greater flexibility and can, if necessary, be moved from mine to mine wherever wagons are offered on a particular day. But before box wagons can at all be used, sidings may need to be altered or strengthened. The producers take the view that the expense on this is difficult to meet considering the margin of profit the present controlled price allows, and should, therefore, be borne by the railways whose operational convenience the box wagons serve. Finally, can one be certain that box wagons are the best possible equipment that the railways could have chosen? Unless improvements are made to enhance their operational flexibility, they tend to create as many problems as they solve. In fact, the producers have been urging that the advantage of quicker wagon turn-round implicit in the use of box wagon rakes is being nullified by delays en route, and at terminals. One aspect of the World Bank survey is appropriately concerned, therefore, with recommending operational improvements on the railways.

In the context of rationalisation of coal traffic, it is necessary that careful evaluation should be made of the comparative economics of other means of transport. Undoubtedly, both roads and inland waterways have a rôle to play, and few disagree with the principle enunciated by the Mines and Fuel Ministry that long-term planning should be based on the fuller use of these alternatives. But the gap between principle and performance cannot be bridged without a great deal of work undertaken well in advance, otherwise energies may be dissipated on such half-measures as the current effort to carry coal first by rail to Mokameh, then by river to Allahabad, and then again by rail or lorry to consuming centres. It is possible that an all-India grid of waterways can eventually be brought into existence by using the still unexploited potential of the country's many rivers, but this will remain a pipe-dream until somebody gets down to the essential task of drawing up practical and reasonably phased plans. The World Bank survey will not do this, but it might at least provide a guide for future work. On the more immediate issue of facilitating the movement of coal by road, the survey is specifically to cover its economics, types of vehicles, and loading and unloading arrangements. It should then be possible to draw practical conclusions for motor-vehicle

manufacturing programmes, organisation of short-haul services and vehicle licensing policies.

The basic point in relation to planning for future transport needs is the obvious one of trying to economise on capital outlays, and more important on the foreign exchange expenditure. In the coming years, the accelerated progress of manufacturing industries and of agriculture will make larger calls on carrying capacity than seems likely to be achieved within the available resources. There is thus a clear need for economy in which both improvement of operating efficiency and rationalisation of demand must play a part.

COTTON OUTPUT AND PRICES

ALTHOUGH weather conditions have been almost ideal throughout the season, India's cotton production in 1962-63 is estimated at no more than 5.4 million or 5.5 million bales. This means that the output in the second year of the third plan—a record so far—is just about what it should have been five years ago (the target for 1957-58 was originally fixed at 5.4 million bales). The fairly substantial improvement in cotton output during the first plan period was brought about mainly through an increase in the area under cultivation. Between 1950-51 and 1955-56, the area increased from 14.5 million acres to 19.9 million acres and production rose from 2.91 million bales to 4 million bales. But since there is little scope for bringing more land under cotton, it has been obvious for some years that production has to be stepped up essentially by raising productivity through intensive cultivation.

The fact that India has only to improve the yield from the present 112 lbs to 140 lbs an acre to achieve the third plan target of 7 million bales gives one the impression that the problem is perhaps not difficult. But, judging from past performance, the outlook is unpromising. The average annual production over the past seven years—that is, since the beginning of the second plan—works out to barely 4.73 million bales. It is clear, therefore, that efforts to increase productivity have yielded no worthwhile results. In the past ten years, only twice has the yield exceeded 94 lbs. Even at its maximum of 112 lbs, the yield in India is less than half the world average and it compares very poorly with that in Egypt, Syria, Peru, Mexico and the United States, where the yield varies from 400 lbs to 470 lbs. In neighbouring Pakistan too, the figure is substantially higher—around 217 lbs an acre.

Inaugurating the recent meeting of the Indian Central Cotton Committee, India's Minister for Agriculture, Dr. Ram Subhag Singh, said that cotton production could be increased "provided adequate steps are taken by way of fertilisation of the crop, protecting it from ravages of various pests and diseases and adoption of known improved agronomic techniques, including use of improved seeds." The programme of soil conservation, which was given high priority in the third plan, with substantial provisions in the State programmes, has not benefited the crop. In spite of the considerable increase in the irrigated area in the country, hardly one-tenth of the total area under cotton has adequate irrigation facilities; many States are reported to have been encouraging the cultivation of "wet" crops at the expense of cotton. Progress in the use of fertilisers has also been very unsatisfactory. Less than 100,000 tons of fertilisers were used in 1961-62. The quantity was barely enough for about 900,000 acres out of the total of 19 million acres under cotton, (of which 2 million acres are irrigated). The States are expected to use about 400,000 tons of fertilisers by 1965-66, which means that the consumption will have to be increased four-fold.

In order to encourage the growth of medium- and long-staple cotton, and thus reduce the dependence on imports which cost Rs. 60 crores to Rs. 75 crores of foreign exchange each year, the Centre asked the State Governments to take up the intensive cultivation of better-quality cotton in 20 selected blocks in nine States, so as to bring an area of 600,000 acres under the programme by 1963-64. But in spite of additional funds having

In relation to the former, the task mainly devolve upon the railways because they constitute by far the most important means of transport. The scope for such improvement is quite considerable. Many people hold that the third plan provision for new wagons is too low, which points to the need to make up for the shortfall by increasing efficiency. The delays in marshalling yards and terminals which account for much of the time lost cannot be accounted for wholly by the lack of physical facilities. It is more than likely that motivation for better human performance is lacking, and this is the direction in which the railways should be looking for improvements.

been provided during the current year, even outside the State plan ceilings, the implementation of the scheme to raise better-quality cotton has not made much progress. While the Central Minister for Agriculture has, in his inaugural speech, described the problems of cotton production in all their various aspects, he has no solution to offer. But the Centre cannot excuse itself by saying that agriculture is a State subject and that the States have not been implementing the development schemes for cotton. The country can ill afford to spend Rs. 60 crores to Rs. 75 crores of importing cotton to augment domestic supplies and thus maintain cloth output at the required level. During the past three years, more foreign exchange has been spent on importing cotton than has been earned from the export of cloth.

Recently, there has been a good deal of uninformed discussion on cotton prices, and it seems to have confused official thinking. Considerable concern has been expressed over the fact that prices have declined from the high levels of October, although they are still at or above the levels which had been the ceiling for nearly a decade. Most varieties of cotton are, in fact, quoted above the previous season's ceiling rates. Besides, the Textile Commissioner is unwilling to give up the supervisory scheme for the marketing of cotton, even though many clauses of the scheme have been declared *ultra vires* by the Bombay High Court. The enforcement of restrictions of the marketing of the crop contrasts oddly with the official concern over the decline in prices. The decline appears to have prompted the Central Minister for Agriculture to warn, in his speech at the I.C.C.C. meeting, that unless the industry realised its obligation to purchase promptly the medium and long-staple cotton produced in the country, "it may be necessary, as in the case of jute, to lay down the quantities to be purchased by mills every month and also to require them to hold minimum stocks of Indian cotton." With production continuing to fall short of the industry's requirements, necessitating large imports year after year, any concern over the decline in cotton prices is altogether unwarranted. And with prices keeping closer to the ceiling than to the floor, an increase of Rs. 50 or Rs. 75 a candy in the floor price cannot have any practical significance, although there is something to be said for narrowing the present gap of Rs. 345 a candy between the floor and ceiling prices.

MONETARY EFFECTS OF U.S. COMMODITY AID

THE commodity assistance which India has been receiving from the U.S.A., mostly in the form of foodgrains, has helped check inflationary pressures at a time when the demand for food has increased with the rise in money incomes. It has also helped sustain a higher rate of investment. Considering that the procedure for obtaining this assistance is not commonly known, the article on "The Effects of the United States Commodity Assistance to India on Money Supply" prepared in the Division of Planning and Special Studies, Economic Department, by D. R. Khakhar and V. V. Bhatt and published in the January issue of the Reserve Bank of India Bulletin, is of interest. India has been receiving commodity assistance under U.S. Public Laws 665

and 480 since 1955. The assistance under P.L. 665 has amounted to only Rs. 32 crores so far. Under P.L. 480, a sum of Rs. 1,131.3 crores has been given between 1956 and 1962, of which only Rs. 602 crores was received till the end of March 1962. The bulk of the counterpart funds arising out of this commodity assistance has been allocated to the Government of India in the form of loans and grants. A portion has been retained for use by the U.S. Embassy in India, and another portion also has been loaned to U.S. and other private firms in this country.

The commodities covered by this assistance are mainly wheat, rice, cotton and tobacco. They are imported on account of both the Government of India and the private sector. The food component of the assistance is received by the Government, while other commodities like cotton and tobacco are imported by the private traders or industrialists to whom import licences are issued. The procedure followed by the Government in financing P.L. 480 and P.L. 665 imports during 1955-60 was different from the one being followed now. At present, the Government of India pays for these imports through the Reserve Bank, to the account of the U.S. Embassy. If the Government's deposits with the Reserve Bank are not sufficient for making the payment, the Government issues *ad hoc* Treasury bills to the Bank, against which the latter provides the requisite funds. The U.S. Embassy invests these funds directly in non-negotiable special securities issued for the purpose by the Government. The latter thus gets back the amount which it pays to the Embassy. When funds are required by the Embassy for its disbursements, the Government makes payment to it against the special securities.

Under the old system, the funds were first deposited to the account of the U.S. Embassy with the State Bank of India in the form of time deposits. When the new procedure was adopted, a part of the deposits, which had accumulated with the State Bank, was transferred in monthly instalments of Rs. 12 crores each between July 1960 and June 1961 (all told Rs. 144 crores) to the Reserve Bank. The latter invested them on behalf of the U.S. Embassy in special Government securities. This apart, the State Bank has been transferring an additional amount of Rs. 10 crores every month beginning from November 1962 to the U.S. Embassy account with the Reserve Bank, and will do so until the amount so transferred reaches Rs. 50 crores.

As for the impact of food imports on money supply, it is pointed out that when the food is imported, the Government pays the U.S. Embassy by selling *ad hoc* Treasury bills to the Reserve Bank. The net bank credit to the Government and the money supply thus increases correspondingly. But since the U.S. Embassy invests these funds in special securities, the Government gets back the amount and retires the *ad hoc* Treasury bills held by the Reserve Bank. The initial expansionary impact on the net bank credit to the Government and on money supply would, therefore, be nullified. When the Government sells food to the public, the Government's cash balances with the Reserve Bank increase and this exerts a contractionary impact on the net bank credit to the Government and on money supply. Thus the effect of the commodity assistance would be contractionary until the counterpart funds are finally allocated for specific purposes. The impact of the private sector's imports on money supply would also be similar to that of the Government imports. When the U.S. Embassy allocates the counterpart funds for expenditure on specific projects, the Government has to pay the U.S. Embassy against the special securities. So there would be an expansionary impact which would be equal to the earlier contractionary impact. Hence the ultimate impact of all transactions arising out of the commodity assistance on the net bank credit to the Government and the private sector as well as on money supply would be neutral.

Between 1956-57 and 1961-62, the total U.S. commodity assistance received under both P.L. 480 and P.L. 665 was Rs. 633.5 crores while the actual sums disbursed out of the counterpart funds were only Rs. 243.5 crores. Hence the authors of the article conclude that the net contractionary impact of the commodity assistance on the net bank credit to the Government and on money

supply would be Rs. 390 crores. But this contractionary impact would be smaller to the extent to which the Government's stocks of imported food were large or subsidies were allowed on the foodgrain sales. This is because, if the Government increases its food stocks or sells food to the public at subsidised prices, the sale proceeds would be less than the amount it would have to pay to the U.S. Embassy. Hence the contractionary impact would be less than the later expansionary impact. Similarly, if the private sector increases its stocks of imported commodities and does not repay its debt to the banking system fully there would be an expansionary impact.

To conclude that the U.S. commodity assistance is having a neutral effect on the net bank credit

Current News and Comment

Checking Inflation

The Central Planning Minister, Mr. Gulzarilal Nanda, told the Lok Sabha last week that it is necessary to hold the price line not only for the successful implementation of the third plan but also for the success of India's export drive. There was a downward trend in prices towards the end of 1962 when the general index of wholesale prices declined from 131.1 in August to 125.6 in December. But, since then, there has been a rise, especially in the case of rice, drugs, medicines, sugar and a number of other manufactured goods. The general index of wholesale prices increased to 126.5 during the week ended 26th January, 1963, and probably still further in February 1963. The main plank in the Government's price policy has been the opening of fair price shops and consumer's co-operatives, the display of price lists; better distribution of available supplies by the licensing of wholesale foodgrain traders, and rice and flour mills; and by releasing stocks of wheat, rice and sugar under Government control at the right moment. The policy also includes the formation of vigilance committees and seeking the co-operation of trade and industry in restricting profit margins. It was due to the combined effect of all these measures that prices declined in the second half of 1962.

The importance of Mr. Nanda's latest speech lies in the fact that although all the old methods of price stabilisation are being continued, greater emphasis is now being placed on some measures which, in the past, did not receive much attention. It is realised that an increase in the production of agricultural commodities and manufactured goods is necessary. Thus, it has been decided that cement factories which exceed the peak production of the previous three years will be paid a cash bonus at the rate of Rs. 2½ to Rs. 5½ a ton of additional production. A similar policy of an incentive bonus should be made applicable for other manufactured goods, whose production has to be increased quickly either for defence or export. Mr. Nanda also announced that incentive bonus would be given to farmers who surrender more foodgrains to the Government.

Apart from the incentive provided by fixing minimum prices before the commencement of the sowing season of cotton, jute and sugarcane, efforts to increase the production of such foodgrains as rice, millets and pulses and cash crops like cotton, sugarcane and oilseeds will be made by intensive cultivation in selected areas with special efforts to increase productivity. In intensive programmes in selected blocks, farmers will be provided with better seeds, more manure at concessional rates, greater and cheaper irrigation facilities and proper guidance about better methods of production. In this way, the increased production of manufactured goods and agricultural commodities will help stabilise prices. Another feature of the official price policy is that although physical controls on production and distribution will not be imposed because of administrative difficulties, "selective" physical controls will be imposed. But physical controls—whether complete or selective—tend to push available supplies to the black market, so their application should be avoided. Mr. Nanda referred to the possible effects of the increased

to the Government and on money supply seems to be an over-simplification of the entire problem. Firstly, the Government always holds imported food stocks and occasionally sells food at subsidised prices. Secondly, the neutral effect would only result if the money paid to the U.S. Embassy and its later expenditure for specific purposes were balanced. This is unlikely to take place except in the long run. It would, therefore, be more useful to find out the effects of the commodity assistance over a shorter period, such as three months, through a study of the figures relating to the total assistance obtained, the amount of the counterpart funds allocated for specific purposes, the quantity of Government food stocks and the amount of subsidy given.

defence and development outlay on prices. But he did not categorically state that inflationary forces would gain momentum if the level of deficit financing is increased or additional taxation is imposed by the Central and State Governments in 1963-64. In order to stabilise prices, it will be necessary to keep such inflationary forces under control while finding the finance for development and defence.

Expanding Steel Output

More than ordinary interest attaches to the comments which Sir Jehangir Ghandy made last week in a speech at the Staff College in Wellington, on the recent improvement in the steel outlook, because he has been a fairly outspoken critic in the past. In the assessment he offered in Capital's mid-year supplement in June 1962, he warned that poor performance at Rourkela and Durgapur was not only damaging morale at home but also alarming India's friends abroad. Now with full production in sight at these two, and with Bhilai doing better than its rated capacity, he says that the apprehensions felt overseas about India's ability to manage new plants should be allayed. The improvement has happily coincided with a welcome growth in the output of coal and in transport capacity to move it—the two major bottlenecks which have bedevilled steel production in the past. Basing his argument on this reassuring turn of events, Sir Jehangir has entered a plea for an early decision on U.S. aid for the Bokaro steel plant because India needs this addition to her steel capacity. Anticipating perhaps a possible U.S. question whether skilled manpower will be available to run Bokaro, he has suggested that the contract for this plant should specifically include production management for an initial period while Indian understudies are trained to take up operating responsibilities. This well-argued case for U.S. assistance to Bokaro, it is hoped, will be noted in Washington and New Delhi's Chanakyaपुरi, particularly because the plea comes from a disinterested quarter.

Looking beyond Bokaro, Sir Jehangir accepts the need for further development of steel capacity as rapidly as possible, but warns against making planning an exercise in wishful thinking. The figures he quotes of the additional coal, iron ore and limestone required if steel production is to rise to 18 million tons by 1970-71, give a concrete measure of the task on the raw material front. One would agree with him that if any of the essen-

India's Resources
are Precious

WASTE NOT,
WANT NOT

tial preparatory work on raising raw materials and moving them to steel plants is deferred because the people concerned have already too much on their hands, it would unquestionably jeopardise the whole steel programme. The determination and vigour with which work is undertaken on these tasks is certainly a good test of the sincerity in proposing a particular target. His own conclusion is that the size of the preparatory tasks continues to be under-estimated, which may once again result in the setbacks suffered during the second plan.

Cane Shortage Hits Sugar Mills

The U.P. sugar industry faces a crisis due to the raw material shortage. In the past, some factories in western U.P. worked up to the end of May and even early in June, but this year most of them will close down by the end of March at the latest. The main cause of the sugarcane shortage is that the State Government tried to reduce cane cultivation in the current season by 10 percent on the advice of the Central Government. There has been little winter rain in some parts of U.P. Furthermore, the formula linking the price of cane with sugar recovery has been enforced from the current season. Under this, the minimum price of cane at the factory gate is Rs. 1.50 a maund and at rail centres Rs. 1.38 a maund, against the corresponding prices of Rs. 1.75 and Rs. 1.62 a maund during the last crushing season. The recovery percentage of sugar in most parts of U.P. is low. So, in spite of the fact that the new formula provides for higher cane prices in case of better recovery, cultivators do not hope to earn much under the scheme. Prices of gur and khandasari sugar have recently increased much more than those of factory sugar, so gur and khandasari producers are finding it possible to pay higher prices for sugarcane than the factories can possibly afford. This has resulted in the diversion of sugarcane from sugar factories to the cottage industry sector.

The U.P. sugar output in 1962-63 is expected to fall by about 20 percent, thereby reducing the all-India production of factory sugar from 2.7 million tons in 1961-62 to less than 2.4 million tons in the current season. This will not only increase the internal prices of factory sugar, but will also make it difficult for India to export the desired amount. When the Central Food Minister, Mr. S. K. Patil, visited Lucknow in the middle of February, the U.P. Chief Minister urged him to give up the policy of linking the price of cane with sugar recovery in order to provide the necessary incentives to cultivators to increase the sugarcane acreage as well as the yield an acre. At a meeting of the sub-committee of the Indian Central Sugarcane Committee in New Delhi last week, the U.P. Government's scheme for intensive sugarcane cultivation in selected areas of all the 71 sugar factories in the State was approved. But the State Government thinks that it may not be possible to increase sugarcane cultivation in U.P. unless the new price formula is given up by the Central Government.

Indian Tea in the Antipodes

An insight into the market conditions for tea in Australia, New Zealand and Singapore has been provided by the Indian tea delegation which recently visited those countries. In its report, the delegation has broadly outlined the circumstances under which Ceylon, at the expense of India, has steadily and substantially increased her tea exports to those countries over the years. Indian tea receded to the background not because the Australians have any prejudice against it, but because of other factors. For one thing, the prices of Ceylon's tea until a year ago were far more competitive. For another, her publicity and public relations work in Australia has been systematic and sustained. Actually, how successful Ceylon's publicity campaign has been is evident from the delegation's observation that there is a general belief in Australia that most of the world's tea comes from Ceylon. Furthermore, India's shipping facilities were not satisfactory in the past. However, as a result of the reduction in the export duty in the last Central Budget, Indian tea has become competitive for the first time in many

years. This country's exports to Australia have more than doubled during the past year.

The delegation has made several recommendations with a view to stepping up Indian tea exports to the countries it visited, especially to Australia. It attaches a good deal of importance to the joint promotion scheme to popularise tea as a beverage. But it remains to be seen whether the other major exporting countries would be prepared to finance such a scheme on the basis of their present pro rata exports to Australia. Concurrently with the joint promotion scheme, the delegation suggests that a vigorous "un-inational" campaign should be launched so that India may be able to secure a fair share of Australia's total tea imports. Other recommendations made by the delegation are equally important. They include the establishment of a tea centre in Sydney, opening of tea centres in the important cities and towns, introduction of Indian packs, organising a sampling service with the object of providing the Australian buyers with a wide range of Indian teas, mailing of weekly market reports and propaganda pamphlets, and finally inviting important people in the tea trade to visit India.

The delegation has expressed the view that the outlook for Indian tea in New Zealand is satisfactory. Since Indonesia dominates the Singapore market because of her proximity and rock-bottom prices, the delegation feels that there is scope only for pushing packet teas in that country. What, however, cannot escape one's notice is the silence of the delegation over the developments which have virtually negated the benefits of the export duty reduction in the Central Budget exactly a year ago. One such development was the wage increase granted to the tea garden labourers. Another was the introduction of the emergency risks insurance scheme, making it obligatory for the tea gardens to pay rather heavy premia. These adverse factors are bound to increase the production costs fairly steeply. Unless, therefore, the export duty is abolished and India's competitive position improved, it is extremely doubtful whether the acceptance and implementation of the tea delegation's recommendations alone will yield any tangible result.

Tea Packagers Want Duty Cut

Mr. J. G. Robinson, in his presidential address at the annual meeting of the Tea Packers Association of India held in Calcutta last Monday, has made a forceful plea for scrapping the export duty on tea. In spite of the strike by the Joint Steamer Companies' crew, India's tea exports in 1962 have risen to 214 million kilograms. This improvement is primarily due to the cut in export duty granted in the last Budget. There is much force in Mr. Robinson's suggestion to abolish the remaining export duty of 10nP a kilogram, since it will further strengthen the competitive position of Indian tea abroad. He feels that the loss of revenue to the exchequer would be more than offset if excise duty is paid on all teas consumed internally at the same rate as on packet tea. At present a duty varying from 15nP to 45nP a kilogram, according to the zone, is levied when tea leaves the gardens. If the tea is exported, a flat rebate of 15nP is allowed. In case it is retained for the home market, a further tax of 40nP has to be paid if it is packed in containers of less than 21 kilograms. However, if the tea is sold loose—and over 72 million kilograms worth about Rs. 45 crores are sold thus every year, according to Mr. Robinson—it is not subject to any further Central tax. This is rather discriminatory and puts the packagers at a big disadvantage. Even otherwise, they are indirectly bearing a large portion of the excise duty on packaging materials like paper, foil and cellophane. Packaging is an important industry in that it protects the consumer from adulteration and other malpractices and ensures for him a clean product.

The Tea Packers Association has been suggesting for some years now that the Government should permit the movement of tea in bond from the gardens to Calcutta and Cochin. If this is done, says Mr. Robinson, an equal universal tax could be levied on internal consumption near the point of sale. The West Bengal entry tax could also be

merged into it and thus the latter's adverse effect on the growth of the Calcutta auctions could be staved off. As a result of the West Bengal entry tax, he says, at least 22 million kilograms of tea have been sold directly from the gardens this season. Besides being a loss to the State, it means that this large quantity of tea, much of which was exportable, was sold even before international buyers could see it.

CORRESPONDENCE

PLIGHT OF GOLDSMITHS

(TO THE EDITOR OF "CAPITAL")

Sir,

The most tragic aspect of the Gold Control Rules is the plight of thousands of goldsmiths and dealers, who have become unemployed all over the country. According to the last census report, 400,000 persons earn their livelihood from the gold trade. However, from the reports pouring in from various centres during the last few weeks, it appears that this number is much larger and that over three million people, including the dependents of the bread-winners from the trade, are seriously affected by these Rules.

The rule which provides that new ornaments cannot be made of gold exceeding 14 carats in purity is unrealistic and will not reduce the demand for gold. Those who are determined to buy it will buy two tolas of 14-carat gold instead of one tola of 22 carats and will thus create greater demand for the yellow metal than at present. Fourteen-carat gold is unsuitable for enamelling and kundan work. The high degree of malleability and ductility which gold possesses is extremely important for fashioning beautiful jewellery of artistic and intricate design, in the making of which our craftsmen have acquired a high degree of proficiency and skill. It is idle to contend that 14-carat gold possesses the same degree of malleability and ductility as pure gold. The artistry of the goldsmiths has been handed down from father to son for generations. It is up to the nation and the Government to see that this priceless heritage is not killed.

Yours etcetera,
PHIROZE J. SHROFF

Bombay, 18th February.

BENGAL CHAMBER

THE proceedings at the annual meeting of the Bengal Chamber of Commerce would have been absolutely bald and common place, and of the merest routine description, had not Mr. Shirley Trevelyan enlivened them with his vigorous criticism of the proceedings of the Viceroy and his scratch Building Committee with reference to the Victoria Memorial Hall site. His description of the said dozen of gentlemen (being more than the minimum statute number required for the purpose) as constituting "an unlawful assembly" was a hit, a palpable hit, and was greatly relished by all in the meeting, including the two Knights of the Chamber, who get their portraits painted for them. Indeed, the hearty applause amid which Mr. Trevelyan sat down, showed that the prevailing feeling throughout the members of the Chamber of Commerce was exactly in accord with that of the general public in their determination that the maiden shall be kept free from new buildings of any description whatever. The speech of Sir Montagu Turner from the chair cannot be described as of the illuminating order, being nothing else than a good, tame, running commentary on some of the points touched upon in the annual report. This is all the more to be regretted as there are no end of subjects looming in the future, bearing upon the welfare of India, any of which, handled by a man of vision, might have furnished food for thought not only to the members of the Chamber, but to the Government of India. But Sir Montagu contented himself with an exposition after the manner of the clergyman, who when reading to his congregation the Scotch metre version of the hundredth psalm—"All people that on earth do dwell," paused, and then, looking very wise, said in his most oracular manner—"This simply means, my brethren, all the people that dwell on the earth."

A Ditcher's Diary

ONSET OF THE EMERGENCY MR. NEHRU REDED the Congress Parliamentary Party of Chamberlain's leadership during the second World War; and I didn't quite see the relevance. Of late there has been much talk of an "air umbrella" for India, and I thought of Chamberlain; this time it may be Mr. Nehru's turn to miss the parallel. The coyness with which the Government of India approaches the whole question of western aid in face of the Chinese challenge brings to mind the vision of some of the "virtuous" women on whom La Rochefoucauld composed some of his best epigrams. And all this is quite unnecessary, except that India finds it difficult precisely to assess the extent of the Chinese threat on which must depend the extent to which non-aligned India will permit herself to accept western military aid. After Professor Galbraith's forthright statement there remains no excuse for India being worried about her non-alignment. Dash it all, no big Power wants India aligned to itself or to any other Power; that's the plain truth. Remains the question of the country's defence in case China attacks again. In the recent past New Delhi's intelligence in these matters has not been seen to be adequate; and I hope measures are already in hand to improve it. But, as in the matter of arms and equipment, the West's assistance should surely be available. Indeed, I would be surprised if the West is not, when considering the question of aid to India, weighing just how much help India actually needs to defend herself against China. This predicated an assessment of Chinese intentions, taking into account, necessarily, the imponderables of any situation and the inscrutability of the Chinese mind. The team that recently visited New Delhi may at this moment be wondering about the inscrutability of the Indian mind! At most times subjective attitudes of particular individuals affect objective situations but slightly. But defence demands firm decisions followed by resolute action before the enemy attacks; and this is why dithering is now impermissible in New Delhi. Whatever the Chinese may be up to, India needs greater defence in the air than she can in the foreseeable future arrange for herself; and that means help from others. And this need not abridge either sovereignty or non-alignment.

AS I READ, PURELY IN TERMS OF ACADEMIC INTEREST, of the latest restrictions on how many more or less useless rupees one may take when going abroad, I wondered why it had not occurred to anyone to congratulate Professor Humayun Kabir on the fact that, since the emergency, he has not once gone to London to negotiate the future of the India

Office library. Such forbearance amid so much alleged ostentation in New Delhi deserves grateful recognition; and I am glad to record the exemplary sacrifice, especially because the example is not being followed very widely. Too many Indians still turn up at all sorts of dubious international conferences for no apparent reason; and at least one official of the External Affairs Ministry is at this moment touring eastern Europe to "sell" India's stand on something or other. On the lines of a diplomatist's warning that the first thing to be remembered about foreign affairs is that they are foreign, it has been said that India's policy on foreign exchange is indeed foreign. I find it downright alien. According to one New Delhi columnist, India lost a great deal of foreign exchange for the total ban on the import of Scotch whisky because many tourists are said to have cancelled their proposed Indian trip for this reason. I do not believe that this is wholly true; but it is typical of the Government of India that the decision has been partially revised for the benefit of tourists. Why did we not, instead, advertise that India produces not equal but drinkable substitutes? Although everyone talks about increasing exports, the emphasis by far is on conserving foreign exchange rather than on earning more. This inhibited attitude explains much that is wrong in life in India today. One Indian manufacturer of whisky, I was told the other day, has been for years trying to persuade the Government of India to let him import enough Scotch to blend with his own product, as is done in the U.S.A. He is said to have guaranteed foreign exchange earnings twice the amount spent. Perhaps there is another side to the story; but I am quite convinced that the going is hard for anyone trying to earn foreign exchange. Is it seriously supposed that the reduction of the travel allowance from Rs. 75 to Rs. 40 will make any material difference to India's foreign exchange resources?

AS ONE OF THOSE WHOSE ONLY FORM OF EXERCISE is the occasional flexing of the right elbow, I defer in awe to the achievement of Mr. Robert Kennedy, the U.S. Attorney-General, in walking 50 miles in 17 hours. And I have no intentions of exhibiting the sour grapes of some critical, though obviously jealous, commentators who have pointed out that Britain's Barbara Moore—a mere woman and not far short of twice Mr. Kennedy's age—is on record as having bettered this performance by something like 59 miles. I have no intention either of joining forces with those who are wondering what it all has to do with ability as a legislator. In the world as it is today, the

capacity to walk 50 miles in under 24 hours, or better still to be able to run them, is as good a qualification for politics as any. After all, I seem to remember that the right to govern in Gulliver's Lilliput was decided according to a candidate's accomplishments on the tight-rope. But as a criterion among journalists I have always favoured as old-fashioned a concept as professional ability, and I am glad to see that the Washington Press corps has indignantly defied this latest Presidential gimmick. The world will, of course, remain eternally divided between two sets of people: those who believe in exercise and those who do not. Personally, I am of the opinion that anybody who considers exercise does him good, benefits from it. For myself, the philosophy of Theodore Roosevelt, a predecessor of Mr. John Kennedy, who held that one should never walk when it is possible to ride, never stand when one can sit down, and never sit when one can lie, has considerably more attractions. Am I healthy in my laziness? Well, if I am not I can always console myself with the immortal words of Oscar Wilde, that nobody whose intellect he ever remotely admired enjoyed good health. Friends have been pressing me for years to take up golf, and lately my resistance had been weakening. Then I read the advice of Sir Compton Mackenzie on his eightieth birthday that the secret of his longevity was total abstinence from exercise, especially golf, than which, he maintained, "there is no more ageing a game". Now I feel justified in holding out a little longer.

WITH THE PUBLIC HEARINGS OF THE VASSALL Tribunal now complete—and they have been the longest of their kind in Britain's history—it is becoming easier to get the whole distressing business into perspective. I remarked some weeks ago about the principle whether or not a journalist should disclose his sources of information which it raised. Now I feel the need to refer to another one which seems to have arisen in somewhat acute form—the supposed inevitability of homosexuals being corrupted. It seems to me that the main purpose of the Tribunal has really been to decide why, if Vassall was indeed well known throughout the Admiralty as a homosexual, as the newspapers claimed, he was not sacked for being a bad security risk before he had time to do any damage as a spy. Surely, this just will not do. The public attitude to homosexuality being what it is, there can be no doubt that those addicted—if that is the correct word—are in greater danger from the attentions of blackmailers than most people. But it is scarcely fair or proper to suggest that they are more likely to betray their employers or their country than anybody else with a rather more-than-average dose of human failings. The fact that Vassall was obviously living above his income is one thing, but to deduce that simply because he was a homosexual he had no right to a job in the

"SCCO"

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

Admiralty at all, is indeed another. The logical conclusion to such an approach would be that no homosexual, or in fact any man of feminine appearance or manner, should ever be employed in a position of trust. And as most jobs which carry any salary at all have some kind of trust attached to them, this would mean that homosexuals would be doomed for life to seeking their living in underpaid and menial labours through no fault of their own. Apart from this being a disgraceful waste of brains, it would surely turn the unfortunate victims into an even greater social problem than they are already. There is considerable danger of this happening; witch-hunting is all too much to the public taste in this day and age.

SOMEBODY WROTE THE OTHER DAY TO *The Times* to say that you cannot "overplay" your hand, though you can "overcall" it. Whatever it is, Pakistan appears to have done it. Although Nepal and Burma also signed border agreements with China not so long ago, there is a difference. Looked at legally, Pakistan has no common border with China; Nepal and Burma have. If some of the Indian indignation is synthetic, Pakistan's folly seems totally inexplicable. Already it has angered Washington; and it will not be surprising if this later affects aid. In fact I have a feeling that the Kennedy Administration never shared the late Mr. Dulles's picture of Pakistan as a mighty ally against communism. I do not often look at the Karachi Press; but whenever I do I am amazed at the near-hysteria some papers display almost daily. If they represent the public mood, which is not always the case, Pakistanis must at the moment be anti-everybody. When there was a smallpox scare in Britain last year, the editor of *Dawn*, I understand, had a rather unpleasant experience at London Airport. The result was a series of tirades against Britain so virulent in tone that, it seemed, the gentleman concerned would not rest until Pakistan left the Commonwealth. Nothing of the sort happened. The rift with the United States may have rather more serious consequences, although it is equally possible that Washington will eventually see the Sino-Pak border treaty as the useless piece of paper it in effect is. Nothing much is known about the frontier tribals in Pakistan; if they trouble the Government much their transfer to China, if the treaty means any such thing, may well be good riddance. It is quite on the cards, on the other hand, that President Ayub Khan is trying out yet another stunt to fob off such internal trouble as he may have. This periodical need to shape foreign policy according to the dictates of domestic political needs has been the curse of Pakistan since its birth, distorting not only relations with India and others but also Pakistan's own politics and economy. If Pakistan for a moment imagines that the deal with China will frighten India into making concessions in Kashmir, it has, to coin a phrase, another "think" coming.

ONE OF THE COMPENSATIONS OF THE JOURNALIST'S life is the occasional discovery that those he criticises may not be entirely bone-headed. Last week, I wrote of the difficulties in securing a copy of the Vivian Bose report on the administration of Dalmia-Jain companies; it is with considerable pleasure, therefore, that I can now say that the full report finally arrived on my table on Monday afternoon. I do not suggest that there was necessarily a causal connection between the publication of the complaint and the arrival of the report. On the contrary, I modestly prefer to believe that the unflattering rumours which had started circulating on the subject had already begun to worry the smart alécs who might earlier have thought themselves clever enough to try to restrict the circulation of this important document. Indeed, I am told on good authority that the unsavoury subterfuge ultimately attracted the Prime Minister's notice; as a result, orders have been issued that more copies of the report are to be printed, circulated and offered for sale. For literary value, the Vivian Bose report may not quite compare with the *History of the Great American Fortunes*. But, at Rs. 12.50, it is a good investment.

THE DITCHER

Guide for Investors

EXPANSION OF ALKALI AND CHEMICAL

THE ordinary shares of Alkali and Chemical Corporation of India Ltd have lacked support around Rs. 34 due to the decline in the profit for the year ended September 1962. The profit has fallen from Rs. 1.41 crores to Rs. 71.72 lakhs, after providing Rs. 41.07 lakhs (against Rs. 40.56 lakhs) for depreciation. Sums of Rs. 2.82 lakhs have been transferred from taxation provision no longer required and Rs. 2.5 lakhs (the same) from reserve for deferred income tax liability due to initial allowances. A taxable ordinary dividend of 15 percent has been maintained. This is covered more than one-and-a-half times and offers a yield of 4.4 percent at the present price of Rs. 19 each a share. Taxation absorbs Rs. 27.22 lakhs (against Rs. 52.50 lakhs) and development rebate reserve Rs. 1.10 lakhs (against Rs. 2.50 lakhs). The carry-forward is Rs. 1.37 lakhs, against Rs. 1.16 lakhs brought in.

Although total sales rose, the turnover increased from Rs. 6.63 crores to only Rs. 6.95 crores following price cuts. The selling prices of polythene and paints were cut in order to meet competition. These cuts, combined with a rise in excise duties on paints and polythene granules led to a fall in the profits. The directors say that in spite of the interruption of work following the construction work on the new intermediate density plant, the polythene output rose. Considerable improvement has been brought about in the use of raw materials. The production of paints increased considerably, although the Company faced difficulties in obtaining raw materials. The expansion of the paints factory has contributed to the increased output. The chlorine and caustic soda units have worked up to their maximum capacities, but the profit margins have been adversely affected by the increase in prices of salt and electric power. The performance of the gammaxane B.H.C. unit has improved further.

The construction work for the new intermediate density plant has started. Licences for importing capital goods have been obtained, and arrangements are being made to finance the foreign exchange expenditure. The design work has made progress, and imported equipment has started arriving at the site. A licence has been obtained for expanding the paints factory and for the installation of a new resin plant. The blueprints are now being prepared. The rubber chemical factory is expected to be completed during the current year. The Company has exported such products as paints, alkathene and B.H.C. materials. Active steps have also been taken to explore new markets for the Company's various products.

Progress of East Anglia Plastics

THE ordinary shares of East Anglia Plastics (India) Ltd are being quoted around Rs. 11.25 on expansion and rights issue prospects. The Government has granted an industrial licence to the Company for manufacturing 1,000 tons of plasticisers a year. Plasticisers constitute important raw materials for manufacturing cellulose acetate moulding compound. The factory for making plasticisers will be located in West Bengal. The

Company's compounding unit in Calcutta for manufacturing cellulose acetate moulding compounds and P.V.C. compounds is already in production. The factory making for cellulose acetate flakes—the principal raw material for the manufacture of cellulose acetate moulding compounds—will be established in Andhra Pradesh. The unit for producing plasticisers will go into production within a year. The projects will help complete the integrated scheme for manufacturing cellulose acetate moulding compounds from indigenous raw materials. The compounding unit will be self-sufficient in raw materials which are now imported. The project in Andhra Pradesh will produce cellulose acetate flakes, bleached cotton, acetic acid and acetic anhydride which are in great demand for both civil and defence purposes.

Volta's Makes Progress

IN his chairman's statement circulated along with the report and accounts of Volta Ltd, Mr. J. D. Choksi has reassured shareholders that in spite of the smaller profit following the increased tax provision for the year ended August 1962, the Company has had its best trading year since its inception. (A fuller version of the statement is printed on a later page in this week's issue of *Capital*.) On 31st August, 1962, fully licensed orders in hand and the profits expected from them have been considerably higher than in previous years. But the Company has had to contend with longer delivery periods. A substantial portion of the business has not been completed due to various formalities. But for these factors, the profit in 1961-62 would have been much higher than in 1960-61. Volta has nevertheless maintained a taxable ordinary dividend of 14 percent which is more than thrice covered. It offers a yield of 5.6 percent at the present price of Rs. 248 a share of Rs. 100 each.

Volta is essentially a trading Company. Mr. Choksi points to the important rôle which it has been playing in marketing and distribution. Although the Company has had to face difficulties in distributing imported goods, its business in distributing indigenous goods has been steadily growing. An important factor contributing to the Company's growth is that it has succeeded well in distributing goods. It also provides after-sales services throughout the country. Volta maintains an overseas buying and forwarding organisation for goods which are imported into India. Although the Company has been trying to supply spare parts, its work has been interrupted by the shortage of imported spares. The Government should, therefore, consider increasing the import of spares in order to ensure a fuller use of the existing equipment. The success achieved by the Company in distribution has helped it to win the world's "best distributor award" on three occasions in the recent past for a certain type of construction equipment of a leading manufacturer in this field.

Mr. Choksi points to the importance of distributors in a modern business organisation, since some have been misled to think that they are para-

sites. The honest and efficient distributor is a vital link between the manufacturer and the consumer. By virtue of his long experience and specialised knowledge of markets, the distributor knows the consumer better and advises the manufacturer of the exact needs of the market. "More often than not, the distributor finances the whole operation of distribution from the point of production to the point of actual sale and even beyond", the chairman says. The distributor also helps to ensure equitable distribution and prevent hoarding.

United Bank Repeats Dividend

THE United Bank of India Ltd has produced satisfactory results for the year ended December 1962. The profit has improved from Rs. 20.50 lakhs in 1960-61 to Rs. 21.20 lakhs in 1961-62. The taxable ordinary dividend of 6 percent has been maintained which absorbs Rs. 16.08 lakhs. The yield works out to 8.14 percent at the present price of Rs. 7.34 a share of Rs. 10 each. Reserve fund is allocated Rs. 4.26 lakhs. The carry-forward is Rs. 3.28 lakhs, against Rs. 2.40 lakhs brought in. Interest paid on deposits amounted to Rs. 1.13 crores while interest and discounts earned increased from Rs. 2.38 crores to Rs. 2.90 crores. Deposits rose by Rs. 5.84 crores to Rs. 64.70 crores. Cash stood at Rs. 7.91 crores, against Rs. 8.09 crores. Investments increased from Rs. 17.71 crores to Rs. 19.16 crores and advances from Rs. 37.61 crores to Rs. 43.90 crores.

Bright Outlook for Mukand Iron

THE Rs. 10-paid shares of Mukand Iron and Steel Works, which were quoted around Rs. 17.48 on 19th February, shot up to Rs. 18.76 on 20th February, against around Rs. 15.72 about a week earlier. The rush for buying followed shareholders' annual visit to the Company's factory in Kuria. Mr. Viren J. Shah, chief executive of the Company, told an informal gathering of shareholders at the Company's works on 19th February that the sales for the current year ending 31st March, were expected to be around Rs. 6.5 crores, against Rs. 4.73 crores in 1961-62, and that the working results would be encouraging. The output of steel castings would be around 7,600 tons, against 6,300 tons and that of rolled products around 56,000 tons, against 37,300 tons in 1961-62. The improved performance had been possible due to the satisfactory supply position of billets, the receipts so far having exceeded 56,000 tonnes. The Kuria steel foundry had turned the corner and was now yielding fair results; its capacity was likely to be raised from 600 tons a year to 1,000 tons a year.

Mr. Shah said that the Company had enough orders on hand and since its steel foundry capacity was booked for the whole year, it was not in a position to accept further orders. Negotiations were, however, in progress with the Government of India for work in connection with the defence effort. Mr. Shah disclosed that more than 60 percent of the Com-

pany's steel castings was for the railways and about 15 percent for two motor-car companies.

The Company proposes to set up in Kalwe, near Thana, a wire rod plant and a 20-tonne electric arc furnace to produce billets from steel scrap. The annual capacity of the proposed works will be about 50,000 tonnes of steel (liquid) and about 80,000 tonnes of wire rods. The plant will work on a continuous casting process instead of the traditional blooming mill method and the electric arc furnace will reduce the Company's dependence to a considerable extent for steel billets—the main raw material—on the big steel producers. This would result in considerable operational economies. The Kalwe project is estimated to cost about Rs. 4.7 crores; inclusive of Rs. 1 crore for working capital. Mr. Shah informed the shareholders that the machinery for the project would be delivered within the next 18 months. The furnace would consume annually 60,000 tons of steel scrap which would be available from indigenous sources.

Explaining the circumstances under which the rights issue of Rs. 91.89 lakhs was to be rushed before the end of February, Mr. Shah said that the Company had given a moral undertaking to the Controller of Capital Issues to make the rights issue before the end of February for being permitted to issue new shares at a nominal premium of Re. 1, against Rs. 5 to Rs. 6 which the Controller had earlier suggested. Besides, even for drawing on its loans for the new project from the Commonwealth Development Finance Company and the I.C.I.C.I., the Company had first to raise its own capital according to the terms of agreement with these institutions. With the completion of the Kalwe project, Mukand Iron will have one of the most modern rod rolling mills for producing wire rods of steel of high quality and tensile strength and its 20-tonne electric arc furnace will also be one of the biggest of its kind in the country for turning steel from steel scrap, Mr. Shah said. He expressed the hope that barring unforeseen circumstances, the Company would be in a position to earn sufficient profits to maintain dividend on increased capital.

Referring to the controversial issue of the conversion of deferred shares, Mr. Shah said that the management had represented to the Government to enable the Company to convert the shares, but the Central Board of Revenue had given the opinion that the conversion would attract capital gains tax. The Company had approached the Finance Minister requesting him to amend the Act. Deferred shareholders were unlikely to agree to conversion if it was liable to capital gains tax.

New Standard Engineering Venture

NEW Standard Engineering Company Ltd, Bombay, which is already engaged in the manufacture of a number of machine tools like drilling machines, furnaces and pneumatic hammers has sought the Government of India's permission to manufacture shot blasting equipment worth about Rs. 40 lakhs. Tilghmans Ltd of the U.K. and Wheelabrator Corporation of the U.S.A. will be the foreign collaborators, providing not only technical know-how, but also participating in the capital of the new Company which will implement this project. The new Company will be known as Wheelabrator-Tilghmans N.S.E. Ltd and it will have an authorised capital of Rs. 50 lakhs. It is proposed to issue shares worth Rs. 68,750 each to Tilghmans and Wheelabrator against the supply of technical know-how and further shares of the value

of 237,500 each will be issued to foreign firms for the supply of plant and machinery. The value of imported equipment is estimated around Rs. 19.18 lakhs.

Reliable reports indicate that the Government's sanction for the proposed venture will be forthcoming shortly. India is currently importing shot blasting equipment worth Rs. 45 to Rs. 50 lakhs a year. Every effort is being made to step up the manufacture of machine tools because of the increased defence requirements. The demand for machine tools, it is estimated, will be around Rs. 65 crores a year by 1965. The total licensed capacity is of the order of Rs. 49.72 crores, and the installed capacity is much smaller around Rs. 11.30 crores.

Suhrid Geigy Expansion Project

RELIABLE reports indicate that the Government of India has approved in principle the proposal

submitted by Suhrid Geigy Ltd, Baroda, for effecting a substantial expansion for the manufacture of cyanuric chloride. The Company is already engaged in the manufacture of dyestuffs, tinopals, etcetera, and it has also a captive unit for manufacturing 72 tons a year of cyanuric chloride which is required in the manufacture of dyestuffs. The Company has sought permission to raise the capacity for cyanuric chloride from the present 72 tons to 300 tons a year. This would make the manufacture of cyanuric chloride more economic and help satisfy the requirements of Companies like Atul Products and Tata-Fison.

It is proposed to secure manufacturing know-how and the patent rights from Dogussa of West Germany and Mushobino Chemicals Laboratory of Japan through the courtesy of Messrs. J. R. Geigy S.A., Sessal, of Switzerland. The cost of imported capital equipment is placed at Rs. 12.15 lakhs and in addition, the Company will need to import raw materials—sodium cyanide and special activated carbon—worth about Rs.

7.50 lakhs a year, which, however, is likely to be reduced considerably when sodium cyanide becomes available from indigenous sources. The Swiss firm has agreed to provide the necessary foreign exchange for plant and machinery for the larger unit.

Fit Tight Nuts Fares Well

DESPITE the heavy slump in the stock market which pushed the shares of many new companies well below par, the shares of Fit Tight Nuts and Bolts Ltd have continued to enjoy a high premium—the Rs. 100-paid share is currently quoted around Rs. 175—which reflects investors' confidence in the prospects for the Company. Judged by its performance during the year ended September 1962, the confidence does not seem misplaced. Sales in the period increased by nearly 43 percent from Rs. 4.21 lakhs to Rs. 6.03 lakhs, and the gross profit rose by about 40 percent from Rs. 1.98 lakhs to Rs. 2.75

lakhs. The ratio of gross profit to sales works out to around 45.6 percent. The directors have provided Rs. 72,438 (against Rs. 57,761) for depreciation and Rs. 80,730 (against nil) for development rebate. After writing off the entire balance of preliminary expenses and brokerage of shares amounting to Rs. 73,471, the balance of Rs. 97,276 is being carried forward, against Rs. 73,682 brought in. There are no arrears of depreciation and development rebate.

The directors state that the major portion of the tool room was commissioned by September 1962. Due to various reasons, production machinery could not be commissioned earlier than October. The remaining machinery was received in January 1963. By the end of 1962, the Company made successful trial runs on all the machines installed by that time and completed the manufacturing range of high tensile nuts of $\frac{1}{2}$ in. to $\frac{1}{4}$ in. diameter and 6 m.m. to 20 m.m. diameter. It also started the manufacture of high tensile bolts from 6 m.m. to 10 m.m. diameter in various lengths. The trial runs for bolts of 12 m.m. to 16 m.m. diameter are being carried on, and it is expected that the production of these items on commercial basis will be taken on hand by March. The Company has also developed certain specialised items of fastenings for the motor-car industry for which orders have already been received. Development of further items is being considered.

The Company has booked orders for the whole of the year ending September 1963. The management has submitted a scheme to the Government for expansion with a view to meeting the emergency requirements of fastenings. During the year, the Company purchased machinery worth Rs. 2.09 lakhs locally and obtained an import licence for capital goods worth Rs. 2.08 lakhs. A further application for the import of capital goods worth Rs. 2.25 lakhs is pending before the Government.

Thirumbadi Rubber Pays Less

THE directors of the Thirumbadi Rubber Co. Ltd have recommended a smaller dividend of 10 percent for the year ended 30th September, 1962, against 12 percent for the previous year. They regret that a better distribution is not possible due to the high incidence of taxation. The net profit for 1961-62 is Rs. 1,03,481 after meeting all expenses and after providing Rs. 94,600 for taxation, compared with a net profit of Rs. 54,943 for the previous year, after providing Rs. 73,000 for taxation. Adding to the year's net profit a sum of Rs. 5,034 brought forward, Rs. 146 being excess provision for taxation in previous years and with a sum of Rs. 100,000 transferred from debenture redemption reserve, the total Rs. 2,08,661. Out of this, a sum of Rs. 75,000 is transferred to general reserve, against nil, and a sum of Rs. 25,000 is transferred to rehabilitation and development reserve (against Rs. 4,75,000). It may be noted that a sum of Rs. 5,24,001 was included in the profit and loss appropriation account of last year being the profit on the sale of Calicut Estate. The proposed dividend of 10 percent, taxable, will absorb Rs. 91,530. The balance of Rs. 17,131 is carried forward.

During the year, 101.86 acres of old seedling rubber has been replanted and 50 acres of virgin jungle has been planted with clonal rubber seedlings. A crop of 202,316 kilograms was harvested during the year at a cost of Rs. 3.24 a kilogram, compared with 245,549 kilograms at a cost of Rs. 3.31 a kilogram last year. The average price realised for the year was Rs. 3.38

a kilogram, compared with Rs. 3.76 a kilogram for 1960-61. The crop for 1962-63 is estimated at 205,000 kilograms, at a cost of Rs. 3.23 a kilogram. It is pointed out that prices for the off-grades produced were considerably lower than in the previous year in keeping with the general trend of the rubber market in India, and this was the main reason for the lower average sale price realised for the year. It is reported that increases in labour wages, staff salaries and amenities and replanting expenses have contributed greatly towards the increase in the estate cost of production.

Canara Banking Syndicate

THE working of the Canara Industrial and Banking Syndicate Ltd for the year ended December 1962, shows all-round progress in the bank's activities. Total deposits, which were Rs. 24.60 crores in December 1961, increased to Rs. 32.65 crores in December 1962—the rise being 37 percent. Total advances have increased to Rs. 18.27 crores. The paid-up capital stands at Rs. 76.64 lakhs and reserves including share premium have risen to Rs. 66 lakhs. The net profit amounts to Rs. 30.33 lakhs. Out of this, Rs. 6.50 lakhs has been transferred to statutory reserves and Rs. 3 lakhs has been set apart for bonus. A sum of Rs. 8.4 lakhs is required for the payment of dividend which is being maintained at 8.57 percent and 7.15 percent on preference shares of Rs. 100 and Rs. 10 each, respectively, and 20 percent on equity shares. A sum of Rs. 12 lakhs has been set apart for the payment of taxes and Rs. 77,782 is being carried forward, against Rs. 34,750 brought in.

Canara Banking Syndicate has a network of 176 branches, including eight branches opened in December 1962, and one branch in January 1963. The bank has received licences from the Reserve Bank of India for the opening of two branches in Curuchorum and Sanquelim, both in Goa. These branches will be opened shortly.

Creamery Company and Food Specialities

IN the issue of Capital dated 14th February, the item headlined "Milk Products from Creamery Company" on page 229 mentioned that India's current output of condensed milk is "hardly around 250 tons". A director of Food Specialities Ltd of New Delhi informs us that his Company is now manufacturing condensed milk at the rate of approximately 2,000 tons a year.

Sharp Rise in Bank of India Deposits

THE directors' full report on the working of the Bank of India for 1962 shows that in spite of an impressive increase of about 32 percent in the bank's total income from Rs. 6.09 crores to Rs. 8.03 crores, the net profit is up by a mere Rs. 1.22 lakhs to Rs. 1.12 crores. This is because of an all-round increase in expenditure. Interest on deposits and borrowings has risen from Rs. 2.60 crores to Rs. 3.55 crores; salaries and allowances show a rise from Rs. 1.61 crores to Rs. 2.05 crores; rent, taxes, insurance, lighting, etcetera, are up from Rs. 18.65 lakhs to Rs. 32.93 lakhs and other expenditure including a contribution of Rs. 5.50 lakhs to the National Defence Fund, has risen from Rs. 27.8 lakhs to Rs. 49.15 lakhs. The working

results are also said to have been affected by the credit restrictions imposed by the Reserve Bank of India. The nominal increase in the Bank of India's profit against an impressive rise in the total income reflects the general squeeze on the banking industry's profits.

In his statement to shareholders which has been circulated with the directors' report, the chairman, Mr. A. D. Shroff, says that the year 1962 has been one of great significance as far as deposit growth is concerned. The bank's deposits increased by more than Rs. 32 crores or 25.7 percent, compared with Rs. 16 crores or 14.2 percent in 1961. This rate of growth in the growth rate of deposits of the entire banking system, which is about 12 percent. With the opening of 24 additional branches, including the branches of the Gadodia Bank, the Bank of India achieved the target of 100 offices by the end of 1962. Of the new branches opened during the year, two were abroad—one in Lagos and the other in Manchester. The bank has now branches in nine countries, the largest representation for any Indian bank. The organisational structure has been strengthened, by the setting up of new departments—the Department of Economic Intelligence and Statistics and the Industrial Finance Department—on the lines of well-established institutions in other countries.

Mr. Shroff has revealed that 80 percent of the bank's depositors are small depositors, holding deposits of less than Rs. 5,000 each. As in the case of deposits, the pattern of advances is also weighted in favour of a large number of borrowers with low limits of accommodation. A break-down of the advances granted by the bank shows that secured advances of Rs. 5 lakhs and under and unsecured advances of Rs. 1 lakh and under, account for about 87 percent of the total number of advances granted by the bank. Disbursement of the bank's advances as on 31st December, 1962, showed that 64.24 percent went to industry, 23.11 percent went to commerce, and the rest to others.

Mr. A. D. Shroff's statement will naturally interest all those who are interested in the problems facing the Indian banking system. The question how the mobilisation plans would affect the banking industry over the next few years is agitating bankers at present. Mr. Shroff rightly points out that the crucial problem is how to draw in the currency which the community is acquiring through defence spending into the banking system and channel it into productive purposes. Much of the progress of the banking system will depend on its ability to transform currency accruals into deposits as quickly as possible in the years ahead. The problem of deposit mobilisation is a crucial one not only for the banking system in general, but for the economy as a whole. For individual banks, the ability to attract more deposits is linked with the range as well as the efficiency of the services provided.

Referring to the Reserve Bank of India's directive asking banks "to bear in mind the need for expansion in the areas not covered by any facilities so far" while drawing up their branch expansion programmes, Mr. Shroff says that the need to provide banking facilities in the vast rural and semi-urban areas not at present served by any commercial bank should be accepted, but it may not be in the larger interests of the country to prohibit new branches in bigger towns. The policy of the Reserve Bank, says Mr. Shroff, is likely to place the big banks at a disadvantage in the matter of their branch expansion programmes. The plan to expand banking facilities into smaller towns should not be allowed

to come in the way of opening branches in bigger towns. It would be more appropriate if the larger objective of extending banking facilities to smaller towns is co-ordinated in some definite manner with the immediate need to expand banking facilities in bigger towns so that the pursuit of the former does not hamper the satisfactory provision of finance to boost industrial production as well as exports.

The branch expansion programme has a bearing on the problem of export promotion. Mr. Shroff has made a plea that the Government of India and the Reserve Bank should encourage banks to open branches in foreign countries and offer them facilities for building up trade contacts with importers there. Referring to the amendment to the Banking Companies Act 1949 passed in September 1962, raising the liquidity ratio to 28 percent as from November 1964, Mr. Shroff says that this legislation is likely to curtail the flow of credit to the private sector from now onwards, because banks have progressively to adjust their advances portfolio to enable them to abide by the higher liquidity ratio when it comes into operation. This in turn is bound to affect the profit margin.

New Capital Issues

EIGHT companies have been authorised to issue capital totalling Rs. 32.25 crores. The following are the details:

Boots Pure Drug Company (India) Private Limited, Bombay, is to issue further capital of Rs. 40 lakhs in equity shares of Rs. 10 each. Out of this, shares of the value of Rs. 20 lakhs will first be issued to the parent company, namely Boots Pure Drug Company Ltd of the U.K. at par consisting of Rs. 9 lakhs against repayment of the outstanding amount of a demand loan and Rs. 11 lakhs for cash. After conversion into a public limited company, shares of the value of Rs. 20 lakhs divided into 200,000 equity shares of Rs. 10 each for cash at a premium of Rs. 16 a share will be offered—102,000 shares to the Investment Corporation of India Ltd, and 98,000 shares to the Indian public by prospectus.

Duncan Brothers and Company Ltd, Calcutta, is to issue 10,000 cumulative redeemable preference shares of Rs. 100 each for cash at par to be issued to the Home Insurance Group of companies to be subscribed from out of their funds in India.

M.R. Industries Ltd, Bombay, will issue bonus shares of the value of Rs. 14,83,030 divided into 148,303 equity shares of Rs. 10 each at par on capitalisation of the Company's reserves to be made in the ratio of 1:1.

Payen-Talbro Private Ltd, Delhi, is to issue Rs. 5 lakhs bonus capital on capitalisation of Company's reserves to a like extent.

Heavy Engineering Corporation Ltd, Ranchi, a Central Government Undertaking, is to issue further capital of Rs. 28.65 crores divided into 286,500 equity shares of Rs. 1,000 each for cash at par.

Indian Drugs and Pharmaceuticals Ltd, Delhi, another Central Government undertaking, is raising further capital of Rs. 2.5 crores divided into 25,000 equity shares of Rs. 1,000 each for cash at par.

Hindustan Machine Tools Ltd, Bangalore, yet another Central Government undertaking is raising further capital of Rs. 25 lakhs divided into 2,500 shares of Rs. 1,000 each.

The Cannanore Spinning and Weaving Mills Ltd, Kerala, is to issue Rs. 15 lakhs equity capital to be issued for cash at par.

3 top-quality ACC products

Here are three products for you,
bearing the ACC hallmark of quality.

FIREBRICKS

—supplied according to YOUR specifications
of shapes, sizes and alumina content, ACC firebricks
resist abrasion and spalling.

ACCOSET-50

(MONOLITHIC REFRACTORY CEMENT)

—air-setting refractory mortar that withstands
temperatures up to 1710°C, and has firm bonding
strength. For jointing, bonding, monolithic lining etc.

ACCOCID

(ACID-RESISTING CEMENT)

—a special cement which is proof against acids
and chemicals. For setting acid-resistant bricks, for
acid towers, for fume-stacks... wherever
protection from acids is needed.

VOLTAS LIMITED**ANOTHER YEAR OF EXPANDING ACTIVITY****MR. J. D. CHOKSI UNDERLINES THE IMPORTANT ROLE
OF MARKETING AND DISTRIBUTION**

The 8th Annual General Meeting of Voltas Limited was held at Bombay House, Bruce Street, Bombay, on the 25th February, 1963.

The following is the Statement by the Chairman, Mr. J. D. Choksi, which was circulated with the Annual Report—

This statement comes to you at a critical period in the history of the country. We are living in the shadow, if not in the limelight, of a national crisis. I shall not make any pious pronouncement on this emergency as appears to be the order of the day. The situation is far too grave for that and at all times deeds are to be preferred to words.

In war and peace your Company will give of its best; but clearly the path of duty requires a renewed concentration and mobilisation of our resources in furtherance of the national effort. The present emergency should lead to a development of the total industrial potential and, I hope, into making India a great industrial country. Your Company has a part to play in such development. I am sure that its performance in the current year and in the years to come in the fulfilment of this cause will be such as to deserve the trust and confidence of the shareholders.

As shareholders are aware we are essentially a trading company. Our skills lie more particularly in the fields of marketing and distribution. Our origin was that of an import house dealing mainly with the distribution and servicing of foreign goods and equipment of the highest quality. We have represented, and continue to represent, leading manufacturers in many lines and categories of goods, and their names are a by-word throughout the world in their particular fields. The products of many of them are still essential for the industrial development of this country and despite the continuously changing policies of Government, we have succeeded in retaining our share of such imports under the various licensing and credit arrangements. We are confident that, in spite of increasing difficulties, we shall maintain our position in the future, because of the excellent relationships that have been established with our foreign associates and with our customers, supplemented by our flexible and efficient nation-wide services.

Rising Turnover

Over the years, we have acquired the distributorship of many well-known Indian manufacturers and today Indian-made products form over 43%, against only 7% in 1954-55, of our total turnover. We expect this share to increase substantially in years to come and are confident that technological improvements and the increasing adoption of modern methods of production will result in improvements in quality, making the Indian article the equal in every respect of the foreign-made product.

The rôle of a distributor such as Voltas is barely understood or appreciated either by the lay public or by the authorities. Any and every agency which operates between the manufacturer and the consumer is often regarded as unnecessary, dishonest and parasitic. If any country needs the skills and facilities of expert marketing and distribution, it is India in its

present stage of development. The honest and efficient distributor is a vital link between the manufacturer and the consumer or end-user. By virtue of his long experience and specialised knowledge of markets, he knows the consumer better and advises the manufacturer better of the consumer's exact wants and preferences. And by being in constant touch with consumer centres throughout the country, he knows the varying demands or requirements of different centres and ensures a smooth and efficient flow and distribution of goods. More often than not, the distributor finances the whole operation of distribution from the point of production to the point of actual sale and even beyond.

At the present time when most goods are in short supply, selling may not be a very difficult problem. But the rôle of an honest distributor even under such scarcity conditions remains an important one. With his specialised knowledge, he serves the best interests of both manufacturer and consumer by ensuring equitable distribution and preventing hoarding in certain pockets and the high-jacking of prices in others. Our performance in this respect has been responsible, times out of number, for many scarce items of merchandise reaching consumers or end-users at normal prices. And when the wide range of our activities and the infinite variety of goods handled—700 different product groups—is considered, shareholders will have some appreciation of the service we render to the community.

Regrettable Fact

It is a regrettable fact that the bias against the distribution trade persists in official and unofficial circles. This bias is reflected in the Government's import policy for the current licensing period, in which further drastic cuts have been made in the import quotas of distributors. Fortunately, in many of our lines, holders of actual users import licences, including Government

undertakings, avail themselves of our services to make their purchases abroad and to import their requirements into India. We provide these and other distributing and after-sales services in return for a very reasonable fixed distributor's margin which cannot by any stretch of imagination be termed profit.

I would like to give you some idea of the principal duties and functions of a Distributor. He must maintain an overseas buying and forwarding organisation for goods that are imported. He must also provide storage and warehousing facilities for imported as well as locally-made goods at important centres throughout the country. Insurance of goods and handling, transport and forwarding are among his other responsibilities. In most cases he is also required to provide finance during transit and storage of goods and give credit facilities to wholesalers, dealers or end-users even after the sale of goods is effected. And a principal distributor like this Company must maintain an all-India sales and delivery organisation as well as specialised departments—such as Publicity and Marketing Research—to assist him in his marketing operations. It is obvious that few manufacturers in India outside the range of major corporations, would be competent or capable of giving this kind of specialised service to market the goods manufactured by them.

Service Facilities

Selling must be backed by service. At Voltas, when we make a sale we back it with SERVICE—with service facilities throughout the country. This factor is of greater significance during the present emergency when machines and equipment must work ceaselessly and to their full capacity. However, maintaining a first class service organisation is only half the battle. No service organisation can function effectively without an adequate supply of spare parts. Unfortunately a situation is developing under which, while we offer round-the-clock

service, we are not assured of a steady supply of a spares, as under the latest import policy of the Government, our quotas for spare parts have been practically abolished. I fear that this policy may soon lead to a breakdown and the immobilisation of many crores of rupees worth of valuable equipment. It might well be asked whether this policy is in the best interests of the country.

The success attained by your Company in the field of distribution has resulted in the Company having won on three occasions in the recent past the World's Best Distributor Award for a certain type of construction equipment of a leading manufacturer in this field. It has also resulted in many approaches being made to us for advice and guidance in the development of industries and the better utilisation of equipment within the country. Not long ago, we were paid an indirect compliment, when we were asked by the Government and their foreign collaborators to undertake the servicing and maintenance of all equipment falling under certain categories in use in one of the largest Government corporations—including those supplied by others!

Working Results

I should now like to deal briefly with the Company's working during the year ended on 31st August, 1962. Though the profits, as shown in the Accounts and discussed in the Directors' Report are slightly lower than last year, mainly on account of a higher provision for taxation, the Company has in fact had its best trading year since its inception. Fully licensed orders in hand, and the margins expected thereon, are considerably higher as of 31st August, 1962, than in previous years. We have experienced longer delivery periods, particularly from Common Market countries and from Switzerland and the completion of formalities in connection with business financed under Government-to-Government loans has taken more time than originally expected. But for these two reasons, the profits for 1961-62 would have surpassed the results achieved in 1960-61.

In conclusion, I express the appreciation of the Board to all those officers and employees of the Company who have been responsible for the results achieved during the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

UNITED BANK OF INDIA LIMITED

Regd. Office: United Bank Buildings, 4, Clive Ghat Street, Calcutta

Annual Report

To be placed before the shareholders of the Annual General Meeting to be held at the Registered Office of the Bank at 4 Clive Ghat Street, Calcutta, on Monday, the 25th March, 1963, at 11 a.m.

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1962

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1962 and Profit & Loss Account for the year ended 31st December 1962 together with the Auditors' Report thereon.

The Profit for the year after making provision for taxation and including the balance of Rs. 2,39,694.16 brought forward from the previous year's account amounts to Rs. 23,60,006.24

Out of this amount the following appropriations have been made:

To Reserve Fund under Section 17 of the Banking Companies Act Rs. 4,26,000.00

Leaving an available balance of Rs. 19,34,006.24

Out of the above the Directors recommend the payment of a Dividend to the shareholders @ 6 per cent per annum subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing Rs. 16,08,000.00

Balance to be carried forward to next year's account Rs. 3,26,006.24

The Bank's business during the year made satisfactory progress.

During the year under report, one branch at Naharkatia (Duliajan) in the State of Assam was opened.

Sri J. M. Dutt, Sri K. C. Das, Sri M. J. Vaidya and Sri S. Gupta retire by rotation and being eligible offer themselves for re-election.

The Directors report with deep regret the demise on the 15th of April 1962 of Sri Narendra Chandra Datta, a revered member of the Board and the founder of The Comilla Banking Corporation Ltd., one of the amalgamating units. The Board has placed on record its high appreciation of the valuable services rendered by him to the banking industry, as a pioneer in the eastern region of undivided India, as also to the Company.

The Bank during the year under report, made contributions of Rs. 1,50,000/- to the National Defence Fund and Rs. 25,000/- to Dr. B. C. Roy Memorial Fund.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Sri M. J. Vaidya, being out of India, could not sign the Report and Accounts.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1962 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date which are incorporated in the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of section 211 and sub-section (5) of section 212 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the bank which have come to our notice, have been within the powers of the Bank;
- in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;
- the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns; and
- in our opinion and to the best of our information and according to the explanations given to us, and according to the information required by the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 15th February, 1963.

RAY & RAY,
Chartered Accountants.

CALCUTTA AWAITS BUDGET WITH SUBDUED OPTIMISM

Wednesday Evening.

THE Calcutta stock market has gone through the past week with subdued optimism. At first, turnover increased on fresh support combined with short-covering. Share prices improved all-round. Lyons Range was inclined to take an optimistic view about the Central Budget which will be presented tomorrow evening. The optimism was based on the view that the Railway and State Government Budgets had not imposed heavy burdens. It was thought that the Central Finance Minister would also be lenient.

Towards the close, investors and operators have turned cautious and turnover has shrunk. Although share prices have been steady because of the absence of selling pressure, support has been selective. The steadiness is based on an improved technical position. Since bears have covered their sales and the outstanding business has been substantially squared up, the market has become more or less normal. Hence the authorities have scrapped all minimum prices, although restrictions on forward trading continue. The future trend will depend on the new taxes which the Finance Minister proposes.

The second instalment of supplementary demands presented to Parliament indicates that Mr. Morarji Desai will face a difficult task in raising the necessary resources. There is no doubt that the Government has so far received substantial sums in the form of contributions to the National Defence Fund and premiums for emergency risks insurance. The former, it is believed, has amounted to about Rs. 45 crores and the latter to Rs. 9 crores. Besides, collections from small savings schemes have been buoyant during the past couple of months, although it is doubtful if the progress can be maintained in the absence of proper organisational efforts.

The stock market guess is that new taxes may yield between Rs. 120 crores and Rs. 130 crores. It also thinks that a large portion of these taxes will be indirect rather than direct. On the view that the new fiscal measures should not discourage production, it is felt that there may be no fresh burden on companies. It is also difficult to visualise any whittling down of the development rebate, since capital formation has to be encouraged. Lyons Range is hoping that the bonus share tax may be scrapped since it has discouraged the flow of capital into trade and industry. Besides, it has fetched little revenue for the Government.

These hopes should not give rise to a sense of complacency. Investors would be well-advised to remember that the working of industry continues to be afflicted by several political and economic uncertainties. The news that the Pakistani Foreign Minister has gone to Peking to sign a border agreement with China has virtually marred the prospects of the coming Indo-Pakistani conference on the Kashmir issue.

Although the recent U.S. loan will help India to import raw materials and spare parts, industry will continue to suffer from shortage of foreign exchange, which is likely to become more acute during the next

licensing period. The shortage of funds for the stock market has been aggravated since banks have been chary of advancing money against shares. Opinion is divided on whether shares are fully-priced at present. In view of the all-round increase in interest rates, the dividends on many shares have become unattractive. On a longer view, it is difficult to be optimistic since the profit outlook has become less favourable because of the increase in production costs combined with official measures to regulate the prices of many commodities. In the circumstances, investors may be more discreet in purchasing shares.

Indian Iron have improved after a long interval due to short-covering and replacement purchases. In the engineering section, attention has been concentrated on Burn, Braithwaite, Indian Standard Wagon, Guest, Keen, Williams, Jessop, Kumardhubi and Britannia Engineering. Texmaco has gained on prospects of expansion with foreign collaboration.

Jute shares have been generally steady in fair turnover. At the close, investors are cautious because of a decline in the offtake of jute goods by foreign countries. They have also been disturbed by rumours that the excise duty on jute goods may be increased. Birla, Fort Gloster, Gourapore, Anglo-India, Barnagore, Union, Howrah, India, and Megha have been prominent. Champdany have attracted attention on the news that the Company will soon refund a portion of the share capital and the shares of Rs. 100 each will be sub-divided into 10 shares of Rs. 10 each.

Prices of selected coal shares have gained on replacement buying. Burrakur, Bengal, Equitable, East Indian, Amalgamated and Central India have been quoted at higher prices. In the cotton mill section, interest has been taken in Dunbar, Bowreah, Jay Shree, J. K. Rayon and Bharat Commerce. Bank shares have generally been neglected. Sugar shares have been difficult to transact in the absence of buyers. Small interest has been shown in tea shares at lower levels. Hantapara, Tezpor, Methoni, Brooke Bond and Hasimara have been transacted.

Prices of miscellaneous shares have improved. Among clearing shares, Hindusthan Motors, Indian Aluminium, Indian Cable, Indian Copper, Orissa Cement and Jaipur Udyog have gained. Alkali Chemical have been quiet on showing smaller profits. Profit-taking has reduced Angelo Brothers. Martin Burn have been steady despite a dividend cut. National Pipes and Tubes have been steady on repeating the dividend. Goodyear India have improved on prospects of a rights issue. Among new scrip, Hindusthan Twyford, India Carbon, Phillips Carbon and Isaac Holdens have been prominent. In paper shares Titaghar, Bengal and Ballarpore have been steady. Orient and Sirpur have gained on influential support. Among electric companies, Calcutta Electric have been taken.

Government securities have generally been dull. Scattered support has been extended to short-dated loans. Prices of medium and long-dated loans show little variation. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.10. Prices

of State Government loans have been depressed in the absence of support.

Bombay

SENTIMENT IMPROVES IN DALAL STREET

NO POST-BUDGET TRADING ON THURSDAY

Wednesday Evening.

THE Bombay stock market has decided for the first time in 15 years not to hold a special Budget trading session on Thursday. The decision has apparently been made because normal trading has not yet been fully restored. Sentiment has, however, improved during the past week and share prices have gained all round. There has been a great deal of short-covering as bears have decided to cover their sales before the Central Budget is presented. There has also been considerable replacement buying because of optimism about the Budget proposals. It is generally believed that the new taxes will not be very stiff as the corporation tax and income tax on personal incomes are already too high. Since the working of the corporate sector has not been encouraging in

recent months, it is unlikely that incentives such as the development rebate will be whittled down.

An important factor contributing to the present steadiness is the squaring up of the outstanding business. The technical position of the market has become healthier. Steel shares have been supported after a long interval. Tata Steel have improved to Rs. 121 and Indian Iron to Rs. 21.72. Among engineering shares, support has been extended to Tata Locomotive, Larsen and Toubro, Premier Construction and Alcock Ashdown. Mukand Iron have been bought on expansion prospects. Among motor-vehicle shares, Hindustan Motors have been supported. Premier Automobiles have met with scattered buying.

Selected cotton mill shares have been bought at rising prices. The improved cloth offtake has been an important stimulating factor. Interest has been taken in Century at Rs. 552, in Bombay Dyeing at Rs. 60 and in Kohinoor at Rs. 283. Svadeshi, Tata Mills, Standard and India United ordinary have been taken. Gokak, Morarjee and Simplex have met with support.

The improvement in chemical shares has been outstanding in the miscellaneous section. Indian Dye-stuff and Polychem have gained considerably. Support has been extended to Tata Chemicals. Cement shares have been sluggish and stray business has been transacted in Associated Cement and Digvijay. Steamship company shares have been quiet, and business has been done in Scindia Steam. Among mining shares, B. B. Petrol have improved, but Shivrampur Syndicate have been neglected.

The earlier interest in sugar shares has not been maintained at the close.

Belapur and Walchandnagar Industries have been sold freely. Rayon shares have been steady, and National Rayon recovered on short-covering. Interest has been taken in Gwalior Rayon and Baroda Rayon. Bombay Burmah have gained on replacement purchases. Support has been extended to Voltas on prospects of expansion and a rights issue. Tata Oil have been bought. Permanent Magnets and S.L.M. Maneklal have gained.

Bank shares have been quietly steady. Bank of India and Bank of Baroda have been dealt in. Among insurance shares, New India Assurance have been prominent on the news that the Company will soon issue bonus shares. Electric companies have been quietly steady. Business has been transacted in Ahmedabad, Bombay Suburban and Tata Hydro.

Madras

MARKET DISCOUNTS BUDGET FEARS

SHARE PRICES REMAIN STEADY

Tuesday Evening.

THE Madras stock market has been steadier during the past week because of higher advices from Dalal Street. Although fresh support has been cautious, selling pressure has abated considerably. There has been growing outside interest in some clearing shares. Operators are inclined to think that the new tax measures in the Central Budget may not be very stiff. This optimism

apparently stems from the fact that the five State Governments, which have presented their Budgets so far, have proposed only modest new levies.

Government securities have generally been quiet and holders have been inclined to cut prices on firm buying indications. Bank shares have generally lacked interest. Canara Bank has declared a taxable ordinary dividend of 15 percent. Stray support has been extended to selected electric companies such as Negapatnam and Vellore. Sugar shares have been dealt in cautiously on fears of an increase in excise duty. E.I.D. have nevertheless been steady around Rs. 40 due to the shortage of scrip. Interest has been shown in Andhra and Mysore.

Selected tea and coffee shares have been bought on good corporate reports. Investors have also been impressed by the steady auction prices for tea. Blue Mountain have come to hand at Rs. 256. Consolidated Coffee at Rs. 18.00 and Periakaramalai at Rs. 3.08. Mysore Coffee have paid a taxable ordinary dividend of 15 percent and Vaikundam a taxable final ordinary dividend of 20 percent. Rubber shares have evoked little interest. In the textile section, South India Viscose have been an outstanding feature and the price has improved to Rs. 157 on prospects of an excellent report. Travancore Rayon have hardened to Rs. 26.75 on short-covering. Madura have been steady at Rs. 31.50. Dhana-lakshmi have declared a taxable ordinary dividend of 17.5 percent. Anglo-French and Bangalore Woollen have been steady.

Selected cement and chemical shares have been supported in the miscellaneous section. India Cement

London

ECONOMIC POLICY HELPS SENTIMENT

EQUITIES RISE

London, 27th February.

WITH the British Government now committed to a programme of spending to boost the economy, buyers have been taking a greater interest in the stock market in the past few days with the idea that the forthcoming Budget in April will provide a strong stimulus to industry. Sentiment has also been helped by some encouraging statements from leading companies, and the recovery in profits announced by English Electric and Monsanto Chemicals has made a good impression. I.C.I.'s preliminary statement, it was thought, would be of a similar pattern, and should the dividend be lifted slightly, the shares ought to continue the good recovery they have made since their "low" of 47s 6d last year. Cotton textiles were helped by the optimism of the chairman of Lancashire Cotton Corporation on the outlook. There was a good demand for engineering and machine tool shares and stores were supported. Motors made good headway under the lead of B.M.C., although the unchanged dividend from Jaguars was a disappointment. But while equities were favoured gilt-edged drifted lower. Dollar stocks lost some ground in the past day or two particularly following President Kennedy's warning on the danger of another post-war recession if Congress refuses tax cuts. Gold shares moved irregularly, but Anglo-American Corporation were wanted following the big investment deal. Charterers who were also involved in the transaction were wanted. Oils were supported at times with Shell and Royal Dutch wanted in front of the quarterly statement which is due in March. Rubbers and teas held steady.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours
Durbhanga Sugar Co. Ltd.	28-2-63	10-30 a.m.
Indian Iron & Steel Co. Ltd.	28-2-63	11 a.m.

'BEHAR' the dependable name in

FIRECLAY & SILICA Refractories

For nearly half a century BEHAR REFRATORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRE CEMENT • STOPPERS • SLEEVES • NOZZLES • TUBES, ETC.

Money

THE CALCUTTA MONEY MARKET

INTERBANK CONDITIONS TIGHT

Wednesday, 27th February.

THE general level of advances has again shown a fair increase in the Calcutta money market during the past week. The requirements of the iron, steel and engineering industries have risen substantially, while those of the cotton and sugar mills are also slightly higher. Credit for the storage of foodgrains and seeds shows a small decrease, but the advances to the jute mills are unchanged. In the inter-bank market, conditions are tight and the call rate is quoted at 6 percent.

The exchange market has been slightly more active, mainly because of an improved supply of gunny bills. The flow of tea bills remains unchanged. The demand for remittance has been keener. The trend in sterling has been mixed, the fluctuations being within narrow limits.

SILVER WAS QUIET IN CALCUTTA during the past week due to profit-taking. The price fell from the previous week's level of Rs. 276.25 to Rs. 275 quoted today for ready delivery and no forward transaction was reported. The London and New York prices were 108½ and 125½ cents. There was no trading in gold.

DURING THE WEEK ENDED 22ND February, Government of India Treasury bills for Rs. 17,44,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-day Government of India Treasury bills were opened on 25th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.365 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 27th February to 2nd March at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 20th February to 23rd February, amounted to Rs. 5,75,000.

THERE WERE DECLINES OF RS. 19.54 crores to Rs. 2,207.11 crores in the total note issue and Rs. 14.05 crores to Rs. 2,194.48 crores in active notes, according to the return of the Reserve Bank of India for the week ended 22nd February, 1963. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 1,876.42 crores. This was done by transferring these securities to the Banking Department in which investments were Rs. 20.03 crores larger at Rs. 226.67 crores. Deposits of the Government of India fell by Rs. 1.82 crores to Rs. 84.56 crores while other Government accounts rose by Rs. 85 lakhs to Rs. 9.80 crores. Balances of scheduled banks at Rs. 77.84 crores showed a fall of Rs. 1.21 crores. Balances held abroad were Rs. 1.95 crores bigger at Rs. 11.96 crores. Loans to scheduled banks

rose from Rs. 37.55 crores to Rs. 38.61 crores, of which advances against usance bills were Rs. 26.82 crores (Rs. 25.52 crores). Ways and means advances stood at Rs. 26.52 crores, against Rs. 27.44 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 15th February, 1963, shows a rise of Rs. 2.79 crores to Rs. 554.37 crores in total deposits. Investments in Government securities are down by Rs. 8 crores to Rs. 215.27 crores, while other authorised investments are up by Rs. 30 lakhs to Rs. 10.37 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 65 lakhs to Rs. 303.51 crores. Cash and balances are, in consequence, shown at Rs. 26.90 crores or Rs. 4.71 crores higher.

THE STATEMENT OF THE POSITION OF schedule banks for the week ended 15th February, 1963, shows Demand and Time liabilities at Rs. 941.20 crores (Rs. 21.11 crores on account of borrowings from banks) and Rs. 1,276.36 crores (Rs. 20.02 crores) compared with Rs. 932.95 crores (Rs. 19.16 crores) and Rs. 1,274.18 crores (Rs. 19.43 crores) in the previous week. Cash has increased by Rs. 88 lakhs to Rs. 51.55 crores, while balances with the Reserve Bank have declined by Rs. 1.90 crores to Rs. 76.14 crores. There is a drop of Rs. 16.47 crores to Rs. 605.69 crores in investments. Advances and bills discounted at Rs. 1,527.96 crores show a rise of Rs. 5.94 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.8 percent and 68.9 percent, against 5.8 percent and 69.0 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 1-3-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Rate

GOVERNMENT EXPENDITURE NEEDS TO BE REDUCED

(FROM OUR NEW DELHI CORRESPONDENT)

IN his address to Parliament last week, the President, Dr. S. Radhakrishnan, said: "Economy in expenditure, the elimination of waste, conservation of our limited material resources and restraint on consumption, always important, are of particular importance today." The address, however, gave no indication how the Government is implementing these cardinal principles. The President referred to the goodwill visits of foreign dignitaries during the year, "which we have welcomed, from many heads of States and Prime Ministers and others from many countries. Among them were their Majesties the King and Queen of Nepal, President Lope-Mateos of Mexico, Mr. George Gheorghiu-Dej, President of the People's Republic of Rumania, President Makarios of Cyprus, Dr. Heinrich Lübke, President of West Germany, His Royal Highness Prince Norodom Sihanouk of Cambodia, their Majesties the King and Queen of Greece, Prime Minister Mr. Lee Kuan Yew of Singapore, Prime Minister Tanu Abdul Rahman of Malaya, Mr. Edward Kardelj, Vice-President of Yugoslavia, and Dr. Rachid Karamé, Prime Minister of the Lebanon."

The Delhi Municipal Corporation, it is learnt, has been spending, on average, Rs. 1.5 lakhs a year on civic receptions for these dignitaries. Two features are noticeable today. Under planning, the Constitutional division of functions—the most remarkable feature of a federal Constitution—has been removed. Even primary education, which is not even the responsibility of a State but of a municipal board, is being financed by the Centre. The following is another quotation from the President's address to illustrate the point further:

"The community development programme now almost covers the entire country, and panchayati raj is now functioning in nine States. In view of the emergency, a special programme has been started for the full mobilisation of rural India to meet the challenge of national defence. Village volunteer forces will be organised in every panchayat with a three-fold programme—production, mass education and village defence. An integral part of the scheme is the creation of a defence labour bank based on the donation of free labour at the minimum rate of one day's labour a month by every adult. The co-operative movement in the rural areas has made considerable progress and the membership of primary agricultural credit societies, which is 20 million now, is expected to rise to 24 million in 1963 and to 28 million next year. More than a thousand co-operative farming societies have been organised so far."

But the question is whether all these responsibilities, however desirable they may be, should be borne by the Centre. If the latter overburdens itself, it may be unable to do now important work for defence and development.

The other noticeable feature is that even the stress on economy has been discarded. The Central Finance Ministry, for example, has rejected the Estimates Committee's suggestion that the Planning Commission should conduct a special study of the trend in economic and administrative ex-

penditure in order to effect economies. The ground for rejection is that adequate machinery already exists in the Government to effect all possible economies. The Government's unwillingness to reduce expenditure is probably due to its fear that it may lead to a fall in employment. Khadi, for example, is heavily subsidised because it provides employment to Congress workers.

The former Central Finance Minister, Mr. C. D. Deshmukh, once created a cell to recommend economies in expenditure. But many recommendations it made were not implemented in later years. The Prime Minister lays a statement before Parliament at least once a year, showing economies. But in spite of the continuous clamour for economy, Governmental expenditure has been continuously increasing. The Central Budget will illustrate this point.

The unwillingness of State Governments to raise additional revenues, as envisaged by the Planning Commission, is another disturbing factor. One obvious result of this will be that the Centre will have to raise money for State Governments as well.

PRICE LEVEL

Policy Clarified

The Central Minister for Planning, Mr. Gulzarilal Nanda, expressed fears last week that the stability of the price line might be upset by the anticipated increase in defence expenditure and the accelerated rate of economic development.

When replying to a debate on the Government's price policy in Parliament, the Minister said that the downward trend in prices, which continued till the end of December last, had stopped and there had been "a slight upward trend" during the past ten weeks. The Minister added that "there is no room for complacency." At the last meeting of the standing committee of the National Development Council, it was pointed out that the full implementation of the plan and the defence build-up, now in progress, were financially impracticable and could lead to inflation. In a nationwide broadcast on 6th February, Mr. Nanda, on the other hand, posed a question and himself gave the answer in the following words:

"Can we then afford to maintain, during the period of the emergency, the outlays on development as envisaged in the third five year plan? Should not the plan be pruned for the sake of defence? These questions are based on an erroneous view of the nature of the defence requirements and the processes by which they can be fulfilled. If the emergency were to be thought of in terms of a brief duration—a matter of a few months—civil consumption might be drastically cut down and development could be temporarily slowed down with a view to diverting resources for defence. The emergency is, however, going to be with us for a long period, during which the apparatus of defence will have to be expanded in a very large way. This involves naturally a corresponding expansion of the economy. Our approach will have to be in conson-

ance with these realities. From now on, defence and development must be regarded as integral and fully related parts of the national economic plan."

Mr. Nanda did not, however, say how the Government proposes to find money for defence and development expenditure. Side by side, he has been giving assurances that the price line will be maintained. Meanwhile, the rates of water and electricity in Delhi have been enhanced. The Railway Budget has imposed an additional levy on goods freights, and the inter-State sales tax has been doubled. All these increases will inevitably be reflected in the price structure. Further taxation in the Central Budget will also prove inflationary. In due course, organised labour will demand an increase in the dearness allowance. This will further increase prices. So the vicious circle will go on.

POWER SURVEY

Shortage Forecast

The first annual power survey conference, which concluded its three-day meeting here last week, was of the opinion that there would be a slight power shortage towards the end of the second year of the third plan. This will be mainly due to the shortage in anticipated and actual power production at the beginning of the third plan. According to the targets fixed, the aggregate installed generating capacity by the end of 1962-63 was to be 7.03 million kilowatts while actually it is going to be 6.83 million kilowatts, resulting in a shortage of 200,000 kilowatts. The backlog of shortage between the anticipated and actual power production at the beginning of the third plan was 100,000 kilowatts.

Attended by the representatives of the State Electricity Boards, electric undertakings and the Planning Commission, the conference was presided over by Mr. K. P. S. Nair, member of the Central Water and Power Commission.

The conference, which considered in detail the approach to the fourth plan power programme, emphasised that future power plans cannot be related as at present merely to the resources and requirements of any individual State. The comparatively slow economic development in the past had enabled the plans of the State Governments to be made substantially independent of each other. But with the present magnitude of power development and the tremendous increase envisaged for the future, it is not possible to continue the pattern of largely isolated development. Future power development, it was agreed has, therefore, to be planned first on a national basis; this plan being later broken up into appropriate portions to be allotted to individual States and authorities.

The conference agreed on three basic requirements for power planning for the fourth plan. Firstly, the implementation of continuing schemes under the second and third plans, whose benefits will be partially or fully derived during the fourth plan period. Secondly, the launching of new schemes in addition to those already existing, to meet the expected demand for power in the fourth plan;

and, thirdly, investigation and sanction of preliminary work for the schemes required for the fifth plan. In order to ensure that benefits from new schemes for the fourth plan are derived in time, the conference thought it necessary to sanction these schemes during the third plan itself.

It has been estimated that 2 million kilowatts of generating capacity will be available during the first two years of the fourth plan from the existing schemes. Plans are being considered to provide another 2 million kilowatts during the period. One of the points emphasised at the conference is the need for standardisation of power plants and transmission lines to avoid varying degrees of performance, to effect economy, to facilitate construction and to help manufacturers produce standardised equipment. The conference reconciled the figures about load forecasting from different States. The power survey is expected to be completed by June this year.

In his concluding remarks, the chairman hoped that it might be possible to conduct surveys in the country twice a year in the future. These surveys, he emphasised, are necessary for realistic power planning.

INDONESIA

Trade Team Expected

An Indonesian delegation of technical experts and trade representatives is expected to arrive in India soon. After the delegation has explored the field in detail, a Governmental delegation led by the Indonesian Minister of Trade will come to India for concluding a trade agreement between the two countries. Mr. Manubhai Shah, Central Minister of International Trade, said this in the Lok Sabha last week. Indonesia, it is reported, is wanting to import on a deferred payment basis.

CUSTOMS ACT

Preventing Smuggling

As part of the anti-smuggling measures under the new Customs Act, the Government of India is taking steps to prevent the open sale of consumer goods whose import for trade purposes had been banned. Such goods, which have been brought to India free of duty or import restrictions for the personal or household of passengers or as gifts by post, etc., will now be liable to confiscation if they are sold, offered or advertised for sale before the original market price has depreciated to less than 50 percent. Buyers and sellers of such goods will be liable to heavy personal penalties.

Furthermore, the possession, sale or purchase of banned goods, which a person knows or has reason to believe to be smuggled goods, is an offence involving heavy penalties. "For instance, a person who keeps for sale or sells banned goods or who attempts to buy or buys such goods will not only lose the goods but will also become liable to heavy personal penalty."

MICA

Making Insulating Bricks

About 75 percent to 80 percent of the crude mica mined in the country, it is estimated, constitutes waste mica. A small portion of waste mica is used for manufacturing insulating mica bricks and for making mica powder used by rubber, paints and printing material manufacturers. The manufacture of insulating bricks, which started only in 1958 on the basis of a

patent obtained from the Central Glass and Ceramic Research Institute, was not a success.

COAL

Procedure for Grading

An expert committee, which recently examined the procedure for the sampling and grading of coals, has recommended that all coals, whether coking or non-coking, should be graded on the basis of calorific value. The present basis of grading coal is related to its ash and moisture content, and the prices for various grades are determined accordingly. The Government is examining the possibility of grading coals on the basis of calorific value as recommended by the committee. As a first step, samples are proposed to be drawn from a representative cross-section of collieries, and then analysed in order to find out what final picture of the new gradewise production emerges. This analysis, it has been decided, should be completed by the Coal Board by 30th April, 1963. The question of fitting in the existing price structure in the new categories of coal will then be examined.

MOTOR-CARS

Loans from A.I.D.

The following motor-car manufacturers have recently secured direct loans from the U.S. Agency for International Development for producing components as well as for increasing their plant capacity and production:

Name of manufacturer	Amount of loan	Loan agreement signed on	Remarks
Premier Automobiles Ltd, Bombay	\$ 3 million	28th June, 1962	(The firm had obtained a direct loan of \$7.2 million in 1961 also.)
Tata Engineering and Locomotive Co. Ltd, Bombay	\$13.7 million	25th September, 1962	
Hindustan Motors Ltd, Calcutta	\$15.8 million	8th November, 1962	

While the loan in the first case is repayable in 27 half-yearly instalments it is repayable in 17 half-yearly instalments in the other two cases. A credit fee of 1 percent and a special charge of 5 percent a year are payable on the unpaid balance of the loans. These payments are to be made in rupees to the Government of India, which will repay the loans to the U.S. Agency for International Development, in accordance with separate special loan repayment procedure agreements concluded between the Government of India and the A.I.D.

COTTON

Threat to Millowners

The Central Minister of Food and Agriculture, Mr. S. K. Patil, said in the Lok Sabha last week that compulsion "will inevitably follow" if the efforts to persuade millowners to buy cotton from growers should fail. "This is a hint and a warning to millowners that if they did not lift the cotton in time, compulsion would necessarily follow", the Minister said.

Earlier, while replying to a question, Dr. Ram Subhag Singh assured the House that all the cotton grown during the season will be bought by millowners by March at reasonable prices.

QUALITY CONTROL

Scheme for Spices

Compulsory quality control before export has been introduced for black

pepper, chillies and cardamom from 1st January, 1963. Similar compulsory quality control before export is likely to be introduced by the Cashew Export Promotion Council shortly for cashewnuts. Meanwhile, short-term loans are being granted to the State Governments for the replanting of the old cardamom plantations.

FERTILISER

Equipment for Gorakhpur

A Japanese consortium has agreed to supply the main equipment for the Gorakhpur fertiliser project. The foreign exchange expenditure involved is Rs. 10.44 crores. Terms of the agreement are still being negotiated.

The Government is considering constituting a fertiliser distribution corporation, it is learnt.

TANKERS

Tonnage Being Increased

The Government has recently granted permission for the construction abroad of an overseas tanker of about 32,000 deadweight tons for the public sector. There is also a proposal from a private shipping company for the construction abroad of another overseas tanker of about 51,800 deadweight tons. One overseas and three coastal tankers are on the Indian register, with a total tonnage of 44,247 g.r.t. (67,538 d.w.t.)

POLYESTER FIBRE

Industrial Licence for I.C.I.

The Government has granted an industrial licence to Messrs I.C.I. (India) Private Ltd for the establishment of an undertaking to make polyester fibre with a capacity of 4.5 million lbs a year. Terylene requirements are estimated at about 8 million lbs a year. Polyester fibre is used in

mixture with wool tops and also with other fibres.

PIG IRON

Goa and Hospet

To increase the production of pig iron, the Government asked a firm of consulting engineers to prepare a feasibility report for a blast furnace complex to produce pig iron in Goa or Hospet. The Government has already received a preliminary report.

PANNA PROJECT

Fee for Consultants

The fee payable to John Taylor and Sons, London, as consultants for the Panna diamond mining project is £5,000 a year payable in sterling in London plus Rs. 1.23 lakhs a year payable in India in rupees, it is learnt.

NEW ZEALAND

Plant for Dairy Project

The New Zealand Government had agreed to supply under the Colombo Plan a milk evaporator plant for the central dairy of the Delhi milk project. It is being installed and may be commissioned in March 1963. It is designed to concentrate 3,000 litres of skimmed milk from 9.5 percent to 30 percent of total solids an hour.

SWEDEN

Exhibition Organised

The Swedish Embassy in New Delhi is now holding an exhibition. The exhibition includes both utility glass and objects d'art. Products of ceramic art from Rorstrand and Gustavsberg are special attractions. Swedish stainless steel has gained in popularity during the last decade. Items of

CAPITAL, 28th February, 1963.

Swedish homecraft are also on display, as well as a new telephone, the "Ericofon" constructed in one unit by I.M. Ericsson. These items are exhibited against a background of Indian textiles of the latest design. Their colour scheme and texture are attractive.

SUGAR

Subsidy for Exports

The loss on sugar exports during the financial year 1960-61 worked out to about 50nP a maund and was met by the industry. Since 1961-62, the losses are mainly met by the Government. A subsidy of Rs. 5.5 crores was paid on exports during 1961-62. The total subsidy for 1962-63 is estimated at Rs. 14.70 crores.

SATELLITE COMMUNICATION

U.S. Help for India

The National Aeronautics and Space Administration of the United States has expressed its willingness to collaborate with India's Department of Atomic Energy in carrying out tests for the development of the Satellite communication system. The system has been used as a means of communication between the different parts of the United States. It will make possible long-distance communication with India without the use of underground or overground cables. Furthermore, satellite communication at very high frequencies will not only provide all weather communication over a large number of channels, but may also make worldwide television possible for the first time. The system envisages a limited number of ground stations for serving the surrounding areas and also for forming links in the chain of world communications. Such stations have either been or are being set up in Brazil, France, Germany, Italy, the U.K. and Japan. Between Italy and Japan, however, there is a large gap in the chain of such stations. The setting up of a station in India will fill the gap.

The total cost of the project is estimated at Rs. 59 lakhs, of which Rs. 43 lakhs will be in foreign exchange. The latter figure represents the cost of "receiving and relaying" equipment (\$800,000) and services of U.S. experts and the cost of training Indian technicians (\$100,000). Efforts are being made to obtain aid from the United Nations Special Fund for Economic Development to cover the foreign exchange component of the project. The cost of providing a site and building for the station and the expenditure on its maintenance as well as on technical and other personnel for the duration of the project, which is four years, is expected to be about Rs. 16 lakhs. The expenditure on the project during the current year is likely to be about Rs. 20,000, mainly on certain preliminary items of work such as the acquisition of the site, construction of building and the recruitment of skeleton staff.

OUTER SPACE

New Research Project

The U. N. Committee on the Peaceful Uses of Outer Space set up in March 1962 a scientific and technical sub-committee on which India was also represented for the purpose of formulating proposals for international co-operation in the peaceful exploration and use of outer space. One of the recommendations of the sub-committee related to the setting up of international sounding rocket launching facilities for the experimental study of a wide range of atmospheric phenomena. Sounding

rockets have already contributed significantly to the success of such programmes as the International Geophysical Year and are also expected to make notable contributions to the programmes of the International Quiet Sun Year, the International Indian Ocean Expedition, etcetera. The scientific and technical sub-committee urged that the sounding rocket launching facility be established as soon as possible, on the geomagnetic equator, which passes through the southern tip of the Indian Peninsula. Accordingly, India will provide a launching site on the west coast in Kerala as well as road and telecommunication facilities to the site, living accommodation, meteorological and range safety services and the personnel for manning the site. India has also offered to act as the host State for this facility. The project envisages the co-operation of four countries, namely, Russia, the U.S.A., the U.K. and France, who will provide rockets and equipment as well as the technical know-how.

The cost of the project, to be borne by India, is estimated at Rs. 3.87 lakhs (non-recurring) and Rs. 2.47 lakhs (recurring) a year. In addition, the land required for the project at the site selected for the purpose is estimated to cost about Rs. 20 lakhs. The expenditure during the current year is expected to be Rs. 10 lakhs on land and Rs. 1.30 lakhs on some preliminary work.

TRADE PACTS

Short Credit Offered

India's trade agreements with Russia and some east European countries as well as the United Arab Republic provide for transactions being financed by non-convertible Indian rupees through the accounts maintained by each country with the Reserve Bank of India, Bombay. In order to ensure that the flow of Indian exports to these countries is not hindered by a temporary shortage of Indian rupees held by them in India, the Government of India has agreed to offer credits to these countries, partly interest-free and partly with interest at the current Treasury bill rate. These credits are in the nature of short-term advances which are repaid as soon as the rupee balances are built up in the accounts with the Reserve Bank in payment for imports from these countries.

The 1962-63 Central Budget included Rs. 12 crores for providing short-term advances to various countries in terms of the trade agreements with them. The export targets to east European countries have since been increased. It has also been decided to grant larger credits to the United Arab Republic for financing the purchase of commodities, particularly tea, from India amounting to Rs. 7 crores. Total requirements of short-term advances to various countries in the current year are now estimated at Rs. 19.85 crores, thus necessitating an additional provision of Rs. 7.85 crores. A sum of Rs. 2 crores will be met out of savings available within the "voted" portion of the grant, and for the balance of Rs. 5.85 crores from a supplementary grant.

An advance of Rs. 3.5 crores was obtained from India's Contingency Fund to meet urgent additional requirements for granting short-term advances. It will be recouped to the fund after the supplementary grant is sanctioned.

HEAVY ENGINEERING

Purchase of Shares

An additional provision is required for the purchase of shares of the Heavy Engineering Corporation, which has been set up to develop and

manufacture heavy capital equipment. The Corporation has to implement four projects, namely, (1) the heavy machine building project, (2) the coal mining machinery project, (3) the heavy machine tools project and (4) the foundry-forge project.

The heavy machine building and the coal mining machinery projects, which are being implemented with Russian credit and assistance, are expected to go into production by the end of the current year, while the other two, which are being implemented with Czech credit and assistance, will go into production in 1965-66. The third plan includes a provision of Rs. 130 crores for the Heavy Engineering Corporation.

The Corporation had a subscribed share capital of Rs. 21.65 crores at the end of 1961-62. A Budget provision of Rs. 20 crores for the purchase of further shares was made during the current year. The total value of machinery and equipment to be imported under the credit arrangements for various projects is now estimated at Rs. 17.20 crores during the current year, while payments to consultants, expenses of training abroad, salaries of foreign experts and the expenditure on civil construction works, stores, etcetera, are estimated at Rs. 17.80 crores, making a total of Rs. 35 crores. Accordingly, it is proposed to make available Rs. 30 crores to the Corporation by way of share capital and Rs. 5 crores by way of loans during the current year. Of the additional provision of Rs. 10 crores required for the purchase of shares, Rs. 1.52 crores will be met from out of the savings within the grant and for the balance of Rs. 8.48 crores from a supplementary grant.

F. A. C. T.

Majority Shareholding

An additional provision is also required for the purchase of shares of

the Fertilisers and Chemicals (Travancore) Ltd. The Company had a paid-up capital of Rs. 3.46 crores at the end of 1961-62, which was subscribed to the extent of Rs. 2.17 crores by the Kerala Government and Rs. 41.10 lakhs by other State Governments, the balance being private holdings. The Company has undertaken an expansion scheme involving a total outlay of Rs. 10 crores which will raise its capacity from 30,000 tons of nitrogen to 70,000 tons of nitrogen a year. The scheme is scheduled to be completed by 1963-64. The Government of India will provide funds amounting to Rs. 8 crores, partly as share capital and partly as loan. The rest of the requirements is to be met by the Company from its own resources. As a result, the Government of India will acquire the majority shareholding in the equity capital of the Company. The 1962-63 Budget included Rs. 1.50 crores for the purchase of shares of the Company, but on the basis of its requirements it is now proposed to make available Rs. 1.50 crores as loan and Rs. 2.10 crores as equity capital, thus necessitating an additional provision of Rs. 60.07 lakhs.

THE RIGHT LATHE FOR TECHNICAL TRAINING

KIRLOSKAR

HARIHAR 'MBD'

Simplicity of operation, smooth and efficient performance and inclusion of latest features make HARIHAR 'MBD' an ideal Lathe for training personnel in technical institutions and workshops. Small wonder, thousands of these popular Lathes are operating throughout India. Just like any other Mysore Kirloskar product HARIHAR 'MBD' Lathes are made to Grade I standards and approved as such by the Inspection Wing of the Government of India. Full, illustrated particulars of this lathe will be gladly sent upon request.

(Proprietors: Bhogilal Leherchand Private Ltd.)

The Price Line

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

REDUCING U.K. UNEMPLOYMENT THROUGH DEFICIT SPENDING

(FROM OUR LONDON CORRESPONDENT)

THE Government will have to inject a further £400 million of purchasing power into the economy if it wants to make sure that unemployment drops below 500,000 by next winter. That is the view of the National Institute of Economic and Social Research as set out in its latest *Economic Review*. The expansionary measures the Government has so far taken will be sufficient only to raise the growth rate from last year's 1½-2 percent to perhaps 3½ percent during 1963. Increased production on this scale could be provided by the normal rise in productivity only, leaving unemployment virtually unchanged except for seasonal movements; nor would this rate of expansion reduce the large amount of spare capacity that now exists. "We doubt," says the Institute, "whether the Government can afford to have over 500,000 people out of work again next Christmas, and so we would expect an expansionary budget."

Expansion could go a long way this time without pushing demand up to the limits of productive resources, it is argued. The reasons are summarised as follows: (1) employment could rise by something like 400,000 to 500,000 before there was any question of an overall excess demand for labour. (2) The economy has a wide margin of spare plant capacity—probably wider than any year since the end of the war. (3) After two-and-a-half years of restraint in output at a time of high capital investment, there is now a "reserve of productivity."

Payments Balance

On present policies, the argument continues, there might be a "true" balance of payments current surplus of perhaps £150 million and a deficit of between £50 million and £100 million on current and long-term capital transactions together in 1963. Against this economic background, the Government, having accepted the aim of a 4 percent growth rate over the period 1961-66, will have to aim in the current year at a growth

rate of at least 5 percent. Any lower figure would be too low to achieve the average for the five-year period of which two years are already gone.

Next, the Review deals with the obvious objection that a 5 percent expansion for this year is not a sustainable rate of growth and may lead to a repetition of stop-go policies. It will certainly be argued that such an expansion would lead to excessive pressure of demand by 1964 and a rapid rise in wage rates. The balance of payments overall deficit would then increase and restrictions would have to be reimposed. The Institute does not accept this reasoning. It is true that this is what happened in 1958-60. But the stimulus provided at the end of 1958, after three years of stagnation, was much greater than is now proposed. This time there is not much chance that the expansion of demand will be swollen by big increases in consumer borrowing. In fact, the Institute does not expect consumer credit to rise any faster than it has been doing recently. Admittedly, 5 percent is probably too fast to be sustained over three or four years in present conditions, but that does not matter much so long as it can be followed by 3½ to 4 percent—and not by 1 to 2 percent. What matters is that the future attainment of the average rate of growth should not be jeopardised. Meanwhile, the growth rate should be varied so that when there is slack it is taken up. Average earnings would be likely to rise. But in view of the wide margin of spare capacity a faster rise in demand would also raise productivity. There are a number of industries now where unit costs are well above their normal level simply because capacity working is so low. "Consequently, on balance, it is most unlikely that a 5 percent rate this year would be worse for price stability than a 3½ percent rate."

Effect on Exports

Much the same arguments are applied to the effect on exports.

Home demand and exports may conflict when the economy is fully employed. This year such conflicts would hardly be likely. Indeed, the Government has now recognised that higher home demand, by reducing unit costs, might help and not hinder exports by making export prices more competitive. As for the effect on imports, if output grew this year by 5 percent instead of by 3½ percent, it would probably raise imports eventually by another £50-£100 million a year. It could worsen the balance of payments by that amount. There might still be a small "true" current surplus if one assumes that rather over £100 million of the balancing item consists of unidentified current credits. But it might lead to an overall deficit on current and long-term capital account of perhaps £150 million.

It is argued that this risk should be accepted for a year or so. An overall deficit of £150 million is not substantial, set against the U.K.'s reserves and drawing rights on the I.M.F. The Fund at the moment "would be most unlikely to require Britain to adopt restrictive policies as a condition of its assistance." In any case, the Government was prepared to risk a temporary payments deficit when it considered joining the Common Market. If it was prepared to accept this risk in exchange for the stimulus which joining the Market would have provided, the Government could also accept it for the sake of the stimulus provided by a period of faster growth produced by other means.

Whether the weakening of the payments balance would be temporary or enduring would, of course, depend heavily on the success or failure of an incomes policy. If this should go wrong, and the Government found after a year or two that the U.K.'s exports were still not sufficiently competitive to sustain a high rate of growth, then the remedy would not be a further period of slow growth. It should rather be some measure "such as export subsidies or devaluation" which acted more directly to correct the competitive weakness.

Boosting Consumption

Discussing the kind of stimulus required to produce quick results, the Institute suggests that this will have to be done mainly by stimulating consumption. All other methods would be too slow. To create roughly £400 million of additional purchasing power a large part of budgetary action would have to consist in reducing indirect taxes. The repeal of the "regulator" would produce some £250 million of purchasing power, but as this has an unduly large effect on highly taxed commodities—alcohol, tobacco and petrol—there may be a case for consolidating all purchase tax rates at 10 percent, which would release just over £200 million. Cuts in the standard rate and the abolition of Schedule A are other possible weapons. In the view of the Institute, a big injection of purchasing power is essential now both to reduce unemployment and to make possible a new confidence in future expansion.

There is much to be said for a bold approach to economic expansion, as recommended by the Institute. It would not be surprising if the Chancellor of the Exchequer is not thinking along these lines. Already, his fiscal changes add up to a pretty large overall Budget deficit. The Treasury's borrowing requirements, which in the current Budget year may not exceed £100 million, are almost certain to rise above £400 million in 1963-64 without allowing for any further tax reductions in the Budget. Borrowing on this scale can hardly be good for the gilt-edged market and may well frustrate further efforts to reduce the long-term rate of interest. But if personal savings continue at the present high rate, a large part of the deficit may well be met from "small" savings which do not directly impinge on the market. It may well be possible for the Treasury to deal with a deficit of this order without the need for any new large Government issue in the market this year—leaving aside any consolidation of corporation borrowing. But the financial picture would look very different if the deficit were increased by another £400 million, or at least by a large proportion of this sum, allowing for something to be recouped by rising tax yields. There is no basic theoretical objection to a deliberate Budget deficit of, say, £300 million in a year when large, idle resources can be taken up. The practical drawback is that investors would not see it that way, particularly foreign investors.

Views on Devaluation

In the opinion of the Financial Editor of *The Guardian*, the whole argument of the Institute rests, in fact, on one word—devaluation. It is only casually mentioned as if it was a minor drawback compared with the great benefits that would flow from the policy at home. But, with any Government elected to look after the nation, the risk of currency devaluation at the end of the experiment in induced expansion must loom large. No doubt the French example can be quoted as an encouragement. But France devalued on joining the Common Market after a period of striking industrial modernisation and financial reform. She has, so far, been able to sustain a high rate of growth combined with a stable exchange rate because the Government was able, for a time, to keep wage claims in check. Her success is now becoming more doubtful. The U.K.'s position is not comparable. In fact, the most worrying aspect of the present situation is that the small increase in last year's exports seems to have been achieved in a large number of cases by cutting profit margins to the bone. Many exporters can make considerably larger profits in the home markets than on foreign orders. In particular, firms have been selling to the markets of the E.E.C. at often painfully low prices to build up their outlets in preparation for the time when Britain should be inside the Common Market tariff wall.

Three questions arise. If so many British firms can only sell abroad at profitless prices at a time when costs have been held relatively steady while foreign costs have risen, how are they going to compete when this temporary advantage has gone? Again, will they make the same effort to get these unattractive export orders when there is plenty of business to be got at home? Thirdly, will not exports become much harder to maintain in any case now that Britain is going to stay outside the Common Market? There is only too much evidence that large parts of British industry are still not truly competitive. Devaluation in these circumstances would only be the beginning of a declining spiral. As long as this evidence is not disproved by a vigorous upsurge in exports, the injection of massive purchasing power into the economy will only produce a temporary flush.

PRIORITIES IN THE CAMPAIGN TO GROW BETTER JUTE

THE stress laid by the Jute Commissioner on the need to improve the quality of India's jute, at a recent meeting with the Chief Ministers of West Bengal, Bihar and Orissa, is timely but not new. Ever since partition, the problem has been highlighted at regular intervals. Although much has been said and something done, the fact remains that the Indian farmer in general is still uneducated in the finer arts of growing jute.

It is significant that the parts of India where the better fibres are grown are the ones where the East Bengal refugees have settled after partition; there they have applied their specialised knowledge of cultivation and fibre extraction. It would be good if some of the former refugees could be sent to advise growers in other parts of the country. To change the traditional methods may be difficult. But if it could be demonstrated to growers in say North Bengal or Bihar that the East Bengal methods produce better jute, and so better prices, something might be achieved.

Spinning Quality

At present, a large proportion of the fibre grown in India is mesta and bimli. But these varieties are not popular because their poor spinning quality affects the quality of the cloth produced, and because the rate of wastage during the manufacturing process is high. In recent years, some improvement has been achieved, in the quality of mesta particularly. But mills are forced to use substantial quantities of this and other low-grade fibres; as a result, the quality of the goods they produce has suffered.

The deterioration in the quality of Indian goods would have been serious even in the days when Calcutta had a near-monopoly of the supply of jute manufactures. Now, when the local mills have to compete with Pakistan and Europe, the improvement of quality is doubly important. Indian mills, therefore, have to be assured of adequate supplies of high-grade jute. To achieve a return to the previous high standard of Calcutta goods, it would be desirable to eliminate as far as possible the use of jungli fibres and certain types of mesta and bimli. But as the Government wants to improve the lot of the cultivators in these areas, that is not practicable at present. Meantime, something has to be done to improve the quality of the fibres themselves. The use of better seeds and better handling of the crop might bring early results.

It is important that the yield and quality of Indian jute and mesta should be improved. To do this, propaganda has to be concentrated on the areas and districts which have proved to be suitable. But there must also be some certainty that, in normal conditions, adequate water is available for retting purposes. No encouragement or help should be given to grow jute on marginal lands which cannot give a good yield and in districts where the water supply is inadequate for the satisfactory preparation of the fibre. This will mean a reduction in the total quantity of the crop, but it can be compensated for by an increase in the yield and output of the best areas. Only thus can India

hope to improve the quality of her jute, and of her jute products.

Gunny Market Dull

There has been another sharp fall in Calcutta jute goods prices during the past week. Prices have fluctuated widely, but the general tendency has been downwards. Reports that a large American trader was seeking to withdraw from his commitments caused consternation in Clive Row, and led to a collapse in the market. Local operators, however, refused to let this deter them; they soon invented rumours about trouble between the United States and Cuba, and thus managed to recoup the losses sustained earlier. In general, however, the market is dull. Fresh business is hard to come by, and trading is extremely limited. Local bazar covering has been the main activity.

Purchase Quotas for March

The Jute Commissioner is asking member-mills of the I.J.M.A. to buy 500,000 bales and non-members 30,000 bales of jute during March. Including the February allocation of 640,000 bales, total purchases by mills so far are 5.78 million bales, while the Jute Buffer Stock Association and the State Trading Corporation have lifted 400,000 bales and 80,000 bales, respectively. Thus, the total offtake by the end of March will be 6.77 million bales out of an estimated supply of 9.7 million bales, which includes the season's production of 7.1 million bales and the previous season's carry-over of 2.6 million bales.

Giving this information at a Press conference last Monday, Mr. G. C. L. Joneja, Jute Commissioner, stated that there may be "increased availability" of about 600,000 bales because of smuggling from Pakistan. But even after taking this into account, he felt that there would be no marketing problem since the next crop would begin to arrive in the market only after five or six months. He also mentioned that

purchases by co-operative societies, although small so far, would play an important rôle in stabilising prices in future. Referring to the export of raw jute, he stated that about 150,000 bales would be bought by east European countries this season. Commitments have been made for 120,000 bales so far.

Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during January 1963 were 761,800 bales, being made up of 46,500 bales from Pakistan and 715,300 bales from India. The total is considerably lower than the previous month's and also 5,350 bales less than in January 1962. Total arrivals during the current season, from July 1962 to January 1963, are now 3,822,550 bales, made up of 197,100 bales from Pakistan and 3,625,450 bales from India. In the corresponding period of the 1961-62 season, total arrivals were 4,210,400 bales, made up of 257,750 bales from Pakistan and 3,952,650 bales from India. Thus, arrivals this season fall short of those during the same period of the last season by 387,050 bales, those from Pakistan being down by 60,650 bales and those from India lower by 327,200 bales.

THE JUTE MARKETS

Manufactured Goods: The undertone of the market was weak and there were considerable fluctuations from day to day. Only small business was reported from overseas buyers, and the main buying was confined to local operators. Mills were not able to sell as much as they would have liked to, but they were not inclined to cut prices. On the contrary, they were reserved and unwilling to sell unless they got the prices they wanted. Good prices were paid for early shipment goods and for specialities.

At the opening last Thursday, the market showed a slight improve-

ment, with ready B Twills quoted at Rs. 113.70 and October-December at a discount of only 20nP. In hessian, 40in. 10oz. was unchanged at Rs. 49.75, but forward shipment moved up slightly to Rs. 48. Covering in ready and near delivery goods caused prices to move up slightly during the day. But by Saturday morning, a reaction had set in, and in the absence of overseas enquiries, prices slumped. Read B Twills fell back to Rs. 112.50, and hessian declined to the week's opening rates. Rumours were mainly responsible for the price movements over the week-end and immediately afterwards. Tuesday was a holiday, so the market was closed.

Opening quotations on Wednesday morning were as follows:

	Feb.	March	Apr.-	June	July-	Oct.-
40in. 7½oz.	39.00	37.80	36.90	35.90	35.25	
40in. 8oz.	41.75	40.50	39.75	38.50	37.75	
40in. 10oz.	48.45	48.50	48.10	47.50	47.00	
B Twills	112.40	113.00	112.70	112.25	112.75	
Cornsacks	116.00	116.00	116.25	116.00	115.75	
Heavy Ceers	111.50	112.75	113.50	112.25	112.75	
(Plain)						
A Twills	138.50	139.25	138.00	137.50	137.00	
Liverpools	128.50	127.50	127.50	127.25	126.75	

Raw Jute: The fibre market was quieter, but only in the mesta and white categories did prices show any appreciable decline. Tossa, Daissee and high-grade jute continued to command a premium but only limited quantities were on offer. Mills bought steadily against their quotas, but in most cases buyers were looking for delayed shipment to relieve their already congested godowns. Arrivals on an all-India basis remained at about 50,000 maunds daily, but there were definite signs of supplies decreasing. In Cossipore, arrivals amounted to 660 wagons, which was above average for the time of year. There was no rain in any of the jute growing areas to enable farmers to prepare the land for sowing. Normally, at this time of year, much of the ground has already been tilled.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)	Current Prices	Minimum Prices	T.S.D. Rs.
		Rs.	Rs.	Rs.

THE U.K. JUTE MARKETS

FIBRE REMAINS WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan it is reported, has been steady, and loose jute imports there has decreased. The position appears to be about unchanged with some buying interest shown by Continental countries. On the other hand, the raw jute market in Dundee has remained weak with holders of secured parcels willing to accept low prices for quite a few grades. This has made the position very irregular, but very little

movement has taken place in fibre at the lowest quoted rates.

There is a substantial quantity of fibre available ex-warehouse, Dundee, and further unsold parcels are at present afloat to this port. This is a very satisfactory position for spinners to have stocks of unsold jute in warehouses to be taken up and paid for when required. The quantity of spot and afloat jute unsold to spinners is estimated to be nearly 75,000 bales. This may not appear to be a very large quantity, but it must be remembered that spinners are also holding large stocks of raw material.

Offers made in Dundee last week were very irregular. Many shippers asked current E.P.C. levels, but holders of secured parcels were willing to discount the official rates by substantial amounts, especially for lower grades. Mill Firsts were named at £146, Mill Lightnings at £115, Mill Hearts at £93 and Grade

Hearts at £79, c.i.f. U.K., for February-March shipment. There were sellers of Grade Tossa-2/3 at £124 and of Grade Tossa-4 at £108 15s. Dacca Tossa-5 was named at £128 and Dacca Tossa-6 at £113. Outport Tossa-2/3 was lowest at £96 15s and Outport Tossa-4 at £85 15s, for February-March shipment. Cuttings were about unchanged with S.N.C. at £53 and N.C. at £46 10s. Only a few offers of Siam jute were made and no buying interest was shown at the present price levels. Grade A was offered at £80, grade B at £76 and grade C at £69, delivered mill Dundee for March-April shipment.

The Calcutta goods market became much easier during the past week. Hessian prices were at the lowest level for some time, but there was not very much buying interest shown. Quotations were at 75s 6d for 40in. 10oz. and at 60s 3d for 74oz. a 100 yards f.o.b. Calcutta for February shipment, at 75s 3d and 58s 6d March and at 74s 3d and 57s April-June. B Twills were at 172s 6d, 173s and 173s 3d for the respective shipment periods.

Demand for yarns and cloth in Dundee was less. Buyers have slowed down deliveries from contracts already placed, but the position remains satisfactory. Certain descriptions of yarns are still difficult to obtain, but the carpet trade was not taking quite as much as previously. Movement in linoleum Hessians was also less. The heavy end of the trade was busy, but new orders were not now coming in so fast. The Dundee jute industry has had a very long busy spell, and there is no reason why this should not continue for some time yet.

THE PAKISTANI JUTE MARKETS

EASIER TREND IN FIBRE

(FROM OUR Dacca CORRESPONDENT)

THE cloudy weather and scattered rains referred to last week had a slightly easier effect on the market but little or no effect on sowings. It is now reported that scattered rains fell lightly only in the Chandpur-Comilla area. The land there is, therefore, being prepared for sowings. Elsewhere, rains are still required, so there is little chance of an early crop. Meanwhile, the Pakistani Commerce Minister's announcement banning cultivation of jute in border areas has been confirmed and will be implemented. In spite of the lack of rains and the banning of cultivation in border areas, there is no improvement in the market where dull and inactive conditions prevail.

Some of the Iron Curtain countries are reported to have bought fibre but not enough of it to have any effect on the market. Small transactions—mainly in cuttings—continue in the Narayanganj market but the biggest buyers, namely, the mills appear to be too heavily stocked to be able to buy substantial quantities. The cuttings market has also weakened further on reports that India will not be buying any more cuttings. In the loose jute markets there is no change in arrivals. Prices are quieter and, it is reported, business in some areas has been transacted below the statutory minima.

E.P.C. registrations during the first fortnight of February totalled 113,145 bales, of which 44,800 bales were bought by China. India bought only 2,860 bales. Mesta sales continue in spite of high prices, and the total registered to date amounts to 80,583 bales.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in January 1963 was 6 million yards less than during December 1962, and 20 million yards less than a year ago. The fall in consumption may be attributed in part to a lack of availability of goods during the longshoremen's strike. January's bag cut-up was 52.1 million yards and piecegoods deliveries 15.5 million yards, compared with 67.0 million yards and 21.2 million yards, respectively, in January 1962. U.S. spot stocks and afloats continued to increase due to the heavy buying following the Cuban and Indian-Chinese crises. At 306 million yards, 112 million yards were spots and 194 million yards were afloats. In January, therefore, spot stocks declined 4.7 million yards due to the dock strike, while afloats increased by 33.5 million yards.

Appearing below are two tables which include the January figures: (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry. (All figures in million yards.)

NEW COMMITTEE OF BENGAL CHAMBER

The following gentlemen were elected to the committee of the Bengal Chamber of Commerce and Industry for 1963-64 at the annual general meeting held on 22nd February, 1963. President, Mr. A. R. Foster of Imperial Chemical Industries (India) Private Ltd. and vice-president, Mr. A. D. Ogilvie of Andrew Yule and Co. Ltd. The members of the committee are: Mr. F. A. Collett of the Imperial Tobacco Co. of India Ltd, Mr. J. W. Easson of Gillanders Arbuthnot and Co. Ltd, Mr. J. V. Jardine Paterson of Jardine Henderson Ltd, Mr. H. K. S. Lindsay of the Metal Box Co. of India Ltd, Mr. H. Mackay Tallack of Macneill and Barry Ltd, Mr. A. I. Murison of James Finlay and Co. Ltd, Mr. D. C. B. Pilkington of Bird and Co. (Private) Ltd, Mr. S. M. Smith of Shaw Wallace and Co. Ltd, and Mr. I. G. Thomson of the Chartered Bank.

Commodity Markets

GROWERS OPPOSED TO NEW CARDAMOM BODY

(BY OUR SOUTH INDIAN CORRESPONDENT)

THERE is no universal welcome for the recently-constituted Cardamom Development and Marketing Advisory Committee, which is headed by the Coffee Board chief, Mr. Sitarama Reddy. A section of the growers are not pleased with it, and their case in brief is: the constitution of the committee was hasty and there was no mature consideration of all the factors involved. The growers are not properly and adequately represented on this body which is charged with the important functions of promotion and extension of cardamom plantations, improvement of the quality of cardamom and productivity of estates, financial assistance to growers and marketing of the crop. Although the original plan to form a Cardamom Board as a wing of the Coffee Board has been changed it does not appear that the newly-constituted advisory committee is a completely independent body.

If the Cardamom Advisory Committee is going to function as a wing or a satellite of the Coffee Board, the latter's weaknesses, especially in the field of marketing, are likely to affect the working of the new body. There are also apprehensions about the distribution of the new body's working expense. Some coffee-growing interests have been opposed to the idea of linking the two organisations due to fears that the Coffee Board may have to bear at least a portion of the cost of the Cardamom Board. In the meanwhile, cardamom growers in the Vandanmedu area in Kerala—this area accounts for about 40 per cent of the country's total production—are agitating for better recognition. They say that they have not got their due representation in the Cardamom Advisory Committee.

This committee had its first sitting recently in Bangalore. The chairman, Mr. Sitarama Reddy, told the meeting, "we have to plan and devise methods for the collection of the crop, storage, processing and marketing". He urged for immediate steps to arrest the serious setback in cardamom prices noticed during the past two years, and for developing the cardamom-growing industry in India on sound lines. Cardamom was the fourth plantation crop in the country to come under the control of the

Central Government, the other three being tea, coffee and rubber. For the past two years, the cardamom-growing industry has been suffering as a result of price falls. The position this year is worse and the growers are thinking in terms of abandoning cardamom altogether in favour of some more remunerative crop.

It would be unfortunate if such a thing were allowed to develop as India held a monopoly in cardamom, a good foreign exchange earner, Mr. Reddy said. Most of the cardamom is grown in areas where coffee is also grown. It is complementary to the coffee economy as many of the growers cultivate both the crops. Therefore, the experience of the Coffee Board in marketing coffee might be of great assistance to the Cardamom Committee, he added. Mr. Reddy stressed that the marketing of cardamom should receive immediate attention. It is necessary to arrest falling prices and ensure a fair and steady return to the grower as an incentive for developing this branch of the planting industry.

