MADRAS ACT No. 58 OF 1961 51

72. Provisions of this Chapter to override other provisions.—The provisions of this Chapter shall, subject to the provisions of section 17, have effect notwithstanding anything inconsistent therewith contained in any other provision of this Act.

CHAPTER IX.

EXEMPTIONS.

73. Exemptions.—Except as otherwise provided in sub-sections (2) and (3) of section 5 and in section 6, nothing contained in this Act shall apply to—

(i) any land held by the Central Government or any State Government or any local authority;

(ii) any land held by—

(a) any charitable or educational institution of a public nature;

(b) any trust;

(c) any University constituted by any law;

(iii) any land owned by such co-operative societies [other than societies registered or deemed to have been registered under the Madras Co-operative Societies Act, 1932 (Madras Act VI of 1932) or under the Travancore-Cochin Co-operative Societies Act, 1951 (Travancore-Cochin Act X of 1952)] as are approved by the Government;

(iv) any land held by any industrial or commercial undertaking (other than a co-operative society) which, in the opinion of the Government, *bona fide* carries on any industrial or commercial operation and which is approved by the Government;

Provided that such approval shall be subject to such conditions as may be prescribed:

Provided further that such land shall be exempt only so long as the said conditions are complied with:

(v) any land in any hill area;

(vi) all plantations in existence on the date of the commencement of this Act;

(vii) lands converted on or before the 1st day of July 1959 into orchards or topes or arecanut gardens, whether or not such lands are contiguous or scattered:

Provided that such lands shall be exempt only so long as they continue to be orchards, topes or arecanut gardens;

(viii) any land used exclusively for growing fuel trees on the date of the commencement of this Act:

Provided that such land shall be exempt only so long as such land is used for such purpose;

BRITAIN AND THE COMMON MARKET: ON THE BRINK

THE consequences for India if Britain joins the European Common Market have not been receiving much attention here lately, for reasons which need no particular elaboration. The progress of the Brussels negotiations, too, has scarcely encouraged step-by-step assessment in this country. Why, it might be asked, should India, with all her present preoccupations, worry herself about Britain's joining the Common Market when such a prospect has never seemed more in doubt since it was first taken up seriously two years or so ago? And that, of course, is the fact of the matter. As the year 1963 dawns, it has to be admitted that the whole question is still shot through with uncertainties, despite the recent gesture of the Six in fixing 1st January, 1964, as a tentative deadline for British membership. The course of the Brussels negotiations since the Commonwealth Prime Ministers Conference last September has been one of rapidly alternating optimism and pessimism so far as Britain's prospects are concerned. At the start of this new year, it is definitely pessimism which is in the ascendency. So, for India, the comforting attitude to take is that it may never happen, because that is a genuine possibility. In the long run, of course, there remains the disturbing possibility that a Britain outside the E.E.C. may be unable to maintain an expanding or even an open market for Commonwealth exports. But for the time being at least that is another matter, and there are other and far more pressing things to worry about.

It seems correct to say that at present the main external obstacle to Britain's membership is the attitude of France. This may be modified by increased pressure from the other members of the Six if President de Gaulle is not successful in his present efforts to avoid all the blame for holding matters up. But since Mr. Macmillan met the President some weeks ago, and so obviously failed to secure any promise of personal intervention on Britain's behalf, it is perhaps the state of public and political opinion in Britain itself which might now prove to be the deciding factor. The evidence suggests that this is becoming increasingly resentful of the unaccommodating attitude of the Six, and especially of France. And because there is not yet the feeling in Britain that membership is in fact, as Mr. Macmillan once described it, the only alternative to early political and economic eclipse, it may result in forcing the Conservative Government to break off the negotiations altogether or be prepared to concede an easy victory to the Labour Party at the next general election. A deadline of end-February for the settling of all outstanding principles is already being talked about in London. British pride, Mr. Acheson and the Skybolt controversy notwithstanding, is still strong and remains a factor to be reckoned with in judging the prospects against Common Market membership.

It is doubtful whether the same can be said of the British economy. At the moment, this is not among the factors discouraging further efforts to secure entry. Indeed, the mood of industry in Britain at the beginning of the New Year is that the sooner the country is allowed in, the better. The present state of uncertainty is one of the

elements responsible for the recent decline in the investment spending of manufacturing industry, which in turn is playing an important part in producing a politically-explosive unemployment problem. British industry has accepted the Common Market challenge well in advance and has been stripping off its surplus labour and improving its operating efficiency. But at present it feels unable to go ahead with long-term expansion plans until the situation becomes clearer. If Britain does decide to walk out at Brussels, the disappointment in industrial circles will be surpassed only by the uncertainties as to what to do about the future. The least that can be expected is a rapid increase in the flow of British investment resources into Europe so as to avoid the tariff wall, a development which would scarcely help in solving Britain's two pressing problems of falling private investment and mounting unemployment. At the worst, a mood of diffidence and despondency might attack British industry which could completely wreck the Government's present plans for long-term economic expansion. In neither case is the prospect a pleasant one.

The mood of the British public, though inclined to be more irrational, is no less important in the final outcome. That large and articulate section of it, organised labour, is by no means opposed to Common Market membership in principle, but tends to be decidedly lukewarm in practice. The idea that traditional and cherished privileges may have to be abandoned if Britain joins has been accepted so far with some reluctance; the less enlightened sections of the movement may take a decision to break off at Brussels as an easy excuse for slipping back into the kind of insular and restrictive thinking which has done so much to bedevil Britain's industrial relations and impede economic progress in the past. Indeed, it is safe to say that both sides of industry would suffer a serious setback to the halting progress which has recently been taking place towards a more enlightened handling of the problems facing them. If Britain is to make her way in the modern world, she can ill afford to let this happen. The traditional insularity of the ordinary British mind, modified to a limited extent during the era of imperialism but tending to strengthen again now that is closed, is certainly no asset in tackling the problems of the modern world.

The picture presented by the British economy at the beginning of this New Year is only a moderately promising one, and only then in comparison with the year just ended. Exports, which rose sharply in the first and second quarters of 1962, were down again in the third quarter. This is not an unusual phenomenon, but even when the figures are adjusted for seasonal variations, it is clear that the growth of exports levelled off in a way which has confounded earlier hopes. It would probably be too much to hope that the upward trend was resumed in the fourth quarter of the year at the rate recorded in the first two. The performance of imports has fortunately been less discouraging, partly because there has not yet been a determined move by British industry to

replenish its raw material stocks. Taking seasonal factors into account, the British balance of payments during the third quarter of 1962, the last for which figures are available, although disappointing, was not therefore such as to cause excessive anxiety. It was, however, bad enough to discourage Mr. Reginald Maudling, the Chancellor of the Exchequer, from yielding to the demands for more expansionary measures before the next Budget. As those already introduced have proved unavailing, no doubt due to the prevailing climate of uncertainty, it is difficult to see how any rapid recovery in Britain's economic activity can be expected in the New Year, especially in the early part of it.

The most remarkable feature of the past year so far as the British economy is concerned has been the strength of sterling. This persisted even during the setbacks of the third quarter of 1962, and has continued into the fourth quarter despite the Cuban and Sino-Indian border crises. The reason for it—one that has served to offset not only adverse political events, but such developments as a fall in invisible earnings and a heavy draft on reserves to finance repayments as well—is an inflow of relatively hot money seeking to benefit from Britain's high discount rate or simply to escape the perils surrounding the dollar and the deutschmark. It is not, however, something on which it would be safe to base ambitious expansionary plans for the future. Indeed, it could be reversed altogether if Britain were to reduce Bank rate from its present 4½ percent; and this is undoubtedly the main reason why Mr. Maudling has so far resisted all pressure to do just that.

Against this economic background, it is becoming increasingly clear that the key to Britain's economic fortunes in the New Year, and in subsequent ones too for that matter, is the acquisition of new export markets. At the moment, the

only source of these is the E.C.M. itself. Now that the likelihood of an easy entrance for Britain appears to have receded, discussion is turning to alternatives. None of those so far suggested has been outlined in detail. They range from a vague recommendation on the lines suggested by Mr. Diefenbaker in London last September to an equally vague suggestion that a conference be convened to expand and liberalise world trade. All appear to ignore one essential factor, which is that it will take more than Britain alone to make a bargain, and so far there is little indication that any other country of world trading importance is seriously interested. It is possible that, outside the Common Market, Britain will be able to expand her trade with her Commonwealth and E.F.T.A. partners. But it is more likely that the scope for this will remain strictly limited in the short run; and it is no coincidence that the largest expansion of Britain's trade in the past two years has been with the Common Market.

It can be said with some conviction, therefore, that the economic arguments for Britain's entry remain as convincing as ever. The main barriers continue to be political and psychological, and there is every sign at the moment that these are growing in strength. There may be some truth in the claim that if Britain does not make the sacrifices necessary to membership now, she will be forced into much bigger ones in the future. But this is unlikely to make much difference to the outcome of events in the current year. They are more likely to be conditioned by the attitude of France on the one hand, and the indignant frustration of British public and political opinion on the other. Such factors as the wishes of the remaining partners in the Six and the long-term plans of the United States will certainly play their part, but at the moment they seem likely to remain somewhat subsidiary to these two main factors.

(the trade has not been above reproach in times of scarcity such as at present. However, a scheme could have been evolved, which would ensure proper distribution at reasonable prices without at the same time eliminating the established importers from their traditional field. Even the system of actual-user licensing has not remained without abuse, and instances are not rare where the imported commodities have gone straight to the markets instead of to the factories. The State Trading Corporation, which was originally set up to supplement the existing trade channels, has now gradually supplanted them. A few more S.T.C.s are reported to be in the offing, and they will operate over a wider field. However, one cannot help feeling that the State, with all its altruistic motives, has not been an efficient benefactor. By and large, the supposedly "amoral" forces of the market seem to have "delivered the goods" better. Representatives of the trade and industry have naturally resented the proposal to canalise a larger volume of imports through the S.T.C.

In view of the far-reaching changes made by the import policy, the system of annual licensing, which was introduced last time in pursuance of the Ramaswami Mudaliar Committee's suggestions, stands bereft of much of its value. Annual licensing was introduced to enable the industries to plan their inventory build-up so that production schedules may be drawn up with confidence. But the fact that for several items the second half of the annual licences will not be validated, indicates that annual licensing has lost much of its significance. There is considerable room for improvement in the licensing system itself. It is well known that import licences are sometimes sold on the market at fantastic premiums. Steps could be devised either to stop this practice or to pass the benefits of these sales to the Government by auctioning the licences that are not used. Red-tape delays and the cumbersome procedure involved in the issue of licences could also be shortened, if not eliminated altogether.

The reduced volume of imports—though the actual extent of reduction proposed is only Rs. 8 crores or Rs. 10 crores in a total import bill of Rs. 256 crores—is likely to push up the prices of those products whose cost of production has an import element. This may add a further problem to those charged with the task of price stabilisation. Consumers' co-operative societies are considered an important, although obviously a feeble, agency to hold the price line. The 50-percent cut on the supplementary licences to be issued to consumers' co-operatives is, therefore, a little surprising. The decision to ban the import of foreign liquor is more in the nature of a token effort, as the saving involved will be only about Rs. 8 lakhs or Rs. 10 lakhs, against an import budget of Rs. 148 crores. However, from the point of view of tourist promotion, which, if properly directed, can become an important dollar earner, the ban on foreign liquor seems ill-conceived. Similarly, halving the imports of certain vital medicines, surgical instruments, vaccines, sera and hearing aids is ill-advised, particularly when there is no indigenous manufacture of many of the items. Plainly, in such cases austerity can be practised only at the cost of the people's health.

BOTTLENECKS IN ENGINEERING

At a Press conference held in New Delhi earlier this week, Mr. Nehru once again emphasised that the Chinese threat to India is essentially long-term in nature. This implies that the task of building up the country's defence potential is not an emergency operation which can be quickly completed with imported military hardware, but an exercise which will extend over several years. In this context, India's engineering industries have an obvious rôle to play; many may be called upon to produce defence stores required for direct military use, while others render just as vital a service to the economy through increased import substitution. The availability of "free" foreign exchange—never very comfortable—is bound to deteriorate further because of the claims of military stores and equipment. This lends the greatest importance to whatever can be done to reduce dependence on imports, both immediately and over a longer period. These are

the two major tasks facing engineering industries as they enter 1963. They have had a good year in 1962, when the index of production rose from 420 at the end of 1961 to 462 last September. Even more impressive has been the rise in the output of industrial machinery—18 percent in the aggregate, but much higher in certain key sectors such as the manufacture of mining equipment and Lancashire boilers. The rate of progress could undoubtedly be maintained, if not improved upon, in the new year if action is taken to alleviate the shortages holding back production. In today's conditions, when a quick increase in output is the pressing need, it is something of an advantage that engineering industries have large reserves of unutilised capacity, going up to 50 percent or more in several branches.

Bringing this capacity into use depends in the first place on the availability of raw mate-

iron, steel and non-ferrous metals. The Engineering Association of India holds that the demand for pig iron is 1.2 million tons, against the current availability of only 750,000 tons. In steel too, the gap continues to be depressingly large despite the rising production from the new steel plants, particularly Rourkela and Durgapur which appear at last to have turned the corner. Even if this upward trend is maintained, there will still be a serious shortage of steel, specially of flat products like plates and sheets. The present limitations of capacity rule out the possibility of substantial relief until Rourkela's expansion, not so far begun, is completed. Looking further ahead, supply will not begin to catch up with demand until another new plant, specialising in flat products, comes up at Bokaro. Whatever doubts may exist about the need for Bokaro in some quarters, it is instructive to note that the consumers take a different view. In New Delhi last week, Mr. K. L. Chowdhary, president of the Engineering Association, was urging that the construction of the fourth steel plant should be expedited.

This does not, however, provide any immediate answer to the problem of shortages. As Mr. Chowdhary said, there is no option but to rely on imports which he hoped would be made available on special terms. There is, no doubt, a great deal more understanding of Indian needs today than ever before, as is evident from the unexpected offer of £1 million worth of copper from Sir Roy Welensky. Whether such generosity will continue, now that the immediate military threat has decreased, remains to be seen. Judging from what the U.S. Ambassador, Professor J. K. Galbraith, said in Calcutta last week, it may be assumed that India's friends will endeavour to help her to increase production for strategic purposes, but there are obvious limits to additional assistance. India's requests for long-term military assistance may not run to \$1,000 million, as some Press reports have suggested, but they are still large enough to constitute a problem for donors obviously have many other claims to meet. This, once again, points to the need for speedy import substitution, which means in this context the accelerated development of basic metals capacity.

Addressing the All-India Manufacturers Organisation in Bombay last week, the Central Minister of Defence Production said that ideological hesitation will not stand in the way of the fullest use of the potential existing in the private sector to meet military needs. If a similar empirical approach were adopted in the steel industry, the acceleration suggested may be more readily achieved. The Government has had before it for several months a proposal to allow Indian Iron to add 300,000 tons to its finished steel capacity in the first phase of a more ambitious expansion programme designed to double Burpur's output. Indian Iron hopes to complete the first stage in little over 30 months at a total cost of about Rs. 12 crores, which makes this a very attractive proposition indeed. Although Sir Biren Mookerjee has not explicitly said so, it is understood that the Government will not have to find any foreign exchange for the expansion since it is likely to be provided by the World Bank.

Tatas are also known to be working on expansion proposals but their enthusiasm has possibly cooled off since the announcement of the new retention price last September. Both Indian Iron and Tatas have pleaded for a review of the price, particularly the underlying assumption that steel plants should work at 100 percent of capacity uniformly year after year. Whatever led Mr. Subramaniam to adopt this obviously irrational attitude, present circumstances warrant a change in policy to encourage them to expand and, if necessary, diversify their production. Both the units can comfortably add another million tons each to their capacity within their overall plant layouts. Since services and facilities will not have to be duplicated, it is reasonable to assume that expansion can be quickly completed and the cost a ton of new capacity will be attractively low.

For pig iron, it would be better to meet the demand of the foundries from independent iron

plants. At least that should be the long-term aim since the tying up of blast furnace capacity in integrated plants for producing pig iron seems unnecessarily wasteful. Unfortunately, schemes for setting up small pig iron plants have so far made no headway at all, which has led to some sharply-worded criticism of the lack of initiative of the private sector. Quicker progress may now perhaps be possible because equipment is likely to be available from within the country with only a small imported component. But however quick the progress towards establishing new iron and steel capacity may be, there would still be an imperative need for the careful husbanding of supplies to ease shortages in the coming months. This would imply better and more effective control over distribution to stamp out the demoralising leakages of scarce categories into the black market. The Government has launched an enquiry on the existing control procedures, but it should still be possible to attempt an immediate streamlining with the co-operation of the trade and consumers.

Raw materials apart, action will be necessary to mitigate other handicaps. Only marginal improvements are possible in power generation capacity as most plants are already fully extended. But that is no reason for neglecting the possibility of a 10 percent or 15 percent increase in better grades of coal are supplied for use in power station boilers. Again, standby capacity could be reduced to the minimum, as the Associated Chambers urged in a resolution adopted at the last annual general meeting, but this would

imply better maintenance and more generous provision for spares. The latter would clearly depend in present circumstances on a larger allocation of foreign exchange. Simultaneously, every possibility for economising the use of power has to be pursued, including staggering of work-days and the institution of daylight saving schemes. Judging from the peak load curve of the Calcutta Electric Supply Corporation, there can be no doubt about the strain thrown on the system in the early evening, which makes it difficult, if not altogether impossible, to introduce an extra shift in engineering plants from which additional production is urgently needed.

On its part, the engineering industry too is thinking in terms of more rational deployment of its productive capacity. Mr. Chowdhary has proposed setting up consortia to pool capital, experience and technical skill so as to enable units collectively to supply complete plant and equipment for individual industries. Such pooling was already being advocated before the emergency because this was the only feasible way of eliminating uneconomic production along parallel lines. The need is more urgent now, and it is to be hoped that such consortia will be quickly set up. For similar reasons, it seems necessary to mobilise tool-room capacity wherever it may exist, whether in engineering units or others. The bottleneck created by the inadequacy of tools, jigs, gauges and fixtures lends weight to the Engineering Association's proposal for a quick survey of capacity as a preliminary to more effective utilisation.

Current News and Comment

Raising Money for Defence

The economic implications of a "crash programme" to mobilise India's resources to meet the Chinese threat have been outlined in a bulletin published by the University of Allahabad. The author of the paper, Dr. A. N. Agarwala, is the University's economist and also a member of the Planning Commission's Panel of Economists. He has taken for a working hypothesis that the Chinese army is 2.5 million strong. To meet the threat of aggression effectively, he suggests expanding India's armed forces to the same strength. For a mobilisation of such magnitude, he favours the creation of a separate defence budget of the order of Rs. 7,500 crores, independent of the existing revenue and capital budgets. He pleads for a separate defence budget because of the need to save the five year plan, at least in its essentials, as a large portion of the plan can be defence-orientated. At present, the Government of India seems to be thinking in terms of doubling the defence expenditure to about Rs. 700 crores a year. Viewed in this context, Dr. Agarwala's suggestions sound very bold and ambitious, and will be impossible to translate into practice.

A defence budget of the size suggested by him would imply raising financial resources totalling over 20 times the present defence allocation, or twice the aggregate of the revenue and capital budgets of the Central and State Governments together. The author feels that resources of this order can be raised, *inter alia*, by reducing the existing level of consumption by 10 percent and freezing it at that level during the period of the emergency. This is to be achieved by axing the expenditure on luxury items and durables like motor-cars, furniture and houses. Assuming the present consumption to be Rs. 12,800 crores, he estimates that this step would release about Rs. 1,300 crores a year for defence. The restriction of consumption by the people would increase the volume of deposits with the banks, but this improved liquidity would not press upon supplies or prices and would, therefore, not be inflationary. It would also release a tenth of the supplies in the market, which might be bought by the Government at current prices.

As for mopping up the savings, Dr. Agarwala suggests raising donations on a regular basis (likely yield: Rs. 100 crores a year), defence loans (target: Rs. 200 crores a year) and a 20 percent rise

in taxation (Rs. 300 crores a year). The consumption cutbacks, on which all these things depend, will obviously call for a high degree of social consciousness and personal restraint. The author points out that reduced consumption will also make redundant the provision made in the plan for improving the consumption standards of the people. This will release over Rs. 2,100 crores a year to begin with, and by 1965-66 will yield Rs. 3,400 crores. He points out that this will be the largest single source of finance, and, in 1963-64, will account for more than 28 percent of the proposed defence budget of Rs. 7,500 crores. Reduction in Government expenditure, which would be possible to the extent of 10 percent, would bring about Rs. 100 crores a year. Increase of the daily working hours by an hour would raise national output by about 10 percent. Taking India's national income in 1961-62 at current prices as Rs. 15,000 crores, the resources available by the extra work put in would fetch annually Rs. 1,500 crores. The additional production by increasing the present volume of employment would yield another Rs. 1,500 crores a year. He has also stressed that foreign military aid of the order of Rs. 2,000 crores a year will have to be secured. Dr. Agarwala's proposals sound fantastic, and would lead to financial and economic chaos. They show that India's academic economists have yet to come down to earth.

Outlook for Cotton Textile Exports

In spite of the introduction of the compulsory export scheme since July 1962 and a series of adjustments in the export promotion measures over the past few months, cotton piecegoods exports from India in 1962 are unlikely to exceed 500 million yards, fetching no more than Rs. 41 to 42 crores. Compared with even the previous year's disappointing performance, this would mean a further setback. Against an estimated fall of 6.3 percent in the volume of world trade in cotton textiles in 1961, mill-made cloth exports from India fell by as much as 17.4 percent from 694.8 million yards to 574.3 million yards. Quantitatively, sales slumped mainly in the U.K., the U.S.A., Australia, Burma, Malaya and Singapore, West Africa, Aden, New Zealand, Iraq and Morocco. In his speech at the latest annual general meeting of the Cotton Textiles Export Promotion Council, held recently, the chairman, Mr. Neville N. Wadia, says that

of the various factors contributing to the disappointing export performance in 1961, the most important was the continued increase in the costs of production due to an all-round rise in the prices of cotton, stores and fuel and higher wage costs. Indian cotton, it is said, is about 25 percent costlier than comparable foreign cotton and Indian mills have to pay for stores nearly 50 percent more than their competitors. Labour costs are also substantially higher when due account is taken of productivity. The other significant reasons for the fall in exports were the vast inroads made in the U.K. market by non-Commonwealth countries at the expense of India whose exports were subject to restrictions, the successive slashing of the prices of Japanese and Hongkong goods in the traditional markets to maintain their performance; credit squeeze, import restrictions and foreign exchange curbs in a number of markets; resort to bilateral arrangements, barter and link transactions by many countries; more stringent control on imports of India's bread-and-butter lines by countries nurturing local textile industries; growing consciousness for fashions and presentation and India's inability to cater to this section of the trade readily and at workable prices.

Since the industry has lost the advantages of cheap cotton and cheap labour and its equipment is old and inefficient, it is scarcely surprising that India should continue to lose gradually her hold on world markets. Competition has already forced this country to sell its cotton textiles at progressively lower prices not only in the non-traditional markets but also in Britain. Cotton textile exports from the European Common Market countries to the U.K. have risen impressively over the past few years in spite of their having to pay a duty of 17½ percent. It may be well imagined, therefore, what will happen after 1967 when their goods will enter duty-free and Indian textiles will be subject to duty at an average of 18 percent, the cumulative adverse effect being 35½ percent. Mr. Wadia expressed the hope that no change would be made in India's existing tariffs and quotas with Britain until the trade agreement with the enlarged Community are concluded.

The exports of cotton, woollen and synthetic hosiery goods fell by about 45 percent in 1961, compared with the previous year and the trend in 1932 has been equally disappointing. The structure of the industry and the lack of modern machinery to cater to contemporary styles at internationally acceptable prices are the root causes of this poor performance. Exports of cotton manufactures other than piecegoods have done fairly well in 1962, largely due to the upward swing in cotton yarn exports; the figure for the January-September period is placed at Rs. 7.4 crores. Considerable improvements introduced recently in the export promotion scheme to accelerate exports of cotton manufactures are expected to provide a fillip to this trade. Mr. Wadia has urged the cotton textile industry to go all out for finished fabrics in order to build up a lasting trade. He has made a special appeal to the fine and superfine mills to contribute enthusiastically to the export drive. The need for concentrated effort in certain markets where quota limitations and other difficulties prevail cannot be overemphasised, and Mr. Wadia's suggestion for a consortium or a syndicate for boosting textile exports deserves to be considered carefully.

Reliable reports indicate that the U.S. administration has expressed concern over the increased tempo of Indian textile exports to the U.S.A., and has requested the Indian Government to restrict its exports of twills and satins to the level reached in the 12 months prior to the Geneva international agreement on cotton textiles. According to the U.S.A., current Indian exports of these items to the American market are in excess of exports during the base year. The U.S. request has come in the wake of similar requests made to other countries like Hongkong, Japan, Formosa, Israel, Colombia, Jamaica, Greece and Portugal concerning certain categories of cotton textiles. The U. S. Administration will discuss shortly with the Government of India the question of regulating cotton textile exports to America.

Rayon Fabric Exports Rise

Exports of rayon and synthetic fabrics in October 1962 through the ports of Bombay, Calcutta

and Madras totalled 6.6 million metres valued at Rs. 62.50 lakhs. This shows a marked improvement over the previous month's figure of 5.3 million metres valued at Rs. 51.80 lakhs. The average price of the fabrics exported in October was, however, slightly lower at 94nP a metre against 96.5nP a metre in the previous month. The October figure brings the total value of exports during the first ten months of 1962 to Rs. 5.6 crores, against Rs. 4.4 crores in the corresponding period of 1961. Asian markets provide an important outlet for India's exports of rayon and synthetic fibres. Out of the total exports of Rs. 62.50 lakhs in October, Asia accounted for Rs. 43.03 lakhs, to be followed by Africa with Rs. 11.11 lakhs. Exports to Oceania, the United States and Europe amounted to Rs. 4.07 lakhs, Rs. 3.04 lakhs and Rs. 1.25 lakhs, respectively.

The prices realised from the export of rayon and synthetic fabrics in 1962 have been considerably better than in 1961; the average price range in 1962 being between 91nP and Re. 1 a metre, compared with 70nP to 90nP in 1961. The improvement in prices is attributed to the change in the export promotion scheme with the incentive granted either on the basis of the f.o.b. value or the value determined on the basis of the schedule of international prices, whichever is lower. Exports in November are estimated around Rs. 50 lakhs and shipments during 1962 will work out to around 15 percent of the country's output. With a view to encouraging the export of art silk fabrics, manufacturer-exporters have now been permitted to ship piecegoods not produced by them. The total exports of the manufacturer-exporter will, however, continue to be subject to the ceiling of Rs. 15,000 a loom a year. Manufacturer-exporters have also been permitted to sell to any consuming unit the imported as well as indigenous art silk yarn obtained by them under the export promotion scheme. The decision to recognise trading in imported and indigenous art silk yarn only legalises what, in effect, has been already in existence. The individual ceiling of Rs. 15,000 a loom is too high a limit to be achieved easily.

Problems of Oilseeds Industry

While the inaugural speech of Mr. Nityanand Kanungo, Central Minister for Industry, at the recent meeting of the Development Council for Oils, Paints, Soaps, Cosmetics and Toiletries, looked more like a restatement of the all-too-familiar problems, some of the policy statements made by him encourage the hope that the Government is now more determined to find a solution. The Government is considering the question of appointing a high-powered committee to make recommendations to place the oil milling industry on a sound footing. The organised mill industry has every reason to feel happy over Mr. Kanungo's statement that the authorities are examining how best the existing compounded levy can be modified so that it does not adversely affect its working. The industry has long been pleading, almost in vain, that as a result of the compounded levy, a number of organised units have been forced to close or work partially. Several small units have sprung up to take advantage of the lower excise duty. This is known to have affected the supply of oilcakes of the requisite quality for the solvent extraction industry. Since groundnut extraction is about the only item that is doing extremely well in overseas markets and it has a big potential, the solvent extraction industry needs every possible encouragement for its efficient and economic working. Mr. Kanungo's announcement that the Government has decided not to license any further capacity for the soap industry is welcome, because already is a large proportion of capacity is remaining idle. But it is equally important that the industry is properly reorganised because the mushroom growth of small units in the unorganised sector has had adverse repercussions on the working of the organised sector. Better organisation could help secure some saving in the use of oils whose supply position is far from comfortable.

The Central Industry Minister did well to call upon the soap manufacturers to recover the maximum amount of glycerine, which is a bye-

CAPITAL, 3rd January, 1963.

product, as glycerine is required in the ordnance factories in the present national emergency. A large-scale substitution of synthetic detergents for soap can also reduce the pressure on edible oils. The production of detergents is very limited at present, but the production of detergents depends mainly on the development of the petrochemical industry. Mr. Kanungo said that the Government had received the report of the committee on the development of the rice bran oil industry, which has vast potentialities. The supply of rice bran in the country is estimated around 900,000 tonnes a year. In view of the difficulties in the collection of the right type of bran for extracting oil, the Government has a plan to develop initially a production of about 20,000 tonnes of oil. The output at present is poor around only 3,000 tonnes.

But the basic problem facing the oilseeds bearing industry is the serious shortfall in the production of oilseeds. The present production is no more than 6.8 million tonnes, against the third plan target of 9.8 million tonnes, which is about the minimum that the country will need in order to satisfy the internal requirements at reasonable prices and also leave a satisfactory exportable surplus. Considering the disappointing progress made in recent years, not much comfort can be derived from Mr. Kanungo's assurance that the question of increasing production is engaging the serious attention of the Central Ministry of Food and Agriculture. Until production can be stepped up to catch up with demand, measures will have to be taken to reduce the pressure on the demand for edible oils and supplies will need to be augmented through imports of cheaper oils. It is in this context that the Government's move to import large quantities of soyabean oil from the U.S.A. under P.L. 480 has to be viewed. The move is welcome in that it will help to stabilise the prices of edible oils in the country and to release for export groundnut oil which is now being consumed by the *vanaspati* industry. Nearly two years ago, this industry had suggested to the Government to import about 50,000 tons of soyabean oil. But imports so far have been extremely limited, and no more than 3,021 tonnes were imported in 1961. The industry has now acquired the technique of processing soyabean oil with the help of U.S. consultants, and this paves the way for large-scale imports of this oil. It is true that the disparity between the prices of groundnut oil and soyabean oil has greatly narrowed down recently. Soyabean oil is at present cheaper than groundnut oil by about Rs. 150 to Rs. 175 a tonne; not long ago, the price advantage amounted to Rs. 550 to Rs. 600 a tonne. But this does not detract from the importance of securing large supplies of soyabean oil, the more so when it is to be imported under P.L. 480. Of course, imports will have to be substantially large to have any pronounced effect on the structure of edible oil prices, and also make available a substantial exportable surplus. The export of groundnut oil, however, will have to be subsidised, because there is little hope of Indian prices coming down to anywhere near the world parity in the foreseeable future.

Research in Air-conditioning

In his presidential address at the fourth annual general meeting of the Air-Conditioning and Refrigeration Council of India in Bombay recently, Mr. Y. A. Fazalbhoy underlined the need for co-operative research in the air-conditioning and refrigeration industry which has been launched on a vast scale with important foreign collaboration. Mr. Fazalbhoy said that foreign collaboration would not automatically solve the problems which face the industry concerning the disposal of its products; nor can these problems be tackled through isolated individual effort. Although the Council of Scientific and Industrial Research has been doing useful work, it could not be expected to tackle the specialised problems of the industry. Mr. Fazalbhoy has, therefore, suggested the establishment of a research unit financed by the industry, but with the assistance from the Government. As a first step, he said, the industry should set up a laboratory for examining raw materials, testing components and sub-assemblies and the labora-

CAPITAL, 3rd January, 1963.

tory could later be developed to undertake major research work. The industry can do a great service to agriculturists by applying itself to the task of preserving farm produce from natural deterioration.

There are about 39 licensed firms in the industry of which nearly one-third are not yet in production. When these units go on stream, there would be a dearth of trained personnel. The Government has not yet responded to the industry's plea for making arrangements for imparting technical education in air-conditioning in any of the technical institutes. Mr. Fazalbhoy said that one university had recently introduced a course in refrigeration and air-conditioning, and he hoped that the lead would be followed by others in the near future. Referring to the progress achieved by the industry, Mr. Fazalbhoy said that according to the statistics compiled by the Development wing, domestic production of refrigerators during the year ended September 1962 amounted to 9,909 units, of commercial refrigerators 87 units, room air-conditioners 12,607 units and water coolers 2,575. The value of the equipment manufactured by the members of the (air-Conditioning and Refrigeration Industry Export) pool during the year was around Rs. 5.3 crores. Commending the efforts of the industry to step up exports, Mr. Fazalbhoy said that this industry had a unique voluntary scheme for compensating export losses, under which every manufacturer has to contribute to the Acres pool 1 percent of its production value and 6 percent of its import entitlement. The pool compensates exporters up to 50 percent of their losses. Exports, however, are still very small. In 1961 water-cooler and room air-conditioner exports fetched only Rs. 1 lakh, and they are expected to yield Rs. 3 lakhs this year. The target for 1963 has been set at Rs. 5 lakhs. The Acres pool has 18 members at present.

Protection for Plastics Discontinued

The Government of India has accepted the Tariff Commission's recommendation that the protection granted to the phenol formaldehyde moulding powder industry—the only sector of the plastics industry which is enjoying protection at present—need not be continued beyond December 1962. The Commission points out in its report that the relative position of the indigenous industry against the landed cost ex-duty of competitive imports is about the same as at the time of its last enquiry in 1959. But it was on certain special considerations that the Commission then recommended the continuance of protection at the level of 35 percent *ad valorem* for a further period of three years. These special considerations were, firstly, the industry was in an important phase of development and some of the producing units had definite plans for diversification of their products backed by technical agreements for foreign collaboration for manufacturing superior grades of p.f. moulding powder. Secondly, for improving the quality of the product, the producing units were required to make further investments; and, thirdly, the industry's dependence on imported raw materials was expected to undergo a change in the near future as a result of the development of indigenous raw materials.

The Commission says that all these factors have since undergone a change. Steps have been taken for the development of indigenous sources of raw materials. Foreign technical collaboration agreements have since been finalised by three units, while negotiations for such agreements are being carried on by some other producers. The industry has installed testing equipment to improve the quality of its products and achieved considerable diversification of output. Thus the special considerations which prompted the Commission to recommend the continuance of protection in 1959 appear to have been removed. During the 12-year period of its protection, the plastics industry has made rapid strides to improve its position by the expansion of capacity, increase in output and diversification of output. The present annual rated capacity of the phenol formaldehyde moulding powder industry is 2,195 tonnes on a single shift basis in six units, against 1,524 tonnes in four units in 1959. Production of p.f. moulding powder has increased from 1,880 tonnes in 1959 to 2,219 tonnes in 1960 and 2,244 tonnes in 1961. During the

first half of the current year, the output amounted to 1,154 tonnes. The production of G.X. and other grades of powder has also improved. The domestic demand for p.f. moulding powder is estimated at 3,000 tonnes in 1962, 3,500 tonnes in 1963, 4,000 tonnes in 1964 and 5,000 tonnes in 1965.

The Commission says that the present capacity of the industry is adequate to meet the current as well as the future demand, provided the industry is enabled to work multiple shifts. Consumers are said to be generally satisfied with the quality of G.P. grade of indigenous p.f. moulding powder, but there are still some complaints concerning G.X. grade from manufacturers of electrical accessories. The Commission urges the producers of p.f. moulding powders to take more energetic steps for improving their products. It feels that with a little more experience, the indigenous industry should be able to produce p.f. moulding powder of G.X. grade comparable in quality to the imported product. The Commission has suggested that the applications for import licences from producers of p.f. moulding powder for testing equipment should be given sympathetic consideration.

U.P. Measures to Raise More Revenue

The U.P. Government's decision to mobilise fresh revenue resources has been prompted by the war with China. As a border State, Uttar Pradesh has a special responsibility for taking defence measures. Faced with a huge Budget deficit of nearly Rs. 14 crores, the U.P. Government has decided on a number of steps to tap additional revenue. The most important of them are the levy of an emergency surcharge on land revenue and the enactment of the Rent Bill. The Act, which empowers the Government to impose a 25 percent surcharge on land revenue or rent, is expected to yield about Rs. 5 crores. The State Government has also enhanced the entertainment tax on cinemas. The rate has gone up from 50 percent to 60 percent. Several legislators wanted the percentage of tax to go still higher. The official argument, however, was that the cinema was the only form of entertainment which the poorer section could afford, so the tax should not be raised further. Sales tax rates have also been increased with effect from 1st December, on a number of commodities. These include cement, bricks, tyres and tubes, kerosene oil, cotton, brassware, spices, *ghee* and fountain pens. The increase is roughly of 1nP over the existing rates, except in the case of cement, cotton and cotton waste. The new rates, it is expected, will bring Rs. 70 lakhs or Rs. 80 lakhs annually to the State exchequer.

Block Rakes for Coal

The Coal Consumers Association of India, whose members use over 10 million tons of coal annually, has in a communication to the Central Minister for Mines and Fuel pointed out the difficulties which are likely to arise if the new pattern of coal distribution proposed by the Government is enforced. The scheme for moving coal only in block rakes has apparently been postponed. This is good, since it would have worked to the disadvantage of industrial consumers, especially small and medium ones. The scheme cannot ensure the supply of coal according to the size and grade required, and consumers would have to incur heavy capital expenditure to extend their sidings to accommodate rakes and to provide additional storage capacity. Alternatively, they would have to get their coal by lorries from the station where the full rake stops, and arrange for keeping watch over the coal if lorries are not immediately available. Other difficulties would arise. For example, on what basis would any shortage of a particular grade of coal be shared when it is to be distributed among a number of consumers, and how would it be possible to spot the colliery which may have been responsible for the shortage or for the supply of bad quality coal not required by users? Many collieries, especially the small ones, do not have arrangements for loading block rakes, so the formation of rakes under the scheme would usually be delayed at these points, causing inconvenience and loss to industrial consumers. Moreover, intermediate railway stations in the country and even some

destination stations do not have adequate siding facilities for unloading the rakes. Until these deficiencies are removed, the block rake scheme is unlikely to work satisfactorily.

As for the establishment of regional coal dumps, the Association has pointed out a number of defects which would make the scheme expensive and irksome. Consumers would have no choice concerning the size and quality of coal and would often have to make do with what is available from the dumps. They may not even get the quality they pay for. This danger will become real when coal is moved in block rakes, giving the unscrupulous supplier enough opportunity for malpractices. Moving coal by lorries to factories when these happen to be some distance away from the dumps would prove expensive, and cost the consumer Rs. 10 to Rs. 12^½ a ton more on average, not to speak of the loss which may arise in transit or due to theft from the dump. Moreover, the scheme would eliminate a class of middle man traders who have so far acted both as providers of credit and as professional advisers to consumers in coal matters. The Association agrees, however, that if the block rake scheme is to be introduced, it should be done in stages, keeping in view the hardship which small and medium consumers may suffer.

Devaluation of Scientists

In spite of the wordy tributes paid to scientists and scientific workers in India, there are many research workers like the late Dr. Joseph who are frustrated by the red tapism and bureaucracy in India's national laboratories. The Prime Minister, Mr. Nehru, has apparently not been able to find any solution to the problem of how scientists—who have to pursue the truth in an independent academic atmosphere and have, therefore, to be given maximum initiative and freedom—may be helped to get rid of interference from the departmental bureaucracy. The truth is that the top echelons of India's numerous scientific bodies are staffed not by genuine scientists but by career administrators who have no idea of how to improve the atmosphere for research. The problem is not always solved by appointing eminent scientists as top administrators; being overloaded with routine administrative work, they then inevitably lose their enthusiasm for research and become obsessed with more day-to-day matters like departmental promotions and transfers.

Some of these problems were discussed by Sir Jehangir Ghandy, director-in-charge of the Jamshedpur steel works in his convocation address at Jadavpur University last week. Sir Jehangir referred to the claims of the Council of Scientific and Industrial Research that it is trying to improve the lot of the scientist. Promotions based on merit, it says, have been introduced, cutting across the more time-honoured principle of seniority; advance increments up to a maximum of three have been granted to research workers who have shown exceptional originality; and by and large younger men are being sent on scientific delegations abroad. But it is obvious from the statistics Sir Jehangir cited that the 27 national laboratories with a staff of well over 2,000 professional scientists have not contributed much to the progress of scientific research. More important, Indian industry, as Sir Jehangir said, "has been slow to profit from the scientific and technological work being done in our laboratories and other institutions." Yet the need for the modernisation of industry has been felt all along ever since planning was initiated, and especially now when industry has been asked to contribute substantially and rapidly to the nation's defence effort.

Engineering Goods Exports

The increase in the exports of engineering goods from Rs. 4 crores in 1956 to Rs. 11 crores in 1961, reflects the impressive progress of the industry in this field over the past few years. The Engineering Export Promotion Council has played an important rôle in boosting the overseas sales. The list of exportable items has gradually expanded, and new products like transmission line towers, railway track materials and castings are being sold. Indian engineering goods now go to as many as 75 markets, which include highly industrialised countries like the U.S.A., the U.K., West Germany

and France. Mr. S. L. Kirlskar, the chairman of the Engineering Export Promotion Council, stated in Madras recently that the export performance in 1962 was not quite satisfactory. Against the target of Rs. 16 crores, exports during the January-October period of the year amounted to only Rs. 7.80 crores. The reason for this poor performance was that the export of steel products like blooms, billets, etcetera, which had amounted to Rs. 2 crores in January-October 1961 had been nil during January-October 1962. Excluding steel, exports, till the end of October, however, had recorded a rise of about 20 percent over the corresponding figure in 1961.

The targets fixed by the Council for next three years are Rs. 20 crores for 1963-64, Rs. 24 crores for 1964-65 and Rs. 30 crores for 1965-66. Mr. Kirlskar added that though these figures might, at first sight, seem unattainable, they were not really so formidable. He said that Indian exporters were trying to break through the foreign markets, and they were offering their goods at lower prices, sometimes even below the cost of production. Indian engineering goods suffered on account of high cost because of the depreciated currency, heavy taxation and certain labour laws which encouraged inefficiency. India faced competition mainly from European countries and Japan. China was not competing in the export of engineering goods. Mr. Kirlskar added that there was no one definite pattern of competition, and individual exporters had to work out their own scheme of furthering the exports of their own goods. Refer-

ring to the effect of the import cuts on the engineering industry, Mr. Kirlskar said that they would have little impact because most of the industries depended on indigenous materials.

Analysis of U.K. Companies

Britain's five biggest companies are Imperial Chemical Industries, Unilever, Imperial Tobacco, Courtaulds and Bowater. This is disclosed in a U.K. Board of Trade analysis of 2,618 manufacturing companies, each of whose assets exceeded £500,000 in 1960. Banking, shipping and property groups are not included, nor are companies such as "Shell" and British-American Tobacco, which mainly operate abroad. The analysis shows how take-over bids affected industry. Between 1957 and 1960, no fewer than 450 companies lost their stock exchange quotation, mainly because of mergers and acquisitions. U.K. Board of Trade figures show that large companies expanded faster than small firms. Among the very large companies, two-thirds increased their assets by 20 percent, or more in 1958-60. Among very small companies only one in three expanded at this rate.

Fast growth by large companies, plus the effect of take-overs, increased concentration in industry. Between 1957 and 1960, the 100 largest companies increased their share of net assets from 51 percent to 54 percent. These figures also confirm the City view that fast-growing firms are generally the most profitable. Of companies which increased their assets by 20 percent during 1958-60, half earned 40 percent on capital employed. Only one in 12 of the slower-growing companies achieved this level of profitability. On average, just over one-third of the increase in assets of companies during the three years was financed by new money. Big companies tended to rely more on outside money. One out of three larger firms relied on external financing, against only one in ten smaller concerns.

Rise in World Shipping

According to the statistical tables compiled by Lloyd's Register of Shipping for 1962, the world tonnage of steamships and motorships during the year at 139.98 million tons gross shows an in-

crease of 4 million tons gross. The increase was widely distributed among principal maritime nations, and there was no significant change in the ranking position of leaders. Decreases have been noted in the case of Liberia and Panama, because of continued repatriation of ships with controlling Greek interests. At the same time, Greece is considerably building up her fleet with new tonnage, and it shows the proportionately highest increase in fleet strength of all maritime nations. There has also been a fall in the case of the U.S.A., due to the scrapping of Liberty ships in that country. Japan comes second in order of tonnage added, followed by Russia and Norway. Small additions to their national fleets were reported by Canada, France, Spain, India and Argentina, while the smallest was reported by Brazil. The total increase of tonnage in British Commonwealth at 500,000 tons gross, was still a long way behind those of Greece and Japan and considerably less than those of Russia. Figures compiled by the International Chamber of Commerce show that the tonnage laid up in the world fell steadily from a peak of 9 million in 1959 to 2.2 million at the end of 1961. It remained at this level until June 1962, but has risen sharply during the past few months to 3.7 million tons, indicating that the shipping industry has run into bad weather again. The world total of oil tanker tonnage has increased by 1,455,000 tons gross since 1961, and now amounts to 45,304,000 tons gross, representing 32.4 percent of all steamships and motor-ships. All maritime countries of the world have reported increases, the highest being in Japan, followed by Greece, Russia, the Netherlands and the U.K. The only two countries showing decreases are Denmark and Panama. Additions in 1962 to the total oil tanker fleet in the British Commonwealth over the 1961 tonnage amounted to 244,000 tons gross, which was, however, less than individual additions of Japan and Greece.

EXCHANGE BROKERAGE

DESPITE the petition of the Brokers and the protest signed by numerous merchants the London offices of the Exchange Banks have refused to re-consider the brokerage question and the reduction of 1/16%, therefore, came into force, so far at least as the Banks are concerned, as from the 1st instant. In the interval which has elapsed since notice of the change was given there has been some reduction in the number of Exchange Brokers, two or three having transferred their energies to other fields of commercial activity, while of the remainder, some we understand contemplate extending their operations to the stock and share markets. This is facing the crisis in a commendable, courageous and business-like way. It will be interesting to observe during the next few months the behaviour of the numerous signatories of the merchants' protest. Logically and consistently they must, of course, continue to pay 1/16%, for, if they were not prepared to do so, their interference in the question at all was an unmitigated impertinence. The brokers claim to their sympathy is surely strengthened and not weakened by the fact that the latter have now lost one-half of their income from the Banks? It is true that many of the signatories of the protest were importers, who, of course, transactions and whose interference was, therefore, purely gratuitous; but then as leading counsel said recently in the High Court, "We money, my lord." It is likewise true that, of the remaining signatories, several, while ostensibly sympathising with the brokers and signing directly with the Banks. But such double-dealing as the investigation of this question has over or tolerated by no doubt be readily glossed familiar with the scandalous morality disclosed in connection with the Jute Manufacturers' agreement and Marine Insurance Tariff. Commercial turpitude is lightly dealt with in Calcutta. In our previous references to the brokerage question we condemned the Banks somewhat severely for the shortness of the notice which preceded the reduction. We learn, however, that a year or more ago the leading representatives of the Banks and their attention drawn to the "cutting of rates" to which we referred in our issue of the 13th November, and which the retention of the remuneration of 1/16% appeared to facilitate.

A Ditcher's Diary

I NEVER HAD MUCH TIME FOR THE INDIAN PRINCES. Only a very few of them ever cared for their subjects: and for the amount of colour they lent to the Indian scene, they did pretty well for themselves. Sardar Patel and Mr. V. P. Menon have been given all due praise for the integration of the States; and, considering the price they extracted for abdication which was perhaps inevitable anyway, it seemed unnecessary to thank the princes for their patriotism, such as it was. Of late, however, I have seen some very uninformed criticism of the ex-rulers for their allegedly niggardly contribution to the war effort. Many, I daresay, could do better than they have done; properly handled, they yet may. But the notion that the princes are sitting pretty on their fat privy purses, when the rest of their countrymen are either fighting at the front or toiling in the factories for meagre wages, is rather wide of the mark. I did not know, until recently, what enormous commitments accompany some of the privy purses. It is all very well to argue that those parasites should be done away with. I agree; but I cannot get so indignant as some others when I see the number of parasites democracies support; counting Governors and other political rejects in other sinecures, you may find that the feudal monarchs of yesteryear do not compare all that unfavourably. Some Congress leaders affect extreme anger at a few of the ex-rulers dabbling in politics. I cannot help noticing a distinct fall in temperature when some other princes join the Congress Party. Whatever the rights and wrongs of the matter, I have a feeling that the Congress Governments have signally failed to win over the princes. Watch your petty bureaucrat and petulant politician; they will throw their weight about at the slightest opportunity, offending everybody around. Yet, some of the former princes had much to give. Before the emergency, they could have helped industrialisation; now they could give money and gold. If they don't, at least in some cases they feel personally hurt and humiliated. Everyone talks in terms of P.R.—public relations. Since the death of the Sardar, there has been no such thing as "princely relations". New Delhi should think the implied suggestion over.

U THANT'S DIFFICULTIES WITH THE PREDICTABLE Mr. Tshombe are easy to see. He has a mandate susceptible of various and mutually exclusive interpretations; and when India withdraws her contingent, as she must and soon, he will not have the resources to do even the little he may be permitted to try. This will suit many parties besides Mr. Tshombe; and it is not necessary to

name them. India has already shown how anxious she is not to embarrass the United Nations; and I admire New Delhi for it. It seems possible still that India's concern for the United Nations is being carried too far. In the existence of the Indian troops in the Congo, some see support for their view that the war with China is not really quite so serious as India sometimes tries to make out. (I say "sometimes" because in the last fortnight Mr. Nehru has more than once referred to the war as a "border dispute", only to say later that to call it a "border dispute" is to get the whole thing wrong. I do wish New Delhi would make up its mind at least on nomenclature.) I do not, of course, know how badly the contingent in the Congo is needed for duty nearer home; but I see a certain contradiction between withdrawing troops from the frontier with Pakistan, which the West seems wholly to approve, and retaining troops in the Congo. For one thing, the seemingly half-hearted request for early return of the Indian troops takes something away from the sense of urgency that should be there, according to the Government itself. For another, even if the troops concerned are not immediately required for action they can, surely, be used for training new recruits. Or am I to understand that training facilities are already adequate and more? As far as I can see, the Congo operation has earned India little more than a vague sort of reputation for high-mindedness—and not a few casualties to little purpose. It is too early to define the operation's place in history; it is not too early to make it clear that India has done more than her share. I was surprised to see an inspired report the other day that India had no right to recall her troops without U.N. consent. Right? Has the U.N. accepted the responsibility of guarding India's borders?

SO WE WON'T BE SEEING Cleopatra for many months yet. I am not suggesting that you were anxiously awaiting Elizabeth Taylor's super-colossal Egyptian block-buster, but with all the publicity this unfortunate movie has had one cannot help wondering whether Darryl Zanuck and friends are ever going to get back the \$35 million they have so far sunk in it. (Incidentally, I wonder whether Julius Caesar or Napoleon spent nearly as much on their ill-fated Egyptian escapades.) Mr. Zanuck says that if he can get "a couple of million dollars more" and if Miss Taylor's health and emotions permit, he might have the four-hour masterpiece ready by the middle of the year. Meantime, I see that Bette Davis and Joan Crawford have made a movie together in less than 30 days and at a cost of under \$1 million, which has

already earned about twice that sum in first releases. It is called *What Happened to Baby Jane* and is a "chiller", in case you want to watch out for this coming attraction. Without going into any comparisons between the old guard of film actresses and the newer reputations, I think the event has a clear lesson for the film industry, including the Indian. It is a familiar lesson, of course, but one that the industry stubbornly refuses to learn. An inexpensive black and white movie with a good story and competent actors is worth all the multicolour sooper-hooper-dooper extravaganzas imaginable—worth more financially as well as aesthetically. Since Miss Bette Davis was lately reduced to buying advertising space in the papers to find a job, and since Miss Joan Crawford is kept busy by her rôle of director of Pepsi-Cola, I guess that they did not demand the exorbitant fees that Miss Elizabeth Taylor receives. The West German film producers decided recently to stop competing for actresses by agreeing on a ceiling for fees. While not, in principle, a supporter of price controls, I take this for the beginning of wisdom.

A BRITISH READER WRITES, WITH MAGNIFICENT indignation: "It may be true that following the Acheson and the Skybolt rumpuses, the British are re-discovering America. But for the Russians to accuse an Englishman of anticipating Christopher Columbus by 130 years is surely to descend to a level of slanderous accusation such as has not so far been experienced in the whole long and dismal history of cold-war incriminations. The English are a patient race; in the past few years they have shouldered the blame for a great deal of what is wrong with the world today, and, as their contribution to the survival of newly-independent rulers hard pressed for scapegoats to cover their own shortcomings, they are prepared to go on doing so. But this is too much. The already vastly over-burdened British conscience cannot be expected to sustain this final straw. History has already affixed the blame for the discovery of America; it belongs to a man whose name has certainly been the cause of more regret than his original good intentions deserved. I know that the Chinese have lately claimed for themselves this dubious distinction; but, despite their behaviour towards India, which proves that they are capable of almost any crime against long-suffering humanity, they need not be taken too seriously. The world has become used to the heated exchange of charge and counter-charge across the Iron Curtain. But why the Russians should have chosen the particular time when Britain is weighing the possibilities of retiring from the nuclear race, and when Russia herself needs all the support she can get against an increasingly aggressive China, to make this particularly grievous and calculatingly wounding aspersion, must remain forever one of the mysteries of that often diabolical box of tricks, the

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

PACKINGS: Suitable for Steam Boilers, Glands, Pumps, Hydraulic etc. made from genuine Jute, Hemp, Flax, Cotton, Asbestos and Metallic Wire.

"Special Acid and Alkali Resisting Packing Manufactured to Individual Requirement".

GRAPHITE: Suitable for Paint, Lubrication, Battery Manufacturers, Foundries etc., Range upto 96.98% carbon guaranteed, flakes.

FOUNDRY REQUISITES: Black Lead, Plumbago/Graphite, Graphite Flake, Moulders Blacking, Casting Powder, Fire Clay, Bentonite, Core Oil, Core Gum, Indian Ganister, Soapstone, Case Hardening Compound, Carburising Salts, Iron Cement, Lime-stone Lumps, Foundry Nails, Chaplets, Coal Powder etc.

INSULATIONS: Guaranteed 'BLUECROSS' 8% Magnesia Asbestos Boiler Covering, Hard Setting Priming, Insulation Cork Boards, Tubular Steam Pipe Lagging, etc., etc.

'Lagging Jobs Also Undertaken'

MINERALS: Ready stock of Barytes Powder, Limestone Powder, Dolomite Powder, Slate Powder, Whiting Powder, Red & Yellow Ochres, Red Oxide, China Clay Powder, Gypsum Powder etc.

Outside Grinding Jobs also undertaken

ASBESTOS: Packings, Jointings, Mill Boards, Long and Short Fibres, Asbestos Indurated Cock Fibres, Powder and Fluff etc., etc.

Slavic mind. I can only say that before breaking off diplomatic relations, and purely as a gesture to offset this latest threat to world peace, Mr. Macmillan should give Mr. Khrushchev an opportunity of making yet another humble retraction. And if international justice is anything but an empty slogan, the descendants of the grossly-wronged Carmelite friar, Nicholas of Lynne, whose memory now runs the risk of being forever blackened, should be compensated in heavy damages. The poor fellow probably never did anything in his life more reprehensible than order a few burnings at the stake."

THE IMMENSE BOOM IN ANTIQUES—FURNITURE, silverware and various decorative items—is well known. Perhaps less well known is the fact that the business has spilled over from Chippendale tables, Louis XIV armchairs and Italian silver to what the dealers call "primitive and Oriental objets d'art". Chinese ceramics (which cannot be sold in the U.S.A. unless exported from China before 1950), African tribal totems, New Guinea headpieces and Aztec jewellery are being knocked down regularly at auctions for high, and still rising, prices. Now, I wonder—as I am entitled to at a moment when all national resources are being mobilised—how many pieces of old Indian art are lying about unvalued and uncared for in this country, when they could be sold abroad for a fortune. I do not suggest that we export the contents of the Calcutta Museum to be auctioned at Sotheby's—although at moments of grave national danger the suggestion would not be absurd. No, I am thinking of things that are not museum pieces and are lying unnoticed in private collections. They have no market in India but they could be worth more than their weight in gold if a market were created for them abroad. No such market will be created until the collectors are reassured of the two facts that are most important to them: the pieces must be guaranteed authentic and must be relatively rare. If a private shop, or for that matter some vastly superior version of the Government's "Indian arts and crafts" emporiums were to be opened in New York and one or two European capitals and offer for sale genuine and certified Indian antiques, I think a new export market would have been invented. And it could soon be worth millions of dollars if the style caught on. To objections about "trading the nation's cultural heritage" (usually raised by folk who have taken no notice of that heritage as long as it stayed at home), I would reply that nothing would so well stimulate India's dying crafts as collectors' interest in Indian antiques. Anyhow, there is always the "honest fake" market: the demand for modern imitations of old pieces that have fetched good prices.

FOR ME, ONE OF THE PLEASANTER SURPRISES OVER the Christmas holidays was an invitation to *The Story of Tata Steel*, a technicolor film sponsored by the Tata Iron and Steel Company to commemorate the golden jubilee of the Indian steel industry. Most public-relations efforts of this variety in my experience, are liable to suffer from one or two major faults: they either emerge as blatant "puffs" for the sponsors in question, or they turn out to be a motley collection of snapshots lacking in both unity and purpose. The great merit of *The Story of Tata Steel*, in my view, was that it judiciously avoided both pitfalls. By concentrating on the various stages of steel manufacture—from the mining of iron ore to the rolling of finished steel—it proved to be not merely informative but fascinating. My patience is not normally known to survive documentaries lasting forty-five minutes, but in this case the interest was maintained throughout. Satyajit Ray wrote the basic script of the film; and the photography of Claude Renoir and the late Bulu Dasgupta was, as one would expect, excellent. Hari Dasgupta could perhaps have marginally improved a very fine production by showing a little less of Mr. Nehru perambulations around Jamshedpur, but I suppose he had a brief to follow. This is not the first time that Tatas have shown a happy honeymoon to be possible between art and commerce, to the mutual advantage of both; the example is one which other companies and industries could emulate with profit.

THE PREMIER AUTOMOBILES LTD. BOMBAY

CHAIRMAN, MR. LALCHAND HIRACHAND'S
ADDRESS

Extracts of the Speech delivered by Mr. Lalchand Hirachand, Chairman at the Eighteenth Annual General Meeting of the Company held on Thursday the 27th day of December, 1962 at 4.00 P.M. (ST).

We meet today under unusual circumstances created by the unprovoked aggression of Indian territory by China. The people have cheerfully responded to the Government's call for supreme effort and sacrifice. The Automobile Industry was one of the first to offer its resources for the defence of our country and your Directors have offered to the Government the full resources of your company for assisting the defence effort of the country.

We have pledged the full efforts of our company for producing such vehicles for defence purposes as Government may require in addition to producing vehicles for civil purposes so that the life of the country may go on with as little dislocation as possible.

Your Company has contributed their mite to the defence effort by donating two lakhs of Rupees to the National Defence Fund. The Staff and the Workers of the Company have donated their one day's salary and wages amounting to Rs. 58,000 by working an additional day on 25th November 1962 and the Company have donated Rs. 20,000 as part of their profit arising out of the additional day's work. This is in addition to the donation of two lakhs mentioned above.

Working Results

During the year under review, the Company's turnover reached a figure of Rs. 21,47,61,789 only as compared to the last year's turnover of Rs. 22,73,86,793. 7,193 cars and 5,324 trucks were sold during the year.

The Company has made a profit of Rs. 39,53,999 after providing Rs. 60,37,508 for depreciation, Rs. 8,00,000 for development rebate and Rs. 49,00,000 for taxation. Adding to this, the balance of Rs. 4,73,969 left over after adjustment of the amount of dividend paid on forfeited shares (forfeiture now annulled) from the last year's "carry forward" and after transferring from deferred taxation Reserve Rs. 14,60,000, the amount available for distribution comes to Rs. 58,87,968. Out of this your Directors have made the following appropriations—

	Rs.
To adjustments to excess of expenses over the income, claims and excess provisions in respect of previous years	3,11,850
To provision towards taxation in respect of previous years	14,60,000
To dividend on equity shares at Rs. 7 per share (subject to tax)	39,31,625
Balance to be carried forward	1,84,493

The fall in profit during the year was due to various causes, principal among which are less turnover due to decline in demand for trucks, rise in overheads, particularly in wage bill which included an amount of Rs. 15,08,034 paid to the employees as bonus for year 1959-60 and larger provision for taxation due to higher

rate of taxes. In terms of the new Agreement with Fiat, which came into force with effect from 1st July 1961, the Company had to pay higher fees for technical assistance. The lower margin of profit on Fiat car, the price of which was reduced in 1960, was further responsible for this rather unhappy position.

The decline in the sale of trucks is mainly due to the proposed legislation on Hire Purchase. As stated in the Directors' Report the Company has formed a new subsidiary for the hire purchase business under the name and style of "PAL HIRE PURCHASE LIMITED" to provide hire purchase facilities for disposing of the Company's products.

I am happy to state that the manufacture of components and parts is progressing according to schedule and more and more components are made every year and this year certain further components, to which a reference is made in the Directors' Report, were produced in the factory.

Expansion Programmes

As you know, we have undertaken the putting up of a complete Press Plant for pressing the Sheet metal parts required for trucks and cars. For this purpose the Company obtained a loan of 7.2 million dollars from the Development Loan Fund of Washington. The orders for machinery pursuant to this have been placed. For the purchase of dies, jigs, fixtures and other equipment a further loan of US \$3 million was arranged with the Agency for International Development of Washington—an Agency of the Government of US when I visited the USA in May 1962.

The Agreement with the Agency for International Development was signed on the 28th June 1962, the repayment being guaranteed by the Bank of Baroda Ltd. to whom our thanks are due. We are proceeding fast to place the necessary orders for dies and other equipment.

For the Press Plant and for the future expansion of your Company, we had in mind a site of about 300 acres on the Kalyan-Shill Road, which was reported in the last year's Report, was being acquired by Government for the Company. Because of a decision of the Supreme Court of India regarding the powers of the State Governments to acquire lands for companies the acquisition proceedings could not progress. We have, therefore, negotiated for purchasing another suitable site on the Kalyan-Shill Road and have already obtained possession of about 400 acres. This factory will be ready by the time the machinery for the Press Shop is received.

The prices of cars and trucks can be reduced to have more economic production only if we have a larger volume. To achieve this, we had submitted to the Government an expansion programme based on the production of 15,000 Fiat Cars and 15,000 Trucks per year on two shift working and had asked for foreign exchange allocation.

War Effort

The Government has under consideration our proposals for assisting the war effort and for increasing your Company's production. I hope that

Government now realises to the full the strategic importance of the Automobile Industry and will give its full support to the expansion of the Industry as fast as possible.

The Government should also consider the burden of tax that is being cast upon this one industry. The industry is taxed as a luxury industry when, in fact, it is one of the most basic industries in the country.

For your information I may state that the Fiat car is sold at a retail price of Rs. 10,651.00 and the 165" wheel base truck is sold at a retail price of Rs. 28,610.00 in Bombay. The incidence of customs and excise duty on this price comes to 21.43% for a Fiat car and 17.96% on a 165" wheel base truck. Thus a big slice of the price is taken away by taxes, viz., customs and excise. In addition Sales Tax at the rate of 10% has to be added to the price.

The incidence of taxes on the prices of motor vehicles sold by the Company comes to 31.43% on a Fiat car and 27.96% on a 165" wheel base truck which is fairly high. This is only a part of the stiff taxation the road transport industry pays to the Central and State Governments—the amount in total exceeds Rs. 200 crores a year. The State Government have put additional levies on diesel oils, gasoline and a variety of other items and justify the additional taxes on the plea that the industry can bear this. The figures of truck sales tell a contrary tale. They show that the transport industry has become stagnant, particularly during the last two years. The effect of imposing levy upon levy of different kinds on transport vehicles and transport services is the undoubted increase in the cost of practically every commodity in the country, leading to an inflation of prices all round.

The role that the railways and road transport industry have to play in the country's economic development is a complementary one. At present this industry is taxed on luxury footing. It would be against the national interest to impose further burdens on this industry which is groaning under the weight of heavy taxation; on the contrary it should receive adequate encouragement at the hands of the Government to enable it to expand and speed-up the tempo of economic growth of the country.

Meadows Engines

The Agreement between the Company and M/s. Henry Meadows Ltd. England has now been concluded and under this Agreement the Company is granted the exclusive right and Licence to manufacture and sell within the Republic of India, certain Meadows Engines and the component parts thereof. The Agreement is of five years in the first instance renewable for a further period of five years terminable by six months notice on either side.

The production of Meadows Engines has been taken in hand. As the Company has not been able to obtain from the Automobile Products of India the necessary machine tools required for the production of these engines, it became necessary to purchase additional machine tools from abroad for which the Import Licences have now been received. After these machines are received and installed production of

meadows engines will reach the target of 250 engines per month.

As all of you know, the Government of India have decided to shelve the "small car" project as it would involve not only money resources—but also physical resources like building materials, steel, power and transport (for production) all of which are also in short supply at present. I had pointed out to the Government in my speeches at our meetings as well as through the press that it was not in the interest of the country that the public sector should take up the manufacture of economy car and I am glad that the Government have decided that this project be shelved.

During the five months ended 30th November 1962 the Company sold 2,271 cars and 1,909 trucks and spare parts of the value of Rs. 66,22,344 as against 2,937 cars and 1,917 trucks and spare parts of the value of Rs. 67,06,938 sold during the corresponding period of the last year. It is difficult to forecast the results for the current year in view of the present uncertain conditions.

(a) The issue of 1,87,237 shares of Rs. 100 each at a premium of Rs. 10 per share recently made by the Company was fully subscribed. As you know, the sum of Rs. 30 with application and Rs. 20 per share on allotment has been called and the balance of Rs. 60 per share will be payable by three calls of Rs. 20 each at such times as the Directors may think fit.

(b) Out of the 1,60,000 debentures of Rs. 100 each issued by the Company 197 debentures are outstanding as on date.

Subsidiary Companies

The business of the Premier Auto Electric Limited, a subsidiary, was satisfactory. The Company took up the distributorship of "BEACON" Dynamos, Starters and Regulators manufactured by Best & Co. Private Ltd. Madras, in collaboration with Simms Motor Units Ltd. England. This subsidiary company has also extended further its range of "PRAKASH" products by introducing two ancillary items, namely, Horns as well as Wiper Arms and Blades into the market.

The other subsidiary company, the India Steering Gears Ltd. could not start business this year also due to non-availability of a Licence.

(a) During the year under review your Director Sir Manilal B. Nanavati, Kt. resigned from the Board of Directors for reasons of health. Your Directors accepted the resignation with deep regret and placed on record their appreciation of the very valuable services rendered and advice given by him during his long association with the Board since the inception of the Company.

In the casual vacancy caused by the resignation of Sir Manilal B. Nanavati, Kt., Mr. Shriyans Prasad Jain was appointed a Director pursuant to Article 162 of the Articles of Association.

(b) Mr. Pratap Bhogilal was co-opted as an Additional Director on the Board during the year under report.

Under an Agreement with the Engineering Mazdoor Sabha, the Company paid to the employees drawing basic wages/salary up to Rs. 500 per month an advance equivalent to 1½ months basic wages/salary to be set off against Bonus that would be finally decided for the year. The employees drawing basic salary over Rs. 500 per month were sanctioned an advance equivalent to one month's basic salary which was paid on the eve of Diwali. The total amount paid by way of advance for both the category of employees referred to above comes to Rs. 11,90,565.

N.B.: This does not purport to be a report of the Proceedings of the Annual General Meeting.

THE SCINDIA STEAM NAVIGATION CO. LTD.

CHAIRMAN, MR. D. M. KHATAU'S STATEMENT

Summary of the Statement of Mr. Dharamsey M. Khatau, Chairman, The Scindia Steam Navigation Co. Ltd. made at the 43rd Annual General Meeting of the Shareholders on Wednesday, the 26th December, 1962, at Scindia House, Ballard Estate, Bombay.

In his opening remarks the Chairman observed:

"This statement comes to you at a time of national emergency created by the Chinese invasion of India. The shipping industry as a whole has pledged its whole-hearted support to the Government of India in their present stupendous task of successfully facing this emergent situation. Our Company has donated a sum of Rs. 5 lakhs to the National Defence Fund. I deem it my duty to assure the Government, on behalf of you all and of myself, of all the assistance and co-operation that we can give in this hour of crisis".

He referred to the drop in the quantum of cargo carried and corresponding drop in freight income, despite which the Company made a profit of nearly Rs. 4½ lakhs as against approximately Rs. 4½ lakhs in the previous year. The Company declared a dividend of 60 nP. per share after transferring Rs. 48 lakhs from General Reserve and providing for a further proportion of the Statutory Development Rebate of 1960-61.

Overseas Trade

Regarding Overseas trades, the Chairman attributed good results to rationalisation of services and partial

effect of 10% increase in the rates of freight in the eastbound services from U.K./Continent. He expressed the hope that the Company would secure the co-operation of the shippers in maintaining rates of freight at a reasonable level. The Chairman referred to the increase in the share of the Indian Lines from 30.25%, 39.475% in the India/U.K. trade as from 1-9-62 and a provision for an annual increase of 1% ensuring ultimate parity between the three Indian Lines and the U.K. Lines. He also referred to the equal sharing by the three Indian Lines of the trades, on a pool basis, between India and Poland, India and East Germany, India and Soviet and Rumanian ports, India and Egypt and Adriatic ports.

Regarding Coastal shipping the Chairman endorsed the request of the industry for examination of its case by the Tariff Commission to enable Coastal steamer tonnage to remain at the level of current and future national need. He pressed for restoration of the cut of 5% in freight rate on coal from Calcutta to ports up to Cochin.

The Chairman specially urged the extreme urgency of introduction of a War Risks Insurance Scheme by the Government of India so as to ensure adequate insurance protection to Indian vessels against war risks.

Regarding tonnage position, the Chairman observed that the Company was facing difficulty in its replacement and new construction programme be-

cause of acute foreign exchange position and other factors.

Operating Expenses

The Chairman referred to the increase in operating expenses as a result of changes in conditions of service of crew members of the floating staff, and of a fresh Agreement concluded between the Company and the Maritime Union of India representing the Officers of the Floating Staff.

Regarding future prospects, the Chairman said that it was difficult to visualise any improvement in the freights sufficient to cover the costs and to provide a reasonable return on capital. The Company is, however, continuing its effort at rationalisation and economy in operations and is taking steps to improve the level of freight rates.

The Chairman referred to the Konkan services of B.S.N. (1953) Ltd. in the following terms:

"Subsequent to our negotiations with the Government of India, they agreed to pay for the years 1961-62 and 1962-63 a subsidy in lieu of 8% increase in fares as also a subsidy of about Rs. 6 lakhs being the excess of repair cost over Rao Committee's estimates; they further agreed to reimburse the excess repair cost for the year 1961-62, subject to a maximum of Rs. 14.50 lakhs, all these payments being subject to scrutiny of the Government Department. The Government had also agreed in October, 1961 to grant an interest-free loan to cover the entire cost of the three new ships

CAPITAL, 3rd January, 1963.

and an annual subsidy in this behalf. While the Company has been writing to the Government from time to time regarding new tonnage, it was not until October, 1962, when the Government advised the Company, that in view of certain offers received by them for the operation of the Konkan services with new ships without increase in fares and without payment of loan or subsidy, the Government saw that no useful purpose will be served by permitting the Bombay Steam (1953) to build new ships. It may be noted here that the Rao Committee had recommended an additional subsidy as also an interest-free loan to acquire new ships to maintain the services on the same pattern as before on the basis of Rs. 40 lakhs as the cost of each ship. It is, therefore, not understood how these very same services could be operated without any increase in fares or other assistance when the cost of these new ships has gone up to Rs. 60 lakhs each and when there have been further increases in cost of operations. The Company has replied to the Government that it would continue to run the Konkan services with the existing ships till 31st May, 1966 if the present terms of the Government assistance are continued till then, whereafter the position will be reviewed in the light of the Government giving permission for new tonnage".

Shri Khatau thanked Shri Jagjivan Ram, Minister of Transport and Communications, Shri Raj Bahadur, the Minister of State for Shipping and other officials of the Transport Ministry for the interest shown by them in promoting the cause of Indian Shipping. He also appreciated the services rendered by the Officers and staff and the Company's Agents abroad and in India and thanked the shippers and consignees for their continued support.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 3rd January, 1963.

THE ASSOCIATED CEMENT COMPANIES LIMITED

SUMMARY OF CHAIRMAN'S STATEMENT

The following is a summary of the statement which has been issued to shareholders by Mr. Dharamsey M. Khatau, Chairman, The Associated Cement Companies Limited, dealing with the Company's working for the year ended 31st July, 1962. The Annual General Meeting of the Company will be held on Friday, the 18th January, 1963 at 4 p.m. at the Sunderbhai Hall, off Queen's Road, Bombay 1.

We are today under a grave national crisis caused by unprovoked aggression. Our policy and all actions affecting each of us as individuals and our business must therefore be governed by the overall consideration of the great and urgent task of repelling the invader. The Company's factories, collieries and engineering workshops will naturally be utilised to the fullest extent in the service of the country. Your Company has already donated Rs. 10 lakhs to the National Defence Fund and I am proud to say that the employees of the Company, numbering many thousands, are solidly behind the Government.

If, against this background, I appear somewhat critical of certain Government policies, I want to make it clear that such criticism is made both in view of the urgent need to stimulate the growth of the cement industry—a vital industry both in times of peace and war—and of the part which your Company can play in this great emergency.

During the year the most important event was the recommendation of the Tariff Commission for an upward revision in the retention price of cement and Government's action thereon. The Directors' report has mentioned the difficulties—operational and other—which prevented the Company from achieving better results than were actually obtained and why, despite higher profits it has not been possible to recommend a higher dividend.

Prospects for the Future Pricing and Industrial Policy of Government

As regards the profit-earning capacity of the Company and its future prospects, these are so largely dependent on the retention prices and Government's industrial policy and action, that there is very little I can say. I can only assure you that our efforts in increasing productivity and reducing costs are being ceaselessly pursued. As you are aware, Government arbitrarily scaled down the increase in price which the Tariff Commission had recommended. The retention price allowed to your Company was inadequate even by the Tariff Commission's standards; and in the absence of automatic escalator clauses, the relief afforded by such price increase is being rapidly reduced, since prompt adjustments to cover subsequent increases in the price of fuel and power, railway freight rates, etc., are unfortunately not forthcoming.

It is a matter of deep regret that the Government should ignore the recommendations of a statutory body like the Tariff Commission—an independent body consisting of people, known for their capacity and judgment, who make their recommendations after scrutiny of all relevant facts and giving weight to all affected interests. It is therefore most disturbing that there is a tendency to dub this body as 'outmoded'. In the absence of an independent organisation

of this kind, one fears that fixation of prices by Government could be completely arbitrary.

The incidence of the enhanced Tax on Corporations from 45 to 50 per cent is substantial. The heavy financial burden imposed by these and other charges has further reduced the profit element. One of the recommendations of the Tariff Commission was that the retention price should be revised if and when adjustments become necessary owing to increases in costs due to governmental action. A representation has been made to the Government through the Cement Manufacturers' Association.

Cement Industry in the National Economy

Cement is a key industry whose continued progress and prosperity are vital to the economic development of the country. The measure of work to be done can be seen from the fact that the target of installed capacity at the end of the third five-year plan, fixed at 15 million tonnes, has been considered inadequate, and it has been mentioned in authoritative circles that the figure should be 18 million tonnes. Even against a target of 15 million tonnes, the current capacity is only 10 million tonnes. The rate of growth is thus certainly not as vigorous as might be expected. Even conceding that numerous difficulties exist, it is difficult to escape the conclusion that this slow growth is largely due to lack of incentives, through the imposition of rigid Government controls on price, distribution and in the manner of licensing of new factories.

The Role of ACC

I would like to remind you of the role which ACC has played in building a sound cement industry and in developing a demand for cement in the country. ACC has a proud record of pioneering during the past quarter of a century. To serve consumer as also national interests, it has dispersed its factories carefully and has put to good use even substandard raw materials by employing beneficiation processes. The wisdom of such planned dispersal must be evident to the S.T.C. which, I have reason to believe, is deriving considerable monetary advantage by low freight leads on despatches from ACC factories, which helps it to subsidise the higher freights on cement despatched from factories belonging to other interests. ACC has been a pioneer in employing new processes and producing new products. The dry process of cement manufacture, the manufacture of white cement, blast furnace slag cement, oil-well cement, water-repellent cements, low-heat cement etc., have all been introduced by ACC after much study, research and development. The credit for manufacturing cement-making machinery at its own workshops and thus helping to lay the foundations of a sound heavy engineering industry in our country must also go to ACC. Our Engineering Works at Shahabad and the AVB Heavy Engineering Works at Durgapur, established in collaboration with Vickers and Babcock & Wilcox, will not only meet ACC's own requirements, but also serve the needs of the cement industry as a whole, thus helping India to conserve a great deal of foreign exchange.

Much foresight, money and effort have gone into these projects and pro-

ducts. ACC has therefore paved the way for other manufacturers to share in the benefits of its pioneering and developmental efforts. Far from discouraging new entrants in the field, ACC has, on several occasions, lent a helping hand to them.

I have dwelt on this somewhat pointedly as there appears to be a tendency, especially in licensing new factories, to consider a Company like yours as a monopoly, for which reason it must take a lower place in the queue!

During the year your Company's contribution towards the National and State finances was Rs. 27 crores in the form of Income-tax, Corporation Tax, Excise and other Duties, Sales Tax, Railway Freight, Import Duty, etc.

These direct and indirect contributions to the national revenues, and the Company's record of progress and service are impressive. All this can continue to be harnessed to good use and I sincerely hope that Government will not stifle this by a doctrinaire approach. I believe that the 'know-how' we possess and our organisational vigour can help to expedite the expansion of the cement industry and make it easier to hold the price line.

Coal and Packing Material

Coal supplies continued to cause some anxiety in the early part of the year though, with special arrangements for the allocation and movement of coal introduced by Government, the position has considerably improved. The Company has also been able to draw about 30 per cent of its coal requirements from its own collieries. With increasing emphasis laid on regionalisation of the supply and movement of coal, the importance and utility of our two collieries have grown.

In the matter of packing materials the industry was looking forward to a continuance of the satisfactory position permitting the rational use of second-hand bags in reasonable proportions. However, its hopes were rudely shaken by Government's decision from the last quarter of 1962, insisting that producers pack 50 per cent of their production in second-hand bags—a condition physically impossible to fulfil in view of the limited availability of second-hand bags of serviceable quality. The jute bag is a wasting commodity and cannot be reused beyond a certain point. From the point of view of the consumers it is likely adversely to affect the standard of packing and will result in loss of cement by seepage by repeated use. The industry has made representations to Government to restore the status quo ante in this respect.

Cement Demand and Transport

Demand for cement in the country is in excess of availability. Transport difficulties have aggravated the situation, creating artificial scarcity in some localities. Your Company has endeavoured to gear road transport to meet the situation. Substantial quantities of our cement were moved by road during the year.

Expansion and Rehabilitation

The Company's planned programme of expansion and rehabilitation has made satisfactory progress. Your

Board has taken the decision to resume work on the construction of a new factory at Porbandar.

ACC-Vickers-Babcock Ltd.

The Heavy Engineering Plant of ACC-Vickers-Babcock Limited at Durgapur, inaugurated in February last, has commenced production and has received orders for boiler plant, cement-making machinery, etc. Full production will be reached by the end of 1963.

Labour-Management Relations

The labour situation at our Cement Works continued to be peaceful. At the Katni Firebricks plant and Okhla Bulk Depot where the Wage Board's Recommendations did not apply, we entered into comprehensive wage settlements. The only factory, Madukarai, where it was not possible to implement the Wage Board's Recommendations has also been brought into line and the settlement of implementation was signed on 31st July, 1962.

The question of bonus, unfortunately, continues to trouble us as it is troubling all industries, in spite of the fact that it has been the policy of the Directors to pay bonus to employees even though strictly according to the Labour Appellate Tribunal Formula no bonus may have been payable. We have four bonus disputes before Tribunals—National and Industrial. These proceedings cost a great deal of money, and drain away the time, energy and attention of personnel, including workers, from the productive side of the enterprise.

Here again, there are hopeful signs in the shape of the appointment of the Bonus Commission by the Government of India. It is earnestly hoped that the Commission will be able to arrive at an acceptable formula which will once for all bring peace in this sphere of industrial relations.

At our Collieries there was one major stoppage and quite a number of lesser dislocations—lightning strikes, go-slow, conciliation and adjudication. Kotma Colliery was closed for 133 days on account of a strike followed by closure. This strike was called on a completely extraneous non-industrial issue, and continued despite the advice of concerned Government Authorities, and was accompanied by violence.

The appointment of the Wage Board for the coal industry during the year to determine 'fair' wages, I hope, will bring peace and improvement in production in this sorely troubled industry.

Appreciation

I would like to express on your behalf our warm appreciation of the sustained hard work and whole-hearted co-operation of your employees.

Bombay, 30th November, 1962.

The above summary is not a document purporting to be a report of the proceedings of the Annual General Meeting.

WORK FOR VICTORY

Your job is vital to victory. India demands all hands to work—and work more for increased production to strengthen our fighting forces, to build up the nation's resources and striking power on all fronts.

At foundry and lathe, machine shop and giant industrial plant, shall all hands strive the harder to raise productivity, boost output. Let vital supplies flow in an unending stream to the front line as well as for the nation's domestic needs.

THE KOLHAPUR SUGAR MILLS LTD.

CHAIRMAN, MR. R. R. RUIA'S SPEECH

Speech delivered by Mr. Ramniwas Ramnarain Ruia, Chairman of The Kolhapur Sugar Mills Ltd, at the 29th Annual General Meeting held on Wednesday, 26th December, 1962.

Gentlemen,

It gives me great pleasure to welcome you at the 29th Annual General Meeting of the Kolhapur Sugar Mills.

Gentlemen, we are meeting, this afternoon, in the midst of a crisis. I refer to the unscrupulous and the wanton Chinese aggression in the North East Frontier and in Ladak. We trusted the Chinese for being implicit supporters of Peace and Panchshila, as much as ourselves. It has been a great disillusionment to our leaders and to the people and has awakened both to a new sense of realism about the profession and practice of the imperialistic expansionism of Communist China.

Whatever the Chinese did, and are doing or will do, and whatever prestige India may have lost in its weakness in armed strength, I am sure, the whole episode will mean a great boon in disguise, to our country, in spite of its trials and tribulations, and in the long run, India, will become really a great nation and completely united in both body and spirit. At the same time, our leaders have and will realise even more, how to deal with whom and whom to consider what, and also what should be our country's strength, and realise what type of leadership is necessary to make our country strong enough to defend ourselves. This sort of realisation has to come to us by finding our weak spots in our total set up and not just by speech and talk, because no country in the world's history has gained and maintained its freedom for long, unless it was prepared and strong enough to defend it. Today, more or less, for the first time, we are really a united nation. Thanks to China!

National Emergency

We all realise that the Defence of the country and the preparations for a protracted and long-drawn war have become the major issue before the country today. The choice of Shri Yeshwantrao Chavan as Defence Minister has been so widely acclaimed and is so assuring that in his able hands, the country feels completely safe. Yeshwantrao, since his early days has been an able and successful leader and administrator. I have a feeling that he will prove himself much more successful as Defence Minister, by his tact, statesmanship, resourcefulness and intuitive judgement of men and events.

At this time of our national emergency, it is gratifying to notice the heartening response of the sister countries of the Commonwealth and of the Western Democracies who have rushed to our assistance expeditiously.

Gentlemen, you will be pleased to note that the employees of our Company have contributed very handsomely to the Defence Fund by collecting Rs. 25,000/- from their earnings. Your Directors too have decided to contribute Rs. 1,00,000/- on behalf of the Mills.

While thinking of the contribution to war effort, it is clear that the significance of the role of Industries lies in unhampered maximisation of production. Modern military history shows

that wars in these days are all-out wars and the country which possesses industrial superiority ultimately wins. We in the Sugar Industry have, naturally, to play our role in this respect. Sugar is not only an every-day necessity but has become an earner of Exchange. Your Company, it is estimated, will crush an all-time record of more than 3 lac tons of cane in the present season. This should be considered most gratifying.

Coming to the business of this Meeting, the Accounts for the period ended 30th June, 1962, along with the Report of the Directors, for the statutory period, have been already in your hands, and with your permission I shall take them as read.

Though the financial working of the Mills, for the accounting year has been satisfactory, I may be allowed to refer to some of the salient features.

Sugar Production

The production of sugar in 1961-62 was 2,69,890 bags as against 3,16,777 of the preceding year. The average Recovery was 12.45 as against 12.57. The fall in production during the year was due mainly to the imposition of the 10% cut in production by the Central Government and also due to lower yield of cane per acre, due to unfavourable climatic conditions and also due to damage to crops by floods. However, the working of the Distillery, with the increased capacity, has been very satisfactory, the production during the year being 7,31,580.3 Gallons as against 2,80,202.9 in the previous year. We have been able to fully utilise not only our Molasses but also 4,642.918 Tons of Molasses from the three neighbouring factories. During the ensuing year, we hope to utilise still larger quantities of Molasses from the neighbouring factories. The actual capacity realised in our Distillery with the new plant is between 5500-6000 gallons per day. In addition, with the old plant we can produce 1000 gallons of Absolute Alcohol per day. Thus we may be able to realise a daily capacity of about 7000 gallons per day. With this capacity your Distillery will be able to handle the Molasses of the two neighbouring Co-operative factories under construction along with the three old Co-operative Factories, thus becoming a Central Distillery for the Kolhapur Region.

I may also refer to the Land Ceiling Act of the Government of Maharashtra by which Government will assume the estates of Mills. For taking over these lands Government have appointed an Advisory Committee, on which both Government and the Industry have been represented. In this taking over of lands from Factories various complicated problems such as valuation of standing crops, movable and immovable properties, etc., are involved. With mutual good-will and understanding all such problems, it is hoped, will be amicably solved. There will be specific problems of our factory in this regard and your management will try their utmost to safeguard the interest of the factory. I may add that the Government of Maharashtra have assured a guaranteed cane supply to the Mills from the area taken over by them.

Price Linking Formula

Another feature of the year is the introduction of the Price Linking For-

mula. This formula is intended to improve the quality of cane. In the Maharashtra region, a common-sense method for paying for cane in relation to quality, was already in vogue and this had worked to the satisfaction of both the cultivators and the Factories. We are proud to say that because of the Recovery we are among the highest priced group for cane price that is paid by any Factory to the farmers and growers. A feature of the newly evolved formula of the Central Government is the fixing up of the cane price on the Recovery of the previous season, during the period from December to end of March. The old Maharashtra Formula was based upon average Recovery of the previous season. I do not see how it could be just to fix the price of cane on the basis of Recovery for a limited period and that too of the highest. This especially is unjust for Maharashtra where the Season starts much earlier than December and closes much later than the end of March.

This measure may prove to be a disincentive to the Mills buying cane during the earlier and the later parts of the season, when the Recovery is bound to be lower than the basis taken for fixing the cane-price. I should not wonder if this measure leads to a short-fall, to some extent, in production. It may also affect the cultivator adversely as his cane may not be accepted being either too early or too late. It may be recalled that on occasions, the Governments in the North had to persuade the Factories to crush cane in later months by reducing the price and also by giving other concessions.

I am happy to inform you, that it is reported only yesterday, that 'the recovery taken for Maharashtra is for the period November to March', thus accepting my contention to a large extent, though not fully.

The recommendations of the Central Wage Board for employees of the Sugar Factory were also applied to farm labour from November 1961.

Estimated Crushing

Gentlemen, I have already mentioned that the estimated crushing for the present season will be more than 3 lac tons. Our factory is situated in the heart of the cane-belt in the Kolhapur District and with the cane development work, the Factory is doing, to help cultivators to grow cane by giving technical advice, implements, improved seed, manures and cash advances, the supply of cane to the Factory is increasing. Even for the present season there are offers for more cane supplies. But we had to decline the same for want of adequate crushing capacity. The possibilities of supply of 3,50,000 to 4 lac tons of cane to our Factory are quite evident now and there is an urgent necessity of expansion to 2,500 tons per day, at least. Your Directors have already moved Government for the same and it is hoped that Government may accede to our request.

The Acetic Acid Plant is expected to be installed by June, next year. The completion of the project has been delayed for various reasons, chief amongst which is the delay in the supply of Power by the Maharashtra Government. We are now assured that

CAPITAL, 3rd January, 1963.

the supply will be available by June 1963.

I have pleasure also in intimating to you that your Board has already approached Government for a Licence for the production of Ethyl Acetate, Carbon Dioxide and Dry Ice. We have been on the alert for the new projects of Alcohol-based industries and I believe I am expressing your wishes when I say that we have before us the prospect of making this area a bee-hive of such allied chemical industries.

Gentlemen, you are aware that the management has been particular in looking after also the cultural and physical well-being of the employees. I have great pleasure in saying that the Jeevan Kalyan has presented cultural programmes of drama, music, and such other cultural entertainments in keeping with its high traditions, at the Ganapati Festival. Its Annual Number is in print and its publication is awaited. The Institution has given educational aid to the children of the employees, in cash and books, amounting to Rs. 3,000/- during the year.

In sports, the record of the Gymkhana of the Mills is very flattering. In Table Tennis we won the Maharashtra Gymkhana Championship. Our Tennis Team annexed the Ruia Shield for Tennis. We conducted the Lohia Open Table Tennis Tournament. We also conducted the Maharashtra Bridge Association Tournament, in which our team won the Rolling Trophy. In the Ruia Sports, in Bombay, we lost to our Head Office Team in which myself and Sushilkumarji were participants.

I have very great pleasure in recording our special appreciation for the admirable manner of conducting the Annual Dinner, at the end of the Season, in honour of the Satyanarain Puj. About 11,000 persons partook of the Mahaprasad last year. It was as usual, a very orderly, well-disciplined function, in which Officers, staff and employees heartily co-operated and achieved an efficiency which I most admire. I almost feel, it is a part of the social-education of the masses and a lesson in social integration.

I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. I am equally thankful to you all for your keen interest in the affairs of the Company.

Co-operative Factories

As Chairman of the Company, I desire to express my feelings of thankfulness to the managements of the Co-operative Factories, the cultivator-suppliers and contractors with whom our relations have always been very cordial, and of whose invaluable co-operation I am very sensible.

Finally, I desire to record our warm appreciation of the very efficient and devoted work of our General Manager, Shri M. B. Lohia, the loyal and earnest co-operation of his colleague officers and for the never failing and hearty co-operation of the staff and workers in the discharge of their duties. Mentioning names will be invidious.

Gentlemen, it has been my very great pleasure to be in your midst this evening and for having had this opportunity of placing some of my thoughts about the Industry and the progress of our Mills before you.

Thank you,

JAI HIND.

Note: This does not purport to be a report of the Proceedings of the Annual General Meeting.

CAPITAL, 3rd January, 1963.

J. K. STEEL LIMITED MR. LAKSHMIPAT SINGHANIA'S REVIEW

Chairman's speech of Mr. Lakshmiapat Singhania on the occasion of the Ninth Annual General Meeting held at 3.30 P.M. on 27th December, 1962.

Gentlemen:

I have pleasure in welcoming you to the Ninth Annual General Meeting of the Company. The Company's Annual Report and Accounts for the year ended 30th June, 1962 have already been circulated and Directors, in their Report to the Shareholders, have dealt with the salient features of the Company's working during the year.

The progress of the Company during the year was hampered due to slow-down and an unfortunate strike lasting 106 days—longest in the history of the Company—which resulted in loss of production to the country amounting to Rs. 60 lacs. It is very unfortunate that inspite of best attempts, we were unable to persuade the Union, whose objectives seem to be guided more from other considerations than the legitimate trade union work, to adopt methods and procedures prescribed for settlement of such disputes and in utter disregard to the Code of Discipline and other obligations undertaken by the parent Trade Union Organisations for settlement of such disputes, the illegal strike was continued for such a long period. However, the Company has passed through this critical period.

The Company was established in Calcutta in the year 1953 primarily to produce Jute Baling Hoops which were originally being produced by Messrs. J. K. Iron & Steel Company Limited, at Kanpur, since 1940. I have pleasure in mentioning that since then we have met the entire demand of the Jute Industry in India—the principal export industry of the country—replacing imports totally. The Jute Baling Hoops plant was shifted to Calcutta from Kanpur as per the desire of the Tariff Commission, which had considered the matter in 1946, and the Government. Principal reasons for recommending the transfer of this plant to Calcutta were that it would be situated near the majority of Jute Mills and would be assured of full raw material requirements, being close to the main producers, and thus, among other things, save freight on finished goods as well as on raw materials.

Raw Material Supply

The supply of raw materials, i.e. billets, for the manufacture of jute baling hoops is a problem in itself. Rolling Industry which in India is called 'Re Rolling Industry' has played a very significant part in the developing economy of the country in two ways. One, is to utilise profitably such materials which are actually used for melting and not used for further processing and the second, is to produce specialised items in such quantities which would be difficult for any main producer to undertake due to requirement of the country being insufficient for the main producer. Thus the Rolling Industry (Re-rolling), in my opinion, has its own place in the country. Unfortunately, the supply position of this industry has material, i.e. billets for this industry has always been very unsatisfactory and a matter of great concern to the Industry. Even before the setting up of the Government Plants and the expansion of the Steel Industry, the matter of supply of billets had been gone into by the Government at several occasions and it was repeatedly promised and decided that certain capacity of the new Steel Plants and expansion of the main producers would be kept reserved for

supply of billets to this vital industry. Unfortunately, all those promises and expectations have not borne fruit and the position has hardly improved. In the beginning of the Second Five Year Plan it was estimated by the Planning Commission that the billets availability from the main producers would be of the order of 7 lac tons by the end of the Second Five Year Plan which is the Rolling Industry's requirements based on one shift working as per Saxena Committee's Report. Against this the supply of billets during 1961 was of the order of 4.57 lac tons. The supply position in 1962 instead of improving has further deteriorated. This is, in fact, a repetition of the old story, i.e. billets being comparatively less paying proposition, the main producers start utilising the available steel for converting the same into finished products rather than selling them as billets. This was the position before and inspite of so much talk about the Government Plants, same is the position even now.

The second unfortunate position is that inspite of the very rigid control of production and distribution of steel in the country, the supply and distribution of billets is very erratic. From the statement placed before the Lok Sabha on 13th June, 1962 by the Ministry of Steel it is clear that while some of the Re-rollers are allocated and actually supplied billets about 2,000 per cent of their 1946 capacity, others have not got even equal to that capacity and their plants have remained unused to a large extent. While it is difficult to analyse the reason for such a disparity of supply of this raw material, since different factors may be responsible for such decisions one thing is definite that there has been inequitable distribution and the distribution system has not worked healthy to this industry. The industry has to be divided into two broad divisions—one, those engaged in production of essentials like your factory and second, who are engaged in production of common materials. The industry engaged in essentials should receive priority in allocation of raw materials.

Disappointing Feature

Another disappointing feature of the distribution system is that the actual supply of billets is far short of even the allotments and the plans made by the Iron & Steel Controller. As will be seen from the following table and chart the supply of billets even to a priority industry like manufacture of jute baling hoops has been far short of the allotments and plans made by the Iron & Steel Controller, resulting in frequent interruptions in the manufacturing process and great loss of production. Actually our Hot Rolling Mills manufacturing jute baling hoops had to be closed down again for a period

of 11 months during the months of October and November, 1962 for want of billets:

Period		Allotment fixed and Plannings made by the Iron & Steel Controller (per month)	Actual Receipts (average per month)	% of receipts to plannings
July 1960 to June 1961	12 months	2,000 tons	960 tons	48%
July 1961 to Decr. 1961	6 months	2,000 tons	1,389 tons	69%
Jany. 1962 to April 1962	4 months	Strike		
May 1962 to Novr. 1962	7 months	1,430 tons (average)	525 tons	36.5%

It will also be observed from these that against our monthly allotment of 2,000 tons of billets per month in year 1960-61, our actual receipts were only 960 tons, obviously resulting in lower production. Our quota for future allotment of billets for 1962-63 has been fixed on the basis of actual consumption of billets during 1960-61 which as mentioned above was lower due to short supply of billets. The new quota fixed is at 1,200 tons per month against which supplies received so far were only 525 tons per month which is approximately 25% of our 1960-61 allotment. Thus this is a process of ever reducing allotment and supply and in this context it is surprising to note as to how others could be allotted an ever-increasing supply of billets.

Definite Plan

In my view, it is therefore necessary that a definite plan for supply of raw material to this industry is made which can be adhered to for proper utilisation of the existing capacity and for further increasing the production of this industry which is the backbone of developing Engineering Industry in the country.

I am happy to say that, inspite of the fact that we have never been in

a happy position with regard to the supply of raw material which is necessary for achieving required efficiencies, we have been able to produce jute baling hoops at a conversion cost which can be well compared with any country in the world for a similar plant. However, more and more efficiency we have attained the more and more retention prices have been cut. In other words this is a way of working back and killing the incentive to the industry. I wish something better is done and some method evolved whereby efficiency is rewarded instead of being penalised.

Your Company started manufacture of Cold Rolled Strips, Box Strappings and Steel Wire Ropes from the year 1960-61. Unfortunately, the supply position of raw materials has been very disappointing since the beginning. For instance, for the Cold Rolled Strips and Box Strappings Plant, the raw material supply had been about 20 per cent of the plant capacity resulting in having continuous idle capacity on the one hand and importing finished material at much higher cost on the other hand. At this stage, it may be pointed out that inspite of this, further industrial licences for manufacture of Cold Rolled Strips and Box Strappings have been granted by the Government to the tune of an annual capacity of 40,000 tons. I am at a loss to understand what will be the fate of the new comers for raw material supply. However, I have great satisfaction in informing you that the performance of both these projects, i.e. manufacture of Cold Rolled Strips and Box Strappings and Steel Wire Ropes, has been exceedingly good without any foreign assistance, technical or otherwise. We have been able to produce quality products to the full satisfaction of the consumers and tech-

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

THE GREATER

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

LOAD ?

The special spring-steel fittings quickly secure the tubes—with a $\frac{1}{2}$ " spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle. All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

The steel chimneys, towers, storage tanks...rising in towns and cities all over India are symbols of a resurgent industrial nation. Structural steelworks like these are fabricated by NSE.

NSE also manufactures: pneumatic hammers and drop forges in collaboration with B & S Massey Ltd., Manchester, U.K. • drilling machines, sheet metal and plate working machinery • textile blowroom machinery in collaboration with Trutzschlers, Germany • Augusta suction and overhead cleaners for ring frames in collaboration with Ernst Jacobi, Germany • electric furnaces in collaboration with F. E. Tagliaferri, Milan, Italy • other foundry and metallurgical equipment • E. O. T. cranes

Vital for India's economic growth, NSE products serve many industries—public and private. And every NSE product is backed by over a quarter century of engineering know-how, skill and service.

By helping reduce the country's dependence on imports, NSE contributes towards national strength and self-reliance.

CAPITAL, 3rd January, 1963.

nically, if not better, then equal to imported stuff.

The Government of India have granted industrial licences for the manufacture of Wire Ropes for a total annual capacity of 34,800 tons against the present consumption of approximately 10,000 tons, in the hope that the country will be able to consume all that in the increased economy and without properly assessing the problem of availability of raw material to this industry which requires steel of special specifications. It is not clear as to from where such steel would be made available to this industry. The problem assumes even increasing importance in view of the acute foreign exchange problem necessitating restriction in imports of raw material.

Special Products

It is our experience that the main producers are reluctant in supplying steel of required composition which is essential to produce special products which are so very necessary to be developed in India and which only can replace imports and contribute to the growing engineering industry. The growth of Engineering Industry in India is most essential for which special engineering products which serve as components to engineering industry have to be produced in this country. Therefore the raw material requirements of such engineering industry have to be met and necessary arrangements for such production is, in my opinion, more important than producing ordinary steel.

Your Company has further obtained certain industrial licences like manufacture of Electric Hoists and chain pulley blocks. This project is going on for sometime but unfortunately due to non-allotment of a small amount of foreign exchange the project is unexpectedly being delayed. Majority of the plant and equipment has been purchased either from rupee payment countries or indigenously. The buildings are complete and we are awaiting, for want of foreign exchange, certain essential imports from our foreign technical collaborators for this project. I hope that we shall get clearance for the pending matters from the Government shortly and the project will be completed without further delay. As regards other industrial licences such as doubling the capacity of wire ropes, manufacturing of pipes and tubes and installation of electric furnace, the matters are being pursued. However, in view of the acute foreign exchange shortage it is very difficult to say which project will come into existence when. I can only assure the Shareholders that the management is doing their best to pursue these and put them through.

Control System

Before I close I may again repeat that the control system of a main commodity like steel in India should have been expected to show much better results especially for manufacture of the required specification of steel as well as distribution and I must say that the present working of the system is very cumbersome and does not yield any positive results even inspite of planning and it is a long demand that either this system be improved so that it will become effective or it be scrapped altogether. I hope something better may come in the near future.

Gentlemen, on your behalf, I express my thanks to the Managing Agents for the very careful way in which they have been guiding the affairs and growth of the Company during these years. I would also like to express my appreciation for the contribution made by all sections of our employees, starting from the worker to the technicians, and the management staff and also to our various customers for patronising our products.

N.B. This does not purport to be a record of the Proceedings of the above Annual General Meeting.

CAPITAL, 3rd January, 1963.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 2nd January.

THE general level of advances has not changed much in the Calcutta money market during the past fortnight. A slight increase in sugar credit has been offset by a corresponding decrease in the accommodation given to the iron, steel and engineering industries. The requirements of the other main categories of borrowers—the cotton and jute mills and the foodgrains and seeds trade—remain almost unchanged. In the interbank market, conditions have been exceptionally tight and the call rate has been up to 6 percent.

The exchange market has been very active. The supply of tea bills was fair and of gunny bills large. The demand for remittance was strong. Sterling has shown a mixed tendency, but closed stronger against most of the major currencies except the U.S. and Scandinavian.

BULLION WAS QUIET IN CALCUTTA during the past fortnight. Turnover was small. Gold declined from Rs. 35.50 to Rs. 106.75 and the sovereign from Rs. 87.50 to Rs. 83. Silver was subdued in sympathy with gold; silver fell from Rs. 250.75 to Rs. 211.25. No forward trading was reported. The London and New York prices were 103½d and 119.50 cents.

DURING THE WEEK ENDED 21st December, Government of India Treasury bills for Rs. 54,29,75,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills, sold from 19th December to 22nd December, amounted to Rs. 10 lakhs only.

THE TOTAL NOTE ISSUE ROSE BY Rs. 12.20 crores to Rs. 2,148.26 crores during the fortnight ended 28th December, 1962, while active notes were Rs. 5 crores smaller at Rs. 2,120.28 crores. The currency rupee securities of the Government of India in the Banking Department rose by Rs. 2.07 crores to Rs. 53.28 crores, but other Government accounts fell by Rs. 7.36 crores to Rs. 6.12 crores. Balances of commercial banks at Rs. 81.18 crores showed a rise of Rs. 3.04 crores. Balances held abroad diminished by Rs. 23 lakhs to Rs. 8.70 crores. Investments at Rs. 181.02 crores showed a fall of Rs. 2.57 crores. Loans to scheduled banks rose from Rs. 18.57 crores to Rs. 20.70 crores, of which advances to scheduled banks against usance bills were Rs. 13.66 crores, against Rs. 10.37 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 14th December, 1962, shows a rise of Rs. 4.08 crores to Rs. 565.60 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 79 lakhs and Rs. 8 lakhs to Rs. 266.23 crores and Rs. 10.35 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 77 lakhs to Rs. 263.98 crores. Cash and balances are, in consequence, shown at Rs. 26.90 crores or Rs. 1.31 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 21st December, 1962, shows Demand and Time liabilities at Rs. 944.42 crores (Rs. 34.13 crores on account of borrowings from banks) and Rs. 1,263.87 crores (Rs. 12.52 crores), compared with Rs. 933.53 crores (Rs. 29.21 crores) and Rs. 1,262.18 crores (Rs. 12.16 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.43 crores and Rs. 1.50 crores to Rs. 48.30 crores and Rs. 74.28 crores, respectively. There is a drop of Rs. 57 lakhs to Rs. 663.66 crores in investments. Advances and bills discounted at Rs. 1,414.57 crores show an increase of Rs. 12.86 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 64.1 percent, against 5.7 percent and 63.8 percent.

The statement of the position of scheduled banks for the week ended 14th December, 1962, shows Demand and Time liabilities at Rs. 933.53 crores (Rs. 29.21 crores on account of borrowings from banks) and Rs. 1,262.18 crores (Rs. 12.16 crores), compared with Rs. 911.28 crores (Rs. 20.92 crores) and Rs. 1,272.77 crores (Rs. 16.08 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 40 lakhs and Rs. 3.36 crores to Rs. 49.73 crores and Rs. 75.78 crores, respectively. There is a drop of Rs. 1.49 crores to Rs. 664.23 crores in investments. Advances and bills discounted at Rs. 1,401.71 crores show a drop of Rs. 3.58 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 63.8 percent, against 5.6 percent and 64.8 percent.

a better store-house for Power

QUICKER STARTING, LONGER LASTING

BHARAT BATTERY MANUFACTURING CO. PRIVATE LIMITED

P. I. A. RASHBEHARI AVENUE, CALCUTTA-19
PHONE: 46-2384 & 44-2136, GRAM: "BIBEMCO"

Rs. 70.50 lakhs (all in equity shares of Rs. 50 each), and this is supported by reserves and surplus amounting to Rs. 1.75 crores. At its current quotation of Rs. 213 cum-dividend, Belapur Sugar share offers a gross return of about 10.4 percent.

The working results of the Great Eastern Shipping Company for the year ended June 1962, show a satisfactory improvement over those of the previous year. The chairman, Mr. A. H. Bhiwandiwalla's speech at the shareholders' annual meeting, held recently, holds out the promise of still better results in the current year. Everything going well, freight earnings in 1962-63 may reach an all-time high of Rs. 4 crores; the figure for the first half of the current year, it is said, will be more than Rs. 2 crores. Mr. Bhiwandiwalla's assessment of the Company's prospects contrasts with the pessimistic note struck by the chairman of the Scindia Steam Navigation Company in his statement to shareholders recently. Mr. Bhiwandiwalla says that the Company is investigating methods of augmenting its tonnage speedily with a view to meeting the country's emergency requirements. The Company has acquired and placed on the west coast of the U.S.A. and Canada run a new ship named *Jag Rakshak* for bringing cargoes to Indian ports. It is felt that this service, if successful, would add an element of stability to the activities of the Company. Replying to shareholders' enquiries, the chairman disclosed that negotiations were in progress with a British concern, which has a number of ships

INDIAN ROCKWOOL COMPANY PRIVATE LIMITED
4, SULTAN SINGH BUILDING, KASHMERE GATE, DELHI-6 Phone: 227344

at its disposal, for a joint venture. The Company does not, however, propose to issue any fresh capital at the moment to finance its expansion for diversification plans because its deposits with the banks are of the order of Rs. 3 crores. The chairman ruled out the possibility of an increase in the dividend for 1962-63.

Mr. Bhiwandiwalla was very critical of the arrangement concerning the Japan-India trade which, it is stated, has been reached under the auspices of the Central Government. The Company's application for membership of the conference catering to this trade has been rejected, although the Estimates Committee of Parliament had advised in its report that the Government-owned Shipping Corporation of India should support the Company's candidature. In view of this pronouncement, Great Eastern Shipping was trying for the past two years to secure the membership and it was for this very reason that it refrained from encroaching on Conference cargoes by quoting lower rates of freight. Not only has the Company's application for membership been rejected, but the Government's present policy is in favour of offering the overflow cargoes to the members of the Conference only. Mr. Bhiwandiwalla says that if this practice remains unchanged, Great Eastern Shipping will be wiped out of Japan-India trade.

He said that the volume of coastal cargo which had been stagnant for a number of years, had improved as a result of the diversion of the additional 1 million tons of coal cargo to coastal shipping. But the conditions in this sector have not improved materially due to the feeling of complacency which has developed after the grant of higher coastal freight rates. Mr. Bhiwandiwalla urged the Government to review the policy concerning the allotment of the overflow cargo in the Japan-India trade.

Oudh Sugar Pays the Same

Although the dividend has been maintained at 20 percent, less tax, the working results of Oudh Sugar for the year ended July 1962, show a substantial setback compared with those of the previous year. The gross profit is down by 39 percent from Rs. 65.10 lakhs to Rs. 39.74 lakhs. The Company's production shows an all-round decline. The quantity of cane crushed fell from 12.5 million maunds to 11.4 million maunds with the sugar recovery down from 9.49 percent to 9.34 percent due to unfavourable climatic conditions. The production of power alcohol and spirits fell from 1.4 million gallons to 1.1 million gallons, and the output of *vanaspati* was also slightly lower at 15,002 tonnes, against 15,095 tonnes. The Company's own farms produced 440,000 maunds of cane, against 628,000 maunds in the previous year. The provision for depreciation and development rebate has been reduced from Rs. 10.64 lakhs to Rs. 9.99 lakhs, and that for taxation has been more than halved from Rs. 29.89 lakhs to Rs. 14.35 lakhs. The proposed dividend absorbs Rs. 15.50 lakhs (the same), leaving a surplus of Rs. 31,000 to be carried forward. In the previous year, a sum of Rs. 9 lakhs had been transferred to reserves, but no such allocation has been made this year because of the fall in the profit. The Rs. 100-paid share of the Company is currently quoted around Rs. 184, offering a gross return of about 8.6 percent.

Baroda Rayon Goes on Stream

Baroda Rayon Corporation's plant in Udhna (Surat District), which is the seventh unit in the country

manufacturing viscose rayon yarn, went into commercial production on 23rd December, when it was inaugurated by the President, Dr. S. Radhakrishnan. The plant is licensed to produce 7½ tons a day of continuous filament rayon yarn on 100 denier basis, 48 tons a day of sulphuric acid, 5 tons of carbon-di-sulphide and 10 tons a day of sodium sulphuric. The Company's plant, it is claimed, is the only unit in the country which will manufacture 75 and 60 deniers. These will meet the requirements of the "zari" industry and are required for the manufacture of fine parachute cloth for defence needs. About 33 percent of the country's power-looms are located in the vicinity of Surat which means a ready market for the Company's yarn. Another unique feature of the plant is that Baroda Rayon proposes to have 50 percent of its production of yarn on sized beams which has not been done by any other yarn manufacturer. The balance will be on cones. The full production capacity, it is expected, will be achieved within a period of two months.

The Company's Rs. 50-million project is backed by the technical know-how of Asahi Chemical Industry Company of Japan, and plant and machinery have been supplied by Mitsubishi Shoji Kaisha Ltd of Japan. The Company's issued capital is Rs. 4.90 crores, all in equity shares of Rs. 100 each. The paid-up capital is Rs. 4,75,71,925. The Rs. 100-paid share which had touched a high of Rs. 160 in 1962 is currently quoted around Rs. 127.

West Coast Paper Expansion

A director of West Coast Paper Mills, Mr. P. D. Bangur who presided over the Company's latest annual general meeting held on 27th December, 1962, informed the shareholders that the Company had big expansion schemes in view which would involve a huge capital outlay. In addition to its present rated capacity of 60 tons of paper a day, it proposes to set up plants for the manufacture of 90 tons a day of rayon grade pulp, 30 tons a day of caustic soda and 60 tons a day of chlorine. Orders for the caustic soda and chlorine plants, which are estimated to cost about Rs. 1.50 crores, have already been placed with Krebs and Company of Paris on a long-term credit basis. The foreign exchange requirements of this project have been sanctioned by the Government and the import licence for Rs. 80 lakhs, it is expected, will be received shortly. It would take about two years for the plant to go into production. Referring to the other bigger expansion programme for the manufacture of rayon grade pulp and other specialities, Mr. Bangur said that the Company was negotiating with an American firm for technical and financial collaboration. Details still remained to be settled.

West Coast Paper has received the green signal from the Government for negotiating the foreign exchange requirements estimated around Rs. 6.5 crores. Negotiations for loans from financial institutions are proceeding. Mr. Bangur added that the implementation of the scheme bristled with many difficulties which were still to be overcome. He assured shareholders that the Company would not suffer on account of raw materials due to the flowering of bamboos. West Coast Paper has undertaken an extensive plantation programme, and it is carrying on research work on other alternative raw materials like lops and tops of various species of hardwood and the use of cotton linters and rags. The production of paper during the first five months of the current year—

July to November—amounted to 11,00 tonnes, compared with 25,406 tonnes in the previous full year. Mr. Bangur strongly criticised the increase in electricity duty on the power generated by the Company's own power plant for its own consumption, particularly in face of the acute shortage of power. He also stated that the increase in the selling prices of paper allowed with effect from 21st June, 1962, was quite inadequate to offset the increase in manufacturing expenses.

Steel and Allied Products

In spite of the closure of the hack-saw and screw sections for nearly five weeks between September and October 1961 due to labour trouble, the working results of Steel and Allied Products for the year ended June 1962, show considerable improvement over those of the previous year. The 16 percent increase in the gross profit from Rs. 10.11 lakhs to Rs. 11.72 lakhs is, however, small in face of the 40 percent increase in sales from Rs. 42.77 lakhs to Rs. 60.20 lakhs. After providing Rs. 2.91 lakhs (against Rs. 1.64 lakhs) for depreciation and Rs. 4.50 lakhs (against Rs. 3.50 lakhs) for taxation, the net profit amounts to Rs. 4.32 lakhs, against Rs. 4.97 lakhs in 1960-61. The proposed gross dividend of Rs. 15 a share (on the increased capital) absorbs Rs. 2.25 lakhs (against Rs. 2.18 lakhs). In the previous year, the Company paid Rs. 40 a share, but only one-third of the capital ranked for the full year, the rest of the capital being partly paid for part of the year. Allocation to general reserve has been maintained at Rs. 1.50 lakhs, but provision for development rebate reserve has been reduced from Rs. 1.34 lakhs to Rs. 50,000.

The directors state that although the Company's expansion scheme was completed during the year, its full effect in the form of production up to the installed capacity could not be achieved due to a shortage of power and unsatisfactory labour relations. Even so, the production of several items recorded a sizable increase. In view of the higher volume of business, the Company needs additional finance, and the directors propose to offer 7,500 new equity shares of Rs. 100 each to shareholders on 15th January this year in the ratio of one new share for every two held. They are negotiating for foreign collaboration for the manufacture of taps, dyes, chasers, twist drills and reamers. The Government of India, it is stated, has agreed to issue the necessary licence. The workers of the Company resorted to an illegal strike from 18th August, 1962, but an agreement was reached on 23rd October under which the workers have undertaken not to adopt go-slow tactics. The factory has reopened and production is being maintained at a satisfactory level. The directors are hopeful of producing better results during the current year.

Carborundum Universal Repeats

In spite of an increase of about 11.5 percent in the sale of Carborundum Universal Ltd from Rs. 1.23 crores to Rs. 1.37 crores during the year ended August 1962, the gross profit is about the same as in the preceding year; in fact, it is fractionally lower at Rs. 35.46 lakhs, against Rs. 35.52 lakhs. The profit margin has been squeezed by the enhanced wage bill and an increase in raw material prices. After providing Rs. 7.19 lakhs (against Rs. 6.98 lakhs) for depreciation and

Rs. 15.97 lakhs (against Rs. 14.15 lakhs) for taxation, the net profit amounts to Rs. 12.30 lakhs, compared with Rs. 14.39 lakhs in 1960-61. The dividend has been maintained at 9 percent, less tax, absorbing Rs. 4.50 lakhs. A sum of Rs. 5 lakhs (against Rs. 4.50 lakhs) has been set aside for general reserve. Allocations to development, replacement and research reserves and dividend equalisation reserve have been halved from Rs. 2 lakhs each to Rs. 1 lakh each. But taxation reserve gets Rs. 1 lakh, against nil. After making all these appropriations, there remains a surplus of Rs. 1.40 lakhs to be carried forward, against Rs. 1.60 lakhs brought in.

The directors state that the installed capacity in both bonded and coated abrasive departments of the Company was fully used during the year, and that they are considering the question of increasing productivity in order to offset some of the rise in manufacturing expenses. The Company has had to make alternative arrangements for financing the import content of the expansion scheme in the bonded and coated departments, as it failed to obtain the Government's approval for the terms of foreign currency loan offered by the Company's overseas associates. The Company has now obtained a line of credit worth Rs. 17.5 lakhs from the I.C.I.C.I. The requisite import licence has been received and orders for machinery have also been placed. The Company has also received an industrial licence for the manufacture of 7,000 tons of synthetic abrasive-fused aluminium oxide grains a year. Land for the project has been obtained in Edappally, near Cochin, and power has also been arranged. The Company has obtained the Government's sanction for the issue of 20,000 shares of Rs. 100 each at a premium of Rs. 25 a share. Additional funds are required for the aluminium oxide plant. Plans for the installation of a rotary kiln in Okha to process calcine bauxite for use as raw material in the aluminium oxide plant are also in progress. It is hoped that with the completion of this scheme, the Company will be in a position to meet the entire aluminium oxide grain requirements of the bonded and coated abrasive industry in the country.

Vazir Sultan Tobacco Fares Well

Vazir Sultan Tobacco Company has done better during the year ended September 1962 than in the previous year, and both sales and profit have been higher. But the increase in the gross profit from Rs. 95.21 lakhs to Rs. 97.49 lakhs is too small, compared with the 18 percent rise in gross sales from Rs. 7.29 crores to Rs. 8.61 crores. The profit margin has been badly squeezed by the heavy burden of taxation and increases in costs. The Company paid Rs. 4.11 crores (against Rs. 3.25 crores) by way of Customs and excise duties with the result that net sales stood at Rs. 4.50 crores, against Rs. 4.04 crores. The other income of the Company increased from Rs. 23.35 lakhs to Rs. 32.87 lakhs. The total revenue after making adjustments of stocks, rose by about 24 percent from Rs. 2.53 crores to Rs. 3.14 crores. But expenses increased by nearly 37.4 percent from Rs. 1.57 crores to Rs. 2.17 crores. From the year's gross profit of Rs. 97.49 lakhs (against Rs. 95.21 lakhs), the directors have provided Rs. 51.15 lakhs (against Rs. 43.85 lakhs) for taxation and Rs. 7.54 lakhs (against Rs. 7.11 lakhs) for depreciation.

The dividend has been maintained at 25 percent, which absorbs Rs. 25

lakhs. Preference dividend accounts for Rs. 1.78 lakhs, against Rs. 1.84 lakhs. A sum of Rs. 11.50 lakhs (against Rs. 17 lakhs) has been transferred to fixed asset and stock replacement reserve while development rebate reserve gets Rs. 36,761 (against Rs. 47,766). After making minor adjustments, there remains a balance of Rs. 1.82 lakhs to be carried forward, against Rs. 1.67 lakhs brought in. The Company's paid-up capital of Rs. 1.29 crores (of which equity capital is Rs. 1 crore) is supported by reserves and surplus amounting to Rs. 1.44 crores. The fixed assets valued at Rs. 1.45 crores have been written down to Rs. 76.41 lakhs. The Company entered into two agreements last November with the Imperial Tobacco Company of India as the previous agreement ceased to have effect after 24th November. One of the two fresh agreements covers the manufacture of this Company's brands and the other is about selling arrangements. Shareholders' approval to these agreements will be sought at the annual meeting to be held this month.

J. K. Steel Expanding and Diversifying

The ordinary shares of J. K. Steel Ltd have been steady around Rs. 16.50 due to the fact that the Company has been going ahead with its programme for the expansion and diversification of activity. In addition to producing jute baling hooks, it has started manufacturing cold rolled strips, box strappings and steel wire ropes. It has been granted a licence for the production of wire ropes. It has also obtained an industrial licence to make electric hoists and chain pulley blocks. This project has been delayed by the foreign exchange shortage. But the Company has now arranged for foreign exchange with the Industrial Credit and Investment Corporation. In his chairman's statement at the annual general meeting of the Company held last week, Mr. Lakshminpat Singhania mentions (a full text of the speech is printed on an earlier page in this issue of *Capital*) that the industrial licences granted to the Company for doubling the capacity for wire ropes, for producing pipes and tubes and for installing electric furnaces will be proceeded with as and when foreign exchange becomes available.

The profit has fallen from Rs. 26.12 lakhs in 1960-61 to Rs. 20.46 lakhs in 1961-62. A taxable ordinary dividend of 10 percent has been declared, which is half the dividend paid for 1960-61, but the share capital has meanwhile been doubled. Mr. Singhania points out that production during 1961-62 has been affected by two factors. The first is a prolonged illegal strike causing a production loss to the extent of about Rs. 60 lakhs. The second is the shortage of raw materials. The supply of billets which constitute the chief raw material, has been very short of requirements. Hence the plant has had to work below its capacity.

The supply of billets has not only been short, but it has also been very irregular. The re-rolling industry, it was expected, would receive a supply of billets to the extent of 700,000 tons at the end of the second plan. But the total supply amounted to only 457,000 tons in 1961. The supply position deteriorated further in 1962. He, therefore, thinks that the Government should take steps to ensure an adequate supply of billets to the re-rolling industry. As for wire ropes, he points out that the Government has sanctioned industrial licences for an annual capacity of 34,800 tons, against the present consumption of only 10,000 tons. This apart, it must be remembered that the production of wire ropes depends

on the supply of specialised steel. He doubts whether an adequate quantity of this steel can be supplied to the producers of wire ropes.

Dalmia Iron Repeats

The ordinary shares of the Dalmia Iron and Steel Co. Ltd have met with scattered support around Rs. 11.69, which is attributed to the fact that their growth prospects have been stressed by the directors in their report for the year ended June 1962. Sales rose from Rs. 1.44 crores in 1960-61 to Rs. 1.80 crores in 1961-62, although part of the increase was due to higher prices. The directors hope for better results during the current year. The management could not proceed with the expansion of the steel foundry according to the original plan due to the foreign exchange shortage. The Company has, however, arranged for increasing the output in this department by procuring indigenous machinery. A new 3-ton furnace has been installed, and it has started producing.

As soon as power supply improves and the necessary equipment has been imported, the output capacity for steel castings will be doubled to 3,000 tons a year and that for grinding media, to 6,000 tons a year. The expansion is likely to be completed by the end of 1963. The Company has, meanwhile, taken steps to raise the production of grinding media to 5,000 tons a year in spite of the power shortage. As for the spun iron pipe project, the management could not proceed with it under the former arrangement for technical and financial collaboration with foreign manufacturers as the requisite foreign exchange was not available. In the meantime, the Company itself produced the equipment necessary to increase the output to 45,000 tons a year by 1963. The cost of this expansion may be around Rs. 10 lakhs.

A taxable ordinary dividend of 10 percent has been repeated. It is covered more than two-and-a-half times, and offers a yield of 8.6 percent at the present price. The profit has improved from Rs. 22 lakhs in 1960-61 to Rs. 22.94 lakhs in 1961-62 after providing Rs. 10.71 lakhs (against Rs. 10.50 lakhs) for depreciation. Development rebate reserve is allocated Rs. 3 lakhs (against Rs. 11.50 lakhs), taxation Rs. 7.50 lakhs (against Rs. 1.50 lakhs) and general reserve Rs. 5 lakhs. The carry-forward is Rs. 1.09 lakhs, against Rs. 1.65 lakhs brought in. The output of grinding media was 3,560 tons, against 3,879 tons, that of steel castings 1,006 tons, against 927 tons, and that of spun iron pipe 18,473 tons, against 15,207 tons.

Burma Corporation Loses

The Burma Corporation (1951) Ltd, jointly owned by Burma Mines Ltd and the Union Government of Burma, has incurred a loss of £248,895 during the year ended June 1962, compared with a loss of £172,536 in 1960-61, after providing £102,698 for depreciation. The gross revenue is £1,897,500 and the expenditure amounts to £2,028,000. Although ore extraction declined, the tonnage of ore milled and the output of all marketable products were higher.

Filtrona India: A New Venture

Filtrona India Private Ltd is a new Company which has been promoted by Killick Industries Ltd in association with the Cigarette Components Ltd, London, and the Industrial Investment Trust Ltd, Bombay. The Company, which has been incorporated in Maharashtra State as a private limited company, will in due course

become a public company in compliance with the provisions of the Companies Act, 1956. Arrangements, it is stated, are well in hand to construct a modern factory at Killick's industrial estate in Chandivli, Bombay, which will be equipped to produce 120 million sextuple cigarette filter rods a year for supply to the Indian cigarette industry. Details about the capital structure have not yet been finally decided, but it is stated that Cigarette Components Ltd, London, will hold 50 percent of the equity capital of Filtrona India and the two Indian firms, Killick Industries and Industrial Investment Trust, will each hold 25 percent. Production, it is expected, will start during the third quarter of 1963.