Wage Increase for Tea Workers

The interim wage increase recently announced for the tea estate workers of Mysore is to be revised soon. The Government notification which is based on the recommendations of the Central Wage Board has been opposed by the employers on the ground that it has not taken into account the existing wages and the differential scale based on the categorisation of estates according to their size. Consequently, the interim wage structure is full of glaring anomalies. For instance, there are cases in which the difference between the existing wage and the new interim wage is as wide as more than Re. 1, while the maximum increase given for a male worker of the largest estate in Mysore is 8nP a day. Employers have refused to implement the notification. Labour is agitating. It is said that the Wage Board has understood the anomalies in its original recommendation and has put up fresh recommendations on the basis

of which a revised notification is expected soon.

Central Wage Board for Rubber

The Central Wage Board for the rubber planting industry with Mr. L. P. Dave as chairman had a few days' sitting recently in south India. It collected evidence from representatives of the employers, staff union and labour unions. The evidence collection part of the Board's job is nearing completion. In the course of the examination in Trivandrum, labour pleaded for an enhancement of the existing wages, while the employers argued that any increase in wages should be on the basis of an increase in the workload. As they are today, wages have no relation to the actual work turned out. They also complained that they were not getting in most cases a fair day's work from labour. The employers pleaded for a fresh and scientific approach to the problem of fixing wages instead of making peremptory concessions to pacify labour.

Kerala Oil Millers Aggrieved

The oil millers of Kerala are aggrieved over the Central Government's decision to grant copra import licences to exporters alone, as a part of the export promotion scheme. The Travancore Oil Millers Association in Alleppey in a memorandum addressed to the Central Minister for Commerce and Industry said that the denial of licences to coconut oil millers for the import of copra was contrary to all assurances given by the Centre that copra import licences would be issued only to actual users. This policy, the memorandum said, would spell ruin to the coconut oil milling industry in Kerala which in a large measure depended on imported copra for working the mills. According to the Association, over 900 small units of the coconut oil milling industry employing about 40,000 workers will be hit by this measure. In the meanwhile, the industry is put to difficulties due to the recently introduced 40 per cent power cut in Kerala which is expected to last until monsoon in May-June. Production of coconut oil is hit by power cut and import difficulties. These are mentioned among the reasons for the present high prices of coconut oil.

World Surplus in Tea Forecast

The Financial Times of London forecasts a world surplus of tea this

year. This would be a novel experience for a market which has been used to more or less a continuous balance between supply and demand since the war. Last year's world tea production was slightly below that of 1961 mainly because of drought in India and Ceylon. Ceylon is aiming to produce 530 million lbs, compared with 445 million lbs in 1961 and Pakistan, which is temporarily out of the market due to the level of domestic consumption, has a target of 65 million lbs, compared with only 51 million lbs last year. One should allow for an element of hope in all these figures, the paper says, and adds that Far East is not the only part of the world where production is growing rapidly. East Africa is now producing over 100 million lbs a year, compared with 62 million lbs eight years ago. Whether the world market can stand the impact of so much extra tea will only become gradually apparent. But the U.K., which has long been the world's biggest importer with an intake of five to six cups of tea a head daily, cannot be counted on for any major increase in its consumption.

Indian Tea Losing Market in Australia

(BY A SPECIAL CORRESPONDENT)

THE Tea Board delegation's visit to the West last year has apparently produced useful results. Some information is now available about its more recent visit to Australia, New Zealand and Singapore. The delegation went to explore the possibilities of expanding the market for Indian tea in those areas.

Australia's consumption is estimated at 60 million lbs a year and there seems to be little chance of stepping up this figure without extensive advertising. Ten years ago, Australia was taking 59 to 60 million lbs and in 1960, the figure given was 62.794 million lbs. Of this total, Ceylon supplied over 50 million lbs. That country's share fell to 33 million lbs to 34 million lbs by 1956 and 1957.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living indices, by groups, have now been brought up to January 1963. As compared with December, the January

index for Food shows a drop of 12 points, while those for Miscellaneous, Clothing and Fuel & Lighting remain unchanged at 311, 598 and 299 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 7 points during January 1963.

HINDALCO ALUMINIUM

Keeps Industries on their March

The Rs. 20 crore Birla-Kaiser Aluminium Project at Rihand went into production in May 1962. From December 1962, the reduction plant has attained the present target capacity of 20,000 tonnes of aluminium ingots per annum, saving for the country over Rs. 6 crores of foreign exchange formerly involved in importing aluminium from abroad. To keep the fast-growing national industries on their march, HINDALCO will set up its rolling and extrusion mills and expand the primary aluminium production capacity to 50,000 tonnes in the near future.

--	---	---

but since then Ceylon has made some recovery, and in 1961, she exported 43 million lbs.

Indonesia is shipping from 10 to 12 million lbs a year, and India has a poor third place. She supplied 12½ million lbs in 1952-53, in 1956-57, 8 million lbs and in 1961 her exports fell to 4 million lbs. The situation concerning New Zealand is no better.

The delegation has pointed out that Ceylon teas are cheaper, and as far as Singapore is concerned, Indonesia dominates the market because of the price advantage and nearness of the source of supply.

U.K. Tea Stocks Rise

London tea stocks are slowly rising and stood at 146.35 million lbs last week, compared with 144.95 million lbs in the previous week. This is seasonal. Tea afloat is lower at 37.25 million lbs, which does not contain any shipment from Pakistan. But London prices last week were a full 2d a lb lower than a year ago.

Tea Output of Tripura

Tripura has probably been growing tea in a small way for about 50 to 60 years, and a large proportion of the current crop is produced by small farmers. A recent survey gives the annual production an acre at about 380 lbs.

U.S. Tea Imports

The U.S.A. reports total imports of tea during the past 11 months at 116.71 million lbs, compared with 102.79 million lbs in the same period last season. This shows some gain but hardly enough to justify all the advertising and publicity expenditure incurred in the United States. The following are the figures of U.S. imports, including Alaska and Hawaii (in million lbs.):

1954	1955	1956	1957	1958	1959	1960	1961
114	104.1	100	101.5	102.6	108.2	114.1	109

Ceylon Expanding Tea Exports

Reports from Ceylon show that that country continues to explore markets for its tea. Russia, it appears, is specially interested in the Colombo market and it is reported, that country has recently taken a shipment of 3 million lbs. By January, about 6 million lbs had been exported to Russia. Despatches of Ceylon tea in the recent past to Russia have been irregular. In 1948, they were 2.130 million lbs, followed by several blank years. Russia seems to have renewed its operations in the Colombo market ten years later when shipments were given as 2.729 million lbs, with another blank year in 1959. In both 1960 and 1961, exports from Ceylon to Russia were below the 1 million lbs. But the latter is expected to take more tea in the coming years under a recent trade and payments agreement.

Good progress with the manufacture of instant tea in Ceylon has also been reported. It is said to be processed direct from green leaf. Other varieties, it is understood, are procured from black tea. The manufacturers, it is said, are Messrs Haelssen and Lyon of Hamburg who are working in partnership with the Government of Ceylon.

Ceylon plans to keep going ahead with her production. Due possibly to a better distribution of rainfall, that country has an almost unbroken series of rising output year after year since 1946. There were small falls in 1952 and 1956, but yields have increased from 282.911 million lbs in 1946 to 453.229 million lbs in 1961. The Government of Ceylon is keen on exploring the possibilities of expanding markets, and special attention is being given to the Sudan, the

U.A.R. and other Middle East countries.

Without official statistics, it is not possible to forecast the trend of market prices during 1963, but although many new areas in the world are being planted with tea, the immediate outlook appears moderately sound, for Pakistan seems to have decided to import tea. So far in the 1962-63 season, the supply does not look like exceeding the previous season's supply while more tea appears to have gone into consumption.

World Tea Outlook

In 1963, tea producers are likely to take full advantage of recent scientific findings in both the field and factories. In past years, planters have been largely at the mercy of the monsoon, but with fertilisers and the monsoon, the loss in crop special irrigation, the loss in crop has been mitigated, while there is now no doubt that scientific investigation in all manufacturing processes helps management to regulate operation in the factory. The year 1963 is, therefore, expected to show a useful increase in output from India. Until further statistics concerning consumption are available, it is difficult to estimate how prices will react to increased production. Fortunately, supplies from Pakistan are not likely to be available for export. Incidentally, it will be interesting to see from which source Pakistan will import tea. With Cachar and Tripura round the borders of East Pakistan, India should be favourably placed but the consuming area in the western wing might favour Ceylon. As a matter of fact Ceylon has already secured this business on a cross-trading basis.

Checking Textile Stock Accumulation in U.K.

A PLEA for positive action to prevent the accumulation once more of excessive stocks of textiles in the U.K. is made in the latest issue of the Cotton Board's Quarterly Statistical Review. It records the lengthening of cotton goods producers' order books in September and October and then the expansion in retail sales clothing after July. Whether the destocking process has yet run its course or not, it continues, experience suggests that this phase of the textile cycle will be succeeded by an upswing in which excessive stocks, including in particular imported cloth, will again be built up, to be followed in due course by the inevitable painful correction of the position.

How the need for this correction could be avoided the Review then indicates. The course of stockbuilding depends primarily on the converters, who are much the largest holders of stocks within the industry. It is not in the collective interest of converters, it is emphasised, to allow burdensome stocks to accumulate, nor is it in the long-term interest of the converting section that the producing sections should be weakened further by a repetition of the boom-slump sequence. In the long run, the Review points out, a viable converting section can only continue in conjunction with healthy spinning and weaving sections. The producing sections are fully capable of meeting any normal increase in demand—that is, any increase which will not cause excessive stockbuilding. Finally, the Review says, the individual converter should bear in mind that any increase in orders which he himself receives probably represents, at least in part, stockbuilding by his customers or his customers' customers. Accordingly, he should not base his buying policy on the assumption that the whole of the increase in orders necessarily represents a genuine expansion in final offtake.

Cotton yarn production in India, which had been running above last year's level in the first half of 1962, was about 4 percent less than in the corresponding period of 1961 in the third quarter. Mill production of cloth was also smaller than a year earlier, as it had been in the first two quarters of the year. It is reported that stocks of cloth have mounted, partly because of the poor export performance and partly because of pressure on transport following the Chinese invasion. The future outlook is considered to be somewhat brighter, however, in view of increased defence requirements. Apparently, the Government has called for an extra 250 to 300 million yards of cloth for defence purposes. This may entail additional imports of raw cotton, and it is reported that the Government has re-allocated certain imported cotton from existing licence-holders to mills producing service requirements.

Indian exports of cotton piecegoods are thought to have totalled about 129 million yards in the third quarter of 1962, compared with 116 million in the second quarter of 1962, and 127 million in the third quarter of 1961. This slight improvement will not suffice to prevent the 1962 total showing a decline from the previous year's level for the third year in succession. High raw cotton prices and inefficient labour utilisation are reported to be the main cause of this poor performance, which the wide variety of official incentives and pressures to ex-

port have been unable to correct so far. It has even been suggested that India may not be able to fill the increased French and German quotas arising out of the Geneva agreement. On the other hand, it is reported that the average price of a yard of cotton piecegoods exported has fallen since the coming into force in July of the obligation on mills to export a specified proportion of their output. If this is cause and effect, any improvement in volume is likely to be largely offset by a decline in average value.

It is understood that the number of spindles in the Pakistani cotton textile industry is to be increased from its present total of 2.3 million to about 2.8 million by the end of 1963, and that finishing capacity is also being expanded. Other reports, however, state that the Government intends to discourage further expansion of the textile industry in view of the uncertain prospect for exports. It is of interest to note that official encouragement is being given for the export of made-up garments. Certain Pakistani interests are reported to desire an international cartel to regulate trade in cotton textiles.

With the application of stringent restrictions in the U.S. market, Hongkong shipments of cotton piecegoods have fallen drastically since the first quarter of 1962. Other countries to invoke the Geneva arrangements against Hongkong include West Germany (shirts) and Norway (shirts and nightwear). The level at which exports to West Germany are being restricted is well above the permissible level laid down in the Geneva agreement. On the other hand, in the case of Norway, the permitted ceilings are initially well below the "Geneva" level; in return, the Norwegians have agreed not to invoke the agreement against other items without proof of market disruption, and if they do they have agreed to allow a 10 percent growth rate instead of the 5 percent minimum specified in the agreement.

TEA COMPANIES

O, P, F and Dd indicate Ordinary Preferred Ordinary Founders and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A DISTURBING BUDGET FROM MR. DESAI

THE Central Budget for 1963-64, presented by the Finance Minister, Mr. Morarji Desai, last Thursday, stands a fair chance of going down as not only the biggest but also the most controversial in Indian economic history. It is easy to sympathise with the Finance Minister in his difficulties. The revenue and capital expenditure on defence was originally intended to be Rs. 376 crores in 1962-63; because of the Chinese invasion, it will now be over Rs. 500 crores, and in the coming year, 1963-64, it will skyrocket to Rs. 867 crores. In addition, the Centre's capital outlay on the plan is budgeted to rise from Rs. 719 crores in the current year to Rs. 901 crores in the coming one. Allowing for certain adjustments, Mr. Desai is thus faced with the formidable task of somehow finding another Rs. 610 crores to spend in 1963-64. This he has done with vigour and ingenuity. But he has done it in a way which, to state the matter in complete seriousness, threatens steady economic decline.

The first problem facing those analysing the Budget is that they cannot easily assess the assumptions on which the main expenditure estimates are based. Mr. Desai had long ago given notice that defence expenditure would have to be doubled, which was taken as implying that it would have to rise from Rs. 376 crores to around Rs. 750 crores. The increase, in fact, is going to be bigger—to Rs. 867 crores. The rise, and the defence preparations it is going to finance, are quite properly not a matter for public dispute and detailed scrutiny. But three comments may nevertheless be made. One is that if this is judged to be the price required now for a decade of miscalculation in foreign affairs, the nation has to pay it. The second is that it reflects a certain deep pessimism about the intentions of the Chinese. The news has apparently leaked through to New Delhi that they are not yet stitching the garlands this country has been hoping to receive over the negotiating table screwed up by the Colombo Powers; and, furthermore, the Himalayan snows will soon be melting. The third comment is that it is easy enough to more than double one's expenditure in a year. But to do so sensibly and efficiently is rather more difficult. It calls for not only organisational ability but also a certain complement of foreign aid, both of which problems, it must be presumed, the Government of India has attended to more carefully than in the past.

If Rs. 867 crores is assessed as the country's requirement for defence in the coming year, there can be absolutely no question but that it must somehow be found. The next problem still remains: can the third plan survive in the form in which it was originally presented, and in the form in which it is even now being proudly advertised? Mr. Desai has given a disguised answer: he has declared that the budgeted outlay, of the Centre and the States together, on the third plan is to increase from Rs. 1,465 crores in 1962-63 to Rs. 1,651 crores in 1963-64. But he has not mentioned that the latter figure is nearly Rs. 100 crores short of what the standing committee of the National Development Council bravely recommended a mere

seven weeks ago. The deduction may be permissible, therefore, that this is the extent to which the third plan programmes for the coming year have been cut—and the Rs. 100-odd crores thus saved siphoned off into the defence budget. The conclusion follows that, in spite of brave talk to the contrary these past five months, defence expenditure has hit the plan. To say that "the whole of the third plan is an integral part of the defence effort" is plainly wrong. If new slogans must be coined, a more truthful one would be that only "part of the third plan is an integral part of part of the defence effort." The rest of the plan, whether one likes it or not, has to be scrapped.

Indeed, it could not be otherwise. What the Government describes as "the vast upsurge of popular enthusiasm", admirable though it may be, could not have yielded enough rupees and naye paise once its main component proved to be verbosity. In any case, even if the money could have been found, it would never by itself have been enough, for it would have had to be backed by physical resources. India could in the coming year finance a plan outlay of not Rs. 1,651 crores, but ten times that much, by working the Nasik printing press overtime and by squeezing the pips of the population dry. But she still would not implement the plan fully; she would only succeed in sending the economy careering down the road to chaos. Therefore, by restricting the increase in the plan outlay to something smaller than the National Development Council had recommended, Mr. Desai has taken a step in the right direction. It now remains to be seen whether even the figure he has suggested can be financed without the economy bursting at the seams.

At the moment, the danger is that the strain on the seams apart, the country might be left wearing no trousers at all. Faced with an estimated revenue deficit of Rs. 266.87 crores and an overall deficit of Rs. 454 crores for 1963-64, the Finance Minister has decided that discretion is not the better part of valour. So, in conformity with the theories of sound budgeting, he has decided almost to wipe out the revenue deficit through new taxation which will bring the Centre Rs. 265.90 crores. As for the Rs. 188-odd crores which are then left of the overall deficit, a minor proportion is to come from a bigger programme for public borrowing. But no less than Rs. 151 crores is to come from that one-time deity of the Indian Exchequer—deficit financing.

The important point to note, however, is that the additional amount of Rs. 265.90 crores is not all that the Central Government is going to siphon out of private pockets into Government exchequers. This total does not include the Rs. 9.60 crores which the States will be getting as their share of the heavier excise duties. It does not include the Rs. 4.6 crores expected from the increases in postal, telegraphic and telephone rates. It does not include the yield from compulsory savings, which Mr. Desai says may bring something between Rs. 65 crores and Rs. 70 crores (of which Rs. 40 crores will accrue to the Centre). Finally, it

does not include the premia under the emergency risks insurance schemes, which Mr. Desai assumes might amount to Rs. 33 crores in the coming year but which others confidently believe might be a lot more. These last two—compulsory savings and emergency insurance—are not tax measures in the strict sense of the term. But the effect on those compelled to pay them will, in the short run at least, be almost exactly the same as if they were straightforward taxes. Two other measures still remain to be considered. The first is the doubling of the Central sales tax to 2 percent (mainly for the benefit of the States); this is estimated to yield Rs. 30 crores in a full year, although only Rs. 23.5 crores in 1963-64. The second is the surcharge on railway freights, which will bring Rs. 19 crores for the temporary or permanent benefit of the Central Exchequer.

The point is this: does New Delhi seriously think that the economy can stand tax and quasi-tax measures, worked through the Central Budget, which are designed to yield, on the official esti-

mate, well over Rs. 400 crores extra in a single year? If the economy were disciplined, vigorous and booming, there might have been some slight justification for a fiscal effort approaching this scale. But over the past year it has been sick and sluggish; nothing that Mr. Desai has done will make it better. In the circumstances, the Central Budget is not an act of courage and heroism. It is an act of extremism. The point is underlined by the fact that the extra revenue has almost certainly once again been grossly and deliberately underestimated. Nobody can fail to notice that the 1962-63 Budget presented last April imposed new taxes totalling about Rs. 60 crores in order to take the Central Government's total revenue up to Rs. 1,381 crores. According to the revised estimates just presented, the revenue is actually likely to go up, not by Rs. 60 crores, but by Rs. 180 crores—to Rs. 1,560 crores. The Budget speech contains a long explanation purporting to show how the Almighty brought bundles of notes down from the sky into the Central kitty. But, for most people, the impression will remain that the

deliberate under-estimation of revenue is now getting to the stage where the arithmetic of the tax-collectors is comparable to the arithmetic of the tax-evaders.

The scale of taxation apart, the nature of some of the new levies is such that, unless drastically amended, they might well bring economic, especially industrial, expansion to a stop. For companies generally, quite the worst of the new levies is the super profits tax. (Its effects are analysed in greater detail in a special article on page 332, and investors' reactions to the tax, as well as to the Budget generally, are reviewed in the "Guide for Investors" section on page 339.) The super profits tax is the centre-piece of a new scheme of direct taxation which displays the murky passions of socialist ideology at their worst. More than anything else, it constitutes a penalty on efficiency in that it is applicable to all companies which achieve a reasonable level of profitability. As the Finance Minister says, "the tax will operate when the income of a company after deducting the in-

come tax and super tax payable by it exceeds 6 percent of its capital and reserves, except for such amounts of reserves which have been allowed as deduction in computing the total income for income tax. The rate of tax will be 50 percent when that income is above 6 percent but not above 10 percent of the capital, and 60 percent on incomes above 10 percent." Mr. Desai has expressed the hope that, apart from discouraging "excessive profits", the levy will help "to keep down the prices". There are excellent reasons for believing that it will do nothing of the sort.

The first main consequence of the super profits tax will be that it will encourage companies to become inefficient. Cost-consciousness, about which Government spokesmen chatter interminably, will vanish. The tendency, on the contrary, will be to allow costs to rise so that profits come down to the level Mr. Desai likes and the full impact of the super profits tax does not have to be borne. The second main consequence will be that "growth" companies will be very badly hit, especially since it appears that the development rebate reserves are to be excluded from the computation of the capital-reserve base. In fact, although it is less than seven days since the super profits tax was announced, reports are already current that a number of companies propose to fold up the expansion plans they were thinking of launching. New companies will wonder how they are to repay their debts, leave alone the servicing of their share capital. And the Finance Minister has yet to explain why, if Government-sponsored bodies like the Industrial Finance Corporation want 7½ percent on their loans, private investors who accept bigger risks should be satisfied with something around 6 percent. Any talk that the super profits tax will help bring prices down is eye-wash. The Finance Ministry must know that in a shortage economy like India's, prices are determined mainly by the demand-supply position. If manufacturing companies cut their prices, there is no chance that the trade, which is largely outside the corporate sector, will. The net result will be a transfer of profits, and later of capital investment, from manufacturing to trading. One wonders if Mr. Desai thinks that a good idea.

Surcharge on Income

The wishy-washy socialism implicit in the super profits tax is seen in the pattern of the other direct taxes too. The withdrawal of the partial exemption for jewellery under the wealth tax is not too objectionable, unless the principle underlying the wealth tax as such is questioned. One only hopes the Government will spend the Rs. 40 lakhs thus acquired on getting itself a longer nose to discover where such jewellery is usually hidden. The additional Union surcharge on incomes is drastic, especially in view of the scale of progression on the higher incomes. Like the super profits tax, it represents a novel contribution to the world's fiscal wisdom in that it introduces the principle whereunder after-tax incomes are once again taxed. The idea sounds terribly clever; if there is nothing to be said for it, one can at least claim that it is new, and therefore ingenious. But the Finance Minister's purpose in doing what he has done is rather more humdrum. It is to spit in the States' eye, by ensuring that they get no share of the extra revenue.

The whole scheme for increasing personal taxation—although its effects are mitigated, in a manner of speaking, by the scheme for compulsory savings—suffers from one crucial defect. It is that it hits hardest those sections of the population who contribute their savings freely to the growth of private industry; and who, for their skill, experience and talent, deserve better rewards. Mr. Desai has shown some courage by applying the compulsory savings scheme to those earning more than Rs. 1,500 a year. But the courage might have been better demonstrated if he had done the straightforward thing by lowering the income tax exemption limit, especially since the administrative difficulties of collection would have been no greater. Because the political courage has been lacking, the Finance Minister has offered as a sop the "soak-the-rich" Union surcharge on the after-tax incomes of the taxable groups. Minor incentives have been given to those who may care to pay their taxes promptly. But these are of little relevance in a

Budget which gives powerful new incentives for evading taxes altogether. India thus moves fast to the stage where, having adopted M. Peacock as its National Bird, it might soon adopt M. Poujade as its National Hero.

On a longer view, among the most serious of the new levies might well be the one which penalises companies for spending more than Rs. 60,000 a year on the remuneration and perquisites of an individual employee. It would perhaps be impertinent to enquire how much the Government spends on an individual Minister, or even on the more favoured among his hangers-on. But the idea that anything above Rs. 60,000 a year spent on an employee should be added back to the company's income, and taxed accordingly, is basically wrong. As an attempt to bring incomes in the private sector down to what they are in the public sector, it is at best an unworthy subterfuge. Many companies will find their senior employees costing them much more than they had expected. Many others may find themselves compelled to revise the terms of employment, which, if the employees decide to leave, will deprive the companies of the skill and experience they have carefully tried to conserve. Less honest organisations could no doubt find ways of avoiding the penalty even though sweeping new powers have been given to income tax officers. But a sound Budgetary policy cannot be one that from year to year puts new premia on dishonesty.

Foreign Investment

The most disastrous effect—of the super profits tax, of the surcharge on personal incomes, and of the virtual restriction on the earnings of senior employees—will almost certainly be seen in the flow of private foreign investment to this country. Mr. Desai cannot be unaware that even the very minor concessions he has given to foreign investors in earlier years have brought a modest, but still encouraging, increase in the inflow of foreign capital. If the Budget stands as it is, it can be said with confidence that that inflow will virtually stop. At a time when the foreign exchange reserves are dangerously small, and when private foreign capital and know-how is desperately

required even for the defence build-up, the prospect cannot be contemplated with equanimity. India has to shake herself out of the dream where she thinks she has become a glorious haven for foreign investors merely because the Chinese are thumbing their nose at her, or because 440 million people are standing around waiting to buy any rubbish that can be made. The fact has to be faced that better returns are available to foreign investors in other countries; and if foreign technicians and managers are wanted here, they cannot be expected to run around in saintly austerity however elaborately the idea might be advertised by prosperous Congressmen.

Indirect Levies

Broadly speaking, one of the more rational features of Mr. Desai's Budget is that he has relied quite heavily on indirect taxes. Out of the total additional revenue of Rs. 265.90 crores accruing to the Centre, as much as Rs. 106.61 crores will come from excise duties and Rs. 87.39 crores from Customs duties. A major aim here again has been to ensure that the States benefit as little as possible, so the device of surcharges on the existing excise duties has been used quite widely. (The States' share in the additional excise revenue will be only Rs. 9.60 crores.) The most notable of the new indirect levies is the 10 percent surcharge on import duties, which is interpreted in some circles as an alternative to the devaluation of the rupee—especially when combined with the minor incentive for exports. Since a large proportion of imports are on Government account, the surcharge to some extent is a measure merely for transferring money from the Exchequer's left pocket to the Exchequer's right pocket. But there can be no doubt that it will do much to raise costs and prices, in a way not very dissimilar from what devaluation might have done. Along with the heavier impost on machinery imports, it will mean that the cost assumptions on which third plan projects are based will now be wrecked. Expansion in private industry too will become more expensive.

The unfortunate feature of the indirect levies is that only a limited attempt has been made to tax articles of general consumption. In particular, the political courage to reimpose the salt duty has been lacking. Instead, Mr. Desai has concentrated his attention not only on the so-called "luxury" goods, but also on many raw materials and intermediate products used by manufacturing industry. In a number of cases, the taxes on the latter categories of goods can be passed on to domestic consumers; but they cannot be passed on to foreign buyers. The rise in the cost of exportable goods will inevitably be extremely damaging. Stronger export incentives are needed if that damage is to be avoided.

In sum, the Budget which Mr. Desai has presented promises to be among the most memorable disappointments in Indian fiscal history. Inflicted on an economy which has already been seriously debilitated, it offers no incentive to move to a phase of expansion and optimism again. It does nothing to revive the domestic capital market, nor to attract the foreign investor. Its chief achievement may be to induce cost inflation on a scale India has perhaps rarely experienced before.

Additional Surcharge on Incomes

IN the Finance Bill, 1963, it is proposed to levy for the assessment year 1963-64 an additional surcharge on income tax in the cases of individuals, Hindu undivided families, unregistered firms, associations of persons, etcetera. This surcharge, which will be for the purposes of the Union, will be calculated on the residual income, that is the total income (exclusive of capital gains, if any), as reduced by the income tax or super tax chargeable on it. For this purpose, the gross amount of income tax and super tax will be deducted from the total income and not the net amount after allowing any rebates that is, rebates on life insurance premia and provident fund contributions, etcetera.

The rates of this additional surcharge, which rise progressively on higher slabs of residual income, are as follows:

Percent	
On the first Rs. 6,000 of the residual income	4
On the next Rs. 9,000	6
On the next Rs. 12,000	8
On the next Rs. 15,000	9
On the balance of the residual income	10

In the case of income from salaries, this additional surcharge will be deductible at source from the payments made during the financial year 1963-64. It will, however, not be charged on the

salary income earned during the financial year 1962-63 because that income is assessable to tax at the rates in force under the Finance (No. 2) Act, 1962. In the case of income other than salaries, the additional surcharge will be levied in making assessments for the assessment year 1963-64.

It has been provided in the Compulsory Deposit Scheme Bill, 1963, that an assessee who makes a deposit under its provisions will be entitled to a certain deduction from the amount of additional surcharge payable by him. This deduction is at the rate of 3 percent on the first Rs. 6,000 of the residual income and at the rate of 2 percent on the balance amount. If the deposit made is smaller in amount, the deduction will, of course, be restricted to that amount. The deposit bears an interest at the rate of 4 percent a year and such interest, it is proposed, will be exempted from tax.

The tables given below show the amount of tax payable by a married individual with more than one child at various levels of total income at the rates proposed for 1963-64, on (i) income from salaries, (ii) earned income other than salaries, and (iii) wholly unearned income. The amount of the maximum deduction from additional surcharge which will be admissible on making a deposit under the Compulsory Deposit Scheme Bill, 1963, is also shown in these tables.

SUPER PROFITS TAX: GUILLOTINE FOR EFFICIENCY

By K. C. Khanna

IT is stated that when Mr. Neville Chamberlain was called upon in 1937 to explain why the tax (then known as National Defence Contribution) was being imposed on companies, he made the frank admission that "it seemed to me the natural thing was to go where the money was". In introducing the Super Profits Tax Bill, 1963, Mr. Morarji Desai has managed to emulate this example of "doing what comes naturally", and companies being less articulate, he has gone to the quarter in which collection of the tax would be assured.

The Super Profits Tax Bill, 1963, if enacted, will come into force from 1st April, 1963, with the result that for every assessment year commencing on and from 1st April, 1963, super profits tax shall be levied, at specified rates, on the chargeable profits of the previous year or previous years ending after 1st April, 1962, of every company, excepting companies having no share capital. Chargeable profits have been defined to mean the total income of a company from all sources computed under the Income Tax Act with the exclusion of capital gains, compensation or similar payment, profits of any business of life insurance and adjusted in accordance with the provisions of the First Schedule. Unfortunately, the relevant provisions of the said Schedule are couched in words of such ambiguity that it cannot be stated with certainty whether, in arriving at the figure of chargeable profits, the income tax and super tax to be deducted from the total income shall be the income tax and super tax actually payable by the company, or the income tax and super tax chargeable on the company, or the tax leviable at the maximum rate of income tax and super tax on a company.

The Finance Minister, in his Budget speech, refers to "the income of a company after deducting the income tax and super tax payable by it". The statement of objects and reasons appended to the Bill refers to the imposition of the tax on "income and profits as reduced by the income and super tax chargeable thereon". A plain reading of Rule 2 of the First Schedule leads to the interpretation that the total income shall be reduced by the income tax and super tax calculated thereon, without deduction of any rebates and reliefs provided in the annual Finance Act. The possible intention is the one adopted in the calculations given later in this article, but it is neither specific nor clear from the wording used in the proposed statute and the confusion remains.

From the balance of the total income remaining after the deduction of income tax and super tax as discussed above, a standard deduction has to be made which is calculated by reference to the capital and reserves of the company at the beginning of the previous year relevant to the assessment year. The rules for computing the capital and reserves are contained in the Second Schedule to the Bill. Briefly, the computation of the capital and the reserves means the total of the paid-up capital of the company and its reserves, with the exception of such reserves which have been allowed as a deduction in the computation of the total income for income tax, for example, the development rebate reserve. A reserve created by revaluing or increasing any book asset shall be excluded, but premium received in cash on the issue of shares and credited to the share premium

account shall be included. In the case of a company, part of whose total income is exempt from income tax—for instance, a tea company—a proportionate reduction shall be made in the amount of capital and reserves for the purposes of calculating the standard deduction. Thus, if only 40 percent of the profits of a tea company are taxed, the standard deduction will be calculated at 6 percent on 40 percent of its capital and reserves.

The example below shows the impact of the super profits tax on a company with share capital. The total tax burden on the basis of a

CAPITAL, 7th March, 1963.

minimum distribution of 45 percent of distributable income, including the tax payable on inter-corporate dividends, but ignoring the holding company's own liability to super profits tax, amounts to 71 percent, a record figure compared with rates of similar taxation in force in other developed and developing countries of the world. This burden of 71 percent will rise still further if there is a non-resident minority shareholder, as happens often in foreign collaboration agreements these days. The total amount left with the company for appropriation to reserves and for ploughing-back is about 19 percent of its total profits, assuming that the taxable profits are equal to book profits. If the entire profits are distributed, the total tax burden will rise to 77 percent. This denudation of resources is bound to slacken efforts towards further expansion and will inevitably retard capital formation. It will also act as a big deterrent to foreign investment in corporate

XXX Manufacturing Co. Ltd			
BALANCE SHEET AS AT 31ST DECEMBER, 1962			
LIABILITIES	(In lakhs of rupees)	ASSETS	(In lakhs of rupees)
Share capital	300	Fixed assets	200
Share premium	45	Less: Depreciation	30
Capital reserve	50		170
Development rebate reserve	5		
General reserve	100	Other assets	530
	500		
Liabilities and provisions	200		
	700		700

- Notes: (1) The Company is a wholly-owned Indian subsidiary in which the public are not substantially interested within the meaning of the Income Tax Act, 1961, and was formed on or after 1st April, 1961.
- (2) Share premium was received in cash.
- (3) Capital reserve was created by revaluation of book assets.
- (4) Depreciation allowed in income tax assessments amounts to Rs. 25 lakhs.
- (5) The credit balance, if any, of the profit and loss account has been deliberately omitted from the above balance-sheet as the inclusion of the said balance in capital and reserves is not free from doubt and will depend on the facts of each case.

Total taxable profits excluding capital gains for the accounting year ended 31st December, 1962, amount to	Rs. 1,20,00,000
Deduct income tax and super tax thereon at 50%	Rs. 60,00,000
Balance	Rs. 60,00,000
Less: Standard deduction computed as under:	
Share Capital and Reserves as per Balance-sheet	Rs. 5,00,00,000
Deduct Capital Reserve and Development Rebate Reserve	Rs. 55,00,000
	Rs. 4,45,00,000
Add: Depreciation not allowed in income tax assessments	Rs. 5,00,000
6% on	Rs. 4,50,00,000
Chargeable profits	Rs. 27,00,000
Super profits tax on 4% of capital and reserves—Rs. 18,00,000 at 50%	Rs. 33,00,000
On balance of Rs. 15,00,000 at 60%	Rs. 9,00,000
Total super profits tax	Rs. 9,00,000
Percentage of super profits tax to total profits—15.	Rs. 18,00,000
Total taxable profits as above	Rs. 1,20,00,000
Less: Income tax and super tax as above	Rs. 60,00,000
Super profits tax as above	Rs. 18,00,000
Balance	Rs. 42,00,000
Percentage of total company's tax to total profits—65.	
Balance available for distribution	Rs. 42,00,000
45% of above distribution as dividend	Rs. 18,90,000
Balance	Rs. 23,10,000
Percentage of retained profits to total profits—19.	
Shareholder's tax at 35% on dividend of Rs. 18,90,000	Rs. 6,61,500
Company's total tax, including super profits tax as shown above	Rs. 78,00,000
Total corporate and inter-corporate tax	Rs. 84,61,500
Percentage of total tax to total profits—71.	

N.B. The above illustration takes into account a distribution of 45 percent of the distributable balance only. In a discussion of the total burden, however, the ultimate liability should be based on full distribution. On this basis, the

tax payable by the shareholding company on the dividend of Rs. 42 lakhs will amount to Rs. 14,70,000 making an aggregate tax figure of Rs. 92,70,000 against Rs. 84,61,500 shown above. The percentage burden will then be 77.

CAPITAL, 7th March, 1963.

finance as other developing countries are offering a measure of liberal profits to foreign investors.

The Finance Minister has tried to justify the imposition of super profits tax on the following grounds (1) there is no correlation between the rate of tax and the percentage of profits; (2) the corporate sector, like the rest of the community, must bear its share of the increased national responsibility; and (3) the super profits tax will act as disincentive to excessive profits and will help to keep down the prices. Let us examine these grounds in detail.

Assuming that it is desirable to have a correlation between the rate of tax and the percentage of profits, does Mr. Morarji Desai's proposal achieve the objective? It will be seen on closer examination that the super profits tax, as proposed, is completely divorced from the principle enunciated by Mr. Desai and, however desirable the objective may be, for reasons stated below, the tax proposal made by the Finance Minister runs counter to it. Firstly, does the arbitrary figure of 6 percent of capital and reserves proposed by the Finance Minister bear any correlation to the present state of the country's developing economy? Does it take into account the fact that expectations of yield from equity investment are higher and that even bank finance and preference capital are not now available at the normal rate of return proposed by the Finance Minister? Mr. Desai is no doubt aware of the keen competition among developing nations to attract foreign capital and the generous terms offered by them to prospective investors. Is it, then, just and proper to peg the normal yield from equity investment to a wholly unremunerative and unrealistic percentage?

Secondly, should the return on investment in all forms of equity finance be kept at the same low figure of 6 percent? Why should an investor finance a risky enterprise when the return to him is to be limited to the same percentage as a return on "blue chips" or gilt-edged securities? It is palpably wrong to prescribe a uniform percentage of return on all types of equity investment. Thirdly, the Finance Minister's proposal takes no account whatsoever of the fluctuations in the percentage of profits from year to year. It is obviously unrealistic to expect a business to earn and maintain a stable level of profits. There are industries with a long gestation period which yield high profits only after a long period of investment. There are industries whose profits are affected by good or bad crops and other factors beyond their control. What remedy or relief is proposed in a case where a year of super profits, assuming that any return over 6 percent of capital employed is super, is followed by a year of super losses or was preceded by years of sub-standard profits? The super profits tax makes no provision for the carry-forward and set-off of deficiency in profits and grants no relief by refund or otherwise in this respect. Why? Any tax system which desires to achieve the objective outlined by Mr. Desai must be fine and flexible but the super profits tax proposed by him appears to be too crude and rigid a measure to achieve his objective and will inflict numerous inequities and hardships.

The Finance Minister's second reason for the levy of the super profits tax is that the corporate sector must bear its share of the increased national responsibility like the rest of the community. This contention is based on a gross misunderstanding. It has been stated time and again that when individuals form a company, they do not acquire a capacity to bear taxes quite different from and additional to their taxable capacity in relation to other forms of income. Companies are merely filters through which rewards of business pass from one set of personal pockets to another set of personal pockets. It is by now generally recognised that all taxation is personal taxation and is ultimately suffered by living persons. It is, therefore, quite wrong to contend that the corporate sector is something different from and additional to the rest of the community. In fact, it is nothing but part and parcel of the community and any burden imposed on the corporate sector will ultimately be borne by the community itself.

As regards the contention that super profits tax will act as a disincentive to excessive profits and will help to keep down prices, experience in other countries shows that "the most important figure to management and shareholders in companies'

accounts is the amount of net profit available for distribution. If this figure is considered to be an adequate return on capital employed, enabling sufficient reserve appropriations to be made and reasonable dividends to be paid, all is well. If not, something has to be done about it. Where heavy taxation reduces the net profits of a company below a satisfactory figure, there is a determined attempt to restore the position and increased selling prices generally result." (A. Dale in *Accountant* dated 16th December, 1961.) It is quite likely, then, that, to some extent at least, company taxation is passed on to the consumer and to this extent the super profits tax may belie the Finance Minister's expectations.

It will be evident from what has been stated above that the super profits tax as proposed cannot be justified on any valid ground. A tax is either a charge to profits or an appropriation of profits. But when a levy is made, like the super profits tax is, on net profits after tax, it is neither a charge nor an appropriation; it is expropriation. It will deplete corporate resources to the maximum and will ultimately lead people to desist from risk-carrying enterprises. In a developing economy, corporate finance must play an increasing rôle in the growth of new industries and nothing should be done which discourages such investment and hinders foreign collaboration.

COMPULSORY SAVINGS SCHEME

AN important feature of the Central Budget proposals this year is that the Finance Minister has introduced a compulsory savings scheme. In 1963-64, the scheme is expected to bring Rs. 65 crores or Rs. 70 crores, out of which the share of the Central Government will be Rs. 40 crores. With remarkable optimism, Mr. Desai hopes that this yield will be in addition to the net realisation of Rs. 105 crores from voluntary small savings. The Finance Minister has cast his net wide, and has covered not only all classes paying income tax but also many who do not at present pay income tax. Shopkeepers, business men, professional people and cultivators too are covered. The most notable feature of the coverage is that it applies to people earning more than Rs. 1,500 a year—that is, even to many who do not at present pay income tax. Instead of lowering the income tax exemption limit, Mr. Desai has thus judged it to be politically wiser to take the money in the form of compulsory savings. The main argument in support of the scheme is that it will raise large additional resources, inculcate a habit of saving, and provide the people with accumulated savings five years after they make their deposits on which they will be able to earn interest at 4 percent a year. Another major argument in favour of compulsory savings is that it will reduce the purchasing power in the market and will to that extent prove disinflationary. At a time when deficit financing and additional taxation will add to the inflationary pressures, this effect of compulsory savings should be welcome.

Sample details about the rates at which compulsory savings will be taken from different classes of tax payers are given on page 330. The methods of collection have apparently not yet been worked out in any great detail. But the Finance Minister has announced maximum limits beyond which the compulsory savings rates will not be increased. These maximum limits will be 50 percent of the basic land revenue on the 1959-60 assessment for agriculturists, 3 percent of the annual rental value of property for property-owners in urban areas, and 3 percent of salary for employees who earn more than Rs. 1,500 a year but are

Because the super profits tax is drastic and threatens serious harm to companies, several suggestions have been discussed as to how it might be made less irrational. The amendments which some have suggested include: (1) an increase in the percentage on capital and reserves to bring it to a realistic figure; (2) provision of flexibility in the basis of calculation of the said percentage to cater to the needs of different industries and trades; (3) provision for the carry-forward and set-off of deficiency of profits and grant of refund; (4) reduction in the rates of super profits tax; (5) allowance of super profits tax paid as a deduction from taxable income of the following year; (6) and the enforcement of the levy from the assessment year 1964-65. To meet urgent financial requirements, suitable provisions may be introduced for advance payment of tax.

It is true that funds are needed for the national defence effort and it is not denied that the Finance Minister's task is onerous. But it is equally true that a strong and healthy economy is vital to the defence of the country and it is imperative that in the anxiety to raise necessary funds, nothing is done which weakens or stifles the economy. The super profits tax in its present form is wholly inequitable, untenable and unacceptable. It must be either scrapped or radically amended.

The maximum limit in the case of persons paying income tax but whose residual income after payment of tax does not exceed Rs. 6,000 a year will be 3 percent of such residual income. But compulsory savings can be deducted before paying the Union surcharge on income. In the case of others with a residual income exceeding Rs. 6,000 a year, the rate of compulsory savings will be 2 percent of the residual income. For people like shopkeepers, whose annual turnover is Rs. 15,000 or more and who are not liable to pay income tax, the rate would be 1/3 percent of the total annual turnover in the year immediately preceding the year in which the deposit is required. For persons other than shopkeepers liable to pay taxes on professions, trades, etcetera, the maximum rate would be an amount equal to the amount of these taxes.

The scheme of compulsory savings, although a unique feature of the Central Budget, has certain flaws which might cause headaches to both the Government and the people. Although the compulsory saving is not a tax, it is still "compulsory." Shopkeepers with an annual turnover of less than Rs. 15,000 and persons with an annual income of less than Rs. 1,500 have been left out of the scheme—presumably because of administrative and political difficulties. In the case of persons paying income tax, the collection of compulsory savings may not offer much practical difficulty, although it could lead to labour unrest among the lower-income groups. In the case of others, the trouble and bother would be considerable. The cost of collecting such deposits, and refunding them after a lapse of five years, has to be kept down if one is to justify the experiment. But the biggest implication of the scheme is that persons, whether paying income tax or not, who are forced to make the compulsory savings deposit, might reduce their usual savings which they were investing in other ways. This would not only reduce the net yield of small savings, but also contributions to Government loans and the finance which the private sector is able to raise from the capital market through shares and debentures. If this happens, the compulsory savings scheme would have a serious effect on the funds available for private investment.

THE ECONOMIC OUTLOOK

HOW will the Indian economy fare in the coming year? It is difficult to give an answer with any confidence, because major uncertainties are implicit in the assumptions on the basis of which the Central Finance Minister, Mr. Morarji Desai, has committed the country to a total outlay

of Rs. 3,672 crores, divided almost equally between the revenue and capital accounts. The biggest of these uncertainties arises from the shortage of foreign exchange, the crucial factor for maintaining output in many industries. In 1962-63, Mr. Desai had taken credit for Rs. 418 crores of foreign

India's Resources

are Precious

WASTE NOT,

WANT NOT

loans but actual receipts were Rs. 78 crores less. For the coming year, he is assuming that Rs. 115 crores will be available through fresh foreign credits, apart from the Rs. 347 crores he hopes to use out of the funds already committed. Until the Aid-India Club meets and the participants disclose their intentions for the rest of the third plan period, Mr. Desai's assumption rests on nothing more solid than hope. In any case, it is not the total amount of aid that is relevant in this context but the proportion untied to specific projects.

Another important uncertainty arises from the inability to foresee what agricultural output will be in the current crop year ending June 1963. Since the movement of the economy closely follows the swings in agriculture, this is another major premise still to be defined before one can make a reasonable guess for the coming year. The official *Economic Survey* commits itself to saying no more than that the crop prospects are by and large satisfactory, despite several adverse factors like an excess of rainfall and floods in some parts of the country and deficiency in others. No major advance is, however, expected over the peak level attained two years ago in 1960-61. The assessment is surprising because credit has been taken for a substantial improvement in the use of irrigation facilities, and for raising the total supply of fertilisers to 425,000 tons of nitrogen, against about 200,000 tons in 1960-61.

Looking back, one has to acknowledge that official policy has veered towards greater realism in several ways during the past year—and this may be among the few hopeful signposts for the future. The change has followed the rethinking forced on the planners by the setbacks suffered during 1961-62, when the economy seemed suddenly to lose the momentum with which it was advancing at the end of the second plan. Agricultural production as a whole showed no increase at all and there was an actual decline in the output of food-grains, sugarcane and raw cotton. Industrial production rose by 6.8 percent, against 10 percent or 11 percent in the two previous years. The shortages of coal, power and transport were clearly retarding economic growth.

Although it has taken time for these developments to register on the official mind, a number of remedial measures initiated last summer seem to have borne some result. There has been, for instance, a remarkable spurt in coal-mining, and it looks as if the year will end with a production of 62 million tons, or 7 million tons more than in 1961-62. Among the factors which have contributed to the improvement, more realistic pricing policies have played an important part. The differential between the lower and higher varieties of coal has been widened from Rs. 3 in 1960 to Rs. 7, and the allowances granted for stowing and difficult mining have been liberalised.

The fact that there was a basic deficiency in planning for power was recognised but not before industries in the West Bengal-Bihar area had paid heavily for the error. The Sachdev Committee's enquiry brought out the fact that while aggregate generating capacity in the country increased by 11.3 percent a year during the second plan period, the rise in the West Bengal-Bihar area—the region of heaviest industrial concentration—was at the rate of only 7.6 percent. The rethinking induced by this analysis has resulted in a decision to enlarge new capacity. For instance, Durgapur has been allowed to provide for a third 75 MW set; and a similar change has been made in Chandrapura. The power crisis has also compelled more expeditious work on new schemes, facilitated by quicker clearance given from New Delhi to meet the foreign exchange costs. From April to September 1962, the amount of aid used for power development amounted to Rs. 13.6 crores, against Rs. 5.6 crores in the corresponding months of 1961. Even though the Chinese invasion has accentuated the anxiety about foreign exchange, a categorical assurance has been given by Mr. Desai that power development will continue to receive top priority. In fact, studies have been initiated to assess future requirements and some advance action on fourth plan programmes is in hand. With over Rs. 1,500 crores of external assistance outstanding at the beginning of this year, there should be no parti-

cular worry about foreign exchange for power projects which have always ranked high with the aid-givers.

In transport, another basic sector, the shortages of 1961-62 have finally persuaded the Planning Commission to do the right thing. The railways have been allocated an additional Rs. 120 crores. Work on their expansion schemes has quickened, and about 40 percent of the funds earmarked for development will have been spent by March 1963. The acquisition of new wagons has been stepped up, with over 19,000 added in the first half of 1962-63, against 12,000 in the corresponding period of the previous year.

Industrial policy has changed for the better in several ways during the past year, although practical results cannot yet be seen. Among the major gains is the decision to accord emphasis in future licensing to the expansion of capacity rather than the setting up of new units. This follows recognition of the waste of foreign exchange implicit in adding new units indiscriminately when existing plants are badly under-utilised. That apart, the policy-makers seem to be better aware of the importance of the economies of scale in any rational programme of development. The change of policy, while dictated by the compulsion of circumstances, might imply that New Delhi is gathering courage to take a firm stand against regional ambitions,

even though it is occasionally inclined to slip back under strong political pressure.

Judging economic policy as it has unfolded over the past few months, the broad conclusion is that helpful gestures have been offset by shortsightedness on several important issues. The stock markets, where the boom had worn off by May 1962, have been given a jolt by the inadequate increase in steel prices. Not surprisingly, the downward trend in share prices has been accentuated since the Chinese invasion, which has already had the effect of inhibiting new issues. Although the total of capital issues sanctioned in 1962 rose to Rs. 165 crores from Rs. 133 crores in 1961, this cannot be accepted as a reliable indicator of investment intentions, especially now that the fresh levies on corporate enterprise make the future outlook for profitability uncommonly bleak. Corporate fortunes apart, one can hardly be sure that the massive dose of additional taxation Mr. Desai has announced, coupled with resort to deficit financing, will not prove more than the economy can take. As the *Economic Survey* acknowledges, the performance of the economy in the coming months will depend to "a significant extent" on the "confidence" of private investors and on their ability to raise the funds necessary for the expansion of essential business. The Budget has done nothing to help the investor; it has placed hurdles in his way which he cannot reasonably be expected to surmount.

COMMODITIES: AN OPEN QUESTION

COMMODITY dealers in London have reported recently the biggest speculation in commodities—specifically, cocoa and sugar—that they have experienced since the prewar era. Special factors have caused shortages of particular commodities and have distorted the indices of commodity prices. But the rise in prices has not been confined to abnormal cases: wool and coffee, for example, have risen considerably. And shipping freight rates have responded to the recent big movements of oil. The higher prices and freight rates are unstable; but many observers believe that the long-term trend of commodity prices turned upward last year. If this trend is substantiated, it will ease the problem of financing the development of underdeveloped countries. But it will deprive the developed countries—particularly Britain, in a period of economic stimulation—of some of the advantage of favourable terms of trade. However, it must be questioned whether the developed countries can achieve their desired growth of industrial production unless the markets for industrial products in the underdeveloped countries are much enlarged.

It is common knowledge that, whereas primary prices declined erratically for more than ten years from 1951, wholesale and retail prices in the developed countries rose during most of that period. The average level of prices has risen during most of 30 years, and many economists have accepted the idea that prices operate on a ratchet principle: they respond freely to upward pressure but are prevented from falling when that pressure is relaxed. This principle has obviously not been applicable to commodities, but it is consistent with the behaviour of wholesale and retail prices since the last war. However, the historical study of prices by Professor W. J. van de Woestijne, published recently by De Twentsche Bank, has been noticed far beyond Amsterdam. This eminent economist has made other economists—and business men—aware that there have been comparable periods in the history of many centuries when prices have risen for decades, or have seemed to be steady at a permanently raised level, but that always, sooner or later, prices have fallen back. He explained the collapse of prices in 1929-32 as a reaction from a level which, although drastically reduced in 1920-22, was still some 50 percent higher than in the decade before the first World War.

The behaviour of prices since the end of the second World War has been quite different. This is partly because prices were not allowed to rise as much in the second World War as they had risen in the first; partly because inflation continued (it was stimulated by a continuing high rate of military spending); and partly because economic

policies were directed towards full employment. Reparations and war debts, moreover, did not distort international trade and payments after the second World War as they had done after the first. Policies have been generally expansive since the second World War, not restrictive as they were between the wars. Yet some economists—Professor van de Woestijne is not the only one—are troubled by the possibility of world-scale deflation, involving a severe fall in prices and general loss of confidence among business men. The purpose of the professor's recent study was not to predict such a development but to warn that it would happen if history were allowed to repeat itself. The possibility was suggested nearly ten years ago by Mr. Colin Clark in Britain and a little later by Professor John Galbraith in America. But wholesale and retail prices continued to rise, despite the decline in commodity prices. Fears were revived near the middle of last year, when prices in the world's stock markets fell heavily. But confidence has been more or less restored by the subsequent recovery in those markets and by the upturn in various commodity markets. Such resistance to the forces of readjustment after a long rise in prices is historically not unprecedented. It is still an open question whether the "normal" readjustment has been delayed or fundamental economic changes have established prices on a permanently higher level. It can be argued (despite the illusions of some experts in the 1920s) that we have evolved techniques of economic regulation that can infallibly prevent a slump in business; but sceptics will say that these techniques have not yet been seriously tested.

It is not impossible that both the optimistic and the pessimistic forecasts will be proved right, for the experience of recent years suggests that stable, or even rising, prices are not incompatible with an economic recession. In the postwar era, there has not yet been a full-scale slump, and eminent economists' warnings of such a possibility will help to prevent it. But one factor that has sustained economic activity in this era has presented a new threat. In all developed countries organised labour is more effectively organised and more aggressive than it was between the wars, and it is still gaining increases in wages. As a considerable proportion of the increases is spent on services, not goods, industry's labour costs are rising faster than the market for its products is expanding. (For the same reason, and because synthetic materials are being developed to replace natural materials, consumption of primary products is not increasing as fast as wages are rising.) The incentive to substitute high-productivity machines for human labour is very strong, and this substitution is causing unemploy-

ment, so retarding the growth of aggregate personal income. These tendencies will not automatically reduce prices, but they will tend to restrict trade, which must, therefore, be developed

Current News and Comment

Waste in Public Expenditure

In its recent report, the Estimates Committee of Parliament has drawn the Central Government's attention to the huge waste in its non-plan and non-essential expenditure. In an earlier report, the Committee had pointed out that in the five-year period from 1956 to 1961, the Government's administrative expenditure had increased by a sizable amount of Rs. 199 crores. The Estimates Committee had expected that in view of its suggestions to reduce such expenditure a better picture would emerge in the first two years of the third plan. But this has not been the case and the administrative expenditure has increased by a further amount of Rs. 58.9 crores during the period. The Estimates Committee has rightly come to the conclusion that "the economies effected by Government as a result of study of selected sectors of activities of the administrative ministries must have been negligible as otherwise there would not have been such a large increase in expenditure". The Committee has, therefore, recommended that a panel of the Planning Commission should conduct a special study of the trends in development and administrative expenditure of the Government in order to be able to effect economies. Strangely enough, the Finance Ministry has rejected this plea on the ground that an adequate machinery for the purpose already exists in the Government itself. But the point is that if the existing machinery had succeeded in its efforts the administrative expenditure of the Government would have been reduced. It is because that machinery has failed that it has become necessary to entrust the work to another agency.

Some idea of the waste involved in administrative expenditure may be had from the fact that in the first two years of the third plan, the salaries of officers have increased from Rs. 16½ crores to Rs. 21½ crores, the pay of establishment from Rs. 82½ crores to Rs. 98½ crores, allowances from Rs. 36 crores to Rs. 47½ crores and contingencies from Rs. 37½ crores to Rs. 44½ crores. The Finance Ministry's argument that the increase in expenditure has been due to the appointment of additional staff for implementing the plan does not stand scrutiny because the increase has taken place not only in the Government departments directly dealing with the implementation of the plan but also in all the other departments. Moreover, there has been no proper rationalisation of work in the different departments. There are not only too many officers and staff in each department but the way in which they operate also hinders the implementation of the plan. No private enterprise would have survived the confusion which prevails in the Central Government's administrative departments.

In the Budget for 1963-64, Mr. Morarji Desai has sought to raise additional revenues to the extent of Rs. 275½ crores. The people who are called upon to bear the greatly increased sacrifices, which the huge additional revenue involves, have a right to expect that the Government would make all possible economies not only in their non-plan and non-essential outlay but also in the plan outlay. But unfortunately, the Finance Minister has not said anything in his Budget speech about the Government's efforts to reduce expenditure. In fact, the expenditure on administrative services has actually gone up from Rs. 70½ crores in the Budget estimates for 1962-63 to Rs. 76½ crores in the revised estimates for 1962-63 and to Rs. 88½ crores in the Budget estimates for 1963-64. There has also been an increase in other items of civil expenditure that are quite unrelated to the requirements of the third plan. In order to reduce the heavy burden of additional taxation on the people, to keep the inflationary forces in check and to convince

by liberal trading policies between nations and between groups of nations—particularly between the developed and the underdeveloped communities.

the people that they are not making sacrifices without purpose, the Government's administrative expenditure in the remaining three years of the plan will have to be drastically curtailed.

Tea Workers in Darjeeling

Enquiries into the socio-economic conditions of plantation labour were undertaken as far back as 1906 when the Assam Government appointed a committee with a view to improving the living conditions of workers in tea plantations in the State. Much has been done to improve the living standards of plantation labour, although it has had the effect of imposing serious burdens on planters. The Tea Board has undertaken a number of useful enquiries into the living conditions of plantation labour on a regional basis, and their findings, in most cases, have been interesting. The Board's latest booklet entitled *Survey of the Living Conditions of Tea Plantation Labour in Darjeeling Hills*, which is the result of a sample survey, gives information on the age-distribution, employment, income and expenditure patterns, etcetera, with a lot of statistical data. Not all the information contained in the booklet can be regarded as new. But the findings have been given a touch of authenticity with detailed statistical analyses.

The overall percentage of literacy among the surveyed labour population, the Tea Board says, was found to be only 21.43. The cause for concern is that the extent of literacy among the younger generation is no higher than among the grown-up population. Labourers have yet to be made aware of the necessity of schooling their children. But this will not be possible unless their expenditure on such non-essentials as liquor and smoking is cut substantially. According to the Tea Board survey, addition to liquor was found to be 53.81 percent among men, 47.42 percent among women and as high as 20 percent among adolescents. Among adult males, 77.64 percent were found to be smokers, while among the women the percentage was still higher at 81.69.

The Board refers to the housing accommodation provided by employers and points out that, of the 324 labour families surveyed 90 families were found to be living in pucca houses, 108 in semi-pucca houses and the remaining 126 families in kutcha houses. It says that the living space available in an average quarter, which works out to 281.34 square feet, is not unsatisfactory for an average family of 5.53 members. But the Board states that many of the quarters provided do not conform to the requirements under the Plantation Labour Act. The poor progress of housing schemes is due mainly to the shortage of building materials, high taxation and increased production costs which have squeezed profits. As for the wages of workers, the Board would have done well to show how these have increased under the pressure of welfare legislation for plantation labour.

Recovery in Shipbuilding

The annual figures of merchant ships launched last year, which have recently been compiled by Lloyd's Register of Shipping, show that the world shipbuilding output reached 8.4 million tons, or 434,749 tons more than in 1961. This welcome increase heralds a recovery in the world shipbuilding industry after three years of declining output when new orders, Lloyd's Register says, were difficult to obtain. But in spite of the rise in output, launching from the various shipbuilding countries during 1962 showed considerable differ-

ences in trends, compared with 1961. Notable increases occurred in such countries as Japan, Sweden and the United States while a fall in output was noticeable in Britain and Northern Ireland, the Netherlands, Yugoslavia, Spain and Belgium. Japan's performance has apparently been most remarkable, since after falling from a peak of 2.4 million tons in 1957 to 1.7 million tons in 1959, the output climbed back to 2.2 million tons in 1962. This output, Lloyd's Register says, is 26 percent of the world total, compared with 23 percent for 1961. The output in Britain and Northern Ireland fell from a peak of 1.5 million tons in 1955 to 1.1 million tons in 1962. This is 13 percent of the world total, compared with 15 percent in 1961. West Germany's output, on the other hand, recorded a recovery. After falling from a peak of 1,429,261 tons in 1958 to 962,407 tons in 1961, the output reached 1,009,698 tons in 1962. But more than two-thirds was for registration in other countries. This analysis shows that Japan is still the largest producer of merchant ships. The U.K., as the *Financial Times* says only narrowly retains her position as the world's second largest shipbuilding nation while West Germany occupies third place. The countries which built large amounts for export are: Japan 876,794 tons, West Germany 683,881 tons, Sweden 596,618 tons, France 308,833 tons and the Netherlands 243,541 tons.

Productivity in Oilseeds

The *vanaspatti* industry did reasonably well in 1962, with its production setting new records at 368,400 tonnes, compared with 338,544 tonnes in 1961 and exports rising from 4,220 tonnes to 12,134 tonnes. The current outlook seems more promising because of the improved supply of edible oils this season. Exports, of course, are possible only because of the incentive scheme. But since the industry's progress is closely linked with the increase in oilseeds production, it is naturally concerned about the growing unbalance between demand and supply, which is reflected in the continued high level of oilseeds prices. Not only have oilseeds prices been rising faster than foodgrain prices, Indian oils have been completely priced out of world markets. For a pretty long time now, Indian groundnut oil has been quoted Rs. 500 to Rs. 800 a ton higher than that from other sources like Africa and the Argentine. Once a leading exporter of oilseeds and oils, India has become a net importer of oils and fats since 1957. Exports, in terms of oil, fell sharply from 306,000 tons in 1955-56 to a mere 71,000 tons in 1960-61. Recently, however, groundnut oil exports have picked up as a result of liberal incentives.

If India is not to lose exports, face a growing fat shortage and end up as a large net importer of fats and oils, serious attention will have to be given to boosting oilseeds production which has persistently been lagging behind the growing demand. With production in the second year of the third plan at 6.8 million tons, still short of the second plan target of 7.5 million tons, one really wonders how the target of 9.8 million tons can be realised by 1965-66. In terms of the likely fat requirements of the country and the need to step up exports to earn valuable foreign exchange, the third plan target is by no means ambitious. But in view of the limited scope for bringing more areas under oilseeds, the production has naturally to be stepped up by increasing the yield.

It is, therefore, hardly surprising that the chairman of the Vanaspatti Manufacturers Association of India, Mr. P. L. Tandon, should have selected the problem of oilseeds productivity as the theme of his speech at the recent annual meeting of the Association. The point is best illustrated by groundnut. It is ironical that India which accounts for nearly 32 percent of the total world production of groundnut has an average yield of 640 lbs an acre, against the world average of 900 lbs. Uganda gets 950 lbs an acre, China 1,613 lbs, Egypt 1,784 lbs and Turkey 2,230 lbs. Mr. Tandon says that the saving grace in the oils and fats situation is the large scope for improving yields. But strangely enough, the yield has actually fallen over the past 15 years. A 50-percent increase in the yields, were it possible, would not only give every Indian mor-

oil, but also restore the country's dominant position in the world export markets.

In his presidential address at the last meeting of the Indian Central Oilseeds Committee, Mr. A. D. Pandit referred to the findings of an East African expert who conducted a study of groundnut cultivation in India. He attributes India's low yields to the low plant population achieved in most groundnut fields, inadequate and unsafe storage conditions for maintaining high germination capacity in seeds, ineffective distribution of seed and inefficient seed drill. Mr. Tandon says that the exploitation of the oilseeds yield potential is not as formidable as it looks. State Governments in the major growing areas have developed an excellent network of agricultural research stations which are known to have obtained a 35-percent increase in the yield through better farming practices, seed dressing, use of manure and improved seeds and appropriate pest control. If yields have not improved, it is because the benefit of research has not reached the farms. The scientist goes his way and the farmer goes his own. Most agronomists place too much emphasis on formal statistical experiments and neglect the practical aspects of cultivation. Red tape and apathy of the State Governments also stand in the way of prompt and fuller application of research for the benefit of the cultivator.

Expansion in Screws

In line with the general trend of industrial production in the country, the output of the

Indian screw industry has risen substantially over the past few years. Production of woodscrews has gone up by 69 percent between 1958 and 1962, while the output of machine screws has more than doubled during this period. Dealing with the industry's progress in his address at the annual general meeting of the Screw Manufacturers Association held last week in Calcutta, Mr. K. Varugis said that the industry is now spread all over the country; moreover, over the past few years, it has diversified its output. Of the 51 units manufacturing woodscrews, many are now making machine screws too. In response to the Government's invitation, the industry has submitted expansion plans. But the Government "appears to have decided" that the bulk of the proposed expansion should be reserved only for the small-scale sector. The larger units, therefore, will have to be content with only small increases in their capacity. The advantages of allowing larger units to reach their economic scale of production are so obvious that Mr. Varugis feels disappointed over the Government's decision.

The industry has its share of the raw materials problem also. Although wire, which is the raw material for the industry, can now be fully met out of domestic production, screw manufacturers have still been experiencing difficulties in obtaining their supply. The requirements of the screw industry forms only a very small part of the total capacity which has been installed for making wire in the country, Mr. Varugis pointed out. Yet the authorities responsible for the allocation of the raw material to the industry have not always

sanctioned the requisite quota for the screw manufacturers.

Policy for Drums and Containers

Reliable reports indicate that the Government of India has revised its policy on the manufacture of containers by "products manufacturers" for their own use because of the continuing general shortage of tinplates. Hitherto actual users (consumer fabricators) were being given preference to commercial fabricators in the licensing of drums and tin containers. This policy is now to be discouraged. All efforts will be made to use, to the maximum extent possible, the existing plant and machinery already installed in the country. This policy may be reviewed again as and when tinplate requirements are freely met for all the existing manufacturers. There are some 89 consumer fabricators and 288 commercial fabricators engaged in manufacturing drums and tin containers. Raw material requirements for the industry are being met both by indigenous as well as imported tinplates. But only about 70 percent of the industry's capacity is now being used. Since there is already unused capacity with commercial fabricators, the licensing of consumer fabricators will not only leave dormant capacity unutilised but also result in the installation of exact duplication of machinery involving avoidable expenditure of foreign exchange.

Besides, a policy of consistently allowing all types of manufacturers to have their own fabricating plants for containers will unnecessarily increase the diversification of manufacturing activities. In the long run, commercial fabricators who are specialising in the particular line will also be adversely affected. The chief consideration behind consumer licensing—especially in the case of the *vanaspati* industry—has been the saving of wagon space and transport costs. The Government now thinks that this can be avoided by a suitable dispersal of the existing tin container factories in the country or by encouraging and allowing the installation of the plant for manufacturing containers as much near the consumption centres as possible or, alternatively, the new licences for food preservation and fruit canning factories, etcetera, should take the nearness of a tin containers factory also into account while locating their plants.

SMOKE NUISANCE

MR. Fred Grover, who has been brought out by the Government of India to examine into the causes of our smoke nuisance with the view of suggesting a remedy, has not been long in settling to work after his arrival. He is to be with us about four months, and so will be able not only to see the conditions of fuel combustion under clear dry weather but also under all other variations of atmosphere onto the rains. Mr. Grover comes from Leeds, and has graduated in that famous University of Smoke. He is now an able Professor in his line, and has perhaps had more experience in fighting smoke along strictly scientific methods than most men of his age, and he is still a comparatively young man. He is thoroughly grounded in the principles that underlie the efficient combustion of fuel, and these he hopes to be able to apply to Calcutta when once he has investigated all the local conditions. Mr. Grover is quite delighted with the reception he is meeting with whatever he has gone in his work of investigation. The managers and owners of the mills look upon him as a friend, as, indeed, he is, and gladly supply him with all the data he wishes. He has already sent out circulars asking a number of questions, and the answers are coming in with cheerful alacrity. He is too wise to express any opinion yet as to what he will recommend as a remedy, or remedies, or on what lines a new Smoke Nuisance Act will require to be framed. He looks upon our venerable Act of 1863 as a perfect curiosity of legislation, in the light of present day conditions. But we may confidently expect that the new Act will be framed on lines which take into account what a steam user can do, and not upon what he cannot.

A Ditcher's Diary

DR. RAJENDRA PRASAD, WHO DIED ON BUDGET DAY, was in many ways the very antithesis of Mr. Nehru; and, in retrospect, it seems a compliment to both that they worked together for so long with so few hitches even after the unifier, alien rule, had ceased. There was something very earthy about the man even when he was free India's first President and had to hold banquets and things for visiting kings and statesmen. He spoke the language of the Indian peasant and, if I may say so, often thought the thoughts of the Indian peasant. Now, I am not an uncritical admirer of the so-called peasant virtues, many of which I do not consider to be virtues at all. Yet the presence of Dr. Prasad in Rashtrapati Bhawan may have served a useful purpose in a difficult and transitory period. He never concealed his congenial conservatism and may well have been some sort of a restraint on the jet-age imagination of some of his colleagues. It is all very well to be aware of the unlimited possibilities of the nuclear age; but when you attach a couple of jets to a bullock cart you spend a lot of money and move no faster. Is not this true of too many of India's projects? Even on social reform my views are nearer Mr. Nehru's than Dr. Prasad's; this does not, however, make me forget that Dr. Prasad was much more representative of the people than I am or Mr. Nehru is. When Dr. Prasad argued that it was a mistake to give votes to the illiterate, that qualifications should have been laid down for M.P.s, he was being "unprogressive". Yet, not even the most ardent democrat can claim that either has been an unmixed blessing in India. The best thing about Dr. Prasad was the example he sought to set of simple living. He was in the event obliged to live differently, especially on ceremonial occasions; but his discomfort in luxury was ever evident. Again, I was of the view that a President should live like a President. Now I see his point. He knew, as I didn't, that most of his colleagues would succumb to expensive living once they got the taste for it; and that would be the beginning of all sorts of undesirable trends. How terribly right he seems when one looks around in present-day Delhi. Whose values have won—Dr. Prasad's or Mr. Nehru's? Some may be rejoicing too soon.

"BEAR IT WITH A SMILE: NEHRU"—SUCH WAS THE headline in Saturday's papers. Since the Government has the powers to collect any taxes it may choose to impose, bear "it" the people must. I have, however, consulted the Defence of India

Rules and can find in them nothing that empowers Authority to extract my smile; and this Mr. Nehru will not have. There was not a touch of even verbal humour in the whole Budget speech, although I can remember Raisman, Rowlands and other Finance Members who could on occasion be quite witty. (Perhaps Mr. Morarji Desai is too lofty for frivolities; and it is indeed difficult to see him appreciate some of the cracks an earlier Ditcher produced in the old Central Assembly; Mr. Tyson spoke of the spending spree and the inevitable morning after, and Raisman regretted there was so little Rose's lime juice to go round!) It is quite illogical to demand, as I have done and do, greater military preparedness and not be prepared to pay for it. It is, at the same time, equally pertinent to insist that the money raised be well spent. I have seen no contradiction yet to the report in the *Statesman* on 8th February last that all Ministers had refused to reduce their water and electricity bills to the not inconsiderable sum of Rs. 250 a month, that for the Prime Minister the monthly bill on this account is about Rs. 4,000 and for lesser Ministers nothing less than Rs. 1,000. (I can believe that you can drink water; but can you eat electricity?) I have since heard some reports about how much it costs the people, you and me, to air-condition and furnish Ministers' free quarters; and I doubt that many Maharajahs of yore spent on quite the same scale. And among the most liberal spenders are the Ministers who speak endlessly of the virtues of simple living and the need for austerity! (I wish some M.P. would ask questions on these items and elicit detailed replies.) One reader's reaction, in verse, is used as a tailpiece; the rest of mine is in the main unprintable. When I pay the new taxes, I shall do so in the knowledge that most of them have been necessitated not by the Chinese but by another enemy of democracy: callous waste in high places.

IT MIGHT BE POSSIBLE; ODD THINGS HAPPEN these days. Anyway, I am not prepared to subscribe to the comment of one British newspaper on the Russian claim to have brought two newt-like creatures back to life after being frozen for 5,000 years—that one would have to be as tight as a newt to believe it. I would prefer instead to accept the less scornful explanation that perhaps the little reptiles were rather more up-to-date than the scientists gave them credit for being, and I had merely been hibernating for the winter. But

trust the Russians to suggest the incident may have significance for future space flight. I should have thought its possibilities were much more immediate than that. What about long and boring air journeys for example? I once read with interest a suggestion by Malcolm Muggeridge that long-distance air passengers should be given knock-out pills when they step aboard their aircraft and then stacked in layers. Now how much better would it be if they could be popped into deep freeze as soon as the airport formalities are completed, loaded on to the aircraft mechanically, unloaded the same way at the other end, and then kept in a state of complete refrigeration until called for? That way there would be no bother about food, passport checks, being turfed off the aircraft half asleep in the middle of the night, or being forced to pay through the nose for a whisky and soda at intervening airports. It might even save the misery of having to fight for a shave in the early morning, although I am not clear what refrigeration does for the whiskers. Then there are the possibilities of escaping the Calcutta hot weather by going into deep freeze; from what I have been hearing through my correspondents in Britain, the temperature there would have needed to fall only a few degrees lower to have put them completely out of their misery this winter. And, of course, the compulsive Rip Van Winkles of this world could have a fine time popping up century after century until they found one that suited them. But that would not do for me, I am afraid; I have always been firmly of the opinion that it is better to get life over with in one sharp rush and be done with it. What does strike me, though, is that if it is really possible to revive life after a sleep of 5,000 years, then there might still be some hope for the Calcutta Corporation.

BUT WHAT ON EARTH IS GOING IN THE CALCUTTA CORPORATION? Or, perhaps, the question to ask is: What on earth is going on in Writers' Buildings? Even as I frame these questions, two faces of the same anomaly, I know that everyone knows the answers perfectly well and nobody will spell them out. Let me try. The Government of West Bengal, as represented by Mr. P. C. Sen, is, like every citizen in Calcutta, fed up with the Corporation and its Councillors whose indifference to civic welfare has now gone beyond all limits. On the other hand, the West Bengal Congress, as represented by Mr. Atulya Ghosh, needs control of the Corporation for reasons I would like to go into but can't. The differences between the two would have been less ludicrous if the Government were run by one Party and the Corporation by another. As it happens, both have been captured by a Party called the Indian National Congress. Personally I do not believe the stories one hears often of

GABRIEL INDIA LIMITED

FIVE-FOLD EXPANSION PROGRAMME

GABRIEL INDIA LIMITED, Mulund, Bombay, has recently been granted a licence by the Government of India to increase its production capacity from 120,000 to 600,000 Shock Absorbers per year. A joint enterprise of The Gabriel Company of Cleveland, Ohio, U.S.A. and Anand Automobiles of Bombay and New Delhi, the Company was granted the manufacturing licence in June 1960. Within days after the first prototype shock absorber came off the assembly line on August 8, 1961, the plant was operating at its full licensed capacity of 400 shock absorbers per day on a single shift basis. To date the Plant has manufactured 225,000 shock absorbers.

Located 20 miles out of Bombay City in the fast growing industrial suburb of Mulund, the Plant is equipped with most up-to-date and highly specialised equipment to manufacture quality shock absorbers. After a careful analysis of the requirements of the vehicle manufacturers in India, special heavy-duty shock absorbers were developed by Gabriel Engineers and for over a year, Gabriel Shock Absorbers have been supplied as original equipment to the majority of vehicle manufacturers for trucks, buses, passenger cars, jeeps, jeep trailers, motor cycles, scooters and three-wheelers. In addition, the Company has been distributing shock absorbers for the replacement market through Firestone Tyre & Rubber Co. of India Private Limited with a network of Sales Offices throughout the country.

Encouraged by the response of Original Equipment and Replacement markets, the Company has embarked on an ambitious expansion programme. The Capital of the Company is being doubled in equal proportions by U.S. collaborators, The Gabriel Company of Cleveland, Ohio and the Indian Associates, Anand Automobiles of Bombay and New Delhi.

The Expansion Programme promises considerable saving of foreign exchange for the country. The indigenous content of shock absorbers which is currently 60% will go up to 98% by the end of this year, which apart from saving foreign exchange will also help the ancillary industry in the country.

The Company is also contributing to the Defence effort by supplying Gabriel Shock Absorbers for Nissan 1-ton trucks and patrol jeeps currently being manufactured by the Ordnance Factory, Jabalpur.

Messrs Sen and Ghosh conducting a private war; I think they are as friendly as they say they are, if only because, at this point at any rate, each has need of the other. My submission is that both have need of a well-run Calcutta; and, for all the support the Congress commands in the countryside, the political Party that loses Calcutta will sooner or later lose all West Bengal. I am not appealing to anyone's nobility or the so-called higher sentiments. My appeal is purely to the political instincts of Mr. Sen and Mr. Ghosh. The former appeared to realise the truth of my thesis when he became Chief Minister; his zeal went to the extent of thinking of appointing a special Minister for Calcutta Affairs (which idea I did not approve of and has since been dropped). Considered as a politician, Mr. Ghosh is right (insofar as anything is right in politics) in seeking to retain his control of the Congress Municipal Association and hence of the Corporation. I suggest, then, that his self-interest demands that garbage be cleared and Calcutta's citizens made to feel that, while political battles are perhaps inescapable, civic affairs are not altogether absent from the minds of those who manipulate municipal politics. The political dividends the Congress will reap from a Corporation run efficiently are so big that I am surprised the Congress values more the current rewards of incompetence and worse. Alas, self-interest is rarely the self-evident thing we all imagine it to be.

THE RUSSIAN AUTHOR, VALERI TARSIS, HAS, I notice, been put in a lunatic asylum for sending the manuscript of a novel to the West. This sort of thing seems to be on the increase; there have been several incidents in the United States recently of people who have in some way rebelled against the established order being committed to mental institutions for inspection and treatment. If steps are not taken against it at the international level soon, I can foresee a rapid growth in the pernicious habit. After all, it has such obvious advantages over prison as a corrective for dissidents. For instance, backed as it is with all the powerful unassailability of science, it conveniently throws doubts on their sanity in the eyes of the public. Also, and perhaps worse, it can raise serious suspicions in the minds of the victims themselves about their own mental stability; not all of us have the technical training or insight to arrive at objective judgments about our own psychological make-up. Indeed, it can be asked quite rationally whether complete sanity or emotional stability are worthwhile criteria to use on would-be rebels and reformers. A deep conviction of being right is obviously indispensable to them—usually the first casualty in any course of psychiatric treatment—and absolute honesty of purpose is also a great help. But there has not been a rebel whose sanity has not at some time been doubted by somebody. Yet what would the world be without such men? No, genius, in whatever form it takes, always has about it the aspect of the unhinged, and that is something of which, in this scientific and impersonal age, we stand in great danger of losing sight. It is not difficult to appreciate why the Russian Government should choose this method of dealing with Valeri Tarsis in preference to the one which misfired so badly with Pasternak and his friends. But if we are not to see it eventually adopted by all governments as a convenient way of stifling opposition, it must be shown up at once for the tyranny that it is. Those who reject the established order, or fashion, or habit, are often eccentric, sometimes misguided, but seldom mad. In fact, they often prove to be the sanest ones among us, and are usually the most useful.

To pay, and we can't fudge it."

THE DITCHER

BUDGET CAUSES COLLAPSE IN SHARE PRICES

(BY A SPECIAL CORRESPONDENT)

THE stock market has collapsed under the impact of new taxes proposed by the Central Finance Minister, Mr. Morarji Desai, in the 1963-64 Budget. The reaction was discernible when official trading started last Monday for the first time after the Budget. On Budget day last Thursday, the trend of share prices was erratic as operators were unable to understand the full implications of the financial proposals. The market was closed last Saturday as an emergency measure in order to give time to operators to understand the Budget proposals. On Wednesday, minimum prices were fixed for clearing cotton mill, engineering, miscellaneous and paper shares.

The sharp decline in share values, which has already taken place, is shown in the table below. But the decline by itself does not fully reflect the panic which has been caused since at current prices there are few buyers. Whatever purchases have been made are largely in the nature of short-covering. This apart, selling has been restrained by various restrictions, especially on forward trading. One must also remember that towards the end of 1962 share prices fell sharply following the Chinese invasion of India. These losses could not be fully recouped by Budget day.

	Minimum Prices on 6th March, 1963	Prices on 28th Feb- ruary, 1963
Indian Iron	19.70	21.65
Guest, Keen	30.00	33.25
Dunlop	32.00	36.62
Orient Paper	31.25	37.40
Hindustan Motors	15.90	17.56
Indian Alumi- nium	29.50	33.19
Indian Copper	4.10	4.46
Birla Jute	25.00	30.12
Kesoram Indus- tries	19.25	21.94

In view of the adverse effects of the new financial proposals, Lyons Range has taken a gloomy view of the outlook. Most disturbing has been the imposition of a super profits tax on companies. The tax will operate when the income of a company—after the deduction of income tax and super tax—is more than 6 percent of its capital and reserves, except for such amounts of reserves which have been allowed as deductions in computing the total income for income tax. The rate of the tax will be 50 percent when the income is more than 6 percent but not above 10 percent of capital and reserves. It will be 60 percent on income above 10 percent. Although it is not yet clear, it looks as if development rebate reserve will not be included in computing a company's total reserves.

There is no doubt that the burden of the tax will be crippling. Since the number of companies having a net income of more than 10 percent is not small, many will have to pay the 60-percent tax on income above 10 percent. Almost all profit-earning companies in the private sector will be subject to the new levy. Rough guesses made so far by market operators are that the Bank of India may have to pay super profits tax of Rs. 16 lakhs, Chitaval Sah Jute Rs. 3 lakhs, Burn and Co. Rs. 9 lakhs, Associated Battery Rs. 3 lakhs, Alkali and Chemical Rs. 8 lakhs, Carew and Co. Rs. 3 lakhs, Sirpur Paper Rs. 9 lakhs, Burrakur Coal Rs. 2 lakhs, Indian Oxygen Rs. 18 lakhs and

Volta Rs. 11 lakhs. In the case of several companies, it is estimated, the super profits tax will be nearly equivalent to increasing the corporation tax to more than 70 percent.

It is obvious that the new levy will have to be paid by pruning both dividends and retained profits. Since companies are keen on conserving resources for modernisation and expansion, they will be inclined to cut dividends. Judging by market trends, the pegging of profits at 6 percent looks grossly unfair. The dearer money policy has pushed up interest rates appreciably. Some banks are offering an interest rate of 5 percent on fixed deposits. Companies have been issuing preference shares by offering a fixed dividend of more than 9 percent. First-grade companies cannot float debentures unless they offer an interest rate of more than 6 percent. By exempting profits up to a ceiling of only 6 percent, companies in various industries will be unable to earn even the profits allowed by the Tariff Commission. Since the prices of some commodities have been fixed by the Government on the recommendations of the Tariff Commission, producers are permitted to earn a minimum level of profits, which will be affected by the new impost.

The tax is inequitable in principle. Mr. Desai is illogical in defending the levy on the ground that it will restrain excessive profits and regulate prices. A straightforward increase in corporation tax would, in fact, have been better than the super profits tax. The introduction of an element of progression in company taxation—as in the case of personal income tax—is unsound because it discourages enterprise and initiative. The new levy will also penalise efficiency and encourage extravagance. But it remains to be seen to what extent the expenditure on commission, advertisement and entertainment can be checked by an official edict. Meanwhile, companies which have a smaller share capital in proportion to their profits, will suffer heavily. Companies which finance their business by borrowings will be hard hit. Trading companies which generally have a small share capital will also be affected adversely.

It is thus not difficult to appreciate why there should be panic in the stock market. Firstly, the dividend outlook has become very discouraging. At current prices, dividend yields of several shares have already become unattractive due to higher interest rates. Secondly, with the imposition of the super profits tax the growth prospects of shares will suffer. Not only will the dividend-paying capacity of companies be impaired; several companies will find it almost impossible to plough back resources into business for development and modernisation. The impact of the tax on new companies will be especially serious, since they usually take a long time to build reserves. Thirdly, there is no doubt that the new issue market will suffer a further setback. In the recent past, support for new issues has largely been based on the fact that several companies have succeeded in securing foreign collaboration. Now that the profitability of companies will be affected due to the levy of the new impost, the flow of foreign capital will decline.

The effect of the increase in personal income tax, combined with compulsory savings, on the stock market will be quite serious. They will

interrupt the flow of funds into stocks and shares. The call rate has spurted to 6½ percent in Calcutta, which is the highest level in many years. This indicates that the shortage of funds will be aggravated in the near future. Concern has also been expressed about the possibility of a decline in the flow of institutional funds for private enterprise. The Budget provision for the Refinance Corporation has been cut from Rs. 7.5 crores for 1962-63 to Rs. 5 crores for 1963-64. As for the Industrial Finance Corporation, the Budget provision has been pruned from Rs. 6 crores for 1962-63 to Rs. 4 crores for 1963-64. Loans under P.L. 480 during 1963-64 are expected to be only Rs. 60 crores, against Rs. 80 crores in 1962-63.

In view of these developments, the removal of the export duty on tea has made no impression on the market. The beneficial effect of the removal has been largely offset by an increase in the excise duty on tea, which will henceforth not be refunded in the case of export tea. The stock market has taken little notice of the prospect

of inflation following the increased Budget provision for deficit financing. The increase in import and excise duties will, it is feared, boost production costs. But it is difficult to say to what extent the incidence of heavier taxation will be transferred to consumers in the form of higher prices.

Elgin Mills Repeats Dividend

IN their report for the year ended September 1962, the directors of Elgin Mills Co. Ltd point to various difficulties. The production costs have risen because of increase in wages and prices of raw materials. The results have, nevertheless, been fairly satisfactory on account of more efficient operation and greater economies in production. Although sales abroad have been more competitive, the Company has made good efforts to promote exports. Renovation and modernisation of the mills continue to be carried out. Capital expenditure for Rs. 20.10 lakhs has been committed since the close of the financial year ended September 1962. The mills have been busy producing defence goods. The Company has received a licence for the installation of 12,000 spindles. Efforts are being made to install these spindles as quickly as possible.

The profit has declined from Rs. 73.50 lakhs in 1960-61 to Rs. 70.11 lakhs in 1961-62, after providing Rs. 11.27 lakhs (against Rs. 9.57 lakhs)

for depreciation. A taxable ordinary dividend of 17.5 percent has been repeated, which is nearly seven times covered and offers a yield of 8.5 percent at the present price of Rs. 20.69 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 2.19 lakhs (against Rs. 4.93 lakhs), taxation Rs. 35.50 lakhs (against Rs. 31.75 lakhs), rehabilitation reserve Rs. 19.50 lakhs (against Rs. 10 lakhs) and capital reserve Rs. 13.17 lakhs. The carry-forward is Rs. 89,499, against Rs. 80,801 brought in.

Rights from East Anglia Plastics

EAST Anglia Plastics (India) Ltd has offered rights shares of Rs. 10 each at par to its shareholders in the proportion of one new share for every share held. The Controller of Capital Issues had permitted the Company to issue new shares for Rs. 2.125 crores, of which fully-paid shares of Rs. 12.5 lakhs are to be allotted to the foreign collaborators in payment of the remaining balance of their technical know-how fees. In view of the emergency the directors have decided to issue rights shares for only Rs. 1 crore since more money will not be required at the present stage.

The funds will be used to finance its expansion project. The Government of India has permitted the Company to import capital equipment for its flakes project under a French credit. The Andhra Pradesh Industrial Development Corporation has agreed in principle to guarantee the French credit. The flakes factory will be situated in Visakhapatnam. The construction has already started. This is an integrated project based on indigenous raw materials such as alcohol and cotton linters. An entire range of chemicals and plastics will be produced in this factory. The Company has also received an industrial licence for the production of plasticisers.

The compounding unit of the Company near Calcutta for the production of cellulose acetate and P.V.C. moulding powder has already started production. Judging by the quantity of imported raw materials which the Company will obtain, it is likely to produce more than 80 percent of the acetate moulding powder consumed in this country. But this production will be below the installed capacity of the factory. Even on this restricted output, sales are expected to be more than Rs. 1 crore. The directors hope to make substantial profits out of this turnover. When the acetate and plasticisers factories are set up, the compounding unit will have sufficient raw materials and its output may be trebled. The consumption of cellulose plastics has been estimated at 7,000 tons at the end of 1966 and may rise to 10,000 tons at the end of the fourth plan. The directors, therefore, consider the growth prospects of the shares as satisfactory.

Walchandnagar Industries Cuts Dividend

ALTHOUGH the dividend has been reduced from 15 percent to 12 percent, less tax, the working results of Walchandnagar Industries Ltd for the year ended September, 1962 show considerable improvement over the previous year's performance. Sales of sugar, spirit and sugar machinery have risen by 32.4 percent from Rs. 4.02 crores to Rs. 5.38 crores, and the gross profit at Rs. 67.11 lakhs shows an increase of about 25 percent over the previous year's figure of Rs. 53.73 lakhs. In spite of a substantial increase in the gross profit, the directors have had to withdraw

Rs. 17 lakhs from reserves, against Rs. 5 lakhs in the preceding year and to write back excess provisions amounting to Rs. 1.43 lakhs (against Rs. 58,765) no longer required, to provide for the reduced dividend. This is due to the decline in the net profit on account of the substantially larger provision for taxation.

After providing Rs. 29.13 lakhs (against Rs. 28.49 lakhs) for depreciation and Rs. 15.50 lakhs (against Rs. 2.50 lakhs) for taxation, the net profit amounts to Rs. 18.69 lakhs, against Rs. 20.33 lakhs in 1960-61. Allocation to development rebate reserve has been raised from Rs. 4 lakhs to Rs. 4.31 lakhs, and a sum of Rs. 5 lakhs has been set aside for additional taxation concerning earlier years on account of the change in the mode of computation of income tax. Preference dividend absorbs Rs. 5 lakhs (the same) and the ordinary dividend takes Rs. 18.12 lakhs, against Rs. 17.04 lakhs, leaving Rs. 1.19 lakhs to be carried forward, against Rs. 1.50 lakhs brought in.

The Company's sugar factory crushed during the year 200,003 metric tons of sugarcane producing 248,000 bags of one quintal each with a recovery of 12.25 percent. The corresponding figures for the previous year were 234,000 tonnes of sugarcane, 274,000 bags of sugar and 11.77 percent of recovery. The Company's distillery produced 700,002 litres of spirit, against 566,000 gallons in the previous year. The sugar machinery manufacturing division supplied machinery worth Rs. 2.13 crores, against Rs. 1.28 crores. The plastic factory supplied goods worth Rs. 5.05 lakhs, against Rs. 5.42 lakhs in 1960-61. The directors state that the supply of sugar machinery to three co-operative sugar factories is nearing completion. Two of these sugar factories are expected to go into production during the current season and the third one during the next season. The Central Government has recently given licences to start three sugar factories in the co-operative sector and one in the private sector.

Negotiations are in progress to secure orders for the supply of sugar machinery for these factories. Efforts are also being made to supply complete sugar machinery plant to foreign countries. The Company has recently entered into collaboration agreement with Cochran and Company of the U. K. for the manufacture of steam accumulators and with Technoexport of Czechoslovakia for the manufacture of Skoda water tube boilers. The collaboration agreement for the manufacture of cement manufacturing machinery and other ancillary equipment is under negotiation. The directors add that with the coming into force of the Maharashtra Agricultural Lands (Ceiling on Holdings) Act of 1961, land in excess of the ceiling area will vest in the State Government as from 1st April, 1963. The Company has offered for sale its dairy to the Government. After the lands are taken away, the Company will have no agricultural profits.

The Maharashtra Agricultural Income Tax Act, 1962, is deemed to have come into effect from April 1962, covering agricultural profits for the financial year 1960-61. As it is not clear from what date the tax is leviable, the directors have not made any provision for the same in the accounts for 1961-62. The Government of India has sanctioned the issue of debentures to the tune of Rs. 60 lakhs, carrying interest not exceeding 7 percent, redeemable after 15 years. These are proposed to be pledged with the bankers against overdraft account. The Company has an equity capital of Rs. 1.52 crores, which is supported by free reserves amounting to Rs. 1.25 crores. The Rs. 100-paid

share of the Company is currently quoted around Rs. 133.

Rights Issue by Atul Products

ATUL Products Ltd. Ahmedabad, proposes to raise its capital from Rs. 3 crores to Rs. 4 crores by the issue of 100,000 equity shares of Rs. 100 each for which necessary sanction from the Controller of Capital Issues is being sought. The proportion in which the new shares will be offered to existing shareholders will be decided after the official sanction is received. It is, however, believed that new shares will be offered in the ratio of one share for every three shares held. The Company is likely to seek permission to issue rights shares at par. The directors have also decided to issue debentures worth Rs. 3 crores which will be entirely taken up by the State Bank of India.

The borrowing programme will be spread over some three years. Additional funds are being raised to finance the Company's expansion programme, which, when completed, will enable the Company to meet 30 percent of its own raw material requirements. The total outlay on the expansion scheme, most of which is expected to be completed by the end of 1964 or early in 1965, is placed around Rs. 10 crores. The Rs. 100-paid share of Atul Products rose from Rs. 400 to Rs. 435, following the Company's decision on the bonus issue in spite of the post-Budget slump in the stock market.

Progress of State Bank

THE State Bank of India's report for 1962 shows satisfactory progress both in its traditional business and developmental activities. The bank's deposit resources showed an increase of Rs. 41.4 crores at Rs. 96.4 crores, against a fall Rs. 52 crores in 1961. If changes in P.L.480 funds are kept out of account, the increase in the bank's deposits was of the order of Rs. 56.7 crores, compared with Rs. 31.5 crores in 1961. Total deposits of other scheduled banks rose by Rs. 168.7 crores in 1962, compared with a rise of Rs. 118.4 crores in 1961. Apart from liberalising the savings bank rules, the bank introduced last year a special credit transfer system under which every personal account holder can transfer up to a fixed amount free of charge from one place to another.

The bank's investments in Government securities increased by Rs. 29.3 crores, compared with a fall of Rs. 69.2 crores in 1961. The demand for bank credit continued to increase in 1962. The State Bank's credit in India rose by Rs. 53.7 crores to Rs. 283.6 crores during the 1961-62 busy season, against an increase of Rs. 61 crores in the previous busy season. The bank's share in the total seasonal credit expansion was 26.4 percent in 1961-62, compared with 30.7 percent in 1960-61. Over the year, the bank's advances showed a net increase of Rs. 16.1 crores at Rs. 260.2 crores. Between December 1961 and 1962, the bank's advances to industry increased from Rs. 178.6 crores to Rs. 193 crores, advances to commerce and financial institutions rose from Rs. 19.3 crores and Rs. 15.1 crores to Rs. 25.6 crores and Rs. 19.2 crores, respectively, and advances to agriculture fell from Rs. 4 crores to Rs. 30 lakhs.

A notable feature of the bank's operations in 1962 was the introduction of the instalment credit scheme to finance purchases of equipment or machinery by small and medium-sized units engaged in approved

CAPITAL, 7th March, 1963.

manufacturing operations including those supplying defence requirements. The amount of loan would be normally Rs. 5 lakhs and the period of the loan five years. The total number of small units assisted by the bank rose by 12.2 percent to 3,153 and credit limits sanctioned rose by 16.7 percent to Rs. 11.82 crores. Outstandings increased by 17.9 percent to Rs. 597.8 lakhs. The bank paid special attention to the provision of medium-term finance to small-scale industries. Further progress was made in the provision of medium-term loans and the furnishing of deferred payment guarantees for acquiring plant and machinery to various industries. The list of industries eligible for medium-term loans was revised and enlarged.

In 1962, the State Bank opened 25 branches under the second branch expansion programme, against 12 branches opened in 1961. Thus, out of the 143 branches to be opened by the bank under this programme, 50 branches have been opened during the period of 24 years ended December 1962. This rate may appear to be rather slow, but this is because the bank has been making during these years necessary preparations. The rate, it is expected, will rise in future. The bank also opened during the year eight branches outside the expansion programme. On 31st December, 1962, the State Bank had a total of 1,010 branches and offices and its subsidiaries had 483 branches and 36 pay offices. The bank is now examining, in consultation with the Reserve Bank, a proposal concerning the opening of more branches at various non-banking treasury or sub-treasury centres during the course of the third plan.

In 1962, the State Bank earned a net profit of Rs. 2.69 crores, against Rs. 2.71 crores in 1961. Earnings from interest and discount rose from Rs. 14.12 crores to Rs. 16.19 crores. Earnings from commission, exchange and brokerage rose from Rs. 5.40 crores to Rs. 6.15 crores. On the expenditure side, interest paid on deposits, borrowings, etcetera, increased from Rs. 6.89 crores to Rs. 7.91 crores. Salaries, allowances and provident fund increased substantially from Rs. 7.90 crores to Rs. 9.42 crores due to the revision of the scales of pay and allowances of the workmen staff as also those of some supervisory staff. Dividend has been maintained at Rs. 23 a share. Reserve fund absorbs Rs. 55 lakhs, against Rs. 75 lakhs. Amounts transferred to pensions fund, staff welfare fund and staff co-operative housing fund are Rs. 7.62 lakhs, Rs. 5 lakhs and Rs. 5 lakhs, against Rs. 7.42 lakhs, Rs. 10 lakhs and Rs. 10 lakhs, respectively. Bonus to staff accounts for Rs. 72 lakhs, against Rs. 45 lakhs in 1961.

Voltas Rights Issue

VOLTAS Ltd had the best trading year of its career in 1961-62, although the results of its operations were not fully reflected in the year's accounts. Speaking to the shareholders at the annual meeting on 26th February, the chairman, Mr. J. D. Choksi, agreed that the present level of dividend paid by the Company is low, but he emphasised the need to conserve resources with a view to financing the various expansion plans. Mr. Choksi hinted at the possibility of a rights issue in the near future in order to raise funds for the expansion of its manufacturing activities and to invest in other companies whose selling and distributing agencies it held or intended to acquire in future. However, he was quick to add that the question

CAPITAL, 7th March, 1963.

of rights issue would be pursued more actively after the Central Budget. But since the Budget has frustrated all hopes of a recovery in the capital market, it is quite possible that the rights issue might be delayed for quite some time. It would be of interest to note that on the basis of its profits in 1961-62, the Company will have to pay an extra Rs. 17.26 lakhs by way of super profits tax. The Company made a net profit of Rs. 56.54 lakhs during the year, and its capital and reserves amounted to Rs. 366.84 lakhs. The ratio of the net profit to paid-up capital plus reserves works out to around 15.4 percent.

Andhra Sugars Results Impress

THE Andhra Sugars Ltd reports a highly encouraging results for the year ended September 1962. The sales are up by 41.2 percent from Rs. 1.65 crores to Rs. 2.33 crores, and the gross profit has increased by 52.4 percent from Rs. 26.32 lakhs to Rs. 40.11 lakhs. After providing Rs. 10.66 lakhs (against Rs. 8.94 lakhs) for depreciation and Rs. 7.50 lakhs (against Rs. 5.70 lakhs) for taxation, the net profit amounts to Rs. 19.08 lakhs, against Rs. 9.99 lakhs in 1960-61. After making some adjustments relating to the previous years and providing for donations and gratuity and transferring a sum of Rs. 3 lakhs from the general reserve, the directors have set aside Rs. 4.50 lakhs for the plant rehabilitation reserve and Rs. 8 lakhs for development rebate reserve. The dividend has been maintained at 16 percent on the increased capital. Dividends, ordinary as well as preference, absorb Rs. 8.74 lakhs.

Improved results are attributed to the diversification of the Company's activities which are expected to yield still better results in coming years. The production of sugar was lower at 165,000 bags, against 173,000 bags, but the production of superphosphate increased from 15,272 tons to 23,450 tons and sales of superphosphate rose from 12,434 tons to 25,886 tons. The industrial alcohol plant went into production in July 1962 and produced 664,000 litres of spirit; the acetic acid plant went into production at the end of September. Both the industrial alcohol plant and the acetic acid plant will be in full production in the current year and are expected to contribute substantially to the year's results.

The work on the caustic soda-chlorine plant in Kovvur has continued. The plant and machinery received from East Germany arrived last year and could not therefore, be commissioned as expected earlier. The caustic soda plant, which is being expanded to a capacity of 30 tons a day, is expected to go into production this year. The company has been licensed to undertake a fertiliser project in Kothagudem (Andhra Pradesh) and a new Company under the name of Hindustan Allied Chemicals Ltd will be formed to implement this project in collaboration with Allied Chemical Corporation of the U.S.A.

Brady Group Revises Dividend Decision

THE management of the three companies belonging to the Brady group—Brady Engineering Co. Ltd, G. Claridge and Co. Ltd and Commerce Ltd—has informed the Bombay Stock Exchange that it wishes to reconsider its earlier decisions concerning the dividends of these companies for the year ended December 1962. This is said to have become necessary as a result of the new tax proposals announced by

Mr. Morarji Desai. The corporate sector has been badly hit by the super profits tax and the stock market has suffered a heavy decline on fears that the super profits tax will make it difficult for many companies to maintain their dividends.

The decision taken by the management of the Brady group of companies is quite extraordinary, in that only in very exceptional circumstances do companies reconsider their decisions on dividends. It is quite likely that the dividends might be revised downward. The boards of directors of the three companies are expected to meet shortly. The dividends already announced are: Brady Engineering Rs. 7 a share plus bonus of Rs. 2, G. Claridge Rs. 20 a share on old shares and Rs. 5.50 a share on new shares, and Commerce Rs. 2.50 a share.

New Capital issues

FIVE companies have been authorised to issue capital totalling

Rs. 1.70 crores. Of these, three companies are raising equity shares, one company is issuing equity plus preference shares and the other one preference shares. The consent in all cases is valid for 12 months. The following are the details:

Tata Finlay Private Ltd, Bombay, will raise further capital of Rs. 1 crore in equity shares of Rs. 100 each at par. Out of this, 44,630 shares for cash and 4,600 shares for consideration other than cash against technical know-how will be offered to James Finlay and Co. Ltd of the U.K. and their associates and the remaining 50,770 shares for cash to Tata Sons Private Ltd and their associates. Proceeds of the issue will be used for manufacturing instant tea.

The National Suarg Mills Ltd, Calcutta, is issuing capital of Rs. 28 lakhs in 280,000 equity shares of Rs. 10 each for cash at par. The capital is required for the purchase of a sugar mill in Beldanga, Murshidabad District, which will be restarted after

a licence under the Industries (Development and Regulation) Act applied for by the Company, has been obtained.

Gajraj Pannalal Ltd, Calcutta, is to issue further capital of Rs. 2.50 lakhs in equity shares. The Company earlier obtained a consent to issue capital of Rs. 12.50 lakhs in August 1962, which has been raised. The additional capital is required to meet the cost of modernisation of the Shree Mahaluxmi Cotton Mills.

Telangana Spinning and Weaving Mills Ltd, Andhra Pradesh, will issue capital of Rs. 30 lakhs—Rs. 24 lakhs in equity shares (including shares worth Rs. 87,650 already subscribed) and Rs. 6 lakhs in 9 percent (less tax) preference shares of Rs. 10 each for cash at par. Proceeds will be used for setting up a spinning mill.

Sundaram Finance Ltd, Madras, is raising capital of Rs. 10 lakhs in the form of 9-percent preference shares of Rs. 100 each for cash at par to the existing shareholders.

help conserve nation's fuel

FUEL is in short supply and expensive too. It forms a substantial part of the budget in every industry. Efficient use of FUEL has therefore become imperative, whether you want to cut costs or plan to increase your production. Our FUEL experts have devised ways and means of getting 10 to 20% more out of the FUEL you use without costly capital investment.

FIXING THE RETIREMENT AGE OF EMPLOYEES

By M. S. Bala

THE age of retirement in Government service as well as in business, industry and other employment, has been widely discussed in recent times. For Government servants, the first and second Pay Commissions suggested that the age of retirement be raised from 55 to 58. The second Pay Commission, while recommending that the age of retirement be raised to 58, suggested that those who were entitled to continue in service up to the age of 60, should be allowed to do so. For scientific personnel, it was proposed, the age of retirement should be 60. But, except for scientists employed in Government or quasi-Government organisations, the Government did not accept the recommendation. Recently, however, it has been decided that the age of retirement should be raised to 58.

In industry, the question of retrenchment and the age of retirement came into prominence with the passing of the Industrial Disputes Act, 1947. The Act defines "retrenchment" as follows in Section 2: "Retrenchment means the termination by the employer of the service of a workman for any reason whatsoever, otherwise than as a punishment inflicted by way of disciplinary action, but does not include: (a) voluntary retirement of the workman; or (b) retirement of the workman on reaching the age of superannuation if the contract of employment between the employer and the workman concerned contains a stipulation in that behalf; or (c) termination of the service of a workman on the ground of continued ill-health."

Specifying the Age

In the case of most employees in industry, there never was a well-defined contract of employment, so the question of specifying an age of retirement in the contract seldom arose. Even the Industrial Employment (Standing Orders) Act, 1946—as it originally stood—was concerned mainly with the form of the standing order rather than with the substance. A dispute over the retiring age came up before the Supreme Court in the case of *Guest, Keen, Williams (Private) Ltd Vs. Sterling (P.J.) and others* (1959 L.L.J. II 405). In this case, after the Industrial Employment (Standing Orders) Act, 1946, came into force on 23rd April, 1946, the Company submitted standing orders for certification to the Certifying Officer. After giving the trade unions of the Company's workmen an opportunity to be heard and after considering their objections, the officer certified the standing orders on 19th December, 1953. No appeal was filed against the standing orders as provided under the law, so the orders became final and operative in governing the employees' conditions of service.

According to the standing orders, the workmen were to retire from the

service of the Company on reaching the age of 55, although the Company had the discretion to extend the age of retirement in individual cases. The Company retired 47 people with effect from 31st May, 1954. The union questioned these retirements, but the industrial tribunal upheld the management's decision. The now-defunct Labour Appellate Tribunal, however, took the view that workmen who joined the service of the Company prior to the framing of the standing orders, should be allowed to continue in service as long as they remained physically fit and that the new scheme could not be justly enforced in their case. The Supreme Court endorsed this view, but fixed 60 as the age of retirement for those workmen. The industrial tribunal, to which the case of the employees of the Dunlop Rubber Company was referred, fixed their age of retirement at 60. When the matter went on appeal, the Supreme Court did not interfere with the discretion exercised by the tribunal.

A number of factors induce people to wish to go on working as long as possible. Often there is no provision for old age. Light work for retired people cannot easily be found. The steadily rising cost of living depreciates the real value of one's earnings. But, on the other hand, the colossal problem of unemployment—particularly of the educated unemployed—indicates the need to retire people at a particular age, thus making room for younger men to step into vacancies caused by retirement.

On 11th December, 1962, the Lok Sabha referred the Constitution (15th Amendment) Bill to a joint committee of Parliament. The Bill, among other things, seeks to provide that the age of retirement of a High Court judge shall be raised from 60 to 62 years; and the disputes relating to the age of High Court judges (to determine the time of retirement) shall be decided by the President. Some of the members urged that disputes relating to the age of judges should be decided by civil courts or some other judicial authority, and not by the President. The Law Minister said that the question of deciding the correct age of a High Court judge was very important because under the Constitutional provisions, all orders passed by a judge, if he was over 60, were null and void.

Important Question

There can be no two opinions about what the Law Minister said. The amendment seems to be the result of the important question which came into prominence consequent on the retirement of Mr. Justice J. P. Mitter of the Calcutta High Court. The question was this: Is there a correct record of the age of all the people

in this country, on the basis of which it can truly be said that a person retires at a particular age? A brief recital of the points raised during Mr. Justice Mitter's case is necessary.

Mr. Justice Mitter was appointed an additional judge of the Calcutta High Court on 11th February, 1949, and as a permanent judge in January 1950. Prior to his appointment as an additional judge, Mr. Justice Mitter disclosed to Sir Trevor Harries—the then Chief Justice of the Calcutta High Court—the discrepancy between his real age and his matriculation age. The Chief Justice, it is stated, accepted the real age and forwarded it to the Government of India. The latter also, it is said, accepted that age and computed the date of Mr. Justice Mitter's retirement on that basis to be 27th December, 1964, his actual date of birth being 27th December, 1904. Subsequently, on 17th April, 1959, the Home Ministry of the Government of India decided to treat the matriculation age of Mr. Justice Mitter, namely, 27th December, 1901, as the age for official purposes. Mr. Justice Mitter, therefore, filed a writ petition before the Punjab High Court challenging the decision of the Central Home Ministry, in which he gave the particulars of 11 judges—seven from the Calcutta High Court and four from the Patna High Court—showing discrepancies between the matriculation age and the age given by the judges at the time of appointment. Mr. Justice Mitter also indicated that there were similar cases in other High Courts.

Cases of Disconformity

It was stated that in the case of a number of people holding such exalted positions as High Court judges, there was disconformity between the matriculation age and the real age. In a letter published in Capital of 11th January, 1962, a correspondent wrote: "It is notorious that by reason of the university regulation, once extant, that no candidate could sit for his matriculation examination unless he attained the minimum age of 16 years on 1st March of the year of the examination, the age of a candidate was often adjusted to that requirement and was seldom the correct age. An analysis of the Calcutta University calendars for the period 1930-40 shows that on the basis of the matriculation records, 92.7 percent of the candidates were born on 1st March—a most absurd phenomenon... It is clear that the Constitution enjoins that a judge shall hold office until he attains the real age of 60 years and not any notional age of 60 years."

In another letter published in Capital of 18th January, 1962, a former Judicial Minister of the West Bengal Government observed as follows: "If the Government can

CAPITAL, 7th March, 1963.

claim a right to reopen the question of a judge's age, so can a judge on the ground that his real age is less than the age given and accepted at the time of his appointment. On this basis, he can refuse to retire until, according to him, he reaches the age of superannuation. I know of two Calcutta cases in which the judges concerned were obliged to give their matriculation age which was in each case higher than the real age. Then what about those cases where the matriculation age was less than the real age as it sometimes happened?"

From all this, it seems fair to conclude that the age given by an individual while entering school should be carefully scrutinised, or he should at least be held down to whatever age he gives. The problem becomes particularly complicated in dealing with those who have not passed the matriculation examination. In their case, the insurance companies in the past—and perhaps the L.I.C. even now—accepts a horoscope as proof of age. However valuable this document may have been formerly, there is no denying that it is now sometimes abused. In many cases, a person may have three ages: (1) his actual age, (2) his matriculation age, and (3) his insurance age.

Thus, often no proper age record exists in non-government employment. Before the passing of the Industrial Disputes Act and the Industrial Employment (Standing Orders) Act, people were usually allowed to work as long as they were useful to the management and as long as their health permitted. But now it is not unusual to find employees attempting to get their ages reduced when they fear that the time of retirement is approaching. Where the matriculation certificate exists but is not helpful to the employee, its existence is denied. In the case of non-matriculates, a horoscope or a life insurance policy (which, incidentally, may be based on a horoscope) is produced as proof of age. In cases where none of these documents is available, the only course for assessing a person's age is to refer him to a doctor. Even when a doctor is completely uninfluenced, his opinion on the age of an individual referred to him would at best be an intelligent guess and would vary within wide limits. The doctor may give a prejudiced opinion depending upon who approached him first—the employee or the employer.

There was an instance in which a father and his third son were working in an organisation at the same time. The father claimed he was 48, the son swore he was 36, and the former's age of 48 was supported by an affidavit sworn by him before a magistrate. In view of modern practices like dyeing hair, using artificial teeth and wearing spectacles, the only help that an employer gets for disposing of a once-useful old employee who claims to be young, is the march of time and the hand of nature.

Registering Births

It is true that registration of births is an obligation under the law. But how carelessly births and deaths are registered is evident from the stupendous task the Census staff faces every ten years or so. The need to record the correct age of every child born in this country cannot be over-emphasised. In its absence, some people might tend to deceive one another or the Government. A mass enquiry is neither practicable nor desirable. But the Government can take steps to ensure that, from a particular date, the date of birth of every new-born child will be carefully recorded along with other details, and the date will again be carefully reproduced in school registers or when a person seeks employment through the employment exchange.

CAPITAL, 7th March, 1963.

NATIONAL AND GRINDLAYS BANK LIMITED

EXPANSION OF BUSINESS

CHAIRMAN, MR. J. K. MICHIE'S STATEMENT

The Annual General Meeting of National and Grindlays Bank, Ltd., will be held on April 2 in London.

The following are extracts from the circulated statement of the Chairman, Mr. J. K. Michie, for the year 1962:—

To quote the Editor of our quarterly Review, this year makes us "a proud and vigorous centenarian" for on 29th September, 1863 the National Bank of India was registered in Calcutta.

A history of our first hundred years is now being completed by Mr. Geoffrey Tyson, C.I.E., and we are expecting to publish it later this year.

The increases in capital both authorised and issued agreed to by you a year ago are reflected in the balance sheet which also shows a general expansion in our business. Total assets at 31st December last at £277,468,847 are higher by £26,184,257. Profits are £70,457 higher at £714,730 but the increase did not arise from our overseas operations where generally speaking conditions were more difficult than in 1961. The sum of £150,000 has been placed to Reserve Account. As you see we have also felt justified in transferring the sum of £387,365 from inner to published reserves bringing the total of the latter inclusive of Share Premium Account to £5,250,000.

In accordance with present day practice we have discontinued making allocations to premises out of published profits but have appropriated a sum for this purpose out of amounts placed to inner reserves.

The half-yearly dividend proposed is unchanged at 7% making 14% for the year as forecast.

A Centenary Bonus

To mark the Centenary of the Bank the Directors recommend the payment of a Centenary Bonus dividend of 2% leaving £316,941 to be carried forward in Profit and Loss Account.

On 30th September to celebrate the Centenary date we propose to pay an appropriate bonus to the staff of the Bank.

National and Grindlays Finance and Development Corporation: The net profit for the year was somewhat higher at £21,348. This sum is being retained in the business, and is reflected in the balance carried forward in the Consolidated Profit and Loss Account.

Exporters' Refinance Corporation: The Corporation has made an encouraging beginning but the volume of business accepted is still on a moderate scale.

Board: To replace those members who resigned after last Annual General Meeting we have been fortunate in recruiting Sir John Muir, Bart., Mr. G. W. Gemmell and Mr. J. R. Vernede, F.C.A., Chairman of James Finlay & Co. Ltd., Alex. Lawrie & Co. Ltd. and Walter Duncan & Goodricke Ltd. respectively.

Individually and collectively they have large interests in and great experience of the industries which we help to finance and the territories in which we operate and I strongly recommend that their appointments be confirmed by you.

India

The economic situation of India and its future policy are overshadowed and dominated by the emergency caused by the recent Chinese invasion of Assam and Ladakh.

It is true that proposals put forward by the "Colombo Conference" for reaching a settlement of the Indo-China

border problems are now under discussion and it is to be hoped these will end in success. Nonetheless it would be unrealistic to expect otherwise than that a great deal more of India's resources will be channelled into expenditure on defence with a consequent slowing up of development under the third five-year plan, an additional strain on her economy and a need for further aid to buttress her vulnerable reserves.

I am writing before the publication of the budget but have little doubt that taxation in some form or other will be increased while a deficit budget is being advocated and indeed may well be impossible to avoid. One source of finance the Finance Minister hopes to tap is the large amount of gold privately held in India variously estimated at from £1,400,000,000 up to £4,000,000,000—a wide variance presumably due to the equally wide difference between the external and internal values. It is now illegal to hold gold except in the form of ornaments and the price has fallen from its previous level of roughly double the international price but there seems to be no rush to take up Gold Bonds at Rs. 62.50 per tola. It is estimated that a cessation of imports by smuggling in itself would save £30,000,000 of foreign exchange per annum.

The Reserve Bank of India rate has recently been raised from 4% to 4½% and the bill discount facilities extended to commercial banks are being both reduced and made more expensive but with the proviso that they may be expanded in special cases albeit at penal rates. Call money in Calcutta has recently fetched as much as 6½% per annum.

Although it will not come into operation until September, 1964, an act has been passed whereby the proportion of assets which scheduled banks have to hold in Government Securities has been substantially increased and this, failing a very large expansion of deposits, will undoubtedly tend to restrict bank lendings. Meantime the pressure for additional finance by commerce and industry including many new and necessary projects continues unabated and as Government spending increases, and Gov-

ernments being notoriously slow payers, it seems inevitable that this pressure will mount.

It is therefore somewhat difficult to see how the situation will be met by the Banking system tho' met it must be.

The Government's Part

This is National Productivity Year and it is sincerely to be hoped that these three words will be no mere headline but will be translated by co-operation and imagination into fruitful action.

The coming budget should disclose the part the Government are prepared to play taking into account that our long drawn out negotiations for entry into the European Common Market have been rendered abortive. A reappraisal by both Government and the N.E.D.C. of our future international economic plans is now imperative. As I mentioned last year certain Commonwealth countries—and these included India and Pakistan—were apprehensive about our possible entry not only on economic grounds, and for varied reasons they may well be relieved by the outcome. However, the pattern of the overseas trade of Commonwealth countries is steadily changing, in many cases in directions other than towards the United Kingdom, and it will be interesting to see if they or any of them will now be willing to open their doors more widely to British goods in exchange for the relatively free entry into our market. I have my doubts if only because of their own plans for industrialisation and export.

It is obvious that the problem will have to be considered on a very wide basis otherwise it may well be that our "aid" will in future be tied far more than in the past to purchases in this country—where heavy industry is hungry for orders.

Bank Rate

A 4% Bank rate and a fairly firm pound sterling coupled with a considerable amount of money being pumped into the economy by the Chancellor of the Exchequer should result in a revival of trade this Spring but it is exports

that we want and must have, not merely home consumption.

So far as this Bank is concerned the reduction in the Bank rate will affect our earnings in this country but we hope to improve on last year's overseas results.

Nevertheless I must draw your attention to the continually mounting costs of providing banking services. Over the past two years these have risen materially throughout our sphere of operations and had we not been able to increase the volume of our deposits from the public, the results would have been much more apparent and unpalatable. These twin aspects of our business are having the unremitting attention of our General Management.

You will have noticed that the larger banks are turning increasingly to automation to deal with the rising volume of paper work. Our own problem is relatively a small one but it has been under close study and we have decided to install in London a computer of suitable capacity which primarily will serve our London business but which in due course will be able to cope with a wider field in such ways as storing information gathered from our whole system of branches.

Tribute to Staff

Once again I wish to thank our General Manager and his staff throughout the Bank for their unstinting service to the interests of the Bank.

During the year Mr. Gillespie and his colleagues have visited most of the territories in which the Bank operates. The Directors have done their share—Lord Aldington visited Kenya and Uganda; Mr. Owen has just returned from a tour of our Rhodesian branches while Lord Lloyd is at time of writing on a comprehensive tour of India, Pakistan, Burma and Ceylon. In the course of business tours Mr. Vernede visited a considerable number of our branches in India, Pakistan and Ceylon and Sir John Muir made similar visits in Southern Rhodesia.

Mr. Wadia is continuously in touch with our Management in India and Lord Twining is on an extended visit to East Africa, where we have established a small advisory committee under his Chairmanship.

In September accompanied by the General Manager I attended the annual meetings of the World Bank and The International Monetary Fund and thereafter Mr. Gillespie called on our principal Correspondent Banks on the Eastern Seaboard of the United States and in Montreal and Toronto.

PREFABRICATED TUBULAR ROOFING STRUCTURES

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions. Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/24	24 ft.	14 ft. and 13 ft. 6 in.
SLS/44	44 ft.	16 ft. 1/8 in. and 13 ft. 4 1/8 in.

CALCUTTA

Amsterdam, gateway to Europe—so easy to reach by KLM.

Read why so many experienced travellers and shippers choose reliable KLM jet routes to Rome, Zurich, Frankfurt and Amsterdam with connecting flights to London, Paris, Hamburg, Brussels and 36 other cities in Europe

They know that KLM was the first European airline to fly to the Far East. They know that 'Golden Circle Service' is offered on KLM flights from the Far East to Europe via the South Asian routes and over the Pole. They know that KLM has had longer than any other airline to perfect its reliability—43 years. Read more KLM facts.

1. KLM operates weekly DC-8 jet services to Europe from Calcutta and Delhi and five-weekly flights from Karachi on Tuesdays, Wednesdays, Thursdays, Saturdays and Sundays.

2. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay any day of the week, by providing connections at Karachi, Cairo, Beirut, Athens, Teheran or Rome (depending on the day of travel), with KLM flights to Europe.

3. KLM has its own fully air-conditioned resthouse at Karachi airport called 'Midway House'. It has spacious, comfortable rooms with shower baths and provides many facilities e.g. a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

Jet maintenance at high level

4. After every 3000 hours in the air, a DC-8 jet is completely stripped. Even the seats come out. They go to the carpenters and upholsterers, the precision instruments to the electrical and radio workshop, and the engines to the testing tunnel.

5. KLM believes in double-checking everything. Before every flight a DC-8 jet gets two "walk-around" inspections, one by KLM maintenance crew, one by the flight engineer. He walks around the entire plane to double-check about 60 key points. Including such details as hydraulic fluid, engine intake ducts, tyre treads, brake linings, toilets, lights and power for the galley.

Service for young and old

6. Every KLM DC-8 jet has a luxuriously appointed lounge,

located in First Class. It is a perfect place to meet your fellow travellers over free drinks.

7. KLM prepares special diet food for passengers who request it as they book their seats. KLM pursers are always briefed on these special diets before passengers come aboard.

8. KLM pampers babies—and their mothers. KLM supplies comfortable cribs that hook firmly to the overhead racks, leaving mother's lap free.

Amsterdam—offering so much for so little!

9. On your next trip to Europe, take advantage of 'Hilton Special'—a stay of two days and a night in the Hilton Hotel, Amsterdam; plus sightseeing tours covering a canal boat trip, visits to the Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond

cutting factory and other places of tourist interest. And all this for just £6.1 sh.

10. KLM's DC-8 jet services from Calcutta, Delhi and Karachi as well as its services from Cairo, Beirut, Athens, Teheran and Rome provide excellent connections at Amsterdam to London, Paris, Hamburg, Brussels and many other European cities.

11. When you route your journey via Amsterdam, you have the advantage of going in for tax-free shopping at the airport (including ShipSide cars), and availing of Holland Minitours at a cost of £1.5 sh. per person.

12. Your Travel Agent will tell you more about the advantages of flying KLM via Amsterdam. Get in touch with him or contact the nearest KLM office. 7 Chowringhee Road, Calcutta; 9A Connaught Place, Delhi; Taj Mahal Hotel, Bombay.

The Stock Markets

LYONS RANGE SHAKEN BY CENTRAL BUDGET

Wednesday Evening.

THE Calcutta stock market has been shaken by the Central Budget. The shock has been the greater since the forecasts about the Budget proposals had gone awry. The market had expected additional taxation of only Rs. 150 crores, whereas the new taxes account for Rs. 265.9 crores. Lyons Range is greatly disturbed by the imposition of the super profits tax on companies (which is discussed in detail on page 332 of this issue). A fuller review of investors' reactions to the Budget is published on page 339.

Share prices have declined sharply all-round on a predominance of sellers. Buyers have been scarce. Whenever purchases have been made, they have been for short-covering. In order to stop the selling pressure, the authorities have fixed minimum prices for clearing, cotton mill, engineering, miscellaneous and paper shares. It has also been decided to introduce compulsory carry-over at fixed making-up prices. There was an interim clearing last Monday in order to prevent payment difficulties. Business has, meanwhile, been very thin since no support has been attracted at the minimum prices. Since the dividend and profit outlook of shares has been damaged by the super profits tax, the trend is unlikely to improve in the near future.

As for Government securities, the turnover has been dull because institutional support is lacking. Prices of short-dated loans have been about steady, while those of medium and long-dated stocks have been weaker. State Government loans have been offered freely.

The Indian Iron and Steel Co. Ltd produced 106,428 tons of pig iron in February, compared with 120,068 tons in January. The output of steel ingots declined from 86,248 tons to 79,233 tons while that of saleable steel rose from 68,972 tons to 69,816 tons. Despatches declined from 70,408 tons to 64,180 tons. The decline in output is largely due to the short working month. The managing agents point out that 7,600 tons of finished steel could not be despatched because of the wagon shortage.

Bombay

AUTHORITIES SUSPEND TRADING

MINIMUM PRICES FOR CLEARING SHARES

Wednesday Evening.

THE Bombay stock market has been overtaken by panic because of the tax proposals made by Mr. Morarji Desai. The authorities suspended trading last Tuesday and minimum prices have been fixed for clearing shares. It has also been decided to enforce compulsory carry-forward at a fixed budla rate of 9 percent a year. Making-up prices will also be fixed. There was also no trading on Wednesday. When the market opened last Saturday, share prices declined appreciably, but there was limited business since the full implications of the new tax measures were not understood. During Monday's session nervousness prevailed and investors wanted to sell their shares in panic.

Therefore, prices declined sharply, but it was difficult to get buyers even at lower levels.

Sentiment had improved appreciably before the Budget on hopes that the new taxes would not be very stiff. When the Finance Minister proposed new taxes for Rs. 265.90 crores, the market was shocked. Among the new levies, the super profits tax on companies is being considered very damaging. It is feared that the levy will cut dividends and hamper capital formation.

Minimum prices have been fixed as follows: Tata Steel ordinary Rs. 116.50, Indian Iron ordinary Rs. 19.70, Tata Locomotive Rs. 262, Bombay Dyeing Rs. 59, Century Rs. 490, Kohinoor Rs. 273, Voltas Rs. 245, Scindia Rs. 10, Tata Chemical ordinary Rs. 13.40 and Belapur Rs. 186.

Madras

TAX PROPOSALS FORCE PRICES DOWN

PANICKY CONDITIONS PREVAIL

Tuesday Evening.

THE Madras stock market has reacted very bearishly to the Central Budget. As there has been

very little trading since Budget day, it is difficult to gauge the extent of weakness. The new tax measures have led to panicky conditions. There has been a predominance of sellers and buyers have been conspicuous by their absence. South India Viscose, for instance, have declined from Rs. 156 to Rs. 139.

The fall in planting shares has been less pronounced in view of the removal of the export duty on tea. However, since the relief from the removal of the export duty has been partially offset by the decision to discontinue the refund of excise duty on tea exports and the 20-percent surcharge, investors have been examining the position closely. It is generally believed that selected tea shares may not suffer heavily considering that satisfactory prices are being realised for the commodity. Despite repeating a taxable ordinary dividend of 25 percent, Kil Kotagiri have been neglected.

Andhra Sugar has paid a taxable ordinary dividend of 16 percent and the Company has benefited from diversification plans. Mysore Coffee has paid a taxable ordinary dividend of 15 percent and United Nilgiri an interim taxable ordinary dividend of 7.5 percent. Dhanalakshmi has declared a taxable ordinary dividend of 17.5 percent and Parry's Confectionery an interim taxable ordinary

Rotorvanes

GIVE YOU
A POWERFUL
MECHANIZED
GRIP ON

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for. The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The automatic latitud feed is shown with the larger machine.

The Portable intermediate feed conveyor is shown with the Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

London

WIDESPREAD RISE IN EQUITIES

CORPORATE NEWS ENCOURAGING

London, 6th March.