Bharat Steel Tubes

Bharat Steel Tubes Ltd of Delhi is a new company which has been formed to undertake the manufacture of steel tubes up to 6in. diameter, in collaboration with the U.S. firm of Abbey Etna Machine Company of Ohio. The factory which is claimed to be the first of its kind in the country has been licensed to manufacture 36,000 tons of tubes annually on a single shift basis. The project, it is estimated, will involve an outlay of Rs. 3 crores, of which Rs. 2 crores will be raised through share capital comprising 175,000 equity shares of Rs. 100 each and 25,000 preference shares of Rs. 100 each. The U.S. firm which is collaborating in the venture will participate in the equity capital of the Company to the tune of \$1 million in addition to supplying machinery and technical know-how. The Government has sanctioned foreign exchange to the extent of Rs. 88 lakhs from the Development Loan Fund. The factory which will be located near Sonapat, Punjab, is expected to go into production by the end of 1963. The Company is likely to enter the market shortly to raise capital. Out of the equity capital of Rs. 1.75 crores, the promoters, directors and their friends are likely to take up shares of the value of Rs. 30 lakhs. The project, it is said, has a great export potential. The construction work of the factory has already started.

Muar River Rubber

The working of the Muar River Rubber Co. Ltd for the year ended March 1962, shows a net profit of £192,390, against the previous year's £226,799. The chairman, Mr. John D. Barlow, says that the result is satisfactory since the c.i.f. price of rubber was nearly 5d a lb lower than last year. With £26,165 brought forward, the total comes to £218,555. Out of this, the directors have transferred £64,650 (against £89,050) to taxation reserve and £55,000 (against £59,000) to replanting reserve. The dividend at 4d a share (16 2/3 percent) amounts to £69,779. The balance of £29,126 is carried forward.

There was a 10-percent increase in the crop during the year at 5.6 million lbs, and the yield an acre tapped was about 650 lbs. There were about 500 acres of mature rubber on the Borneo estates which were not tapped due to lack of labour. The chairman says that given more labour for this work, the Company can harvest higher crops in Borneo, which will benefit not only the company, but also the Borneo Government who will receive increased export duty on larger crops. The crop for 1962-63 is estimated at 5.7 million lbs. The average gross selling price was 22.1d a lb and the all-in-cost, excluding replanting, was 16.7d, so the profit was 5.4d a lb, compared with about 6d a lb in the previous year.

Dealing with the outlook, the chairman says that the estimates for

CAPITAL, 3rd January, 1963

supply, including stockpile deliveries, and demand for natural rubber in 1962 are evenly balanced at 2.2 million tons. Estimates for supply and demand for synthetic rubber are for the first time about the same as natural. Now half the world's supply of rubber is natural and half synthetic. Mr. Barlow says that new synthetics, such as cis-polybutadiene, can be used instead of the natural product for almost all purposes, and the price of these synthetics will, to a large extent, determine the price of natural rubber.

New Capital Issues

The Controller of Capital Issues has authorised six companies to raise fresh capital totalling Rs. 6.18 crores. One company is issuing part of its new capital as bonus shares and the rest are issuing equity. Two companies are giving part of the capital to their foreign collaborators. One is a State Government undertaking. The consent for all these issues is valid for 12 months. The following are the details:

I.L.S.C.O. Stanton Pipe and Foundry Company Ltd. Calcutta, is raising equity capital of Rs. 3 crores in ordinary shares of Rs. 100 each at par. Out of this, shares worth Rs. 2 crores will be subscribed by the Indian Iron and Steel Co. Ltd. and shares worth Rs. 1 crore will be offered to the foreign collaborators, Stanton and Staveley Ltd of the U.K.

Gujarat State Fertilizers Company Ltd. Ahmedabad, is raising capital of Rs. 2 crores divided into 200,000 equity shares of Rs. 100 each for cash at par, to be subscribed by the Government of Gujarat.

John Oakey and Mohan Ltd. Delhi, will issue capital of Rs. 50 lakhs (inclusive of Rs. 7,55,900 already issued and subscribed) divided into 500,000 equity shares of Rs. 10 each, for cash at par.

Molins of India Ltd. Calcutta, is to issue Rs. 34 lakhs in equity shares of Rs. 10 each at par, to be subscribed to the extent of 48 percent by the Indian public. The remaining 51 percent will be subscribed by Molins Machine Company Ltd of the U.K. against supply of capital goods.

Sri Sai Baba Textile Mills Ltd. Andhra Pradesh, has been granted consent to the issue of equity capital of Rs. 20 lakhs for cash at par.

Auto Distributors. Calcutta, will issue capital of Rs. 14,00,000 divided into 100,000 equity shares of Rs. 10 each, for cash at par to be issued to the public and 14,000 equity shares of Rs. 10 each as bonus shares to existing shareholders of the Company on the capitalisation of its reserves.

STANDARDS CONVENTION TO MEET IN CALCUTTA

The seventh Indian Standards Convention will meet from 28th January to 2nd February, 1963. It will be inaugurated on 28th January by Mr. P. C. Sen, Chief Minister of West Bengal. Mr. K. C. Reddy, Central Minister for Commerce and Industry, will preside over the function. Dr. Sushila Nayar, Central Minister for Health, Mr. O. V. Alagesan, Central Minister of State for Irrigation and Power and some ministers from the West Bengal Government are expected to attend it. The technical sessions of the Convention, which will discuss important problems of standardisation in topical subjects, will be held at the Rabindra Sarobar Stadium, Calcutta. This is the second time that Indian Standards Convention, the first being the inaugural convention held in 1954.

CAPITAL, 3rd January, 1963.

Stocks and Shares

CALCUTTA STARTS THE NEW YEAR WITH PESSIMISM

Wednesday Evening.

THE Calcutta stock market has started the New Year with pessimism. The hangover of the sharp decline towards the end of 1962 following the Chinese invasion has not yet passed. The all-India index for ordinary shares has declined from 182.4 to 170.6 (base year 1952-53 equals 100) over the past year. The hesitation of operators and investors is understandable. The political situation remains uncertain. Although there has been no armed clash since China declared a cease-fire in November, her intentions are far from clear. Despite the fact that talks have started between India and Pakistan about Kashmir, no solution of the problem is in sight.

Political uncertainties apart, Lyons Range has been worried by recent economic developments. Although the fresh import cuts for the October 1962-March 1963 period were expected in view of the meagre foreign exchange reserves, it is feared that the working of many industries will suffer due to the shortage of raw materials and spare parts. On a longer view, however, the outlook is probably not so depressing. As the import policy has been framed with a view to promoting defence production and exports, it is hoped that defence and export industries will be given the raw materials necessary for carrying on full production. The hope is reinforced by the fact that many foreign countries have indicated their willingness to help India in fighting the Chinese invasion. When the Aid-India Club meets a couple of months hence, it is expected that it will give all the aid India requires for defence production. As a result of the import cuts, the import-substitution industries are likely to benefit but their number may not be large.

Lyons Range has been taking a cautious view of the near-term trend. The prospect of heavier taxation in the next Central Budget, which is to be presented at the end of February, is almost certain. The Central Finance Minister, Mr. Morarji Desai, has already indicated that more taxes will have to be imposed in order to finance defence expenditure. This apart, many companies have already decided to contribute a portion of their profits to defence voluntarily.

Although industry has been asked to produce more for defence, in the absence of fuller information it is not possible to say at the present stage to what extent the increase in production will contribute to profits. Considering that a large proportion of the output will have to be sold to the Government, investors are inclined to take a cautious view about the profit outlook. They know that an increase in turnover does not necessarily imply bigger profits. In fact, profits have not improved in proportion to turnover during the past year due to a rise in production costs. In the circumstances, it is difficult to take an optimistic view about dividends in the near future. On the basis of share prices is present level of share prices is probably higher than is justified. But ideas about dividend yields are being revised as the trend towards a dearer money policy and higher interest rates gathers momentum.

During the last three days' trading in 1962, it was reported that bank pressure had been felt, which might have been due partly to the year-end closing of accounts. In any case, the shortage of credit is likely to be more

pronounced during the coming weeks as bank funds will be fully employed in meeting the busy season's requirements. Since the support for shares might be poor, it is hoped that the Reserve Bank will persuade the banks not to press for a reduction in share overdrafts. A redeeming feature is that the load of floating stocks has been relieved greatly by the substantial purchases of the Life Insurance Corporation.

Government securities have been quiet in the absence of institutional support. Prices of Central Government loans have eased. State Government loans have met with selling pressure. Scattered business has been done in selected preference shares and debentures.

Bombay Market

TURNOVER REMAINS SMALL

ANXIETY OVER RISE IN CLOTH STOCKS

Wednesday Evening

THE Bombay stock market reopened on Wednesday after the Christmas holidays in a hesitant mood. Turnover was small and operators were unwilling to enter into fresh commitments in view of the political and economic uncertainties. The import policy for the October 1962-March 1963 period has caused a great deal of concern. As imports have been cut further, it is feared that many industries will suffer from a shortage of raw materials and spare parts. Although the engineering industry has been asked to produce more for defence, it remains to be seen whether profits will increase. The speech of the chairman of Premier Automobiles, at the annual general meeting of the Company, has made investors cautious as he is not sure how the increased defence production will influence profits.

Cotton mill investors are getting worried over the accumulation of stocks of cloth and yarn. The Government is not expected to announce the new prices of cloth and yarn on the recommendations of the Tariff Commission before the beginning of the next financial year. But it is doubtful whether the trading community will care to buy cloth above the minimum requirements in anticipation of a cut in the price. In the miscellaneous section, sugar shares have been depressed by the accumulation of stocks of the commodity at factories. Rayon and cement shares are subdued. Chemical shares have been sold more freely than bought. There is little interest in bank and insurance shares. The prospect of an increase in the standard return for electric companies has not impressed investors.

Madras Market

STEADIER START AFTER THE HOLIDAYS

SELECTIVE SUPPORT FOR TEAS AND RUBBERS

Wednesday Evening.

THE Madras stock market has started the New Year in a

steadier mood. Reopening today after the Christmas holidays, attention has been concentrated on selected planting and miscellaneous shares due to satisfactory dividend yields. Good tea shares have met with scattered support as the average price of the commodity realised so far is slightly better than in 1961. Selected rubber shares are steady, but coffee shares are generally neglected. In the sugar section, E.I.D. and Mysore have attracted scattered support. Cotton mill shares are being traded cautiously in view of the uncertain export prospects. In the miscellaneous section, good cement and chemical shares are fancied due to their growth prospects.

Investors are nevertheless cautious as bank credit has become more expensive. The import cuts for the half-year ended March 1963 are a disturbing factor. Government securities are depressed, and prices of Central Government securities have eased in the absence of buyers. Prices of State Government loans have fallen considerably on a predominance of sellers. In the cotton mill section, Asher has declared a taxable ordinary dividend of 15 percent. Among planting shares, Coffee Lands has paid a taxable ordinary dividend of 9 percent. In the miscellaneous section, Mysore Cement has passed the dividend, but has issued

...inauguration THE BARODA RAYON CORPORATION LTD., UDHNA, SURAT

Another Rayon Yarn Manufacturer in India— the seventh Viscose Filament Rayon Yarn Plant— stepped into the industry on 23rd Dec. 1962. A Rupee Eight Crore Project standing on 320 acres will manufacture—backed up by the technical know-how of ASAHI CHEMICAL INDUSTRY COMPANY LIMITED, and plant and machinery supplied by MITSUBISHI SHoji KAISHA LTD. TOKYO (JAPAN)—eight and a quarter million pounds per annum of Viscose Filament Rayon Yarn for the textile industry, along with the daily production of by-products like Sulphuric acid (48 tons) Carbon-di-sulphide (5 tons) and Sodium Sulphate (10 tons). Also, there is a programme of manufacturing Caustic Soda and Staple Fibre Yarn. The Company has its own power plant with a capacity of generating 10,000 k.w.

THREE PROPOSALS SUBMITTED FOR COCHIN OIL REFINERY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India, it is believed, has accepted in principle the proposal to set up a 2-million ton refinery in Cochin. It has also established a Cabinet sub-committee consisting of Mr. T. T. Krishnamachari, Minister for Economic and Defence Co-ordination, Sardar Swaran Singh, Minister for Railways, Mr. C. Subramaniam, Minister for Steel and Heavy Industries, Mr. Gulzaril Nanda, Minister for Planning and Labour and Mr. K. D. Malaviya, Minister for Mines and Fuel. The sub-committee will examine the steps necessary to expand refinery capacity to meet the growing need for oil products.

As far as the south Indian refinery is concerned, three proposals have been made. E.N.I. of Italy has prepared a project report for an integrated plant, including a 2-million ton refinery at an estimated cost of \$34 million. It also includes a lubricating plant at an estimated cost of \$10 million. The proposal envisages a public-sector refinery, E.N.I. supplying the equipment and technical know-how on credit, 5 percent of which has to be paid at the time of signing the contract and 3 percent 12 months later. The balance has to be paid in ten instalments, the whole of the unpaid credit carrying an interest of 6 percent.

Phillips Petroleum

The other proposal is by Phillips Petroleum of the U.S.A., also for an integrated plant as follows: A 2.5 million ton refinery at an estimated cost of \$30 million; a 50,000-ton lubricating plant at an estimated cost of \$10 million; a hydrogenation, sulphur and asphalt plant at an estimated cost of \$5 million; and a power plant at an estimated cost of \$5 million. These estimates have lately been revised and the provision for a power plant has been deleted, it is learned. Under the proposal, Phillips Petroleum will buy crude from its own sources. The proposed undertaking will allot 51 percent of its capital to the Government of India, Phillips Petroleum retaining 25 percent of the equity capital itself and allocating 25 percent to its Indian partners, who are the sponsors of the project.

The third proposal is by Burmah-Shell for a 2-million ton refinery at an estimated cost of Rs. 9 crores. Its proposed capital structure is similar to that of Phillips Petroleum. According to reports, the Ministry prefers the proposal of Phillips Petroleum, in spite of the fact that it is a deviation from the strict interpretation of the Industrial Policy Resolution. The sub-committee will consider the three proposals in their various aspects and reach a decision to construct a 2-million ton refinery at minimum cost, other things remaining equal.

As far as the expansion of the existing refineries is concerned, the Central Minister for Mines and Fuel has made no secret of his hostility to their proposals. Mr. Malaviya made two statements, one of which he has slightly modified in recent weeks. He told Parliament that the refining capacity in the public sector "shall not be less than 51 percent." In other words, the refining capacity in the private sector "shall not be more than 49 percent." The oil companies, enquiries show, have no dispute over the ratio of refining capacity to be allotted to the private sector. They are mainly concerned over when these percentages are to be reached. Mr. Malaviya has given no indication of the date for reaching the target, beyond stating that there will be no further expansion of the refining capacity in the private sector.

But in fixing the refining capacity at the end of the third plan, the demand for petroleum products should be the main consideration. On the basis of earlier calculations, this demand was placed at 14 million tons. The existing throughput of the private-sector refineries is 7.40 million tons. The three public-sector refineries are at present planned to refine 4.75 million tons. By asserting that the public-sector refineries in Barauni and Gujarat are being expanded, Mr. Malaviya claimed that there is no room for further expansion of the refining capacity to meet the 1966 demand for 14 million tons. He has, however, raised the 1966 demand to 17 million tons in recent weeks.

Meanwhile, both Esso and Burmah-Shell have made definite proposals to expand their refining capacity by 2 million tons each and Caltex by 50,000 tons. Esso proposes to expand its existing refinery in two stages, by 1 million tons by 1966 and by another 1 million tons in 1969 at a total cost of \$11 million. Its existing capacity is 2.5 million tons. Burmah-Shell proposes to expand its refinery from 3.5 million tons to 5.5 million tons in 20 months at an estimated cost of \$8.4 million. It has offered to meet all the foreign exchange cost.

The sub-committee of the Central Cabinet will become a sort of negotiating body. The thinking here has apparently been that not only should the existing refineries be permitted to go ahead with their expansion schemes but there should be long-range planning to make India self-sufficient in oil products and to launch an intensive development programme for petro-chemicals. The Productivity Team, which visited Russia and Rumania earlier last year, recommended that the refining capacity in India should be 20 percent more than the demand for petroleum products.

Contract with E.N.I.

The Oil and Natural Gas Commission entered into a contract with E.N.I. of Italy for oil prospecting in the Gangetic Valley. The E.N.I. will be the contractors of the Government-owned company, financing the project out of the credit given to India by the former. Incidentally, India has provided Rs. 62 crores of foreign exchange in the third plan for oil exploration.

In this context, some comments in the report of the World Bank Mission are interesting: "The mission considers it essential that geological surveys and exploratory drilling for oil in India should continue on an increasing scale, and the Government's declaration of its readiness to enlist the co-operation of private capital and technical skill in these ventures is to be warmly welcomed. Capital costs of oil exploration and development are extremely high, and large sums may be spent without obtaining any com-

mercial return. Given the acute shortage of capital in general and of foreign exchange in particular, there appears to be no sound economic justification for the Indian Government to enter into further financial commitments concerning oil development until all reasonable possibilities of securing the participation of private capital have been fully exploited.

Promising Start

"The Oil and Natural Gas Commission has made a promising start, it is gradually building up a competent technical staff, and its activities can be expanded as its technical and financial resources permit. It may be doubted, however, whether the Commission can usefully spend as much as has been allocated to it under the third plan. Whatever its capabilities, there is also ample scope for getting more private companies to search for oil and to share the risks as well as the possible benefits of exploration. Much further work remains to be done before the full extent of the deposits in Assam and Gujarat can be established, and large sedimentary areas in other parts of India still await investigation. As the mission sees it, it is very much to India's economic advantage that exploration should be carried out as rapidly, and on as broad a front as possible, and that the heavy costs of exploration and development should be financed to the maximum extent possible out of private capital, thereby releasing Government funds for investment in other sectors where they are urgently needed. It is to be hoped, therefore, that following the invitations issued to private companies, negotiations for new exploration leases will be pushed forward with the greatest expedition.

"Likewise, in the refining and distribution of oil, development should, so far as possible, be left in private hands, except to the extent that Government intervention may be needed to ensure an adequate measure of competition. Private oil companies have already invested large sums in refining, storage and distribution in India, and there is no reason to doubt that they will be able, as part of their normal business, to finance the additional facilities required to meet the growth of the feeling in India that the pricing policies of the international oil companies have tended to be determined without regard to India's interests and it has sympathy with the Government's desire to encourage greater competition in the supply and pricing of oil. Substantial cuts in the price of imported oil have recently been announced by the principal supplying companies, and India has every right to take full advantage of the present competitive situation in the oil market. But we believe that she can do this without the Government entering into the costly and complicated business of oil refining and distribution."

POWER

Survey Group Meets

The first meeting of the Power Energy Survey Group, appointed by

the Government of India, was held here last week. The group will survey India's long-range power requirements in the broad perspective of the next 15 or 20 years for the country's balanced regional economic development, as envisaged in the five year plans. It will also examine and make recommendations on the speedy development of regional and national grids. The group's terms of reference will cover the existing electricity legislation. It will suggest improvements from the administrative, financial and other angles for the expeditious development of the power potential. It is expected to submit its report within a year.

The group consists of the following members: Mr. M. R. Sachdev, Secretary to the Central Ministry of Irrigation and Power, Messrs S. S. Kumar and K. P. S. Nair, members at the Central Water and Power Commission, Mr. H. R. Bhatia of the

London

U.K. ECONOMIC OUTLOOK: EXPORTS AND EMPLOYMENT FALL

(FROM OUR LONDON CORRESPONDENT)

FROM the economic point of view, the year 1962 ends on a gloomy note for Britain. Unemployment continues to rise, causing anxiety in all quarters; productivity is at a standstill if indeed it is not actually falling; and, most significant of all, the balance of payments situation is less encouraging than it ought to be if the country is to ride the present near-crisis, and continue to advance to economic stability along sound lines. Mr. Reginald Maudling, Chancellor of the Exchequer, is not allowing himself to be stampeded into panic measures to satisfy the fears of the panic-stricken. His sober assessment of the situation and careful balancing of incentives and restrictions hold the best chances of steering the economy into calmer waters.

The T.U.C. is keeping up its pressure on the Government for more expansionary economic policies and special measures to deal with high unemployment areas. The General Council is to meet the Chancellor of the Exchequer for a second time on 2nd January, and this time the production committee will press for remedial measures designed particularly to meet the needs of the high unemployment areas. Mr. Maudling is to be urged to apply existing powers rigorously and to consider further action, including the transfer of Government establishments to regions like the North-East and Scotland. The T.U.C. is suggesting that the President of the Board of Trade, the Minister of Labour, and the Minister of Transport, should also attend the meeting. A meeting with the Minister of Pensions and National Insurance is also requested so that T.U.C. leaders can press upon him the "urgent need" for an increase in unemployment benefit and national assistance payments.

The T.U.C. is taking a very serious view of the unemployment situation, which the December figures show has worsened since November. Although the high general level of unemployment is blamed for aggravating the situation in the "black spots", trade union leaders are viewing the two problems as separate; the first requiring expansionary economic policies, the second positive acts of social policy.

The T.U.C. View

It is clear from an examination of the statements recently made by the Chancellor and the T.U.C. on the unemployment outlook that the T.U.C. and the Chancellor are in fundamental conflict, not only on questions of policy, but on the basic facts of the economic situation. Mr. Maudling believes the money he has injected into the economy will do the trick; the T.U.C. does not. Earlier hopes that the T.U.C. would be more co-operative towards the new Chancellor's approach to economic stability are proving inaccurate. The General Council gave a cool reception to both the Government's proposals for legislation on industrial training and its Contracts of Employment Bill. Turning from labour to production, it is discouraging to find that a fall of three points in the seasonally adjusted index of industrial production occurred between September and October. The index for manufacturing industries alone fell by four points, from

118 to 114. For various reasons, these figures probably exaggerate the setback. But they certainly remove any previous impression that industrial production was expanding.

In the first ten months of 1962, the adjusted index for all industries averaged 115, compared with 114 in the same period of 1961—a rise of less than 1 percent. In effect, industrial activity has been no greater than last, and Mr. Maudling's fairly recent claim that there had been a "growth" of 7 percent since the low point of last winter is now shown up as a rather irrelevant statistical debating point. One reason why the October figure overstates the drop is that the September figure is now believed to have been rather too high. The Treasury emphasises this by pointing out that the average for the three months August to October was the same as in the previous three months. Since March the trend has been roughly level, rather than up and down.

Moreover, the index is very largely based on reports on delivery and not on output. Recent Board of Trade statistics have shown that deliveries in the engineering industries fell sharply in October. It is possible that the rail strike at the beginning of the month had some impact. One gathers that among the components of the production index the figures for the engineering and machinery group and for the vehicle group dropped more than the average in October. It is a disappointment—in much the same way as the failure of exports to continue their expansion in the second half of this year. Indeed, industrial production, exports and personal consumption all show the same picture of an economy stalled at dead centre. On the other hand, the October statistics reflect the situation as it was before the Chancellor announced his chief reflationary programme. In the light of the trend that is now revealed, it is surprising that he waited so long before making his decision.

Clearly, the economy failed to live up to the hopeful forecasts made by the previous Chancellor in his Budget speech and the Budget was tougher than it should have been. As Mr. Maudling has, for perfectly sound reasons, chosen to apply his stimulants mainly in the form of incentives and programmes which are slow to take effect, Britain must have to live through a bad winter before the patient responds to treatment. Finally, there has been a sharp deterioration in the British balance of payments during the third quarter. The current account has swung over from a surplus of £76 million in the second quarter to a deficit of £45 million in the third. The late summer is always an unfavourable time of the year and the Treasury estimates that more than half of the swing of £121 million was due to seasonal factors. But what remains is sufficient to dash the earlier hopes that the U.K. had won through to a safe surplus which would at last give some room for manoeuvre in the British economy.

Trend of Exports

The chief disappointment lies in the trend of exports. The balance of visible trade in the third quarter is estimated as a deficit of £54 mil-

lion, compared with a surplus of £17 million in the second quarter. What really happened emerges from the seasonally adjusted figures: the trend of imports was moderately upwards while exports showed very little further change after the strong increase between the first and the second quarters. Net invisible earnings in the third quarter fell sharply to £9 million, compared with £59 million in the previous quarter. The Treasury says that much of the fall was due to a seasonal increase in travel expenditure and a decline in net oil receipts. After seasonal correction, the fall in total net earnings was small. But again, there had been some reason to hope that invisible earnings had begun to revive. That is another disappointing aspect of the third quarter results. As for the long-term capital account, a net outflow of £53 million is estimated. Nearly half of this consisted of inter-Government loans; net private investment abroad amounted to £27 million. Inward portfolio investment, which fell away in the second quarter, seems again to have been very small in the third.

Taking current and long-term capital transactions together, the identified balance was a deficit of £98 million. On the other hand, the balance of monetary movements was favourable to the U.K. to the extent of £30 million. This result is obtained by setting off the fall of £229 million in the reserves (largely representing repayments of debt) against a reduction of £264 million in the U.K. liabilities in the form of overseas sterling holdings. Other monetary movements showed a net increase in liabilities of £5 million. To reconcile the favourable monetary flow with the deficit in the recorded payments balance, the Treasury has put in a "positive" balancing item of £128 million, an unusually high figure for the third quarter.

Strength of Sterling

A short while back the Bank of England drew attention to the apparent conflict between the strength of sterling in the market and the re-

cent deterioration in the balance of payments. It suggested that there might well have been undetected monetary movements to explain the paradox. In short, the figures for a single quarter need not be taken too gravely. But if exports have really reached a sticking point, the expansion policy is in trouble. That is just how Mr. Maudling sounded in the House of Commons the other day. The Government has some hope that the decisive meetings of the negotiators in Brussels on the terms for Britain's entry into the European Economic Community may be reached by the end of next month or early in February.

Apart from the general case for reaching finality in these negotiations, the Government sees a special need to settle the matter because it regards the prevailing uncertainty as a factor contributing to unemployment in Britain. Ministers have received some evidence that firms which are anxious to expand are holding back their plans until they can decide whether to expand in the U.K. as a member of the Community, or in one of the existing member-States of the Community. The effect of this uncertainty is shown, as the Government reads the situation, in the latest production figures for November, which are declining. This means that it may take longer for the country to get out of the present phase of underemployment than the Government could have wished.

It is impossible to say now that the result of the decisive meetings in Brussels—whenever they take place—will be to secure Britain's entry into the Community, but the Government inclines to the view that the bulk of its supporters in the country have already accepted the notion, consciously or subconsciously, that Britain is in effect "in". The current broadsheet by the Common Market campaign, which was published, states that except in Italy, employment levels in the Community are now higher than in Britain (in the case of Italy unemployment has fallen by 29 percent since 1960). In Belgium, states the broadsheet, where in 1960 there was considerable regional unemployment—which, rather than general unemployment, is also the trouble in Italy as in Britain—the total has declined by 30 percent to under 60,000. The broadsheet notes that apart from article 117 of the Rome Treaty which lays down a general requirement on member-States to promote improvement of the living and working conditions of labour, there is a specific obligation in article 10(r) to ensure a high level of employment, and the stability of the level of prices.

Jute

MORE JUTE PURCHASE QUOTAS ISSUED FOR JANUARY

SPECULATION in B Twills has been the chief feature of the jute goods market during the past fortnight. Consumers have shown little inclination to operate, and there has been a holiday feeling in the air with the festive season on. During most of the period, B Twill quotations have fluctuated violently due to speculative influences, and rates slumped by over Rs. 5. Hessians have been comparatively neglected, and although they too have dropped about Rs. 2.50, the undertone there has been steadier.

It is not the gunny market alone which has been upset. In spite of the fact that mills have bought jute against their quotas regularly, fibre rates have continued to drop and the sentiment is weak. To try and stem the downward tendency, the Jute Commissioner has again issued quotas for the month of January, consisting of a total of 750,000 bales (3,750,000 maunds). Of this, 50,000 bales are to be taken up by the Jute Buffer Stock Association, 50,000 bales by non-member mills, and the remaining 650,000 bales (3,250,000 maunds) by member-mills of the I.J.M.A. The trade in general thinks that this latest imposition by the Government will have no more effect on raw jute prices than the ones before. Over the past two months, mills have been coerced into buying over 1,900,000 bales of jute with the object of supporting raw jute prices. But the prices have fallen by about Rs. 2 a maund.

Weakness of Gunnies

To find the reason for this, one has to look to the finished goods market. Unless gunny prices improve and mills can sell some goods at a reasonable profit against the huge stocks of jute they are carrying, there seems to be little prospect of fibre prices rising. Under present conditions of maximum production, there is little chance of an appreciable rise in jute goods rates, or at least a rise substantial enough to offset the weakness of raw jute. If the Government wishes to do something about lifting raw jute rates, something might first have to be done to support the goods market. There are at present too many finished goods waiting for too few buyers, and until the glut is reduced, goods prices will remain weak.

There has been a great deal of talk about producing better quality of jute, but very little action so far. Apart from the provision of fertilisers and improved retting facilities, to instruct growers in methods of retting and means of determining the length of time for the process so that the jute is neither under- nor over-retted. Instruction is also necessary in the method of extracting the fibre. A great deal of jute is spoiled, especially in Northern and some Daissee districts, by hammering the stalks with mallets (which results in split fibre) instead of withdrawing the stock whole.

Bigger Yield of Fibre

In spite of propaganda to the contrary, there is still a significant silence on the subject of research to produce varieties of jute which will give a bigger yield of fibre a plant, instead of producing bigger plants which give a bigger yield an acre. The results obtained over the past

century in the case of foodgrains show that it is worth persevering with the object of producing varieties giving a greater percentage of fibre to the green weight of the plant. The average yield of fibre of the varieties at present grown is 6 percent or 7 percent of the green weight. An acre of jute in India produces on an average a little over 3 bales, or about 1,200 lbs.

Let us for our purpose assume a yield of 1,200 lbs of fibre an acre. That means about 20,000 lbs of green plant have to be produced to give 1,200 lbs of fibre. In other words, 18,800 lbs of waste material is grown. (Of course, not all is wasted since some of the green vegetation goes back to fertilise the fields and some of the sticks are used as fuel.) Even if the fibre yield could be doubled, the amount of waste vegetation grown would still be very large. But the significant point is that the same quantity of fibre could be produced from half the acreage. If that could be done, much more land could be set aside for food production.

The large increases in the yield of grain a plant show what can be done. The yield of grain a plant in the case of oats has increased eight-fold in a century, and the yield of potatoes a plant in the U.K. has also greatly increased. Research and development have to keep pace with the needs of the time. How much has the yield an acre of jute increased during the present century? Jute development work is being reorientated, and quality plays a large part. But to attain self-sufficiency, India needs an increased amount of quality fibre from possibly fewer plants grown on a smaller acreage. That should be the main object of research.

THE JUTE MARKETS

Manufactured Goods: During the period from 20th December, 1962, to 2nd January, 1963, there were only nine working days. In the early stages, the market was weak, and prices opened much lower, with B Twills at Rs. 119.25 for December shipment and Rs. 115 for July-September 1963. Hessian showed only nominal losses, and 40in. 10oz. opened at Rs. 52 and Rs. 49.25, respectively, for the near and forward positions. Typical end-of-year conditions prevailed, with overseas buyers taking no interest. Consequently, the trend was influenced by speculative activity, and operators took full advantage of the situation. Heavy selling pressure forced down prices, and over the next three days, sacking rates fell by nearly Rs. 2 and Hessians by 50nP. On Christmas Eve, rates dropped again as speculative activity increased, and by the opening after the holidays, B Twills had been reduced to Rs. 116. Further losses were due to the way, and B Twills slumped to Rs. 114.50 before there was any sign of recovery. This was brought about in the futures market, where heavy speculative buying caused prices to rise. The improvement was slow at first but gathered momentum towards the end of the year, and on the last working day of 1962, ready B Twills stood at Rs. 116.35, with 40in. 10oz. at Rs. 51.50. The undertone was slightly better, but there was still no interest from foreign markets, which

were mostly closed for the holiday period.

Opening quotations on Wednesday, 2nd January, were as follows:

	Jan.	Jan.-	Apr.-	July-
	Mar.	June	Sept.	
40in. 7½oz.	39.25	38.50	37.50	36.85
40in. 8oz.	42.00	41.25	40.25	39.35
40in. 10oz.	51.60	51.00	49.75	49.25
B Twills	115.15	114.50	114.00	113.50
Corn sacks	119.50	118.00	116.75	116.00
Heavy Cees	113.50	114.25	114.00	113.50
(Plain)	142.00	141.00	140.00	139.00
A Twills	129.00	129.00	128.00	127.00
Liverpoos				

Raw Jute: The fibre market was weak, and in spite of daily business with mills, there was plenty of jute on offer. Prices continued well below the minimum for all grades, and in general still lower prices were obtainable. The Jute Commissioner's office issued new quotas for the month of January for a total of 750,000 bales. But the move was not expected to have much influence on prices. Imports on an all-India basis were reported to be about 40,000 maunds daily. During the period from 20th December, 1962 to 2nd January, 1963, arrivals in Cossipore amounted to 1,268 wagons.

Opening quotations on 2nd January were as follows:

THE PAKISTANI JUTE MARKETS

STEADY UNDERTONE IN FIBRE

(FROM OUR Dacca CORRESPONDENT)

ALTHOUGH a steady undertone prevailed during the past fortnight, the holiday feeling was very apparent, in that there was little or no demand from overseas. Pucca bale business was limited and loose jute negotiations were concerned more with moisture than with high prices.

Registrations for the first half of December 1962 totalled 370,335 bales, which give a fair indication of the steadiness of the market during that period. The U.K. was once again the biggest buyer, with 80,936 bales. France bought 49,595 bales and Belgium 41,500 bales. The Russians and Chinese who, it was reported, bought 50,000 bales actually bought 28,000 bales and 13,440 bales, respectively. The Americans once again came into the market and bought 26,875 bales. Japan bought 20,450 bales and West Germany 20,056 bales. Italy bought 18,550 bales and Spain 13,118 bales. Czechoslovakia, who was earlier reported to have bought 15,000 bales, in fact bought 10,710 bales. India bought a total of only 394 bales. Registrations during the second half of December may have been considerably smaller. For this month or so, Dundee will probably restrict its purchases

es as it is reported that some unsold jute is already on the way to that centre.

In the pucca bale market, few transactions have been reported, but the market has remained steady. The quietness was due to both sellers and buyers being reserved. Upcountry prices have not risen, but the quantity of arrivals has been small. Unfortunately, moisture is appearing increasingly, and the Director of Jute has been obliged to issue a circular about it. White jute was more or less unchanged in the northern district areas, but in the jat areas where some percentage of Export Firsts is still found, prices were above the export minima even for Export Hearts. It was in Tossa that most moisture was found, and the prices, particularly in the higher marks, were exorbitant. Since most godowns are full, it is probable that the sellers themselves will suffer from trying to sell wet jute.

Once again there has been talk of nationalisation of jute, but this is mainly among anti-Government politicians. In a Press interview, the Ministry of Commerce has indicated that the Government knows only too well that it cannot afford to accept the nationalisation demand.

THE U.K. JUTE MARKETS

RESTRICTED BUYING OF FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan has been firm over the past week, and some shippers have again raised their prices. Interest has been shown by some Far Eastern countries, France also has been in the market for supplies. Offers of the higher grades of both white and dark jute are still scarce, and the prices asked are very high in comparison with the values of medium and lower qualities. The position in Dundee has been steady, but little buying interest has been shown. Spinners here have already secured the major part of their requirements from the present crop, and at the same time, a substantial quantity of raw jute which is still unsold to spinners is coming forward to the U.K. This is a "bear" factor on the Dundee market, especially when warehousing accommodation is becoming a little difficult.

During the week, some business took place, but this was mainly in afloat parcels which were available at £3 to £7 a ton below current shipment rates. Offers being made were very irregular, with Mill Firsts named at £158/10, Mill Lightnings at £123, Mill Hearts at £97 and Grade Hearts at £84/5, c.i.f. U.K. for December-January shipment. Grade Tossa-2/3 was at £135, Grade Tossa-4 at £116, Outport Tossa-2/3 at £102 and Outport Tossa-4 at £91/10, December-January. Some shippers asked £1 a ton more for shipment a month further ahead. There was no change in cuttings with S.N.C. at £56 and N.C. at £48/5, December-January. Practically no offers of Siam jute were being made, and the few prices named were at a very high level. Grade A was at £85 delivered mill, Dundee, for January shipment. The few afloat parcels available also increased in price with grade B at £80. The high prices being asked were of no interest to Dundee spinners.

The Calcutta goods market was weak and prices showed a considerable fall during the past few days. Quotations were at 77s 9d for 40in. 10oz. and at 61s 3d for 7½oz. a 100 yards f.o.b. Calcutta for December shipment, at 77s 6d and 60s January, at 77s and 58s 6d February, at 76s 9d and 57s 3d March and at 74s 6d and 56s 3d April-June. B Twills were at 183s, 181s 9d, 180s 6d, 179s 3d and 178s

6d for the respective shipment periods.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in November 1962 was 7 million yards more than in the same month of the previous year and 2 million yards higher than October 1962. Reflected in November's figures is some of the increase in business resulting from the Cuban crisis. Bag cut-up in November was 56.9 million yards and piecegoods deliveries 19.6 million yards, compared with 49.7 million and 20.2 million yards, respectively,

in November 1961. U.S. spot and affloat stocks continued to increase--and quite sharply. At 261 million yards, 110 million yards were spots and 151 million yards were affloats. In November, therefore, spot stocks declined by 7 million yards, with affloats increasing by 19 million yards. Heavy buying following the Cuban crisis accounts for the rise in affloats. Appearing below are two tables which include the November figures --(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)			U.S. burlap consumption (estimated industry total) (Million yards)

UNSEASONAL RAINS MAY REDUCE COFFEE CROP

(FROM OUR SOUTH INDIAN CORRESPONDENT)

FOR the second year in succession, India is going to have a poor coffee crop. The 1962-63 crop, it is believed, has been damaged by the unseasonal rains in the chief coffee-growing areas of Mysore early last month. It is feared that the production of Arabica Plantation coffee may go down due to the rains. The exact extent of the damage is being assessed by the Coffee Board. The picking and processing of coffee on the estates are also being delayed. The Coffee Board has revised its estimate downwards in view of this adverse development. The present estimate is that the 1962-63 crop will be about 53,000 tons, comprising 32,800 tons of Arabica and 20,200 tons of Robusta. This compares with the previous season's crop of 45,650 tons, consisting of 29,100 tons of Arabica Plantation and 16,550 tons of Robusta. The 1961-62 crop was down by about 22,000 tons, when compared with the 1960-61 crop, which was a record at 67,500 tons.

This is disappointing in view of the country's need for maximising exports and earning more foreign exchange. The home market will require at least 35,000 tons of coffee in 1963. The 1962 offtake is officially placed at about 34,600 tons, compared with 33,873 tons in 1961. The Coffee Board has made a temporary allocation of 21,300 tons for export out of the 1962-63 crop, consisting of 19,300 tons of Arabica Plantation and 2,000 tons of Robusta, keeping in mind the quota restrictions under the International Coffee Agreement and various other factors.

India has recently joined the new five-year International Coffee Agreement. The basic export quota fixed for her is 21,600 tons, exclusive of the exports to non-quota countries like Russia and Japan. The chairman of the Indian Coffee Board, Mr. Sitarama Reddy, told the recent meeting of his board that repercussions arising out of India's joining the International Coffee Agreement were under study and adequate measures would be taken to safeguard the interests of the industry. India should make every effort to build up markets and keep them in non-quota countries, too, he added.

Exports in Last Season

Until the end of November, 18,600 tons of coffee was sold for export out of the 1961-62 crop, the realisation on which is placed at about Rs. 6.5 crores. The total allocation for export was 20,000 tons. The average prices realised in pool sales as well as in export sales during 1962 were generally higher than in 1961. Open auctions for export coffee introduced from the beginning of 1962, have proved useful. The chairman indicated at the last meeting of the Coffee Board that the final return to the grower on the 1961-62 crop will not be less than Rs. 2.20 a point.

Cardamom Prices Drop Sharply

India's cardamom-growing industry has been promised a board on the lines of the Coffee Board and other commodity boards in the country to look after its interests. The industry is in the midst of a crisis, prices having fallen to uneconomic levels. The value dropped from Rs. 22.32 a kilogram in 1957 to Rs. 15.21 a kilogram in 1961. The fall has been precipitous since the beginning of 1961.

The average price realised by the commodity at the Cochin auctions recently was Rs. 11.96 a kilogram. India produces about 4,000 tons of cardamom a year, about 50 percent of which is exported. West Asia and Europe are the main markets for the commodity. Indian cardamom is meeting stiff competition in these markets from Ceylon and Guatemala. Hence its present plight. The proposed cardamom board will purchase cardamom from growers at reasonable prices and consider the future structure of the industry, it has been officially announced.

Cardamom is one of the Indian spices which will be brought under quality control from the beginning of the year. These spices will have to be graded and marked according to the Agmark regulations before export. The preshipment inspection will be done by the technical staff of the Spices Export Promotion Council. Although Agmarking charges will raise slightly the cost of pepper, cardamom and chillies, which are brought under the compulsory quality control scheme, it will serve to build foreign buyers' confidence in Indian spices, and will, in the long run, prove beneficial to exporters.

Promoting Cashew Exports

India, which once had a virtual monopoly for exports of cashew kernels to the United States, may have to face competition from east Africa and South America in the coming years, the Cashew Export Promotion Council warns. This is a problem which the cashew industry in India should consider seriously. India's cashew exports to the United States occupy a place second only to her exports of jute goods. Without any progressive publicity campaign that usually motivates product sales in the U.S.A., cashew consumption in that country has risen from about 100,000 lbs in 1923 to about 54 million lbs in 1961, and there is excellent scope for further improvement. At present, India has no real hold on the U.S. cashew market, says the Council. Consumers in the U.S.A. have developed a taste for these low-caloried nuts, but they do not know that cashews come from India. Other edible nuts have become popular in the U.S.A. through large-scale advertising and public relations campaigns. India also will have to undertake a large-scale publicity programme in the U.S.A., in which cashews should be identified with India in order that this country does not lose its share of the trade to its competitors. Indian exporters wishing to sell their goods to a country like the United States should equip themselves adequately with high-class publicity material. They can expect assistance from the Cashew Export Promotion Council in Ernakulam and the Indian Consulate-General in New York.

India's exports of cashew kernels to east European countries have increased appreciably in 1962, according to the Cashew Export Promotion Council. Cashew kernels exported to these countries during the first nine months of 1962 totalled 7,900 tons, compared with 4,700 tons in the corresponding period of 1961. The total exports to these countries were about 5,900 tons in 1961 and 6,200 tons in 1960. The Central Minister for International Trade, Mr. Manubhai Shah, in the course of his recent visit to Kerala exhorted cashew processors there to pay special attention to the

quality of the nuts they prepare for export. He expressed satisfaction at the decision of the Cashew Export Promotion Council to introduce compulsory quality control measures from April 1963. His feeling was that with the introduction of a good quality control scheme, the reputation of Indian products would improve in foreign markets. He said that the Government was aware of the diversion of cashew kernel purchased by a few of the east European countries to markets elsewhere. Appropriate action was being taken to tackle this problem.

More Tea Being Grown in Russia

(BY A SPECIAL CORRESPONDENT)

Nearly 150 years ago, it was found that tea was native to the soil of Assam and Manipur and cultivation started. From small beginnings, India and Ceylon expanded their tea output and gradually secured the bulk of China's tea export markets. By 1900, these two countries were busy selling seeds to planters in Java and Sumatra, thereby encouraging competition in their own markets. At a later period, competition from these islands threatened to become severe, but due to the damage done during the last war, the danger was checked. Planting in East Africa is, however, going rapidly ahead, and from the original five major tea producing countries, there are now at least 30 growing tea on varying scales. Hence the pessimistic forecast by the U.N. Food and Agriculture Organisation. Fortunately for the major producers, most of the newcomers appear to have no scientific approach, their yields are low and quality generally on the poor side. But there remains one very important exception to this generalisation and that is Russia, which is one of the oldest tea-drinking countries. For years, the Russians took their requirements from China, and then gradually entered the London, India and Ceylon market. By 1914, imports into Russia had gone up sharply.

It is said that the Russians began experimental planting before the turn of the century, and that after the first World War, planting began on an enlarged pattern. A point of interest is the fact that the Russians claim that they began acclimatisation of tea seeds at a much earlier date and now report that Georgia has an ideal climate for tea, with conditions far more suitable than in tropical countries. For example, shade trees are not needed and pests and diseases do not spread so quickly as in the tropics.

In view of the high yields claimed by some Russian writers, it is interesting to note that the main varieties cultivated are said to be from Chinese jats and Indian and Chinese hybrids. The plants seem to follow the Indian cycle in so far as a period of dormancy is said to take place. It is claimed that by the selective growing of tea seeds from Chinese and Indian bushes, the Chinese and Indian strains have been improved. The Indian strain is said to grow quickly, gives large-sized leaves and a high content of tannin. It may be remarked that Russians find that the tea plant is rich in alkaloids--theine or caffeine. Different varieties are used according to the climatic conditions, and plants are said to be capable of resisting cold 15 or 25 degrees below zero. Darjeeling estates, presumably, have to face equally severe conditions about this time of the year.

With reference to competition, present and future, a company known as the Estates Agency Holdings of the U.K. owns plantations in south India and Ceylon together with about

1,000 acres in West Cameroons. The last-named is now coming into bearing. The Company has paid a steady 10 percent dividend over the past five years from the proceeds of its old estates. It will now secure a useful increase in production from its new plantations in the Cameroons, but these receipts will be required to pay off loans.

A reference to the Annual Bulletin of Statistics issued by the International Tea Committee shows that the total planted area in the Cameroons in 1952 was 70 acres only. By 1960, it had increased to 1,416 acres. Production figures are not given until 1958, when output was recorded at 26,000 lbs, but in 1960, it rose to 185,000 lbs. Last year, Estates Agency interests produced only 10,600 lbs from these areas, but for the coming season, this company expects to harvest about 111,000 lbs. So it is obvious that larger crops are in sight from soundly managed and properly developed new lands.

Tea Exports to U.K.

During the next three months, U.K. supplies should increase because export space from Calcutta is fully booked and the teas held up during the past two months are expected to go forward freely.

Notwithstanding the Joint Steamer Companies strike, exports have been moving well, especially to the U.K. The north Indian tea crop up to 15th December, 1962, totalled 574,970,334 lbs, a shortfall of approximately 261 million lbs. Pakistan may have lost about 8 million lbs by the end of 1962.

COMPANY AND PUBLIC NOTICES

THE ALEXANDRA JUTE MILLS LIMITED

THE Board of Directors has declared the following interim dividends in respect of the year ending 31st December, 1962:—

- On 7% (tax-free) Cumulative Preference Shares @ 9.1% (being the stipulated dividend increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960), and
- On the Ordinary Shares @ 20%.

These dividends will be paid to the registered holders of the above shares whose names appear in the Company's Register of Members on 21st January, 1963 after deduction of tax under Section 194 of the Income Tax Act, 1961.

The Share Transfer Books of the Company will be closed from 15th January, 1963 to 21st January, 1963, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Director,
Managing Agents.

Registered Office:

"McLeod House",
3, Netaji Subhas Road,
Calcutta, 29th December, 1962.

DALMIA IRON & STEEL LIMITED

NOTICE is hereby given that the Seventh Annual General Meeting of the Company will be held at the Registered Office of the Company at Rajgangpur (Dist.: Sundergarh, Orissa State) on Thursday, the 21st February, 1963, at 3 P.M. to transact the following business:—

- To receive and consider the Directors' Report, the Auditors' Report and the audited Statement of Accounts for the year ended 30th September, 1962.
- To declare dividend.
- To elect a Director in place of Shri J. Dalmia who retires by rotation and is eligible for re-election.
- To elect a Director in place of Shri B. P. Khatian who retires by rotation and is eligible for re-election.
- To elect a Director in place of Shri B. D. Goenka who was appointed as an Additional

Director on 23rd October, 1962 and who holds office as such upto the date of the Seventh Annual General Meeting. Notice has been received from a shareholder under Section 257 of the Companies Act, 1956 proposing his candidature for the office of Director.

6. To appoint Auditors and to fix their remuneration.

By Order of the Board of Directors,
For DALMIA IRON & STEEL LIMITED,
G. KEJRIWAL,
Managing Director.

18th December, 1962.

NOTES.

- Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the meeting.
- The Register of Members & Share Transfers of the Company will remain closed for accepting Share Transfer Applications from 16th January to 31st January, 1963 both days inclusive.
- The dividend when sanctioned will be paid to those shareholders whose names would appear in the Register of Members on 31st January, 1963. Dividend Warrants are expected to be posted by 15th March, 1963.
- Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 for item No. 5 of the Agenda is being forwarded to the Members of the Company.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES—Contd.

O. Po., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve & other Funds	Accrue under Tea	Outturn and Average Price per Kk./lb. realised for crop		Estimate	NAMES	Accounts closed	Mz. Agis. Secretaries etc.	Net Profits including taxation	Dividends per cent			Paid-up per Share	Latest Market Quotations as available until

SIGNIFICANCE OF THE BANK RATE INCREASE

LAST week's decision to increase India's Bank rate from 4 percent to 4½ percent is mainly in the nature of formal recognition by the Reserve Bank of the prevailing level of interest rates in the country. The International Monetary Fund had, in fact, suggested such a measure some time ago. For many years, Bank rate has remained largely ineffective in the sense that the rate at which the Reserve Bank has actually offered accommodation to the scheduled banks has been a good deal higher, varying with the amount of loans sought. The Reserve Bank has had two conflicting motives to reckon with, in its efforts to wield Bank rate as an instrument of credit policy. One was the Government's desire to borrow large sums of money from the public as cheaply as possible; this called for a relatively low Bank rate. The other was the need to curb excessive credit expansion, which always carries the threat of inflation; this prompted higher lending rates.

A compromise between the two conflicting requirements was evolved whereby Bank rate was pegged at 4 percent—a level at which it had remained since May 1957—while the actual rates for lending to banks have been governed by a three-tier system. (Incidentally, this is the third time that Bank rate has been changed since the inception of the Reserve Bank in 1935). According to this system, scheduled banks were required to pay 4 percent interest on their borrowings up to 25 percent of their statutory reserves with the Reserve Bank, 5 percent interest on the next 25 percent, and 6 percent on further borrowings up to 50 percent of the statutory reserves. Loans in excess of the statutory reserves were considered only in exceptional cases and were offered at penal rates. This system of differential lending rates has been simplified. Scheduled banks now have to pay the enhanced Bank rate of 4½ percent on their borrowings up to 50 percent of their reserves, and 6 percent on further loans up to the other half of their reserves. Thus, after a long period of disuse, Bank rate is now returning to service. Banks requiring assistance beyond the above limits will have to secure special permission from the Reserve Bank, and penal rates will be charged on such loans. Obviously, the two-tier scheme is meant to streamline the rediscounting system, as its effect on the borrowing banks will in practice be very limited. They will now have to pay a uniform 4½ percent on what were the first two tiers, instead of 4 percent on the first 25 percent and 5 percent on the next 25 percent.

Although Bank rate, by itself, has so far been a feeble instrument of credit policy, the effects of its increase on the economy may in course of time be far-reaching. The increase is interpreted as a major step in the move towards dearer money. The share markets have responded by weakening and there has been a tendency to offload stocks at the floor prices. Major commodities advances will henceforth become more expensive and also selective. According to a recent inter-bank agreement, the minimum lending rate is to be 2 percent above Bank rate. The minimum

interest rate chargeable by scheduled banks on their advances will thus become 6.5 percent. Interest rates on call money and term deposits may also go up. This may, however, stimulate an increase in bank deposits and put the banks in a better position to meet the demand for credit from their own resources. The Reserve Bank has tried, so far with only limited success, to foster such self-reliance on the part of scheduled banks.

It remains to be seen how the industries catering to defence needs and export markets will respond to the increase in interest rates. Although the higher rates may not seriously affect the growth of production, special measures may be necessary to assist such industries. Since many producing units depend on bank loans for their working capital requirements, the higher interest rates will push up their cost of production and ultimately affect profits and dividends. The public sector undertakings are, however, likely to remain insulated from the higher interest charges, as their requirements are financed by the State Bank of India at lower rates.

An upshot of the rise in Bank rate may be a downward adjustment in the values of preference shares and debentures, which offer a fixed return, to bring their yield in line with the higher lending rates. Equities too may behave likewise as their present yields will become less attractive; besides, the shrinking of profit margins consequent on the increased cost of borrowing may affect their dividends. Power companies, however, are likely to fare better since the "reasonable return" on their capital is fixed at 2 percent above Bank rate. In any case the Government has already promised to raise their return by 1 percent. Whether the increase of ½ percent accruing from the Bank rate rise will be absorbed in the promised 1 percent, or will be over and above that, will depend on the Government's attitude. Gilt-edged may shed some value to bring about closer alignment between their yield and the interest rates. They had already suffered a depreciation when the Central Government floated its loans in 1962 offering higher interest rates. This had affected the investment portfolios of institutional investors like banks, who are statutorily required to hold a certain percentage of their deposits in Government securities.

Since Bank rate has now gone up, investors will watch with interest whether the Government will offer higher interest rates on its new flotations. Past experience offers no guidance in this matter. In May 1957, when Bank rate was raised from 3½ percent to 4 percent, the Government did not match it with a corresponding increase in its borrowing rate. As a substantial chunk of the Government's revenues goes to meet its interest obligations, it is doubtful whether it will readily add to its commitments. It may be argued that, in any case, the securities market is a very limited one, buyers of Government paper being motivated more by considerations other than interest rates. In the case of banks, provident funds, the Life Insurance Corporation and other similar investors, earnings from in-

terest have not always been the decisive factor. However, one thing seems likely: the new defence loans floated by the Government, whose

FOREIGN CAPITAL IN SHIPPING

THE resolution adopted at the Congress Parliamentary Party's executive committee meeting in New Delhi last Friday, recommending that the ceiling for foreign participation in the share capital of Indian shipping companies be raised from 25 percent to 40 percent, has revived an old and fierce controversy. Reactions to the proposal range from strong opposition to unqualified support. The critics say that with increased foreign participation, Indian lines will lose their voice in international shipping conferences, and foreigners will have more influence over the policies, operations and management of the shipping companies accepting collaboration. Some critics have even gone to the extent of asserting that increased foreign participation in shipping, which provides a second line of defence, will endanger the security of the country. But there can be little doubt that such fears are greatly exaggerated. The Merchant Shipping Act, 1958, provides sufficient safeguards against any adverse consequences of foreign capital participation.

The proposal deserves support primarily because the Indian shipping industry is greatly in need of foreign exchange for expansion, and the increased participation of foreign capital might be one way of getting the exchange. The industry might flatter itself that, despite the shortage of funds and other difficulties, it will easily exceed the revised Third Plan target of 1.25 million tons; and that it might even cross the target of 1.4 million tons originally recommended by the National Shipping Board. The tonnage in operation at present is 1,026,000 tons, with a further 268,000 tons under construction. The tonnage under consideration amounts to 255,000 tons. All this makes a total of 1,549,000 tons. After allowing for the scrapping of 240,000 tons during the next three years, the country will be left with a little over 1.3 million tons of shipping at the end of the Third Plan. Of the Rs. 51 crores allocated for shipping under the Plan, only Rs. 37 crores have been committed so far, which means that there is still Rs. 14 crores at the disposal of the industry.

The progress seems encouraging in terms of the Third Plan target, but many feel that the target is low in comparison with the country's needs. As long ago as 1947, the Reconstruction Policy Sub-committee had recommended a target of 2 million tons to be achieved by 1954 to enable Indian ships to carry 50 percent of the country's foreign trade, 100 percent of the coastal trade and a fair share of the adjacent trade. The requirements have increased considerably since then. That the present tonnage is inadequate will be apparent from the fact that hardly 10 percent of the foreign trade is carried in Indian vessels and in the field of tramp and oil tankers, the share of Indian shipping is only 2 percent or 3 percent. It is said that tramp ships of 500,000 tons and oil tankers of 250,000 tons would be required if half the country's foreign trade is to be carried in Indian bottoms.

The need for expanding India's merchant navy has been highlighted by the present emergency. But one of the main obstacles hindering its growth is the shortage of foreign exchange. At present, ships are acquired on a "pay-as-you-earn" basis. Under this arrangement, no initial down payment is made. The first instalment falls due after one year of the delivery of the ship. The first as well as the subsequent instalments are paid on the basis of a certificate issued by the Reserve Bank concerning the net foreign exchange earned every year. These terms are very difficult to meet. It is with a view to overcoming such difficulties that the restriction on the participation of foreign capital is sought to be relaxed. The move for an increase in the percentage of foreign participation from 25 percent to 40 percent should be welcomed if it can help attract more foreign capital for the development of the Indian shipping industry. Fears that with greater foreign participation,

appeal is not confined to institutional investors, may not retain their present attractiveness as an investment proposition.

the control will pass into foreign hands are baseless. Nor is there much force in the contention that increased foreign participation will strain the foreign exchange position by leading to the outflow of money from India in the form of dividends; the chances are that the foreign exchange earnings will far exceed the outflow through dividends. It is worth noting that under the Merchant Shipping Act, the Government can change the percentage of foreign participation in the industry through a notification in the official gazette.

Indian shipowners who have strongly criticised the Congress Parliamentary Party executive's proposal are disguising self-interest under a facade of nationalism. Shipping has not in recent years

SMALL AND HAND TOOLS

SMALL tools and hand tools play an important rôle in the industry of any country. In an economy like India's, where a great part of the productive operations are carried on manually, their contribution is all the more important. These tools are the basic means of production. They are also essential for the maintenance and servicing of machinery. They cover a wide range of products—from fine precision callipers and twist drills to picks and shovels. Their production in India is organised on varying scales: there are large numbers of small producers working on a cottage industry basis, catering mostly to local needs, and also some large-scale manufacturers. The increased investment in equipment in the last few years has caused an unusual increase in the demand for these tools. But due to the way production is carried on and demands satisfied, data on production, consumption, installed capacity and the trends in them, have been lacking. The Engineering Association of India, therefore, undertook a survey, and the report on it has now been published.

The report shows that the manufacture of small and hand tools is concentrated in West Bengal, Maharashtra and Punjab. Since most of the firms manufacturing hand tools belong to either the small or medium size category, they are not able to install special-purpose machines to give consistency to their products. For instance, hammers produced by small-scale firms vary to the extent of one-eighth of an inch in size. Other production techniques like controlled heat treatment for forgings and quality control cannot be introduced, and the firms cannot afford to employ highly-qualified technical personnel. These factors harm the quality of the products, raise costs and reduce the ability of the factories to raise output. The report, therefore, suggests that efforts should be made to expand the output of the small units. It recommends that licences to new entrants should be granted only for such items as are not being produced in the country or whose output is negligible. But where most entrants are small-scale and do not require an industrial licence under the Industries Act, the suggestion cannot be implemented effectively. This point seems to have been overlooked.

Imports of small tools and hand tools have risen fairly fast in the last few years—from Rs. 1.94 crores in 1958 to Rs. 3.17 crores in 1960 and Rs. 4.82 crores in 1961. Domestic production in the large and small-scale sectors (excluding cottage industry units) rose from Rs. 4.06 crores in 1960 to Rs. 5.45 crores in 1961. But demand has been rising faster than the two sets of figures indicate, and imports would have risen even more but for the foreign exchange restrictions. The report estimates that demand will rise by 40 percent every year, reaching a level of Rs. 46.2 crores in 1965, on the basis of the expansion in general and electrical engineering, machinery manufacture, machine tools, electrical machinery and appliances, and small tool

been a particularly profitable industry, so any impression that huge amounts of foreign capital are waiting to rush into Indian shipping companies is plainly false. The proposal deserves support on principle: why should foreign capital be unwelcome in shipping, when its entry is eagerly sought in other industries? The suspicion arises that some of the Indian companies are afraid that competitors might improve their efficiency by obtaining foreign collaboration. In any case, there is no evidence to show that the servicing of the loans, credits and deferred payments which the Indian companies are so keen to get, will be less "burdensome" than the outflow of dividends resulting from foreign capital participation. In other industries, there is, if anything, an inclination to favour the entry of risk capital rather than loans, for the simple reason that the former does not have to be repaid as long as the investment climate remains reasonably satisfactory. But Indian shipowners cannot have much confidence in their own strength and business acumen if they think that greater foreign capital participation will undermine what they choose to consider their interests.

and hand tool manufacture itself, in the last few years. India exported small and hand tools worth Rs. 5.80 lakhs in 1960 and Rs. 6.93 lakhs in 1961, mostly to under-developed countries. The report recommends extensive market research in advanced countries. But this is likely to be of doubtful value, since a lot more can be sold even to the under-developed countries. It is not clear why tool exports to advanced countries should be considered to have greater prospects, as against the established markets where promotion efforts may yield greater dividends at less cost.

In view of the large scope for increasing output, it is surprising that the report should recommend that "the Government should take due cognisance of the claims of underdeveloped regions while of the claims of fresh licences." But there is merit in the suggestion that co-operatives should be organised in centres where small units are concentrated to undertake the common purchase of materials and sales of products, since the requirements of output of each unit may be relatively small. The laying down of specifications by the Indian Standards Institution will, as suggested, help to overcome consumer prejudice, but units which can adhere to such specifications at present may be comparatively few. Raw materials of the required quality, whether imported or indigenous, are not available in certain cases. Without them, the quality of the products cannot be improved.

PROGRESS OF INDIAN INVESTMENT CENTRE

BEFORE the Chinese invasion, the investment climate in India was less discouraging than it is now, for both indigenous and foreign capital. The stringent import restrictions offered a sheltered market, the consumption potential was increasing as large sums of money were pumped into the economy, and new industries were being set up under the five year plans with official blessings. The impetus given by these factors seems to have suffered recently because of the new political and economic uncertainties. As a result, the inflow of foreign risk capital appears to have shrunk. Formerly, it was arriving in a fairly steady stream, aided by the active collaboration-scouting done by Indian entrepreneurs faced with the foreign exchange shortage. According to a survey in the October issue of the *Reserve Bank of India Bulletin*, the net inflow of foreign private capital into the private sector in India touched a record level of Rs. 53.3 crores in 1960 from a meagre Rs. 2.4 crores in 1958, the year when industrial expansion in this country suffered a sharp setback. The rise in the volume of foreign investments was not as impressive as these figures alone might suggest; a single industry, petroleum, accounted for a major share of the investments. Besides, compared with the very large amounts of

foreign capital that sought investment opportunities across international borders, what came into India was only modest. Still, the rising trend was encouraging, and it played an important part in the expansion and diversification of Indian industry.

The Indian Investment Centre, which is still only a little over a year old, has played an extremely useful rôle in attracting foreign capital to this country. It is officially stated that, during 1962, 25 projects for setting up industrial enterprises with foreign collaboration, which were assisted by the Centre, have matured into Government-approved joint ventures. Collaboration agreements between Indian and foreign entrepreneurs for 16 more enterprises have either been submitted to the Government or are likely to be submitted shortly. Over 100 other proposals are in varying stages of progress. Of the 25 projects

Current News and Comment

Study of Markets and Prices

The Government of India's decision to reorganise, strengthen and streamline the statistical set-up throughout the country in a bid to have an accurate idea of the market behaviour and price pattern at all levels—producers, wholesalers, retailers and consumers—is welcome because a correct assessment of the situation is essential for the formulation of a sound price policy. To start with, the study will be confined to rice and wheat in about a dozen pairs—primary and secondary—of markets. The proposal is to cover about 50 percent of the markets in the country for collection of general data. At present, information is being collected from nearly 850 markets and this is to be increased to 1,500. The results of these studies will make it possible for the Government to have a broad idea of the producer's share in the consumer's rupee, the wholesaler's margin and the retailer's profit. Besides wholesale prices, special attention will be paid to retail prices. Data relating to these are generally collected from areas where the lower middle-class or labour population predominates.