THE stock market has been in good form over the past week, and although it became quieter in the last two days of the week, prices of equities were appreciably higher than a week ago. Buyers were encouraged by the very satisfactory preliminary statements which had been coming from certain of the industrial giants recently, including those of I.C.I. and Unilever. The Budget, which is only four weeks away, has also been very much in the minds of investors and there is much speculation as to how far the Chancellor will go in boosting the economy. Equities were the centre of attraction, and they advanced on a broad front with the lesser-known issues receiving most attention latterly. The Hoover results were well received, but after an initial burst of strength, profit-taking brought prices back.

Gilt-edged were a poor market and with the latest banking returns showing a marked expansion in bank loans, sellers came in on the view that the banks would take similar action in order to meet the expansion in borrowing by customers. The gradual slide on Wall Street left its

mark on dollar stocks, although a sharp rally towards the end brought some recovery there. Gold shares made a good showing, especially the finance issues and diamonds pushed ahead. Coppers displayed a marked strength. Oils trended irregularly, and the good quarterly profit figures from Royal Dutch Shell did not help the shares much. Rubbers and teas were quiet.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours

An arsenal of sacrifice

Indian women have been noted for their bravery and courage. Padmini of Chittor, Chand Bibi of Ahmednagar, the Rani of Jhansi, Sita, Damayanti and Draupadi are glorious examples followed by Indian womanhood. Whenever the need arose, Indian women willingly sent their sons, brothers, husbands to the battlefield, with a blessing to them, a "tilak" on their brow, with a smile on their own lips, a prayer in their hearts. Today again they are facing a new threat. The Chinese have attacked our motherland, and our brave sons are fighting them. But they need more arms, more equipment, more warm clothes to help them defeat the enemy. While many women have given their gold, their jewellery, their valued possessions to help us convert them into an arsenal, greater sacrifice is needed. This is everyone's struggle... and all of you have to join in to help protect our honour, our freedom.

Money

THE CALCUTTA MONEY MARKET

CALL RATE SHOOTS UP

Wednesday, 6th March.

THE feature of the Calcutta money market during the past week has been the exceptional tightness of inter-bank funds. The call rate has shot up to 6½ percent, which is perhaps the highest level in living memory. Even so, the rate is to some extent nominal, since there are large borrowers over whose needs cannot be met. Otherwise, advances to trade and industry generally are almost unchanged. The credit given to the cotton, sugar and jute mills has increased a little, but this has been offset by a fair decline in iron, steel and engineering advances. The monetary accommodation given to the foodgrain and seeds trade remains around last week's level.

The exchange market has been extremely dull. The supply of both gunny and tea bills has decreased considerably, and remittance has been on a poor scale. Sterling has lost ground in relation to all the major currencies, except the Swiss franc.

THE CALCUTTA SILVER MARKET was quietly steady in the past week on better demand. The price advanced from the previous week's level of Rs. 275 to Rs. 276, quoted today for ready delivery. There was no forward business. The London and New York prices were 108½d and 125.6 cents.

DURING THE WEEK ENDED 1ST March, Government of India Treasury bills for Rs. 20,68,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 5th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.365 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Kanpur and New Delhi up to the close of business on 9th March, and in Bangalore, Bombay, Calcutta, Madras and Nagpur up to the close of business on 11th March.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 6th March to 9th March at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 27th February to 2nd March, amounted to Rs. 50,000.

ACTIVE NOTES FELL BY RS. 51 LAKHS to Rs. 2,193.97 crores and the total note issue by Rs. 33 lakhs to Rs. 2,206.78 crores, according to the return of the Reserve Bank of India for the week ended 1st March, 1963. Notes held in the Banking Department consequently rose by Rs. 19 lakhs to Rs. 12.82 crores. Deposits of the Government of India increased by Rs. 19.39 crores to Rs. 103.95 crores, and those of other Governments by Rs. 3.07 crores to Rs. 12.87 crores. Balances of scheduled banks at Rs. 77.57 crores showed a fall of Rs. 27 lakhs. Balances held abroad improved by Rs. 1.24 crores to Rs. 13.20 crores. Investments were fractionally higher by Rs. 5 lakhs to

Rs. 226.72 crores. Loans to scheduled banks rose from Rs. 38.61 crores to Rs. 57.17 crores, of which advances against usance bills were Rs. 38 crores (Rs. 26.82 crores). Ways and means advances stood at Rs. 27.63 crores, against Rs. 26.52 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 22nd February, 1963, shows a rise of Rs. 2.93 crores to Rs. 557.30 crores. Investments in Government securities are up by Rs. 11.03 crores to Rs. 226.30 crores, while other authorised investments are down by Rs. 3 lakhs to Rs. 10.34 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 5.44 crores to Rs. 308.95 crores. Cash and balances are, in consequence, shown at Rs. 21.66 crores, or Rs. 5.25 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 22nd February, 1963, shows Demand and Time liabilities at Rs. 945.67 crores (Rs. 18.74 crores on account of borrowings from banks) and Rs. 1,274.16 crores (Rs. 19.41 crores) compared with Rs. 941.20 crores (Rs. 21.11 crores) and Rs. 1,276.36 crores (Rs. 20.02 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 53 lakhs and Rs. 3.72 crores to Rs. 51.02 crores and Rs. 72.42 crores, respectively. There is a rise of Rs. 10.91 crores to Rs. 616.60 crores in investments. Advances and bills discounted at Rs. 1,537.70 crores show a rise of Rs. 9.74 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.6 percent and 69.2 percent, against 5.8 percent and 68.9 percent.

BUDGET WILL DISCOURAGE FOREIGN INVESTMENT

(FROM OUR NEW DELHI CORRESPONDENT)

ACCORDING to lobby circles, the taxation proposals of Mr. Morarji Desai, Central Finance Minister, are not only drastic but also reflect his helplessness. Unless it was done by design, the proposals will stop the flow of foreign investment to this country. The foreign investor is already reluctant to bring in capital to India in view of the heavy burden of taxation, the increasing difficulty of importing raw materials as well as the transport shortage. In the last analysis, it is the yield on foreign investment which determines the movement of capital. But under Mr. Desai's latest taxation proposals, the profits of companies will fall to about 6 percent. Mr. Desai probably agrees with his two colleagues, the Central Ministers for Mines and Fuel and Steel, who are apparently opposed to foreign investments in India, that such investments lead to a heavy drain on India's resources through commissions, salaries and dividends. But they are oblivious of the need for foreign investment for the supply of technical know-how and to ease the foreign exchange shortage.

The basic philosophy underlying western aid is to save India from going communist just as aid is given by the communist bloc to prevent India from joining the western bloc. Britain, the U.S.A. and West Germany have done their best to increase the flow of private investment to India. The effect of Mr. Desai's Budget on the flow of foreign investment to this country will be extremely adverse. The direct impact of the Budget will be to stop the inflow of foreign private capital to India.

Mr. Desai's compulsory saving scheme is based on a realistic approach. It applies to millions of people who are not assessed to income tax. But to rope in the vast multitude of people under the compulsory saving scheme will create serious administrative problems. The basic assumption underlying planning is to raise the standard of living of the masses. Under Mr. Desai's plan, a man earning Rs. 125 a month with wife and a child will have to foot an increased bill to sustain himself and his family due to the sharp rise in the cost of living under the impact of excise duty and will also have to fork out about Rs. 4 a month by way of compulsory deposit. In other words, his standard of living, which was supposed to go up, will go down. It sounds ironical that the Central Ministers, who oppose a reduction even in their electricity bill, running in several cases to Rs. 1,000 a month, should call upon the masses to make sacrifices.

Mr. Desai's helplessness is evident from the fact that he has been able neither to reduce the growing administrative expenditure nor to rationalise the plan to meet the needs of defence. The Finance Minister should have frankly told the standing committee of the National Development Council how much money he could raise without endangering the economy. As it happens, even the psychology for economy has been obliterated. While the people are being asked to bear the increased burden "with a smile", satellite communications stations are being set up involving huge expenditure. In

a post-Budget speech, Mr. Desai has stated that there is no alternative to heavy taxation. But there exist some alternatives. Firstly, he could drastically slash the administrative expenditure of the Central Government by liquidating some unimportant Ministries which deal with subjects which, under the Constitution and ever since 1921, have been the sole responsibility of the States. This would have helped him to provide sizable relief to the taxpayer. Secondly, the unprofitable business of subsidising khadi should go and as a former Central Health Minister, Rajkumari Amrit Kaur, suggested last year, salt tax should have been reimposed.

A special provision to stimulate exports, notwithstanding Mr. Desai's proposals will make Indian goods more uncompetitive in world markets. In order to cut down imports, the Finance Minister has imposed additional duties on them. As the

bulk of imports constitute raw materials, components and capital goods, the incidence of the increased levies will add to the cost of production. Since these additional levies are on an *ad valorem* basis, imports from the U.S.A. will now prove costlier. The Government has already raised the price of coal. Imported cotton has been made costlier, by the levy of an import duty. Postal tariffs have been revised to the disadvantage of an exporter, who is not allowed freely to go abroad to market his goods. By and large, there are no facilities to provide after-sales service for manufactured goods. Meanwhile, the exporter's transport bill is being raised through an increase in railway freights and his profits are being pegged around 6 percent. A Board of Trade under a Central Minister can set up committees or pass resolutions but cannot compel a foreign buyer to purchase Indian goods, un-

less they are competitive in price and quality.

The Government cannot hold the price line by issuing orders. This country would have been a paradise on earth if all the laws and regulations were obeyed by the people. Prices are increasing, making it difficult for middle class people to sustain themselves, much less to improve their standard of living. As for organised workers, they will see to it that any increase in the cost of living is compensated by an increase in the dearness allowance.

It is apprehended that the Government will not be able to spend all the money it is collecting for defence. From this point of view, the Budget may have a deflationary effect. A better course would have been to come up with supplementary taxation proposals if the Finance Minister needed extra funds later in the year.

According to lobby circles, the Congress Party itself is not happy over the taxation proposals. Party spokesmen are expected to express their views this week.

ALUMINIUM

Progress in Substitution

The Government of India has been considering the question of

CANNED FOR CONVENIENCE After a tiring day's work how pleasant it is to relax, sipping your favourite fruit juice from a chilled small can! How convenient these 5½ oz cans are! They are easy to handle and take less storage space ■ Poysha, one of the leading tin container makers in the country, pioneered the manufacture of these cans. This made possible greater utilisation of our fruits and vegetables and helped create a new export item. First marketed a year ago, hundreds of thousands of these containers, made by Poysha, have already been used by leading canners to export fruit juices to the countries of the Middle East ■ Poysha are thus helping India develop new industries and also earn valuable foreign exchange.

imposing restrictions on the use of copper, tin, zinc and brass and their substitution by aluminium and its alloys. The success so far achieved in this sphere is as follows: All the underground cables and the heavier sizes of insulated cables are being manufactured out of aluminium instead of copper. It is proposed to substitute aluminium for copper in the manufacture of all sizes of insulated cables from April 1963. In other electrical industries, some manufacturers are shortly going to make aluminium bus bars instead of copper bus bars. A number of electrical motor manufacturers have switched over to die-cast aluminium rotors instead of copper.

It has been decided to make a 30 percent cut in the supply of copper and a proportional percentage of zinc for the making of copper and/or brass utensils. In order to economise zinc, it is proposed that only the top portion of transmission towers may be galvanised, and painting or aluminising resorted to for the remaining portion. For low tension transmission poles and the Posts and Telegraphs poles, it has been proposed that wooden poles or other substitute material may, as far as possible, be used in place of galvanised poles. No possible substitute has yet been established for tin. As most of the cables are now to be made of aluminium, it will not be necessary to "tin" such wires or cables.

SUGAR

Output Likely to Fall

The combined production of sugar in U.P. and Bihar up to 22nd February has increased by 72,000 metric tons, compared with the output up to the same date of last year. But in view of the shortfall in the sugarcane acreage, adverse seasonal conditions, higher incidence of pests and diseases and competition from gur, the availability of sugarcane to factories has been reduced. So it is expected that the production of sugar during the year will be less than last year, but it is too early to say how much less it will be. There was a substantial stock of sugar at the beginning of the year. The quantity, it is hoped, will help tide over any difficulty due to the shortfall in production.

Meanwhile, the Central Food Minister, Mr. S. K. Patil, has warned that the Central Government will not hesitate to take over the sugar trade if the prices were pushed up to "unreasonable levels". As the sugar industry and trade are closely linked together, the Government will have to take over the entire sugar industry if it is really serious to bring down sugar prices. The loss on sugar exports, it is reported, will be heavier this year and may exceed Rs. 15 crores.

COAL

Price Raised

The coal industry requested the Government to allow a price increase in order to help to implement the former the interim wage board award which came into effect from 1st March, 1963. The impact of the award on the cost of production has been assessed and an increase of 80p a ton has been sanctioned from 1st March, 1963.

The following doublings have been approved to help the increased movement of coal from the Ranigunj coalfield area:

Name of section	Miles	Railway	Target date of completion
Ondal to Sonachara	5.00	Eastern	End of third plan
Ukhra to Pandaveshwar	6.00	-do-	-do-
The Strip exchange yard to Sitarampur	12.00	-do-	-do-
Sonachara to Toposi	2.00	-do-	-do-
Mugma to Thaparnagar	3.25	-do-	-do-
Sainthia to Barharawa	66.00	-do-	Early fourth plan
Damodar to Madhukonda (including bridge over the Damodar)	3.00	South Eastern	-do-

contributing to the country's industrial and commercial growth...

THE BANK OF BARODA LIMITED.

There are over 165 offices in India, and in London, Kampala, Dar-es-Salaam, Mwanza, Jinja, Kisumu, Mombasa, Nairobi, Mbale, Moshi, Naraingunj (East Pakistan), Port Louis (Mauritius), and Suva (Fiji Islands).

The Calcutta Offices are at:
Brabourne Road, Burra Bazar, *Bhowanipur,
*Dum Dum, *India Exchange (Main Branch),
M. Gandhi Road, Sham Bazar, Lake Market.

CAPITAL, 7th March, 1963.

completed by the middle of the current year. As far as the second phase of the expansion programme is concerned, the Company is still trying to find a collaborator to supply the necessary know-how and technical assistance.

FOODGRAINS

New Silo Planned

Preliminary steps are being taken for the construction of a grain silo in Bombay. Two silos, one each in Hapur and Calcutta, have already been constructed. The cost of the silo in Hapur was about Rs. 27.35 lakhs and that of Calcutta about Rs. 32.08 lakhs. These silos were obtained under the U.S. Agency for International Development programme and as such no foreign exchange was involved. The cost indicated includes A.I.D. funds amounting to Rs. 19.05 lakhs in each case.

The cost of construction and the foreign exchange expenditure involved in the case of a silo to be constructed in Bombay cannot be worked out at present since the designs and other data required are yet to be finalised. The capacity of silos in Hapur and Calcutta is 10,000 tons each. Steps have also been taken to increase the capacity of the Calcutta silo by another 9,000 tons. The Bombay silo is expected to have a storage capacity of 50,000 tons.

POWER PROJECTS

Progress Being Expedited

The Government is taking special steps to accelerate the progress of the following power projects in view of the power shortage in the country, namely, (i) Neyveli thermal power station extensions, (ii) the Pathratu thermal project, (iii) the Singrauli (Obra) thermal project, (iv) Delhi "C" power station, (v) the Chandrapura thermal power station and (vi) the Durgapur thermal power station, both of the D.V.C. According to tentative estimates, the additional expenditure involved for speeding up the execution of the third and fourth plan projects amounts to about Rs. 160 crores.

A contract for preparing the detailed project report and working drawings for the expansion scheme of the Neyveli thermal power plant under the third plan was signed here recently. Under the contract, Russia will supply the detailed project report by the second quarter of 1963 and working drawings for the sixth 50-megawatt unit by October 1964.

The Government-owned Neyveli Lignite Corporation is at present putting up with Russian assistance a 250 megawatt thermal power station comprising five units of 50 megawatts each. It is now proposed to increase the capacity of the plant to 400 megawatts, including two units of 50 megawatts and 100 megawatts during the third plan period. The expansion scheme is estimated to cost Rs. 15 crores, including a foreign exchange component of about Rs. 10 crores.

The Government of India has devised a new procedure to quicken the pace of release of foreign exchange for irrigation and power projects. It has been decided that where public tenders have been called for and no quotations have been received from indigenous manufacturers, there is no need to get a "no-objection" certificate from the Department of Technical Development before an import licence is issued. The Central Ministry of Irrigation and Power, State Governments and the project authorities will not, in future, make any reference to manufacturers in

CAPITAL, 7th March, 1963.

the public or private sectors concerning the availability of stores and material for which open advertisements have been issued.

If no quotations are received against public tenders, it will be presumed that the capacity to manufacture or supply the material in question is not available within the country, and there will be no reference to any Ministry or public or private sector project before the sanction of foreign exchange or the issue of import licence. After an open tender, there will also be no negotiation with any party who has not initially tendered against the requirement.

MADRAS

Equipment for Mettur Project

A technical and commercial agreement has been reached with the Russian Government for the supply of equipment for the third and fourth units of the Mettur tunnel hydro-electric project in Madras State. It was signed between the Madras State Electricity Board and the Russian suppliers, Messrs Machinexport. Orders for the first two units of 50,000 kilowatts each under the Mettur thermal hydro-electric scheme in Madras were placed on Messrs Machinexport. Orders for the additional two units of 50,000 kilowatts for the extension scheme have also been placed with the same suppliers. The total cost of the scheme, including the initial installation of the two units of 50,000 kilowatts, is Rs. 8.89 crores. The foreign exchange component for the additional two units is estimated at Rs. 1.90 crores. The portion covered under the Indo-Russian trade agreement is of the order of Rs. 1.75 crores. Free foreign exchange to the tune of Rs. 10 lakhs or so will be required for procuring fire protection equipment and control cables, etcetera, which cannot be procured from Russia. The plant is expected to be commissioned in 1965-66.

ELECTRICAL EQUIPMENT

Contract for Crompton

Crompton Parkinson Ltd has announced that its associate Company, Crompton Engineering Company (Madras) Ltd, has been awarded a £360,000 contract to supply electrical equipment for a new factory in Avadi, near Madras. The factory is being built by the Government of India for manufacturing tracked vehicles. The equipment to be supplied under the contract will include transformers, switchgear, cables, electric motors and control gear. Most of it will be manufactured at the two Crompton factories in Bombay.

EARTH-MOVING EQUIPMENT

New Production Programme

The Government has approved in principle a proposal from one of the industrial undertakings under the Central Ministry of Defence for manufacturing earth-moving equipment, such as wheeled tractors, motorised scrapers, rear dumpers, etcetera. Details of the production programme are, at present, being worked out by the Central Ministry of Defence.

FERTILISERS

Factory for Durgapur

A.U.S. team recently came to India to set up a fertiliser factory in Durgapur. There was a general discussion

on the collaboration terms and the fees to be paid to the American party. The discussions were of an exploratory nature and no conclusions were reached.

The three fertiliser factories are expected to go into production on the following dates: the Trombay project August 1964; the Namrup project December 1965; and the Gorakhpur project December 1966. The expenditure incurred on the projects as on 31st December, 1962, is as follows: Trombay Rs. 13.77 crores, Namrup Rs. 1.86 crores; and Gorakhpur Rs. 2.98 lakhs.

TUBEWELL PROJECTS

Use of Dollar Aid

Certain tubewell projects in Bihar, Uttar Pradesh and Punjab, sanctioned during 1952 to 1954, were financed partly from the U.S. Government aid. The rupee expenditure on the projects was financed by long-term loans sanctioned by the Government of India. The dollar aid was limited to the foreign exchange expenditure involved in those projects. The rupee equivalent of the dollar aid used was also treated as a long-term loan from

the Government of India to the State Governments. The latter have been representing for the remission of interest charges on the dollar portion of the capital cost. It has, however, not been found possible to accede to this request due to the following reasons:

"The pattern of foreign assistance received by the Central Government varies depending on the aiding country. The pattern of assistance given by the Centre to the States is, however, uniform for all projects of the same nature.

"The approved pattern of assistance for tubewell construction envisages only a loan, and the remission of interest charges on any portion of the capital cost will be tantamount to a concealed subsidy."

ORISSA

Port Trust for Paradip

The Orissa Government has decided to set up a port trust for developing and administering Paradip port. The Orissa Port Trust Act will be applied to Paradip from 1st April, 1963. The State Government has stated that the first board of trustees will consist of

seven Government officials. It will have a five-year term. Funds will be raised through a loan from the State Government as well as public flotation.

HANDLOOM CLOTH

Stocks Accumulate

The Government of India has received reports that there is an increasing accumulation of unsold handloom cloth causing distress to weavers in various States. The Government has studied the situation carefully. It is of the view that this is a temporary phase and the situation is likely to improve shortly. But in order to improve sales and clear off the accumulated stocks and to give immediate relief to the industry, the Government has decided to allow the handloom co-operatives a special additional rebate of 5p in the rupee on all retail sales and 3p in the rupee on all wholesale sales of handloom cloth for a period of 15 days from 1st March, 1963. This special rebate will be in addition to the usual rebate of 5p in the rupee on retail sales and 3p in the rupee on all wholesale sales. The special rebate, it is hoped, will help in clearing off a major part of the accumulated stocks.

London

F.B.I. URGES MORE U.K. AID FOR INDIA

(FROM OUR LONDON CORRESPONDENT)

A SUGGESTION that British aid to India is not as large as it ought to be and is perhaps wrongly applied comes in a report by the Federation of British Industries on export opportunities in the subcontinent. The report is based on a survey made in January by Sir Norman Kipping, director-general of the F.B.I., assisted by Mr. Michael Donelan, the F.B.I. representative in India. In his report, Sir Norman says that the outstanding fact for British exporters is that their share of India's trade with the outside world now depends almost entirely on Britain's share in the growing aid to India. In the 'fifties, India had at her disposal large sterling reserves mainly accumulated in the second World War. In these circumstances, the traditional links with British exporters and competitive factors function freely.

Now, says Sir Norman, the pattern has been transformed because of India's heavy and continuing deficit in her trade balance. Her own exports are sufficient today to pay for only about 60 percent of her total imports. Any increase in imports must be paid for, in effect, by foreign aid, and since Britain's share

in this is only 10 percent, the U.K.'s export supremacy is slowly being undermined. Manufacturers are urged to counter the balance of payments by arranging for production in India. The report acknowledges that "British industry is securing its future in the market more surely from the inside than that of any other country." Since 1959, British companies have concluded 367 out of a total of 1,300 "collaboration agreements" with Indian companies. United States companies have concluded 221, West Germany 201 and Japanese 100.

Bearing in mind the irrecoverable loss of commercial position the U.K. is now suffering in India and also the employment situation at home, says Sir Norman, "we should surely be wise in our own interests to stretch the amount of our aid to the limits of economic prudence." He also suggests that the aiding countries, Britain included, ought to make up their minds whether they are genuinely giving aid—loans on very easy terms—or seeking hard commercial terms for their money. "We ought to remind ourselves," he says, "of the days when we were at the borrowing end. The terms we were given for Marshall Aid were certainly soft." There is little doubt that India will remain a borrower for many years and the prospects of her repaying her debts in the near future are dim. In fact, says Sir Norman, in the ordinary course of events one would say that India is already on the edge of the precipice and "her cheque might bounce at any time."

Deterrents to Investment

The question for Britain is whether she ought not to join with the United States in seeking ways and means of ensuring that the aid is genuine aid which will not impose a crushing burden upon India. Sir Norman admits that there are deterrents to British private investment in India which have helped to put off some intending exporters: the Indian policy of ensuring that

the controlling interest in companies should be in Indian hands is one. But the overriding fact is the size and potential of the Indian market. The report quotes with approval the remark of an American commentator: "Anybody who invests in India is a sucker; but anybody who does not invest in India is a bigger sucker."

There is probably a case for some rethinking about Government aid to India as it affects the business prospects of exporters. Marginal adjustments are no doubt possible that would relieve some of the frustrations of exporters who, collectively, are faced with a relatively static market in the absence, that is, of a significant increase in total British trade to India. But the scope for improvement would not seem to be great and a further undermining of the U.K.'s export supremacy in the Indian market is probably inevitable. The same need not be true about British business within India. Indian-based companies which are either British-controlled or in which there is a large British participation are a big asset in a market with tremendous potential. The practical difficulties of operating, brought out in the Kipping report, are often formidable: so, therefore, are the deterrents to establishing or expanding business there. Yet, investment of this kind is the only way to maintain the U.K.'s standing in India.

U.K. Capacity for Aid

Is it going to be possible to give this increased aid in view of the economic situation with which this country is faced? The Budget ought to provide some pointers, but meantime, it is possible to get some idea of the lines along which Mr. Maudling is thinking in the leaked details of the National Economic Development Council's report, by publishing a summary of which the *Guardian* scored a distinct journalistic scoop immediately after the disagreement among its members at their last meeting.

The Chancellor of the Exchequer has accepted Neddy's 4 percent annual growth target as being "proper and feasible", and he is on record in a television interview as seeing no reason why it should not be achieved. This, in spite of the fact that Professor A. K. Cairncross, the Government's economic adviser, had given evidence before the National Income Commission a few days earlier, to the effect that the 4 percent growth target was a "gleam in our eye" and seeming to suggest that he was back on the 2½ percent laid down by Mr. Selwyn Lloyd as the "guiding light". Mr. Maudling went on to say: "In order to achieve this, the Government has to do much, the employers to do a lot, and the unions have to do a lot. Let us, surely, take as our next task to agree among ourselves what we all do as a common national purpose, a common national scheme for achieving this target." As chairman, he is not going to disagree with Neddy's advice, so the forthcoming Budget should show just how far the Government is prepared to go to implement it.

As a guiding light Sir Robert Shone, the director-general of Neddy,

CAPITAL, 7th March, 1963.

has emphasised that the target of an annual growth of 4 percent in Britain's economy will be reached only if improvements are made in industry. The report says: "Success in achieving a higher rate of growth will depend to a large extent on the way in which the Government, management and unions carry out their respective functions and on a new spirit of co-operation. The Government has the responsibility for ensuring that narrow sectional interests do not frustrate the achievement of an agreed growth object." The report, which at present is more in the nature of a discussion paper, is being considered by Council members, who have already posed problems in addition to those mentioned by Sir Robert. They have suggested a number of ways in which the obstacles to growth might be overcome. They expect to have their first conclusions ready after their March meeting.

Economic Priorities

Among the points raised by Sir Robert Shone and his office staff in the report are:

Education: Expenditure on education should have high priority in the investment programme. It is pointed out that money spent on improving skills will show a good return.

Research: An investigation is suggested into whether Britain is spending enough on research and development, and how the State can best invest in research.

Adult training: There must be better opportunities for retraining workers who become redundant or who want to change their jobs. Changes in allowances for persons undergoing training might be necessary.

Housing: A special housing subsidy is suggested as an incentive to councils to build houses for transferred workers. Financial help for house purchase should be considered for unemployed men willing to move to growth areas.

Pensions: The question of preservation of pension rights on the transfer of a worker from one job to another should be considered.

Redundancy: A national redundancy fund financed by employers should be considered.

Incentives: There should be capital assistance and help with labour training for incoming firms in the slowly developing areas.

Taxation: To replace profits tax and purchase tax, a single rate value-add tax should be considered. The report also considers the question of varying tax rates on earned and unearned income. The question is posed whether growth might not be stimulated by taxing personal wealth as opposed to taxing the income produced by wealth. It is admitted that this might be controversial. It is suggested that consideration of the proposal might be given in a major fiscal review.

Income: It is acknowledged that restraint in earned income will prove as difficult as restraint in profits. If the country can make progress with an incomes policy it might be better off than many of its competitors. The chances of the adoption of some of the suggestions made by the Council's office have improved lately. The Government has given signs that it is thinking positively of change.

CAPITAL, 7th March, 1963.

Jute

MARKET UNRUFFLED BY GUNNY EXCISE DUTY SURCHARGE

THE past week has been a dull one, at least as far as real goods business is concerned. But the speculative market has had its full share of activity. There has been little reaction to the Budget news. The imposition of a 10-percent surcharge on the excise duty on jute goods, having already been anticipated and discounted, has had little effect on prices. In fact, values have shown a fairly steady rise after a quiet start. The rise is mainly due to speculative covering in heavy goods following reports of enquiries from some eastern countries and Government of India tenders. Many buyers at one time or another were reported to be showing interest, but none of the enquiries were large. The state of the market at present, however, is such that speculators are grabbing at the slightest opportunity to manipulate prices.

U.S. interest appears to be non-existent, and it is not likely that any major support will come from that quarter in the near future. U.S. buyers have said on more than one occasion, as current consumption reports bear out, that prices are too high. U.S. burlap consumption, moreover, during the next few months normally has a tendency to fall, so it is unlikely that brisk business will be forthcoming from that area to instil life into the local market.

Fibre Prices

Once again, legislators in the West Bengal Assembly have been attempting to criticise the jute industry. As usual, only one side of the picture has been presented, and no thought has been given to the long-term effect of raising raw jute prices in the effort to improve the lot of the growers. Nine times out of ten, any increase in the price of raw jute does not benefit the grower but goes into the pocket of the middleman. It has become obvious in the past few years that, with a few notable exceptions, the holding power of the growers has greatly improved. In the circumstances, it seems that unnecessary attention is given to this subject, particularly when the raising of fibre prices jeopardises India's competitive prospects in world markets and thereby reduces the foreign exchange earned by the industry. If the output of the industry were to be drastically curtailed because of its inability to compete in world markets, the growers would suffer more than they are likely to suffer if jute prices are lowered.

The indiscriminate increase in the Indian jute crop has resulted in a glut of low-quality jute, which the mills cannot hope to absorb. Only in the areas where low-quality fibre is grown is there any hardship to the growers. To say that all growers are affected by low prices is wrong. Many are better off now than they have been for years, and on an overall basis, the average price of raw jute is well above the minimum laid down by the Government.

Sowing Season

With the sowing season fast approaching, legislators should spend their time persuading the farmers in their constituencies to improve the standard of the crop. This important aspect has long been neglected by the Government. Something has been

done, but achievements have fallen far short of promises, and the tangible results so far have been almost negligible. Every grower has to be encouraged to use better seeds and more fertilisers; to adopt line-sowing and to improve retting facilities. Only in this way can the yield of fibre a plant be increased. If this yield could be increased by only a small percentage, the growers would be producing more and better jute on the same land. They would then be able to earn a higher income. In fact, they would be better off because of the reduction of expenditure on labour. Unfortunately, this aspect of jute cultivation and research still does not appear to be appreciated by the Government.

The supremacy of jute and jute goods will depend in the future, as in the past, on the price factor. No other single factor is of equal importance to the industry, which is endeavouring to maintain its position in world trade in the face of steadily increasing competition. Exports are of primary importance, and the Indian industry has to be enabled to sell its manufactured goods at competitive prices in markets overseas.

THE JUTE MARKETS

Manufactured Goods: In the opening phase on Thursday, there was a certain amount of uneasiness in the market as operators awaited the Budget proposals. Fears of an increase in excise duty caused some speculative selling, which tended to force prices down. There were very few foreign enquiries and in general trading was dull. Opening quotations on Thursday were based on B Twills at Rs. 113.10 for March shipment and Rs. 113 for October-December. Hessian showed a slight improvement at Rs. 48.90 in the near position, with forward shipment at a discount of Rs. 1.40. On Friday, all the Calcutta

markets were closed to mourn the death of the former President of India, and so it was not until Saturday that the full effects of the Budget proposals were felt. The immediate reaction was downwards. But as prices had already been discounted in anticipation of the excise duty surcharge, the fall was only temporary. By Monday morning, sacking rates were slightly above those at the week's opening, and they were about 50mP up in hessian. This trend continued due to speculative buying on reports of a fresh Government tender for B Twills, and rumours of overseas enquiries for hessian. B Twills rose to Rs. 113.75 and hessian to Rs. 49.50. The general undertone was steady.

Opening quotations on Wednesday morning were as follows:

	March	Apr-June	July-Sept.	Oct-Dec.
40in. 7½oz.	38.50	37.75	36.80	36.00
40in. 8oz.	41.50	40.50	39.35	38.50
40in. 10oz.	49.50	49.25	48.70	47.90
B Twills	114.00	114.85	114.75	114.35
Cornacks	117.50	117.75	117.50	116.75
Heavy Cees	113.25	114.50	114.75	114.35
(Plain)				
A Twills	139.50	138.50	138.00	137.50
Liverpools	129.00	129.00	129.00	128.50

Raw Jute: The jute market was steady during the past week and sellers were not prepared to discount prices. Business was smaller than in previous weeks as buyers were well bought and had contracts in hand to place against their quotas, which were much smaller than before. Arrivals on an all-India basis showed a marked drop, and were estimated at between 40,000 maunds and 45,000 maunds daily. Arrivals in Cossipore also showed a decline over the previous week's above-average figure, and totalled 270 wagons. Sellers were keen to sell low-grade jute and certain grades of mesta, but the majority of mills were more interested in middle quality jute, of which there was only a limited supply.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		Current Prices		T.S.D. Minimum Prices	
	Rs.	P.	Rs.	P.	Rs.	P.
Assam-Agartala	77.70	29.00	80.38	30.00

THE U.K. JUTE MARKETS LITTLE BUYING OF FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

WITH holidays in both Pakistan and India during the past week, it was not possible for much change to take place in the raw jute markets. Offers were freely made, but very little buying interest was shown by any consuming country. The raw jute market in Dundee remained weak because of a large quantity of fibre available on spot and further unsold parcels which are afloat. In addition to this, there is over 3,000 bales of reconditioned jute ex the Feronia which will be sold by tender this week. This jute was damaged by fire and water in Pakistan. Although this is a small quantity, it will be a further drag on the market if no buying interest is shown.

The quantity of jute imported by the U.K. during the first seven months of the season is only about 70,000 bales short of its annual consumption. It is most unlikely that much more buying of the present crop will take place. Already, offers of new crop jute are being made, but so far there are no reports of actual business. Mill Lightnings were named at £109 and Mill Hearts at £96 in a combined offer for August-September shipment.

Present crop offers were very irregular with Mill Firsts at £146, Mill Lightnings at £115, Mill Hearts at £92 10s and Grade Hearts at £78 10s, c.i.f. U.K., for March-April shipment. Grade Tossa-2/3 was at £124 and Grade Tossa-4 at £109. Outport Tossa-2/3 was lowest at £96 10s and

Outport Tossa-4 at £86 for March-April shipment. Cuttings were also quiet with S.N.C. at £53 and N.C. at £46. Less than the above rates would be accepted for spot and float parcels in some instances, but as spinners are already holding large stocks of raw material very little movement is taking place in near-at-hand supplies. The Siam jute market also remained about unchanged. Offers were not being freely made, but grade A was named at £80, grade B at £76 and grade C at £69 for open marks, delivered mill Dundee for March-April shipment.

The Calcutta goods market became much easier during the past week and hessian prices were at the

lowest point for over a year. Quotations were at 74s for 40in. 10oz. and at 57s 6d for 7½oz. a 100 yards f.o.b. Calcutta for March shipment, at 73s 6d and 56s 3d April-June and at 72s 9d and 54s 9d July-September. B. Twills were at 173s, 174s 3d and 173s 6d for the respective shipment periods.

Dundee yarns and cloth were quieter, but a fair amount of business was still being placed for forward delivery. Demand for linoleum Hessians was very poor. On the other hand, the carpet industry was taking regular deliveries and placed further follow-on orders. The heavy-end of the trade was quite busy with some buying interest shown for sackings and tarpaulins.

Books

ROLE OF BANK RATE IN MONETARY POLICY

A Century of Bank Rate. By R. G. Hawtrey. (Published by Frank Cass and Co. Ltd, 10 Woburn Walk, London W.C. 1. Review copy received from Rupa and Company, 18 Bankim Chatterjee Street, Calcutta 12. Price 45s, pages 328.)

The book consists of a series of Alfred Marshall lectures given at Cambridge University in 1937. It was first published in 1938, and the present edition has been reprinted

together with a brilliantly written foreword by the author which summarises the postwar developments up to the present time. The object of the book, according to the author, is to show "how the Bank rate tradition grew up, what was in the minds of those who originated it, to what extent their intentions were realised in the experience which followed and what is its virtue in the circumstances of the present day and the future".

In the first chapter, Mr. Hawtrey traces the origin of the tradition of using Bank rate as an instrument of monetary policy. The amendment of the usury laws in 1833 created favourable conditions for its application. With the rapid and substantial growth of branch banking in the U.K. and of the discount market in London, Bank rate policy assumed a vital rôle in regulating the supply of credit. The theory of gold standard, too, added importance to Bank rate policy as an instrument for regulating the inflow and outflow of gold, thereby stabilising the external value of sterling in terms of gold. The deterrent effects of a high Bank rate (or dear money policy) on price, income and employment were known to practical bankers and business men even in the early days of the century as can be gathered from the evidences given to the Parliamentary Committee in 1848. The subsequent two chapters on "Bank rate and gold" admirably presents the history of monetary developments from 1858 to 1914 supported by statistical figures. One learns how the entire interest-rate structure in the money market came to be linked with Bank rate and how monetary policy based on the variations of this rate was applied in times of booms and slumps during this period. The onset of the first World War brought panic in the market. The extraordinary measures taken by the Government to tackle the situation have been related in the chapter on "Bank rate and deflation" which also describes the postwar developments, e.g., the return to gold standard in 1925 and the Great Depression of 1931.

The later chapters in the book are devoted to long-term and short-term rates of interest and prices. Mr. Hawtrey introduces an interesting discussion on the Keynesian theory of interest (better known as the liquidity preference theory) and exposes its inadequacies. According to Keynes, the long-term rate of interest and the amount of money available for "idle" balances are mutually related in such a way that either can be regarded as a function of the other. The monetary authority is able to determine the long-term rate of interest provided it creates a sufficient amount of money to satisfy "the liquidity preference" of the community. As a matter of practical policy, Keynes would have liked to see the long-term rate kept always at a low level to induce an adequate increase in investment to enable the economy to reach full employment. This theory, Mr. Hawtrey points out, completely ignores the influence of the short-term rate of interest on stocks of goods and attaches excessive importance to the influence of the long-term rate on capital outlay.

Bank rate has often proved unexpectedly effective as a deterrent, for it produces changes in traders' expectations which reinforce its effects. The monetary authority should always consider this factor before implementing an interest rate policy. Although the book deals with a technical subject, it is written in a clear and lucid language for ordinary readers.

EFFECTS OF DUTY CHANGES ON TEA TRADE

(BY A SPECIAL CORRESPONDENT)

THE export duty on tea has been abolished in the latest Central Budget. This should help increase exports, but the Government has effected changes in excise duties with the object of restraining internal consumption. The Budget also imposes a surcharge of 20 percent on tea and coffee. The trade fears that these proposals will check internal consumption. But with the rising standard of living, the increasing population and the rise in purchasing power, this correspondent hopes that home consumption will not be seriously curtailed.

Although the statistical position in relation to world demand and supplies appears to be reasonably balanced, tea available from India may show a sharp rise if the target of 900 million lbs is realised within two or three years. Mr. A. S. Bam, chairman of Tea Board, pointed out last year that competition might come from the Argentine, Brazil and Peru. Meanwhile, collective tea farms in Russia report that the recently planted selected tea acreage is already yielding 10 tons of leaf a hectare. This claim sounds extravagant, but tea growers working in Assam are reported to be securing yields of over 30 maunds an acre from selected seed and clone planting.

Now that the Central Government has taken realistic steps to promote exports, the State Governments should also follow suit. The West Bengal Government should abolish the entry tax and the Assam Government its carriage and road imposts. This country cannot afford to allow its tea growing interests to work at a loss. If it is, therefore, desirable to stimulate home consumption as well as exports. If the excise imposts now as exports. If the excise imposts now as exports. If the excise imposts now as exports.

India is gradually realising the importance of propaganda. It is to be hoped that advertising will soon produce results comparable to Ceylon's

efforts. That country is reported to have spent about £650,000 in 1961 and over £693,000 in 1962. A comparison of exports from India, Ceylon and east Africa (two of India's most important competitors) shows that India is still falling behind. But fortunately, the Government is beginning to realise its implications. It is understood that many applications have been submitted for financial assistance for the installation of machinery to help produce quality tea. The nery to help produce quality tea. The machinery hire-purchase scheme came into operation in April 1960. The Government, it is understood, will be able to meet the industry's entire requirements of nitrogenous fertilisers. The supply of coal, as far as the Assam gardens are concerned, it is said, will also be arranged.

The president of the Tea Packers Association of India, Mr. J. G. Robinson, said at the annual general meeting that as more than half the tea sold for consumption in India is sold as loose tea and the total consumption may now be running at over 300 million lbs a year, there would appear to be a good ground for adjusting taxation to encourage exports. Mr. Robinson estimated the total "loose tea" at over 72 million kilograms. He added that his Association had urged the Government to permit the movement of tea in bond from gardens to Calcutta and/or Cochin. If this were permitted, an equal unit of tea could be levied on tea for internal consumption. In order to evade the West Bengal entry tax, at least 22 million kilograms had been sold directly from gardens during the current season.

The matter of taxing packet tea for export also needs careful consideration because in addition to the higher costs of packing materials in India, one has also to consider the fact that African and Asian countries are setting up their own packing industries. Mr. Robinson said that internal consumption should be encouraged since production under the third plan is planned to be raised.

Writing in the *Tea and Rubber Mail*, Mr. D. L. Betts, a former chairman of the Indian Tea Association, takes a different view of the agreement to restrict production. Referring to supply and demand, he says

"there are facts and factors which are indisputable. And unless they are faced up to with promptitude and initiative, the tea industry could be faced with a crisis of gigantic proportions affecting producers in every tea producing country. Experts have judged the position and are certain that production is increasing more rapidly than is the rate of increase of consumption." Mr. Betts forecasts that huge stocks will accumulate as world production increases.

The supply potential of India and Ceylon is considerable while African countries are expected to send more tea to overseas markets. Even Indonesia is likely to become a danger spot. Mr. Betts also anticipates larger supplies from Japan, China and Formosa. In fact, "world production could be stepped up to a colossal total". Internal markets in producing countries should, therefore, be developed now. Mr. Betts also recommended the renewal of the International Tea Agreement. If that is impossible, then the International Tea Market Expansion Board should be reorganised. Governments should be represented on the Council of Control but producers' representatives should predominate in the body. If world producers refuse to co-operate, Mr. Betts suggests that "India and Ceylon could go it together, as they produce about 80 percent of world exports. But the cost problem will remain. Africa and China produce cheaper tea than India."

Mr. Betts considers it necessary to initiate enterprising and dynamic campaigns for the promotion of tea consumption in many countries where there is an immediate potential, namely, in North and South America and the Continent.

Pepper Prices Rise

(BY A SOUTH INDIAN CORRESPONDENT)

THE price of pepper has registered a smart recovery on the Indian markets in the last few days due to the revival of foreign demand. The U.S.A. as well as the communist bloc countries have bought sizable quantities recently from India. The revival of U.S. buying is attributed to firmness in Singapore prices which have risen to about 110 Singapore dollars, 10 dollars more than the previous rates. The uncertain political conditions in that part of the world is primarily responsible for this. Sellers in Singapore are hesitant to part with their stocks because of the threat from Indonesia. The U.S.A. has been keeping off from the Indian market because of attractive offerings from Singapore. The hardening of prices in Singapore and the growth

of the feeling that future supplies from there are not assured have turned the U.S. buyers again to India. American buyers, it is stated, have absorbed a sizable quantity after paying up to 32 cents a lb. Since then Indian prices have hardened to 33½ cents. Buyers are hesitating to pay the prices Indian shippers are asking for. Indian shippers are, however, unwilling to reduce their price on the ground that when fresh offerings from Singapore are dried up, the United States and other foreign buyers will have to take their requirements from India. The Indian supply position is now good. The harvest is practically over, and the crop is flowing steadily into the terminal markets. According to some trade estimates, almost 40 percent of the new crop has been marketed already. The new crop is placed at about 30,000 tons.

Export performance of Indian spices in 1961-62 was better than that of the previous year, according to the chairman of the Indian Spices Export Promotion Council, Mr. Sreekumaran Nair. He told the recent meeting of the Council that export earnings from spices during 1961-62 amounted to Rs. 17.33 crores, against a target of Rs. 15 crores laid down for the year.

Budget and the Plantations

A serious danger lies in the deep cuts into individual and company incomes which the Central Finance Minister seeks to make. The new surcharge on incomes, super profits tax and the compulsory savings scheme will affect fresh investment which is needed in the planting industry.

On the eve of the presentation of the new Budget, representatives of the planting community in south India made representations to the Centre and the State Governments concerned that the planting industry might be spared the additional levies in view of the heavy tax burden it is bearing already and the need for increasing production and the export of plantation crops. The tea industry pays the Central income tax on 40 percent of the profits and the State agricultural income tax on the remainder. The coffee, rubber and cardamom industries pay the State agricultural income tax on the whole of their profits. The tea and coffee industries are subject to heavy excise duties and in the case of tea, there was an export duty also. Besides, there are State levies like sales tax and entry tax. These taxes take away such a large share of the earnings that plantations are unable to retain adequate funds for replanting and rehabilitation of old and unproductive fields, the Governments were told.

Two Powerful Tyres for Heavy Duty

Here are two Dunlop tyres of tremendous strength and durability. Massive tyres. Working under the killing sun or deep into the night by the powerful beams of scores of flood lights. Propelling the gigantic earthmoving machines amidst the loud clangour of incessant work... at Koyna, Nagarjunasagar, the N. C. D. C. mines and numerous important projects.

The tread patterns and the especially tough casings of these tyres were developed after prolonged field trials on many kinds of terrain in many parts of the world.

COMPANY AND PUBLIC NOTICES

MARTIN BURN LIMITED

NOTICE

THE Annual General Meeting (being the Seventeenth Ordinary General Meeting) of the Company will be held on Wednesday, 27th March, 1963, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

- To receive and adopt the Audited Accounts for the year ended 30th September, 1962 and the Directors' and Auditors' Report thereon.
- To declare a Dividend on the Ordinary shares in the Company.
- To appoint a Director in place of the retiring Director Sir N. R. Pillai.
- To appoint Auditors and to fix their remuneration.
- Special Business.

To consider and if thought fit, to pass the following resolution as a Special Resolution—

"That pursuant to Section 314 and other applicable

provisions of the Companies Act, 1956, consent be and is hereby accorded to Mr. Thomas Acquin Martin, a relative of Mr. T. Leslie Martin, a director of the Company, holding or continuing to hold for a period of five years as from 1st April, 1963, an office or place of profit under the Company as an Assistant on a higher remuneration, namely, a basic salary of £3,000 per annum, fixed, plus such other allowances, benefits, perquisites, bonus, gratuity, leave, etc., as are usually admissible to the senior covenanted staff of the same status serving in the United Kingdom."

The Ordinary Share Register and Transfer Books of the Company will be closed from 14th to 27th March, 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Calcutta,
1st March, 1963.

NOTE—The Dividend, if sanctioned, will be paid on or after 1st April, 1963, to those Shareholders whose names appear in the Company's Register of Members for Ordinary Shares on the 27th March, 1963, or to their mandatees.

An Explanatory Statement annexed to the convening notice as required under the Companies Act, 1956, has been forwarded to the members of the Company.

The Company meetings and dividends table appears on page 347.

The following statement of ownership and other particulars about "Capital" Calcutta is published in compliance with Rule 3 of the Registration of Newspapers (Central) Rules 1956.

tracts from the seriousness of purpose which the Budget is supposed to reflect.

Ultimately, the most important criterion by which the Budget will be judged is whether it manages to get the economy on the move again. In a leading article last week, it was pointed out that although Mr. Desai's new tax measures are designed to bring about Rs. 266 crores extra into the Central coffers in the coming year, the whole new scheme of financial mobilisation he has devised will rake in well over Rs. 400 crores. It can hardly be suggested that such huge sums were lying idle or being wastefully used; on the contrary, the nature of the new measures is such that a large part of the extra revenues will come from sectors engaged in productive activity. Quite the worst feature of the Budget is that it

BUDGET HITS TEA TOO

THE speech of Sir Richard Duckworth, chairman, at the annual general meeting of the Indian Tea Association in Calcutta last Friday, was remarkable for its lucid and elaborate presentation of the problems of the tea industry. The industry is India's second largest foreign exchange earner, but is unfortunately subject to several handicaps, not the least important of which are the fiscal ones. The export duty was one such. But welcoming the decision to scrap this particular impost, Sir Richard stated that "no tax has been more difficult to explain to our overseas customers; no tax has been more inconsistent with an export drive". However, practically all the benefit that accrues to the producer from the abolition of the export duty has been neutralised by the levy of a 20-percent surcharge on the excise duty. Although the Government expects to lose Rs. 5.38 crores of Customs revenue by abolishing the export duty, the additional revenue from the excise duty surcharge and the withdrawal of the excise duty rebate on exported teas will amount to Rs. 5.48 crores. Instead of benefiting, tea as a commodity will actually be worse off to the extent of Rs. 10 lakhs as a result of these changes. The industry will be required to pay a heavier excise duty on teas sold for internal consumption. As for export promotion, the export duty relief is of little value since it has to a large extent been neutralised by the 20-percent surcharge on the excise duty. The following table shows the position until the latest Central Budget and the changes now proposed (in naye paise):

Zones	Present		Proposed	
	Rate of excise duty a kilogram	Net duty payable on exported teas (including export duty rebate)	Surcharge	Relief on exported teas
I	15	25	3	18
II	25	35	5	30
III	30	40	6	36
IV	35	45	7	42
V	45	55	9	54

The table indicates that the net relief for tea exported from Zones V, IV and III is negligible, being only 1nP, 3nP and 4nP a kilogram, respectively. Only for producers in Zone I and Zone II is there some minor relief, but then teas produced in Zone I are exported in very limited quantities. At first glance, it might appear that the full benefit of the export duty abolition is available to the exporter. But since the excise duty and the 20-percent surcharge will have already been paid on his purchase, the price of the tea sold at the auctions will tend to be higher to that extent to begin with. Thus, the cost of Indian teas offered in foreign markets, by and large, may continue to be about the same as it is now, a minor decrease being possible only in the quotations of teas produced in Zone I and Zone II. The cost of teas offered in the home market will be appreciably higher. Little has been done in response to the argument that Indian tea is meeting with stiff competition from the Ceylon and East African products, so its

hits these sectors severely; and, furthermore, in doing so it penalises skill and efficiency. The sharp progression in the sphere of personal taxation, and the super profits tax in the sphere of corporate taxation, have no justification except that they conform in some vague way to the discarded theories of the socialist rebels of fifty years ago. Mr. Desai has decided that it is politically necessary to soak the rich among individuals and companies while he subtly tries to broaden the tax base. But, in doing so, he has taken the dangerous risk of sharply reducing the incentives and the flow of savings which constitute the life-blood of private industry. The public sector may be burgeoning with funds it will not need, while the private sector starves for them—but this can hardly be the sound prescription for reviving an ailing economy.

fiscal burden ought to be reduced substantially to improve its competitive position.

The tea industry suffers from major handicaps in that it has to pay large sums of money as excise duty before the commodity can leave the estate. The 20-percent surcharge will aggravate the problem. It comes at a time when bank credit is difficult to obtain and lending rates are high. Since it may take some time—up to two or three months—for the tea to be sold, the collection of excise duty at the garden imposes a big strain on the resources of the producers. The industry has, therefore, urged the Central Excise Reorganisation Commission to permit payment of the duty in arrears in the form of either a promissory note or a post-dated cheque. If the plea is accepted, Sir Richard suggested that it would be wise to collect the cess along with the excise duty. There is much force in his contention that the cess, which is levied to finance tea promotion, should not fall only on exported teas but should be spread over other teas too. The industry as a whole benefits from the promotional efforts and other services of the Tea Board, which is financed by the cess, and it is only reasonable that the cess should be borne by all.

Tea companies are particularly worried about the super profits tax, since it may hit them with greater severity than other companies. As Sir Richard pointed out, tea has always been an under-capitalised industry and its expansion has

been achieved not by raising more capital but by ploughing back profits. The capital structure of many companies has remained unchanged for generations, although their acreage and assets have increased enormously. The incidence of the super profits tax, which is based on the percentage which profits bear to capital (including certain classes of reserves), will naturally be very severe on such companies. Furthermore, the tea industry being susceptible to seasonal fluctuations, its profits vary widely from year to year. Account should, therefore, be taken of the lean years before taxing the returns of a bumper year. This underlines the need for "averaging" profits before considering the income of any year as "super profits".

Apart from the fiscal burdens, there are other directions from which fresh calls on the tea industry's resources may be made. The enquiries of the Wage Board for Tea, the Working Group on Plantation Labour Housing and the Bonus Commission are of vital concern. No one in the industry grudges the workers their aspirations for higher wages provided these are matched by a corresponding increase in productivity. Sir Richard stated, however, that labour representatives had put forward claims for more pay without indicating how the rise would be justified. The tenor of their arguments has been that "the low output, quality of work and absenteeism are occupational misfortunes for which they (the workers) should not be blamed". The interim wage award has already imposed an additional burden on the industry. The award is unwarranted since there is already a provision for increasing the wages if the cost of living rises beyond certain levels.

Besides, the industry is now engaged in re-housing its workers. Although it has already provided free housing, new quarters are being built to replace the old ones which fall short of current specifications. Criticisms have been levelled against the industry for the slow pace of re-housing. This is rather surprising since already about 118,000 houses have been constructed in spite of the shortage of funds, and of cement and other construction materials. The industry hopes that the Working Group on Plantation Labour Housing will propose measures which will help it to quicken the progress of construction. It has asked that the Central Government's subsidised housing scheme should be extended to the tea industry also. The plea is reasonable and there can be no valid objection to it, particularly since other industries have been slow to take advantage of the scheme.

TAX ON REGISTERED FIRMS

THE inequity of the tax on registered firms is to be further magnified by the provisions of the Finance Bill, 1963, which seeks to levy a surcharge of 20 percent on taxes otherwise payable by registered firms. The tax is inequitable in both conception and application. In fact, the extent of the injustice will be seen from the table below:

	(A) Share of partner	(B) Self-employed person	Rs. (ii)
Profit of Firm having five partners sharing equally	Rs.	Rs.	
Share of Partner 1/5th	...	...	200,000
Tax on Registered Firm including Surcharge under the Finance Bill	40,000	...	
Share of Partner 1/5th	...	...	20,700
	4,140	...	
Additional tax payable by Partner, exclusive of additional Surcharge under the provisions of the Finance Bill. (The Surcharge would affect all three categories, and so it may be ignored for this purpose)	35,860	40,000	35,860
Tax payable on self-employed person's earned income on same basis	10,162	...	
Net income after tax	...	...	...
	25,698	28,665	26,337

the partner with an income of Rs. 40,000 has less net income than even the self-employed person with an income of Rs. 35,860. This is because the partner has to pay an additional tax of Rs. 639 on the Rs. 4,140 paid as his share of tax on the registered firm. If this tax of Rs. 4,140 was deducted and his income considered as Rs. 35,860, he would, with an income of Rs. 40,000, at least be in the same position as another person with an income of Rs. 35,860. But in actual fact the partner has to bear a tax of Rs. 4,979 (Rs. 4,140 plus Rs. 839) on an income of Rs. 4,140, that is, at a rate of more than 100 percent. This absurd position needs to be changed.

The tax on registered firms was first introduced in 1956 and has more than doubled itself since then. When first introducing the tax on registered firms, the Finance Minister thought it was justified because limited companies had to pay corporation tax. The comparison is untenable and ignores certain basic differences between limited companies and partnerships. One important difference is that the shareholders of the former have limited liability, whereas partners have unlimited liability for which they ought to receive some compensation. But the most important difference is that the tax payable by companies, even including the proposed super profits tax, is payable only on the profits remaining after charging managerial remuneration. Partnerships, however, have to bear tax before charging the remuneration of any of the partners. If a shareholder or part owner of a limited company happens to be an employee in the company as well, his salary can be charged against the profits of the company. The shareholder can, therefore, be remunerated for his services as an employee and he can also receive a dividend as an owner. In a partnership firm, even if a partner works as an employee, his salary cannot be charged against the profits of the firm. It will thus be seen that the profit on which a company pays tax represents the investor's income, whereas the profit of the registered firm represents the investor's income in addition to the managerial remuneration. To put the two on a par, registered firms should be permitted to charge a fair part of the remuneration of the owners against the profits of the firm when the owners actually work in the firm.

The tax on registered firms was probably introduced with a view to preventing tax evasion, which had previously been possible by having *benami* partners. This is also probably the reason why a higher rate of tax has been applied to firms having five or more partners. Such considerations do not and cannot apply to professional firms, such as those of solicitors or chartered accountants. Such persons are prohibited by law from incorporating themselves. They are also prohibited from entering into partnership with persons who do not have the requisite professional qualifications, so that there can be little scope for *benami* partnerships with close relatives. Whatever justification there may be for imposing a tax on registered firms in general, there can, therefore, be no justification for such a levy on professional firms. In such circumstances, to discriminate against professional firms having more than five partners is even more unfair and harmful. The basic reason for larger professional partnerships is that in today's complex economic and financial conditions, specialisation is essential. It is impossible for a sole practitioner to give the service which his clients do, and should, expect from an expert.

If this country is to use the services of experts to the best advantage, they have to be given ample opportunity to specialise in their own

India's Resources
are Precious
WASTE NOT,
WANT NOT

particular field. By restricting the size of professional firms, the result will be a larger number of smaller firms, none of which are in a position to devote sufficient time to give the specialised service which is required of them. Where there is a question of foreign collaboration, the inability to obtain effective advice in this country will inevitably go against the best interests of the country, involving loss of foreign exchange. The only other possibility would be for different firms to specialise in different fields. This may well mean a client having to go to several different firms in order to obtain advice on all aspects of any one matter. This is not a feasible proposition as it may not be possible for a business man to harmonise all the advice received in a business scheme.

Partners in professional registered firms are so much worse off financially than colleagues outside the professions that there is a strong case for further relief in addition to the removal of the tax on such professional firms. The table below shows the comparative net cash position after similar expenses of a director or other salaried employee receiving gross emoluments of Rs. 40,000 a year and Rs. 30,000 a year, and a partner in a firm with five partners who share equally a gross profit of Rs. 2 lakhs.

Column A shows the comparative position of a director or other salaried employee whose cost of employment is Rs. 40,000 with that of a partner having the same income. Section I of this column shows how the cost of employment of the employee and the net cash left with him is made up after a

retirement provision of Rs. 6,500. This amount is made up of provident fund Rs. 5,520 (company Rs. 2,760 and own Rs. 2,760) and life insurance premiums of Rs. 980. Section II of this column shows the position of the partner after identical expenses and retirement provisions have been met. Section III shows the extra cash available to the salaried employee as compared to the partner earning an identical amount.

Column B similarly shows the comparative position of a salaried employee whose cost of employment is Rs. 30,000 with a partner receiving Rs. 40,000. The expenses and retirement provisions are again identical. It will be noted from Section III that even an employee whose cost of employment is Rs. 30,000 is better off than a partner receiving Rs. 40,000.

In addition to the cash surplus, the employee will also often have pension benefits which are not available to the partner; nor has any return on investment been given to the partner. If all factors such as these are taken into account, the partner's position will be even worse than that of a director or other employee. It is evident that if a partner in a firm is in such a bad position, his employees will also be worse off than their colleagues outside professional firms. The result is that more and more people of ability are leaving and will continue to leave the professions in favour of positions in commerce and industry. This is detrimental to the best interests of the country and is particularly undesirable at a time like the

I. Cost of employment of Director or other Salaried Employee				(A) Costing Rs. 40,000	(B) Costing Rs. 30,000

present when professional and technical skill is required to an ever-increasing extent.

The tax on registered firms is unjust because it discriminates between persons of equal status and income, because it taxes part of the income at a rate of more than 100 percent and because it discriminates against firms with five or more partners. In its application to professional firms, it

is doubly unjust because it discriminates against a body of people who have no choice as to the form of business organisation in which they work; and any disintegration of the professions is hardly in the best interests of the country. The Government should, therefore, amend some of the provisions of the tax for all registered firms and for professional firms should abolish the tax altogether.

Current News and Comment

Taxes in State Budgets

All the State Governments have by now presented their Budgets for 1963-64. The Budgets of West Bengal, Maharashtra, Uttar Pradesh, Andhra Pradesh and Bihar were analysed in *Capital* of 28th February. The Budgets of Madras, Orissa, Mysore, Punjab, Assam, Jammu and Kashmir, Kerala, Madhya Pradesh and Rajasthan are now discussed. None of them seems to have tried to raise resources to the maximum possible extent. Although some of the States have imposed new taxes, these are largely marginal in character. It is disturbing that the additional tax effort has mostly been confined to sectors which are already heavily taxed. The State Governments have been shy in tapping the lightly-taxed agricultural sector for additional revenue for political reasons. The reluctance of the Gujarat Government to impose additional taxation on the rural sector is a case in point. There is no reason why farmers should not contribute more revenue since the rise in prices of agricultural produce during the past few years has increased their incomes.

Within a week of the presentation of his Budget for 1963-64, the Gujarat Chief Minister, Dr. Jivraj Mehta, has felt obliged to withdraw his major tax proposal relating to land revenue. The proposal was generally hailed as a laudable measure because the agricultural sector has been let off rather lightly. It was estimated to yield Rs. 67 lakhs next year and Rs. 1.10 crores in a full year, but has now been dropped. The proposal to increase the rates of non-agricultural assessment according to the increase in general land values in different zones within each urban area and developed area and in suitable groups of villages outside such areas has also been withdrawn. Another tax proposal which has been withdrawn is the imposition of sales tax on *gur*. The changes in the original tax proposals will involve a revenue loss of Rs. 1.63 crores. This is to be covered to the extent of Rs. 35 lakhs by increasing the sales tax by 1 percent instead of $\frac{1}{2}$ percent as proposed in the original proposals.

The revised estimates for 1962-63 show an increase in revenue receipts from Rs. 71.63 crores to Rs. 75.67 crores. The revenue expenditure is down from Rs. 72.35 crores to Rs. 71.04 crores. So the revenue deficit of Rs. 72 lakhs is converted into a surplus of Rs. 4.63 crores. The Budget estimates for 1963-64 place the revenue receipts at Rs. 80.39 crores and revenue expenditure at Rs. 79.06 crores, leaving a revenue surplus of Rs. 1.33 crores on the basis of existing taxation. The revenue surplus will, however, turn into a deficit of about Rs. 90 lakhs on account of the additional expenditure on the introduction of the *panchayati raj* and on unforeseen measures in connection with the emergency. The capital expenditure for 1963-64 has been estimated at Rs. 20.53 crores and capital receipts at Rs. 15.14 crores, leaving a capital deficit of Rs. 5.39 crores. The overall deficit will, therefore, be Rs. 6.29 crores, which will be reduced by about Rs. 1 crore as a result of the expected increase in receipts from the inter-State sales tax which is being raised by 1 percent. Dr. Mehta proposes to raise through various taxation measures an additional revenue of about Rs. 4.05 crores for the full year and about Rs. 2.92 crores next year. The overall deficit of Rs. 5.29 crores for 1963-64 is thus to be reduced to Rs. 2.37 crores which was left uncovered. Apart from the taxation on the agricultural sector, which has now been withdrawn, the tax proposals include an upward revision of passenger fares, the motor-vehicles tax, sales tax on cotton, certain changes in the sales tax and marginal increases in stamp duty and electricity

duty. The expenditure on the plan projects for next year will be of the order of Rs. 43.84 crores, against Rs. 48.42 crores in 1962-63 and Rs. 37.53 crores in 1961-62.

The Madras Budget has estimated revenue receipts at Rs. 124.45 crores and revenue expenditure at Rs. 127.19 crores, leaving a deficit of Rs. 2.74 crores. The capital Budget shows receipts at Rs. 57.42 crores and disbursements at Rs. 57.02 crores, leaving a surplus of Rs. 40 lakhs. So the overall deficit is Rs. 2.34 crores. Plan outlay has been estimated at Rs. 59.83 crores. The Budget does not propose any new tax measure as such, but the State Finance Minister has indicated that the revenue deficit will be covered by the additional yield accruing from the State's share in the Central sales tax and by an adjustment in the rates of sales tax on luxury goods.

The Orissa Budget has proposed an increase in the sales tax on luxury goods, a toll on roads and bridges, changes in motor-vehicle tax and an increase in irrigation, electricity and registration rates. Account has also been taken of receipts accruing from State trading in Kendu leaves. Revenue has been estimated at Rs. 67.60 crores and expenditure at Rs. 67.15 crores, leaving a surplus of Rs. 45 lakhs. The capital Budget shows receipts at Rs. 127.85 crores and disbursements at Rs. 127.90 crores, leaving a deficit of Rs. 5 lakhs. So the overall surplus is estimated at Rs. 40 lakhs. Plan outlay will be Rs. 29.50 crores.

The Mysore Budget proposes no new taxes, but indications have been given that adjustments will be made in sales tax. The Government is considering a scheme for rationalising water rates and betterment levy. The plan outlay will be Rs. 51.28 crores. Development expenditure on revenue account has been estimated at Rs. 66.60 crores.

The Punjab Budget has estimated revenue at Rs. 95.11 crores and expenditure at Rs. 105.35 crores, leaving a revenue deficit of Rs. 10.24 crores. The overall receipts have been shown at Rs. 144.84 crores and disbursements at Rs. 148.01 crores, leaving a deficit of Rs. 3.17 crores. The State Finance Minister has hinted at the possibility of new tax measures in order to cover the gap. New taxation measures, it may be pointed out, were introduced earlier for the welfare of the scheduled castes fetching Rs. 2.81 crores. The plan outlay will be Rs. 39.24 crores.

The Assam Budget contains six proposals for additional taxation, fetching a revenue of Rs. 1.74 crores. The State Finance Minister has proposed an increase in agricultural income tax and in the tax on public transport vehicles. A new tax is to be levied on immovable property in urban areas. It is also proposed to increase the sales tax on luxury goods and petrol. Sales tax is to be levied on kerosene. The excise duty on country-made liquor has been increased. The Budget shows surpluses of Rs. 28.99 lakhs on revenue account and Rs. 1.20 crores outside revenue account. Due to an opening negative balance of Rs. 4.38 crores, the overall Budget deficit is Rs. 2.89 crores. During the past four years, the State Budget has been showing surpluses every year, but these surpluses have been converted into deficits since large debits have been brought forward. The additional expenditure on floods and the emergency is not questioned, but it is wondered why the State continues to forgo revenue by enforcing Prohibition in a few districts.

The Jammu and Kashmir Budget estimates revenue at Rs. 34.21 crores and expenditure at Rs. 36.08 crores, leaving a deficit of Rs. 2.77 crores. New taxes for Rs. 1 crore have been proposed. A passenger tax has been levied on passenger fares

on routes other than road. Luxury goods are to pay an increased sales tax. Electricity duty has been introduced and the agricultural income tax has been revised.

The Kerala Budget has proposed new taxes totalling Rs. 4.25 crores. Electricity duty has been imposed and a tax on entertainment has been levied. A levy has also been imposed on school fees from Standard VI to Standard VIII, and increased fees have been introduced in arts, science and engineering colleges. Sales tax has been raised, and so has the motor-vehicle tax. The plan outlay has been estimated at Rs. 20.83 crores. Revenue is estimated at Rs. 71.67 crores and expenditure at Rs. 70.87 crores, leaving a surplus of Rs. 80 lakhs. On capital account, the deficit is Rs. 11.45 crores. After adjustments, the Budget shows an overall deficit of Rs. 4.55 crores.

The Madhya Pradesh Budget proposes new taxation for Rs. 1.93 crores, leaving an uncovered deficit of Rs. 1.99 crores. Revenue is estimated at Rs. 94.70 crores and expenditure at Rs. 95.19 crores. A levy of 1 percent on sales tax in relation to food-grains has been imposed. Sales tax on luxury goods, petrol and motor spirits has been raised. Water rates as well as betterment levy for irrigation have been proposed. The plan outlay is Rs. 50.5 crores.

The Rajasthan Budget estimates revenue at Rs. 63.16 crores and expenditure at Rs. 66.14 crores, leaving a revenue deficit of Rs. 2.98 crores. The capital expenditure shows a deficit of Rs. 1.52. New taxes for Rs. 4 crores have been proposed. The Finance Minister has imposed a tax on cinema advertisement. The tax on conveyance deeds and stamp duties has been increased. The duty on motor-car stage carriages has been raised. A tax has been levied on tractors and tractor-cum-trailers. Sales tax on luxury goods has been increased, and diesel oil has been subjected to a tax. All cereals, except only a few, have been taxed. A general cess has been put on land revenue instead of the former surcharge. Royalty on minerals has been raised. The plan outlay is Rs. 34.50 crores, against Rs. 35.40 crores in 1962-63.

The Flow of Foreign Aid

A survey of foreign aid trends made by the Central Finance Ministry in a booklet entitled *External Assistance, 1962*, shows many interesting features. Excluding the assistance under P.L. 480 and some *ad hoc* grants, authorisations of foreign aid from 1951 to the end of March 1962 total over Rs. 2,210 crores. During the nine months from 1st April to 31st December, 1962, a further sum of Rs. 425 crores has been authorised. The survey indicates that most of this aid has been received in the form of loans and not grants. In fact, our right grants up to the end of December 1962 total only Rs. 302 crores, while the balance of Rs. 2,332 crores is in the form of loans and other credits. Another important point which emerges from the survey is that, although India has benefited in so far as her economic growth has been accelerated, the foreign aid has also helped the donors to sell their machinery, raw materials and other goods to India. Countries like the U.S.A. and Russia, which have given substantial help, have increased their exports in a way which might not have been possible in the absence of aid. No doubt, India has reason to be grateful to the countries which have given aid. They in turn have reason to be satisfied because they will get back the loans with interest in due course, and have meanwhile succeeded in increasing the sales of their goods to India.

As was known, the U.S.A. has given the largest amount of aid. The total value of aid authorised till the end of 1962 amounts to Rs. 864.70 crores—Rs. 724.08 crores as loans and Rs. 140.62 crores as grants. This excludes the commodity aid under P.L. 480 (Rs. 1,156.33 crores) and under P.L. 685 (Rs. 31.88 crores). The aid received from Russia so far total Rs. 384.96 crores. The main difference in the aid from these two countries is that whereas the bulk of the U.S. aid is meant for primary projects and for importing materials for India's private sector, the bulk of the Russian aid is for public-sector enterprises. Two of the criticisms against the Government of India are that foreign aid has not been used as quickly as it should have been, and that not all the aid received has been

put to proper use. The Finance Ministry's survey shows that only about 60 percent of the foreign aid received from 1951 to the end of March 1962 was actually used. It is not known how much of the foreign aid of Rs. 425 crores authorised between 1st April and 31st December, 1962, has so far been used. This rate of use cannot be considered adequate. In spite of the fact that a large proportion of the aid is "tied" to specified projects and that a lot of formalities have to be gone through both in India and in the aid giving countries, it should be possible to use foreign aid more quickly.

The survey shows that a large number of countries are now giving aid to India. Britain has not only given grants under the Colombo Plan but has also extended long-term credits; up to the end of December 1962, they totalled Rs. 86 crores and Rs. 249½ crores, respectively. Australia has given gift consignments of wheat, copper, fertilisers and some other equipment. Japan, West Germany, France, Czechoslovakia, Yugoslavia, Poland and some other countries have also been giving aid. India hopes that, in the future, the amount of foreign aid will increase. The total foreign aid available for use during the 1st year of the third plan was Rs. 1,065½ crores in loans and Rs. 57 crores in grants. The balance available at the beginning of 1962-63 was a little less than Rs. 838 crores in the form of loans and Rs. 35½ crores in the form of grants.

Sharp Fall in Cloth Exports

Indian cotton piecegoods exports suffered a further sharp fall in 1962. The provisional figure of 508.31 million yards is 11.5 percent lower than the 1961 figure of 574.30 million yards, and is the lowest figure for 12 years. That exports should have fared so miserably in spite of the introduction of compulsory scheme from July and the various export promotion measures shows how difficult it is to sell Indian cloth in foreign markets which are not only becoming increasingly competitive, but are becoming very much quality-conscious. Exports to the Asian zone fell by nearly 30 million yards from 156 million yards to 126 million yards, shipments to Africa fell from 185 million yards to 143 million yards and exports to Europe were down by about 14 million yards at 146 million yards. Exports to America and Oceania, however, improved, and fairly impressively to the formal. Shipments to the American zone increased from 30 million yards to 49 million yards and those to Oceania were nearly 1.5 million yards higher at 42.93 million yards.

Exports to the major importing countries with the 1961 figures—all in million yards—in brackets were: U.K. 134.47 (132.96), Sudan 66.74 (58.73), British East Africa 44.43 (58.58), Australia 29.71 (26.92), Afghanistan 22.23 (24.35), Canada 21.99 (18.56), Aden 18.29 (23.49), Ethiopia 15.10 (22.02), Indonesia 8.10 (21.77), Malaya and Singapore 17.68 (22.96), New Zealand 11.19 (10.81), Persian Gulf Ports 15.03 (14.43), Saudi Arabia 10.58 (12.26) and the U.S.A. 27.33 (6.99). While the exports of cotton piecegoods showed a fall, exports of cotton yarn recorded an increase of nearly 50 percent from 15.11 million lbs to 22.96 million lbs. Export earnings from cloth fell from Rs. 46.11 crores to Rs. 39.96 crores, but earnings from the sale of yarn rose from Rs. 3.73 crores to Rs. 5.29 crores.

Rising Transport Costs

The past month has brought a spate of budgetary measures whose cumulative effect will be to push up transport costs sharply. Firstly, the Railway Minister has raised the surcharge on freight rates from 5 percent to 10 percent, and has imposed a surcharge of 10p in the rupee on parcel traffic. Now, the Central Budget will increase the capital and operating expenses of the motor transport industry by imposing a series of levies. The excise duty on motor-vehicles, tyres, diesel oil and petrol has been raised; the import duty on motor-vehicle spare parts and on raw materials used for manufacturing components has also gone up steeply. The higher transport costs will swell industrial costs and the price level, and thus aggravate the inflationary pressures in the economy. In West Bengal and in certain other States, the

motor-vehicles tax has meanwhile been increased substantially.

According to the Motor Vehicles and Allied Industries Association of Madras, there will be an average increase of over Rs. 4,000 a year in the cost of operating a lorry. In a telegram to the Central Finance Minister, the Association has emphasised that the new taxes, which are in addition to the high level of taxation already being imposed by the Central and the State Governments, will seriously affect the road transport industry. The super profits tax, in particular, will affect the transport industry in south India, where it is being organised into joint-stock companies with a low capital base.

The Association points out that the Customs duties on motor-vehicle parts are now raised to a minimum of 55 percent, going up to 103 percent for ball bearings. The Customs duties on raw rubber, rayon cord, iron and steel, alloy steel, machinery, copper, paints and pigments have been raised, adding to the cost of the motor-vehicles and their components manufactured in India. In addition, a surcharge of 10 percent, 20 percent or 33½ percent on excise duty has been levied on many components (including tyres) which go into motor-vehicles and their parts. The possible effect of

these various duties and levies on a motor-car (Fiat, Hindustan or Standard) may be listed in the table on this page.

F.I.C.I. Criticises Budget

Commenting on the Central Budget, the Committee of the Federation of Indian Chambers of Commerce and Industry says that it will be possible to mobilise the country for defence only if the entire economy, and especially the industrial sector, is placed on a firmer and more vigorous footing. Even before the Budget, the corporate sector was finding it very difficult to raise resources. No greater injury to it could have been thought of than levying a progressive rate of taxation on profits; the super profits tax will mean a tax on efficiency of the better-managed companies. To the extent that dividend payments will be curtailed because of the levy, the scope for raising fresh capital and the capacity for investment will be reduced. Furthermore, the 6-percent yield on capital, assumed for levying the tax, is unreasonably low compared with the present interest and borrowing rates. Preference shares are already not attractive unless they yield about 9 percent. The capital and reserve structures of companies

				Rs. 2,775

Increase in Operating Costs

(1)	Increased cost as a result of the increase in excise duty on diesel oil, on the basis of 80 litres a day for 300 working days, (at 12.25nP a litre).	...		Rs. 2,940
(2)	Increase in the price of tyres as a result of the increase in excise duty on tyres and increase in Customs duty on all raw materials that go into the manufacture of tyres (on two sets of tyres at 10 percent)	...		Rs. 600
(3)	Increase in the price of spare parts as a result of the increase in the Customs duty on motor-vehicle parts, increase in the cost of spare parts locally manufactured as a result of the increase in the price of raw materials (on an annual consumption of Rs. 3,000 worth of spare parts a lorry, at 20 percent	...		Rs. 600
(4)	Anticipated increase in the cost of new vehicles as a result of various taxes—Rs. 2,800 (equated to 7 years' basis)	...		Rs. 400
	Total			Rs. 4,540

The additional burden on the road transport industry on the basis of 240,000 lorries and buses as a result of the increase in taxation by the Centre works out to Rs. 108,96,00,000.

have been built over a period of years on certain assumptions, including the one that it is commercially and financially prudent to depend on loan capital. However, the new levy will make it very difficult for these companies to repay their loans. This will be particularly unfortunate where foreign collaboration and foreign loans are involved.

The Committee says that at least at the time of the emergency, when more taxes are being levied, there should have been concrete plans to cut down waste and extravagance in the Government. The overall deficit of Rs. 454 crores for the coming year arises mainly from the increase of Rs. 362 crores in defence expenditure. But the deficit could have been minimised if expenditure on civil items unrelated to economic development or to essential programmes in the third plan were curtailed. Unfortunately, the revenue account shows an increase in civil expenditure of more than Rs. 73 crores, wholly unrelated to plan programmes. After a recent study made by the Federation it was suggested that economies to the extent of Rs. 109 crores on revenue account and about Rs. 96 crores on capital account could have been achieved without affecting the programmes of development in the plan. Of these amounts, grants and loans to States constitute Rs. 146 crores. It is disconcerting to find that the Central Government had to go to the assistance of some State Governments to clear their overdrafts with the Reserve Bank.

Criticising the Government for under-estimating revenues, the Committee says that revenue for 1962-63 was Rs. 119 crores higher than the estimate. On average, during the last few years, actual revenue has exceeded the Budget estimates by over Rs. 40 crores. Now there has again been an under-estimation, and the yield from the new tax proposals will be far more than the estimate of Rs. 275 crores.

The proposed indirect levies, the Committee feels, will impart an inflationary bias to the economy. Although such taxation is theoretically deemed to be anti-inflationary, after a certain point it has the greatest inflationary potential, particularly in a developing country. There are already a bewildering array of taxes and tax authorities—tax on urban land and houses, registration fee, licensing fee, octroi, local cesses and sales tax, duties and surcharges of various kinds on raw materials, transport, fuel and power, not to speak of excise duty. When prices rise on account of all these growing levies, demand will be dampened. This in turn will affect production adversely, resulting in higher costs. The export drive will also be affected, despite the financial and other incentives that are sought to be given.

Paper Production and Prices

In his address at the annual general meeting of the Indian Paper Mills Association, last week in Calcutta, Mr. Umashankar Bajoria, president, has said that the slow-down in the progress of the paper industry during the past few years is due to the price policy followed by the Government. The return of only 12 percent allowed on capital employed in the industry is based on the historical value of the block, and completely disregards the need for rehabilitation. Moreover, the return is subject to income tax, managing agents' commission, interest on borrowing and bonus to labour. The gross margin available to the industry works out, on average, to only about Rs. 250 a ton whereas a larger return is necessary to meet all liabilities. Giving an example of how the permissible margin of profit has been discouraging expansion, Mr. Bajoria said that the cost of erecting a new plant, as is apparent from the figures of some new units which have come into production, is around Rs. 3,200 a ton of annual output. Taking the cost of expansion at a slightly lower level, the average cost of new installations may be assumed to be Rs. 3,000 a ton. The gross return, therefore, of about Rs. 250 a ton, subject to interest, depreciation, etcetera, can hardly service a large investment of this order. For example, a new plant of 20,000-ton annual capacity will require at least Rs. 6 crores on the basis of the present cost of machinery and plant; the gross profit margin permissible will be only Rs. 50 lakhs, while deprecia-

tion alone will be of the order of Rs. 60 lakhs. The position concerning the pulp and newsprint projects, according to Mr. Bajoria, is even worse since the profitability of a pulp mill or a newsprint mill, under the present profits formula, is bound to be lower than that of an integrated pulp and paper mill.

Discussing the working of the paper industry over the decade 1951-61, Mr. Bajoria says that despite numerous handicaps it has made significant progress. The production of paper and board, which was 131,915 tons in 1951, rose to 364,118 metric tons in 1961. The rising trend was more or less maintained in 1962, although the rate of increase was much slower in 1962 than in 1958, 1959 and 1960. The record of the industry is assurance enough that it will be able to meet the growing demand for its products if the Government permits a more realistic rate of return and helps the industry to develop its sources of raw material supply. The Planning Commission has estimated a progressive annual increase of 12½ percent in the demand for paper, on the basis of which 506,000 tons may be required in 1962-63, 570,000 tons in 1963-64 and 700,000 tons in 1965-66. It is also tentatively estimated that the demand will reach 1,400,000 tons in 1970-71 and 2,100,000 tons in 1975-76.

To meet this anticipated increase in demand, the Government has licensed an additional capacity of 759,000 tons a year for paper and paper board, which takes the total capacity licensed so far to 1,169,600 tons a year. Out of the additional licensed capacity, about 70,000 tons has already come into use. Only if the expansion of existing units by 155,560 tons and the installation of 63 new units, both big and small, covering 534,000 tons take place as visualised, can the entire licensed capacity be installed within the scheduled time. Mr. Bajoria doubts whether this will at all be possible. The installed capacity of the industry was stationary at 410,000 tons at the end of the second plan. It has now increased to only 480,000 tons on the basis of which the industry is likely to achieve a production of about 410,000 tons by 1962-63. If a net import of 25,000 tons is added to this, the total availability by the end of this year will be about 435,000 tons. There will, therefore, be a deficit of 71,000 tons and 137,000 tons at the end of the second and third year, respectively, of the current plan. In other words, during the next 12 months the industry has to make up a leeway of 160,000 tons to achieve the target for 1963-64.

CORRESPONDENCE REFORMERS AMONG INSURERS

(TO THE EDITOR OF "CAPITAL")

Sir,

The editorial comments in your issue of 7th February under the heading "The Reformers among Insurers", and similar comments which appeared in an earlier issue dated 29th November, 1962, are—to say the least—unlike the informed and balanced views that your paper is so justly famous for. Information and "facts" can be presented in many ways, and I feel that the "slant" from which the facts have been put forward in the two editorial comments mentioned above, are not fair to the industry.

It is not unusual for "faults" to develop in the course of rapid development, and many industries in India have been trying to improve their working, by means of self-imposed Codes of Conduct and similar other regulations. The insurers in this country have also been trying to raise their standard of operations, and a considerable improvement has already been effected during the last ten years. Many weak companies suffering for lack of capital or proper management had closed down or amalgamated, leaving the market cleaner and stronger. The remaining companies have strengthened their premium and other reserves, and generally the position of the industry as a whole is much sounder than it was ten or 12 years ago. Realising that most of the "defects" were due to lack of education and trained personnel, Insurance Institutes have been organised at most centres, affiliated to a

"Federation", which conducts courses for tuition and examinations. Abolition of credit has saved many marginal companies from ruin, and undesirable investments have been restricted. All this has been achieved by the voluntary efforts of companies, working through their various professional organisations.

In spite of these improvements, the question of high commissions and rebates still remained, and another effort is being made to eradicate this practice. This is nothing new. Even from the time of the "Associations" in the British days, there were self-imposed regulations preventing companies from paying high commissions. Subsequently, various insurance enactments provided maximum rates for commission, thereby making the old habit of paying higher commissions an offence punishable under the Insurance Act. This habit, however, seemed to have persisted, drawing thereby justifiable criticism from various quarters. It would be a pity if an otherwise well-established and well-behaved industry—on the threshold of a great future—were, under the pressure of competition, to earn a bad reputation for itself by paying commissions higher than those permissible by law. Hence the continuation of the voluntary effort to put this position right. An Administrative Committee had been appointed for this purpose several years ago, which has now been enlarged. Any expense incurred for this purpose is more than compensated by the savings in commissions, apart from removing a very serious stigma from the name of this industry. Surely, a "reform" (!?) of this type would merit the support of all right thinking persons, among which one has certainly the right to include a paper like *Capital*.

Yours etcetera,

M. N. SETH

Chairman and Managing Director,
Sterling General Insurance Co. Ltd
New Delhi, 8th March, 1963.

TRADE ASSOCIATIONS

TRADES Associations are, of course, not unknown in India, though, with one or two exceptions, we believe, we are right in saying they are of recent growth. Bombay only established its Trades Association last year. Bangalore possesses an Association, so does Rangoon, and so, too, does the Punjab. The prominence however, which is now being given to the deliberations of these corporate bodies is a sign of the times, and the Annual Meeting of the Madras Trades Association, possibly out of modesty, has hitherto, it would seem, not admitted Press Representatives to the Annual Meeting. But this exclusive policy, we are glad to note, has at last been abandoned. A Trades Association in a city like Madras is a really representative body, and, this being so, its collective opinions must at times possess more than a private interest. The Madras Trades Association has, for the past two years, been steadily progressing, and Mr. E. W. Orr, the Chairman, contrasted the former almost moribund state of the body with its present healthy active life. This is a fair matter for congratulation; though it seems that much is still required. "Externally", said Mr. Orr, "we require more intimate relations with our kindred Associations in India, mutual assistance from each other in protecting the interests, and perhaps, specially the pockets of fellow members, and co-operation in protecting and advancing the general interests of trade throughout India and Burma." Mr. Orr urged two reforms; one earlier closing, and another the necessity which exists for the establishment of a Social Club formed on the lines of the Dal-house Institute in Calcutta or the Rangoon Club in Rangoon—a Club to which ladies would be admitted. It may be taken for granted, we think, that sooner or later Mr. Orr's suggestion will be materialized, for apart from its distinctly social and recreative side it has other aspects, upon which the Chairman touched, to recommend it. We note that the Madras Trades Association are anxious to have a representative on the Municipal Commission. The representation, it seems, has been recommended by the Madras Government to be included in the Municipal Act now under consideration, so that this matter is in a fair way of being settled.

A Ditcher's Diary

A FORMER PRESIDENT OF THE ASSOCIATED CHAMBERS of Commerce does not retire from India without leaving a void in the commercial and social scene of Calcutta; Sir Walter and Lady Michelmores will be missed in a wider world than that. Sir Walter's interest in tennis outlived his Wimbledon days; but to everything he touched he brought some of the qualities that make a good tennis player. His services to British business—and he was proud both of "British" and of "business"—extended beyond the Bird-Heilgers group he joined as long ago as 1929; and during his presidency of Assocham, he established a rapport between New Delhi and Netaji Subhas Road such as had not been there every year since 1947. This, I think, was possible because Sir Walter seldom spoke of the "good old days" and his acceptance of the new India was complete; he was as convinced of the part British business has to play in this country's development. And when the Government of India seemed doctrinaire and inhibited, Sir Walter drove as often as he lobbied, volleyed and rallied. Not for him the pessimism one often encounters in business circles. To talk to him about the economic future of this country was to partake of his robust optimism, which proceeded from his immense confidence in the potentialities of the people of India. Sir Walter and Lady Michelmores' many friends will testify that this gracious couple was completely free from any complexes; their friendship was always genuine and transparently sincere. As adviser to the India, Pakistan and Burma Association in London, Sir Walter's rich experience and mature wisdom will still for years be in many ways devoted to India. Lady Michelmores' personality consisted of her presence; and continued correspondence or exchange of Christmas cards is a poor substitute for that. The Michelmores have gone with the best wishes of many more than they themselves may know.

HOLI IN CALCUTTA GETS LESS AND LESS ROWDY from year to year; and somebody, surely, deserves to be congratulated. I am not sure who. It has become standard practice to make a fair number of preventive arrests, perhaps not wholly discriminatingly and, almost certainly, unconstitutional. (I am surprised none of those arrested has yet thought of going to the Supreme Court.) While this may have contributed much to the quieter Holis in recent years, this can hardly be the whole explanation, for when the masses are really determined to do something, they just do it and there isn't much the police can stop. While thanking the

Calcutta Police for its part, I am inclined to think that the people in general are also deserving of some congratulation. This drop in popular fervour for religious or quasi-religious celebrations, a new sociological phenomenon, could be the subject of rewarding study. As I think I have suggested before, this welcome distension (if that's the word) of the popular mood is closely related to the political climate of West Bengal. Gone is the old militancy; and, in direct consequence, gone are the deplorable excesses around Pujas and Holi. Whether a general passivity or indifference is good for the political health of a society, I am not sure; there should be, in my view, room for a sober sort of radicalism. It would be a pity if West Bengal altogether lost its traditional spirit of political rebellion, for in India today—and in West Bengal—there is much to rebel against. If on the other hand there has been a conscious and enduring separation between political passions and religious (which, in effect, means communal) emotions, I entirely welcome it. I have another improvement to report. On Sunday a friend sprinkled some coloured water on my shirt; and I immediately, perhaps somewhat severely, said that I was not amused. He said, "Five minutes". And, lo and behold, as the water dried, the colour disappeared completely. The chemist who evolved the formula of coloured without colour deserves a gold medal, and not of 14 carat either. Who says science plays no part in Indian life?

ONE CAN DOUBT THE SERIOUSNESS, NOT TO SAY the sanity, of the members of the Society against Indecency in Naked Animals. Personally, I have too much faith in the American capacity for perpetrating the absurd to consider that those who have been urging Mrs. Kennedy not to ride a naked horse are anything but firmly convinced of their own righteousness. But I do suspect there may be a hidden motive. Just think what possibilities the clothing of animals opens up. If, for instance, I were a hard-up textile manufacturer anxious to know where my next order was coming from, I should probably become an ardent supporter of Mr. C. Clifford Prout and his weird organisation. And if I were a frustrated fashion designer, who had not been making the fortune I inevitably considered my due for reducing my female clients to the modern sartorially grotesque, then I should be very interested indeed. What scope there would be for lining my pockets when all hippopotamuses are equipped with stylish swimming costumes and all elephants with frilly white skirts and ballerina tights!

Surely, there is big money to be made out of designing natty neckwear for giraffes, striped sweaters for zebras and matador slacks for flamingoes? The mind positively boggles at the commercial prospects. But before rushing off to buy cotton mill shares it might be as well to reflect that there is still probably a majority of people in this world who consider that perhaps the one advantage which animals have over human beings is their innocence, a quality which is hardly reconcilable with clothing them for the sake of decency. It does not require a fertile imagination to realise that the wearing of clothes leads inexorably to the kind of rivalries, jealousies, frustrations and social stratifications from which the animal world is still mercifully free. Furthermore, if it is the commercial advantage which is coveted, then there are plenty of human beings still waiting to be clothed adequately before we start on the animals. I suspect Mr. Prout's movement will eventually collapse under the weight of its own absurdity.

* NOT FOR MANY A LONG YEAR HAS CALCUTTA SEEN a more powerful production on the amateur stage than Santha Rama Rau's *A Passage to India*, presented by The Amateurs at the Hindi High School last week. Miss Rama Rau's adaptation of the E. M. Forster classic is hilarious in tone, deeply serious in content; but, above all, the significance of the play (as of the novel) lies in the fact that as a commentary on a certain phase of the Indo-British connection, it is almost unrivalled for the sincerity of its judgment and the brutality of its frankness. Presented in what once was the second city of the British empire, *A Passage to India* may have revived memories which small minds would consider better forgotten. But it is primarily as a work of art that the play demands to be judged; and it is a tribute to the boldness of The Amateurs that, in spite of queasy opposition, they carried their enterprise through to the very great success it turned out to be. For a non-professional group, *A Passage to India* cannot have been an easy play to produce: the cast is large, the changes in mood are almost kaleidoscopic, and the tempo of action and dialogue calls for sudden variations. So much greater, then, is the credit that must go to Dilip Sirkar for the skill, discipline and sureness of his direction. The major rôles—Kamal Bhagat as Dr. Aziz, Jasbir Malik as Mr. Fielding, Devika Singh as Adela Quested and Kobi Judge as Professor Godbole—were admirably portrayed. But that is perhaps the least one ought to expect even of an amateur production; the exceptional merit of last Saturday's performance, to my mind, lay in the quality and discipline of the supporting cast, among whom Ranjit Mathur was particularly notable for a brief but memorable appearance as the mousy little assistant magistrate of Chandrapore. The scene in Chandrapore Club shortly before the trial of Dr. Aziz achieved the right degree of tenseness; and the trial scene itself unfolded exactly as it

CAPITAL, 14th March, 1963.

should have done—a devastating indictment of the insane myths which lie at the root of racialist buffoonery. Calcutta is accustomed to plays which are briefly enjoyed, but soon forgotten. The Amateurs are to be congratulated on a serious production which will be long remembered.

WHOEVER MAY HAVE THOUGHT OF IT FIRST, THE idea of organising a "Science for Children Exhibition" in Calcutta strikes me as an excellent one indeed. The Exhibition, I am told, is due to be held from 11th to 26th May, at 11 Lord Sinha Road; and its purpose, as is evident from the title, is to cultivate in children a living interest in science and its application to modern life. I have had occasion to remark before that a major shortcoming of the Indian educational system is that it tries to make bookworms out of those compelled to suffer its tortures; rarely does it provide adequate opportunities for leavening theoretical knowledge with practical experience. I do not for a moment imagine that the handicap can be corrected by a single exhibition, however elaborate it may be, but I am sure it could do much to stimulate scientific interest among the young which would otherwise be completely dormant. The longer-term aims of the sponsors of the "Science for Children Exhibition" are more ambitious; they hope that the Exhibition may serve as the nucleus for a later attempt to establish a science museum for children. For the time being, they are inviting science clubs in various schools, as well as industrial organisations, to do what they can to make the forthcoming Exhibition a success by providing suitable models and materials. The cause is a noble one, and I hope it gets the support it undoubtedly deserves. Indian industry cannot escape its share of the blame for the shortage of scientific talent in this country; the Exhibition provides it with a useful and inexpensive opportunity to show that it is beginning to make amends by taking a closer interest in scientific education.

I RECENTLY WROTE ABOUT V. S. NAIPAUL'S PIECE on Calcutta in the *New Statesman*; and when I read John Mander's essay on India in *Encounter* it occurred to me that this too might give me a paragraph. (Little does the reader know how difficult it is in some weeks to find enough subjects.) Now I can't find my copy of *Encounter*; and I say, "Just as well". I think we in this country attach far too much importance to superficial writings on India by all sorts of visiting firemen. Mr. Mander's essay isn't bad at all; it is the attitude of Indian readers to views formulated after a short, flying visit that I find exaggerated. I recommend a measure of irreverence, although not solely on the usual ground that they haven't been in India long enough. (How long is long enough? Nor are first impressions always wrong.) All depends on how good an observer and analyst the writer is. However good, his views remain a foreigner's views; and they are not correct simply because they are supposed to be detached. I think you need a little bit of attachment really to understand a country. An Australian journalist came to see me the other day; and he never stopped complaining that in his hotel bearers never stopped demanding tips, that at a certain consulate (whither he had gone for a visa) officials asked for a bribe and when he drew the attention of the consul to it the latter only shrugged his shoulders, that he got into a tram which was crowded, that he never got a taxi when he needed one. We are familiar enough with these complaints; and I approve of none of the things done to the visiting journalist. Yet I was surprised that he had not expected some of these things in advance of his arrival here, just as I know that certain things will happen to me when I go to Rome or Paris. The latter may be different but not less irritating. I felt certain that my Australian colleague had been "put off" by India on first acquaintance and, for the rest of his travels in this country, he may find little besides confirmation of his initial unfavourable impressions, mostly the products of his own inexperience. As an Australian it is, I suppose, his birthright to mislead his countrymen; but I see no reason why anyone in this country should get het up about whatever he may write. A people's own opinion about itself is not by definition worthless.

THE DITCHER

CAPITAL, 14th March, 1963.

Guide for Investors

BIRDS INVESTMENTS MAINTAINS DIVIDEND

BIRDS Investments Ltd has maintained the taxable ordinary dividend at 10 percent for the year ended September 1962, absorbing Rs. 2 lakhs. The yield works out to 8.7 percent at the present price of Rs. 11.50 a share of Rs. 10 each. Compared with the 1960-61 figure, the profit has fallen by Rs. 3.97 lakhs to Rs. 2.87 lakhs. Taxation is allocated Rs. 3.08 lakhs (against Rs. 94,060). There is a carry-forward of Rs. 2,634, against Rs. 50,926 brought in. The portfolio is representative of investments which are quoted on the Calcutta and Colombo stock exchanges, with the exception of some shares costing Rs. 7.38 lakhs.

The total market value of the investments for which quotations are available, together with unquoted investments, have been valued by directors. It exceeds the book value as on 30th September, 1962, by Rs. 16.97 lakhs. The investments have been spread over jute mills, electric, iron, steel and engineering, investment, tea, mining, miscellaneous and Ceylon tea companies. Investment has also been made in collieries and paper mills. Debentures constitute 1.61 percent, preference shares 12.56 percent and ordinary shares 85.80 percent of total investments.

Martin Burn Pays Less

MARTIN Burn Ltd has made a smaller profit during the year ended September 1962 because of the increased restrictions on imports. The fall in the profit of the trading business has been partly offset by a small rise in the managing agency commission earned. The profits of certain trading and industrial activities have also improved. The engineering group of companies under the management of Martin Burn have shown some improvement in spite of various difficulties. Although the generating and distributing capacities have increased, the profits of the electric companies have been about maintained. The profits of the railway companies have fallen due to increased competition from road transport.

The profit is down from Rs. 81.02 lakhs in 1960-61 to Rs. 78.17 lakhs in 1961-62, after transferring Rs. 2.89 lakhs (against Rs. 2.76 lakhs) to depreciation. A taxable ordinary dividend of 25 percent has been paid. It is more than twice covered and works out to a yield of 8.2 percent at the present price of Rs. 30.50 a share of Rs. 10 each. The dividend was 27.5 percent for 1961-62. Taxation is allocated Rs. 36.50 lakhs (against Rs. 33.50 lakhs) and general reserve Rs. 1 lakh (against Rs. 5 lakhs). There is a carry-forward of Rs. 2.45 lakhs, against Rs. 2.46 lakhs brought in.

Indian Wood Products Maintains

IN their report for the year ended September 1962, the directors of Indian Wood Products Co. Ltd take a cautious view of the outlook for the current year. The main raw material, khair trees, is being bought at the auctions, but the prices have increased. They mention that it has not been possible to pass the entire

increase in prices on to consumers in the form of higher prices for finished products. Hence they expect a fall in the profit.

A taxable ordinary dividend of 30 percent, including a final of 20 percent, has been repeated which is more than thrice covered. The yield is 9.6 percent at the present price of Rs. 31.25 a share of Rs. 10 each. The profit has improved from Rs. 16.33 lakhs in 1960-61 to Rs. 21.72 lakhs in 1961-62, after cutting depreciation from Rs. 1.17 lakhs to Rs. 89,007. Taxation is allocated Rs. 11.81 lakhs (against Rs. 7.26 lakhs) and general reserve Rs. 2.50 lakhs (the same). There is a carry-forward of Rs. 3.26 lakhs, against Rs. 1.85 lakhs brought in.

Sen-Raleigh Repeats Dividend

THE name of Sen-Raleigh Industries of India Ltd has been changed to Sen-Raleigh Ltd. The paid-up ordinary share capital was originally Rs. 70 lakhs divided into shares of Rs. 10 each. The Company issued a further 650,000 ordinary shares at a premium of Rs. 4 a share last November. Out of this issue, Raleigh Industries Ltd of the U.K. subscribed for 334,000 shares. The foreign exchange brought in by this subscription will be used for financing the bicycle expansion scheme. It is also proposed to undertake the manufacture of house service meters.

Although sales improved from Rs. 3.98 crores to Rs. 4.86 crores, the profit has not proportionately improved due to rising raw material costs. The directors mention that it has not yet been possible to have balanced operations, which could have contributed to producing optimum results. The profit has increased from Rs. 21.56 lakhs in 1960-61 to Rs. 23.37 lakhs in 1961-62, after providing Rs. 21.86 lakhs (against Rs. 22.60 lakhs) for depreciation. A taxable ordinary dividend of 8 percent has been repeated on the old share capital. It is more than four times covered and offers a yield of 5.7 percent at the present price of Rs. 14 a share of Rs. 10 each. Taxation absorbs Rs. 11.86 lakhs (against Rs. 10.08 lakhs), development rebate reserve Rs. 57,757 (against Rs. 1.28 lakhs) and repayment of loans reserve Rs. 3.75 lakhs (the same). The carry-forward is Rs. 13,552, against Rs. 7,622 brought in.

Same from National Pipes and Tubes

IN their report for the year ended September 1962, the directors of National Pipes and Tubes Co. Ltd say that the working results were adversely affected by the shortage of raw materials and power, combined with rising production costs. Since these shortages continue, the prospect for the current year will depend on an improvement in the supply of raw materials and power. Although the products of the Company are being sold without difficulty, they mention that other competitive manufacturing units have been set up. The management hopes that it will soon obtain licences for importing equip-

ment in order to undertake expansion projects.

A taxable ordinary dividend of 20 percent has been repeated, which is more than thrice covered and offers a yield of 6.8 percent at the present price of Rs. 29.25 a share of Rs. 10 each. Sales fell from Rs. 1.16 crores to Rs. 1.08 crores. The profit has declined by Rs. 4.45 lakhs to Rs. 22.10 lakhs, after providing Rs. 21.147 (against Rs. 16,311) for depreciation. Taxation absorbs Rs. 11.07 lakhs (against Rs. 12 lakhs). A further sum of Rs. 1.31 lakhs has been provided to cover the increased taxation for the year ended September 1961. General reserve is allocated Rs. 2 lakhs (against Rs. 5 lakhs) and dividend equalisation reserve Rs. 1 lakh (against Rs. 2.50 lakhs), leaving a carry-forward of Rs. 52,804, against Rs. 67,385 brought in.

Asiatic Oxygen Passes Dividend

ASIATIC Oxygen Ltd has passed the dividend for the year ended September 1962, but a credit balance of Rs. 31,948 has been carried forward. The directors mention that the Company's public issue of shares was over-subscribed last year. It has secured a holding interest in the Asiatic Oxygen and Acetylene Co. Ltd. The subsidiary has been carrying on business in industrial and medical gases, electrodes and welding accessories. It has factories in Calcutta and Bhilai. It has set up a new factory in Barauni.

Asiatic Oxygen proposes to build six factories for producing industrial and medical gases. Three factories will be set up for producing electrodes, gas welding, cutting equipment and welding transformers. The subsidiary Company has already set up an acetylene plant in Durgapur, West Bengal. This factory is expected to start production soon. Orders for plant and equipment of all the proposed factories have been placed and output may start in the near future. The directors mention that cylinders valued at Rs. 54 lakhs have already arrived.

English Electric Share Issue

THE English Electric Company of India Ltd has recently been converted into a public company. It manufactures and deals in electric, magnetic and galvanic apparatus, machinery and appliances. It produces and supplies all kinds of light, heat, sound and power equipment. It also acts as general engineers and contractors. Its works in Pallavaram, near Madras, produces a wide range of fuse gear electrical distribution equipment. Its output was Rs. 97 lakhs in 1962, and sales during the current year are estimated at Rs. 1.20 crores. The Company has been working to a phased programme of expansion which is expected to be completed by 1964. It proposes to introduce some new products. The output of relays started in 1962. The works expansion for the manufacture of control panels has been completed and production may start soon. Although

it has obtained a licence for the manufacture of switch gear, it does not intend to proceed with this project for the time being.

English Electric is offering ordinary shares to raise funds for the expansion programme. The paid-up ordinary share capital is Rs. 40 lakhs divided into shares of Rs. 10 each. The present issue is for Rs. 60 lakhs, divided into ordinary shares of Rs. 10 each. Out of this, the English Electric Co. Ltd of London will subscribe for 350,000 shares. The remaining 250,000 shares are being offered to the public for subscription at par. The list opens on 25th March, 1963, and applications for shares must be made for a minimum of 25 shares or multiples thereof. Although the issue has not been underwritten, the English Electric Company of London has agreed to subscribe for any shares which are not taken up by the public. (The details of the issue appear on a later page in this issue of Capital).

The private Company made a profit of Rs. 9.38 lakhs during the year ended September 1962, before providing Rs. 1.44 lakhs for development rebate and Rs. 2.72 lakhs for estimated relief under income tax. No dividend was ever paid by the private Company. The public Company now issuing shares has entered into collaboration with its parent Company, the English Electric Company of the U.K. The prospect appears to be encouraging, in view of the fact that there is a keen demand for the products it manufactures. The directors think that they will be able to pay reasonable dividends once the expansion scheme is completed, and planned production has started. The business of the Company should improve steadily with the progress in power generation and supply. The cost of the expansion project has been estimated at Rs. 60 lakhs.

Further Progress by I.C.I.C.I.

THE eighth annual report of the Industrial Credit and Investment Corporation of India covering the year 1962, shows that the Corporation continues to play an increasingly important rôle in the growing industrial development of the country. In 1962, the Corporation considered 99 applications for a total assistance of Rs. 22.38 crores, and it approved 92 applications for a total assistance of Rs. 19.60 crores. This showed an increase of almost 50 percent over the previous year's figure of Rs. 13.76 crores. Rupee assistance in the form of loans, underwriting of and direct subscriptions to ordinary and preference shares amounted to Rs. 9.83 crores (against Rs. 4.51 crores in 1961), for 32 companies, and foreign currency loans were the equivalent of Rs. 9.77 crores (against Rs. 6.79 crores) for 44 companies. Among these companies, 20 were sanctioned assistance both in rupees and foreign exchange.

Disbursements in 1962 rose impressively by about 75 percent from Rs. 5.96 crores to Rs. 9.85 crores. The Corporation completed seven underwriting operations in 1962 for a total amount of Rs. 2.42 crores (compared with Rs. 78 lakhs), against which it was called upon to take up Rs. 1.68 crores (against Rs. 41 lakhs). Total assistance sanctioned by the Corporation during the eight years of its career—1955-62—amounts to Rs. 60.16 crores to 183 companies, of which 83 were new undertakings. Out of the rupee loans and guarantees sanctioned totalling Rs. 14.56 crores, the amount disbursed up to the end of 1962 was Rs. 8.70 crores. Out of the sanctioned foreign currency loans of

Rs. 23.43 crores, the amount disbursed was Rs. 11.30 crores. Likewise, out of Rs. 13.33 crores sanctioned for underwriting, the Corporation completed operations in all amounting to Rs. 11.72 crores, against which it was called upon to take up Rs. 5.69 crores in shares and debentures on which an amount of Rs. 5.08 crores was paid up. Out of the direct subscriptions to ordinary and preference shares of Rs. 3.84 crores sanctioned, the Corporation subscribed to Rs. 3.50 crores on which Rs. 3.18 crores was paid up. Total disbursements up to the end of 1962 amounted to Rs. 28.26 crores.

The Corporation's business has gradually undergone changes not only in size but also in content, reflecting both the conditions in the capital market and the requirements of the changing industrial structure. When the I.C.I.C.I. was set up eight years ago, conditions in the capital market were very different from what they are today. The problem then was to obtain rupee resources while it was much easier to obtain foreign currency requirements from the Government. Consequently, during 1955-58, out of the net sanctions for Rs. 13.35 crores, loans in foreign currencies amounted to no more than Rs. 3.14 crores and over three-quarters covered underwriting, direct subscriptions and rupee loans. The position changed appreciably in the following three years—1959-61. Foreign currency loans at Rs. 16.28 crores represented 55.4 percent of the total assistance of Rs. 29.36 crores. The Corporation's assistance has been concentrated on what might be called non-traditional industries like engineering and chemicals, which, to some extent, is the result of a deli-

berate policy. The qualitative impact of the Corporation's operations on industrial development has been much larger than what the figures of finance provided might lead one to assume.

In his statement to the Press, the chairman of the Industrial Credit and Investment Corporation, Mr. G. L. Mehta, has made a pointed reference to the two broader aspects of the Corporation's operations in 1962—encouragement of small operations and the diversification of operations by providing funds, particularly foreign currency loans, for balancing equipment like ancillary textile equipment, boilers, generators and so on. (A fuller version appears on a later page in this week's issue of Capital). The Corporation approved last year many proposals for foreign currency loans and underwriting for small amounts. It also provided assistance to two co-operative sugar factories in 1962. Mr. Mehta said that the Corporation was continuing its efforts to promote joint financing operations in co-operation with other financial institutions. In 1962, the I.C.I.C.I. carried out ten joint operations—two with the Commonwealth Development Finance Company, U.K., six with the Industrial Finance Corporation of India, one with the International Finance Corporation, Washington, and one with the Madras Industrial Investment Corporation.

Foreign exchange loans continue to play an important rôle in the I.C.I.C.I.'s operations, and the current rate of sanctions is now almost \$20 million a year. The Corporation has so far received four loans aggregating \$60 million from the World

Bank, and an amount of \$56 million out of these credits, had been sanctioned by it as loans to industrial projects in the country by the end of last year. It is now negotiating a further line of credit of \$30 million from the I.B.R.D., which is expected to be finalised by June. Mr. Mehta told a Press conference on 7th March that during his forthcoming visit to the U.S.A., he will also meet representatives of the International Finance Corporation to discuss joint financing operations. Before going to the U.S.A., Mr. Mehta will visit West Germany and the U.K. His trip to West Germany is in connection with the finalisation of an agreement for a further line of credit of 20 million deutschmarks (Rs. 2.38 crores) from the Kreditanstalt für Wiederaufbau (Reconstruction Loan Corporation), in addition to a loan of 5 million deutschmarks under negotiation. Pending finalisation of the two loans, the Corporation has sanctioned 6.3 million deutschmarks (Rs. 75 lakhs) as loans. During his stay in London, Mr. Mehta would also hold talks with the Commonwealth Development Finance Company over joint financing operations. The Corporation's shareholding shows that it has now become more international in character. Its stockholders include British, American, German and Japanese financial institutions. British interest accounts for 16 percent and American 5 percent. Indian holding is around 72 percent, with the Life Insurance Corporation as its biggest shareholder.

The Corporation's receipts from interest, dividend, underwriting commission, etcetera, recorded an increase of about 45 percent from

Rs. 1.16 crores to Rs. 1.67 crores. The profit before tax amounted to Rs. 78.92 lakhs, against Rs. 74.27 lakhs in 1961. The dividend has been maintained at Rs. 6.5 a share. It is somewhat ironical that the Rs. 100-paid share of the Corporation, which is playing an important rôle in promoting industrial development in the country, should be quoted at a substantial discount, around Rs. 88. Investors in the Corporation's shares are unlikely to find much comfort from the chairman's statement that the I.C.I.C.I. operations would help bring about a total capital mobilisation of over Rs. 300 crores, raise the gross domestic product by over Rs. 200 crores and bring about a direct increase of about 60,000 in jobs. While not many will perhaps share Mr. G. L. Mehta's view that the prevailing difficulties in the Indian capital market reflect basically a "crisis of confidence" as a result of the emergency—the latest Budget proposals certainly warrant a reassessment of the basic outlook for equities—his assurance that the I.C.I.C.I. will continue to finance projects found viable on careful scrutiny, whatever the immediate conditions of the capital market in the country, is welcome.

Role of State Bank in Emergency

IN his speech at the eighth annual general meeting of the State Bank of India, the chairman, Mr. B. Venkatappaiah, highlighted the rôle that the Bank and its subsidiaries have been playing in the present emergency which has created new and grave problems. (A fuller version appears on a later page of this week's Capital.) There was a certain degree of dislocation of the usual channels of credit towards the end of 1962, which threatened the normal production of tea and the distribution of food articles. The chairman said that the Bank collaborated promptly with both industry and the Government, including the Tea Board, to help restore normal functioning of commercial credit. It granted loans to the Assam Government on the hypothecation of stocks for the purpose of distribution of certain food-stuffs, made available funds to the Assam Co-operative Apex Bank for financing some smaller tea gardens and financed certain bigger tea gardens itself.

The bank has extended certain special facilities to the members of armed forces; these facilities include the waiving of charges for maintaining accounts and for remittances in settlement of children's school and education fees or for maintenance of dependents. Mr. Venkatappaiah said that the bank was in touch with the authorities and interests concerned for providing credit to industries which are important for the defence effort. The bank was conducting a review of the working of its scheme for financing small industries in order to gear it to such tasks as small industry may be called upon to undertake in the new context. The report of the study team appointed for the purpose was expected shortly.

Among the problems to which a new dimension of gravity has been added by the emergency is that of foreign exchange. Here again, the State Bank has taken a number of steps to provide finance for stepping up exports. Subject to certain conditions, the Bank has introduced a concessional rate of interest in the form of a rebate of 1 percent on advances used for financing exports. It is also making available medium-term export credit in suitable cases. Besides, in collaboration with the Government and within the framework of existing import policy, the

bank has initiated a small and purely experimental scheme whereby, against the bank's guarantee, a company may get a loan in foreign currency for importing raw material on the understanding that repayment will be made out of the proceeds of the export of the finished product.

Referring to the branch expansion programme, Mr. Venkatappaiah said that the bank would open new branches not only in the rural and semi-urban centres, already selected or added to its list from time to time, but also in the metropolitan areas, cities and bigger towns which in recent years have developed so rapidly. But at the same time, the bank was endeavouring to improve the facilities and services to its customers, whether these be borrowers or depositors, large account holders or small ones. The bank is now working a pilot deposit scheme in a few selected centres. Under this scheme, it endeavoured to establish closer contacts with customers, present as well as prospective, and sought, as far as possible, to tailor the bank's services to their needs.

The deposits it aimed at getting are mainly those which are at present outside the banking system. The scheme is still in an experimental stage, but the results have been encouraging. The chairman said that the pace of branch expansion had been deliberately slowed down in 1962 in order that various arrangements concerning recruitment and training might be completed and the results of the previous expansion consolidated. Of the 416 branches opened during 1955-60, a large number is now working at a profit. Mr. Venkatappaiah expressed the view that with the implementation of the Desai award, the way was clear for an enduring and harmonious relationship between staff and management.

The chairman stated at a Press conference that the bank's lending rates had not changed substantially even after the increase in Bank rate to 4.5 percent and that the bank's effective lending rates ranged between 5½ percent and 6½ percent. He also disclosed that at present about 9 percent to 10 percent of the State Bank advances were to the public sector, while 90 percent to 91 percent were to the private sector. In 1961, the public sector's share was lower at 6 percent to 7 percent.

Bank of India Earns More

THE Bank of India Ltd has made all-round progress during the year ended December 1962. The profit has been Rs. 1.12 crores, against Rs. 1.10 crores in 1961. A taxable interim dividend of 8 percent was paid earlier on a paid-up capital of Rs. 3 crores, absorbing Rs. 24 lakhs. A taxable final dividend of 12 percent has been declared on an increased paid-up capital of Rs. 4.05 crores, absorbing Rs. 48.60 lakhs. (Further details appear on a later page in this issue of Capital.) Reserve fund is allocated Rs. 22.50 lakhs and bonus to staff Rs. 32.50 lakhs. The carry-forward is Rs. 13.10 lakhs, against Rs. 29.16 lakhs brought in.

The issued and subscribed capital has been increased from Rs. 5.50 crores to Rs. 7.60 crores, and the paid-up capital from Rs. 3 crores to Rs. 4.05 crores. The paid-up capital has been raised by issuing 200,000 rights shares of Rs. 100 each, on which a sum of Rs. 50 has been paid-up. The shares have been issued at a premium of Rs. 20 a share. Ten thousand shares of Rs. 100 each—on which a sum of Rs. 50 has also been paid-up—have been issued to the shareholders of the Gododia Bank Ltd on the amal-

gamation of that bank with Bank of India. The reserve fund has improved from Rs. 3.28 crores to Rs. 4.12 crores.

India Sugars and Refineries Pays Less

THE India Sugars and Refineries Ltd has reported a marked decline in the profit for the year ended September 1962, compared with the previous year. The ordinary dividend has been reduced to 8 percent from the previous year's 10 percent. The profit amounts to Rs. 7.52 lakhs after meeting all expenses and providing Rs. 4.70 lakhs for depreciation. The previous year's profit was Rs. 12.34 lakhs, after providing Rs. 5.54 lakhs for depreciation. With Rs. 3.17 lakhs brought forward from the previous year, the total amounts to Rs. 10.69 lakhs. Provision for taxation gets Rs. 4.10 lakhs (against Rs. 4.70 lakhs), reserve for development rebate Rs. 2,500 (against Rs. 4,000) and provision for doubtful debts Rs. 2,569 (against Rs. 11,698). The preference dividend at 7½ percent (subject to tax) amounts for Rs. 73,360. The proposed dividend of 8 percent on equity shares (against 10 percent) will absorb Rs. 5.11 lakhs. The balance of Rs. 68,747 is carried forward.

Sugarcane crushed during the year amounted to 186,340 tonnes while sugar production was 19,186 tonnes with an average recovery of 10.29 percent. The corresponding figures for the previous year were 206,203 tonnes of sugarcane and 18,890 tonnes of sugar. The directors state that the removal of control on sugar prices, a movement and distribution caused a sudden slump in prices. Moreover, the carryover from the previous year was very heavy. So the bulk of the stock of the previous season had to be disposed of at low prices. The Company's profits have, therefore, been adversely affected. The Company has had to incur a loss of Rs. 1.42 lakhs towards sugar exports in the previous year. The export loss for the year under review has not yet been ascertained.

During the year, the distillery unit produced 113,887 gallons of spirit, against 87,662 gallons in the previous season. Steps are being taken to expand the capacity of the unit from 600 gallons to 3,000 gallons a day during the current year. The subsidiary company, namely, the Salar Jung Sugar Mills Ltd, has earned a token profit due to lower sugar prices. The factory's expansion scheme is progressing. There has been no appreciable improvement in the working of the other subsidiary company, namely, Manjula Confectionery Ltd.

Bank of Baroda Forges Ahead

LIKE most other banks, the Bank of Baroda also made a lower profit in 1962 due to a marked rise in operating expenses as a result of the Desai award and higher deposit rates. But otherwise, the bank has made an all-round progress during the year. Its deposits increased by 19.4 percent from Rs. 95.45 crores to Rs. 113.96 crores; the increase in 1961 was of the order of 12.32 percent. Fixed deposits rose from Rs. 53.12 crores to Rs. 62.18 crores; savings bank deposits from Rs. 19.71 crores to Rs. 25 crores, and current account deposits from Rs. 22.63 crores to Rs. 26.78 crores. Advances moved up by about 20.5 percent from Rs. 70.36 crores to Rs. 84.78 crores; the increase in 1961 was smaller around 16.9 percent. The credit-

deposit ratio went up from 73.72 percent to 74.39 percent. Investments were higher by 7.6 percent at Rs. 26.09 crores, compared with Rs. 24.89 crores; the increase in 1961 was smaller, around 4.8 percent.

The bank's operating income increased from Rs. 5.14 crores to Rs. 6.22 crores and operating expenses moved up from Rs. 4.66 crores to Rs. 5.80 crores. The issued and subscribed capital of the bank rose from Rs. 1.5 crores to Rs. 2 crores, and the reserve fund and other reserves increased from Rs. 1.81 crores to Rs. 2.09 crores. The ratio of capital funds to deposits works out at 3.63 percent. The bank opened 20 branches and closed three branches in India during the year, raising the total number of offices to 157; it also opened three branches in foreign countries. Five more branches have been opened in India since the beginning of this year. From 1st January, 1962, the Bank of Baroda has taken over the business of the Surat Banking Corporation.

Hindustan Lever Puts off Rights Issue

HINDUSTAN Lever, which had announced the issue of rights shares in the proportion of 25 new equities for every 37 shares held at a premium of Rs. 25 a share, that is, at Rs. 35 a share, has now decided to defer the issue for the present. The decision has been taken to study the impact of the new taxation measures on the Company. It is said that Hindustan Lever will have to pay an extra Rs. 1 crore on account of the super profits tax. It was on 7th December that the shareholders had approved the proposal to issue rights at an extraordinary meeting. Now another meeting will be called again to cancel their earlier decision to offer new shares to shareholders registered in the books of the Company at the close of business on 2nd March, and to empower the directors to fix another date of entitlement at a suitable time.

That a big and efficiently managed concern like Hindustan Lever should have thought it necessary to revise its decision on the proposed rights issue because of the new tax proposals is an indication of the change in the attitude of those responsible for expansion of industries. But the Finance Minister, Mr. Morarji Desai's defence of his taxation proposals, including the super profits tax, in the Rajya Sabha suggests that these proposals are unlikely to be modified materially.

National and Grindlays Bank Centenary

THE National and Grindlays Bank Ltd will be completing one hundred years of useful service in September 1963. Hence it proposes to pay the shareholders a centenary dividend and the staff a centenary bonus. The directors have recommended a final dividend of 7 percent, less income tax, at 7s 9d in the pound for the year ended December 1962. They have also recommended the payment of a centenary bonus dividend of 2 percent less income tax at 7s 9d in the pound. Both are payable on 5th April, 1963.

In his chairman's statement, which has been circulated along with the report and accounts for the year ended December 1962, Mr. J. K. Michie points (a full text of the statement appeared on page 343 in the last issue of Capital) to the expansion in business, although trading conditions in overseas territories have been rather difficult. He has also mentioned the rising costs of

providing banking services. Although the cut in the U.K. Bank rate may affect the earnings of the bank in that country, he is hoping for an improvement in the overseas results. Referring to activity in India, he says that the decision to increase the proportion of scheduled banks' assets in Government securities will restrict lendings unless deposits increase substantially. The decision will be implemented in September 1964. He, therefore, foresees an increased pressure on bank funds in the near future considering that the monetary demands of trade and industry continue to rise.

Changdeo Sugar Revises Dividend

UNLIKE most sugar companies, Shree Changdeo Sugar Mills did fairly well during the year ended September 1962. Its gross profit at Rs. 27.11 lakhs showed only a nominal fall from the previous year's figure of Rs. 27.45 lakhs. The dividend had been declared at Rs. 2.50 a share, involving a total distribution of only Rs. 7.50 lakhs. But this dividend has now been revised downwards to Rs. 1.50 a share. Explaining the reasons for this rather unusual step to the shareholders' annual meeting on 7th March, the chairman, Mr. A. H. Bhiwandwalla, said that the cut in the declared dividend had become unavoidable because of the new taxation proposals in the Central Budget. The super profits tax, he said, was likely to impose an additional tax burden of about Rs. 4 lakhs. The Emergency Risks Insurance premium would cost another Rs. 80,000. The Company had also to put up with an additional burden on account of the Maharashtra Agricultural Income Tax Act which has retrospective effect from April last.

As for the Land Ceiling Act, the chairman assured the shareholders that it would have no serious effect on the Company as it had very little surplus land. He, however, feared that sugar production would suffer if all surplus farms were converted into State farms. Discussing the current year's prospects, Mr. Bhiwandwalla said that the Company had recently entered into an agreement with another factory for the supply of about 10,000 tons of sugarcane at the rate of Rs. 5.26 a quintal. This would enable the Company to maintain its sugar production at the previous year's level. The chairman also indicated that the directors were considering the question of diversifying the Company's activities. The Rs. 12.50-paid share of Changdeo Sugar is nominally quoted around Rs. 21.76.

Coonoor Tea Estates Pays More

A HIGHER dividend to shareholders and an increase in the profit, following a record crop and higher selling prices are the highlights of the working of the Coonoor Tea Estates Co. Ltd for the year ended September 1962. With the final dividend of 10 percent now recommended by the directors, the total dividend for the year amounts to 17½ percent, including an interim dividend of 7½ percent, against the total dividend of 15 percent for the previous year. After meeting all expenses and providing Rs. 35,664 for depreciation, the profit amounts to Rs. 2.58 lakhs, compared with the previous year's Rs. 1.55 lakhs, after providing Rs. 33,726 for depreciation. Out of the year's profit, provision for taxation gets Rs. 1.28 lakhs (against Rs. 70,000). The net profit, after taxation, amounts to Rs. 1.30 lakhs.

Though only 31.7% of India's 438 Millions constitute the Labour force, J. K. has proudly contributed to a very commendable percentage for this employment.

INDIA'S GREAT INDUSTRIAL AND COMMERCIAL COMBINE

JKO/2/63

I had mentioned in my last year's Statement to you about the holding, under the auspices of ICICI, of a Regional Conference of Development Banks in Asia. The Conference was held on March 29-31, 1962, and was attended by delegates from development banks from 13 countries in Asia. Fraternal delegates from international and foreign lending institutions such as the International Bank for Reconstruction and Development, the International Finance Corporation and the International Development Association, the Commonwealth Development Finance Company Limited of the U.K., Kreditanstalt für Wiederaufbau of the Federal Republic of Germany, also participated along with officials of the Government of India, the Reserve Bank of India and some of the State Finance Corporations. The Conference helped us to exchange views, identify common problems and

also develop contacts with similar institutions in other countries. I am glad to say that the idea of holding the Conference has been generally appreciated, and arrangements are already being made to hold, in the latter part of 1963, a second Conference in Teheran under the auspices of the Industrial and Mining Development Bank of Iran. We have also tried to develop relations with other development banks through visits. Mr. Nguyen-Huu-Hanh of Societe Financiere Pour le Developpement de L'Industrie au Viet-Nam, visited ICICI in October, 1962, to study our procedures. Two officers of the Nepal Industrial Development Corporation came in December, 1962, to study various aspects of appraisal and follow-up work at ICICI. In January, 1963, Mr. Yom Tantsethi, General Manager of the Industrial Finance Corporation of Thailand, visited us for a week to

discuss general problems of development banking and ICICI's operations. We expect to have, later in the year, a trainee from an African country under the U.N. Technical Assistance Programme. We also expect visits from senior officials of development banks in South East Asian countries. These are all examples of practical co-operation between institutions at operational levels and we are glad to be able to make a contribution to it. Before concluding, I would like to refer to the change in the stewardship of the International Bank for Reconstruction and Development. Mr. Eugene Black retired as President of the Bank on December 31, 1962. The World Bank, as it is popularly known, followed an active policy of helping underdeveloped countries during Mr. Black's term and it also helped to set up a large number of development

CAPITAL, 14th March, 1963.

banks including this Corporation. We are deeply indebted to this far-sighted economic statesman for his sympathetic insight and his keen interest in the working of this institution.

In the Directors' Report, you must also have seen a reference to the resignation of Mr. George Woods from your Board, consequent upon his appointment as President of the IBRD. Mr. Woods was associated with this Corporation even before its formal inception, and had been a Director on its Board since June 25, 1959. His guidance has been of considerable help in the progress of this Corporation. We trust that in his new capacity we shall continue to receive his friendly advice in our work.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 14th March, 1963.

THE STATE BANK OF INDIA

CHAIRMAN, MR. B. VENKATAPPIAH'S ADDRESS

Speech of the Chairman, Mr. B. Venkatappiah, at the Eighth Annual General Meeting of the Shareholders held in Bombay.

Gentlemen,

I am glad to welcome you here today.

The Report of the Central Board of Directors is before you. Along with it have been circulated the Bank's Profit and Loss Account for the year 1962 and the Balance Sheet as at 31st December, 1962.

It is usual to divide the operations of the State Bank of India into two categories: the traditional and the developmental. In time, of course, the distinction is useful and I will come back to it presently. Meanwhile, I am happy to tell you that the Bank has during the year 1962 made progress in both these respects and therefore also in its operations as a whole. The average level of the Bank's advances in India rose from Rs. 244.2 crores in 1961 to Rs. 267.0 crores in 1962; and the peak from Rs. 267.8 crores in 1961 to Rs. 289.1 crores in 1962. At the same time the Bank's investments rose by Rs. 29.3 crores over the year. As a result of these and other factors, income rose from Rs. 19.7 crores in 1961 to Rs. 22.6 crores in 1962. The Bank's lending rates, it may be mentioned, were substantially the same as in 1961.

Rise in Expenditure

The rise in income was more than offset by a rise in expenditure. The increase in expenditure was largely in establishment expenses. In turn, the main item of increase in establishment expenses was that pertaining to the wage bill of our workmen staff. In pursuance of the Award of the National Industrial Tribunal, the salaries and allowances of this category of our employees were raised with retrospective effect from January 1, 1962. Moreover, we sanctioned a proportionate—and substantial—increase in their bonus. May I add that your Directors felt that this increase was justified as a measure of goodwill to the staff, though in no way obligatory under the Award? During the course of the year, we also effected an improvement in the pay scales of our Sub-Accountants and Head Cashiers. Further, we introduced more liberal terms, including a running pay scale, for our Staff Assistants and Probationary Assistants, now redesignated Staff Officers and Probationary Officers respectively. An additional item of expenditure was the premium paid by the Bank to the Deposit Insurance Corporation which started functioning in January 1962. Also, the amount of interest paid by us on our deposits was larger this year than in the previous year. Mainly as a result of these items, the Bank's total expenditure rose from Rs. 17.0 crores in 1961 to Rs. 19.9 crores in 1962.

The net profit of the Bank, after due provision had been made for the usual and necessary items, amounted to Rs. 2.69 crores as against Rs. 2.71 crores last year. The dividend retains its previous level; it is Rs. 23 per share, subject to deduction of tax. For the reasons I have stated, there is a large increase in bonus to workmen staff. It was Rs. 45 lakhs in 1961. It is now Rs. 72 lakhs. An amount of Rs. 7.62 lakhs has been transferred to the Pension Funds as compared with Rs. 7.42 lakhs in 1961. To the Reserve Fund has been added Rs. 55 lakhs; this is less than last year's Rs. 75 lakhs, but more than the corresponding figure

for any of the 6 years preceding. Rupees 5 lakhs, as compared with last year's Rs. 10 lakhs, have been transferred to the Staff Welfare Fund. Similarly to the Staff Co-operative Housing Fund has been transferred an amount of Rs. 5 lakhs, as against Rs. 10 lakhs in 1961. The balance carried forward at the close of 1962 is Rs. 45.68 lakhs as compared with Rs. 50.41 lakhs the previous year.

National Emergency

Before I proceed to other matters, I should like to refer to the National Emergency and make a brief mention of the part we played in the grave situation which followed the Chinese invasion of Indian territory. There was a certain degree of dislocation of the usual channels of credit: there was also some threat to normal production, especially of tea in the frontier districts of Assam; and in a few instances, particularly of food articles, it became necessary for the State Government of Assam to enter more largely into the business of distribution. We collaborated promptly with both Industry and Government, including the Tea Board, and in so far as it fell within the sphere of the State Bank, did all we could to help restore normality. On the hypothecation of stocks, we granted loans to the State Government for the purpose of distribution of certain foodstuffs; on their guarantee, we made funds available to the Assam Co-operative Apex Bank for the financing of some of the smaller tea gardens; and we took upon ourselves the financing of a certain number of the bigger tea gardens, especially in those areas where such a course would have the greatest effect psychologically, since, as I have said, our main objective was to assist in restoring the normal functioning of commercial credit. In regard to industries of importance to the defence effort, we are in close touch with the authorities and interests concerned. It is now generally recognised that small industries too have a great deal to contribute to such effort. Since the biggest institutional scheme in the country for the financing of small industries, especially their requirements of working capital, is that which has been developed over the last few years in the State Bank, we are at the

moment conducting a review of its working in order to gear it to such tasks as small industry may be called upon to undertake in the new context. A Study Team consisting of two officers of the Bank has visited various centres of small industry in different parts of the country and we hope to have before us in the near future its suggestions for action. Meanwhile, the State Bank's Instalment Credit Scheme, of which details will be found in the Report of the Directors, is of special relevance to those small and medium entrepreneurs who, in connection with defence production or otherwise, desire to purchase machinery or equipment on suitably easy terms. May I add, before I pass on from the subject of Emergency, that the State Bank and its Subsidiaries, through their very wide network of offices—now numbering more than 1,500—have been playing a very active part in all work connected with the National Defence Fund. Defence Bonds and so forth? I would also add that, as a gesture of goodwill to the members of the armed forces, the Bank has extended certain special facilities to them during the present Emergency. These facilities include the waiving of charges for maintaining accounts and free remittances in settlement of children's school or college fees or for maintenance of dependents. Further, the Bank has agreed to collect free of charge, for members of armed forces, cheques drawn on any of our offices. These facilities are available to all officers and other ranks of the Army, Navy and Air Force as well as for Special Armed Constabularies set up for frontier duties and members of the Army Nursing Services.

Foreign Exchange Shortage

Among the problems to which a new dimension of gravity has been added by the Emergency is that of foreign exchange; and an important facet of the problem is the need to step up exports. In so far as export finance has a bearing on this, we are of course intimately concerned; and accordingly we have been in touch with the relevant interests such as Jute Manufacturers, Tea, Cotton Textiles and Engineering Goods. As concrete expression of our desire to help, we have taken a number of steps. Three spe-

cific items may be mentioned. We have introduced, subject to certain conditions, a concessional rate of interest in the form of a rebate of 4 per cent on advances utilised for financing exports. We have made use of the scope offered by a recent amendment of the State Bank of India Act to make available medium term export credit in suitable cases. Lastly, in collaboration with Government and within the framework of existing import policy, we have initiated a small and purely experimental scheme whereby, against the Bank's guarantee, a company may get a loan in a foreign currency for importing raw material on the understanding that repayment will be made out of the proceeds of the export of the finished product.

The Bank's normal or traditional business, as reflected in its advances and deposits, continues to expand. Since the close of 1962, advances have further risen and now stand at Rs. 293.4 crores (on February 22, 1963). With the increased demand for credit especially from industry, the problem of raising resources has become all the more important. This of course, is a problem for all banks and for the country as a whole. We on our part have been taking several steps to increase our deposits. We have now a programme of opening new branches, not only in the rural and semi-urban centres already selected or added to our list from time to time, but also in the metropolitan areas, cities and bigger towns, which in recent years have developed so rapidly. We are endeavouring at the same time to improve the facilities and services we offer to our customers, whether these be borrowers or depositors, large account holders or small ones. One such facility is the Credit Transfer System. As you are aware, this was introduced last year; and advantage is being taken of it by an increasing number of our customers. We have introduced certain new facilities for savings bank depositors. The minimum balance on cheque-accounts has been reduced from Rs. 200 to Rs. 100. The maximum amount that can be deposited by a savings bank depositor in a year as also the maximum balance at any given time have been substantially raised. Withdrawal facilities have been increased from once a week to twice a week.

Pilot Deposits Scheme

We have been working a Pilot Deposits Scheme in a few selected branches in each of our Circles. Under this scheme, we endeavour to establish

Cottons labelled 'Sanforized' will not shrink out of fit

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licences, carefully examining fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued; measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for **'SANFORIZED'** on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark SANFORIZED, or permit the said trademark to be used by registered users authorized to use the trademark, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

For Information: 'Sanforized' Service, 95 Marine Drive, Bombay 2
The trademark 'SANFORIZED'—registered and trusted in 129 countries of the world—is a vital force for the export of Indian textiles.

WHICH HOLDS	Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coil.
THE GREATER	Unaffected by rot, fungus and termites. Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.
LOAD?	The special spring-steel fittings quickly secure the tubes—with a 3/4" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle. All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

ITC/SL-7A

closer contacts with our customers, present as well as prospective, and also seek, as far as possible, to tailor our services to their needs. The deposits we aim at getting are mainly those outside the banking system. We are still in the process of learning from the experiment, for it is only six months old, but the results in some of the pilot centres have been encouraging. In one particular town, for example, a few months' effort led to the opening of more than 500 savings bank accounts by relatively small depositors.

You will be glad to note that our deposits increased by Rs. 41.4 crores to Rs. 496.4 crores in 1962. This was after allowing for a transfer of Rs. 20 crores of U.S.P.L. 480 Funds to the Reserve Bank. The transfer was in pursuance of an arrangement whereby an amount of Rs. 10 crores per month for five months is to be credited to the Reserve Bank, beginning from November, 1962. Our deposits now stand at Rs. 487.1 crores (on February 22, 1963).

I turn next to the developmental activities of the Bank. As mentioned in the Annual Report, we opened 25 new branches during 1962 under the Second Expansion Programme, bringing the total number of these branches to 50 during the first 2½ years of the Programme and leaving 95 branches yet to be opened. As you are aware, the pace of branch expansion has, in pursuance of the recommendations of the Committee which went into this question, been deliberately slowed

down in order that various arrangements concerning recruitment and training might be completed and the results of the previous expansion consolidated. We have at present before us a proposal to open a large number of branches at centres not hitherto on our list but where Treasuries and Sub-Treasuries are located. We are examining the proposal in consultation with the Reserve Bank of India. I may mention here that, of the 416 branches opened during the period 1955-60, a large number is now working at a profit.

I pass on to small industries and co-operatives which represent two important aspects of the Bank's developmental activity. The Bank's Scheme for financing small scale industries has been making further progress. As mentioned in the Report, the number of units assisted, the credit limits sanctioned and the corresponding outstandings have all increased from 2811, Rs. 1,012.9 lakhs and Rs. 507.0 lakhs in 1961 to 3153, Rs. 1,181.8 lakhs and Rs. 597.8 lakhs respectively in 1962. Similarly, in regard to our Scheme for financing co-operatives, the Bank continues to show progress. The total credit limits sanctioned by the Bank to all types of co-operatives and the corresponding outstandings increased from Rs. 24.6 crores and Rs. 6.6 crores on September 30, 1961 to Rs. 33.4 crores and Rs. 8.5 crores respectively on September 30, 1962. Finally, our advances against warehouse receipts,

issued by the Central and State Warehousing Corporations have continued to rise; the credit limits sanctioned by the Bank and the corresponding outstandings have risen from Rs. 445.5 lakhs and Rs. 153.4 lakhs to Rs. 503.9 lakhs and Rs. 180.1 lakhs respectively.

Progress of Subsidiaries

I am glad to be able to tell you that all our Subsidiaries have recorded further progress in their commercial banking business as well as in the developmental sphere. There was an increase in their total deposits, advances and investments. Their aggregate net profits, however, have declined to some extent, mainly because of the additional cost pertaining to three items: the Desai Award, the revision of pay scales of officers, and the payment of deposit insurance premia. The State Bank of Bikaner, the State Bank of Hyderabad, the State Bank of Indore, the State Bank of Mysore and the State Bank of Travancore have, nevertheless, all declared the same dividend as in the previous year. I should add that, as from 1st January, 1963, the State Bank of Bikaner has been re-named the 'State Bank of Bikaner and Jaipur', having taken over the assets and liabilities of the State Bank of Jaipur under Section 38 of the State Bank of India (Subsidiary Banks) Act. The State Bank of Patiala and the State Bank of Saurashtra did not find it possible to declare any dividend.

We have nearly doubled the capacity of our Staff Training College at Hyderabad and, to a limited extent, made the facilities available to our Subsidiaries as well. As mentioned in the Directors' Report, there are Staff Training Schools and Zonal Training Centres in each Circle for the training of clerks and cashiers, including those newly recruited. We are expanding these arrangements. It is on the standards of our recruitment and training that the quality of our customer service will ultimately depend. It also depends on a contented staff and good staff relations. I welcome from that point of view the cessation of uncertainty as to the service conditions of clerks and other workmen staff consequent on the publication of the Desai Award to which I have already made a brief reference. The Tribunal has authoritatively fixed the terms in regard to almost all the important conditions of service of workmen staff, such as scales of pay, dearness and other allowances, hours of work, overtime, leave privileges, medical benefits, travelling and halting allowances, retirement age and so on. The way is therefore clear for what I sincerely believe can be an enduring and harmonious relationship between staff and management; a relationship that will be of benefit to the staff, to the Bank, to the Bank's customers, and indeed to the community generally. The subject is one we propose to keep under constant review for the purpose of taking suitable steps in consultation, where necessary, with the relevant organizations of the employees. Meanwhile, I should like to compliment all categories of the staff on the good work they have put in during the year and thank them for the devotion they have shown to the interests of the institution.

Bank Nationalisation in Burma

Before I conclude, I should like to make a passing reference to a very recent development, namely, the nationalization of banks in Burma. The order issued by the Burmese Government on the 23rd of February covered 24 banks, of which 10 were Burmese and 14 foreign. Included in the latter category was our branch at Rangoon. Our business there has not been large—it has dwindled in recent years, more especially after the establishment of the State Commercial Bank of Burma in 1954—but of course that in no way alters the fact that the nationalization came upon us as a complete surprise. The Union Finance Minister has already made a statement on this subject in the Lok Sabha. I have little to add to the particulars he has given. I am sure all of us share with him the hope that the Burmese Government will take a fair and reasonable view regarding valuation of assets, payment of compensation and other related matters and settle all dues promptly to the satisfaction of those affected.

Lastly, may I on behalf of the Board of Directors, including myself, place on record our high sense of appreciation of the valuable services rendered to the Bank by Shri P. C. Bhattacharyya who relinquished his office as Chairman on February 28, 1962. We are grateful to him for the progress made by the Bank during his stewardship. We are also grateful to Professor D. G. Karve for the guidance available from him on more than one Committee; we record our high appreciation of the valuable services he rendered to the Bank as Vice-Chairman and are glad that he remains associated with the Board as a Director nominated by the Reserve Bank. I would also place on record our high appreciation of the services rendered to the Bank by those who during the year ceased to be Directors of the Central Board or Members of the Local Boards.

Note: This does not purport to be a record of the proceedings of the annual General Meeting.

In Textile Industry...

THE RIGHT "CLIMATE"

for greater profits

is created by

In your mill, the quality of the products is dependent on climatic conditions. SF Humidifiers create the right "textile climate" not only for improving the quality of products but also for increasing the efficiency of workers.

A series of humidification towers, each connected directly to its own distribution channel, when placed along the walls in suitable numbers according to requirement of each department, ensure uniform distribution of moisture and a high degree of ventilation. Because of their low power consumption, excellent flexibility, low installation cost and long life, hundreds of textile mills in India with a total spindleage of about 3 millions have already installed SF Humidifiers.

THE ENGLISH ELECTRIC COMPANY OF INDIA LIMITED

(Incorporated on 13th March, 1957)

Registered Office: D-3 G'llander House, 8, Netaji Subhas Road, Calcutta.

EXISTING AND PROPOSED ACTIVITIES

The Company was incorporated on the 13th March, 1957 with the objects stated in its Memorandum of Association and in particular to deal in all kinds of property and to carry on the business of electrical, mechanical, hydraulic and general engineers and contractors, manufacturers of and dealers in electric magnetic and galvanic apparatus, machinery and appliances, manufacturers and suppliers of all kinds of light, heat, sound, power and any articles or things being used in connection therewith.

The Company was converted into a public company on 21st February, 1963.

The Company is the wholly owned subsidiary of The English Electric Co. Ltd. of "English Electric House", Strand, London W.C. 2, United Kingdom. The Company's Works are located at Pallavaram (near Madras) and the Company presently undertakes the manufacture of overhead busbar chamber equipment, combination fuse switch units, distribution fuse boards, distribution pillars, high rupturing capacity cartridge fuse links switchgear components and relays (Relays are specialised electrical protection equipment for power generation and distribution systems).

The Company has been working to a phased programme of expansion of manufacture which it is hoped to complete by 1964. This programme included an expansion of existing facilities and the introduction of certain new products for which the Company has obtained the necessary industrial licences from the Government. The production of Relays commenced in 1962.

The Works extension for the manufacture of Control Panels has been completed and production is expected to commence in 1963.

AUDITORS' REPORT TO THE MEMBERS

- We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 46 Branches have been audited between us and 33 Branches by other Auditors.
- We report that:—
 - we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;
 - the transactions of the Bank which have come to our notice have been within the powers of the Bank;
 - in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;
 - the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;
 - the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the audited returns;
 - in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO.,

Chartered Accountants.
 Bombay, 7th February, 1963.

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1962 does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Ltd., as a nominee company incorporated and operating in the United Kingdom, as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

A. D. SHROFF, Chairman.
KRISHNARAJ M. D. THACKERSEY, Vice-Chairman.
JUGMOHAN PRASAD GOENKA, General Manager.
JAININH VITHALDAS, Acting Chief Accountant.
K. R. KEDARI, Acting Chief Accountant.
A. F. FERGUSON & CO., Chartered Accountants.
S. B. BILLIMORIA & CO., Chartered Accountants.
 Bombay, 7th February, 1963.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

Directors' Report for the year ended 31st December, 1962

The Directors submit the Balance-Sheet for the year ended 31st December, 1962. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Ltd., of which the Company is a wholly-owned subsidiary.

London, 1st January, 1963.

S. C. KOTHARI,
S. H. BRADFORD, Directors.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion the Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1962, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.
 London, 1st January, 1963.

Stocks and Shares

SENTIMENT IMPROVES ON HOPES OF TAX CHANGES

Wednesday Evening.

THE Calcutta stock market has become somewhat steadier towards the close of the week. Earlier, for a few days, no business was reported. Operators and investors were panicky because of the stiff taxes imposed by the Budget. Although selling pressure was restrained by enforcing minimum prices and compulsory carry-over at fixed badla charges, holders were nervous. Later, sentiment has improved and nervousness has lessened. Share prices have risen slightly, because of short-covering and bargain-hunting. Attention has, nevertheless, been concentrated on clearing shares. The turnover in cash scrip continues to be poor.

The improvement has stemmed from hopes that some of the tax proposals may be modified. The stock exchanges have written to the Central Finance Ministry about the damaging effects of the tax proposals. The super profits tax, in particular, has worried investors most. Operators have debated whether the total company tax (including income tax and super tax) to be deducted will be 50 percent or 80 percent for arriving at the residual profit on which super profits tax is to be levied. Nevertheless, it is generally agreed that the impact of this levy on companies will be crippling. Unless the tax is substantially modified, the outlook for dividends and retained profits will be very discouraging. If the exempted profit is kept at 6 percent of capital and reserves, the flow of foreign capital will be interrupted since other countries offer more attractive returns. In the circumstances, the stock market believes that the Finance Minister will appreciate the arguments against this tax and modify it suitably. But nobody knows how it will be modified. Whether the exempted profit level will be increased to more than 6 percent of capital and reserves, or the rate of the tax will be cut, is anybody's guess.

The meeting of the stock exchange presidents, due to be held in Hyderabad next Friday, is awaited with great interest. It is hoped that all the stock exchanges together will tell the Finance Ministry that the investment climate will suffer unless the tax proposals are modified. The meeting is also expected to decide about the proposal to enforce uniform conditions for new issues. Application forms for new shares will be standardised; reasonable time may also be given before closing a new share offer.

Indian Iron have been quoted above the minimum price. Among engineering shares, Texmaco have gained on influential support. Guest, Keen, Williams have met with demand. Burrakur have been taken in the coal section. In the jute section, Birla have been bought. Titaghur Jute has declared a taxable final ordinary dividend of 10 percent, making 13 percent for the year. Samnuggur Jute and Victoria Jute have decided to pay taxable final ordinary dividends of 7 percent, making 10 percent for the year. In the miscellaneous section, prominent features have been Indian Aluminium, Indian Copper, Hindustan Motors, Kesoram Industries, Dunlop Rubber and Jaipur Udyog. Despite the removal of the export duty, tea shares have been neglected because the super profits tax will hit these companies hard.

Government securities have been dull. Except for official support, especially in short-dated loans, there have been very few buyers. Prices of State Government loans continue to be depressed on a predominance of sellers.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during February 1963 was: iron 136,000 metric tons; steel ingots 143,500 tons and saleable steel 113,100 tons.

Bombay

PRICES IMPROVE IN DALAL STREET SUPPORT CONFINED TO SELECTED SCRIP

THE Bombay stock market has started the new account in a steadier fashion after the post-Budget collapse. There has been an all-get improvement in share prices round improvement in share prices due to short-covering and replacement buying. The earlier panic has been confined to selected shares which have been quoted above their minimum prices. Turnover in cash shares has been rather small.

Dalal Street has become cheerful on hopes that the super profits tax may be modified. Strong representations have been made from various quarters pointing to the damaging effects which may flow from this impost. Unless the tax is substantially modified, industrial development will suffer greatly. Companies will find it difficult to finance modernisation and expansion out of their own resources, because the super profits tax will mop up a substantial portion of their profits. Since the dividend outlook has become very unfavourable, it will be extremely difficult to attract funds from outside.

Among shares which have been supported are Tata Steel at Rs. 118.50, Tata Locomotive at Rs. 287, Hindustan Motors at Rs. 16.96, Bombay Dyeing at Rs. 63.50, Kohinoor at Rs. 284, Voltas at Rs. 263, Bombay Burma at Rs. 638 and Scindia Steam at Rs. 11.24. Bank shares have lacked interest because banks have been finding it difficult to finance the legitimate requirements of the economy on account of the shortage of funds. Among insurance shares, New India have been steady on prospects of a bonus issue.

Madras

MINIMUM PRICES FIXED FOR ALL SHARES

SENTIMENT IMPROVES SLIGHTLY

Tuesday Evening.

THE Madras stock market authorities have fixed minimum prices for all shares. Although sentiment

has improved somewhat on hopes of modification of the Budget proposals, the turnover has been limited. Scattered business has been done in selected shares. Support from outside interests has been negligible. The growing shortage of funds, combined with more expensive credit, has virtually dried up fresh support. The absence of fresh imposts on planting companies in the State Government's Budget for 1963-64 has helped to maintain the prices of good tea shares.

Government securities have been quiet and prices of State Government loans have fallen in the absence of buyers. Bank shares have evoked no interest. Scattered business has been reported in South Madras Electric at Rs. 10.05. In the planting section, Coorg have met with support at Rs. 4.15, Teekoy at Rs. 5.10 and Periakaramalai at Rs. 3.05. Thirumbadi has paid a taxable ordinary dividend of 10 percent and Mysore Coffee a taxable ordinary dividend of 15 percent. United Nilgiri has declared an interim taxable ordinary dividend of 7.5 percent. Kil Kotagiri has paid a final taxable ordinary dividend of 17 percent, making 25 percent for the year. Mysore Coffee Curing Works has issued 20,000 ordinary shares of Rs. 10 each at a premium of Re. 1 a share to the existing shareholders in the proportion of one share for every four shares held.

Among textile shares, South India Viscose have recovered to Rs. 140 and Travancore Rayon to Rs. 29.75. Rayalseema has paid a taxable ordi-

nary dividend of 15 percent and Coimbatore Cotton a taxable ordinary dividend of 9 percent. Shri Akkamamba Textile proposes to issue 48,242 ordinary shares of Rs. 10 each for public subscription at par. At first, these shares were offered to the existing shareholders but they had not taken them. Business has been subdued in the miscellaneous section. Scattered business has been done in Aluminium Industries at Rs. 20.37, in Mettur Chemical at Rs. 12.87 and in Seshasayee Paper at Rs. 7.40. Andhra Scientific proposes to issue 50,000 redeemable cumulative preference shares of Rs. 10 each at par, to the existing shareholders in the proportion of one new share for every two shares held. These shares carry a fixed dividend of 9.23 percent. Mysore Cement has issued 650,000 rights ordinary shares of Rs. 100 each at par. Parry's Confectionery has declared an interim taxable ordinary dividend of 8 percent.

London

STOCK PRICES FALL BACK

SHARP DECLINE IN GILT-EDGED

London, 13th March.
AFTER making good headway for most of the past week, the stock market took a turn for the worse on the revival of pressure against the pound which was stimulated to some extent by talk of devaluation. Gilt-edged were the chief sufferers and the advance of the previous week was reversed. As is usual when devaluation is talked of, gold shares immediately attracted those wishing to hedge against such an eventuality and the result that prices moved up fairly sharply, even though Wall Street was not always ready to follow. Equities became unsettled, but this was due more to buyers holding off rather than sellers coming in, but there was still some selective buying going on following good company statements. There was, however, a disposition to await the Budget which is just over three weeks away. With Wall Street moving narrowly, Dollar stocks showed no definite trend, but the Dollar premium moved up to well over the 10 percent mark. Apart from the strength of gold shares, mining shares as a whole were quiet. De Beers were wanted in front of their results. Oils were an extremely quiet market, and although over-shadowed by developments in the Middle East, held fairly steady. Shell were in demand in advance of Thursday's dividend announcement. Plantation shares were quiet.

INVESTMENT CONFERENCE IN TEHRAN

The Industrial and Mining Development Bank of Iran (I.M.D.B.I.) convened an investment conference in Tehran from 9th March to 12th March. The conference was inaugurated by the Prime Minister of Iran. It discussed such subjects as investment, banking, capital markets, stock exchanges and project development. Ministers of the Iranian Government and senior officials of the Central Bank as well as the representatives of the International Finance Corporation, Washington, and foreign banks and financial institutions participated in the conference. The Industrial Credit and Investment Corporation of India (I.C.I.C.I.) was represented by its Deputy General Manager, Mr. J. S. Raj, who presented a paper on "experience in stock exchange".

Books

VALUE AND WEALTH

Life's Value in Cash. By Leon Zeitlin. (Published by Oswald Wolff (Publishers) Ltd, 12 Fitzroy Street, London W.1. Review copy received from Rupa and Co., 15 Bankim Chatterjee Street, Calcutta 12. Price 10s 6d, pages 102.)

There has been a long-standing controversy in economics whether it should be a light-bearing or a fruit-bearing subject. The human factor in economic endeavour was not lost sight of even by economists of the old school. Mr. Zeitlin has attempted to prove with figures that the marginal utility of the non-pecuniary value in man's life is his greatest economic asset. He quotes with approval Mr. Robert Garner, president of the International Finance Corporation, who stressed at the Vienna Conference that a country's real wealth does not derive from its

national resources but primarily from the strength of its population exploiting them. There is a meticulous, but lucid, analysis of the scientists', statisticians', politicians', and judges' evaluation of the non-pecuniary values. The author concludes that the economic, social and political structures have elements of non-pecuniary economic values. The book makes interesting reading and is a timely reminder of the fundamental economic wisdom enshrined in Oscar Wilde's aphorism that "people know the price of everything but the value of nothing".

EMERGENCY INSURANCE

Emergency Risks Insurance. By V. N. C. Narichania. (Published by V. N. C. Narichania and Co., Sir Phirozshah Mehta Road, Fort, Bombay 1. Price Rs. 15, pages 130.)

This is a timely publication containing detailed commentaries on the provisions of the Emergency Risks

Insurance Acts recently enacted by the Government of India. It contains comments on the Emergency Risks (Goods) Insurance Act, 1962, the Emergency Risks (Factories) Act, 1962, the Emergency Risks (Goods) Insurance Scheme, the Emergency Risks (Factories) Insurance Scheme as well as the notifications and changes relating to these enactments. Similar schemes, it will be recalled, were introduced by the Government of India during the second World War for War Risks (Goods) Insurance and War Risks (Factories) Insurance Schemes. There exists some confusion in the public mind concerning the interpretation of some of the clauses of the Acts. The present publication will help allay this confusion and will serve as a useful guide for all who are interested in and affected by this legislation. The publication contains a number of appendices for the benefit of prospective policyholders. The price for this small book seems to be rather high.

Firestone

World's Leading Producer of Rubber

Nobody builds tyres like Firestone, world's leading producer of rubber. Nobody tests tyres like Firestone—and millions of punishing tyre miles each year prove it. In fact, no part of a car is more thoroughly proved than its Firestone tyres. Motorists everywhere in the world, trust the tyre that's built, tested and backed by the Firestone name. It's their surest sign of value. They know what they are getting when they buy Firestone.

Firestone
Your Symbol of Quality and Service

One Purchase Officer with a headache cut his inventory down from 30 products to only 8!

The Caltex "Stop-Loss" plan was the headache antidote... When each department in a plant specifies a lubricant it wants without reference to the purchases of other departments, there is bound to be a lot of waste and costly over-lapping. The Caltex "Stop-Loss" programme helps to eliminate this waste of lubrication by effectively reducing the total plant lubricant inventory. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

Find out today how Caltex "Stop-Loss" can specifically stop the problem in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS STILL SCARCE

Wednesday, 13th March.

THERE has been a moderate increase in the general level of advances in the Calcutta money market during the past week. Most of the increase is in the accommodation given to the sugar mills and to the iron, steel and engineering industries. The credit given to the cotton and jute mills, and to the foodgrains and seeds trade, is almost unchanged. In the interbank market, conditions are still extremely tight. The call rate is quoted at 6½ percent, but this is nominal as there are almost no lenders.

The exchange market has been very dull. The flow of tea and gunny bills has been negligible. The demand for remittance too has been poor. Sterling has weakened considerably because the U.K.'s external reserve figures for February are unfavourable and rumours are circulating that the pound might have to be devalued.

THE CALCUTTA BULLION MARKET TRANSACTED only ready silver in the past week. The price was steady on an increased demand and advanced from the previous week's level of Rs. 276 to Rs. 282.50, quoted today for ready. The London and New York prices were 108½d and 126.2 cents.

DURING THE WEEK ENDED 8TH MARCH, Government of India Treasury bills for Rs. 6,94,00,000 were sold in favour of the Reserve Bank.

TENDERS for Rs. 2 CRORES of 91-DAY Government of India Treasury bills were opened on 12th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.370 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th March.

IT IS STATED THAT 91-DAY TREASURY bills will be sold from 13th March to 16th March at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 6th March to the 9th March amounted to Rs. 1,29,75,000.

RISES of Rs. 41.89 CRORES to Rs. 2,235.86 crores in active notes and of Rs. 41.50 crores to Rs. 2,248.28 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 8th March, 1963. The currency expansion was covered by increasing foreign securities by Rs. 5 crores to Rs. 100.08 crores and rupee securities by Rs. 40 crores to Rs. 1,916.42 crores in the paper currency reserve. This was done by corresponding transfers from the Banking Department in which balances held abroad were Rs. 1.08 crores smaller at Rs. 12.12 crores and investments fell by Rs. 33.23 crores to Rs. 193.49 crores. Deposits of the Central Government increased by Rs. 19.98 crores to Rs. 123.93 crores and those of other Governments by Rs. 3.46 crores to Rs. 16.43 crores. Balances of scheduled banks at Rs. 69.75 crores showed a decline of Rs. 7.82 crores. Loans to scheduled

banks rose from Rs. 57.17 crores to Rs. 83.40 crores, of which advances against usance bills were Rs. 58.90 crores (Rs. 38 crores). Ways and means advances stood at Rs. 35.92 crores, against Rs. 27.63 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 1st March, 1963, shows a drop of Rs. 6.25 crores to Rs. 551.05 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 4.03 crores and Rs. 2.57 crores to Rs. 222.27 crores and Rs. 7.77 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 3.36 crores to Rs. 312.31 crores. Cash and balances are, in consequence, shown at Rs. 24.27 crores, or Rs. 2.61 crores higher.

THE POSITION OF SCHEDULED BANKS for the week ended 1st March, 1963, shows Demand and Time liabilities at Rs. 942.14 crores (Rs. 18.12 crores on account of borrowings from banks) and Rs. 1,261.63 crores (Rs. 19.31 crores), compared with Rs. 945.67 crores (Rs. 18.74 crores) and Rs. 1,274.16 crores (Rs. 19.41 crores), respectively, in the previous week. Cash has increased by Rs. 3.33 crores to Rs. 54.35 crores, while balances with the Reserve Bank have declined by Rs. 2.60 crores to Rs. 69.82 crores. There is a drop of Rs. 4.45 crores to Rs. 612.15 crores in investments. Advances and bills discounted at Rs. 1,552.41 crores show a rise of Rs. 14.71 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 70.4 percent, against 5.6 percent and 69.2 percent.

ONLY MARGINAL CHANGES IN BUDGET PROPOSALS LIKELY

(FROM OUR NEW DELHI CORRESPONDENT)

WHILE replying to the Budget debate in the Rajya Sabha last week, the Central Finance Minister, Mr. Morarji Desai, was generally unresponsive to the criticisms against his tax proposals. Mr. Desai said that there is little scope for reducing the proposed excise duty on kerosene or exempting the lower middle class from the new rates of taxes. He admitted that some of his measures would hit the poor people hard. But this, he said, is unavoidable when the country has to incur huge defence expenditure. Mr. Desai was confident that the patriotic people of India would bear the burden cheerfully.

The Central Finance Minister, however, remained unconvincing when he said that all avenues of economy had been explored. While he was replying to the Budget debate in the Rajya Sabha, his colleague, Mr. Mehr Chand Khanna, Central Minister for Works, Housing and Supplies, told Parliament's informal consultative committee for his Ministry that he had been unable to persuade Cabinet Ministers to place a ceiling of Rs. 250 a month on their electricity bill. He also disclosed the amounts which the Central Ministers had spent on their furniture. Mr. Desai himself should have told the Rajya Sabha how much money the Central Ministers and their juniors spend on useless tours, sometimes accompanied by their wives and retinue. In spite of extravagance and wastage, Mr. Desai has imposed taxes on all and sundry which will inevitably affect their standard of living.

Many consider it unlikely that all the money that is being raised for defence will be spent during the year ended 31st March, 1964. The critics, meanwhile, have not been unhelpful. They have suggested that Mr. Desai could introduce a supplementary Budget in Parliament in October if he wants more money. Then again, he could depend more on public borrowing than he proposes to do.

As far as the compulsory saving scheme is concerned, apart from its administrative difficulties, the Congress Parliamentary Party is opposed to the scheme being applied to cultivators. It will not surprise anybody if the latter are eventually exempted. In any case, Mr. Desai will have to explain how he proposes to compel a large number of people earning Rs. 1,500 a year to make compulsory deposits. The introduction of the scheme is a direct official admission that the small savings scheme has not been as successful as is officially claimed. As far as the Super Profits Tax Bill is concerned, some of its objectionable features should be rejectionable or modified. As it is, the Bill moved or modified. As it is, the Bill will hinder industrial expansion. The attempt to reduce profits to near 6 percent of capital and reserves, is the most objectionable feature of the Bill. It will affect foreign investment which needs to be encouraged due to the foreign exchange shortage in India.

In its present form, the Super Profits Tax Bill will make it impracticable, if not impossible, for the jute, cotton and many other industries to repay the loans they have taken for rehabilitation and modernisation. Considering its own wastage and extravagance, many wonder, how can the Government ask for large sums of money? According to lobby re-

ports, defence mobilisation has yet to gather full momentum. The Central Ministry of Economic and Defence Co-ordination is treated as an intruder by Ministries whose activities it is supposed to co-ordinate. In fact, it has hardly any work to do, and unlike other Ministers, Mr. Krishna-machari makes no secret of this.

The former Canadian High Commissioner in India and now the director of the World Bank, Mr. E. Reid was here during the past week in order to prepare the ground for the Aid-India Club meeting which is scheduled to be held on 30th April. He was given an hour's unconvincing sermon by the Planning Commission, which explained that the plan could not be trimmed because of the defence build-up.

To sum up, the Government is unwilling either to reduce non-plan ex-

penditure or trim such parts of the plan as are unrelated to the defence effort. It is equally unwilling to improve the tax-collection machinery in order to secure higher yields from the existing sources. But it dubs people as unpatriotic if they criticise the tax proposals or make suggestions for improving the yields from existing taxes.

AFRO-ASIAN COUNTRIES

Offering Export Credits

India is likely to offer medium-term export credits to the Asian and African countries to stimulate India's exports to them, the Central Commerce and Industries Minister, Mr. K. C. Reddy, said in Parliament last week. He gave no hope that the export target of Rs. 720 crores for 1962-

63 would be reached. According to him, total exports during the period would not exceed Rs. 695 crores—or Rs. 25 crores less than the target. The shortfall is largely due to the decline in exports to Asia and Africa, almost half of which are accounted for by Japan.

Sir Norman Kipping, director-general of the Federation of British Industries, who was in India last month, says the following in his report: "As for India's manufactured goods, it is early yet to expect many of the new industries to match up to the rigours of world competition. But, in the end, India will have to face this and to adopt policies consistent with this end. At present, inefficiency of some of her domestic producers is being too much protected by import restrictions and her system of excise duties are leading to high production costs. The pattern of aid, to some extent, results in the use of high-cost materials, and of high-cost plants leading to high overheads. The whole attitude at the moment is 'Oh well, export at a loss; you can recoup on the home market!'"

"Export incentives are being operated which, in any developed country, would be regarded by the trading nations with repugnance. They are link systems which lead to double-pricing of the kind which has

been outlawed by G.A.T.T. They may be excusable as short-term expedients, but must be self-defeating in the long run for all that they really do is to cause increases in cost, and decreases in competitive power. In addition, there is the system of refusing licences to expand capacity unless undertakings are given that a proportion of the product will be exported. It is sometimes extremely difficult with honesty to give such undertakings. In short, there are many readjustments which will have to be made as India gains in self-confidence and comes to believe in her industrial competence and ability to export."

As far as medium-term export credit is concerned, the question is on what goods should it be offered? India cannot indefinitely borrow with one hand to sustain her own economy, and then lend to others to sustain their economies in the name of Afro-Asian solidarity or the promotion of exports. Indonesia has told India that it has no foreign exchange to justify the visit of a trade mission to this country. So it has been demanding credit to make its purchases from India. Meanwhile, will it be commercially wise to grant medium-term credit in order to claim that the country has reached its export target?

HINDUSTAN STEEL

Raw Material Worries

Some of the teething troubles of the three public sector steel plants are narrated by Hindustan Steel in its 1961-62 report. Dealing with the supply of such raw materials such as coal and iron ore, its says: "As pointed out last year, irregularity of transport from the producing centres to the steel plants, the insufficient supply of suitable coal and the deterioration in the quality of supplies, continued to cause anxiety. Agreement has not yet been reached with the mining industry on the method of improving quality, or on the mode of payment, or on the analysis of samples. As a result, quantities of blendable semi-coking coals have had to be used. Because of the serious effect of irregular or poor supplies of coal on steel production and its economy, it is most important that agreement be reached quickly with the coal industry for adequate mining and supply of coking coals of low ash content."

"The mechanisation of mines in Barsua proved that the quality of ore from that mine has not maintained the specification anticipated in the original project report. As a result, Rourkela had to continue to supplement its requirements from the Barajamda and Rajhara areas. Durgapur has also been faced with somewhat similar difficulties of supply and had also to obtain additional supplies from the Barajamda areas. In both Barsua and Bolani, beneficiation is being considered for expansion."

RUSSIA

Trade Team Arrives

A Russian trade delegation, led by Mr. V. Spandaryan, arrived here on Monday to negotiate a new five-year trade agreement with India. This country's trade with Russia has shown marked increase in recent years. As a result of the new trade pact, it is expected, there will be a substantial increase in trade between the two countries. An Indian team consisting of senior officials of the Department of International Trade and other Ministries and experts of the Government of India will conduct negotiations with the Russian team.

Among the items to be imported are likely to be oil products, power equipment, industrial machinery,

heavy machine tools, river dredging equipment, rolled steel products, pig iron, special steels, some non-ferrous metals, fertilisers and wood pulp. Manufactured products are likely to figure more prominently than hitherto in India's exports to Russia. They may include larger quantities of cotton textiles, fabricated steel structural, some rolled steel products, electrical machinery, machine tools, handicrafts, processed foods and fruits, shoes and leather goods, jute manufactures, some chemicals and pharmaceuticals, paints and varnishes and plastic goods.

India's exports of traditional items like tea, tobacco, coffee, shellac, mica, castor oil and hides and skins are expected to rise. Some new items are likely to be added to the trade between the two countries.

FERTILISER

Progress in Private Sector

Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, told Parliament's informal consultative committee for his Ministry that the fertiliser industry in the private sector has not made sufficient progress. So the question of the public sector taking over the units, which has not made satisfactory progress, is being considered. Production in the public-sector factories is expected to be satisfactory.

All the fertiliser projects in the public sector—except those in Neyveli, Rourkela, Belagola and Alwaye—are under the control and management of the Fertiliser Corporation of India Ltd. Of these, the Sindri and Nangal factories are in production while those in Trombay, Namrup, Gorakhpur and a unit in Madhya Pradesh, are in the construction stage.

A target of 1 million tons of nitrogen and 400,000 tons to 500,000 tons of P₂O₅ had been fixed for the third plan period. The total installed capacity at the end of the second plan was 248,300 tons of nitrogen. A further capacity of 308,250 tons is now being installed. Approval was accorded for the installation of an additional capacity of 519,000 tons of nitrogen during the first year of the third plan and of 312,250 tons during the second year. Thus the total capacity—existing and approved for installation—is 1,387,800 tons.

CEMENT

Progress Reviewed

Referring to the cement industry, Mr. C. Subramaniam said that production had been running at slightly more than 100 percent of the installed capacity during the past three months. The improvement in production may enable the Government to reduce the 25-percent cut in the State quotas, which has recently been imposed, to meet the defence needs. There are at present 35 cement factories with a total annual installed capacity of 9,728 million tons. In addition, 18 new units or a substantial expansion of the existing units with a total capacity of 3,032 million tons are already covered either by way of import of plant and machinery or by allocation of foreign exchange for components. This adds up to a total capacity of 12,76 million tons for which definite steps have been taken and which is expected to materialise within the third plan period. Additional capacity of about 6.99 million tons has been either licensed or approved. These comprise six expansion schemes in 31 new units. Measures to be taken for achieving the target installed capacity of 15 million tons within the third plan period are constantly being reviewed. It is estimated that about ten to 14 plants

with a total capacity of 2.5 million tons a year could be delivered before 1966.

S. T. C.

Barter Pacts Concluded

The State Trading Corporation, it is reported, has concluded barter-link agreements with business houses in Sweden, Switzerland, France, West Germany, Finland, Austria, Belgium, Italy, Jordan and Tunisia.

Country	Items of import	Items of export
Sweden	Wood pulp, newsprint, electrical machinery, ball bearings and special steel	Tea, coffee, deoiled cakes, jute manufactures, cotton textiles, woollen and worsted goods, leather manufactures, handloom furnishings, manganese ore, animal hair, carpet and floor coverings. (Value: Rs. 2.78 crores each way).
Switzerland	Standard machine tools, printing machinery (rotary), dye and pharmaceutical intermediates (as approved by the Development Wing, Government of India)	Mica, shellac, tinned food, including frozen food, marine food, fresh fruits, walnuts and hazelnuts, handloom fabrics, coir mats and matings. Essential oils, crude herbs such as senna leaves, light engineering goods, sports goods, woollen textiles, jute goods for the use of the Swiss Government departments only, tea, finished leather and leather goods. (Value: exports Rs. 85 lakhs and imports Rs. 75 lakhs).
France, West Germany, and Switzerland	Automatic looms	Vegetable oils, cotton textiles, ferro-manganese, decorticated cottonseed cakes, manganese ore, low-grade Virginia flue cured tobacco. (Value: export Rs. 3.80 crores and import Rs. 3 crores).
France and West Germany	Dye-stuffs and dye-intermediates, textiles, chemicals, pharmaceuticals and Pharmaceutical intermediates, machine tools, industrial equipment	Linseed oil, cottonseed oil, cottonseed cakes (decorticated), ferro-manganese, handlooms, ready-made garments, Robusta coffee, hemp, sewing machines, sports goods, tinned fruits and juices, tinned pickles and chutneys, tamarind seeds, myrobalam extracts, machine tools, thermite welder, ironclad switches, railway coaches, bicycles, quartz, feldspar, garnet, calcite, mica powder, red oxide of iron, carpets, coir mats and matings, finished leather and leather manufactures, deoiled cakes, mica scrap, tinned and frozen food, including shrimps and marine products. (Value: Rs. 1.50 crores each way).
Italy	Fertilisers, art silk yarn	Pepper, coir fibres, coir yarn, raw cotton, wood and timber, tanned leather and jute manufactures. (Value: Rs. 2.20 crores each way).
Austria	Plant and machinery required for the projects in India for which quotations are called on an open tender basis	Approximately 50,000 tons of iron ore. (Value: Rs. 31.14 lakhs each way).
Finland	Cellulose, newsprint, other paper qualities	Robusta coffee, food cakes (deoiled meal only), cotton textiles, tea, canned goods, spices, woollen piecegoods, carpets and carpetings (made of wool, cotton, jute and coir), leather manufactures and shoes, bristles, miscellaneous products, such as animal by-products, casin, sport goods, light engineering goods, etcetera. (Value: Rs. 1.73 crores each way).
Jordan	Rock phosphate	Various textiles including ready-made garments and hosiery, tea and coffee, spices, cottonseed oil, chemical and pharmaceutical products including toilet goods, various engineering equipment, electric appliance and accessories and manufactures, miscellaneous items such as glassware, cutlery, crockery, sports goods, handicrafts, etcetera, tinned food-stuffs, biscuits and confectionery including pickles and chutneys, etcetera. (Value: Rs. 58 lakhs each way).
Tunisia	Rock phosphate and hyper phosphate	Tea, yarn, jute and jute products. (Value Rs. 7.40 crores each way).

CAPITAL, 14th March, 1963

MACHINE TOOLS

Raising Output

As for the machine tool industry Mr. C. Subramaniam said that Hindustan Machine Tools Ltd is exporting its products even to West Germany and Switzerland. Its prices compared favourably with the landed cost of similar foreign machine tools; in some cases, they were lower. A proposal to set up a machine tool factory in the public sector in Kerala during the third plan period at a cost of Rs. 7.5 crores, including a foreign exchange component of Rs. 1.75 crores, is being considered. The capacity of the factory will be 1,000 machine tools a year. The plant capacity could be doubled by an additional capital investment of Rs. 3 crores (Rs. 1 crore will be in foreign exchange). The implementation of the project is likely to be entrusted to Hindustan Machine Tools which is also setting up a factory in Pinjore, Punjab.

CAPITAL, 14th March, 1963.

The Government is at present considering a techno-economic report submitted by a Russian agency for setting up a unit for the manufacture of compressors and pumps, with a production capacity of 16,700 tons a year.

The Government is also considering a proposal to set up a ball and roller-bearing factory in the public sector. Two or three private undertakings are to go into production very soon. Some more units have also been licensed to be set up in the private sector.

TEA

Loan Sanctioned

The Government has agreed to the Indian Tea Board granting a loan of Rs. 3 lakhs to the Punjab Government for establishing a co-operative tea factory in Bir, Kangra, with an estimated capital cost of Rs. 5 lakhs to process 200,000 lbs of tea—either black or green tea—a year, with a provision to increase the capacity to 500,000 lbs to 750,000 lbs in stages.

COMMERCIAL OFFICES

Opening Proposed

The Government of India proposes to open commercial offices in Uganda, Tanganyika, the Central African Federation and Senegal which will also cover Upper Volta and the Ivory Coast. Cotton textile export promotion council offices are proposed to be opened in Lagos (Nigeria), Khartoum (Sudan), Mombasa (Kenya), the Engineering Export Promotion Council offices in Mombasa (Kenya) and Cairo (Egypt), a Plastics and Rayon Textiles Export Promotion Council offices in Mombasa (Kenya).

STEEL

Experimental Tests

According to the Central Ministry of Steel, tests in the experimental low-shaft furnace at the Unterwellenborn factory with sintered Salem iron ore and Neyveli lignite high temperature coke have shown the technical feasibility of applying the low-shaft furnace technique for the production of steel-making iron based on these materials. Due to the high price of lignite coke, it is, however, doubtful whether the production of iron on an economic level could be achieved on Neyveli lignite and Salem ore with the low-shaft furnace technique.

Indications are that with a moderate price for 3 to 10 mm grain size lignite temperature coke and a reasonable price for power consistent with the high load and power factors which electric smelting involves, there is a prospect of economical production of iron with Neyveli lignite and Salem iron ore based on the electric smelting technique with pre-reduction.

LIGNITE

Investment in Neyveli Project

Mr. K. D. Malaviya said in Parliament last week that the total amount of investment in the integrated

Neyveli lignite project up to the end of January 1963, is Rs. 90.74 crores. The estimated cost of lignite, when the mine is developed for full production at the rate of 3.5 million tons, is expected to be about Rs. 13.3 a ton. In terms of heat value, lignite conforms to 4,410 British thermal units a lb, round coal from the Singareni collieries to 9,500 British thermal units a lb, and Grade I coal from Jharia to 12,000 British thermal units a lb, on average. The average price a ton of Singareni coal is almost double the price of lignite, but on the basis of the heat value mentioned above the effective price of Singareni coal at the pit-head and that of lignite will be about the same. Since Jharia coal has a still higher heat value, its average effective price on this basis will be about two-thirds of the effective price of lignite.

RAILWAYS

Expansion Schemes

The railways are going ahead with various projects for expanding their line capacity, provisionally on the basis of the following targets of production which have been fixed for both Bengal-Bihar and the outlying coalfields:

	(In Million tons)			
	1962-63	1963-64	1964-65	1965-66
Bengal-Bihar coalfields	47.3	51.7	56.3	65.1
Outlying coalfields	13.75	16.25	20.23	33.24

In addition to the various line capacity works, including doublings, etcetera, proposed for expanding the transport facilities, the railways have also prepared a programme for acquiring diesel locomotives which will mainly be employed for transporting coal and for exporting ore on various sections of the railways as follows: 1962-63 112 B.G. diesel locomotives (103 received up to 20th February, 1963), 1963-64 133 B.G. diesel locomotives, and 1964-65 54 B.G. diesel locomotives.

The plan also provides for the transport of coal in specially designed high capacity wagons having a carrying capacity of 55 tons in block rakes to large consumers and to specified stations where dumps are to be located. The number of such wagons to be added to the coal fleet during the plan is 16,052 according to the following programme:

1961	5,390
1962-63	2,112
1963-64	5,874
1964-65	2,676

B.I.C.C.

Railway Contracts Received

Three contracts valued at about £2.5 million have been awarded to British Insulated Callender's Cables Ltd (B.I.C.C.) by the Indian Railway Board. The first contract, for the Northern Railway, is for overhead

equipment to be installed over 225 track-miles between Moghalsara and Subedarganj, near Allahabad. This section forms part of the main line from Calcutta to Delhi. B.I.C.C. has already provided equipment on an adjacent section (Gaya-Moghalsara) under an earlier contract.

The second is for the Eastern Railway, where about 145 track-miles are to be electrified between Sakrigarh and Dum Dum and from Belur to Dankuni. The extensive marshalling yards at Chitpur are also covered by the contract. From Sakrigarh to Dum Dum, the electrified line will accelerate the flow of heavy freight and mineral traffic between the Calcutta docks and the north Bengal coalfields.

The final contract is for the electrification of some 25 track-miles from Rourkela to Birmitrapur on the South Eastern Railway. This will facilitate the transport of raw materials to the steel plants.

T. I. S. C. O.

Raising Output

The proposal of the Indian Iron and Steel Co. Ltd to increase its production capacity by 300,000 (ingot) tons a year has recently been approved in principle. The question whether any further expansion is either called for or is practicable during the fourth plan period is being considered.

49 years ... not even a scratch

The rate of industrial accidents in India has increased from about 24 per thousand workers in 1938 to about 44 in 1959. Every year, over 93,000 workers are involved in accidents and 250 lives are lost. Also wasted annually are a million man-hours—enough to produce 170 broad gauge locomotives or 700 coaches for the Indian Railways.

Safety has always been Tata Steel's watchword as efficiency is hardly possible without it. 'No-accident month' as an annual feature, safety exhibitions, training in safety, safety awards, safer working conditions, a continuing campaign under the direction of joint councils to turn safety into a habit... these are some of the means adopted in Jamshedpur to prevent accidents in the Plant.

Safety, however, depends largely on the worker himself because about 75 per cent of industrial accidents are found to be caused by human negligence. This is where men like Jamuna Dube, the oldest employee in Tata Steel, come in. He has worked for 49 years without ever sustaining an injury, not even a scratch.

The importance of safety was one of the first things that Jamshedpur taught Dube when he arrived in the Steel City half-a-century ago... a city where industry is not merely a source of livelihood but a way of life.

JAMUNA DUBE

BUILDING PIPELINES ACROSS BRITAIN

(FROM OUR LONDON CORRESPONDENT)

A CLASH between the major oil companies and the "independent" distributors is likely to give extra edge to the competing applications to Mr. Wood, U.K. Minister of Power, for consent to build a pipeline across Britain. One application has already been made, and the other is expected to be ready within the next two months. United Kingdom Oil Pipeline Ltd, which lodged an application at the Ministry on 29th January, is backed by five major oil companies. These are Esso, Mobil, Petrofina (Great Britain), Regent and Shell-Mex and B. P. The Company has applied for permission to build a

217-mile long pipeline between the Thames and the Mersey at a cost of about £7,570,000. Of the 800 land-owners who would be involved, 450 have already given their consent. Of the remainder, less than 100 have raised objections. The objections are despite payment of at least 5s a yard for the installation of the pipe three and a half feet beneath the land surface. They would also be compensated for any damage done during the pipe-laying process.

Although a pipe system running North-West to South-East of England would have great advantages in the distribution of liquid fuels, the

Minister is unlikely to give his consent until he has also received the impending application from the other concern interested in building a similar pipeline. The new application is coming from Trunk Pipelines Ltd. This Company is controlled by S. G. Warburg and Company, the City merchant bankers. It has made a profit-sharing agreement with the British Railways and with the British Waterways Board. The proposed route is mainly over railways and canal property.

Construction of Pipeline

Under the Pipelines Act, passed last session, the construction of any pipeline more than ten miles long requires the authority of the Minister of Power. U.K. Oil Pipelines decided against using railway or canal easements on several grounds. These included cost, the difficulty of getting round obstructions such as signal-boxes, bridges and locks, and the fact that the route would be unnecessarily circuitous. Explaining the situation as far as U.K. Pipelines was concerned, a spokesman said that his Company believed it should control its own pipelines. He claimed that the five groups interested in the Company "now meet some 95 percent of the oil demand served by their proposed pipeline system." If the concerns used an alternative pipeline, they would have no guarantee of security of use, or of a certain price over a period. He added: "Our plans do not visualise the possibility of using an alternative pipeline, should our scheme not receive the sanction of the Minister of Power and the other is approved."

Interest in using a pipeline owned by United Kingdom Oil Pipelines, the spokesman said, had already been

CAPITAL, 14th March, 1963.

shown by three other companies, Gulf, Total and Amoco. These are some of the companies that Trunk Pipelines probably looks to as possible customers if its project is approved. Others may include Lobitos, Manchester Oil Refineries and Jet Petroleum, the "cut-price" distributor now owned by Continental Oil, the largest independent group in the U.S.A.

United Kingdom Oil Pipelines does not expect that transport of oil by pipeline would lead to a fall in the volume carried by the railways. Trunk Pipelines, commenting on railway and canal participation in its project, has said that it should safeguard the substantial revenues received by the railways from carrying oil. Latest available figures for inland consumption of oil in Britain put the total for 1962 at an estimated 52 million tons. This compares with 42.7 million tons in 1960.

The proportion of demand served by the major companies in the areas to be served by proposed pipeline routes, is questioned at Trunk Pipelines Ltd. The Company indicates that the "independents" may have a significantly larger share of the market. Reluctance of the major oil groups to use a pipeline not controlled by them is described as "rather strange" at Trunk Pipelines, which says that the leading companies use independent pipelines in the United States and Europe.

United Kingdom Oil Pipelines counters this with the comment that the structure of the pipeline organisations is different elsewhere. Costs of sending oil pipeline depend on a number of factors of distance and volume. But on a broad average, it costs rather less than 1d for each "ton-mile" to send it by pipeline, against about 2½d by road and about 1½d by rail. Should the Minister of Power decide in favour of the Trunk Pipelines' project, the chances of its being used by the big oil companies are very small indeed. What they want is a guaranteed long-term system of distribution which will cut their transport costs.

Scheduled Route

Permission is to be sought from the Minister of Power to build the pipeline along the following route: Canvey Island to near Barking: 22.2 miles, involving North Thames Gas Board; near Barking to Barking Creek: 0.7 miles, non-residential land; Barking Creek to Victoria Park: 5.8 miles, along the northern outfall sewer; Victoria Park to Greenford: 16.8 miles, along the Regents Park Canal; Victoria to Denham: 6 miles, along British Railways; Denham to Birmingham: 126 miles, along the Grand Union Canal; Birmingham to Ellesmere Port: 84.5 miles, along the Shropshire Union Canal.

Trunk Pipelines says that throughout the length of 262 miles, there are only six private landowners from whom entirely new "way-leave" agreements are needed. Agreement is also needed from the private owners of three bridges and of land above tunnels to be used. Other consents concern public bodies and local authorities. An alternative route round the north of London would call for other agreements. In deciding on applications for consent to build pipelines, the Minister of Power has to have regard to their "ordinary development." It seems unlikely that the British Railways and British Waterways Boards could have entered into the agreement with Trunk Pipelines without the sanction of the Minister of Transport.

CAPITAL, 14th March, 1963.

Jute

PRICES EASE AS BUSINESS REMAINS POOR

THE past week has again been dull for the jute and jute goods markets. The volume of business has been small. Overseas enquiries or manufactured goods are few, and very little interest has been shown in raw jute. Speculators in the Calcutta markets have again caused considerable fluctuations, but these have had little relation to actual business conditions. The main trend has been towards lower levels. In the circumstances, it is not surprising that consumers have taken little interest. Requirements for early deliveries seem to have been pretty well satisfied, and buyers cannot be blamed if they hesitate to acquire additional supplies at the present prices. In view of the fall in stocks of manufactured goods held by the mills during February, the I.J.M.A. has decided to continue the current high rate of production until the end of April 1963. The decision, it is hoped, will create more stable conditions and help to increase the consumption of jute goods.

Loose Jute Standards

Loose jute standards have once more become an urgent topic of discussion with the approach of the sowing season for the new crop. The existing guarantees of quality have worked well enough for the past few seasons, not so much because the specifications are sound but because of natural factors which define standards of jute from the standpoint of normal conditions obtaining in upcountry markets. This year, however, conditions have changed and a good deal of irregularity in standards and prices has resulted.

There is considerable dissatisfaction over the failure to adopt a system of permanent standardisation which, as in the case of pucca bales, would remain stable from year to year, irrespective of the vicissitudes of the weather or the whims of the sellers. Too often is the trade presented with the anomaly of having to buy middle jute of a certain grade in one season which only the season before it would have bought as Bottoms. The Calcutta mills are seriously perturbed over the present trend. While one sympathises with them in their dilemma, one feels that much of the trouble might have been avoided by a stricter interpretation of the guarantees, which leave big loopholes for the unscrupulous. As an alternative, a completely new system of guarantees could be evolved. The underlying idea of any revision must be, as in the case of pucca bales, the establishment and maintenance of a uniform standard of assortment, whereby each grade will be fixed and sustained with greater regularity throughout the season.

Colour of Fibre

With the increase in the sale of high-grade fabrics, many mills are concerned about the "colour" of their jute. The present guarantee is vague on this point, merely stating "average colour of the district". As a means of ensuring general agreement and regularity, a concise description of each district could be compiled and distributed to each of the interested associations for the general information of members. This would prevent many disputes about the "colour" of jute from districts that are generally not regarded

as good. Too many mills interpret the phrase "average colour of the district" as good colour.

Quality could be treated likewise, and the descriptions might be used, fully arranged under headings enumerating the main characteristics in order of importance. In the early months of the season, when quality in the normal course of events is uniformly better than at a later stage, business transactions would be a natural consequence of being confined to the higher standards. Later on, when quality tends to fall, the higher grades are automatically restricted, the higher grade characteristics as compiled by the table would practically disappear and the lower numerical orders would be available in corresponding larger quantities. The attainment of a degree of uniformity would tend to be reflected in a corresponding permanent stabilisation of all subsidiary standards.

As a practical way of inaugurating this system, a full range of type standard samples of all grades of different fibres could be selected by a committee of approved experts and kept under special supervision in a room set aside for that purpose under the jurisdiction of the tribunal of arbitration of the various chambers of commerce. These samples should be available for reference at all times by arbiters. Several sets of samples would be necessary for the purpose. Alternatively, a system of periodical substitution under expert supervision might be best suited to requirements. Duplicate type samples could similarly be instituted by chambers of commerce or other institutions for the guidance of mofustitions for the guidance of a premium sil interests. As hitherto, a premium would be asked for and paid for this standardisation, consistent with a guarantee of a correspondingly higher assortment and regularity than in the case of ordinary gradings. This type of specification, as

at present, would continue to be conducted on a basis of private samples as mutually agreed between buyers and sellers.

I.J.M.A. Jute Goods Stocks

At the end of February 1963, stocks of manufactured goods held by member-mills of the I.J.M.A. amounted to 83,400 tonnes, made up of 24,600 tonnes of hessian (29.5 percent), 44,900 tonnes of sacking (53.3 percent) and 13,900 tonnes of other goods (16.7 percent). Compared with the previous month, the total is down by 7,000 tonnes—hessian being down by 600 tonnes, sacking by 5,100 tonnes and other goods by 1,300 tonnes. In February 1962, total stocks were 61,800 tonnes, 17,100 tonnes being hessian (27.7 percent), 29,000 tonnes sacking (46.9 percent) and 15,700 tonnes other goods (25.4 percent).

THE JUTE MARKETS

Manufactured Goods: There was very little genuine activity in the jute goods market during the past week, and price movements were influenced mainly by speculative activity. Operators paused while waiting for the I.J.M.A. jute goods stock figures. Opening quotations last Thursday were based on March B Twills at Rs. 113.80 and October-December shipment at Rs. 114.20. In hessian, 40in. 10oz. opened at Rs. 49.70 for March shipment and Rs. 48 for forward shipment. There was very little alteration in these rates and, as the week-end approached the market became slack and neglected on account of the Holi celebrations. On Monday, prices were slightly easier and B Twills dropped to Rs. 113 and 40in. 10oz. to Rs. 40.50; in the absence of any overseas interest, these prices were reduced by about 50p during the day. Towards the close, the general undertone was quiet, and rates continued to decline.

Opening quotations on Wednesday morning were as follows:

	March	Apr.-June	July-Sept.	Oct.-Dec.
40in. 7oz.	38.35	37.35	36.35	35.85
40in. 8oz.	41.35			
40in. 10oz.	49.20	48.75	48.30	47.75
B Twills	112.35	113.25	113.35	113.00
Cornsacks	116.25	116.25	116.00	115.50
Heavy Ceess (Plain)	112.00	113.00	113.25	113.90
A Twills	138.00	137.50	137.50	137.00
Liverpools	128.50	127.50	127.50	127.00

Raw Jute: Only small business was transacted in the fibre market during the past as the mills took up the quotas assigned to them by the Jute Commissioner. Prices declined slowly; in the white and mesta sections, the fall was about Re. 1 or Rs. 1.50 below the minimum, but Daissee and Tossa continued to command premiums. Sellers in general offered freely and in each case the mills had sellers over. Many upcountry jute areas had rain over the past week and the preparation of the fields had begun. This also helped to bring prices down. Imports on an all-India basis fell, while in Cossipore arrivals showed a small increase at 305 wagons.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D. Prices	
	Current Rs.	Minimum Rs.	Current Rs.	Minimum Rs.
Assam-Agartala	76.36	28.50	80.38	30.00
Jute	75.02	28.00	79.64	29.50
Northern Jute				
Western Desal				
Jute	71.00	26.50	73.68	27.70
Selected Daissee	89.75	33.50	85.74	32.00
Assam-Agartala				
Tossa	85.74	32.00	83.05	31.00
Mesta:				
Assam-Northern	69.66	26.00	72.34	27.00
Local Daissee	69.66	26.00	72.34	27.00
Bihar Dist.	64.30	24.00	66.98	25.00
Pakistani N. C.	88.00 a bale.		March-April	

THE U.K. JUTE MARKETS

FIBRE WEAK

(FROM OUR DUNDEE CORRESPONDENT)

NO change took place in the raw jute market in Pakistan during the past week. Most shippers were offering at current E.P.C. price levels, but this was not attracting spinners. Very little news was re-

BROAD LOOMS FOR JUTE MILLS

ceived concerning weather conditions in Pakistan for new crop sowings. Some reports indicated that there was still lack of rain in some areas which was holding up operations.

There is still a large quantity of unsold jute in Dundee and this kept

the market weak. As spinners are already holding large stocks of raw material, it will be some time before all the unsold spot parcels are taken up. At present, there is nothing to indicate that much change in raw jute prices is likely to take place in the immediate future.

Offers were irregular with holders of secured parcels willing to accept low prices. Mill Firsts were named at £145, Mill Lightnings at £115, Mill Hearts at £92 and Grade Hearts at £79, c.i.f., U.K., for March-April shipment. Grade Tossa-2/3 was named at £124 and Grade Tossa-4 at

I.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the stocks of jute goods at the end of February as follows:

Description	28th February, 1963		31st January, 1963		Increase over (+) or decrease from (-) last month		28th February, 1962	
	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)

THE PAKISTANI JUTE MARKETS

FIBRE SHIPMENTS DELAYED

(FROM OUR Dacca CORRESPONDENT)

THE total registrations during the second half of February which included some five days of holidays, only amounted to 80,758 bales, mostly to so-called outports. Japan was the biggest buyer with 11,500 bales. Czechoslovakia bought 9,250 bales and Poland 8,820 bales. South Africa bought 8,680 bales and Belgium 7,375 bales. The U.S.A. bought 7,350 bales, Italy 5,875 bales, France 4,945 bales, the U.K. 2,350 bales and West Germany 2,158 bales. India bought 4,130 bales of cuttings. This brought the total up to the end of February to 3,088,389 bales.

Balers' premises continue to be unusually full of jute for this period of year, and the congestion in Chalna has reached alarming proportions. It is reported that there are about 120,000 bales awaiting shipment. Much of the blame is being laid at the door of the U.K. Continental Conference, and its pooling and rationalisation scheme. Although the conference may be partly to blame, the main cause for the congestion at present is a large amount of jute on account of some communist countries as well as others which do not have a regular shipping service. It would be reasonable to expect that with such delays in shipments there would be a certain steadiness in the afloat and ready market.

MAINTAINING RAW JUTE PRICES

Speaking at the annual general meeting of the Calcutta Jute Brokers and Dealers Association in Calcutta last week, Mr. I. S. Boyed, deputy chairman, said that as a result of the large jute crop last year, the market was easy and except for some of the higher grades, there was an abundant supply. Far too much raw jute was available in the lower grades and "had it not been for the concerted efforts of the Government and the Indian Jute Mills Association through the medium of minimum purchase quotas and the Jute Buffer Stock Association, the market would undoubtedly have collapsed." The position was aggravated towards the end of the past year by the incidents in border areas and also by the strike of the Joint Steamer Companies' crews. Nevertheless, the market survived and for this thanks are due to the efforts of all the parties concerned. Mr. Boyed referred to two other factors in connection with the maintenance of prices, namely, the State Trading Corporation entered the market for the first time and the export of "pucca" bales of raw jute was permitted for only the second time since partition. In neither case was the quantity involved significant in itself but sentiment assisted in arresting any drastic market collapse. If there is another bumper crop this year, Mr. Boyed said, it is impossible in the present circumstances to visualise how a serious decline in prices can be averted. It is not possible for the mills to continue building up stocks, for reasons of space and finance. It is, therefore, imperative that the accent should be more on quality rather than quantity, particularly to meet the increased demand for higher grades used in the manufacture of specialities, such as carpet-backing cloth, and to meet the situation caused by the loss of a considerable part of the sacking market to Pakistan.

E. E. C. PRESIDENT TO VISIT INDIA SHORTLY

By Malcolm Subhan

THE news that Professor Walter Hallstein is shortly to visit India came as a surprise to observers here. Although the Commission's president is a frequent visitor to the United States, official visits to third countries are normally paid by Mr. Jean Rey, the Belgian member of the Commission who is in charge of the Community's external relations. Coming so shortly as it does after Professor Hallstein's remarks to the European Parliament that the provisional agreement on India and Pakistan of last August should not be allowed to fall into oblivion, the news has inevitably given rise to speculation as to whether the Professor is not in fact going to New Delhi in order to discuss with Mr. Nehru and other Cabinet members the feasibility of a commercial agreement between India and the E.E.C. Both the Commission and official Indian circles have discouraged such speculation. Both stress the fact that Professor Hallstein has been invited to deliver the Azad Memorial lectures, and point out that the invitation was extended before the break-down of the negotiations with the U.K.

The Commission's president will no doubt take the opportunity to meet Mr. Nehru and certain of his colleagues, although in view of the present unsettled conditions prevailing within the Community itself, Professor Hallstein is not likely to discuss so important a problem as that of a commercial agreement between India and the Community except in very general terms. The fact that Mr. K. B. Lal, India's ambassador to the European Communities, does not plan to be in New Delhi during Professor Hallstein's visit, only confirms this impression.

None of this should distract from the importance of the visit. The Commission has little first-hand contact with Asia. The only visit which any of its members has paid to an Asian country was that of Mr. Jean Rey to Japan more than a year ago; but Japan is hardly typical of the developing countries of Asia. The developing countries have been strongly influenced by its relations with the 18 African States, associated with it, although as the Dutch and Germans have often pointed out, the associated States, with a population of 40 million or so in all, are hardly an adequate substitute for the countries of Asia and Latin America.

Professor Hallstein's visit may be seen as an attempt on the part of the Commission to broaden the Community's horizons. It is, therefore, of particular significance that India should be the first Asian country which the Commission's president has chosen to visit. Of course, his visit will not produce any dramatic results, and none should be expected. Although the Commission has substantial powers under the Treaty of Rome, and is in fact responsible for negotiations with third countries on Community problems such as those relating to tariffs, the decision-making power lies nevertheless with the Council of Ministers.

Relations with Developing Countries

It is difficult, however, to say just how far the six member States would be prepared at present to follow the Commission were the latter to adopt a more positive approach to the developing countries. During the

recent ministerial discussions on the new Convention of Association, the Dutch urged their partners to look beyond the 18 associated African States, although the cynics claim that the Dutch enthusiasm for the English-speaking States in Africa is not unrelated to the interests which Unilever and Royal Dutch Shell have in these regions, where it is not simply a question of reprisals against the French for having vetoed the British negotiations.

The fact remains, however, that in the case of India and Pakistan, the Six already have the basis of an eventual trade agreement, and Professor Hallstein will presumably refer to it when he is in New Delhi. It is contained in the provisional agreement adopted last August by Mr. Edward Heath and the six foreign ministers of the Common Market. An examination of this agreement in the light of the present situation could be instructive.

It will be remembered that the provisional agreement was in two parts. The first was devoted to the comprehensive trade agreement which the enlarged Community undertook to negotiate with India and Pakistan on Britain's accession to the E.E.C., and the second to the arrangements for the transitional period from Britain's entry to the conclusion of the comprehensive trade agreements. As the U.K. had accepted the common external tariff, the main purpose of the transitional arrangements was to provide for the gradual application of this tariff to her duty-free imports from the Indian sub-continent.

Obviously, the transitional arrangements have now become irrelevant. India is regarded by the Community as any other third country, and her exports to it are subject to the common external tariff. And yet it would be unwise to dismiss these arrangements as of no further interest. The mere fact that it should have taken so long to draft the transitional arrangements for cotton textiles, suggests that however liberal the principles espoused by the Six, their application will not always be easy. Moreover, the Six will insist on safeguards before making any concessions for products such as cotton and jute textiles, carpets, coir matting, and perhaps even light engineering goods, for all of which they had insisted that Britain introduce the common external tariff in four or five stages.

Principles of Trade Agreement

But the first part of the provisional agreement of last August, containing the decision to negotiate comprehensive trade agreements with India and Pakistan, is of even greater significance now. Unfortunately, it is relatively short and not sufficiently detailed to give a clear idea of the proposed agreements. The fact is, of course, that once the negotiators had outlined the principles of the comprehensive trade agreement they felt that the main apprehensions of India and Pakistan had been met. Happily, the objectives sought are explained clearly enough. The primary object of the agreements would be the development of trade between the Community and India and Pakistan in order to maintain, and if possible increase, the foreign exchange earnings of the two countries. As the Six have always been somewhat sceptical of the slogan "trade, not aid," the comprehensive trade agree-

ments were also expected to cover the question of direct financial aid. The Six maintain that India's foreign exchange requirements are so great that her exports cannot meet them. They expressed, therefore, their readiness to grant development credits and to extend other forms of direct financial and technical assistance.

It was this concern with financial as well as commercial problems which justified the objective "comprehensive." It is not clear now whether financial problems also would be discussed in any eventual negotiations between India and the Six. Presumably, much will depend on whether or not India wants to see credit problems covered by a trade agreement or dealt with within the framework of such an organisation as the Aid India Club (although the one does not exclude the other in principle). The Six may show a preference for a Community approach to problems of financial aid. They have already agreed to consult one another on questions of export credits, and in principle, they must adopt a community policy in this matter by the end of the transitional period. But as no such policy exists at present, each of the Six member-States may prefer to negotiate with India bilaterally in the matter of financial assistance.

Methods of Increasing Trade

A number of methods of increasing trade between the Community were outlined in the provisional agreement. The principal one, of course, related to tariff policy. The Six presumably would be prepared to grant to India the various concessions which they offered Mr. Heath last year, such as a zero tariff on tea, handloom products, and some other items. They would no doubt also be prepared to reduce certain tariffs. Such concessions may pose a practical problem for the Six, however. As the Community would negotiate separate agreements with India and Pakistan, the Six would find themselves in the awkward position of having to decide to whom the concession should be made. The obvious criterion—that of the principal supplier—may not always be feasible. (There is a feeling within the Commission itself that a zero tariff on tea, for instance, should be granted in the first instance to Indonesia, which is the Community's principal supplier—and extended to India and Pakistan on the basis of the most-favoured-nation clause.)

On the whole, the Six are unlikely to offer to reduce tariffs other than those agreed to last year. Indeed, they may prefer to negotiate important reductions only within the framework of the forthcoming Kennedy round in Geneva in order to avoid the impression of discriminating between developing countries. The Six have, however, indicated their willingness to open new tariff positions. This was a solution advanced in the case of East India kips, where the Six had agreed to reduce the tariff from 9 percent to 6 percent. It may be used in cases such as that of textiles, where any substantial reduction of the overall tariff is out of the question. Certain of the coarser textiles of which India is a main supplier could be the object of new tariff positions at lower rates.

The Community may also grant duty or duty-free quotas to its members. Such quotas are regarded as a temporary solution only. They are

disliked by the Commission, and Mr. Heath's request for duty quotas for certain Indian products such as tobacco was received by the Six with little enthusiasm. Moreover, the terms on which these quotas are granted are such that it is unlikely that any Indian products would qualify for them.

Negotiation for Quotas

Although quotas themselves are a matter for member-States to negotiate bilaterally, the provisional agreement listed the suppression or the enlargement of existing quotas as another means of achieving the objectives of the comprehensive trade agreements. The enlarged quotas would eventually be made available on a Community basis; that is to say, they would not be confined to any one member-State. Before suppressing quotas altogether, the Six may, however, insist on safeguard clauses or voluntary restriction agreements such as that in force between India and the U.K. for textiles.

Broadly speaking, the comprehensive trade agreements which the Six were prepared to negotiate with India and Pakistan offer a reasonable basis for negotiation. Much depends, of course, on the evolution of the present crisis within the Community. Moreover, the difficulties which the Six have encountered in their negotiations with Israel, and the problems which the negotiations with Iran have posed, suggest that the time is not yet ripe for India to make any official approach to the E.E.C. The sudden storm over the signing of the new Convention of Association must be allowed to blow over also.

"Here are five ways

BOAC Air Cargo can help your business!"

and give your Exchange-earning goods speedy, safe delivery!

- ★ Fast BOAC jetliners slash transit time by hours.
- ★ Direct BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.
- ★ Simple (cheap) packaging is all that's needed with careful BOAC handling.
- ★ Safe, efficient BOAC freighting means lower insurance costs, wider coverage.
- ★ Experienced BOAC staff give all goods individual attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit your business—and speed up consignments that earn valuable foreign exchange!

NO FRESH STATE TAXES ON SOUTHERN PLANTATIONS

(BY OUR SOUTH INDIAN CORRESPONDENT)

NO fresh levies have been imposed by the south Indian State Governments on the plantation industry in their 1963-64 Budgets. Although the Kerala Finance Minister has made several sweeping and far-reaching taxation proposals for the coming year to bring in an additional revenue of Rs. 4.85 crores, he has left the plantation industry and agricultural holdings alone. It appears that this State Government has started realising that the planting industry's capacity is almost exhausted. The Kerala Finance Minister disclosed in his Budget speech that actual turnover from the State levies affecting plantation and agricultural properties have fallen very much below the Budget estimate. The yield from the plantation tax which was introduced a couple of years ago is not likely to exceed Rs. 25 lakhs in 1962-63, compared with the Budget estimate of Rs. 50 lakhs. The additional tax on land and the land tax together amounting to Rs. 4 an acre have fallen through following the striking down of the Land Tax Act by the Kerala High Court. Under agricultural income tax, a fall of Rs. 11 lakhs is anticipated on account of the fall in the prices of cardamom, pepper, arecanut and some other crops. The plantation industry in south India which is confined to these three States, therefore, will pay in 1963-64 only the existing levies to the State Governments.

Although the tea interests welcome the abolition of export duty, they hasten to add that the relief has been rendered negligible by the simultaneous withdrawal of the refund of excise duty on tea export allowed in the previous Budget. The 20 percent surcharge on the already heavy excise duty will further enhance the cost of production. They are perhaps more concerned with the new taxes on the corporate sector visualised in the 1963-64 Budget. A major portion of the companies' profits will be taken away by way of income tax, corporation tax and super profits tax. Further, the super profits tax will impose a penalty on efficiency, impede capital formation and affect growth of the economy.

Raw Rubber Imports

Manufacturers of rubber products in India may have to spend more on their raw rubber imports on account of the new import duty on the commodity. Indigenous supply of natural rubber which is far short of the manufacturers' requirements is not expected to show any substantial improvement during the current year. Synthetic rubber is expected to become available from India's first factory from this year. Yet the manufacturing industry in this country will have to import a substantial share of its requirements from outside.

World statistics relating to the production and consumption of raw rubber (both natural and synthetic) point to an increasing trend. According to the International Rubber Study Group, world stocks of natural and synthetic rubber at the end of last year were higher than in the previous years. Last year, a total quantity of 2,105,000 tons of natural rubber were produced, compared with 2,090,000 tons in 1961. On the other hand, sales from the U.S., British

and other Government stockpile surpluses totalled 66,000 tons in 1962, against 29,000 tons in 1961. The total supply of natural rubber in 1962 was thus 2,171,000 tons, compared with 2,120,000 tons in the previous year. Consumption continued to be higher at 2,167,000 tons last year, against 2,132,000 tons in 1961, and 2,062,500 tons in 1960, inclusive of Russian imports which fell from 363,750 tons in

1961 to 345,000 tons in 1962. During 1962, China's imports rose from 83,250 tons to 107,500 tons, offsetting the fall in Russian purchases.

Synthetic rubber output rose from 1,980,000 tons in 1961 to 2,224,000 tons in 1962, whereas consumption rose from 1,917,500 tons to 2,142,500 tons. Stocks went up by 22,500 tons to 410,000 tons towards the end of 1962. Consumption prospects appear to be more favourable. Demand for rubber in the United States has been bigger, while consumption in Europe is also likely to rise substantially. There has been some anxiety about the political situation in south-east Asia, the main source of natural rubber supply. Stocks in Malaya are said to be substantial, and they are likely to be put on the market soon. The present feeling in market circles appears to be that the world rubber

market is unlikely to be strong in the near future.

Coconut Oil Recedes

Coconut oil price has started receding from the peak following the abolition of Central excise duty on unprocessed non-essential vegetable oils. Oil price was ruling at Rs. 308 a quintal on the Alleppey market just before the concession was announced and it drifted gradually to Rs. 272 by 8th March. Market sentiment continues to be weak and uncertain.

The new situation following the announcement of the 1963-64 Budget proposals has created difficulties in the settlement of the pending hedge contracts which had been quoted inclusive of the excise duty before the pre-Budget sessions of the market. The Oil Millers and Merchants Asso-

ciation which was conducting the futures market in Alleppey had decried that all futures contracts concerning March and April deliveries in the Alleppey market still outstanding as at the close of business on 28th February would be deemed to have been closed at the closing rates of Rs. 290 and Rs. 286 a quintal, respectively. Meanwhile, trading in the March and April delivery contracts has been suspended by the Association pending the approval of the scheme by the Forward Markets Commission.

The Chief Minister of Kerala, Mr. R. Sankar, in his recent Budget speech has testified that the present prices of coconut and its products are the "highest in history". Coconut is an important crop of Kerala, and its price fluctuations have a direct impact on the fortunes of the people in that State. According to the Chief Minister, there was a considerable fall in the production of coconut in 1960-61 due to abnormal weather conditions. Of the agricultural crops of Kerala, coconut earns the highest value of output and a considerable fall in the production of this crop badly affected the economy of the State.

Coir Exports to Burma

India's coir export trade with Burma is almost paralysed, according to certain members of the Kerala Assembly. These members who have

some stake in the coir industry complained in the State Legislature last week that following the trade pact between Burma and Ceylon that came into force from November last, Burma does not buy Indian coir. With the nationalisation of banks in that country, Indian exporters are finding it hard to realise their dues from Burmese buyers. The Labour Minister, Mr. Achuthan, who replied on behalf of the State Government said that Ceylon is not in a position to meet the entire requirements of Burma so much so that the trade agreement between these two countries is not going to block coir exports from India completely. Besides, the trade pact between India and Burma provides for coir exports to Burma. The State Government is not aware of any difficulty of the Indian exporters about the settlement of their accounts with the Burmese buyers.

In reply to another question in the House, Mr. Achuthan disclosed that only Rs. 2 lakhs out of the Budget provision of over Rs. 19 lakhs for coir development could be used during the first nine months of 1962-63. This amount was distributed as loan to coir co-operative societies in Kerala. There was delay in the disbursement of loans due to the failure of the societies in satisfying certain conditions laid down by the Government for giving loans, the Minister said.

SUPER PROFITS TAX WORRIES TEA INDUSTRY

(BY A SPECIAL CORRESPONDENT)

THE Indian Tea Association held its annual meeting on 8th March in Calcutta. The chairman, Sir Richard Duckworth, in his address discussed the many difficulties with which the planting community is faced. The export duty on tea has been abolished, but the industry now has to take an increase of 20 percent in excise duty. "The move is one which the industry as a whole must regard with some satisfaction", but if the exporters find the situation easier, the industry is worried about the levy of the super profits tax. A great deal of the expansion as well as development in planting was financed in the past by ploughing back profits and not by raising new capital. The capital structure of many companies has remained unchanged for years, and such units are bound to be hit hard by the super profits tax. Other difficulties may be imposed on the managements by the Wage Board and the Bonus Commission. The payment of increased wages will aggravate the difficulty of financing tea estates for, it is reported, practically all gardens in Cachar, 11 percent in Darjeeling and 25 percent in Assam are already running at a loss. It follows that even the smallest increase in wages will add to the number of losing estates.

As for bonus, Sir Richard said that there had been occasional years of admitted prosperity. The industry has, therefore, accepted the principle of profit-sharing, and it has agreed that if the industry makes profits, a share of the profits will go to the workers. Such an arrangement is very flexible, and imposes no additional burden when times are bad and allows the workers to participate when times are good. "Since our agreements started, we have paid out over Rs. 19 crores in bonus, the equivalent of nearly £15,000,000".

Housing is another expensive problem. The chairman has pointed out that the allegations that the industry has provided accommodation only for 30 percent to 40 percent of its

workers is not correct. Actually, the gardens provide accommodation for men, women, children and a lot of other people, who live rent free in houses on companies' lands. This has always been the practice in the tea industry. As this correspondent can testify, over 50 years ago, when the new labour was being recruited, the garden concerned built new "lines" and made new "wells" for the fresh arrivals. The old thick mud-walled rooms with good thatch roof plus a semi-verandah were probably a great deal cooler than the new erections, now under construction. The industry has so far rebuilt or constructed 118,000 houses to new specifications. Another difficulty which will be

accentuated by the increase in excise payments is that "until the duty is paid no tea can be despatched from an estate."

The industry has made representations and suggestions to the Government, about minimising the difficulties of the estates on this account.

The Darjeeling Branch of the Indian Tea Association has also submitted its views on the proposed fiscal adjustments which are too severe on the tea industry, as the taxes on company profit will amount to about 80 percent. This will check expansion and development. The memorandum points out that tea production is a highly speculative business as in addition to trading risks and difficulties, it has to face

agricultural hazards such as drought, hail, pests and diseases.

The Tata-Finlay Private Ltd of Bombay will raise a further capital of Rs. 1 crore in equity shares of Rs. 100 each at par. The proceeds of the issue will be used for the production of instant tea. James Finlay and Co. Ltd of the U.K. is interested in the venture. The former Company's announcement states that 44,680 shares will be offered for cash, and 4,600 shares against payment for technical "know-how" will be offered to the U.K. Company. The instant tea product will be in powder form and soluble in hot or cold water. The factory will be in Kerala, and it is expected to begin producing early in 1964. The Company expects to export up to 14 million lbs in the near future.

The Price Line

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Directors have decided to declare a second Interim Dividend on 28th March, 1963 (additional to the Interim Dividend of 24%, subject to tax, declared on 28th August, 1962) in respect of the Company's financial year ending 31st March, 1963, of 24%, subject to tax, payable on or after 11th April, 1963 to registered shareholders whose names appear in the Register on 28th March, 1963 or to their mandatees.

The Share Transfer Books of the Company will be closed from 25th to 28th March, 1963 and transfers received at the office of the Registrars of the Company, Jardine Henderson Limited, 4, Clive Row, Calcutta, before close of business on 23rd March, 1963 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board
B. GRANGER PEARSON
Secretary.

Virginia House,
37, Chowringhee,
Calcutta.
8th March, 1963.

THE VICTORIA JUTE COMPANY LIMITED

THE Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 7% making, with the interim dividend, 10% for the year ended 31st December 1962; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1962.

These dividends will be paid on 2nd April 1963, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 19th March to 2nd April 1963, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1962.

Preliminary figures for the year ended 31st December 1962 show Trading Profit £287,212 (loss £59,922), Income from Investments £17,600 (£14,989), Depreciation written off £45,000 (£10,000), net profit after Taxation £174,277 (loss £92,489), net interim dividends already paid £10,106, net dividends now declared £19,906, transfer to General Reserve £35,000 (from General Reserve £35,000), Transfer to Modernisation of Machinery Reserve £20,000 (Nil), and estimated carry forward £44,079 (£4,814).

Trading conditions for the current year continue favourable.

P. WILLIAMS,
Secretary.

Dundee, 12th March, 1963.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED

THE Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 10% making, with the interim dividend, 13% for the year ended 31st December 1962; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1962.

These dividends will be paid on 2nd April 1963, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 19th March to 2nd April 1963, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1962.

Preliminary figures for the year ended 31st December 1962 show Trading Profit £307,242 (loss £40,302), Income from Investments £31,915 (£27,003), Depreciation written off £30,000 (£10,000), net profit after Taxation £215,034 (loss £57,609), net interim dividends already paid £13,781, net dividends now declared £39,506, Transfer to General Reserve £65,000 (from General Reserve £65,000), Transfer to Modernisation of Machinery Reserve £30,000 (Nil), and estimated carry forward £73,365 (£6,618).

Trading conditions for the current year continue favourable.

P. WILLIAMS,
Secretary.

- (2) On the Preference Shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1962.

These dividends will be paid on 2nd April 1963, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 19th March to 2nd April 1963, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1962.

CAPITAL, 14th March, 1963.

Preliminary figures for the year ended 31st December 1962 show Trading Profit £471,356 (loss £58,238), Income from Investments £22,174 (£19,073), Depreciation written off £30,000 (£10,000), net profit after Taxation £115,879 (loss £77,715), net interim dividends already paid £13,781, net dividends now declared £28,481, transfer to General Reserve £65,000 (from General Reserve £65,000) and estimated carry forward £13,397 (£4,780).

Trading conditions for the current year continue to be favourable.

P. WILLIAMS,
Secretary.

Dundee, 12th March, 1963.

THE BENGAL PAPER MILL CO. LTD.

Notice of First Call.

NOTICE is hereby given that by a resolution passed on the 25th February, 1963 the Board of Directors of the Company have decided to make First Call of Rs. 5/50 per share (inclusive of Rs. 3/- on account of premium) on 1,80,000 Equity Shares of Rs. 10/- each issued at Rs. 22/- per share. The call money is payable to the Company at its Registered Office on or before 30th April, 1963 by the Shareholders registered as on the 30th March, 1963. The holders of shares with blank transfer deeds are requested to lodge them with the Company for registration of transfer.

The Transfer Books of the Company will remain closed from 25th March to 30th March, 1963, both days inclusive.

By Order of the Board,
H. P. DHANUKA,
Director.

Registered Office:
14, Netaji Subhas Road,
Calcutta-1.
11th March, 1963.

such dangerous ideas unless the Finance Minister can persuade himself to make a formal and categorical denial. The report hints that the super profits tax might be only temporary; that the averaging of assessments might be allowed in order to help companies with widely fluctuating profits; and that "the disincentive to foreign investment could also be suitably taken care of by necessary relief measures." But these would represent only marginal adjustments in a levy that, to begin with, is wrong-headed and disastrous. No investor or company can be expected to rely on hints and assurances other than those specifically given by the Finance Minister and written into the law.

The basic assumption implicit in the discussion on the super profits tax is that companies in India are making excessive profits, so these must be penalised. No attention has been given to the criticism that the criterion for judging "super profits" is completely arbitrary, and is likely to hit the efficient concerns hardest. The view, on the contrary, seems to be that "super profits" are due to "monopoly power"—the politicians' syno-

JUTE MILLS STUNNED

IN an industry subject to wide fluctuations in its fortunes, long-term problems tend to get obscured by the natural concern over immediate prospects. This is particularly true of the Indian jute industry since independence, because neither raw material supplies nor world market conditions have remained sufficiently stable over any length of time for the basic policy issues to crystallise in public thinking. With production running at the level of 100,000 tons a month, and with ample supplies of raw material in hand because of two successive bumper crops, 1963 could have provided the jute industry with just that breathing spell it clearly needed to consolidate its gains and equip itself for an uncertain future. But that is unfortunately not to be because the Finance Minister, Mr. Morarji Desai, has chosen to undermine the very basis on which long-term plans were being formulated by his super profits tax. After a long spell of misfortunes culminating in the heavy losses of 1961, the industry has had a prosperous year in 1962. But if a large proportion of these profits are to be taken away by Mr. Desai's latest levy, there will be no cushion left against periods of adversity. More than that, the industry will be deprived of the financial resources required for completing the urgent task of modernising the mills. In fact, the financial stringency, already acute because of the large fibre stocks the mills are compelled to hold, will become much worse with the commitments for the purchase of new equipment that have in many cases already been made.

It is appropriate, therefore, that the threat to the industry's future posed by the super profits tax should have been underlined by Mr. C. L. Bajoria in his address from the chair at the I.J.M.A. annual meeting in Calcutta last Friday. As he said, there are only two courses open to the jute industry—either it modernises to strengthen its competitive position, or it reconciles itself to a slow but steady decline in the face of Pakistan's determined bid to capture world markets, and the emergence of local manufacturing units in several countries of Africa and the Middle East. Since modernisation, in spite of the limited assistance available from State-sponsored financial institutions, has to be based on the jute mills' own resources, penal taxation of profits in a good year like 1962 will have the effect of halting further progress. This, as Mr. Bajoria warned, is a grim prospect indeed for India's principal export industry, and the fact that textiles are specifically excluded from the benefit of the new export incentives only compounds the injustice.

Official apologists for the super profits tax have claimed that the 26 percent development rebate available on new equipment will have the effect of reducing its rigours and encouraging expansion. But the assertion overlooks the simple fact that if the tax sharply reduces the company's net earnings, the profits that can be retained in the busi-

nym nowadays for a sheltered home market. The argument follows that if the prices of basic industries like coal, cement, steel and paper are controlled, the profits of the others should also be—so as to divert investment to the former. The point has been missed that private savings are not an irresistible flood which must always find some industry or the other to get into; the main effect of the super profits tax will be that the volume of savings as such will decrease sharply, and any industry wanting to expand will then be left almost completely at the Government's mercy. The authors of the report appear to be not too unhappy about the prospect. In fact, it appears to be precisely what they want, since they imply that the savings raked in by the Government will always be there to make up for the decline in savings from private investors. In the light of their report, the super profits tax acquires an altogether new meaning. Its significance is not merely that it mops up Rs. 25 crores or Rs. 30 crores; the more important aspect may be that it is a far-reaching attempt at financial starvation, followed by Government intervention, in private industry as a whole.

Urging companies to borrow in order to finance expansion is unlikely to be a practical idea in the present conditions of the capital market, apart from the fact that high gearing reduces the capacity to absorb shocks in periods of adversity when the servicing of debt becomes difficult. In an industry where profitability is as erratic as in jute, this factor alone will deter borrowers no less than lenders. It is hardly a solution to suggest that the Government's financial institutions may be expected to help. There is the example of the coal industry, where such assistance was expressly promised but has still to materialise to any significant extent. If the Finance Minister is serious in his professions of concern for export promotion, nothing short of substantial modifications in his tax ideas will really serve.

Although the immediate issue of the super profits tax is prominent in the industry's mind in these post-Budget days, its need for New Delhi's support to contend with Pakistani competition is equally pressing. Here again, it would be pointless to delay action because just now the industry is in a position to earn reasonable profits despite the competition offered by the rapidly growing industry across the border. The pent-up world demand which kept both Pakistani and Indian mills working to capacity for most of 1962 is petering out, specially in the case of sacking. In July-December 1962, exports of sacking were only 17,000 tons above the same six months of 1961, as against a difference of 86,000 tons in the case of hessian. A similar conclusion emerges from the fact that the stocks of sacking rose from 36,500 tons at the end of May 1962 to 49,200 tons at the end of January 1963. This confirms that Pakistani mills, thanks to their lower raw mate-

THE BUSY SEASON SQUEEZE

ALTHOUGH the traditional busy season in the money market still has many weeks to run, the banking system is under heavy strain. The acute monetary stringency has pushed the inter-bank call money rate to 6½ percent or 6½ percent. Scheduled banks' returns for the week ended 8th March show how intense the pressure on banks' resources is. During that week, bank credit increased by as much as Rs. 43.92 crores (from Rs. 1,536.61 crores to Rs. 1,580.53 crores), which accounts for nearly 22 percent of the total credit expansion since the beginning of the busy season in November. While credit recorded a steep rise, bank deposits declined by Rs. 15.02 crores (from Rs. 2,028.51 crores to Rs. 2,011.49 crores), with the result that the banks were obliged to liquidate their investments and borrow more from the Reserve Bank. Investments declined by Rs. 24.27 crores (from Rs. 612.15 crores to Rs. 587.88 crores)

and the export bonus scheme, are in a position to displace Indian sacking at will, the only limitation being their present production capacity. But the number of looms is steadily on the increase, about 2,000 having been added within the past 12 months and another 4,000 due to be installed before 1965, when the total on the basis of 24-shift working will be equivalent to 35,000 looms. Having already lost 60 percent of the market in Burma, 37 percent in Australia and 63 percent in Peru (according to the figures Mr. Bajoria cited), the I.J.M.A. chairman's analogy with an oncoming flood cannot be dismissed as a mere rhetorical flourish.

It is not as if the problem is not recognised by New Delhi. Almost a year ago, concern over the industry's prospects led to the appointment of a committee headed by Mr. N. C. Shrivastava, adviser to the Planning Commission. But before its recommendations have been either acted upon or made public, another study group has been set up under the aegis of the Board of Trade to look once again into export possibilities. While there can be no objection to keeping export problems under continuous study, the need for fresh thinking should not stand in the way of positive action even if it is explicitly on a temporary basis. The point may also justly be made that competitors are not going to wait while New Delhi perfects its counter-measures. It is futile, therefore, to defer protective measures until such time as the whole structure of the jute goods trade has been refashioned (if it can ever be done) to fit some academic mould of New Delhi's conception. With the U.S.A. as one of India's principal markets, anything suggestive of official control over trading cannot but do harm to India's reputation, as the Government was obliged hastily to recognise by the storm of protests from U.S. buyers over the Customs authorities' interpretation of existing contracts.

The price of raw jute has an important bearing on the industry's international viability because it accounts for almost 60 percent of the production costs. The point here essentially is that price support should not foster the cultivation of low-grade jute, the large proportion of which in the total crop is already a major source of embarrassment. With the greater emphasis on the production of hessian and carpet backing cloth, the demand for low grades suitable for sacking is in any case likely to decline. This tends to exert an unhealthy downward pressure on fibre prices, which statutory controls cannot stem, and the only practical solution is to build into prices an incentive for the improvement of quality. The I.J.M.A. has taken a fair share of the responsibility by its work in popularising improved seeds and better cultural practices. It is up to State Governments—particularly in Bihar, where the low grades constitute a special problem—to undertake effective follow-through. State Governments are understandably more susceptible to political pressures exerted, ostensibly at least, on the growers' behalf. But the realisation has to be brought home that unrealistic prices will only increase the cost advantages of Pakistan and encourage other countries to establish their own mills.

and borrowings from the Reserve Bank rose sharply by Rs. 26.91 crores (from Rs. 56.91 crores to Rs. 83.65 crores).

During the current busy season—26th October, 1962 to 8th March, 1963—bank credit has expanded by Rs. 196 crores, against an increase of Rs. 154 crores in the corresponding period of 1961-62 and Rs. 204 crores in the entire 1961-62 busy season (November to April). Deposits are up by a mere Rs. 15 crores—the figure has been arrived at after allowing for the transfer of Rs. 50 crores of U.S. counterpart funds from the State Bank to the Reserve Bank—against an increase of Rs. 73 crores in the same period of the last season. In view of the disappointingly small increase in deposits so far this season, the credit expansion of Rs. 196 crores has been achieved mainly by borrowing from the Reserve Bank (which have risen by

Rs. 75 crores) and liquidation of investments (which are down by Rs. 73 crores, after allowing for the adjustment of U.S. counterpart funds amounting to Rs. 50 crores). In the corresponding period of the 1961-62 busy season, the Rs. 154-crore credit expansion was met mainly by an increase of Rs. 73 crores in deposits, a Rs. 41-crore rise in borrowings from the Reserve Bank and liquidation of investments to the tune of Rs. 35 crores.

In spite of various restraints on banks' lending, the demand for credit has continued to expand in keeping with the growing tempo of economic activity in the country. On 8th March, the credit-deposit ratio of all scheduled banks touched a high of 78 percent; if the State Bank of India is excluded, the ratio of scheduled banks in the private sector is much higher, around 83 percent. Scheduled banks' borrowings from the Reserve Bank at Rs. 83.65 crores, as on 8th March, are nearly Rs. 18 crores in excess of their overall quota, which works out to around Rs. 66 crores. Bank borrowings from the Reserve Bank are at present ordinarily subject to a ceiling of 100 percent of their statutory reserves, borrowings up to 50 percent being charged at Bank rate of 4½ percent and the remaining 50 percent at 6 percent. Advances above this limit are subject to approval, and also to a special charge. The special accommodation sought by the banks from the Reserve Bank is an indication of the growing pressure on their resources. With the growing industrialisation of the country, and the changes in the structure of deposits and in the pattern of bank advances, the busy season has lost much of its traditional character. This is why the contraction of bank credit during the 1962 slack season amounted to only Rs. 42 crores—a little more than a half of that in the 1961 slack season. The pressure on banks' resources might not ease materially even after the end of the traditional busy season in April. While the stepping up of defence and development effort is likely to sustain the demand for bank credit at a high level, the growth of deposits has slowed down appreciably and the rate of growth cannot be expected to show any marked improvement in the near future in view of the steep rise in taxation and the massive programme of public borrowing.

The Reserve Bank has now decided to introduce, with effect from 23rd March, the export bills credit scheme. It has also offered to provide additional quotas in relation to banks' advances to small industries and co-operatives. The decisions indicate that the central banking authority is well aware of the impact of current economic trends and the budgetary policy on the banking system. Under the export bills credit scheme, banks will be granted the facility of borrowing from the Reserve Bank at Bank rate within their overall quotas against eligible export bills drawn in Indian rupees or foreign currencies. In the case of bills drawn in Indian rupees, banks will be entitled to borrow from the Reserve Bank over and above their quotas at Bank rate amounts not exceeding the value of export bills, provided they do not charge a rate exceeding 1½ percent above Bank rate. As for the facilities for securing accommodation from the Reserve Bank against advances to small industries and co-operatives, the Reserve Bank has stipulated that the additional quotas made available to scheduled banks at Bank rate for such lending will be over and above their total borrowing quotas, without any corresponding reduction in their 6 percent borrowing quota as at present. As a result of this relaxation, scheduled banks will be able to borrow an additional amount of about Rs. 10 crores at Bank rate. A substantial portion of the benefit will naturally go to the State Bank of India, which is the major lender to small industries and co-operatives.

F.I.C.C.I.: MR. NEHRU ASKS FOR HONESTY

THE main feature of the annual session of the Federation of Indian Chambers of Commerce and Industry in New Delhi last Saturday was the Prime Minister, Mr. Nehru's exhortation to business men to observe the highest standards in their dealings. He gave this advice in view of the Vivian Bose Commission's report on Dal-

mia-Jain companies which came as a shock to many. Mr. Nehru said that the report revealed how things were done and managed by a group of companies "to the detriment of public good". Many questions had "arisen since then as to how this kind of thing should be dealt with, not only a particular thing enquired into, but the wider picture". Although the Vivian Bose Commission's report related to the working of a single group of companies, Mr. Nehru felt it was necessary for business men to check the impression that "all is not well in our commerce and industry and that the standards that we should keep up are not adhered to".

Mr. Nehru's exhortation came after the speech of the F.I.C.C.I. president, Mr. Shriyans Prasad Jain, who is one of the persons criticised by the Vivian Bose Commission in its report. Mr. Jain's speech was, perhaps understandably, confined to other, more general economic issues. Criticising the Central Budget, and the super profits tax in particular, he said that it would drain the resources of the private sector and penalise efficient companies. The additional incidence of the super profits tax on better-managed concerns would be about 15 percent to 25 percent of profits. The F.I.C.C.I. president reiterated the criticism that the Government has not taken advantage of the help and co-operation offered by industry for the defence effort. Pointing to the freeze on plans for industrial development, he referred to the virtual embargo on the licensing of many new industries and the decision to curtail the number of priority industries for the import of capital goods to 21. Economic policies based on political dogmatism are still being pursued at the cost of increased production. Besides, the administrative machinery continues to move as slowly as ever before.

The growth of the economy is already being seriously retarded. The stock markets, which are the barometer of investor confidence, are depre-

sed. New company flotations have become extremely difficult, and foreign risk capital is tending to shy away from India. To add to the worries of the corporate sector, bank finance has become expensive and difficult to obtain because of the restrictive credit policies. As Mr. Jain stated, the test of the new tax burdens is whether they will promote economic growth and production. But when the squeeze has been applied on every section of the people so as to net in a total of over Rs. 275 crores in one big sweep, little scope will be left for corporate savings and expansion. Middle-class investors, whose interest in the investment market has been welcomed and encouraged by the Government, will be left with little savings.

In his speech at the F.I.C.C.I. session, Mr. Nehru reiterated the Government's decision to strengthen the defence effort and at the same time to go ahead with the development plans. But unfortunately, there are certain basic inconsistencies in the official policies. Firstly, if development has to proceed smoothly, the resources for it cannot be denied to the private sector. Secondly, if the Government wants to prevent a rise in prices, the proposed fiscal measures will have to be modified, since they will inevitably push up industrial costs. The F.I.C.C.I. has expressed the readiness of its members to undertake new responsibilities and has offered its co-operation in stepping up the defence effort and accelerating economic growth. The resolution on the subject says that this "can be accomplished by the authorities and the people working together in unison". It is to be hoped that ideological considerations will not come in the way of the Government harnessing the energies and resources of the private sector. The F.I.C.C.I. emphasises that "the preoccupation with taxation as a key to development must give place to a purposive programme of financial and fiscal encouragement to private industry".

Current News and Comment

Importance of Small Banks

The Governor of the Reserve Bank, Mr. P. C. Bhattacharyya, told a seminar for chief executive officers of small banks in Madras last week that in India's expanding economy, small banks have ample scope to co-exist with large banks. The former have a distinct advantage where local knowledge and contacts are important. The remarks should go a long way in correcting the popular belief that small banks are always at a disadvantage. Mr. Bhattacharyya went further and pointed out that small banks are already playing a significant rôle in reducing the operations of usurious moneylenders. At present, nearly three-fifths of the assets of the household sector—in which the bulk of the national savings are made—are held in the form of physical assets. Since small banks have many offices in centres with a population below 50,000, there is ample scope for them to mobilise resources which big banks cannot. In the past, small banks have concentrated on personal loans, usually against the security of gold ornaments. At present, such loans form nearly two-fifths of the total advances of Indian non-scheduled banks. It is possible for the banks to play a greater rôle in the financing of small-scale industry and trade, thereby making their advances more broad-based and at the same time increasing their earnings.

The main problem is to make small banks viable and efficient. In the past, the Reserve Bank has tried to achieve this result by amalgamating small banks with bigger and more efficient ones. But, in this process, even the efficient small banks might lose their individual existence. Another method which the Reserve Bank has tried is to conduct careful and frequent inspection of banks, both big and small. But external inspection is no substitute for internal efficiency and integrity. Besides, as Mr. D. R. Joshi, executive director of the Reserve Bank, pointed out,

when the Reserve Bank inspector visits the bank, the small bank executive views him with hostility as someone trying to find fault. This prevents the inspector from being as useful as he could otherwise be. The fact of the matter, as Mr. Joshi put it, is that "the Reserve Bank makes many rules but allows the bank executive and the banking machinery to function on their own. Only when there is a fault the Reserve Bank tries to set it right. The Reserve Bank is just like a pilot". If executives realise this fact clearly, it would be possible to increase the viability and efficiency of small banks much more quickly. With the introduction of the deposit insurance scheme, it should be possible to make a greater appeal to small depositors and thus to attract more funds.

In the ultimate analysis, the viability and efficient operation of small banks depend on the efficiency and integrity of bank managers and scrupulous adherence to "canons of business prudence and sound management". As Mr. Bhattacharyya pointed out, the discretion of the chief executive officer plays the most crucial rôle in planning the scale of operations of the bank, in improving its services, in the judicious dispensation of credit, in maintaining adequate liquid assets and in ensuring profitable working so as to add to reserves and pay dividends to shareholders. For this purpose, it is necessary that small banks should make greater use of the Bankers Training College in Bombay. The benefits of training at this College have accrued over a wide area but it has not been possible for small banks to take full advantage of the facilities.

Banks: Interest and Service Charges

At a meeting held in Bombay last week under the auspices of the Indian Banks Association, it was decided that no change is required in the

existing interest rates on deposits and advances. The spread between these rates, it was claimed, was not greater than in other countries; the expenses of banks in India were increasing rapidly; and it was necessary to strengthen their financial position. The main problem which commercial banks face at the present time is that their deposits have not increased much, while the demand for bank credit has expanded greatly. It has been argued that the present position is unstable because the spread between deposit rates (ranging from 3 percent to 5 percent) and rates of interest on advances (ranging from 6½ percent to 8 percent) is too great and should be narrowed. But the bankers have come to the doubtful conclusion that it would not serve any worthwhile purpose to increase deposit rates.

It seems that the deposits of commercial banks are not increasing rapidly because some people are lending their money to industry and trade at high rates of interest. Business houses may also have reduced their deposits with banks because they have to pay the emergency risks insurance premiums and also taxes. When the slack season sets in, the deposits of commercial banks might grow, but it seems unlikely that they will increase fast enough. In order to help the banks to tide over the present difficulty, the best course would be for the Reserve Bank to liberalise their credit limits so that they are not forced to liquidate their investments.

Mr. Tulsidas Kilachand, chairman of the Indian Banks Association, who presided over the meeting, suggested that the question of standardising service charges should be considered further. But the bankers came to the conclusion that service charges should be flexible in order to allow for an element of competition. The financial charges made by the banks differ widely. In addition to interest, they usually include insurance charges, charges for godown and inspection, charges created by the minimum interest clause and by the margins imposed by banks. Although the banks charge interest rates according to the inter-bank agreement, they often waive some of the other charges and provide special facilities to favoured clients. The nature of banking business is such that it is best to leave them flexible in order to promote competition.

An important problem which the bankers discussed was the incidence of the super profits tax on banking companies. According to one estimate, the banking industry might have to pay Rs. 4 crores annually as super profits tax. This will impose a heavy burden. The Central Finance Minister, Mr. Morarji Desai, has himself suggested the need for increasing paid-up capital and reserves. Moreover, banks not only have to pay deposit insurance premia and higher emoluments to their staff; they also have to run branches in semi-urban areas at a loss for quite a long time in the beginning. There is a strong case for exempting banks, like the Life Insurance Corporation, from the super profits tax.

Replacing Super Profits Tax

The speech of Mr. F. E. H. Goddard, outgoing president, at the annual general meeting of the Bombay Chamber of Commerce and Industry last Friday, naturally concentrates on the controversial super profits tax. While conceding that business men and industrialists have to contribute money for defence, Mr. Goddard says that the super profits tax, with an estimated yield of Rs. 25 crores, will be disastrous in its incidence. This yield can be obtained with less administrative trouble by a special emergency surcharge of 6.25 percent on the corporation tax. The super profits tax is a wholly new measure and will inevitably give rise to disagreements between tax collectors and assesses with consequent additional work. As an instance of the litigation-potential of a new levy, he cites the business profits tax which was in force from 1946 to 1949. Even 14 years later, cases arising from genuine disagreements about assessment are pending in the courts. The Super Profits Tax Bill does not mention that it is proposed only for the period of the emergency. Besides mulcting efficient producers, it will discourage the flow of foreign capital into Indian industries. Mr. Goddard says that in Maharashtra

alone, the future of investment schemes in the private sector involving over Rs. 50 crores has been jeopardised. Efficient companies that are going into production will find that the income they had planned to use for repaying loans under deferred payment terms will not be available because of the new tax.

Mr. Goddard is highly critical of the large number of holidays declared by the Government in spite of the emergency. They will naturally affect production. This apart, the existing production capacity is not being used fully because of the shortages of raw materials, coal, power and transport. Although some idle capacity may be inevitable in the initial stages of development, he says that there can be no justification for unused capacity of 35 percent to 65 percent in many industries. There may also be idle capacity in the civil machinery of the Government itself. When the tax-payer has been asked to shoulder such large burdens, it is essential that the Government should make the best use of its own human and material resources.

Importers in Difficulties

The foreign exchange allocations for imports having been cut drastically, the lot of established importers has not been a happy one. Since the declaration of the emergency following the Chinese invasion, their position has become even more difficult. More and more of their licences are being taken away and given instead to actual users or the State Trading Corporation. Addressing the annual general meeting of the Calcutta Import Trade Association in Calcutta last week, Mr. L. R. Patel thought that this was being done on the grounds that there has been trafficking in licences and that the goods imported against them are being sold "at an excess profit." This is wrong and no established importer of repute has ever done it, he says. The Government does not realise that the established importers' services to the consumer include not only a specialised knowledge of the equipment which he has been importing for a considerable time, but also the best methods of obtaining equipment on the most advantageous terms.

Discussing the disadvantages of the new policy, Mr. Patel says that an actual user who imports his own equipment and also spares must necessarily keep a full range of all the necessary spares. "If a hundred actual users import a hundred similar items together with a hundred sets of spares for these items", there will be a considerable duplication of the spares so imported and a totally unnecessary drain on foreign exchange. As for the increasing activities of the State Trading Corporation, Mr. Patel has pointed out that it does not have the same facilities nor the same experience as established importers, in catering to the demand for technical items. Even if it wants to, the State Trading Corporation cannot possibly provide the same service to its customers as the established importers do. "It is only another middleman who is increasing the cost of goods to the consumer without providing the necessary and essential service."

Referring to the latest Budget increases in the rates of import duty on machinery and spares, Mr. Patel says that all items will now be assessed at 22 percent, instead of 15 percent. Where excise duty is applicable, the total amount of duty payable will be 38 percent in place of 27½ percent previously. The total amount of Customs and excise duty on an earth-moving or mining dumper will work out to the incredible figure of 78½ percent, which is an increase of almost 65 percent on the previous rate of 47½ percent. Most of the heavy equipment and earth-moving machinery are now purchased by Government projects; collieries and Government-managed companies, and any extra duty levied on new equipment by one Ministry will have to be paid by other Ministries. The burden, of course, will have to be borne ultimately by the consumer. Mr. Patel did not wish to offer specific comment on the Central Budget proposals for 1963-64, but he broadly observed that the extent and magnitude of the proposed taxes are such as will increase the cost of maintenance and production, inflict a serious blow to the growth and development of industry and have

widespread repercussions on economic growth and the general price level.

Growth of Cotton Mill Industry

The latest statistics about the Indian cotton mill industry for the year ended August 1962, compiled and published by the Millowners Association, Bombay, show that the industry's growth has continued to be at a very slow pace. At the end of August, there were 526 mills, compared with 523 mills a year before. In addition, the number of idle mills fell from 26 to 23. Besides, there were 23 mills which had been registered and are in the course of erection, the corresponding figure for August 1961 being 24. The paid-up capital of mills, however, increased substantially by Rs. 10.81 crores from Rs. 136.22 crores to Rs. 147.03 crores, which compares with an increase of only Rs. 1.34 crores in 1960-61 and Rs. 4.18 crores in 1959-60.

The expansion in the size of the mill industry was accounted for only by the spinning sector. The number of spindles installed rose by 152,903 from 13,984,981 to 14,137,884: the increase in 1960-61 was smaller at 121,230 spindles. The figure for looms installed, however, was down, although only slightly, from 206,525 to 206,486. In 1960-61, the number of looms installed recorded an increase of 961. There was a more intensive utilisation of the capacity than in the previous year, in that the ratio of spindles working first shift only to the total number of spindles installed, showed a small improvement from 86.7 percent to 87.8 percent. The like ratio for looms showed only a modest rise from 89.3 percent to 89.7 percent. The average number of workers employed in all shifts during 1961-62 was 782,176, compared with 778,301 in 1960-61 and 766,347 in 1959-60. The quantity of cotton consumed was considerably higher at 56,34,930 bales (of 392 lbs each), compared with 53,47,554 bales in 1960-61.

Trends in Industrial Output

During 1962-63, the second year of the third plan, there was a further increase in India's industrial output, according to the annual report of the Ministry of Commerce and Industry. The index of industrial production touched an average of 149.8 during January-September 1962 (base year 1956)—a rise of 8 percent, compared with the corresponding period of 1961. The upward trend was particularly marked in jute manufactures, woollen fabrics, steel, aluminium, machine tools, railway wagons, electric motors, power transformers, cables and wires, soda ash, calcium carbide, viscose staple fibres and coated abrasives. The production capacity was substantially increased in several industries, including tyres and tubes, aluminium, cables and wires and caustic soda. The jute industry, says the report, worked to full capacity because of the availability of adequate raw jute. The production of cotton cloth and yarn, however, remained steady at the previous year's level. The increases in production, however, should not lead to complacency because compared with the rise of 10.8 percent in 1960, an increase of 8 percent is a distinct slow-down. Shortages of transport, power, industrial raw materials and capital equipment have conspired to lower the growth rate.

The annual report claims that the third plan targets for several industries have been fully covered by industrial licences, the number of licences granted during the year being 1,058, compared with 1,353 in 1961. Vigorous steps, says the report, were taken to render all necessary assistance to the licencees. However, it should be noted that a large number of licences had to be revoked because the parties concerned did not go ahead with the schemes. The Government's desire to prevent concentration of industries in a few hands led to the grant of licences to a large number of new parties who had neither the experience nor the resources to start industries. There were also instances of some parties applying for licences just to preclude others from getting them. Thus the number of licences granted is hardly a reliable index to the progress of industrialisation.

Some of the new items, production of which was undertaken during the

nets, formaldehyde, heavy water, tyre cord yarn, polyester resins, transistors and diodes and punch-card sorters. Almost all metallurgical industries, excepting antimony, lead, brass/copper sheets and circles and electrolytic copper wire and rods, have registered a significant rise in production. The chemical industries have maintained a satisfactory level of output in spite of the foreign exchange shortage. The output of soda ash may rise significantly as a result of some of the new units going into production. The output of industrial explosives, safety fuses, polyethylene, polystyrene, potassium permanganate and antibiotics like penicillin and tetracyclin also increased substantially.

Idle Capacity in Refractory Units

The growth of the refractory industry has been rapid in recent years. The installed capacity has increased to 850,000 tonnes in 1962 from 400,000 tonnes in 1957. The meeting of the panel on refractories pointed out in January 1963 that the installed capacity would increase to about 1.4 million tonnes in 1965. Speaking at the annual general meeting of the Indian Refractory Makers Association in Calcutta recently, Mr. D. Gopalakrishnan, chairman, said that the expansion has brought in its wake serious problems of over-production and idle capacity. Some of the plants have reduced their output of fireclay refractories during the past three years because of insufficient demand. The situation, Mr. Gopalakrishnan explains, has arisen mainly because the steel industry, which normally uses 70 percent to 75 percent of the refractory output, has not progressed according to the plan targets. It is also partly due to a reduction in the consumption of refractories for each tonne of ingot steel because of improved techniques and greater efficiency in the steel-making processes.

It looks as if the idle capacity in the industry will continue throughout the third plan period. It may, in fact, even increase on account of more refractory manufacturing units coming into production during the period without there being any prospect of an appreciable increase in the overall demand. It is disturbing to note, Mr. Gopalakrishnan says, that although two years of the third plan have passed, the industry has not so far received any substantial orders from the steel plants. Since the steel plants are likely to change their open-hearth furnaces "to an all basic construction much more quickly than was expected" there may be a rapid decline in the demand for silica bricks for the roof of open-hearth furnaces. The silica brick plants which have been built up during recent years at considerable costs will, therefore, be rendered idle. The chances of using these plants for basic brick manufacture are remote, since the existing capacity—and the expansion in hand for basic brick manufacture—will be more than sufficient to meet the future demand.

Meanwhile, there is a growing preference for "L.D." and other oxygen processes for the manufacture of steel. These processes do not use the conventional basic refractories which are being manufactured at present. They require instead only a comparatively small quantity of tar-bonded dolomite bricks. The Association, Mr. Gopalakrishnan said, was surprised to see recent Press reports that the Government and Hindustan Steel intend to set up five new refractory manufacturing units attached to the steel plants as recommended by a Russian team of experts. The Association has made representations to the Government that, in view of the idle capacity in the industry, there is no need to establish further refractory manufacturing plants involving heavy foreign exchange expenditure. The Association is also deeply concerned over the Government's decision to import 82,000 tonnes of refractories from Russia to meet the constructional requirements under the Bhilai steel plant expansion scheme.

Priorities for Steel Expansion

In a recent speech in Hyderabad, Dr. M. N. Dastur, steel consultant to the Government of India, has drawn attention to the need for reviewing the production pattern of the Indian steel in-

dustry for the purposes of development and defence. According to him, China's steel production is 20 million tons a year, as against the production capacity of 6 million tons in India. Unless special efforts are made in this country, the gap might increase further in the future. The policy of the Government has so far been to set up new plants to increase the total output of steel. Dr. Dastur suggests that one or more new steel plants might be set up at coastal locations like Goa or Visakhapatnam, not only to diversify the industry but also to secure more economical production, if imported coal has to be used in a larger measure than in the past. Another point worth emphasising is the need for expanding production capacity in the private sector. Although the demand for all kinds of steel is increasing, the manufacture of flat products like sheets and plates, and of tool, alloy and special steels, deserves particular attention.

Dr. Dastur acknowledges that increasing the steel output in India to 18 million ingot tons by 1970-71 and 28 million tons by 1975-76 is "a very large task". Apart from the difficulties of securing machinery and raw materials, the industry faces an acute shortage of coking coal and skilled labour. But, at present, India spends nearly Rs. 100 crores a year on importing steel, and unless production is raised the foreign exchange expenditure will increase. Dr. Dastur claims that it might be cheaper to import good-quality coal for increasing domestic steel output, instead of importing finished steel. Low-ash coal imported from abroad can be blended with local supplies to make it suitable for use in the Indian steel plants. The Central Fuel Research Institute is reported to be working on the proposal.

According to Dr. Dastur, the main reason for the shortage of steel engineers and mechanics is the waste of talent in keeping men of skill and experience in jobs which could be done by lesser men. In a system where all authority is concentrated in a small group at the top, the development of talent in the lower rungs of management has been retarded. Besides, there is a defective promotion procedure which was "designed for very different circumstances", and which has hindered the development of skill in the junior grades of service. Dr. Dastur has suggested that men of promise should be picked out from the five large steel plants, irrespective of seniority considerations, and given intensive training to equip them for senior positions. Another difficult problem which the Indian industry faces is that costs of production are too high. Not only is there a consumption of coke a ton of iron produced unusually large; other costs too are high, especially in the public sector plants. It is unfortunate that India, which at one time produced the cheapest steel in the world, has now lost the advantage. To increase productivity, Dr. Dastur has made four suggestions: (a) reliance should be placed to a much larger extent on modern technology, particularly in the preparation of raw materials; (b) adequate incentives and training facilities should be provided to increase the rate of output a labourer; (c) optimum-size equipment and machinery should be used in order to reduce unit costs of production; and (d) methods of maintenance should be improved.

CORRESPONDENCE

SUPER PROFITS TAX

(TO THE EDITOR OF "CAPITAL")

Sir,

The Finance Minister's proposal to levy the super profits tax on the lines indicated in the draft Bill is not only untimely but is also retrograde. No doubt, funds will have to be raised for meeting the additional expenditure, particularly for defence; but it is unfortunate that the method adopted, particularly the levy of the super profits tax, is haphazard and unscientific. The Finance Minister has made it clear that in spite of the emergency, the plan targets will be pursued, that is to say, the expansion of industries in the private and public sectors, will be continued at the same tempo.

However, the measure he has adopted will have the opposite effect. At present, the corporate

taxation is already heavy, being 50 percent of the net profit. The proposed levy of the super profits tax on residual income exceeding 6 percent will considerably retard the growth of the existing industries, and discourage the flow of capital into new companies. This levy will particularly affect the small private limited companies, because their only source of finance for expansion is the plough-back of profits. Under the proposed levy, the small companies will not be in a position to create or add to their existing reserves after paying even the nominal dividend of 6 percent permitted by the Government, because 50 percent of the balance left after payment of dividend will go to the Government as the super profits tax and 60 percent on any surplus exceeding 10 percent will also go to the Government. The only other course for the companies will be to increase their share capital, but then because of the super profits tax, investors will be shy.

The limit of 6 percent laid down by the Government is also inexplicable, because the rates of interest charged by banks are 7½ percent to 8 percent, while preference shares carry dividends up to 10 percent, in the case of individual deposits with banks, interest on term deposits is allowed at 6 percent. Surely, with the risks that are attached to a business venture, the 6 percent allowed by the Government is too small a compensation to attract capital from the public. This factor will also curtail the flow of foreign capital into India.

The super profits tax will mean a penalty on efficiency and premium on inefficiency. On the one hand, it will penalise efficient companies which have a small capital but make good profits by efficient methods of production; on the other hand, it will conduce to inefficiency in as much as, deprived of the incentive to make profits, the production costs will tend to increase. It will also discourage foreign collaborations in Indian ventures. The result will be disastrous to the country since foreign collaboration, at least in some basic industries, is essential if the plan targets are to be achieved.

Yours etcetera,
HARIKISHANDAS T. AGGARWAL,
Chairman,

Devidayal Cable Industries Private Ltd
Bombay, 11th March.

ADVERTISING IN INDIA

THE Advertising Agent, as we understand him in London, New York and on the Continent, does not exist in India, and we are of opinion that many years must elapse before there will be any scope at all for his legitimate operations in the East. And even granting the scope for his energies—granting it, that is, in the abstract—the vast majority of Indian Advertisers are not at all likely to be easily convinced that the Advertising Agent with Western ideals is at all a necessity. The Advertising Canvasser, whether he travels for a group of papers or whether he be the special representative of one paper, or publication only, is thoroughly understood, and fills a useful link between the publishing proprietary and the Advertising community. But the Advertising Agent in Western lines is something to which Indian Advertisers are not likely to get accustomed. His methods are, no doubt, suitable to the conditions of Western business, or he would not exist, but in India trade conditions are altogether different. The Western Advertising method deals primarily with the Advertiser. The latter, whether he be manufacturer or seller, places the whole of his Advertising business with the Agent who distributes business among the various newspapers. This system, of course, does not always obtain; but it does in a vast number of cases. Here, on the contrary, the Advertiser generally distributes or places his Advertisements himself, either with the newspapers direct, or through a canvasser or representative. He selects his own medium, fixes his own terms, pays his bills direct to the newspapers, and, so far as we are aware, has been perfectly satisfied to do business in this way. But of late years an attempt has been made to induce Advertisers to place their advertising business in the hands of "Agents" through whose hands the entire advertising business of firms is by the terms of the arrangement, supposed to go.

PROSPECTS FOR THE POUND STERLING

(BY A SPECIAL CORRESPONDENT)

NO great significance attaches to the fact that the pound sterling dropped below its exchange parity with the U.S. dollar around the middle of last week. The fall was sharp and sudden, and the below-parity quotation appeared for the first time in 18 months. Nevertheless, sterling has been fairly quick in recovering above parity subsequently. This suggests that the earlier weakness was due mainly to speculative influences. The latter were aggravated by the troubles in the Middle East, worries about the pace at which the U.K. Government intends to expand the economy, and comments in the Press about the possible devaluation of sterling. The sterling market has become particularly vulnerable to such short-term influences since the breakdown of the Brussels negotiations. The growth of unemployment in the U.K. at a time when exports are no longer rising, and the possibility of a general election before long, have tended to make the market more sensitive.