Retail prices are now obtained from 79 urban centres every day, from 110 urban centres every week and from 385 rural centres every month. The number of centres is to be greatly increased in all cases. Schemes for expanding and improving training facilities and for tightening supervision are under way. The Government also proposes to devote more attention to the processing work so that the data might yield more meaningful index numbers at the State and all-India levels. While the collection of reliable market data will greatly help in the formulation of a sound price policy, its successful implementation will depend largely on honest and efficient administration, the co-operation of the business community, and the restraint and discipline of the consuming public. With production failing to catch up with the growing demand, the question of holding the price line has assumed great importance. But inflationary pressures cannot be kept under check for long through fiscal and monetary measures. The real answer to the problem of high prices lies in increased production. The study of market behaviour is useful, but far more important is the study of how to raise output.

Refinancing Export Credits

The Study Group on Credit Facilities for Exporters, set up by the Ministry of Commerce and Industry in April 1960, recommended that the Refinance Corporation should extend the scope of its activities by taking up refinancing of medium-term export credits, i.e., credits for periods exceeding six months but less than five years. As a result, the Corporation has introduced a scheme for refinancing medium-term export credits. The facility will be limited to exporters in the private sector, who are manufacturers, re-

which have matured, 10 have secured collaboration from the U.S.A., four from Japan, three from France, two each from Britain, Canada and West Germany, and one each from Belgium and Switzerland. The Centre has an office in New York, while the Commercial Counsellors in Indian Embassies function as its representatives in other countries.

The Chinese aggression has now affected the investment climate adversely, because of the political and economic uncertainties it has brought. It is reported that the number of enquiries and follow-ups from foreign industrialists has fallen sharply. U.S. investors, who had taken a steadily growing interest in Indian opportunities, have been the quickest to react to the changed conditions. British entrepreneurs, however, are believed to have been bolder; their interest in industries catering directly or indirectly to defence is growing.

cognised export houses or other exporters of standing and will be ordinarily available for exports of capital or engineering goods. The question of extending the facility to other goods will also be considered by the Corporation, subject to Exchange Control agreeing to the receipt of the sale proceeds within a period exceeding 180 days initially. The refinance facilities will be available to banks which are authorised dealers in foreign exchange and otherwise eligible for refinance facilities from the Corporation.

The scheme provides for refinancing of pre-shipment credit also where it is combined with post-shipment credit. The total period of credit, excluding pre-shipment credit, should not be less than six months or more than five years. The minimum amount of a loan for which refinance may be sought will for the time being be Rs. 1 lakh; the total amount of export credits refinanced for any one exporter will not exceed Rs. 50 lakhs. The loans eligible for refinance will relate to exports against firm contracts and will ordinarily be covered by appropriate policies of the Export Risks Insurance Corporation. A down cash payment of 20 percent or a letter of credit or guarantee providing for payment to that extent against delivery of shipping documents should ordinarily be obtained from or on account of the importer before the loan is refinanced. This condition may be waived by the Corporation where the period of credit is short, say, not exceeding one year, and in other deserving cases.

Bullion Prices Recover

Spot gold, after dipping to Rs. 84 for 10 grams some time ago, has bounced back to Rs. 105. But the rise might be shortlived in view of the stern measures the Finance Minister has threatened to take. The incentive for smuggling should, however, have worn off a little in view of the uncertainties of the price situation. Apart from the risk of smuggled gold being confiscated by the Government—in 1961, the amount seized was worth Rs. 2.76 crores—it is not easily possible to secure gold in large quantities in world markets at the international price. Besides, the heavy discount that the Indian rupee commands against the dollar and pound sterling in the unofficial foreign exchange market greatly enhances the cost of financing smuggling activity. Evidence is accumulating that the Government of India is not only determined to check smuggling of gold to stop the leakage of foreign exchange, estimated at between Rs. 30 crores and Rs. 45 crores a year, but it is equally anxious to mobilise the country's huge gold hoards through the gold bonds which have been issued at the international price of Rs. 53.58 a 10 grams. For this, it is necessary to bring down the price of gold still further, and the Government is said to be contemplating necessary action shortly. Several factors such as the application of the Industries Development (Regulation) Act to bullion, the amendment of the Sea Customs Act, restrictions on bank advances against bullion, the issue of gold bonds at the international price

and the ban on all types of forward dealings contributed to the heavy decline in the price of gold from its August peak.

It may be recalled that the panicky selling which pushed down the price from Rs. 106 on 20th November to Rs. 95 the very next day and further down to Rs. 84—the lowest rate since 1956-57—on 23rd November, was touched off mainly by Mr. Morarji Desai's statement at the meeting of the Parliamentary Consultative Committee on Finance that the Government would take more steps to bring down the price of gold. Mr. Desai expressed the view that the price of gold would soon come down to around Rs. 70 a tola (about Rs. 61 a 10 grams), and if gold fell to that level, the glamour of gold would disappear and gold bonds would become attractive. Whether the price of gold will come down so very close to the international price of Rs. 62.50 a tola, is difficult to say. But if the Finance Minister can somehow bring down the price anywhere near Rs. 70 a tola and make it stay there for a long while, he can be assured of a good response to his gold bonds. But fear alone cannot produce a lasting decline in the price of gold, particularly because of the check on smuggling activity. The Government will need to take further positive steps to bring down prices and it would be well-advised not to delay these measures for long because it is only during a national emergency as at present that drastic measures like strict control of spot dealings and limits on individual holdings of gold can attract wide public support.

Rapid Rise in Bicycle Output

The bicycle industry has made remarkable progress over the past 12 years. From an annual output of only 114,000 units in 1951, the organised sector of the industry raised its production to 660,000 in 1956, to 990,000 in 1959 and to over 1 million in 1961. During the first six months of 1962, production was running at an annual level of 1.2 million bicycles. It was claimed by Mr. M. G. Vohra, president of the Cycle Manufacturers Association of India, in his speech at the annual general meeting held in Bombay recently, that the industry was able to reach the production targets set under the first and second plans much ahead of time, and taking the output of both the organised and the small sector together, it was in a position to reach the third plan target of 2.5 million units by 1965-66. As the industry has steadily expanded its production, it has experienced raw material difficulties increasingly. It is now unable to secure the steel products it requires for making bicycle parts. The ancillary units are also unable to supply their products in the right quantity and quality. The position of such consumable stores as nickel anodes, brighteners, levellers, and felt bobs is far from satisfactory. "The quality of the materials produced by the indigenous manufacturers is below requirements and have adverse effects on the finish of bicycles", Mr. Vohra complained.

An export target of 200,000 bicycles has been set under the third plan. Mr. Vohra considers this to be a bigger challenge for the industry than increasing its production. But the performance on the export front has been disappointing. In 1961, the industry was able to export only 12,677 bicycles to countries in the Middle East and Africa. But during the past year, only 2,400 units

had been sold abroad up to the end of October. The real hurdle appears to lie not so much in competing against firmly established brands supplied by other countries, as in bringing down the cost of the Indian product to levels more acceptable to the overseas buyer. The pool system under which member exporters are subsidised by the Association at the rate of Rs. 30 a bicycle has not helped much; nor has the liberal assistance which the Government has been offering. The Government has now revised the import entitlement against bicycle exports—from Rs. 40 a vehicle to 40 percent of the f.o.b. price. An export target of 50,000 bicycles has been set for 1962-63, and the manufacturers have assured to do their best to reach this target. Mr. Vohra urged that a thorough enquiry into the cost structure of the industry is required. Nearly 40 percent of the value of a bicycle is accounted for by imports. The prices of raw materials imported against D.L.F. loans are very high. "Even where the indigenous sources are established for these imported products the price tends to be at par with the c.i.f. value of imports, and in some cases, costs 50 percent more", Mr. Vohra said. He hoped that the official committee which has been appointed to recommend measures for reducing the costs of export goods, of which bicycle is one, would make some suggestions helpful to the industry.

Prohibition in U.P.

The U. P. Government's decision to revise its Prohibition policy is to be welcomed. The recent statement of the State Finance Minister that there was "no question of scrapping Prohibition" was somewhat guarded. Whatever may be the ideological conflict or emotional drama that had preceded the decision, the State has undoubtedly stolen a march over others. Apart from the fact that Rs. 1.75 crores will accrue to the State Exchequer, money need not now be spent on maintaining an unwieldy and ineffective Prohibition staff. So far, the scheme was in operation in 11 districts, namely, Kanpur, Unnao, Fatehpur, Rae Bareilly, Pratabgarh, Jaunpur, Sultanpur, Farrukhabad, Mainpuri, Etah and Budaun. It was also in force in the three pilgrim towns of Vrindaban, Rishikesh and Hardwar.

The income of the State will go up by Rs. 80 lakhs a year by the enhancement of duties on country-made and foreign spirits and beer and the imposition of export duty on beer. The export duty on country and foreign spirit will bring in an additional revenue of about Rs. 21 lakhs. The rate of increase will be from 12nP to 50nP a L.P. gallon. The duty on beer will be raised from Rs. 1.50 to Rs. 3 a gallon. This is expected to yield an additional income of about Rs. 4.5 lakhs. The new levy of export duty on beer will be at the rate of 6nP a bottle or 36nP a bulk gallon. This will swell the coffers by about Rs. 5 lakhs. The vend fee on denatured spirit has been raised from Rs. 2 to Rs. 3 a bulk gallon. This will bring in additional revenue of Rs. 7.5 lakhs.

Training for Cost Accountancy

In a rapidly industrialising economy such as India's, cost accountancy plays a vital part; and cost control acquires special significance because of the large and growing public sector. In a free competitive economy, the inefficient unit is weeded out "sooner rather than later". A public sector concern, however, is not unduly worried about costs. This view was expressed by Mr. V. Srinivasan in his presidential address at the 1962 Convocation of the Institute of Cost and Works Accountants of India, held recently in Calcutta. He suggested that the production cost, which is a truer indication of the efficiency of public sector undertakings, should be subjected to close and continuous scrutiny and measured with such reasonable yardsticks as may be available. Such scrutiny will promote an efficient system of production. With a highly protected domestic market, Indian industries may not have much incentive for reducing costs. But since the country has to increase its exports to earn more foreign exchange for development and defence, cost consciousness is of paramount importance now.

Mr. Srinivasan has commended the decision of the Government to set up a division of cost studies in the Department of International Trade to undertake enquiries into the cost structure of certain major export industries. An unofficial agency is also conducting similar studies relating to the cost of production of some other industries. Indian industries, by and large, have realised the advantages of cost accountancy, and the prospects for the profession have greatly improved. But the outturn of qualified cost accountants has been rather slow, in spite of the great enthusiasm noticed among men and women to take to it as a career. The total number of students registered at present exceeds 20,000, and the registration every year is nearly 4,000. But the slow outturn, according to Mr. Srinivasan, is due to the very high standard of the examinations and the inadequate facilities for coaching and practical training. Mr. Srinivasan deplored the stop-gap arrangements made by way of short-term training courses to meet immediate requirements, such as the courses run by Hindustan Steel, the Orissa State Government and the Institute itself (for Government employees). It is impossible to learn the subject to any appreciable extent within a few months, as a full grasp can be acquired only through continued study over a long period supplemented by practical training. The Institute, therefore, does not issue any certificate to persons receiving such short-term training.

A scheme has been drawn up for widening the study of management accounting, a subject which has lately been engaging the attention of industries, accountants and governments. This scheme is intended for top-level accountants as well. Mr. K. C. Reddy, Union Minister for Commerce and Industry, who addressed the Convocation and distributed the certificates, agreed with Mr. Srinivasan that the short-term course introduced at the instance of the Department of Company Law Administration offered only elementary training, and was not an adequate substitute for the knowledge acquired by qualified members.

WIRELESS TELEGRAPHY

THE success of Marconi in establishing wireless telegraphy between Canada and England is just what everyone expected, who has been following that young inventive genius through the successive stages that led up to this wonderful achievement. After this, it is now only a question of time, when wireless telegraphy will be practicable wherever it is wanted, irrespective altogether of mileage, anywhere on the face of the planet. The transmission of power without wires has also a big future before it. Commercial and press messages between Europe and America will begin to be regularly sent in a day or two by the Marconi system, at rates considerably under the present cable tariff. It will be possible now for ships on any sea, however far away from land, to be in constant communication with their owners. Exploring expeditions whether by sea or land in the heart of Africa, or winter bound in the neighbourhood of either Pole, will be able to supply a record of their daily doings to the Newspapers. The possibilities are endless everywhere, except perhaps in India. For more than a year back, the authorities have been urged to go in for wireless telegraphy, and as first instalment, to Light Ships, Saugor Light House, the Pilot Brigs, and the stations down the Bay to the Andamans and Nicobars. But because the engineering staff not fully competent to tackle this new development without being educated up to it, or because of its initial cost, or some other reason, here we are, and nothing has been done. Some abortive experiments were carried on between the Government Telegraph Office and Alipore, and today when wireless messages are being freely telegraphed across the Atlantic, we are gravely informed, as if a new discovery had been made, that Mr. Simpson has managed to transmit signals between Saugor and the Pilot Brig, a distance of 45 miles. Well done! Mr. Simpson, there is hope for India yet. The Government will now begin to believe that wireless telegraphy is an actuality, fitted for every day work. We will get on now.

A Ditcher's Diary

I THINK PAKISTAN SHOULD BEWARE OF REPEATING too often its threat of leaving its western military alliances—in its own interest. I am not forgetting the breathtaking Hitler-Stalin non-aggression pact of 1939; nor do I consider wholly improbable similarly dangerous pacts between Washington and Moscow to take care of China or—take a deep breath—between Tokyo and Peking to divide up Asia between them. (I could, at a pinch, think up some unlikely alliances that India might well get involved in.) I rule out nothing in international affairs. I do, however, maintain that there is something unreal in thinking that even an all-powerful President like Field-Marshal Ayub Khan can, at will, throw up old alliances and enter new ones. Mr. Nehru is not wholly wrong in claiming that India's policy of non-alignment arises naturally from this country's traditions and present position in the world. Pakistan's alliances, I suggest, are equally natural growths; and it is wholly illusory to imagine that Pakistan can get out of them just because the West will not satisfy every whim of Rawalpindi. Only on ill-defined and largely irrelevant moral grounds can Pakistan be arraigned for trying to take some advantage of India's difficulties; I can think of many countries for which India does worse things. India is as right in not relaxing on the Pakistan front as Pakistan is in seeking to put pressure on the West; that is the way of national States. It is for this reason that I have, right at the beginning, mentioned Pakistan's national interest. This demands a realistic appraisal of Pakistan's bargaining power which, like every country's, is not exactly unlimited; and I am anxious that Pakistan should not overcall—overplay is inaccurate—its hand. The socio-economic set-up of Pakistan makes an alliance with communist China a most unnatural affair; unless a war supervenes, which upsets everything, no Peking-Pindi understanding can be anything more than ephemeral and superficial. In spite of India's many anti-West stances, it was inherent in the situation that India should turn to the West and that the West should respond instinctively. There's no such rapport between China and Pakistan; and that should be as clear in Rawalpindi as anywhere else.

THE TIME MAY HAVE COME FOR THE INDIAN Press to tell the Government of India quite firmly: "Thus far and no farther". Of actual constraints there have so far been very few, for which one must thank the Government. What I object to is the way in which the emergency is being used by certain parties who are distributing some very unworthy advice to my profession

which is well able to take care of itself and does not need to prove its patriotism any more than any other body of people in any walk of life. Several ministers have said that criticism of the Government or of Mr. Nehru will be treason; Mr. Nehru does not need to be told this, but some others in the Government do, that it is nothing of the sort. The Government needs to be criticised—because of the emergency—very severely and regularly on several counts; and I hope it will be. One count is access to information. Mr. Lal Bahadur Shastri said the other day that it would be good for the Press and good for the Government if half the files marked "Secret" were made public. What prevents the Home Minister from rendering so signal a service to the Press and the Government? Already many, even in New Delhi, are turning more and more to expensive air editions of foreign papers to get more Indian news. To suggest that this is because the Indian Press is less enterprising or less efficient is to malign it; the fault is somewhere in the Government. Now come to the more positive objections. I understand that the dailies have been persuaded to publish the long and quite useless lists of donors to the N.D.F. on some vague promise of more newsprint. This, surely, is the one reason for which India does not need to import more newsprint. Nor can I say that I am enthused every morning by seeing in the papers those emergency slogans, some of which are childishly alliterative and say nothing. One said something to the effect that we should talk less; I wish some ministers set a good example or two. On civil defence, for instance, there have been so many confusing pronouncements that the picture is as clear as mud. You see why the Government must keep being criticised—because, I repeat, of the emergency.

"NOT IN YEARS HAS A PRESIDENT EXERTED SUCH a great influence on masculine taste both in the U.S.A. and around the world. What Mr. Kennedy wears or doesn't wear shows its immediate effect and, hence, we're looking for ideas that will appeal to him". So says Mr. Bernard L. Salesky, chairman of the Hat Corporation. Specifically, Mr. Salesky and colleagues are trying to get the chief executive to go under cover, in the hope that millions of men "both in the U.S.A. and around the world" will at once start buying hats. Actually I had not noticed anyone around here rushing to imitate Mr. Kennedy's sartorial preferences, and I think he could buy a hat for every hatpeg in the White House before Calcutta business men started going in for headgear again. This city's sudden dis-

affection for the sun helmet about 20 years ago has been variously explained, but in any case it seems to be final and irrevocable and even if Theodore Roosevelt were to come back to Washington in a tiger-shooter we would remain defiantly bare-headed. No doubt it is different with Americans, whose mimicry of the presidential couple has become ludicrous. Every debutante in the country wants to have that First Lady look, and if the hatters could get the plentiful presidential coiffure under felt, hat sales would probably soar. Not that one can laugh in a country where the Mahatma's simple cap was soon copied in millions and millions of Gandhi caps, which became the very symbol of high purpose, against the ostentation of the traditional turban. Nor could British friends, for their recurrent imitation of Prince Albert's slippers, Mr. Eden's hat and the Duke of Windsor's tie-knot are familiar. True, Sir Winston's broad-brimmed stetson and Mr. Macmillan's Russian fur hat found fewer if any imitators, but presumably Mr. Salesky does not aim to get the President into anything so spectacular.

ON ARRIVAL AT A HOTEL RECENTLY IN SOUTH INDIA, a friend found the place plastered with one importunate, almost plaintive, notice:

PLEASE DO NOT TIP
Kindly Co-operate with the Management
Any Member of the staff soliciting Tips
is liable for Dismissal

By Order

My friend writes: "This really was touching. Here, at last, was a management imploring me not to pay something; this, I said, despite the emergency which has already been the excuse for mulcting you and me on various counts. The South, I mused, is really different. The management of the hotel was requesting me to co-operate with it; and for once co-operation was going to cost me nought. The whole tone of the notice conjured up visions of a long queue of foreign tourists, American by preference and, so, suckers born, pathetically appealing to the management that they must, they really must, be allowed to tip the hotel's numerous servants (numerous when you don't need them) on the American scale; and the complementary vision of the Manager on his knees pleading non-payment and saying, 'Please don't, don't, for here in the South we believe in service with no thought of reward. If you ladies and gentlemen tip the servants they will be materialists like you; and then what will be left of eternal India?' It did not take long, however, to get off the dream sequence (very popular in southern films, I'm told), for about five men had carried my sole, light bag into my room; and there they were—waiting and waiting. For Godot? Hardly. I looked at the notice; and the men followed my gaze. Five sets of white, gleaming teeth flashing against the background of ebony skins. For a

brief second I thought of reporting them to the management; but what was there to report? They hadn't said a thing. Well, I paid 25nP each; and I tried to explain that half a man would have been enough to carry my bag from the reception to my room. They laughed, as though I had said something funny. The next morning one of the men saw me and didn't laugh. I realised that I had gravely offended him by paying 25nP. In the name of the emergency, these notices should really be removed". My friend does not seem to remember that Madras may have learned the thing from Calcutta.

SENIOR DITCHERS MAY HAVE NOTICED THAT ONE OF the four baronetries in the latest New Year's Honours List has been conferred on R. H. M. Thompson, an erudite and genial personality who was a director of the Standard Literature Company here in the years just before the second World War. Richard Thompson was in fact born in Calcutta; and after a highly successful business career, during which he travelled extensively, he volunteered as an ordinary seaman for the R.N.V.R. when the war broke out. Commissioned shortly afterwards, he participated in several naval battles in the Mediterranean, the Atlantic, Madagascar and north Africa, before moving to the Pacific Fleet in the last months of the conflict. A former colleague tells me that, after the sinking of the *Hermione*, Thompson braved the treacherous waters of the Mediterranean for almost 24 hours before he got to safety. That was but one example of the determination which was at the root of his success, not only as a naval officer but also in business and subsequently in politics. He has been a Conservative M.P. since 1950, first for Croydon West and then for Croydon South. Within this period, he has held important responsibilities in Party and Government, the last of them as Parliamentary Secretary to the Ministry of Works until, if I remember right, July last year. The *Economist*, I notice, has expressed some rather unorthodox views on baronetries in general, while conceding that the latest ones have gone to men of ability. Those who have known Thompson cannot doubt that in his case the honour is richly deserved.

A CARTOON ON THE BUSINESS PAGE OF A POPULAR weekly lately showed the venerable company-board chairman rising to address a roomful of those staid, bald, cigar-smoking gentlemen that the public imagines to compose the class of directors. The old tycoon is saying, "As chairman of your company, Top Pops Records Limited, I'll clue you cats in on the year's activities. Like, man, the profit after tax is a gasser, but to stay on the top of the charts we'll have to get hip to trade and play it like cool, Dads, cool!" The joke seemed suitably improbable until I came across the following passage in a report on U.S. musical instrument companies: "Benny Goodman is a director of H. and A. Selmer Incorporated (one of the leading instrument making firms); he not only plays the company's instruments at music dealers' conventions but also, during his recent tour of Russia, he gave out Selmer buttons to the Muscovites. So imbued with missionary zeal are the instrument makers that many of the top executives play in jam sessions. Jack Fedderman, president of Selmer, plays the saxophone. The chairman of the board beats the drums. At the Richards Music Corporation, the treasurer performs on the clarinet. The sales manager plays the saxophone and the credit manager toots on the trumpet". It did not say that they do these things at company meetings, but I am beginning to wonder whether proceedings at board conferences in a firm where Benny Goodman is a director and his colleagues share his taste for jazz can be really so different from what the cartoonist imagined.

BANK MANAGER TO CUSTOMER: "I HAVE, TOGETHER with my superiors, reviewed your financial situation and we have decided that we should revert to our original arrangement whereby you banked with us."

THE DITCHER

CAPITAL, 10th January, 1963.

Money

THE CALCUTTA MONEY MARKET

SMALL INCREASE IN ADVANCES

Wednesday, 9th January.
THERE has been a small increase in the general level of advances in the Calcutta money market during the past week. The increase has been shared by the jute and sugar mills, and by the iron, steel and engineering industries. Credit for cotton, and for the storage of food-grains and seeds, remains almost unchanged. In the interbank market, conditions have become steadier after an easy spell, and the call rate quotes 4½ percent.

The exchange market has been quiet, with few tea or gunny bills. The demand for remittance has been poor. Sterling has firmed up, and shows gains against all the major currencies.

BULLION WAS STEADY IN CALCUTTA during the past week on fresh purchases following the arrival of the marriage season. Gold rose from Rs. 106.75 in the previous week to Rs. 124.75. The sovereign hardened from Rs. 83 to Rs. 83.50. Silver was also steadier in sympathy with gold and the price advanced from Rs. 211.25 to Rs. 250.50 quoted for ready delivery. The London and New York prices were 104½d and 120.50 cents.

DURING THE WEEK ENDED 4TH JANUARY. Government of India Treasury bills for Rs. 54,27,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 8th January. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.355 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 14th January.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 9th January to 12th January at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 3rd January to 5th January, amounted to Rs. 5 lakhs only.

RISES OF RS. 33.77 CRORES TO Rs. 2,154.05 crores in active notes and of Rs. 22.37 crores to Rs. 2,171.03 crores in the total note issue were notable features of the statement of the Reserve Bank of India for the week ended 4th January, 1963. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 25 crores to Rs. 1,843 crores. In the Banking Department, deposits of the Central Government rose by Rs. 51 lakhs to Rs. 53.79 crores and those of other Governments by Rs. 9.67 crores to Rs. 15.79 crores. Balances of commercial banks at Rs. 75.26 crores showed a decline of Rs. 5.92 crores. Balances held abroad improved by Rs. 9 lakhs to Rs. 8.79 crores. The investment portfolio rose by Rs. 22.47 crores to Rs. 203.49 crores. Loans given to scheduled banks declined from Rs. 20.70 crores to Rs. 19.45 crores.

res, of which advances against usance bills were Rs. 10.31 crores (Rs. 13.56 crores). Ways and means advances stood at Rs. 12.45 crores, against Rs. 16.38 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 28th December, 1962, shows a rise of Rs. 33 lakhs to Rs. 566.67 crores in total deposits. Investments in Government securities are down by Rs. 9.94 crores to Rs. 257.56 crores, while other authorised investments are up by Rs. 7 lakhs to Rs. 10.48 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 6 crores to Rs. 272.29 crores. Cash and balances are, in consequence, shown at Rs. 25.71 crores, or Rs. 1.36 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 28th December, 1962, shows Demand and Time liabilities at Rs. 952.40 crores (Rs. 33.44 crores on account of borrowing from banks) and Rs. 1,270.79 crores (Rs. 16.47 crores), compared with Rs. 944.42 crores (Rs. 34.13 crores) and Rs. 1,263.87 crores (Rs. 12.52 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 4.27 crores and Rs. 5.07 crores to Rs. 52.57 crores and Rs. 79.35 crores, respectively. There is a drop of Rs. 9.96 crores to Rs. 653.70 crores in investments. Advances and bills discounted at Rs. 1,430.56 crores show a rise of Rs. 15.99 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 64.3 percent, against 5.6 percent and 64.1 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 11-1-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
11-1-63	14-4-63	2,00.00	Rs. 2.355%
4-1-63	7-4-63	2,00.00	Rs. 2.355%
21-12-62	24-3-63	2,00.00	Rs. 2.355%
14-12-62	17-3-63	2,00.00	Rs. 2.355%

JUTE SHARES REACT MILDLY TO INTERIM DIVIDENDS

It is not surprising that jute shares have responded only mildly to the declaration of some excellent interim dividends. In the present depressed mood of the stock market, good news fails to make any impression, while bad news affects sentiment immediately. Kanknarrah, for instance, has returned to the dividend list after an interval of seven years by declaring a taxable interim ordinary of 5 percent for 1962. Kamarhaty has also declared the same dividend. In the Bird-Heilgers group, Auckland, Dalhousie, Lawrence, Union and Northbrook have declared taxable interim ordinary dividends of 5 percent each for 1962-63. Except for Lawrence and Northbrook which paid taxable ordinary dividends of 10 percent and 20 percent, respectively, all these companies had skipped the dividends for 1961-62.

The interim dividends have bullish significance as they imply that during the current financial year, the operations of the jute mills will be profitable. Since the early part of 1962, the working of the industry has taken a definite turn for the better. During the current season, not only has there been an abundant supply of raw jute; the price of fibre has also been maintained at a satisfactory level. As a result, jute mills have found it profitable to do simultaneous business. There have been satisfactory overseas enquiries for jute goods. Hessien, in particular, has been sold at remunerative prices. At the present price, the mills have also been making fair profits on the manufacture of sacking. The industry has been working with no restriction on looms. In view of an abundant supply of raw jute, the full working is likely to continue for some time. Although there has been a lull in foreign enquiries for jute goods for the time being, the demand is likely to pick up soon. It is also hoped that the domestic demand for gunnies will increase due to the defence effort.

Now that the sowing season is approaching, attention is being diverted to the new crop for 1963-64. Considering that vigorous efforts are being made by the Government and the industry to maintain the price of fibre at a remunerative level, it is hoped that the next season's crop will be satisfactory. Mills have plenty of raw jute to last them until the arrival of the new crop. The current season should end with a fairly comfortable carryover. Hence the industry can look forward to an abundant supply of fibre for several months ahead.

Share Offer by Pyrotex India

PYROTEX India Ltd, which proposes to set up a factory in Kirkee near Poona for the manufacture of mineral-insulated metal-sheathed electrical cables, is offering 14,250 equity shares of Rs. 100 each at par for public subscription. The list will open on 21st January and close on 29th January or earlier, but not before 23rd January. (Fuller details of the issue are published on page 55 of this week's Capital.) In spite of the continued depression on the stock market, the success of the issue seems assured; unofficially, the shares are quoted at a sizable premium. The project is claimed to be the first of its kind in the country

as mineral-insulated metal-sheathed electrical cables are not yet being manufactured in India. The cables will be fireproof and will have a wide applicability. Pyrotex Ltd of Hebburn, England, which is collaborating in the venture is one of the leading manufacturers of special types of cables.

Pyrotex India will have an authorised capital of Rs. 60 lakhs, all in equity shares of Rs. 100 each. Of this, Rs. 55 lakhs is being issued for the present which will cover the entire cost of the project. Out of the issued capital of Rs. 55 lakhs, half has been reserved for allotment to the British firm which is collaborating in the venture, partly for cash and partly in consideration for the supply of technical know-how and assistance and for the supply of plant and machinery. The Bombay Company (Private) Ltd, Bombay, one of the promoters, will subscribe for Rs. 6.25 lakhs and the directors and their associates are taking up shares worth Rs. 7 lakhs. The balance of Rs. 14.25 lakhs is now being offered to the public in the form of ordinary shares. The directors include Mr. F. W. Tomlinson, Mr. E. S. Vernon-Jose, Mr. G. V. Nath, Mr. Jaisinh Vitthaladas and Mr. G. H. Pardiwala.

Same from Dena Bank

AS usual, the Devkar Nanjee Banking Co. Ltd (popularly known as the Dena Bank), which ranks among the top ten banks in the country, is the first to announce its working results for 1962. The preliminary report shows all-round progress—in deposits, advances, working funds and number of accounts and branches. The net profit, however, is down by about 18.8 percent from Rs. 29.65 lakhs to Rs. 24.08 lakhs. Apart from the fact that the increase in the bank's advances is much smaller than the expansion in deposits, the profit margin seems to have been adversely affected by the deposit insurance scheme, contributions to the National Defence Fund and the payment of arrears of salaries due to the staff under the Desai award. The bank opened five new branches during the year, raising the total number of branches to 112. The number of accounts recorded an appreciable increase from 224,000 to 250,000. The bank's deposits rose by about 16.6 percent from Rs. 43.36 crores to Rs. 50.50 crores, while advances increased by a little over 7 percent from Rs. 30.06 crores to Rs. 32.24 crores. The credit ratio came down from 69.3 percent to 63.8 percent, which is well below the general average for all scheduled banks. With the amount of Rs. 13.51 lakhs brought forward from the previous year's account, the disposable surplus amounts to Rs. 37.59 lakhs, against Rs. 37.51 lakhs which included a sum of Rs. 7.86 lakhs brought in from the 1960 accounts.

Allocation to the reserve fund has been raised from Rs. 15 lakhs to Rs. 23 lakhs and the bonus to the staff is also higher at Rs. 4.50 lakhs, against Rs. 3.50 lakhs. The dividend has been maintained at 11 percent, less tax, but it absorbs a larger sum of Rs. 6.90 lakhs, against Rs. 5.50 lakhs because of the increase in the capital from Rs. 50 lakhs to Rs. 1 crore. The increased capital, however, participated in the dividend only for a

short period. If the dividend is maintained for 1963, it will involve a total distribution of Rs. 11 lakhs, against Rs. 6.90 lakhs for 1962. After making various allocations, there remains a balance of Rs. 3.19 lakhs to be carried forward, against Rs. 13.51 lakhs brought in. With the amount of Rs. 23 lakhs transferred from the year's profit and Rs. 2 lakhs from the share premium on new shares, the bank's reserve fund has risen from Rs. 75 lakhs to Rs. 1 crore, thus bringing it on par with the paid-up capital. The Rs. 50-paid share of Dena Bank is currently quoted around Rs. 58 cum-dividend, offering a gross return of about 10 percent.

Bank of Maharashtra Earns More

THE preliminary report on the working of the Bank of Maharashtra in 1962 shows all-round progress. Deposits have risen by 23 percent from Rs. 19.48 crores to Rs. 23.96 crores, advances by 21.9 percent from Rs. 9.76 crores to Rs. 11.90 crores, investments by 24.9 percent from Rs. 7.47 crores to Rs. 9.33 crores, and the working funds by 16.7 percent from Rs. 21 crores to Rs. 24.50 crores. The net profit, after providing for gratuity and bonus to staff and making the usual provisions including that for taxation, however, shows only a small increase from Rs. 8.24 lakhs to Rs. 8.44 lakhs. This is because of the sizable increase in expenses. The Bank has had to pay Rs. 62 lakhs, about Rs. 20 lakhs more than in 1961, by way of interest on deposits and the deposit insurance scheme premium amounts to Rs. 1.14 lakhs. Salaries of staff including arrears have risen by Rs. 5 lakhs to Rs. 32 lakhs as a result of the Desai award.

The dividend has been maintained at 9 percent, less tax, which is payable on the increased capital of Rs. 50 lakhs. The bank issued new rights shares in August on the basis of one-for-four at a premium of Rs. 2.50 a share. The proposed dividend will absorb Rs. 3.89 lakhs, against Rs. 3.34 lakhs. Allocation to the reserve fund has been increased from Rs. 4.40 lakhs to Rs. 4.50 lakhs, raising the total reserve fund to Rs. 25 lakhs, against a paid-up capital of Rs. 50 lakhs. After making various appropriations, there remains a surplus of Rs. 47,000 to be carried forward, against Rs. 42,349 brought in. The Rs. 50-paid share of the Bank of Maharashtra is quoted around Rs. 62, offering a gross return of about 7.8 percent.

United Bank Profit Up

SUBJECT to audit and after providing for taxation, the net profit of the United Bank of India for the year ended 31st December, 1962, amounts to Rs. 21.20 lakhs, against Rs. 20.50 lakhs for 1961. The directors have recommended a dividend of 6 percent, subject to tax, for the year (the same as in 1961), and it will absorb Rs. 16.08 lakhs. About Rs. 4.26 lakhs will be allocated to statutory reserve, leaving a balance of Rs. 86,000, against Rs. 32,000 in the previous year. The balance,

together with the sum brought down from the previous year's account, will amount to Rs. 3.26 lakhs, and will be carried forward. Deposits of the Bank have increased by more than Rs. 5 crores to over Rs. 64 crores during 1962.

McNally-Bird Making Progress

MCNALLY-BIRD Engineering Co. Ltd, a joint Indo-American venture, is aiding the development of coal and basic industries in India. Set up with an authorised capital of Rs. 2 crores, the Company is presently engaged in the manufacture of coal washeries, and coal and ore-handling plants. Under the present phased manufacturing programme, it is anticipated that 70 percent of the coal washery will be manufactured indigenously, and in the course of five years, it is planned that the entire production will be carried out in India. This represents a considerable saving in foreign exchange, especially when coal washeries are required by the rapidly developing basic industries during the third plan. At a rough guess, it is estimated that the production of the new firm will save Rs. 4 crores or Rs. 5 crores in foreign exchange during the third plan period. The plant of McNally-Bird is located in Kumardhubi, Bihar. The equipment to be manufactured includes heavy medium washeries, jig type washeries, heavy medium cyclones, crushers, screening plants, belt conveyors, bins, car hauls, chain conveyors, structurals and tipplers.

C. D. F. C. Loan for Braithwaite

THE Commonwealth Development Finance Co. Ltd has agreed to make a sterling loan of £322,500 to Braithwaite and Co. (India) Ltd, as a contribution towards the cost—estimated at £319,000—of modernising the Angus works in Bhadrachalam and the Clive works in Kidderpore, both near Calcutta. This modernisation will help introduce the manufacture of various types of cranes at the Angus works, and increase the production of railway wagons at the Clive works from 17,000 tons to 30,000 tons a year. The output of the foundry will also be increased.

More Electrical Sheets from Tata Steel

RELIABLE reports indicate that the Government of India has approved the scheme submitted by the Tata Iron and Steel Company for stepping up the production of electrical sheets (dynamo grade) from the present 24,000 tons to 42,000 tons a year at its Jamshedpur works. The project involves an additional capital outlay of Rs. 1.17 crores, of which Rs. 71 lakhs will be needed for the import of machinery from abroad. Additional capital is to be secured from internal resources and by borrowing. The Company had made an application to the World Bank for its foreign exchange requirements, which include the requirements for the electrical sheets project. The ferro-silicon and aluminium needed for the manufacture of electrical sheets are available from indigenous sources. The expansion scheme, therefore, will not involve any recurring foreign exchange expenditure and it will save the country the foreign exchange that is now spent on imports. In 1960, imports of electrical sheets were valued at

Rs. 1.18 crores, and the figure for 1961 was a little higher at Rs. 1.27 crores. Imports up to July 1962 are placed at Rs. 1.06 crores.

The present demand for electrical sheets is estimated at around 30,000 tons, made up of 20,000 tons of d-i-amo grade sheets and 10,000 tons of transformer grade sheets. The total requirements of electrical sheets by the end of the third plan were originally estimated around 70,000 tons. But according to the Government's latest estimates, the country will need 85,000 tons of dynamo grade and 30,000 tons of transformer grade sheets by the end of 1965-66. This revised target has been accepted by the Planning Commission. At present, the Tata Iron and Steel Company is producing at the rate of 24,000 tons a year of dynamo grade electrical sheets, and another 50,000 tons of electrical sheets will be available from Rourkela when full production is achieved. The expansion scheme of Tata Steel will help cover the gap between the anticipated demand and existing capacity.

T.E.L.C.O. Rights Issue

AN extraordinary general meeting of the shareholders of the Tata Engineering and Locomotive Company is being convened on 29th January to vote on the resolutions relating to the increase in the Company's authorised capital from Rs. 10 crores to Rs. 15 crores and the issue of 200,000 new equity shares of Rs. 100 each at a premium of Rs. 50 a share. The Government sanction for the proposed rights issue has already been received. These will be offered to existing shareholders in the ratio of one share for every four held. Shareholders have been given the option to apply for additional shares, the allotment of which will be made on an equitable basis with reference to the shares already held by them. A sum of Rs. 75 a share, made up of Rs. 25 on premium account and Rs. 50 on capital account, is payable on application and the balance of Rs. 75 is payable on or before 30th September, 1963. The new equity shares will not be entitled to the dividend for 1962-63, but will rank for dividend from next year onwards. Additional funds are being raised for meeting part of the cost of the first stage of the Company's expansion programme, which visualises an increase in the output of diesel vehicles from 12,000 to 18,000 units. The total cost of the first stage of the expansion programme is estimated at around Rs. 13 crores.

An agreement has already been finalised with the Agency for International Development for a loan of Rs. 6.5 crores (\$13.7 million) to cover the foreign exchange requirements. The proposed capital issue will bring Rs. 3 crores and the balance of Rs. 3.5 crores will be met from internal resources. Originally, the Company had proposed to finance the expansion programme through the issue of debentures, but this proposal had to be modified in the light of the Government's reaction to the scheme of convertible debenture, the present economic situation and the general desire of the shareholders to be more closely associated with the financing of the project. It may be noted here that in an otherwise depressed market, the shares of the Tata Engineering and Locomotive Company have been remarkably steady, and are currently quoted around Rs. 283.

Jenson and Nicholson to Expand

JENSON and Nicholson (India) Ltd of Calcutta, which manufactures

quality surface coatings, has sought the Government of India's permission to set up a paint factory in Kolaba district of Maharashtra State. The Company proposes to make in the proposed factory 575,000 kilograms of paints, 517,000 kilograms of distempers and 600,000 litres each of enamels and varnishes every year. The new factory in Maharashtra will provide better service to the customers on the spot and will ensure quicker delivery of products. It is stated that about 25 percent of the Company's products are consumed in the western region of the country. The proposal involves the import of raw materials and capital goods to the tune of Rs. 3 lakhs and Rs. 1.16 lakhs, respectively. The Company will meet its requirements of imported raw materials and capital goods either through the State Trading Corporation or from foreign exchange earned through the export of its products.

Jenson and Nicholson has a paid-up capital of Rs. 58.19 lakhs, made up of Rs. 32.5 lakhs in equity shares of Rs. 10 each and Rs. 25.69 lakhs in 7½ percent redeemable preference shares of Rs. 100 each. Out of the paid-up equity capital of Rs. 32.5 lakhs, approximately 76 percent is held by the Jenson and Nicholson Group Ltd, London, and the balance is held by residents. The Company now intends to issue further equity capital to the extent of Rs. 7.5 lakhs and the principals in the U.K. have agreed to issue the entire amount to residents which will bring down the foreign holding in the equity capital of the Company to about 60 percent. Reliable reports indicate that the Government has approved the Company's scheme and the licence, it is expected, will be issued shortly. The demand for paints, enamels and varnishes by the end of 1965 is estimated around 140,000 tons. The third plan target for capacity has been set at 160,000 tons.

Kesar Sugar to Issue Shares

KESAR Sugar Works Ltd, which, as Kesar Industries Ltd, reports encouraging results for the year ended July 1962. Production of sugar as well as of alcohol is up; so are sales and profit. The sugar factory crushed 2.31 million quintals (6.31 million maunds) of sugarcane producing 230,000 quintals (617,000 maunds) of sugar, the corresponding figures for the previous season being 2.11 million quintals (5.81 million maunds) and 211,000 quintals (565,000 maunds). The average rate of recovery was higher at 9.70 percent, against 9.60 percent in 1960-61. The production of alcohol increased from 1 million gallons to 1.1 million gallons. The Company's sales in 1961-62 amounted to Rs. 2.29 crores, against Rs. 2.24 crores in 1960-61, and the gross profit increased from Rs. 14.31 lakhs to Rs. 15.40 lakhs. After providing Rs. 4.28 lakhs (against Rs. 3.95 lakhs) for depreciation and Rs. 5.25 lakhs (against Rs. 4 lakhs) for taxation, the net profit amounts to Rs. 5.86 lakhs, compared with Rs. 6.36 lakhs in the previous year. Allocation to development rebate reserve has been reduced from Rs. 96,000 to Rs. 85,000. The dividend has been maintained at 20 percent, less tax, absorbing Rs. 4.50 lakhs. Preference dividend accounts for another Rs. 91,000. The directors state that the Company would have earned a much higher profit but for the provision of about Rs. 4 lakhs towards the liability resulting from the price-linking formula under which growers are to receive a share in sugar price from the season 1958-59 onwards, and also in the incentives received by the factory.

The industrial licence originally granted to the Company for expanding the crushing capacity of the sugar factory by 900 tons a day has been amended since the directors thought that sufficient cane for the increased capacity might not be available. They have decided to expand the capacity by 400 tons to begin with. The whole scheme, it is expected, will be completed within two years at a cost of about Rs. 34 lakhs. The Company has received a licence for further expansion of the capacity of its distillery to 2.95 million gallons a year, and the directors are considering its implementation. The Company's scheme for the manufacture of sodium hydrosulphite, formalal and other chemicals in Baheri in technical and financial collaboration with A.C.C. (Brother-ton) Ltd, U.K., has been modified and the revised scheme, it is said, has been approved in principle by the Government of India. The directors state that the production and sales of the Company's chemical factory increased slightly during the year, but the results were not satisfactory as the prices of chemicals continued to remain depressed while the cost of production continued to rise.

In view of the expansion of the Company's activities and the consequent need for additional funds, the directors propose to issue equity capital of Rs. 9 lakhs at par. For this purpose, 35,000 unissued equity shares of Rs. 100 each will be subdivided into 70,000 equity shares of Rs. 50 each. Out of these, 18,000 shares will be offered to existing shareholders in the ratio of two shares for every five held. It is proposed to change the name of the Company to Kesar Industries Ltd as the directors feel that the existing name does not properly represent the Company's diverse activities. The necessary resolution to this effect will be moved at the forthcoming annual meeting. The Rs. 50-paid share of Kesar Sugar is currently quoted around Rs. 180 cum-dividend, offering a gross return of about 5.9 percent.

Kolhapur Sugar Diversifying

THE Kolhapur Sugar Mills Ltd has produced satisfactory results for the year ended June 1962. In his statement at the annual general meeting of the Company held recently, the Chairman, Mr. Ramniwas Ramnarain Ruia, has taken an optimistic view of the current working. (A fuller version of the speech was printed in last week's issue of Capital). In 1961-62, the Company produced 269,890 bags of sugar, compared with 316,779 bags in 1960-61. The recovery fell from 12.57 percent to 12.45 percent. The decline in output was due to the 10 percent cut in production enforced by the Government and also because of poor cane supplies. During the current year, the cane crush may be more than 300,000 tons. The distillery has worked satisfactorily, and its output is likely to improve further during the current year. It is hoped to realise a daily capacity of about 7,000 gallons. Production was 731,580.3 gallons in 1961-62. In view of the prospect of a bigger cane supply, the Company has asked the Government for permission to expand capacity.

Referring to the diversification of activity, Mr. Ruia said that the acetic acid plant might be installed by June 1963. The Company had approached the Government for a licence to produce alcohol-based products, such as ethyl acetate, carbon dioxide and dry ice. The adverse effects of the Land Ceiling Act of the Maharashtra Government could be offset if the State Govern-

CAPITAL, 10th January, 1963.

ment ensured an adequate supply of cane to the factories. He did not think that the adoption of the new price-linking formula would help in the improvement of cane quality. As the procedure for enforcing the formula has been defective, mills might be discouraged to buy cane, especially during the earlier and later parts of the sugar season.

Nil from Champaran Sugar

THE results of the Champaran Sugar Co. Ltd for the year ended June 1962 are unsatisfactory. The ordinary dividend has been passed. A dividend of 12 percent, taxable, was paid for 1960-61. Losses on sugar exports, combined with a substantial increase in interest charges following the large accumulation of sugar stocks, have contributed to the loss suffered by the Company during 1961-62. As the crushing season had to be extended, recovery fell from 9.12 percent to 8.66 percent in the case of the Barrah factory and from 9.40 percent to 9.08 percent in the case of the Chanpatia factory. The Barrah factory had a cane crush of 1.4 million quintals, against 1.5 million quintals, while the crush of the Chanpatia factory at 1.5 million quintals showed a slight increase.

Steps have been taken to improve the working of the Barrah factory. It has been decided to produce 7,500 tons of raw sugar at the Chanpatia factory for exporting. Referring to the removal of restrictions on production during the current 1962-63 season, the directors think that the move is belated as the acreage under cane has already declined due to the former restriction on output. The cane supply during the current season may also be affected by floods. Efforts are, however, being made by the Company to obtain additional cane supplies from outlying areas. The loss of Champaran Sugar has amounted to Rs. 9.79 lakhs during 1961-62, after transferring Rs. 2.27 lakhs (against Rs. 1.78 lakhs) to depreciation and Rs. 27.820 (against Rs. 84,644) to development rebate reserve. There was a profit of Rs. 3.58 lakhs in 1960-61. A debit balance of Rs. 9.07 lakhs has been carried forward.

Outlook for Steel and Allied Products

IN their report for the year ended June 1962, the directors of the Steel and Allied Products Ltd mention that the expansion scheme has been completed, but the installed capacity has not yet been fully used due to the shortage of power and unsatisfactory labour conditions. Production has, however, improved and turnover has risen from Rs. 42.77 lakhs in 1960-61 to Rs. 60.20 lakhs in 1961-62. The profit has increased from Rs. 8.47 lakhs to Rs. 8.82 lakhs after transferring Rs. 2.91 lakhs (against Rs. 1.64 lakhs) to depreciation. A taxable ordinary dividend of 15 percent has been maintained on the increased share capital. It is more than three-and-a-half times covered. General reserve absorbs Rs. 1.50 lakhs (the same) and taxation Rs. 4.50 lakhs (against Rs. 3.50 lakhs). The carry-forward is Rs. 22,122, against Rs. 13,899 brought in.

The final instalment of the loan from the Industrial Finance Corporation amounting to Rs. 2.50 lakhs has been received. In order to finalise the expansion in activity, it is proposed to issue further ordinary shares for Rs. 7.50 lakhs. The directors have been negotiating

CAPITAL, 10th January, 1963.

with the foreign collaborators for the production of taps, dies and chasers. It is also intended to manufacture drills and reamers as the Government of India has agreed to issue the licence to the Company for the production of these items. The scheme, it is expected, will be finalised at an early date. As for the current working, the directors take an optimistic view assuming that production is maintained at the present level.

Mysore Kirloskar Does Well

MYSORE Kirloskar Ltd has produced satisfactory results for the year ended June 1962. Turnover rose from Rs. 1.57 crores in 1960-61 to Rs. 1.75 crores in 1961-62. The Company has made good progress in the manufacture of its existing products, but the progress in the manufacture of Capstan and Turret lathes has been hampered by the shortage of imported components. In view of the foreign exchange shortage, this line of production may be difficult to improve in the near future. The Company has declared a taxable ordinary dividend of 12 percent, which is more than one-and-a-half times covered. The profit at Rs. 27.47 lakhs shows a small rise of Rs. 64,000, after increasing depreciation from Rs. 9.35 lakhs to Rs. 11.87 lakhs. Taxation absorbs Rs. 15.95 lakhs (against Rs. 11.30 lakhs). Development rebate reserve is allocated Rs. 1.46 lakhs (against Rs. 4.10 lakhs), debt redemption reserve Rs. 2 lakhs (the same) and general reserve Rs. 20,000 (against Rs. 1.70 lakhs). The carry-forward is Rs. 3,365, against Rs. 3,724 brought in.

Beadwire from National Standard Duncan

A NEW company called National Standard Duncan Ltd has been promoted and formed as a joint venture by the National Standard Company of the U.S.A. and Duncan Brothers and Co. Ltd of Calcutta. The latter will also be appointed the secretaries and treasurers of the new undertaking. The share capital of the venture will be subscribed by the National Standard Company, Duncan Brothers and the public. The foreign collaborator will not be entitled to any royalty or technical know-how fee.

National Standard Duncan will manufacture beadwire for the first time in India. The product is an essential item in the manufacture of tyres and is now entirely imported. The National Standard Company is a well-known manufacturer of various types of wires. The new Indian types of wires will be due course. The factory will be situated in Bombay and may start production early in 1964. Mr. K. P. Goenka, chairman of Duncan Brothers, will be chairman of the new Company.

Kirlampudi Sugar Skips Dividend

THE working of Kirlampudi Sugar Mills Ltd for the year ended June 1962, shows a net profit of Rs. 30,616, after providing Rs. 3.73 lakhs for depreciation and Rs. 14,720 lakhs for development rebate. The previous year's net profit was Rs. 69,217, after providing Rs. 4 lakhs for depreciation and Rs. 38,788 for development rebate. With Rs. 1.10 lakhs

brought forward, the total comes to Rs. 1.41 lakhs which is carried forward.

During the year, the factory crushed 105,147 tonnes of sugarcane and produced 105,080 bags of sugar with a recovery of 10.02 percent. This is the highest so far for any year. Although the recovery has been satisfactory, the Company's profits have not shown any improvement, mainly due to the fall in sugar prices, implementation of the Sugar Wage Board award with retrospective effect from 1st November, 1960, provision for all arrears of depreciation and extra shift allowance for previous years, loss on compulsory exports, high interest charges and increased expenditure under other items. The excess of current assets over liabilities and provisions amounted to Rs. 31.16 lakhs on 30th June, 1962. The directors regret their inability to recommend any dividend from the available surplus

India Forge Makes Progress

THE directors of India Forge and Drop Stampings Ltd say in their annual report for the year ended June 1962 that barring unforeseen circumstances, the Company will start experimental production in about six to eight months. The training of technical and supervisory staff required for the project is mak-

ing progress. India Forge has received a licence for importing the bulk of the required machinery. A major portion of the machinery—both imported and indigenous—is expected to be received according to the original schedule. Some items of imported and indigenous equipment have already arrived at the site. The bulk of the machinery to be supplied by the foreign collaborators, Messrs B. and S. Massey Ltd, is ready for shipment.

The directors state that the Company has secured a licence for expanding the installed capacity of the plant for producing an additional 3,600 tons of steel forgings and drop stampings and 120 tons of non-ferrous stampings. Due to the increased cost of land, steel, building materials, etcetera, and in view of the provision in the layout for further expansion, the total project cost has increased appreciably. The Madras Government has allotted the Com-

THIS IS ONLY AN ANNOUNCEMENT OF INTENTION TO MAKE PUBLIC ISSUE OF SHARES AND IS NOT A PROSPECTUS

PYROTENAX INDIA LIMITED

(Incorporated on the 7th July 1962 under the Companies Act, 1956)
Registered Office: 9 Wallace Street, Fort, Bombay-1.

AUTHORISED CAPITAL:..... 60,000 Equity Shares of Rs. 100/- each **Rs. 60,00,000**
ISSUED CAPITAL:..... 55,000 Equity Shares of Rs. 100/- each **Rs. 55,00,000**

SUBSCRIBED CAPITAL:

(a) Pyrotex Limited, Hebburn, England, have agreed to subscribe for and have been allotted 5,500 Equity Shares of Rs. 100/- each credited as fully paid up for consideration other than cash, namely supply of technical know-how and technical assistance pursuant to the Technical Collaboration Agreement dated 26th November 1962 entered into with them. **Rs. 5,50,000**
(b) The Bombay Company (Private) Limited, Bombay, the other promoters, have subscribed for and have been allotted 6,250 Equity Shares of Rs. 100/- each for cash, on which Rs. 50/- per each Equity Share has been paid up. **Rs. 6,25,000**
(c) The Directors, their friends and associates have subscribed for in cash and have been allotted 7,000 Equity Shares of Rs. 100/- each, on which Rs. 50/- per each Equity Share has been paid up. **Rs. 7,00,000**

RESERVED FOR SUBSCRIPTION:

Pyrotex Limited, Hebburn, England, one of the promoters have agreed to subscribe for and will be allotted 22,000 Equity Shares of Rs. 100/- each credited partly for cash and partly for plant and machinery agreed to be supplied by them pursuant to an Agreement dated 26th November 1962. **Rs. 22,00,000**

NOW OFFERED AT PAR TO THE PUBLIC FOR SUBSCRIPTION IN TERMS OF THE PROSPECTUS: 14,250 EQUITY SHARES OF Rs. 100/- EACH.

(a) Rs. 25/- per share on application;
(b) Rs. 25/- per share on allotment;
(c) balance of Rs. 50/- per share on call to be made subsequently but not earlier than three months after the date of allotment.

BOARD OF DIRECTORS

Name	Address	Description and Occupation
1. Mr. F.W. Tomlinson	Pyrotex Limited, Hedgeley Road, Hebburn, County Durham, England.	Chairman and Mg. Director, Pyrotex Limited, Hebburn, England.
2. Mr. E.S. Vernon-Jones	Wallace Bros. & Co. Ltd., 4, Crosby Square, London E.C. 3	Director of — The Bombay Company (Pte.) Ltd.
3. Mr. G.V. Nath	The Bombay Co. (Pte.) Limited, 9 Wallace Street, Bombay-1.	Director of — 1. The Bombay Company (Pte.) Ltd. 2. The Lakshmi-Vishnu Cotton Mills Ltd.
4. Mr. Jaisinh Vithaldas	Vishnu Villa, Worli Seaface, Bombay-18.	Partner of—Vissanji Sons & Co. Director of—1. Wallace Flour Mills Co. Ltd. 2. The Bank of India Ltd.
5. Mr. C.H. Pardiwala	Crawford Bayley & Co., State Bank Buildings, Bank Street, Bombay-1.	Solicitor and Partner of Crawford Bayley & Co., Solicitors.

It is proposed to purchase an industrial site in Kirkee near Poona, for the erection of the Company's factory.

EXISTING AND PROPOSED ACTIVITIES

The Company has been incorporated with the immediate object of manufacturing and marketing of every kind of mineral insulated metal sheathed cables. Pyrotex Limited, England, who are the leading manufacturers of special types of cables have agreed to subscribe Rs. 27.5 lakhs which will be 50% of the Company's issued capital. Pyrotex Limited are the Technical Collaborators to the Company and have agreed to supply plant and machinery.

DATE OF OPENING AND CLOSING FOR SUBSCRIPTION

The Subscription List will open at the commencement of banking hours on the 21st January 1963 and will close at the closing of banking hours on the 29th day of January 1963 or earlier at the discretion of the Director but not before the close of banking hours on the 23rd January 1963.

FROM WHOM APPLICATION FORMS ALONG WITH COPIES OF PROSPECTUS CAN BE OBTAINED

Copies of application forms and of prospectus can be obtained from the Registered Office of the Company and from the Company's undermentioned Bankers and Brokers.

pany 10.26 acres in the Ambattur industrial estate, at a distance of 9½ miles from Madras city.

The Company's audited accounts for the year ended June 1962, show a net loss of Rs. 6,518. To this is added the loss carried forward from 1960-61, amounting to Rs. 11,765. The total debit balance of Rs. 18,283 is carried forward.

Parshuram Pottery Pays the Same

DESPITE a modest increase in sales from Rs.70.08 lakhs to Rs. 73 lakhs, the gross profit of Parshuram Pottery Works Ltd for the year ended July 1962 is down from Rs. 16.77 lakhs to Rs. 15.88 lakhs. After providing Rs. 4.31 lakhs (against Rs. 4.39 lakhs) for depreciation and

Rs. 5.25 lakhs (against Rs. 6.05 lakhs) for taxation, the net profit amounts to Rs. 5.17 lakhs, against Rs. 5.73 lakhs in 1960-61. Allocation to rehabilitation reserve has been increased from Rs. 2 lakhs to Rs. 2.25 lakhs, but provision for development rebate is lower at Rs. 26,000, against Rs. 57,466. A sum of Rs. 1 lakh (against nil) has been set aside for dividend equalisation reserve and another of Rs. 50,000 (against nil) have been provided for investment fluctuation reserve. The dividend has been maintained at Rs. 5.36 a share, less tax, absorbing Rs. 1.36 lakhs (the same). After making certain minor adjustments, there remains a balance of Rs. 24,892 to be carried forward, against Rs. 37,499 brought in. The directors state that the Industrial Credit and Investment Corporation of India has sanctioned a loan of Rs. 12 lakhs, of which Rs. 4.75 lakhs is in foreign currency. The Com-

pany's collaboration arrangements with a French firm have been completed and the work on the new project will start soon. It spent Rs. 6.12 lakhs in 1961-62 on new buildings and machinery. The Rs. 25-paid share of Parshuram Pottery is currently quoted around Rs. 59.

New Capital Issues

NINE companies have been authorised to issue capital totalling Rs. 3.33 crores. Of these, eight companies are issuing equity shares and one company is capitalising part of its reserves. One is a new company. The consent in all cases is valid for 12 months. Following are the details:

The Kalyanpur Lime and Cement Works Ltd, Calcutta, will raise capi-

tal of Rs. 76 lakhs. The capital is required for the expansion of the Company's existing cement works in Banjari, Shahabad, district Bihar.

South Bend India Ltd, Madras, will issue equity capital of Rs. 65 lakhs. The money will be used for setting up a factory in Madras State for the manufacture of centre lathes, milling machines, turret lathes and drilling machines, etcetera, in collaboration with South Dend Lathe Incorporated, U.S.A., which will be issued equity shares of the value of Rs. 29,25,000.

The Omega Insulated Cable Co. (India) Ltd, Madras, is issuing equity capital of Rs. 60 lakhs for cash at par. The proceeds will be used for the manufacture of V.I.R. and P.V.C. cables and electric wires in technical collaboration with Wireco Engineering Ltd, Canada.

Assam Small Industries Development Corporation Ltd, Gauhati, will issue equity capital of Rs. 50 lakhs (in addition to Rs. 5 lakhs already issued) to be entirely subscribed by the Government of Assam partly for cash and partly for other than cash for taking over the commercial undertakings of the Industries Department of the State Government.

Galvawire Industries Ltd, Bombay, is to issue capital of Rs. 30 lakhs, divided into 30,000 equity shares of Rs. 100 each for cash at par. The proceeds of the issue will be used for the manufacture of galvanised iron steel wires, etcetera.

Selected Satgram Collieries, Ltd, Calcutta, is issuing 30,000 equity shares of Rs. 100 each to existing shareholders of the Company. The existing paid-up capital of the Company is Rs. 40 lakhs. The capital is required for the development of its collieries in the third plan period.

Franco Malhotra Steel Rolling Mills Ltd, a new Company, will issue capital of Rs. 20 lakhs in 200,000 equity shares of Rs. 10 each. The proposed capital is required for undertaking the manufacture of steel for engineers' files in collaboration with a French firm.

Shree Digvijay Cement Company Ltd, Gujarat, is raising further capital of Rs. 1,50,000 divided into 1,500 equity shares of Rs. 100 each at a premium of Rs. 50 a share. All the shares will be offered to Johns Manville International Corporation, New York, U.S.A. The proceeds of the issue would be used for financing the setting up of an asbestos sheet and pipe factory.

Sri Lakshmi Saw Mills Ltd, Kasaragod, has been allowed to capitalise reserves to the extent of Rs. 46,125 for making existing 2,287 equity shares of Rs. 10 each (50 per cent paid-up) as fully paid-up, by crediting Rs. 5 a share and issuing 3,469 new equity shares of Rs. 10 each as bonus shares to the existing 3,469 equity shares of Rs. 10 each (fully paid-up).

NAMES AND DATES

Mr. Akbar Hydari, managing director of the Western India Match Co. Ltd, has been elected president of the Bombay Chamber of Commerce and Industry for 1963-64. Mr. Hydari is the chairman of Vulcan Trading Company, Atlas Copco (India) and Alfa-Laval. He is a director of the Assam Match Co. Ltd, Ceylon Match Co. Ltd, Associated Bearing Co. Ltd, Kirloskar-A.S.E.A. Ltd, and Facit Asia Ltd. He is, in addition, an executive committee member of the Employers Federation of India and a member of the General Council of Mayo College, Ajmer.

Stocks and Shares

LIMITED TURNOVER IN LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has been quiet during the past week and turnover has shrunk considerably. Business has largely consisted of "squaring-up" deals. The decision of the authorities to relax the restrictions on trading has had virtually no effect. The minimum prices have been removed for some more cash shares in addition to electric company, jute and preference shares for which the minimum prices were removed earlier. There will no longer be any compulsory carryover for Howrah Jute, Jai-pur Udyog, J. K. Rayon and Orient Paper. Hence only six clearing shares will now be subject to the compulsory carryover; earlier, it had been scrapped in the case of eight other clearing shares. Freer trading has been introduced for Indian Iron. Members have been allowed to make fresh purchases of these shares up to a maximum of 6,000. Purchases up to 3,000 shares can be made by paying a margin of Re. 1 a share; a further 3,000 shares can be bought on payment of a margin of Rs. 2 a share. Only those members who have bought less than 10,000 shares will be allowed to make these purchases. Day-to-day jobbing business continues to be prohibited.

As the relaxations have not impressed operators, the settlement on Wednesday has been uneventful. Sentiment has weakened as Lyons Range is inclined to interpret the increase in Bank rate bearishly, although the Reserve Bank has indicated that the rise merely formalises the existing pattern of interest rates. Operators, nevertheless, feel that the increase confirms the impression that a dearer money policy has come to stay. It is quite on the cards that interest rates will harden further in the coming weeks when the pull of the busy season is felt more. In any case, the stock market cannot expect a big flow of funds into stocks and shares. Not only has bank credit become costlier; it has also become more scarce. In fact, many banks have been pressing for bigger margins against share overdrafts.

Political uncertainties have also restrained activity. Until a clearer picture of Sino-Indian relations emerges, operators will be reluctant to enter into fresh commitments. The near-term trend is unlikely to improve because of the prospect of heavier taxation clearly indicated for the next Central Budget (to be presented at the end of February).

Indian Iron have not responded to the relaxation of restrictions on trading. The shares have been freely offered below the minimum price in the kerb market. The Company produced 116,804 tons of pig iron in December 1962, against 107,690 tons in November 1962. The output of steel ingots rose from 85,016 tons to 91,175 tons. But the output of salable steel was 66,444 tons, against 70,218 tons in November. Despatches improved from 79,856 tons to 80,395 tons. Except for scattered support for Jessop, engineering shares have been generally neglected. Although some jute companies have paid excellent interim dividends, support for shares has been limited. Attention has been confined to Dalhousie, Barnagore, Northbrook, Anglo-India and Kanknarrah. Investors have been worried by the

present lull in overseas enquiries for jute goods.

The earlier improvement in miscellaneous shares has not been maintained at the close. Despite the payment of a higher dividend, Angelo Brothers have been neglected due to the discouraging outlook for shellac exports. Among new shares, Hindusthan Twyford and Asiatic Oxygen have attracted attention. Steamship company shares have been depressed by the recommendation of the Congress Parliamentary Party's executive committee to allow an increase in the participation of foreign capital in Indian shipping companies. Calcutta Electric have met with scattered support on prospects of a rise in the "reasonable return" for electric undertakings following the increase in Bank rate. Among paper shares, Sirpur have recovered on influential buying. Tea shares have been freely offered without attracting support, as investors are chary about the border situation.

Selected preference shares and good debentures have been bought because of their attractive yields. Government securities have been dull and quiet. There has been virtually no buyer, except for some official support. Investors are wondering whether the increased Bank rate will push the prices of securities down. The 3 percent Conversion loan 1986 has declined to Rs. 63, at which level the Reserve Bank has been supporting it. Prices of State Government loans have been de-

pressed and buyers have been difficult to locate even by discounting prices.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during December 1962 was: iron 161,800 metric tons; steel ingots 158,200 metric tons and salable steel 128,000 metric tons.

Bombay Market

SHARE PRICES HOLD STEADY

TRADING RESTRICTIONS RELAXED

Wednesday Evening.

THE Bombay stock market has started the new account in a steadier mood. Except for a temporary reaction when the Bank rate rise was announced, share prices have improved, although modestly. In order to help the restoration of normal conditions, the authorities have relaxed the various restrictions on trading. There will be no compulsory carryforward business in 33 clearing scrip and there will also be no fixed carryforward charges for them. When the carryforward charges were fixed

General Banking and Foreign Exchange Business Transacted.

PRAVINCHANDRA V. GANDHI Managing Director

freely last Friday, they showed a mixed pattern. For some shares, the badla rate was even higher than the 9 percent hitherto fixed by the authorities.

The minimum prices for three shares—Tata Steel, Century and National Rayon—have been reduced. The minimum prices for all non-clearing shares have been removed. Jobbing business has been permitted in cash shares to a limited extent. The extent of fresh purchases in any single scrip has been raised from Rs. 50,000 to Rs. 1 lakh, and purchases worth more than Rs. 50,000 will be subject to a margin of 5 percent. The overall limit of Rs. 2 lakhs on total purchases of all shares continues as before. The authorities have also decided that spot delivery business will be permitted in Tata Steel, Indian Iron, National Rayon and Century without the previous permission of the Stock Exchange president.

In spite of the small improvement, turnover is limited and confined to selected shares. In the cotton mill section, sentiment has taken a turn for the better on reports of improvement in the cloth offtake. Operators are nevertheless inclined to go slow on fears of heavier taxation. Scattered business has been transacted in Tata Steel. In the engineering section, Tata Locomotive have met with support on prospects of a rights issue in the proportion of one new ordinary share for every four held, at a premium of Rs. 50 a share. The funds will be used to finance the expansion of the production capacity for lorries. In motor-vehicle shares, Hindustan Motors and Premier Automobiles have recovered. Business in cotton mill shares has been limited and stray support has been extended to Standard, Kohinoor and Century.

In the miscellaneous section, Bombay Burmah and National Rayon have recovered on short-covering. B. B. Petrol have attracted attention on rumours that the Company may receive compensation on account of second World War damage. Indian Dyestuff and Voltas have recovered on replacement buying. Among new shares, attention has been confined to S. L. M. Maneklal and Permanent Magnets. Electric company shares are steadier on hopes that the "reasonable return" will be increased due to the rise in Bank rate.

Among transactions, Tata Steel have been done at Rs. 123.25, Tata Locomotive at Rs. 295, Hindustan Motors at Rs. 17.36, Premier Automobiles at Rs. 106.50, Century at Rs. 559, Standard at Rs. 785, Indian Dyestuff at Rs. 385, Bombay Burmah at Rs. 636, B. B. Petrol at Rs. 4.28 and Associated Cement at Rs. 151.

Madras Market

TRADING PARTIALLY LIBERALISED PRICES STEADY IN SMALL TURNOVER

Tuesday Evening.

THE Madras stock market has been steady during the past week. Although turnover is small, prices are generally maintained. The increase in Bank rate has had no appreciable effect. The authorities have taken steps to liberalise trading somewhat. The minimum prices for bank and electric company shares have been removed, except in the case of Punjab National Bank. Business in odd lots may now be transacted below the minimum prices.

Government securities are depressed and State Government loans, in particular, have been offered freely at lower rates without attracting

support. Electric company shares have met with selective buying and West Coast Electric have been taken. Sugar shares are neglected; Kirlampudi has declined on a predominance of sellers as the dividend has been passed. In planting, support is confined to Blue Mountain, Consolidated Coffee and Periakaramalai. Mercara has paid a taxable ordinary dividend of 15 percent and Kailas an interim taxable ordinary dividend of 15 percent. Cotton mill shares are dull, and small business has passed in Rayalaseema. Travancore Rayon have reacted modestly. In the miscellaneous section, scattered support has been forthcoming for selected chemical and fertiliser shares. Andhra Scientific has paid a taxable ordinary dividend of 15 percent.

E.I.D. has changed hands at Rs. 40.25, K.C.P. at Rs. 26.12, Blue Mountain at Rs. 2.60, Periakaramalai at Rs. 3.05, Ashok Leyland at Rs. 8.20, India Cement at Rs. 6.42, F.A.C.T. at Rs. 6.85, Seshasayee Paper at Rs. 8, Parry's Confectionery at Rs. 3.95, Textool at Rs. 155.50 and West Coast Electric at Rs. 18.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

London Market
LEADING INDUSTRIALS RISE
GILT-EDGED DULL
London, 9th January.
THE past week witnessed varying trends in the stock market. It resumed after the New Year holiday on a firm note, following the Chancellor of the Exchequer's move to stimulate the economy by reducing purchase tax on a number of articles. Just as they were returning to subdued conditions again there was a further and more marked advance in response to the cut in Bank rate to 4 percent which followed the good December gold figures. This gave the market its busiest Monday for some months, but the advance was then halted by the Russian broadcast on the Berlin situation. New Common Market uncertainties were a restraining influence. It was equities that received most support and gilt-edged faded out of the picture. Most leading industrial equities showed good gains on the week, but best prices were not always held.

CAPITAL, 10th January, 1963.

New Delhi

PLANNING COMMISSION DISCUSSES GAP IN RESOURCES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Planning Commission recently had a preliminary discussion on the resources for the 1963-64 plan. It found a sizeable gap between the resources, as estimated by the Central Ministry of Finance, and the so-called minimum demanded by the Planning Commission. Mr. Pitambar Pant made a thought-provoking study of resources. He referred to taxes which were affecting production or had already reached the limit of diminishing returns. The meeting felt the impact of pressure groups, which were lobbying to maintain the progressively increasing but in-essential expenditure. The Prime Minister, Mr. Nehru, is understood to have told the meeting that India herself should shoulder the burden of implementing the plan, whatever the sacrifices. Meanwhile, deficit financing is becoming inescapable, although it may lead to inflation. If the price line has been held so far, it is due to consumer resistance.

The Commission wants Rs. 900 crores for implementing the 1963-64 plan, against a little over Rs. 700 crores which the Central Ministry of Finance estimates it can raise. Much will, however, depend on the size of the defence budget. In the last analysis, both civil and defence expenditure will have to be financed by the taxpayer. Since the defence budget is irreducible, the size of the plan will depend on the availability of funds—both existing or potential—which could be made available after meeting defence requirements and without overstraining the economy. But the core of the third plan, including industries such as power, transport and agriculture as well as defence industries, will have to be accorded the highest priority.

The total amount of external aid for the third plan is still undisclosed. The aid-giving countries, such as the U.S.A. and the U.K., are faced with numerous problems. The defence aid which is now demanded by India will have to come from the same pool from which development aid is offered. While India's defence needs are being discussed, the Government has urged the aid-giving countries to indicate the maximum amount they can offer for the development programme during the next three years and for 1963-64 in particular.

The standing committee of the National Development Council will meet here on 18th January, when a fuller picture of the plan and resources to implement it should be available.

ALLOY STEEL

Tenders being Examined

Tenders for the 50,000-ton alloy steel project in the public sector are being examined by the Central Ministry of Steel, it is learned. Enquiries show that the Japanese tender is the lowest. The Japanese have made two offers, both in the nature of package deals. One tender is based on the project report, while the other is for a modified scheme. These tenders are believed to have a bargaining cushion. The Japanese tender is given by the Japan Consulting Institute.

Two feasibility studies—one by Hindustan Steel and the other by

Dastur and Company—are being made for steel plants proposed to be set up in the fourth plan period. Dastur and Company has undertaken the study for a plant in the Goa-Mysore region and Hindustan Steel in the Bailadilla area in Madhya Pradesh. In both areas, coal supply is the main problem. The studies are expected to be completed by the middle of 1963. The fourth plan steel target is now placed at 18 million tons.

SHIPPING

Foreign Collaboration

The executive committee of the Congress Parliamentary Party, at its meeting last week, decided to suggest amending the Merchant Shipping Act, in order to increase the permissible percentage of foreign collaboration in shipping undertakings from 25 percent as at present to 40 percent. The proposal is intended to increase the tonnage on the Indian register, particularly during the present emergency, which has created shortages of both rupees and foreign exchange.

CEMENT

Raising Output

The Government of India, in consultation with the Planning Commission, has decided to maximise the production and availability of cement. It proposes to do this by maintaining the present throughput of 90 percent of the existing units, by accelerating the commissioning of the new units already licensed, and by expanding the existing units wherever possible. It has, however, been made clear that the Government will not permit the import of complete cement plants in the future. Side by side, steps are being planned to reduce the consumption of cement by lowering the standards and specifications for ordinary buildings.

TECHNICIANS

Reducing Training Courses

The Production Committee of Secretaries, dealing with manpower, has recommended the acceleration of technical training of engineers, telecommunication and medical personnel, etcetera. It has suggested the reduction of the duration of the course by cutting down holidays and by working training schemes on the basis of a two shift system. Another committee, which is examining the question of increased and improved production, has decided to send productivity teams to some public and private sector undertakings in order to raise production both quantitatively and qualitatively.

NATURAL GAS

Talks on Transport

Mr. A. C. Geddes has arrived here and is discussing with officials concerned the new process for transporting natural gas. He claims that he can bring natural gas from the Persian Gulf in special tankers to India at a cost cheaper than that of crude. Natural gas, among other things, can

planned in four phases. During the first phase, the production of lathes, planers and radial drills is expected to be taken up. The manufacture of other types of machines will be taken up in the next two phases. The interval between the consecutive phases will be one year. The maximum output is expected to be reached two years after the starting of production of different phases. It will thus be seen that the maximum production of the factory, namely, Rs. 8 crores to 9 crores, will be achieved only after the conclusion of the third five year plan. An output target of about Rs. 3 crores has been tentatively fixed for 1965-66.

PRAGA TOOLS

Production Plan Outlined

In March 1961, the Government of India entered into an agreement with C.E.K.O.P. of Poland for the design and supply of some complete plants. The foreign exchange expenditure for further expansion of the Praga Tools Corporation under the scheme was estimated at Rs. 1.5 crores, out of which Rs. 1 crore was set apart from the Polish Government credit. The rupee expenditure was estimated at about Rs. 1.5 crores, excluding working capital. The tentative production programme under the proposed Polish collaboration will be as follows:

Machine tools	Annual Production in the first stage (by 1962)	Annual Production in the second stage (by 1966)
	Nos.	Nos.
Universal lathe	240	720
Bench lathes	240	480
Milling machines	300	420
Bench drills	720	1200
Column drills	180	360
Tool and cutter grinders	240	360
Tapping machines	60	120

DEFENCE EFFORT

More Technicians Needed

The Central Minister for Economic and Defence Co-ordination, Mr. T. T. Krishnamachari, has appealed to employers "to release liberally engineers and other technical personnel who volunteer their services for the defence of the country". Mr. Krishnamachari has urged employers to give an assurance to employees that their emoluments and service conditions will not be affected if they join the defence forces. The following is the full text of his appeal: "The Chinese aggression on India has created problems demanding unstinted effort and sacrifice on the part of the whole nation. An urgent and crucial need that has arisen is for technical manpower. To meet the increasing defence needs, our defence forces and defence production establishments need engineers, technicians and skilled craftsmen as also doctors and other medical personnel in substantial numbers.

"The Government of India has, therefore, decided that doctors, engineers and other technical personnel employed under them should be freely permitted to apply for the defence services during the present emergency, save only in cases where their release is likely to come in the way of essential production or the efficient functioning of an essential service. Orders have also been issued protecting the service lien, civil pay, seniority and other service interests of Government servants joining military service. Certain leading firms in the private sector, I am happy to note, have offered similar encouragement to their technical personnel who apply for defence services by permitting retention of lien and seniority on their jobs, protection of their pay in the company by making up any difference between their civil and military

Capacity of Ranchi Plant

A decision is expected shortly concerning the heavy machine tool project in Ranchi to be constructed with Czechoslovak collaboration. The total planned capacity of the plant is 10,000 tons a year, including the production of special accessories and spare parts. The annual output of complete machine tools will be 7,000 to 10,000 tons when full production is achieved. The production programme is

pay and continuance of participation in annual bonus.

"I appeal to all employers to release liberally, wherever they can do so without impairing essential production, engineers and other technical personnel who volunteer their services for the defence of the country and assure them the necessary protection of emoluments and service interests for the purpose."

MOSCOW

Indian Exhibition Planned

The Government of India has decided to hold an Indian exhibition in Moscow in June-July 1963. The exhibition is being organised to present to the Russian public the progress that India has made during the past 15 years, opportunities for future

development and the part that the Russian economy can play in this country's development. Raw material and semi-processed and manufactured goods, which India can export to Russia, are proposed to be displayed. Apart from display and visual publicity, information on quality, specification, price range and the terms of trade of the goods on display along with full addresses of exporters will be provided at a special counter at the exhibition. An advisory committee has been set up in connection with the organisation of the exhibition.

NEWSPRINT

Restriction on Use

According to an amendment to the newsprint control order, no consumer

—other than a publisher of textbooks or books of general interest—shall use any kind of paper other than newsprint except with the permission, in writing, of the Controller of Newsprint.

WEST BENGAL

Techno-economic Survey

Early in 1959-60, the National Council of Applied Economic Research undertook the techno-economic survey of West Bengal at the State Government's request. The objective of the survey was to make an appraisal of the material and manpower resources available within the State and to outline a programme for their effective utilisation and for ensuring a rapid development of the State's economy during the decade 1961-71. Although

the State enjoys the highest per capita income among all the States of the Indian Union, the distribution of incomes is highly uneven, and masses of people live in poverty. The majority of the people do not earn enough to assure themselves of a reasonable standard of living in terms of elementary human comforts. Unemployment and under-employment are widespread.

Agriculture is the main occupation of the people of West Bengal. The heavy pressure of population on arable land, coupled with conditions of backward technology and organisation, has resulted in severe under-employment and low output an engaged person. Increased intensity in agricultural operations, expansion of animal husbandry, fish culture, and sericulture, may provide some additional employment. Nevertheless, extensive employment opportunities could be provided in the rural areas only through an intensive industrialisation programme. The secondary sector comprising industries, mining, and power is the key sector of growth. But this sector supports a low-income segment of small cottage establishments which have been continuing for ages with almost stationary techniques of production. In the process of accelerated development, this segment might be a drag on growth, unless it is modernised and production techniques are considerably improved.

Although the State had many years of early start in its industrialisation programme, economic growth could not gather momentum due to lack of integrated and planned development among various sectors of the economy and of the State as a whole. There is extreme regional polarisation of industrial development in the State. Except for Calcutta and its surroundings, the Asansol-Durgapur region, and the tea districts of Jalpaiguri and Darjeeling, industrial development has not made much progress in other parts of the State. On account of the continuous agglomeration of industries, Calcutta with its limitation of space, severe strain on transport facilities and civic amenities, has reached almost a state of saturation. In the interests of both balanced regional development and a faster rate of growth, it is necessary to effect a planned dispersal of industries over a wider region.

West Bengal holds a premier position in the field of power development among the States. But there is a striking regional unbalance in power development which is in accord with the regional lack of balance in industrial development. Whether catering for more civic amenities, or for dispersing industries in outlying semi-rural and rural areas, it is essential to provide adequate facilities for generation and transmission of power to serve the vast deficient areas of the State. Transport facilities are better in some aspects in West Bengal than elsewhere in India. But the available facilities are at present under severe strain and require to be considerably expanded to handle the ever-increasing traffic in and around the State. It is, therefore, essential to prepare a programme for reducing congestion in old areas, and to provide a transport network to link up the areas of industrial and urban growth and arrange expanded facilities of rural communication to achieve a full integration of the economy.

On the basis of appraisal of resources, the National Council has suggested a programme of development for the next decade, 1961-71, which will require an investment of Rs. 2,000 crores. This investment, which may be necessary for achieving the projected overall rate of growth of 7.4 percent, is undoubtedly high; all that is stated is that the rate of

growth is technically and economically feasible, and that it is a worthy goal to be kept in view.

Sectorwise, out of the total investment of Rs. 2,015.5 crores, the primary sector will account for Rs. 129.2 crores or 7 percent, the secondary sector Rs. 1,150.5 crores or 57 percent and the tertiary sector Rs. 735.8 crores or 36 percent. In the primary sector, agriculture—including sericulture—accounts for Rs. 86.1 crores, that is, 65.8 percent of the total investment. Most of this will be for irrigation, drainage, flood control, and land reclamation. An investment of Rs. 14.5 crores is allotted to animal husbandry, for better breeding and improved veterinary facilities, Rs. 6.1 crores for the development of forests, comprising new plantation, farm forestry, rehabilitation of degraded forests, improvement of the communication system, soil conservation, etcetera. For fisheries, an investment of Rs. 22.5 crores is allotted.

About 68 percent of the total investment on the secondary sector (Rs. 1,150.5 crores) is set apart for the development of factory industry: most of the investment will be on metallurgical, metal-based, chemical, and forest-based industries. Some metallurgical and chemical industries are anticipated in the Asansol-Durgapur area and resource-based industries in the Jalpaiguri-Siliguri area. The main objective of industrial planning is a wide regional dispersal of industries. For the development of minerals, almost the entire investment of Rs. 126 crores will be devoted to the mining and development of coal which is of major importance to the State and the national economy. For sustained industrial progress, power development, mostly thermal, deserves special attention; so an investment of Rs. 320 crores has been proposed for the large-scale expansion of power facilities.

In the tertiary sector, an investment of Rs. 300 crores is proposed for transport and communications, and Rs. 435.8 crores for social services. The investment under transport will be mainly on roads and road transport, railways and ports.

Of the total investment of Rs. 2,015.5 crores, the State's share will be about Rs. 644.9 crores. In other words, the latter will have to find resources of this order during the next decade. But the amount that the State Government could make available for plan investment during 1961-71 works out to Rs. 243 crores. The anticipated gap of about Rs. 401.9 crores needs to be bridged by additional efforts on the part of the State Government, as well as from Central assistance, so that the entire programme may be fulfilled within the next ten-year period.

The development programme suggested in the report will result in a 7.4-percent annual rate of growth in the next decade. This should be considered as a desirable goal, although it may be difficult to attain. The per capita income, it is also expected, will increase at an average rate of 3.7 percent a year. Compared with the past standards, this is a much higher rate of rise for the State. Out of the additional net output of Rs. 747.1 crores expected during the next decade, 17 percent will originate in the primary sector, 42.5 percent in the secondary sector, and 40.5 percent in the tertiary sector.

IMPORT TRADE

O.G.L. for Pakistan

The Central Government has issued an open general licence granting permission to import from Pakistan five items produced or processed in that country. The items are: live tortoise; fish (not otherwise specified); fish (salted wet); hides and skins (raw or

salted); and kapok. The O.G.L. will be valid up to 20th March, 1963, and is subject to the condition that goods are shipped or despatched on through consignment to India. The payment for imports of two of the items, namely, live tortoise and kapok under the O.G.L. will be made in non-convertible Indian rupees as provided for in the trade agreement between the Governments of India and Pakistan.

AVIATION

Developing Civil Aerodromes

The Central Ministry of Works has created a special division of the Central Public Works Department to develop and strengthen civil aerodromes in Bihar, Uttar Pradesh, West Bengal and Maharashtra. The whole project will be completed within six months at a total cost of Rs. 12 crores.

RURAL SAVINGS

N.C.A.E.R. Study Proposed

The National Council of Applied Economic Research will be conducting a savings survey in rural areas during the first four months of the current year. About 9,000 rural households in 320 villages all over India will be interviewed by the Council's investigators. The study will, for the first time, provide a complete picture of the financial condition of rural families, based on a large and scientifically selected sample of households.

One purpose of the survey is to collect data which will be useful in revising the country's statistical estimates of income, saving, and investment. The rural household saving survey is the third in a series of studies undertaken by the Council directed towards this end. One of the earlier studies was concerned with the estimate of aggregate saving of the country during 1949-58 on the basis of available records and data. The second was a savings survey in urban India based on a household survey. The present survey of saving in rural India will round off the Council's studies of the financial situation of the household sector—an area where adequate data are particularly lacking. Yet the household sector is responsible for about 80 per-

cent of saving in India, with the Government and corporations accounting for the remainder. More precise information is indispensable for effective economic planning and mobilisation of saving.

A second purpose of the survey is to throw light on the economic, social and motivational factors which lead some households to save, while others with similar incomes not to save. Thus a better understanding of the savings habit among different types of rural households is expected to result from the survey.

MOPEDS

Demand Prospects Assessed

The National Council of Applied Economic Research recently took up a study to assess the demand for mopeds on the basis of a consumers' preference study in four selected towns as well as on the available statistical data on urban population, employment, salary earners, etcetera. Results of the study show that a large unsatisfied demand exists for

A highly refractory mortar for all furnace constructions

ACCOSET-50

is composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals. Once it is dried and burnt, ACCOSET-50 becomes one with the bricks.

Recommended for jointing, bonding, monolithic and rammed linings, gunning etc. Technical literature sent free on request.

DUNLOP

LONGEST MANUFACTURING EXPERIENCE IN INDIA

Dunlop Truck and Bus tyres are most in demand with operators all over the country. They have proved themselves to be the most sturdy, most dependable and most profitable under all conditions of service. Extra strong casing—more re-treads per tyre—lowest cost per mile!

DUNLOP TRUCK AND BUS TYRES
lowest cost per mile

mopeds. Looking a little more into the future, on the basis of the anticipated rise in the urban population and urban income, it has been estimated that annual production of mopeds has to reach at least 60,000 numbers by 1965-66 if the needs of the people have to be met. Results of the study also make it clear that the Government should encourage the industry in a big way, particularly, as its product caters to the need of lower middle income groups falling in the income range of Rs. 200 to Rs. 500 a month.

F.B.I.

Kipping in India

The Director-General of the Federation of British Industries, Sir Norman Kipping, is visiting India for a month. Sir Norman, who paid similar visits in 1957 and 1959, will discuss with the Indian authorities current problems of the F.B.I. members' business in India. He will exchange views with the Government, industrial and trade circles in India on general matters of common interest, and make an appreciation of the outlook with a view to preparing a report. In an extensive tour, Sir Norman will visit Calcutta (from 11th January), Durgapur (on 12th January), Madras (from 16th January), and Bombay (from 19th January), returning to Delhi on 23rd January. He will leave for London on 5th February. Sir Norman will address chambers of commerce, visit industrial centres, and talk with business and trading groups all over the country.

POWER

Two Committees Appointed

The Government of India has appointed two committees to undertake surveys of electrical power and other energy resources of India separately. Terms of reference of the electrical survey committees are the following:

In the light of the prospective demands for power by States, regions and categories of consumers to be expected by March 1971, the committee will consider appropriate measures required to meet such demands. The committee, in particular, will consider the following for the said period:

(a) Development of power resources: (i) hydro-electric, (ii) thermal (this includes coal, lignite, oil and gas) and (iii) atomic energy. The committee will make recommendations on the phasing in which these should be brought into use progressively.

(b) Fuel for thermal power stations: the availability of fuel, best location and sizes of plants. The fuel to be considered are coal, oil, gas and atomic energy.

(c) The outline plan for regional and all-India grids and dovetailing (in relation to both timing and potential) of hydro-electric, thermal, and atomic energy stations into a grid with recommendations for appropriate voltage levels.

(d) Survey of local production of generation, transmission and distribution equipment, consideration being given, among other things, to capacities of equipment and possibilities of standardisation. In this connection, the committee will make a review of facilities available for the transport of equipment and make appropriate recommendations.

(e) Investments necessary in generation, transmission and distribution, split up to the extent possible, on an annual basis.

(f) Necessary imports giving due allowance to existing and recommended local production. The extent of standardisation might also be

indicated so as to permit bulk purchase.

(g) Requirements of skilled manpower for construction, operation and maintenance of power systems.

The committee will also consider the organisational pattern for power surveys in future. The committee will also recommend on organisational and financial matters bearing on power development, with particular reference to (i) the adequacy of existing electricity supply legislation in the light of past experience and future development as well as (ii) electricity tariff and financial policies.

The terms of reference of the energy survey committee are the following: The energy study should cover present and prospective demands and supplies, both total and in relation to all constituents of energy on a national, regional and sectoral basis. The committee is expected to provide the Government of India the basic material for developing resources energy up to 1981. In making this study, the committee will consider, among other things, the use of energy in rural areas.

SOUTH INDIA

Energy Demand Assessed

The National Council of Applied Economic Research has published a study of the demand for energy requirements of the four southern States of Andhra Pradesh, Kerala, Mysore and Madras, both individually and regionally. It has made an assessment for the period up to 1976, based on known and contemplated developments in industrial and other sectors.

Chapter I of the study deals with the all-India situation. The most disturbing factor in India is the difference between supply and effective utilisation of energy. Eighty percent of energy available to the Indian economy is wasted; only 20 percent is "converted to work". In the case of non-commercial fuels, 85 percent is wasted. Fuel used in the transport sector is particularly "inefficient". Steam locomotives consume only a third of India's coal, but the net output is equivalent to 41 percent of the total calorific value of coal used.

Viewed in the light of current practices, the outlook is depressing. Energy—instead of serving a handmaid of development—has become a burden on the Indian economy. The industrial backwardness of the southern region is evident from the lower percentage of commercial energy exploited and used. Even the resources available in the region have not been fully used. The region has been a net importer of commercial energy from other States and abroad, imports being nearly 150 percent of the regional output, against 20 percent for the country as a whole. The following features, according to the N.C.A.E.R., deserve special attention:

(i) The contribution of hydro-electric power in the southern region is much higher than that for all-India. Nevertheless, it constitutes only 10 percent of the total commercial energy consumption and 1.2 percent of all energy consumption in the south.

(ii) Surprisingly, petroleum products contribute a larger share in the southern region, being nearly 47 percent of commercial energy.

(iii) The share of coal is much less in the south than for the other regions of the country.

The bulk of the energy consumed in the southern region goes to the domestic sector and 97 percent of this energy is obtained from non-commercial fuels. "It is necessary to arrest this trend in the consumption of non-commercial fuels in the domestic

sector, to relieve the intensity of the pressure on the land resources by the removal of valuable organic material essential to plant growth." The problems of such substitution and the consequent demand on commercial fuels for the various quinquennial periods up to 1976 have been assessed in the study.

The development potential in all the four States, in the field of both agriculture and industry, is high. In the light of these anticipated developments, the energy position emerges as follows:

	Actual demand in 1959	Estimated demand in 1976
Coal fuels (million tons)	23.6	79.5
Petroleum products (million tons)	1.8	5.2
Electricity (billion kWh)	1.8	5.2
Total	5.4	55.9
Hydro	1.3	23.7
Thermal	4.1	32.2
Non-commercial fuels (billion kWh)	399.4	381.5
Draft power (billion kWh)	9.5	9.5
All sources (billion kWh)	568.7	1002.0

The item which is of prime significance in the above table is the share of commercial energy. From the present level of 18.8 percent, it will rise to 64.5 percent in 1976, although non-commercial sources will still continue to play a part in the total energy picture.

The hydro-electric potential of the southern region is large. It has been estimated at 8 million kilowatts at 60 percent load factor. This is adequate to generate about 40,000 million kilowatt hours a year, against a total requirement of 46,000 million kilowatt hours in 1976. The demand beyond 1975-76 is bound to increase sharply. The development of thermal power in Andhra Pradesh and Madras and the fuller development of the hydro-electric potential in all the States appear to be essential. The development of nuclear power in places far away from the coalfields is also called for. In fact, the Central Government is now considering a proposal to set up a nuclear thermal station in the southern region.

The anticipated increase in the demand for coal and lignite can be met entirely from resources available in the region. The estimated re-

Coal fuels (billion kWh)

Petroleum fuels (billion kWh)

Electricity (billion kWh)

Total commercial (billion kWh)

Non-commercial (billion kWh)

Grand total (billion kWh)

sources of these minerals are large and represent nearly 150 to 200 times the level of anticipated demand in 1975-76. Lignite resources of Madras will be almost entirely used within the State, but it will still continue to be a net importer of coal fuels from Andhra Pradesh along with Mysore and Kerala. Except for hydro-electric power, Mysore and Kerala will have to depend on other States for all other forms of commercial energy. Kerala is very advantageously placed in relation to hydro-electric potential which is the only exportable energy from Kerala.

None of the four States in the southern region possesses metallurgical coal, but a noteworthy development which is imminent is the utilisation of the available lignite for producing energy required in steel making. Foundry-grade coke has to be imported from outside the region. Prospects of oil resources are also poor in this region. It is considered essential to establish additional refining capacity of 3 million tons in the southern region by 1975-76. The

CAPITAL, 10th January, 1963.

Government of India is already contemplating establishing a refinery with a capacity of 2.5 million tons in south India.

To sum up, a full and proper exploitation of the available energy resources of the southern region can help to (i) reduce its dependence on imports from other States and abroad from the present level of 65 percent to about 10 percent to 12 percent in 1976; (ii) to pull out the region from its relative backwardness in industrial development—a matter vital for the removal of unbalances in economic uplift of the people; and (iii) increase the share of commercial energy in the total consumption from 18.6 percent to 64.5 percent.

Power Needs of Eastern Region

The study on the eastern region comprising Orissa, West Bengal, Bihar, Assam and Uttar Pradesh is nearing completion. These States occupy 27.5 percent of the country's area and account for a population of 185 million. The region is rich in many minerals, of which the most important are coal and iron ore. This has resulted in a concentration of medium and large industries, particularly in West Bengal and Bihar. However, there are serious lack of balances within the region because in spite of being quite rich in mineral resources, Assam and Orissa are comparatively backward in industrial development. The position of Uttar Pradesh is even worse as it has not even the necessary mineral resources. The region is a net exporter of energy, although 1.8 million tons of petroleum products were imported in 1959. The net export of commercial energy was 153,000 million kilowatt hours, mainly in the form of coal fuels.

The development plans envisaged for the study contemplate further exploitation of the rich mineral resources, such as good quality of iron ore, coal, limestone and other minerals. The discovery of new oil fields and natural gas resources in Assam will go a long way for the establishment of various petro-chemical industries besides meeting the demand for petroleum products in the region. The industrial complex growing around Durgapur and Ranchi and the iron and steel industries of the region will appreciably raise further the demand for commercial energy as follows:

Consumption in 1959	Estimated demand in 1976
30.97	299.89
(4.43 mil. tons)	(38.14 mil. tons)
17.65	47.11
(1.32 mil. tons)	(3.76 mil. tons)
4.10	46.00
52.72	393.00
228.35	218.00
281.07	611.00

The resources of the region are adequate to meet its own requirements as well as for enabling it to continue to be an exporter of energy, mainly in the form of coal and coke. However, the magnitude of the future demand is high and calls for urgent action in bringing about co-ordinated planning for the development and exploitation of the available resources. The hydro-electric power resources of the region are abundant and are estimated at about 19 million kilowatts at 60 percent load-factor capable of generating 95 million kilowatt hours, against a demand of 56,000 million kilowatt hours in 1975-76. There are also extensive reserves of steam coal which can be used for power generation where the generation of hydro-electric power is not found economical. The Council estimates that the resources of the region are such that it will be possible to develop about 23,700 million kilowatt hours of hydro-electric power and 32,200 million kilowatt hours of the thermal power in a co-ordinated manner.

CAPITAL, 10th January, 1963.

London

PROSPECTS FOR THE U.K. SHIPBUILDING INDUSTRY

(FROM OUR LONDON CORRESPONDENT)

THERE is little on which to base optimism about British shipbuilding. The present position can only be described as grim and the immediate outlook appears equally bleak. In so many words, Mr. Alexander H. White, president of the Shipbuilding Conference, echoes the words of Dr. Denis Rebbeck. As president of the Shipbuilding Employers Federation, Dr. Rebbeck said recently that the outlook was not encouraging, and made a plea for combined operation by builders, repairers, sub-contractors and labour forces.

In a New Year message to the industry, Mr. White said: "At the moment, there is little on which to base optimism but our industry stands prepared to meet the challenge of the future. New contracts in 1962 represented only slightly more than a third of the normal annual capacity of our shipyards. Although the closing weeks brought some substantial orders, it would be premature to regard those as a token of sustained improvement in demand. Some of our companies were closed down during the year. Others announced their intention of going out of business, and it may be that there will be further casualties in the months to come. The same fate hangs over shipyards in other countries; it is a consequence of the creation of excessive capacity in world shipbuilding. Our faith in the long-term future of the industry, however, remains unshaken." They had continued to increase the efficiency of their shipyards and to develop their research facilities. They had also to intensify their sales effort among shipowners abroad. "The will to overcome our immediate problems is undoubted," he said. "It is precisely because the industry is now in such good shape to take advantage of a turn in the tide that we look forward with confidence."

One concern which is showing this confidence is undoubtedly Cammell Laird, of Birkenhead, whose progressive young chairman, Mr. Robert W. Johnson, has just recently returned from a salesmanship visit to Norway as a follow-up to the fact that every shipowner in the world operating sea-going cargo vessels recently received a catalogue, the first of its kind, offering shipbuilding at "bargain" prices. Because British shipbuilding is in the doldrums, he and his board are determined to go out and "sell their wares" in a big way rather than rely on tenders. He chose Norway as a start, because shipowners there not so long ago were placing 50 percent of British shipbuilders' overseas orders. He was following up talks he had with Norwegian owners when his Company exhibited at the British Trade Fair in Stockholm earlier last year.

Selected Six

The well illustrated catalogue is called "The Selected Six—Standardisation in Shipbuilding". It offers six standard ship designs, a range comprising three cargo ships, two bulk carriers, and a tanker, varying in tonnage from 3,150 tons to 57,400 tons dead-weight, with speeds from 14 to 17 knots. As to propulsion machinery, diesel engines are offered

to suit owners' requirements. This propelling unit will be the product of Britain, West Germany, Switzerland, Holland, Denmark or Italy, as desired. Cammell Laird, which has modernised its Merseyside Yard at a cost of £8 million, and intends to spend another £8 million on improvements, has, it is believed, taken the biggest step in the British shipbuilding industry's history to attract overseas trade.

Mr. Johnson told his guests in Bergen recently: "We at Cammell Laird look upon the intensely competitive conditions that prevail today, not with dismay, but with a determination to pursue vigorously all potential business. Our visit is evidence of this determination. We have every confidence in our capacity and capability to compete effectively, provided the terms are equal, in the world's shipbuilding market." During the past year or

so, a detailed and comprehensive investigation into the production of a number of sizes and types of ships has been undertaken. Six standard designs had been produced, "a presentation which we believe is unique. There will be no lowering of the standard of material or workmanship. As to cost, this is of course the question to which you will attach the greatest importance." This aspect would be dealt with for formal enquiries. "You have my assurance, however, that the prices of our standard ships are substantially below those for comparable non-standard ships built to owners' requirements".

It is 44 years since Cammell Laird built for a Norwegian owner, although it has repaired many Norwegian ships. It is because Norway is still ordering ships abroad in a fairly big way while other countries hold back that Mr. Johnson selected

the country for the beginning of his overseas drive. This was something revolutionary. Never before, as far as can be ascertained, has a catalogue of ships been published by a British shipyard. Never before has a shipowner been able to say "I'd like one of those"—and know that, by return post, he can receive full details of price and delivery date.

New Scheme Welcomed

The announcement of the new scheme was greeted by an avalanche of praise in the Press, on radio, and on T.V. Perhaps the most original was television's tribute, in which a lady telecaster treated the whole subject as a fashion show. Afterwards, Mr. R. W. Johnson was interviewed by Mr. Harold Webb. The 600 type ships fulfil most general purpose requirements. It was, indeed, only after a long period of deliberation, of acceptance and rejection, that the firm's designers were able to make their selection from the almost infinite number of alternatives available to them. Even then, it was by putting the emphasis on one aspect—which happens also to be the prime preoccupation of shipowners today—economy.

In his introduction to the "Selected Six" brochure, Mr. Johnson puts it thus: "This brochure contains outline plans and principal

CONDENSED MILK TO COSMETICS

Milk products or cosmetics, lubricants or vanaspati, paints or pharmaceuticals, processed food or printing inks, wide is the range of industries served by tin containers manufactured by Poysha. Though young in years, they are already one of the leading tin container manufacturers in the country. Over the last four years their turnover has increased by about 70%, annually. A great deal has been achieved in such a short time because at Poysha the emphasis is always on quality and service. At every stage of manufacture quality control is exercised by technicians, working with modern equipment. Service begins even before the order is placed and ends only when canning is completed.

ONS

particulars of a series of ships of varying sizes to suit most general purpose requirements. "These are, however, ships with a difference, for they have been specially designed to assist our shipowning friends combat the intense competitive conditions prevailing in world shipping today. They are designed to be produced at low capital cost and to operate at maximum efficiency with economy and reliability".

Robot Telephone Exchange

Three fully independent electronic telephone exchanges will replace manual exchanges at Goring-on-Thames, Pembury (Kent), and Leighton Buzzard within the next two years. Mr. Bevins, the Postmaster-General, announced this the other day when he accepted from the manufacturers a new experimental electronic exchange at Highgate Wood, London—the first in Britain, and one of the first in the world. The three exchanges will represent a second generation of more sophisticated electronic machinery, and they will operate completely on their own without the assistance of standby conventional electro-magnetic equipment, as the Highgate Wood exchange will do. Mr. Bevins said that there was not the slightest doubt that the future lay in electronic exchanges, "it is the Post Office's policy to move straight from our existing automatic ex-

changes to fully electronic ones as soon as we possibly can".

Subscribers need not expect speedy transfer to the electronic system, however. It is, after all, some 50 years since work began on replacing manual with automatic exchanges, a programme by no means yet complete. Replacement of existing exchanges will take place as these wear themselves out. In fact, the new system is not going to have any effect very noticeable to subscribers, apart from a barely perceptible improvement in the time it takes to make a connection. The benefits—of economy and efficiency—will be felt at the other end of the line, by the G.P.O. It is hoped that the new units will cost less, need less maintenance, be smaller in size, so that more could be packed into less space, and offer room for further and better facilities.

The Highgate Wood electronic telephone exchange is based on the principle of time division multiplex, in which a single highway through the exchange—the physical path through wires and switches—is able to carry up to 100 simultaneous telephone conversations. In conventional telephone exchanges, one subscriber is connected with another by a "solid" path through the metallic contacts of relays and selector mechanisms. All the apparatus along that path is used exclusively for the one conversation. In the electronic exchange, the caller is

directly connected with his correspondent for only one-hundredth part of the time, each of the remaining 99 periods of the time remaining available to carry another conversation. The switching rate, however, is so fast—10,000 times a second—that there is no audible break in the conversation: a single syllable may be broken into many hundreds of pulses. Despite this, speech quality is considerably higher than is required for ordinary telephone working, with a substantially flat response from 300 to 4,200 cycles a second. (Frequencies required for normal telephone working are 300 to 3,400 cycles a second.)

Co-operative Programme

The electronic exchange is the result of a unique co-operative programme of research and development between Post Office engineers and the five principal British manufacturers of exchange equipment. The co-ordinating body is the Joint Electronic Research Committee, representing the Post Office and the companies responsible for designing and building the exchange: Automatic Telephone and Electric Co. Ltd, Ericsson Telephones Ltd, the General Electric Co. Ltd, Associated Electrical Industries Ltd and Standard Telephones and Cables. A small experimental model of the electronic exchange was built at the Post Office research station at Dollis

Hill, London, N.W., in 1959. Its success led to the design of the first public exchange.

At Highgate Wood, the 800-line electronic exchange will work alongside a conventional electro-mechanical exchange, with switching available to bring either one or the other into operation. This is not because the engineers suspect the reliability of the electronic model; it is to give them the facility of taking it out of service for further research activities without interfering with the service to subscribers. A basic part of the Highgate Wood technique is an electronic switch, in most cases a semi-conductor diode, which can change from "on" to "off" in a period of time measured in thousandths of a millionth of a second. Known as "gates", these switches are controlled in a strict time sequence. The "on" moment occupies one millionth of a second and is repeated every 100 millionth of a second, so that the switch is closed and opened 10,000 times a second. Each call is allotted a particular 1-microsecond "time-slot" in the 100-microsecond period and the connection with the wanted subscriber is established by acquiring a further "empty" time slot in that part of the system corresponding to the number being called, or to the required outgoing junction to a distant exchange.

Overall Control

By interlacing the speech paths in time, any one highway can carry the full 100 conversations, each in a separate time slot in the 100 microsecond sequence. The switching cannot operate "at the wrong time", because the repetition rate of all pulses throughout the system is under the overall control of a 1-ke/s quartz crystal clock, which provides the reference time for the whole exchange. A revolving magnetic memory drum contains all the essential information relating to each line, storing on its surface such things as whether it is a pre-payment call box, or a subscriber's telephone and deals with such facilities as referring a call to an alternative number. The drum, which can be looked upon as the central information library of the exchange, also records the number and duration of each subscriber's calls. This can easily be applied to automatic accounting procedures.

In synchronisation with the revolution of the magnetic drum, each line is in turn examined to see whether a call is required or whether the line is busy. When the memory finds that a call is to be made, it causes the line to be connected with apparatus that picks a vacant time slot in the 100 microsecond sequence into which the call can be fitted and passed on to another part of the system, the register. After producing dialling tone to the subscriber, the register is ready to accept dialling pulses and store them on delay line memory units until they are required for the next step. This is to refer the pulses back to another part of the memory drum which examines them and translates them into the required "routing instructions" to make the connection. It might be to a subscriber on the same exchange, or the drum might be required to generate a series of pulses to route the call through several distant exchanges to its destination. (For calls to a distant exchange, the electronic signals from the drum require to be converted to electrical pulses acceptable to conventional exchange working.) The complete system behaves as though it had only one operator handling all the calls for the exchange, one at a time; but one working so rapidly that the subscriber can detect no delay in the completion of the call.

Jute

JUTE FLOOR PRICES WILL RESTRICT GUNNY OFFTAKE

AS far back as 1920, there was an agitation in Bengal for fixing a minimum price for raw jute, and the measure has been a favourite hobby-horse of politicians ever since. In 1938, a Bill was introduced containing a provision that "no person shall buy jute from any grower at a price lower than Rs. 10 a maund." Then, as now, the fixing of a minimum price was found impracticable, as it was easy to evade regulations and the evasion was not always at the instigation of the buyer. It has been proved, time and again, that those whom such measures are designed to protect are invariably the first to break the minimum price. This underlines the fact that many legislators are not acquainted with the realities of the world jute and jute goods trade.

If there is anything that the experience of the past few years has taught, it is that there is a demand for jute goods as long as they are cheap. While the expansion of demand during the past year is attributable in no small degree to the improvement in world trade, it is clear that the increased use of jute goods is also due to their being cheaper than in 1961. If the price of the raw material is artificially raised, a rise in the price of manufactured goods would be inevitable.

Although a modest increase would probably have little effect on consumption, any substantial increase would at once encourage the use of substitutes with disastrous results. No longer can one justify any rise in the price of jute goods as was done in the "statement of objects and reasons" of the Bill introduced in 1938 that there is "as yet no successful imitation or substitute." There are several now and they are prevented from competing only by their dearness in comparison with jute.

Fall in Prices

Recent newspaper reports show how faulty is the knowledge of many about the current raw jute situation. A statement made by a Minister of the West Bengal Government claims that one of the reasons for the fall in the price of raw jute in the State is "the absence of adequate interest of buyers and consequential unbalance in supply and demand". A glance at the purchase record of Calcutta mills over the past few months would prove that the statement is baseless. During November and December 1962, member-mills of the I.J.M.A. and others purchased 1.9 million bales of jute, or 9.5 million maunds. During that period, the consumption of the industry was estimated at about 6 million maunds. In other words, it purchased 3.5 million maunds more than its consumption. Furthermore, during the current month, the I.J.M.A. mills have undertaken to purchase 3.25 million maunds in weekly quotas, non-member mills 250,000 maunds and the Jute Buffer Stock Association (which, in effect, is again the mills) a further 250,000 maunds. Does this sound like "absence of adequate interest of buyers"? Those in responsible positions in Government circles should be sure of their facts before making sweeping statements.

Protection for Dundee

The question of protection for the U.K. jute industry has again come to the fore through the British Jute to the Fore Federal Council, which has Trade Federal Council, which has told a restrictive trade practices court

that the U.K. mills cannot compete on equal terms with low-cost jute goods from India and Pakistan. This is a question which has attracted the attention of industrial and Government circles for many years, and as is usual in such controversies, there is a great deal of exaggeration on both sides. The withdrawal some years ago of the export duty on Indian manufactured goods made the position more difficult for the British industry, and it must not be forgotten that Pakistan has a powerful weapon at its disposal for purposes of retaliation, if necessary, in the form of export duties on raw jute, although a discriminatory tariff in this direction would be unworkable. But, at present, the "mark-up" imposed by the U.K. Jute Control already operates greatly in favour of Dundee to the detriment of the Indian manufacturer, and this is a factor which should not be ignored by the British Jute Trade Federal Council.

Gunnies Ease

There has been nothing of outstanding interest in the market for manufactured goods during the past week. The downward tendency has continued and there has been a depressing absence of demand from overseas. But the shipping figures for December have been good, as is reflected by the reduction in stocks of manufactured goods. In contrast to the goods market, raw jute has remained fairly steady and good business has been transacted with mills. Upcountry markets have taken the lead, and prices in the mofussil have advanced considerably, probably as a result of reports that the State Trading Corporation has made some purchases through co-operatives at the minimum prices. The quantities so far involved, however, are not likely to have a lasting effect on the situation. Although the average holding of mills is high, and the current quotas issued by the Jute Commissioner are designed to bring the industry's stocks of raw jute up to 30.5 weeks' consumption by the end of January, the stocks are very irregularly distributed. Their quality does not conform to the mills' requirements in many cases, so mills will have to purchase selected amounts in order to get what they need. This will tend to support the market.

Stocks of Jute Goods

Stocks of jute goods held by member-mills of the I.J.M.A. at the end of December 1962, amounted to 83,000 tonnes, being made up of 22,800 tonnes (27.5 percent) of hessian, 46,600 tonnes of sacking (56.1 percent)

and 13,600 tonnes of other goods (16.4 percent). Hessian stocks dropped by 4,900 tonnes and sacking by 3,900 tonnes, but other goods rose by 400 tonnes. The overall reduction compared with November 1962 was 8,400 tonnes. In December 1961, total stocks were 55,600 tonnes, consisting of 16,100 tonnes of hessian (28.8 percent), 28,800 tonnes of sacking (52.1 percent) and 10,700 tonnes of other goods (19.1 percent).

JUTE MARKETS

Manufactured Goods: There was a certain amount of speculative buying at the start of the past week, and it tended to push up prices. Opening quotations on Thursday morning rose to Rs. 115.45 for January B Twills, which was a premium of Rs. 1.60 over the forward position, and Rs. 51.75 for January 40in. 10oz. hessian, this being Rs. 2.40 over the July-September quotation. The rise was short-lived in view of the almost complete absence of overseas interest. With renewed selling pressure in the futures market, all the gains were wiped out by Friday morning. By Saturday, new low levels were recorded at Rs. 113.75 for ready B Twills, and Rs. 51.25 for 40in. 10oz. in the same position. This trend continued with minor variations over the week-end, and speculators forced heavy goods down a further 50p by Monday. On Tuesday, there was a slight recovery on the news that jute goods stocks had shown a substantial decline of 8,400 tonnes. But again the lack of genuine interest, coupled with heavy speculative selling pressure, pushed the market down.

Opening quotations on Wednesday morning were as follows:

	Jan.	Feb.	Mar.	Apr.	May	Sept.
40in. 71oz.	38.85	38.25	37.75	37.25	36.65	
40in. 8oz.	41.50	41.00	40.50	40.00	39.25	
40in. 10oz.	50.75	50.40	49.80	49.20	48.65	
B Twills	114.25	113.25	113.90	113.65	113.00	
Cornacks	118.25	117.50	117.00	116.50	115.50	
Heavy Cees						
(Plain)	112.25	113.25	113.25	113.50	113.00	
A Twills	142.00	140.50	139.50	138.50	138.00	
Liverpools	122.25	122.25	122.00	121.75	121.00	

Raw Jute: The mills continued to make extensive purchases against allocations for the buffer stock and from the Jute Commissioner. Upcountry markets benefited from some small purchases by the State Trading Corporation at the minimum rates, and the fall in arrivals also helped. Calcutta prices, however, remained unaffected, and business was conducted well below the official minimum. Wagon arrivals in Cossipore dropped sharply and only 505 wagons

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the stocks of jute goods at the end of December as follows:

Description	31st December, 1962		30th November, 1962		Increase over (+) or decrease from (-) last month		31st December, 1961	
	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons
Hessian cloth and bag	7,66.35 (8.38)	22.8 (22.4)	9,15.57 (10.01)	27.7 (27.2)	-1,49.22 (-1.63)	-4.9 (-4.8)	5,20.47 (5.69)	16.1 (15.9)
Sacking cloth and bag	10,37.26 (11.34)	46.6 (45.8)	11,09.23 (12.13)	50.5 (49.7)	-71.97 (-7.9)	-3.9 (-3.9)	5,97.41 (6.53)	28.8 (28.3)
Others		13.6 (13.4)		13.2 (13.0)		+0.4 (+0.4)		10.7 (10.5)

THE U.K. JUTE MARKETS

FIBRE QUIET

(FROM OUR DUNDEE CORRESPONDENT)

NO change has taken place in the Pakistani raw jute markets over the past two weeks. Due to so many business premises being closed during the Christmas and New Year holidays, offers of the fibre were not being so freely made as previously. No buying interest was shown and the position generally was very quiet. Registered sales of raw jute up to 15th December to the U.K. amount to nearly 450,000 bales. Dundee spinners are carrying substantial stocks of raw jute and large quantities are now arriving in the U.K. Spot and allot parcels are available to spinners and this is depressing the market to a certain extent. There are holders of secured lots who are willing to accept less than the generally quoted rates, and this has been making the position a little irregular.

No offers of Mill Firsts were made, but Mill Lightnings were available at £123, but up to £10 a ton more was asked in some instances. Mill Hearts were lowest at £96 5s and Grade Hearts at £82 10s c.i.f., U.K., for January-February shipment. Grade Tossa-2/3 was at £135 10s and Grade Tossa-4 at £115 10s. Prices of the lower grades of Tossa were weak with Outport-2/3 at £100 10s and Fours at £90, c.i.f., U.K. January-February. Cuttings were quieter with S.N.C. at £55 10s and N.C. at £48. There were no sellers of Siam jute. Shippers remained out of the market because of the scarcity of supply. The crop in Thailand is much smaller than expected and the early shipment position appears to be oversold.

The Calcutta goods market became steadier at the end of last week, but since then the position became quiet later. Quotations were at 78s 3d for 40in. 10oz. and at 59s 6d for 71oz. a 100 yards f.o.b. Calcutta for January

What keeps blowing and growing in Burnpur is IISCO Steel and in fact there is about a million tons of steel ingots a year, not to talk of finished steel, blooms, billets, bars, sheets, rails and structural—coming out ceaselessly from the integrated steelworks. These, the end products of Burnpur 'blowing and growing', help to shape many a thing which forms part of our daily life and part of our industrial life.

Indeed, in every sphere of the country's endeavour at present, IISCO Steel is playing a very substantial part.

shipment, at 77s 6d and 58s 6d February, at 76s 9d and 58s 3d March and at 75s 3d and 57s 9d April-June. B Twills were at 175s 6d, 175s 3d, 175s and 174s for the respective shipment periods.

Dundee yarns and cloth were very firm and further orders have been received since business was resumed after New Year holidays. Producers are very busy, and most of the new business has to be for delivery over the second quarter of the year.

THE PAKISTANI JUTE MARKETS

FAIR DEMAND FOR CUTTINGS

(FROM OUR Dacca Correspondent)

E.P.C. registrations during the third week of December 1962 were almost as high as during the first fortnight, and totalled 339,673 bales. Of these, over 54,000 bales were cuttings bought mainly by the United States. Possibly as a result of this, cuttings were the only grade in which fairly large transactions were reported at prices approximately equivalent to the overseas minima, which is slightly higher than the rate at which business was reported to the United States. It is

apparent from the above that there was as usual a final spurt of buying just before the holiday period. The pattern for the last few months seems to have been the same, namely, to buy as far forward as possible, probably because earlier purchases were shipped generally on the first day of the shipment period. Among other factors, this system of buying as far forward as possible has caused serious problems for the balers.

The result of this was shown in the local pucca bale market, where all transactions for the forward position were at a premium over the ready position. Quite considerable discounts were obtained by buyers who were prepared to take immediate delivery. The upcountry loose markets continued more or less unchanged, with arrivals reduced, and the moisture content, particularly in tossa, considerably higher. What is hard to explain is that in spite of the very obvious flood damage at the beginning of the season, very little seriously damaged jute has so far appeared, except for some hard-centred jute. Some better quality fibre has, however, been available. This is the traditional raky jute or better jute held back for better prices, which was not expected this season. The congestion in Chalna is probably at its peak at present, and even Chittagong is fairly well jammed with jute seeking space on ocean-going vessels.

Fairly widespread labour troubles in the jute trade and possibly also in the jute industry, are expected. Rival unions seeking to prove to their members their superiority over others have threatened a strike in Narayanang. There is already a strike in Chandpur, and quite possible, the strike may spread to all parts of the country. If this happens, it may well strengthen the prices of unsold and afloat jute, and will even give the Conference a chance to clear the congestion at ports. It will, however, put balers in a very difficult position, and will certainly not help the poor growers.

COMPLAINT AGAINST CARPET BACKING SHIPMENT DELAYS

A strong plea for relief from delays in shipments of jute carpet backing from India to the United States was made in New York by Mr. Paul M. Jones, president of the American Carpet Institute. Speaking for the U.S. carpet industry, Mr. Jones urged the Indian authorities to reconsider their administration of recent Customs regulations, which, he said, appear to be responsible for these shipment delays. This development, he stated, has had a serious impact on American carpet manufacturers, who consumed about 240 million square yards of jute carpet backing in 1962, of which 79 percent came from India. The Institute, he said, had received widespread complaints from its member-companies who are dependent on supplies of jute carpet backing, to sustain the high rate of production of tufted carpet for U.S. consumers.

Commenting on the Customs regulations, which require scrutiny of contracts for the export of jute goods by the Calcutta Customs authorities, Mr. Jones stated that these regulations in some cases interfered with the ability of suppliers to meet contract terms on prices which had been agreed upon many months ago. While stressing that the American Carpet Institute does not question the purpose of the Government of India to protect its foreign exchange, Mr. Jones urged that administration of these regulations should also take into account legitimate trade practices in the United States. These practices, he explained, provide for purchases to be made on foreign contracts at prices which must be honoured on the date of shipment regardless of current market quotations. When such contracts are abrogated by arbitrary regulations, he emphasised, the flow of trade between responsible shippers and buyers is impeded. This development, he said, could cause U.S. purchasers to lose confidence in future transactions with their sources of jute carpet backing from India. Mr. Jones stressed that the American carpet industry must be assured of dependable terms for future prices and deliveries if it is to continue as a market for jute carpet backing from India. Further uncertainty about future conditions, he declared, would certainly accelerate the use of substitutes for jute carpet backing by U.S. manufacturers. This could mean, he said, an ultimate loss of this fast-growing market to the Indian jute industry.

ALUMINIUM ON THE LONDON METAL EXCHANGE

An interesting question for 1963 is whether a fifth metal, aluminium, will be added to the four—copper, zinc, lead and tin—in which the London Metal Exchange trades at present. The idea has been discussed sometimes in recent years, but it has more substance now than previously, because the New York com-

CAPITAL, 10th January, 1963.

modities exchange is considering the same proposition. Aluminium is produced, outside the Soviet bloc, mostly by a few big companies, and they dislike the principle of fluctuating prices. But this situation is similar to that of copper; and the big producers of copper have organised a method of stabilising the price of their metal.

There is no doubt that while copper was fluctuating, the stability of aluminium helped it to compete with copper. Both metals are in abundant supply; consumption of both is increasing; producers of both desire the benefits of stability. But if the functioning of the market is to be permanently restricted by price-stabilising techniques, it will be necessary to introduce an element of flexibility into pricing policies. It is difficult to believe that the long period of stability, of both metals, in 1962 represents a basically unchanging relation between them. In November 1962, the price of copper was flexible to the extent of 2s 6d a ton, but £234 a ton is still the basic price fixed by the producers.

In an interesting reversal of earlier trends, lead has advanced while zinc has fallen back. It has been felt for some months past that lead fell too fast. The price of lead is now being adjusted—although demand for metals generally is restricted by uncertainties in the economic trend.

BELGIUM WANTS MORE IMPORT CURBS ON INDIAN JUTE GOODS

By Malcolm Subhan

THE case for further restrictions on jute goods imports from low-wage countries such as India and Pakistan is argued at considerable length in a report which has just been released in Brussels by the Belgian jute industry. Broadly similar demands have been made in recent months by textile federations in France and Belgium for cotton textiles. The present report may, therefore, be regarded as part of the campaign undertaken by the European textile industry to prevent any concessions being made to the Asian members of the Commonwealth in the course of the Common Market negotiations with the British.

The report was prepared by the professional organisation of the textile and clothing industry at the request of the Belgian Ministry of Economic Affairs. However, it may be said to reflect the views of the jute industry in not only Belgium but also the other Common Market countries. Belgium, after all, is the largest European exporter of jute yarn and fabrics. Roughly half the total exports of the west European industry are of Belgian origin: in 1961, a comparatively bad year because of the severe shortage of raw jute, they amounted to 40,700 tons. While this figure is relatively small when put beside those for India or Pakistan, it must be remembered that during 1961, Belgium's two principal European competitors, France and the U.K., only exported about 13,000 tons each.

Competitive Capacity

The report is primarily an assessment of the competitive capacity of the national industry. It broadly concludes that if the Belgian jute industry is more competitive than either the British or the French, it is at a serious disadvantage vis-à-vis the Indian and the Pakistani. The latter enjoy not only a virtual monopoly of raw jute, but also a considerable degree of Government protection. The report claims that under these circumstances, the Belgian jute industry must inevitably lose its markets to India and Pakistan unless it is afforded a certain measure of protection.

The special factors which in the view of the Belgian industry favour jute manufacturers in India and Pakistan are examined at some length. The first of these relates obviously to raw materials. It is argued that both India and Pakistan have taken advantage at various times of the monopoly which they enjoy arbitrarily to fix the export prices of raw jute even while allowing domestic prices to find their own level. The report accuses the Pakistani Government, moreover, of using the monopoly of exchange price checks, the monopoly of exchange prices and a tax on minimum export prices to discriminate exports of raw jute to discriminate against overseas buyers. Inevitably, the report maintains that jute manufacturers in India and Pakistan enjoy the further substantial advantage of cheap and abundant labour. To this must be added, in the Belgian view, the various subsidies bestowed on the jute industry by the two Governments, industry by the form of bonus vouchers as far as the German. Rome, though no less protectionist than Paris, has nevertheless sanctioned barter deals involving jute goods, while Belgium, which espouses the principles of free trade, is not altogether happy defending the interests of an industry which

the support of jute interests in the other Common Market countries. The first is that the comprehensive trade agreements to be negotiated between the enlarged Community and India and Pakistan should not only impose certain restrictions on the exports of jute goods by the two Asian countries, but also contain an arrangement under which European mills could obtain their supplies of raw jute on more or less equal terms with Indian and Pakistani mills. The second proposal, put forward unsuccessfully in the course of negotiations under G.A.T.T., called for a European tax equal to the export tax on raw jute. Needless to say, the proceeds of the tax would be returned to the Asian countries in the form of financial aid.