Now that Britain's energies have been irrevocably diverted from the attempt to get into the Common Market to the task of revitalising the internal economy, the time is appropriate for assessing what the switch might mean for sterling. In the long run, of course, it cannot in any way be regarded as favourable. The main economic purpose of seeking Common Market membership was to provide expanding markets for Britain's exports. Now, efforts will no doubt be made to increase Commonwealth trade and to negotiate cuts in the Community's tariffs from which Britain might benefit. Already it has been agreed by member-countries of the E.F.T.A. that tariffs and quotas on manufactured imports should be abolished by 1966, four years earlier than was originally provided for in the Stockholm Convention. All this was foreshadowed a short time ago by Mr. Macmillan, but it will be necessary to wait for the completion of the "Kennedy round" of negotiations in G.A.T.T. before deciding precisely what consolations can be drawn from the breakdown at Brussels. More important at the moment for the health of sterling will be the success enjoyed by the British Government's plans to relieve the stagnation within the economy, improve its competitive efficiency, and generally to achieve the 4 percent a year growth rate laid down by the National Economic Development Council. In other words, the future health of the pound will depend chiefly on the state of Britain's internal economic health.

Considerable Heart-searching

At present, there is considerable heart-searching going on in Britain about the immediate and long-term prospects for the economy. This is probably chiefly because unemployment has once again emerged at the centre of the domestic scene, for the first time since the 1930s. No British Government can afford to ignore this problem, and the present Conservative one has already gone a long way in its attempts to relieve the situation. But so far these have not been successful, and now the country is looking forward with confidence to an expansionary Budget in April. The main trouble is that the sum total of all the efforts necessary to get the economy on the move again might well, eventually, push it into another inflationary boom. If this should happen, then sterling is bound to suffer. The question now being asked is whether or not it can be avoided. Bearing in mind that measures so far announced have already pumped nearly £500 million of new purchasing power into the economy, and that additional ones foreshadowed in the Budget may possibly add another £400 million, the final total of all such moves might well amount to more than one-fifth of the entire Budget. It does not seem likely that the British economy can absorb this without an eventual risk of inflation.

Whether the Chancellor of the Exchequer will all the way with the recommendations of the

National Institute of Economic and Social Research and release a further full £400 million of new purchasing power is, of course, doubtful. The dilemma facing the Chancellor is how to pump in enough to get the economy on the move again without launching it off into inflation. This could probably be resolved by using a sum of rather smaller size than £400 million, although it must be understood that the risk of making it too small, and so failing to achieve the necessary expansion, is almost as great for the long-term future of sterling as making it too large. The maximum benefit from any sum will be obtained only if the major part of it is concentrated on the relief of consumer taxes. Along with the recommendations for the release of a further £400 million, the National Institute has pointed out that this sum would be best applied in consolidating all purchase tax rates at 10 percent, reducing income taxes and abolishing the "Schedule A" levy on owner-occupied property. This would mean placing by far the major part of the new purchasing power where it would be likely to have the greatest impact on prices. Together with what has already been released, therefore, it is clear that the coming Budget is going to throw a heavy strain on the pound unless the new resources can be absorbed by vastly increased output or restrained by physical and fiscal controls.

The Economy Depressed

Judging from the depressed state of the British economy, it is quite possible that output expansion may account for a substantial proportion of the new purchasing power. It is the size of the remainder which represents the threat to sterling. The possibility of this being controlled by physical means, instead of the monetary ones used hitherto, can be completely ruled out as long as the present Conservative Government remains in power. Fiscal controls, therefore, are the most likely alternative, and that is why the coming Budget is expected to include a substantial measure of tax reform as well as reductions. What shape these reforms should take is now the subject of lively debate. The whole thing ties in with the Government's plan to stimulate a 4 percent annual rate of growth through the N.E.D.C. It is almost impossible to separate reforms required to protect the balance of payments from those intended to encourage the work and effort needed for expansion. In the former category, however, tax incentives for exports and penalties on imports are easy enough to identify. It is widely known that the Chancellor is seriously considering export incentives. But whether these will be introduced, with all their attendant international repercussions, what form they will take, and whether they will be accompanied by their logical complement, fiscal burdens on imports, are questions which only the Budget can answer.

The Chancellor cannot complain of any lack of good advice in choosing his tax reforms. The one so far most widely advocated is a turnover tax based on value added in manufacture as a substitute for the present purchase taxes. The Economist has advocated it as a substitute for profits tax, but only within the framework of a scheme to correlate the general level of prices and wages. The most popular concept of a turnover

India's Resources

are Precious

WASTE NOT,
WANT NOT

CAPITAL, 21st March, 1963.

tax is of a levy which can be used more easily to encourage exports, or to regulate consumption over a wider range of goods than the present purchase tax structure. It is pointed out by advocates that something of the kind would have been inevitable if Britain had joined the Common Market. The main objection to it at the present time, at least from the British Government's point of view, is that it might be administratively difficult to introduce, and could cause inconvenience and misunderstanding if adopted so close to a general election. For this reason, it is doubted by some observers that anything so radical can be expected in the coming U.K. Budget.

The other suggestions for tax reform generally revolve around the need to encourage work and initiative. The Labour Party has recently come forward with a vague plan to substitute a portion of the present burden on earned income by levies on wealth and capital gains which has not shaken opinion in the City of London quite as much as might have been expected. This is partly due to the fact that it is nothing new so far as Labour is concerned, and partly because it is now generally accepted that the existing burden on work and enterprise is far too high for sustained economic growth. Other suggestions for reform include the separation of personal income tax and corporation tax, the removal of the present wholly objectionable tax on short-term stock exchange profits, and the use of the fiscal system more adequately to control industrial location. Some of these should prove more politically acceptable than others. But as most of them have some connection with the need to increase output, cut costs and quicken the rate of economic change in Britain, they have a direct relevance for the future of sterling. That is why it is unfortunate that the most likely course the Government will take in the coming Budget is to play safe over the more far-reaching and controversial measures and confine itself to the more popular idea of tax reductions.

Impending Changes

The impact that all these impending changes, both external and internal to the British economy, will have on the health of sterling, largely depends on the vigour with which they are applied and the success they enjoy. Put another way, it all depends on the willingness to undertake radical changes which the failure at Brussels has instilled into the British people and their Government. Unfortunately, there are few signs at the moment that any such willingness exists. There is much talk on the subject of what is needed, but so far little show of enthusiasm for the various forms of action required. It is generally agreed that the Government should give a lead. But with all the goodwill in the world, this is not easy under the present circumstances where failure at Brussels has not been exonerated, or punished, by the verdict of a general election. Thus, trade agreements and hypothetical Budget reforms notwithstanding, it may still be true that the main hope for sterling is an early appeal to the polls, because short of that there seems little chance of the Government being able to carry the country with it in the more difficult of the new policies needed.

Sterling has shown remarkable health during the past year, even in face of the Cuban crisis and the Chinese incursions into Assam. This was partly due to the relative buoyancy of Britain's exports and partly to the fact that internal stagnation has held prices in check. How long this will continue is anybody's guess, but already exports have stopped rising and the balance of payments seems dependent for its immediate future on the relatively stable level of imports. This seems likely to rise along with economic expansion, even if internal prices are held down by rising production. So the short-term threat to sterling is a two-pronged one arising from the likely behaviour of both imports and prices in a period of economic expansion. The prospects for the future might be more promising if the sterling area's gold and convertible currency reserves had been substantially increased during the pound's period of good health. But this has not been so, except to a very limited extent.

CAPITAL, 21st March, 1963.

A Ditcher's Diary

CHINA'S HINT THAT RUSSIA TOO WILL SOON BE FACED with territorial claims came as no surprise to me. Nor, I suspect, did it to the Russians themselves who, if the truth were known, have probably been expecting something of the sort for years now. It has always been a conviction of mine that Russia's anxiety to preserve her extensive Asian empire from the encroachments of her great communist neighbour has been at the bottom of her much-publicised sympathy for India. The Russians have, of course, worked a highly-successful confidence trick over their colonial territories for the past half century. Under the Tsars, they were frankly acknowledged to be imperial possessions—in those days it was both fashionable and respectable to have such things. But after the revolution they were closely integrated into the Soviet Union as ostensibly independent regions, although in fact there has been no real change in their colonial identities at all. It would indeed be true to say that nowhere in the world does the old eighteenth century colonialism survive in such an unchanged form as it does in Russia's Asian empire today. That is not to say that the Chinese have any more right to claim the regions north of Manchuria as metropolitan territory than have the Russians, although I daresay a slightly better historical case could be made out for them. But, of course, the question is not going to be settled on the basis of right and wrong, and the possibility of the world being witness to a struggle between two rival empires over a disputed colonialist possession, such as was already out of date in Kipling's time, cannot be dismissed altogether. The question now is how it will all end. Not disastrously, I imagine; at least not yet. This is probably just another attempt by China to frighten Mr. Khrushchev into discussions on their current ideological dispute, from which, of course, the Chinese have every intention of emerging as the leaders of the communist world. Along with the rest of humanity I shall watch the performance with detached amusement, and the sincere hope that it will remain strictly localised. But it is clear to me, and even more to the Russians, or so I suspect; that if China's multiplying millions are to find the room they need to expand, then eventually it is going to be at the expense of the Russian empire in Asia. It certainly cannot be into India's congested areas.

FRANKLY, I WOULD NOT HAVE ENJOYED BEING IN the shoes of Sir Paul Gore-Booth and Mr. John Kenneth Galbraith during the fourth round of talks in Calcutta on Kashmir—and other related matters—between the Foreign Minister of Pakis-

tan and the Railway Minister of India. I wouldn't even know what our brief was. When anyone was frank at all and said anything off the record, the usual statement was: Well, our purpose was to tell them in private that the talks, however infructuous, must not break down. I daresay the two diplomatists did their job well; but, to raise a wartime question, was their journey really necessary? I think not. Both New Delhi and Rawalpindi must now realise that the talks were initiated by Britain and the U.S.A., less for an early solution of the Kashmir problem than for domestic political reasons. The U.S. Congress would take a dim view of President Kennedy's large allocations of military aid to India—and Pakistan—if they did not even affect to desire a settlement. The Macmillan Government also has a small but stubborn Tory backbench. You might say that this calculated simulation by Washington and London is not very honest to the British and American publics. All I will say is that both Governments and both publics have known worse ruses. As have Governments and peoples in India and Pakistan. Diplomacy is not the simple thing some imagine. Although Sardar Swaran Singh more than held his own. I find some of Mr. Z. A. Bhutto's loaded questions worthy of diplomatists older than he. Until the other day, Paris and London gave airs that only they knew the fine art of diplomacy. The older capitals should see how fast the others are learning—including the Americans, for whom they had special contempt.

WHEN A FEW YEARS AGO PRINCE RAINIER OF Monaco was joined in marriage to the beautiful Hollywood actress, Grace Kelly, just about the entire world Press was there to cover the event. And that, I was told, was the whole point. It was then suggested by some that Sir Winston Churchill's friend, the great shipping magnate Mr. Aristotle Onassis, had a hand in bringing the marriage about; and if Mr. Onassis had an interest in some of the casinos and hotels in Monaco at the time, he can hardly have done too badly out of the many foregathered there for the wedding. Was there an Onassis in the Gangtok woodpile yesterday? I doubt it. If, however, I were a communist, I could easily think up several plausible theses. Why, the Peking man would easily argue, how could an American girl, Miss Hope Cooke, marry the Maharajkumar of Sikkim without there being behind it the diabolical machinations of the U.S. State Department? From here it is a very short step to insist that

for New Delhi, the marriage must be one more provocation against China. I only hope that, after the celebrations, delightfully exotic I am sure, various neighbouring diplomatists will leave the charming bride and bridegroom alone for, in the final analysis, marriage is an intensely personal affair; and even well-intentioned outsiders can only introduce complications. That the couple will not spend their honeymoon in Europe or the U.S.A. seems an excellent decision. This part of the world has more beautiful spots than most of us know; and as Miss Hope Cooke has decided to make Sikkim her home, she should spend as much time there as possible. The people of Sikkim are enormously friendly; but their friendship, like any other people's, has to be worked for and earned. I wish the marriage all success.

LONDON HAS ALWAYS BEEN A COSMOPOLITAN CITY. But I see it is becoming even more so, and although few of its immigrants these days find its streets paved with gold, if in fact they ever did, I suspect the economic reasons for moving there are still the predominant ones. At least they are with the colonial and Commonwealth residents, who now comprise 5.8 percent of the total population, compared with only 1.9 percent in 1951. And with the Irish, too, of course, much as it has always been; their proportion has risen from 3.3 percent in 1951 to 5.1 percent. The British Government's 1961 census figures establish the somewhat startling fact that not only has overseas immigration into the London area trebled in the past ten years, but that 10 percent of the present total population was born outside Britain. Over 30,000 of these are from India, although many must be only temporary residents. The largest Commonwealth contingent is from the West Indies, chiefly Jamaica, and that numbers 70,523, or did in 1961. Few of these "new Londoners" can be living in luxury either. The proportion of households still without a separate bath comprises 30.5 percent of the total, which seems extremely high for the world's second most prosperous capital city. What does surprise me most, however, is that 41.4 percent of London's households do not enjoy exclusive use of a hot-water tap; as many as 36.6 percent have none at all. Britain is a cold country, at least during such winters as the one which has just ended, and I have no doubt that bathing can sometimes be a greater privation. In fact, the habit of a daily bath was unknown in the country until returning India hands—or "nabobs" as they called them in the eighteenth century—took it home with them. For a wealthy city like London to have more than one-third of its households still without a hot-water tap is a depressing reminder of how long it is going to take to introduce some vestige of modern civilised comfort into poverty-stricken Calcutta. The situation seems even more hopeless when one notes that London's population has actually been going down during the past ten years,

although not of course the inhabitants of the greater London area, whereas I shudder to think of the extent to which that of Calcutta has been growing.

I THINK THIS, FROM A CINEMA WEEKLY, IS A BEAUTY:

I hear reliably that C. S. Forrester had been receiving a lot of offers from leading Hollywood film producers to sell the story rights of 'His Passage to India' (sic). But so far he has declined to do so. But it seems that Forrester (sic) is interested (sic) in striking a deal provided that Satyajit Ray directs the film.

It is possible to feel sorry for Mr. E. M. Forster; but so many come to India these days that I am altogether unable to swear that Horatio Hornblower has not been around too; and if he calls his book *His Passage to India* he can scarcely be accused of plagiarism. Such confusion over authors' names is not unknown; everyone knows the bookseller's advertisement about "Mill on Liberty" and "Mill on the Floss". Pardonable and not unamusing. But the truth behind the howler goes deeper. In so many film epics does Hollywood start with a book like *A Passage to India* and end with a film that is still called *A Passage to India* but is, in fact, closer to something concerning Hornblower. When turning a book into a film it is often necessary to make changes; the language of words isn't the same as that of pictures. This is not always appreciated by writers. Shaw, for instance, was so scared of manhandling by film producers that he sold the rights of very few of his plays and then only to selected directors. We all know instances of perfect collaboration between writer and director in producing films which the director by himself could never have done. I am thinking of the remarkable films made by Graham Greene and Carol Reed; in some cases it was difficult to say whose contribution was the greater; and, for *The Fallen Idol* and others, Greene was the first to acknowledge Reed's creative participation. On the other hand, some Hollywood (and not Hollywood alone) producers have such scant respect for the writer that they "hire" (that's the word) half a dozen scriptwriters to "improve" the original—with disastrous results. As for Satyajit Ray, I am sure he could take on both "A" and "His" *Passage to India*, if he cared, and cover himself with further glory: his genius is cinematic first, literary a long way behind.

MOST PEOPLE ASSOCIATE BRITAIN'S WELFARE STATE with the Labour Party, and perhaps in particular with that irrepressible member of it, the late Aneurin Bevan. But in fact its architect was the staunchly Liberal William Beveridge who died in Oxford on Saturday at the ripe old age of 83. Born in Rangpur, Bengal, this son of an Indian Civilian undertook the work during the war on behalf of Mr. Churchill's coalition Government. The subsequent Beveridge Report was presented to the British people as an incentive for winning the war, a fact which may have been responsible for the reluctance always shown nowadays when the question arises of pruning welfare benefits to proportions more suited to the country's economic circumstances. The trouble with Britain's welfare State is that it appears to have grown to represent something more than an institution: it is now a condition of mind. But that was not the fault of Lord Beveridge, who embodied in it many years of social and economic research as a civil servant and later as the Director of the London School of Economics. He would have preferred to call it the "welfare society", a title which would have excluded its socialist overtones. But popular opinion seems inevitably to have associated its principles with left-wing thought, as indeed it also did in the case of full employment, another subject on which this great Liberal did much pioneering work. In fact, had Lord Beveridge decided to throw in his lot with the Labour Party in 1945, instead of maintaining his old loyalty—as also did his distinguished contemporary, Lord Keynes—he would undoubtedly have held high office in Mr. Attlee's Government, and indeed might eventually have been his successor. But, instead, he preferred comparative academic obscurity. His name, however, will live for ever in Britain's social history.

SUPER PROFITS TAX DEPRESSES JUTE SHARES

(BY A SPECIAL CORRESPONDENT)

AFTER the presentation of the Central Budget, jute shares weakened along with other shares because of the heavier tax proposals. The weakness has been aggravated since Mr. C. L. Bajoria, chairman of the Indian Jute Mills Association, took a gloomy view of the outlook while addressing the annual general meeting in Calcutta last Friday. The slump in these shares is all the more unfortunate considering that large investments have been made in the industry. The rise in these shares before the presentation of the Central Budget was largely due to the increased support extended to them in the belief that jute mills would make bigger profits during the current financial year. The improvement in the industry's working since the middle of 1961 was welcomed by investors after the staggering losses it sustained during 1960 and 1961.

When the industry started making satisfactory profits on "simultaneous business"—especially after the middle of 1962—hopes were entertained that not only would the previous losses be wiped out, but shareholders would also be rewarded with satisfactory dividends. The interim dividends paid by some jute companies reinforced this optimism. But the hopes have vanished as the super profits tax is proposed under the latest Central Budget. Since a large portion of the profits will be siphoned off by the levy, jute companies will have very little money left to plough back into the business and to pay dividends to shareholders. In fact, it is feared that no jute company will be able to pay even moderate dividends if the tax is levied in its present form.

The industry will be hit badly by the levy due to various factors. Firstly, investments in the industry greatly exceed the share capital. So the rule of exempting profits equivalent to 6 percent of capital and reserves from the new impost will place the industry in an unfavourable position. Secondly, the industry's fortune fluctuates from year to year. As the Super Profits Tax Bill contains no provision to offset the losses of one year by the profits of another, the burden on the industry will be crippling. Although the special report issued by the Government supporting the Budget proposals has vaguely hinted at the possibility of averaging profits for the purpose of the super profits tax, it remains to be seen whether losses will eventually be allowed to be offset against profits. Unless this is done, the industry will find it impossible to recoup any losses which it may sustain in lean years. Thirdly, the jute companies have been put in an awkward position due to the loans they have taken to finance the expansion, modernisation and diversification of activities. During recent years, the industry has invested heavily in modernising the spinning section. It has also spent large sums of money on installing broad-loom for the production of carpet-backing cloth. This has been done with a view to increasing exports since this fabric has met with an excellent demand in foreign countries.

The industry has borrowed heavily in order to effect these improvements since it believed that it would liquidate its indebtedness in due course

by earning sufficient profits. Now that the super profits tax threatens to mop up the major part of profits, jute mills will find it extremely difficult to repay the loans. This also raises doubts about the dividend outlook. Since jute companies will be keen on repaying their debts, whatever profits are left are likely to be conserved rather than distributed as dividends. The impost will reduce the liquidity of jute companies, so they will be reluctant to pay good dividends. The willingness of companies to pay dividends, it must be remembered, is governed greatly by the cash in hand. Meanwhile, the finances of jute mills have been strained by the huge raw jute stocks which are almost equivalent to their six months' consumption. They have built up these stocks in order to support the price of fibre. The super profits tax will be particularly burdensome since the profitability of the industry compares unfavourably with that of other industries. In a study undertaken by the Reserve Bank on company profitability in 1960, it was confirmed that the profits, after tax, as a percentage of net worth, were only 7.4 percent for the jute industry, compared with an average of 10.8 percent for all other industries.

Investors are also getting worried whether the industry, under the present circumstances, will continue to improve its competitive power in the face of keen competition in foreign markets. The Pakistani jute industry has captured markets which were hitherto largely served by the Indian industry. The loss of markets—especially in sacking—has been pronounced in recent years. The Pakistani industry enjoys the advantage of having cheap as well as quality fibre; its labour costs are lower than in India; and its equipment is modern. It has also flourished under the shelter of an export subsidy given by the Pakistani Government. As a result, the Pakistani mills enjoy a price advantage of about Rs. 400 a ton for sacking, compared with Indian mills. Whether this advantage of the Pakistani mills should not be offset by giving immediate assistance to the Indian industry in some form the industry is under serious consideration. The help is needed only for a temporary period until the competitive power of the Indian jute mills is improved. The weaving section of the jute mills must be modernised at an early date. This is likely to contribute to the increased competitive power of the industry. Since modernisation will involve considerable finance, it is doubtful whether the industry can afford to incur further capital expenditure as long as the super profits tax threatens to cut profits.

The present downward trend in gunny prices, following the slower off-take of jute goods by overseas countries, has also disturbed investors. Although exports during 1962 are expected to touch a new high of Rs. 150 crores, the near-term outlook is not bright. Since the pent-up demand has been satisfied and the market has started declining, foreign countries will be inclined to buy slowly. The industry has decided to continue the maximum level of production up to the end of April, for the time being. The raw jute supply is adequate. So it is generally

believed that there will be an abundant supply of jute goods in the near future.

But if the price of gunnies continues to move downward, the profit margin of mills will be reduced, since the Government is determined to hold the price of raw jute above an economic level. Meanwhile, foreign countries are taking the view that the next jute crop will be quite satisfactory. Reports of rainfall have been received from many jute-growing areas in India, so land preparations there have started. Although preparation of the char lands in Pakistan has been delayed by the shortage of rainfall, the crop in that country is also expected to be fairly big. Under the circumstances, investors cannot be blamed if they take a gloomy view about jute shares. Unless the super profits tax is substantially modified, the prices of jute shares will decline further. Since dividends may be reduced, many shares at present prices look rather overvalued.

Rights Share Issue by Dr. Paul Lohmann

DR. Paul Lohmann (India) Ltd is offering rights ordinary shares for Rs. 60 lakhs at par to existing shareholders. The funds will be used for financing the expansion scheme. The Company has obtained an industrial licence for producing formic acid, oxalic acid and sodium formate in its factory. It is expected to produce 600 tons of the former two chemicals and 300 tons of sodium formate a year. These chemicals have widespread industrial uses. The Company will use a portion of these chemicals for producing fine chemicals at its own factory. It foresees no difficulty in selling the balance of its production considering that these chemicals are at present imported. The Company's factory on Jessore Road, near Calcutta, may start production during the next couple of months.

Belsund Sugar Cuts Dividend

IN their report for the year ended September 1962, the directors of the Belsund Sugar Co. Ltd say that the shortage of sugarcane is being felt during the current season. Not only has cane cultivation been restricted, but there has also been a considerable diversion of supply to the manufacture of gur and khar-sari. The profit has fallen from Rs. 5.72 lakhs in 1960-61 to Rs. 5.09 lakhs in 1961-62, after transferring Rs. 3.4 lakhs (against Rs. 3.15 lakhs) to depreciation. The taxable ordinary dividend has been cut from 10 percent to 6.6 percent. It is covered more than two-and-a-half times and offers a yield of 5.9 percent at the present price of Rs. 8.50 a share of Rs. 7.50 each. Taxation absorbs Rs. 303 lakhs (against Rs. 1.65 lakhs) and development rebate reserve Rs. 7,240 (against Rs. 1.57 lakhs). Sales have increased from Rs. 1.16 crores to Rs. 1.62 crores, but the Company has incurred a loss of Rs. 3.86 lakhs on sugar exports. The cane crush was 1.8 million quintals, against 1.9 million quintals. The

Star Paper Passes Dividend

THE Star Paper Mills Ltd has shown disappointing results for the year ended September 1962. There has been a loss of Rs. 1.18 lakhs, after providing Rs. 14.97 lakhs for depreciation. After making all adjustments and bringing in Rs. 1.72 lakhs, there is a balance of Rs. 56,480 which is carried forward. The dividend has been passed. Sales increased from Rs. 1.74 crores to Rs. 2.97 crores. The directors point to the increase in production costs. They add that the U.P. Government has not offered sufficient forest areas to the Company, so the latter has had to contend with the shortage of wood supplies. Star Paper has been forced to buy wood from the open market at prohibitive prices. The forest royalty has also been raised. Chemicals and stores have had to be bought at higher prices. There has been an increase in labour emoluments. Under the circumstances, the directors think that the last increase in the paper price has been insufficient to compensate for the rising production costs. The Company's working during 1961-62 was also affected by technical difficulties in running the pulp plant. There was also a temporary stoppage at the new paper machine. But these difficulties have now been overcome. Normal production has begun with the installation of additional machinery. The Company hopes to increase production in future.

Mohini Sugar Loses Again

MOHINI Sugar Mills Ltd has incurred a loss of Rs. 4.12 lakhs for the year ended September 1962, after providing Rs. 2.37 lakhs (against Rs. 3.30 lakhs) for depreciation and Rs. 1,747 (against Rs. 220) for development rebate. The loss

poor quality of sugarcane was responsible for a decline in recovery from 9.14 percent to 9.11 percent.

was Rs. 7.36 lakhs in 1960-61. The dividend has been passed. The cane crush was 520,474 quintals with recovery at 9.86 percent, compared with a crush of 601,200 quintals with a recovery of 9.65 percent. During the current 1962-63 season, the crush has so far amounted to 304,131 quintals with a recovery of 9.25 percent.

Orient Engineering Resumes Dividend

Orient Engineering and Commercial Co. Ltd. has made a profit of Rs. 7,231 for the year ended September 1962, compared with a loss of Rs. 16,834, after providing Rs. 3,800 (against Rs. 3,309) for depreciation. A taxable ordinary dividend of 4 percent has been declared. There was no dividend for 1960-61. It is alleged that a senior officer has misappropriated funds of the Company. The matter is being investigated, although it will be difficult to find out to what extent the financial position of the Company has been affected by this alleged defalcation.

Albion Plywood Repeats

ALBION Plywood Ltd has repeated a taxable ordinary dividend of 10 percent for the year ended September 1962, which is more than one-and-a-half times covered and offers a yield of 10.5 percent at the present price of Rs. 9.50 a share of Rs. 10 each. The profit has amounted to Rs. 3.82 lakhs, against Rs. 3.92 lakhs in 1960-61, after transferring Rs. 1.09 lakhs (against Rs. 1.06 lakhs) to depreciation. Taxation absorbs Rs. 1.50 lakhs (against Rs. 99,000), development rebate reserve Rs. 10,000 (against Rs. 57,000) and general reserve Rs. 90,000. The carry-forward is Rs. 462, against Rs. 68,316 brought in. Sales rose from Rs. 52.85 lakhs to Rs. 60.61 lakhs.

The directors point out that the setting up of the veneering unit in the Andamans was delayed due to the shortage of shipping space for transporting equipment. But the installation work, it is expected, will be completed soon. As soon as commercial veneers start to flow from the Andamans factory, there should be an adequate supply of wood at reasonable prices. Meanwhile, the factory in Budge Budge near Calcutta has been working below its output capacity due to the shortage of wood. The price of wood as well as that of coal have increased. The quality of coal has also deteriorated.

Punjab Minerals Shows Loss

THE Punjab Minerals Co. Ltd has incurred a loss of Rs. 4,066 for the year ended September 1962, after providing Rs. 2,633 for bad debts. So a debit balance of Rs. 1.47 lakhs

has been carried forward. The dividend has been passed.

William Powell Loses

WILLIAM Powell and Sons Ltd ran into financial difficulties soon after issuing shares to the public nearly two years ago. This happened due to misappropriation of the Company's funds, the directors point out in their latest report for the year ended March 1962. Since the Company has had to raise loans by mortgaging its assets, the mortgagee has taken possession of all plant and machinery. William Powell has been compelled to do its work by hiring other factories. But the directors say that manufacturing orders to the extent of Rs. 18 lakhs to Rs. 20 lakhs are being negotiated, and they hope to get the orders.

They have asked the shareholders whether they will permit the management to issue further shares in order to pay off the Company's debts. Unless all loans are repaid, the Company cannot take possession of its factory from the mortgagee. The latter has, however, been paying rent of Rs. 1,500 a month for the plant and machinery taken over from the Company. During 1961-62, there was a loss of Rs. 2.33 lakhs. This has increased the total debit balance to Rs. 3.84 lakhs, which is being carried forward. The dividend has been passed. The ordinary shares of the Company are being quoted at substantial discounts.

J. K. Synthetics Pays Interim Dividend

J. K. Synthetics Ltd which has had to skip the dividend for the year ended June 1962 because of the net loss that the Company incurred on account of a huge provision for depreciation, has declared an interim dividend of 5 percent—50p a share, less tax, for the current year. The working results for 1961-62 showed a gross profit of Rs. 5.74 lakhs, compared with Rs. 8 lakhs in the preceding year when the Company paid a dividend of 3 percent. But the surplus for 1961-62 is converted into a net loss of Rs. 9.94 lakhs as the Company has had to provide Rs. 15.88 lakhs for depreciation. This compares with a net profit of Rs. 4.40 lakhs, after providing Rs. 3.60 lakhs for taxation in 1960-61. Adjusting the surplus sum of Rs. 44,000 brought forward from the previous year, the net balance loss of Rs. 9.50 lakhs has been adjusted against general reserve which stands reduced to Rs. 2.49 lakhs.

The directors state in their report that the Company's synthetic nylon yarn plant in Kotah was successfully commissioned last year. The trial operations started in January 1962, and within a few weeks, the Company was able to produce nylon yarn of a satisfactory quality for the first time in India. The plant, it is said, has been started in record time. Re-

cently, the Company has undertaken to produce yarn for defence requirements as well. The directors state that the Company is facing difficulties in obtaining raw material which has to be imported from abroad until such time as it has its own plant for the manufacture of caprolactum. For this an application has been made to the Central Government for the grant of an industrial licence to produce its own raw material. The Company's satisfactory working during the current year has enabled the directors to declare the interim dividend of 50p a share on the increased capital, the number of equity shares having been raised from 726,250 to 1,250,000.

No Early Rights Issue by Dena Bank

THE chairman of the Devkaran Nanjee Banking Co. Ltd (popularly known as the Dena Bank), Mr. Lalit Chandra C. D. Nanjee, assured the shareholders at their annual meeting last week that in spite of the super profits tax, the bank would be able to maintain the dividend for the current year. He was unable to say how exactly his bank would be affected, but he had no doubt that the super profits tax would hit the banking industry very hard. Mr. Nanjee said that the Dena Bank was contemplating to celebrate its silver jubilee towards the end of this year in a suitable manner, and he assured shareholders that their interests would be properly looked after, taking into consideration the prevailing conditions and the profitability of the bank at that time.

The chairman disclosed that the bank had opened five new branches in 1962 and another four offices have been opened since the beginning of this year, which brings the total number of branches to 116. The bank has received permission from the Reserve Bank to open branches in several centres, and before the end of the year, it will open branches in Bhopal, Hyderabad and in certain towns of Gujarat and Maharashtra. Replying to shareholders' questions, the managing director of the bank, Mr. Pravinchandra Gandhi, stated that although the authorised capital of the bank had been raised from Rs. 1 crore to Rs. 2 crores, the bank had no intention of issuing additional capital in the near future. The capital fund-deposit ratio of the bank is low around 3.9, but additional capital would be issued only at an opportune time when the bank was in a position to maintain dividend on the increased capital. The Life Insurance Corporation holds 28 percent shares in the Company.

The chairman said that the new taxation measures were likely to accentuate the prevailing stringency in the money market. Deposits were not keeping pace with the growth of demand for credit, and without a proper climate for the growth of deposits, the pressure

CAPITAL, 21st March, 1963.

arising from an increased demand for funds as a result of the huge outlay on development and defence would adversely affect the banking industry's prospects. The super profits tax, he said, would greatly reduce the disposable profits of banks which will not only affect allocations to reserves necessary for achieving the requisite capital fund-deposit ratio, but will make it difficult for banks to maintain their dividends.

Mr. Nanjee said that the banking industry had a strong case for exemption from the super profits tax since, unlike other companies engaged in manufacturing activity, banks had no direct influence on prices except through advances which were being strictly regulated by the Reserve Bank of India. He criticised the Reserve Bank's credit policy on the ground that it had a restraining effect on the supply of credit to trade and industry which was not in keeping with the growing requirements of an expanding economy. He demanded an urgent review of the current curbs to ensure an effective and efficient banking system.

The chairman made very pertinent observations on the question of branch banking. That banks have been concentrating their offices in big towns while half the towns in the country are without any banking facilities is common knowledge. Mr. Nanjee has made a plea for introducing an element of compulsion in opening branches in semi-urban and rural areas. The Reserve Bank, he says, should take steps to ensure that there is no encouragement of overbanking and competition among banks in the urban areas. He also suggested that the Reserve Bank should set up a healthy convention of directing foreign exchange banks to open their branches in centres and areas which are not at present covered by banking facilities and where they would not offer keen competition to Indian banks.

Prospects for Automobile Products

THE Automobile Products of India Ltd fared very badly during the year ended July 1962; the Company incurred a huge loss of Rs. 19.72 lakhs, against a profit of Rs. 19.44 lakhs in the preceding year. The results for the current year, however, are expected to show some improvement. The chairman, Mr. M. A. Chidambaram, assured the shareholders' annual meeting in Bombay on 14th March—the meeting had later to be adjourned to 19th March on a point of order that the necessary books of the Company had not been produced at the meeting—that the turnover in the current year would go up and that there would be no further loss. He said that he was devoting personal attention to improve the Company's working on the technical side and that necessary steps were being taken to reduce overheads, consumption of materials and wastage.

The output of the Lambretta division is gradually catching up and now that all the machines have been commissioned, the proportion of indigenous content in the LI model has gone up to 75 percent. The Company has been supplying clutches as original equipment for Standard Herald, Hindustan Ambassador and Comet lorries of Ashok Leyland. It has also started supplying clutches as original equipment to T.E.L.C.O. and Premier Automobiles for cars. The turnover in the brake linings division is picking up and is now running at a level of Rs. 30 lakhs a year, against Rs. 21.86 lakhs last year. The chairman informed shareholders that a

CAPITAL, 21st March, 1963.

sum of Rs. 3 lakhs, against the outstanding mortgage loan of Rs. 40 lakhs from the Industrial Finance Corporation and the third instalment of Rs. 4.20 lakhs for machinery imports worth Rs. 22.36 lakhs from Italy, would be payable on 31st March, 1963. The Company expected to receive the final instalment of Rs. 6 lakhs from Premier Automobiles on 29th April. The chairman informed shareholders that the directors did not propose to call up till the end of this year a further capital on 89,720 new shares, allotted against the rights issue of 350,000 shares made about the middle of last year.

Good Progress by Union Bank

THE preliminary figures about the working results of the Union Bank of India for 1962, which were released along with the dividend announcement, showed that after providing Rs. 4.68 lakhs (against Rs. 3.26 lakhs) for depreciation and making the necessary provision for taxation the bank has made a net profit of Rs. 22.06 lakhs, against Rs. 21.62 lakhs in 1961. The directors' full report shows that the bank has made good progress all round. The deposits in 1962 rose by 29.8 percent from Rs. 32.83 crores to Rs. 42.62 crores; advances increased by 25.5 percent from Rs. 18.50 crores to Rs. 23.23 crores; investments rose by 27.4 percent from Rs. 8.24 crores to Rs. 10.51 crores and the bank's total income increased by 20.8 percent from Rs. 18.5 crores to Rs. 22.3 crores.

The increase in deposits was shared by all accounts, fixed deposits rising by Rs. 4.45 crores to Rs. 18.58 crores, savings deposits by Rs. 1.19 crores to Rs. 4.44 crores and current deposits by Rs. 4.15 crores to Rs. 19.59 crores. The bank's expenses increased by 22.8 percent from Rs. 1.60 crores to Rs. 1.85 crores. The increase in expenses was caused by an all-round rise in costs. Interest paid on deposits rose from Rs. 58.58 lakhs to Rs. 76.15 lakhs, salaries and wages from Rs. 68.59 lakhs to Rs. 80.49 lakhs and rent, taxes and miscellaneous expenses rose from Rs. 33 lakhs to Rs. 40 lakhs. As against the paid-up capital of Rs. 1 crore, the Union Bank's reserves amounted to Rs. 70 lakhs at the end of 1962. The bank opened two new branches during the year. Mr. K. R. P. Shroff, who has been associated with the bank for 33 years as member and chairman of the board, is retiring due to his advanced age.

Indo-Swedish Pipe Manufacturing

INDO-Swedish Pipe Manufacturing Co. Ltd is a new company which has been formed to undertake the manufacture of cast iron soil pipes in collaboration with the well-known Swedish firm of A. B. Styckebruck. The former has been licensed to manufacture 24,000 tons of pipes and fittings a year on a single shift basis. The project is estimated to involve a capital outlay of Rs. 50 lakhs, of which Rs. 28 lakhs will be spent on plant and equipment and Rs. 12 lakhs will be the working capital. The authorised capital of the Company will be Rs. 1 crore, made up of 80,000 equity shares and 20,000 preference shares, both of Rs. 100 each. The issued capital is Rs. 5.25 lakhs in equity shares, of which Rs. 2.70 lakhs has been subscribed by the promoters, directors and their friends and Rs. 2.55 lakhs by Mr. Ole J. Bach, representative of the Swedish firm.

The Company proposes to issue further equity capital of Rs. 29.75 lakhs. Out of this, shares worth Rs. 3.50

lakhs are proposed to be allotted to the Life Insurance Corporation and the balance of Rs. 26.25 lakhs will be offered for public subscription. The Company is negotiating for a foreign exchange loan of Rs. 15 lakhs from a financial institution. It proposes to set up two plants, one in Agra with a capacity of 12,000 tons and the other near Bombay with a capacity of 15,000 tons. The first plant, it is expected, will go into production by the end of this year, and the other six months later.

The Company has already received an import licence worth Rs. 17.55 lakhs. It has given an undertaking to the Government to export 15 percent of its production. All the raw materials are available from indigenous sources. The Swedish firm which is collaborating in the venture has agreed to provide, initially, for a period of ten years technical collaboration for the manufacture of soil pipes on their special machines by a patented process. The foreign firm will help in the erection, installation and initial operation of the plants. It will be paid a licensing fee of 50,000 Swedish crowns and also a royalty of 3 percent of the net sales. The Company's board of directors includes Lala Hansraj G. Gupta, Mr. P. L. Kirloskar, Mr. M. M. Muthiah, Mr. Ole J. Bach, Mr. Ram Prasad Khandelwal, Mr. K. C. Sood, Mr. Baij Nath Gupta and Mr. Bisheshwar Nath Gupta.

Nizam Sugar Pays Less

THE working results of the Nizam Sugar Factory Ltd for the 15-month period ended September 1962—the Company has changed its accounting year from June-end to September-end—show a sizable setback with the gross profit falling to Rs. 52.26 lakhs, compared with Rs. 81.33 lakhs in the preceding 12 months. The fall in profit is attributed to the absorption of three months' extra expenditure in the accounts—July 1962 to September 1962—amounting to Rs. 22 lakhs and lower realisation on the sale of sugar. The sugar market was greatly depressed during the period under review, following the removal of restrictions on the inter-State movement of the commodity. The Company crushed 600,000 tonnes of sugarcane producing 57,566 tonnes of sugar at an average recovery of 9.59 percent. The corresponding figures for the preceding 12 months were 649,000 tonnes of cane, 65,219 tonnes of sugar and 10.05 percent recovery. The factory farms produced 239,000 tonnes of cane, against 20,700 tonnes, the average yield being higher at 44.26 tonnes, against 38.27 tonnes an acre.

Provision for depreciation and development rebate has been raised from Rs. 9.03 lakhs to Rs. 22.09 lakhs, and that for taxation is substantially lower at Rs. 10.44 lakhs, against Rs. 27.62 lakhs. No provision has been made for general reserve which received Rs. 16.38 lakhs in 1960-61. A sum of Rs. 2.60 lakhs (against nil) has been transferred from dividend equalisation reserve. The dividend of Rs. 4.50 a share (against Rs. 5.75 a share), less tax, and the preference dividend, absorb Rs. 22.39 lakhs, against Rs. 27.32 lakhs, leaving a balance of Rs. 3,044 to be carried forward, against Rs. 9,960 brought in.

Bharat Commerce Maintains

ALTHOUGH the dividend has been maintained at 15 percent, less tax, the working results of Bharat Commerce and Industries Ltd for the past working year show a substantial

setback over the previous year's performance. The gross profit is down by nearly 38 percent from Rs. 64.18 lakhs to Rs. 39.84 lakhs. Provision for depreciation has been raised from Rs. 7.93 lakhs to Rs. 11.62 lakhs, and that for development rebate from Rs. 4.36 lakhs to Rs. 5.88 lakhs. A sum of Rs. 6.25 lakhs (against Rs. 8.50 lakhs) has been set aside for taxation and provision for contingency has been maintained at Rs. 2 lakhs. The preference dividend of 9 percent absorbs Rs. 2.70 lakhs, and the ordinary dividend of 15 percent absorbs Rs. 7.50 lakhs. After all these appropriations, there remains a surplus of Rs. 18,000 to be carried forward, against Rs. 1.46 lakhs brought in.

New Capital Issues

SIX companies have been allowed to raise capital totalling Rs. 4.66 crores. The following are the details:

McNally-Bird Engineering Company, Calcutta: Rs. 70 lakhs of which Rs. 16 lakhs will be contributed by the McNally Pittsburg Manufacturing Corporation of the U.S.A.

Plastic Resins and Chemicals Ltd, Bombay: Rs. 265 lakhs in

equity shares of Rs. 10 each for cash at par. Out of this, Rs. 25 lakhs will be offered to the foreign collaborator, Marubeni-India Company Ltd, Tokyo, for cash or other than cash against supply of machinery and the balance will be offered to Indian nationals.

Hindustan Steel and Metal Company Private Ltd, Calcutta: bonus shares of Rs. 1,00,000, divided into 10,000 ordinary shares of Rs. 10 each by capitalisation of general reserves to a like extent.

Asian Cables Corporation Ltd, Bombay: Rs. 55 lakhs in 55,000 equity shares of Rs. 100 each for cash at par. The entire issue will be made to the foreign collaborator, Phelps Dodge Enfield International Corporation, Inc., New York.

Gandhidham Spinning and Manufacturing Company Ltd, Adipur (Gujarat State): Rs. 35 lakhs in equity shares of Rs. 10 each, to be issued for cash at par.

The Panipet Woollen and General Mills Company Ltd, Kharar (near Chandigarh): Further capital of Rs. 40 lakhs in 300,000 equity shares of Rs. 10 each and 10,000 cumulative redeemable preference shares of Rs. 100 each carrying dividend at 9.3% for cash at par.

BRASS
TACKS

A successful businessman knows that a bright office is the first step to winning the confidence of clients and customers. So, get down to brass tacks and keep the brass articles and fittings in your office bright as new with a regular Brasso polish. Brasso, available in large tins, is easy to use and economical too.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1962.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi; by the Manager, Pakistan Branches and by all the necessary particulars have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that matters which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Accounts have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

THE CHARTERED BANK

CHAIRMAN, MR. V. A. GRANTHAM'S STATEMENT

The following are the extracts from the statement of the Chairman, Mr. V. A. Granttham, which will be presented at the Annual General Meeting of The Chartered Bank on 3rd April, 1963, at 38, Bishopsgate, London, E.C.2.

The administration of a banking business extending over the greater part of Asia into a multiplicity of sovereign states each pursuing highly individual and often conflicting economic policies grows increasingly complex with the passing of the years. It will be seen, however, from the statement which follows that the management of The Chartered Bank has continued during 1962 to respond to rapidly changing situations and to every challenge of new political forces emerging in the East. It is often alleged that banks are hide-bound by precedent; this cannot be true of The Chartered Bank. If it were there could have been no rapid adaptation of traditional credit operations to new financial conditions. In 1962 the challenge of change was perhaps more insistent than at any time during the past decade and the results of the bank's operations during that year, to which I shall shortly refer, demonstrate the success with which this challenge has been met.

The continuing favourable condition of the bank's affairs is a reflection of the professional skill displayed by the General Management in London and the branch managers everywhere. The stockholders will, I am sure, wish to be associated with the Court of Directors in acknowledging the skill, devotion and enterprise exerted on the bank's behalf by the General Management, the branch managers and staff at all levels and throughout the establishment. I would again draw your attention to the number of new branches opened at various points.

The Court of Directors

Mr. E. J. Pakes, C.B.E., on retiring from business in the City a year ago, relinquished his seat on the Court and I take this opportunity of acknowledging with gratitude the valuable help and good counsel he brought to the deliberations of the Directors. The

Court elected in place of Mr. Pakes, Mr. Kenneth M. Campbell, M.B.E., Chairman of The British India Steam Navigation Company Limited and the stockholders will be invited to confirm his election at the approaching annual general meeting.

The Bank's Balance Sheet

In 1961, because our balance sheet total had shown a very substantial increase over that of 1960 after rapid progress in previous years, I felt bound to warn that there were factors that might affect our further progress although I hoped that increased business resulting among other things from the opening of new branches and the increase in our capital and reserves would outweigh these factors. In the event we have had another good year and our Balance Sheet shows an increase of no less than £49 millions, standing at the record figure of £402 millions.

It will be noted that the main contributions to this increase are rises in Current and Other Accounts and Fixed Deposits of £26 millions and £24 millions respectively.

On the other side of the Balance Sheet the figure for Advances and Other Accounts shows an increase of £26 millions, while our figure for Cash and Securities are up £5 millions and £19 millions respectively.

The Consolidated Balance Sheet total of £468 millions, which includes of course the figures of The Eastern Bank, shows an increase of £60 millions over that of last year and is an all-time high.

In view of these figures we have deemed it wise to increase our allocation to Reserve Funds.

Consolidated Profit and Loss Account
The profit we show for 1962 of £1,076,748 is up £86,510.

While we are doing all we can to increase our efficiency by the introduc-

tion of mechanisation, this much larger business of ours has entailed increases in overseas staff and in all parts of the globe costs, and in particular salaries, have risen and still show a tendency to rise. We are fortunate so far that our income has enable us to keep pace with these increases and I think it will be agreed that the result achieved in this not altogether easy year is satisfactory. Our stockholders have benefited by the increased dividend distribution arising from the rights issue made at the end of 1961. The total distribution is £50,531 higher.

With the balance brought forward from the previous year of £540,648 the amount available for allocation totals £1,617,396 out of which we have transferred £450,000 to Reserve Funds which now stand at £7,700,000. The interim dividend of 7½ per cent. less income tax paid in September last, absorbed £303,187 and it is now proposed to pay a final dividend of 7½ per cent. less income tax costing £303,188. This leaves a balance of £561,021 to be carried forward, an increase of £20,373 on last year's figure.

India

Already painfully beset with economic difficulties, India was given by the events of October and November, a stark and unwelcome reminder of the harsh political realities of the modern world. The shock administered by the exposure of mistaken assumptions in foreign policy and military planning was profound, and the reasons which have long prompted friends of both India and Pakistan to urge on them the need to settle their differences over Kashmir and other problems became increasingly recognised by thoughtful people in both countries. Whatever other effects the hostilities on the northern frontiers may have had, a feeling of fervent national unity has been stimulated among the Indian people and there is a universal willingness to work together in the national interest. If leadership emerges to harness this spirit there can be little doubt of the country's ability to respond to the challenge it now faces. This is a testing time for government, which is now called on to lead the nation in a situation which contains hazards and difficulties unforeseen at the time its policies were overwhelmingly endorsed in last year's general elections.

Even before increased spending on the armed forces became necessary it seemed that lack of foreign exchange was likely to cause some revision of the third five-year plan (1961/66). After some delay the consortium of countries helping to finance the plan agreed to raise their contributions for the second year of the plan, but as most of this aid is allocated to specific development projects, and is available only for purchases from the donor country concerned, it did little to ease the shortage of ready foreign exchange required to pay for the country's normal day-to-day import requirements. The reduction in the reserves has been gradual, but has continued steadily and in July a standby credit from the International Monetary Fund was arranged, part of which has since been drawn.

If then, as is hoped, the equipment now required from abroad for the armed forces will be either on lease-lend terms or under aid, the country's basic economic problem is still to earn enough foreign exchange to meet the inescapable needs of its people and to keep its new industries going. It was

CAPITAL, 21st March, 1963.

anticipated that the export of manufactured goods would increase and make a valuable contribution to overseas earnings but setbacks have occurred through transport difficulties, lack of electric power and inability to purchase abroad vital spare parts and materials. With exchange reserves at a level that gives no scope for further reduction, there can be little optimism for an early improvement and in any case manufacturing costs are generally too high for open competition in world markets. Some reduction in costs will no doubt come as experience is gained in running the new industrial units, particularly if the protected domestic market is not made so easy to sell in, but even the older industries find that they are unable to compete abroad with the heavy taxation, high cost of protected local raw materials and low productivity of an increasingly costly labour force. It would seem then that any betterment of the exchange position is more likely to come from the gradual rise in agricultural production, but even an appreciable rise in exports will not meet an import bill already cut to the minimum.

In these circumstances it was not unexpected that official thought again turned to the country's hoarded gold. It has always been assumed that India would have no balance of payment problem if the vast quantity of gold privately hoarded within the country could be brought out and at last official action has been taken to mobilise it for the national benefit. An offer of gold bonds met with a poor response, which was not surprising for its terms were unrealistic and ignored the fact that prerequisites for the voluntary surrender of gold are an attractive price and a guarantee against inflation and a depreciating currency. Moreover, as a proportion of the privately held gold in the country represents the proceeds of tax evasion there was some reluctance, despite assurances from the government, to disclose such holdings. Persuasion having failed the authorities have now had to resort to compulsion and the ownership of all gold, other than ornaments, is to be declared. If this causes a fall in the Indian gold price to something near the world level the considerable traffic in gold smuggling from abroad, by which the Indian demand is at present met at a serious cost in foreign exchange, will be decisively checked. Whether it will bring out gold is another matter, and for some years, when the exchange reserves were high, I advocated the contrary policy of a free market, which would at least have saved the many millions of pounds lost through smuggling over the years.

Defence orders, industrial expansion, a soft home market and generous labour tribunals all point to one thing—inflation—and our sympathies must be with the monetary authorities who require dearer money and restricted credit to combat the danger and yet are under departmental pressure to keep interest rates low to finance development plans as cheaply as possible. In these circumstances it is important that the policies followed by the indigenous banks should not be at variance with the real needs of the country as a whole. The bank rate was recently raised and what is needed is a realistic rate structure for commercial banks round that rate, with no distortion through holding of free counterpart funds by one privileged bank. A reasonable spread in rates would help the banks to build up their reserves in keeping with the Reserve Bank's policy of creating a strong banking system.

In furtherance of that policy too, they are restricting credit to the banks, some of which had become badly over-levered and over-dependent on official assistance. Nevertheless the Reserve Bank has always helped where restrictions jeopardised essential industry or seasonal crops and this system of selective credit control worked smoothly and is in the country's best interests. The new

CAPITAL, 21st March, 1963.

statutory requirements to be operative from September 1964 are, however, obligatory by legislation, but in a rapidly expanding economy they may be too drastic and amendments may have to be introduced. There is still some doubt whether the central institution's policy on government securities is fair to the commercial banks, who are obliged to make purchases at artificially controlled low yields.

All the foregoing, I am sure, points to the necessity of the economy of India and its industry being consolidated in preference to further industrial expansion. Perhaps I am being a little pessimistic in stressing the difficulties and the failures rather than the general achievement, but optimism about India's future must, for the time being, be based largely on the political importance of its stabilising influence in Asia and the willingness and the determination of the Western powers to support it in that role.

We have recently received permission from the Reserve Bank to extend our

branch organisation to Vasco de Gama in Goa and arrangements are now in hand for the opening of the new office.

Conclusion

From this review, it is clear that continuing inflation is still a major problem with many of the developing countries and, in addition to this, their ever increasing short-term and medium-term foreign debt must cause deep concern. Its servicing accentuates the already difficult balance of payment problems and at times the return from eagerly sought after foreign loans is not commensurate with the cost, as they are diverted into nationalistic enterprises which do little to balance and strengthen the economy.

The supply of aid is necessarily limited, save in exceptional circumstances and many Asian countries are now seeing the advantages of encouraging private investment from abroad. Whereas foreign loans involve interest charges and repayments which become

a burden on budgets and exchange reserves, the risk of private investment is borne entirely by the investor who can only receive a return on his investment if his enterprise is successful. Ability to attract new private capital is closely linked with the treatment of existing investments and those countries which have failed in their appeal to the overseas investor are invariably those which have been less than fair to direct investments made in the past. It is those who already know the East and have confidence in its future who are most likely to be the new investors and it is not accidental that most of the private investment which has been made in Asia in recent years has come from enterprises which were already locally established. The potential investor from overseas who is considering setting up business for the first time naturally takes into account the treatment meted out to existing foreign firms in the country in which he is interested. He is unlikely to be impressed by promises of freedom to remit profits and repatriate capital by governments which deny such

freedom to existing enterprises. It is significant that those governments which have been most successful in attracting foreign investment have been at pains to create conditions favourable to business enterprise and to induce confidence in the political and economic stability of their countries. The flow of private capital to developing countries would be greatly facilitated if agreement could be reached on an internationally acceptable code of behaviour regarding the treatment of foreign property on the lines of the draft convention recently sponsored by the Organisation for Economic Co-operation and Development.

We continue to assist to the best of our ability the many countries in which the Chartered Bank group is working. This assistance can be financial or in the form of advice based on many years experience in many different countries and, needless to say, wherever we have a branch it is our policy to work fully in the interest and aspirations of the country concerned and within its regulations.

			£1,496,492

REPORT OF THE AUDITORS

TO THE STOCKHOLDERS OF THE CHARTERED BANK

We have obtained all the information and explanations which we considered necessary for our audit. In our opinion proper books of account have been kept by the Bank and proper returns adequate for the purposes of our audit have been received from the branches, which have not been visited by us. The annexed balance sheet of The Chartered Bank is in agreement with the books and returns.

We have also examined the annexed group accounts, comprising the consolidated accounts of the Bank and its subsidiaries, other than Allahabad Bank Limited, and the separate accounts of Allahabad Bank Limited, with the audited accounts of those companies, certain of which have not been audited by us. Subject thereto in our opinion the said balance sheet and group accounts give, in the prescribed manner, the information required of banking companies by the Companies Act 1948, and, on the basis indicated in Note (4) on the balance sheets, give a true and fair view of the state of affairs as at 31st December, 1962 and of the profit, ascertained as indicated in the profit and loss accounts for the year ended on that date of the Bank and its subsidiaries, so far as concerns stockholders of The Chartered Bank.

London

SELECTIVE BUYING IN EQUITIES

OPERATORS CAUTIOUS

London, 20th March.

ALTHOUGH the speculative attack on sterling in the early part of last week was short-lived, the event had a sobering effect on sentiment in the stock market and buyers were adopting a distinctly cautious approach. The February trade figures were no inducement to open new commitments, and there appeared to be a general disposition to await the Budget due in just a fortnight. However, some selective buying went

on in equities which was stimulated by good company news, and the heavy electrical shares which had been out of favour for so long, were being bought on the strength of the good results from the giant A.E.I. group. But leading stocks as a whole were inclined to drift lower in the absence of support. A fair amount of interest was shown in the lesser known stocks and useful gains were recorded. Gilt-edged see-sawed in the wake of sterling and were now looking easier again. Dollar stocks also moved irregularly, and the dollar premium, which at the height of last week's sterling trouble, reached a peak of 1¼ percent was back to under 10 percent. Gold shares met with a strong demand as the pound plunged, but subsequently much of the ground gained was lost. The de Beers results proved rather disappointing and the shares lost ground. Coppers went ahead at one time, but eased later. The Royal Dutch-Shell results were well received, and a strong investment demand carried Shell to a new 1962-63 peak. Rubbers met with selective buying, but teas drifted lower.

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers.

We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel.

We can collect and negotiate for

EXPERT ATTENTION TO YOUR EXPORT PROBLEMS

EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward".

We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries.

With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

THE BANK OF INDIA LTD.

SERVE INDIA IN THOUGHT WORD AND DEED

There is no phase or corner of our lives where discipline and self-control cannot well be planted to give their strength and assurance to our resolution

- Whether it be in refusing to heed the subtle poison of rumour
- Whether it be in foregoing luxuries to provide funds for defence
- Whether it be in controlling purchases of goods to avoid the inflation of prices
- Whether it be in individual dedication to service and endeavour
- Whether it is to discipline our personal conduct so that there is minimum of conflict, a maximum of co-operation

All these are disciplines we have need of now
Let us be aware. Let us be determined

YOUR DISCIPLINE IS INDIA'S STRENGTH

Space donated by INDIAN OXYGEN LIMITED

excluding township, etcetera, is likely to be about Rs. 40 crores. Of this, the foreign exchange components as far as can be roughly assessed at present—is likely to be Rs. 23 crores; this will be mostly met from the rouble credits offered by Russia.

Following the acceptance of the detailed project report in November 1959, the Heavy Engineering Corporation entered into three separate contracts with Messrs Prommash-export of Moscow as follows:

(i) A contract dated 12th March, 1960, for a total sum of Rs. 12.80 crores for the supply of plant and equipment, fabricated structurals and certain items of stores from Russia.

(ii) A contract dated 1st February, 1960, for the supply of working drawings for the project for 80,000-ton capacity; and

(iii) a contract dated 30th July, 1962, for the supply of equipment, devices and materials for the 80,000-ton stage, valued at Rs. 5.90 crores.

Against the total quantity of 43,958 metric tons of plant and equipment valued at Rs. 18.70 crores c.i.f. ordered for the 80,000-ton stage, 17,665 metric tons valued at Rs. 7.34 crores have been shipped up to December 1962. Contracts for all the major factory buildings have been awarded. Work in production and ancillary shops is progressing according to schedule. The erection

of the plant and machinery is proceeding satisfactorily.

Coal mining machinery project: The plant is being set up in Durgapur, West Bengal, with Russian technical collaboration. The plant was initially designed to produce 30,000 tons of coal-mining machinery a year. But in view of the proposed increase in the coal output during the third plan, it has been decided to expand the plant's capacity to 45,000 tons a year in the second stage. The value of finished machinery items is estimated at Rs. 16 crores a year in the first stage and Rs. 24 crores in the second. The total outlay of the plant, excluding township, is estimated at Rs. 30.50 crores, of which the foreign exchange component will be Rs. 13 crores. The latter will be met from the rouble credits offered by Russia. In the first stage, the plant is expected to provide employment to about 4,000 workers.

Following the acceptance of the detailed project report in November 1959, a contract for the supply of plant and equipment, fabricated steel structurals and other stores and materials of the total value of Rs. 7.30 crores was entered into with Messrs Prommash-export of Russia in March 1960.

A contract for a detailed project report and working drawings to conform to a capacity of 45,000 tons was executed with Messrs Prommash-

export on 12th December, 1960. The Heavy Engineering Corporation entered into a contract with Messrs Prommash-export, Moscow, on 30th July, 1962, for the supply of equipment and material valued at Rs. 9.74 crores for the 45,000-ton stage of the plant.

Against the total quantity of 23,363 metric tons, valued at Rs. 9.775 crores, of plant and materials ordered for the 45,000-ton stage, 11,471 metric tons valued at Rs. 3.05 crores, have been received from Russia up to the end of December 1962. Contracts for practically all the major factory buildings have been awarded. Work on all the production and ancillary shops and the erection of plant and machinery are progressing according to schedule.

Heavy electrical equipment project, Ranipur, Hardwar: This project, with Russian assistance, is being designed to manufacture steam turbines and generators in the range of 50-200 megawatts for an annual output of 1.5 million kilowatts, hydro-turbines and generators from 10 megawatts to 100 megawatts for a total output of 1.2 million kilowatts and medium and large-size industrial motors for an annual output of 520,000 kilowatts. As a first step towards the implementation of the project, a contract for the preparation of a detailed project report was signed on the 15th May, 1962, by the Heavy Electricals (India) Ltd with

CAPITAL, 21st March, 1963

Messrs Prommash-export, Moscow. A team of four Indian engineers was deputed to Russia for participating in the preparation of the detailed project report. The latter is expected to be received in May 1963.

Heavy plate and vessels project and heavy structurals project: Discussions with a leading manufacturer of pressure vessels and structural steel works of the United Kingdom concerning the establishment of the heavy plate and vessel works (capacity: 12,500 tons a year) and the heavy structural works (capacity: 25,000 tons a year) were concluded in 1962. A draft agreement was also finalised. The capital cost of the project is estimated at Rs. 17 crores (excluding township) out of which the foreign exchange component is Rs. 7 crores. The project was originally intended to be financed from the U.K. credit. Since it was later found that no British credit would be forthcoming, efforts are being made to implement the project with credits made available by some foreign countries.

SWITZERLAND

Experts Visit India

Dr. Southeim and Dr. Kellersberger of the Swiss firm of Brown Boveri are now visiting India. They are going to Calcutta, where a unit with which their firm had been collaborating for manufacturing electrical equipment, has been lying closed for over two years on account of labour troubles. Dr. Southeim and Dr. Kellersberger hope to meet some West Bengal Ministers to bring about a settlement of the dispute.

POLAND

Pact on Coal Mining

The Polish Minister for Mines and Power is expected to visit India shortly. The Minister, it is expected, will finalise an agreement on coal mining in the Raniguni area.

CEMENT

A.V.B. Machinery Project

A. V. B. Ltd is negotiating a collaboration agreement with Humboldt Denz of Germany for manufacturing cement machinery by using the dry process.

FERTILISER

The Mangalore Project

The Dutch collaborators of Hallis and Shaw Wallace in the Mangalore fertiliser project are expected here shortly to finalise the details of the project.

MACHINE TOOLS

Japanese Mission in India

A Japanese machine tool mission is here. It will shortly visit Calcutta and Ranchi in order to explore the possibilities of collaboration for manufacturing machine tools in India.

MANAGING AGENCY

Policy Clarified

The Central Minister of Industries, Mr. Nityanand Kanungo, said in the Lok Sabha last week that the Government is not considering any proposal to end the managing agency system. He added that the extension of tenure was granted to five managing agents and rejected in the case of others.

CAPITAL, 21st March, 1963.

during 1961-62. The rejected applications were all from Indian concerns. The Minister said in cases of extensions, there was no relaxation of the general policy on remuneration and time-limit. The Government's approval of the renewal of managing agencies was usually given after it was satisfied that (1) it was not against the public interest to have a managing agent; (2) the managing agent proposed was a fit and proper person to hold such appointment; (3) the conditions of the proposed managing agency agreement were fair and reasonable; and (4) the past performance of the managing agent was satisfactory.

INDUSTRIAL TRUCE

Cases of Breach

The Central Minister for Planning, Employment, and Labour, Mr. Gulzarilal Nanda, told the informal consultative committee of Parliament last week that the provisions of the Industrial Truce Resolution were better observed in November and December 1962 than during the last two months. Complaints concerning breaches were now increasing.

Mr. Nanda said that he had recently written to the Central organisations of employers and workers concerned in relation to specific instances of the breaches of the code. On receipt of the required information, he would ask State Governments to look into them. The Minister said that he was thinking of holding a tripartite conference to ensure that the truce resolution worked more satisfactorily in future.

NEYVELI-SALEM PROJECT

Report Ordered

The Government of India has appointed a firm of consulting engineers to prepare a detailed project report for the Neyveli-Salem iron and steel project, it is reported here.

I.I.S.C.O.

Expansion Plan Approved

The Government of India has approved in principle the expansion programme of the Indian Iron and Steel Co. Ltd which envisages a continuous casting plant with a capacity of about 300,000 tons of steel blooms a year. The metal required for the plant is to be met partly from the steel arising from increased production of iron in the existing four blast furnaces and partly from a 40-ton electric arc furnace which is to be installed. The blooms will be rolled into salable products in the existing mills. The total cost of the project was previously estimated at about Rs. 9.20 crores, including a foreign exchange component of Rs. 4.60 crores. According to more recent estimates, the total cost is estimated at Rs. 11.15 crores with a foreign exchange component of Rs. 5.28 crores.

OIL-TANKER

Pact Signed

The Shipping Corporation of India and Caltex (India) Ltd have recently signed an agreement for chartering a tanker to ply between the Visakhapatnam Port and the Persian Gulf. The tanker will be built at the shipyard of Hitachi Shipbuilding and Engineering Co. Ltd of Japan. The present agreement with the shipyard covers the construction of a single screw motor tanker of 32,640 deadweight tons with a speed of about 16 knots and a draft of 32.88 feet. Negotiations, however, are now being carried on for certain changes in the

specifications in order to meet the requirements of the agreement with Caltex (India) Ltd.

HALDIA

Plan for Satellite Port

The Government considers Haldia to be the best available site for a satellite port in the Hooghly estuary. There is natural deepwater at the site. The only technical points which still need to be clarified are: firstly, whether, in the foreseeable future, the depth now available along the bank in Haldia could be maintained and, if possible, improved. The second issue relates to the stability and the extent of improvement that can be obtained in the approach channels to Haldia.

CREDIT GUARANTEE

Scheme Extended

The Government has extended the credit guarantee scheme with effect from 1st January, 1963, to cover the entire country on a permanent basis. A broad classification of industries, which have benefited under the scheme, is as follows: Food manufacturing industries, including beverage industries, tobacco manufactures, manufacture of textiles, manufacture of footwear, other wearing apparel and made-up textile goods, manufacture of wood and cork, including furniture and fixtures, manufacture of paper and paper products, printing, publishing and allied industries, manufacture of leather and leather and fur products, manufacture of rubber products, manufacture of chemicals and chemical products, manufacture of non-metallic mineral products except petroleum and coal products, basic metal industries, manufacture of metal products, manufacture of machinery, including electrical machinery apparatus, appliances and supplies, manufacture of transport equipment and parts, miscellaneous manufacturing industries like surgical and scientific instruments, watches, stationary articles, toys, novelties and presentation articles.

FISHERIES CORPORATION

Progress of Scheme

The proposal to establish a fisheries corporation in the public sector to undertake deep-sea fishing and pro-

cess the catches for export as well as for internal consumption, has made some progress. Representatives of an American firm, which is interested in collaborating in the venture, are at present in India. They are currently engaged in a preliminary resources survey.

CARDAMOM

Development Scheme

The Government has decided to set up a Directorate of Cardamom Development and Marketing under the Central Ministry of Commerce and Industry with headquarters in Bangalore. It will be advised by a Cardamom Development and Marketing Advisory Committee. The functions of the committee will be to advise the Government on measures for developing the cardamom industry including: (1) the promotion and extension of cardamom plantations; (2) the improvement of the quality of cardamom and the productivity of the estates; (3) arrangements for the supply of fertilisers and ancillary equipment required by the industry; (4) the provision of adequate financial assistance in the form of working capital and credit, etcetera, for measures of improvement; and (5) in particular, the marketing of cardamom with a view to ensuring economic and reasonable prices to the grower and augmenting the foreign exchange earnings for exports.

The compulsory quality control and preshipment inspection scheme under "Agmark" for exporting cardamom has been introduced with effect from 1st January, 1963.

SANFORIZING PROCESS

Pact Extended

There is no contract between the Government of India and any foreign company for the continued use in India of the "Sanforizing" process. There were some discussions with the U. S. firm, which is the proprietor of the "Sanforized" trade mark, on the question of the continued use of that trade mark in India under the Trade and Merchandise Marks Act. As a result of these discussions, 60 textile mills have been or are being given "registered user" licences under the above Act for the use of the "Sanforized" trade mark on their fabrics, for a period of three years from 25th November, 1962. No new

mills will now be added to this list. The extension of the arrangement is now finally granted for a period of three years ending 24th November, 1965. The Government does not propose to extend it any further after that date. This has been made clear to the foreign company as well as the Indian mills.

Royalty in foreign exchange payable to the proprietors of the "Sanforized" trade mark is: (i) 0.175 cent (U.S.) a yard up to 45in. width of cloth; and (ii) 110 percent of the above rate for cloth above 45in. width.

DAIRY

New Scheme Approved

The Government has approved in principle a scheme to set up a factory for manufacturing powder milk and unsweetened evaporated milk to meet the requirements of the Defence Services. It is subject to a scrutiny of detailed estimates, economics of manufacture and related issues. Jind in Punjab is one of the sites surveyed but a final decision is yet to be taken. The project is estimated to cost about Rs. 65 lakhs in capital expenditure. It is to be a departmental venture of the Ministry of Defence and is not likely to get any foreign aid.

POWER GRIDS

C.W.P.C. Convenes Meeting

The Central Water and Power Commission has suggested the division of India into seven power regions. The suggestion was endorsed by a meeting of the representatives of the State Electricity Boards and the Damodar Valley Corporation. It was convened by the Central Water and Power Commission for considering the question of development of the regional power grids.

POLAND

International Fair

The Government of India has decided to participate in the Poznan International Fair in Poland. The Fair is to be held from 9th June to 23rd June this year. The Poznan, International Fair is one of the most important international trade fairs held in the Continent and attracts a very large number of buyers and visitors from all parts of the world.

A 1/2" SPANNER PUT THIS UP

A half inch spanner is the only tool required to erect Mills Scaffolding. A few turns and the fittings secure the steel tubes firmly—the greater the load the stronger the grip due to the "shackle grip" principle on which they are designed.

Strong and safe, Mills tubular scaffolding is versatile; the same tubes and fittings can again be used to erect anything from Grandstands and temporary buildings to storage racks and road blocks.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd., and the tubes are manufactured by The Indian Tube Company (1953) Limited.

"...to ensure for the people of the country all the benefits that can accrue from the acquisition and application of scientific knowledge"

Government of India Policy Resolution on Scientific Research, March 13, 1958

Today at Goregaon, Bombay, the Prime Minister will inaugurate the first centre in South Asia offered by private industry for fundamental chemical and biological research. It has been established by the international chemical organisation C I B A.

Initially the Centre's scientific programme will comprise two main fields. Basic research in pharmaceuticals is to include chemical and biological investigations of Indian medicinal plants and the elaboration of new synthetic drugs. Dyestuff research will be conducted in collaboration with Atul Products Limited.

This new venture supports one important goal of the Third Five-Year Plan: increased efforts in basic research by private industry for economic development of the country. The project has been carried out in a spirit of goodwill and the most cordial cooperation. The 80 laboratories are now a functioning reality whose future rests in the hands of scientists dedicated to the task of improving the health and well-being of Man.

C I B A where research is the tradition

C I B A of India Limited

London

PROSPECTS OF GROWTH FOR THE U.K. ECONOMY

(FROM OUR LONDON CORRESPONDENT)

THE National Economic Development Council, whose report on "Growth of the United Kingdom Economy to 1966" has now been officially published, has yet to make its impact on the country felt. It is anticipated that this may come about after the Chancellor has presented his Budget next month, but whether it will or not is a moot point—and an examination of the report explains why, for the truth is that it is both encouraging and disappointing. The encouragement lies in the fact that nothing miraculous would be needed to raise the annual growth rate to an average of 4 percent. But it is infuriating to find that it implies, quite rightly, that the major barriers in the way of faster growth are the out-moded attitudes of a divided society. The Government is suspicious of management, management is suspicious of the trade unions; and the trade unions suspect both. To achieve the growth "Neddy" shows is feasible, someone has got to make an effort to resolve these suspicions.

So far, the Government has declined to give a purposeful lead. Treasury thinking still seems to be dominated by the inability of industry in the past to make significant progress in the export market, and thereby to save the country from falling into balance of payments difficulties whenever expansion at home has really got under way. This defensive mentality is understandable, but if it means only a mildly expansionist Budget in April, then the N.E.D.C.'s growth target may as well be forgotten.

The Council's original aim was an annual growth of 4 percent each year until 1966. As the report points out, however, "one year of the five-year period has already elapsed. The increase in output has been well below the average required. Between 1961 and 1962, output increased by less than 2 percent, so that the average annual increase between 1962 and 1966 will have to be rather more than 4 percent, if the 1966 target is to be achieved." But it adds that the programme of expansion could be re-phased and "the slack" that had arisen in 1962 could be taken up. The slow increase in output in that year could be offset by a faster growth between 1963 and 1966.

Adequate Manpower

The Council concludes that manpower to achieve the target is adequate provided it is properly used, that increased effort devoted to scientific development will continue, productivity will increase much faster than in the past, and industrial capacity will be available. But there will have to be a faster growth in exports. Certain shortages of skilled men will have to be remedied. "There are undoubtedly difficult problems to be tackled," says the report, "the solution of which will call for changes in policies, arrangements and attitudes. A vital element will be a determination to succeed on the part of the Government, management and trade unions."

The Council started its task of determining how the required rate of growth could be achieved by investigating the implications of such an expansion to 17 key industries. In general, the industries believed they could cope with the demand on them arising from faster growth in the economy.

Individually they saw no insuperable difficulties in obtaining the capital equipment and finance for the investment they would need, nor in recruiting sufficient manpower. Difficulties of obtaining sufficient skilled labour were foreseen. Two of the industries, electricity and to a less extent chemicals, expected some difficulty in extending their capacity. But others, including the motor-car industry and steel, already had spare capacity and could meet a large increase in home demand.

The report goes on to consider the implications of the proposed faster rate of growth for the economy as a whole. Part of the growth until 1966 will come from an increase in the manpower available, which is expected to go up by 8 percent a year. If employment in the less prosperous regions could be raised to reduce the level of unemployment towards the level of the more prosperous regions, it would make a significant contribution to the level of national employment. The report also suggests that special measures to help married women wanting to work might be taken. They would have to take into consideration the desire of many married women to take only part-time work. The measures suggested include vocational guidance and training or refresher courses, and special shifts or hours for women wanting to work part-time should be arranged.

It is proposed that steps should be taken with the object of retaining workers above the normal retiring age. A possible inducement would be an increase in the increments to the flat-rate pension which workers who postpone retiring can earn. "On the whole," the report concludes, "there seems good ground to suppose that the overall growth in the labour force will be adequate for 4 percent a year growth in output."

Mobility of Labour

In the five-year period, there will be significant movements of work-people between different industries, and substantial contractions in the railway, shipbuilding, aircraft and cotton industries. The Council estimates that 200,000 workers become redundant each year and adds: "Redundancy has a far greater significance for economic growth than the actual number of work-people directly affected by the contraction of particular firms or industries would suggest. From the viewpoint of growth, it is essential to see whether more cannot be done to assist mobility and to tackle the problems to which redundancy gives rise."

Referring to the problem of shortage of skilled labour, the report says: "Technological progress requires an increasing proportion of trained and technical manpower in the labour force and experience suggests that a much bigger training programme will be needed to overcome the shortages due to faster growth. Existing apprenticeship schemes would not produce sufficient skilled labour up to 1966. It would, therefore, be necessary to rely mainly on the training of adult workers. In the long-term sense, it was important to ensure that the country's apprenticeship arrangements and other training systems in industry and commerce were appropriate to the needs of an expanding economy."

The report emphasises that the major part of the increase in national output will have to come from increased productivity. Assuming that employment increases by 8 percent, each worker's output will have to rise by an average of 3.2 percent a year. The Council appears to see little difficulty in achieving this increased productivity. The number of qualified scientists and engineers in industry, it is pointed out, has been increasing rapidly and they will contribute to a faster increase in productivity in the future. Technical developments will also help productivity in the gas and electricity industries. The introduction of labour-saving devices is expected to be marked in many industries. Research also will play its part and the heavy investment in some industries in recent years will yield its benefit.

Efficient Plants

Another factor mentioned is the concentration of output in more efficient plants. The value of advisory services set up in some industries is also pointed out. The report then examines estimates of the rise that will take place in the country's resources if the target is achieved. The resources available will be a gross domestic product nearly 22 percent higher than in 1961 plus imports of goods and services. The following table gives details of resources available and their use in 1961 and in 1966:

	1961 £ million at 1961 prices	1966 £ million at 1961 prices
Resources available—		
Gross domestic product at market prices	26,481	32,230
Imports of goods	4,006	4,870
Net imports of services*	70	95
Total	30,567	37,195
Use of resources—		
Consumers' expenditure	17,336	20,590
Public consumption	4,570	5,440
Investment	4,798	6,225
Export of goods	3,863	4,940
Total	30,567	37,195

* Military expenditure abroad, payments for shipping, travel, etcetera, less receipts from abroad for similar items.

On the assumption that the annual 4 percent growth is realised, total consumption a head of the population would increase by 2.8 percent a year. Expenditure on motor-cars would be expected to go up, but demand for clothing would rise more slowly. The report adds: "It seems reasonable to assume that one of the ways in which it would be desirable to reap the fruits of a faster growth would be a more rapid improvement in housing standards." Some 4 million dwellings in Britain would be over 100 years old by 1980. Several experts had put the desirable rate of replacement at about 200,000 a year. There was also a need over a long period for about 100,000 dwellings a year to provide for new households. About 500,000 other dwellings would have to be built to provide a reasonable number of vacant houses, which were important if the mobility of labour was to be increased.

Domestic Investment

The higher level of domestic investment and the transformation of the balance of payments on current account from a deficit in 1961 into a substantial surplus in 1966, would mean that almost 2 percent more of the gross domestic product must be saved. The Council then poses the question: "What increase in the volume of exports would secure an improvement in the current balance of payments from a deficit of £77 million in 1961 to a surplus of £300 million which it is estimated will be needed in 1966?"

The answer given is an increase of about 5 percent a year over the five-year period. The enquiry which it made into key industries, says the Council, suggested that on a "non-Common Market basis" exports by them were expected to increase at about the same rate as in the past. This was 5½ percent a year. But the 17 industries concerned increased exports more rapidly than was the case with exports as a whole. If total exports also moved in line with past trends, the increase would be about 3 percent a year. The report says bluntly: "To achieve a rate of increase in total exports of 5 percent a year is clearly a formidable task. Nevertheless, it is not high by comparison with the rates achieved by other countries whose production has grown faster than our own." It adds: "Our exports have been hampered by a comparatively low level of investment and slow rate of increase in productivity at home, and it is assumed that there will be improvements in both directions." Measures to improve selling methods, design and the speed of innovation would help.

THE U.K. JUTE MARKETS POOR DEMAND FOR FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

DEMAND for raw jute from all consuming countries remained very small last week. As a result of this, the market in Pakistan was quiet and there was no doubt that shippers would accept less than their quoted rates if any real buying interest was shown. There are still ample supplies of the lower grades of both white and Tossa jute available in Pakistan from the present crop, and spinners were in no hurry to add to their present stocks.

Dundee spinners have purchased very little raw material during the past two months. This is not only due to their holding large stocks, but also to the fact that a substantial quantity of jute is available on spot and further unsold quantities are afloat at present. This could amount to at least 80,000 bales. Holders of these parcels were willing to accept low prices in many instances, but this was not attracting spinners. Many grades were available at up to £5 a ton below the minimum export prices. In past years, it was normal for a fair business to have taken place in new crop fibre, but it was not so on this occasion. Any offers of new crop being made were at or above minimum export price levels, which were not attractive when old crop could be obtained at much less.

Offers being made in the U.K. last week were very irregular with the lowest rates at £145 for Mill Firsts, at £114 for Mill Lightnings, at £91 15s for Mill Hearts and at £78 5s for Grade Hearts, c.i.f. U.K. for March-April shipment. Grade Tossa-2/3

was named at £124 and Grade Tossa-4 at £110. Dacca Tossa-5 was at £128 and Dacca Tossa-6 ranged from £112. Output Tossa-2/3 was now available at £95 and Output Tossa-4 at £85, for March-April shipment. Cuttings were about unchanged at £54 for S.N.C. and at £46 for N.C. There is nothing to indicate that much change can be expected in raw jute prices in the near future. Prices of Siam jute have become much easier of late, but offers were not very freely made last week. Grade A was at £75, grade B at £69 and grade C at £64, delivered mill Dundee for March-April and April-May shipment.

Although there was an improvement in the Indian mill stock position of finished goods at the end of February, this made very little difference to prices. Quotations were at 74s 9d for 40in. 100z. and at 58s 6d for 74oz. a 100 yards f.o.b. Calcutta for March shipment, at 74s and 58s 9d April-June, at 73s 6d and 55s 3d July-September and at 72s 6d and 54s 9d October-December. B Twills were at 171s 3d, 172s 6d, 172s 9d and 172s 6d for the respective shipment periods.

Less business was taking place in yarns and cloth in Dundee. The carpet industry has slowed down its offtake of yarns, but there is still sufficient demand to absorb production. There is a lack of demand for linoleum hessians at present, but the wide cloth for tufted carpet backing is in good demand. The heavy end of the trade is busy and producers of sacking and tarpaulins have orders in hand for forward delivery.

THE PAKISTANI JUTE MARKETS

FIBRE DULL

(FROM OUR DACCAL CORRESPONDENT)

COMPLETELY dull and inactive conditions prevailed in all sectors of the market during the past week. From overseas, regular reports show that resellers have been discounting more and more each day. If it were not for the congestion in Chalna, this position might be even worse since over and above the unsold stocks in Europe, there are some 70,000 bales in this port, which should have been on the high seas for Europe already. Due to foodgrain ships, there is also a certain amount of congestion in Chittagong, and this explains the fact that there is an even heavier stock of unsold jute afloat to Europe.

In the pucca bale market, occasional business is reported in Lightnings and in spite of an apparent weakening last week, a fairly large amount of business in cuttings was done at about £38 f.o.b. Recently, some business has been reported in Export Hearts at £63 f.o.b., which is practically a distress sale. In the loose sector, one large baler continued to buy. Otherwise, there was no interest among balers or the mills. Despite this, loose prices have, if anything, hardened.

Recently there were some healthy and beneficial rains in the eastern part of the country. North Bengal earlier had beneficial rains. This means that the only area still in need of rains is the southern half of the western part of the country. At this time of the season and with the stock position heavy, good rains suggesting a healthy new crop should be a bearish factor. The news of rains may have had a weakening effect on the overseas market, but has had no reaction whatsoever in the loose market.

LABOUR PARTICIPATION IN MANAGEMENT

Workers' Management in Yugoslavia. (Published by the International Labour Office, Geneva. Price Rs. 18, pages 320. Review copy received from the International Labour Office, India Branch, Mandi House, New Delhi 1.)

The concept of workers' management of modern industrial undertakings is not new. This was the basis on which syndicalism and guild socialism grew up. Socialism of all shades incorporates this idea in varying degrees. Socialism, as practised in Russia and other east European countries, lays emphasis on the centralised control of production and distribution and on collectivisation. In Yugoslavia, the trend from the very beginning has been towards decentralisation of economic power and of initiating workers' management of industries.

Compiled by the I.L.O., this publication is an interesting study of the Yugoslav practice against the background of the country's economy. It gives a factual account of the administrative machinery, the functioning of an undertaking under workers' management, the sphere of central control, the determination of prices and the distribution of income. The workers' participation in the economy is ensured by "workers' councils" of individual undertakings. These councils are elected by workers who control investment and production of the industrial units and also determine the distribution of revenue among workers. The board of management, too, is selected by them. Senior executives and technical personnel have wide discretionary power in day-to-day administration, although they are responsible to the council for their action. The remuneration of all concerned considerably depends on the success and failure of their collective effort. The system does not entertain the idea of equal pay for all—wide differences, in fact, exist between the pay packets of skilled technicians and ordinary workers, but the linking of remuneration to results of an undertaking provides an incentive to all concerned.

The Yugoslav system seeks to reconcile the two apparently diversified ends of planning at all levels and of the freedom to trade and produce for all individual producers and undertakings. The Federal Government fixes interest charges, depreciation rates for different sections of the economy and determines the general level of taxation. It also plans for the allocation of investible funds. The determination of prices of most commodities and services and of factors of production are left to the "free play of economic laws". This is where many socialist economists will object, since there is the possibility that individual undertakings—particularly if they are strong—may seek to adopt the all too familiar monopoly practices of retaining the high prices of their products, thereby maintaining larger revenue for their workers. In the Russian economy, the authorities will tackle the problem by directly controlling prices and rationing the consumption of the product. In the competitive capitalist economy, the entry of new firms and competition from substitutes will ultimately bring down prices and lower the margin of profit. The Yugoslav system relies on the criticism of the Press and the Intervention of the Central Secretariat of Economic Affairs to restrain the profit motive of the

workers' council. This, it is claimed, has so far proved effective.

As in India a large part of the economy belongs to the public sector, the problem of incentive in public undertakings is a vital issue. Workers must not think that they are mere cogs in a machine and should be given the opportunity to participate in the organisation of production. But a serious limitation is the illiteracy of workers here, who may not be able to understand, let alone practise, such socialistic ideas in industry. The scheme succeeded in Yugoslavia because workers there are more literate than in India. So the pre-condition for introducing the scheme in this country is to raise the level of literacy among workers. Otherwise, trade unions with political affiliations will only exploit the situation to their advantage.

PIECEGOODS MARKETING

Marketing of Cotton Piecegoods in India. By M. P. Kacker. (Published by Vora and Co. Publishers Private Ltd, 3 Round Buildings, Kalbadevi Road, Bombay 2. Price Rs. 12, pages 204.)

This book is an adaptation from the author's doctoral thesis. While the book covers a wide range of subjects, there is a noticeable lack of expertise. On page 167, the author says that controls were responsible for depriving the livelihood of many middlemen but he wants (on page 194) strict licensing of the latter. On page 191, he wants more opportunities for weavers' co-operative societies, but he admits (page 167) that co-operative institutions have no experience of cloth business. The author abhors middlemen whom he calls parasites (page 190). But he forgets that the middleman discharges a vital economic function, namely, locates the sources of supply and demand. As long as this function is necessary, the middleman will undoubtedly exist. In his recital of the activities of the State in relation to marketing, the author wants everybody to be licensed, policed and penalised. There is no mention of the promotional measures undertaken by the Japanese agencies since 1959 with noteworthy results, nor the rise and fall of "Bleeding Madras." There is also no awareness of the problem that even well-managed spinning mills are finding it difficult to operate. A doctoral thesis should either present new facts or make a fresh recital of the existing facts. This book does neither.

MONETARY ECONOMICS

Monetary Economics. By N. C. Agrawal. (Published by Vora and Co. Publishers Private Ltd, 3 Round Buildings, Kalbadevi Road, Bombay 2. Price Rs. 7, pages 134.)

Dr. Agrawal's book is designed for students preparing for the degree course in economics. It is also intended for those who wish to have an acquaintance with monetary theory. The book is apparently based on several standard works on the subject.

ASSAM URGED NOT TO TAX TEA MORE

(BY A SPECIAL CORRESPONDENT)

THE Indian Tea Association has addressed the Government of Assam on the subject of the proposed increase in the rates of agricultural income tax by the State. New impositions will check the development programme of the tea industry, the third plan target for which is 900 million lbs. The State Governments should follow the Centre's example and reduce (not increase) taxation. Tea remains one of the main earners of foreign exchange, and it would be in India's interests if, instead of allowing the States to penalise this industry in order to secure an insignificant amount of revenue, the Central Government could share with the States concerned the collections which must accrue when the super profits tax is imposed. This tax or any modification thereof will bring in far greater sums than the original estimates.

Any steps that will help the tea industry should be carefully considered. This country cannot afford to allow a major exchange producer to be crippled by a load of taxes. It is of national importance to prevent further loss to outside competitors. Although the Indian tea output over the years has shown a steady increase, the percentage of such improvement suffers by comparison with Ceylon and east Africa. There are also many new areas coming into greater production. Therefore, this industry must be allowed to produce cheaply. To do that, one must aim at quantity also, and that implies buying markets for the commodity, both internally and externally. Producers can make the grade, but the Central and State Governments should realise that co-operation in the matter of taxes is important.

The following figures confirm the fact that India has been losing ground in the world's tea markets. In the decade 1951-61, production has risen from 629.1 million lbs. compared with 776.6 million lbs in 1961, that is, a rise of 23½ percent. Whereas, production in Ceylon during this period has risen by 36.3 percent from 326.2 million lbs in 1951 to 455.2 million lbs in 1961. East Africa has gone ahead from 37.6 million lbs in 1951 to 82.8 million lbs in 1961, or up by about 121 percent.

Exports from the same areas in the period were: India 454 million lbs in 1951 (1951 happened to be a bumper crop year for India); and 455.5 million lbs in 1961, Ceylon 305.1 million lbs in 1951 to 425.7 million lbs in 1961; east Africa 30.1 million lbs in 1951 to 70.1 million lbs in 1961.

It is expected that as a result of the energetic propaganda undertaken by the chairman of the Indian Tea Board, the 1962 season will show some improvement.

At the tea auction held in Calcutta on 11th March, only 44,861 packages were put up for internal sale. There was again a good general demand, with orthodox types selling at dearer prices. CTC styles were somewhat irregular, but sold, on average, around the rates prevailing at the previous sale. On Wednesday, 13th March, 30,695 chests containing dust teas were catalogued for sale. The demand was good and general although the rates were somewhat irregular, but again, giving strong liquors sold at higher prices. Colombo offerings also met with a strong demand, but again, some irregularity was reported in small leaf offerings. "Bright teas" were dearer and the best B.O.P.

fannings were in strong demand at higher prices.

Later, London reported offerings of 32,683 packages, of which India supplied 28,425 packages. Good Assams sold well, but lower grades were easier to buy. On 14th March, the U.K. tea stocks were reported higher at 152.7 million lbs, compared with 150.9 million lbs one week ago. This is normal as shipments from Calcutta will fall off from now on. The present stock is below average at this time of year. Deliveries during the week were given as 10.78 million lbs. This would suggest that consumption is being maintained around 550 million lbs a year, which compares with 522.7 million lbs in 1960 and a record 548.2 million lbs in 1958.

The total allot for the U.K. was shown at 32.7 million lbs, of which Calcutta shipped 19.35 million lbs. Colombo accounts for 10.5 million lbs and others, which presumably include East Africa, shipped only 2 million lbs.

The chairman, the Tea Trade Association of Cochin, Mr. R. I. Bishop, has suggested that a small portion of the cess collected from tea exports should be retained for a replanting subsidy as many estates are not able to afford the interest charged on the replanting loans offered by the Tea Board. When addressing the annual general meeting of the Association recently, Mr. Bishop stated that most of the tea estates in south India are old, and of poor quality and low yielding. Therefore, something must be done to improve their position. Any delay in replanting would impair the competitive position of south Indian tea in world markets.

The chairman expressed the hope that it would be possible to improve the original legislation on emergency risks insurance by ensuring that the extra charge did not fall on overseas customers who might not be sympathetic towards such an impost. He wanted the method of charging premium under this scheme to be critically examined since the maximum holding as a basis for assessment did not seem to be equitable. Mr. Bishop added that the 5 percent sales tax levied on tea in Kerala acted as a drag on the development of Cochin as an auction centre. The abolition of the export duty on tea announced in the Central Budget was welcome, but he said that the surcharge on excise duty payable by the producers would mean a further inroad into estate profits.

In 1962, south India produced 81,317,847 kilograms. In 1961, the figure was 80,164,165 kilograms. Cochin auctions accounted for 24.95 million kilograms of leaf and 14.33 million kilograms of dust, showing an increase of 3.87 percent and 12.87 percent, respectively.

ASSOCIATION OF MANAGEMENT CONSULTANTS FORMED

At a meeting held recently at the Indo-German Cultural Society, Bombay, the Association of Management and Industrial Consultants (A.M.I.C.) was formed. Mr. H. N. Thadani, managing director of Ikon Private Ltd. was elected as the first president of the Association. The objectives of the Association are:

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours
Alkali & Chemical Corp. of India Ltd.	21-3-63	3-30 p.m.
United Bank of India Ltd.	25-3-63	11 a.m.
Martin Burn Ltd.	27-3-63	12 noon
National Pipes & Tubes Co. Ltd.	29-3-63	3-30 p.m.

DIVIDENDS DECLARED OR PROPOSED.—National Rubber Manufacturers Ltd.—8 p.c. (o), subject to tax; Rajasthan Spinning & Weaving Mills Ltd.—Nil; Bombay Oxygen Corporation Ltd.—Nil.

ciation are: (a) to promote better understanding and appreciation of the techniques of management and industrial consultancy practice; (b) to provide facilities for interchange of ideas in the field of management and industrial consultancy; (c) to maintain the practice of management and industrial consultancy at the requisite professional level by setting standards of qualifications and practice; (d) to formulate and to sustain a code of professional ethics among management and industrial consultants.

ISI AND EXPORT DRIVE

Boost India's exports. Create confidence in the goods sent abroad by assuring the overseas customer that he would receive quality.

This is possible if the goods exported conform to accepted standards.

The Indian Standards Institution (ISI) has developed over 2000 standards for industrial and consumer goods. It also provides for the certification of products through ISI Certification Marks Scheme. The ISI Mark on a product is a third party guarantee of dependable quality to the consumer and a symbol showing that the product has been made according to a well-defined system of quality control.

Take advantage of this scheme. Produce goods to accepted standards. Get the licence to affix ISI Mark on your goods.

Build for yourself a name for quality in overseas markets.

New Capital Issues	

The outstanding achievement of the past year has been an unexpectedly large increase in production. Coal output has risen from 56 million tonnes in 1961-62 to a probable 64 million tonnes in 1962-63. As Mr. Prashad has pointed out, of the total increase of 8 million tonnes, the private sector has contributed more than 6 million tonnes, and it is at present ahead of its revised production target for 1962-63 as fixed by the Planning Commission's working group. Although the private collieries have thus reduced the shortfall carried over from the second plan, in the case of the Government-owned collieries the shortfall remains large. Perhaps two factors are mainly responsible for the overall improvement in output. The first is that special measures have been taken to increase coal production since the Chinese invasion. The second is that the shortage of transport and power, for the time being at least, is less acute than it was. The scarcity of explosives, spare parts and machinery, however, continues.

last year were far less than the situation demanded. The price rise sanctioned now, to compensate for the interim wage increase recommended by the Wage Board for the Coal Mining Industry, once again does not meet the cost in full. While sand-stowing is sought to be officially encouraged, the subsidy scheme the Government has evolved discriminates against collieries which had voluntarily undertaken stowing earlier. Similarly, while the need for extracting more coal from deeper seams is recognised, the subsidy given to collieries operating in difficult mining conditions remains inadequate.

The difficulties of the coal industry have received somewhat closer attention from the Government during the past year. The credit for this is due to Mr. D. Malaviya who, barring occasional adventures of the imagination, has brought a new sense of urgency to the work of the Mines

and Fuel Ministry. It is to some extent because of the closer attention, especially since the emergency, that coal production has shown an encouraging increase after a year of stagnation. But even if this increase continues, there is no certainty that the original third plan target of 97 million tonnes (to say nothing of the revised targets of 101 million tonnes or 104 million tonnes) will be achieved. It is a sobering thought that the industry still has to raise its output by more than 50 percent in three years in order to reach that target. The handicaps imposed by the Central Budget could ruin the prospect. Even if the Budget is suitably amended, the financial difficulties which remain will be serious enough to call for speedy correctives. Coal-mining is still far from being the strong and economic enterprise it ought to be if the expansion of the economy and of defence industries in particular, is not to suffer.

STERLING AND THE U.K. BUDGET

Just over a fortnight ago, most people were confident that the U.K. Budget, due next Wednesday, would be one of the most generous and expansionary in the country's history. This was because of employment and persistent industrial stagnation clearly called for vigorous measures to stimulate economic revival. But on 11th March, the pound sterling was suddenly subjected to selling pressure on the world's currency markets which pushed its value below the \$2.80 parity for the first time in 18 months. This run was halted as soon as the authorities had collected their wits and set about absorbing the sales. Now the pound is back above the dollar-parity level and shows every sign of having recovered its previous health. But the doubt is being expressed in Britain that the Chancellor of the Exchequer, Mr. Reginald Maudling, will not now have the courage to make his coming Budget as expansionary as the country's internal conditions clearly call for.

The recent pressure on the pound has clearly caused the authorities in Britain considerable concern. But to suggest that might make the Chancellor alter the expected reflationary character of his Budget—as distinct perhaps from adjusting it marginally so as to avoid any unnecessary risks to sterling—is probably to misunderstand altogether the radical change which has taken place over the past year in Britain's economic thinking. The deflation of the internal economy by overall monetary means has, or so it is hoped, now been abandoned completely as the sole official form of economic control. After years of practice in such a policy, it has been discovered that while it certainly restricts production, discourages industrial expansion and chokes off consumer demand, it does not perform efficiently its expected function of boosting exports, cutting down internal inflation and correcting the balance of payments. In other words, the theory now goes that if Britain's balance of payments remains obstinately weak whether the internal economy is subject to austerity measures or not, then there is no real point in being austere. Such reasoning may not meet with much enthusiastic support from the traditionalists at the Treasury and the Bank of England, but there can be no doubt that if a Chancellor of the Exchequer still refuses to accept it, he and his Party can confidently expect a severe drubbing at the hands of the Opposition and an inevitable defeat at the next general election.

So the conclusion is that an ultra-cautious Budget next Wednesday is highly unlikely, although it may not be quite as expansionary as it would have been had 11th March never dawned. Fortunately, the factors pointing in this direction are not all political, nor connected exclusively with internal economic circumstances. Some of them are distinctly international and concerned with the external circumstances facing the pound. In fact, it may be true to say that what happened on 11th and 12th March was largely irrelevant to a balanced assessment of sterling's current health and strength. A run such as the one which took place was the outcome of special circumstances, and although its significance must not be minimised, it was probably not a clear indication of approaching weakness in the pound at all.

The outstanding feature of sterling during the past six months has been its persistent strength.

This has not only survived the Cuban and Sino-Indian border crises; it has also continued into the period following the breakdown at Brussels. And it still exists; the events of 11th March were caused by British importers covering future foreign exchange requirements in the light of academic Press comment on the possibilities of devaluation, and was only incidentally the result of subsequent international speculation. Because so much sterling was sold forward, future pressure on the pound will to that extent be reduced. Only the speculative selling has had a potentially lasting effect on the sterling area reserves, and this has been comfortably absorbed.

The question arises whether the future pressures could be just as easily reversed. And the answer appears to be yes. At present, the published figures for the sterling area reserves are just below the £1,000 million mark, and in themselves are not particularly impressive. They are, however, backed by at least \$1,000 million of drawing rights with the International Monetary Fund, by extensive holdings of British Government dollar securities and eventually, of course, by the large investments which British companies have in the north American markets. These last two items have tended to expand even during periods when the published reserves have been declining. Finally, there is the extensive support represented by the kind of international co-

operation embodied in the Basle Agreement which should be supplemented in any future on the pound by the United States stockpile sterling.

Thus, the backing which the pound now enjoys is probably larger than it has ever been in postwar history, is certainly much greater than was when the last run on sterling developed in 1930, and is judged by most competent observers to be at least reasonably adequate to permit Britain's expansionary plans to be pushed to ward without too great a risk of being taken back into restrictionist policies, into the spread adoption of physical controls, or into devaluation. So, when it is remembered that British short-term sterling debts are at present comparatively low, and that the main speculative alternative to the pound, the U.S. dollar, is by no means as strong as it has been in recent years, then the position of sterling is seen to be quite remarkably hopeful.

Along with the inevitability of a "stop-go" restrictionism as the only answer to balance of payments difficulties, criticism in Britain is also being levelled against the theoretical working of such policy itself. For example, it is being pointed out that higher production reduces overhead costs and cheapens the price of exports, while an industrialist subject to monetary restrictions is as likely to postpone new investment in plant manufacturing exports as he is in machinery turning out goods for the home market. Furthermore, the restriction of consumer credit and the forcing of high unemployment, far from reducing the pressure of wage demands, tends to encourage claims for more money to overcome the increased difficulty of purchasing conventional necessities and to offset the general feeling of insecurity.

So the factors pointing to a fairly generous Budget for Britain on 3rd April are both practical and theoretical. Any Chancellor erring in the direction of too much caution would find himself under attack not only on subjective, practical and political grounds, but would experience difficulty in justifying his underlying theories as well. The coming Budget is now recognised as a crucial one in Britain's postwar economic history, the one which marks the transition from a state of inflation-orientated economy to one which is deflation-orientated. No Chancellor would dare ignore such an historic watershed—or so it is being predicted—and nothing which has happened so far to the pound seems likely to make him do so.

SUPER PROFITS TAX

THE elaborate defence of the super profits tax contained in the special report on the Budget proposals appears to be steeped in such mediocre and mediaeval thinking that one is reminded of Marie Antoinette who, on hearing her hungry people crying for bread, suggested that they eat cake. To the wailing companies who will be starved of finance by the imposition of the super profits tax, the report gives a similar counsel of despair: "Why don't you borrow?" Apart from the fact that borrowing in a stringent money market may be neither attractive nor feasible, does the suggestion to depend on loans conform to the Government's declared policy of encouraging expansion through retained profits? Less than a year ago, the Finance Minister in his Budget speech on 23rd April, 1962, advised that "industry in the private sector should exercise a greater measure of restraint in relying on bank finance." He considered it desirable that "new companies should aim at raising a larger proportion of the capital they need through equity shares rather than by loans".

What, then, are the reasons for this sudden reversal of policy? Companies with existing high liabilities cannot afford to indulge in the luxury of further borrowing, particularly when the depletion of their finance, accelerated by higher taxation, will make repayment of loans impossible. Interest on borrowing is no doubt a deductible expense, but it cannot be forgotten that borrowed money does not form part of the capital on which the standard deduction is based for purposes of cal-

culating super profits. Thus, while interest income will swell the profits of the banking companies, making them liable to super profits tax, borrowed capital will be excluded from the computation of standard deduction and the Exchequer will have the best of both worlds. It would, therefore, obviously be uneconomic and costly to raise finance by borrowing.

The contention that the cost of raising new equity capital will be increased is summarily dismissed in the special report with a wholly unsubstantiated and erroneous remark that "in view of the excess demand for investment, there is no possibility that corporations as a whole will run short of finance for expansion". After a detailed study, the National Council of Applied Economic Research came to the contrary conclusion and stated: "While it cannot be maintained generally that the sources of supply of funds have begun to dry up, it can be shown that the combined impact of income and wealth-taxes tends to curtail severely the capacity to save of active entrepreneur-investors in the higher ranges of income and wealth. The rate of savings in the economy does not seem to have kept pace with the rate of investment in recent years. Even the savings of public and private limited companies do not show an upward trend in the years for which we have firm estimates". (Taxation and Private Investment, pages 77-78). The recent reluctance of investors to put money in equity capital proves the correctness of this conclusion. For obvious reasons, under-subscription is not widely advertised.

Cases of over-subscription receive such prominence as to create the impression on the public mind that all issues these days are over-subscribed.

In the special report, a novel argument has been adopted to suggest that the super profits tax, far from discouraging, will actually "encourage" expansion. The argument is based on the view that any company using its profits to buy equipment can, in addition to depreciation, deduct 20 percent of the price as development rebate, thus avoiding liability to super profits tax. The incentive to expand, it is therefore concluded, will now be stronger because the development rebate will remove a company from the super profits tax range. The logic is queer. An industry determines the net return on its capital after taking into account all the permissible deductions and reliefs under the law. The development rebate allowance is not an additional benefit being conferred subsequent to the imposition of the super profits tax. It has been in existence for long and has been taken into account by industry and trade in arriving at a normal return of profits for the past many years. Moreover, as stated in the special report itself, "development rebate is considered, at least to a certain extent, to cover the excess of replacement cost over historical cost". Depreciation rates having been prescribed long ago, and having remained unchanged for years, development rebate has been regarded more or less as an additional depreciation allowance. It is, therefore, erroneous to contend that the development rebate will spur further expansion.

It is common knowledge that any expansion or new project does not depend merely on the installation of plant and machinery. Land, buildings, furniture, equipment, motor transport and a host of other items, on which no development rebate is allowed, go to make the total cost of a project. As development rebate is allowed only on the cost of new plant and machinery and as net profits after tax will be reduced only by half the amount of the rebate, the allowance can seldom be so substantial as to affect the profit percentage materially, even if it be assumed that the statement made in the special report is correct. Further, as expansion will be financed by borrowed capital, the tax saved by development rebate will be absorbed by the service charge on debt finance, and not only the taxable profits but even the profits available for retention and distribution will be reduced. The next argument is that the proportion of profits distributed as dividends is much less in countries where the taxation on profits is higher than where it is low. This argument ignores two major points. Firstly, the distribution of dividends in India is forced by statutory provisions in the case of a number of companies. Secondly, the imposition of the super profits tax will not lead to the ploughing back of profits, although it will certainly curb the distribution of dividends.

A feeble attempt is made in the special report to counter the all important contention that the super profits tax will act as a guillotine on efficiency. The report implies that if the requirements of earning enough to expand take high precedence, more effort will be devoted to earning enough, after tax, to meet this requirement. This argument betrays an astonishing ignorance of human nature and the elementary principles of economics. Even a schoolboy knows that efficiency and reward vary in direct proportion to each other and not in the inverse ratio implied in the report. Similarly, the resultant inflation in costs is dismissed with a vague reference to controls and restrictions.

It is true that the super profits tax is not charged at 100 percent, but the fact remains that the standard deduction is based on 6 percent of capital and taxed reserves. The comparison between this return of 6 percent and the yield from loan finance and preference capital is wholly valid because the standard deduction is equivalent to a normal expectation of yield from equity capital. What justification is there, in case the return on equity capital works out to 8 percent, to mop up 1 percent and leave only 7 percent to the investor? It is highly desirable that the standard or normal return should bear some correlation to the minimum expectation of return on loan and prefer-

ence capital. Judged in this context, the comparison is not only sound but absolutely necessary.

Considerable emphasis has been laid in the report on the importance of collective saving and the Government's ability to channel funds into the private sector through the grant of loans and the purchase of equities, etcetera. In this connection, it is sufficient to quote the following extract from the publication referred to earlier in this article, without comment: "What is more disquieting is the trend in savings in the Government sector. If the capacity to save of individuals is curtailed, but the savings by Government correspondingly increase, then at least it could be maintained that public savings have taken the place of private savings. The real position, however, is quite the contrary. Net savings by the public sector have really declined since 1951-52. The ratio of net Government savings to net Government investments has steadily fallen from 94 percent in 1951-52 to 18 percent in 1957-58. In other words, an increasing proportion of public investment is financed by drafts on private savings. In this situation, there can be no doubt that the promotion of a high rate of private savings must be a basic goal of fiscal and other economic policies".

No attempt is made in the special report to meet the objection that the super profits tax is bad in principle, that it provides for no return on factors other than capital and taxed reserves, that

it levels the yield in all industries and trades to an arbitrary percentage and that it hits hard investment companies as corporate dividends paid out of profits subjected to the super profits tax will be again liable to super profits tax assessment. The other objections—its inequitable operation on companies with widely fluctuating profits, its disincentive to foreign investment and its tendency to inflate prices—are conceded, but it is suggested that these could be removed by suitable adjustments. Would such adjustments contained in executive instructions allay the fears of investors, domestic or foreign? The best course would be to scrap the super profits tax, but if grounds of prestige and policy stand in the way, radical amendments must be introduced in the Super Profits Tax Bill itself.

Last but not least, it is argued in the special report that the tax should be viewed as a purely temporary measure. A reference to the proposed wording used in the statute, however, leads to a contrary conclusion. Clause 4 of the Bill, which is the charging clause, provides that "there shall be charged for every assessment year commencing on and from the first day of April, 1963, as tax . . .". The notes on clauses clearly state that "clause 4 seeks to provide for the charging of super profits tax for the assessment year 1963-64 and subsequent assessment years." Investors have to be wary of verbal camouflage which might lead them to think otherwise.

RAISING SUGAR TARGETS

WHEN the Budget demands of the Central Food and Agriculture Ministry were discussed in the Lok Sabha last week, Mr. S. K. Patil, Food and Agriculture Minister, referred to a proposal to increase the third plan target for sugar production from 3.5 million tons to 4 million tons. The Government, he said, was also considering the incentives that should be given and the manner in which they should be implemented to raise the output to 3.3 million tons in the 1963-64 season. In his enthusiasm for a "farmer-orientated economy", Mr. Patil stated that, if necessary, some more price incentives would be offered to cane-growers. Under his new scheme for linking cane prices with the recovery of sugar, the growers have already been getting higher prices than before. Further incentives may result in a substantial shift in cultivation in favour of cane at the cost of food crops and also burden the sugar industry with higher raw material costs. The price of cane constitutes the major element in the production cost of sugar.

Any rational scheme for raising sugar output should in the ultimate analysis be based on increasing the yield an acre. The average yield an acre in India is extremely low. Increasing it is essentially a long-term solution which calls for improved farming methods. There is already a proposal in U.P. to take up blocks of 4,000 acres around each sugar factory for intensive cultivation of cane. Estimated to cost Rs. 1 crore, the scheme will be jointly financed by the Centre, the U.P. Government, the mills and the cultivators. It is reported that similar schemes may also be introduced in Bihar and Punjab. Then there is the question of using the sugarcane cess for improving the quality of cane. The cess was introduced to finance cane development, but it is actually used for other purposes. An important measure that can be taken to put sugar production on a sound footing is to use the crores of rupees which State Governments are raising by way of cane cess to improve the quality of cane. It is gratifying to note that the U.P. Government has decided to spend an additional Rs. 1 crore on cane development. Mr. Patil mentioned that similar steps would be taken in Punjab and Bihar. There would be a matching grant from the Centre for the purpose. Under the present pricing scheme, improvement in the quality of cane, by itself, will fetch better returns for the grower.

An important development which has to be reckoned with is the diversion of cane for producing gur and khandari, especially in Bihar and U.P. As Mr. D. D. Puri pointed out in his presidential address at the last annual meeting of the

Indian Sugar Mills Association, two-thirds of the cane grown in the country goes for the manufacture of gur and khandari, only one-third being used for producing sugar. This diversion of cane supplies is wasteful since sugar factories are able to extract between 33 percent and 50 percent more from the cane than the producers of gur and khandari. It also leads to idle capacity in the sugar industry. Mr. Patil has stated that, because of the incentives, there will be no more need for diverting sugarcane to gur manufacture; but, if this means higher prices for sugarcane, the benefit to the sugar industry will be dubious. It needs substantial resources to renovate and modernise its equipment in order to step up production. Among the major problems it has to contend with are the high costs of raw material and stores and accessories, heavier wage bill and the burden imposed by the emergency risks insurance scheme. The super profits tax, which may deprive the industry of resources to rationalise its production, will be another burden.

Mr. Patil mentioned in the Lok Sabha that the target for exporting 500,000 tons of sugar would stand, irrespective of the international price. The world price of sugar, however, is far lower than the cost of production in India and, for this reason, exports have to be backed with heavy subsidies. The subsidy comes from the excise duty and the cess which the domestic consumer pays. In view of the higher prices at home, the wisdom of exporting sugar has often been questioned, although many other producing countries too export their product at prices lower than the cost of production. A major difficulty in catering to the export markets is that they prefer raw brown sugar to the refined product since many of the importing countries possess refining capacity. The switch-over from the production of white sugar to

India's Resources
are Precious
WASTE NOT,
WANT NOT

raw sugar is not easy, particularly in view of the exacting specifications laid down by some importers. Apart from difficulties of production, there are also problems of storage, handling and deterioration in transit. The acute shortage of

foreign exchange may make it necessary for the country to undertake a serious export drive. But whether it is worth earning foreign exchange after paying a heavy subsidy on sugar exports is doubtful.

Current News and Comment

The Prospect for Steel Imports

With domestic steel production rising from 3.15 million tonnes to 4 million tonnes in a single year, 1962-63 is the best year so far in the history of the Indian industry. Yet, even with imports of 800,000 tonnes, taking total steel availability to 4.8 million tonnes, demand has remained unsatisfied and the engineering industry has continued to suffer from idle capacity. Since all the steel plants are now approaching the limit of their existing production potential, the most that can be added to output until new facilities are built is only half a million tonnes. The issue that has to be faced squarely, therefore, is of continuing imports to meet the most pressing demands, at the same time as various measures are adopted to restrict non-essential uses. Since scarcity is selective, being confined to categories like plates and sheet, wire and tinplate, restrictions will have to be devised with care lest they unduly curb the demand for freely available sections. The possibility of steel mills having to cut back production because no orders are in sight is not as remote as one may be led to think if the shortages are viewed only in terms of aggregates. Distribution controls over easy categories have, no doubt, been liberalised but this is unlikely to provide the whole solution. Many steel-processing or fabricating industries need matching supplies of scarce categories along with the easy ones to keep production going. This factor complicates the task of evolving a rational policy for steel distribution, and for determining the quantum of imports for which foreign exchange must be secured.

The issue of imports needs to be looked at from another angle. Steel being the primary construction material, its availability will determine the speed with which new projects progress. There is evidence that the foreign exchange component of many projects has been calculated on rather vague (or at best optimistic) assumptions about materials, especially the steel available from domestic production. Otherwise, the provision made for steel imports in drawing up a foreign exchange budget for the third plan would not have been proved hopelessly wrong already. It is necessary, therefore, that a fresh assessment should be made so that a more realistic picture of the demand-supply situation from year to year may be obtained. The last such appraisal was made by the Ministry of Steel and Heavy Industries for the 1962 Aid-India Club meeting, but a host of new factors, including the emergency, have intervened since to render it out-of-date. Of course, the final element needed to complete the demand-supply picture will still be missing because the volume of imports cannot be forecast until India knows what amount of foreign assistance to expect, particularly the proportion available for maintenance imports. Even a series of approximations is better, however, than pushing ahead in the dark. The consuming industries will find it helpful to know whatever it is possible to foretell.

Increasing Coal Output

In his inaugural speech at the golden jubilee meeting of the Indian Mining Federation in Calcutta last week, Mr. K. D. Malaviya, Central Minister for Mines and Fuel, has noted with satisfaction that coal production in 1962-63 is likely to touch 64 million tonnes. Of this, the private sector's share is 52.11 million tonnes, against the target of 49.33 million tonnes. While commending the performance of the private sector, he has observed that a mere increase in production is not sufficient and that it should be achieved at a low cost. This raises the much larger question of modernising the coal industry. There has been considerable

delay in using the World Bank loan of \$35 million to the private sector for importing mining machinery because of the shortage of matching rupee finance. The recent Budget proposals have rendered the plough-back of profits or fresh raising of capital from the market well-nigh impossible. Mr. Malaviya has given an assurance that the Government will guarantee the necessary rupee loans that may be sought by the collieries. It is to be hoped that this will enable the private sector to make quicker use of the World Bank loan.

Mr. M. Sen Gupta, chairman of the Federation, has made a lucid exposition of the industry's problems. The expansion in output is largely determined by the availability of rail transport, since the bulk of the coal supply to consumers has to be moved by rail. Apart from the shortage of wagons and line capacity, the railways have very few weighbridges, which are essential for correct loading of coal in the newly provided "box" wagons. It is true that lately the movement of coal has improved. But, as pointed out by Mr. Sen Gupta, so far the railways have planned the movement of coal according to their own operational convenience. Being an important raw material for industry, it is essential that the pattern of coal traffic should be moulded by the phased programme of coal production and not by the operational convenience of the railways. Apart from the problem of transport, the other difficulties faced by the industry are the shortages of power and explosives.

Mr. Sen Gupta has also pointed out that the present price structure does not allow adequate margin for the industry. Coal prices should cover all elements of cost, provide a reasonable return to the investor and leave a sufficient margin for re-investment. Mr. Sen Gupta has made a strong plea for granting a depletion allowance to the coal industry, as has been done in the case of the oil industry. Also, in view of the heavier wear and tear of machinery used in coal mines than in surface industries, he has pleaded for a special rate of depreciation, as was allowed during the second World War. The emergency risks insurance premiums have imposed a new burden. The price increases which have been granted so far have always fallen short of the minimum requirements of the industry.

Spurt in Industrial Production

The seasonally adjusted index of industrial production which stood at 146.6 in September and 148.2 in October—the average for the January-October period works out to 149.2—rose impressively in November when it touched an all-time high of 159.7. The sudden spurt of 11.5 points in a single month is an outstanding example of what can be achieved when employers and workers decide to co-operate wholeheartedly. For there can be no doubt that the steep rise in production in November is due to the satisfactory implementation of the Industrial Truce Resolution requiring workers and employers to work extra shifts, extra hours or on Sundays and holidays. That the Truce Resolution has had a marked impact on industrial relations is apparent from the amazing fall in the number of man-days because of work stoppages since the Resolution was passed. From a monthly average of 470,462 for the January-October period, the number of man-days lost fell to 70,149 in November and the figure for December was even lower at 19,147.

By and large, the provisions of the Truce Resolution calling upon managements and unions to exercise restraint and forbearance and promote constructive co-operation between them to ensure sustained defence effort have been implemented duly curb the demand for freely available sections.

by both the parties. The voluntary restraints exercised by them in the matter of their economic interest in terms of the Truce Resolution have helped in lessening pressure on prices and keeping them stable. The index for wholesale prices which had been moving between 129.7 and 130.8 between July and October, eased to 125.8 in November and it was only slightly higher at 126.1 in December.

While the impact of the Industrial Truce Resolution, as of the emergency, was well pronounced in November and December, the Resolution seems to have been less effective in subsequent months. The Central Minister for Labour, Employment and Planning, Mr. Gulzari Lal Nanda, told a recent meeting of the Parliamentary Consultative Committee on Labour recently that complaints about breaches of the Truce Resolution had increased in January and February. The number of man-days lost due to work stoppages increased in January to 21,603, although it is negligible when compared with 405,661 in January 1962. It is alleged that employers have not lived up to their obligations in the matter of retrenchment, lay-off and discharge and dismissal of workers; lay-off on the part of employers concerning voluntary arbitration have been more pronounced. Workers, too, have been found wanting because of the work stoppages although their contribution to defence effort in the form of donations, extra work and restraint on direct action has been commendable. Mr. G. L. Nanda spoke of the Government's obligation to preserve industrial peace. The Government is shortly calling a tripartite conference to discuss cases of violation of the Industrial Truce Resolution.

Linking Wages with Productivity

In his speech from the chair at the annual general meeting of the Employers Federation of Southern India in Madras recently, Mr. N. G. Bowen stressed the need for linking wages with productivity. Industrial wages have to be viewed in the wider perspective of economic development and not merely from the standpoint of enabling workers to lead a decent standard of living. Mr. Bowen says that in India, the abstract concept of social justice has often influenced the fixing of wages. If the working classes and the rest of the community are to achieve a reasonable standard of living in conditions of full employment and price stability, there will have to be a large increase in production as well as productivity. One of the implied conditions for creating enthusiasm among workers, the chairman said, is to make them feel that they are getting a fair deal as an incentive for playing their part well. But if a minimum wage is made applicable to all sections of the working population, including agricultural labour, it will call for an increase in national output of about 60 percent over and above that visualised in the third plan. "Clearly, this is impossible and it is futile to bargain for a need-based minimum wage for a long, long time to come."

The non-payment of such a wage, Mr. Bowen says, does not mean that labour has been given an unfair deal. If frustration is to be avoided, workers should not be led to expect things that are not feasible. Labour leaders will, therefore, make a substantial contribution to harmonious industrial relations if they desist from equating a need-based wage with a fair deal to workers. The chairman has pointed out that in the context of the country's determination to increase exports, efforts to raise productivity are particularly important. At present, the cost of India's exportable goods is substantially higher than that of her competitors. While the disparity in prices is due to a number of factors, such as the cost of raw materials, interest charges, insurance, freight and management cost, labour costs—if they are allowed to rise without a corresponding increase in productivity—will affect the country's export potential.

Mr. Bowen says that India does not have a cheap wage-cost economy as has been made out in some quarters. Individual earnings of some workers may compare less favourably than those in the more advanced countries in the West but, for that matter, even managerial emoluments in India are correspondingly lower. "It must not overlooked"

economics, it is the wage cost a unit of production which is all important."

Making P.V.C.-processed Goods in India

Since 1961, several schemes for P.V.C.-processed goods were deferred or rejected by the Government on the ground that indigenous P.V.C. production was not sufficient to meet requirements, and as such imports of P.V.C. would be needed which was not considered feasible in view of the tight foreign exchange position. It was only towards the end of 1961 that Calico Mills started the production of P.V.C. The plant has a capacity of 3,600 tons a year and actual production annually is placed around 3,000 tons. The second unit for P.V.C.—Rajasthan Vinyl Ltd, Kotah, is expected to come on stream by the end of the current year. The capacity licensed for this plant is 6,000 tons a year. These two units will use 25 percent of the production for their own consumption. Thus out of a total production of 9,600 tons in 1964, 7,200 tons would be available for the consuming industries. The consumption of P.V.C. by the established units in the current year is estimated around 4,000 tons, and it is expected to go up to 5,000 tons in 1964. Thus approximately 2,000 tons of P.V.C. would be available in 1964 for developing new consuming industries, particularly those which will replace metals. In the light of the fresh assessment of the position concerning the availability of P.V.C. during 1964, the Directorate General of Technical Development has now approved four schemes for the manufacture of P.V.C. pipes and fittings, synthetic foam and flooring material.

Mr. M. Varadarajan from Hyderabad has sought the Government of India's permission to set up a factory near Madras for manufacturing 600 to 1,000 tons a year of hard P.V.C. pipes and fittings in collaboration with Wavin N. V. of Holland. The entire foreign exchange requirements for the import of capital goods, estimated around Rs. 10 lakhs, are proposed to be met by foreign capital participation in minority. It is stated that in spite of the high price of P.V.C. prevailing in India, the cost of P.V.C. pipes would be economic with the utilisation of the technique of foreign collaborators. The project is estimated to cost about Rs. 25 lakhs, and will be implemented by a new Company to be known as Wavin India Ltd. The scheme has been approved by the Directorate General of Technical Development. The second proposal approved by the Government is that of Bhor Industries of Bombay for setting up a factory in Baroda for the manufacture of 480 tons of P.V.C. rigid pipes a year. This firm is already engaged in the manufacture of leather cloth and has been licensed for manufacturing plastic goods. No import of capital equipment or raw materials is required for the implementation of this project, and no foreign collaboration is required for know-how.

Messrs Caprihans of Bombay are being permitted to expand their production of P.V.C. unsupported sheets from 600 tons to 1,500 tons a year, subject to suitable arrangements for meeting the cost of imported capital equipment.

According to informed sources, P.V.C. pipes and fittings are ideal substitutes for G.S. pipes or cast iron pipes for portable and sewage water distribution, and the economics of its production and the maintenance compare favourably with those of the metal pipes. In fact, in Europe and Japan, P.V.C. has considerably replaced the use of metallic pipes for water distribution. In addition, due to its ability to withstand erosion, it is an ideal piping material in chemical plants.

Among plastic foams, there is at present only one unit engaged in the manufacture of polystyrene foam, and another one is manufacturing polyurethane foam on a small scale. P.V.C. foams are said to be equally useful both in the manufacture of consumer articles and also industrial applications. The Government has approved the scheme of Mr. Surendra Kumar Jain for setting up a new undertaking in Kotah (Rajasthan) for manufacturing 720 metric tons a year of synthetic foam. The firm, it is said, will be negotiating with Japan Machinery Trading Company, of Osaka for collaboration. The scheme visualises the import of raw material and equipment entirely on an export promotion basis. The proposal submitted by Bhor Industries for the manufacture of flooring material

has also been approved by the Directorate General of Technical Development. The firm proposes to set up a factory in Baroda for manufacturing 1,200 tons of P.V.C. flooring material a year. Semtex Ltd of the U.K. will collaborate in the project by providing technical know-how. No capital participation is visualised. The firm has undertaken to export P.V.C. flooring material to the extent of Rs. 26.5 lakhs over a period of five years. The import of capital goods required is valued at Rs. 8 lakhs, and the value of raw materials required to be imported annually is estimated at Rs. 7.85 lakhs.

Raising Paint Exports

In his speech from the chair at the annual general meeting of the Indian Paint Association in Calcutta on Friday, Mr. T. M. Bishop says that the progress of paint exports has not been encouraging in spite of various import entitlement benefits which the Government has made available to the industry. These benefits, Mr. Bishop points out, have been offset to some extent by increased production costs. An extensive survey of export markets has been carried out by individual members of the Association. This has shown that in spite of the preference for brands manufactured abroad, there is a market for the Indian products overseas. But if Indian exports are to be raised substantially, their competitive position should be strengthened. Non-standard specialised packings, the expense involved in undertaking market research, sales promotion and overseas agents' commission, which will inevitably involve foreign exchange, will make heavy demands on the industry's resources. "It is the view of many members", Mr. Bishop says, "that a specific study by the Government of the paint industry's particular problems and its true capacity to earn foreign exchange through exports, will prove informative and invaluable both to the Government and the industry". With India's industrial growth, the paint industry, he says, is making a substantial and worthwhile contribution to the export of other industries' products in the form of specialised coatings.

Dealing with the industry's problems, Mr. Bishop states that in spite of the difficulties which the industry has experienced as a result of the high freight rate and the cut in imports of essential raw materials, the production of paints and varnishes has registered "a not inconsiderable increase". The latest imposts in the Central Budget will further raise production costs. The introduction of such measures as the super profits tax will adversely affect the corporate sector, including the paint industry. Manufacturers should, therefore, try to rationalise their production methods and increase efficiency. As for research, a beginning has already been made by forming the Indian Paint Research Association. Mr. Bishop said that the research projects undertaken by the Association should be related to the needs of the members and the cost should be such as could be easily met by them.

Cloth Output, Stocks Down

The output of cloth by Indian mills in February is provisionally placed at 369 million yards, compared with 410 million yards in January 1963 and 396 million yards in February 1962. The February 1963 figure is the lowest for a few years, which seems quite intriguing in view of the easy availability of cotton and large defence requirements. The fall in production seems to be due mainly to the industry's anxiety to dispose of the large accumulated stocks held by mills at the end of January and uncertainties about the Central Budget. The February figure for yarn production is also lower at 147 million lbs, compared with 160 million lbs in the previous month and 151 million lbs in the corresponding month last year.