Clearly, all Belgian fears ultimately relate to the price of jute goods from India and Pakistan. In general, Belgian prices are between 25 percent and 30 percent higher than Indian prices. The common external tariff on jute manufactures of 23 percent more or less covers this difference (although the present Belgian tariff of 18.4 percent does not), and explains why the industry is so strongly opposed to any tariff concessions. (There is, however, a drawback on temporary imports of items such as hessian and jute bags.) As matters stand at present, Britain will have to apply the common external tariff in four or five stages to all her jute imports from the Indian sub-continent, for the Six are unlikely to grant the British request for a zero tariff on heavy jute goods. They offered last summer to reduce the tariff by 15 percent in the case of heavy jute goods, although the Belgian industry would in fact like the tariff to be even higher than at present.

Commercial Policies

The industry is aware, however, that an effective policy towards imports from the low-cost countries is impossible as long as the Six do not co-ordinate their commercial policies. Some progress in this direction has already been made at industry level. Among the proposals which have been canvassed is one which while restricting imports of jute goods from Asia, would nevertheless oblige member-countries to import a fixed amount each year. There would be no restrictions, however, on jute goods imported on a temporary basis where such imports are vital to a particular industry, such as the chemical, for example.

The need to restrict imports from the low-wage countries has apparently been conceded by the Common Market Commission, although a proposal by the jute industry for the establishment of an organisation similar to the U.K. Jute Control was turned down by the Commission. The situation is quite different, however, as regards the six member-countries themselves. Bonn, conscious of the need to help under-developed countries, has undertaken under G.A.T.T. progressively to dismantle quota restrictions by the end of 1964. The French Government, strongly protectionist by tradition, has refused to go as far as the German. Rome, though no less protectionist than Paris, has nevertheless sanctioned barter deals involving jute goods, while Belgium, which espouses the principles of free trade, is not altogether happy defending the interests of an industry which

employs only a small fraction of her labour force—just over 5,000 workers in all.

The Belgian jute industry does not lack allies, however. The industry as a whole is critical of the provisional agreement on India and Pakistan concluded last August between the U.K. and the Six. Its criticisms are somewhat similar to those voiced by the cotton textile industry, in that both industries feel that the agreement contains insufficient safeguards against re-export from the U.K. of Asian goods during the transitional period, when Britain will apply a lower tariff than the present member-states. Similarly, both fear that the U.K. will import increased quantities of certain textiles for the home market in order to export part of its domestic production to the Continent at very low prices.

Distortion of Trade

The problem of the distortion of trade as a result of disguised re-exports is a real one in the Belgian view, and the report mentions two such cases arising within the Community. The German industry undertook recently to stop imports of Asian sacking until 1965, and to require a certificate of origin for other jute manufactures after 1st January, 1961. West German companies acquired one or two mills in Belgium, however, to convert sacking imported from India and Pakistan into bags. As the conversion is carried out in Belgium, a Belgian certificate of origin acceptable to the Germans is issued. The report also claims that while the French authorities do not grant foreign exchange for the import of jute manufactures from Asian countries, a very small quantity of sacking and hessian of Indian and Pakistani origin enters France from Holland under cover of false certificates of origin.

It may be noted in passing that the debate between the U.K. and the Six has turned as much on the protected nature of the British market for jute goods as on the question of imports from India and Pakistan. As the Six made clear to Mr. Heath last summer, the U.K. will have to abolish Jute Control on joining the Common Market, and at the same time, open up her market to jute goods from the other E.E.C. countries. The Belgians for their part are not afraid of British competition. As the report points out, Belgian prices are considerably lower than British, both for jute yarn and fabrics. This is because the Belgian jute industry is one of the best equipped and most modern in Europe. It produces approximately 100,000 tons of yarn and fabrics a year, against a total annual consumption of approximately 80,000 tons. Nearly all the yarn consumed in Belgium—some 55,000 tons a year during the period 1958-61—is manufactured in Belgian mills. The situation is altogether different for fabrics, however. Of the 25,000 tons or so consumed in Belgium each year, roughly half is imported at present, principally from India and Pakistan. In other words, although consumption has risen from 14,000 tons in 1950 to approximately 25,000 tons, Belgian manufacturers have secured only a small share in the increased consumption.

Fall in Belgian Exports

It is this fact, together with the overall decline in its exports, which has alarmed the Belgian industry.

While its yarn exports now average 21,000 tons a year, compared with a mere 9,000 tons in 1950, its exports of fabrics have dwindled from a peak of 34,000 tons in 1951 to roughly 21,000 tons today. (During the same period, U.K. exports fell by 20 percent, and those of West Germany by nearly half.) Only exports to Holland have risen sharply, although much of the increase apparently represents re-exports of jute fabrics from India and Pakistan.

The Belgian industry maintains that while exports from India and Pakistan to the seven countries of the European Free Trade Area have remained more or less stationary in recent years, they have risen sharply to the Common Market. The report claims that the two Asian countries exported only 14 tons of jute fabrics to the Six in 1955, but over 18,000 tons in 1961. Their exports of new jute bags rose from approximately 9,000 tons in 1955 to over 21,000 tons in 1961, and would have been higher, in the industry's view, but for the shortage of raw jute that year.

Modernisation of Industry

As the report makes clear, the Belgian jute industry has made a determined effort to strengthen its competitive position on both home and export markets. Considerable sums have been invested in new plant and equipment in an effort to raise productivity, which has, in fact, increased from just under 12 tons a worker a year in 1950 to a little over 17 tons today. At the same time, the industry has tried to diversify its production and to reduce the emphasis on packing materials. Even as regards packing materials, Belgian firms are trying to develop such new lines as jute bags lined with polythene. The industry complains, however, that its efforts to specialise have been of little avail, as the new products have been quickly adopted by Asian manufacturers. Even jute carpets, traditionally a Belgian specialty, are now being made in India. According to the report, mills in Calcutta have ordered approximately 300 broad looms for the manufacture of carpet rugs, enough to meet the entire world demand for jute carpets.

MANGANESE ORE INDUSTRY IN DISTRESS

(FROM OUR BOMBAY CORRESPONDENT)

THE once-prosperous manganese ore industry is now in trouble. In 1956-57, India exported nearly 1.7 million tons of manganese ore; exports fell to 1.05 million tons in 1961 and the figure for 1962 is placed at no more than 850,000 tons. The disappointing export performance reflects the declining fortunes of the manganese ore mining industry. About 80 percent of the mines are said to have already closed down, resulting in a sharp decline in output. At a time when the country's critical foreign exchange position demands the utmost export effort, the slump in manganese ore exports is a matter of serious concern and measures aimed at rehabilitating the industry and the export trade deserve careful attention. In his address at the recent seventh annual general meeting of the Western India Minerals Association, the chairman, Mr. N. S. Worah, has attributed the industry's difficulties largely to the Government's unrealistic export policy, and has warned that the export trade may be lost permanently if the authorities do not take certain remedial measures soon enough. In the absence of a longer-term policy by the Indian Government, consumers abroad have been looking around for alternative sources of supplies and entering into long-term contracts with other producing countries. Hitherto, Brazil, Chile, Morocco and Russia have been India's chief competitors. But recently, the former French Equatorial Africa, where large quantities of superior grade ores have been discovered, has emerged as a formidable rival.

According to Mr. Worah, exports of manganese ore can be boosted only through barter and link deals; sales on a direct or cash basis are not possible in view of the price disparity (ranging from \$3 to \$7 a ton depending on the grade), following the high f.o.b. cost of Indian ore and the availability of large quantities of superior grade ores in other countries. The Government has been permitting certain barter deals, but what is needed is a bold, imaginative and clear-cut barter policy, allowing import of selected items against ore exports. Mr. Worah has also emphasised the need for removing various restrictions such as movement control, pre-shipment analysis and commission payable to the State Trading Corporation as they do not serve any purpose in the present altered circumstances. In order to develop the mining industry, he has suggested that the Government should be liberal in giving mining licences, and thus throw open the vast areas reserved by the Government for exploitation by private

enterprise. The levy of royalty at fixed rates according to grades, as against the previous method of basing royalty on the pits-mouth value, is said to have adversely affected the industry, particularly in the case of medium and lower grade ores.

Mr. Worah has regretted the Government's move to withdraw the present scheme of concessional railway freight rates on manganese ore from 30th March. He says that apart from giving a serious blow to the industry struggling for its existence, it has created uncertainties about the future freight rates, making it difficult for exporters to conclude forward sales. He has urged the Government to continue the present scheme for at least two years. The mineowners have made a strong representation to the Government on this point. Informed sources believe that the Commerce and Industry Ministry is inclined to accept the industry's case; only the Railway Ministry is insisting on the withdrawal of the concession from 30th March. The Railway Ministry's decision to withdraw the concession is based on the report submitted by a panel of cost accountants, who investigated the cost of production of the manganese ore mines as also their margin of profit. The representatives of the industry have challenged the findings of the cost accountants, which place the industry's profit margin between 40 percent and 48 percent. To convince the Government, some important mineowners are known to have submitted their actual accounts. The Government's final decision is awaited with interest. The industry and the export trade have also emphasised the need for increasing the rate of loading at ports like Calcutta and Madras. The enormous delay caused to ships at these ports is affecting the competitive position of Indian ore. It is pointed out that in a port like Calcutta, it takes about 15 days to load a ship of 7,500 tons, whereas a ship of this tonnage can be loaded in an African port in just a day.

Lower World Coffee Crop Forecast

(BY A SOUTH INDIAN CORRESPONDENT)

AN 8 percent fall in the 1962-63 world coffee crop is forecast by the U.S. Department of Agriculture. Its third revised estimate places the current season's crop at 65,550,000 bags, compared with the 1961-62 figure of 71,190,000 bags. Of this the exportable quantity will be to the tune of 52,142,000 bags, compared with 57,947,000 bags in 1961-62. Some

of the South American producers like Columbia are having smaller crops due to bad weather. The South American crop is placed at 37,097,000 bags, compared with 45,217,000 bags in 1961-62. The North American crop will be slightly smaller than the previous year's. African producers, on the other hand, are having a bumper harvest. Production in Africa in 1962-63 would be the highest ever, according to the Department. Record crops are expected in several countries including Angola and Kenya. The total African crop is forecast at 14,533,000 bags, compared with 12,318,000 bags in the previous year. The Department forecasts larger crops for India and Indonesia also.

The estimate concerning India seems to require a further revision. There were unseasonal rains early in December in the principal coffee-growing areas of Mysore including Coorg. As a result of these rains, it is feared that the 1962-63 crop has been damaged and its size will be smaller than what was anticipated earlier. The exact extent of the damage is being assessed. Picking and processing of coffee on the estates are also being delayed on account of these unseasonal rains. The original estimate of the Coffee Board of India was that the 1962-63 crop will be to the tune of 54,800 tons. The present indications are of the order of 53,000 tons, comprising 32,800 tons of Arabica and 20,200 tons of Robusta.

There is a feeling in certain quarters that the quality of Indian coffee is deteriorating. There are surmises that it may be due to various causes such as the age of trees, larger production, thinning out of shade and lack of proper care during harvesting, processing and curing of coffee. The Coffee Board chairman referred to this problem in the recent meeting of the Board and said that this was not peculiar to India alone because other quality coffee-producing countries like Kenya were also facing this problem. Various remedies have been suggested from time to time by scientific workers in the field such as replanting old trees with suitable varieties best suited to the soil and climate, proper maintenance and care in harvesting, processing and curing of coffee. All these involved careful planning to improve the quality of coffee, he said. What is called the "new malady" is a matter of serious concern for coffee growers. This causes unusual leaf fall followed by a severe drying of the wood. This malady was first noticed some five years ago, but it was only two to three years since the crop has been affected. It is said that extensive areas in the south west monsoon tracts where 80 percent of India's coffee is grown, are affected by this malady. The Coffee Board has been conducting some studies on it. Of late, indications of the existence of eel worms in large areas are being frequently obtained, and studies are in progress to understand the implications of this fact. The Coffee Board chairman told the last meeting of the Board that extensive investigation on this problem would be undertaken by a scientific officer of the Board

CAPITAL, 10th January, 1963.

soon. Preliminary studies have been started by the Research Department to determine whether pest incidence could cause ill health among plants due to resultant nutrient or hormonal deficiency. In the meanwhile, desirability of ground protection, improvement of soil tilth, provision of adequate shade under Indian conditions together with adequate plant protection measures and balanced nutrition, is felt as a very essential condition in bringing round the affected coffee.

Rubber Pool System

The rubber dealers in Kerala are opposed to the proposal to introduce a pool system of marketing for raw rubber produced in the country. The proposal has been mooted as a positive remedy to the present difficulty of the growers in getting the statutorily fixed price. If the proposal is accepted and implemented all the rubber produced in the country will go to a central pool from where the consumers will have to take their requirements. Under the pool system of marketing, the chances are better for the growers to get the statutorily fixed price. The dealers' contention is that the difficulty now experienced concerning the sale of raw rubber is due to the bulk release of import quota at the peak production period in India. With some readjustment it will be possible to balance supply with demand, and ensure that the growers get the price for which they are entitled. The rubber dealers have a genuine fear that they will lose their ground if the pool system of marketing is introduced. However, it is a fact that the growers are now compelled to sell their produce at prices less than the rates fixed by the Government, although rubber is in short supply in this country. The Government and the Rubber Board have a responsibility to correct this situation.

Prices at Tea Auctions Improve

(BY A SPECIAL CORRESPONDENT)

PRICES at the tea auctions to the end of November 1962 show that 1,765,545 packages have been sold in Calcutta at Rs. 5.43 a kilogram compared with 1,702,810 packages up to the same date in the previous year at Rs. 4.95 a kilogram. In London, the corresponding price average is 5s 5d a lb, compared with 4s 8d a lb in the previous year. The price fall noted at tea auctions in the past three weeks appears to have come to an end and Calcutta and Cochin have recorded some improvement. London also shows a steadier tone. After a long period of steady losses by India in export markets in competition with Ceylon, there are now signs that the efforts made by the Indian Tea Board in conjunction with the Central Government in the matter of taxation, are at last bearing fruit. The amount of tea sold in Calcutta up to the last sale in 1962 for export is given as 64,799,650 kilograms, at Rs. 5.55 a kilogram compared with 71,067,925 kilograms with previous year at Rs. 4.83 a kilogram.

The last sale of 1962 held on 27th December, reported a good general demand for Dusts (internal consumption), with prices for good types tending upwards, but plainer sorts sold at a considerable discount. Legg-cuts were in demand, but there was a drop of up to 20nP a package.

At the final London tea sale held on 31st December, a good general demand was reported with prices for the good quality fully steady, but other kinds came to an irregular market. Later news from Cochin, Colombo and Calcutta indicates a steady tone. Supplies from north

CAPITAL, 10th January, 1963.

India will be short by about 28 million lbs. Pakistan needs all its produce for internal consumption so that this season's offerings on the London market from the major producers will presumably fall short of the amount available last year at this period.

U.K. Tea Stocks and Shipments

Shipments to the U.K. from 1st April up to the end of September 1962 are given as 31,643,886 kilograms, compared with 32,188,796 kilograms during the same period of 1961. Stocks in the U.K. as on 3rd January, 1963, were reported at 141.6 million lbs. At the end of December 1960, the amount was 154.7 million lbs and in 1961 it was slightly lower at 67.4 million kilograms.

Pakistan to Import Tea

On 1st January, 1963 the Pakistani Government notified that further tea exports would be discontinued because of scarcity of supplies for internal consumption. The Government has further decided to import up to 1 million lbs. This decision has been brought about by the high price of tea ruling at the internal auction sales due, as noted, to a shortage in the Pakistani crop. Up to mid-December, about 23 million lbs were sold for local consumption and only 4 million lbs were exported. The total Pakistani crop is estimated at under 50 million lbs. Pakistan may become a small-scale importer of tea as due to the delay in the supply and application of fertilisers, there is some anxiety about production in 1963.

Coffee Drinking in South

It is generally expected that the demand for tea will increase substantially in most parts of India, although coffee has a strong hold on the population in the south. It is well known that the world supply of coffee is surplus to world requirements. Although India has secured an export quota under the new international coffee agreement the amount is small by comparison with the country's output. Therefore, the home market is the only alternative and coffee producers appear to be going all out to expand their market at home—at the expense of tea. In its December issue, a local trade journal contains an article with the heading: "Fewer Votaries of tea in Anantapur—a town in Andhra". This refers to a recent survey carried out by the Tea Board which shows that the percentage of families drinking tea has actually fallen since the last survey in 1957. Families appear to be drinking tea much as before, but the male population favours coffee for refreshment in working hours. It is also noted that women appear to be taking rather more tea than five years ago, and whereas the percentage of families taking tea declined, the ratio of those taking coffee increased. It is stated that "the quantity of coffee consumed annually" by each coffee drinking individual has increased from 5.22 lbs a head to 8.89 lbs a head and the per capita annual consumption of coffee has increased from 3.10 lbs to 5.73 lbs.

New Record for Silver Price Forecast

A FORECAST that the price of silver will reach new record levels during 1963 is made by Mocatta and Goldsmid, London bullion dealers and a subsidiary company of Hambros Bank. In its annual circular, the firm points out that by the end of 1962, "the speculative positions outstanding on 1st January, 1962, have been appreciably reduced." It continues, "Taking into account the

unpredictability of Chinese sales, the remaining stocks of the Bank of Mexico and the free stocks of 40 million ounces still retained by the U.S. Treasury, we think that during 1963, the prices of silver will reach new peaks, and in New York will approach 129 cents an ounce, while in London it may even exceed the sterling equivalent of this figure." It recalls that "by the end of 1961 a considerable speculative holding had been built up and consumers were holding larger stocks than usual. World consumption was outstripping new production by some 60 million ounces a year".

The highest ever spot price for silver was touched on 22nd October, when it went to 104½d in London and 122 cents in New York. The price fell back to some extent during November and December. In December, speculators were realising their profits before the end of the year and consumers were concerned with their end-year stock position.

Outlook for Gold

On gold, Mocatta and Goldsmid say that the experiences of the market in 1962 indicate "that in the future, the price is likely to remain between limits of \$35.05 and \$35.20 for as long as the principal central banks remain technically co-operative and the gold policy of the U.S. administration appears to private buyers to be in line with its other economic and fiscal policies." Outlining the events of 1962 in the gold market, the circular records that the total private investment during April and May of 1962, much of which is still held, was of a much greater size than at any similar period since the market re-opened in 1954. After the Cuban crisis, and by the third week of October, the demand for gold in London rose to probably unprecedented heights and the dollar equivalent at the fixing was advanced to \$35.18½, but within a week, the price had fallen back to \$35.12 as a result of massive intervention effectively managed by the Bank of England on behalf of the Gold Pool, and so it had become evident that private buyers would have to reckon with "authority" as never before. During the year, Russian sales fell away by more than a third. There was also reduced demand from the Middle East following the embargo on forward dealings in gold imposed by the Indian Government in November. Another cross-current affecting the London market has been the increased flow of gold direct from Canada to South America.

FERTILISER PRODUCTION IN NANGAL

The fertiliser factory in Nangal is now in a position to achieve its full production capacity. This has been achieved following the commissioning of the third stream in the ammonia plant on 16th November, 1962. Production of ammonia during December 1962, was 8,650 tonnes and that of fertiliser (calcium ammonium nitrate) 32,629 tonnes. The total fertiliser output to-date during the current financial year amounts to about 200,000 tonnes.

PREFABRICATED TUBULAR ROOFING STRUCTURES

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SL3/20	20 ft.	10 ft.

TEA COMPANIES

O, Po, and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LOOPHOLES IN THE GOLD CONTROL RULES

INTRIGUED and annoyed by the price of gold remaining high in spite of stern official warnings and the extremely disappointing response to the gold bonds scheme (subscriptions to which have been less than the gold contributions to the National Defence Fund), the Central Finance Minister, Mr. Morarji Desai, indicated last November that the Government was considering further steps to bring down the price of gold. The ultimate aim, it was said, was that India should fall in line with other countries where the private possession of gold in large quantities was not allowed. By announcing his new assault on the problem of gold on Wednesday last week, the Finance Minister might take credit for having redeemed his promise. But the major shift in policy from the mobilisation of gold hoards to the mere prevention of smuggling will be widely regretted. It is indeed surprising that his broadcast to the nation enunciating the new gold policy contained not a word about the mopping up of gold hoards for productive use. As pointed out by the Finance Minister, the main objectives of the Government's policy are to segregate smuggled gold, achieve a progressive reduction in demand and bring down the price to around international parity.

Briefly, the Gold Control Rules, which have been promulgated under the Defence of India Act, introduce six main measures. Firstly, all power-operated refineries and major bullion dealers will have to seek licences and conduct their business according to the prescribed procedure. Secondly, all individuals and institutions who hold gold in any form other than ornaments will have to file a formal declaration of their holdings within 30 days. Thirdly, it will be illegal for any individual or institution other than a licensed dealer to acquire additional quantities of non-ornament gold, except by inheritance or by special permit. Fourthly, all ornaments made in the country in future, whether from existing ornaments or from gold in other forms, will not have gold of a purity exceeding 14 carats. Fifthly, the manufacture of any article of gold other than ornaments will be prohibited unless authorised by special or general order. Sixthly, no person can make, advance or grant any loan to any other person on hypothecation, pledge, mortgage or charge of any gold other than ornament gold unless such gold has been included in the declaration. Contravention of the Gold Control Rules is a serious offence punishable with fine and imprisonment. Adjudication and confiscation under the rules cannot be questioned in any court of law. These rules are to be administered by the Gold Control Board, which has been entrusted with the further task of suggesting suitable measures to discourage the use of gold and advising the Government on all matters relating to the metal.

Although the new measures have generally been described

even for ornaments and the compulsion to use ornaments containing gold of a purity not exceeding 14 carats. The permit system will, no doubt, tend to restrain demand, but the use of 14-carat ornaments might only mean more ornaments for the same quantity of gold.

Because of the various restrictions that have been imposed on transacting business in gold in bullion form, the metal may lose some of its attraction as a store of value and not many people may wish to conceal their ill-gotten wealth in 14-carat ornaments. Even so, the demand for gold is unlikely to fall sufficiently to mitigate the impact of reduced supplies of smuggled gold, with the result that the price of gold in the form of ornaments might tend to move up rather than down, which in turn might encourage smuggling in one form or another. It is difficult to share the Finance Minister's optimism that the new gold policy will usher in yet another peaceful and constructive social revolution. The success of the gold policy in achieving even the limited objectives will depend on how honestly and efficiently the rules are enforced. Critics can easily point out how the Prohibition policy has given a big boost to illicit distillation in the country. The critical foreign exchange position and the emer-

DEMAND FOR BANK CREDIT

THE impressive growth of the banking system has been an outstanding feature of the Indian economy during the past few years. From 1952 to 1961, years which correspond roughly to the periods of the first and second five year plans, there has been a remarkable expansion in industrial and business activity under the impetus of development programmes. Industrial production has risen by 81 percent and the money supply with the public has increased by 57 percent. The banking system has responded to the increased monetisation of the economy by adopting a vigorous branch expansion programme. As a result, the spread of the banking habit and the growth of banking facilities have been greatly encouraged. The November issue of the *Reserve Bank of India Bulletin* contains elaborate statistics relating to the earnings and expenses of scheduled banks during 1952-61, and points to the spectacular progress the banks have made. The survey does not mention the serious difficulties which have occasionally arisen: for instance, the hangover of a number of bank failures during this period has not yet passed. But the broad conclusion nevertheless stands, that the banking system has developed greater resiliency as many deficiencies have been rectified through a combination of official measures and self-discipline.

The survey gives some idea of the vigorous branch expansion programmes adopted by the State Bank and also by other banks. The number of scheduled bank offices has risen from 2,757 at the end of 1951 to 4,490 at the end of 1961. There has been a remarkable rise in deposits, although the rate of growth slowed down in 1960-61 following the phased transfer of P.L. 480 and P.L. 665 funds from the State Bank to the Reserve Bank. In order to meet the growing demand for credit, the advances portfolio of banks has been greatly expanded. Not only have the number of borrowers' accounts multiplied; bank credit also shows a large increase. In consequence, there has been a substantial increase in banks' earnings. But although profits have risen considerably, they have not always increased in proportion to earnings since expenses have also risen.

The most important item of expenses relates to interest payments on deposits and borrowings. Although an increase in deposit interest payments was inevitable as deposits rose, the increase has been restrained by the restrictions on deposit interest rates under interbank agreements since October 1958. The second major item of banking costs—establishment expenses—has also increased steadily. The emoluments of the staff have been raised under tribunal awards. The increase in the number of offices, and the larger volume of business handled, have necessitated the employment of more people. In allocating the profits, banks have taken good care to strengthen their financial

agency call for a more determined effort for mobilising the vast gold hoards for productive purposes. The Finance Minister's broadcast on gold policy, no doubt, holds out the hope that the Government has not yet said the last word on the subject, but Mr. Desai needs the reminder that half-hearted measures announced on a piecemeal basis rarely add up to a sound policy.

The Government's decision banning forward dealings in silver, including non-transferable specific delivery contracts, with effect from 10th January will be welcomed by all except those who live on speculation. It was about two months ago that the Government banned forward dealings in gold, but surprisingly enough the ban did not cover silver, even though the case for forward trading in silver was much weaker than that for gold. Unlike gold, there is no smuggling of silver, with the result that the Indian market has always been starved of fresh supplies. Floating stocks of silver in the country have seldom been large enough to permit the smooth functioning of the market. The ban on speculation in silver is desirable but it does not follow, as many people are inclined to think, that the ban will lead to a decline in the price of silver. The market's immediate reaction has, in fact, been shown by the sharp rise in the value of spot silver.

position as far as possible. The allocations to reserves have risen, showing the keenness of banks to plough back more money into the business. But a substantial portion of the profits has been absorbed by taxation. The next main item of allocation has been the payment of dividends and bonuses to shareholders. Considering that there has meanwhile been an increase in the paid-up share capital of many banks, this item has shown only a modest rise in comparison with the increase in profits.

Banks' earnings are derived largely from advances, discounts and investments, but the income from advances and discounts has risen steadily, while that from investments has fallen somewhat sharply. Funds have been shifted from Government and other securities to loans and advances, as the latter are more remunerative. The decline in the investment income is also due to the phased transfer of P.L. 480 and P.L. 665 deposits from the State Bank to the Reserve Bank. There has been a gradual fall in the cash ratio of banks due to the liberalisation of remittance facilities offered by the Reserve Bank and because of the borrowing facilities given by the latter, although scheduled banks have had to pay a higher interest rate on

1961	126.6	28.6	22.6	

borrowings from the Reserve Bank. The income derived from subsidiary services, such as opening letters of credit, collecting bills and issuing T.T.'s and D.D.'s has contributed to the total earnings of banks. The income from subsidiary services has increased in proportion to the credit given by banks. The accompanying tables show the growth of scheduled banks.

The trends of the past few years are particularly significant in view of the fact that they are still continuing. For the time being, banks are preoccupied with the problem of meeting the credit requirements of the current busy season. Advances and loans by scheduled banks have already touched the high level of Rs. 1,401.71 crores, and they constitute about 63.8 percent of the total deposits. The past year's trend shows that the former variation in advances between the busy season and the slack season has narrowed greatly as more and more advances have become industrial and perennial in character. The trend will be accentuated with the industrialisation of the economy. In any case, the credit demand during the next few months is likely to be at least as large as in the corresponding period of 1962, if not greater. Some financial circles expect it to increase by about Rs. 200 crores during the current busy season. Apart from the need to finance crop movements, the demand is likely to be boosted by two new factors. The first is that many industries have been asked to produce more for defence, so their credit needs might increase. The second is that some industries, such as sugar and cotton textiles, have been embarrassed by a sudden accumulation of stocks. In the circumstances, banks will have to provide more credit, especially for carrying stocks, if normal working is not to suffer.

Whether banks can meet the increased credit requirements from their own resources depends on the trend in deposits. It is discouraging that the latter have fallen from Rs. 2,227.2 crores at the end of October 1962 to Rs. 2,205.04 crores at the beginning of January 1963. The decline is partly due to the transfer of P.L. 480 and P.L. 665 deposits from the State Bank to the Reserve Bank. But, even so, banks will have to make vigorous efforts to increase their deposits. The task will be difficult since large sums are being mopped up by the Defence Bonds. The trend is expected to continue as many institutions find it more remunerative to invest their funds in defence issues since the yields are attractive. Banks will face keen competition in attracting small savings because the Post Office savings bank interest rate has been raised. This apart, in the present emergency, the general inclination of the people is to keep more cash.

There is little scope for banks obtaining more cash by selling Government securities. The investments of the scheduled banks in Government securities are about Rs. 642.21 crores, against Rs. 593.66 crores a year ago. By selling securities, banks will incur substantial losses due to the sharp decline in prices of Central and State Government loans. The index for Government and semi-government securities has declined from 100.8 to 99.6 (base year 1952-53 equals 100) over the past year. A further decline cannot be ruled out as institutional support has been lacking. In fact, banks have had to sell their securities either to the Reserve Bank or to the market by discounting prices for some time. They are generally not inclined to borrow from the Reserve Bank as the interest rate charged is prohibitive. But it is difficult to understand how they can meet the legitimate credit requirements of the economy without borrowing substantially from the Reserve Bank. In the circumstances, it is hoped that the Reserve Bank will adopt a more liberal policy in extending credit.

REFORMING TAXES IN BRITAIN AND U.S.A.

THE recent reductions of purchase taxes that are benefiting British consumers and restrictions on expense accounts that are worrying U.S. business men are comparatively minor elements in plans to reform taxes in both Britain and the United States. The British plan, including the re-arrangement of purchase taxes on consumer goods

takes account of the possibility that Britain might soon be a member of the European Economic Community. The U.S. plan, including the new rules concerning expense accounts, is devised partly to avoid what President Kennedy called "distortion of economic judgments". In both countries fiscal methods will be used this year to stimulate the respective economies. In Britain, the special category of "luxury" goods has been eliminated. Taxes on motor-cars (late last year) and on radio and television receivers, gramophones and gramophone records and cosmetics (at the beginning of this year) have been reduced to "ordinary" levels. In his Budget in April last year, Mr. Selwyn Lloyd consolidated purchase tax into four categories: 45 percent, 25 percent, 15 percent, 10 percent. Anticipating his Budget of April this year, Mr. Reginald Maudling, Mr. Lloyd's successor, has eliminated the top-rate category. Mr. Lloyd brought sugar- and chocolate-confectionery, ice cream and biscuits, into the range of taxed goods. Mr. Maudling is considering the possibility of including services, such as hair-dressing and various entertainments. (In this sense, the abolition a few years ago of the tax on admission to cinemas was a retrogressive move.)

Ideas on what is and what is not "taxable", and on what relative rates of tax are appropriate, change as society changes. The luxuries of the 1950s may be items of general consumption in the 1960s. And as people spend relatively less on goods and relatively more on services it is logical to extend the range of "taxable" items so that the total burden may be spread more evenly. Moreover, taxation is a more efficient economic regulator when taxes are widely spread. And it is a more efficient economic regulator when it is easily variable—hence the importance of Mr. Maudling's changes months before they would normally be introduced in a Budget. Simplicity is important, too, as a factor in flexibility. The system of purchase tax in Britain has been improved, and it is being used now as a gentle stimulant. But the U.K. authorities are not using only fiscal instruments. Immediately after the adjustment of purchase tax they reduced Bank rate.

One purpose of the adjustment was to narrow the range of tax so that it could be more easily converted to the European system if Britain joined the E.E.C. In that event, presumably, purchase tax would be replaced by the "added-value" tax, or by whatever form of turnover tax may finally be adopted by the Community. This is only one of a number of important changes in the British tax system that would be involved in Britain's "entry into Europe". Harmonising Britain's taxes with the Community's, as a speaker said at a recent conference in London on this subject, would be "not the work of one parliamentary session or of one Finance Bill but probably the work of a decade". Professor F. Neumark, chairman of the Community's Fiscal and Financial Committee, addressing that conference, suggested that duties such as those levied on transfers of stocks and shares should be abolished. He argued that such duties impeded the flow of capital and were, therefore, incompatible with the principle of a common market. They are certainly restricting foreign investors' interest in the London market, and if the British authorities intend to strengthen London's position as a financial centre, they should abolish these duties as soon as possible, regardless of Britain's relations with the E.E.C.

In the long discussion on the implications of joining the Community, British business men have been forced to discard the illusion that total taxation is exceptionally heavy in Britain and that harmonising Britain's taxes with the Community's would automatically lighten their burden. British companies pay profits tax (on their whole profit) and income tax (on the undistributed portion of their profit). In the Community, Britain would, presumably, unify her company taxes and harmonise the unified rate with the Community's; but an average of the present members' rates of company tax does not indicate that taxation of companies in Britain would thereby be reduced. The Treaty of Rome is vague on the subject of taxation, but the experts agree that, by implication, it requires a unified system, and a unified policy, of taxation in the Community. In Britain, this requirement is not fully understood. This is partly because expert British opinion is less willing than Continental opinion to recognise that, taxation is

an element in costs, and that, therefore, company taxes are ultimately paid mainly by consumers.

There are differences of opinion also on the subject of taxing wealth. The wealth of a dead person is taxed at much higher rates in Britain than on the Continent; and Professor Neumark has observed that the absolute and comparative rates in Britain would be a serious obstacle to the functioning of the Common Market. He has suggested that the rates be reduced and that a moderate annual tax on wealth be imposed to make up the

lost revenue. So one comes up against a question of principle, whether taxing the wealth of the living or taxing the wealth of the dead is the stronger deterrent to accumulating capital. More urgent questions, in Britain and the United States, concern the principle of unbalanced Budgets (a principle not widely accepted before the last war) and the degree of imbalance permissible in the present situation. But such questions should be related to the tax systems involved. A balanced Budget may prevent inflation; but a rational tax system is essential to promote growth.

Current News and Comment

Finances of Small Industries

The study of the finances of small industries in India during 1950-60 made by Dr. G. Balakrishnan, Senior Research Officer in the Department of Company Law Administration, serves to highlight the growing difficulties of small companies in getting long-term funds. (Small companies have been defined as those which have a paid-up share capital of less than Rs. 500,000 each). Their difficulties have become greater because they now have to increase their investments in fixed assets in order to meet the growing demand for their products. The demand is increasing because of the import cuts and defence needs. As it is advisable to finance fixed assets with long-term funds, the Government's move to put its financial guarantee scheme on a permanent basis has been welcomed. Under this scheme, the Government guarantees to reimburse a portion of the loss arising from loans given to small companies for periods of up to seven years. Dr. Balakrishnan points out that the fixed assets of these companies constituted 89 percent of their long-term liabilities in 1950 but the percentage rose to 100 at the end of 1960.

Judging from the performance of the companies, there is no reason for taking a complacent view. There has been a decline in the growth of their net assets during 1950-60, although their gross assets have increased modestly. Their profits too have improved only moderately. The ratio of gross profits to the total capital employed has risen from 7 percent in 1950 to 8 percent in 1960; the profits after tax on net worth have increased from 4 percent in 1950 to 7 percent in 1960. The dividends paid by them have increased in proportion to profits. In 1950, 48 percent of the profits after tax were distributed in the form of dividends, while in 1960 the percentage rose to 68. Retained profits have also risen. They constituted 17 percent of the profits after tax in 1950 but rose to 32 percent in 1960.

These companies have had to depend heavily on borrowing. Bank borrowings, which constituted only 4 percent of their total liabilities in 1950, rose to 10 percent in 1960 and their borrowings from the trade increased from 3 percent of their total liabilities to 19 percent. As a result, interest charges have gone up from 18 percent of their profits (before tax) in 1950 to 37 percent in 1960. In comparison with large companies having a paid-up share capital of more than Rs. 5 lakhs each, small companies have lagged behind in performance. Large companies have had a more favourable experience in relation to profits, growth of fixed assets, liquidity and reserves. In financing fixed assets, large companies have been less dependent on borrowings as they could raise funds from the public.

Machine Tool Projects in Trouble

During the last few months, the Government of India is reported to have revoked the industrial licences of eight firms for machine tool projects, either because they had failed to take effective steps for implementing the sanctioned schemes or because they had expressed their inability to implement their projects. The authorities seem rather perturbed over the loss of interest in the development of the machine tool industry because the setback has come at a time when the Govern-

ment is anxious to assign an important rôle to this industry in view of the national emergency. What could be the reasons for the loss of interest when the private sector had been agitating for a foothold in the machine tool industry, which was originally proposed to be reserved for the public sector? Mr. S. L. Kirloskar's presidential address to the recent annual general meeting of the Indian Machine Tool Manufacturers Association provides the answer.

The inordinate delay experienced by manufacturers in obtaining Government's approval to terms of foreign collaboration and sanction of import licences for capital goods, essential raw materials and components are mentioned as major obstacles to the progress of the machine tool industry. Mr. Kirloskar has also complained about the delay in securing financial assistance from the Industrial Finance Corporation and similar statutory bodies and in getting import licences under D.L.F. for c.k.d. machines and components. Acute shortage of foreign exchange, electric power and transport facilities also impede the industry's progress.

Mr. Kirloskar has urged the Government to evolve co-ordinated machinery for the elimination of delays and simplification of the procedure. He has suggested that the Government should extend the tax-holiday from five years to ten years and increase the maximum rate of profit from 6 percent to 12 percent in order to enable the industry to expand. Foreign collaboration should be encouraged by withdrawing the restrictions on royalty payments and other minor terms of the agreement. Mr. Kirloskar has pleaded for a top limit of 7½ percent for royalty. He emphasises the need for close liaison between the Indian Machine Tool Manufacturers Association and the Ministry of Defence Production so that defence requirements can be met expeditiously. Even after three months of the national emergency, the Association does not know what machine tools are needed for the production of war materials.

Corporation for Textile Mills

The 100-year-old Indian cotton mill industry, which provides employment to nearly 3.5 million workers, still continues with its outmoded machinery. Not many mills have been able to modernise their equipment. The cost of modernising the entire industry has been estimated by the Working Group for the Cotton Textile Industry at Rs. 800

crores. Even the minimum requirement for
modernisation during the current plan period is
placed at Rs. 250 crores. The expansion scheme
which envisages the installation of 4 million spind-
les and 25,000 automatic looms by 1965-66 will cost
another Rs. 210 crores, making a total bill of Rs. 410
crores. With its equipment old and relatively in-
efficient and the wage bill and raw material costs
steadily mounting up, the industry is not only un-
able to satisfy changing consumer requirements at
reasonable prices, but it also falls sick whenever
there is a major change in the economic weather.
At present, the industry is faced with a glut.

The State Governments have, at times, taken
over mismanaged or closed mills as a measure of
unemployment relief. But the need for a central
organisation to tackle the problems of "sick" mills
has been increasingly felt for some time. The
Central Ministry of Commerce and Industry is
now actively considering a proposal for setting up
a Textile Industry Rehabilitation Corporation, with
a capital of Rs. 10 crores to establish new mills,
particularly in replacement of scrapped units, and
to take over the "sick" mills. The Corporation is
expected to work as an investigating body, to go
into the affairs of mills not managed on sound
lines. It will finance the rehabilitation and
modernisation programmes of mills taken over.
The Corporation will be allowed to pay dividends,
subject to prior approval by the Central Govern-
ment.

To prevent harassment of the corporation by
the creditors of mills taken over by it, certain
amendments to the Industries (Development and
Regulation) Act are proposed. The draft memo-
randum and articles of association of the proposed
corporation have been circulated among the mil-
lowners' associations for eliciting their reactions.
The shareholding of the corporation is proposed to
be restricted to the Central Government, State
Governments, State Finance Corporations, the
Indian Cotton Mills Federation and other regional
associations of textile mills. The financial assis-
tance that is given to the cotton textile industry by
the National Industrial Development Corporation
will be handled by the new corporation.

Idle Capacity in Engineering Units

Mr. T. R. Gupta, president of the Engineering
Association of India, has pointed out that about
50 percent of the installed capacity of the engi-
neering industries remains unutilised. According
to a rough-and-ready survey conducted by the As-
sociation, the idle capacity in 79 firms totalled
341,852 machine-hours a month (excluding casting,
galvanising, etcetera). As engineering goods are
basic for the defence effort, fuller use of existing
capacity should engage the Government's atten-
tion immediately. Recently, an official survey too
indicated that idle capacity was over 35 percent
in about 75 industries in the country. The Engi-
neering Association's study covers a smaller field,
but a strategically vital one.

Mr. Gupta has urged the defence departments
to use the idle capacity available with the differ-
ent firms as far as possible, instead of approach-
ing firms which are working to full capacity. Al-
though such a step may not be feasible in all
cases, he says, "by and large, the defence effort
should be so directed that the idle capacity is
utilised before firms are called upon to divert their
entire production resources to defence work". It
is also essential to keep up the normal production
of engineering stores to ward off shortages in the
market which may push prices up. Besides the
79 firms covered by the survey, almost all the
members of the Engineering Association are un-
derstood to have volunteered to accept defence
work. In some cases, balancing plant and equip-
ment may have to be obtained. The firms are
willing to undertake such additions to their fac-
tories, and also go in for the additional plant and
machinery that may be necessary to execute de-
fence orders.

The break-down of the idle machine-hours is
as follows: lathes and automatic machines
97,454; boring 11,816; milling 19,908; shaping
11,779; drilling 39,341; grinding 35,735; pressing
31,435; welding, etcetera, 39,143. The survey is
subject to certain limitations. Firstly, the type,

capacity and range of the machines involved have
not been ascertained; this will be necessary to
devise any concrete measures to use them. Second-
ly, the idle capacity has been computed on the
basis of the number of shifts actually worked by
the factories; this has not been uniform, as some
are working only one shift, some two, and others
three. Obviously, those working less than three
shifts can offer more capacity for production.

Cloth Exports to Russia

Reliable reports indicate that the State Trading
Corporation, which has already contracted to ex-
port three million metres of cotton textiles to
Russia, is now negotiating for the supply of an-
other two million metres and that the contract is
likely to be finalised soon. According to a note
circulated recently by the Department of Com-
mercial Intelligence and Statistics among the mil-
lowners' associations and officials in charge of the
textile industry, Russia is expected to take up 8
million or 10 million metres of Indian cotton tex-
tiles in the current year. This will be a substan-
tial improvement over the 1962 figure of 200,000
metres. Of course, a great deal will depend on
the quality and price of Indian goods. The Russian
demand is expected to be mostly for finer var-
ieties such as poplin, satin, printed calico and other
types of printed goods suitable for use as ladies'
dress material. There will also be some demand
for bleached sheetings.

From a bare 23.7 million metres in 1958, total
cloth imports into Russia rose to 143.3 million
metres in 1960. Imports were mainly from China
and Hungary and to some extent from Poland.
In 1961, imports of cotton textiles into Russia de-
clined to 60.9 million metres because of increased
internal production estimated around 4,900 million
square metres. Russia is also an exporter of tex-
tiles, exports having risen from 165.7 million
metres in 1958 to 197.1 million metres in 1961.
Russia's exports are mainly to Bulgaria, Indonesia
and Mongolia and to some extent to Afghanistan,
Malaya, Sudan, Iran, Iraq and Guinea. Exports
to Indonesia have recorded a sharp increase over
the past few years. Being a competitor to India
in the export markets, Russia is likely to be quite
selective about quality and strict about price while
importing cotton textiles from India. This is a
point which exporters of Indian cotton textiles
would do well to bear in mind.

THE HIGH COURT

TIME was when the people of this country
looked up to the High Court as a Palladium.
They felt that there they would obtain a
patient hearing in the first instance and justice
in the end. That feeling has now disappeared,
and one of distrust and suspicion has taken
its place. Rightly or wrongly the impression
prevails that Government has got the High
Court under its thumb and the frantic protesta-
tions of the Chief Justice that no attempt has
ever been made to coerce or influence him, are
looked on as in the nature of *qui se excuse
s'accuse*. This is very unfortunate. It is
unfortunate for the Government as well as the
people. If there is any understanding between
the Government and the High Court, it should
be the endeavour of the Judges to conceal it by
every means in their power; because a High
Court that does not possess the confidence of
the suitors might just as well be abolished. We
confess we view with grave suspicion the action
of Government in recent years of decorating
Chief Justices, etc., with K.C.I.E.s; there is an
uneasy suspicion that these are not given for
nothing, that they are exchanged for the inde-
pendence of the Bench, and it is a grave misfor-
tune that this should be. As for the Judges
themselves, with but one or two rare excep-
tions, their calibre has seriously deteriorated;
which appears before them, and we are inform-
ed that they endeavour to make up for their
want of knowledge, common sense and experi-
ence, by assuming a flippant and hasty demean-
our, and to get through business by rejecting
applications for rules and the like in an off-
hand, abrupt and offensive manner.

A Ditcher's Diary

I HAVE A NOTION—AS SOMERSET MAUGHAM IS FOND
of saying—that the main part of an inter-
national conference's time is spent in drafting the
communiqué to be issued at its end. Its content
is the least important consideration; and a very
good example is the statement released at the end
of the New Delhi huddle of the six non-aligned
countries presided over by Mrs. Sirimavo Bandara-
naik. The *communiqué* could hardly have said
less; and I am quite prepared to believe that it is
an honest one: the conference may have achieved
as little as the *communiqué* tells. Having criti-
cised the Government of India in the past when it
sought to intervene in matters that are none of its
business, I have a right to be similarly frank
about the latest crop of "honest brokers" between
India and China. Take them one by one. First,
Ceylon. It is very nice of Mrs. Bandaranaike to
try to help India or China or both. But the state
of affairs in her own country, where the Press is
strangled and the economy is running down daily,
could do with a little more of her attention. Judg-
ing by reports, the United Arab Republic was a
somewhat reluctant participant; so I shall leave
it alone. But it is seriously suggested that Mr.
Ofori-Atta, Ghana's Minister of Justice, does justice
to his own people by coming to New Delhi when
his President is being greeted with bombs almost
anywhere he goes? Indonesia's Dr. Subandrio is
free to travel to Peking. Can he freely travel in
his own country, where one-half of the islands does
not know what the other may be up to? Not very
dissimilar things could be said about Burma and
Cambodia. The world, I think, would be so much
better if everybody minded his own business. It
now seems fairly clear that talks between New
Delhi and Peking may be resumed before very
long; Mr. Nehru's last letter to Mr. Chou was ex-
ceptionally mild. This may well be justified by
facts not in the public's possession; I simply do
not know. But Colombo's contribution to India
and China getting together for talks can hardly
be rated very big. And for this six poor countries
have not only spent their own meagre foreign ex-
change but also forced India to spend a lot of hers
because Ministers, Secretaries and others have had
to travel widely to "explain" India's stand. This
is the debit side; on the credit side I see very
little for anyone.

TO PARODY OUR OLD FRIENDS GILBERT AND
Sullivan, "an editor's lot is not a happy one". At
least not always, and rarely when he finds himself
up against authority or, what is often worse, the
virtual impenetrability of his more fanatical
readers. I am prompted to this piece of philo-

sophy by the recent episode involving the British
weekly *Tribune* and the Chinese Government.
The humorous "letter" from Mr. Chou En-lai,
which *Tribune* published in one of its Christmas
numbers, contained so many obviously outrageous
statements that only a half-wit could possibly have
taken it seriously. But, to the undying shame
of the British Foreign Office, it "requested"
Tribune to publish a Chinese statement in reply.
Now I shall leave the reader to judge for himself
the propriety of the Foreign Office action; person-
ally I consider it inexcusable even if a diplomatic
incident was threatened. And I shall certainly
not dwell on the tiresome subject of the Chinese
lack of a sense of humour; to talk about a
"criminal act of forgery and calumny" under such
circumstances is plain stupidity. What I am
doing is inviting *Capital's* readers to put
themselves in the position of the editor of
Tribune whose harmless joke had so badly misfired
and rebounded on his country's head. Should he
do as in fact he did, that is print a nonsensical
rejoinder to an inconsequential joke, and so eat
humble pie at the dictates of a humourless and
farcaical officialdom? Or should he stand by his
joke, and tell the Chinese that if they did
not like what they read they knew what they
could do about it? There are no prizes for the
right answer. I know what I would have done.
But anybody else who tries to work it out for him-
self cannot fail to be impressed with how difficult
an editor's dilemma can sometimes be. After all,
international relations can be a serious matter
even if jokes are not.

READY TO TRY ALMOST ANY NEW IDEA ONCE I RE-
cently got rather scared of carrying a largish
amount of cash and, so, bought myself some rupee
travellers cheques issued by the State Bank of
India before setting out on my journey. A friend
said I had bought trouble. It was later left
to me to discover that my friend had exaggerated
but slightly. My first attempt to cash some of my
cheques at a bank—not the State Bank, but a well-
known one—was a moment of disenchantment.
The branch manager told me: "No, we do not
cash rupee travellers cheques". Period. There
was a certain finality in his voice; and I dared
not tell him that his bank was noted for consid-
erable overseas business and should be familiar with
travellers cheques. "Not rupee travellers cheques",
he repeated. I then proceeded to an international
travel agency. The clerk dealing with travellers
cheques said, "Why come to us? Go to the State
Bank. Why should we do the State Bank's work?"
Meanwhile my hotel manager had let it be known

that he preferred his bills paid in cash. At the
State Bank itself there was no dearth of courtesy.
But the gentleman dealing with me wanted to
know more about me and my antecedents than
seemed necessary for cashing travellers cheques.
In spite of my somewhat depressing and somewhat
exasperating experience—for one has more im-
portant things to do on hurried journeys than ex-
plaining the rudiments of banking to bank em-
ployees—I think the rupee travellers cheques are
a good idea. What then has gone wrong? I can
only hazard guesses. Perhaps the rupee travellers
cheque scheme has not been publicised well enough.
Perhaps there is too much form-filling involved
for the commission allowed. Fortunately the
State Bank has a branch almost everywhere; but
it costs money and time to get to one of them.
And it should not be necessary at all, for the whole
idea of travellers cheques is their ready acceptabil-
ity everywhere simply on verification of the origi-
nal and endorsing signatures. I shall advise
friends to buy rupee travellers cheques as soon as
there is evidence that the State Bank has ensured
easier encashment.

WHEN A WELL-KNOWN CALCUTTA FIGURE WAS
elevated, several years ago, to membership of the
Legion of Honour, I took the opportunity of com-
menting that this decoration (though beyond doubt
richly deserved in that particular case) seemed to
be becoming rather common. President de Gaulle,
it appears, has begun to see the point. The Legion's
membership, he has decreed, must be slashed from
its swollen 300,000 to 120,000. Present chevaliers
will not of course have to send back their little
red rosette, but there are going to be precious few
new awards until death has thinned the ranks of
the glorious company—which might not take too
long, for honour comes with age, as we all
know. Still, although chevalier means knight,
one must not expect members of the Legion ever
to become as rare as knights are in Britain.
Napoleon, who founded the order, had just the
opposite idea; he wanted a decoration that could
be dispensed fairly generously to encourage civic
merits that would not warrant really grandiose
titles. For more eminent talents and services,
there would be promotion to the higher ranks of
the Legion: a chevalier could become a comman-
der and so on. In short, a typical soldier's idea of
what should replace the monarchy's corrupt nobil-
ity of birth. Napoleon was only the first revolu-
tionary to realise that societies cannot manage
without recognition of notable services, and so the
old régime's hated aristocracy had to be replaced
by some other way of rewarding talent and loyalty.
Since then, we have seen the Russians, and for
that matter the Indians too, institute a system of
decorations after ridiculing the honours dispensed
by previous rulers. Only the Americans have re-
fused to do so, on any large scale, but I have
heard it argued that politics and business in the
United States would both be more honest than

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

United Bank of India Ltd.

REGD. OFFICE : 4, CLIVE GHAT STREET, CALCUTTA - I

they are if worth were officially recognised. The communist States, for all their egalitarianism, have a way of simply heaping decorations on the political favourites of the day, and I remember that *Pravda* once described Marshal Tito (Moscow and Belgrade were on bad terms at the time) as being "decorated like a Christmas Tree". Eminent Russians can get to be the same way, and it was on meeting one of these Soviet Christmas Trees in Delhi that Mr. C. R. Rajagopalachari innocently said, "I thought you did away with decorations and honours in Russia!" "We did for a time after the Revolution", replied the bemedalled commissar, "but then we realised that it had been a mistake". "What?", said Rajaji, "The Revolution?"

THE LATE DR. SYLVANUS OLYMPIO, PRESIDENT OF the Republic of Togo, always reminded me of our very own Mr. T. T. Krishnamachari. That both were once associated with the Unilever empire, of which the United Africa Company is a part, is obvious enough. There were other temperamental characteristics in common, for selling soap does things to you which leave a permanent imprint on your character. Dr. Olympio was the first African to hold so important an appointment in a large commercial firm; and, it was said, he ran the Government as he had run the Togo branch of the United Africa Company; that is to say, his approach was purely businesslike, not political. And no wonder he created political enemies—as T. T. K. enjoys doing. To function on the political plane and simultaneously to cherish non-political values—be they spiritual such as Mahatma Gandhi's, or commercial such as Dr. Olympio's—is to court danger. Even Dr. Olympio's bitterest enemies never suggested that he was corrupt, which can be said of few politicians anywhere and very much fewer in Africa. But he took decisions, as in the U. A. C., entirely on his own; and his colleagues felt ignored. More than that, he never could conceal his contempt for most of his countrymen. (Something more in common with T. T. K.?) People not obliged to follow the intricacies of west African politics may be tempted to think that Dr. Olympio could not very well be a popular leader if there were so many attempts on Dr. Nkrumah too; and it can honestly be said that there the similarity between the two Presidents ends. The fact is they did not love each other; each in fact thought that the attempts on their respective lives were all engineered by the other. Dr. Nkrumah is an ambitious man; the presence of an independent Togo next door irked him. In the name of unifying the Ewe tribe he had often toyed with the idea of overthrowing Dr. Olympio and just moving in. The idea is not dead; it may well be reviewed with the death of Dr. Olympio. But Dr. Nkrumah will be wise to remember that Nigeria may not see things that way.

AMERICAN BUSINESS FOLKLORE IS REPLETE WITH stories of young men starting as office boys and ending as managing directors. The ambition, enterprise and hard work which the stories portray were, in rather different circumstances, the outstanding qualities also of Sir Shri Ram, who died after a prolonged illness last Friday. Joining the Delhi Cloth and General Mills nearly sixty years ago as an ordinary apprentice, Sir Shri Ram became managing director in 1934 and chairman in 1951. Over the years, he laid the foundations of an industrial empire which was not merely confined to cotton textiles and sugar, but soon covered chemicals, pottery and light engineering units also. He won deep respect for combining business leadership with progressive ideas that were not common among the Indian industrial community at the time, but the influence of which was widely felt in later years. All companies have their ups and downs, and Sir Shri Ram's were no exception; but the dedication with which he built Jay Engineering into a model of what such enterprises should be, epitomised in many ways his success as an industrialist. A philanthropist at heart, he was kind to those who knew him, as well as to many who did not; and his services in the cause of education will be long remembered. Not often do men succeed in mixing enterprise and generosity to better purpose than Sir Shri Ram did.

A CALL FOR CAUTION UNTIL THE BUDGET

(BY A SPECIAL CORRESPONDENT)

VERY little business has been done in the stock market during the past week. Most of the transactions have been of a squaring-up nature and operators are not inclined to enter into fresh commitments. The political and economic uncertainties are many, so investors cannot confidently foresee what the future will bring. But, in its latest fortnightly report, Place, Siddons and Gough Private Ltd has shown itself to be unusually bold in expressing optimism. It states: "Balancing the plus and minus signs emerging during the past six months, our view is that investors have good reason to be hopeful about the future. Many profitable opportunities for investment will be arising in the months ahead." Investors will wonder whether the optimism is justified.

Place, Siddons and Gough points out that share prices have fallen sharply since the Chinese invasion was launched last October. As a result, the average yields on ordinary industrial shares have risen. But it is difficult to say whether the adjustment to the new yield ideas has been completed, although the brokers seem to imply that it might even have been overdone. Many investors feel that, with the recent increase in Bank rate symbolising the move towards a dearer money policy, a further increase in yields is necessary—which would mean that share prices would have to fall. The anxiety is supported by the fact that the latest reports of certain leading companies have been discouraging. Profits have been reduced because production costs and taxation have increased. In the circumstances, dividends have not always been easy to maintain.

It is fashionable nowadays to argue that profits will rise as industrial production is increased in support of the defence effort. It is true that a number of industries have received additional orders from the armed forces, but there is little indication that economic activity as a whole will improve. The drastic cuts in imports will affect many enterprises. The growth of import-substitution industries might well take a long time, especially if the capital market remains as dead as it is now. There seems to be little reason, therefore, for investors to start thinking about the growth prospects of shares.

The political situation remains confused. Cautious observers say that the mediation in the Sino-Indian dispute undertaken by the Colombo Powers has yielded little result so far. That being the case, investors have no reason to assume that the political uncertainties have been reduced. No definite progress seems to have been made in the Indo-Pakistani talks about Kashmir either. Against this background, most investors will probably judge that discretion is the better part of valour—at least until the stiff taxes threatened for the Central Budget at the end of next month are known in more detail.

Growth Prospects for Indian Oxygen

THE long-term growth prospects for the ordinary shares of Indian Oxygen Ltd remain favourable, as is pointed out by Sir John Brown in his chairman's statement, which has been circulated along with the report

and accounts of the Company for the year ended September 1962. (A full text of his statement is printed on a later page in this issue of *Capital*.) He nevertheless says that in view of the massive capital expenditure, shareholders cannot expect a spectacular increase in the trading profit during the next year or two. Considering the debt repayment obligations arising out of the increased capital expenditure, shareholders should not hope for a further increase in the dividend for a few years to come. The Company may have to accelerate some development projects in order to meet the rising requirements of its customers who have been engaged in defence production.

For 1961-62, a taxable ordinary dividend of 12 percent has been declared. It is covered more than thrice and offers a yield of 3.9 percent at the present price of Rs. 31 a share. A taxable ordinary dividend of 15 per-

cent was paid for 1960-61. But the present dividend has been declared on the share capital, which has meanwhile been increased by Rs. 1.04 crores through the issue of bonus shares by capitalising reserves. The dividends absorb Rs. 43.68 lakhs (against Rs. 39 lakhs). The present share capital is Rs. 3.64 crores, but the authorised capital has been doubled to Rs. 8 crores in order to provide for further issues of capital which will be required to finance future expansion. However, the Company has no immediate intention of issuing any further share capital.

In order to diversify its activities further, Indian Oxygen proposes to undertake the manufacture and installation of plant and machinery for producing and using gases and other products. Further capital expenditure of Rs. 1.32 crores was incurred during 1961-62 in order to extend the capacity of the factories in Bombay

and Jamshedpur. The electrode factory in Khardah, near Calcutta, has been expanded. Additional equipment has been installed at the factory in Beliaghata, near Calcutta. The factory set up in Gauhati has started producing. Steps have been taken to build factories in Hyderabad and Ranchi.

Sir John thinks that the demand for industrial oxygen and dissolved acetylene will exceed the supply, especially in view of the present emergency. Hence, it is essential that the existing units be encouraged to produce to the utmost of their capacity. During 1961-62, sales were Rs. 8.87 crores, against Rs. 7.56 crores in 1960-61. Despite the power shortage and insufficient supplies of various raw materials, turnover increased appreciably. Much of the increase in production costs resulting from the higher prices of raw materials has been offset by the expanded scale of operations.

The profit has risen by Rs. 28 lakhs to Rs. 1.35 crores, after increasing depreciation from Rs. 44.96 lakhs to Rs. 49.84 lakhs. Taxation absorbs Rs. 74.67 lakhs (against Rs. 36.25 lakhs). Apart from the increase in corporation tax, a sum of Rs. 13 lakhs has had to be paid on account of the bonus share tax. Money has had to be provided for additional tax in relation to 1961. Development rebate reserve is allocated Rs. 6.50 lakhs (against Rs. 13 lakhs), fixed assets replacement

Viewing the world through glass

With GLASS it's more view and more room too! Wherever it goes Glass opens up exciting new possibilities. Gone is that cramped, confined, closed-in feeling. The bright, cheerful, open look is in.

And glass goes everywhere. To homes, hotels, hospitals—to offices, schools and stores. In windows and doors, in buses and cars.

Manufactured in India by Hindusthan-Pilkington Glass Works Limited, quality tested sheet glass is available in a wide variety of sizes and thicknesses to suit every purpose.

For the finest, most durable glass you can depend on

reserve Rs. 1.10 lakhs (against Rs. 51,976) and general reserve Rs. 10 lakhs (against Rs. 25 lakhs). The carry-forward is Rs. 17.61 lakhs, against Rs. 18.07 lakhs brought in.

Sharp Fall in Alkali Chemical Profit

THERE is a predominance of sellers in the ordinary shares of the Alkali and Chemical Corporation around Rs. 39.12 due to a sharp decline in the profit of the Company for the year ended September 1962. The full effect of the 1961-62 results has not been felt in the market as no official business can be transacted except at the minimum price. The profit has fallen from Rs. 1.41 crores in 1960-61 to Rs. 71.72 lakhs, after providing for depreciation. The taxable ordinary dividend of 15 percent has been repeated. It is covered more than one-and-a-half times and offers a yield of 3.8 percent at the present price. Taxation absorbs Rs. 27.22 lakhs (against Rs. 52.50 lakhs) and development rebate reserve Rs. 1.10 lakhs (against Rs. 2.50 lakhs). Bringing in Rs. 1.16 lakhs and transferring Rs. 2.50 lakhs from deferred income tax liability and Rs. 2.82 lakhs from taxation no longer required, the available balance is Rs. 49.89 lakhs (against Rs. 90.18 lakhs). The usual preference dividends have been paid, and they absorb Rs. 2.02 lakhs. There is no transfer to general reserve and dividend equalisation reserve. They were allocated Rs. 14 lakhs and Rs. 26.50 lakhs, respectively, in 1960-61. The carryover is Rs. 1.37 lakhs. According to the balance-sheet for 1960-61, the ordinary share capital is Rs. 3.10 crores, divided into shares of Rs. 10 each. Reserves and surpluses total more than Rs. 1.99 crores.

United Commercial Bank Profit Up

THE United Commercial Bank Ltd has made a larger net profit of Rs. 73.33 lakhs for the year ended December 1962, compared with Rs. 72.61 lakhs for 1961. Bringing in Rs. 2.07 lakhs from the previous

year's account, the available balance is Rs. 75.40 lakhs. A taxable ordinary dividend of 12 percent has been repeated on the old shares and proportionate dividends have been paid on the new shares. They absorb Rs. 24.50 lakhs. The yield works out to 7.3 percent at the present price of Rs. 82.50 a share. The reserve fund is allocated Rs. 25 lakhs (against Rs. 30 lakhs), gratuity trust fund Rs. 4 lakhs (the same) and bonus to staff Rs. 16.50 lakhs (against Rs. 14 lakhs). The carry-forward is Rs. 3.25 lakhs.

Prospects for Belapur Sugar

THE shareholders of the Belapur Co. Ltd. returned disappointed from their annual general meeting last week. Considering the Company's discouraging performance during the year ended September 1962 and all that the directors stated in their report, few shareholders could have gone to the meeting with any bright ideas, but hope somehow persisted that the chairman, Mr. Neville N. Wadia, might have some reassuring words for them. Shareholders have suffered badly over the past few years. In 1959-60, the Company earned a gross profit of Rs. 85.60 lakhs and paid a gross dividend of 58 percent (Rs. 29 a share of Rs. 50). The profit declined to Rs. 8.80 lakhs in 1960-61 and the dividend was reduced to 50 percent. The results for 1961-62 have been still more disappointing with the profit down to Rs. 53.96 lakhs and the dividend pruned to 40 percent. The Rs. 50-paid share of the Company which touched a high of Rs. 335 in 1961, was sold down to Rs. 205 in November last, and the latest quotation is only a little higher at Rs. 214.

While the chairman assured shareholders that the management would continue to run the business as efficiently and economically as possible, he could not view the future with optimism. He was unable to assure shareholders that the dividend for the current year would be maintained at 40 percent. With the implementation of the Land Ceiling Act, the Company will lose the tax benefit on its agricultural profit which stood around Rs. 21 lakhs on average for

the past 12 years and at Rs. 18 lakhs last year. The chairman said that the Company would be required to pay about Rs. 15 lakhs for 1960-61 and Rs. 9 lakhs for 1961-62 by way of agricultural income tax of 50p a rupee which came into force from 1st April, 1962. The Maharashtra Government has also recently imposed an education cess of Rs. 25 an acre of cane grown.

Referring to compensation for agricultural land, Mr. Wadia said that the Company will be receiving Rs. 4.5 lakhs to Rs. 5 lakhs. The amount of compensation for machinery is still being negotiated. The compensation will be paid in the form of 3-percent bonds maturing after 20 years. The chairman informed shareholders that some progress had been made for putting the Company's subsidiary, Gangapur Sugar Mills, on an economic footing. Unfortunately, the sugarcane supply position for the factory this season is not satisfactory. The State Government has been approached in the matter. Meantime, the management is trying to get as much sugarcane as possible by offering to assist those cultivators who are prepared to revert to planting sugarcane instead of cotton.

Progress of Mysore Kirloskar

IN his statement at the annual general meeting of Mysore Kirloskar Ltd held in Harihar last week, Mr. N. D. Shivananjappa, chairman, referred to the progress made with the expansion schemes. (A fuller version of the statement is published on a later page). During 1961-62, new plant and machinery have been installed. Orders have been placed for importing further equipment and the installation work is expected to be completed during the next couple of years. As for the production of capstan and turret lathes, the progress has been rather slow as the necessary equipment could not be imported due to the foreign exchange shortage. The Company has taken steps to export its products to south-east Asian countries. To meet the requirements of the present emer-

gency, the directors are considering undertaking new lines of production such as grinding machines, moulding machines and automatics.

The chairman has mentioned the difficulties facing the factory. It has become difficult to obtain the right quality of hard coke and pig iron. The shortage of wagons has also been a restraining factor. In spite of an increase in sales during 1961-62, the profits have not gone up proportionately due to increased wages, higher taxation and rising production costs.

Bank of India Earns More

THE Bank of India Ltd has maintained the final dividend for 1962 at 12 percent, but since it is on the increased capital of Rs. 4.05 crores (against Rs. 3 crores), it absorbs Rs. 48.60 lakhs, against Rs. 36 lakhs in 1961. With the interim dividend of 8 percent (the same), the total distribution to shareholders amounts to Rs. 72.60 lakhs, against Rs. 60 lakhs in 1961. The preliminary report on the bank's working in 1962 shows only a small increase in the profit. After providing for taxation and making usual provisions, the net profit for 1962 is placed at Rs. 1.12 crores, against Rs. 1.10 crores in 1961. Including Rs. 29.16 lakhs (against Rs. 12.85 lakhs) brought forward, the disposable surplus amounts to Rs. 1.41 crores, against Rs. 1.23 crores. Both final and interim dividends absorb Rs. 72.60 lakhs and the allocation to the reserve fund has been raised from Rs. 15 lakhs to Rs. 22.50 lakhs, leaving a surplus of Rs. 45.60 lakhs to be carried forward which is subject to the payment of bonus to staff. The Rs. 50-paid share of the bank is quoted around Rs. 109 cum dividend, offering a gross return of a little over 10 percent.

Shree Changdeo Sugar Does Well

SHREE Changdeo Sugar Mills Ltd has reported its working results for the year ended September 1962. The dividend has been maintained

at 20 percent (Rs. 2.50 a share of Rs. 12.50), less tax. The Company's factory crushed 115,000 tonnes of sugarcane producing 134,000 bags of sugar at an average recovery of 11.7 percent. The corresponding figures for the previous season were 121,000 tonnes of sugarcane, 141,000 bags of sugar and 11.6-percent recovery. The sugar output is stated to be 352 bags more than the production quota fixed by the Government after taking into account the 10-percent cut on average production of the last two years. On its export quota of 17,149 bags in 1961-62, against 12,476 bags in 1960-61, the Company suffered a net loss of Rs. 3.32 lakhs, against Rs. 2.10 lakhs. The gross profit for 1961-62 at Rs. 27.11 lakhs shows only a slight decline from the previous year's figure of Rs. 27.45 lakhs. After providing Rs. 2.92 lakhs (against Rs. 2.78 lakhs) for depreciation and Rs. 12 lakhs (against Rs. 9.90 lakhs) for taxation, the net profit amounts to Rs. 10.71 lakhs, against Rs. 13.19 lakhs in the previous year. With Rs. 94,454 brought forward and adding Rs. 28,993 being the refund of income tax relating to 1949-50 and 1950-51, the disposable surplus amounts to Rs. 11.96 lakhs. The allocation to general reserve has been reduced from Rs. 5.26 lakhs to Rs. 3 lakhs. Development rebate reserve gets Rs. 7,000, against Rs. 8,000. The proposed dividend absorbs Rs. 7.50 lakhs (the same), leaving Rs. 1.39 lakhs to be carried forward.

The larger provision for income tax in 1961-62 is attributed to the fact that agricultural income tax became payable on the Company's agricultural profits with effect from 1st April, 1962. The directors say that although the enactment of the Land Ceiling Act by the Maharashtra Government may not appreciably affect the supply of sugarcane to the Company's factory, a number of problems, such as valuation of crops, lift irrigation, mechanical equipment for cultivation and drainage have to be tackled. Due to the cut in production imposed last year, the area under sugarcane has been reduced. High gur prices prevailing this year have further affected sugarcane supplies available to the factory. This may lead to a lower crush during the current season. The Rs. 12.50-paid share of Shree Changdeo Sugar is currently quoted around Rs. 27.75 cum dividend, offering a gross return of about 9.9 percent.

Mysore Sugar Earns Less

ALTHOUGH production and sales of Mysore Sugar Co. Ltd continued to be satisfactory, there was a marked decline in its profit for the year ended June 1962. The reduced profit was mainly due to the lower price realised on sugar sales subsequent to the removal of controls in September 1961 and also due to the loss of Rs. 12.41 lakhs incurred on 7,180 tonnes of the export quota. The implementation of the Central Wage Board's wage-scale recommendations led to a rise in working expenses, and a provision of Rs. 5.96 lakhs had to be made to meet this additional expenditure. The directors' report says that the payment of unusually heavy interest charges of Rs. 5.67 lakhs on large-scale borrowings necessitated by the accumulation of stocks, also adversely affected the profits.

The profit for the year, before providing for taxation and development rebate reserve, amounts to Rs. 14.14 lakhs, after setting aside Rs. 8.27 lakhs for depreciation. The profit includes Rs. 2.03 lakhs being the excise duty rebate by way of production incentive for the 1960-61 season. Out of the profit, provision for taxation gets Rs. 10 lakhs (against Rs. 11 lakhs). A sum of Rs. 22,677 (against Rs. 1.55 lakhs) is transferred to deve-

lopment rebate reserve. After making these provisions, the net profit amounts to Rs. 3.91 lakhs (against Rs. 7.52 lakhs). Adding to this Rs. 63,788, being the balance brought forward from the previous year, and Rs. 8 lakhs, being the excess provision for taxation up to June 1961, the total comes to Rs. 12.55 lakhs. Out of this, provision for fluctuation in the value of investments comes to Rs. 25,000 (against nil). Stores depreciation reserve gets Rs. 50,000 (the same) and rehabilitation reserve Rs. 4 lakhs (against nil). The directors have maintained the dividend at 30 percent, subject to deduction of tax. This will absorb Rs. 6.54 lakhs. The balance of Rs. 25,953 is carried forward.

The directors say in their report that the amended price-linking formula for the payment of deferred price for sugarcane, is expected to impose a heavy burden on the Company for the past four seasons commencing from 1958-59. The Company's Mandya sugar factory commenced crushing operations on 14th

July, 1961, and worked up to 27th April, 1962. During this period, 385,016 tonnes of sugarcane was crushed and 38,056 tonnes of sugar produced, with an average recovery of 9.77 percent. Alcohol production in the distillery amounted to 713,268 gallons. The entire quantity of molasses produced in the factory was consumed in the distillery.

Indian Vegetable Products

THE working results of the Indian Vegetable Products Ltd for the year ended September 1962, show considerable improvement over the previous year's performance as a result of the increased demand and steadier raw material prices. The dividend has been maintained at 17 percent. Against an increase of 10 percent in sales from Rs. 3.33 crores to Rs. 3.67 crores, the gross profit has risen by about 32 percent from Rs. 11.11 lakhs to Rs. 14.63 lakhs. After providing Rs. 71,000 (against Rs. 72,000) for depreciation and Rs. 6.80 lakhs (against Rs. 4.55 lakhs)

for taxation, the net profit amounts to Rs. 5.68 lakhs, against Rs. 4.83 lakhs in 1960-61. With Rs. 66,028 being the excess provision and refund of sales tax for previous years written back, and including Rs. 2,393 brought forward, the disposable surplus amounts to Rs. 6.36 lakhs. Allocations include general reserve Rs. 1.77 lakhs (against Rs. 50,000), dividend equalisation fund Rs. 35,000 (against nil), and development rebate Rs. 80,000 (the same). No provision has been made for contingency reserve which absorbed Rs. 50,000 in the previous year.

The directors say that the Company has received a licence for manufacturing epoxy plasticisers. The initial plant and machinery worth Rs. 1.50 lakhs acquired for this purpose is being installed and the Company hopes to commence trial production shortly. Indian Vegetable Products has received the Government's sanction for issuing bonus shares in the ratio of one share for every seven held on 30th September by capitalising Rs. 3.02 lakhs from general reserve. The issue is being made in

An encounter with victory

Our will to win is worth only as much as our will to work. Increased output means self-sufficiency. It means relieving the Government of economic cares—leaving it free to concentrate all its efforts on throwing the Chinese out. An honest day's work, done in the spirit of self-dedicated duty, is an encounter with victory. In farm or factory, at the work-bench or the office-desk, it can be given to one and all of us to grasp the fuller meaning of this encounter.

Jai Jawan

Issued in the interests of the nation
BY SAHU JAIN GROUP OF INDUSTRIES

ACCOCID

(ACID-RESISTING CEMENT)

Containing silicates of high purity, ACCOCID is proof against all strengths of inorganic and organic acids. ACCOCID is recommended for setting acid-resisting bricks for acid storage and pickling-tanks, acid towers and fume-stacks, reaction-vats and tanks, laboratory bench-tops etc.

ACCOSET-50

(MONOLITHIC REFRACTORY CEMENT)

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, ACCOSET-50 gives good bonding strength and high heat resistance. Once it is dried and burnt ACCOSET-50 becomes one with the bricks. Recommended for jointing, bonding, monolithic and rammed linings etc.

FIREBRICKS

With medium, high and super alumina content, firebricks are made to the required shape, size and quality. They resist spalling, abrasion and the various stresses induced by heat.

order to bring the share capital (Rs. 21.17 lakhs) more in line with the capital employed in the business which amounts to Rs. 32.26 lakhs. The bonus shares will be entitled to dividend that may be declared in the current year. The Rs. 100-paid share of the Company is quoted around Rs. 200.

New Holding Company for Itakhooli Tea

PLANS to reduce the proportion of assets at stake in India explain proposals for a changed company structure put forward by the Itakhooli Tea Company. The directors propose to form a holding company, the shares of which will be exchanged for shares in the

existing Company on a one-for-one basis. Itakhooli Tea will then be a subsidiary of the newly-formed Itakhooli Holdings, and a quotation will be sought for the new company's capital of £200,000 divided into shares of £1. The tea Company will continue to work the Indian estate and retain assets incidental to operations. But some of the investments and cash owned by the tea Company will be transferred to the new parent.

Bonus Issue from Gourepore Jute

THE decision of the Gourepore Co. Ltd. to issue bonus shares by capitalising reserves has bullish im-

plications for jute shares in general. It implies not only that the industry has been enjoying a spell of prosperity but that the near-term trend is also encouraging. It is said that jute mills have been making profits of up to Rs. 500 a ton on hessian and around Rs. 200 a ton on sacking. Most of the mills are already well sold up to March 1963. Substantial sales have also been made by mills for the April-June quarter. On hopes of earning satisfactory profits for the current financial year, many jute companies have already paid good interim dividends.

In spite of such an encouraging prospect, and the issue of bonus shares, the ordinary shares of Gourepore Jute have been sluggish around Rs. 468 due to the general dullness of the stock market. When confidence returns, jute shares may be the first to respond. Investors in Gourepore shares, for the time being, are busy examining how the dividend outlook will be influenced by the issue of bonus shares. The one-for-one issue will double the ordinary share capital to Rs. 48 lakhs. The Company paid a taxable ordinary dividend of 20 percent for 1961-62, which absorbed only Rs. 4.80 lakhs; but during that year trading conditions were difficult. In 1962-63, the profits are expected to be much bigger. Hence the Company should not find it difficult to maintain the usual dividend on the increased share capital. Hopes have been reinforced by the fact that the mills have 962 hessian looms and only 432 sacking looms. On the basis of the past dividend of 20 percent, the yield works out to 4.3 percent at the present price.

The move to sub-divide the ordinary share of Rs. 100 into ten shares of Rs. 10 each is significant to the extent that it may help to widen the market for the scrip. It is also possible that the share ownership may become more widespread when the sub-division is completed.

Voltas Maintains Dividend

VOLTAS Ltd has maintained the dividend for the year ended August 1962 at 14 percent, less tax. The preliminary figures about the Company's working results, which have been released along with the dividend announcement, show a slight fall in the profit in spite of a modest increase in the turnover. Receipts of sales and services are up by about 5.5 percent from Rs. 25.73 crores to Rs. 27.16 crores. But the profit, after providing for depreciation, is down from Rs. 1.40 crores to Rs. 1.37 crores. The omission of the figure for depreciation is understandable, particularly when all the other details about appropriations have been mentioned in the preliminary results. After providing Rs. 71 lakhs (against Rs. 66.50 lakhs) for taxation, the net profit is shown at Rs. 66.48 lakhs, about 9 percent less than the previous year's Rs. 73.05 lakhs. With Rs. 3.79 lakhs brought forward and adding Rs. 255 written back form development rebate reserve, the disposable surplus amounts to Rs. 70.77 lakhs. The allocation to general reserve has been reduced from Rs. 25 lakhs to Rs. 20 lakhs and that to development rebate reserve from Rs. 1.81 lakhs to Rs. 1.65 lakhs. No provision has been made for development reserve and staff welfare reserve which received Rs. 5 lakhs and Rs. 1 lakh, respectively, in the previous year but Rs. 7 lakhs has been allocated to the newly created taxation reserve. The proposed dividend absorbs Rs. 35.70 lakhs, leaving Rs. 2.91 lakhs to be carried forward.

The directors state that the Company has fully licensed orders in hand and margins expected from

CAPITAL, 17th January, 1963.

Globe Motors to Expand

GLOBE Motors Ltd has reported satisfactory results for the year ended July 1962. The gross profit at Rs. 6.33 lakhs shows little change from the previous year's Rs. 6.22 lakhs, but the directors have decided to skip the dividend in order to conserve resources for the expansion schemes. In 1960-61, the Company paid a dividend of 15 percent, less tax. Allocations include depreciation Rs. 66,366 (against Rs. 53,203), development rebate Rs. 643 (against Rs. 14,400), taxation Rs. 1.72 lakhs (against Rs. 2.58 lakhs), reserves Rs. 3.60 lakhs (against Rs. 40,000) and taxation in relation to earlier years Rs. 32,168. The Company's industrial unit—Globe Steels—is reported to be ready for going into regular production shortly. The factory will initially produce silicon-manganese spring steel flats for use in railways and the automotive industry as well as various types of malleable iron castings.

The Company made a share offer to the public in May 1962. Now it proposes to offer rights shares of the value of Rs. 10 lakhs in the ratio of one share for every five held, after making the existing shares fully paid by making the final call of Rs. 25 a share. The additional funds are needed for investment in the Company's subsidiary—Luke Auto Ancillary (India) Private Ltd which has taken up the manufacture of clutches and clutch plates in collaboration with the West German firm of Lamellen und Kupplungsbau August Haussermann, Stuttgart. Production is expected to start by September 1963. The subsidiary Company will have a capital of Rs. 20 lakhs of which 51 percent will be contributed by Globe Motors and the balance by L.U.K. of Germany. The Company proposes to form another subsidiary in collaboration with Firma Luhn and Pulvermacher of Hagen-Haspe, West Germany, for manufacturing laminated and helical springs for using in motor-cars and railways. The subsidiary will be known as Globe Baldur Private Ltd. Fifty-one percent of its capital will be owned by Globe Motors and 49 percent by the foreign firm collaborating in the project.

Bank of Baroda Profit Falls

THE Bank of Baroda, which raised the interim dividend from 7 percent to 8 percent, has reduced the final dividend for 1962 from 10 percent to 8 percent. The total dividend for 1962, therefore, amounts to 16 percent, against 17 percent in 1961. According to the preliminary report, the net profit, subject to audit, after providing for tax, shows a decline from Rs. 67.13 lakhs to Rs. 63.19 lakhs. With Rs. 3.02 lakhs brought forward, the disposable surplus amounts to Rs. 66.21 lakhs, against Rs. 68.72 lakhs. Final and interim dividends absorb Rs. 27.30 lakhs against Rs. 25.50 lakhs. The final dividend, it should be noted, is on increased capital. The allocation to the reserve fund has been reduced from Rs. 20 lakhs to Rs. 12.75 lakhs. The carry-forward, subject to payment of bonus to staff, is Rs. 26.16 lakhs, compared with Rs. 23.22 lakhs at the end of 1961. The Rs. 50-paid share of the Bank of Baroda is currently quoted around Rs. 93 cum dividend, offering a gross yield of about 9.4 percent.

them will be substantially higher than in the previous year. This holds out the promise of better results in the current year. The Rs. 100-paid share of Voltas is currently quoted around Rs. 247, offering a gross return of a little over 6 percent on fresh investment.

CAPITAL, 17th January, 1963.

INDIAN OXYGEN LIMITED

CHAIRMAN, SIR J. D. K. BROWN'S STATEMENT

The following is the statement circulated by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited to the Members of the Company with the Annual Report for the year 1962. The 28th Annual General Meeting of the Company is to be held in Calcutta on the 8th February, 1963.

This review deals with a period which ended before the proclamation of the present emergency. Nevertheless, I feel that it is appropriate that I should begin it with a reference to the situation created by the attack launched by Chinese Government Forces on Indian territory. While armed conflict between nations is rightly to be deplored by all thinking people at any time for the loss of life which it inevitably involves, and for the suffering which it entails for bereaved families and those who are rendered homeless, it is indeed tragic that at a time when such vast efforts to raise the admittedly low standards of living of the mass of the Indian people were being made by means of planned industrial development, a part of that effort—possibly a substantial part over a period of years—must now be diverted to increasing and modernising the country's defences.

For industry, the task to-day is to mobilise our total resources to ensure that, so far as it is humanly within our power, every demand of the Armed Forces is met without any avoidable delay; that where possible we should indeed anticipate these demands, and contrive by our ingenuity to overcome the shortages and the bottlenecks to production which are inevitable features of a situation such as that in which we now find ourselves. This involves the maximum degree of co-ordination; not merely between the various Ministries of Government, but within industry as a whole, and more particularly between Government and industry. Your Company is engaged in an industry which, in the context of defence production, is vital and I am sure I need hardly tell you that we have already assured the Government of India of our readiness to do whatever may be required of us to meet defence production demands.

Profits, Taxation and Dividend

The final outcome of the year's trading, after providing for depreciation and all taxation, is a profit of Rs. 60,82,869 as compared with the previous year's figure of Rs. 71,30,284. This may appear at first sight to be somewhat disappointing in a year in which gross income increased from Rs. 7.58 crores to Rs. 8.90 crores; but if the accounts are examined in detail it will be found that in fact the net profit, before charging taxation, increased from Rs. 1,07,55,284 to Rs. 1,35,49,869 despite the fact that the charge for depreciation alone increased by practically Rs. 5 lakhs as compared with the previous year. The fall in net profits after taxation is accounted for by the fact that in addition to the necessity of providing for taxation at a rate this year, we have an increased rate to provide for the shortfall in the previous year's taxation provision. This is an unavoidable adjustment in the case of a company such as ours, closing its accounts at 30th September, in any year in which the rate of tax on corporate profits is increased by the Finance Bill, which is not normally introduced until a date subsequent to the date of our Annual General Meeting. To aggravate the disparity in the taxation charge we have this year had to provide Rs. 13 lakhs, being the tax payable at 12½% on the bonus issue of share capital

made in September, 1962—a heavy price to pay for a very necessary adjustment to our capital structure. While there can be differing views regarding the equity of taxing bonus issues which have been made out of accumulated taxed profits which might otherwise have been distributed to shareholders as dividends, I am myself quite unable to see the justice of levying an additional tax on the capitalisation of premiums which have been paid in cash by shareholders on subscribing for additional shares in a company. Personally, I feel that it is only right and proper that companies should be encouraged to issue additional capital at a proper premium; but I am sure that the practice would be much more acceptable to the investing public and to company managements if it were not for this inequitable tax on capitalisation of premiums which have been subscribed by the shareholders themselves in cash, possibly out of their own taxed savings.

We continued to be faced during the year with rising costs in a number of directions. In terms of the recommendation of the Tariff Commission, the price of indigenously produced calcium carbide was increased from January, 1962 and the consequent further rise in the cost of production of dissolved acetylene compelled us to raise our selling prices from 15th February, 1962. Mild steel rods and core wire required for producing electrodes had to be largely imported at substantially higher prices, which forced us with reluctance to raise the selling prices of electrodes with effect from 1st November, 1961 to cover some part of the increased cost of production. Generally speaking, however, increasing costs in other directions were absorbed by the expanded scale of our operations, which is the direct result of the heavy capital expenditure incurred in recent years and it was this which largely contributed to what I and my colleagues regard as a very satisfactory increase in turnover and trading profits.

At the time when the proposal to capitalise Rs. 1.04 crores out of the Company's reserves was announced in April, 1962, it was made clear in a statement in the Press and to the Calcutta Stock Exchange that the proposed issue of bonus shares did not signify an intention to maintain the same rate of dividend on the increased capital, or indeed to increase at all the total amount distributed as dividends. In fact, in consideration of the increase in trading profits, your Directors have recommended a small increase in the distribution and you will see from the Profit and Loss Appropriation Account that the 12½% dividend proposed will absorb Rs. 43,68,000 as compared with the previous year's disbursement of Rs. 39,00,000 in respect of the 15% distribution for that year on the smaller capital.

Sales

Sales, which last year were at a level of Rs. 7.56 crores, rose this year to Rs. 8.87 crores; an increase of Rs. 1.31 crores or 17%, which I am sure you will agree is extremely satisfactory. These successful results have been achieved in spite of a number of difficulties. The Finance Bill which was introduced in the Lok Sabha on 23rd April, 1962 provided for the imposition of an excise duty on oxygen. This development created quite a few administrative problems which, however, have since been satisfactorily resolved. On account of the foreign exchange shortage, procurement of ade-

quate quantities of raw materials was never easy and shortages were particularly felt during the year in supplies of mild steel core wire used in electrode making and ammonium nitrate used in producing nitrous oxide. Continued power shortages at most of our operating centres again interfered with production and raised operating costs. It is a matter for satisfaction, however, that in spite of these difficulties the rising trend in our turnover over the past few years was successfully maintained. I may point out that in the last five years our turnover has shown a steady rate of increase of 16% to 17% per annum compound.

Substantial increases were achieved in sales of pipeline oxygen to the steelworks at Jamshedpur and Burnpur as well as in the sales of liquid oxygen explosives used largely in opencast mining, while sales of liquid and compressed oxygen also improved appreciably. Sales of dissolved acetylene again rose this year, as did our sales of electrodes and gas-user equipment, which were produced in greater quantities.

Share Capital and Finance

Just before the close of the year, the share capital was increased by Rs. 1.04 crores by the issue of 10,40,000 new ordinary shares as a capital bonus on capitalisation of Rs. 48 lakhs standing to the credit of share premium account and a sum of Rs. 56 lakhs forming part of our undivided profits standing to the credit of general reserve. As a result of this operation, the paid-up capital of the Company is now Rs. 3,64,00,000 and the opportunity of the general meeting which was held at the end of September was therefore taken to increase the authorised capital from Rs. 4 crores to Rs. 8 crores to provide for further issues of capital, which will inevitably be required to finance some part of the future development of our business, although I should make it clear that there is no immediate intention of issuing further capital.

Capital expenditure incurred during the year amounted to Rs. 1,32,35,506; this covered a number of projects all over the country, which are referred to in some detail hereunder. Most of our capital imports were arranged against foreign exchange entitlements already in our hands so that no new scheme for foreign exchange loan financing was involved, although you will have observed that our overdraft with our Bankers in India increased further during the year. We have reached a stage, however, where, in order to finance further large scale developments, which we believe to be urgently necessary, we shall have to seek further substantial loans in foreign currencies. Negotiation of such loans with the financial institutions and the procurement of the relevant import licences inevitably involves much delay, and in view of the relative urgency of implementing some of our development projects, we are particularly grateful to The British Oxygen Company Limited for having agreed in principle to make further advances by way of loan, up to a total of £500,000. I shall refer to this matter in more detail later in this statement.

Development and Expansion

At a meeting of shareholders held on the 27th September last, it was agreed to incorporate in our Memorandum of Association certain additional clauses dealing with the objects of the Company and we are now seeking the consent of the High Court in Calcutta thereto. As was explained in the state-

ment which accompanied the notice convening the meeting referred to, it is proposed to undertake the manufacture and installation of, and to deal in, plant and machinery for producing and using gases and for manufacturing electrodes, gas using equipment, welding transformers, etc. Ours being a capital-intensive industry and most of our plant having previously been imported from abroad, you will appreciate that the implementation of this scheme will result in substantial savings of foreign exchange. Apart from manufacturing plants for our own use, we intend to undertake to install such plants and render technical assistance to others.

I had indicated last year that in step with increasing oxygen requirements in the Jamshedpur area, the Company had taken in hand a programme to install three additional 400M³ oxygen plants in our factory there. I am happy to report that all three plants have now been installed and have commenced commercial production.

The installation of a new dissolved acetylene producing plant at Gauhati was completed during the year and is now in commercial production. This supplements the oxygen producing facilities installed at our own site there last year and provides a local source of supply of Assam's requirements of oxygen and acetylene, which in the light of subsequent and recent events in that part of the country can only be described as a most timely development.

Considerable progress was made during the year with our development plans at the Bombay Factory. Civil work mainly centred round a new bay to accommodate the nitrous oxide plant and a new oxygen filling deck

S. T. SADASIVAN

General Manager

with an attached despatch office. The second 400M² oxygen plant which was licensed for Bombay last year is now under erection and is expected to be on stream in February next year. The nitrous oxide plant was installed and has been in commercial production since October, constituting our second source of supply in the country of this important anaesthetic agent.

Land was purchased during the year at Hyderabad, and plans are now being laid for erecting a factory to manufacture oxygen and dissolved acetylene there.

An extension to the Electrode Factory building at Khardah, near Calcutta, was completed during the year and an additional electrode producing machine installed. The newly licensed wire mill has also just been erected and preliminary runs have already been made in drawing our own wire for electrode making. Additional machines were installed in the Equipment Factory at Beliaghata, which was reorganised along new lines some months ago.

Land has been purchased at Ranchi for building a modern factory to pro-

duce 'Loxite' cartridges, a component of liquid oxygen explosives. This activity has hitherto been carried on at Burnpur, where the available facilities have, however, now become outmoded.

Competition

In the same way that availability of electric power is indispensable to the development of the economy generally, so is an increasing supply of industrial gases essential if the output of the engineering industry is to expand. And just as in the case of electric power supply, the availability of industrial oxygen and dissolved acetylene particularly has to be planned and capacity installed well in advance of current requirements. In my statement last year, I discussed the need for perspective planning in the context of the Government of India's proclaimed industrial policy. Your Company has at all times endeavoured to keep its production facilities one step ahead of demand but in pursuing this policy it has been necessary from time to time to take account of industrial licences issued to potential competi-

tors during the past few years. Unfortunately, in a number of cases where licences have been issued, implementation of schemes for the setting up of oxygen and dissolved acetylene plants has been delayed through various factors, such as the shortage of foreign exchange or the difficulty in finalising terms for technical collaboration. This is particularly unfortunate in the context of the present emergency, which has already thrown up pressing or potential additional demands which, with the best will in the world, can hardly be met from existing productive capacity. The present situation emphasises the necessity in an industry of this kind to have in reserve a margin of capacity to meet unexpected demands. The actual position is that the plants installed in the country are generally working beyond normal capacity and the margin which preferably should exist between that capacity and peak demands is simply not there.

Our own assessment of the position over the next ten years, made before the present emergency gave rise to potential increased demands from indus-

tries concerned with the defence of the country, shows that there is room for newcomers, whose emergence as competitors we in fact welcome; but I would utter a warning against retarding the sound development of existing concerns pending the coming on stream of the newer units. Whatever the justification from the point of view of the building up of a socialistic pattern of society, which in the case of this particular industry seems very doubtful, such a policy has grave dangers so far as the development of strategic industries generally is concerned.

Management and Personnel

The six-year agreements with our various Labour Unions covering the bonus payable to the Company's employees other than officers terminated with the bonus payable in relation to the year ended 30th September, 1960. The bonus payable for the year ended 30th September, 1961 had to be determined during the year under review and I am happy to report that this was achieved amicably under an agreement reached with the Unions cover-

ing the quantum of bonus payable for the two years, 1961 and 1962. The amount agreed was higher at five-twelfths of the basic earnings during each year, regulated within certain minimum and maximum limits.

I had referred in my statement last year to the selection of four members of the staff for intensive management training. These trainees have since been appointed officers and the results achieved fully justify the experiment. Officers of the Company continued to be trained, both inside the Company and outside at the Administrative Staff College of India at Hyderabad and through several other organisations as well as at Charteridge Lodge, a residential Staff College of The British Oxygen Group situated near London.

I have once again to record our particular gratitude to our Managing Director, Mr. A. K. Sen, who has not spared himself in directing the Company's activities. To him, to his colleagues in the management and to all staff and workpeople at our installations throughout the country, I once again offer on your behalf our grateful thanks. Having worked closely with Mr. Sen for over three years now I would assure you that this expression of thanks is no mere formality but signifies our sincere appreciation for a job well done.

Mr. C. Hawkins, who joined the service of the Company in 1952 and who was appointed a Technical Director in 1956, is severing his connection with us at the end of this month and I welcome this opportunity of extending to him our best wishes for the future along with our thanks for his services during the past ten years.

We have learnt only very recently of the death in the United Kingdom at the end of last month of Mr. D. B. A. Cart, who was appointed a Director and General Manager of the Company in 1937, and who was Managing Director from the end of 1942 until his retirement at the beginning of 1951. Mr. Cart played a most important part in building up this Company during its formative years and he continued to take a great interest in its welfare after his retirement. It is only appropriate that we should recall at this time his contribution to the growth of the Company and also that we should extend to Mrs. Cart our sympathy in her bereavement.

Technical Collaboration

We have been privileged recently to receive a further visit from Mr. J. S. Hutchison, the Chairman of The British Oxygen Company Limited. In company with your Managing Director and myself, Mr. Hutchison visited Delhi at the height of the fighting on the northern frontiers last month. Mr. Hutchison lost no time in pledging the full support and technical backing of The British Oxygen Company Limited, not only to your Board but also to the Government of India through the Finance Minister, in meeting on a priority basis whatever demands might be placed on them. While this is most heartening, it is by no means all that Mr. Hutchison had to mean all that Mr. Hutchison had to offer us when he was here. Appreciating the delays which might be involved in arranging for the necessary foreign exchange to meet the cost of the imported components of certain urgently required developments, he was in a position to offer on behalf of the parent company to make advances in sterling to your Company up to a limit of £500,000 on terms to be approved by the Government of India. I need not tell you that this is a most valuable gesture which should greatly assist us in implementing without delay demands for additional productive capacity which, it seems to us, must be placed on us before long. I might add that in addition to this offer and while Mr. Hutchison was still with us, the Board of The British Oxygen Com-

pany Limited undertook to contribute the sum of £15,000 in sterling to the National Defence Fund. The British Oxygen Company Limited is basically a Commonwealth enterprise and I welcome this opportunity of expressing publicly on your behalf our heartfelt thanks to Mr. Hutchison and his colleagues for the speed and the extent of their response to India's needs at this critical juncture in her history. Incidentally, a measure which you will surely approve—your Board has authorised a contribution of Rs. 3 lakhs to the National Defence Fund out of the funds of the Company; while contributions on a notable scale have been made directly by employees, who have authorised deductions from their wages and salaries for this purpose.

Apart from their generous response at the height of the present emergency, our Technical Consultants have continued throughout the year to meet all demands made upon them for technical advice, for the training and provision of staff and in various other directions. With our projected entry into the plant manufacturing field we shall undoubtedly be making additional calls upon them while building up this side of our business. On your behalf, I extend to them our grateful thanks for their contribution in achieving the satisfactory results of the past year.

Prospects

Company Chairmen are notoriously vague in advising their shareholders in regard to future prospects. This, in my opinion, is a wise attitude born of caution and, in many cases, experience. The present emergency conditions prevailing in this country make it particularly difficult to venture an opinion on prospects for the current year. If I had been addressing you before the declaration of the emergency, I would have said that growth prospects continued to be favourable but that, being about to enter on another cycle of fairly massive capital expenditure, I should not expect to see the same spectacular increase in trading profits in the next year or two as we have seen in the accounts which are submitted with this statement; in other words, while long term growth prospects remain favourable, because of increasing debt repayment obligations arising out of continuing capital expenditure, shareholders could not expect a further increase in dividend for another few years. While it is too early yet to make any pronouncement as to the effect of the changed conditions which now obtain, our tentative conclusions are that it will probably be necessary to accelerate certain of our development projects in order to meet the demands of many of our customers who will be involved in the expansion of the country's defence industries. There are, however, so many imponderable connected with, for example, supplies of our own and our customers' raw materials, electric power and other items that I cannot usefully say more at this juncture. Your Company will, I assure you, do its utmost to meet whatever demands may be placed on it by the Defence Services directly or by industry generally and I am confident that with the country-wide organisation which has been built up and with the invaluable technical backing of The British Oxygen Company Limited, we shall not fail.

Personal

As this is the last occasion on which I expect to address shareholders as Chairman of the Board, I take this opportunity of extending to my fellow Directors my thanks for their unfailing support, not only in the past year but throughout the period during which I have been privileged to be associated with the Company.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE MYSORE KIRLOSKAR LIMITED

HARIHAR

CHAIRMAN REVIEWS PROSPECTS

Extracts from the Speech of the Chairman delivered on Saturday the 8th December, 1962, at Harihar at the time of the Twenty-first Annual General Meeting of the Company.

It is my proud privilege to welcome you to this Twenty-first Annual General Meeting of your Company. Unfortunately, we are meeting today after the sad and premature demise of Sri Rajaram Laxman Kirloskar on the 8th October, 1962, in Bombay.

Your Directors have duly placed on record their very warm and sincere appreciation of the meritorious services rendered by Sri Rajaram Laxman Kirloskar not only to the Company but also to the Machine Tool Industry in India as a whole.

Net Sales

From the Profit and Loss account of your Company you may have noticed that the net sales of the manufactured goods during the year amounted to Rs. 1.75 crores as against Rs. 1.57 crores in the previous year. Sale of stores and sundries during the year amounted to Rs. 7.36 lakhs as against Rs. 6.05 lakhs in the previous year. Though the sales during the year under report are higher than the previous year, the profits of the Company are not however commensurate with the same. It will be observed that compared to the previous year, the proportion of salaries and wages to total revenues has increased from 23 per cent to 25 per cent on account of the revision of wage structure as a result of the agreement with the Labour Union. The proportion of provision for taxes to total revenues has also increased from 7 per cent to 9 per cent as a result of the increase in the rate of Super-tax with effect from the assessment year 1962-63 in respect of the companies. The Development Rebate provided for 1961-62 is Rs. 1,48,500 which is much less than that of the previous year. This has resulted in a higher provision for taxation for 1961-62. Raw materials, Stores consumed, including Works-in-process and Transport charges account for 41 per cent of the total revenues whereas the proportion for the previous year was 42 per cent. The expenses on account of Fuel and Power consumed have increased from 2 per cent to 3 per cent. The proportion of Statutory Depreciation to total revenues remains unchanged at 6 per cent. Indirect Working expenses have reduced from 11 per cent to 10 per cent. The balance of profits which was 9 per cent for the year ended 30th June, 1961, has declined to 6 per cent for the year ended 30th June, 1962.

During the year under report, there has been an addition to the Plant and Machinery valued at Rs. 6.84 lakhs as against Rs. 18.14 lakhs in the previous year. Orders have been placed for the import of the Plant and Machinery required for the expansion schemes and the machinery is expected to be received during the course of the next two years. There have also been additions to the buildings valued at about Rs. 14 lakhs. These include the buildings for our Branch Factory at Hubli and Machine Shop No. 3 as well as the extension of Machine Shop No. 2 and the Packing and Painting Sheds.

Capstan and Turret Lathes

As you may have seen from the Directors' Report, the Company's pro-

gress in the manufacture of Capstan and Turret lathes could not be according to our plans on account of the delay in receiving the imported components. The speed of development of these lines in future would depend upon the import policy of the Government of India.

At the time of the last Annual General Meeting, I had pointed out the difficulties faced by the Company in procuring quality Hard Coke and Pig Iron. This year the situation became even more difficult. The position of Coke had gone from bad to worse and the supply position of Pig Iron was perhaps at its worst. The timely help received from the Mysore Iron and Steel Works, Bhadravati, however, helped us to maintain the continuity of production. The difficulties experienced in getting wagons have also increased because of the speed restrictions on the movement of trains.

I am happy to say that attempts are being made by your Company to export its goods to the South-East Asian countries and a proposal is under consideration to open an office at Kuala Lumpur for this purpose.

National Emergency

Today we are facing a national emergency as a result of the border disputes with China. We are already facing an undeclared war. Under the circumstances, the Machine Tools Industry has a special responsibility to shoulder. The Minister of Heavy Industries has rightly urged that every Machine Tool factory should work round the clock to increase production and also to take up new lines which are urgently needed to meet the Defence requirements.

Your Company has already responded to the call of the Nation in increasing production. Your Company is also actively considering taking up new lines of production like Grinding machines, Milling machines, Automatics, etc.

A certain amount of understanding and co-operation must exist between the workmen and the management to meet the demands on the industry. Now that a long-term agreement is recently concluded with the workmen, I hope, the workmen will appreciate the need of the hour and will not fail to continue to extend their unstinted co-operation in increasing production.

I am glad to inform you that your Board has agreed to donate a sum of Rs. 25,000 towards National Defence Fund.

N.B.: This does not purport to be a report of the Proceedings of the Annual General Meeting.

India is facing a grave threat. Operations such as coalmining, steel making, earth-moving, oil drilling, shipping and shipbuilding, have to be executed with the greatest promptitude, involving maximum efficiency and minimum wastage. During such an emergency the utility of wire ropes is invaluable.

The Usha Martin Black plant at Tatisilwal, Ranchi, is equipped with some of the world's most modern wire drawing, rope making and rope testing machinery.

What is more, UMB wire ropes can be used in different climates, be it in the cold Himalayas or in hot Rajasthan, and under varying conditions below the earth, on the surface, afloat or in mid-air.

At this moment of a foreign exchange crisis, Usha Martin Black sets an example by manufacturing what hitherto had to be imported and thus saves vital foreign exchange.

INTWMB 6326

DEPRESSION CONTINUES IN CALCUTTA

Wednesday Evening.

THE Calcutta stock market has remained quiet during the past week. Buyers have been conspicuous by their absence, so share prices have fallen in proportion to the selling pressure. Many scrip have been offered below the minimum prices without attracting buyers. Indian Iron, for instance, have been sold freely in the kurb market below the minimum price. The proceedings of the last annual general meeting of the Company, held in Calcutta some time ago, have been quoted to support the impression that the dividend is unlikely to be increased in view of the expansion schemes and the relatively low retention price of steel.

Lyons Range has been disturbed by political and economic uncertainties. The meeting between the Prime Minister, Mr. Nehru, and the "honest brokers" from Colombo has had little effect. There is a great deal of concern over the Kashmir problem. The attention of investors and operators has been diverted to the forthcoming Central Budget which, it is feared, will impose new taxes to cover the rise in defence expenditure. The Central Finance Minister has already indicated that the defence expenditure may have to be doubled to about Rs. 750 crores. But the stock market hopes that, for raising more revenue, he will concentrate more on indirect taxation than on direct.

Lyons Range has been worried by the growing shortage of funds. Because of the sharp fall in the commodity markets, operators have become nervous. Holders are finding it difficult to avoid selling their shares as banks are trying to curtail overdrafts against shares. Reports that some banks have also decided to increase their interest rates on advances against shares have caused concern. In the circumstances, the move of the committee of stock exchange presidents to ask banks to increase the margin against shares, from 60 percent to 70 percent of share values, has been welcomed. If banks were to adopt the increased margin, selling pressure would be reduced. The move would also help to increase support for new issues, which have had a poor response during recent weeks. The increased margin may not involve giving more credit to the stock market in view of the sharp fall in share values during recent months.

The stock market thinks that the prospect of a further hardening in interest rates has bearish implications. As shares are now being judged by dividend yields rather than growth prospects, it is feared that investors will want bigger yields than before. Hence a downward adjustment in share prices cannot be ruled out. The hesitation of investors has been the greater since the latest company reports have been discouraging. In spite of an increase in turnover, profits have generally been squeezed by heavier taxation and rising production costs. Hence companies may not find it easy to maintain their dividends.

But for scattered support to Indian Standard Wagon, Braithwaite and Jessop, engineering shares have been sold freely. Britannia Engineering, Dalmia Iron and J. K. Steel have been transacted at lower levels. Coal shares have been neglected. A Press report that a World Bank team will soon be coming to this country to investigate the possibilities of expansion in the coal industry, has been ignored. Pench Valley and Amalgamated have improved fractionally. Cotton mill shares have been depressed and buyers have stayed out.

Although pressure has declined in jute shares, support has not been forthcoming in spite of the payment of some good interim dividends. The near-term outlook for the industry is considered encouraging. There is an abundant supply of fibre. Although overseas enquiries for jute goods have been few, they are expected to increase in the near future. Barnagore, Anglo-India, Megna, and Union have been bought. Gourepore have met with scattered support on prospects of a one-for-one bonus issue.

Prices of miscellaneous shares have fallen due to selling pressure. Anglo Brothers have been quoted lower despite the payment of a higher dividend. Hindustan Motors have reacted, as investors have been unable to ascertain whether the diversion of capacity to the manufacture of lorries will prove to be more profitable. Hindustan Aluminium have been quiet on prospects of a rights issue. Among managing agency shares, Jardine Henderson and Martin Burn have been bought. Among new shares, Hindustan Twyford, Isaac Holdens and Asiatic Oxygen have been steady.

Scattered support has been extended to Calcutta Electric due to the payment of an interim dividend. Investors also think that the "reasonable return" for electric companies will increase following the rise in Bank rate. Paper shares have fallen after an earlier improvement. Sirpur, Bengal and Seshasayee have been dealt in. Tea shares have been freely offered without attracting buyers. Investors have been worried by the shortfall in the north Indian crop during 1962.

Government securities have been quiet. The Reserve Bank has cut its buying and selling rates for some loans in line with the market trend. Institutional support has been lacking as some banks are reported to have sold securities to obtain more cash for financing credit requirements. The 3 percent Conversion loan 1986 has fallen to the official support level of Rs. 63. Prices of State Government loans have fallen further. Sellers have even been willing to discount prices on firm buying indications. High-yield preference shares and debentures have met with scattered support.

Bombay

SLUGGISH CONDITIONS IN DALAL STREET TAX FEARS AFFECT SENTIMENT

Wednesday Evening.

SLUGGISH conditions have prevailed in the Bombay stock market during the past week. Share prices have drifted downwards on any indication of selling, but buyers have preferred to stay out. Political uncertainties apart, operators have no inclination to enter into fresh commitments in view of the possibility of heavier taxation in the coming Central Budget. Investors have been

worried by the thought that interest rates may harden further.

Turnover has been confined to a few selected scrip, but there have been more sellers than buyers. In steel shares, sentiment has been subdued by fears that the steel companies will find it difficult to increase the dividends unless retention prices are increased. Tata Steel have been quoted at Rs. 120 and Indian Iron at 21.84. Engineering shares have generally been neglected. Tata Locomotive have declined to Rs. 279. Hindustan Motors and Premier Automobiles have been subdued among motor-vehicle shares.

Cotton mill shares too have been easier as the offtake of cloth has been below expectations. There is a great deal of uncertainty about the prices of cloth and yarn, which may be cut in the near future. Scattered business has been transacted in Century, Bombay Dyeing, Kohinoor, Khatau, Standard and Tata Mills at lower prices. Miscellaneous shares have been dull. B. B. Petrol have reacted after an earlier rise. It is rumoured that the Company may receive adequate compensation for damage caused during the second World War. Sugar shares have been sold freely due to fears that output may be smaller during the current year. In cement shares, there has been some interest in selected scrip such as Associated Cement Steamship company shares have been subdued as the Government may increase the participation of foreign capital in Indian shipping companies. Bombay Burmah have fallen on pressure. Rayon and chemical shares have been quiet. Voltas have met with scattered support on maintaining the ordinary dividend. There has been virtually no interest in bank and insurance shares. Scattered support has been extended to electric company shares on hopes that the "reasonable return" may be increased with the rise in Bank rate.

Madras

MINIMUM PRICES SCRAPPED

APPRECIABLE FALL IN TURNOVER

Tuesday Evening.

THERE has been an appreciable decline in turnover in the Madras stock market during the past week. Although minimum prices of all clearing and non-clearing shares have been scrapped, investors have not responded. Operators have been idle and are not inclined to extend their commitments in view of the poor advices from Dalal Street. Investors' hesitancy stems from fears that several industries may suffer due to the shortage of power and raw materials. The paucity of funds has been growing; it is feared that banks may restrict credit supplies to the stock market because of the restrictions on commercial banks' borrowings from the Reserve Bank.

Bank shares have been neglected, only stray business having been done in Indian Bank. Among electric company shares, South Madras and West Coast have met with scattered buying. Except for E.I.D. in the sugar

COAL- VITAL RAW MATERIAL, WORTHLESS WITHOUT TRANSPORT

Unless delivered to industry, coal might just as well be rubble. The growth of our industries means increased coal consumption. The railways, working to full capacity, find it difficult to keep up with the demand. Vital industries are constantly faced with coal shortage. The Indian Roads and Transport Development Association has made a valuable contribution towards public awareness of this urgent and vital problem. They estimate that by 1965 the demand for long-haul traffic will be 330 million tons against a transport capacity of only 290 million tons—a gap of 40 million tons. With better roads and modern vehicles, Road Transport can deliver the goods.

General Manager.

AB-21

section, there has been a predominance of sellers. Planting shares have drifted downwards in the absence of support. Blue Mountain, Cochin Malabar and Consolidated Coffee have declined. Cotton mill shares have been subdued and stray business has been transacted in Travancore Rayon, Rayalaseema and Buckingham. Except for scattered buying in selected cement and chemical shares, miscellaneous shares have been neglected. Aluminium Industries have been transacted at Rs. 23.30, Ashok Leyland at Rs. 8.20, India Cement at Rs. 6.17 and Mysore Paper at Rs. 14.10.

Government securities have been quiet and buyers are difficult to locate. Prices of all dated loans have declined, and those of State Government loans have fallen further on selling pressure. Investors have been cautious they fear that a further

decline might take place because of the increase in Bank rate.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. London Market

UNSETTLED TREND IN PRICES

LEADING EQUITIES DULL

London, 15th January.

THE London stock market was unsettled during the past week with few people committing themselves since the outlook was obscure. European Common Market developments were a considerable influence and President de Gaulle's spanner had a particularly unsettling effect. Jobbers immediately pushed prices lower. However, there was very little selling and the market soon became somewhat steadier. Sentiment was helped to some extent by the U.K. Chancellor of the Exchequer's forecast of unprecedented spending in 1963. Gilt-edged was in a dull mood and drifted lower under the lead of 3½-percent War Loans. Dollar stocks reflected Wall Street trends and after some fluctuation, moved up after the recent rise in response to the U.S. tax cut news. Leading equities mostly showed falls ranging to 2s with I.C.I. around that amount lower. Gold shares moved narrowly and mainly towards lower levels but small selective buying later brought better prices. Copper shares were favoured at times and tins gained some ground. Oils moved erratically but there was a good demand for both rubbers and teas, particularly for the latter.

GOING UP - TO GO DOWN

As the rigbuilders get to work on a new well location, so the local people say: "Ah, they're beginning to search for oil." Not so! Although the oilman's derrick is often the first outward sign that oil prospecting is in progress, months—perhaps years—of careful preparation by geologists, geophysicists, and other scientists will have preceded it without catching anyone's eye.

The building of the steel derrick, which is mainly a device for lowering and raising the driller's tools, drillpipe and casing into and out of the well, is one of the last stages of the operation.

It takes many skills and aptitudes—including the know-how of the sure-footed rigbuilders who erect the derricks—to find oil.

A ½" SPANNER PUT THIS UP

A half inch spanner is the only tool required to erect Mills Scaffolding. A few turns and the fittings secure the steel tubes firmly—the greater the load the stronger the grip due to the "shackle grip" principle on which they are designed.

Strong and safe, Mills tubular scaffolding is versatile; the same tubes and fittings can again be used to erect anything from Grandstands and temporary buildings to storage racks and road blocks.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd., and the tubes are manufactured by The Indian Tube Company (1953) Limited.

At the commencement of the project during the second plan, there was no indigenous production of either cables or the line transmission equipment required for the scheme, and it was envisaged that the necessary material would be imported. However, due to restrictions on the import of material (due to foreign exchange difficulties) from the early stages of the scheme, the progress as planned could not be achieved. Physical work on the project was commenced in May 1958, and up to the end of the second plan period, work was completed in the Delhi-Agra, Agra-Kanpur and Kanpur-Lucknow sections and cable laying in the Asansol-Saram section was nearly complete.

'BEHAR' the dependable name in

FIRECLAY & SILICA Refractories

For nearly half a century BIHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRM CEMENT • STOPPERS • SLEEVES • NOZZLES • TUYERS, ETC.

Gram "BANCOR"

ted. This represents work on 577 miles of the route, against the original target of 2,000 miles. Taking into account the various details of these works, such as equipment installation, and building work, the achievement of the physical target of the project at the end of the second plan is estimated at 26 percent.

During the third plan, it is proposed to complete the left-over portion of the project undertaken during the second plan, namely, work in the Sasaram-Kanpur and Sasaram-Patna, Agra-Bombay and Jodhpur-Beawar sections, totalling 1,410 miles. In addition, new coaxial projects are proposed on the followings routes: Bombay-Poona-Bangalore-Madras-Trichy-Coimbatore 1,140 miles; Delhi-Meerut-Muzaffarnagar - Saharanpur-Ambala-Jullundur 325 miles; and Bombay-Dhulia-Nagpur and Dhulia-Indore 670 miles. The routes mentioned above are proposed to be cabled using standard coaxial cables. In addition to this, it is proposed to lay small tube coaxial cables providing up to 300 channels on the following routes:

Miles	
Ahmedabad-Rajkot	... 140
Trichy-Madurai	... 100
Meerut-Hapur	... 40
Ambala-Chandigarh-Simla	... 100
Jullundur-Pathankot-Jammu-Srinagar	... 326
	706

The project, which was sanctioned during the second plan, will be completed as follows: Agra-Ahmedabad August 1963, and Ahmedabad-Bombay, Beawar-Jodhpur and Patna-Sasaram July 1964.

The new works proposed in the third plan will be commenced in the middle of 1963. From this period, the work will be carried out in the following order: (1) Bombay-Poona-Bangalore-Madras-Trichy; (2) Delhi-Meerut-Muzaffarnagar - Saharanpur-Ambala-Jullundur-Amritsar; (3) Bombay-Dhulia-Nagpur; and (4) Dhulia-Indore. As for the small tube coaxial installation, the work will commence from the middle of 1963. During the third plan, it is proposed to introduce subscriber dialling over the coaxial cable systems between important cities. The traffic statistics over the various routes have been collected and are being analysed. The detailed engineering work of the various sections will be taken up and completed in time for the execution of the works as shown above.

The 1963-64 programme includes the laying in of cables to connect Delhi to Meerut, Saharanpur, Ambala, Ludhiana and Jullundur; Bombay to Poona on the one side and to Surat, Broach, Ahmedabad and Himmatnagar on the other. During 1964-65, Poona will be connected to Bangalore and Madras to Tiruchirappally. During the third plan, it is proposed to introduce microwave telephone networks for the first time in the country. Over the last few years, considerable development in the technique of microwave design, manufacture and operation has taken place which, in turn, has affected favourably the reliability and economics of such links.

In the normal microwave systems, the range is limited to slightly beyond the line of sight and for long links, relay stations are required at intervals of about 30 miles to 40 miles depending on the conditions of the terrain. In this type of system, it is possible to obtain up to 900 telephone channels on a route. In another system of transmission of microwaves, the principle of tropospheric scatter is used and ranges higher than the line of sight are possible. In the present stage of development, this type of system can cover up to 200 to 300

miles and provide up to 120 telephone channels.

In the third plan, it is proposed to provide a network of the combination of line-of-sight microwave links and scatter links to connect Asansol-Darjeeling-Shillong-Tezpur, Shillong-Agartala and Shillong-Dibrugarh sections with various shorter links connected to these stations. In addition to this it is also proposed to take up field studies for the introduction of microwave links over 400 miles of routes in other parts of the country where terrain conditions would indicate their use. At present, microwave equipment is not manufactured indigenously, and there is a paramount need for starting their early manufacture within the country itself. Most of the equipment required for the proposed project will have to be imported.

The expansion programme of some of the important automatic telephone systems during the third plan period is as follows:

Delhi: During the first and second plans, the capacity was increased from 10,100 lines to 16,200 lines and from 16,200 lines to 31,700 lines, respectively. One new automatic exchange was opened during the first plan, namely, Tis Hazari, with a capacity of 4,000 lines, while two more automatic exchanges, namely, Karolbagh (2,500 lines) and Jorbagh (3,000 lines), were opened during the second plan. In the third plan, it is proposed to provide 44,200 lines, including Shahdara and Faridabad raising the capacity to 76,600 lines. The capacity at the end of the third plan will be more than twice the capacity at the beginning of third plan and seven times the capacity at the commencement of the first plan.

Calcutta: The capacity at the beginning of the first plan was 21,570 lines consisting of manual exchanges only. A scheme for automatization was sanctioned in 1949 at a cost of Rs. 13.4 crores, providing for 15 new exchanges of the direct type with a total initial capacity of 55,000 lines. Eight of these new exchanges were opened during the first plan, raising the system's capacity to 44,590 lines at the end of the plan. The automatization scheme was completed during the second plan and further extensions to exchanges were provided. The capacity of the system at the end of the second plan rose to 74,600 lines, nearly three-and-a-half times the capacity at the beginning of the first plan. During the third plan, it is proposed to increase the capacity by 30,900 lines, raising the total capacity at the end of the plan to 105,500 lines.

Bombay: At the beginning of the first plan, the capacity of the Bombay telephone system was 20,070 lines. It was raised to 35,325 lines at the end of the first plan. During the second plan, the capacity was increased to 74,500 lines. A large project for expansion was sanctioned in 1956 at a cost of Rs. 12.5 crores, including provision for the construction of 11 new automatic exchange buildings, replacement of 13,460 lines and installation of 38,000 additional lines. During the second plan period, construction was started on three of the new buildings.

During the third plan period, the major expansion scheme referred to will be mostly completed and further extensions to these exchanges provided. The capacity, which will be increased by 58,300 lines by 1966, will then be more than five times the capacity which existed at the beginning of the first plan.

Madras: At the beginning of the first plan, the capacity of the Madras system was 5,700 lines. This was raised to 8,300 lines by 1956. It was practically doubled (increased to 14,750 lines) during the second plan period. Action was also then initiated

on the major project of replacement and expansion of the Madras Central Exchange to 8,000 lines. During the third plan, it is proposed to install 28,900 new lines and recover 4,800 lines of old equipment. The capacity at the end of the third plan will be about 39,500 lines—nearly seven times the capacity at the beginning of the first plan.

Waiting List

The third plan has started with a registered waiting list of 200,000. The present potential demand and that expected to be created in the third plan is likely to be well over 500,000. An outlay of about Rs. 154 crores will be needed for the extension of the local telephone service alone, but it has been possible to earmark only Rs. 35 crores for this scheme from the plan allocation. This will enable the department to provide only 300,000 new telephones (about 60 percent above the second plan achievement of 183,000). So the position in relation to the waiting list will be worse at the end of the third plan than at its beginning.

The Telecommunications Committee, it is learned, has recommended a crossbar system for telephone exchanges. Tenders for 50 crossbar lines have been issued as well as for seeking collaboration for a Government factory.

STEEL PIPES

Projects Approved

Four steel pipe projects have been approved by the Government of India. They are the Assam Tube plant, the Bharat Tube plant in Punjab, the Madras Tube plant and the Kalinga Tube plant in Orissa, the last one manufacturing seamless tubes.

ALUMINIUM

The Koyna Project

Every effort is being made to finalise the implementation of the Koyna aluminium project, it is learned. The project is linked to guaranteed exports by suitably adjusting the pattern of production and exploring the feasibility of bauxite and alumina exports.

MACHINE TOOLS

Imports from East Germany

Efforts are being made to buy East German machine tools and to manufacture them under licence in India to meet defence requirements. Earthmoving equipment is also being borrowed from the river valley projects and from large private contractors. Some imports for river valley projects are being diverted to defence for the manufacture of earthmoving equipment.

GOLD

Control Rules Issued

The Gold Control Rules were recently issued as an amendment to the Defence of India Rules, 1962. The Rules are concerned with gold in any shape or form with a fineness of not less than nine carats. They are intended to regulate the business of power-operated refineries and large dealers and seek to ensure a watch over them. They also provide for control over gold holdings in a shape other than finished ornaments in the hands of all others and envisage a few other measures which impinge on certain sections of the public.

The Rules are to be administered by a Gold Control Board composed

CAPITAL, 17th January, 1963.

of a non-official chairman, and for the present, three members, two of whom are officials of the Central Ministry of Finance. In addition to implementing the Gold Control Rules, the Board will take steps to discourage the use of gold and bring about conditions tending to reduce the demand for gold. It will also advise the Government on all matters relating to gold.

The Defence of India Act empowers the Government to control "the possession, use or disposal of, or dealing in, coin, bullion, bank and currency notes, securities or foreign exchange." The Rules authorise Central excise officers the necessary powers of search, seizure, ordering the production of documents, obtaining and testing samples of gold, confiscation, adjudication, etcetera, with provision for a final appeal to the Central Government. As far as the appeal to patriotism is concerned, it did not have much effect as the price, in spite of official measures, could not be brought down to the international level.

FREIGHT RATES

Joint Steamer Companies

By a resolution of 6th May, 1961, the Government of India appointed a committee. Its tasks were:

(i) to examine the traffic handled by the India General Navigation and Railway Co. Ltd and the Rivers Steam Navigation Co. Ltd (called the Joint Steamer Companies) on the river routes from Calcutta to Assam between 1958 and 1960, the freight rates prevailing in 1960 and the anticipated traffic and operational results in the immediately following years on the basis of the freight rates in force prior to March 1961;

(ii) to recommend whether any increase in freight rates was justified and, if so, to what extent; and

(iii) to recommend further how the increase, if any, could be distributed among the various commodities other than foodgrains.

The committee which submitted its report to the Government of India on 17th June, 1961, recommended a 5-percent increase in the freight rates in force prior to 15th March, 1961 for all traffic other than tea from Cachar as well as foodgrains. The committee further suggested (i) that this increase might take effect from 1st July, 1961, and be operative till the close of 1962, and (ii) that further investigation might be undertaken early in 1963 to assess what rates would be appropriate under the altered conditions expected to prevail thereafter in the context of (a) the increase in the capacity of the railways in the North East Frontier Railway; (b) progress of the Joint Steamer Companies' programme for replacement of their old vessels; (c) improvements, if any, in the river conditions, and (d) the construction of a port in Pandu, etcetera.

These recommendations were accepted. Freight rates increased on this basis have been charged by the Joint Steamer Companies since 1st July, 1961. "Since it is now necessary to set up a committee for the purpose of reviewing these freight rates in the light of the developments since the middle of 1961, and since there are obvious advantages in getting the enquiry made by persons who are familiar with all aspects of the case, the Government of India has decided to reconstitute the committee again with the following: Mr. S. R. Kalyanaraman, formerly member of the Railway Rates Tribunal, chairman; Mr. K. Nagaswami, Senior Cost Accounts Officer, Central Ministry of Finance, and a representative of the Assam Government,

CAPITAL, 17th January, 1963.

members. Mr. D. A. Rama Warriar, Secretary of the Ganga Brahmaputra Water Transport Board is member-secretary".

The committee will study the traffic handled by the Joint Steamer Companies in 1961 and 1962, assess traffic patterns and the operational results they are likely to have in the next few years on the basis of the existing freight rates. It will recommend, in the light of these and other such factors as it considers relevant, whether any revision of rates is called for and, if so, to what extent. The committee will also recommend how the increase or decrease, if any, in the rates should be distributed among the different commodities. The committee has been requested to make every effort to complete its work and submit its report before 31st January, 1963.

QUALITY CONTROL

Study Groups Appointed

At its first meeting held here last week, the Export Inspection Advisory Council endorsed the draft of the Export (Quality Control and Inspection) Bill of 1963, which follows the international pattern of such legislation prevailing in most countries. The Council also drew up a working programme for the current year to cover some of the important commodities like vegetable oils, fish and sea foods, coir and coir products, ginger, pulses, turmeric and onions. Four study groups were constituted for manufactured articles—one each for chemicals, engineering products, jute and jute products and for selected handicrafts. The study groups will report back to the Council the programmes, procedures and specifications for different products for preshipment inspection and quality control in consultation with the industry and trade interests concerned.