Stocks held by mills at the end of February fell by a little over 153,000 bales (of 1,500 yards each) from 454,300 bales to 301,100 bales. Stocks of unsold cloth fell from 234,300 bales to 180,800 bales, and the figure for "sold but delivery not taken" came down sharply from 220,000 bales to 120,300 bales. The steep fall in stocks in February cannot be explained away in terms of the

lower output of the month and improved trade and consumer off-take in the cotton piecegoods market. It appears that stocks had been taken away from the mills' premises in the belief that excise duties on cloth would be increased in the Budget, which, however, has not occurred. The February-end figure of 301,100 bales is the lowest since May 1962. At the end of December, stocks with the mills had risen as high as 499,800 bales which created a serious situation because of the acute financial stringency. For the first time in many months, stocks of yarn with mills also showed a welcome decline from 86,700 bales (of 400 lbs each) to 58,700 bales; unsold stocks came down from 42,100 bales to 32,800 bales and stocks under "sold but not lifted" fell from 44,600 bales to 25,900 bales.

Shipments of cotton piecegoods from Bombay port, which accounts for nearly 90 percent of India's cloth exports, amounted to 33.52 million yards in February, compared with 47.74 million yards in January 1963 and 38.58 million yards in February 1962. February 1963 shipments are the lowest for many years, which reflects the continued poor export performance in spite of the compulsory export scheme. Exports in March, it is expected, will show a satisfactory improvement, the provisional figure for 1st to 19th of the month being placed at 27.97 million yards.

Good Progress by E.R.I.C.

The Export Risks Insurance Corporation is only five years old, but the progress which it has made during the short span of its existence is quite impressive. The main function of the Corporation is to facilitate the growth of the country's export trade by providing insurance cover to exporters to enable them to shed their "commercial" and "political" risks, arising from the default or insolvency of the overseas buyer, from war or insurrection, from import restrictions or embargoes on exchange remittance. Apart from offering financial protection to the exporter against all the "commercial" and "political" hazards over which the exporter has no control, the Corporation also serves to improve his financial standing vis-à-vis his banker. The E.R.I.C. has designed a wide range of policies to suit the varying requirements of exporters and to provide for different patterns of trade. Apart from the usual shipments and contracts policies covering either comprehensive risks or only political risks, the Corporation now issues manufacturers' credit insurance policies, exporters' credit insurance policies and market development policies. The Corporation has steadily widened the sweep of its operations. It has decided, for instance, to issue policies covering countries hitherto taboo on grounds of abnormal risks, subject to considerations of prudence of course. It has intensified its publicity and public relations programme, strengthened its field organisation and established liaison with export promotion councils, commodity boards and chambers of commerce. All this holds out the promise that the Export Risks Insurance Corporation will soon become a strong arm of export promotion. With export performance continuing to fall far below the plan target of Rs. 740 crores a year—current year's exports are placed around Rs. 682 crores—the need for boosting exports can scarcely be over-emphasised.

The Corporation's operations in 1962 showed all-round progress, which, however, seems due, in no small measure, to the grave situation created by the Chinese invasion. Reliable reports indicate that there was a tremendous spurt in the Corporation's business in November, with exporters extremely anxious to cover their risks on business with communist countries. The number of policies issued in 1962 increased by 30 percent from 426 to 554; the maximum liability in force rose by about 49 percent from Rs. 12.9 crores to Rs. 19.26 crores; the value of risks covered increased by 72.3 percent from Rs. 12 crores to Rs. 20.7 crores; the premium income shot up by 61.6 percent from Rs. 3.48 lakhs to Rs. 5.63 lakhs and the average rate of premium came down from 29p percent to 27p percent. The bank finance availed of by exporters on the basis of policies issued by the Corporation increased by nearly 40 percent from Rs. 3.7 crores to Rs. 5.1 crores. The claims con-

cerning losses paid by the Corporation fell from Rs. 4.32 lakhs in 1961 to Rs. 1.55 lakhs and recoveries made against the claims paid amounted to Rs. 1.44 lakhs, against Rs. 2.75 lakhs in 1961.

Talking to newsmen in Bombay on 8th March, the managing director of the Export Risks Insurance Corporation, Dr. S. P. Chabiani, said that the value of the risks covered in 1962 corresponded roughly to about 3 percent of India's exports. But if allowance is made for trade in traditional items and for trade against letters of credit and between associates, the Corporation's business covered about 8 percent of the normally insurable risks, which, according to Dr. Chabiani, compares well with that of the similar organisations abroad of the same age. The Corporation has set a target of Rs. 25 crores to Rs. 30 crores for the current year, against Rs. 20.7 crores in 1962. Dr. Chabiani said that the Corporation's experience of the packing credit policies had been very encouraging and the question of enlarging its scope was before the second study group on export finance appointed by the Government of India. The report of the study group was expected to be ready within two months. Dr. Chabiani disclosed that the Corporation was studying the premium structure with a view to revising it to the advantage of exporters. A new dimension of "what the traffic could bear" would be introduced in revising the premia, but he did not say when the revised premia would come into force.

World Cotton Meet in India

Considerable interest centres on the forthcoming meeting of the International Cotton Advisory Committee in Bangalore from 23rd April to 8th May. This is the first time that India will be playing host to cotton experts from 23 countries which are members of this body. With perhaps the largest area in the world under cotton, the average yield in this country is about the lowest. Efforts at stepping up cotton production have not been of much avail, and with production continuing to lag far behind domestic needs, the country has to depend on large imports of cotton, which are now presenting a serious problem because of the critical foreign exchange position. The forthcoming meeting of cotton experts from all over the world should provide a valuable opportunity to the country in tackling the indigenous cotton problem. The problems that the Bangalore meeting will be discussing will, however, be of a very different kind, in that there has now emerged a world surplus of cotton because of the rapid increase in production during the last few years. The U.S. Department of Agriculture has estimated world cotton production in 1962-63 at 49.6 million bales. This is the fifth successive season in which world production has set a new record.

Cotton experts who will be meeting in Bangalore next month will discuss not only ways to stabilise cotton production in the world, but also the prospective level of consumption and the extent to which competition from man-made fibres is affecting raw cotton consumption. Another important issue which will come up for discussion is the impact of international textile agreements on world cotton production. The World Bank which recently undertook a study of the world situation in extra long staple cotton will present its report to the committee meeting. Each country is expected to provide the committee with a review of its cotton production and of its Government's price policy. The problems to be discussed at the Bangalore meeting are of special interest to India because the Government is already engaged in evolving a rational crop pattern to ensure the satisfactory supply of the raw material to the cotton textile industry.

Cotton Price Rise Worries Mills

Not many weeks ago, the president of the East India Cotton Association, Mr. Madanmohan R. Ruia, the president of the Indian Central Cotton Committee, Mr. A. D. Pandit, the Central Minister for Agriculture, Dr. Ram Subhas Singh and the Central Food Minister, Mr. S. K. Patil, were heard

expressing concern over the fall in cotton prices. On 19th February, Mr. S. K. Patil stated in the Lok Sabha that if the mills failed to lift cotton supplies by the end of March, the Government would resort to compulsion. He said that the Government was determined to ensure that the refusal of mills to lift supplies in time did not cause distress. By about the middle of February, cotton prices had already recorded a substantial recovery from the January low levels. Of course, even at their worst levels in January, most varieties stood only Rs. 30 to Rs. 40 a candy below the previous ceiling—a ceiling which had been kept unchanged for nearly a decade. Prices have registered a further sizable improvement over the past few weeks, the upward trend having been accelerated by the absence of any increase in excise duties on cotton textiles and because of a cess on indigenous cotton and the imposition of a duty on imported varieties in the Central Budget.

The recent rise has pushed certain varieties of cotton to the revised ceiling prices, which are Rs. 125 a candy higher than in the previous season, and several other varieties are quoted only about Rs. 20 to Rs. 40 a candy below the maximum. This has naturally caused considerable concern in the industry and the chairman of the Indian Cotton Mills Federation, Mr. Bharat Ram, has been obliged to issue a Press statement on the subject. The Federation chairman says that the cost of textile production, which is already high, will be pushed up still further as a result of the rise in cotton prices, causing great hardship to the domestic consumer of cloth and adversely affecting the industry's efforts at export promotion. The Government, says the Federation chairman, should take this development into account while assessing the textile industry's export potential and performance. The committee of the Indian Cotton Mills Federation has decided to make a strong plea to the Central Government to extend to the cotton mill industry the benefit of the proposed additional rebate on income tax and super tax to the extent of 2 percent of the value of exports. The textile industry sees no reason why it should have been excluded from this benefit. The committee feels that the super profits tax will cripple the country's industrial development, penalise prudent and efficient management and discourage the flow of foreign capital.

Growth of Joint-stock Companies

The annual report on the working of the administration of the Companies Act for the year ended March 1962, shows that the total number of newly-formed companies declined from 1,683 in 1960-61 to 1,614 in 1961-62. But the number of newly-formed public limited companies increased to 199 which was the highest on record. The paid-up capital of companies at work on 31st March, 1962, was Rs. 1,879 crores while the number of companies was 24,757. Of these, 5,999 were public companies with a total paid-up capital of Rs. 933 crores and 18,758 were private companies with a total paid-up capital of Rs. 946 crores. During the past six years, the total number of companies declined by 5,117 because the Company Law Department took active steps to remove the inactive and moribund companies. The move has been welcomed since there is no point in maintaining rickety companies on the list, particularly because they may also be used to indulge in corrupt practices and evasions. In spite of the decline in the number of companies at work, the total paid-up capital of all companies rose by Rs. 855 crores during the past six years. It is important to note that there has been a shift away from the managing agency system since 1956. The managing agency pattern has not found favour with the newly-incorporated companies which have adopted other forms of management. The number of new companies, which proposed to adopt the managing agency system during the past six years, was only 1.2 percent of the total number of new companies registered during the period.

An important move which the Company Law Department has initiated is in relation to Government companies. The department has rightly suggested that these companies must make their annual reports more comprehensive in order to reflect faithfully their performance and achievement. They should also outline their expansion

programmes. The need for giving fuller information cannot be exaggerated since the public must know clearly how these companies are faring. So the suggestion that the directors of government companies should furnish additional information in their annual reports deserves careful consideration. There were 154 government companies with a total paid-up capital of Rs. 627 crores on 31st March, 1963.

Solving U.K. Unemployment Problem

An editorial on Commonwealth trade in the latest issue of Barclay's Bank D.C.O. Overseas Review suggests that increase in British investment in the Commonwealth could be a long-term and more desirable method of tackling unemployment in Britain than stimulating the domestic demand for consumer goods. The article says that the Commonwealth has been and still remains the market on which British fortunes largely turn. Increases in exports to Europe, the United States and elsewhere are desirable and are, as a whole, being achieved, but they are of little avail in the face of static or even declining exports to the Commonwealth. The Commonwealth countries depend predominantly for their exports on foodstuffs, raw materials and minerals, but the declining level of prices of these primary commodities has slowed down the increase and caused a decrease in their earnings, says the article. It goes on: "Sooner or later, the countries have been forced to impose tariff controls on their imports. Their total imports were lower in 1961 than in 1960, with a further decline in 1962 almost certain. But the future is not necessarily gloomy. Nearly all the Commonwealth countries are progressing with industrialisation and diversification of their economies, and it seems impossible to believe that expansion and increasing prosperity (and, therefore, increased markets) will not come to them soon."

The article says it is not easy to see how better markets for Commonwealth products could be found in the United Kingdom. A more promising line was to seek to increase the flow of investment to the Commonwealth. The Government was talking of taking risks with the balance of payments situation in order to cure unemployment. The risks taken need not be great if international financial backing was sought, which might well be forthcoming if measures were designed to support a programme of investment in the Commonwealth. This seemed a longer-term and, ultimately, more desirable method of tackling unemployment than that of stimulating domestic demand for consumer goods made in areas with a fair measure of full employment.

THE PRICE OF MONEY

MR. Reginald Murray has an article in the March number of *The Bankers Magazine* on "Money and Prices in India" which is a plea for the development and the extension of the joint stock banking system as one of the prime needs of Commercial India, for encouraging and distributing credit. "Whatever is the influence of money on prices or the reverse," says Mr. Murray, "money plays such an important part in the daily transactions of every person of every class, that it behoves all concerned, which is practically everyone, to encourage and promote institutions, which, by partially collecting and distributing money, become automatically the indicators of the general supply and demand." There can be no doubt whatever that the utterly disconnected relation of all the various money markets in India to each other, as witness (for example) in Calcutta, "the European money market centred by the Joint Stock Bank, the Burra Bazar market composed of Marwari financial firms, and the Hatkhola Market, represented by Bengali capitalists," is a terrible drag upon the wheels of commerce. The rates of interest charged on loans by the bankers in Burra Bazar and Hatkhola are, as Mr. Murray points out, "no reliable index of the value of money even for the time being." Individual supplies are necessarily soon exhausted, and the terms on which they are let out are dependent upon limited knowledge and application.

A Ditcher's Diary

WHEN A COLLEAGUE OF MINE WENT SOUTH LAST year, he took the opportunity of talking things over with some old ex-Congress leaders in the region. With the wisest and shrewdest of them he discussed, quite casually, Biju Patnaik and his famous room in the External Affairs Ministry. The entire talk was "off the record"; but recent political comment and Monday's exchanges in the Lok Sabha make me feel that I shall betray no confidences by giving an indication or two of the tenor of the discussion three months ago when some of the old man's observations seemed preposterous to my colleague. "Yes", the old man said, "Panditji thinks Biju could succeed him". But how could this moderately successful business man endear himself so to the Prime Minister? The answer was to the effect that Mr. Patnaik's success in the mid-term election must not be forgotten, and that was a much-needed shot in the arm for the Congress at the time. "And", the old man said without the slightest trace of rancour, "Jawaharlal Nehru has all his life worshipped only one thing and that is success, however achieved and whichever the field of human endeavour. He loved his father for being such a tremendous success at the Bar; he knew from the start that Gandhi was the man in politics who would deliver the goods". All this seemed rather hard on Mr. Nehru, my colleague told me at the time; on Tuesday morning he wasn't so sure. Political observers in New Delhi apparently believe that Mr. Patnaik succeeding Mr. Nehru may not be altogether a joke, although the expedition with which Mr. Patnaik felt obliged to disclaim any ambition even for the Defence Ministership is a pointer to the contrary. Be that as it may, Mr. Nehru has already said that Mr. Patnaik's visit to Washington has done a lot of good; we have also been told that in dealing with the brand new Kennedy Administration he tended to adopt techniques associated with the New Frontier. (Whether Mr. Kennedy will take it as a compliment is another matter.) What must be obvious is that, in some matters, Mr. Nehru still seems moving in one direction and the rest of his Government in another. I am not suggesting that the former must by definition be wrong.

OFFICIAL AWARDS, WHETHER FOR FILMS OR BOOKS, are soon reduced to a farce, except possibly for the lucky ones of the year who may take their prizes almost as seriously as the cheques accompanying them. They breed intrigue and ill-will; if they ever inspired a work of art I would like to hear of it. In New Delhi the main defects are not caprice and subjectivity; we all are subjective

and can easily be capricious. What informs New Delhi, when it comes to judge the year's films (first selected, mostly ineptly, by regional boards), is what I shall call a moral pigheadedness. Nothing else can explain the acclamation of such pictures as *Bhagini Nivedita* last year and *Dada-thakur* this year. Both, I understand, have noble themes; and that's what carried the day. I am all for nobility; my only regret is that I see so little of it in living men around me. (I don't think my Calcutta address has anything to do with it; I'm not at all sure that I would see more of it in New Delhi or Bombay.) Nor shall I, on this occasion, go into the continuing iniquity of paying the producer, who is in fact financier and no more, Rs. 20,000 and the director, who makes or mars a film, only Rs. 5,000. But, surely, when you are asked to select a film for an award, you look in it for its qualities as a film and not for any message it may or may not have. This elementary point is never, never remembered in New Delhi; and subtlety is something that never seems to appeal to our superior judges. It is good that Satyajit Ray's *Abhijan* has got a certificate; a better film it was than any made by anyone else in India. But the same Ray had made a beautiful film called *Kanchanjanga*; and this, I understand, didn't make the grade even to go to Delhi! (If anyone had the simple idea of asking Ray which film he would prefer to be judged by, I am sure he would have chosen *Kanchanjanga*. Which shouldn't be the last word; but his opinion was certainly worth having.) It's all explainable, however, in psycho-analytical terms. If identification is the source of my pleasure at seeing Gregory Peck opposite Ava Gardner, our film judges may be going through the same process when seeing the self-sacrificing Dadathakur. They can, at least, forget the water and electricity bills. Escapism again!

ON A VISIT TO INDIA A FEW WEEKS AGO, A BRITISH writer specialising in the problems of urban development said to me that, in the course of his fairly extensive travels, he had seen innumerable examples of badly-planned cities, but never a completely unplanned one. Not, that is, until he arrived in Calcutta. A six-day sojourn is apt to leave one with only the most superficial of impressions; but I thought he got fairly near the heart of the matter with the remark that the main trouble seemed to be the passion for spectacular schemes, with the result that not much attention was given to the many little things that could be cheaply done. The West Bengal Government's idea of re-examining the feasibility of the proposal for an underground railway is an

excellent example of the sort of thing I have in mind. This particular proposal is an old brain-child of Dr. Roy's, along with several others concerning monorails, circular railways, suburban townships, and what-have-you. If memory serves, it has been resurrected and buried with unfeeling regularity every three years. More than a decade has passed, and it is still being studied. I should have thought that, the transport shortage in Calcutta being as acute as it is, the time had at last come for a holiday from academic enquiry and disputation. It is not for me to say which form of transport could be developed cheaply and efficiently—buses, a circular railway or an underground. Personally, the thought of noisy trains crawling round Calcutta makes me shudder with horror; so does the suspicion that the vibrations they would cause would accelerate the collapse of a fair proportion of the ancient monuments in which Ditchers are privileged to live and work. The answer, I suggest, is to have more buses moving faster on better roads. The idea is not spectacular, and perhaps therein lies the rub; traffic experts too have to justify their existence in an age of passionate devotion to futile brain-waves.

HAVING ONCE CONGRATULATED ALL INDIA RADIO on making Dr. B. V. Keskar's election defeat the lead in its news bulletin on the relevant day, I suppose I shouldn't be unduly annoyed that for most of Friday and Saturday last week the most important news for A.I.R. was that some odd M.P.s had said one or two nice things about Indian broadcasting during the national emergency. By now we have got used to the idea that All India Radio will in the main be at the service of the Government for its propaganda; it seems a bit much still that A.I.R. should use itself for its own glorification, to which A.I.R.'s only valid defence could be: "If I don't beat my drum, there's no one else who will". And if the Press Information Bureau could once have, may still have, a Press Relations Officer—without anyone asking what the rest of the P.I.B. might be for—one shouldn't be too harsh on A.I.R. But when All India Radio and I joined in our rejoicing over Dr. Keskar's well-earned defeat, we did it, I do not mind confessing, on the utterly fallacious assumption that nothing, nobody could be worse. Forgetting the Ministry of Information and Broadcasting for the moment, this "nothing could be worse" attitude inspires some of the most desperate and hence dangerous movements; in Germany, many well-meaning fellows really had had enough of the Weimar Republic, and we know today the alternative they chose with what results for themselves and for the rest of the world. That's a much bigger subject, to which I may return another day. As for All India Radio, I don't think it has done as badly as it might have done—given the shifting twilight governing the Government of India's foreign policy in general and China policy in particular. is by and large a simple, straightforward and subtle medium. You say something or you don't. It would be quite impossible, perhaps also unwise to reduce India's China policy to such simple proportions; and no wonder All India Radio has been hectoring and harmless historical sciences by Mr. Panikkar (one of the architects of India's China policy, but how wise today!). It is altogether silly to expect A.I.R. to have a policy when its master, the Government of India has none. The listeners? The "Damn the classes" attitude ain't dead yet.

FEW MEMBERS OF THE BUSINESS COMMUNITY have commanded greater respect and influence in recent years than Sir John Brown, the distinguished chairman of Jardine Henderson who is leaving India on retirement later this year. J.D.K., as he is popularly known, came to India in 1937 on the staff of Lovelock Lewes; he became a partner of the firm nine years later, before moving to managing directorship. Jardine Henderson in 1949. In India, the transition from accountancy to industry has been a happy one; if it has been particularly so in Sir John's case, the credit is due primarily to his remarkable breadth of vision, combined with an astonishing memory for detail. These qualities have been seen not only in his work with Jardine Henderson, or within Assocham; his services to business and industry have ranged over a much wider field, through committees covering such complex problems as company law and reorganisation. Although his contribution has been unostentatious, those who have been in contact with him will testify that it has been distinguished not only by zeal and enthusiasm, but by a quality of insight and quiet logic which is perhaps rare. Sir John is known as a man of pronounced urbanity that he has gained and held the affectionate esteem of many who might have disagreed deeply with his opinions. Thoughtful, modest and charming, he and Lady Brown leave behind a large circle of friends and will be greatly missed.

SO THE FUTURE OF THE BRITISH GURKHA BRIGADE has been settled at last. And I am glad to say that it will not be as unpromising as some people had feared. There is a genuine affection for these fine soldiers in British military circles and there will be considerable satisfaction in the fact that, when complete, the run-down will leave the Brigade 10,000 strong. I have been interested in some of the views expressed during the recent British Parliamentary discussions about the Gurkhas' fate. It seems that good fantry men though they are, their rôle in a technically-orientated modern army is inevitably limited. Modern industrial communities do indeed have a certain general measure of technical insight and competence into those brought up in them, quite apart from individual aptitudes or later training. This is something the Gurkha soldier lacks, though I am sure that with suitable instruction he would make the grade. There are advantages, too, in using him for the kind of work which the professional peacetime British army is most likely to find itself doing outside Europe, namely, holding the ring in colonial disputes. So that leaves chiefly routine guard duties something which no proud, self-respecting soldier such as the Gurkha wants to find himself doing too much of. In view of these circumstances, therefore, the decision to reduce numbers should permit an improvement in quality, satisfy Britain's sentiments towards her loyal little friends, and incidentally help Nepal preserve an important element in her balance of payments. Besides, one can never predict when troops like the Gurkhas are urgently needed again; I have often wondered, for instance, why Britain appears never to have hit on the idea of training them exclusively for mountain warfare in her modern army. But perhaps that may come; there are plenty of changes going on in the British army at the moment. One of them, I see, is the abolition of battledress, after more than 24 years in fashion.

THE DITCHER

Guide for Investors

S.P.T.: COMPANIES DEFER RIGHTS ISSUES, CUT DIVIDENDS

(BY A SPECIAL CORRESPONDENT)

THE Calcutta stock market has lost its nerve, and no business has been transacted during the past few days. As the implications of the super profits tax are now understood more clearly, share prices have collapsed on a broad front. Since the umbrella of minimum prices has proved ineffective, the authorities have scrapped the minima for shares on the cash list in a desperate bid to restore normal conditions at lower prices. The minima for clearing shares have been maintained lest there be payment difficulties. But it has become nearly impossible to transact business, since buyers are difficult to locate even at discounted prices.

The market has not been able to stand up to the unfavourable corporate decisions taken during the past few days. Dunlop Rubber, for instance, has cut the dividend from 20 percent to 15 percent and Union Carbide from 18 percent to 12.5 percent. Although the cuts have been made on super profits tax considerations, operators wonder whether the companies have not acted hastily. Since strong representations have been made from all quarters pointing to the crippling effects of the impost, it is possible that the tax may be dropped or at least modified. There is no doubt that in its present form, the levy will damage the prospects for the private sector considerably. However, since the tax is yet to be put on the statute book, it would have been a better policy for companies to defer declaring dividends until the final form of the tax is known. Braithwaite and Company, for instance, has taken the right step by deferring its dividend. If Dunlop Rubber and Union Carbide felt that they should not keep their shareholders waiting for the dividends they could have paid an interim dividend. This would have left the door open for paying more later. Now that the final dividends have been declared, shareholders will suffer if the super profits tax is later modified. Whether they would be compensated in the latter eventuality, the shareholders would be greatly interested to know.

Hindustan Lever was perhaps the first leading company to show the adverse impact of the impost. It has already postponed its rights issue which was intended to finance the expansion programmes. Two companies in the Brady group have also cut their dividends. At a general meeting of Goodyear India Ltd., held in Calcutta last Friday, the shareholders have decided to defer the issue of 998,500 new ordinary rights shares of Rs. 10 each at a premium of Rs. 16 a share. The funds were intended to be used for financing the expansion of the tyre factory which has been set up in Ballabgarh. The expansion was estimated to cost Rs. 1.5 crores in machinery and in training personnel.

At the meeting, Mr. R. E. O. Carey, managing director, mentioned that in consultation with the associate company, the Goodyear Tyre and Rubber Company of the U.S.A., it has been decided to postpone the expansion programme in the light of the super profits tax. The impact of the impost has to be determined more fully after the Super Profits Tax Bill is passed. Hence it is desirable not to

proceed with the rights issue for the time being. But he hopes that the expansion plan will again be re-examined as soon as the proper time arrives. He has even hinted at the possibility of reopening the matter at the annual general meeting of the Company due to be held in June, provided the situation improves. Anyway, the licence to issue the rights shares will remain in force until February 1964.

The joint memorandum submitted by the eight recognised stock exchanges to the Central Finance Minister on the subject of super profits tax examines the position taken up by Mr. Desai in his Budget speech that an increase in the corporation tax is either not practicable, or may not bring in the required revenue of Rs. 25 crores, or would not secure an equitable distribution of the burden; and that the super profits tax would be more equitable because it would correlate the rate of tax with the percentage of profits by taking at 50 to 60 percent all "excessive" or "super" profits earned by a company exceeding a standard return of 6 percent on its paid-up capital plus taxed reserves. It is pointed out that *prima facie*, net profits above 6 percent cannot be said to be "excessive" or "super", when current bank borrowing rates are 7 percent to 8 percent and debenture and preference capital cannot be raised at less than 9 percent.

An examination of company balance sheets shows that even in the case of industries like iron and steel, cement and electricity where there is price regulation or statutory control, and in undertakings like banks and insurance companies which no one could charge with profiteering, some units make "excessive" or "super" profits and others do not. Therefore, what are called excessive or super profits are really differential profits.

Various Reserve Bank studies show that companies do not make excessive profits; and that even these moderate profits are not frittered away by distributing excessive dividends, but as much as 35 to 40 percent is conserved as reserves representing enforced savings on the part of shareholders for initiating, promoting and accelerating industrial growth, development and expansion.

SUPER PROFITS TAX LIABILITY OF SELECTED COMPANIES

The following is a statement showing approximate super profits tax liability of companies whose shares are included in the clearing list of the Calcutta Stock Exchange on the basis of last reported profits. The figures form part of the study of 523 companies made by the Calcutta Stock Exchange:

Company	Pre-tax profit	Tax	(In Lakhs of Rupees) CLEARED SECURITIES					Last dividend	Last transfer to reserve
			Taxed profit	Exempt profit	S.P.T. charged	Residual profit	S.P.T. charged		
Indian Iron	897	395	502	251	251	134	368	217	322
Orient Paper	133	65	68	40	28	15	53	48	20
Hind Motor	301	152	149	36	93	52	97	101	50
Indian Aluminium	164	53	111	44	67	38	73	62	50
Kesoram	87	36	51	26	25	14	35	39	31
Orissa Cement	112	44	68	20	48	28	40	36	31
Texmaco	52	20	32	11	6	26	26	6	—
Shree Gopal Paper	53	23	30	16	14	10	20	29	—
Indian Cable	137	69	68	30	38	21	47	56	18
Guest Keen, Williams	104	30	74	60	14	7	67	56	27

Jaipur Udyog	63	—	63	22	41	22	41	23	33
Total								433.00	

This is confirmed by an examination of balance-sheets of individual companies. There is no yardstick in the nature of a standard return on capital with which to measure profits for either industry as a whole, or from industry to industry, or between one company and another in the same industry. It is, therefore, a fallacy to assume that all differential profits earned by a company in excess of 6 percent of its paid-up capital plus taxed reserves are "excessive" or "super" profits.

A super profits tax which taxes companies' net profits between 6 percent and 10 percent of their paid-up capital plus taxed reserves at the rate of 50 percent, and net profits above 10 percent at the rate of 60 percent, is *prima facie* confiscatory; and it will inculcably increase the maldistribution of the tax burden because, as observed by the Income-tax Investigation Commission (1949), "public companies generally attract a large number of middle class shareholders and many of them would be seriously prejudiced if the companies are subjected to super-tax at a progressively increasing rate". The investing public will also be hard hit by the adverse effects of the super profit tax on the stock market. Since the super profits tax will materially reduce the profit-earning and dividend-paying capacity of different companies, the structure of stock exchange prices will be distorted, and the continued and unequal fall in prices, differing from industry to industry and company to company, is likely to deepen the present depression.

To mitigate the defects, the proposed tax should at least be modified to provide for the following:

- Capital employed should include all shareholders' free reserves (e.g., development reserve) as well as

COAL SHARES DOWN

(BY A SPECIAL CORRESPONDENT)

AN increase of almost 6 million tonnes, or 12 percent, in the private sector's coal production in the course of one year is a remarkable achievement, as Mr. K. D. Malaviya,

debenture and long-term loan capital and bank borrowings.

- Standard return on capital employed should be increased from 6 percent to 10 percent with power to prescribe a higher percentage where necessary.
- Option should be given to companies to calculate standard deduction either with reference to a percentage return on capital employed, or in comparison with "normal profits" earned in a base-period, say, the last year or the average of the last two or three years.
- Profit chargeable to super profits tax should be reduced by preference dividend in excess of the amount of dividend calculated at the standard rate of return on capital employed.
- The super profits tax rates should be substantially reduced to less than 20 percent to 25 percent.
- Provision should be made for carry-forward and carry-backward of losses and deficiency of profits and for set-off and grant of refund.
- Exemption should be given to industries where there is price regulation or statutory control, and also to special industries like banking.
- Exemption should also be given to companies "in which the public are substantially interested" within the meaning of Section 2(18) of the Income-tax Act, failing which, as recommended by the Income-tax Investigation Commission (1949), provision should be made for refund or credit of super profits tax to shareholders of such companies.
- Tax holiday should be given to all new companies.

The customary form of taxation for companies is the corporation tax, and therefore, instead of levying a super profits tax, it would be from all points of view more practicable, desirable and equitable to levy a temporary surcharge of 10 percent to 12½ percent on the corporation tax, raising the effective rate of corporation tax to 55 to 56½ percent for the duration of the emergency.

Central Minister for Mines and Fuel, has acknowledged. Normally, it should have cheered coal investors, but the bullish influence of an upswing in production has been completely neutralised by the shadow cast over the stock markets by the super profits tax. Calculations made by the Calcutta Stock Exchange show that a group of 12 coal shares have shed something like Rs. 1.04 crores in value since the Budget was presented. Among the leading equities Bengal Coal is down from Rs. 299 to Rs. 265, Central India from Rs. 10.25 to Rs. 8.75 and Burrakur from Rs. 15.75 to Rs. 14.87.

This decline in coal shares reflects in part the generally depressed market sentiment, but there are also some special handicaps impinging upon this industry which make future prospects particularly bleak. The industry's expansion programme, requiring an outlay of something like Rs. 60 crores over the third plan period, assumed that a part of the resources would be available from the reinvestment of profits. But if profits are diverted to the Exchequer by the new levy, the gap already existing between resources in sight

and the total requirements for expansion programmes will be further widened.

Even before the Budget, 46 applications for a total value of Rs. 6 crores had been made for Government assistance in procuring rupee finances on the basis of the Reserve Bank guaranteeing loans made by commercial banks to the extent of 65 percent. With less money available from plough-back, the requirements will now go up, and some producers may find the situation too discouraging to proceed with expansion at all. Any prudent company must satisfy itself about its ability to repay loans before it actually undertakes to borrow. The effect of the super profits tax on the ability to redeem corporate debts is obvious. But in the case of coal companies, with their narrow capital base—because fresh investment has been difficult to attract for many years—the incidence will be especially harsh. Yet if companies fail to expand, they may well find their profitability squeezed by cost inflation on the one hand, and by New Delhi's obdurate refusal on the other to allow coal prices to rise to an economic level. In sum, the outlook for the industry, whichever way one looks at it, must cause considerable concern to the investor.

While congratulations for the record output, conveyed by the Minister in the message he sent to the Indian Mining Association last week, are entirely in order, investors feel that some indication of future policies would have been more to the point. No doubt, the Minister's missive mentioned that the Government would endeavour to create a climate in which private producers could fully play their part, but such pious expressions of goodwill are no substitute for policy decisions. Sympathetic noises are made from time to time to give the impression that New Delhi will not let political inhibitions stand in the way of doing the right thing by the private companies, but little actually gets done.

During the current financial year, the ad hoc increases in coal prices fell far short of requirements, although the Government had accepted the view that the effect of the heavy investment required to meet third plan targets should be specifically allowed for. In fact, the assurance had been expressly given that "necessary adjustments" would be made in the price structure to ensure "an adequate return" on the capital employed in the industry. But even before returns are calculated, the increases in production costs need first to be neutralised. Investors are worried that, here again, the gap between precept and practice continues. In the case of stowing subsidies, the principle that actual costs should be fully neutralised stands enshrined in the recommendation of the Coal Prices Revision Committee. But as Mr. P. Prashad has pointed out in his address to the Indian Mining Association, literal interpretation of procedures whittles down the benefits, and something like Rs. 1.50 a ton of costs is left uncompensated.

The new scheme of subsidies introduced last August tends to discriminate against those producers who have made heavy capital investment on aerial ropeways or belt conveyors, while compensating far more adequately units which are taking to stowing only now, employing trucks and trailers. Again, subsidies paid for difficult mining conditions fail to cover costs, which specially handicaps the private sector because it is confined largely to vertical expansion. As Mr. Prashad says, coal companies fully accept the need to get at the coal lying in deep seams but progress is held back by uncompensated costs. Yet there is no alternative to vertical expansion if the proportion of better grades in the total raisings is to be

improved. Had the collieries been allowed to spread the cost by combining horizontal expansion with vertical, the disability may not have been so crippling. As matters now stand, a producer is not permitted to extend his operations to new or contiguous areas unless his reserves amount to less than ten years' raisings. This overlooks the fact that he cannot always keep out of the red under the present price structure if his workings are confined largely to the deep seams.

The Government's response to these difficulties leaves the impression that, although the idea of a mixed economy is accepted in theory, there is a reluctance to accept the corresponding obligations. In a planned economy, and especially in the case of coal where production, distribution, movement and prices are all subject to official controls, private initiative has precious little elbow-room left to it. Producers' fortunes must, therefore, depend to a large extent on New Delhi's policies in which positive encouragement to growth is the element most conspicuously missing. It is futile to argue, as some foreign observers suggest from time to time, that the private sector should forge ahead through its own enterprise without depending on official assistance. This is hardly possible when the scope for enterprise is limited in every direction, and even financing must, in part at least, be arranged by the Government because of the disabilities imposed by past pricing policies.

In the context of prices, the Government's oft-expressed concern over the inflationary effect of a rise in the cost of coal is no doubt legitimate, but closer enquiry suggests that the burden of holding the price line should be shared more widely. Investors point out that, while denying coal producers their legitimate claims, the Government does not appear to be worried about the increase in the delivered cost of coal arising from the successive rises in railway freights. Nor do its policies concerning industrial location pay much heed to considerations of transport costs, as is evident from the steadily lengthening lead of coal traffic.

Because coal prices fail to reflect the real value of fuel, efficiency in its use is at a discount and wasteful utilisation is often sought to be offset by employing better qualities than really necessary. Mr. Prashad has drawn attention to the need for improved efficiency in the use of coal in the context of its pricing. Not only are the two issues inter-related, as has been brought out in the report made to the Government by the Colombo Plan team of experts; it is also valid to suggest that any increase in fuel costs from the revision of selling prices can be largely absorbed by improved burning efficiency. The quest for efficiency need not entail any great capital outlay, savings of at least 10 percent being possible in most cases by inexpensive measures.

In any discussion of the coal industry's prospects at the present juncture, investors can hardly overlook the possibility that stocks may pile up at pitheads in the absence of demand. There are persistent reports of cancellation of orders by consumers, and already some relaxation of grade entitlements has had to be made to forestall a glut. The basic point here is that the rise in industrial production since the end of the second plan has fallen short of estimates. The rise was no more than 6.8 percent in 1961-62, and about 8 percent in the first nine months of 1962-63, compared with an average increase of 14 percent a year assumed in the third plan. The outlook for the future, already clouded by the uncertainties of foreign exchange, has not been improved by the latest Budget proposals which must, unless

substantially modified, have the effect of restraining new investment.

Mr. Malaviya has at times talked as if he is himself uncertain whether 97 million tons of coal will really be required by 1965-66. For him, as far as the public sector operations in coal are concerned, the problem is largely academic, because N.C.D.C.'s performance so far does not indicate that it will be in a position to fulfil the task allotted to it. But in the case of private producers who stand almost at the half-way mark in their progress towards the 60 million-ton target set for them, this must cause anxiety. Every ton of coal lying unsold at pitheads increases their working capital liabilities, apart from all the risks of deterioration and loss in storage. Their capacity to weather adverse developments is strictly limited by the already low level of profitability.

Bangalore Stock Exchange Opened

THE Bangalore Stock Exchange is the eighth stock market to be recognised by the Central Government under the Securities Contracts (Regulation) Act, 1956. At the inaugural ceremony in Bangalore on Sunday, the president of the Exchange, Mr. M. L. Gopala Setty, said that several companies had already indicated their desire to get their shares listed on the Exchange. The president has requested other companies registered in Mysore State as well as those registered outside Mysore, but having shareholders in the State, to get their shares listed on the Exchange. The stock markets, he said, should help in ensuring distribution of shares among small investors and thus strengthen the democratic base of industrial development. Statistics show that the number of small shareholders in companies has been increasing gradually in recent years. Most of these investors come from the middle class, men in the professions, business executives, pensioners, etcetera. This is a healthy sign paying the way for industrial democracy.

Mr. Setty said that the Reserve Bank of India which restricted bank advances on shares, when the prices of the latter were rising steadily, should now reverse its policy. Bank advances on shares should vary proportionately according to the fluctuation of share values. The banks, Mr. Setty said, should be directed to take 30 percent margin in a depressed market and gradually increase it to 50 percent if there is a boom. The policy followed by the Federal Reserve Board in the U.S.A. in going to the rescue of the market when it passes through a slump and tightening the margin in times of a boom should be followed in this country.

The Central Budget proposes to impose a heavy burden of direct and indirect taxes. The three-fold way of encouraging economic expansion, Mr. Setty says, is to enable the existing industries to expand and modernise, to encourage the formation of new companies and to provide attractive incentives for foreign capital. But the irony is that the super profits tax will destroy all these possibilities and block the way for future industrial progress. A 6-percent base is given for calculating the super profits tax, but it is well known that companies borrow from banks and other institutions at 8 percent to 9 percent interest and raise preference share capital at 8 percent to 10 percent. The concept of the super profits tax is itself a misnomer, since very few companies have so far made super profits. The tax will hit the growth shares most. Investors who bought these shares at high prices in the past will get insufficient rewards for making wise investments. The tax will make it impossible for new companies

CAPITAL, 28th March, 1963.

to pay reasonable returns to shareholders even if the latter wait for four or five years. The companies will be unable to build up reserves, so capital formation will be retarded. There is already a slowing down of fresh applications for industrial licences and for capital issues in recent months. A sum of Rs. 20 crores expected from the tax, the president said, will be a small compensation for the harm that will be caused to the country's industrial growth.

Prospects for Alkali and Chemical

IN his chairman's address at the annual general meeting of Alkali and Chemical Corporation of India Ltd in Calcutta last week, Mr. A. R. Foster saw that it is difficult to forecast the trend in view of the emergency and the effect it will have on the costs and profits after tax. The super profits tax will have a heavy impact on all industries. As for expansion, the chairman points out that the existing units have been producing more and new lines of manufacture have been adopted. The rubber chemicals plant has been completed and will start producing soon. The paints factory has been licensed to increase its production capacity by 50 percent. The company has obtained a licence for setting up a modern resin plant.

The construction of the intermediate density polythene plant has made progress and is expected to start production before the end of the current year. As for the decline in profits in 1962 Mr. Foster hopes that the trend will change for the better in due course. In spite of bigger sales in 1962, the profit has been held down by increased competition in polythene. The paints factory could not make sufficient profits as the prices of various raw materials and wages have risen. The prices of caustic soda, liquid chlorine and hydrochloric acid have been fixed by the Government below production costs.

Jay Shree Textiles Maintains

JAY Shree Textiles Ltd has maintained the taxable ordinary dividend at 10 percent on the increased capital for the year ended December 1962. It offers a yield of 7.8 percent at the present price of Rs. 12.81 a share of Rs. 10 each. The trading profit has risen from Rs. 33.17 lakhs in 1961 to Rs. 43.10 lakhs in 1962. Depreciation absorbs Rs. 8.11 lakhs (against Rs. 3.19 lakhs), taxation Rs. 16.55 lakhs (against Rs. 11.95 lakhs) and development rebate reserve Rs. 8.60 lakhs (against Rs. 49.952). A sum of Rs. 1.25 lakhs has been allocated to general reserve. The carry-forward amounts to Rs. 12,038, against Rs. 87,266 brought in. Sales rose from Rs. 1.73 crores to Rs. 2.20 crores.

The cotton spinning unit in Risra in West Bengal has started producing. The mill has 15,200 spindles. The Company has received a licence to set up a cotton spinning unit in Midnapore, West Bengal, with 12,000 spindles. It has also received a licence to build a factory for producing malleable castings and steel fabrications in West Bengal. A licence for building an H.T. and L.T. insulators plant has been obtained. The Company has taken steps to get the necessary equipment.

Union Carbide Cuts Dividend

UNION Carbide Ltd has cut the taxable ordinary dividend from 18 percent for 1961 to 12.5 percent

CAPITAL, 28th March, 1963.

including a final of 5 percent, for the year ended 25th December, 1962. At the present price of Rs. 29 a share of Rs. 10 each, the yield works out to only 4.3 percent. Gross sales were Rs. 12.26 crores, against Rs. 9.50 crores. Profits before tax and after development rebate have amounted to Rs. 1.86 crores, against Rs. 83.21 lakhs. The higher profit has largely been due to the substantial increase in sales and a lower development rebate of Rs. 7.80 lakhs (against Rs. 65.50 lakhs). Taxation absorbs Rs. 1.29 crores (against Rs. 21.78 lakhs), a provision for Rs. 35.85 lakhs having been made for the super profits tax.

Dry batteries, flash-lights and zinc products of the Company have met with a steadily increased demand. Sales of chemicals and plastic products have been higher following the first year's full working of the chemicals and plastic plant in Trombay. Capital expenditure amounted to Rs. 33.81 lakhs for providing improved facilities and higher capacities at the chemicals plant and zinc rolling mills. Depreciation rose to Rs. 56.39 lakhs from Rs. 34.94 lakhs in view of the new factory capacities brought into production.

Deposits of United Bank Rise

COMMENTING on the growth of deposits in 1962 in his chairman's address at the annual general meeting of the United Bank of India Ltd in Calcutta last Monday, Dr. N. N. Law makes (a full text has been printed on a later page in this issue of Capital) some interesting observations on banking trends. The impact of the proposed super profits tax on the corporate sector will be considerable. In view of the special position that banks occupy in the economy and considering that they have been asked to plough back sufficient funds into the business, a fair portion of the bank profits, after tax, should be exempt from the impost.

As for the compulsory deposit scheme, it is possible that funds will be diverted from banks, so deposits may decline. Considering that the demand for money has been running ahead of banking resources, it is essential that steps be taken to reinforce banking funds. The Government should, therefore, use commercial banks for keeping its funds. Dr. Law thinks that in a regulated and closed economy, the deposit interest rate by itself does not act as a stimulant to deposit growth, so it is in the interest of banks to hold down the interest rate. Whenever this interest has been increased, there has also been more than a corresponding rise in lending rates. The chairman, therefore, thinks that the more desirable move will be to increase the differential between the deposit interest rates and lending rates in order to ensure a bigger profitability for banks.

As for standardising the service charges of banks, Dr. Law thinks that it is more or less a necessary component of the interbank agreement on deposit and lending rates. But a large section of banking circles is inclined to think that flexibility in service charges is essential to promote healthy competition among banks. It is relevant to point out here that the greatest weakness of Indian banks is that its services are poor. Unless there is competition in relation to service charges, any substantial improvement is unlikely in the near-term. The chairman has approved of the emergency risk insurance scheme since it has imparted security to various properties.

Commenting on the reference to establishing an investment trust in

the Budget speech of the Central Finance Minister, Dr. Law agrees that it is a good idea for mobilising savings. But the question is whether this trust can be operated efficiently by the public sector. Since the bureaucratic machinery is not suited to providing the necessary expertise for running an investment trust, it should be left to the private sector to develop it. But for this, substantial tax concessions have to be offered.

Bank of Baroda Earns Less

THE Bank of Baroda Ltd has declared a final taxable ordinary dividend of 8 percent for the year ended December 1962, making 16 percent for the year, including the interim of 8 percent paid earlier. Pro rata dividends have also been declared on the new shares recently subscribed. The profit has amounted to Rs. 63.19 lakhs, against Rs. 67.63 lakhs in 1961. Reserve fund is allocated Rs. 12.75 lakhs (against Rs. 20 lakhs) and bonus to staff Rs. 22 lakhs (against Rs. 20.20 lakhs). The carry-forward is Rs. 4.17 lakhs, against Rs. 3.03 lakhs brought in. Deposits rose from Rs. 95.46 crores to Rs. 113.96 crores.

Cash rose from Rs. 8.20 crores to Rs. 10.78 crores. Investments increased from Rs. 24.90 crores to Rs. 26.09 crores, and advances from Rs. 70.37 crores to Rs. 84.79 crores. The banking business of the Surat Banking Corporation Private Ltd has been taken over by the Bank of Baroda.

More from National Rubber Manufacturers

THE National Rubber Manufacturers Ltd has increased the taxable ordinary dividend from 6.5 percent for 1961 to 8 percent for the year ended December 1962. It is covered more than twice and works out to a yield of 6.9 percent at the present price of Rs. 11.62 a share of Rs. 10 each. The profit has improved from Rs. 6.87 lakhs for 1961 to Rs. 11.41 lakhs for 1962, after increasing the depreciation from Rs. 6.93 lakhs to Rs. 7.58 lakhs. Sales rose from Rs. 2.70 crores to Rs. 3.52 crores. Out of the profit, development rebate reserve absorbs Rs. 46.307 (against Rs. 1.72 lakhs), dividend equalisation reserve Rs. 1 lakh (against the same) and taxation Rs. 5 lakhs. The carry-forward is Rs. 75,633, against Rs. 58,466 brought in.

The satisfactory results have largely been due to the good effects of the expansion programmes. The installed capacity for cycle tyres, industrial V belts and fan-belts has been more than fully used. The need for further expansion has been felt. A new licence for extending the capacity for fan-belts and V-belts has already been received. The directors point to the improvement in the margin of net profits in relation to sales. The General Tyres Ltd, of which National Rubber Manufacturers are the managing agents, has made satisfactory progress and the new factory may start production soon.

Bank of Tokyo Earns Less

THE Bank of Tokyo Ltd has made a profit of Rs. 6.04 lakhs during the year ended December 1962, compared with Rs. 6.68 lakhs in 1961. Interest paid on deposits declined from Rs. 48.70 lakhs to Rs. 46.63 lakhs while interest and discounts earned increased from Rs. 63.18 lakhs to

Rs. 77.73 lakhs. Deposits were Rs. 3.74 crores, against Rs. 3.91 crores. Cash was shown at Rs. 63.96 lakhs, against Rs. 93.31 lakhs. Investments increased from Rs. 1.17 crores to Rs. 1.33 crores and advances from Rs. 9.14 crores to Rs. 11.68 crores.

Hongkong and Shanghai Bank Results

THE Indian branches of the Hongkong and Shanghai Banking Corporation has earned a profit of Rs. 9.63 lakhs for the year ended December 1962, compared with Rs. 14.68 lakhs for 1961. Interest paid on deposits rose from Rs. 30.57 lakhs to Rs. 33.99 lakhs, while interest and discounts earned improved from Rs. 59.77 lakhs to Rs. 72.96 lakhs. Deposits increased from Rs. 8.24 crores to Rs. 9.06 crores. Cash rose from Rs. 45.39 lakhs to Rs. 1.34 crores. Investments stood at Rs. 7.52 crores, against Rs. 1.51 crores. Advances rose from Rs. 9.99 crores to Rs. 11.32 crores.

Outlook for Indian Tack and Nail

IN their report for the year ended December 1962, the directors of the Indian Tack and Nail Co. Ltd point out that the factory in Konnagar, near Calcutta, has been completed. The production of shoe tacks and nails began in October 1962. They are confident that full production will be achieved during the current year if the supply of new materials and power is adequate. For the time being, there has been a serious delay in procuring steel sheets and wire. There has been a loss of Rs. 3.19 lakhs, as the factory could work only for a short period. Hence a total loss of Rs. 4.20 lakhs has been carried forward. The dividend has been passed.

Prospects for Fit Tight Nuts

THAT the Rs. 100-paid share of Fit Tight Nuts should be quoted around Rs. 167 in spite of the severe slump in the investment market is an indication of investors' faith in the Company's future, and this optimism is not unjustified. In his speech at the shareholders' recent annual meeting, the chairman of the Company, Mr. Laldas Jannadas, has held out the prospect of a handsome maiden dividend next year. The first expansion programme has been carried out more or less according to schedule.

The new items of the Company's products have been well received by the customers. The order books are full for the whole year. The national emergency has created further demand for fastenings and to meet this, the Company has submitted a second scheme of expansion to the Government. The chairman informed the shareholders that the Company will not have to pay any super profits tax for the past financial year and that for the current financial year, it will have to provide large sums for depreciation and development rebate on new machinery commissioned after September 1962 before it becomes liable to pay super profits tax.

Dhanalakshmi Mills Repeats

THE working of the Dhanalakshmi Mills Ltd for the year ended De-

cember 1962, shows a profit of Rs. 21.57 lakhs, after meeting all expenses and providing Rs. 7.39 lakhs for depreciation. The previous year's profit was Rs. 22.49 lakhs which was arrived at after providing Rs. 8.40 lakhs for depreciation. With Rs. 487 brought forward and Rs. 2.50 lakhs transferred from machinery replacement reserve, the total available for appropriation amounts to Rs. 24.07 lakhs. Income tax paid for 1959 amounted to Rs. 40.548 and sales tax for previous years to Rs. 60.400. Development rebate reserve gets Rs. 92,000 (against Rs. 1.18 lakhs) and provision for taxation Rs. 9.25 lakhs (against Rs. 8.50 lakhs). The directors have recommended a dividend of 17½ percent (the same), absorbing Rs. 8.51 lakhs. The balance of Rs. 2.447 is carried forward. Sales of finished goods rose to Rs. 1.73 crores from Rs. 1.61 crores.

Brady Group Revises Dividends

THE boards of directors of the three Companies belonging to the Brady group—Brady Engineering Company, G. Claridge and Company and Commerce (1935) Ltd—which had decided to reconsider the accounts and the dividends for 1962 in the light of the Budget proposals, have now announced their revised decisions about the dividends. Brady Engineering has maintained the dividend, including the bonus, at Rs. 9 a share. But the dividend of the other two Companies has been reduced. The dividend for G. Claridge and Company has been cut from 30 percent to 15 percent and that for Commerce from 27½ percent to 17½ percent. It may be recalled that the directors of G. Claridge had earlier announced a dividend of 20 percent, and Commerce had decided to maintain the dividend at 27½ percent.

Kil Kotagiri Tea Repeats

AN impressive rise in the profit and a record tea crop feature the working results of Kil Kotagiri Tea and Coffee Estates Ltd for the year ended October 1962. Considering that no provisions have been made for increased taxes on account of the Super Profits Tax Bill and the Finance Bill for 1963, the directors have recommended a final dividend of 17 percent for the year, making a total of 25 percent (the same). After deducting all charges and expenses but before providing for taxation, the profit for the year amounts to Rs. 10.45 lakhs, compared with Rs. 5.89 crores for the previous year.

After deducting Rs. 4.85 lakhs (against Rs. 2.65 crores) being the provision for taxation, the net profit amounts to Rs. 5.60 lakhs. With Rs. 10,852 brought forward, the total available for appropriation is Rs. 5.71 lakhs. Out of this, development rebate reserve gets Rs. 138 (against Rs. 3,125). A sum of Rs. 50,000 (against nil) is transferred to general reserve. The dividend at 7 percent on preference shares accounts for Rs. 17,500. The interim dividend at 8 percent paid on ordinary shares absorbed Rs. 1.37 lakhs. The proposed final dividend of 17 percent on ordinary shares will absorb Rs. 2.32 lakhs. The balance of Rs. 73,949 is carried forward. General reserve in the balance-sheet stands at Rs. 6.90 lakhs and dividend equalisation reserve at Rs. 2 lakhs.

The tea crop for the year amounted to 515,350 kilograms (against 446,673 kilograms). The all-in-cost

of production was lower at Rs. 3.49 a kilogram, against Rs. 3.60 a kilogram. The average price realised was higher at Rs. 5.35 a kilogram, against Rs. 5.17 a kilogram. The coffee crop amounted to 121,819 tonnes (against 37,379 tonnes). The estate cost of production amounted to Rs. 2,185 a tonne, against Rs. 5,607 a tonne. The Company has valued the coffee crop at Rs. 2.25 a pool point. On the basis of this valuation, the Company's coffee production has resulted in a profit of Rs. 44,361, compared with a loss of Rs. 1.67 lakhs in the last season. The estimated tea crop for 1963 is placed at 480,000 kilograms. The coffee crop is estimated at 80 tonnes.

The directors state that the prospects for the 1963-64 coffee crop are good. Given reasonable weather conditions, the directors hope to harvest a crop of about 150 tonnes. The report says that there are many imponderables which make it difficult to pass an opinion on the prospects for the current year. The final recommendations of the wage boards constituted in 1961 to investigate wages on estates, are still awaited. The estates are also faced with additional taxation and increased expenditure due to the national emergency. Mr. J. N. A. Hobbs, chairman, assures shareholders that the Company will do its best to overcome the difficulties, and if these are not too great, the Company can look to the future with reasonable confidence.

Madras Rubber to Expand

THE accounting year of Madras Rubber Factory Ltd has been changed to October-September from January-December. The directors have, therefore, submitted their report and audited accounts for the period ended September 1962. After meeting all expenses and providing Rs. 2.26 lakhs for depreciation, the Company's working shows a net profit of Rs. 13.20 lakhs. This compares with the previous year's net profit of Rs. 18.30 lakhs, after providing Rs. 4.58 lakhs for depreciation. The previous year covered the period from 16th November, 1960 to 31st December, 1961. With Rs. 4.56 lakhs brought forward and with Rs. 34,005 being the excess provision for dividends written back, the total available for appropriation is Rs. 18.09 lakhs. Out of this, Rs. 10.45 lakhs (against Rs. 14,294) is transferred to reserve for development rebate. No provision for taxation has been made as the year's income of the Company is not liable to income tax. Provision for taxation in the previous year was Rs. 9 lakhs. The directors have recommended a dividend of 45p a share, subject to tax, for the period of nine months. This dividend accounts for Rs. 5.63 lakhs. The balance of Rs. 2.02 lakhs is carried forward.

The directors state that the profit of Rs. 13.20 lakhs has been earned exclusively from the tread rubber division during a period of nine months. In spite of a considerable increase in expenditure, the average net profit has been maintained at the previous year's level. The dividend of 45p a share on the entire capital for a period of nine months is also 6 percent, the same as last year. The report says that the main plant for the production of tyres and tubes was commissioned on 4th December, 1962. The directors are confident that full production will be attained before long. The Government has sanctioned substantial expansion of the Company's factory by increasing the licensed capacity by 60,000 tyres and tubes a year, thus increasing the total licensed capacity to 360,000

tyres and 360,000 tubes a year. The second Banbury mill will shortly arrive in the factory. The directors feel that the factory is capable of carrying out any additional expansion which the Government of India may sanction in the future.

Pabbojan, Dekhari, Eastern Assam Merger Move

THREE leading tea Companies with net assets of £5,510,000, are to put merger proposals to their shareholders. They are Pabbojan, Dekhari, and Eastern Assam, and are all associated with the James Warren agency group. A new Company, Warren Tea Holdings, has been formed as a vehicle for the merger. Share-exchange terms proposed are in accordance with the advice given by Baring Brothers at the request of the three boards. Warren Tea Holdings will have an authorised equity capital of £2 million in £1 ordinary shares, of which 1,900,977 shares will be issued if the offers are fully implemented.

Terms for the merger are the exchange of nine "Warren" for every seven Pabbojan, four "Warren" for every three Dekhari and 11 "Warren" for every ten Eastern Assam. Because of the fluctuations in profits from company to company and year to year, adjusted averages have been used in arriving at an equitable basis. The real question is the market valuation of the shares of Warren Tea Holdings. Coupled with dividend forecasts and trading reports for the three Companies, the offer document says that the combined distribution should justify maintenance of tax-free distributions equal to 12½ percent from Eastern Assam, 14 percent from Pabbojan and 14½ percent from Dekhari. This indicates a dividend basis of about 11½ percent, tax free, for "Warren."

Oriental Metal Industries to Expand

THE Oriental Metal Industries Private Ltd has received an industrial licence for expanding its vitreous enamel division. The full capacity, after expansion, will be 3.6 million pieces of enamelware a year. The Company is already exporting hurricane lanterns to the Middle East and Africa. It proposes to export enamelware after the expansion programme is completed. Oriental Metal Industries is at present manufacturing the "Khas Janata kerosene cooker", "Khas Janata medium", "Khas Janata junior" and "Dipti kerosene stove".

Borrowing Plans of Mukand Iron

AN extraordinary general meeting of the shareholders of Mukand Iron and Steel works Ltd has been convened on 20th April to authorise the board of directors to raise funds through borrowings for meeting the cost of expansion and modernisation of its works. The Company's steel foundry in Kurla is being expanded and modernised at a cost of Rs. 2.10 crores, which will raise its annual output from the present 7,200 tonnes to 12,000 tonnes. The Kalwa (Thana) project of the Company is estimated to cost Rs. 4.70 crores, of which Rs. 3.70 crores will be for fixed capital and Rs. 1 crore for working capital. The foreign exchange component of the project amounting to Rs. 1.60 crores, it is proposed, will be met through loans from the I.C.I.C.I. and the Commonwealth Development Finance Company of the

U.K. Under the scheme, a wire rod plant will be set up in Kalwa to meet the rising demand from wire-drawing units and, in addition, the Company will install a 20-tonne electric arc furnace to produce billets from steel scrap. The Company proposes to borrow £600,000 from the C.D.F.C. of the U.K., \$1,680,000 from the I.C.I.C.I., Rs. 88 lakhs from the Industrial Finance Corporation and a sum not exceeding Rs. 1 crore from its bankers. The Company's borrowings may thus well exceed the aggregate of its paid-up capital and free reserves which amounted to a little over Rs. 1.60 crores on 31st January, 1963.

Share Offer by Facit Asia

FACIT Asia Limited, which proposes to set up in collaboration with A. B. Atvidabergs Industrier of Sweden a factory in Perungudi, near Madras, for the manufacture of calculators and adding machines, is offering 7,350 equity shares of Rs. 100 each at par for public subscription. The sanctioned capacity of the plant is 5,100 units in each of the models—calculating machines and adding machines. This is claimed to be the first plant of its type in Asia.

The Government of India has permitted Facit India to assemble and manufacture calculating and adding machines. It is estimated that after five years of the working of the plant, the indigenous content of calculators and adding machines will be around 85 percent. The Swedish firm, which is collaborating in the venture, will provide the technical know-how and assist in the establishment of the factory. The collaboration agreement provides for the export of these machines to the neighbouring countries in the East.

The Company has an authorised capital of Rs. 1 crore, all in equity shares of Rs. 100 each. The issued capital will be Rs. 30 lakhs, of which shares of the value of Rs. 7.65 lakhs have been allotted to the signatories to the memorandum, directors and their friends and shares of the face value of Rs. 15 lakhs have been reserved for allotment to the foreign collaborators in consideration of part payment of the price of machinery which they have agreed to supply. The balance of 7,350 equity shares will be offered for public subscription. The board of directors includes Mr. Gunnar Ericsson, Mr. Gordon Frederick Muirhead, Mr. Sundaram Iyer Rajam, Mr. Lenart Schussler, Mr. R. Natarajan, Mr. Girin Khandwala, Mr. T. D. Chatterjee, Mr. M. R. Pratap and Akbar Hydari.

Prospects for Madura Mills

ADDRESSING the annual general meeting of the Madura Mills Co. Ltd, held in Madurai last week, Dr. Rajah Sir M. A. Muthiah Chettiar, chairman, takes an optimistic view of the outlook during the current year. (A full text is printed on a later page in this issue of Capital.) An important factor contributing to the smaller profit in 1962 was the unprosperous price fixed for yarn. Yarn prices have been raised only since last February. Due to rationalisation, the operational efficiency of the mills has improved. As for the super profits tax, the adverse effect will be somewhat mitigated in the case of this Company by the large reserves built in earlier years. But it will not be possible to build reserves as much as in previous years as most of the profits will be mopped up by the new impost. He, however, hopes that it may be possible to maintain

CAPITAL, 28th March, 1963

the dividend rate at a reasonable level.

In spite of a smaller net profit of Rs. 31.81 lakhs in 1962, the results are considered fairly satisfactory. The net profit was arrived at, after providing Rs. 10 lakhs for debenture stock redemption reserve and meeting the increased depreciation charges. The debenture issue made by the Company last year was successful. The funds are being used to implement the 450-loom project. The looms are in the process of erection and some of them have started operating. He thinks that the project will be successful and the Company will be able to fulfil its export obligations by selling 50 percent of the products of these looms in overseas markets. Dr. Chettiar mentions that the Company has still much to do by way of modernisation and expansion. The profit in 1962 was also held down by the increased price of raw cotton which was in short supply. The crop in 1961-62 was only 4.7 million bales, compared with an estimated crop of 5.4 million bales. Although imports of foreign cotton made up the shortfall to some extent, the domestic price short up because of shortages.

New Capital Issues

EIGHT companies including three new ones have been authorised to raise capital totalling Rs. 5.33 crores. The following are the details:

Kesoram Industries and Cotton Mills Ltd. Calcutta: Mortgage debentures of the value of Rs. 1.7 crores, carrying interest up to 7 percent a year.

United Carbon India Ltd. Bombay: A new company is to issue capital of Rs. 1,62,50,000 in equity shares of Rs. 100 each at par. Of this, shares of the value of Rs. 65 lakhs—Rs. 50 lakhs for cash and Rs. 15 lakhs for consideration other than cash against technical know-how—will be offered for subscription to the foreign collaborator, United Carbon Company, Houston, Texas, the USA.

Indian Oil Blending (Private) Ltd. Bombay: A new Company, it will raise capital of Rs. 20 lakhs in equity shares of Rs. 500 each for cash at par. Out of this, shares of the value of Rs. 10 lakhs will be offered for subscription to Mobil Petroleum Company Inc. of New York, U.S.A. and the remaining Rs. 10 lakhs to Indian Oil Company Ltd., Bombay.

K. C. P. Fives Lille-Cail (Private) Ltd. Madras: Equity capital of Rs. 40 lakhs for cash at par to be subscribed privately, 50 percent by K.C.P. Limited, Madras, and 50 percent by Fives Lille-Cail, Paris.

Binani Industries Private Ltd. Bombay: Rs. 49,000 in equity shares of Rs. 10 each to be issued on capitalisation of the Company's reserves to a like extent to the existing shareholders of the Company.

Indian Metals and Ferro. Alloys Ltd. Orissa: Rs. 75 lakhs (inclusive of Rs. 4,68,000 already raised) divided into 600,000 equity shares of Rs. 10 each and 15,000 cumulative redeemable preference shares of Rs. 100 each carrying dividend at the rate of 9.5 percent for cash at par.

The Mithila Iron and Steel Company Ltd. A new Company incorporated in West Bengal, is issuing capital of Rs. 35 lakhs divided into 250,000 equity shares of Rs. 10 each and 10,000, 9.5 percent cumulative redeemable preference shares of Rs. 100 each.

The Orissa Forest Corporation Ltd. A State Government undertaking will issue capital of Rs. 25,00,000 divided into 25,000 equity shares of Rs. 100 each for cash at par to be subscribed privately. The consent is valid for 24 months.

CAPITAL, 28th March, 1963.

The Stock Markets

NEGLIGIBLE BUSINESS IN LYONS RANGE. GLOOM PREVAILS

Wednesday Evening. THE past week has been a period of gloom for the Calcutta stock market. Since the minimum prices for shares on the cash list were scrapped, equity values have collapsed. It is almost impossible to locate a buyer at any price. In the circumstances, the authorities had to close the market last Saturday. Since Monday, operators have not transacted any business, partly as a mark of protest against the super profits tax and partly because there are no buyers. Lyons Range does not intend to transact any business until it knows the outcome of the meeting between the stock exchange presidents and the Central Finance Minister due to be held on Thursday.

This is not the appropriate time to debate whether operators are justified in refraining from transacting any business. The gloomy assessment about the impact of the new impost on the corporate sector has not been exaggerated since the adverse effects have already started showing up. Dunlop Rubber, Union Carbide and two companies of the Brady group have had to cut their ordinary dividends sharply. Braithwaite has deferred its decision on dividends. Hindustan Lever and Goodyear India have postponed their rights issues which were intended to raise funds for expansion.

The most disturbing feature is that the super profits tax has hit the new issue market hard. The disappointing response to the recent share offer by Indo-American Electricals Ltd is understandable. Considering that the super profits tax has scared foreign investors, many wonder whether foreign collaborators in new companies will continue to take interest in the Indian ventures. The fear is underlined by the fact that Goodyear India has postponed its rights issue in consultation with its foreign associate, the Goodyear Tyre and Rubber Co. of the U.S.A. This is said to be the main reason why the Indo-American Electricals issue has not succeeded fully.

Business in Government securities has also come to a standstill. Unless the capital market is helped to recover its confidence, the prospect of the forthcoming Government loans cannot be considered bright.

Bombay

EQUITIES DECLINE SHARPLY DIVIDEND CUTS AFFECT SENTIMENT

Wednesday Evening. THE Bombay stock market has passed through the gloomiest week on record. At one stage, operators decided to refrain from transacting any business, but they consented to carry on in response to exhortations by the authorities. Hopes have been held out that at their forthcoming meeting with the Central Finance Minister, the Stock Exchange presidents will succeed in impressing on him the need for scrapping or at least substantially modifying the super profits tax.

Meanwhile, there has been a sharp decline in share values all round.

Almost every holder has been keen on disposing of his shares. Hence prices have declined substantially in the absence of buyers. The adverse effects of the super profits tax have already been reflected in unfavourable corporate developments. Many cotton mill companies have pruned their dividends for 1962. Hindustan Lever has deferred its rights issue. Two companies in the Brady group have also cut their dividends sharply. Shares on the cash list and new issues have been badly affected. Towards the close, there is a predominance of sellers, and buyers are sitting on the fence. Since the prospects of capital formation and dividends have been seriously damaged by the super profits tax, any improvement in the near term is unlikely, unless the impost is substantially modified.

Tata Steel have fallen to Rs. 117, Century to Rs. 490, Tata Locomotive to Rs. 271, Scindia Steam to Rs. 10.44, Permanent Magnates to Rs. 160 and Bombay Burmah to Rs. 617.

Madras

THIN TRADING IN SHARES S.P.T. WILL HIT SOUTH INDIAN FIRMS BADLY

Tuesday Evening.

ALTHOUGH the Madras stock market has decided to continue the minimum prices fixed for shares earlier, there has been very little business during the past week. Since the share capital and reserves of the south Indian companies are generally small in proportion to the total business, they are likely to be seriously affected by the super profits tax. Unless the impost is substantially modified, the outlook for dividends will be very discouraging. Despite reports of good crops, tea shares have been freely offered at cut rates without attracting buyers. There has been scattered interest in high-yielding preference shares. Investors have also been worried by the growing shortage of funds. It is feared that in view of the sharp decline in share prices, there may be increased pressure from the banks to sell.

South India Viscose declined to Rs. 139 and Dalmia Cement to Rs. 12. The erstwhile support for rights issues of various companies has vanished. McDowell preference shares have been dealt in at Rs. 75. South Madras preference shares have been done at Rs. 7.12. Karur Vvsva have paid a taxable ordinary dividend of 12 percent.

THE WEEK'S TRANSACTIONS

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

London

INDUSTRIALS DULL GILT-EDGED RISE

London, 27th March.
QUIET and rather mixed conditions prevailed in the stock market during the past week. Even the opening of the long account covering next week's Budget failed to stimulate interest and there was little sign of pre-Budget buying. Gilt-edged securities recorded appreciable rises, but industrials generally were on the dull side. Many good features developed in industrials, but the leaders mostly lost ground. Falls, however, were small. Short-dated gilt-edged were unsettled by the authorities' money market move forcing the discount houses to borrow above Bank rate. This move was designed to attract foreign money and

strengthen sterling by keeping short-term rates high without affecting the long-term rate. Other gilt-edged securities, apart from the short-dated, therefore, moved up to record good gains on the week. Banking, hire-purchase, insurance and property shares moved within narrow limits. Dollar stocks inclined easier with Wall Street. Gold shares were virtually unaffected by the South African Budget and prices showed little change except Johannesburg which were a strong market. Other mining sections were subdued. Oils gave a mixed display. Rubbers were neglected, but Indian teas fell back on Mr. Nehru's speech referring to the possibility of another Chinese invasion.

CZECH CHEMICAL EXPORTS TO INDIA RISING

Dr. Z. Mojzisek, the president and general manager of Chemapol, the Czechoslovak foreign trade corporation for chemical and pharmaceutical products and raw materials, said recently in Calcutta that Czech chemi-

cal exports to India during the past ten years, have increased substantially. The total volume of exports in 1962 was six-and-a-half times higher than that in 1953. In 1953, Czechoslovakia was delivering 13 basic groups of chemical and pharmaceutical products and raw materials, but her present exports include about 35 groups of different pharmaceutical and chemical products. The increasing industrial potential of India reflects also the changing structure of Czech chemical exports. Whereas the final products as tar-dyestuffs were exported at the beginning, the share of semi-products and raw materials has been increasing in the past years. The following are some of the most important items of export: sulphathiazole, sulphaguanidine, phenobarbitone, vitamin C, glucose, glutamic acid, calcium benzoate, procain H.C.I., etcetera. The Indian market, Dr. Mojzisek said, continues to offer good possibilities for some types of human and veterinary antibiotics, sera and vaccines, in the supply of which Czechoslovakia can play an important part. Considering the future development of the Indian rubber

industry, the country will need to import more of auxiliary products for the industry, such as accelerators, antioxidants, factices and other allied products. Czechoslovakia is developing production in this line and there is a sound basis for a close co-operation in this field, Dr. Mojzisek said.

ROUND THE BEND

A crooked hole is a driller's headache. The weight of a string of steel drill pipe tends to keep it vertical, but when the cutting bit strikes an inclined wall of hard rock buried deep in the earth it may sheer off at an angle. Then the hole has to be straightened by reducing or increasing the weight on the drill bit, or by using extra heavy drill pipe, called collars. As a last resort, a bad bend may have

to be sidetracked from the point where the deviation began, or the well may be abandoned altogether and a new hole drilled.

Many ingenious tools have been devised for dealing with difficulties at the well, but to use them effectively calls for men with practical experience at their command and high skill at their fingertips.

Money

THE CALCUTTA MONEY MARKET

INTERBANK CONDITIONS TIGHT

Wednesday, 27th March.

THE general level of advances has shown a fair increase in the Calcutta money market during the past week. Most of the increase is accounted for by the iron, steel and engineering industries. Cotton and sugar credit is slightly higher. Advances against jute and for the storage of foodgrains and seeds, remain unchanged. In the interbank market, conditions have been tight and the call rate is quoted at 61 percent, with borrowers over.

The exchange market has been moderately active. There have been a fair number of gunny bills but very few tea bills. The demand for remittance has been good. Sterling is stronger in relation to all the major currencies except the Belgian franc.

THE CALCUTTA BULLION MARKET transacted only ready silver in the past week. The price was steady around Rs. 242.75, but turnover was small. The price was quoted at 110d in London and at 127.7 cents in New York.

There was no official dealing in gold which was unofficially talked around Rs. 103 a 10 grammes.

DURING THE WEEK ENDED 22ND March, Government of India Treasury bills for Rs. 45,39,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS 2 CRORES OF 91-DAY, Government of India Treasury bills were opened on 25th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.370 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 30th March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 26th March to 30th March at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 20th March to 23rd March amounted to Rs. 6 lakhs.

THERE WERE FALLS OF RS. 11.35 CRORES TO RS. 2,230.45 CRORES IN ACTIVE notes and of Rs. 8.35 crores to Rs. 2,249.89 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 22nd March. The currency contraction was covered by reducing rupee securities by Rs. 10 crores to Rs. 1,911.42 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 1.46 crores to Rs. 61.66 crores and those of other Governments by Rs. 7.47 crores to Rs. 27.62 crores. Balances of scheduled banks at Rs. 71.69 crores showed a decline of Rs. 53 lakhs. Balances held abroad were Rs. 1.61 crores larger at Rs. 69.38 crores, of which advances against usance bills were Rs. 54.31 crores (Rs. 58.54 crores). Ways and means advances to Governments stood at Rs. 30.35 crores, against Rs. 35.01 crores. The invest-

ment portfolio was Rs. 10.33 crores larger at Rs. 199.72 crores due to the transfer of securities from the Banking Department to the Issue Department.

THE RETURN OF THE STATE BANK OF India for the week ended 15th March, shows a rise of Rs. 2.99 crores to Rs. 547.97 crores in total deposits. Investments in Government securities are up by Rs. 2.01 crores and Rs. 5 lakhs to Rs. 204.75 crores and Rs. 7.83 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 2.48 crores to Rs. 319.55 crores. Cash and balances are, in consequence, shown at Rs. 21.69 crores or Rs. 4.60 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 15th March, shows Demand and Time liabilities at Rs. 959.56 crores (Rs. 21.57 crores on account of borrowings from banks) and Rs. 1,243.46 crores (Rs. 18.75 crores), compared with Rs. 946.86 crores (Rs. 19.54 crores) and Rs. 1,244.14 crores (Rs. 17.10 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.61 crores and Rs. 77 lakhs to Rs. 52.94 crores and Rs. 72.15 crores, respectively. There is a drop of Rs. 33 lakhs to Rs. 587.55 crores in investments. Advances and bills discounted at Rs. 1,593.68 crores show a drop of Rs. 3.83 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 72.3 percent, against 5.6 percent and 72.9 percent.

THE INDIAN MINING ASSOCIATION

COAL PRICES TOO LOW
MORE EFFICIENT USE OF FUEL RECOMMENDED

CHAIRMAN, MR. PRAN PRASHAD'S

ADDRESS

Speech delivered by Mr. Pran Prashad, Chairman of The Indian Mining Association, at the Annual General Meeting of the Association held in Calcutta on 22nd March, 1963 at the Bengal Chamber of Commerce and Industry.

Gentlemen,

Your Committee's report has been circulated and will give an idea of the field of activities covered by the Association in the year under review. We have had our share of success and disappointment.

Over the year, considerable interest has been shown in our affairs. We were pleased to appear before the Estimates Committee of the Lok Sabha which undertook a detailed and searching enquiry into the affairs of the Industry. A Working Party of this Committee toured the Coalfields and was able to obtain a first-hand impression of many of our problems. I hope that our legislators will now be even more appreciative of the difficult tasks imposed on us.

One of our significant achievements was the response of the Industry to the calls made upon it in the context of the National Emergency. This Industry, I am proud to say, was one of the first of all organised industries to step up output so that defence production and maintenance of essential services during the critical period of November last year were not handicapped by shortage of coal supplies. I should like to pay a tribute to those managements which, despite the extra expense involved, ungrudgingly responded to the call of the hour. We must also remember that our achievement would not have been possible without the whole-hearted support and co-operation of our workers who agreed to forgo their rest days and to resort to seven-day working. I am confident that if a like need arises the country can rest assured that the Coal Industry will not fail in its duty.

Production Increases

The most outstanding feature of the year, however, has been the fact that coal production has increased from 56 million tonnes in 1961/62 to about 64 million tonnes in 1962/63. The increase in production has been remarkable, despite shortages of explosives, spare parts, machinery and, until very recently, of power and transport. Out of this increase of 8 million tonnes, the Private Sector has contributed over 6 million tonnes and is at present ahead of its production target for 1962/63 as fixed by the Planning Commission's Working Group. However, I venture to suggest that there is no room for complacency, by either Government or producers, that this rate of progress can be sustained. The recent fall in demand for coal and the impact of the Central Budget proposals, as they stand, seriously affect the capacity of the Private Sector to increase its production potential. Urgent action is, therefore, necessary to remove many of the difficulties which have arisen. I make no apology for raising the subject of finance at such an early stage in my address this morning, and I feel that I must pinpoint these problems and indicate possible solutions.

Last year, when addressing you from this Chair, I referred to the Rs. 17

crore loan in foreign exchange granted by the International Bank for Reconstruction and Development to Government for use of the Private Sector of the Coal Industry. Out of the total allocation of Rs. 17 crores, of which Rs. 2 crores had been provided for equipment required for new mines, we had submitted applications for import licences in excess of the remaining sum. As against this, licences issued as at the end of February aggregated approximately Rs. 14 crores. Orders to the tune of about Rs. 7 crores had also been confirmed. The impact of the Budget would affect the ability of many Coal Companies to take up in full the foreign exchange allocations made against their approved Project Reports.

I also pointed out then that to ensure full utilisation of this foreign exchange, the provision of complementary Rupee funds was essential. The Industry had originally estimated that a substantial portion of these funds could be raised from ploughback or through fresh floatations. The result of the Budget proposals is that much of the ploughback will now be diverted to the State coffers. Because of historical reasons and depressed coal prices, the equity capital in coal mining has been low. The Industry has, therefore, perforce had to rely on borrowings to finance its development. The Super Profits Tax proposed in the Central Budget will hinder the processing of such loans. We welcome the measure of positive assistance whereby Government have now agreed to guarantee medium and long-term loans from commercial banks to Coal Companies. I sincerely trust that when the Budget proposals are enacted, some, if not all, of the harsh features will be moderated.

Rising Costs

The question of profitability and return on capital inevitably brings me to the question of costs of production and their relation to our existing selling prices. We are grateful for the prompt steps taken by Government in sanctioning ad hoc increases in coal prices as an incentive towards increased production. The increases in our price structure fell far short of our requirements and expectations, and moreover, we were distressed at the decision to extend ceiling prices for Grades II and HH coals. Most of you are aware that today's controlled prices are based on production costs of about six years ago and that over this period numerous impositions have been thrust on the Industry while costs on stores, power, royalties, etc. have steadily moved upwards. The profit left to the Industry, therefore, continues to be eroded.

It is appreciated that the level of selling prices of coal and coke has a direct bearing on the production costs of other industries. Although this must be borne in mind, I am sure all will agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices. The fact is that production has increased very substantially over recent years without a corresponding rise in profitability because of enhanced liabilities. The inevitable consequence of a selling price which makes no allowance for demands of development will be to retard expansion, which will thus give rise to the

very inflationary trends which are now sought to be avoided with the existing price structure. I should at this stage like to make the general observation that in my view coal prices are too low and it is because of this that so little attention is paid to economy in its use. I submit that the only way to reduce fuel costs to the consumer is not by keeping coal prices at an unreasonably low level but by the proper and efficient use of this fuel. Throughout the world, fuel economy is now a specialised science, and in our circumstances with coal as the major source of commercial energy, it is vital that this receives the country's attention.

Apart from adjustments of the price structure, which we contend should receive the early attention of the authorities to give us the relief we urgently need, there are certain legitimate claims which Government might reasonably approve without further delay. Firstly, we have proposed an increase in the depreciation allowances laid down in the Income-Tax Act for machinery and plant installed in mines. Although most coal mines work more than two shifts, the depreciation rates allowed do not provide for any extra shift allowance, as in the case of other industries. Besides, until recently, mining operations were by and large labour-intensive, but in order to achieve our targets, extensive mechanisation is inescapable. This involves more extensive as well as intensive use of machinery, making fair rates of depreciation essential. It will be recalled that during World War II, which can be considered as a roughly comparable period, special rates of depreciation at 50% of the written down value of machinery and equipment were allowed.

Depletion Allowance

Secondly, I would again reiterate this Association's previous suggestion for the grant of a suitable depletion allowance to the Mining Industry which is working a wasting asset. Here again, such allowances have been granted to our counterparts in other industrially advanced countries. In fact, in India also a depletion allowance has recently been allowed in the case of the oil industry. I feel that in all fairness this facility should also be extended to the Coal and other mining industries. It has, however, been contended that in the case of the oil industry the reserves are limited. Equally in the case of minerals and particularly in Coal, natural reserves are not inexhaustible, but it is well known that our reserves of the better grades are limited and the quality of the seams has deteriorated rapidly. The profitability of the enterprise, therefore, becomes poorer with lapse of time and some compensation by way of a depletion allowance should be provided on this account.

Thirdly, there is the question of import duty on mining machinery and plant. In September, 1957, Government were pleased to specify a concessional rate of duty at 5% for imported machinery and plant required by the Mining Industry, which in 1960 was increased to 10% and under the new Budget proposals has now again been increased to 15% plus a surcharge of 10%. I am constrained to point out that in the implementation of the decision to grant a concessional rate of import duty, the authorities have not been

fair to us. We are invariably asked to pay the higher rates of duty mentioned in the Customs Tariff, irrespective of the end-use of the equipment imported. Plant and equipment now being imported into India for coal mines particularly, is governed by the guarantees which individual companies have executed in favour of Government in terms of the World Bank Loan. Under this guarantee, equipment can only be installed at a colliery with an approved expansion project. In view of the numerous safeguards and the heavy penalties for misuse, I submit that the Customs authorities should allow importation of mining machinery at the concessional rate.

We have recently been informed that a production of an additional 83 million tonnes has been finalised for the Fourth Five Year Plan, making a total of 180 million tonnes annually by the end of that Plan. We have, however, not been given any indication as to the grades of coal required; the main consumption centres; the areas from which increased production is to be obtained; the transport facilities that will be available and the like. Accordingly, I would suggest that the Industry be informed at this stage of Government's intentions regarding these matters as well as its future policy concerning the working of contiguous and new areas. Most companies have been working their mines upwards of half a century, and with exhausting reserves they will, in the course of the next few years, be faced with the prospect of having to abandon such pits. The Industry should, therefore, be allowed to expand into new areas to replace old workings.

Supply of Wagons

While great credit is due to our Railways for their splendid performance over the last twelve months, our production capacity continues to be governed by transport availability. The actual supply during the calendar year ended December 1962 averaged 6363 wagons per day. This represents an improvement of 415 wagons per day over 1961, and is an achievement of which the Railways can be justifiably proud, having regard to their other pressing needs during the Emergency.

The Railways have had to manage in spite of lack of resources for implementation of their expansion programmes. As a result, they have sought to make up their requirements through numerous—in our opinion—unfair impositions on the users of their systems. The use of BOX wagons to speed up movement of raw materials to the Steel Plants and other bulk consumers has been introduced and it is contended that this necessitates the strengthening of colliery sidings. Demands have been made on numerous collieries to pay for not only the sub-grade work but also the permanent way materials required for remodelling of sidings. These demands have also been accompanied with threats of total stoppage of wagon supplies if not complied with. There are instances on record where collieries, having made such deposits, continue to load BOX wagons for months on end without remodelling of sidings. One wonders whether there is any justification for this demand when little has been done by the Railways to strengthen their own lines and marshalling yards. Another proposal is that collieries producing over 10,000 tonnes per month must install their own private weighbridges. This idea is, indeed, laudable but serious doubts arise as to whether expenditure of such large sums of money by several collieries is justified when the Railways can very well install them at each pilot section, thereby reducing the overall cost to the economy.

We, therefore, welcomed the interest shown by Government and the World Bank to study and advise on solutions to our problems connected with coal movement. We hope that their recommendations will receive the attention that they warrant and that remedial

'BEHAR' the dependable name in

FIRECLAY & SILICA Refractories

For nearly half a century BIHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT 1949.
We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of The Hongkong and Shanghai Banking Corporation with the books and accounts of the Calcutta Branch and with certified returns from Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Sections 211(1), (2) and (5) and 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956, but are in conformity with Forms A and B of the Third Schedule of the Banking Companies Act 1949.

We report that:—

- (a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.
(b) In our opinion proper books of account as required by law have been kept by the Calcutta Branch so far as appears from our examination of those books and proper returns, adequate for our audit, have been received from Bombay which was not visited by us.
(c) The abovementioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.
(d) In our opinion and to the best of our information and according to the explanations given to us, such Balance Sheet and Profit and Loss Account give the information required by the Companies Act 1956 in the manner required for the Banking Companies and, on such basis and subject to the same remarks, give respectively a true and fair view of the state of affairs of the Indian Branches as at 31st December, 1962 and their results for the year ended on that date.

Manager, Calcutta Office.

MADURA MILLS COMPANY LIMITED

(Regd. Office: NEW JAIL ROAD, MADURAI)

CHAIRMAN DISCUSSES PROGRESS AND PROSPECTS

Speech of the Chairman Dr. Rajah Sir M. A. Muthiah Chettiar at the Annual General Meeting of the Shareholders of the Company held at Pandyan Building, Madurai, on 21st March, 1963.

Gentlemen,

Before we commence the regular business of today's meeting I have to refer, with very great regret, to the passing away of Shri Rajendra Prasad, our ex-President who was one of the noble sons of India. His death is a great loss to the Country and as a mark of respect to his memory I request you all to stand up and observe 2 minutes' silence.

The Report of the Directors and the Audited Accounts of the Company for the year ended 31st December, 1962 having been circulated in the prescribed manner, I propose with your permission to take them as read.

As you are all well aware, the Country is now passing through a very critical period in its history and we are in a State of Emergency, owing to aggression by a powerful and ruthless enemy. Although there is a lull in the fighting now and the Chinese have withdrawn to positions of their choice, we have to be prepared to meet the challenge. It is most gratifying to find that all parties are united in this effort and that there is an awareness on the part of labour on the need for achieving greater productivity. Your Company and its associates are playing their full share in meeting the requirements of Defence in this National Emergency.

Cotton Shortage

On the last occasion I mentioned the difficult position with regard to cotton we would face during the year. The crop for the year to 31st August, 1962 was only 46.50 lakh bales against the earlier expectations of 54 lakhs, as a result of bad weather conditions all round. Most of the areas produced sub-normal crops. The overall consumption estimated at 57.10 lakh bales was therefore much higher than the cotton available and Mills generally had great difficulty in purchasing the required raw material. To cover the deficit imports were allowed of short staple cottons from America and Pakistan to the extent of 10.66 lakh bales but actual arrivals were only about 8.65 lakh bales. Inadequate supplies and rising demand naturally led to heavy increases in the price of cotton. Although the Textile Commissioner took measures to tighten up control by the re-imposition of compulsory quality surveys, prohibition on Mills' holding stocks in excess of five months' average consumption and restriction on supplies to Mills by means of quotas, the Industry was forced to pay very high prices for its raw material. With effect from 1st September, 1962, Government raised the ceiling prices for all varieties of cotton by Rs. 125 per candy. It therefore became an extremely arduous task for your Company to procure the required supplies of cotton both qualitatively and quantitatively. Despite these odds you will note with gratification that production was well maintained by your Company during the year.

As in the previous year the demand for our products continued to be strong throughout the year. Together with the steady rise in the cost of cotton we also witnessed a steady rise in manufacturing cost but Government

was hesitant to yield to the Industry's demand for increases in yarn prices of counts 40s and below. This resulted in an increasing trend in the divergence between the ex-mill prices and market prices showing that Government's reluctance to allow increase in ex mill prices in no way benefited the consumer. From your Company's point of view the Government's policy affected the trading results of the year and if profits are not favourable in comparison with the previous year, you have the explanation. You will note from the Accounts that while there was a reduction in the net turnover by about Rs. 25 lakhs as compared with the previous year, the raw material cost was almost equal to that in the previous year. I am pleased to be able to report however that there has been a revision in the yarn prices, which with Government's approval has come into force from 7th February 1963. I sincerely hope that the Company will have a satisfactory trading year in 1963, despite the threatened power cut. I would like to mention in passing that the Company is giving its full support to the Textile Commissioner's and the Madras Government's schemes for distribution of yarns to the Handloom Weavers' Co-operative Societies in India to assist the handloom weavers in the Co-operative fold.

We continue to do well on the Export side, though our performance during the year has not been as good as in the previous year. I made reference, on the last occasion, to the meeting between the representatives of the Lancashire Textile Industry and the Indian Cotton Mills Federation and to the subsequent meeting of G.A.T.T. in Geneva. In pursuance of the agreement arrived at between the Governments of India and the United Kingdom a ceiling of 11.5 million lbs. has been fixed for the export of yarn. Export markets are highly sensitive to prices; however, we continue to have a very large share of the export quota.

Debtenture Issue

The proposed Debtenture Issue mentioned in my last speech was successfully effected in November 1962 and on the strength of this we have gone ahead with the full implementation of the 450 loom project. The first consignment of looms has already arrived and the looms are in the process of erection, with a few in operation already. Although these looms are the first of their kind in India we are wholly satisfied with their performance and versatility. We have an export obligation of 50% of the production on these looms, 350 of which will eventually be erected at our Ambasamudram unit where an up-to-date Weaving Shed is in course of erection. Market surveys done so far indicate that we shall be in a position to fulfil the obligation, provided we are granted a share of the markets at present restricted by Quotas.

Turning now to the Accounts for the year I must say that the net profit shown, Rs. 31,81,355 is considerably lower than that of the previous year but taking into consideration that this figure is arrived at after providing Rs. 10,00,000 for Debtenture Stock Redemption Reserve and after meeting the increase in depreciation charge together with the increase in raw material and manufacturing costs I referred to earlier, I am sure you will agree that the results are not unsatisfactory. With the increase in yarn prices an-

nounced in February and with the introduction since the 11th of this month of rationalised workloads in our units at Madurai and Tuticorin in settlement with the Unions at these places (who I am pleased to say have appreciated the need of the day for increased productivity), I hope and trust that results for the current year will be more satisfactory. In this connection I wish to mention that due to the conservative and prudent policy observed by the Company in the past in the matter of dividends and to the policy of ploughing back profits, the reserve position is very sound, but still I cannot say that the Company is not adversely affected by the proposed Super Profits Tax. It may not be possible in future to add to our reserves to the extent possible in previous years, but it is hoped that the dividend rate could be reasonably maintained.

Co-operation of Employees

The financial results are undoubtedly due to the harmonious co-operation and efforts of all our employees to whom again I would like to express my appreciation. We have still much to complete in our modernisation and expansion projects. With their continuing support we can look forward to the future with confidence and with mutual financial benefit.

Before concluding, I have to refer to the announcement in the Notice calling this meeting which stated that Mr. A. E. Cooper was not offering himself for re-election. Mr. Cooper joined the

Company in the latter part of 1954, and joined the Board of your Company and of the Managing Agents, the latter as Deputy Managing Director, in April 1960. He plans to leave India and to work in his home land. His departure will be a great loss to the Company and I would like to express on your behalf and on my own our appreciation of the valuable services he has rendered to the Company. I wish him all success in his future career.

As you know it had been my intention to propose to you, as the second and third items on today's Agenda that Mr. Victor Duxbury be elected to the Board in the vacancy caused by Mr. Cooper's retirement. I am very sorry to have to tell you that during the last few days Mr. Duxbury has advised the Company that personal considerations have made him decide to resign his position with the Company, and that he does not now wish to be considered a candidate for election to the Board. Under these circumstances Mr. Cooper has agreed to offer himself for re-election and to continue on the Board, if elected, until a suitable replacement for him can be arranged.

Note: This document does not purport to be a report of the proceedings of the Meeting.

THE BANK OF BARODA LIMITED

(Registered Office: Mandvi, Baroda)

Directors' Report

The Directors have pleasure in submitting this Fifty-Fourth Annual Report together with the Audited Statement of Accounts for the year ended 31st December, 1962.

	This year Rupees	Previous Rupees
The net profit for the year 1962, after providing for taxes, including Rs. 3,02,552.37 brought forward after taking Rs. 14,24,043.93 towards depreciation on buildings and furniture amounts to	66,21,722.36	68,72,552.37
An ad-interim dividend at the rate of 16% per annum, subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June, 1962 which absorbed	12,00,000.00	10,50,000.00
Amount transferred to Reserve Fund	12,75,000.00	20,00,000.00
Provision for Bonus to Staff	22,00,000.00	20,20,000.00
	46,75,000.00	50,70,000.00
The Directors now recommend :—		
(a) Payment of a final dividend at the rate of 16% per annum per equity share on the paid-up value on all those shares (issued prior to 30th June, 1962) subject to deduction of tax at the appropriate rates for the half-year ended 31st December, 1962 amounting to	12,00,000.00	15,00,000.00
(b) Payment of a final dividend at the rate of 16% per annum on the paid-up value on the new issue of one lac equity shares in proportion to the period commencing from the first day of the month following the date of receipt of application moneys, subject to deduction of tax at the appropriate rates for the portion of the year ended 31st December, 1962 amounting to	3,30,000.00	
(c) and carry forward to the next year's account of the balance amounting to	4,16,722.36	3,02,552.37
	66,21,722.36	68,72,552.37

2. The business of the Bank during the year under review continued to be satisfactory.

3. The Reserve Bank of India rate of interest continued to rule @ 4% per annum for the past 5 years, but was raised by 1% per annum to 4½% per annum effective from 3rd January, 1963.

4. The Deposit Insurance Corporation Act, 1961, came into force from 1st January, 1962 and premium amounts on our total deposits in India (excluding deposits permitted by the said Act) at the rate of 5 rP. per cent per annum were paid to the Corporation.

5. The Bank opened during the year 1962, 20 more branch offices in India namely :-

Navrangpura, Ahmedabad	Dhankam	Mangalore
Bareilly	Shaktinagar, Delhi	Asaf Ali Road, New Delhi
Ballard Estate, Bombay	Dhokla	Udhna
Khand Bazar, Bombay	Junagadh	Umrath
Khar, Bombay	Sitalnagar Bazar, Indore	Viramgam
Broach	Godhra	Mulund, Bombay
Lake Market, Calcutta	Ludhiana	

and closed 3 branch offices at Bruce street (Bombay), Pimpalgaon (Baswan), and Industrial Fair (Anasol). Consequently, the number of its branch offices in India increased to 12 as at the end of 1962. Since 1st January 1963 the bank has opened further branches at Asandol, Ahmedabad (Girdharnagar), Bombay (Khetwadi, Main Road) and at Borsad and will shortly be opening another branch at Bori Bunder (Bombay).

Three more branches were opened in foreign countries, first at Mbale (Uganda), second at Moshi (Tanganyika), both in East Africa and the third at Port Louis in Mauritius Island.

6. The Board of Directors decided to take over the banking business of the Surat Banking Corporation (Private) Limited, Surat. Accordingly, after due examination and valuation, the banking business of the Corporation has been taken over by the Bank with effect from 1st January, 1963 and the only office of that Bank at Vania Sheri, Surat, has commenced functioning as a branch of this Bank from that date.

1. The Bank had in all 114 branch offices after taking into account three branches closed down during the year ended 31st December 1962. 192 applications for exemption were granted exemption from audit under Section 228 of the Companies Act, 1956, in respect of 73 branches in India for the year 1962. Out of the remaining 101 branches, 87 branches in India have been either audited by the Bank's Statutory Auditors or by firms of Statutory Auditors in India, 14 branches in India have been audited by the Statutory Auditors. All the Bank's branches outside India number 141, have been audited by Chartered Accountants who have been competent to act as Company Auditors under the Acts of the respective countries and who have been approved by the Bank's Auditors.

8. The Directors report with great regret the death on the 7th July, 1962 of one of their senior colleagues, Shri Durgaprasad Shambhuprasad Laskari. They desire to place on record their appreciation of the valuable services rendered by him to the Bank for a period of 40 years.

9. In accordance with Article 145 of the Articles of Association of the Bank, four directors—Shri Kantilal Nahalchand, Shri Naval H. Tata, Shri Anandlal Hirajlal Sheth and Shri B. K. Daphtary—retire by rotation and being eligible, offer themselves for re-election.

10. Under the provisions of Article 149 of the Bank's Articles of Association, Shri A. M. M. Arunachalam and Shri Navnitlal S. Shodhan, who have been appointed as additional directors during the year will hold office upto the date of the Annual General Meeting i.e. upto 8th April 1963. They held office upto 31st March 1963.

11. The shareholders are requested to appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

Bombay,
Dated 7th February, 1963.

UNITED BANK OF INDIA LTD.

CHAIRMAN, DR. N. N. LAW'S REVIEW

Abstract from speech by Dr. N. N. Law, Chairman, United Bank of India Ltd. at the Annual General Meeting held on the 25th March, 1963.

Gentlemen,

I welcome you to this 13th Annual General Meeting of the United Bank. Since we met last year, we have lost our revered director Sri N. C. Datta, who died on April 16, 1962, at the age of 83 years. The death of Sri Datta has been a great loss to the Bank and the community. Way back in 1914, urged by the spirit of national service, when Sri Datta founded the Comilla Banking Corporation, banking was yet at a formative stage. His strength of conviction and urge for service is better appreciated when one remembers that he set forth on a pioneering enterprise, and in order to work whole time for it gave up a lucrative legal practice. With his progressive approach, fore-

sight and expert knowledge, he has made a marked contribution to the banking industry.

The closer I came to him the more I was charmed by his forthright behaviour, wealth of experience, and the warmth of his affection. Let us take consolation in the fact that he lived a glorious life, saw the fruition of his dream, assisted us in solving the difficult problems of amalgamation, and was able to see the United Bank well on the way to progress. May the departed soul rest in peace.

With a deep sense of sorrow I have also to refer to the rather untimely demise of Sri Dharendra Narayan Mukerji, the founder of the Hooghly Bank, another amalgamating unit of the United Bank. On the 19th of February 1963, Sri Mukerji passed away at the age of 62. Sri Mukerji, as you are aware, coming from a well-

known family, sacrificed a lot in the interest of the nation and built up the Hooghly Bank, the hard way. The story of the growth of the Hooghly Bank and its march from a small place on Dharamtala Street to 42, Chowringhee Road, is like the story "from log cabin to White House". His efforts, with winning manners, contributed not a little to solving the problems of the merger. Even when he was not on the Board of this Bank he did his best to support the cause of the institution. We condole his very untimely death.

On this occasion we cannot but remember with reverence the founders of the other two amalgamating units—the Comilla Union Bank and the Bengal Central Bank. The late Sri I. B. Dutt started the Comilla Union Bank in 1922. He had no need for personal earnings and was motivated entirely by selfless service to the community. Those who know the history, vividly

CAPITAL, 28th March, 1963.

recall even to-day, how he, for all his aristocratic heritage and foreign education, went from door to door, with a spirit of humility, for collecting a few rupees either by way of capital or deposit.

Late Sri J. C. Das, who founded the Bengal Central Bank, was wellknown in the country as a professional Accountant, having acquired his accountancy qualifications both in the U.S.A. and U.K. His firm of Accountants enjoyed a high reputation in the country. His advent in the field of banking was again a case of service to the cause of the community. The Bengal Central Loan Company was established by him at Calcutta in 1918, with a view to helping and co-ordinating the activities of various loan offices in Eastern India. A few years later it was converted into a regular commercial bank. Development of the Bengal Central Bank was entirely the result of his untiring efforts. The late Sri Das had often thought of a merger of the larger banks of Bengal to make it one of the foremost in the country. It is not generally known that in 1948 the merger of the Bengal Central Bank and the Comilla Banking Corporation was almost complete, but certain circumstances prevented it. It is an irony of fate that when the amalgamation really took place, with a larger purview, he was

CAPITAL, 28th March, 1963.

no longer with us to see the fruits of his efforts.

I take this opportunity to pay my homage to the deceased founders of the amalgamating units.

National Emergency

I must make a reference to the state of emergency that the country now faces. Our defence forces who gallantly resisted the massive aggression against heavy odds, deserve the highest tribute. The memory of the brave who laid down their lives in defending the motherland, will ever remain enshrined in every heart.

Confronted with the challenge, the immediate reaction of the nation has been to face up to it, with unity and determination. It is now the duty of all of us to see that the initial enthusiasm and the sense of oneness is maintained so that the period of emergency is seen through successfully.

Emergency Risk Insurance

Of the measures taken with the advent of the emergency, mention must be made of the Emergency Risk Insurance, which also covers the plantation industry. This has been a timely and appropriate step. However, by the nature of things, the schemes of Emergency Insurance cannot cover all the facets of the risks which are inherent in the situation. As in the case of the risks covered under the Emergency Risk Insurance, there are other risks also which had better be covered similarly, rather than left with the respective units to carry. I feel that a close study of the risks of every nature that the financial institutions, vis-a-vis industry and trade, have to bear, should be undertaken, in collaboration with all the sections concerned. Remedies suggested by such a study could be formulated well in advance and implemented whenever the situation so warrants.

I take this opportunity to mention that the services rendered by your Bank in the frontal areas during the relevant period, were highly appreciated by the Chief Minister of Assam, the business community in general and the tea industry in particular. I must also make a particular mention of the staff of all categories at our branches in the forward areas who conducted themselves admirably well during the crisis period.

Gold Control Measures

Another emergency measure that deserves mention is the steps taken to discourage hoarding of gold. The issue of gold bonds, has been a very well devised measure. It is most unfortunate that it did not meet with much success.

The follow-up measure imposing a complete control on dealings in and uses of gold, has raised an amount of controversy, which, however, could be expected. That the measure has had its initial impact on gold racketeering is noticeable from the reactions in the gold markets abroad as reported in the London Economist. However, the manner and the degree of success of the measure will depend on many factors. Varied and difficult problems of breaking down the age-old traditions and building up an adequate administrative set up, will have to be faced. All this will take time.

Super Profit Tax

As expected, the budget for 1963-64 has imposed substantial burden in the form of increased and new taxation. On the whole, in view of the emergency, such a step was inevitable. The increased outlay will largely be financed by tax resources and less by deficit financing. This approach is preferable to relying more on deficit financing, which would have further eroded the purchasing power. However, this positive quality of the budget would considerably be set off by the adverse impact of the Super Profit Tax now proposed. A few remarks on this

aspect of the budget will not be out of place here.

By further taxing the taxed profits of corporate bodies, their ability to build adequate reserves, through ploughing back, will be seriously curtailed. Particularly in the case of banks, the need for plough back, both in the form of published as well as internal reserves, is pressing and this has fully been recognised by the Monetary Authority; the Super Profit Tax will hit hard the already limited ability of the banks. If the recent attempts to strengthen the banking system are to succeed, some method of relief from the incidence of this tax will have to be devised.

I may suggest that in case of banks, their transfers to reserves—published and internal—to the extent of at least 30 per cent of after-tax profit be specially exempted from the chargeable profit to be calculated under any modifications to the Super Profit Tax that may be introduced as a result of reappraisal. Such a concession, while helping the banking system will not result in any great loss to the Exchequer in terms of revenue.

The imposition of Super Profit Tax, besides its impact on corporate finance, also has a bearing on the industrial development in the country. The importance of private sector investment for economic development is well recognised and has also been emphasised in the Economic Survey released along with the Budget. In the recent years the capital market was showing signs of healthy growth and a new section of investors was gradually developing. The imposition of Super Profit Tax as proposed has produced an impact on the market, which, if continued, may distort this healthy development to an undesirable degree.

Investment Trust

It is heartening to learn that the Government is considering the question of formation of Investment Trusts with a view to spreading the benefit of the industrial investment in the community at large. I have, in the past, emphasised the importance of and need for Investment and Unit Trust, as recommended by the Shroff Committee. It is wellknown that the growth of such trusts has so far been inhibited on account of the incidence of multiple taxation which, under the present tax laws, such trusts would be subject to. I am, therefore, particularly happy that the idea is now being considered in earnest at the appropriate level.

I would, however, submit that in order to achieve the desired results, it would be necessary for the Government to provide conditions and encouragement for such trusts to grow extensively throughout the country. Such a broad based development, with direct participation from the small investors, alone can provide for a healthy, balanced and natural growth of the capital market.

Compulsory Deposit Scheme

The other measure I would like to refer to is the Compulsory Deposit

Scheme, which is being introduced for the first time. As a step to curtail consumption, to mobilise resources and to ensure a general participation in the defence efforts the scheme has been well devised. However, the scheme in its present form can seriously affect the growth of deposits with the commercial banks by diversion of funds, and to that extent inhibit commercial banks' ability to serve the needs of industry and trade.

The scheme will affect the very section of the people who provide the prime deposit to the banks. The banking system, therefore, can legitimately expect that the Government will take other measures so as to mitigate their problem created by this imposition. We have, in the past, had occasion to refer to the need for utilising the commercial banks as depositories of Government funds, and I feel that the present measure is a further justification for giving a serious consideration to this idea.

Bank's Working

The Directors' report and the accounts for the year 1962 have been in your hands for some time and, I am sure, you have studied them with interest. You will, no doubt, have seen that despite the situation that developed towards the end of the year, the results have been satisfactory. Deposits have risen by Rs. 5.83 crores or by nearly 10% over the previous year.

This growth in deposits enabled us to increase our advances partially to meet the rising demand for bank credit, and to expand our investment portfolio in government securities. Our Foreign department continued to render services to the country's import and export trade, and over the years the volume of business transacted has registered a satisfactory growth, with a pronounced increasing trend. Our Pakistan branches continued to play their useful role in the development of the local economy and their business during the year was satisfactory.

Desal Award

In September last the Award of the National Industrial Tribunal (Bank Dispute) was announced, with its provisions taking effect from January 1962. You will have noticed that the establishment charges have risen by Rs. 24 lakhs, inclusive of normal increment etc., as against an increase of about Rs. 8 lakhs during the previous year. This is an increase of 16.7 per cent over the previous year and of 4.1 per cent on the quantum of increase in deposits in 1962. Most of this rise is due to the extra load imposed on the Bank by the Award, and its other implications are yet to be felt in the current year.

However, now that the Award has been implemented in the interest of the wellbeing of the staff, one may reasonably expect a higher degree of co-operation from the staff members. Only then can the incidence of the operating cost be somewhat lightened. I do hope that while the management will continue to make their efforts, the staff

will not be lacking in extending greater co-operation.

Interest Rates

You would have noticed that interest on deposits during the year under review has increased by Rs. 24 lakhs for a rise of only Rs. 5.83 crores in deposits. This works out to 4.1 per cent on the amount of increase in deposits and reflects the tendency towards increase in the rates of interest on deposits noticed during the last few years. If we are obliged to abandon our restraint with regard to interest on deposits, I am afraid, our operating cost ratio would further rise. I would once again like to repeat that higher interest rates on bank deposits, in a regulated and closed economy, does not, as it could not, by itself act as stimulant to deposit growth.

The recent growth in bank deposits is largely attributable to opening up of new branches, increase in the national income, expansion of currency and similar other factors. If all these are taken into account one would see how little, if any, has been the influence of increased rate of interest on the growth of deposits. At the same time banks' operating costs have been unnecessarily raised. As a result the rates of interest on advances have also increased.

If the lending rates were raised to broaden the differential with the deposit rates and thus substantially to strengthen bank reserves, a useful purpose would have been served. But instead, the trend has continued to be that the increase in interest rate on deposits has pushed up the lending rates without expanding the differential. The structure of interest rates, I feel, should be reorganised to suit the economy, at the same time to improve the profitability of the banks.

The convention evolved by the British banks in this regard, viz. that the maximum rate of interest on deposits be 2 per cent below the Bank Rate and that the prime rate of advances be 1 per cent above the Bank Rate with a minimum of 5 per cent, is more pragmatic in its approach than the agreement adopted in this country. I think the Indian Bank's Association should reorganise the inter-bank agreement on similar lines, but providing for a larger differential.

Service Charges

Here I would like to reiterate the need for standardising the charges for various services provided by banks. While deposit rates are regulated by agreement, absence of standardisation of service charges based on the costs of such services, militate against true implementation of the deposit rate agreement. I am at a loss to understand how in the face of the existing agreement on deposit rates, and even on lending rates, can there be any objection to an agreement on service charges; particularly when such an agreement becomes necessary in the interest of the existing ones.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of THE BANK OF BARODA LTD., as at 31st December, 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 41 Branches audited by us, 60 Branches audited by Branch Auditors and unaudited returns from 70 Branches for which Audit Exemption) Rules, 1961.

We report that:

- We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- the reports on the accounts of the Branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

U.N. MOVE FOR CONFERENCE ON WORLD TRADE

(BY A SPECIAL CORRESPONDENT)

THE proposals of Mr. Khrushchev and Mr. Diefenbaker that a conference should be convened to plan expansion of international trade were treated rather sceptically in Britain, but before the end of 1962, the General Assembly of the United Nations had voted for such a conference, to take place in 1963 or early 1964. The Canadian Prime Minister visualised a meeting of the British Commonwealth, the European Common Market, the European Free Trade Association, the United States, Japan and other "like-minded nations". The U.N. conference will include, of course, Russia and her satellites, but not, as Mr. Khrushchev's proposal visualised, China and East Germany.

However such a conference is constituted, it must discuss, as the most important item on its agenda, trade between the developed and the under-developed countries. The recent annual statement of Mr. J. S. Crossley, as chairman of Barclays Bank D.C.O., develops the theme that "a situation in which the rich nations are rapidly becoming richer and the poor relatively poorer, presents the greatest challenge of our age". Mr. Crossley is concerned with the policy of the European Economic Community, and with the implications of Britain's application to join it, rather than with world-scale conferences on trade. He says frankly that to promote prosperity in the under-de-

veloped countries is a matter of self-interest on the part of the developed free-enterprise countries. "More than a century ago, when the rise of the new capitalist society produced by the industrial revolution caused violent strife from one end of Europe to the other, the question at issue concerned differences in wealth between individuals. Today, these differences emerge as between nations themselves. But communism can feed on the one as well as on the other."

Change in Relative Prices

The background to this relative impoverishment is the change in relative prices, to the disadvantage of the under-developed countries. Cost-inflation in the developed countries has tended to raise the prices of their manufactured exports, while over-production in the under-developed countries has tended to lower the prices of their primary exports. Demand for primary goods has not expanded as much as the producers anticipated. More liberal trading policies on the part of the developed countries, combined with policies to develop industry in the under-developed countries, could gradually rectify the position. Bankers whose interests are mainly in the under-developed countries are particularly qualified to discuss this problem. Most of the

countries of the British Commonwealth are in the category of the "have-nots", says Mr. Crossley; and from this point of view, he questions the advantages of Britain's participation in the E.E.C. He questions also the present policy towards the dollar. The dollar could withstand further severe strains while maintaining its parity with gold. "Whether it should be required to do so and whether the intensification of the new 'dollar protectionism' which might be involved would be worth the cost may be arguable, but it can scarcely be denied that such a policy would bear hardly upon the 'have-not' countries."

The Main Problem

The under-developed countries of the Commonwealth, and those that are in transition between primary-producing and manufacturing communities, are the main problem in the negotiations between the E.E.C. and Britain, but this is only a segment of the whole problem of relations between the more developed and the poorer countries. (The terms of trade have, in fact, moved further against Latin America than against the primary-producers of the Commonwealth.) British industry, in general, is well protected by tariffs, and (inside or outside of the Community) it should be prepared to relinquish much of this advantage. Schemes to stabilise and support commodity prices may be helpful, but they cannot provide an adequate income for under-developed countries whose export markets are restricted. And unlimited aid, even if it were available, would be an irrational evasion of the essential problem—"the greatest challenge of our age".

THE BANK OF TOKYO LIMITED—Cont'd.

CONSOLIDATED

AUDITORS' REPORT

E. OHARA
Manager

We have audited the above Balance Sheet of THE BANK OF TOKYO LTD., as at 31st December, 1962 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Bombay Branch audited under Section 228 of the Companies Act, 1956 by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
- The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;
- The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns ;
- In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962 and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

POLICY ON FOREIGN CAPITAL NEEDS TO BE CLARIFIED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India, it is felt, should issue an authoritative statement on its attitude towards private foreign capital. Such a statement has become necessary after the recent remarks made by Mr. K. D. Malaviya, Central Minister for Mines and Fuel, and Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, that private foreign capital leads to a perennial drain on India's foreign exchange resources. Does this mean, then, that the Government should not encourage the inflow of private foreign capital? Mr. Malaviya has succeeded in blocking the expansion of the private-sector oil refineries on the ground that this will lead to a drain on India's foreign exchange resources.

The policy statement which the Prime Minister, Mr. Nehru, made in Parliament a few years ago gave an unqualified assurance about non-discrimination and about the repatriation of profits and capital to private foreign investors. It was on the basis of this assurance that the inflow of private foreign investment into India could be increased.

The Indian commercial community welcomes private foreign investment. This is obvious from the two resolutions adopted by the Federation of Indian Chambers of Commerce and Industry earlier this month. In the resolution on the national emergency and planning, the Federation stated that a more flexible implementation of the industrial policy resolution would encourage the flow of foreign investment to India. In another resolution on the need for revision of the fiscal and monetary policy, the Federation stated that the proposed super profits tax would "make it difficult, perhaps even impossible, for the companies to repay borrowed moneys. This will be particularly unfortunate in the cases of foreign collaboration and foreign loans and affect the status of India in the international field."

In the Report on Third Five Year Plan, the Planning Commission says that "normal inflow of foreign capital may continue but reliance on special forms of external assistance has to be reduced progressively and has to be eliminated." Meanwhile, the World Bank, which has been sponsoring meetings of the Aid-India Club to mobilise foreign assistance for India says in its evaluation report on the third plan: "The Indian estimate of the foreign exchange gap is arrived at without making any allowance for the inflow of private long-term capital. In other words, private foreign investment is treated—along with foreign assistance—as a means of covering the foreign exchange deficit, but nothing is said in the plan about how much it might contribute. The estimates of private long-term investment are made periodically by the Reserve Bank. The latest study relates to 1957 and 1958. According to it, the net inflow in 1956 was Rs. 24.70 crores, in 1957 Rs. 16.80 crores and in 1958 Rs. 1.70 crores. The outflow of foreign capital from India in 1958, it may be explained, amounted to Rs. 24.40 crores. The report adds that independent evidence obtained by the World Bank mission also indicates an upward trend in private foreign investment in India, most of it being accounted for by the U.K. and the U.S.A. The report regrets that India is not sav-

ing foreign exchange by allowing the oil companies to expand their refineries or to undertake oil exploration.

In the last Report on Currency and Finance, the Reserve Bank said: "During the year under review, the Government of India, in accordance with its policy of promoting foreign investment in the country, signed double taxation avoidance agreements with two more countries, namely, Finland and France. The agreement with France, as also the one signed with the U.S.A. in 1959, await ratification. Similar agreements exist already with Pakistan, Ceylon, Sweden, Norway, Denmark, Japan and West Germany. The Indian Investment Centre, set up in June 1960 with a view to encouraging actively the flow of foreign capital into the country, has made an encouraging beginning. A branch of the centre was opened in New York in October 1961. The services of the centre are being increasingly made use of by both Indian and foreign entrepreneurs. A large number of specific proposals for investment is reflected in the large number of foreign collaboration agreements approved by the Government of India. Sanctions given to Indian entrepreneurs for collaboration, including financial participation with foreign firms totalled 402 in 1961, against 388 in 1960 and 162 in 1959. During the first quarter of 1962, the number of such approvals was reported at 123."

Western Institutional Aid

Institutional aid from western countries is intended to supplement and not supplant private foreign investment. This is evident from a policy statement which the U.N. Secretary-General issued towards the end of last year. It says:

"As the development decade progresses, it may be expected that the number of developing countries potentially able to attract private foreign capital will rise. Pre-investment work, governmental, international, bilateral, and private, is being undertaken to uncover new physical resources and activate latent human resources. The emphasis placed by many underdeveloped countries on industrialisation, as well as general success in the endeavours of the development decade, also are all likely to lead to new opportunities for private foreign capital in the manufacturing sector. If the targets set by the General Assembly for increased assistance are to be met, a substantial expansion of private capital flows will unquestionably be necessary.

"The contribution that foreign private investment can make to economic development has come to be recognised by an increasing number of developing countries, many of which indicate—in their development plans and investment laws, the rôle foreseen for foreign private capital. The scope given to private foreign investment varies between countries.

"Foreign business investment is, potentially, a major source of technical assistance and information—not only concerning particular manufacturing processes and techniques, but also for the development of managerial and marketing skills. Recognition of this fact has led to the development of various contractual arrangements for the transfer of knowledge, including licence agree-

ments, technical services agreements, engineering and construction contracts, management contracts and agreements for the exploitation of mineral resources. These arrangements may or may not be accompanied by capital investment from the foreign partner, either in the form of equity or of a loan to purchase equipment and materials.

"But there are also many difficulties in the way of effectively mobilising an increasing flow of foreign private capital for economic development. Among them are obstacles inherent in the state of under-development, such as the lack of necessary supporting infra-structure, skilled labour and developed markets. Historically, there are also political difficulties on both sides. Under-developed countries fear interference by foreign business interests, and investors fear the consequences of political instability, balance-of-payments difficulties, and the absence of an institutional structure and policies in which the rôle of business is clearly established.

Flow of Private Capital

"A wide range of measures to promote the international flow of private capital has been adopted by both the developing countries themselves and countries seeking to facilitate the foreign operations of their industries. These measures have been the subject of a number of U.N. resolutions and reports. Two such measures seem to offer special scope for intensified U.N. assistance during the development decade. They are the following:

"The provision of information on investment opportunities and conditions—Several underdeveloped countries have established investment information centres both at home and abroad. The chief functions of those centres are to inform interested investors and business enterprises in the developed countries concerning conditions, regulations and opportunities in the country in question, and to facilitate contacts with interested government agencies or potential domestic private partners. Some of the centres (namely, the Jamaica Industrial Development Corporation, with offices in London, New York and Toronto) go beyond these tasks of information and liaison, and will co-operate actively in the establishment of foreign financial enterprises by participating in preliminary planning and surveying, building factories, screening and training workers and even helping to finance the enterprise.

"A number of the development banks and corporations established in underdeveloped countries, are also playing an active rôle in attracting foreign private investment, by bringing promising new investment opportunities to the attention of private businessmen abroad and by helping domestic firms to make contact with potential foreign sources of finance. As already noted, some development banks and corporations are themselves financed, in part, with foreign private capital.

"In many underdeveloped countries, there may be scope for the establishment or expansion of similar facilities, designed primarily to provide domestic private investors with information on foreign sources of finance and technical assistance, and to assist them, as required, in pre-

investment and preliminary planning activities, including the preparation of project reports and feasibility studies in forms appropriate for use in negotiations with foreign firms.

"The main task envisaged for the U.N. system in connection with such institutions will be to provide—on governmental request—technical assistance in their establishment and the development of their pre-investment and planning services. Within the U.N. system, considerable experience in this field already exists, and the organisations concerned stand ready to continue and intensify their help.

"The protection of private foreign investments against non-business risks—A number of countries have taken measures to overcome the apprehensions of foreign investors concerning non-business risks, including nationalisation or confiscation, the non-convertibility of profits and of the principal of the investment, and violence, unrest and war. These measures may relate not only to direct investments and loan capital, but also to patents and technical knowledge made available to enterprises in foreign countries. Assurances to overcome these apprehensions may be provided through authoritative policy statements, through guarantees incorporated in investment laws, and through commitments incorporated in international treaties with capital-supplying countries or in concession agreements with individual firms.

"In all these cases, the value of the assurance, and in effect the weight of the apprehension itself, will depend to a considerable extent on the stability of the Government of the country offering the assurance and on the underlying political and institutional framework. A development plan clearly setting out, among other things, the rôle envisaged for the private investor may form an element of this framework. So will the development of a modern commercial, financial, administrative, legal and institutional structure, which can greatly reduce the area of uncertainty in carrying on foreign business operations. The value of unilateral assurances and guarantees also increases with time, if the commitments are strictly observed.

Guarantee to Investors

"In addition to these assurances proffered by underdeveloped countries, a few capital-supplying countries—the Federal Republic of Germany, Japan and the United States—offer guarantee or insurance to their investors establishing enterprises in developing countries, provided that, in principle, the latter have entered into supporting agreements with the insuring government (except under the Japanese scheme, which is unconditional in this matter). While the Japanese insurance scheme is limited to equity investments, the other two cover loan capital and, in the case of the U.S. scheme, also patents, technical information, and so on. A much larger number of capital-supplying countries offer credit insurance to their exporters, some of them for terms up to 20 years to facilitate exports of capital equipment.

"The limited scope and geographical coverage of the existing investment insurance schemes have led to the formulation of a number of private proposals for a multilateral investment guarantee scheme. The World Bank has recently published a study identifying and discussing the principal issues. The study takes no position for or against the desirability or feasibility of such a plan. It was undertaken in the belief that an analysis of the issues might be useful both to governments and to private interests in further consideration of the subject.

"Related proposals to establish an independent international forum for

the conciliation and arbitration of disputes involving foreign private investors and governments—possibly within the framework of the U.N. system—have also been widely discussed. There is no doubt that effective methods of settling disputes will help to improve the investment climate and thus promote the flow of private foreign capital. The proposals have been examined in detail in recent secretariat reports, and a secretariat enquiry among member-governments revealed widespread interest in the subject. On parallel lines, the World Bank has on several occasions been asked to assist in the settlement of disputes involving foreign private investors and governments, and is currently exploring with its member-countries what might be

done to promote the establishment of appropriate arrangements to this end. "Facilitating access to foreign sources of development capital—While the needs of developing countries for foreign assistance in the financing of their development programmes are expanding, resources available for meeting these needs are limited and are proffered by a complex variety of public and private, national and international institutions, through a multiplicity of channels and techniques and in different forms."

In addition to being a source of technical assistance, private foreign capital in India is making two other contributions. Firstly, foreign investors have scrupulously kept themselves aloof from the country's poli-

tics. Secondly, they are building up a cadre of Indian managerial personnel who are gradually replacing their foreign counterparts.

Latest Taxes

Even before the latest taxation proposals, corporate taxation in India was very high, compared with other capital-importing countries. Such foreign investment becomes worth while only when its net yield in a country is comparable with that obtainable elsewhere. High taxes in India are a deterrent to foreign investment. They are also a deterrent to the employment of foreign technical personnel here. The burden of taxation is felt all the more due to the absence in India of the same relief in personal income tax enjoyed

by a foreigner in his own country; the absence in India of several personal services provided by the State; the heavy taxes on amenities; and the constantly increasing attractions of higher salaries outside India. Besides, a foreigner employed in India is taxed on his foreign income even if he does not bring it into India. If he retires from India and continues to enjoy an income (say, a pension), he will be taxed not only on the pension but on any income which he may earn in the country of his retirement or pay a tax at the minimum rate of 49 percent.

Following the Chinese aggression an additional burden has been imposed on companies, namely, emergency risks insurance. Mr. Desai's

CAPITAL, 28th March, 1963.

CAPITAL, 28th March, 1963.

latest tax proposals will inevitably raise the cost of living, add to the cost of production of manufactured goods through additional Customs and excise duties, postal rates, and railway freights, etcetera. On the other hand, the Government has virtually fixed a ceiling on corporate profits by proposing to levy a super profits tax. In other words, Mr. Desai is indirectly conceding the demand of the communists to stop the inflow of private foreign capital into India.

The World Bank and the United Nations, as reported earlier, have emphasised the rôle of private foreign investment in the economic development of a country. The U.S.A. has, therefore, offered loans liberally to promote India's economic growth. Foreign investors are not queuing up to enter the Indian market. They will be only too willing to explore other places if India's policy is to keep them out. It is, therefore, high time that the Government clarified its policy towards private foreign capital.

BUDGET

Representations Made

The taxation proposals in the Central Budget are being discussed from various angles. The president of the Associated Chambers of Commerce, Mr. A. R. Foster, joined his colleagues in a discussion in New Delhi concerning the tax proposals and their impact on foreign capital in general and the servicing of loans in particular. A small committee of Assocham has been meeting Government officials to place its viewpoint before them.

A deputation of the Federation of Indian Chambers of Commerce and Industry presented the case of the Indian commercial community to the Central Finance Minister on Monday. Mr. J. R. D. Tata has already met the Prime Minister to explain industry's viewpoint to him. The Government's reactions to these representations will be known by 11th April, it is officially stated here.

It is said that on the evening of 28th February, it was the voice of Mr. Morarji Desai which people heard in the Lok Sabha, but it was the hand of Mr. Pitambar Pant which evolved a new system of taxation to hurt the poor and make them poorer and discontented. Meanwhile, stories of Chinese troop concentrations in Tibet are gaining ground. Why the reports should have started now is not disclosed. Were there no Chinese concentrations in Tibet all along? Everyone in this country is determined to meet the Chinese challenge. But people also expect the Government to reduce wastage and extravagance. The Government has demanded that every citizen should cut down his standard of living so that India can regain her military strength and self-respect. But it is not prepared to cut down the number of Deputy Ministers and their wasteful expenditure on tours, telephone bills, electric and water charges, etcetera. This cannot be called equality of sacrifice. Then again, why has the Government excluded Hindu temples from the scope of the compulsory saving scheme?

The Government has been unable to convince people that it will be able to spend all the money it is raising. There is an apprehension here that some of the money raised will eventually be squandered. The better course would have been to leave the gap uncovered and to come back to Parliament for additional funds in October if the Central Ministry of Defence had actually been able to use the funds it had asked for. Since the burden of taxation will affect economic expan-

sion and may even create discontent, a rational approach is needed more than ever before.

MOTOR-CARS

Meeting Defence Needs

A decision on the defence-oriented manufacturing programme for the motor-car industry was reached here last week. As already reported, the making of motor-cars has been given second priority, first place being allotted to lorries. Here again, defence requirements will enjoy top priority. Indications have been given to manufacturers about the demand over a pretty long period. The diversion of manufacturing capacity to meet defence needs is bound to create shortages for civilian requirements. By reducing the percentage of imported parts and components and by increasing Indian supplies, the volume of production, it is hoped, will increase.

FOREIGN AID

U.S. Expert to Report

Mr. John Ulinsky of the U.S. Agency for International Development discussed the requirements of the public and private-sector industries with the Union Ministries concerned last week. He will submit his report to the U.S. Government to enable it to determine the American aid for the remaining three years of the third plan.

FERTILISERS

Talks on New Project

A team of U.S. consultants consisting of Mr. Cope of California Chemicals and Mr. Dennison of the International Mineral Corporation and the representatives of E.I.D.-Parry of Madras recently discussed with the Government the details of their combined fertiliser project in Visakhapatnam. The discussions related to the capital structure and such other matters as costs which are bound to go up after the new taxation proposals come into force. In spite of these handicaps, the parties are believed to be eager to go ahead with the project.

BASIC CHEMICALS

Working Group Proposed

The Planning Commission has asked the Central Ministry of Industries for details of the constitution of the working group on basic chemicals in connection with the establishment of capacity in the fourth plan, it is learned here.

N. I. D. C.

Changing the Role

The Government of India has decided that the granting of loans and the lending of money now being exercised by the National Industrial Development Corporation should, in future, be entrusted to the Industrial Finance Corporation or similar institutions.

NEW ZEALAND

Import Licensing

The New Zealand Government's 1963-64 import licensing schedule, which was recently released by the Minister of Customs, Mr. N. L. Shelton, provides for the ready availability of a wide range of raw materials and a more flexible grouping of

licences for manufacturers and importers. A sum of £250 million is provided for import payments.

One hundred and six items now in Category A under which initial licence represents 75 percent of the 1962-63 licences, and additional licences may be issued to the licence holder against his actual need as shown by sales or the use of the materials in manufacture. Some of the more important raw material requirements of industry in this category include most cotton fabrics, most classes of unfabricated iron or steel other than certain rods and flats being produced in New Zealand, most basic metals in ingot, raw coffee, unground spices, crude rubber, gypsum, waxes and tanning materials, shellac and certain gums and resins, kapoc, petroleum jelly and some mineral oil products, many dry colours and pigments of the type used in paint manufacture and some other essential goods. Other goods include certain medicinal preparations and drugs, domestic and industrial sewing machines, infant-feeding bottles and teats, artificial eyes, sewing and gramophone needles, engineers' studs, aircraft parts, infants footwear, galvanised corrugated iron and wire netting.

The list of goods completely exempt from import licensing has now been extended to include all detonators and all printed books except magazines, newspapers or periodicals, including comics.

JOINT STEAMER COMPANIES

Loan Offered

The Government of India has decided to give a loan of Rs. 2 crores to the Joint Steamer Companies (Rs. 1 crore each to the India General Navigation and Railway Co. Ltd. and Rivers Steam Navigation Co. Ltd.) to enable them to rehabilitate their obsolete fleet for the maintenance of essential services on the Calcutta-Assam route. The Companies will repay the loan in seven equal annual instalments. The first of such instalments will be paid 12 months after the payment to the Companies of the last instalment of the loan. Every subsequent instalment will be paid on the same date of each and every succeeding year until the entire amount of the loan has been repaid in full.

The Companies shall pay interest at the rate of 8 percent a year, by quarterly payments payable on 30th March, 30th June, 30th September and 31st December each year, provided that if they duly perform and observe all the covenants of their agreement with the Government, the latter shall accept interest at the rate of 5 percent in lieu of the interest at the rate of 8 percent a year.

The loan is to be advanced in monthly instalments in arrears against completed vessels. In the first two or three years, the loan may be advanced by the Government on "works in progress".

CALCUTTA PORT

Dredger Ordered

The Government of India has decided to purchase a new dredger for Calcutta port. An order has been placed with Messrs I.H.C. of Holland. The dredger is estimated to cost about Rs. 2.5 crores.

U.S.A.

Funds for Farm Research

The U.S. Government has agreed to finance from the rupee funds generated through the sale of commodities under P.L. 480 a total of ten Indian agricultural research

schemes during January and February 1963.

SHIPPING CORPORATION

New Cargo Services

The Shipping Corporation of India proposes to inaugurate the India-U.S.A. cargo services some time in April or May this year.

ROURKELA STEEL PLANT

Equipment Ordered

Hindustan Steel has placed orders with Allegemeine Electricaets-Gesellschaft (A.E.G.), Frankfurt, West Germany, for the supply of electrical equipment for a five-stand cold rolling mill in tandem for the Rourkela steel expansion programme. The mechanical part of the mill will also be built by Siegner Maschinenbau G.m.b.H. (S.I.E.M.A.G.), of Dählbruch, West Germany. The mill is scheduled to commence operation in 1965. To a large extent, this will render the Indian economy independent of sheet steel imports from abroad.

Dema A.G. at West Germany has signed a contract with Hindustan Steel to supply and erect an electric sheet rolling mill in Rourkela. This will enable the plant to produce transformer and dynamo sheets for India's electro-industries.

The installation consists of three rolling stands and three skin-pass mill stands as well as auxiliary equipment. The annual rated capacity is 50,000 tons. The Rourkela steel plant's wide strip mill, built also by Demag, will supply the basic material for the manufacture of electric sheets in the form of 8 to 10 metre long strip. After cutting and further rolling, the strip will be processed through a heat treating plant where the sheets receive good conductivity and low tension loss, etcetera. The after-treatment of the dynamo sheets will be done package-wise and continuously in a tunnel-type furnace.

FOREIGN EXCHANGE

Use in Industry

In order to give industry greater flexibility in the use of foreign exchange released to it, some modifications have been made in the procedure for the import of raw materials, components and spare parts against actual user licences granted to industries in the scheduled and non-scheduled sectors, including the small-scale industries.

According to an Import Trade Control public notice issued here, holders of actual user licences for raw materials may—in their discretion—import more or less of any items of raw materials and components covered by their licences, subject to the condition that the excess in relation to any individual item will not exceed 25 percent of the quantitative limit, if any, indicated in the licence itself. Furthermore, within the face value of the licence, the licence-holder will be allowed to import permissible spare parts and small tools required for the purposes of his factory, provided the value of such imports does not exceed 25 percent of the face value of the licence. Banned items of spare parts and small tools should not be imported under the scheme.

This facility will be allowed by the Customs authorities on the strength of this public notice. It will not be necessary for licence-holders to get their licences specially endorsed for this purpose.

The procedure for the release of foreign exchange and the issue of import licences has been revised as follows with effect from 1st January, 1963:

(1) All proposals for the release of foreign exchange for the irrigation

**brings back
THE FLYING
RED HORSE
Mobil lubricants
return to India**

The familiar landmark, the famous Flying Red Horse, is back in India. The Indian Oil Company has become the exclusive distributor of Mobil industrial and automotive lubricants.

Now Mobil premium products, known and trusted for wellnigh 50 years in this country, will be marketed once again in India.

Today, Indianoil can readily supply the entire range of your requirements of lubricants.

Please specify your requirements to:

Indian Oil Company Ltd.

(A Government of India Undertaking)

'Rashmi', Carmichael Road, Bombay 26-WB;

BOMBAY: Volga Building, Clerk Road, Bombay-34;

MADRAS: "Chordia Mansion", 150-A Mount Road, Madras 2;

CALCUTTA: P-64, Sundari Mohan Avenue, Calcutta 14;

NEW DELHI: National Insurance Bldg.,

5 Parliament Street, New Delhi 1.

* Registered Trademarks of the Mobil Companies

and power projects are to be received in the Central Water and Power Commission direct in duplicate from the project authorities and State Governments, etcetera. On receipt, the proposals will be examined by the Commission to see if these are complete in every aspect. If they are found complete, they will be given a number in the control register prescribed for this purpose and an acknowledgment will be issued to the applicant within 24 hours of its receipt indicating the control number allotted to the proposal. In all future correspondence, this control number will be quoted by the State Government or project authorities. If no acknowledgment is received within a reasonable time, the State Government or project authorities will write to the Central Water and Power Commission and ask for an acknowledgment and the allotment of control number.

(2) Hitherto the practice has been for State Governments to remind the Government of India about their pending foreign exchange cases. No system of giving monthly statement the State Governments or project authorities pending with the Government of India for over two months has been introduced. While most of the applications are sanctioned and import licences issued after going through all formalities within a period of two months, the statement

gives reasons for the delay in deciding cases which still remain undisposed of.

(3) All cases for foreign exchange sanction were, in the past, sent to the Department of Technical Development for clearance. It has now been decided that the clearance of the Department of Technical Development need not be obtained if quotations have an open tender for a period of 21 days and no indigenous offer is received. This is a major departure in procedure and is expected to save considerable time in issuing foreign exchange sanctions.

(4) Consultation with the internal Financial Adviser has been dispensed with except in cases where Central funds are involved.

(5) Before a foreign exchange application is sanctioned complete with an import licence, it has to be scrutinised by (a) the Technical Development Department from the point of view of non-existence of indigenous production; and (b) the Controller of Imports and Exports for the purpose of issuing an import licence.

In cases that will have to be referred to the Technical Development Department under the new procedure, either because of indigenous equipment that is available not being up to specifications or prolonged delivery, a time limit of 15 days has been fixed in consultation with the department. All cases that are not disposed of within 15 days, are discussed in periodical meetings between the officers of the Technical Development Department and the Central Ministry of Irrigation and Power and cleared.

As far as the Chief Controller of Imports and Exports is concerned, some cases of small value in the past were referred to the regions in Madras, Bombay and Calcutta for the issue of licences. The issue of licences for all irrigation and power projects has now been centralised in the Chief Controller of Imports and Exports office in Delhi. The Chief Controller of Imports and Exports has also agreed to fix a time limit of 15 days during which all the applications will be disposed of. Cases which cannot be disposed of within this period, are discussed between the officers of the Chief Controller of Imports and Exports and the Central Ministry of Irrigation and Power in periodical meetings.

(6) Emergent demands are dealt with on a top priority basis and given a separate set of control numbers. Liaison officers in the Central Water and Power Commission as well as officers of the Ministry will process such cases personally and such demands will be sanctioned within four to five days under the new procedure. The clearance required in the case of emergent demand will be obtained at a personal level from the authorities concerned.

FARM IMPLEMENTS

Expert Study

A team has been appointed by the Committee on Plan Projects for the study of agricultural implements used in India. For the purpose of the study, agricultural implements will be divided into the following categories: (a) bullock-drawn implements; (b) small power implements; (c) hand tools and garden implements; (d) irrigation appliances and machinery; (e) plant protection equipment; and (f) supplementary implements and equipment.

The team will study and report on all aspects of progress of various schemes—both of the Central and

State Governments—and their efficiency and effectiveness in relation to the manufacture, popularisation and distribution of agricultural implements.

TECHNICAL AID

Offer from India

It is proposed to offer technical collaboration to some Asian and African countries. As for medium-term export credits, a general scheme extending credits for a period of six months to five years against suitable guarantees is already being operated by the Refinance Corporation of India. This apart, a few arrangements involving deferred payments for Indian exports of capital goods to Ceylon and Indonesia are also being considered.

The Government is encouraging Indian business men to open business houses abroad. The foreign exchange required for this purpose is released in deserving cases. The Government is also considering giving greater assistance to export promotion councils, commodity boards and exporters to carry out market and commodity research and area surveys. These are to be financed from the new Marketing Development Fund.

MOSCOW

Cost of Exhibition

The estimated cost of the proposed Indian exhibition in Moscow is Rs. 71.25 lakhs, of which the foreign exchange component is Rs. 63.5 lakhs. Out of this, industrialists and commercial enterprises are expected to bear Rs. 30 lakhs.

N. C. A. E. R.

Survey of Rajasthan

The National Council of Applied Economic Research released to the Press its techno-economic survey of Rajasthan during last week. After making a detailed scrutiny of its resources and taking into consideration the all-India targets, guidelines of development have been suggested for Rajasthan for 1961-71. These development plans would require an investment of about Rs. 1,500 crores during the decade, averaging to Rs. 150 crores a year. This would roughly amount to 5.45 percent of the investment envisaged for the entire country. Investment of this magnitude for Rajasthan is justified by the availability of natural resources and the relative backwardness of its economy.

Agriculture will continue to play the predominant rôle in the economic development of the State because of the existence of a very large potential in this sector. The State offers excellent opportunities for evolving a more economic and efficient land use pattern based upon improved techniques of wet and dry cultivation, and above all in modernising agriculture. It is visualised that in the south-eastern part of the State where the annual rainfall is above 20 inches and considerable irrigation facilities exist, the increase in farm output and productivity will be possible through land development and land reclamation programmes, improvements in irrigation practices, introduction of superior cropping patterns and by the application of higher inputs and better techniques of cultivation.

Rajasthan has a wide range of mineral deposits of non-ferrous and non-metallic variety. For several of them, the State is either the sole or the leading producer in the country.

However, many mineral resources are small and several are not fully known. The lack of basic minerals also restricts the future development of the State in this field. The mining programme suggested for the current decade will need an investment of the order of Rs. 23 crores, chiefly for copper, lead, zinc and lignite mining. It is recommended that the State should undertake surveys to determine the extent and the quality of these mineral resources which have not been fully surveyed so far.

The industrial sector will get a strong push during this decade. The output of factory industries will rise from Rs. 12 crores in 1951-61 to Rs. 149 crores in 1970-71—an average annual increase of 119 percent. The bulk of the investment will be absorbed by the chemical and engineering industries. The more important units to be established in the former group will be for producing nitrogenous fertilisers, cement, viscose rayon, soda ash, caustic soda and calcium carbide, while the important units in the engineering group of industries will include copper, lead and zinc smelters, and a precision instrument factory. In addition, sugar and textile industries will witness considerable expansion. Locationally, the industrial activity will be concentrated in Kotah, Udaipur, Jaipur and Ganganagar districts. Transport is still the main problem of the State. Paradoxically, there is also the labour shortage.

The Council has published or is preparing to publish similar surveys for all the States. Its next task should be to co-relate these studies to prepare an all-India report.

CANADA

Invitation to Experts

Three Government officials and five leading business men from the private sector have been invited by the Canadian Government to tour industrial plants located in 56 industrial centres in Canada. These men will be the leading figures in a large delegation of 178 industrial and Government leaders participating in the "World Markets—Machinery" being held from 24th March to 31st March, 1963. They include engineers, planners and industrialists from Britain, Europe, Asia, Africa, Latin America and the Middle East; a total of 53 countries will be represented. The eight Indian visitors will be touring factories. This will provide the visitors with a comprehensive survey of Canadian industrial capacity in the field in which they are specifically interested. These fields include: agricultural, automotive parts, construction, hydro and thermal electric, oil and gas pipeline and plant, shipbuilding, steel mill, mining, aircraft, boiler plants, electronics, industrial and process plant, railway and special vehicles.

The following are the members of the Indian delegation: Dr. B. D. Kalelkar, Senior Industrial Adviser (Engineering), Development Wing, Central Ministry of Commerce and Industry, Mr. K. P. S. Nair, Member (Hydro-Electric), Central Water and Power Commission, Mr. L. K. Dhanwan, Joint Director (Railway Stores), Central Ministry of Railways, Railway Board, Mr. R. F. S. Talyarkhan, Managing Director, Voltas Limited, Bombay, Mr. N. M. Wagle, Managing Director, Greaves Cotton and Co. Ltd., Bombay, Mr. D. M. Sen, Secretary to the Board (Engineering), Martin Burn Ltd., Calcutta, Mr. K. C. Gupta, Chief Engineer, Hindustan Aluminium Corporation Ltd., New Delhi, and Mr. V. Podder, Works Manager, Rohtas Industries Ltd., Dalmianagar, Bihar.

London

BRITISH INDUSTRY LOOKS AT THE PROSPECTS

(FROM OUR LONDON CORRESPONDENT)

THE regular flow of complaints from industrial leaders that they are being held back by Government policy is becoming rather tedious. The Chancellor has allowed public spending estimates to go up by the highest percentage seen in peacetime. Contracts are now beginning to roll out from central and local government bodies in a rapidly swelling volume. Taxes have been cut. Incentives have been provided for industrial capital projects. The latest fiscal treatment of new plant and equipment is more favourable than in almost any other advanced country. All restraints on credit have been removed and although the banks are not at present overliquid, nobody can doubt that they will be put in funds by a deliberate expansion of the floating debt rather than be compelled to turn down any industrial requests for credit. How much clearer can official policy be?

Yet, the industrial spokesmen talk as if nothing had happened. They tell each other and the public that they can have no confidence in the economic situation. The latest cry of agony comes from the Institute of Directors. Having asked a number of the biggest member-firms whether they could expand production without extra labour, they received the obvious positive reply. Surely no "survey" was required to find out that large numbers of workers and staffs are at present under-employed. Similarly, some companies confirmed that higher output would bring down unit costs and that in some cases this might help exports. A majority of member-firms think they can expand production by up to 10 percent without a substantial rise in the purchases of imported raw materials.

Idle Capacity

From these meaningless generalisations, Sir Richard Powell, Director General of the Institute draws the conclusion that industry is "straining at the leash." The evidence, he adds, shows that if industry were given the chance to "go" now it could do so safely, without once again running into serious labour and balance of payments problems. The Guardian differs from this conclusion. Used to making regular industrial enquiries on a far more ambitious scale than the Institute of Directors' "Survey," the paper claims to have some experience in assessing the kind of replies one is apt to get from managements. In view of the question asked, it is surprised that the answers were anything less than unanimous. They are also worthless. With industrial production as a whole running roughly level for three years while new plant and equipment was being added to industrial capacity at a record rate, it is obvious that there must be a great deal of idle capacity.

This overall picture is, of course, distorted by the structural troubles of shipbuilding, coalmining, the railway and—as a consequence—the ways and means of the steel industry. But heavy end of the steel industry. But the high unemployment figure of February could not have been reached unless there was much slack in industries outside the main sufferers. The questions that need asking now are: what are managements waiting for? Do they expect ready-made demand for precisely the products they like to sell or emerge on their door-

steps? Are they going to sulk in their tents until the Government has pumped another £400 million of money into the economy? Have they given any thought to the possibility that the ghost of Lord Keynes may at last have gone to rest, and his prescription of expansion by Government deficit financing may no longer work?

The devout faith in the magic powers of the Chancellor may be touching, but it could lead to sad disillusionment. Surely, the time has come for industry to do its own share of the job. Instead, one finds that the respectable economic argument for injecting more purchasing power into the system receives further support from the sixteenth enquiry into industrial trends undertaken by the Federation of British Industries. The returns from 717 firms do not reveal a radically different pattern of business or business attitudes from the last enquiry four months ago. It is true that 30 percent of companies are less optimistic about the general business situation, compared with 22 percent last time, but so many subjective and irrational influences have probably been at work that too much should not be put on the rise in this percentage.

The series of measures taken by the Chancellor of the Exchequer since the autumn have not boosted business confidence. The reason is not hard to find. In the last four months, the main factor limiting output has been simply a shortage of orders. Of those replying to the questionnaire, 74 percent mentioned it and no less than 77 percent expect that a shortage of orders will restrict output in the next four months. Only 8 percent gave a shortage of skilled labour as a reason for low output. The other outstanding figure is that for under-capacity working. Of firms making returns, 68 percent reported that they were working below capacity, compared with 66 percent in October. This change of 2 percent understates the extent to which unused capacity has increased, for it gives no clue to the amount of plant now idle.

Business Expectation

There are one or two crumbs of comfort in the survey if one looks hard enough for them. For instance, more firms are looking for an improvement in business in the coming months than expect a deterioration. Unfortunately, similar expressions of optimism at this practical level in the last year have proved to be unfounded. Secondly, there is some indication that the decline in intentions to invest in plants and building, although continuing, has become less steep. More firms expect to spend less on capital projects in the next 12 months than expect to spend more, but the "unfavourable" margin has diminished.

All the questionnaires were completed after General de Gaulle's Press conference on 14th January when he virtually killed the U.K.'s application for membership of the European Economic Community. About half the respondents sent in their returns after the formal breakdown of the Brussels negotiations, but according to the F.B.I., there is no evidence that their replies to questions about general business

optimism were affected. Nor would the turn of events in Europe seem to have any bearing on replies to the export enquiry. Firms are, on balance, more optimistic about export prospects than they were four months ago. A higher proportion again reported a rise in the level of export deliveries, although the balance reporting a rise was only 10 percent, compared with 17 percent last June.

Among different markets, the European Free Trade Association area has replaced the European Economic Community as the market in which prospects are believed to be rising most rapidly. A balance of 9 percent of firms reported improving prospects in the "Six," while in October, a balance of 22 percent did so. A lowering of expectations about prospects in the Common Market has been apparent since last June: this movement has accorded with the trend of actual sales to the "Six." British business men, however, are still apparently looking for more Government aid in the matter of exports. A call to the Government to press for an immediate revision of the General Agreement on Tariffs and Trade (G.A.T.T.) is made by the National Association of British Manufacturers in an editorial in its monthly journal, *The British Manufacturer*. The N.E.D.C. growth target of 4 percent a year means a growth rate of approximately 5 percent in the U.K.'s exports, says the Association, and since, with the failure of the Common Market negotiations, there is likely to be difficulty in increasing our trade with "the Six," any deficiency will have to be made up elsewhere. "We have got to secure a greater share of world trade than we have at present if we are to succeed, and this involves an examination of our costs and of the incentives to export."

If Britain is to introduce export incentives based on the remission of taxes on profits made on export sales, as the Association advocates, they will have to be the subject of negotiations in G.A.T.T. The world has changed materially since G.A.T.T. was signed in 1947, says the editorial, and the time has come when the "no new preference" rule should be re-examined. "We should press for some freedom of manoeuvre which is at present denied us. We might then be in a stronger position to hold trade discussions with the Commonwealth, either collectively or individually, which would lead to the expansion of trade which is essential to us." At the same time, the Association suggests, a comprehensive convention should be drawn up dealing with export incentives. "The last thing we should wish to see is an incentives race..." but "provision should be made for export incentives to be introduced whenever the condition of the national economy demands this, as it does in this country at the present time." Britain cannot hope to succeed in her export drive if she deliberately handicaps herself as she has been doing in the past, says the Association.

Bank of England View

The Bank of England, judging from its latest quarterly Bulletin, takes a rather gloomy view of current prospects. Discussing the underlying balance of payments, the Bank finds

that there was probably no marked change in the fourth quarter although a small deficit on current account may have emerged. But the balance of monetary movements was adverse. As for the domestic economic outlook, the Bulletin stresses the link between domestic expansion and exports. In the immediate future, world demand for manufactures will continue to rise, although less quickly than of late. "In these circumstances, U.K. exports cannot be expected to grow more than modestly unless there is an improvement in the U.K. share of trade."

The Bank argues that it might have been easier to increase the U.K.'s share of world trade if she had joined the Common Market. As this advantage has now been lost, further change at home has become both more necessary and more difficult. The argument concludes: "The immediate needs are restraint of costs, which requires in its turn an effective incomes policy, and aggressive salesmanship. In the longer run, not only are changes needed in our own industrial organisation, education and training, and perhaps in fiscal arrangements, but it is important to promote a more rapid increase in world demand for manufactured goods."

New Approach

And finally, there is a new approach to the problem from Sir Roy Harrod, the economist, which will stir up controversy if it does no more. The other day he put forward the novel suggestion that imports of articles Britain can make should be restricted temporarily to help world trade. "The world might say it was a shocking thing to do," he said to a conference considering international trade and economic problems, "but we should only be hurting producers in other rich countries and not primary producers." From a world point of view, by damping down the British economy, the U.K. was restricting imports. "I would never say damp down. Allow imports of materials of all kinds needed by industry, and, if you must restrict, cut out kitchenware and that sort of thing we can make for ourselves." The U.K.'s "stop-go" policy which had restricted industrial growth was bad not only for Britain but for the world.

Private investment of United States capital in Europe and Canada was "nonsense." This unnecessary pouring out of capital should be adjusted from a world point of view. The mature countries of Europe should be thinking of importing most of their simple manufactures from the rest of the world and switching to the highly scientific industries, chemicals and electronics, where they would hold the lead for years. It would mean a major switch of labour in Europe. On a world economic conference, he thought "Neddy" and the French planning commission might be better bodies to look at international problems than civil servants with "fixed ideas and a traditional viewpoint."

HINDALCO ALUMINIUM

Keeps Industries on their March

The Rs. 20 crore Birla-Kaiser Aluminium Project at Rihand went into production in May 1962. From December 1962, the reduction plant has attained the present target capacity of 20,000 tonnes of aluminium ingots per annum, saving for the country over Rs. 6 crores of foreign exchange formerly involved in importing aluminium from abroad. To keep the fast-growing national industries on their march, HINDALCO will set up its rolling and extrusion mills and expand the primary aluminium production capacity to 50,000 tonnes in the near future.

Jute

FIBRE PRICES EASE: DULL MARKET FOR GOODS

IN the jargon of the jute and jute goods markets in Calcutta, some words have been given a twist which is in conflict with their real meaning. The word "quiet", for instance, is accepted as meaning lower or declining prices. The result of a spell of quiet trading usually is that prices decline, but this is not always the case. There may be a period of quiet markets when prices remain quite steady, and there again we have a word which is much abused. "Steady", which really indicates absence of movement, is frequently interpreted as referring to rising prices; and we are often told that the market is "ruling" this or "ruling" that, whereas the market does not rule anything.

Stabilising Prices

These thoughts on the abuse of the language in commercial circles arise from the circumstance that it seems probable the word "stabilisation" is in process of being added to the list of words whose meaning is distorted. For some time, one has heard a lot about the stabilisation of prices in connection with schemes for regulating the price of raw jute, and more than one ordinance has fixed minimum prices in the name of stabilisation. However, experience so far has shown that measures to "stabilise" prices have been taken only when the natural tendency of the markets has been downward. The fixing of a maximum price by the L.J.M.A. for raw jute a few years ago was criticised by some as an attempt to deprive the poor cultivator of his legitimate profit. The rapid fall to more normal levels, however, was soon followed by an ordinance to "stabilise" prices.

The dictionary tells us that "stabilisation" means "to make stable or steady, to fix". The record in the jute industry shows, however, that all ordinances or measures taken in the name of stabilisation so far have been designed not to stabilise but to raise prices to higher levels. It may, of course, be argued that that is necessary in the interest of the growers in the circumstances which exist at this time. If that is true, it is a natural corollary that the measure should be adopted if raw jute prices are forced by artificial means to dangerously high levels, but Government circles are not always ready to accept this view.

Rapid Fluctuations

Another aspect of stabilisation concerns the futures market. It is increasingly clear that action is necessary if the jute trade and industry are not to remain the sport of the gamblers. Rapid fluctuations in the market usually deter business, and over the past week, overseas buyers have again shown a reluctance to place orders. Enquiries have been on a much smaller scale and this seems to have shaken the bazaar a little. Hitherto, the policy of bazaar dealers has been immediately to replace sales for early deliveries by purchases of forward deliveries, but the reduced volume of business has dampened their enthusiasm for buying forward. The price movements of the past week have certainly not been justified by any one factor, and the feeling in the market is one of nervousness.

The market for raw jute has again weakened. This is because the mills have bought very little fibre since

the market for manufactured goods has been dull. Raw jute sellers are keen to liquidate their holdings. But as these consist mainly of low qualities, they do not interest buyers who, in any case, are few. The mills have shown interest in a few cases in the higher grades of jute which are in short supply and are difficult to secure. With accommodation limited and stocks high, they prefer to wait for good quality fibre from the 1963-64 crop, instead of filling up any available space with lower quality jute, of which the supply is ample.

All the mills are well stocked with raw material, and the purchase of more stocks will be attractive only if there is a good margin of profit. Because of the increase in the proportion of specialities and high-grade cloth being made, and the lack of demand for heavy sacking, there has been a considerable change in the class of raw material required by mills. Their current needs are only for qualities which are scarce. Good quality jute is in short supply because there have been two crops which have been below average in quality: this is a position which cannot be remedied until the new crop arrives. Therefore, it is desirable that weather conditions should be favourable in order that a crop of good quality is grown and harvested to redress the unbalance created by a succession of bad crops. This is, unfortunately, a matter which cannot be regulated by ordinance.

THE JUTE MARKETS

Manufactured Goods: The continued lack of interest from overseas buyers was responsible for very dull conditions in the jute goods markets during the last week. New low levels were recorded in sacking, and price fluctuations were mainly the result of speculative activity. Previous rumours that a large American importer intended to close down were

now believed to be incorrect, but even this did not stem the downward trend. It was not until near the close, when some foreign enquiries were reported, that prices began to rise. Last Thursday, B Twills opened in the ready position at Rs. 110.40, and in the October-December position at Rs. 111.75. But 40in. 10oz. hessian opened at Rs. 46.90 in the near position, this being a premium of 40nP over the forward price. Sacking declined steadily over the next few days and on Saturday morning, B Twills were quoted at Rs. 109.50, during which time 11-porter hessians also fell back to Rs. 46. This tendency continued after the week-end. It was not until Tuesday morning that prices showed any tendency to rise, and then the losses were recovered. Reports of foreign business continued to stimulate the market and towards the close the tendency was firmer.

Opening quotations on Wednesday morning were as follows:

	March	Apr.-	June-	June-
			June	Sept.
40in. 71oz.	35.25	35.80	35.80	35.80

Liverpools	127.50	127.00	127.00	127.00

Raw Jute: The fibre market was very quiet during the past week because of lack of interest from the mills. Only small business was reported, and this was mainly in Middles or better quality jute. Sellers were keen on doing business, and were prepared to discount prices considerably, but this met with little response. Towards the close, prices rose by about 50nP in sympathy with the goods market but in general the rates were still well below the minimum price. Imports on an all-India basis were reported to be about 35,000 maunds. Arrivals in Cossipore were

quite good for this time of year, and during the week 305 were reported.

There was slight rain in northern Bengal. In all other areas no rain has so far been reported. In Pakistan, good rain has been reported in all areas and in some lowland districts sowing has been completed.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D.

THE U.K. JUTE MARKETS FIBRE WEAKER

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was very quiet in Pakistan last week, and the tendency was for prices to fall. There were signs of weakness in the market possibly brought about by sellers of new crop who were willing to accept less than the present minimum export rates for the lower grades. Offers of old crop were being freely made, but very little buying interest was shown. Where business was taking place, the price paid was generally very low. There is still a considerable quantity of unsold jute in Dundee, and further unsold parcels are afloat at present. This is a "bear" factor on the Dundee market, and as things are at present, it will take some time before all these spot parcels are taken up by spinners. The occasional transaction is taking place, but the quality must be very good and the price low.

News concerning the new crop is satisfactory, in so far as there has been sufficient rain to allow sowings to proceed. There has been no announcement from the Pakistani authorities about jute policy for the

Rs. 4,950 on the basis of a recommendation of their association. The Planters' Association has recommended to its constituents that contribution at the rate of Rs. 5 a planted acre may be made to the National Defence Fund.

Since 13th March, the Bonaccord Estate which employs about 1,100 workers is having a labour trouble, which has paralysed the tea plucking and manufacturing operations there. This low elevation tea estate is one of the well-managed British plantations in Kerala. It has 914 acres under tea. The general manager of the Poonmudi Tea and Rubber Company which owns and manages this estate told your correspondent that 13,000 kilograms of tea worth about Rs. 65,000 had been lost until 22nd March due to this trouble in

which about 400 pluckers and 86 factory workers are actively involved. Around 73.5 percent of this tea is normally exported. The loss of revenue to the Government in the form of excise duty and sales tax alone has been to the tune of Rs. 5,675.

A party of newsmen including this correspondent visited the estate on 23rd March to see for themselves what was going on there because many ugly things were said in the State Legislature by some P.S.P. leaders about this trouble and the management. The Pressmen found several thousand pounds of green leaves getting decayed in the three weighing sheds of the Bonaccord Estate. The management said that they were forced to close the factory and lay off its 86 workers due to non-

availability of the raw material—the tea leaf. This might appear paradoxical, but that is the real situation in the estate.

The trouble started for a very silly reason. The Superintendent of the estate, Mr. Carter, a 72-year old British planter of pretty long experience both in India and Ceylon, wanted to rectify the uneven shape of tea bushes in a particular field and made arrangements for plucking these bushes by placing on them thin and long bamboo canes, a practice followed not only in the other blocs of the very same estate, but also in almost all the major tea estates in south India. For some unconvincing reasons, some of the workers who were sent to this field refused to obey this order of the management. They insisted on having their

own way of plucking and the management refused to pay them for the leaves they collected. Workers in other fields came to the rescue of the 52 disobedient workers and refused to surrender their harvest unless the leaves gathered by the 52 were weighed and accounted first. The management refused. The result was that all the leaves plucked that day were thrown away by the workers.

The workers now go to the field every day, pluck leaves as they like, take them to the weighing sheds, engage themselves in a bit of argument with the supervisory staff and ultimately throw away their harvest and go home. This was repeated in the presence of the Press party also. The factory workers were offered alternate employment when it was found that no leaf was coming to the factory for manufacture. They refused to accept the offer and insisted upon getting work inside the factory. Ultimately, they were laid off by the management. There were some picketing and demonstrations for one or two days. The 72-year-old superintendent was not allowed to leave his office one day to answer the call of nature. Since the arrival of the police on the scene on the request of the management for protection, there has been no untoward incident.

Other operations in the estate like weeding, spraying, etcetera, are going unaffected now. The staff are not associated with the strike which they say is unjustified and unreasonable. They appeared to have very good relations with the management. There had been some conciliation efforts at the instance of the State Labour Department. Mr. Lawrence said that as a result of these efforts the differences between the union and the management have narrowed down to the question of absorbing the factory workers. The union has agreed to the use of cane in the disputed field also. The union wants full and immediate employment for all the 86 workers the day the direct action is called off by the union. The management's contention is that they would be given employment in the factory the moment the raw material becomes available. That might take a day. Until then, the factory workers should do field work or allow themselves to be treated as laid off. Both seemed to be unwilling for a concession on this score as it involves a question of prestige.

There are two labour unions in the Bonaccord Estate, and strangely enough, both are H.M.S. unions claiming loyalty to the Praja Socialist Party. The Bonaccord trouble has all the signs of irresponsible handling of labour by the leaders of the majority union which is presided over by a P.S.P. member of the Kerala Legislature. In fairness to the management, one should say that it is behaving with utmost restraint. It even makes no effort to take possession of the leaf gathered which is the property of the Company and it says that it does not want to give any provocation for the workers to become violent. They have intimidated their willingness to the State Labour Department to accept either adjudication or arbitration. The union has not agreed to either of the two so far. Even if the strike is called off immediately, at least a month more would be required to put back the estate into normalcy, the manager said, because the unattended bushes need three rounds of plucking to get their correct size and shape to yield the normal crop. The labour trouble as it happened at this time of year when the estate is entering the peak production season would affect the total output of the estate this year. The normal crop

of the Bonaccord Estate is over 1 million lbs of made tea a year.

Exporting Glassware and Chemicals

THE Government of India has recently increased the import entitlement of glass and glassware under the special export promotion scheme from 20 percent to 70 percent, out of which 50 percent can be used directly for the import of soda ash and the remaining 20 percent for other chemicals needed for the manufacture of glass. This increased import entitlement will be applicable for all exports of glass and glassware made on or after March 1963. The high cost of production of Indian glass and glassware has affected their exports adversely. They are outpriced in foreign markets by about Rs. 300 a tonne. The high price of soda ash—an important raw material for the industry—accounts for about 30 percent of the cost of production. Soda ash was being imported by the State Trading Corporation and distributed at a price more than double the imported price. This was done to compensate the losses sustained by the S.T.C. on other items.

In 1961, the Chemicals and Allied Products Export Promotion Council sponsored a trade delegation to west Pakistan, west Asia and east Africa to promote the exports of Indian glass and glassware. Besides being a fact-finding delegation, it was entrusted with the work of establishing business contacts with foreign importers. It also displayed Indian goods to promote on-the-spot sales. In its report, the delegation makes four observations: firstly, there is much goodwill in Iran for such Indian products as sheet glass, safety glass, mirrors and tumblers. Iranian glass merchants are prepared to give preference to Indian goods provided the prices are brought down a little lower than those quoted by Japan, Czechoslovakia and Belgium. Secondly, as Iranian importers prefer large packing, efforts should be made to packing Indian glass products in large ship Indian glass products in large packing as is presently done by the Japanese exporters. Thirdly, the commission agents in Teheran wish to become sole agents for Indian products. Only then are they prepared to sell Indian goods. The commission usually demanded is 3 percent to 5 percent. The delegation has urged that Indian manufacturers in order to introduce their goods in Teheran might be used by Indian exporters for exhibiting their products.

The Council also sent a trade delegation to different countries in the Far East with the primary object of studying market conditions there, making on-the-spot sales, whenever possible, and for assessing the export possibilities of chemicals, pharmaceuticals and other allied products.

COMPANY AND PUBLIC NOTICES

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE Eightyfourth Annual General Meeting of The Bombay Dyeing and Manufacturing Company Limited will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay 1, on Thursday, the 18th April 1963, at 4-30 P.M., to transact the following business:—

- To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1962.
- To sanction the declaration of a Dividend.
- To appoint a Director in the place of Mr. Pratapsinh Mathuradas who retires by rotation, and being eligible offers himself for re-appointment.
- To appoint a Director in the place of Mr. N. M. Wagle who retires by rotation, and being eligible offers himself for re-appointment.
- To appoint a Director in the place of Mr. J. D. Choksi who retires by rotation, and being eligible offers himself for re-appointment.
- To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

- AND for the purpose of considering, and if thought fit, to pass (with or without amendment) as may be permissible, the Resolutions set out below as Special Resolutions:—

(a) SPECIAL RESOLUTION NO. I.

"RESOLVED that, subject to permission being accorded by the Central Government under Section 363 of the Companies Act, 1956, in respect of all or such of the amounts referred to hereafter for which permission is necessary, the Company hereby waives the recovery from Messrs. W. H. Brady & Co. Ltd. (who are or may be deemed to be 'associates' of the Managing Agents of the Company) of the sums of Rs. 43,158/52, Rs. 87,429/40, Rs. 67,363/69 and Rs. 34,464/48 paid by the Company to Messrs. W. H. Brady & Co. Ltd. during the years 1960, 1961, 1962 and 1963 (up to the 11th March 1963), respectively, in respect of goods purchased from them by the Company."

(b) SPECIAL RESOLUTION NO. II.

"RESOLVED that, subject to permission being accorded by the Central Government under Section 363 of the Companies Act, 1956, in respect of all or such of the amounts referred to hereafter for which permission is necessary, the Company hereby waives the recovery from Messrs. The Empire Dyeing & Manufacturing Co. Ltd. (who are or may be deemed to be 'associates' of the Managing Agents of the Company) of the sums of Rs. 1,14,504/27, Rs. 2,75,904/87, Rs. 63,579/44 and Rs. 1,30,923/38 paid by the Company to Messrs. The Empire Dyeing & Manufacturing Co. Ltd. during the years 1960, 1961, 1962 and 1963 (up to the 11th March 1963), respectively, in respect of the services by way of processing work rendered by them to the Company."

(c) SPECIAL RESOLUTION NO. III.

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. W. H. Brady & Co. Ltd., Bombay (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by three months notice given by either side to the other, in respect of purchases from Messrs. W. H. Brady & Co. Ltd. of machinery and spare parts of machinery, laboratory and testing equipment and mill stores such as emery fillets, spindle tapes, valves, pins, bobbins, beam flanges, steel strappings, greases and lubricating oils, belt-ings and such other goods in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company; subject to the conditions that the prices of such mill stores, machinery and spare parts and such other goods and equipment as aforesaid shall be such as are reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. W. H. Brady & Co. Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. W. H. Brady & Co. Ltd."

(d) SPECIAL RESOLUTION NO. IV.

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. The Empire Dyeing & Mfg. Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—(subject to any amendments as may be suggested by the Central Government and accepted by the Board of Directors of the Company and by Messrs. The Empire Dyeing & Mfg. Co. Ltd.)—to be operative as from the date of this Meeting, until determined by three months notice given by either side to the other, in respect of Messrs. The Empire Dyeing & Manufacturing Co. Ltd. rendering services by way of any work of or in relation to processing of cloth and yarn such as bleaching, dyeing, printing, raising, mercerising and finishing, and in respect of purchases from them of such goods in which they trade or do business or may trade or do business, as well as in respect of sales to them by the Company of any property or any article produced, dealt in or owned by the Company, subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. The Empire Dyeing & Mfg. Co. Ltd. shall be made within one month from the date of the sale or supply of any property or any article

by the Company to Messrs. The Empire Dyeing & Mfg. Co. Ltd."

(e) SPECIAL RESOLUTION NO. V. "RESOLVED

(a) that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of an agreement for sale in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, for the sale to Messrs. Bombay Ring Travellers Co. Ltd., (who are or may be deemed to be 'associates' of the Company's Managing Agents), of two plots of land of the Company's Dye Works at Cadell Road, Mahim, namely (i) an area admeasuring about 4,300 square yards (over which Blocks 'Q', 'O' and 'O1' are at present located), and (ii) an area admeasuring about 2,300 square yards (situate on the other side of a 20' wide road between these two plots, (subject, however, to increase or decrease in area as provided in the aforesaid draft Agreement), at the price of Rs. 130/- per square yard, and on payment, by way of reimbursement, of betterment charges under the Town Planning Scheme in respect of these plots at Rs. 5/- per square yard; subject to the condition that the stamp duty and registration charges in respect of the documents relating to the sale of the said two plots shall be borne and paid by the purchasers.

(b) that the Board of Directors of the Company be and they are hereby authorised to complete the aforesaid agreement for sale and thereafter to complete the conveyance of the said two plots of land in favour of Messrs. Bombay Ring Travellers Co. Ltd. and/or their nominee or nominees in accordance with the terms of the said agreement for sale."

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. III, IV and V are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

FIXING A NEW MINIMUM PRICE FOR JUTE

RECENT reports from New Delhi indicate that, within the next few days, the Government of India will be announcing the minimum price for raw jute for the 1963-64 season (July-June). The minimum price fixed officially since about the end of 1961 has been Rs. 30 a maund, basis Assam Bottoms, delivered in Calcutta. According to the reports, roughly the same basic price will be continued, although the differentials between the various grades of jute may be adjusted in order to encourage the cultivation of the superior varieties. If that is the case, the decision on the basic price is certain to prove extremely unrealistic; it will represent a surrender to the pressures from State Governments and from political busybodies who claim to represent jute-growers, while ignoring the requirements of what is at present far and away India's biggest export industry.

The broad principle of supporting the price of raw jute when it tends to fall too low is not in question; the mills, the growers and the country have a common interest in ensuring that enough jute is grown, and that the price incentives for the purpose are adequate. The criteria for a rational minimum-price policy, however, are three. The first is that it must take account of market realities, and try to ensure that there is neither a shortage nor a burdensome surplus of fibre. The second is that it should encourage the cultivation of the better varieties at the cost of the lower grades, especially since the former are required for the manufacture of the types of jute goods which are now in strong demand. The third criterion is that it should not ignore the fact of growing competition in the world jute and jute goods trade; if it does, the Indian mills will be seriously handicapped in their efforts to promote jute goods exports and earn more foreign exchange.

When the minimum price of Rs. 30 a maund, basis Assam Bottoms, delivered in Calcutta, was fixed one-and-a-half years ago, conditions in the raw jute trade were far different from what they are now. The jute and mesta crops had been poor for two seasons in succession—1959-60 and 1960-61. The shortage of the raw material became so acute that the industry had to cut back its production, and finally resort to two block closures of one week each, while jute (and jute goods) prices rose to exorbitant levels. But because prices at sowing time had been high and weather conditions favourable, the 1961-62 crop turned out to be a bumper one. As it started arriving in the markets from September 1961 onwards, jute and mesta prices began to decline sharply. As Mr. C. L. Bajoria recalled in his speech from the chair at the annual meeting of the Indian Jute Mills Association three weeks ago, it was in circumstances such as these that the industry itself suggested the minimum price of Rs. 30 a maund. The bumper crop of 1961-62, however, has now been followed by another large crop in 1962-63. This crop is not only large, but is also of unusually poor quality. The result is that, while the higher grades are scarce, there is a burdensome surplus of the lower grades. Even with the in-

dustry working at full capacity, it has not been possible to absorb the surplus, and the price of the inferior fibres, especially from Bihar, remains below the official minimum.

Against this background, if the Government decides to widen the differentials between the minimum prices in order to discourage the production of the lower grades, it would be taking a step in the right direction. The whole politically-inspired controversy about raw jute prices has in fact centred on these grades, since the superior varieties have been in good demand and have generally been purchased at rates well above the minima. Apart from being an embarrassment to the industry, the controversy has been an embarrassment to the Government itself. The embarrassment will not be avoided in the coming season merely by widening the differentials; the main trouble remains that the proposed basic price of Rs. 30 a maund, for Assam Bottoms—to which the other prices are linked—would be far too high in the circumstances of today. It is this basic price which needs to be reduced first, and market conditions suggest that it should be brought down to around Rs. 27 a maund. Only then will the minimum price policy begin to bear some relationship to the realities of demand and supply.

At the moment, there is nothing to indicate that fibre supplies for the coming season are going to be inadequate, except possibly in the case of the higher grades. The carryover into 1962-63 was 2.6 million bales, to which has been added a jute and mesta crop which is officially estimated at 7.1 million bales. In addition, arrivals from Pakistan, legal as well as illegal, have probably totalled 1 million bales, maybe more. Against this, India's domestic consumption is likely to amount to 7.3 million bales (7.2 million bales by the mills, and 100,000 bales by other consumers). The statistics thus indicate that, when the current season ends in June, the carryover may amount to as much as 3.25 million bales, or the equivalent of almost five months' consumption. Nobody can yet say for certain how big the 1963-64 crop will be. Dry weather has delayed sowing in Bihar and in the southern districts of West Bengal. But in Assam and the northern areas of West Bengal, where the weather has been more favourable, most people are confident that sowings so far have been no less than they were at this time last year. This indicates that cultivators are pleased with the prices they have got; indeed, some are so pleased that they are thinking of switching over more land from rice to jute, which can hardly be a welcome change at a time when the rice shortage in eastern India is growing.

Even in purely political terms, the point is one which the Government may seriously reconsider. An artificially high minimum price for raw jute can do something to calm the temper of the farm lobby. But if it leads to the diversion of land away from crops like rice, and thus to a rice shortage, it would be no less embarrassing politically than a lower jute price to begin with. Unlike in the case of wheat, a rice shortage cannot be disguised by pumping in large P.L. 480 supplies. Ir

fact, in spite of the Government's efforts, rice prices have already been rising rather dangerously in West Bengal. The political consequences of the trend, which accompanies a highly inflationary Budget from Mr. Desai, cannot be ignored. To have an unsaleable surplus of inferior jute, while commodities like rice and sugarcane are in short supply, makes sense neither in economic nor in political terms. The farm lobbies of Bihar and other jute-growing States have yet to realise that this is precisely the anomaly which the jute price policy they advocate will tend to create.

For growers as well as the industry, the past year has been an exceptionally fortunate one in that the demand for their products has been unusually large. But there are signs that the huge backlog of demand for jute goods accumulated during the desperate shortages of 1961 has by now been met. The time may not be far off when the industry, whether it likes it or not, will be compelled to reduce its production, and therefore its offtake of the raw material. The effects of surplus production will then be felt mainly on the sacking side, since this is the chief category which the rapidly expanding Pakistani mills are exporting with the help of the enormous competitive advantage they get out of their export bonus scheme. A decline in the demand for sacking will inevitably affect the lower grades of jute which go into

its manufacture. The difficulties created by these grades during the current season may, therefore, be accentuated during the coming one.

The Government has yet to ask itself seriously whether this country can afford to maintain the minimum price of jute at a level that is almost 50 percent higher than the price paid by its main competitor, Pakistan. The difference in prices has encouraged smuggling on a large scale, and thus led to the loss of foreign exchange. Both countries claim that they will be making renewed efforts to stop the illicit trade, but past experience does not encourage much optimism on this count. The Indian Government, meanwhile, is vaguely hoping that Pakistan is moving to a price-support policy similar to this country's and the two industries will then be on a par in relation to the price they pay for their main raw material. One wonders, however, if these are the sort of hopes on which a country should base the future of its major export industry at a time when it is desperately short of foreign exchange. The competition which Indian jute goods face from Pakistani products, from substitute packaging materials and from bulk handling is steadily increasing—as the Government well knows. That competition has to be fought by the same methods as India's toughest competitors use—by an export subsidy, and with a realistic raw jute policy which enables her mills to produce better goods more cheaply.

IDLE CAPACITY IN ENGINEERING

MACHINES standing idle on the one hand and demand piling up on the other is an anomaly which has existed in the engineering industry for some years. A fresh attempt to remedy this situation is especially necessary now, when the demand arising from defence needs superimposed on a record level of planned investment poses the most serious challenge the economy has yet faced. Fuller use of capacity raises a number of problems, the biggest being foreign exchange required in the first place for maintenance imports of basic metals either not produced in India or in short supply. In 1962-63, domestic steel production rose to 4 million tons—the industry's best year so far. But even with imports of 800,000 tons, total availability must be judged to have been well below demand, considering the 4 million tons of orders pending with the major steelworks. In non-ferrous metals, domestic capacity is still disappointingly small, and it looks as if the import bill on this account will keep rising for some years. Maintenance needs apart, engineering industries need substantial imports of capital goods to diversify and expand production. Even if some new schemes must wait until fresh credits have been negotiated, there is a strong case for giving quick clearance to the import of balancing equipment required for expanding or diversifying essential production.

In many cases, very substantial import savings can be achieved for a comparatively small capital outlay of foreign exchange. Cases have been cited where New Delhi has shown itself strangely reluctant to release the small amounts needed by units which can by enlarging production save the same amount in imports in a year or less. After all, the foreign exchange problem will continue for many years, and it makes nonsense of planning if the steps that should be taken now to reduce dependence upon imports in future are neglected on the plea of the emergency. In a recent instance, New Delhi took so long to decide whether steel wire or rods needed by the electrode makers should be allowed to be imported that a situation was reached where production nearly stopped altogether. This meant in turn that a large number of steel fabricating units would have had to shut down, including some executing top priority orders. Representations from these users having brought home the seriousness of the situation, some imports of finished electrodes are understood to have now been permitted. A decision taken earlier would, however, have been less costly in foreign exchange. This is by no means an isolated example, as will be evident from the case histories supplied to the Planning Commission by the Indian Engineering Association late last

year in support of its plea for a more rational allocation of exchange.

Admittedly, the task is not easy. An element of hasty improvisation is inevitable in a situation where exchange is so terribly short. But this is not to suggest that difficulties cannot be reduced by planning imports in closer consultation with the ultimate users. The point was made by Mr. Aloke Mitra, chairman, in his address to the Indian Engineering Association in Calcutta last Friday that large quantities of steel, imported and domestic, lie unused for months because of the lack of matching sections. He quoted the example of two wagon manufacturers who lost Rs. 4 crores of production in 1962 for precisely this reason. Surely such wastage of capacity can be avoided even with the present limited amount of exchange available for importing steel if more of it is used for importing the scarce sections.

The engineering industry, as Mr. Mitra conceded, can contribute to a solution of the problem by eliminating certain sections and sizes, of which only small quantities are required. One structural firm has, for instance, found that if it eliminates all those sections for which the total annual demand is less than 50 tons, it can cut down the total number of sections from 200 to 70. At the present time, other users are also undertaking a similar exercise to help the Indian Engineering Association formulate concrete proposals for rationalising production. Once these proposals have been agreed upon with the steel plants, important benefits should result in terms of increased output from the steel plants and the elimination of some of the present production bottlenecks. But the point to note is that rationalisation would mean in most cases using heavier sections in place of the lighter ones now

specified, which will mean an increase in the amount of steel consumed, and consequently in the production costs. The Government, as a major consumer of steel, will find itself having to pay more for public projects, but more than that, higher steel consumption will tend to aggravate the already serious shortage.

A balance has, therefore, to be struck between the advantages accruing from rationalisation and these disadvantages. The final decision may also have to take into account the impact of rationalisation on engineering exports. India's ability to compete with long-established producers elsewhere may be seriously jeopardised by the addition to production costs. Long-term interests require, therefore, that the number of sections and sizes available to consumers should be wide enough to permit the matching of supply precisely to demand. A reduction to overcome immediate difficulties should be considered as only a temporary expedient, although some of the present ideas about the design of light-weight sections may well have to be given up for good. While lightness is desirable for cost-saving and spreading the available steel more widely, the specification set for steel producers must be capable of being implemented in practice. There is ground for the apprehension that the new I.S.I. specifications are asking the steel-maker to attempt the impossible with the equipment presently available in some plants.

The problem of ensuring steel supplies to the consuming industries is not a matter of rationalising production alone but also of ensuring efficient and speedy distribution. Appropriately, Mr. Mitra devoted a large part of his speech to discussing the Raj Committee's preliminary proposals. There will be general agreement with his argument that requiring steel indentors to deposit 25 percent with their orders will aggravate speculation instead of curbing it. Steel-using industries, with their large working capital requirements, will often not be in a position to make a 25 percent down payment for supplies which may not materialise for months. The Raj Committee's idea that the buyer's deposit should be matched by the producer giving firm delivery dates is unlikely to be practical. Transport difficulties, raw material shortages and orders enjoying overriding priority might upset delivery dates given in good faith, even if producers are required to grant rebates for delayed despatches. If the 25 percent deposit is insisted upon, the using industries will have to rely for supplies on the speculative trader able to service his trading capital by charging a fancy resale price.

No relief will in practice be forthcoming from Government-run stockyards because they will never be able to act quickly enough to defeat speculation by pumping supplies into the market just at the moment needed. The very idea of a Government servant behaving as a free-market trader, taking gains and losses in his stride, is fantastic. It just cannot be done because Government regulations make no allowance for human mistakes. The moment a loss arises, there will be thousands of explanations to give and audit objections to answer. The Raj Committee's idea of Government-run stockyards being able to correct market unbalances cannot be taken seriously, quite apart from the issue of principle raised by Mr. Mitra when he said that the assumption of a monopoly of profitable trading by the State was ethically indefensible.

THE POWER SHORTAGE

INDIA has suffered from an acute shortage of power for several years now. In many major industrial areas, the supply has been shut off or reduced, seriously affecting production. The emergency has accentuated the shortage. Many industries, particularly those catering to defence requirements, need to work three shifts and some industries on all days of the week. Even during normal times, the supply of electricity has been inadequate because industrial expansion has greatly outpaced the increase in generating capacity. The third plan visualised a power target of 12.69 million kW, but so far the generating capacity is only around 6.85 million kW. The slow implementa-

tion of some major projects like Koyna, Sharavathy and the Neyveli thermal station, as also the delays in building thermal units in several States, explains the shortfall. Besides curtailing production in the existing industries, the power shortage has delayed the commissioning of several new enterprises.

The annual report of the Central Ministry of Irrigation and Power for 1962-63 says that the installed generating capacity, both hydro and thermal, has risen by 650,000 kW during the year. The actual output is estimated to be 21,200 million units, which represents a rise of 1,500 million

units over the previous year. Electricity boards have been set up in all the States, and work on the planning and formation of zonal power grids has been initiated. The Minister of State for Irrigation and Power, Mr. O. V. Alagesan, announced in the Lok Sabha last week, while the Budget demands of the Ministry were discussed, that the Central Government would enter the field of power development "in a big way". The allocation for this sector is sought to be increased by Rs. 160 crores. It is gratifying that the Government has awakened to the realities of the situation since the emergency. There have been grandiose plans for expanding power generation in the past. Schemes for giant zonal stations and inter-State grids have been in the air for several years now. In terms of concrete achievement, however, the results so far have been poor.

The scheme for zonal grids can offer definite advantages by facilitating the more economic distribution of power. The inter-connection of power stations will enable the pooling of energy and its better distribution according to needs. It will also help improve the working of electric supply undertakings by raising the load factor and reducing the requirements of stand-by machinery. According to estimates, in the southern region alone there would be a saving of Rs. 23 crores in capital outlay and Rs. 2.6 crores in annual recurring expenses. Similarly for the eastern region, the saving in capital outlay may be about Rs. 27 crores and in annual expenses about Rs. 5 crores. The adoption of the zonal approach in drawing up and executing power development plans will make for economy and better use of the power potential. In the absence of zonal planning, the energy resources in some States may go untapped, either because the State Governments may be unable to finance the projects by themselves. Although there has been inter-State co-operation in the construction of projects like Bhakra-Nangal and Tungbhadra, little has been done so far to implement the scheme of zonal grids. Four inter-State grids are proposed to be established during the third plan period. They are (1) the southern grid, linking Andhra Pradesh, Mysore, Madras and Kerala; (2) Gujarat, Maharashtra; (3) Punjab-Delhi-Uttar Pradesh; and (4) Uttar Pradesh-Madhya Pradesh.

The increase in generating capacity now visualised has far-reaching implications. It will not only call for generators and turbines but also for a wide range of transmission and functional equipment. The new imposts levied by the Central Budget will push up the cost of such equipment and make the new schemes far more expensive. The Irrigation and Power Ministry's annual report says that the programme for manufacturing generating plant and other electrical equipment like transformers and switchgears has already been started by Heavy Electricals, Bhopal. It is expected to meet the demand for power schemes to be commissioned towards the end of the third plan and onwards. Two more factories of this type, it is said, may be set up during the third plan. But considering the painfully slow progress of many public sector ventures, it is doubtful if they will be completed within the plan period.

Now that the official attitude has become more appreciative of the country's power needs, it is to be hoped that the expansion schemes will not be slowed down for want of finance. Besides rupee resources, they will call for larger allocations of foreign exchange for certain basic raw materials like copper and aluminium in the next import policy. It is a matter for satisfaction that steps have been taken to streamline the procedure for sanctioning foreign exchange for power projects, and that the Ministries of Finance and Commerce and Industry have agreed to do away with several routine procedures. Particularly welcome is the proposal to clear all foreign exchange applications pending for over 15 days with the Technical Development Wing and the Chief Controller of Imports and Exports. The pace at which fresh generating capacity will be installed in the next two years will be of crucial importance not only to the defence effort but also to the success of plan projects.

Since most of the power schemes will necessarily be implemented over a period of years, the outlook for the near future is far from encouraging. The Estimates Committee, in its report to the Lok Sabha on the Ministry of Irrigation and Power, has emphasised this point. It has expressed the fear that the power shortage will be more acute next year, particularly in the Bengal-Bihar region. The additional requirements of industries supplying defence needs, a number of which are located in this area, will aggravate the situation. The Committee says that there will be a shortage of power at the end of the third plan in all States, except Jammu and

Kashmir, Rajasthan, Delhi and Kerala. The overall shortage may increase from 353.1 MW in 1961 to 455.3 MW in 1966. The Estimates Committee has recommended that prompt action should be taken to obtain "stand-by" power plants and that the "package units", for which orders have already been placed, should be imported immediately. These units are to be installed in areas where the power scarcity is hampering industrial and defence production. It is to be hoped that these suggestions will get the attention they deserve. Power development has to be a continuous process and work has to be undertaken on several projects now in order to avoid crippling shortages in later years.

BANKS UNDER THE S.P.T.

THE super profits tax, as it stands, recognises only the correlation between profits and owned capital; it does not recognise the amount of capital employed. The point acquires special significance in the case of banks, whose stock-in-trade is money—other people's money. The super profits tax is based on the view that the return on capital in the private sector is often "excessive". But its basic weakness lies in the assumption that capital—and that, too, capital rigidly defined as paid-up share capital and free reserves—is the only factor that should be considered in determining the ratio of profitability.

A bank's "capital" consists, firstly, of its name and the goodwill it commands; and, secondly, of the deposits it is able to attract. Its profitability depends on its ability to provide efficient service, and on its judgment concerning the soundness of its advances and investments. The gathering of deposits is a slow and arduous process spread over years; and the more successful a bank becomes, the greater the difference between its capital and the amount of deposits. In India, the rapid growth of bank deposits, from Rs. 918 crores at the end of 1951 to over Rs. 2,000 crores by the end of 1962, has reduced the ratio of paid-up capital and reserves to deposits from 9 percent to about 5 percent. In the case of several well-known banks, the percentage of capital to deposits is much lower.

The Reserve Bank has been worried about the low ratio of own funds to deposits. It has declared that "although a bank's soundness is by no means to be measured solely by the proportion which its capital funds form to its deposit liabilities, this proportion is an important factor for assessing a bank's strength." The Governor of the Reserve Bank, in a letter dated 27th December 1961, suggested to all scheduled banks that a minimum ratio of 6 percent between capital funds and deposits should be aimed at; for this purpose, he recommended the convention of transferring at least 20 percent of declared profits to published reserves each year. Subsequently, legislative amendments to the Banking Companies Act were passed in September 1962, making it compulsory for Indian banks to transfer to reserves created under Section 17 of the Act not less than 20 percent of the balance of profit each year. The super profits tax will now retard the Reserve Bank's long-range plans to promote the strength and stability of the banking system, since it will reduce the sums available for transfer by banks to their reserves.

Own funds in the case of the "Big Three" (excluding the State Bank) in Indian banking

comprise only about 3 percent of total deposits. The return of published profits on own funds after taxation amounts to about 21 percent. Their statutory contributions from published profits to reserves will be slashed to less than half the present figures, and as the Government will be absorbing nearly 70 percent of their profits, precious little will be left for distribution as dividends to shareholders. The super profits tax on banks will, therefore, lead to cuts in dividends; it will also prevent the strengthening of the capital base of banks. In the case of foreign banks, it seems that the super profits tax will be based on notional capital and reserve figures; the capital-reserve base for Indian income will be assumed to bear the same proportion to the company's total capital-reserve base that its Indian income bears to its world income. While it is difficult at this stage to arrive at any precise figures, the liability under super profits tax for certain major foreign banks in India is said to be so heavy as to make the total tax impost about 75 percent of profits. This is clearly an extraordinary burden. Foreign banks having access to foreign exchange resources will now have even less incentive to bring in funds from abroad in view of the very poor returns that may be expected.

While the corporate sector as a whole has strong reasons for opposing the super profits tax, banks are in a specially vulnerable position. A bank, by the very nature of its functions, uses the funds of its depositors and any evaluation of the rate of profit should take into account the extent of working funds also. With the doubling of deposits during the last ten years, the earnings of banks have increased from Rs. 47.7 crores in 1952 to Rs. 126.6 crores in 1961, and profits before taxation from Rs. 11.4 crores to Rs. 28.6 crores during the same period. However the ratio of profits to total income in 1961 was 22.6 percent, against 23.9 percent in 1952. These figures certainly do not indicate any windfall profits. On the contrary, they reflect the proportionate growth of expenditure along with the growth of deposits and profits. Incidentally, shareholders' cut of profits by way of dividends and bonus comes to 15.2 percent of pre-tax profits. Banks have been assigned a significant rôle in the mobilisation of savings. If the present rate of increase in deposits is maintained, the capital base of the banking system will undoubtedly be weakened by the super profits tax. A strong case, therefore, exists for the exemption of banks from the purview of the super profits tax.

Current News and Comment

Progress of Refinance Corporation

Established in June 1958, the Refinance Corporation for Industry has made satisfactory progress during the short span of its existence. Refinance facilities have been extended to an increasing number of financial institutions and the field of operations has also been gradually expanded. As many as 58 commercial banks, 15 State financial corporations and four State co-

operative banks are now eligible for refinance facilities. The Corporation has already come to be looked upon as the pivot for the expansion of facilities for term finance for industry, and even such industries as are not specifically listed for development in the plans are eligible for the Corporation's funds. Now, the Corporation has undertaken to provide refinance facilities against medium-term export credits. The latest report of the Refinance Corporation for 1962 clearly shows

that the tempo of progress recorded in its business in 1961 has been well-maintained during the past year.

The Corporation received 68 applications for refinance from 20 financial institutions for a total sum of Rs. 13.72 crores, compared with 69 applications for a total amount of Rs. 11.26 crores in the previous year. Of the applications received in 1962 and the 13 applications for Rs. 1.80 crores then pending, 73 applications for Rs. 10.62 crores were sanctioned, against 59 applications for Rs. 10.71 crores in 1961. Of the 24 applications for Rs. 4.65 crores pending at the end of 1962, 15 applications for Rs. 3.16 crores have since been sanctioned. But it is in the field of disbursements that the Corporation's record is really creditable: the amount disbursed in 1962, at Rs. 7.96 crores, compared with Rs. 4.70 crores in the previous year and is greater than the total amount disbursed up to the end of 1961. The 1962 figure takes the total disbursements at the end of 1962 to Rs. 14.92 crores. The outstandings at the end of the year stood at Rs. 13.56 crores, against Rs. 6.46 crores a year ago. The total refinance sanctioned by the Corporation since its inception amounts to Rs. 27.12 crores, covering 165 applications received from 22 financial institutions. Five institutions which had not hitherto availed themselves of the facilities provided by the Corporation took advantage of these for the first time in 1962.

The large number of applications, the amount involved and record disbursements indicate the increasing interest shown by financial institutions in the refinance facilities provided by the Corporation. The directors have expressed the hope that this trend will persist, leading to early utilisation of Rs. 26 crores of the P.L. 480 funds earmarked for the Corporation. The increase in the demand for funds from the Refinance Corporation in 1962 necessitated further borrowings from the Government of India to the tune of Rs. 6 crores, raising the total borrowings to Rs. 11 crores. In view of the increase in the volume of business and income, the rate of interest payable by the Corporation on the loan secured from the Government in 1962 has been raised from 2.5 percent to Rs. 3 percent. In view of the growing demand for the refinancing facilities provided by the Corporation, it might not be long before the Corporation exhausts its present quota of P.L. 480 funds. The Corporation will, therefore, need to make arrangements for augmenting the resources at its disposal but it might not be difficult to secure additional amounts from the accumulated P.L. 480 funds.

The demand for the Corporation's funds is likely to increase further now that it has decided to entertain applications for refinancing loans given jointly by two or more banks or by a bank and a term-lending institution as long as such loans satisfy other criteria for refinance. Refinancing facilities have also been extended to the medium-term portion of loans which are themselves for a longer period. This should encourage co-operation between various institutions engaged in term-lending. Even more welcome is the Corporation's decision to extend refinancing facilities to the sphere of export credit. The scheme for the financing of medium-term export credit for periods exceeding six months but not exceeding five years has come into effect from the beginning of this year. The Corporation is offering refinance facilities for export credit at a concessional rate of 5 percent, as against 5½ percent charged on industrial loans with effect from 14th March. This facility should induce banks to grant medium-term credit to the export trade; at present, most

India's Resources

are Precious
WASTE NOT,
WANT NOT

banks are interested mainly in providing short-term credit which restricts the scope for obtaining refinance from the Corporation.

The Corporation's earnings from interest on loans to financial institutions recorded an impressive rise from Rs. 19.72 lakhs in 1961 to Rs. 46.91 lakhs in 1962 as a result of record disbursements during the year. After meeting all expenses, the Corporation made a profit of Rs. 25.57 lakhs, as against Rs. 20.19 lakhs in 1961. Including transfers from reserves and other adjustments, the total amount available for appropriation is Rs. 26.93 lakhs. The dividend at the rate of 4 percent absorbs Rs. 10 lakhs. Taxes take away Rs. 14.28 lakhs and a sum of Rs. 2.68 lakhs has been set aside for reserves, leaving a balance of Rs. 2,083 to be carried forward, against Rs. 22,741 brought in. It is hardly necessary to add that the Refinance Corporation is basically a non-profit making body and its results are to be judged by the assistance it gives to banks and other financial institutions in order to promote term lending to industry and the export trade.

Clay Report on U.S. Aid

The Clay Committee's report concerning U.S. economic and military aid, which has been accepted in principle by the Kennedy Administration, has a special significance for India. The Committee has recommended that the current year's programme of U.S. foreign aid should be cut by \$500 million from the previous level of \$3,900 million; also, some definite principles should be followed in giving such aid in future. In granting foreign aid, it has been suggested, the U.S. Government should observe greater selectivity, stricter self-help standards, greater participation by other developed countries in aid effort and continued improvement in the administration of aid-receiving countries, as criteria for deciding the nature and volume of aid.

Although the Committee has suggested a reduction in the U.S. aid to a large number of countries in Asia, Africa and Latin America, India has been spared a cut on the ground that she has proved her determination to maintain her independence from communist domination. It has been pointed out that India is "the only area of south Asia able to offset the Red Chinese colossus", and unless India's economic growth and freedom continue, there can never be a balance of power in Asia. In the absence of such a balance American involvement in the area could be indefinite and infinitely more costly. There is much satisfaction in India that the Clay Committee has recognised the special problems which this country is facing not only for her own defence, but also for the preservation of peace and freedom in Asia. There is, however, some disappointment that the Committee has bracketed India with Pakistan and has not appreciated the fact that the need of the former is much more urgent and far more significant at the present moment than that of any other country in Asia. Moreover, the Committee has not appreciated the fact that American aid to India is justified not only because of the Chinese aggression. Even otherwise, such aid would be warranted because peace in the world is indivisible, and only a strong and well-developed India can prevent the spread of communism in Asia.

However, the fact that the Clay Committee has clearly recognised the need for increased aid to India, and that the U.S. Government has accepted this suggestion, should be gratifying. In the past, most of the foreign aid to countries in Asia, including India, has come from the U.S.A. The Clay Committee has, therefore, emphasised that other developed countries in the West should give more aid to the under-developed countries in Asia and elsewhere, and that U.S. aid should not continue to be the main prop. In the past, the U.S. Administration laid down that India should get "matching" grants from other countries. It is expected that at the meeting of the Aid-India Club this month, the point will be emphasised again by U.S. delegates. But it should not be forgotten that both by reason of its economic development and of its leadership of the free world, the U.S.A. has a special rôle in aiding the growth of the under-developed countries. Undue insistence on the

principle of "matching" grants may delay the development of the poorer countries.

The Clay Committee's suggestion that aid should be a judicious combination of sales, loans and outright gifts is to be welcomed. In the past, the main emphasis in the case of aid to India has been on "tied" loans. This has delayed the use of foreign aid and, has also reduced its effectiveness. It is to be hoped that the Clay Committee's report will impress on the Aid-India consortium that a major part of foreign aid to India in future should be in the form of untied loans and grants. The Committee has also laid down the principle that the U.S.A. should not aid a foreign Government for establishing State-owned industrial and commercial enterprises, which "compete with existing private endeavours". Under normal conditions, this principle could have stopped the U.S. aid for the Bokaro steel project. But since India is now faced with an emergency and the steel produced in Bokaro will not compete with the steel output in the private sector, it may be expected as the American Ambassador to India recently pointed out, that U.S. aid will be available for the Bokaro project.

Trends in Balance of Payments

A Reserve Bank monograph on India's balance of payments for the period 1948-49 to 1961-62, published recently, shows some interesting trends in this country's foreign exchange earnings. The disquieting conclusion of the monograph is that the net deficit in the balance of payments in the third plan period is likely to be substantially larger than was originally estimated. In the first plan period, the draft on India's foreign exchange resources was Rs. 127 crores, against the plan estimate of Rs. 290 crores, while in the second plan period, the draft on the external reserves was of the order of Rs. 599 crores, against the plan target of Rs. 400 crores. In the third plan, there is not much scope for drawing down the reserves further, so the net result would be an increase in India's foreign indebtedness. A rise in the balance of payments deficit in the third plan would be due primarily to the fact that the net payments on invisible account would be higher because of the interest payment on large foreign loans and also because India's imports for maintenance purposes as well as for development would go up considerably.

The monograph has highlighted the fact that the basic weakness in India's balance of payments stems, not from cyclical swings in the country's trade fortune as is the case with most Western countries, but from the country's pre-occupation with the objective of maintaining a reasonably high rate of economic growth. This implies that the balance of payments deficit is not temporary, but may continue for a considerable time to come. It is also not capable of correction by the usual methods adopted for this purpose in the western countries. In the second plan period, the annual average imports into India amounted to Rs. 1,080 crores (against an estimated Rs. 868 crores) and the average annual exports amounted to Rs. 613 crores and the invisibles, excluding official donations, to Rs. 75 crores, which were higher than the plan estimates by Rs. 20 crores and Rs. 24 crores, respectively. There are many causes for the slow increase in India's exports. The Reserve Bank has drawn attention to the important fact which is frequently overlooked, that there is a marked seasonal variation in the country's export earnings; they are higher in the last two quarters—October to December and January to March—of the financial year than in the first two quarters, primarily because India's main exports, jute manufactures and tea are seasonal. In spite of the fact that some new commodities like engineering goods are now being exported, the basic structure of India's export trade has remained unchanged.

Licensing Policy Hits Importers

The presidential speech of Mr. R. C. Shah at the annual general meeting of the All India Importers Association recently in Bombay naturally referred

to the shrinking share of established importers in the country's import trade. The acute shortage of foreign exchange and complaints of scarcity of supplies have prompted the Government progressively to reduce established importers' licences and at the same time enlarge the volume of imports handled by actual users and the State Trading Corporation. By virtue of their long experience, contact with overseas suppliers and intimate knowledge of world market conditions, established importers have been performing a valuable function in buying goods on the most advantageous terms and thus helping to conserve foreign exchange. The Import and Export Policy Committee recognised their usefulness. It pointed out that in certain industries, where a large number of units were working, it would be advantageous to canalise imports through established importers. This could obviate the "needless stocking of components, etcetera, over a large number of consumers and prevent undue locking up of foreign exchange".

Criticising the system of licensing, Mr. Shah pointed out that even for actual users, there were frequent changes in the terms and value of annual licences; this had created uncertainty and dislocated production. It is doubtful whether imports by newcomers under rupee-payment, barter or link arrangements have led to any saving of foreign exchange. Imports by the State Trading Corporation too have not always been timely or made on the best terms. Its entry into the import trade has distorted the prices of essential raw materials, many of which have found their way into the market and are sold at high prices. Many small industrial units have found imports by the S.T.C. costly and wasteful. They would prefer to obtain their requirements through established importers, since the latter alone provide easy terms, finance and other facilities.

Exports and Official Inefficiency

The administrative shortcomings of the Government came in for sharp criticism from Mr. B. B. Dodd, chairman, at the annual general meeting of the Madras Chamber of Commerce last week. He said that the Government had taken the military emergency well in hand, but the economic emergency was being treated with many rigid reservations; it still remained to be realised that there was a great need for an all-out attack on the foreign exchange situation. The country is pre-occupied to make the sacrifices involved in a major export promotion drive, but the sustained follow-up action, which the third plan Report emphasises so strongly, is not being taken. The processes of so strongly, is not being taken. The processes of the Government are too slow and the sluggish re- actions of a bureaucratically-controlled economy have been operating as a drag on the energy and enthusiasm of the people. Mr. Dodd pointed out that although adequate machinery had been set up for close and continuous consultation between the Government and the representatives of commerce and industry, it was difficult to suppress the feeling that non-official views were not often heeded.

Referring to the study by the National Council of Applied Economic Research of India's economy as it might evolve between 1961 and 1981, he said that the authors had visualised the balance of trade eventually turning in India's favour, with exports rising to an annual rate of Rs. 1,800 crores a year, against imports of Rs. 1,500 crores a year. This will be impossible unless the administration is suitably redesigned and toned up. The "vandalism of some of the latest Budget proposals" might also do serious damage to the economy of the country, and their implications for the export trade are very discouraging. Dealing with occasional references in the Press to a proposal for the formation of an export secretariat, Mr. Dodd said that the export trade had known nothing so far about the move from official sources. All the same, he suggested a five-point plan of his own to boost India's exports. Firstly, the proposed export sector should be sufficiently broad-based to include all interests concerned; secondly, export houses should be formed in association with each of the export promotion councils to serve as outlets for the smaller exporters; thirdly, all units of the export sector should be given the highest priority in the supply of power,

transport, raw materials and components so that they could work continuously at full capacity and reduce the unit costs of their products; fourthly, the whole tax system should be so reorganised that neither the manufacturer nor the merchant could afford to stay out of the export trade; and lastly, the meagre benefits which are available to exporters from the Finance Act should not be nullified by the super profits tax.

Manufacturers Criticise Taxes

Addressing the annual conference of the All-India Manufacturers Organisation in New Delhi last week, the Prime Minister, Mr. Nehru, said that the latest Central Budget proposals were a courageous attempt to meet the Chinese threat both to the freedom and economic progress of India. The chairman of the Organisation, Mr. Prabhu V. Mehta, agreed with the broad objectives of the Budget, but pointed out that the requisite resources, in the ultimate analysis, would have to come from the economy in a manner which it could sustain. Considering that the Chinese danger is likely to continue for a long time, the steady and rapid growth of the economy has to be ensured. The authors of the Budget have been habitually under-estimating Central revenues, while the tax effort by State Governments has been half-hearted. The Central Government should have asked the States to levy additional taxation in their respective spheres, rather than taxing its own net so far and wide. The tax on agriculture, for example, can be increased much further and the proceeds used for raising farm production. This would have spared the Central Finance Minister the unpleasant duty of imposing fresh taxes on the same small section of the people which is already being taxed heavily.

Mr. Mehta said there was considerable scope for rationalisation in the tax structure. For example, excise and sales tax levies could be combined on as many commodities as possible, and its proceeds shared in some agreed manner. If this is done, it would yield considerable extra revenue since sales tax does not fetch the optimum amount at present because of serious leakages at various points. Referring to the proposed super profits tax, Mr. Mehta said that it was not consistent with the idea of a self-generating economy which the country was aiming at. The corporate sector still accounts for the major share of industrial production, and must, therefore, be allowed to accumulate a surplus if it is to expand its activities continuously. It should be the objective of the Government's tax policy to encourage ploughing back of profits of corporate enterprises to accelerate industrial and commercial growth. This also applies to the proposed surcharge on registered firms.

Economic Activity in West Bengal

In his address from the chair at the annual general meeting of the Bharat Chamber of Commerce in Calcutta last Friday, Mr. H. S. Singhanian, quoted comparative data concerning business expansion in West Bengal and several other States to prove that enough enterprise had not been forthcoming in the former. Therefore occupations in the non-agricultural sector here had expanded by only 20 percent during the first decade of planning, compared with 35 percent in India as a whole, 52 percent in Kerala and 30 percent in Punjab. According to him the rate of increase of West Bengal's per capita income has been among the lowest in the country. The number of foreign collaborations, industrial licences issued, share in new company formations, etcetera, have also been lower. In a recent techno-economic survey of the State, the authors have projected over the next ten years an investment of Rs. 238 crores in 86 large industries and an amount Rs. 83 crores for a large number of small-scale industries. Mr. Singhanian, however, suggested that first of all, there ought to be a review of the work of the existing boards, committees, corporations, and other bodies which are connected with the development of industries and trade. The functioning and organisation of the Directorate of Industries also needed to be examined in order

to assess whether it could be an "effective instrument" in the development of industries in the State. If necessary, special machinery should be created in association with the chambers of commerce to help promote industrial development in West Bengal.

Discussing the common anxiety about the price line, Mr. Singhanian feared that some rise would be inevitable because of defence mobilisation, and the increase in Customs and excise duties. The formation of price intelligence units at the Central and State levels for the collection and dissemination of relevant information and data to the public and business men is welcome, but it is no substitute for a proper price policy. For a developing economy, a price policy should be formulated from the point of view of maximum production and investment.

Wheat Supply for Flour Mills

Flour mills in West Bengal have had a good year in 1962, during which they have milled approximately 286,000 tonnes of wheat, or 84,000 tonnes more than in 1961. The prospects for the current year should be good, considering that rice production in West Bengal is lower, and the bigger gap in food requirements will have to be filled partly by wheat products. But higher wages and lower ceiling prices for wheat products fixed under the Roller Mills Wheat Products (Price Control) Order, 1962, may continue to affect the profit margin. Speaking at the annual general meeting of Calcutta Flour Mills Association in Calcutta, last week, Mr. N. N. Atal, president, said that the uniform ceiling prices for wheat products throughout the country were welcome, but the flour milling industry in West Bengal had been adversely affected as extraction controls continued to operate here. The local industry was directed to increase the extraction of resultant atta to 35 percent in March 1962. Since October 1962, it has been compelled to extract at the rate of 40 percent, but it is not permitted to produce wholemeal atta.

Referring to the revised terms and conditions governing the sale of imported wheat from Central Government stores, Mr. Atal said that this would have "the greatest bearing on the operation of the industry" not only in West Bengal, but throughout the country. Since the inception of the procedure in March 1962, every roller mill in Calcutta has experienced some difficulty in obtaining wheat. The industry does not object to the system of monthly allocations now in force, but it is worried by the financial difficulties involved in obtaining wheat from far away places like Visakhapatnam. Deliveries from there have been uncertain because of irregular wagon supplies, and this has been the cause of wheat shortages and the consequent disruption of production. The trouble could have been avoided by arranging despatches to Calcutta from outstation depots on Government account, and by issuing the allotments to local mills here. Supplies from Visakhapatnam and Changanallur depots being irregular, part of the outstation allotments often have to be cancelled, and wheat reallocated from local depots. The mills are, therefore, often compelled to mill without adequately conditioning the wheat. Sometimes it has not been possible to maintain a suitable grist because of the limitation of stocks.

New U.K. Journal for Industry

Sir Kenneth Bradley, Director of the Commonwealth Institute, announced recently plans for the publication of a new magazine to be known as the *Commonwealth Institute Journal*. The first issue is to include book reviews, reading lists, and reports, a profile of the Indian Defence Minister, Mr. Chavan, and other special articles. The Pergamon Press in Oxford has agreed to publish the magazine on a non-profit basis. The first press run will come to 20,000 copies and will be distributed without charge to Government departments and educational institutions in Britain and abroad. Mr. Don Taylor, editor of *New Commonwealth* magazine and a Governor of the Institute, has agreed to edit the new journal. Besides being of practical value to industry, its aim is to provide a central source of information for educationalists and public servants throughout the Commonwealth.

to keep them abreast of developments in political, economic and social fields.

Raising Biscuit Output

In his address from the chair at the annual general meeting of the Federation of Biscuit Manufacturers of India in Delhi recently, Mr. A. C. Khanna said that due to their rising standard of living, the people have been consuming more and more biscuits. This fact is reflected in the steadily rising output of the manufacturers. In 1955, their output totalled about 12,000 tons a year, but the figure has gone up to 28,824 metric tons in 1962. Out of the 39 factories registered with the Development Wing, 29 units, on average, were in regular production during the year. In 1961, output totalled 26,220 tons. The figure for 1962 thus shows a rise of 10 percent.

Under the third plan, the Development Council for Food Processing Industries has fixed for the biscuit industry a target of 40,000 tons a year at the end of the quinquennial period. Mr. Khanna says that the industry will achieve this target provided the Government allows it to modernise the plants. For the past several years, there has been a severe restriction on biscuit machinery imports with the result that the manufacturers have had to manage with obsolete plants, which are most uneconomic to operate. If import licences of the value of about Rs. 20 lakhs can be annually issued in the next two or three years, the requirements of the entire industry can be met, according to Mr. Khanna. This will enable the manufacturers to improve the standard of their production further and lower the price of their products. It will also help them to strengthen their footing in overseas markets, where competition is severe.

Levy of Sales Tax

In the case of the Kanpur Development Board versus the Commissioner of Sales Tax, U.P., a division bench of the Allahabad High Court consisting of the Chief Justice, Mr. M. C. Desai, and Mr. Justice K. B. Asthana has held that the former is not liable to pay sales tax. This shows that too technical an interpretation of the rules by sales tax officers could prove very damaging. The Kanpur Development Board was constituted for the purpose of providing water supply, public drains, roads, town planning services, transport, markets and other such facilities. In the course of its activities, the Board supplied materials to its contractors from its own stores at specified prices and the contract provided for their repurchase by the Board under certain conditions. On this basis, the sales tax officer assessed the Board as a "dealer" under the U.P. Sales Tax Act on its sales to the contractors. On an appeal by the Board, the Judge (Appeals) Sales Tax set aside the assessment order on the ground that the Board did not carry on any business of selling materials and was, therefore, not a "dealer". But on a revision application by the Sales Tax Department, the Judge (Revisions) Sales Tax restored the assessment order on the ground that the supply of materials by the Board to the contractors amounted to "sale" as the latter paid for the goods which became their property. The Judge further held that the prices of the materials supplied by the Board were worked out on the basis of cost price, freight, cartage, octroi, producers' tax, etcetera, and the Board could repurchase the goods at the prevailing market price thereby making a "profit" on the transaction, which made the Board a dealer under the Sales Tax Act. At the request of the Board, the Judge referred the matter to the High Court for its opinion.

Since sales tax is levied by all the States in India and since not only improvement trusts and development boards but a number of other bodies also are supplying materials to their contractors for public constructions at specified prices, the ruling of the Allahabad High Court has a broader public interest. The award of the High Court helps to define a "dealer", "sale" and "profits" more clearly which will be useful in interpreting the sales tax rules in other States as well. The first important point which arises from the High Court's ruling is that carrying on business for profit was not one of the duties of the Kanpur Development Board,

since it was expected to raise the money it needed through taxation. If the intention of the Board was to make a profit it would have opened a regular shop or would have sold goods to anybody who wanted to purchase them and would have displayed them to encourage prospective buyers. Although it is true that the goods became the property of the contractors, a number of restrictions were imposed on them since they could not remove the goods from the site without permission, had to allow inspection by the Board's engineers and had to resell them to the Board, if necessary, at the prevailing market price not exceeding that at which they were purchased. These onerous conditions were inconsistent with the idea of making a profit. The purpose behind the Board's supplying these materials to the contractors was to avoid delay in the performance of the contracts and to ensure that proper materials were used in construction. A stipulation concerning repurchase of goods by the Board did not mean that the sale was effected with the idea of making a profit. An interesting point which the High Court has made is that the repurchase may be with the idea of making a profit, but under the Sales Tax Act, the authority was concerned with the question of sale and not of purchase.

The important points which emerge from the ruling of the Allahabad High Court are that "sale", to become liable to sales tax, must be with a view to making a profit. The mere fact that a profit results from any transaction does not make it a sale under the Sales Tax Act, if the intention of making profit is not there. Sale and purchase are two separate transactions and if profit arises from repurchasing a commodity, it does not mean that its "sale" should be subject to sales tax.

CORRESPONDENCE

SUPER PROFITS TAX

(TO THE EDITOR OF "CAPITAL")

Sir,

There are a large number of private limited companies (which are neither managing agents of big public limited companies, nor subsidiaries or allied ones of public limited companies), having a low capital base; achievements of a substantial number of such private limited companies depend mainly on personal exertions. If the proposed super profits tax will apply *pari passu* to medium and small-sized private limited companies as well, undoubtedly it will be an inequitable heavy burden to them.

It has been the clear declared policy of the Government to encourage the development of small-scale industries in the country; there are many private limited companies as well as public limited companies, having a small capital base, engaged in small-scale industries. Such public limited companies have all along to face considerable difficulties in raising the necessary share capital. Nobody is likely to invest his money in shares of such public limited companies if the yield ratio is the same as that of shares of the big public limited companies. Shares of medium and small-sized companies are generally purchased when there is a possibility of higher yield; a feeling of lesser security naturally arises while investing in them. Also, such companies often have to plough back the profits in their businesses rather than raising a fresh capital. The proposed super profits tax will hit hard such companies and consequently it will retard the progress of small-scale industries in the country.

The proposed super profits tax is not to apply to those companies who have no share capital. A company limited by guarantee may have a share capital to comply with the provisions of the Indian Companies Act. But actually speaking, a company limited by guarantee has no paid-up share capital; its members only undertake to contribute to the assets of the company in the event of its winding up such amount, as may be required, not exceeding a specified amount (i.e., up to the amount of shares held by them). To impose the super profits tax on a company limited by guarantee would be highly improper in the context of the prevailing rates of taxes on others, if such a company also comes within its purview.

The inequitable heavy burden of the super profits tax, when imposed on medium and small-sized companies, is likely to create a tendency on the part of the medium and small-sized section of the corporate sector to divert its business activities and/or income by other lawful methods. This consequently may result in lesser revenue receipts to the exchequer; all companies pay income tax at the maximum prescribed rate and in case of others, the rates apply according to the slabs of income.

In the present national emergency, the medium and small-sized section of the corporate sector hardly have any ground in not gladly bearing a more reasonable burden of taxation, if necessitated due to circumstances; the burden of the proposed super profits tax, however, is evidently quite inequitable and very heavy for it. The great inequity will be evident from the following data showing the pre-Budget and post-Budget tax liabilities (including the super profits tax):

Income	Companies			Individuals		
	Capital	Approx. Pre-Budget Tax	Approx. Post-Budget Tax	Pre-Budget Tax	Approx. Post-Budget Tax	
25,000	50,000	11,250	17,700	4,150	5,400	
40,000	100,000	18,000	27,600	11,400	13,300	
100,000	300,000	45,000	67,000	54,400	57,800	

Under the circumstances, it may be suggested that the super profits tax, if imposed on medium and small-sized private and public limited companies also, should be based on a slab system according to their share capital, and there should also be an exemption limit in their case for computing the super profits tax. Further, the super profits tax should not be made applicable to those companies who have no paid-up share capital and/or have only a nominal paid-up share capital. In view of the prevailing high rate of taxes, some concession as such to the medium and small-sized private as well as public limited companies is not at all unwarranted and will hardly create a wide gap in the revenue receipts from direct taxes.

Yours etcetera,
S. K. BANKA.

Calcutta, 16th March, 1963.

IMPROVING CALCUTTA

NEITHER the Lieutenant-Governor nor his Secretary were to be drawn on Saturday last into any expression of opinion upon the Calcutta Improvement Scheme. They declined to commit themselves to any statement whatever until the scheme had been considered by the Chamber of Commerce, the Trades Association and other local bodies, and their opinions upon it recorded. We must defer any detailed criticism also until we have seen the details of the scheme. So far as we can gather, apart from a contribution from the Government of India of fifty lakhs and a tax upon petroleum, estimated to bring in one and a half lakhs of rupees of revenue per year, the whole brunt of the improvements will fall upon the Calcutta Municipal funds, and taxation will be increased to a maximum to meet the cost. We must enter an emphatic protest against this proposal. The present scheme is, we take it, intended to bring Calcutta up to date, that is to say, abreast of modern requirements. The expenditure may, therefore, be described as extraordinary and should be met by extraordinary measures. The whole of the Municipal revenues of Calcutta, when the scheme has been carried out, will be required to keep Calcutta up to date, that is to say, to carry on the necessary additions and improvements, which each succeeding year will call for; it seems to us, therefore, an unsound idea to burden the current revenues with the work of bringing up the arrears. Let us start fair. A small tax on lute and coal would bring in all the revenue required to provide for the payment of interest on the loans to be raised and a sinking fund to wipe them out. We have consistently for many years past advocated a duty on lute; it would not be felt by the trade, and even if it did fall upon the grower, the rise in the price of that commodity has been such as to make him perfectly able to pay. And as regards coal, if the Port Commissioners are so wealthy that they do not wish to tax it, that is no reason why it should not bear its fair share of the burden of taxation and be earmarked for the Municipality instead of for the Port Trust.

A Ditcher's Diary

IGNAZIO SILONE RECALLS IN HIS ESSAY *The God That Failed* that in 1922, when he was visiting Moscow, Alexandra Kollontaj one day suddenly turned to him and said: "If you happen to read in the papers that Lenin has had me arrested for stealing the silver spoons in the Kremlin, that simply means that I'm not entirely in agreement with him about some little problem of agricultural or industrial policy". Silone adds, "Kollontaj had acquired her sense of irony in the West and so only used it with people from the West". I really know very little about the various laws governing extradition; and I take the view that V.S. Tarasov is no great loss to the Soviet Union and, equally, no great acquisition for the United States. If I had anything to do with policy in the Kremlin I might have made a minor fuss about Nureyev, who is a considerable ballet dancer; Tarasov I simply would have taken no notice of. Mr. Dean Rusk is on record with the view that it is not the policy of the United States to grant political asylum generally to citizens of other countries; he said this when Cardinal Mindszenty was sitting right there in the U.S. Embassy in Budapest. It can in fact be a dangerous thing to invite desertions, for you never know what you will get next. What was significant in the recent legal battle between the Russian and U.S. Embassies in New Delhi was the flimsy charge of theft, which seems routine procedure for the Russians whenever a comrade of theirs bolts—like Alexandra Kollontaj's silver spoons. Is Tarasov bad advertisement for the Soviet Union? Efforts will doubtless be made to make Tarasov something of a hero, as another specimen of Homo Sovieticus choosing freedom from the oppression of communist society. I think this sort of thing has been a bit overdone; and the law of diminishing returns has already started operating. One can hate one's environment for a hundred different reasons; and it is absolutely puerile to regard one man's judgment as the final verdict on a society which may or may not have all the freedoms some others are used to but may have several compensations. There is no substitute for freedom. I know; but so stark a choice confronts only a very few of any country's citizens. The rest is Madison Avenue.

DR. VERRIER ELWIN MAY WELL BE CURSING himself that he ever thought of the phrase "A Philosophy for N.E.F.A." and then chose it as the title for his excellent book on the region and its people. In recent years, and especially

since the Indian reverses in face of the Chinese attack last October, the phrase has been hurled back at him on all sorts of occasions, usually in the middle of a string of non sequiturs. Some people in Assam can hardly wait to grab the region for exploitation; and they will not so much as mention that Dr. Elwin or anyone else did not think up a philosophy out of his head, that the Government's policy was shaped by objective circumstances, that the success of the Chinese invasion had nothing whatever to do with the behaviour of the tribals, that the risks inherent in any sudden change of policy may be nothing short of creating a second Nagaland in a particularly vulnerable part of the country. "Integration" has come in as a handy instrument for some whose love for unity is no more obvious than their regard for the tribals. The usual run of administrators from the plains, mostly from the Hindu middle classes, simply will not remember that many of the tribals in N.E.F.A. are Christians, that some others are Buddhists whose Buddhism is more Tibetan than Indian, that tribals have different ways of life which are not to be despised just because they are different. What is called a legacy of British rule—keeping tribals apart and away as museum pieces—is not a legacy at all. I am not even sure that the British had any firm policy on tribals; they went about their business as they usually do, pragmatically and without any subtle and theoretical enunciation of a philosophy. The passion for a defined policy came after independence, after some of the ablest officials, with a genuine love for the tribal people, had left. Mr. Nehru, and he alone among higher policymakers, well knows the difficulties involved in bringing tribals into the stream of life in India without disrupting their traditions, without which many are simply lost. I am glad the Prime Minister stoutly defended his Government's N.E.F.A. policy in Parliament on Friday. A little more sustained interest in tribals from him may yet solve many problems now shrouded in confusion.

THE QUOTATION FROM SHAKESPEARE ("If it were done when 'tis done, then 'twere well it were done quickly") with which Dr. Beeching, head of Britain's Transport Executive, unveiled his proposed hatchet plan for British Railways, may yet prove to be more appropriate than he expected. The worthy doctor has certainly condescended to cast himself as the ambitious, ruthless villain of British transport policy in the eyes of

more people than have probably ever heard of Macbeth. But that is a pity, because it seems to me that the plan he proposes is a good one, and it is, after all, what he was put there to devise. I only hope that his Lady Macbeth, the hitherto determined Transport Minister, Mr. Marples, will not regret his political initiative in the matter and leave Dr. Beeching to defend himself alone when the Great Birnam Wood of reaction attacks the Dunsinane hill of railway reform. Because opposition there will be, as is only to be expected of a plan which seeks to close more than one-half of Britain's stations, withdraw passenger facilities from almost one-third of the country's total track mileage, leave large areas of Wales and northern Scotland without any railway facilities at all, and deprive 70,000 men of their jobs in the next three years. Not all such opposition will come from the unfortunately large body of opinion which often appears to reject any change in the national life at all, however desirable on economic grounds. But as long as the majority of Britons continue to think that any man who can save the country most of the annual £150 million in subsidies which British Railways are at present absorbing, has earned his paltry £24,000 a year, Dr. Beeching and his plan should be home and dry. I have been wondering whether there are any lessons in all this for India's railways. Probably not; this country is too short of transport of any sort for there to be much danger of road haulage taking the lead to the extent it has done in Britain. But it is as well to remember that what has brought Britain's railway system to this pass is the complacency and neglect of years. Instead of adjusting itself gradually to times which were all too obviously changing, it has been allowed to settle into a rut of old-fashioned and inefficient operation simply because the taxpayer has been willing to foot the bill. In other words, there is no substitute in any industry for keeping up with the times, and this applies whether it is located in Britain, or India, or anywhere else either.

I AM SURE THE CHINESE HAVE THEIR OWN REASONS for yet another of their abrupt, dramatic decisions, this time to release the 3,000-odd Indian prisoners they have been holding since October or November last year. (I hope all New Delhi's actions are similarly motivated, selfishly if you like.) That seems to me very insufficient reason for India's chilly welcome to the Chinese decision. New Delhi's reaction, as reported, seems almost churlish, harping as it does on the delay in their release and the propaganda capital the Chinese totally unsurprisingly expect to make out of the "one-sided" action. If I am not totally wrong, New Delhi has always been chary of making any representation to Peking on the prisoners, perhaps because it thinks that the

status of the men held may not be very clear. The question was once asked that since India and China were not, officially, in a state of war, could these men, strictly speaking, be called prisoners of war, entitled to whatever was laid down in the Geneva Convention? I see no motiveless benignity in the Chinese decision; but the net result will be that some 3,213 Indians may soon be reunited with their families. This consummation is cause for rejoicing on humanitarian grounds; and that's why it pains me that New Delhi's reaction should be so destitute of grace. I notice some references to "brainwashing" too, as though this was something the Chinese invented. They may have added a refinement or two: but "education" for prisoners of war was known long before the Korean war—when, incidentally, Chinese prisoners too were interrogated for "intelligence" and told how bad their Government was. Just as at one time New Delhi could see nothing wrong in Peking, today, it seems, there is an inverted romanticism: the Chinese can't do anything that will not hurt, almost outrage, New Delhi. The Chinese, let us face it, are not a sentimental people; and it's time New Delhi stopped being sentimental. Equally irritating is the hangover of British officers' mess talk: the other day in Washington Mr Biju Patnaik said that if the Chinese attacked again India must be prepared to give them a "bloody nose". "Bloody cheek", the Chinese might say.

THE DESTRUCTION OF THE ABU SIMBEL TEMPLES is, to my mind, far and away the greatest setback to President Nasser's Russian-sponsored scheme for harnessing the Nile. Being something of a sentimentalist in matters archaeological, and not having any vested interest in retaining Egypt's present dictator in power, I could cheerfully see the whole grandiose Aswan project abandoned if the temples could thereby be preserved for posterity. Although I would not expect the Egyptian people to agree with me, the temples are, after all, the world's heritage and not exclusively that of a single nation. Which is why I was so cheered the other day to read of yet another idea for their preservation that does not this time call for the massive expenditure which has so successfully ruled out all its predecessors. It involves surrounding the temples with purified water insulated from the rest of the Aswan reservoir by a thin "membrane". Viewing would then be possible from under-water observation chambers with the help of submerged flood lighting. All very ingenious; but now I gather that it is unlikely to prove practicable because the stone from which the temples are carved will dissolve quite rapidly when placed in permanent contact with any kind of water, purified or otherwise. I should hate to see such a brilliant project abandoned for this one reason, so here is a variation on it which I have dreamed up all by myself, and U.N.E.S.C.O. may have it with my compliments. Why not impound the temples in a bubble of compressed air instead of purified water? The "skin", which would replace the "membrane", could be of some tough, though fairly light, metal, and would not need to be built to withstand the pressure of the surrounding water because this would be exactly compensated by that of the air inside. All it would be required to do would be to withstand the buoyancy of the imprisoned air, and possibly because I am no expert in hydro-statics I cannot think that this would be too difficult. Then the compressed air could be kept dry so as to preserve the stone, the whole inside of the "bubble" could be flood-lit, and viewing could still take place from special observation chambers as in the original scheme.

A PRESS RELEASE ON BEHALF OF THE KENSINGTON Palace Hotel in London describes its remarkable pastry cook who says that his "own special method of knowing when a cake is baked is to open the oven door, tap it gently and listen. You see, it talks to me—when it gives a soft whistle sound that says, 'I'm ready to come out, please!'"

THE DITCHER

Guide for Investors

GLOOMY OUTLOOK FOR COTTON MILL SHARES

By D. P. Sharma

AT the moment, everything depends on the likely modifications in the ill-conceived super profits tax proposal which has shaken the private sector, deepened the crisis of confidence and virtually wrecked the investment market. According to the joint memorandum submitted by the stock exchanges to the Central Finance Minister, the 80 textile companies—cotton textiles and others—listed on the Bombay Stock Exchange will have to pay nearly Rs. 6 crores by way of super profits tax. The Indian Cotton Mills Federation has made some rough calculations, according to which the cotton mill industry will have to pay something like Rs. 9 crores as super profits tax.

Unless suitably modified, this tax alone can bring about a significant change in the outlook for cotton mill shares even if the industry continues to enjoy reasonable prosperity. But unfortunately, the profit outlook for the cotton mill industry is far from encouraging. It is almost certain that the industry's working results for 1962, which have still to be announced, will show a sizable setback from the 1961 performance. The wage bill will be higher because of the further increase of Rs. 2 a worker a month from 1st January, 1962. The industry has also had to shoulder the burden of bonus payments. Cotton prices in 1962 were generally higher than in 1961. Exports suffered a heavy fall. The industry had to bear the financial burden of carrying huge stocks which created a critical position towards the close of the year. As against an increase in manufacturing costs, cloth prices continued to be controlled on a voluntary basis and in the last two months of the year, many mills were obliged to dispose of their goods at below the stamped prices.

The cotton mill industry thus had a difficult time in 1962, and the prospects for 1963 seem even worse. The super profits tax is by no means the industry's only worry. The emergency risks insurance may also place a considerable burden on the industry whose profits are likely to be further squeezed as a result of the various new levies imposed by the Central and State Governments and local authorities. Manu-facturing costs of the industry will increase as a result of enhanced excise duties on dyes, petroleum, staple fibre and other items. The general surcharge of 10 percent on import duties, the increase in the import duty on machinery and cotton and the rise in inter-State sales tax will impose additional burdens. The industry will also have to put up with the increase in railway freight rates and the rise in the cost of transport on account of the taxes on motor and motor-vehicle spares, tyres, spirit, motor-vehicle spares, tyres, etcetera. The wage bill, too, is likely to go up because of the increase in the dearness allowance as a result of the rise in the cost of living index.

All these factors make it difficult to take an optimistic view of the outlook for cotton mill shares. It is hardly necessary to add that the prospects for the industry will depend a great deal on the Government's decision on the Tariff Commission's report on fair prices for cloth. The Government's decision on cloth prices is overdue, because

it is now many months since the Commission submitted its report.

Disappointing Results from Kasturbhai Mills

THE preliminary reports about the working of the Kasturbhai group of textile mills for 1962, which have been released along with the announcement of dividends, confirm the general apprehension that the textile industry did not have a good time last year, the profit margin having been squeezed by cost inflation. Although known for efficient management, none of the mills in the group—Arvind, Ashoka, Aruna, Nutan, New Cotton, Raipur and Saraspur—has been able to repeat its previous year's performance. The gross profit is down in all cases although sales were either maintained or showed only a modest decline. Arvind has fared better than others, but here also, the gross profit is lower in spite of an increase of about 15 percent in sales. All the companies have reduced their dividends, although the total amount distributed among the shareholders is, in most cases, larger because of the increased capital as a result of the issue of rights or bonus shares in 1961.

Arvind Mills: The Company's sales increased from Rs. 3.82 crores to Rs. 4.39 crores, but the gross profit fell from Rs. 1.08 crores to Rs. 1.01 crores. The directors have announced a gross dividend of Rs. 30 a share, including an interim of Rs. 10, against Rs. 45 a share paid in 1961. The reduced dividend, however, is on 100,000 ordinary shares, including 40,000 bonus shares, and it absorbs Rs. 30 lakhs, against Rs. 27 lakhs in the previous year. Allocations of the year's gross profit include depreciation Rs. 32.29 lakhs (against Rs. 24.82 lakhs), statutory development rebate Rs. 12 lakhs (against Rs. 22.50 lakhs), taxation Rs. 24.77 lakhs (against Rs. 30 lakhs), donations Rs. 1.54 lakhs (against Rs. 2.03 lakhs) and dividend Rs. 30 lakhs (against Rs. 27 lakhs). The Company has transferred a sum of Rs. 14.25 lakhs (against Rs. 12.07 lakhs) from general reserve, and an additional sum of Rs. 6.78 lakhs has been provided for taxation for the previous year. The Company spent Rs. 47 lakhs on renovation programme and a similar amount is likely to be spent in the current year.

Ashoka Mills: The sales of the Company fell from Rs. 2.66 crores to Rs. 2.53 crores, and the gross profit dropped by nearly 43 percent from Rs. 45.41 lakhs to Rs. 25.82 lakhs. The directors have recommended a dividend of Rs. 24, less tax, on 30,000 equity shares, including the rights issue of 10,000 shares, compared with Rs. 35 a share paid on 20,000 shares in 1961. Appropriations include depreciation Rs. 20.28 lakhs (against Rs. 14.68 lakhs), and development rebate Rs. 5.83 lakhs (against Rs. 5.50 lakhs). No provision has been made for taxation. The Company is withdrawing Rs. 7.75 lakhs from the reserves to provide for the proposed dividends which absorb Rs. 7.77 lakhs, against Rs. 7.87 lakhs in 1961. The Company spent over Rs. 50.79 lakhs on extension of buildings, installation of machinery and equipment.

Aruna Mills: The directors of the Aruna Mills have recommended a gross dividend of Rs. 24 a share on

29,902 shares, against Rs. 35 a share on 20,000 shares paid in 1961. Total sales fell from Rs. 2.82 crores to Rs. 2.46 crores, and the gross profit fell by about 20 percent from Rs. 51.23 lakhs to Rs. 41.28 lakhs. Allocations include Rs. 8.77 lakhs (against Rs. 7.83 lakhs) for depreciation, Rs. 2.50 lakhs (against Rs. 1.50 lakhs) for development rebate, Rs. 14.76 lakhs (against Rs. 16.70 lakhs) for taxation and Rs. 4 lakhs (against Rs. 11.98 lakhs) for general reserve. The proposed ordinary dividend will absorb Rs. 7.16 lakhs (against Rs. 7 lakhs). Preference dividend accounts for Rs. 50,000.

Nutan Mills: The Company has announced a taxable dividend of Rs. 22 a share on 25,000 ordinary shares, against Rs. 35 a share paid on 15,000 shares in 1961. This will absorb Rs. 5.46 lakhs, against Rs. 5.25 lakhs in the previous year. The Company's sales are down by about 10 percent from Rs. 1.84 crores to Rs. 1.65 crores and the gross profit has fallen by as much as 31 percent from Rs. 32.52 lakhs to Rs. 22.31 lakhs. Appropriations include Rs. 7.62 lakhs (against Rs. 7.18 lakhs) for depreciation, Rs. 1.36 lakhs (against Rs. 2.20 lakhs) for development and rehabilitation reserve, and Rs. 6.99 lakhs (against Rs. 10.30 lakhs) for taxation. The proposed dividends, ordinary and preference, absorb Rs. 5.69 lakhs, against Rs. 5.47 lakhs.

New Cotton: Although the sales of the Ahmedabad New Cotton Mills are virtually unchanged at Rs. 2.10 crores, against Rs. 2.09 crores, the gross profit has fallen sharply by nearly 37 percent from Rs. 31.70 lakhs to Rs. 19.85 lakhs. The directors have recommended a gross dividend of Rs. 20 a share on 19,972 shares, against Rs. 35 a share paid on 10,000 shares. Allocations include Rs. 10.96 lakhs (against Rs. 8.40 lakhs) for depreciation, Rs. 5 lakhs (against Rs. 1.80 lakhs) for development rebate, and Rs. 2.10 lakhs (against Rs. 9.71 lakhs) for taxation. The proposed dividend absorbs Rs. 3.98 lakhs, against Rs. 3.50 lakhs in 1961.

Raipur Mills: The directors of the Raipur Manufacturing Company have announced a total gross dividend of Rs. 24 a share, including an interim of Rs. 8 on 50,000 shares compared with Rs. 40 a share on 30,000 shares paid in 1961. While sales are more or less unchanged at Rs. 2.06 crores, against Rs. 2.05 crores, the gross profit has come down from Rs. 45.53 lakhs to Rs. 39.95 lakhs. Appropriations include Rs. 8.77 lakhs (against Rs. 7.42 lakhs) for depreciation, Rs. 3.10 lakhs (against Rs. 3 lakhs) for development rebate and Rs. 12.85 lakhs (against Rs. 16.70 lakhs) for taxation. The proposed dividend absorbs Rs. 12 lakhs (the same). The Company spent a sum of Rs. 24 lakhs on renovations.

Saraspur Mills: The working of the Saraspur Mills shows a substantial setback, with its sales down by about 11 percent from Rs. 2.50 crores to Rs. 2.22 crores, and the gross profit down by nearly 30 percent from Rs. 37.43 lakhs to Rs. 26.04 lakhs. The directors have proposed a dividend of Rs. 24 a share, less tax, on 30,000 shares, against Rs. 35 a share paid on 20,000 shares in 1961. Allocations include Rs. 9.28 lakhs (against Rs. 8.80 lakhs) for depreciation, Rs. 3 lakhs (against Rs. 25,000) for development rebate, Rs. 7.35 lakhs (against Rs. 11.33 lakhs) for taxation and Rs. 61,000 (Rs. 62,000) for donations. The direc-

tors have transferred Rs. 3.15 lakhs from general reserve to provide for the proposed dividends, which absorb Rs. 7.47 lakhs, against Rs. 7.27 lakhs in the previous year.

Processing Machines from Pioneer Plastic

IT is reliably understood that the Government of India has approved the proposal submitted by Pioneer Plastic Works (P) Ltd, Calcutta, for the establishment of an industrial undertaking in the State of Punjab for the manufacture of plastic processing machines. A new Company called Stubbe India Ltd, it is proposed, will be formed for implementing the project. The scheme is to manufacture annually 100 plastic injection moulding machines of four different sizes and 25 extrusion machines of two sizes. The average price of each machine is placed around Rs. 60,000.

Pioneer Plastic is seeking the technical and financial collaboration of Stubbe of Switzerland. The capital equipment of the project is estimated to cost Rs. 15 lakhs, of which Rs. 5 lakhs will be spent on imported machinery. In addition, the firm will have to depend on imports of hydraulic and electric control equipment, constituting nearly 40 percent of the value of the machines, until such time as these items of equipment become available from indigenous sources. Separate schemes have already been sanctioned by the Government of India for the manufacture of hydraulic equipment. The requirements of various types of plastic working machines are quite large, while actual production is limited.

Out of the schemes already licensed, only those of Windor India Ltd and Nebel India Ltd are expected to materialise. The capacity of these two schemes is limited, and it would hardly account for an output of Rs. 80 lakhs a year and that, too, after a period of two or three years. According to the phased manufacturing programme submitted by Pioneer Plastic of Calcutta, the indigenous content of the machines which it is proposed to be manufactured will go up from 50 percent to 80 percent over a period of three years. The annual turnover of Stubbe India Ltd, when in full production, is estimated at Rs. 75 lakhs, which will help save about Rs. 40 lakhs to Rs. 45 lakhs a year now being spent on importing plastic processing machines.

Sewing Machine Parts from T. V. Sundaram

T. V. SUNDARAM and Sons Private Ltd, Madras, has sought the Government of India's permission to set up an undertaking for the manufacture of 150,000 sets of some 11 items of sewing machine components, domestic and industrial types. The well-known American firm of Singer Manufacturing Company, New York, is collaborating in the venture. Singer Sundaram Ltd is mentioned as the likely name of the new Company which is being formed to implement the project. The new concern will have an authorised capital of Rs. 50 lakhs, of which Rs. 30 lakhs is likely to be issued in the beginning. The capital equipment for the project is estimated to cost Rs. 27 lakhs, of which Rs. 22 lakhs will be spent on imported machinery.

The foreign collaboration proposal visualises equity participation to the extent of 33 1/3 percent to cover the cost of machinery up to Rs. 10 lakhs and the balance of the capital equipment requirements, it is proposed, will be secured through a long-term

loan of Rs. 12 lakhs from the foreign collaborator, repayable in easy instalments. The collaboration agreement does not provide for the payment of any royalty or technical fees. In addition to imported machinery worth Rs. 22 lakhs, the Company will also need to import nearly 200 tons of special alloy steel a year valued at around Rs. 2.50 lakhs, which will be a recurring expenditure until such time as special alloy steel becomes available from indigenous sources.

The sewing machine components are required for both original fitment and replacement purposes. Under the existing pattern of production, more than 80 percent of the total production of sewing machines in the country belongs to Jay Engineering Works which manufactures all the components in its own factory. Components manufactured by Jay Engineering, it is said, can fit in with the machines manufactured by them. The remaining 20 percent machines require parts for original fitment and replacement purposes. Only one scheme of Messrs Sewing Spares (India) Private Ltd, Delhi, has so far been sanctioned for the manufacture of six domestic sewing machine components, namely, shuttles, bobbin cases, pressure foot, oscillating rockshaft, thread take-up and lever and square roller, with a capacity of 240,000 sets a year.

Reliable reports indicate that the Central Ministry of Commerce and Industry has approved the scheme of T. V. Sundaram on the ground that the components needed are of a precision type and the manufacture of these components in collaboration with a firm like Singers having international reputation will bring in to the country first rate quality. Besides, the capital equipment from abroad is to be obtained without any strain on the country's foreign exchange resources. It is also felt that Sewing Spares India Ltd would take some time before it goes into full production and that, meanwhile, demand for sewing machines and their components is likely to go up appreciably. The requisite industrial licence is awaited.

Bombay Dyeing Profit Down

ALTHOUGH the dividend has been maintained at Rs. 3.50 a share (Rs. 25-paid), less tax, the working results of the Bombay Dyeing and Manufacturing Co. Ltd for 1962, show that the Company has not fared as well as it did in the previous year. In spite of an increase of some 9 percent in gross sales from Rs. 13.59 crores to Rs. 14.82 crores, the gross profit is down by nearly 6.7 percent from Rs. 1.58 crores to Rs. 1.48 crores. The ratio of gross profit to sales works out at 10 percent, against 11.6 percent in 1961. The setback in Bombay Dyeing's results reflects the difficulties of the textile industry which has had its profit margin squeezed in 1962 as a result of the all-round increase in manufacturing costs.

The directors state in their report that the home and export markets were very dull during the year. Towards the end of 1962, the national emergency due to the Chinese aggression created a sense of uncertainty causing heavy accumulation of stocks in the local markets. The rigid fixation of cloth prices in spite of rising costs of manufacture, diminished the margin of profits. Severe competition was experienced in overseas markets from Japan, China and Hongkong, resulting in an overall decrease of exports of cotton textiles from India.

The Company's accounts for 1962 show an increase of 13.7 percent in

costs of raw materials, stores, fuel oil, electricity, water, etcetera, from Rs. 7.55 crores to Rs. 8.59 crores. Payments to employees are up by about 15.4 percent from Rs. 3.25 crores to Rs. 3.75 crores. With the increase in production and turnover, the rise in major items of expenditure was to be expected, but the increase in expenses has been relatively higher. As stated by the directors in their report, the Company had to pay Rs. 79.27 lakhs more for the cotton consumed in 1962 than what it paid in the previous year—the average price paid being higher by Rs. 61 a candy. Bombay Dyeing paid Rs. 88.96 lakhs by way of excise duty, against Rs. 68.04 lakhs in 1961. Closing stocks were substantially higher at Rs. 2.79 crores, against Rs. 2.29 crores at the end of 1961.

After providing Rs. 80.42 lakhs, including Rs. 34,694 for 1961, (against Rs. 80.52 lakhs) for depreciation, Rs. 9.75 lakhs (against Rs. 24.83 lakhs) for development rebate reserve and Rs. 23.80 lakhs including Rs. 2.80 lakhs for 1961 (against Rs. 14.20 lakhs) for taxation, the net profit for 1962 amounts to Rs. 29.02 lakhs, against Rs. 33.17 lakhs in the previous year. With Rs. 69,669 brought in, the disposable surplus is Rs. 29.71 lakhs. The interim dividend absorbed Rs. 10.04 lakhs, leaving a balance of Rs. 19.67 lakhs, of which Rs. 19 lakhs has been transferred to the dividend equalisation fund, leaving a balance of Rs. 67,586 to be carried forward. The proposed final dividend of Rs. 2.50 a share will absorb Rs. 25,09,800, which is being paid out of dividend equalisation reserve. This means that a sum of about Rs. 6 lakhs (net) is being used from the previous dividend equalisation reserve in order to pay the dividend for 1962. In the previous year, the Company transferred only Rs. 2 lakhs for the purpose of dividend payment.

The directors have explained that in the balance-sheet for 1962, a sum of Rs. 56.70 lakhs was standing to the credit of development and rehabilitation account. This amount represents development rebate reserve set apart during the past years—1958 to 1960—estimated at 80 percent of the liability as a safe provision. The exact provision, however, required to be made under the Income Tax Act, namely, 75 percent of the development rebate actually allowed to the Company, can only be determined after completion of the income tax assessments of the respective years. This has been done up to the assessment year 1961-62, thereby showing an excess provision of Rs. 3.75 lakhs which has now been transferred to general reserve. No. 2, thus reducing the figure to 52.95 lakhs. To this amount, a further sum of Rs. 24.83 lakhs standing to the credit of development rebate reserve, which has been used by the Company for the purchase of new machinery during the year 1962, has been added making a total of Rs. 77.78 lakhs. The amount of Rs. 9.75 lakhs representing development rebate reserve compulsorily set aside under the Act for 1962, has been credited to this account.

The Company's exports in 1962 amounted to 4.7 million yards valued at Rs. 4.92 crores, a drop of about 11 percent, compared with the previous year. Bombay Dyeing's efforts have been concentrated on larger exports of bleached, dyed, printed and finished goods which resulted in a better realisation a yard of cloth. In the context of the all-India performance of cotton textile exports, the Company has maintained its share of 12 percent in value of the total exports of cloth from India. New machinery of the value of Rs. 61.45 lakhs was installed in both the mills. The entire blow room machinery has now been renovated

at the Spring Mills and the blow room at the Textile Mills is being replaced. The screen printing plant is now in full production and the printed material from it is commanding good sales. A yarn mercerising machine has recently been installed at the new dye works. The new Schriener Calendar has begun working. The new engraving and pentograph machines have also been installed.

The plant ordered for imparting the "Hecowa" finish to the Company's goods is under installation at present, and is expected to go into production in a couple of months. Orders have been placed for new drawing and high speed frames and ring spinning frames for the Spring Mills to replace the old machinery. The deliveries of these machines are spread over a year. A further set of combers has also been ordered for the Spring Mills to increase the production of fine count fabrics. The number of installed spindles at the Company's Spring and Textile Mills is at present 208,184, and of the 3,551 looms, 1,974 are automatic. A further 240 automatic looms are still to be received for the Spring Mills.

In his statement to the shareholders which has been introduced for the first time as part of the annual report, the chairman, Mr. Neville N. Wadia, has answered the criticism of the Company's policy of selling in export markets at prices somewhat lower than the internal market. He says that it is the Company's exports which earned it the machinery import licences. Over the years, Bombay Dyeing has been able to install a large quantity of new machinery, much of it of the best quality and design from abroad, at prices which are well below those prevailing now. The installation of Rs. 8.5 crores worth of new machinery in the past ten years has resulted in a substantial increase in production from 26 million lbs in 1952 to 41 million lbs in 1962, in terms of yarn. At the same time, rationalisation has not meant less employment. On the contrary, the Company now has 12,500 workers, compared with 8,000 ten years ago, and there has been a big increase in their individual earnings.

Answering the question "what has the Company gained by all this?", Mr. Wadia says that by the middle of next year, Spring Mills, with the exception of only carding engines, will have been completely re-equipped from start to finish. It will be one of the largest units anywhere with only automatic looms—2,160 under one roof—a mill prepared to face the uncertainties of the future and to give quarter to none. Apart from renovating some important departments at the Textile Mills, the Company has built one of the largest and finest finishing plants. It has installed automatic looms for the manufacture of towels, damask table linens and furnishing fabrics. The Company, says Mr. Wadia, intends to go on expanding the range of its products not only to keep pace with popular demand, but to take a lead in fashion. Approximately 50 percent of the Company's looms are engaged on export orders and the Company is doing everything possible to maintain the high reputation which it has earned during almost quarter of a century. With the change in the range of production, a new distribution system has become necessary and the Company is implementing a plan of regional distribution by stages.

British Paints Pays Less

BRITISH Paints (India) Ltd has cut the taxable ordinary dividend from 12.5 percent for 1961 to

10 percent, including a final dividend of 3.75 percent, for the year ended December 1962. It is covered more than four times and offers a yield of 4.9 percent at the present price of Rs. 20.50 a share of Rs. 10 each. The profit has risen from Rs. 13.49 lakhs in 1961 to Rs. 24.33 lakhs in 1962, after providing for depreciation. Taxation absorbs Rs. 14.38 lakhs (against Rs. 6.25 lakhs). The estimated liability for the super profits tax is Rs. 4.7 lakhs. Development rebate reserve is allocated Rs. 20,000.

Indian Aluminium to Expand Further

IN their report for the year ended December 1962, the directors of Indian Aluminium and Co. Ltd point out that the integrated expansion programme undertaken in 1959 has been duly completed. The doubling of the Hirakud smelter and the installation of the extrusion press at Alupuram were completed in 1961, ahead of schedule. The expansion of the alumina plant in Muri was completed in March 1962, raising its rated capacity from 18,300 tons to 55,000 tons a year. As a result of research and development, the expanded plant should be able to operate at more than its rated capacity. The expansion of sheet rolling facilities in Belur, near Calcutta, was completed in 1962 and its capacity is now 16,800 tons of rolled products a year.

The Company has in hand two more projects. It will set up a second smelter near the existing one in Alupuram, with a capacity of 10,850 tons a year. An aluminium foil rolling and finishing mill will be set up in Kalwa, with an annual capacity of 2,500 tons of aluminium foils. The Company had already issued 801,276 rights ordinary shares at a premium of Rs. 15.50 a share for every five held to raise funds. A debenture stock for Rs. 1 crore was also oversubscribed. The cost of these projects has been estimated at Rs. 6 crores, of which the foreign exchange component will be Rs. 2.46 crores. The subscription to the rights issue by Aluminium Ltd of Canada will provide the necessary foreign exchange. The new smelter in Alupuram should be ready by the middle of 1964 and the foil mill in the middle of 1965. The directors hope that this diversification of activity will help meet the increasing market demand for aluminium products.

The profit for the year ended December 1962 has improved to Rs. 1.79 crores from Rs. 1.64 crores in 1961, after transferring Rs. 61.50 lakhs (against Rs. 45.50 lakhs) to development rebate reserve and Rs. 1.05 crores (against Rs. 58.87 lakhs) to depreciation. The taxable ordinary dividend has been increased from 15 percent to 17.5 percent, including a final of 10 percent. It is covered more than twice and offers a yield of 5.9 percent at the present price of Rs. 29.75 a share of Rs. 10 each. Taxation absorbs Rs. 52.50 lakhs (against Rs. 53 lakhs) and general reserve Rs. 80 lakhs (against Rs. 50 lakhs). A sum of Rs. 30 lakhs has been transferred from fixed assets replacement reserve, leaving a carry-forward of Rs. 56.98 lakhs, against Rs. 62.32 lakhs brought in.

In Hirakud, the output rose from 9,837 tons to 17,072 tons. The technical difficulty which interrupted output has now been overcome. The decline from 6,072 tons to 5,840 tons in the production of the Alupuram smelter was due to factors beyond the control of the Company. The alumina production in Muri rose from 22,085 tons to 44,600 tons following the completion of the expansion project. The decline in the output of the Belur factory was due to the interruption of work caused by the expansion project. The operational

efficiency of this factory has now improved. The directors also mention that the Company may have to pay an annual premium of about Rs. 20 lakhs towards the emergency risks insurance scheme, if it were to remain in force with the present rate of premium.

Dunlop Rubber Cuts Dividend

IN spite of the bigger sales and profits during the year ended December 1962, the Dunlop Rubber Co. (India) Ltd has had to cut the taxable ordinary dividend from 20 percent for 1961 to 15 percent for 1962 due to a larger provision for taxation. Sales improved from Rs. 32.86 crores to Rs. 37.13 crores. The profit has risen from Rs. 3.06 crores to Rs. 3.31 crores, after transferring Rs. 60.80 lakhs (against Rs. 61.39 lakhs) to depreciation. The dividend is more than four-and-a-half times covered and works out to half times covered at the present price of Rs. 32 a share of Rs. 10 each. Taxation is allocated Rs. 2.35 crores (against Rs. 1.41 crores) and general reserve Rs. 20 lakhs (against Rs. 62.50 lakhs). Development rebate reserve absorbs Rs. 3 lakhs, against Rs. 7.50 lakhs. The carry-forward amounts to Rs. 25.88 lakhs, against Rs. 25.39 lakhs brought in. The directors say that the proposed super profits tax will absorb about Rs. 63 lakhs. So the Company's results show clearly how the proposed levy will adversely affect the dividends and retained profits.

Guest, Keen, Williams Repeats

GUEST, Keen, Williams Ltd has maintained a taxable ordinary dividend of 14 percent for the year ended December 1962, of which an interim of 6 percent was paid earlier. At the present price of Rs. 30 a share, the yield is 4.7 percent and the dividend is covered more than twice. The profit has risen from Rs. 1.04 crores in 1961 to Rs. 1.30 crores in 1962, after providing for depreciation. Taxation is allocated Rs. 55.6 lakhs (against Rs. 30.5 lakhs), general reserve Rs. 6.15 lakhs (against Rs. 10.69 lakhs), dividend equalisation reserve Rs. 9.12 lakhs (against rebate reserve Rs. 5.55 lakhs) (against Rs. 12.21 lakhs). A sum of Rs. 5 lakhs has been transferred to the debenture sinking fund.

Progress of Asiatic Oxygen

SPEAKING to shareholders at the annual general meeting of the Asiatic Oxygen Ltd held in Calcutta last Saturday, Mr. B. L. Jalan, chairman, said that the Company would soon set up industrial gas factories in Calcutta, Bhilai, Barauni, Durgapur, Bombay, Madras, Rourkela, Hyderabad and Patna. (The full text of the speech is printed on a later page in this issue of Capital.) It would also build three more units for the production of oxy-acetylene, gas, welding and cutting equipment, electrodes and arc welding formers. The necessary equipment from it is expected, will be shipped from the U.S.A. shortly, and the factories may start producing before the end of this year. He thinks that the demand for oxygen and dissolved acetylene will improve steadily. The demand for oxygen was estimated at 1,000 million cubic feet and that for dissolved acetylene at 150 million cubic feet in 1960-61. The third plan

production targets for these two have been raised to 1,650 million cubic feet and 200 million cubic feet. The emergency should also raise the demand for these products because of the defence effort.

Pointing to the adverse effects of the proposed super profits tax, Mr. Jalan said that the tax would penalise efficiency. Investments, especially from foreign countries, will be discouraged. It is feared that the good effects of the development rebate and the five-year tax holiday for new companies will be destroyed by the new impost. It will also discourage the middle and low-income groups from participating in capital issues. He pointed out how foreign investors have been deterred by the cumbersome licensing procedures and the dilatory methods of the Government. It will be difficult to hold down the prices of commodities in future in view of the increasing Government expenses, rising prices of plant and machinery and increased production costs, he said.

Amar Dye-Chem Disappoints

THE working results of Amar Dye-Chem Ltd for 1962 show that the Company has fared badly during the year. Compared with 1961, sales are down by about 16.5 percent from Rs. 1.70 crores to Rs. 1.42 crores, and the gross profit has declined by as much as 42 percent from Rs. 64.08 lakhs to Rs. 36.59 lakhs. The directors have, however, maintained the ordinary dividend at Rs. 9 a share, subject to tax. This will cost the Company additional Rs. 75,000 as the 10,000 new shares are eligible to the full dividend in 1962, compared with a proportionate dividend of Rs. 1.50 a share paid in 1961. The Company's poor performance is attributed to the change in Government policy concerning the assessment of Customs duty on naphthols and fast bases, namely, abolition of tariff values and assessment on a c.i.f. basis from September 1961. The directors say that more than 250 tons of naphthols and fast bases consents of items manufactured by the Company were imported in 1962, which resulted in more than normal supply, and created a strong pressure on prices.

The outlook for the current year, however, is considered to be encouraging. The first stage of its T.P.M. project has been completed and the plant has been commissioned. The production, it is expected, will increase gradually, reaching the target capacity in the next four or five months. The Company has also taken in hand the manufacture of reactive dyes and has already placed on the market one item. Three more items will be introduced shortly. Sales and profit, it is expected, will show a considerable improvement with the production and sale of T.P.M. and reactive dyes. The Company has negotiated a rupee loan of Rs. 45 lakhs with the Industrial Credit and Investment Corporation of India to finance its expansion programme.

Allocations of the 1962 profit include depreciation Rs. 14.69 lakhs (against Rs. 8.67), taxation Rs. 9.63 lakhs (against Rs. 22.40 lakhs), development rebate reserve Rs. 2.30 lakhs (against Rs. 1.80 lakhs) and development reserve Rs. 76,000 (against Rs. 60,000). No provision has been made for depreciation reserve, capital redemption reserve and general reserve, which received Rs. 51,000, Rs. 5 lakhs and Rs. 12.50 lakhs, respectively, in 1961. The proposed ordinary dividend absorbs Rs. 8.10 lakhs (against Rs. 7.35 lakhs) and preference dividend accounts for Rs. 1.71 lakhs (the same). After making all these appropriations, there

Sen-Raleigh Makes Progress

IN his statement at the annual general meeting of Sen-Raleigh Ltd in Calcutta last Thursday, Mr. Abhijit Sen, chairman, takes a cautious view of the Company's prospects. (A fuller version of the speech has been printed on a later page in this week's issue of Capital.) Because of the present emergency, a substantial quantity of indigenous steel has been diverted to defence production. So it is feared that the production of bicycles will decline following the shortage of raw materials. Raw material supplies from the U.S.A. have been interrupted by a dock strike in that country. After the emergency, import licences for the industry have also been cut. Although the immediate outlook is not encouraging, Sen-Raleigh has been going ahead with its expansion plans which may cost about Rs. 2 crores during the next couple of years. The foreign exchange required will be obtained by the subscription of Raleigh Industries Ltd of the U.K. to the new shares issued in November 1962. But the directors think that they may have to approach the Industrial Finance Corporation for a loan in order to obtain more foreign exchange, especially to implement the house service meter project. The entire bicycle expansion scheme will be financed by the resources which have already been made available. A technical agreement has been signed with the Associated Electrical Industries Ltd of the U.K. for the house service meter project. If the required foreign equipment is obtained in time, the project will start trial production in 1964. In view of the emergency risks insurance scheme and the increased transport and power costs, a further rise in production costs is foreseen. But the Company has been making efforts to raise its operational efficiency in order to check the rising costs.

During 1961-62, the production of Sen-Raleigh made satisfactory progress. The Company has started the 1963-64 year with a full order-book. The demand for bicycle and components produced by the Company has increased steadily. But the profit has not moved up in proportion to the increased turnover due to the rising production costs. The Company has started exporting bicycles under the trade name of "Balaka". The chairman said that the move would help to sell Indian bicycles in foreign markets.

Calcutta Landing and Shipping Pays More

THE Calcutta Landing and Shipping Co. Ltd has produced excellent results for the year ended October 1962, due to the reorganisation scheme carried out earlier. The profit has improved from Rs. 1.28 lakhs in 1960-61 to Rs. 5.19 lakhs in 1961-62, after providing Rs. 54,055 (against Rs. 53,558) for depreciation. The taxable ordinary dividend has been increased from 7.5 percent to 22 percent, which is covered more than three-and-a-half times and offers a yield of 6.3 percent at the present price of Rs. 35.06 a share of Rs. 10 each. Taxation absorbs Rs. 3.10 lakhs

(against Rs. 70,000), reserve Rs. 50,000 (the same) and capital reserve Rs. 17,650 (against Rs. 22,168). The carry-forward is Rs. 5,967, against Rs. 3,299 brought in. Although the directors were thinking of extending their interest to some small industries in addition to boating, the idea has now been postponed in view of the uncertain conditions. They mention that a provision of Rs. 84,000 has been made to meet the requirements of the super profits tax.

Expansion of Standard Pharmaceutical

STANDARD Pharmaceutical Works Ltd, Calcutta, has sought the Government of India's permission to expand the capacity for the manufacture of penicillin from 6 tonnes (10 m.m.u.) to 12 tonnes (20 m.m.u.) a year in order to make its plant economic. The firm has stated that the capacity can be doubled by installing certain equipment of which the imported component will cost Rs. 5.5 lakhs. In addition, the Company will need to import raw materials to the tune of Rs. 2.90 lakhs. The foreign exchange needed for the expansion scheme is sought to be procured through an arrangement with the foreign collaborators either by way of a long-term loan repayable after ten years in equal instalments and carrying tax-free interest at 6 percent or by a short-term loan, at the same rate of interest, payable by the export of penicillin at international prices. The firm hopes to implement its expansion scheme within a period of six months.

Reliable reports indicate that the Government is likely to approve the Company's scheme, although penicillin is included in the list of items for which applications for licences are to be ordinarily rejected, since a large capacity to cover the requirements is provided under the I.D.P.L. project. At present, there exists a gap of 40 to 45 tonnes between the demand and actual production. This, no doubt, will be bridged when the I.D.P.L. project commences operation, but this is likely to take three to four years' time. In the present emergency conditions, more penicillin will be needed to meet the increasing civilian and defence demands. Since Standard Pharmaceutical Works expects to be able to complete its expansion programme within six months, it will result in the saving of foreign exchange to the extent the firm can reduce the gap between demand and production.

It might be noted here that against the third plan target of 120 m.m.u. a year, the capacity already licensed is 215 m.m.u., comprising Hindustan Antibiotics Ltd 45 m.m.u., Alembic Chemicals 20 m.m.u., Standard Pharmaceutical Works 10 m.m.u. and the Rishikesh plant (with Russian collaboration) 140 m.m.u. The installed capacity at present is only 65 m.m.u. The current demand for penicillin is of the order of 85 to 90 m.m.u. a year, against the current production of 60 m.m.u. The gap of 25 to 30 m.m.u. a year between demand and actual production is expected to be bridged partly during the current year and partly next year. The production of penicillin by Hindustan Antibiotics will go up from 45 m.m.u. to 60 m.m.u. after the installation of two additional fermentors. This work is now in hand, and the results, it is expected, will be achieved partly during the current year. Alembic Chemicals is obtaining the machinery for doubling the production of penicillin from 10 m.m.u. to 20 m.m.u. a year against the I.C.I.C.I. loan. It is expected that the additional production would be established during the latter part of 1963-64. Every effort is being made to

establish the capacity in Rishikesh before the target date, but the manufacture of penicillin is likely to start only in 1965. It is said that the additional capacity of the penicillin that would become available after the I.D.P.L. project commences operation would be partly absorbed in the country, and partly exported.

Anil Starch Fares Well

ANIL Starch Products Ltd reports encouraging results for the year 1962, with both sales and profit recording appreciable increases. The directors have maintained the gross dividend at Rs. 20 a share, but the bonus has been reduced from Rs. 10 to Rs. 5 a share. Although the distribution on a share is Rs. 5 less than in 1961, the total amount distributed by way of dividend and bonus is only slightly lower at Rs. 9.92 lakhs, against Rs. 9.95 lakhs, new shares being entitled to a full year's dividend. Preference dividend absorbs Rs. 35,000 (the same). The preliminary report on the Company's working in 1962 shows an increase of 16.7 percent in sales from Rs. 2.82 crores to Rs. 3.29 crores. The gross profit is up by about 15.2 percent from Rs. 44.22 lakhs to Rs. 50.96 lakhs.

After providing Rs. 13.15 lakhs (against Rs. 10.67 lakhs) for depreciation and Rs. 16.59 lakhs (against Rs. 13.33 lakhs) for taxation, the net profit amounts to Rs. 17.50 lakhs, compared with Rs. 16.93 lakhs in 1961. The directors have provided Rs. 3.11 lakhs (against Rs. 5.95 lakhs) for development rebate reserve and Rs. 4 lakhs (against nil) for general reserve. The proposed dividends—ordinary and preference—absorb Rs. 10.27 lakhs (against Rs. 10.30 lakhs), leaving a surplus of Rs. 5.491 to be carried forward, against Rs. 50,543 brought in. Reliable reports indicate that the higher sales in 1962 were due to increased production of starch, glucose, dextrose and superphosphate. The Company is said to be planning to shift the heavy chemical section from Ahmedabad to Bhavnagar. The Rs. 100-paid share of Anil Starch is currently quoted around Rs. 670 offering a gross return of about Rs. 3.9 percent.

Outlook for Walchandnagar Industries

PRESIDING over the annual general meeting of the Walchandnagar Industries Ltd in Bombay last week, the chairman, Mr. Gulabchand Hirachand, struck a note of cautious optimism about the Company's working results during the current year. He said that the plantation sector was expected to yield better results because of the increase in the sugarcane yield. The Company's industrial machinery division was also likely to fare better in view of large orders worth Rs. 3 crores, including one for a sugar plant worth Rs. 1 crore. The turnover in this division is expected to rise from Rs. 2.12 crores to Rs. 2.75 crores. But in spite of the likely improvement in the Company's performance during the current year, the chairman was unable to assure the shareholders that the dividend would be maintained as much would depend on the actual impact of the proposed new tax measures.

Mr. Hirachand told shareholders that Von Kohorn-Universal Corporation of the U.S.A. had shown willingness to collaborate with the Company in the fabrication of chemical machinery and that the management was examining the issue in all its aspects. The Company has completed negotiations with Messrs Sahu-Jain for the manufacture of

cement-making machinery and the Government's sanction for the import of machinery is awaited. Replying to shareholders' queries, Mr. Gulabchand Hirachand stated that the Company hoped to receive Rs. 1 crore in cash and an equal amount in bonds as compensation against the acquisition of sugar farms taken over by the State Government under the Maharashtra Land Ceiling Act. The actual details are yet to be finalised but this is not likely to take more than a few weeks.

United Motors Cuts Dividend

THE United Motors (India) Ltd reports disappointing results for the year 1962. While sales are down by 12.5 percent from Rs. 19.23 lakhs to Rs. 17.08 lakhs, the gross profit has fallen by about 42.5 percent from Rs. 1,06,710 to Rs. 74,857. The sharp setback in the profit has obliged the directors to reduce the dividend from 1.40 a share to 70np a share (Rs. 10-paid). After providing Rs. 8,673 (against Rs. 5,901) for depreciation and Rs. 33,000 (against Rs. 41,000) for taxation, the net profit amounts to Rs. 33,183, compared with Rs. 59,809 in 1961. The proposed dividend absorbs Rs. 35,743, against Rs. 71,484, leaving a sum of Rs. 1,813 to be carried forward, against Rs. 4,371 brought in. The directors have attributed the setback in the Company's profit to the fall in the sale of Ford parts, reduction in the number of Ford vehicles on the road and increase in dearness allowance and increments payable to staff under the Industrial Court award.

Central Bank Puts off Rights Issue

THE continued depression in the investment market has obliged even some of the reputed companies to revise their decisions on the issue of fresh capital for which necessary Government sanction had already been obtained. The Central Bank of India, too, had secured official permission to issue 634,625 shares in the proportion of one new share for every two held, but the bank has decided to postpone this issue. The directors state in their report for 1962 that the terms laid down by the Controller of Capital Issues are considered unfavourable in the light of the adverse developments in the capital market in the wake of the national emergency. Conditions have further deteriorated after the presentation of Mr. Morarji Desai's Budget, mainly as a result of the ill-conceived super profits tax.

The directors' report for 1962, however, shows all-round progress, although the profit margin has been squeezed by the increase in expenses. The total deposits of the bank recorded a rise of about 7.2 percent from Rs. 220.19 crores to Rs. 236.06 crores, with fixed deposits up by Rs. 7.50 crores at Rs. 122 crores, savings deposits by Rs. 5.66 crores at Rs. 43.78 crores and current accounts higher by Rs. 2.71 crores at Rs. 70.25 crores. The bank's advances increased by 8.98 percent from Rs. 160.99 crores to Rs. 175.44 crores. Investments are placed at Rs. 65.86 crores, against Rs. 58.79 crores at the end of 1961. Income by way of interest and discount rose by about 11.63 percent from Rs. 10.16 crores to Rs. 11.34 crores. Commission, exchange and brokerage fetched Rs. 2.30 crores, against Rs. 1.25 crores—an increase of about 17.4 percent.

But expenses recorded a relatively bigger increase, thereby more than offsetting the benefit of the larger income.

Interest paid went up by Rs. 73 lakhs to Rs. 5.99 crores. Wage bill

and overheads absorbed Rs. 56 lakhs more at Rs. 4.59 crores. Apart from the increase in expenditure consequent on the expansion of business, contribution to the National Defence Fund took away Rs. 9 lakhs and deposit insurance premium Rs. 10.87 lakhs. Because of the additional burdens, the net profit of the bank is slightly lower at Rs. 1.80 crores, against Rs. 1.83 crores, after meeting all expenses and providing for taxation but subject to provision for bonus to employees.

During the year, the bank opened one branch, 12 sub-branches and five pay offices at various centres and one sub-branch and two pay offices were closed down as they were found to be unremunerative. With the nationalisation of banks in Burma, the business of the bank's Rangoon office has been taken away by the Government of Burma from 23rd February. The manner in which the take-over is to be effected is not yet settled. A sizeable portion of the assets of this branch is said to be held in India.

The capital structure of the Central Bank changed during the year as a result of the amalgamation of the Jodhpur Commercial Bank; the authorised capital increased by Rs. 72,700 to Rs. 6,30,72,700 and the subscribed capital by Rs. 36,350 to Rs. 3,15,36,350. The reserves and surplus have risen from Rs. 4.13 crores to Rs. 5.10 crores. The total working funds of the bank have increased considerably further from Rs. 237.02 crores to Rs. 256.67 crores, mainly because of the sharp increase in deposits and other accounts from Rs. 220.63 crores to Rs. 236.52 crores. The ratio of capital funds to deposits works out to 3.36 percent. The ratio of advances to deposits at the end of 1962 was 74.32 percent, against 73.11 percent at the end of 1961. The Rs. 25-paid share of the Central Bank is currently quoted around Rs. 52, offering a gross return of over 10 percent on fresh investment.

Vasanta Mills Reduces Dividend

THE directors of the Vasanta Mills Ltd have recommended a lower dividend of 20 percent for the year ended December 1962, against 25 percent for the previous year. The net profit amounts to Rs. 4.84 lakhs, after providing Rs. 6.63 lakhs for depreciation, Rs. 1 lakh for development rebate reserve and Rs. 6.60 lakhs for taxation. The net profit for the previous year was Rs. 5.31 lakhs, after providing Rs. 6.56,186 for depreciation, Rs. 1.50 lakhs for development rebate reserve and Rs. 5.20 lakhs for taxation. With Rs. 60,469 brought forward from the previous year, the total available for appropriation is Rs. 5.45 lakhs. Out of this, the directors have transferred Rs. 87,742 (against Rs. 50,000) to general reserve. The preference dividend accounts for Rs. 37,050. The proposed ordinary dividend at 20 percent, subject to tax, will absorb Rs. 4.20 lakhs. The above appropriations have absorbed the entire amount of Rs. 5.45 lakhs, so no amount is carried forward. In spite of the substantial increase in the production costs, the directors feel that the profit earned by the Company has been satisfactory.

Atul Products Repeats

ATUL Products Ltd has maintained the dividend for the year 1962 at 12 percent, less tax, but the total distribution is Rs. 6 lakhs higher at Rs. 32.99 lakhs, compared with Rs. 26.99 lakhs in 1961 as the new shares receive Rs. 9 a share,

against Rs. 3 a share in the previous year. The Company's performance is not unencouraging, although both sales and profit are down. According to the preliminary figures which have been released along with the announcement of the dividend, sales are lower by about 12.6 percent from Rs. 4.75 crores to Rs. 4.15 crores, while the gross profit at Rs. 1.24 crores is about 5.7 percent less than the previous year's figure of Rs. 1.32 crores.

After providing Rs. 26.24 lakhs (against Rs. 22.18 lakhs) for depreciation and Rs. 34 lakhs (against Rs. 38.50 lakhs) for taxation, the net profit amounts to Rs. 57.49 lakhs, against Rs. 64.20 lakhs in 1961. The directors have set aside Rs. 1.60 lakhs (against Rs. 6 lakhs) for development rebate reserve, Rs. 30 lakhs (against Rs. 40 lakhs) for general reserve and Rs. 1.06 lakhs (against Rs. 30,000) for donation. Credit has been taken for a sum of Rs. 6.41 lakhs, being excess provision for income tax in the earlier year. After providing for the proposed dividend which absorbs Rs. 32.99 lakhs (against Rs. 26.99 lakhs), there remains a balance of Rs. 61,183 to be carried forward, against Rs. 2.38 lakhs brought in. The Rs. 100-paid share of Atul Products is quoted around Rs. 400, offering a gross return of barely 3.1 percent on fresh investment.

New Capital Issues

SEVEN companies, of which two are new, have been authorised to raise capital totalling over Rs. 4 crores. Two companies are Central Government undertakings. One company will issue bonus shares, three equities and three equity plus preference shares. The consent in all cases is valid for 12 months. The following are the details:

New India Assurance Company Ltd will raise further capital of Rs. 28,48,425 in equity shares of Rs. 15 each as bonus shares on capitalisation of reserves to a like extent.

Fibre Glass Pilkington Ltd, Bombay, a new company, is to issue capital of the value of Rs. 1,19,99,930 in equity shares of Rs. 10 each at par. Out of this, shares of the value of Rs. 60 lakhs would be offered for subscription to Fibreglass Ltd of St. Helens, Lancashire, England.

Heavy Electricals (India) Ltd, Bhopal, a Central Government undertaking, is raising further capital of Rs. 50 lakhs divided into 5,000 equity shares of Rs. 1,000 each for cash at par.

Indian Oil Company Ltd, another Central Government undertaking, is issuing further capital of Rs. 25,00,000 divided into 2,500 equity shares of Rs. 1,000 each to be issued privately for cash at par.

The Mettur Chemical and Industrial Corporation Ltd, Madras, is to issue capital of Rs. 90 lakhs consisting of 6,00,000 equity shares of Rs. 10 each and 300,000 9 percent preference shares of Rs. 10 each, all for cash at par.

Nimar Textiles Ltd, Maharashtra, will issue capital of Rs. 60 lakhs divided into 50,000 equity shares and 10,000 cumulative redeemable preference shares of Rs. 100 each carrying dividend at 9.5 percent for cash at par.

The Bilaspur Spinning Mills and Industries Ltd, a new company incorporated in West Bengal, is to issue capital of Rs. 27.39 lakhs divided into 198,900 equity shares of Rs. 10 each and 7,500 cumulative redeemable preference shares of Rs. 100 each carrying dividend at 9.3 percent.

The Stock Markets

CALCUTTA RESUMES TRADING BUT TURNOVER SMALL

Wednesday Evening.

THE Calcutta stock market resumed trading last Monday after an interval of a week. The operators had earlier stopped transacting any business as a mark of protest against the super profits tax. They had thought that their action would impress the Central Finance Minister, when the stock exchange representatives met him in New Delhi last week. But the move fizzled out. Although the stock exchange delegation was given a patient hearing, the Finance Minister, as was expected, did not give any indication about modifying the levy. Meantime, the interruption of business has probably embarrassed small investors who urgently wanted to obtain cash by selling shares.

This apart, trading during the past couple of days indicates that the panic in Lyons Range has been exaggerated. Although turnover has been thin, prices have not fallen as sharply as was feared earlier. The decline in turnover is not difficult to understand considering that the super profits tax is not expected to be modified substantially. Therefore, until the Super Profits Tax Bill is finally passed, nobody is willing to extend his commitments.

All sections of trade and industry have made strong representations to the Government about the adverse impact of the levy. In fact, the latest reports of some leading companies confirm the impression that the proposed impost, unless modified, will seriously affect retained profits and dividends. In any case, the outlook for dividend and growth has deteriorated considerably during recent months. Corporate profits have been squeezed by heavier taxation and rising production costs. Investors have, therefore, been right in expecting that share prices would move down in order to adjust themselves to lower dividends. Since it is not possible to take a correct view until the final form of the super profits tax is known, buyers have decided to hold back. Even bargain hunters have been sitting out in the hope that share prices may fall further. In a market which has been devoid of support, any small selling has tended to depress prices out of all proportion.

Wednesday's clearing passed uneventfully. Compulsory carry-over at fixed badlas was enforced in the case of only ten clearing shares. The minimum prices of nine clearing shares have been cut. The carry-forward charges were slightly higher than in the previous settlement. Lyons Range is also getting worried whether pressure from banks would increase in view of the sharp decline in prices. Since the recent fall has wiped out the margin in the case of overdrafts against shares, bank pressure may do more harm than good. In the circumstances, it is necessary that the Reserve Bank should ask the banks to be more generous in advancing against shares. It is time the margin against share advances was raised.

A disturbing development is that the new issues market has been badly affected by the super profits tax. Not only have the prices of new shares fallen sharply; many proposals for new issues have been either abandoned or deferred. Even

Hindustan Lever and Goodyear India have decided to postpone their rights issues which were meant to raise funds for their expansion.

Although prices of Government securities have been slightly steadier, mainly because of official support, turnover has been negligible. Institutional buying has been conspicuous by its absence. The Reserve Bank has increased its buying prices for some selected short-dated loans. State Government loans have been difficult to deal in in the absence of buyers. The 3 percent conversion loan has closed at Rs. 63.

The Calcutta stock exchange has changed the minimum rates for the following clearing shares:

Guest, Keen, Williams ...	Rs. 29.50
Hindustan Motor ...	Rs. 15.50
Indian Aluminium ...	Rs. 29
Indian Iron ...	Rs. 19.25
J. K. Rayon ...	Rs. 12.25
Kesoram Industries ...	Rs. 19
Orient Paper ...	Rs. 30.50
Rohtas Industries ...	Rs. 10.50
Dunlop Rubber ...	Rs. 31

Bombay

BUSINESS COMES TO A STANDSTILL

BAD CORPORATE NEWS AFFECTS SENTIMENT

Wednesday Evening.

BUSINESS has almost come to a standstill in the Bombay stock market. Earlier during the week, there was an improvement on hopes that the super profits tax would be substantially modified. After the presidents of the various stock exchanges met the Central Finance Minister in New Delhi last week, it became clear that no idea about the modification could be had until the Super Profits Tax Bill was passed. Hence operators have been disinclined to extend their commitments in any way. Whenever share prices have improved, selling has been attracted. Thus fluctuations have been narrow in a limited turnover.

Corporate news, has meanwhile been unfavourable. The latest results of cotton mills in Bombay show how profits have been squeezed by increased taxation and production costs. The fact that a leading company like Bombay Dyeing has earned less profits in 1962 than in 1961 has acted as a damper. Brady and Company has cut the taxable ordinary dividend. Shivrajpur Syndicate has again passed the dividend, but the report has not yet been published. Since electric and mining companies are not permitted to publish their reports and accounts, the Company has been ascertaining

from the authorities whether they should publish their annual reports as before.

Bombay Burmah has been permitted by the Controller of Capital Issues to issue bonus shares by capitalising reserves, provided the Company subdivides all its shares into scrip of Rs. 25 each. The only good news is that New India Assurance has been permitted by the Controller of Capital Issues to issue bonus shares by capitalising reserves. Hence this scrip has improved somewhat. Sugar shares have been subdued as the companies are believed to be preparing to challenge the Maharashtra Land Ceilings Act in the court. It is believed that the Central Bank of India has decided not to proceed with the proposed rights share issue for the time being. It was originally intended to issue rights shares in the proportion of one new share for every two held. Tata Steel closed at Rs. 118.50, Bombay Dyeing at Rs. 62, Bombay Burmah at Rs. 622, New India Assurance at Rs. 55 and Tata Locomotive at Rs. 281.

Madras

TURNOVER STILL RESTRICTED

MINIMUM PRICES SCRAPPED

Tuesday Evening.

THERE has been very little business in the Madras stock market during the past week. Aluminium Industries rights have been transacted at Rs. 2.40 and F.A.C.T. have been done at Rs. 7. Investors and operators have been chary of doing business on fears that share prices will decline further since minimum prices of all shares have been scrapped. The decision of some banks to cut the dividends already announced has dampened sentiment. The Indian Overseas Bank will pay a taxable dividend of 12 percent, instead of 14 percent, and the Indian Bank a taxable dividend of 6.5 percent, instead of 7.5 percent. Rajalakshmi, in the cotton mill section, has decided to pay a taxable ordinary dividend of 15 percent.

Investors are particularly disturbed by the fact that plantation companies will be badly affected by the super profits tax. Since the capital-reserve base of these companies is usually small in proportion to the total turnover, the impact of the levy will be severe. Hence there has been a predominance of sellers in these shares despite the fact that the crop reports of tea companies, in particular, have been generally more satisfactory than in 1961-62. Blue Mountain, Consolidated Coffee, Ouchterlony and Periakaramalai have been freely offered without attracting any support. There has been no interest in cotton mill shares. Miscellaneous shares have been neglected.

Whatever buying has taken place has been confined to high-yielding

London

TRADING CONDITIONS CHEERFUL EXPECTATIONS OF TAX RELIEF

London, 3rd April.

CHEERFUL conditions prevailed in the stock market during the past week. Confident expectations of tax concessions in Mr. Maudling's first Budget brought in a steady stream of buyers of industrial equity shares, and with few sellers about, prices forged ahead to record widespread, and in many cases, appreciable gains. Demand embraced almost all industrial groups. Prices eased slightly on the eve of the Budget on profit-taking, but the major part of the earlier gains was maintained. While the approaching Budget dominated the market, Dr. Beeching's plan to slash railway services stimulated buying of road transport shares which moved up sharply. Banking, H.P. insurance and property shares were in demand. With equities in favour, gilt-edged attracted little attention, but prices generally held steady. Dollar stocks moved within narrow limits. Greek bonds reacted in the foreign market. Gold shares generally fluctuated narrowly, but Johnnies were a strong feature on the share deal with Rand Selection and the dividend forecast. Teas moved uncertainly under the influence of the Sino-Indian frontier situation. Rubbers were neglected but steady.

U.K. INVESTMENT IN COMMON MARKET

SINCE the break-down of negotiations in Brussels, the British Treasury has been watching closely the trend of British firms' direct investment in the Common Market. Many firms were waiting for the outcome of the negotiations, undecided whether to organise manufacture in the Common Market or to concentrate their efforts at home with a view to exporting to the Common Market. Some of them established small units in the Common Market, with the intention to expand them if Britain remained outside the Community or to use them for such purposes as servicing their exports if the Community's tariff wall were extended round Britain. The Treasury feared a rapid increase in British investment in Europe after the negotiations failed.

Such information as is available from companies indicates that they are not hurrying to increase their investment in Europe, and the narrowing of the premium on "investment dollars" points in the same direction. But some companies are extending their interests there, and the movement, necessarily slow at the start, will probably gain impetus. There is a feeling in the City of London that if a considerable expansion of foreign investment coincides with a temporary deterioration in Britain's current account, the authorities may tighten restrictions on foreign investment.

However, it should be appreciated that most British firms have some unused capacity in their factories at home and that they will be reluctant to establish or to expand manufacturing units abroad if they can fully utilise their existing resources by increasing their exports. In some markets, the inhibiting factor is direct restriction of imports; to circumvent this restriction it is necessary to manufacture locally. But where the obstacle is an import duty it may be more economical to reduce the basic price of goods to surmount the tariff, thereby increasing sales and expanding output so that capacity at home is fully employed; for by that means unit-costs can be reduced.

U.S. Capital in U.K.

Another factor in the international capital account is the flow of U.S. investment. Britain can finance more investment in Europe and elsewhere if she receives more capital from the U.S.A. But American companies are now planning their foreign investment in a changed situation. Last year they could reasonably assume that Britain would soon be in the Common Market; this year they must accept the fact that in the foreseeable future, they will not be able to get their goods into that market, on favourable terms, by manufacturing in Britain. On the other hand, they have been made aware that they are unwelcome in France; and through Britain they can still gain preferential entry into the Free Trade Association and the Commonwealth.

It has been, perhaps, too readily assumed that U.S. companies were waiting to decide between Britain and continental Europe. Some of them, recognising that the Common Market will not soon be enlarged

by the inclusion of Britain, may curtail their plans for foreign investment, preferring to use their capital at home. Such a policy would please the Administration, not only because it would relieve pressure on the balance of payments, but also because it would promote employment at home. Conversely, Britain—particularly Scotland, which has hitherto attracted a large proportion of U.S. capital but is still a depressed area—would welcome more U.S. capital for the sake of the balance of payment and employment; though recent drastic cuts in the labour force of U.S. firms in Scotland, and the possibility that U.S. firms (Ford is often mentioned) will transfer some of their production from a British to a continental subsidiary, warn Britain that U.S. capital is an unstable factor in the economy.

Relative Costs

This year's political and economic developments in Europe will probably deter medium-size U.S. firms: the huge corporations plan long-term and on a vast scale, and they will probably continue to invest in Europe (including the U.K.), not only to get behind tariff walls, but also to produce in a geographical area where incomes are rising fast and the market for goods is not stated, as it may appear to be in some trades in the U.S.A. Despite the impediment of remaining tariffs, these corporations tend to specialise in each European plant. The broad policy of International Business Machines, for instance, is to make any particular product in only one of its six main plants in Europe. In spite of the tariffs, goods made by U.S. firms in Britain are exported to the Common Market and goods made by U.S. firms in the Common Market are exported to Britain. Factors determining the choice of sites are not only relative costs but also proximity to the market where the biggest sales are envisaged. Du Pont, for instance, has located an Orion plant in Holland to serve primarily the Common Market and secondarily the U.K., and a synthetic-rubber plant in Northern Ireland to serve primarily the U.K. and secondarily, the Common Market.

Partly, no doubt, because of the common language, American firms have hitherto invested rather more in the U.K. than in the Common Market. The latest authoritative estimate, covering 1961, shows an aggregate of rather more than \$3,500 million in the U.K. and rather more than \$3,000 million in the Common Market. In the last two years, however, the U.K.'s share of this direct investment has diminished, and this trend will probably continue.

It is arguable that this direct investment, however distributed, is excessive, for development capital is needed in the under-developed countries rather than in Europe. It is, anyway, anomalous that countries that receive this investment are required to refrain from converting dollars and to provide short- or medium-term loans to support the U.S. currency. The funds needed for the U.S.A.'s direct and portfolio investment in Europe are not really available, and in recent years Europe has in effect lent to the U.S.A., by devious means, most of the American capital that it has received.

Money

THE CALCUTTA MONEY MARKET

SLIGHT INCREASE IN ADVANCES

Wednesday, 3rd April.

THERE has been a slight increase in the general level of advances in the Calcutta money market during the past week. The requirements of the jute mills are higher. But the credit given to the cotton textile and sugar industries, and to the foodgrains and seeds trade, is unchanged. There has been a slight decline in the advances given to the iron, steel and engineering industries. In the interbank market, conditions are slightly easier and the call rate quotes 64 percent.

The exchange market has been quiet. The supply of gunny bills has been spasmodic, but tea bills are scarce. The demand for remittance has increased. Sterling has weakened in relation to all the major currencies except the Canadian dollar.

DUE TO THE RAMNAVAMI FESTIVAL, the price of silver fell from the previous week's level of Rs. 280 to Rs. 278.75 in the Calcutta bullion market. The London and New York prices were 109-7/8d and 127.3 cents. There was no trading in gold.

DURING THE WEEK ENDED 29TH MARCH, Government of India Treasury bills for Rs. 156,46,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 1st April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,370 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 8th April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 2nd April to 6th April at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 26th March to 30th March, amounted to Rs. 10 lakhs.

A RISE OF RS. 11.52 CRORES TO RS. 2,241.96 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 29th March, 1963. The total note issue was Rs. 63 lakhs larger at Rs. 2,250.52 crores. Notes held in the Banking Department consequently fell by Rs. 10.89 crores to Rs. 8.56 crores. Deposits of the Government of India fell by Rs. 5.83 crores to Rs. 55.83 crores, while those of other Governments rose by Rs. 3.80 crores to Rs. 31.42 crores. Balances of scheduled banks at Rs. 74.91 crores showed a rise of Rs. 3.22 crores. Balances held abroad fell by Rs. 1.19 crores to Rs. 11.30 crores. Loans given to scheduled banks increased from Rs. 60.38 crores to Rs. 71.28 crores, of which advances against usance bills were Rs. 53.30 crores (Rs. 54.31 crores). Ways and means advances stood at Rs. 28.89 crores, against Rs. 30.35 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 22nd March, 1963, shows a rise of Rs. 5.15 crores to Rs. 553.12 crores in total deposits.

Investments in Government securities are up by Rs. 9.96 crores to Rs. 214.71 crores, while other authorised investments remain unchanged at Rs. 7.83 crores. Advances, including loans, cash credits overdrafts, and bills discounted and purchased have increased by Rs. 59 lakhs to Rs. 320.14 crores. Cash and balances are, in consequence, shown at Rs. 19.79 crores or Rs. 1.90 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 22nd March, shows Demand and Time Liabilities at Rs. 981.45 crores (Rs. 22.30 crores on account of borrowings from banks) and Rs. 1,228.84 crores (Rs. 16.50 crores), compared with Rs. 959.56 crores (Rs. 21.57 crores) and Rs. 1,243.46 crores (Rs. 18.75 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.26 crores and Rs. 2.33 crores to Rs. 51.68 crores and Rs. 69.82 crores, respectively. There is a rise of Rs. 9.56 crores to Rs. 597.11 crores in investments. Advances and bills discounted at Rs. 1,594.52 crores show a rise of Rs. 84 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.5 percent and 72.1 percent, against 5.7 percent and 72.3 percent.

THE FOLLOWING IS A STATEMENT OF the cash balances of the Central Government on the last day of December 1962:

(1) At the Reserve Bank of India	Rs. 52,23,45,000
(2) At Treasuries in India	(-) 43,76,000
(3) In England (Sterling converted at 18d the rupee)	1,38,76,000
Total	53,18,45,000

SEN-RALEIGH LIMITED

CHAIRMAN'S REVIEW

The 13th Annual General Meeting of Sen-Raleigh Limited was held in Calcutta on the 28th March, 1963. Below is the statement of Mr. Abhijit Sen, Chairman of the Company.

In the year under review the growing popularity of the Company's products was reflected in the satisfactory increase in its sales. The demand for its bicycles continued to rise steadily and even with a considerable rise in production, the year closed with a full order book in this line. Except for one of our products where off-take did not match output, the demand for bicycle components was also steady.

In the face of ever-rising costs of raw materials and their erratic supply making operating conditions difficult and leading to unduly high costs of production, the profits of the Company have failed to rise in proportion to its expanding sales. This is a situation which your Directors view with concern and to which they are endeavouring to find a remedy.

The changes brought into the organizational structure of the Company over the recent past have effectively helped in improving production, but it has to be noted with regret that they have not yet achieved the much desired targets of improved efficiency and tighter controls referred to in my last report to you. To bring future profits of the Company more in line with the scale of its operations, it is necessary to streamline its activities in all aspects, and, though this is bound to be a formidable uphill task, it is one that must be handled boldly—with all the resources of the Company mobilised in the attempt. If there is a realisation of the fact that with a sincere effort on the part of each and every person within the organization the targets of efficiency and improved operation can be reached, it should be possible in the coming years to attain this goal—and maintain the Company's pre-eminent position amongst leading bicycle manufacturers in the country.

Industrial Production

In the context of the present emergency the accent in industrial production is on co-operative effort better to utilise materials, avoid waste, and increase productivity. These important features kept in the forefront at all times—and not only during the emergency—will inevitably lead to improved operations for any industrial unit, and it is only to be hoped that the present heavy emphasis on these aspects of operation remain with us for ever.

If the months following the emergency are any index of the shape of things to come, the outlook for the coming year is not very bright. Further cuts in import licences demonstrate the bicycle industry has fallen considerably from grace where import policy is concerned. Moreover the exigencies of the situation have called for diversion of supply of the limited quantity of indigenous steel to defence production, and a considerable drop in the bicycle production as a whole in the country is visualised unless the better in time changes rapidly for the better in the near future. The dock strikes in the U.S.A., a country from which much of our raw materials now come, have been a further retarding factor affecting supply lines, and as a result of all these features, both bicycle and of other component production has suffered a considerable set-back. In the interests of India's economic development, it is only to be hoped that these conditions will pass off soon.

Early in the emergency, your Company along with many others offered its services for assisting in defence production. Your Company is emi-

nently equipped to undertake production of defence stores and any orders for defence production would doubly benefit the country in its hour of need, as, in addition to resulting in out-turn of much needed stores, these would also assist towards fuller employment, and utilisation of idle capacities.

Future Projects

Though the immediate outlook is not very encouraging, your Directors do not consider that the Company should delay implementation of any of its future projects on which it has been working for the past two years. As you are aware, negotiations have been successfully concluded with Raleigh Industries Limited for financing the foreign exchange requirements of schemes for expansion of bicycle production and diversification into the manufacture of House Service Meters. These negotiations culminated in the subscription by the latter to a substantial part of the new capital issued by the Company in November last, and, in their executing a series of fresh agreements with the Company to replace the Agreement dated 3rd November, 1948 and the Sales Agreement. In November too, the Company in General Meeting accepted the new continuing Technical Aid Agreement with Raleigh Industries Ltd., under which royalty will be payable at half the previous rate until 1968, and no royalty shall be payable thereafter for technical aid and use of their marks.

At the same time, the Trade Mark Agreements with Raleigh Industries Limited and its Associates were recast to fall in line with the requirements of the Trade & Merchandise Marks Act 1958. Amended Agreements with Union Sils van de Loo & Co., and Wittkop & Company consequent to the revision of the Trade Marks Act have also been submitted to Government for approval. An Indian Trade Mark belonging solely to the Company has now been introduced, and it gives me pleasure to announce that the first consignment of bicycles bearing the brand 'Balaka' will soon be on its way to Africa. It has been found that in markets where the popular English brands of our Associates hold sway, an Indian brand of bicycle with our

standards of quality finds easier acceptance than the English brand of an Indian manufacture. In such markets an Indian Raleigh would fight an unequal contest with its English counterpart and result only in creating an embarrassing situation for both. Although we have started the Balaka exports in a small way at present, one can hope for the time when this flight of Indian birds will spread its wings over the major cycle importing countries of that day.

Expansion Programmes

The expansions we have undertaken would cost the company over Rs. 2 crores in the next 2/3 years, and the Capital we have now raised will be financing just one part of this expansion. For the rest, we shall be dependent mainly on finances generated within the Company, but we may need to consider an approach to the Industrial Finance Corporation for foreign fund loans for the reason that though the Raleigh subscription covers the exchange requirements of the entire bicycle expansion scheme and most of the House Service Meter scheme, a small part of the exchange requirements of the latter scheme still remains to be found.

For the scheme of manufacture of House Service Meters, a Technical Agreement has been entered into between your Company and Associated Electrical Industries Limited, of U.K. This Agreement has a tenure of ten years, and is based on the payment of royalty for use of the AEI 'knowhow'. It also allows the Indian Company to export. The planning work on this project is well advanced, and subject to import licences for plant and equipment being received on time, it is expected to commence trial production in 1964.

In planning our expansions, we have the expectation that the steel output in the country having reached its take-off stage, much of our expanded requirements could be met in the near future from indigenous supply; that if exports of our products develop on planned lines, export incentive licences should help us substantially in regard to meeting our essential import requirements; and that most of the plant required for our expansions would in general be suitable for manufacture of defence stores, should this

aspect of production assume greater priority. At the moment, the range of steel manufactured in the country is relatively wide, and with better co-ordination on the part of the various Ministries concerned leading to a fuller utilisation of re-rolling and cold-drawing capacities in the country, the major requirements of Light Engineering Industries could be met from indigenous steel. Today, though skelp, black bar and wire-rod are all manufactured in fair quantity by the primary steel producers, much of the cold strip, bright bar and wire drawing capacities in the country still remain idle and imports have to continue in these latter items. With a bit of planning, and co-ordination the imports could be scaled down considerably with hot-rolled material replacing the cold-rolled and allowing the cold-rolling capacity in the country to work to capacity. It is hoped that with the creation of the new Ministry for Economic and Defence Co-ordination, this problem could be looked into on a wider perspective than at present.

Rise in Costs

The impact of the recent increases in excise have already been reflected in our past year's performance. With the threat of further taxation looming ahead of us, the extremely onerous burden of Emergency War Risks Insurance premia, and increasing costs of transport and power a rise in costs will inevitably result of an order which cannot be countered by any economy effected by efficiency of operation or increased output alone. Something extra is called for now and we must be prepared to trim the many little luxuries we have allowed ourselves in the past, and to effect the many small economies which we have tended to ignore as inessential so far, in our bid to meet the challenge of the times.

Staff and Worker relations continued to be quite happy though recent layoffs due to lack of materials has been a disturbing factor for both management and workers. Towards the end of last year, the Agreement with the Employees' Union at Kanyapur was to have come up for review, but in the face of the emergency, both the Union and the Company agreed that the existing one be extended and negotiations for a new agreement be held in abeyance till more settled times.

I cannot close without a word of thanks to all staff and workers of the Company for their efforts during the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

PREFABRICATED TUBULAR ROOFING STRUCTURES

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 6 in.
SLS/44	44 ft.	10 ft. 1/8 in. and 13 ft. 4 1/8 in.

ASIATIC OXYGEN LIMITED

REPLACE S.P.T. BY VOLUNTARY CONTRIBUTIONS, MR. JALAN PLEADS

Extracts from the Chairman's speech of Mr. B. L. Jalan at the Annual General Meeting of Asiatic Oxygen Limited held at Calcutta on Saturday, the 30th March, 1963.

Gentlemen,

As you are aware, our proposed production facilities together with those of our subsidiary company will represent an extensive network of in-

dustrial gas factories around the country, at Calcutta, Bhilai, Barauni, Durgapur, Bombay, Madras, Rourkela, Hyderabad and Patna. We will also have additional three units for the manufacture of oxy-acetylene gas, welding and cutting equipment, electrodes, and arc welding transformers, which will enable us to provide complete service to our customers, large or small, in the industrial welding and cutting field. Our gas plants are expected to be shipped from the U.S.A. very shortly and we hope that all our gas plants will be on stream before the year is out.

It is not necessary for me to dilate at length on the prospects of this industry. The demand for oxygen and dissolved acetylene was estimated at 1000 million cubic feet and 150 million feet respectively in 1960-61. The Third Plan production targets of 1650 million cubic feet for oxygen and 200 million cubic feet for dissolved acetylene were based on a projected capacity of 2300 million cubic feet for oxygen and 250 million cubic feet for dissolved acetylene. This growth represents a 66 per cent rise in 5 years for oxygen and 33 per cent for dissolved acetylene. All indications and projections show that the demand would be higher. Utmost vigilance, however, is warranted in our licensing policy which may lead to mushroom growth of industrial units leading in its wake to uneconomic and wasteful capacity.

Need for Defence

The industrial gas industry has assumed a special importance owing to the national emergency proclaimed in the aftermath of the massive and wanton Chinese invasion. The requirements of oxygen and allied gases for purposes of defence have considerably gone up in consequence of increased defence efforts. Your industry, I am proud to say, has joined the whole country in offering its services and unstinted support in the national cause. It is a matter of great satisfaction to us that practically the whole world has supported our righteous stand and that Communist China has been completely isolated. Friendly countries like the United States and the United Kingdom, besides several others, have come out with large scale and immediate help.

As the Prime Minister has rightly said, the war has to be fought not only on our frontiers but equally in our fields and factories. No time would be more propitious than now that the 150 million of our working village people should be geared to provide more food and more raw materials. Voluntary extra effort would be the answer. Members of Parliament, State legislatures and other social workers supported by Government officials in rural areas can do yeoman's service to the nation by organising the villages to dig canals, wells and the like. Targets should be determined for each State, each district, each village. Simultaneously, industry should be asked to operate additional shifts and to work on all Sundays. Workers should contribute to the National Defence Fund their extra wages and the industrialists their extra profits. It is estimated that in one year alone workers would earn about Rs. 75 crores of additional wages, the industry would produce additional goods and services of the gross value of Rs. 480 crores and of the net value of about Rs. 180 crores.

New Taxes

It is in this perspective and context that we should view the various

measures taken by the Government including the new taxes. The yield, you know, of the new super profits tax has been estimated at Rs. 25 crores which pales into insignificance before the estimates of additional wealth which would be created by making the industry work on additional shifts and on Sundays. Moreover, the suggestions I have made a little while ago would increase the national wealth, and therefore, the intrinsic strength of the nation. The taxation will only bring about a mere transfer of the existing flow of incomes even if it does not actually, as apprehended by many, retard production seriously. It may also be recalled in this connection that even the voluntary contributions to the National Defence Fund during the last six months, have been twice as large as the total yield estimated to accrue from the new super profits tax for the whole year. I have absolutely no doubt in my mind that if instead of imposing this fresh tax, the Government asked the industry and the people of India to make additional voluntary contributions to the tune of Rs. 25 crores, they would welcome this as an additional responsibility to be carried out willingly and with a sense of gratification.

In the midst of the flare up of border warfare and some initial reverses, our Prime Minister so boldly and so rightly laid the task before the nation: while we should double our efforts and be prepared for a prolonged war with our treacherous neighbour, we should not relent our efforts to achieve a faster rate of industrial and economic growth. Any other approach would only achieve one of the basic objectives of our communist adversary. Confronted with a complete debacle of "leap forward" at home, the successful "leap forward" in India by democratic methods, techniques and institutions, became an eye-sore to China. By giving up our plans of economic development we would only be playing into the hands of the aggressor.

Our distinguished Finance Minister in his budget speech so candidly and so lucidly described the objectives of our fiscal and economic policies. At the cost of repetition I will reproduce here what he said: "First and foremost, there is the need to increase production and accelerate the pace of development. The growing claims of defence and development cannot be met except on the basis of an expanding volume of production. By far the greater part of the responsibility for increasing production rests with the private sector and when I refer to the private sector, I am referring not only to organised industry and labour, but also to the millions of our peasants and artisans." "The second thing which may be evident from what I have said earlier is the seriousness of our foreign exchange position." One wonders, however, if the tax proposals are calculated to help achievement of the basic objectives of our policy.

Take the super profits tax. It is a tax on taxed income. It is a tax on economy and efficiency and higher productivity. It is a deterrent tax on investments. It is a deterrent tax on inflow of foreign capital. Does it not, therefore, go against those basic principles of taxation which have been evolved through many centuries?

The super profits tax also negatives the attractive features of our tax system, namely, development rebate and five year tax holiday.

Industrial Policy Resolution

I do not have many doubts about the situation which emerges. Our objec-

CAPITAL, 4th April, 1963.

tives have been wisely devised; but the ways and means adopted to achieve them are calculated to defeat the very objectives. It is not a question, as is sometimes posed, of public and private sectors. It is a basic question of mobilising, in the most efficient manner, our limited national resources. It is in this context that I sincerely believe that our Industrial Policy enunciated in 1956 has become outdated and obsolete. There cannot be a dichotomy of productive effort, reserved here for the private sector and there for the public sector. There is only one sector and one goal. The only sector is the national sector. The only goal is the national growth and prosperity.

It is only in recent years that people in the middle and lower income brackets have shown considerable interest in industrial investments. This is doubtlessly a very healthy and profound development. It has a far reaching impact on our economic and social framework. I wish the Government realised the deterrent impact the new budget would produce on these large number of investors and disturb healthy trend of more widespread interest in capital issues.

There is yet another area into which I am afraid the dynamic sense of national urgency has yet not penetrated. The functioning of the licensing procedures and of the autonomous public institutions continues to be as, if not more, dilatory than before. The impression has gained currency that the national emergency has not brought any perceptible change in the red-tape-ridden methods and procedures of Government.

Dilatory Methods

I am aware of quite a few cases of leading foreign companies which otherwise willing to make large investments, were repelled by bureaucratic behaviour and dilatory methods of licensing and regulatory procedures. It is, perhaps, seldom a more precious asset, that is, highly advanced technical know-how. The United States of America spends every year on research alone some 15 billion dollars. That is, about Rs. 7,500 crores equivalent to our total public spending under the entire Third Five Year Plan in all the sectors of the economy. It is, indeed, this national urge for more efficient techniques, tools and processes which have made possible the high productivity of American industry and the phenomenal prosperity of the American people.

I had referred earlier to another objective of our current economic policy, namely, to hold the price line. It is a 'must' for our rapid and accelerated rate of industrial and economic growth and for mobilising our resources for defence at minimum cost. I am afraid, however, that powerful forces have been released in the economic system which would make it impossible to hold the price line. Government spending, both on civil and defence accounts, has been raised phenomenally. Similar spending on capital account has been likewise rising. Monetary incomes have been touching new high levels. Liquidity within the country is expanding owing to foreign aid and investments. Industrial costs have been allowed to increase unabated. Taxes have been imposed which tend to further increase the costs. The cost of capital equipment and construction has considerably gone up. The cost of capital goods has witnessed an unprecedented rise in recent years while bank credit to industry is becoming more and more difficult to obtain. Disposable profits have been reduced by all forms of taxation.

This does not purport to be the record of proceedings of the meeting.

CAPITAL, 4th April, 1963.

New Delhi

THIRD PLAN MAKES POOR PROGRESS IN TWO YEARS

(FROM OUR NEW DELHI CORRESPONDENT)

IN the 1963-64 annual plan, adequate provision has been made for agricultural production programmes, consumer co-operatives and irrigation schemes which are expected to yield benefits early. A larger provision has also been made for power schemes, and such industries as steel, fertiliser, electrical, engineering and coal mining. The line capacity of the railways is being extended, and road works are being taken up to meet the needs of the emergency. The training of engineers, medical and other technical personnel is also being expedited.

In the first year, the third plan outlay was around Rs. 1,140 crores. On the whole, this did not cause any serious strain on the economy. The Budget deficits at the Centre and States were moderate, and they were met by drawing down cash balances and through the issue of Treasury bills. Some States, however, had no cash reserves to fall back upon. The deficits, therefore, had to be met by unauthorised overdrafts from the Reserve Bank. To enable these States to clear off their overdraft liabilities, the Centre had to offer them ad hoc loans. The aggregate Budget deficit of the Centre and the States amounted to Rs. 96 crores. Rupee resources corresponding to external assistance amounted to a little over Rs. 300 crores. The remaining amount of Rs. 743 crores was found from current revenues, additional taxation, surpluses of railways and other enterprises as well as borrowings, small savings and miscellaneous capital receipts.

The Outlay Target

For 1962-63, the outlay target for the third plan was initially taken as Rs. 1,476 crores. The revised estimates show a small increase over the earlier figure. The actual outlay may well turn out to be somewhat lower. Nevertheless, the increase in the outlay this year over that of the previous year will be of a sizable order. On the basis of the revised estimates, the Budget deficit is likely to be around Rs. 215 crores, although the actual position might turn out to be somewhat better.

For 1963-64, the outlay target for the third plan has been fixed at a little over Rs. 1,650 crores. But it appears unlikely that this target will be reached.

As for the surplus from public enterprises, the actual contribution in the first two years has been below the initial expectations. For 1963-64, the target of surpluses from these enterprises has been fixed at Rs. 69 crores, which shows a big increase over the likely realisation in 1962-63.

The performance in the sphere of small savings in the first two years of the third plan has not come up to expectations. To supplement small savings a compulsory savings scheme has been included in the Central Budget.

The expenditure in the first two years, 1961-63, on agricultural programmes, co-operation and community development is estimated at Rs. 335 crores. Including an outlay of Rs. 216 crores for 1963-64, the outlay in the first three years (Rs. 551 crores) is less than 52 per cent of the five-year outlay. The budget for

the community development programme has been re-orientated in order to concentrate on agricultural production.

As for large and medium industries as well as minerals, against the third plan outlay of Rs. 1,882 crores (including Rs. 80 crores on State plans), the actual expenditure in 1961-62 is Rs. 193 crores, the anticipated outlay in 1963-64 Rs. 298 crores and the budgeted outlay Rs. 365 crores (including the expenditure to be met from internal resources of public enterprises). There has been a substantial increase in the outlay from year to year.

The foreign exchange component of public-sector industrial projects in 1963-64 is more than Rs. 100 crores. It is expected to be met almost wholly from foreign aid. The implementation of these projects will result in a rapid use of foreign aid and credit.

The following table indicates the outlays on important industrial and mineral projects:

	(In Rs. crores)			
	Five-year outlay 1961-66	1961-62 actuals	1962-63 anticipated	1963-64 Budget
(i) Steel	622	41	71	104
(ii) Heavy Industries				
(a) Heavy engineering	130	15	36	32
(b) Heavy electricals	104	11	15	18
(c) Fertiliser factory, Trombay, Namrup, Gorakhpur and F.A.C.T. (Kerala) and Madhya Pradesh	63	5	25	18
(iii) Coal				
(a) N.C.D.C. and Singareni collieries	121	13	21	22
(b) Neyveli lignite	64	27	22	16
(c) O.N.G.C.	149	14	22	30
(d) Refineries	69	18	18	16

The belated review of the first year of the third plan was published last week. The review is a record of achievements on each and every front. If there have been shortcomings, they are attributed to acts of God.

Actual Performance

The review says: "Considering the standard of actual performance which the third plan has been able to achieve in its first year, it appears that, while in the aggregate, it has met with some degree of success in certain directions, the pace of progress has not been fast enough, at least in view of the ground to be covered in the entire five-year period."

"In the agricultural sector, the output of foodgrains was at 78.6 million tons, being lower by about 1 million tons, compared with 1960-61. There was also a decline in the production of certain important cash crops like cotton. The additional utilisation of major irrigation was less than 1 million acres and additional potential from minor irrigation less than 2 million acres. The area benefited from soil conservation increased only by about 1 million acres. The performance of other agricultural production programmes was of like order. The overall performance in agriculture was thus far from satisfactory. In the industrial sector, while there was a significant addition to capacity and out-

put in certain categories, the rate of growth of industrial production, as a whole, had slackened."

As for agriculture, apart from adverse weather conditions, expansion of the production potential had not been realised to the extent planned. There has been a tendency in some States to divert outlays for irrigation. But maximum benefits have not been secured from irrigation potential already created due to the failure to construct field channels in many areas. The progress of minor irrigation schemes has not been satisfactory either.

Seed multiplication and distribution programmes suffered because of the inadequate financial provision in the State plans. While the availability of nitrogenous fertilisers has improved, it continues to be below requirements as imports cannot be increased due to the foreign exchange shortage. The problem of raising agricultural production is, however, one of increasing the yield and acreage and in conserva-

construction and maintenance of field channels has been fixed on panchayats. Meantime, the taxpayer is being asked to pay more money for the Ministry which is now engaged in creating a village defence force. The agriculture targets still remain targets—yet to be achieved.

Industrial Progress Retarded

As for industries, the principal factors which adversely affected the rate of growth were the shortages of transport, power, fuel, essential raw materials and foreign exchange. The position in relation to power and transport has eased lately to some extent but the supply of essential raw materials and components continues to be difficult due to the shortage of foreign exchange. Meanwhile, some public-sector projects have not operated to full capacity because of technical and other difficulties. The tendency to satisfy regional and individual claims by licensing too many units within an allotted capacity has led to the development of high cost units.

Some projects have already been crowded out of the third plan. They include the Bokaro steel plant and the heavy plate and vessels project which is to be located in Wardha. The expansion of the Rourkela and Durgapur steel plants is expected to be completed within the third plan but it is doubtful whether both of them will be able to realise expanded production by 1966. The commissioning of several projects, such as the Barauni oil refinery is behind schedule.

In the private sector, as already reported, many industrial licences had to be cancelled due to the delay in implementing the schemes. This may lead to shortages of particular industrial products. The Government is anxious to reach the target capacity for fertilisers and aluminium. The Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, warned recently that the Government might take over a particular fertiliser project if its implementation was not speeded up by the private party which received the licence earlier.

The case of aluminium projects is even more depressing. It was almost two years ago that two licences were issued for setting up a plant each in Koyna and Mangalore, with a capacity of 20,000 tons and 30,000 tons respectively. Although the difficulties concerning the Koyna project have been ironed out, those relating to the 30,000-ton Mangalore project still remain unsolved. Mr. Murarji Vaidya, it will be recalled, got a licence for the project. He made collaboration arrangements with the U.S. firm of Reynolds. It is no longer a secret that Mr. Vaidya and Reynolds had some differences of opinion. So Mr. Vaidya eventually fixed up another foreign collaborator. Apart from other difficulties, it is not yet known whether the new collaborator will be able to arrange all the dollar loans and credit facilities which Reynolds had succeeded in arranging.

It will thus be seen that the picture painted by the Planning Commission on the achievements in the first year of the third plan is not very promising.

FRENCH PLANNING

Indian System Compared

The Counsellor of Economic Affairs to the French Embassy in New Delhi, Mr. Jean Bernard, read a paper on French planning last week. The Indian planners, it may be added,

were conspicuous by their absence. Claiming singular success for the French system of planning, Mr. Bernard, compared it with planning in India in the following terms:

"Being admitted that the French have gathered a large amount of experience in a method which is as far from the Russian totalitarian planning system as from the American totally unplanned economy, Indians may well raise a somewhat similar claim to an original compromise between the one and the other.

"Whatever may be the similarities, there is a striking and fundamental difference between the Indian and French experience, in so far as they represent answers to entirely different problems. Indian planners try to initiate a process of growth in a largely under-developed economy extending over an immense area, whereas the French endeavour to bring about the harmonious and sustained progress of an already developed economy, closely interconnected with highly sophisticated and capitalistic countries. Consequently, a success of the indicative type of planning has a significance which is largely irrelevant to Indian conditions. On the other hand, the successful fulfilment of French planning may well have a definite bearing on the future of Europe, and on the fate of the western civilisation itself."

IMPORTS

Policy to be Announced

The import policy for the next financial year April 1963-March 1964 is expected to be announced during the third week of April, after taking into account the overall needs of the country including the defence requirements.

I. D. A.

Credit for Railways

The International Development Association—an affiliate of the World

Bank—made available to India a development credit equivalent to \$87.5 million last week. The credit will help the Indian railways to finance imports of materials and equipment needed during the current year for the railway development programme. The foreign exchange cost of the programme has been substantial. Considerable help in meeting it has been provided by the World Bank, which through six loans over the past 13½ years has provided the Indian railways with nearly \$378 million—by far the largest amount it has lent for any single enterprise. By developing the manufacture of railway equipment in India, the dependence on imports has been greatly reduced. Electric locomotives, for instance, are now built at the Chittaranjan works. By 1966, it is hoped, most of such locomotives needed by India will be met from domestic production. Nevertheless, the foreign exchange cost of the 1961-66 programme is expected to reach the equivalent of Rs. 249 crores.

The present I.D.A. credit will help to cover the cost of imports for the railways over the coming year when expenditure abroad is expected to reach its peak. It will be used for the purchase of components and materials needed to build locomotives and rolling stock in India, and also to finance imports needed for the electrification programme, for track and other materials and equipment. Orders for imported equipment are placed through international competitive bidding.

The I.D.A. credit of \$67.5 million is for a term of 50 years, with repayment of the principal beginning on 1st May, 1973. Thereafter, 1 per cent of the principal will be repayable annually for ten years, and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ½ of 1 per cent a year on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

Two more agreements for another \$34 million are nearing completion. These two are specifically meant for diesel locomotives. The U.S. Export-Import Bank is expected to provide \$19 million to finance the foreign exchange cost of setting up a diesel locomotive manufacturing plant in Banaras. The I.D.A. will give another \$15 million to enable India to purchase 54 diesel locomotives from abroad. These will be supplied within a year and will be required to fill the gap until indigenous manufacture begins.

RAW MATERIALS

Supply for Industry

Although it is too early to assess the impact of import cuts during the current licensing period, important industries, such as cement, steel, aluminium, paper, sugar, nitrogenous fertilisers and jute manufactures required little or no imported raw materials. For other industries, such as cotton and woollen textiles, tyres and tubes, drugs and medicines, tyre cord yarn, staple fibre and art silk yarn, provisions for raw material had been made at the same or increased levels. While there may be some decline in production of industries with low priority, the overall picture will be one of steadily rising industrial production, it is claimed.

FOREIGN COLLABORATION

Number Declines

There has been a fall in foreign collaboration arrangements in recent months. The number of technical and financial collaboration proposals approved by the Government of

India in 1961, 1962 and from 1st January to 15th March, 1963, was 402, 299 and 60, respectively. The recent fall in the number of proposals approved has been mainly because the Government is not encouraging foreign technical collaboration in fields where technical know-how is generally available within the country and also in industries which are not of sufficient importance under the present emergency. Furthermore, in view of the present foreign exchange shortage, the policy is to approve foreign collaboration proposals only after a firm had been able to make definite arrangements to import plant and machinery required for the project and its application for capital goods had been considered and approved by the Government of India.

CZECHOSLOVAKIA

Revising Credit Pact

The Government of India has asked the Czech Government to revise the Rs. 231-crore credit agreement on the four major public-sector projects of heavy engineering and heavy machinery in Ranchi and the heavy boiler plant in the south to be established in India with the latter's collaboration. The scrutiny of the detailed project reports of the third stage of the foundry-forge, high-pressure boiler, heavy power equipment and heavy machine tool plants, submitted by Messrs Technoexport, Prague, showed that there was an increase in the capital cost estimates of these plants, compared with those contained in the preliminary project reports. The foreign exchange requirements of these plants for importing machinery and equipment, etcetera, from Czechoslovakia substantially exceeded the credit of Rs. 231 crores.

As already reported, a delegation headed by the Additional Secretary to the Department of Heavy Industries, Mr. T. Swaminathan, held discussions on these matters with the Czech Government in Prague early last month. The Czech Government has agreed to consider India's suggestions on this matter.

U. S. A.

Loan for Power-station

The U.S. Ambassador to India, Professor John Kenneth Galbraith, announced here last week that his Government has approved a loan of \$16 million (Rs. 7.6 crores) for the Chandrapura thermal power-station. This will help make the plant the largest of its kind in India. The loan will pay the foreign exchange costs of adding one more 125,000-kilowatt or 140,000-kilowatt generator to the two units each of the same capacity which are now being installed through U.S. financing of the power plant. The loan will be made available to India through the U.S. Agency for International Development.

NEVELI LIGNITE

More Tenders Invited

The Neyveli Lignite Corporation has invited global tenders for additional machinery required to increase the production of lignite to 4.88 million metric tons. The present annual production is envisaged at 3.56 million metric tons. It has already been decided to increase the capacity of the power station from 250,000 kilowatts to 400,000 kilowatts.

STATIONERY

Cost Estimated

The total cost of stationery supplied by the Stationery Office to the

CAPITAL, 4th April, 1963.

Government of India offices last year and the estimated cost of supplies this year are of the order of Rs. 3 crores and Rs. 5.38 crores, respectively.

S. T. C.

Iron Ore Contracts

New contracts have been concluded by the State Trading Corporation with Yugoslavia and East Germany for 250,000 tons and 6,200 tons of iron ore, respectively. Bulgaria has also agreed to buy about 50,000 tons.

SHIPPING COMPANIES

Foreign Participation

The Indian shipping companies in whose capital foreigners hold shares and the percentage of shares held by them are as follows:

Name of company	Percentage of foreign participation
Scindia Steam Navigation Co. Ltd	0.69
India Steamship Co. Ltd	3.17
Bharat Line Ltd	6.67
Jayanti Shipping Co. (Pvt.) Ltd	24.8
Mogul Line Ltd	19.39
Malabar Steamship Co. Ltd	0.009
Gill Amin and Company	13.577
South East Asia Shipping Co.	25

The maximum foreign participation permitted in Indian shipping is at present restricted to 25 per cent under Section 21 of the Merchant Shipping Act, 1958.

FREIGHT RATES

Increase Announced

The India, Pakistan, Ceylon and Burma Outward Freight Conference, governing the trade from the United States, north Atlantic and the Gulf ports to India, has recently announced an increase of 10 per cent on the base rates. The Conference at present comprises one Indian and seven foreign shipping lines.

N. I. D. C.

Loans Offered

During the past three years, the National Industrial Development Corporation has disbursed the following loans to the cotton and jute industries for their rehabilitation:

Cotton textile industry	
Gujarat	Rs. 25,05,400
Maharashtra	Rs. 1,00,27,502
Madhya Pradesh	Rs. 28,87,000
Madras	Rs. 62,07,282
Pondicherry	Rs. 12,93,652
Uttar Pradesh	Rs. 19,14,000
West Bengal	Rs. 40,40,000
Jute industry:	
Uttar Pradesh	Rs. 38,75,000
West Bengal	Rs. 2,27,98,640

STEEL

Productivity Team Report

The productivity team's report on the steel industry in Russia and Czechoslovakia, sponsored by the National Productivity Council, says:

"The main problem before Indian industry in the sphere of productivity, the team says, is that of maximising production at optimum capital outlays, since here capital is

CAPITAL, 4th April, 1963.

more scarce than labour. To do this, it is necessary that labour organisation and discipline are considerably improved and the management task of forward planning for raw materials, transport, maintenance and introduction of new techniques be more effective. While the first objective can be attained through the help of trade unions and by assuring the worker a fair share of the gains, the second requires meticulous pre-planning of all details at the managerial level. Unlike the Indian steelworks' manager, his Russian counterpart is delegated full powers, and then held fully accountable for results."

The team has been greatly impressed by the rapid growth of the industry in both Russia and Czechoslovakia. Judging from the results achieved so far, and the discipline and drive it observed, the team thinks that Russia will become the world's largest steel producer within a decade, and also reach its enormous target of 250 million tons by 1980. Much of the credit for this goes to the "socialist form of Government" in that country which has "enabled the allocation of funds and priorities to facilitate rapid steel development, and has inculcated the discipline necessary for the determined pursuit of productivity". This system, the team says, "also permits a new technique, once proved and its economics established, to be unfalteringly applied on a countrywide basis. In India, on the other hand, technical issues—such as the desirability of beneficiating iron ores and agglomerating the fines—tend to be debated endlessly and often at non-technical levels."

In both Russia and Czechoslovakia, technical men with specific steel plant experience are in top positions, not only at the steel works but also in the planning bodies and ministries connected with steel. This, however, is not the only lesson held out by the Russian and Czech steel industry. Regional dispersal of the industry is a cardinal principle in both countries. In India, the "centre of gravity" of steel production was till recently in the eastern region; now the team suggests that a "second metallurgical base" should be developed in the Bhilai-Bailadilla-Chanda area in the central region, and a "third base" established in the south. Furthermore, the team says, "sea-based plants in Goa, Visakhapatnam and other coastal regions are viable propositions which need to be investigated."

As for the size of a steel plant, the team suggests that a "good initial size for a new flat-products steel works would be about 3 million to 4 million tons, to be achieved in phases over a five-year construction period. Furthermore, such a plant should be capable of expanding by at least four times to a possible future capacity of up to 15 million tons in the next two decades." Russia today has one plant approaching 10-million-ton capacity, that is, India's third plan target. Even a small country like Czechoslovakia, with serious raw material difficulties, is planning a new steel works in Kosice for an initial output of 4 million tons, and a provision to expand it to 8 million tons. According to the team, India too, must depend on large steel complexes or the bulk of its requirements, and simultaneously build small plants to meet regional demands.

Basing itself on a close study of various other facets of the industry in the two countries, the team reports:

"Labour productivity: Labour productivity at the Russian and Czech steel works is currently only 55 per cent to 60 per cent of the U.S.A., but is rising rapidly at 5 per cent and

8 percent a year, respectively. Even so, Russian productivity today is about twice that of India. The problem is not that Indian labour productivity is low but that its rate of improvement is slow in spite of massive infusion of capital. The climate for productivity can only be created if the steel worker is fully trained and properly motivated, by financial and other incentives.

"Blast furnace size: Consideration should be given to evolving a standard Indian furnace design of about 1,700 tons which could produce up to 300 tons of iron a day.

"Steelmaking: The present Indian average output from openhearth is 6.5 tons a square metre a day, against 10.46 tons in Zaporozhstal, Russia, and 7.2 tons in Czechoslovakia. This indicates the large scope that exists for increasing production from the same furnace through modern technological advances, such as oxygen injection and flame enrichment, and basic roofs.

"Rolling mills: The Russian rolling mill practice is characterised by high equipment availabilities of over 7,000 years a year, as a result of meticulously-planned maintenance and repair. There is a growing trend towards automation and computer control of all processes.

"Design organisation: The success of Russian and Czech industry is due largely to the existence of large

specialised design organisations. The design organisations in the two countries visited are able to function effectively because they are completely independent of equipment manufacturers, production units or State planning bodies."

BELGIUM

Another Loan Expected

Belgium is expected to announce another loan of \$10 million to India at the next meeting of the Aid-India Club which is scheduled to take place in Washington on 30th April. The use of the current \$10-million aid from Belgium has been slow. With the exception of a fraction of the aid used in a cast iron spun pipe project, it has remained unused so far. Various projects are, however, now under discussion. The expert team of the National Coal Development Corporation, headed by the Joint Secretary to the Central Ministry of Mines and Fuel, Mr. Cheddi Lal, will leave for Belgium on 7th April to buy mining equipment.

Electric locomotives as well as their parts and engines are being purchased from the German, French, Italian and Belgian consortium to use a part of the loan. The Central Ministry of Transport proposes to buy two ships, while talks are in progress for financing the Gujarat State fertiliser plant

from either the yen credit or the Belgian loan. The loan is an extension of the export risk credit repayable in five to ten years.

The Central Minister for Economic and Defence Co-ordination, Mr. T. T. Krishnamachari, it is expected, will visit Australia to explain India's policy with particular reference to the Chinese aggression. Australia has agreed to supply arms and ammunition and woollen garments worth over £(A)2 million as an outright gift.

KUMARDHUBI REFRACTORIES

THE FINEST IN THE EAST

From Kumardhubi—the largest refractory manufacturing unit in the East—comes a continuous supply of the widest range of refractories to the Steel, Ceramic, Chemical, Cement, Sugar and other industries.

For IMMEDIATE DELIVERIES OF STANDARD Firebricks, Silica bricks, Sillimanite bricks, Acid proof bricks, Insulation bricks, and bonding materials and EARLY DELIVERIES to CUSTOMERS' SPECIFICATION INSIST ON KUMARDHUBI REFRACTORIES.

KFS

is but one of the many progressive divisions of the Bird-Heilgers Group. The Group, with its varied industrial activities, plays a significant role in the country's economy.

KUMARDHUBI FIRECLAY & SILICA WORKS LIMITED
Managing Agents: BIRD & CO. (PRIVATE) LIMITED, Chartered Bank Building, Calcutta-1.
Works: Kumardhubi, Dist: Dhanbad, BIHAR.

During last year, we saved and earned Rs. 7.14 crores in foreign exchange by manufacturing petroleum products for local consumption and by exporting gasoline to the value of Rs. 2 crores

The proposed lubricating plant will save over Rs. 2½ crores of foreign exchange annually

How long is a year?

A year is long enough for a Company to make its name known and trusted throughout the country; especially when its public services closely touch the daily lives of millions of people.

During its first year of operation in India, Esso has supplied its petroleum products to agriculture, industry, transport and domestic users, establishing in India the supreme quality of Esso products and services.

On its first anniversary, Esso looks back proudly on a year of service to the country... of vital supplies maintained and life lines preserved during a time of national emergency... and looks forward to making greater contributions towards India's progress.

Esso —serving the nation

ESSO STANDARD EASTERN, INC.
(Incorporated in U.S.A. with Limited Liability)

If proposals are approved for refinery expansion from 2.5 million tons to 3.5 million tons by 1966 and 4.5 million tons by 1969, an additional Rs. 5 crores will be saved in foreign exchange annually

During 1962, Esso purchased locally, goods worth Rs. 8.2 crores

Improved technology, technical resources and research make Esso undisputed leaders in the petroleum industry

PWT-29, 1962-3

LINKING LAND REFORMS WITH ECONOMIC GROWTH

By Dr. Ayodhya Singh,
Banaras Hindu University

THE latest annual report of the Colombo Plan Consultative Committee shows that the eight developed countries of the world, with less than 20 percent of its population, get 65 percent of the total world income, while 18 Asian and African countries with 55 percent of the world population get less than 12 percent. The remedy to this wide disparity lies in rapid economic growth in less developed countries, primarily through intensified industrialisation. But these economies are predominantly agricultural in character, and to plan for a quick rate of industrialisation within a short period is simply not practicable. Therefore, ways and means should be devised to take the most out of the agricultural sector, even for promoting industrialisation.

In India, the experiments in planning and land reforms were introduced almost simultaneously in 1951-52. While planning appears to have generated the hope of attaining self-sustained growth in the near future, the impact of land reforms—the core of agricultural development—on economic growth has been much less than desired. Several factors are responsible for this phenomenon. Firstly, there has been too little recognition of land reform as a positive programme of development, and it has primarily been regarded as external to the community development schemes and to the effort to increase agricultural production. Secondly, adequate attention has not been paid to the administrative aspects of land reform, not only at the lower levels where collusion and evasion have gone unchecked, coupled with the apathy of the village community towards the enforcement of the legal provisions. Lastly, it has not been fully realised that land tenure reforms and early enforcement of land ceilings are essential foundations for quick economic growth. In view of the present emergency conditions, the land reform programme should be completed in all its aspects throughout the country without further delay, and all the bottlenecks in the legislation from the stage of formulation to its ultimate enforcement should be expeditiously removed.

Helping Economic Growth

Land reforms can promote economic growth either through a marked increase in agricultural production (even unaccompanied by a simultaneous increase in industrial production) or through the release of agricultural surpluses and their mobilisation or both. An analysis of these two determinants—agricultural production and surplus—becomes imperative for understanding the significance of land reforms in the realm of economic growth.

Taking the first determinant, it needs to be said that agricultural production and its efficiency depend mainly on three factors: (1) the extent of capital formation and productive investment; (2) the extent of the use of improved technology or proper utilisation of traditional skills; and (3) the size of farms. Agricultural output can be significantly increased by creating a favourable climate for productive investment, encouraging proper use of indigenous skills, coupled with the adoption of modern techniques and determining the size of farms capable of optimum production.

To promote capital formation and productive investment in agriculture,

incomes of participants must be related to the functions they perform in agricultural production and not to the legal and social status they enjoy. This means elimination of all functionless participants like intermediaries. Their abolition has paved the way for greater agricultural production because not only does it tend to provide the incentives, but is also likely to increase the resources of the actual producers. Tenancy reforms, in spite of their half-hearted, unenthusiastic and partial implementation, have led to some remarkably effective action here and there, and certain unforeseen and fortuitous gains. Further, imposition of ceiling on land holdings may be more significant. Apart from conferring permanent ownership rights on tenants in non-resumable lands, the real implication of the ceiling is that subsequent to its enforcement, non-agricultural classes will be prevented from acquiring lands and earning income by leasing them. Thus if land ceilings and tenancy reforms reduce the possibility of undesirable transfer expenditure and promote productive investment, they will have beneficial effects both on agricultural and industrial investment.

Outside Capital

Again, the extent of investment in agriculture depends partly on its capacity to absorb external capital efficiently. Outside capital in the past was largely used for the purchase of land and money-lending, usually at an extraordinarily high rate of interest. These methods contributed little to agricultural production and efficiency. On the contrary they led to exploitation and neglect of agriculture. However, in spite of the dilution of the spirit of land reform at various stages between the original conception of the law and its final implementation, the flow of such unproductive capital into agriculture has been diminishing and may even stop in the near future. But the gap can be easily filled in by rural-minded providers of credit, such as co-operative agencies financially backed by the Government, at least in the initial stages. If the situation is tackled seriously and carefully, there is no reason to fear that agriculture will suffer from a shortage of capital.

As for agricultural skills they are of two types—the traditional skills based upon experience and modern skills based upon scientific knowledge. It would be unwise to believe that traditional skills have nothing to commend themselves or to assume that modern skills can be applied to Indian agriculture without suitable modifications necessitated by local conditions. Agricultural inefficiency in India is not so much due to the inefficiency of traditional skills as to lack of proper opportunities to use them. One comes across a paradox of the Indian agricultural economy, namely, the majority of those who possess skills like landless labourers, share-croppers and tenants do not have land and those who have land like big landowners do not possess the skills. When tenancy reforms as a whole are fully implemented in all the States and land ceilings enforced everywhere, those tenants who become owners will get a real opportunity for practising their skills and it is getting the most out of them. It is only then that they will be receptive to suggestions for improvements in

their techniques and prepared to adopt modern techniques whenever and wherever they feel these superior to the traditional ones. Thus, with the completion of the land reforms programme in the country, the farmer will make innovations, take risks and substantially increase productivity.

Economic Size of Holdings

The third factor affecting agricultural efficiency is the size of the holdings, which in essence is a question of optimum combination of factors of production. The factors may combine in various proportions. There may be not one unique combination giving optimum results, but several combinations giving more or less equally satisfactory results. This is due to some degree of substitutability of factors of production. For instance, what would be lacking due to the small size of the farm may be compensated to a considerable extent by intensity of labour and capital. Small farms tend to become less efficient not solely because of their size, but mainly because of the owner's lacking capital resources and incentive for intensive application of labour. Adequate capital resources and suitable incentives—economic as well as psychological—are equally important.

Further, agriculture requires primarily three types of services, namely, supply of credit, production aids and proper marketing. Agricultural inefficiency has been partly due to the small size of the operational unit, but mainly because of highly defective arrangements for the servicing of agriculture. By and large, farmers have been generally thrown into the clutches of the village 'shylock' for obtaining their requirements.

This arrangement has proved to be a very unsatisfactory feature of agriculture. The moneyholder makes a regrettably imperfect integration of the required services. At the same time, he uses his strong position not to help the farmer but to exploit him. In this context, the current policy of organising service co-operatives is commendable. Apart from seeking to establish a perfect integration of various services required by agriculture, it is institutional and non-exploitative in character. If service co-operatives can be organised successfully and worked efficiently, there is no doubt that they will prove to be an excellent substitute for the village money-lender.

Agricultural Surplus

Having discussed the bearing of efficient agricultural production upon economic growth, it is necessary to proceed with the problem of release of surplus from agricultural sector. A marked increase in agricultural output, implicit in the proper co-ordination and implementation of varied measures of land reforms, will naturally result in a new surplus, provided the propensity to consume of the rural community does not rise proportionately in the meantime. Land reforms, in essence, mean transfer of incomes from former intermediaries and big landowners to tenants and small owners. One may think that such transfers from upper income slabs to lower income slabs will increase rural consumption almost to the degree of increased agri-

cultural output and thus liquidate the surplus at its very source.

But a closer examination of the working of the agricultural economy in India will show that tenants and small owners, in general, are comparatively more investment-minded than former intermediaries and big landowners, who use their incomes primarily for unproductive purposes, also occasionally spending a significant proportion of their incomes outside the agricultural sector, mostly on luxury goods. The propensity to save and invest of cultivators in the lower and lower-middle income brackets is to be strengthened considerably with the completion of the land reforms programme, mainly security of tenure, as has been well brought out by the studies on farm management. Even if it is assumed that the small cultivators start spending a little more on consumption in view of their increased incomes, such a tendency will provide the incentives for additional effort in increasing agricultural production.

Mobilising Created Surplus

Some increase in the consumption of agricultural sector, instead of being discouraged, should be preferred, for such an increase, apart from providing incentives to farmers for further stepping up agricultural effort, will be beneficial to the industrial sector as well. A's expenditure is B's income and hence surplus traded directly by the agriculturists for consumption of industrial goods would correspondingly increase the incomes and profits of the industrial sector. Then the Government could justifiably mop up a significant portion of these marginal increments through taxation and borrowing for planned industrialisation in the public sector. Such a device of mobilising a part of the surplus would be quite practicable. Moreover, it would be welcomed by the State Governments. In their own political interest, they would avoid injuring the feelings of the farmers. The remaining part of the surplus can be left with the industrialists, who should be persuaded through measures like tax incentives to invest in capital formation.

Again, service co-operatives which are being given due encouragement should be used for indirect mobilisation of the surplus. With the passage of time, they alone will remain the channels through which the supply of credit and other materials will move into the agricultural sector and come out of it. By adopting suitable price policy, keeping in view the peculiarities of cost-price relationship of agricultural goods vis-à-vis non-agricultural goods, a surplus can be created and properly mobilised. After the service co-operatives have firmly established themselves in the agricultural community, measures should be devised to tax their profits gradually.

Further, with the steadily rising productivity of agriculture resulting from land reforms and other allied measures, the farmers can be convinced through propaganda, publicity and education, about the necessity for a bigger contribution to the additional tax effort. By maintaining for long the high tempo of alertness, patriotism and co-operation in the country, created by the Chinese aggression, the agricultural sector can be confidently approached with a demand for more and more resources—through increased land revenue, slightly higher irrigation charges, inclusion of all agricultural property in determining estate duty, establishing parity of State's agricultural income taxes with the Union income tax, and last but not least, through the imposition of the betterment levy, notably in the irrigated regions.

*Taxation of agricultural incomes in any form falls within the jurisdiction of State Governments alone.

ments to ports where only one ship operates a month. One of the causes for the congestion is the large number of foodgrain ships coming to Chittagong all at once.

In Chalna, the quantity of bales awaiting shipment is no worse than it was in the past. More attention, has, however, been focussed on it on this occasion, partly because there is very little business in the market and mainly because in spite of a reduction in movement from baling centres to ports, there has been little or no improvement in Chalna. One of the reasons once again is the import of foodgrains beyond the capacity of the port, but this is by no means the only reason.

Apart from the late arrivals of vessels to lift cargo for ports other

than the U.K. and the Continent, there is also the fact that Inland Water Transport barges with cargo do not reach the vessels in time and frequently when they do, the cargo required for that particular vessel is overstowed. Presumably, the position will improve in future. Meanwhile, this is a very slack period of the season. But it is strange that at such a slack period Chalna should be congested with over 90,000 bales of raw jute and gunnies.

Because of a few days of dry weather, a section of dealers suggests that the coming crop will suffer from lack of rains. To the unbiased this seems improbable since there is still plenty of time. With the exception of Pabna, Faridpur and Jessore, most of the areas have had some rain.

Faridpur, at least for its low-lying jute, does not need rains since its crop depends on the rivers and natural moisture in the soil for its growth.

MORE JUTE BEING BALED

In his speech from the chair at the annual general meeting of the Calcutta Hydraulic Press Association in Calcutta last Thursday, Mr. J. R. Modi said that the baling of jute so far this season had recorded an increase over the past season. A total of 243,667 bales was packed up to the end of February, against 111,158 bales for the corresponding period of 1961-62. But the amount is still substantially lower than the 356,848 bales exported during the same period of the 1959-60 season. The chairman last year sug-

gested allowing raw jute exports for earning more foreign exchange and for supporting fibre prices. An export quota of 100,000 bales, which was subsequently increased to 200,000 bales, was sanctioned last year. But the somewhat onerous and restrictive conditions laid down in the jute export policy "have been found discouraging and frustrating to the trade and the quota of exports has not been filled". Only about 120,000 bales, it is reported, have been sold, mainly to countries with which rupee payment arrangements exist. But little business has been done with other important markets from which direct foreign exchange could have been earned.

As a new jute crop was being sown, Mr. Modi said, it would be wise to announce the continuation of the policy of raw jute exports for the next season. The quantities available as well as the carryover of the last two crops would make the total supply large. So it would be necessary to allow raw jute exports freely, subject to the quality restrictions necessary to protect the Indian manufacturing industry, and to encourage the trade by removing the onerous conditions now being imposed on fibre exports. Apart from the baling of jute, such commodities as hemp, cotton, cotton silk and hosiery waste provide a small but regular business for some units. The slump in the foreign demand for hemp of the qualities being baled in Calcutta is reflected in the poor figures of some of the presses handling the commodity. "This is a pity because the export of hemp is a useful source of foreign exchange earnings and provides a very welcome second line of activity for our industry".

DULL PROSPECT FOR GOLD

One of the incalculable elements in the British Government's economic equation is the sensitivity of the foreign exchange markets. On the whole both the currency and bullion markets were fairly quiet in 1962. This in part is a tribute to the network of sophisticated international co-operation fostered among, or foisted upon, the leading European countries by the United States. The gold "pool" for stabilising the London gold price has worked well. Looking into the future, Samuel Montagu and Company in its annual bullion review, expects the market to remain "rather dull," moving only within narrow limits.

This dullness is brought about basically by the European central banks, which continue to refrain from converting their large dollar holdings into American gold. Samuel Montagu observes that this year will be "a testing time" for the dollar, with much depending on the success or failure of the U.S. Government's efforts to restore the balance of payments to approximate equilibrium. There is then this Delphic utterance: "The measures which have been propounded as being necessary to achieve success are likely, if put into effective operation, to alter the picture completely and may well transfer the pressure, at least in part, to other currencies."

Samuel Montagu is as certain as anyone can be that 1104d an ounce is about the highest price silver is likely to reach. This is equivalent to \$1.2929, a magic figure, for at this level the silver contained in the United States silver coinage is equivalent to its monetary value. At this point, the U.S. Treasury is authorised to sell silver, which it has in vast amounts as backing for silver certificates. The U.S. Treasury has in fact stated its willingness to supply refined silver bullion at \$1.2929 and, as they could continue doing this for many years, this price seems to be the effective ceiling for silver in the foreseeable future.

SCOPE FOR PETROCHEMICALS MANUFACTURE IN INDIA

(BY A CORRESPONDENT)

THE term "petrochemicals" has now become current coin in industrial circles in India, but the real import of the term is understood only by a handful of people. One of the newest of industries, the real growth of petrochemicals began during and after the second World War. In fact, the term "petrochemicals" had not come into use before 1942. The vastness of the range is indicated by the fact that from petrochemicals come plastics, synthetic fibre, rubber, detergents, insecticides, fertilisers, cosmetics and a thousand other products, none of which resembles, even remotely, the primary raw material, crude oil.

Basically, petrochemicals are not different from synthetic organic chemicals derived from the other primary sources, coal and vegetable products. The organic chemist can virtually supply the entire needs of industry by using any one of these as source material. The advantages in using petroleum feed-stocks lie in the fact that these ensure regular availability in large quantities, low costs, stability of prices and uniformity of quality. It is true that coal shares, to some extent, the advantages of petroleum feed-stocks, but the latter are easier to handle and much easier to convert into a wide range of intermediate chemicals.

Petrochemicals are mainly aliphatic, aromatic and naphthemic organic compounds and their derivatives. They could also be inorganic materials, such as sulphur, ammonia and carbon black. Thus, petrochemicals are a host of chemical compounds widely varying in their physical and chemical properties. While some are simple, others are complex chemicals which supplant and supplement the traditional sources of supplies. Before the advent of the petrochemical industry, chemicals were derived from the farm (alcohol and acetone from molasses), from the forest (natural resins, acetone, etcetera, from wood distillation) and from the mine (aromatics from coal tar distillation). The steady rise in the demand for chemicals coupled with the need for cheaper products gave rise to the petrochemical industry.

Applications

What are the applications of petrochemicals? Petrochemicals are used to meet the countless needs of the individual as also of industry. Nearly 80 percent of the chemicals derived from petroleum and natural gas go into seven major channels of consumption. Plastics and resins lead the field with polyethylene, polyvinyl chloride, polystyrene and polypropylene. Polyethylene bags, wrapping and buckets are among the most common articles, as are polystyrene combs, containers and toothbrush handles. P.V.C. goes into the making of toys, shower curtains, table cloth and linoleum carpets.

Synthetic rubbers take the second place with poly-butadiene and S.B.R. rubbers which are partial substitutes for natural rubber. Although natural rubber is produced in Kerala, there is hardly enough production to meet the growing demands. Therefore, in the coming years both these are likely to play a vital rôle as also the latest entrants in this field, namely, polyisoprene and E.P.R.

Another variety of rubber known as butyl rubber is an important member of the synthetic rubber group. Butyl rubber is not only considered to be suited for the manufacture of inner tubes for tyres, but is ideal where resistance to ozone and oxidation are important (that is, cables, weather strips for motor-cars, conveyor belts, etcetera.)

Synthetic fibres provide the third important outlet for petrochemicals so that a major buyer of petrochemicals could be the nascent, but growing synthetic fibre industry. Considerable use of petrochemicals are made in the manufacture of paint, varnish and lacquer, petroleum additives and soap substitute, otherwise known as detergents. Besides these, petrochemicals find their applications in a host of chemicals, for example, petroleum coke (aluminium refining), hexane (vegetable oil extraction), alcohol (drugs and pharmaceuticals), ammonia (fertilisers), chlorinated hydrocarbons (dry cleaning), chloroethylene (metal work).

Building Blocks

The "building blocks" from which major chemicals are produced, are simple, but highly reactive organic molecules. They can be suitably combined, that is to say, polymerised into molecular aggregates technical referred to as polymers. Various temperatures, pressures and catalysts are developed to ensure that the molecular complex synthesised under each predetermined condition will meet the specific needs of the technologists and will have almost predictable physical and chemical characteristics. Acetylene, ethylene, propylene, butadiene and benzene are perhaps the five most important building blocks used in the petrochemical industry. The first two are gases at ambient conditions while the next two are liquids under pressure. Benzene is a liquid at room temperature.

Perhaps it would be worth while to understand how these building blocks are made. When crude oil, or a fraction derived from crude oil, is subjected to severe molecular cracking at high temperatures, one or more of the above mentioned building blocks is obtained. The raw material most commonly employed in the United States is natural gas, since it is available in plentiful supplies. In Europe and Britain, naphtha is used despite higher costs, also because of ready availability. In India, natural gas supplies are limited and already earmarked for the manufacture of fertilisers in Assam. Because the total number of motor-cars in the country is low, some quantity of naphtha will be left after meeting the indigenous gasoline requirements, and, therefore, this material could be used for manufacturing building blocks.

History of Industry

With industrial development in the country progressing apace, the scope for the petrochemical industry in the country should be wide. It would country should be wide. It would be safe to say that plastics and synthetic rubbers will provide the biggest outlet in the next five years. The current consumption of chemicals that could be derived from petroleum today is of the order of 15,000

tons. This is expected to jump by at least 500 percent before the third plan is over.

The development of the petrochemical industry in the West might well serve as a pointer to the potentialities of the industry in India. This industry had its roots in the U.S.A., where large-scale developments have subsequently taken place in this field. A remarkable feature was the phenomenal growth of the market

for synthetic polymers. During the last decade, the investment in the petrochemical industry in the United States increased from Rs. 1,000 crores to about Rs. 3,800 crores. This is expected to double in the next seven years. In the U.K., the investment has reached during the last five years from about Rs. 61 crores to about Rs. 200 crores; in Europe the investment has almost doubled from Rs. 390 crores to Rs. 800 crores over a period of only three years (1959-61). The figures go to show how quickly the petrochemical industry can grow, once it is established.

With the growth of the oil refining industry and development of indigenous oil resources in India, the scope for developing the petrochemical industry has considerably widened in the country.

ACC COSET-50

ACC HIGH TEMPERATURE REFRACTORY CEMENT

INDISPENSABLE FOR MONOLITHIC LINING OF FURNACES

Accoset-50 can withstand the effect of moisture, the abrasive action of the charge and great temperature fluctuations.

ACCOSET-50 is also excellent for

- Jointing, repairing and patching
- Bonding and laying firebricks of any shape
- Protective wash of furnace walls and floors
- Gunning

Technical literature sent free on request.

Ready stocks of ACCOSET-50 available from THE CEMENT MARKETING COMPANY OF INDIA LTD.

Rotorvanes

GIVE YOU A POWERFUL MECHANIZED GRIP ON tea

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanizing to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.

The Rotorvane will help you make good tea.

CO-OPERATIVE MARKETING SCHEME FOR RUBBER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IT is reported that the Rubber Board is formulating a voluntary co-operative marketing scheme for the small growers, apparently with the idea of ensuring the controlled price for the small growers' rubber. Last year, there was some difficulty for the producers to sell their rubber at the statutorily fixed price, although the indigenous production was only 50 percent of the manufacturers' requirements of natural rubber. There was a plea for help and the proposed scheme of the Rubber Board appears to have been formulated to meet this situation. A section of rubber growers in the country have serious misgivings about the Rubber Board's move. The dealers have already raised their objection. It is said that the manufacturers are also opposed to the idea of the Rubber Board taking up marketing responsibilities.

The Board has been constituted to protect the interests of the rubber planting industry and that of the country. The interests of the country can be protected only by producing more rubber, and if possible, by making the country self-sufficient in this commodity. The interest of the rubber planting industry can be protected only by enabling it to produce rubber of good quality at a level of prices that could stand the competition with natural rubber imported from outside and synthetic rubber produced locally or imported. Although the Rubber Board has been in existence for more than a decade with crores of rupees at its command, it has not been able to achieve its twin objectives mentioned above.

Instead of trying to find out the reasons for its failure and to reshape its policies to suit the genuine requirements of the interests it is expected to serve, the Board is engaged in a wild goose chase. It is trying to take up additional responsibilities forgetting the fact that it has not been able to discharge those limited responsibilities it is already having. There are complaints from various quarters that the Rubber Board office has become worse than a Government office in the matter of red-tapism. Letters to the editor in some Malayalam papers have complained about the Rubber Board. Delays in correspondence and distribution of replanting subsidy, defective estimates of production and wrong advice to the Government in the matter of import are some of the charges against the Board. Unless and until the Board is able to create a good impression among the interests it is serving, the Board's proposals to take up additional responsibilities like marketing will certainly be opposed by the people whose interests are at stake. The co-operative system of marketing now being proposed for small growers is bound to face more opposition because the record of the co-operative movement in Kerala where this system is to work is very bad. Assembly debates, court findings and newspaper reports all go to show that the co-operative movement is greatly abused in Kerala. The movement is looked upon with suspicion by the people. Therefore, it is only natural that a section of rubber growers should have misgivings about the "voluntary co-operative system of marketing" being formulated by the Rubber Board for the small growers.

Rubber manufacturers and the planting industry cannot have for-

gotten the experience of the monopoly purchase of rubber by the Government during the last war, nor are the rubber growers unaware of the fate of their counterparts in the coffee-growing industry. The coffee growers are not completely happy with the pool system of marketing administered by the Coffee Board, although the Coffee Board is comparatively a more efficient body and coffee is a commodity having to face competition in the world market. At least a section of the growers have a feeling that the Coffee Board's marketing policy has been defective during the past few years, and if left to themselves they could handle the marketing problems more easily and efficiently.

It is a paradox that natural rubber which is in short supply in this country has occasionally to be sold at less than the statutorily fixed price. It is said that this is due to the defective import policy of the Government of India. The import policy is normally framed on the basis of the advice received from the Rubber Board. The Board recommends import to cover the gap between local production and consumption. It is said that production estimates by the Board is defective and the Board has been under-estimating indigenous production. The country might be either importing more rubber than what is actually required to bridge the gap between indigenous production and the manufacturers' offtake or the bulk release of import quota as was done last year might be enhancing the buyer's bargaining power to the detriment of the seller. There can be no other explanation for the difficulty experienced by the Indian producers to sell their rubber at the controlled price. The surest remedy to this anomalous situation is to correct the import policy and not controlled marketing, it is pointed out. The old system of quarterly release of import licences might be restored as a first step towards removing the producers' difficulties.

Raw Cashewnut Rises

Prices of raw cashewnut have registered a handsome increase recently in the light of the reports that the local crop has been damaged due to unfavourable weather. African nuts of average quality were quoted at Rs. 720 a ton, compared with Rs. 660 a ton a week ago. Similar improvements were reported in the prices of Indian nuts also. Certain market circles place the extent of damage to the crop in Kerala, the principal source of local supplies at as high a figure as 50 percent of the normal size of the crop, but the factory owners in Quilon who are the principal buyers, are not in a mood to give complete credence to these estimates. India imports over 100,000 tons of raw nuts from Africa, while the indigenous production is around 60,000 tons. The firmness in raw nut price is reflected in the price of processed kernels, too. While the overseas buyers are showing interest around the previous price of 44 cents (U.S.) a lb. c. and f. for 320 counts quality, exporters are asking 46 cents.

Pepper Dull

The pepper market has been inactive for the past few days. American buyers are practically out of the market now. U.S. price ideas are

around 30 to 30½ cents a lb. while the Indian parity is 31½ cents. Singapore quotation is also around this figure. Indian shippers hope that American buyers would however, prefer Indian pepper to Singapore pepper in view of the early delivery facilities. In the meanwhile, there are reports that the Sarawak crop has been damaged heavily by the recent floods and due to the wide incidence of root disease. If these reports are correct, there is the possibility of Britain also taking more pepper from India during the current season. India's crop, too, would be smaller this year, according to the present trade estimates. Last season's crop was a record one at well over 32,000 tons.

Labour Trouble

All the pending issue connected with the Bonaccord labour trouble were referred to the voluntary arbitration of Mr. Purushothaman Nair, Industrial Tribunal of Trivandrum. The accord was reached at a conciliation conference convened by Kerala Labour Minister, Mr. K. T. Achuthan on 30th March.

The labour trouble in this 1,000-acre British tea plantation near Trivandrum which began on 13th March, had completely paralysed the plucking and manufacturing operations there. The daily loss was to the tune of Rs. 10,000. Almost 75 percent of this estate's production is normally exported, so much so that the nation might have lost about Rs. 2 lakhs in foreign exchange due to this undeclared strike under the P.S.P. labour union. The dispute arose from the unwillingness of 52 workers to obey the orders of the management to pluck a certain field in a particular way.

Tax Burden on Tea Estates

(BY A SPECIAL CORRESPONDENT)

AT the Assam Tea Planters Association's annual general meeting in Sibisagar on Sunday, Mr. M. A. Rahman, chairman, assured the Government that the industry was prepared to make any sacrifice. But the new tax proposals, Mr. Ramman said, will "cripple the tea industry, especially the Indian-owned tea gardens". Any benefit gained from the abolition of export duty is likely to be neutralised by the 20-percent surcharge on the excise duty on tea. The chairman feared that additional taxes would "naturally thwart the future growth of the industry and ruin many a garden, especially in Assam, where outside investors have become exceedingly shy since the Chinese invasion." Taxation, the chairman said, has brought the industry to the point of no return.

Mr. A. S. Bam, chairman of the Indian Tea Board, said at the meeting that "apart from participating in the activities of the Tea Councils in the U.S.A., Canada, West Germany and Ireland, we have also appointed our own officers in London, New York, Sydney and Cairo. The tea centre in Cairo and the 'Tea Nook' at the Indian Trade Centre in Beirut have also become very popular." An Indian tea centre has been opened in Dublin on 28th March. Furthermore, a tea centre is likely to be opened in Edinburgh in May this year. There will also be a tea centre in London before long. It is also proposed to have shortly a tea centre in Sydney and tea bars in different cities of Australia and New Zealand. A tea council in Australia has also been recently set up in collaboration with Ceylon, and the Australian trade will shortly be introducing sampling service for the tea trade in Australia and New Zealand. All these promotional measures, in so far as Australia

and New Zealand are concerned, have been decided upon on the basis of the recommendations of the Indian tea delegation which visited Australia and New Zealand in October-November 1962.

For promoting the sale of Indian tea in the Continent, it has been decided to set up four tea centres at strategic places. These tea centres will be connected by tea kiosks on the highways in Europe in order that intra-Continental tourists and travellers could enjoy a good cup of Indian tea at these kiosks. A cinema-cum-tea van has recently been sent to the U.A.R. for "propagating the image of Indian tea." Similar vans will be sent out in the near future to Saudi Arabia, Afghanistan, Iraq, Sudan, etcetera, Mr. Bam said.

The Tea Board and the Government of India are extremely keen on seeing that exports of tea go up as envisaged in the third plan. Various steps and measures have already been taken towards this end and all other action that may be necessary to remove genuine hindrances to exports will certainly be taken. "I would also like to tell you categorically that we firmly believe that the targets of production and exports laid down in the third five year plan are not at all impracticable or overambitious. The consumption of tea in the whole world is increasing rapidly and the pace of growth is going to be accelerated in the years to come as a result of the intensive promotional campaigns which we are going to launch in different countries of the world. We are convinced, therefore, that there will be no excess of world supply of tea over world demand in the foreseeable future. The feasibility of attaining the export target set for the tea industry in the third five year plan is, therefore, beyond any shade of doubt. What is required is zealous and aggressive salesmanship on the part of the industry so that foreign buyers can be induced to buy more and more of Indian teas," Mr. Bam said.

Now that export tea sales for the 1962-63 season have ended, one can look forward to a stream of reports and accounts from rupee tea companies. A number of tea companies are under-capitalised, and the new tax proposals will, moreover, hit producers. The surcharge on excise duty will probably check consumption.

In many tea companies, the net block is shown at 100 to 200 percent higher than ordinary capital. It, therefore, confirms the statement that development has been financed by ploughing back profits. In order to levy taxes to help defray the cost of defence, the first essential to aim at is the maintenance of a healthy economy. This vital point seems to have been overlooked in some quarters. Although the export duty has been abolished, tea growers will have to pay more in taxes than before.

The cost of planting in Sylhet 60 years ago was estimated at around Rs. 300 an acre. By 1910, good estates changed hands at Rs. 750 while land values today are around Rs. 1,500 an acre. Assam properties, however, command nearly double that price.

COMPANY AND PUBLIC NOTICES

THE DUNLOP RUBBER CO. (INDIA) LTD.

NOTICE

NOTICE is hereby given that the 37th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57B, Free School Street, Calcutta, on Wednesday, the 24th day of April, 1963 at 11 a.m. for the following purposes:

1. To consider the Profit and Loss Account for the year ended the 31st December, 1962, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as an ordinary resolution and numbers 6 and 7 as special resolutions:

5. (As an ordinary resolution): "That Sardar Hardit Singh Malik, a Director of the Company, who retires by rotation and who attained the age of sixty-eight years on 23rd November, 1962, be and is hereby reappointed a Director of the Company and it be and is hereby specifically declared that the age limit for directors prescribed in Section 280 of the Companies Act, 1956, shall not apply to him".

Special Notice of intention to propose this resolution in conformity with Section 281 of the Companies Act, 1956, has been received by the Company.

6. (As a special resolution): "That subject to the approval of the Central Government, the terms and conditions of service of Mr. Prakash Narain Haksar, a Director and Deputy Managing Director (Purchasing) of the Company, as approved by a special resolution at the Annual General Meeting held on 27th April, 1961, be and are hereby varied in the manner following, that is to say:—

(a) a pension be provided to him in accordance with the Rules and Regulations of The Dunlop Rubber Company (India) Limited Executive Staff Pension Fund established by the Company under the Trust Deed dated 22nd September, 1962 and

(b) the payment of bonus to him be discontinued, and the said terms and conditions varied as aforesaid be and are hereby approved."

7. (As a special resolution): "That subject to the approval of the Central Government, the terms and conditions of service of Mr. Phani Bhusan Sen Gupta, a Director and Deputy Managing Director

(Administration) of the Company, as approved by a special resolution at the Annual General Meeting held on 19th April, 1960, be and are hereby varied in the manner following, that is to say:—

(a) a pension be provided to him in accordance with the Rules and Regulations of The Dunlop Rubber Company (India) Limited Executive Staff Pension Fund established by the Company under the Trust Deed dated 22nd September, 1962, and

(b) the payment of bonus to him be discontinued, and the said terms and conditions varied as aforesaid be and are hereby approved."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 17th April to 1st May, 1963, both days inclusive. Any dividends that may be declared will be paid only to those members whose names appear on the above Registers on 16th April, 1963.

By Order of the Board,

P. B. SEN GUPTA,
Director & Secretary.

Dunlop House,
57-B, Free School Street,
Calcutta.
29th March, 1963.

NOTE:

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been annexed to the notice issued to the members of the Company.

RAZA BULAND SUGAR COMPANY LIMITED

(Regd. Office: Rampur, U.P.)

THE Twenty eighth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Raza Buland Office, Rampur, U.P. on Tuesday, the 30th April, 1963, at 10-30 a.m. Notices of the meeting setting out the Agenda and Explanatory Statement on the Special Business to be transacted thereat are being sent by post.

Notice is hereby given that the Share Transfer and Members' Registers will remain closed from 11th April, 1963, to 30th April, 1963, both days inclusive, for purposes of dividend.

Persons holding shares under blank transfer should send such shares for transfer before closure of transfer books to be entitled to dividend. Unless Exemption Certificate is received by 10th April, 1963, statutory Income Tax will be deducted from dividends.

By Order of the Board,
For RAZA BULAND SUGAR CO.

LTD.,
S. K. KAUL,
Secretary.

Rampur, U.P.
Dated 1st April, 1963.

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at the Tata Auditorium, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Friday the twenty-sixth day of April 1963, at 4-15 p.m. (S.T.), or as soon thereafter as the preceding Extraordinary General Meeting to be held on the same day at 4 p.m. shall have been concluded, for the purpose of considering and if thought fit passing, with or without modifications, the following resolution as a Special Resolution, namely:—

RESOLVED upon the recommendation of the Directors.

(1) that it is desirable to capitalise a sum of Rs. 1,33,75,000 being as to (a) Rs. 92,28,873, the whole amount at credit of the Capital Rehabilitation Reserve, (b) Rs. 41,46,127, part of the amount at credit of the Fixed Property Reserve;

(2) that the sum of Rs. 1,33,75,000 accordingly be capitalised and distributed among the members in pursuance of Article 106A of the Articles of Association of the Company and that the said capital sum be applied on behalf of the persons whose names stand on the Register of Members of the Company on such date as may be fixed by the Directors, as follows:—

(a) as to an aggregate amount of Rs. 91,75,000 in paying up 3,67,000 unissued shares of Rs. 25 each to be issued as fully paid bonus shares to those members holding fully paid up shares of Rs. 25 each in the Company on such date as may be fixed by the Directors in the proportion of one bonus share of Rs. 25 each for each fully paid share of Rs. 25 held by them respectively and that the said 3,67,000 bonus shares credited as fully paid up be allotted accordingly, subject to the Memorandum and Articles of Association;

(b) in applying the balance, namely Rs. 42,00,000 out of the said sum of Rs. 1,33,75,000 in crediting the 4,20,000 partly paid shares of a nominal value of Rs. 25 each upon which Rs. 10 has been paid up with the sum of Rs. 10 per share being part of the sum of Rupees 15 per share at present unpaid thereon and upon the sum of Rs. 42,00,000 being so credited the said 4,20,000 shares in the Company will become partly paid up to the extent of Rs. 20 per share;

(3) that the amount and the so distributed shall be for all purposes as an increase of the nominal amount of capital of the Company by each such shareholder not as income;

(4) that the 3,67,000 shares consequent upon such capitalisation do rank pari passu with the existing fully paid shares of the Company and that dividends declared after 26th day of April 1963;

(5) that the 4,20,000 partly paid shares of the nominal value of Rs. 25 each (and on Rs. 20 will have been paid up) rank for all dividends declared after the 26th day of April 1963 in proportion to amount of capital paid credited as paid up there;

(6) that the crediting of Rs. 10 partly paid share of nominal value of Rs. 25 the allotment and issue fully paid Bonus shares, to the extent that they relate to resident Members of the Company, be subject to the approval of the Reserve Bank of India under the Foreign Exchange Regulation Act,

(7) that the Company shall complete and have ready for issue the Share Certificate in respect of the existing bonus shares within months from the last allotment thereof, and

(8) that for the purpose of effect to this Resolution Directors are authorised to take all necessary steps to give such directions as may be necessary and to settle any question or difficulty that may arise in regard to the issue of the bonus shares as they fit.

The transfer books of the Company will be closed from the day of May 1963 to the eleventh day of May 1963, both days inclusive.

AN EXPANSIONARY BUDGET FOR BRITAIN

THE unexpected rise in the sterling area's gold and convertible currency reserves during March did not by a long chalk rule out the obvious need for caution in any Budget aimed at expanding the British economy. This result was achieved only through the success of international lending co-operation, which secured a total of \$250 million in short-term resources to offset last month's run on the pound. The real movement of the reserves, had it been allowed to emerge, would have accounted for a far less favourable picture. Nevertheless, Mr. Maudling plumped for a moderately expansionary Budget on Wednesday last week, and only the most ascetic of critics have been able to find serious fault with his choice. The fact he had to remember was that the ultimate fate of sterling, whatever its present position, depends overwhelmingly on Britain's internal economic health, and that for the past year, thanks largely to his predecessor's Budget, this has been anything but robust. The British economy is in recession—slump is not too strong a word. The release during the past nine months of nearly £500 million of purchasing power, plus innumerable attempts at encouragement and exhortation, have all so far failed to get things on the move again. Unemployment is high, business activity is stagnating, a particularly severe winter and the failure at Brussels have both made the situation worse, so inevitably the whole country has been looking to the Budget for relief. Under such circumstances, the Chancellor had little choice, whatever he judged might be the short-term impact on the pound. It is good for Britain, for her trading partners, and not least for the future of the Government to which Mr. Maudling belongs, that he should have risen to the occasion in the reasonably adequate way he did.

But not all observers are happy about this Budget. The National Institute of Economic Research had previously mentioned a figure of £400 million for the minimum necessary tax concession, compared with the Chancellor's £270 million, and there was much evidence to support this view. But it had to be faced that the purchasing power already released, and which had so far had practically no effect at all on overall demand, was still available to supplement any Budget relaxations Mr. Maudling was prepared to make. In the last resort, it was the willingness of the British people to spend what they already had, not the amount of fresh resources the Chancellor was prepared to leave with them in his Budget, that would decide whether or not the economy could recover. By releasing what Mr. Maudling considered to be just enough new purchasing power to encourage and finance expansionary sentiment without running too great a risk of swamping the economy with inflationary demands, the Budget appears to meet the prevailing need, at least as far as the purely short-term considerations are concerned.

As for the long-term ones, there would seem to be not quite so much cause for congratulation. This Budget had been awaited with an eagerness which could only be explained in terms of its sig-

nificance as the first to be presented after the failure of the Brussels negotiations. Not only was it required to get the British economy moving again, but it was also looked to for an answer to all the long-term problems of stagnation which was at one time hoped, membership of the Common Market would effectively solve. But it has not provided the answer, except to a very limited extent. It is true that in his Budget speech the Chancellor paid lip-service to the need for improving the longer-term costs and efficiency of the British economy, but it is difficult to see what proposals can do to achieve it. More specifically, the obvious need to reform the existing industrial tax structure so as to encourage exports has been brushed aside with a promise to conduct a future enquiry into the possibility of a turnover tax as a substitute for the existing purchase and profit taxes. This does not suggest that the problem of export promotion is yet regarded as being particularly urgent in Treasury circles, a fact which should startle all overseas students of the British economy. Even the amalgamation of company income tax and profits tax—a long-realised and much-needed simpl

ment's acceptance of the National Economic Development Council's 4 percent-a-year growth target presupposes an annual rate of ~~wage~~ increases not exceeding 3½ percent, and that the income tax cuts announced were the equivalent of an overall wage rise of 2 percent. Now, at any rate, the unions will not be able to shrug off their own responsibility for wage restraint on the ground that the Government has no plans for growth. The shaping of the concessions so as to favour particularly the lower-paid worker was also designed to head off any acceleration of wage claims in the coming year, although this feature of the Budget has left the Conservative Government wide open to Opposition attacks on its electioneering intentions. For the majority of taxpayers, however, especially those for whom the income tax concessions do not offset the recent increases in local taxation, the incentive to embark on a consumer buying spree is unlikely to be large, while the urge to demand higher wages and salaries so as to compensate for any narrowing of earning differentials will certainly not be diminished.

The attitude of the trade unions is, of course, the crucial factor in the problem of promoting Britain's economic growth without inflation. So far their reactions to Budget appear to have been reluctantly favourable, although it has already been pointed out by the Secretary of the T.U.C. that nothing has been done to raise the standards of those who are too poor to pay any taxes at all. This may be just another manifestation of the essentially social-welfare approach which the British unions have towards economic management, and it may dissolve fairly quickly if the economy begins to move again. But there must be no underrating the prevailing dissatisfaction which exists in Britain today, and not only in trade union circles, with a Government which frequently gives the impression of having been in power too long.

The possibility of a Conservative victory at the next election is probably as important a factor in assessing the future prospects of sterling as Mr. Maudling's Budget itself. It must not be con-

cluded, however, that an unwillingness on the part of the trade unions to co-operate with the Government in containing inflation will automatically make it lose the next election. On the contrary, the preceding strike of London busmen is still regarded as one of the most important factors in the Conservative victory of 1959. The central question is whether or not a return to full employment will cause wages to rise faster than the prescribed 3½ percent a year, and this is largely independent of whatever Government might be in power. It can be argued whether Mr. Maudling's Budget will make this more or less likely, and, therefore, its short-term effect on the future of sterling will be adverse or favourable as the case may be. The balance of opinion is perhaps that it will help keep inflation in check, at least moderately, and probably for no longer than the period necessary to get the British economy moving again. After that, the fact that the Budget makes no serious attempt to tackle the deeper problem of Britain's industrial costs and efficiency, emerges as the crucial factor affecting the future of sterling.

So the final reluctant verdict must be that Mr. Maudling has probably missed his great opportunity to correct some of the long-term harm done to Britain's economic prospects by the failure to join the Common Market. If the country's exports, on which the entire prospects of economic growth depend, do record an increase in the coming months, the reason will probably be increased inflation among Britain's competitors rather than the improved efficiency of British industry. In fact, Britain's exporters will be fortunate indeed if they are able to hold their own, especially towards the end of the current year when the soporific effects of renewed prosperity have had time to sink into the economy. It is impossible, therefore, to avoid the parallel with Mr. Amory's Budget of 1959 which was followed by a balance-of-payments deficit in 1960 and a sterling crisis in 1961. It must be regretted that Mr. Maudling did not go into detail in his Budget speech as to what long-term plans he has for dealing with the situation, if events turn out that way again.

CONFUSION OVER EXPORTS

WITH major discrepancies revealed between the export figures compiled by the Reserve Bank and the Ministry of International Trade, one is left guessing what improvement in exchange earnings was actually achieved during 1962-63. Judging from the statistics on which the Board of Trade based its evaluation, it seems that there was a 5 percent expansion in exports last year, continuing the upward trend of the previous 12 months. India is still far short of the target set in the third plan, but the possibility that the long period of stagnation may have ended warrants some slight satisfaction. In fact, earnings might have been even higher if the prices of key commodities like tea had not softened as the result of larger supplies being placed on world markets.

Since a very large part of India's trade with the world consists of primary commodities in which adverse price fluctuations tend to cancel out the gains accruing from larger exports, it was heartening to hear Professor Hallstein say in Delhi last week that stabilisation of prices will confer immeasurably greater advantages than any conceivable increase in the amount of aid to developing nations. Even though the need for stabilisation may now be widely accepted, getting concrete international agreement on the measures by which this is to be achieved will take time. Meanwhile, the scope for mutual consultation between producing countries needs to be explored, and some attempt made to unify the ideas of Afro-Asian nations, all of whom have a direct stake in this matter.

The hurdles here will more often be psychological than economic, jute goods providing a case in point. Greater success may be achieved if consultations took place under international aegis in the first instance, to be followed up later by direct bilateral talks where appropriate. Ideas about regional economic co-operation in southern Asia canvassed at the recent Manila conference of E.C.A.F.E. are perhaps too ambitious in the present

context, but a useful beginning may be made by tackling such immediate problems as commodity pricing.

In this regional context, India's interests also require fresh thinking on the problem of mutual trade relations with neighbours. A report presented by the Reserve Bank on Afro-Asian markets highlights the growing difficulties which Indian exports will inevitably have to face unless action is taken now to forestall competitors. Most countries of southern Asia are faced with balance-of-payments deficits which oblige them to erect high tariff walls and adopt other restrictive measures to prevent the trade gap from becoming unmanageable. In these markets, trade expansion may have to depend upon long-term bilateral arrangements under which India obtains from them some primary commodities that she herself requires and sells them in return capital goods and light engineering items in which export surpluses will need to be created. Some economists are making the plea that such trade pacts may require a review of the aim of self-sufficiency where this conflicts with expansion of profitable trading. The examples quoted are rice and rubber, the export staples of Burma and Malaya, respectively, importing more of which can in this view be linked

FOREIGN CAPITAL IN SHIPPING

THE Government of India's decision to increase the ceiling for foreign participation in the share capital of Indian shipping companies from 25 percent to 40 percent is wise. The decision follows an earlier recommendation by the Congress Parliamentary Party's executive committee. The committee favoured such a measure in order to facilitate the flow of foreign exchange for the expansion of India's merchant navy. The foreign exchange shortage, worsened by the emergency,

with larger offtake of Indian goods. This raises large questions of policy which require careful study before any firm conclusions can be reached. Action need not, however, be deferred on some immediate issues like better credit facilities to underpin the export drive and encouragement to entrepreneurs to establish joint ventures in markets from which Indian exports threaten to be shut out by local manufacture sponsored by competitors. Capital exports have larger implications, which makes it more than ever necessary to keep a close watch on Chinese moves to penetrate neighbouring economies.

If broad issues of this nature were discussed at the Board of Trade meeting held recently in New Delhi, this is not public knowledge. The impression given by official handouts is that the Board confined itself chiefly to the mechanics of foreign trade, although one is entitled to expect from this high-powered body some guidance on matters of long-range strategy. It was gravely concerned about the adverse impact of sales taxes on export prices, a subject to be studied by a sub-committee it appointed. But nothing seems to have been said about the much more serious consequences of the inflationary impact of the latest Budget proposals. If the handout correctly represents the consensus reached by the Board (and not merely the view taken by official representatives), the super profits tax was held to have little direct bearing on exports. Surely there is some mistake somewhere because responsible spokesmen of such major export industries as tea and jute have left no doubt in anyone's mind about how they feel. Tea companies, with their traditionally narrow capital base, will find most of their profits in a good year diverted to the Exchequer, leaving little either for expansion or for evening out losses in a bad year. Yet expand they must if in the face of rising domestic demand they are to produce increasing export surpluses to reach the high target set for the industry. At the same time, the industry must constantly strive to reduce its production costs to keep in step with competitors. This will often mean substantial investment in new irrigation facilities or improved tea-making machinery, the resources for which will have disappeared into State coffers unless the super profits tax is modified.

The same holds true for jute, where the threat of competition is, if anything, keener, coming not only from other producers but also from substitutes. Modernisation of weaving equipment and diversification of production to include a larger proportion of specialities are indeed the only ways of preventing the industry's decline. The Board of Trade must have known of the L.J.M.A. chairman's warning that the installation of broad looms might suffer a setback if the Government insists on annexing through super profits tax the resources on which capital expenditure had been predicated. None of these genuine misgivings appear to have been reflected in the Board's deliberations, or so the official handout indicates. One might in fact be tempted to ask whether a Board which was seemingly so out of touch with realities had any worthwhile contribution to make to the export drive. Innocuous platitudes count for nothing in the hard world of international commerce. Speaking in Parliament on Monday, the Minister for International Trade, Mr. Manubhai Shah, called for efforts to lay conscious, modern and scientific foundations for foreign trade—an unexceptionable sentiment. He did not, however, explain how export industries are to find the brick and mortar to lay these foundations. The contradiction in calling upon industries to assume new responsibilities, but at the same time denying them the wherewithal, reflects a deplorable trend in policy-making at the highest levels.

has underlined the need for getting more external finance for India's shipping. A long and acrimonious controversy has raged over the question of increasing the proportion of foreign participation in shipping. Criticisms have been made that it would lead to foreign domination in a vital sector of the transport industry, and that Indian interests would lose their voice in international shipping conferences. But an effective reply to these criticisms was contained in the recent

observations of the Minister of Shipping, Mr. Raj Bahadur, that the existing law provides adequate safeguards against foreign domination; for instance, under the Merchant Shipping Act, the chairman, the managing directors and 70 percent of the board of directors have to be Indians, irrespective of the size of foreign investment.

In any case, there is no reason why one should be chary of foreign capital participation in shipping when it is eagerly sought for other industries. If the argument about the dangers of external domination were true in the field of shipping, it would be equally true in other industries. But in the latter, foreign risk capital and collaboration are accepted as being vital for development. Indeed, the progress in shipping too would have been more rapid but for the hesitation so far in permitting increased foreign capital participation. Although in some sectors of international trade, Indian ships have done well, in the sphere of dry bulk and liquid bulk cargoes, which account for two-thirds of the country's external trade, the performance has been poor. Shipping tonnage needs to be expanded fast in the field of tramps and bulk cargo carriers. Larger foreign investment would help India to build an adequate and balanced merchant navy.

According to the annual report of the Ministry of Transport and Communications (Department of Transport) for 1962-63, Indian shipping "has crossed an important milestone with the attainment of the 1 million-ton-mark". The actual tonnage on the Indian register on 31st December, 1962, was about 1,014,000, against 908,000 at the end of 1961. The shipping target for the third plan, which was originally fixed at a gross addition of about 375,000 tons, has subsequently been raised to 550,000 tons without increasing the financial allocation. Further financial allocation has not been necessary because last December a sum of Rs. 14 crores out of the Rs. 51 crores allotted for shipping under the third plan was lying unused. The acquisitions already made since the beginning of the plan amount to about 166,000 tons. With firm commitments for acquiring 24 overseas ships of 281,000 tons and two overseas tankers of 55,000 tons, there remains a balance of only 50,000 tons to be arranged in the rest of the plan period to reach the target of 1.3 million tons, even after allowing for the scrapping of 200,000 tons.

Although interpreted in terms of tonnage target the progress may give some satisfaction, it has not been adequate in relation to the country's needs. Barely 10 percent of the sea-borne trade is handled by Indian vessels at present; the percentage in the field of tramp and bulk liquid cargoes is considerably lower, about 2 or 3. It is gratifying that the deficiency in tramp and tanker tonnage is sought to be corrected by laying emphasis on them in future purchases. A committee under the chairmanship of Mr. C. P. Srivastava is now studying the scope for tramp shipping in handling the transport of mineral ores and other bulk cargoes. The increased foreign share in Indian shipping should help the development of the tramp trade.

The report says that in coastal shipping, resort to foreign chartered vessels for moving coal has been "virtually stopped". Apart from the acquisition of 14 vessels, a number of overseas vessels have been diverted to the coastal trade. The share of Indian shipping operating in the India-U.K.-Continent trade has been raised from 30.25 percent to 39.47 percent from September 1962, as a result of an agreement between India and Britain. The Indian share will be raised by annual escalations of 1 percent to 48.47 percent by 1971. An agreement has been reached that there will be no overall increase in the tariff rates until 30th June, 1963. In matters relating to the revision of ocean freight rates on Indian exports, the shipping interests will first hold discussions with the shippers. The report states that a Maritime Freights Commission has been set up to advise the Government on freight problems in the coastal and overseas trade of India. The Government intends to centralise all its chartering activities with a view to saving foreign exchange by obtaining cheaper freight rates.

Threat to Gold Control Policy

Glittering gold ornaments are back in the market for regular sale after a lapse of nearly two months. Under the Gold Control Rules, the sale of ornaments of over 14 carats, except among private individuals, came to an end from 8th February. The sale of 14-carat ornaments on a regular commercial basis began in Bombay for the first time on 3rd April with the Collector of Central Excise, Bombay, inaugurating the sale at a prominent jewellery shop. People vied with one another to get the best out of a wide variety of ornaments made from the much-maligned 14-carat gold. Sales on the first day, it was said, exceeded the wildest expectations of the firm. The intricate designs, delicate artistry and minute workmanship of the ornaments, all made without the aid of any new tools, clearly demonstrated that almost anything in jewellery could be made from 14-carat gold.

According to the proprietors of the firm, there was no difficulty in drawing the material of the required strength from 14-carat gold bars as it had developed a special alloy of 14-carat gold. Giving an idea of the prices of 14-carat and 22-carat jewellery, they said that a pair of 14-carat gold *kangan* weighing 41.75 grams will be sold at Rs. 375.75 (made up of Rs. 292.25 for the gold content at Rs. 70 a 10 grams, and Rs. 83.50 as the making charges at Rs. 20 a 10 grams). A *kangan* of the same weight in 22-carat gold would cost Rs. 438.37 (Rs. 375.75 for the gold content at Rs. 90 a 10 grams and Rs. 62.62 as the making charges at Rs. 15 a 10 grams). It is worth noting that the making charges for 14-carat ornaments work out to as much as 28.6 percent of the gold content and 22.2 percent of the total price. The corresponding figures for 22-carat ornaments are 16.6 percent and 14.3 percent.

The Bombay firm has, no doubt, given the lead, but it enjoys no monopoly of the special alloy used in making 14-carat ornaments. Quite a few refineries are now known to have undertaken the formulation of the special alloy, which is composed of 58.33 percent of pure gold and 41.67 percent of silver and copper. The Bombay Bullion Association's refinery is already offering as many as 14 different 14-carat gold alloys obtained by a variation in the percentage of silver and copper. All the 14 alloys are said to be capable of being fabricated into ornaments of the required design. Each alloy has definite properties of strength, colour, malleability and ductility, depending on the percentage of silver and copper it contains.

In view of the keen public demand for 14-carat gold ornaments and with the special alloy for making them readily available, it may not be long before jewellery shops all over the country begin to display for sale a wide variety of such ornaments. This may put the Government's gold control policy under severe strain by stimulating the demand for gold. The lawful sources of supply are limited. It is extremely doubtful if many people would like to have their existing ornaments of pure gold converted into new 14-carat ornaments, although small quantities may find their way into the market through distress selling. Nor is there likely to be much business in old 14-carat ornaments. Unlike ornaments of pure gold, 14-carat ornaments will not be offered for sale or for remaking because of the much higher making charges. Non-ornament gold held under exempted quotas is also unlikely to add much to the market supply of gold because it may be retained by the persons concerned in the form of 14-carat ornaments in case need arises for new ornaments for some social purpose.