Inaugurating the meeting, the Central Minister for International Trade, Mr. Manubhai Shah, said that the arguments against quality control could not be supported by a small off-repeated plea that only a small number of complaints were being received from foreign quarters and that there was no need for quality control. This, he said, is a fallacious approach. It cannot justify the existing absence of quality control and export inspection programmes for exportable commodities. Quality control and preshipment inspection is a positive aspect of trade and particularly of the export trade. It is most important to see that quality consciousness spreads throughout the country to every producer of agricultural commodities, every manufacturer of industrial goods and the trading community as a whole. The programme of quality control and preshipment inspection will help develop this consciousness and create an impression of India as a quality-conscious country throughout the world.

So far so good, but what about the poor consumer who is ungrudgingly paying for export promotion through high prices and in return is getting only adulterated goods, including life-saving drugs? Brave words and threats are often uttered by Central Ministers to check adulteration, but they have proved ineffective so far.

HOSIERY MILLS

Forming New Body

The Government of India has urged the hosiery industry to form an all-India organisation to help the planned development of the industry. It will give all necessary help and encouragement to the organisation. It does not, however, consider it necessary to set up a board for the industry on the lines of the All-India

Handloom Board as recommended by the Working Group for the Hosiery, Knitting and Embroidery Industries. The Working Group was set up in October 1961 to enquire into various problems of the hosiery, knitting and embroidery industries and suggest measures for their development and modernisation. Many of its recommendations have been accepted by the Government. They have approved the proposal for a limited expansion of the embroidery and hosiery industries by the installation of modern machinery with adequate export guarantees.

The Government has also accepted in principle, within the overall availability of foreign exchange for the woollen industry, the need to allow the import of necessary and suitable synthetic fibre or tops for blending with Indian wool and wool tops. This will make possible greater and better use of Indian wool and wool tops.

TEXTILES

Delegation to U.S.A.

A delegation has left for the U.S.A. to make representations against the American move to restrict imports of Indian cotton textiles. Led by Mr. Neville N. Wadia, chairman of the Cotton Textiles Export Promotion Council, the delegation consists

of representatives of the Indian Cotton Mills Federation and the Central Ministry of Commerce and Industry. During its stay in Washington, the delegation will meet representatives of the U.S. textile trade and the U.S. Government to explain to them the viewpoints of Indian exporters on this question.

The U.S. administration, it is learnt, recently expressed concern over the increased tempo of Indian textile exports to the U.S.A. It requested the Government of India to restrict the export of twills and satins to the level reached in the 12 months preceding the Geneva international agreement on cotton textiles.

According to Washington, current exports of Indian textiles to the U.S.A. are in excess of those during the base year.

POWERLOOMS

New Body Set Up

The Government of India has decided to set up a committee, with Mr. Asoka Mehta as chairman, to enquire into the problems of the powerloom industry. Terms of reference of the committee are the following:

(i) to examine the structure and growth of the powerloom industry

with special reference to the types, holdings, ownership, appliances, supply of raw material, types of fabrics produced, the processing of fabrics, marketing, financing and other related factors;

(ii) to examine the "remunerativeness" of the powerloom industry taking into account the costs of production and efficiency of working and the conditions of workers;

(iii) to consider the relative rôle to be played by the powerloom industry vis-à-vis that of the handloom and mill industries and to recommend production targets;

(iv) to account for the phenomenal growth of unauthorised powerlooms in the past and devise means to prevent future unauthorised expansion;

(v) to examine the desirability and scope for the conversion of handloom co-operatives into powerloom co-operatives; and

(vi) to make suggestions for the establishment of the powerloom industry on a stable footing within the field of operation which should be allotted to it.

The committee is to submit its report within six months.

100 Years of Banking in India

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Ltd., Grindlays Bank Ltd., and the Eastern Branches of Lloyds Bank Ltd.)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The liability of Members is limited.

Bankers to the Government in Aden, Kenya, Uganda and Zanzibar.

NEW INDUSTRIAL CHARTER FOR U.K. RECOMMENDED

(FROM OUR LONDON CORRESPONDENT)

A DESIGN for an industrial charter was recently sketched by Mr. Ronald Brech, head of the Unilever Economics and Statistics Department, in a lecture to the Institute of Bankers. The first item of the charter is concerned with the provision of an improved standard of general education and more especially of adequate facilities of higher education for industrial and business life. The second item is labour. In a dynamic economy, labour has to become more mobile. The most important thing to ensure this is the introduction of a national redundancy scheme, guaranteeing so many weeks' full pay (according to the length of service) to enable alternative employment to be found. (The number of weeks can be worked out statistically according to the time it takes to find another job.) The redundancy pay will also apply to the period of retraining. The scheme should be financed on the same basis as national insurance with both employee and employer contributing.

The next item in the charter deals with capital. "It should not be beyond the wit of man," Mr. Brech said, "to devise a corporation taxation system which, instead of acting as penalty to efficiency, offers direct incentives." But what is really needed is a new and imaginative approach to taxation using it not just as a means of raising revenue and redistributing income but also as a direct incentive to firms to become more efficient. Mr. Brech said that the Government must also have a policy to make dying industries die. This will involve setting up of a body whose responsibility will be to see that it does this as quickly as possible with the minimum social hardship. It will also be responsible for seeing that the redundancy scheme and resettlement or retraining programme are effectively carried out and for looking after shareholders' interests.

Another thing, Mr. Brech said, the Government must do is to make cer-

tain that the social (including education) and industrial infrastructure of the country is both adequate and efficient. "In Britain this should be easier to do since many of the organisations and industries involved are nationalised. Yet, precisely for that reason, the Government seems loth to take the necessary action."

Employment Bill

To what extent is the Government moving towards this end? Recently, it has taken two tentative steps towards achieving its 15-year old plan for a new pattern of industrial relations. One of these is the Contracts of Employment Bill, over which Mr. Hare, the U.K. Labour Minister, has worked most diligently. The Bill, by providing employees with written contracts of service and reasonable periods of notice, fits into the Government's wider plan to improve the workers' status and security. It is, thus, all of a piece with the latest Offices and Shops Bill, the White Paper on the training of apprentices and the discussions on further measures to improve redundancy, sick pay and pension arrangements. Needless to say, many firms provide far superior conditions of contractual service than does Mr. Hare's measure; and there is nothing in it which a reasonable employer ought not to provide. If Britain is behind other countries in this matter, it is perhaps because the trade unions—under full employment—have put freedom before security, higher wages before fringe benefits. The real significance of this measure is that it will affect contracts and collective agreements over practically the whole field of employment.

Many millions of workers will be affected by the conditions laid down in the Contracts of Employment Bill. Known as the "workers' charter", it requires, for the first time, minimum periods of notice ending employment to be given by employer and employee. The minimum notice will be two weeks after two years' employment, and four weeks after five years, and any lesser provision in existing contracts will be void. The provisions will particularly benefit those in the building industry, where only two hours' notice at the end of the week is required. Others particularly affected are weekly-paid staff, and ship-building and shop workers. The Bill applies to all fulltime employees except those already covered, such as dockers, seamen, fishermen and Crown servants.

Minimum Pay

Another important provision will guarantee employees a minimum rate

of pay during notice. This will be not less than the average rate over the last six months. Employers will also be obliged to give each employee a written statement of terms. This will cover pay, hours, holidays and holiday pay, sickness and sick pay, rights to notice and pension rights. While the Bill confers these benefits, it also lays down obligations. These will be particularly welcome to Conservative M.P.s and others who have been pressing for a curb on "wild-cat" strikes. The sanction is that workers who ignore their obligations will forfeit their rights under the Bill. After the rules come into force an employee with two years' service or more will break his continuous employment if he goes on strike without giving 14 days' notice of intention.

A worker who has less than two years' continuous employment, whose contract requires notice of two weeks or more, will also break the qualifying period unless he gives 14 days' strike notice. Seven days' strike notice must be given if a contract requires less than two weeks' notice.

Continuous employment is not affected by lock-outs. It is also not affected if a business is transferred as a going concern or through other changes. If the continuity is broken, an employee has to start afresh to qualify for the statutory rights. Absences due to holiday or lay-off count as periods of employment, as do absences through sickness up to six weeks, or longer if the contract provides. The Government hopes that trade union leaders will accept the justice and wisdom of the rules for dealing with industrial disputes.

Ministers do not expect employers to welcome the paper work involved in the requirement that employees should have written terms. They think it necessary, however, in the interests of good industrial relations. It will suffice in many cases to refer the employee to documents such as collective agreements. Once the rules operate, employers will have to comply within five weeks. Failure, or false information, could result in fines of up to £20. Continued non-compliance might mean a maximum fine of £100.

Provisions Criticised

Neither the employers, nor labour, are impressed with this particular legislation. The British Employers Confederation finds the Bill a thoroughly unsatisfactory measure. In its latest bulletin, it says: "It appears to be of little, if any, positive benefit to any employee." The Bill says the B.E.C. leaves a number of

CAPITAL, 17th January, 1963.

important points in considerable doubt. How is continuity of service to be defined? How are absence through sickness, short absences without leave or unofficial strikes to be regarded? Under the provisions of the Bill, all employees with more than two years' service will be entitled to a month's notice of dismissal. The Bill will cause a considerable increase in administrative work for employers, the B.E.C. argues, and it is by no means certain that it will do anything to curb wild-cat strikes. The bulletin concludes: "The Confederation has set up a special working party to examine the Bill in detail, but at first sight it seems a poor contribution by the Government to National Productivity Year." The T.U.C. also criticised the Bill and Mr. George Woodcock called it "a very, very poor effort for 1962." Thus the Government's belated "workers' charter" has pleased neither side of industry.

Offices and Shops Bill

Measures to protect the health, safety and welfare of more than 8 million people employed in 1 million offices, shops and railway premises, are described in the Offices and Shops Bill which represents the second move towards an industrial charter. It has been called a charter for the "white-collared" worker. The main provisions apply to premises owned or occupied by the Crown, but the armed forces are excluded. The measure will enable Ministerial regulations to be made for cleanliness, temperature, ventilation, lighting, sanitary conveniences, washing facilities, drinking water, clothes, accommodation, seats, and first aid. On safety, the fencing of exposed machinery will be required. Arrangements will be made for training and supervising young people working dangerous equipment.

To deal with overcrowding, the Bill provides that after five years from the date it becomes law, staff must have 40 square feet of space each. Where ceilings are less than 10 feet high, the minimum space is to be 400 cubic feet. A minimum temperature of 60° Fahrenheit is stipulated. There are also clauses dealing with fire precautions, covering necessary means of escape, alarms, fire prevention and fighting. The classes of building most likely to be affected are: 400,000 offices with more than 4 million employees; 650,000 shops with more than 3 million staff; and 30,000 railway premises with more than 400,000 employees. There are several exemptions, which include the following: premises not used solely or principally as offices, such as hospital wards where sisters perform clerical work; private residential hotels and boarding houses; private club restaurants; hostels for railway staff; railway hotels; outworkers in their own homes; and premises used fewer than 21 hours a week.

The effect is to exclude small shops run by owners with paid help at week-ends, or premises staffed by close relatives of the employer. Included are offices in hospitals, clubs or schools, store-rooms, dry cleaning shops, public houses, cafes, restaurants and hotel dining rooms, staff canteens, railway stations, marshalling yard buildings, and signal boxes. The Minister of Labour is given power to exempt any class from overcrowding, temperature, sanitary or wash facility provisions. Inspection—based on a register of premises provided by employers—will be by local authorities.

The Government is still a long way short of Mr. Brech's blueprint, but at least it is moving tentatively along the right lines towards its long-cherished plans for the workers' charter. As a further step, Mr. Hare proposes to take up the question of redundancy with his National Advisory Council this month.

CAPITAL, 17th January, 1963.

RAISING PRODUCTIVITY ON THE FARMS

(BY A SPECIAL CORRESPONDENT)

AFTER more than a decade of planned development, India is still searching for an effective agricultural policy. Investment in agriculture has increased over the years, but the results have been far from encouraging. Consequently, major export industries, like jute and cotton textiles, have often run short of their basic raw materials. The target of self-sufficiency in food, set during the first plan, remains as elusive as ever, although the need for it has grown in urgency with the population increasing at the rate of nearly 10 million a year. As farming has gradually been extended to almost all areas that could be brought under the plough, the future will be bleak unless productivity can be raised substantially and speedily.

Official Neglect

Many commentators have pointed out that the agricultural shortfall is a result of official neglect, stemming from the planners' preoccupation with heavy industry. This was certainly true at the beginning of the second plan, when a sense of complacency was induced by a succession of good harvests in the closing years of the first plan. The harvest of 1958-59 brought a sharp setback, and made it clear that good fortune was not to be taken for granted. Since then, India's planning strategy has acknowledged the primacy of agriculture and this finds reflection in the proportion of resources devoted to agriculture and related sectors in the third plan. But money alone cannot induce an increase in agricultural production. The increase depends no less on social changes, especially reforms in the system of land tenures.

In initiating such changes, however, there seems to be no broad agreement on the direction in which rural society should be headed. As Mr. Tarlok Singh, a member of the Planning Commission, recently pointed out in his presidential address to the All-India Agricultural Economics Conference in Ahmedabad, land reform requires four sets of measures—abolition of intermediary tenures, tenancy reform, ceilings on agricultural holdings and conferment of ownership rights on tenant cultivators. While the underlying ideas governing land reform legislation were settled by the Central Government after long debates in the ruling Party's highest policy-making bodies like the A.I.C.C., the strength of local pressures has led to wide variations in the implementation of these measures. In the main, intermediary tenures, which accounted for about 45 percent of the total cultivated area, have been extinguished, and this part of the process of reform has been nearly completed. Tenancy reforms have made comparable progress, resulting, as Mr. Tarlok Singh said, in "considerable de facto redistribution of the land". Unfortunately, however, the elimination of the Zamindar has left a vacuum in some areas which other institutional arrangements have not so far filled. The impact of the reforms on development has, therefore, been weakened, jeopardising production and efficiency.

Proposals for imposing ceilings on land holdings have only slowly found their way into the statute books of the various States, and often after acrimonious wrangling with-

in the ruling party itself. The laws, as adopted, have left loopholes for evasive transfers. Problems have also arisen where owners have resumed land for "personal cultivation", defeating the object of giving cultivators the security of tenure without which the incentive to adopt long-range measures of improvement would be missing. How these residual problems of tenure are to be overcome is anybody's guess, but the full benefit of the changes already

accomplished remain substantially unrealised because matching organisational reforms to mould village society in a new pattern have fallen behind.

Community Development

Mr. Tarlok Singh faced this problem squarely in making his assessment of agricultural policy. He admitted that the principal agency of rural change—the community development organisation—does not

adequately fulfil its function, being deficient in both the quality and number of extension personnel. At the end of the second plan, there were 40,000 of them in position, after brief periods of training in extension techniques. The burden of administrative and organisational tasks devolving on the village level workers was, however, so large that they could not reasonably be expected to take responsibility for agricultural progress as well. It is now not a question of merely persuading the cultivator to use fertilisers or better seeds, but more often of advising him on specific problems arising from the adoption of improved agricultural practices. This calls for greater skill and knowledge than the village-level worker has. There is also the larger task of organising the whole community to act in a co-operative spirit for such things as

INSTALMENT CREDIT FOR EQUIPMENT OR MACHINERY

The State Bank of India

have pleasure in announcing the introduction of 'Instalment Credit Scheme', to cater to the needs of industrialists. In approved cases, the purchase of equipment or machinery will be financed by loans repayable in monthly or quarterly instalments spread over a period up to five years on easy terms.

he cutting of field channels in order to use fully the irrigation potential that has already been created.

The average Indian farm holding is too small and uneconomic to make it feasible to employ surplus labour, often available in the village itself, on an individual basis. But the community acting together may find it possible to do so for such necessary chores as soil conservation, afforestation and dry farming. With a larger and better-organised labour input, changes could undoubtedly be brought about which would raise the

efficiency of farming, and at the same time alleviate rural unemployment. Outlining these possibilities, Mr. Tarlok Singh urged that the community development movement should create leadership of higher calibre than is now provided by the village-level worker. Conceding that the new men could not be found overnight, he advocated concentrating on the promising areas where physical factors like rainfall and soil fertility were particularly favourable.

Price Policy

While nominally acknowledging the rôle of price policy as a lever of change in the countryside, Mr. Tarlok Singh appeared to underestimate its importance. This was surprising because the figures he himself cited showed that the high prices realised for jute and cotton—to cite only two examples—have materially contributed to the progress achieved since independence. It is common experience that a season in which a particular crop fetches a high price is usually followed by a bumper harvest not only because of diversion of land from other uses but also on account of better techniques of cultivation. The farmer judges the latter to be worth while

at the price he received in the preceding season, but the expectation is often belied through the operation of the laws of supply and demand. It is widely accepted, therefore, that an element of price stability through buffer stock and other price support operations has to form an integral part of agricultural policy. A major step in this direction has recently been taken with the announcement of support prices ahead of the sowing season.

The new policy of price support cannot, however, be allowed to shield inefficiency in agricultural practices. Nor should it be assumed that the prices fixed, experimentally as they must be at the present stage, can only be revised upwards. Mr. S. K. Patil has acted with a commendable sense of realism which combines solicitude for the agriculturist with an appreciation of the larger market forces that impinge upon commodity prices. He has, for instance, linked cane prices with the sucrose content in spite of the powerful opposition of the Bihar and U.P. Governments. Similarly, he has expressed the view that the price of raw jute cannot be fixed arbitrarily since it must in the final analysis depend upon the state of the world markets for jute goods. It is pos-

sible, therefore, to hope that the Food and Agriculture Ministry will administer its new policy in a manner which judiciously balances the interests of growers and consumers, resolving the conflicts that sometimes develop by reference to larger national interests.

Long-term Benefits

Ultimately, the optimum price level is the one which maximises long-term benefits. It has to include, therefore, a clear incentive for improving both the quality and the quantity of the crop, the increase in the latter coming preferably from higher yields rather than a larger acreage. The high level of costs in Indian agriculture is, as Mr. Tarlok Singh admitted, a drag on the development of the economy as a whole. Unnecessary softness towards the inefficient agriculturist may win political rewards, but it is highly damaging to the country's economic future. Conversely, any policy which fails to reward the farmer for extra effort or additional investment on producing a better and larger crop will be equally harmful. To maintain this delicate balance is admittedly not an easy task, especially in the midst of conflicting political pressures, but that is no reason for failing to make a serious effort.

Books

ECONOMIC SURVEY OF ANDHRA AND ASSAM

Techno-economic Survey of Andhra Pradesh. (Published by the National Council of Applied Economic Research, New Delhi. Price Rs. 20, pages 333.)

Andhra Pradesh is the fifth largest and the fourth most populous State in the Indian Union. But it shows all the characteristics of an underdeveloped economy. It has a weak agricultural sector and inadequate industrial base, without any appreciable development of the tertiary sector. The population of 36 million is increasing at the net rate of 1.3 percent a year. The net result of this economic structure is the low per capita income which is estimated at Rs. 232 for 1955-56, against Rs. 261 for the whole of India. The State occupies eighth place in the per capita total revenue collected (Rs. 17.42) and sixth place in the per capita total revenue from State taxes (Rs. 9.08). The per capita grants from the Centre in 1957-58 works out to Rs. 2.29. These figures indicate that taxes collected by the State are above the all-India average and that the degree of its dependence on the Centre is below average. Between 1955 and 1961, the total revenue increased by 126 percent. In 1958-59, development expenditure was 58 percent of the total expenditure on revenue account. Education absorbed 20 percent of the total expenditure.

The N.C.A.E.R. report calls for an investment of Rs. 1,733 crores during the third and fourth plans, the share of the State Government being Rs. 1,035 crores. As a result, the State income is expected to rise to Rs. 1,595 crores in 1971 and the per capita income to Rs. 380. The report recommends the establishment of sugar factories with a total crushing capacity of 20,000 tons, spinning mills with a capacity of 63 million lbs of yarn a year, 30 solvent extraction plants, six pulp and paper mills, two cement plants, etcetera.

Techno-economic Survey of Assam. (Published by the National Council of Applied Economic Research, New Delhi. Price Rs. 20, pages 277.)

The State of Assam, girdled around by foreign territories, stands unique in its geographic isolation from the rest of India. There is the natural division of the State into the plains and the hill areas, and these factors have a distinct bearing on the scope and process of economic development. Although nature is bountiful to Assam, her industries are undeveloped and much of her wealth lies untapped. Since 1950, the State's per capita income fluctuated sharply due to variability in the agricultural output as well as frequent floods. Since 1955-56, there has been a declining trend of per capita income in Assam because of the high growth rate of population. Besides, high transport costs are a serious deterrent to Assam's export trade.

But the State is better placed financially than many others. The per capita income from State taxes in 1957-58 stood at Rs. 12.53, the second highest in India, and the per capita total revenue at Rs. 28.12, the highest in India, and first in relation to per capita grants from the Centre. The State's revenue increased by 197 percent in seven years. In 1957-58, development expenditure formed 70 percent of the total expenditure. The N.C.A.E.R. report makes several suggestions to rehabilitate the economy of Assam. It calls for an investment of Rs. 554.2 crores during 1961-71.

Although some of the conclusions and projections of the N.C.A.E.R. may not be accepted, the report is full of factual data with many useful tables and charts.

SMALL INDUSTRIES

A Guide to Small-scale Industries. By P. M. Bhandari. (Published by Ramesh Industrial Agencies, Naya-pura, Kota, Rajasthan. Price Rs. 6, pages 359.)

There are many books on small-scale industry in India, but they do not usually come up to expectations. But this one is a welcome exception. A successful attempt has been made here to piece together all available data on small-scale industries, especially information which enables entrepreneurs to obtain concessions and facilities according to the prescribed procedures. The chapters on credit facilities, hire-purchase of machinery, industrial estates, export promotion, standardisation and marketing, industrial research and training, procurement of indigenous and imported raw materials are elaborate. Specimens of a number of forms have been annexed and useful hints given to entrepreneurs desiring to start new small-scale industries. There are, in fact, 62 annexures and the coverage is comprehensive and up-to-date. But the book should have been printed on a better quality of paper with a better get-up.

AN ANNUAL NUMBER

Far Eastern Economic Review, 1963 Yearbook. (Edited and published by Dick Wilson for the Far Eastern Economic Review Ltd, 411-414A, Marine House, Hongkong. Pages 248.)

The *Far Eastern Economic Review* has an established reputation as a dependable and well-edited journal. Its latest yearbook, following tradition, contains a wealth of information on such Asian countries as Japan, Burma, China, Ceylon, India, Nepal, Hongkong, Malaya and Indonesia. The sections on India, China and Pakistan are exhaustive and contain references even to the latest developments. The background to India's border troubles with communist China has been discussed from a broad perspective and the reasons why the latter should be keen on extending its empire have been analysed in considerable detail. But the striking feature of the analysis is the impartiality maintained throughout. This is not easy, especially when an analyst—because of political predilections—may succumb to bias and prejudice. The claims of both India and China have been discussed in their historical perspective, and readers have apparently been left to draw their own conclusions. Nor is any bias noticeable in the discussion on Burma or Pakistan, where the political situation encouraged *coups d'état* and the eventual curtailment of civil liberties. But it is only when a reader goes through the discussion on economic prospects for the Asian countries that he comes to realise how intelligently and tactfully facts and figures have been analysed to create a firm overall impression in the reader's mind about a country's economic situation. The economic sections contain surveys of industry,

agriculture, power, transport, trade, etcetera, with many tables and charts.

PORT TRAFFIC SURVEYS

Traffic Survey of Karwar, Honavar and Coondapur Ports. (Published by the National Council of Applied Economic Research, New Delhi. Price Rs. 16.50, pages 276.)

With the growth of iron ore exports and the starting of new industrial units in the coastal region of Mysore, such as paper and ferro-manganese, solvent extraction plants and the power project in the Sharavathy valley, the demands for port services and facilities are rising in Karwar, Honavar and Coondapur. This trend is likely to continue with the setting up of an aluminium plant in the Hubli-Karwar area, the exploitation of coastal deposits of iron ore in the Apsara-Konda area and the development of such industries as fertiliser and dissolving pulp in the region. The survey which was undertaken at the request of the Mysore Government, reports on the industrial and agricultural potential of the hinterland between the coastal districts of north and south Kanara and the inland districts of Bellary and Raichur. It indicates the nature and extent of their impact on the potential demand for port services. The establishment of a more adequate road network and better transport links and certain improvements of port facilities are recommended in order that Karwar may be equipped to handle a traffic of about 572,000 tons. A new factor has entered into the picture since the survey was completed. Marmagao with its natural harbour and port facilities has become part of the Indian port system and the whole traffic position in Karwar may have to be reviewed again. Many tables, appendices and maps enhance the usefulness of the report.

STUDY ON MARKETS

Organised Markets. By Krishna Kumar Ghia and others. (Published by Vora and Company Publishers Private Ltd, 3 Round Building, Kalbadevi Road, Bombay 2. Price Rs. 10, pages 215.)

The book has been written for the benefit of commerce students in different universities in India. It contains three essays, the first two on money markets and stock exchanges, the authors of which are anonymous. The last essay on bullion trading in India is written by Mr. Ghia. The book serves as a good introduction to enable students to gain the basic elementary knowledge and to proceed for advanced studies.

The essay on money markets covers the structure of bill and discount markets in London and New York and the state of both organised and unorganised money markets in India. The author discusses in some detail the drawbacks of the Indian market which have hindered the growth of an organised bill market as in London, the most deterrent factor being the conspicuous absence of acceptance houses and the reluctance of commercial banks to do acceptance work. Recognising the importance of a growing bill market, the Reserve Bank introduced the bill market scheme in 1952 which provides the mechanism for the extension of short-term credits to commercial banks to enable them to meet the *bonafide* requirements of trade during the busy season. The author correctly points out that the scheme provides for advances by way of short-term credits and not rediscounting facilities as offered by the Bank of England. The main weakness of the essay is the virtual absence of a discussion on the

Central Bank's quantitative and selective control on credit supply whose importance can hardly be ignored.

The essay on stock exchanges starts with rather elementary observations on their functions and services, the difference between a produce exchange and a stock exchange, speculation and gambling and presents the usual classification of various types of shares and securities. Provisions of the Securities Contract (Regulations) Act, 1956, which were enforced to counteract malpractices in stock exchanges and to strengthen public confidence, have been discussed at length and brief references made to the working of the London and New York Stock Exchanges.

Mr. Ghia's essay on bullion trading makes interesting reading. It covers all aspects of bullion trading, including the organisation of the Bombay Bullion Association Ltd and contains valuable information.

INSURANCE DIRECTORY

Indian Insurance Directory, 1962. Compiled and edited by V.N.C. Narichania. (Published by V.N.C. Narichania and Company, 22, Sir Phirozshah Mehta Road, Fort, Bombay 1. Price Rs. 7.50 and for cloth binding Rs. 8.50, pages 319.)

During the pre-nationalisation days, insurance directories were in abundance. After the nationalisation of the life insurance business, most of these ceased publication since they did not serve any useful purpose. The present publication is a happy reappearance of a useful directory after the lapse of several years, and as the compiler claims, it is the only reference book on Indian insurance. The directory necessarily relates to general insurance with details about both Indian and foreign companies. It contains useful information on their balance-sheets and revenue accounts for the five years between 1956 and 1960. These apart, there is a lot of information of a general nature which is useful for the general insurance underwriter and others in the industry such as population statistics, information on the provisions of the Insurance Act and Rules, estate duty and health tax. The directory also contains information on fire hazards, shipping news, etcetera. But a publication of this nature, the compilation of which must have been spread over a number of years, becomes out of date in certain aspects due to changes in company structure and management and can only be corrected by last-minute changes in the material. Although the publisher's note is dated October 1962, many changes in company management made much earlier have not been incorporated.

GROWTH OF A FIRM

Century in Malabar. Edited by W. K. M. Langley. (Review copy received from Peirce Leslie and Co Ltd, Calicut, Kerala. Pages 150.)

The book describes the genesis and growth of Peirce Leslie and Co Ltd over a period of 100 years, commencing from 1862. The first four chapters of the book deal with personalities who were in the firm—Peirce, Leslie, Gilkison, Macra-Badenoch, Christie and others. The chapters are written in a racy style. The later chapters deal with the firm's progress through the decades. The book is also a descriptive account of the economic history of the region. In an excellent preface, Mr. C. Rajagopalachari stresses the need for authentic works history of foreign companies in India.

Things to be proud of...AJANTA and ELLORA
Imperishable monuments of exquisite craftsmanship.
Incredible blending of architecture, sculpture, painting.
Proud heritage of the past...each opus is epic, unique. (And Wills Gold Flake—as smooth as ever—superbly satisfying).
Wherever you go...they're good.

BUILDING A FACTORY? GCCP PLANS YOUR ENTIRE ELECTRIFICATION AT THE BLUEPRINT STAGE!

That's when it should be done — right from the word 'go'. Electrification planning for a new factory must begin at the blueprint stage when such aspects as civil works, water and machinery are under consideration.

MORE THAN MEETS THE EYE
There's more to electrification than meets the eye. Climatic conditions at site must be taken into account. Load has to be assessed and sanction obtained. The layout is governed by a number of factors — Indian Electricity and Fire Insurance regulations, availability of equipment and future expansion or alteration. Electrification calls for a concentration of specialized skills and experience. GCCP has them.

GREAVES COTTON & CROMPTON PARKINSON LTD.
GCCP also supplies and installs electrical equipment, and provides a comprehensive after-sales service.

OVERSEAS BUSINESS POOR SO PESSIMISM SPREADS

FOR several weeks, the Calcutta jute goods market has been dominated by speculators. But, of late, it has become increasingly apparent that they might be reaching the limit of their ability to influence prices. The lack of overseas enquiries has had its effect. Pessimism has grown and nervous holders have begun to unload. Erratic price fluctuations have been the order of the day, as heavy selling pressure has been followed by covering at the lower levels. Thus it has not been possible to ascertain the basic trend at a particular time. This state of affairs is hardly conducive to business, and it is significant that few of the enquiries received from overseas have matured into orders.

The situation is viewed with a certain amount of anxiety by the mills. All of them are now very long in jute, and unless sales are made at reasonable prices in the near future, the mills are liable to show losses against these purchases. The days of simultaneous business in raw jute and finished goods are gone, at least for the time being. Only on a very few occasions has such business been possible recently, and when the opportunity has arisen, it has invariably been for a delivery for which manufacturers have had nothing left to sell. Overseas buyers these days are very reluctant to put out feelers or make any enquiries, because they know that as soon as there is the slightest hint of business, speculators jump into the market and rates are pushed up.

Shortage of Wagons

Although the shortage of transport for raw jute is not causing any hardship to mills due to their extremely long jute position, in many cases sellers are suffering badly. The fact that mills are giving extensions of due date freely does not help, as in the majority of cases the jute is lying ready waiting for the allotment of wagons. Thus considerable amounts of money are blocked, and sellers are handicapped in purchasing fresh jute to fulfil their commitments, apart from the congestion caused in godowns and assorting sheds.

While the need to provide transport for the movement of essential supplies during the emergency is accepted without criticism, actually there has been a lot of confusion over the allotment of wagons for jute. One railway upcountry stops booking, and explains that the decision has been taken at the request of the authorities in Calcutta, which the authorities in Calcutta deny. Applications for wagons to mills are refused, while they are available for booking jute to Cossipore. And so on.

The railways frequently complain about the slow turn-round of wagons. It is unlikely that any valid complaint could be made against the mills, as priority is always given to unloading arrivals by rail. On the other hand, the slow movement of wagons is the cause of much delay. Cases have been reported of wagons loaded at stations 50 or 60 miles from Calcutta taking two weeks or more to reach mills in the Calcutta area. Part of the delay appears to be due to the lack of shunting power, which causes the hold-up of whole trains while the main-line goods engines do local shunting. A

train with, say, 60 wagons is held up for hours, while half-a-dozen wagons are shunted into mill sidings. The same thing happens again a few miles down the line, and so on until all the wagons have been placed. Thus, it is not surprising that the movement is slow and that not enough wagons are available for the transport of jute. It seems that better organisation at the destinations would facilitate the movement and turn-round of wagons to the advantage of the railways themselves and of the jute industry.

S. T. C. Purchases

The activities of the State Trading Corporation have had a steady influence on raw jute prices, particularly in the Daissee and Tossa sections. Sellers are now asking up to Re. 1 premium over the minimum price for these fibres, but white jute and mesta are still available below the minimum rates. During the past week, most mills have completed their purchases against the buffer stock allocation of 250,000 maunds. They have also taken up their quotas issued by the Jute Commissioner. Much of the jute bought recently has been for February shipment, but sellers are not keen to sell forward.

The incidence of godown fires has again increased in the Calcutta mill areas. The most devastating jute fire ever seen in Calcutta has occurred at a mill in the northern area. A very large quantity of fibre stored inside a disused mill was involved. It is understood that part of the building collapsed, causing considerable damage and hampering fire-fighting and salvage operations. Until the time of going to press, 12 days after it started, the fire was still smouldering in many places. The question arises: are jute fires unavoidable? Many more occur in mill compounds than in, say, Cossipore or upcountry storing centres. In Dundee, where probably as much jute is sometimes stored as in Calcutta—present conditions excepted—a jute fire is rare. Many theories have been advanced about the cause of the fires, but no satisfactory answer has been given. With mills carrying such large stocks, the question has now become one of major importance.

THE JUTE MARKETS

Manufactured Goods: Once again, it was a dull week in the Calcutta jute goods market. On the whole, conditions were governed by speculative activity which caused irregular fluctuations. At the opening last Thursday, some small enquiries caused more excitement than their size justified. B Twills jumped by over Re. 1 to Rs. 115.35 for January shipment, which was Rs. 1.35 above the July-September position, while 40in. 10oz. advanced by 60nP to Rs. 51.35 for the near position and Rs. 49.20 for July-September. On Friday, sacking rose by a further 65nP ahead and hessian by 40nP, but profit-taking at the higher levels soon brought prices back again. For the rest of the period, prices saw-sawed, with heavy goods gaining and losing about Re. 1 and hessians following suit. By Tuesday morning, ready B Twills were down to Rs. 114.70, while 40in. 10oz. dropped to Rs. 50.85. There was very little

overseas interest at this stage, and speculative activity predominated.

Opening quotations on Wednesday morning were as follows:

	Jan.	Feb.	Mar.	Apr.-June	July-Sept.
40in. 7oz.	38.35	37.65	37.35	37.00	36.75
40in. 8oz.	41.00	40.50	40.00	39.75	39.85
40in. 10oz.	56.25	50.00	49.50	49.00	48.50
B Twills	114.00	114.10	114.00	113.65	113.15
Cornsacks	117.25	117.25	117.00	116.50	115.65
Heavy					
Cees	111.50	113.00	113.25	113.25	113.15
A Twills	141.50	140.00	139.00	138.50	138.00
Liverpools	127.50	128.00	128.00	127.50	127.00

Raw Jute: The fibre market tended to become steadier, but the only grades that showed a marked improvement were Tossa and Daissee. In these sections, sellers were very reserved and were only offering small lots at prices between 50nP and Re. 1 a maund above the minimum rates. A fair amount of business was concluded against buffer stock and mill quotas, much of it being for forward delivery, but sellers were not keen to go too far forward. The white jute and mesta market was virtually unchanged, with prices continuing to rule below the minimum. High-grade jute remained very scarce, and up to Rs. 50 a maund was paid for special lots. The shortage of godown space in mills was very acute, and large quantities of jute were being stored in the open. Wagon arrivals in Cossipore dropped again, and last week only 430 wagons were received. Imports on an all-India basis were estimated to be about 70,000 maunds daily.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills			T.S.D.

I.J.M.A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total production of jute goods for December as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	5,522 metric tons (5,435 tons)
2,038.83 thousand metres (2,229 lakh yds.)	
1,84.5 lakh nos.	
(b) Sacking	44,181 metric tons (43,483 tons)
9,568.71 thousand metres (10,46.5 lakh yds.)	
4,63.0 lakh nos.	
2. Gunny Cloth	
(a) Hessian	40,718 metric tons (40,075 tons)
13,96.83 thousand metres (15,27.6 lakh yds.)	

(b) Sacking	1,687 metric tons (1,660 tons)
39.15 thousand metres (42.8 lakh yds.)	
3. Other Manufactures	
12,062 metric tons (11,871 tons)	
4. Total Production	
(All kinds)	1,04,170 metric tons (1,02,524 tons)

		Summary		
		(000 metric tons and 00,000 yds.)		
		Dec. '62	Nov. '62	Dec. '61
Hessian		16,00.66	15,25.82	12,77.75
		(17.51)	(16.69)	(13.97)
Sacking		9,56.02	9,93.39	10,53.01
		(10.89)	(10.86)	(11.52)
		(000 metric tons and tons)		
		Dec. '62	Nov. '62	Dec. '61
Hessian		(15.5)	45.1	37.8
		(45.5)	(44.5)	(37.2)
Sacking		45.9	46.1	49.6
		(45.1)	(45.4)	(48.3)
Others		12.1	10.2	10.2
		(11.9)	(10.1)	(10.6)
		104.2	101.4	97.6
Grand Total		(102.5)	(99.8)	(96.0)
Hours worked		2,8.0	208.0	208.0

N.B.—These Statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE U.K. JUTE MARKETS FIBRE PRICES FALL

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan was quiet during the past week, and most sellers quoted lower prices. In spite of the easier trend, spinners in Dundee showed less buying interest and business was confined to the occasional parcel. Dundee spinners have already met the major portion of their requirements from the present crop. At the same time, a fair quantity of jute is available on the spot. There is also a substantial quantity of jute afloat to Dundee which is still unsold to spinners. This is making the market weak. Sellers are obviously anxious to dispose of these supplies, and they are discounting the market to a considerable extent for all grades. In the case of Mill Lightnings, offers are being made afloat at £114 whereas the lowest shipment price is £119. The fall in prices is expected to continue until all the secured parcels are taken up by spinners.

There is now much more pressure from sellers for business with the generally quoted rates at £119 for Mill Lightnings, at £95 for Mill Hearts and at £81 for Grade Hearts, c.i.f. U.K., for January-February shipment. Grade Tossa-2/3 is available at £133 and Grade Tossa-4 at £113 10s with output Tossa-2/3 at £99 10s and output Tossa-4 at £89 10s, for January-February shipment. Cuttings are also quieter with S.N.C. noted at £54 and N.C. at £48. There has been an easier trend in the raw jute market since the beginning of the current year. At present, there is nothing to indicate that this will be halted. Although raw jute consumption is running at a high level throughout the world, there should be sufficient fibre to meet all demands. A few offers of Siam jute are being made, but the prices asked for are high and not attractive to spinners. Grade A is quoted at £89 10s and Grade B at £82 10s, delivered mill Dundee, for February-March shipment.

Although the stocks of jute goods held by the Indian mills at the end of December were at a lower level, they made little difference to prices. Quotations are at 76s 9d for 40in. 10oz. and at 59s for 7-1/2oz. 100 yards f.o.b. Calcutta, for January shipment. At 76s and 58s 3d February, at 75s 6d and 57s 6d, March and at 74s 6d and 56s 3d April-June. B Twills are at 174s 9d, 174s 6d, 174s 3d

AUSTRALIA'S LARGEST COMMERCIAL BANK CAN HELP YOU TO PROMOTE TWO-WAY TRADE WITH AUSTRALIA, NEW ZEALAND, AND FIJI

Want to sell? Want to buy? Want market information? The International Division of the Bank of New South Wales can tell you about the opportunities for trade offering with these countries.

The Bank's complete banking service includes such specialized facilities as trade introductions to buyers and sellers, industrial enquiries, economic and market information, and a complete travel service.

Enquiries may be made through your own bankers or direct to:

The NEW SAFFIRE LIGHT WEIGHT BLOWPIPE

Big automobile garage or small workshop, the new Saffire blowpipe is ideal for welding light gauge sheet metal. Its low weight of 283.50 grams (10 ozs) and the easy-to-grip fluted aluminium shank lessen operator fatigue in repetitive work.

Gas valves of advanced design and six sizes of copper welding nozzles ensure sensitive flame control and peak performance throughout the welding range of mild steel—from 914 mm. (20 s.w.g.) to 4.76 mm. (3/16") thickness.

The forward mounted gas controls and light weight mixer all contribute to give trouble-free performance over a long safe life.

INDIAN OXYGEN LIMITED

CAPITAL, 17th January, 1963.

and 174s for the respective shipment periods.

Dundee spinners and manufacturers are busy. Orders are now being received for delivery over the second quarter of the year. Mills and factories are utilising the full labour force available and the position is expected to continue over the first half of the current year.

The Restrictive Practices Court is now investigating seven agreements in the British jute industry, to decide whether they are in the public interest. The hearing is taking place in Edinburgh before Lord Cameron. It is expected to continue for three or four weeks.

THE PAKISTANI JUTE MARKETS E.P.C. FIGURES SET NEW RECORD

(FROM OUR Dacca CORRESPONDENT)

TOTAL E.P.C. registrations for December constitute what is certainly a record for this time of the season, namely, 802,330 bales. During the second half of December, Belgium was the largest buyer with

79,065 bales. The United Kingdom bought 78,635 bales. Egypt purchased 61,880 bales and France 36,990 bales. Germany bought 29,905 and Russia and China 28,000 bales and 8,800 bales, respectively, making their total purchases during the month 78,240 bales. America again bought 25,175 bales and Portugal bought 20,080 bales. India only bought 200 bales. Total purchases from 1st July to 31st December, 1962, amounted to 2,719,100 bales, against 2,642,900 bales up to December 1961. Not only have purchases this season already exceeded the last season's in spite of a smaller crop, but the difference is even larger when one considers the June registrations. Under the circumstances, it is difficult to visualise anything but an upward trend in prices.

E.P.C. registrations rose sharply in spite of the fact that 900,000 bales, largely of this season's crop, were registered in June and are not, therefore, counted in the above figures. Although buyers may well feel that they wish to buy more to build up stocks, the fact remains that they are too well bought and cannot raise the prices in the overseas market for some time. But heavy sales, coupled with the small crop, are undoubtedly a bullish factor in the local market. In certain areas, middlemen, who

collect payment for their jute from balers, are facing financial difficulties because, apart from their own personal needs, they need money to return to the village to purchase more jute.

A strike in Chandpur, which has now been settled, followed by a strike in Chalna and in Narayanganj and threats of the same elsewhere have created unsettled conditions in East Pakistan. This has apparently affected the market. In Narayanganj, balers decided not to give in to the demands of labour. It was, in fact, reported that if some balers come to a private agreement with the unions, they will be expelled from the P.J.A. In spite of these disturbances, there is a certain amount of activity in the cuttings market. Fair business has been reported at the minimum prices, namely, Rs. 75 a bale, but it is mainly for the forward position. There is a discount of some £2 a ton in the ready position. Some balers feel that a heavy bear position has to be covered. Meanwhile, overseas buyers are not finding it difficult to find sellers of cuttings below the minimum price. This implies that the bear position, if any, is purely theoretical.

The overseas market continues unchanged, although there is some interest in the forward position. Sellers seem to be very keen on selling.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 8th January and 14th January, 1963)

Cowhides: Wet salted (Slaughtered) 21,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.

Goatskins: Wet salted (Daissee, Kustia) 190,000 pcs. on the basis of Rs. 400 to Rs. 415 and Rs. 470 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Murshidabad-Pakistan 17,300 pcs. on the basis of Rs. 340 to Rs. 360 and Rs. 400 to Rs. 480; Purneah-Kissenganj 10,000 pcs. on the basis of Rs. 380 to Rs. 395; Patna-Muzaffarpore 11,300 pcs. on the basis of Rs. 370 to Rs. 380 and Rs. 395 to Rs. 405.

Bazaar Stocks

(14th January, 1963)

Cowhides: Wet salted 107,800 pcs.

Goatskins: Wet salted (Daissee, Kustia, Killed) 48,000 pcs.; Assam-Dinajpur 76,000 pcs.; Muzaffarpore-Patna - Pakur-Purneah - Kissenganj 140,000 pcs.

SHELLAC STEADY

During the week ended 15th January, the market was steady. The range of quotations was as follows:

	Rs.
Pure Buttonlac	110 value
Lemon One Shellac	114 value, 112 buyers, 116 sellers
Lemon Two Shellac	104 value, 100 buyers, 104 sellers
Standard One Shellac	94 value, 88 buyers, 94 sellers
Pure TN Shellac	80, 78 value
Golden Kusmi Seedlac	110 value
Kusmi One Seedlac	90 value, 88 buyers, 94 sellers
Golden Bysack	80 value
Manbhumi Fine Bysack	64, 62 value
Fine Bysack	56, 54 value
Genuine Bysack	48, 46 value
Grade One Class B Seedlac	70 value, 66 buyers, 70 sellers
Grade Two Class B Seedlac	56 value, 50 buyers, 54 sellers

Commodity Markets

TEA TAXES NEED TO BE CUT PRODUCTION COSTS RISE

(BY A SPECIAL CORRESPONDENT)

ONE of the distressing facts of the past two years' trading in tea has been that the rise in production has often been accompanied by a fall in profits. If output is to be increased, manufacturers have to be permitted to earn reasonable profits so that they can finance their expansion programmes and declare a fair dividend to shareholders. Future taxation must, therefore, be judiciously adjusted. The imposition of more taxes will intensify the operation of the law of diminishing returns, which already appears to be in operation. Most company reports recently published show not only an increase in output but also much higher production costs, so there has been no relative improvement in profits. Taking profits after tax as a percentage of net worth, the rate was 6 percent in 1952-53. It improved to 9 percent by 1955-56, but two years later was again around 7 percent. After mounting to 9½ percent in 1960-61, it again fell to about 7 percent in 1961-62. This shows too small a rise over a decade, especially in view of the relative increase in the gross national product.

Problem of Finance

The problem of finance still seems to worry planters. This must be solved because of the importance of tea exports to India's balance of trade. In the first two plans, tea exports alone earned over Rs. 1,175 crores for the country. The industry also contributed to Central and State taxes and gave employment to a million people. It is hoped that the call for further concessions on export taxes will receive the Government's favourable consideration.

Meanwhile, the industry is distressed by the Government's attitude in relation to fertilisers. It has already been noted that Pakistani output in 1963 may again be on the low side because of the shortage of fertilisers. To meet the growing demand as well as to recapture the trade already lost to Ceylon, both crop and quality have to be improved. The tea industry figures among the large users of chemical fertilisers. It should, therefore, secure its requirement at concessional rates. An agriculturist in Assam can procure ammonium sulphate at Rs. 360 a metric ton, but tea companies have to pay Rs. 384.60 a metric ton. Something should be done to end this anomaly if only because the cost of growing tea has to be reduced.

New Instant Brew

Ceylon, as usual, seems to be in the lead with an instant brew. It is to be marketed under the name of "Ceyta". Some months ago, there were reports of work on these lines in India. But local producers are apparently keeping these developments secret.

North Indian Crop

The north-Indian crop up to the end of 1962 amounted to 578,109,305 lbs. This was below the previous year's yield to the extent of 25,043,344 lbs—a smaller reduction than was expected in some quarters and still above the average output for the 1959-61 seasons. Selling centres in Calcutta, Cochin, Colombo and London show that quality teas are finding ready buyers but there is some irregularity in the case of low grades in all these markets.

COMPANY AND PUBLIC NOTICES

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on the 13th day of February, 1963 at 3 p.m. to consider and, if thought fit, to pass with or without modification the following Resolution:

As an Ordinary Resolution:

"That approval be and is hereby accorded to the undernoted investments.

ECONOMIC POLICY: BACK TO THE GOOD OLD DAYS

A STRANGE aura of unreality seemed to pervade the meeting of the standing committee of the National Development Council held in New Delhi last Friday. More than three months have passed since the Chinese launched their large-scale attack in N.E.F.A. and Ladakh. During this period, even more massive than the Chinese attack has been the torrent of words exhorting the people of this country to speed up their "defence mobilisation" and prepare for the switchover to "a war economy." Now, the top economic policy-making body has met, but no one has any clear idea of what the mobilisation and the switch-over imply. The National Development Council has meekly endorsed the generalisations concocted by the Government and the Planning Commission—generalisations which assert that the third plan must continue largely intact. Having warned the country repeatedly some time ago that a huge diversion of economic resources to defence purposes would be necessary, Mr. Nehru has now spoken in terms suggesting that India's defence build-up has been going on since time immemorial. "Some odd industries might have to be postponed, but nearly 85 percent of the developmental plans are part of the defence programme, and the remaining 15 percent are either indirectly connected with it or part of it." In other words, the economic motto for the future is to consist of strong exhortations to the people: produce more, consume less, save more, waste less, work more, talk less. But, as far as the Government and its planners are concerned, the prescription is "business as usual."

All this does not add up to a rational economic policy for a nation which is constantly being reminded that its territorial integrity is threatened. It represents only slogan-mongering of a type fashionable among political parties in the lush days of peace. The Government's dilemma, on the face of it, is understandable. On the one hand, it believes that the Chinese threat is a long-term one, which Mr. Nehru once thought meant five years but has now decided means an even longer period. On the other hand, the hope is growing that the threat will not erupt into fresh border warfare in the immediate future; thanks partly to the to-ing and fro-ing of the brokers from Colombo, a reluctant India might soon wend her tortuous way from chit-chats and preliminary talks, to non-preliminary talks and actual negotiations. The assumption seems to be that, if the best of India's political and military hopes are realised, no drastic re-ordering of third plan priorities will be necessary. Such are the tenuous premises on which the Planning Commission, the Government and the National Development Council appear to have been working.

The facts, however, point otherwise, and they do not cater to the country's convenience. The Finance Minister, Mr. Morarji Desai, has offered the estimate that, whether or not the fighting is resumed, the annual expenditure on defence will have to be doubled. The statement has been taken to imply that it will have to be raised by Rs. 375 crores or so to around Rs. 750 crores in the coming year. Not even by a herculean stretch of the imagination can it be pretended that the extra

Rs. 375 crores will somehow crystallise out of thin air. A small fraction of it could come from the National Defence Fund, and another small fraction from the defence savings schemes launched three months ago. The Government has no doubt decided that there is scope for heavier taxation; and perhaps also for other forms of public borrowing and for deficit financing. But there is nothing to suggest that all these sources combined, together with the once-famous "surpluses of public enterprises", will suddenly yield the huge sum the Government has announced as its defence requirements. Mr. Nehru has bravely suggested that the tax burden should be increased "till it hurts" ("it should hurt", "it will hurt", "it has hurt", "it must hurt"—so ran the profound variations in one report of his speech at the N.D.C. meeting). But even he must know that there are certain limits to taxation, as well as to borrowing and deficit financing, if the more essential projects for economic development are not to be wrecked. Those limits will decide the extent to which the third plan will have to be pruned—if the Government really intends to raise defence outlays as sharply as it says it will.

It is arguable that the pruning is not really necessary since the Government in any case would not know what to do with the extra Rs. 375 crores, assuming that it could get the money. The details of the defence build-up have to be based on an assessment of the politico-military probabilities, and New Delhi is entitled to one's sincerest sympathies if its assessment of the probabilities remains about as clear and stable as the waters of the Hooghly river. The whole purpose of the N.D.C. meeting, however, was to decide the economic adjustments that would be necessary for the purpose of strengthening the defence effort. Days before the meeting, inspired reports emanated from New Delhi emphasising the point that the adjustments in the plan for 1963-64 would be of far-reaching significance, since they would set the pattern for economic and military mobilisation even for the subsequent years. But now there emerges a formula which broadly prescribes the mixture as before. The Centre will give the States Rs. 50 crores less than it had originally intended. But the States will somehow raise approximately Rs. 60 crores or Rs. 70 crores more, fortified by the knowledge that the next general elections are a safe four years away. Greater importance will be given to agriculture, power, transport, mining and industries catering to essential defence and civilian requirements. But, apart from a few minor industries, everything else will be important too. Thus will the Government's economic policy move to a new version of Orwellian fantasia: "All economic aims are equal, but some are more or less equally equal to others."

There are, to be sure, other aspects also to the process which is nowadays rather flatteringly being described as "economic mobilisation for defence." Non-plan expenditure is not being cut, because those responsible for cutting it are too busy speechifying about the need to stop extravagance. Long lists are being compiled of indus-

tries considered capable of meeting military needs; in compiling the lists, special attention is being given to small-scale units whose technical competence and attention to quality is assumed to be famous enough to thrill those responsible for maintaining equipment standards in the army. There was a possibility once that the money allocated to the Education Ministry might be greatly reduced; but, in the nick of time, the discovery has been made that education is jolly important for defence, so funds must be provided for a continuing horde of unemployable B.A.s and M.A.s, along with a few more technically skilled hands. There was also a possibility once that the Ministry of Co-operation and Community Development would be given much less money to put down the drain; the possibility has now been largely avoided as the Ministry has pulled out of its hat some brand new schemes for promoting the defence effort by plastering the country with consumer co-operatives and "village defence labour banks." It seems the grand strategy for economic mobilisation now remains incomplete in only one aspect: the absence of windmills to harness energy from a tornado of speeches.

In the empire-building and horse-trading that is going on under pressure from individual minis-

BEING OILY ABOUT OIL

IN three months, the Central Ministry of Mines and Fuel has shifted its stand as many times to justify its reluctance to permit the Bombay refineries to expand their annual capacity from the present level of 6.25 million tons to about 10 million tons. The Ministry's first plea was that it should be allowed time to examine the proposals in all their various aspects; it urged the advocates of expansion not to "stampede" it into a decision. The stand was later altered, when the "heavy" and recurring foreign exchange liabilities arising from the repatriation of profits were offered as the reason for not allowing further expansion. Critics were quick to point out that the Ministry's sudden concern about the repatriation of profits ran counter to the Government's policy of inviting foreign capital to participate in economic development; and as long as foreign capital was invested in India, it was agreed that its owners were entitled to receive legitimate returns, especially since the liability on account of profit remittances had almost always been substantially less than the import-saving made possible by the investment. The Ministry's stand, therefore, has now changed again. The latest plea is that the economic marketing zone of the Bombay refineries will require no more than 6 million tons of oil by 1965-66; and there is no point, therefore, in allowing them to go up to 10 million tons. If anything so irrational is permitted, the Ministry adds, it would throw an intolerable strain on the railways. Asking critics to grasp "the basic fact" that transportation affects the economics of the petroleum industry deeply, Mr. K. D. Malaviya, Central Minister for Mines and Fuel, took the somewhat unusual step last week of sending a 1,500-word communication to the *Times* of India to educate it on the intricacies of the oil industry.

Instead of attempting such a remarkably shifty defence of his basically ideological approach to the whole question, it would have been much simpler if Mr. Malaviya had just said that expansion, whatever its merits, would not be permitted until all possibilities of creating new public-sector capacity had been exhausted. Fortunately, the Minister has not so far been able to persuade the other arbiters of the country's economic policies to take such an extreme position. While the case for developing public-sector refining is recognised as resting chiefly on the freedom of the State-owned units to use crude imported from any country, the Cabinet sub-committee has clearly been reluctant to reject the expansion proposals. It has doubtless taken into account the advice tendered to the Indian Government to reduce the pressure on its own resources by using foreign private capital, which is more readily available for oil than for any other industry, to the maximum extent possible. While giving this advice, the World Bank pointed out that the Government already possessed sufficient powers to ensure that the private oil companies took India's interests fully into account

tries and States, the need for a clear-cut plan is beginning to be forgotten. The Planning Commission and the Finance Ministry are reported to have prepared widely different estimates of the plan expenditure each of them considers possible during the coming year. The former does not have any direct responsibility for raising resources, so it takes the easy way out by supporting all sorts of schemes for which the money may ultimately never be found. The Finance Ministry, charged with the task of actually raising the money, is understandably more cautious, and probably also more realistic. There might have been a faint chance once that these two august organisations could, after discussion, evolve a definite order of priorities. But the possibility is now waning with the Prime Minister having announced that nearly everything is important—health, social services, education, scholarships and what-have-you. There is little hope, therefore, that the economic policy proposed for the period of the emergency will emerge with any clarity before the Central Budget is presented, if even then. By shirking its responsibilities with the help of vague generalisations, the National Development Council has shown itself to be lacking in the "sense of urgency" which the rest of the country is constantly being urged to maintain.

in determining their operating policies. Any hesitation on this score was, therefore, unwarranted, although the Bank sympathised with the basic idea underlying the Government's move to introduce greater competition in oil refining and distribution.

In the light of this recommendation, it is reasonable to urge that the private sector should be allowed, and even encouraged, to carry as much of the load as can be shifted to it. There will still remain a large residual responsibility for the public sector to shoulder, large enough to keep all the State organisations—the Oil and Natural Gas Commission, Oil India Ltd, Indian Refineries Ltd and the Indian Oil Company—fully occupied. The demand for oil is rising rapidly, and the estimates for 1965-66 have had to be revised upwards three times already. The draft outline of the third plan was formulated on the basis of a total annual demand of 9.9 million tons. Subsequently, the Oil Advisory Committee suggested 11.7 million tons as a more realistic figure, which it has now dropped in favour of the much higher estimate of 17.1 million tons, subject to further examination of the demand for furnace oil (now being investigated by a sub-committee). The present assumption is that demand will rise to 31 million tons by 1970 and to 54 million tons by 1975. Even if the country does not wish to concern itself just now with requirements so far ahead, it is clear that a vigorous rate of growth will be necessary. By 1966, 9 million tons of new refinery capacity will have to be created and commissioned, otherwise the shortage will have to be met by importing refined products. To import 1 million tons of products will cost Rs. 5 crores more than to bring in an equivalent quantity of crude. Looking further ahead, 2 million tons of new refining capacity will be needed in each year of the fourth plan.

Plainly, therefore, there is enough to keep the public sector busy even if the Bombay refineries are allowed to add 4 million tons to their capacity, of which 3 million tons would be completed by 1966, and another 1 million tons by 1969. They have already offered to scrap the existing refinery agreements and operate under ordinary industrial licences. As far as repatriation liabilities are concerned, the two companies have substantially met Mr. Malaviya's objections by offering equity participation to Indian shareholders gradually over several years so that capital repatriation on a large scale does not throw an unmanageable strain on India's balance of payments in any one year. They are also reported to have indicated their willingness to accept an agreed rate of return on capital, but profit margins have in any case been reduced by the cuts in oil prices enforced in several instalments over the past few years.

The only point on which the oil companies have declined to accept Mr. Malaviya's ideas is in their disinclination to use crude oil from communist countries. This is a matter with larger interna-

tional implications, where the policy adopted by the oil companies often reflects the decisions of their home Governments. Evidence supporting such a view is provided by the U.S. move to persuade Japan not to export steel tubes for the pipelines which Russia is laying to intensify its competition in the oil markets of western Europe. Since oil is of strategic importance, the issues involved in the East-West tussle are often political and military, on which the governments concerned obviously have very strong views. They are unlikely to change their views even though they may sympathise with India's need to obtain some part of her oil requirements on a rupee payment basis. But political questions apart, there are technical considerations also which seem to rule out Russian crude. One of the companies has constructed an interesting table showing the yield of various oil products—heavy and middle distillates and the light fractions—from crudes of different origin. Given the present design of its Bombay refinery Iranian crude is the one which yields a product mix closest to Indian market requirements. The company argues, therefore, that replacement with Russian crude will upset the balance and affect the throughput of the refinery.

In an obvious bid to close the issue, Mr. Malaviya announced early in the new year his plans for the expansion of the public-sector refineries to fill the gap between the present capacity of 8 million tons (7.25 million tons in the three private refineries and 750,000 tons at Nummati) and the 1966 demand of 17 million tons. The 1 million ton refinery which is being built with Russian aid in Barauni is to be expanded straight away to 3 million tons, and the same will be done with the other 2 million ton refinery which is to come up in Koyali, Gujarat. Another 1.5 million ton public-sector refinery is to be built at a still unspecified site in the South, to take the total State-owned capacity up to 9.75 million tons, including 1.25 million tons from Nummati after expansion.

Many have questioned the wisdom of embarking upon such enormous expansion even before the initial capacity has been stabilised (as in Nummati) or the construction completed (as in Barauni). In the case of Koyali, where the project report has yet to be approved, the decision to expand will mean starting all over again. But such doubt have failed to shake the Ministry's confidence. I talks of 2 million tons materialising from Barauni by September 1964 and the next 1 million tons 1 months thereafter; it promises the completion of Koyali by July-August 1965 and of its further expansion before the end of the third plan. On the south Indian refinery, it is positive that work of the (still to be chosen) site will start within 3 days of the signing of the agreement and will be completed in 2½ years. Keeping in mind the country's pressing needs, everyone will join in wishing the Ministry's various ventures all success. But anxiety will remain that, apart from being to fanciful, Mr. Malaviya has allowed himself a elbow-room at all to take care of likely setback: A more practical approach would have been to sanction any extra capacity that the expansion of the private refineries could provide.

SMALL INCREASE IN EXPORTS

SINCE India's foreign exchange reserves are extremely low, and huge quantities of imports are required to support development programme and the defence effort, the problems of export promotion have acquired fresh urgency. The Reserve Bank's foreign exchange reserves at down to Rs. 97 crores, and the import bill for April-November 1962 has exceeded the export earnings by about Rs. 232 crores. The third plan visualises that exports should fetch at least Rs. 3,700 crores over the five-year period. It assumes an average earning of Rs. 740 crores a year, with exports rising from Rs. 660 crores in the first year of the plan to Rs. 820 crores in the final year. But the trends hitherto are far from reassuring. Exports during April-November 1962 have risen to Rs. 451 crores, from Rs. 438 crore during the corresponding period of 1961. But it is probable that the modest improvement of Rs. 13 crores has been brought about mainly by the increased earnings from jute goods, and to a lesser

extent from tea. This suggests that, at least in the case of most other commodities, the export promotion measures introduced so far have been a failure. Exports to India's traditional markets in Asia and Africa during April-September 1962 have declined to Rs. 61 crores, from Rs. 72 crores in the corresponding period of 1961. This fall is attributed to the keen competition from Japan and China in south-east Asia, and from Pakistan and Ceylon in Africa. The restrictive import policy adopted by most of these countries due to their foreign exchange difficulties has been another handicap. India's exports to the European Common Market countries and the United States have also declined, the fall in each case being about Rs. 5 crores.

Against this background, it is disappointing that the Board of Trade, at its recent meeting in Madras, has addressed itself only to the superficial aspects of export promotion. It has recommended a detailed study of the economic assistance received by the Afro-Asian countries from various international agencies, so that the possibilities of promoting India's exports under the aid programmes may be explored. It has suggested the opening of offices by export promotion councils in the Afro-Asian countries to facilitate closer liaison with importers. Other suggestions are: (1) granting permission to export houses to open offices in foreign countries and offering a somewhat liberal allocation of foreign exchange for the purpose; and (2) extension by the Reserve Bank of its programme of establishing research and economic units to important centres in those countries. The Government has already set up five territorial directorates of foreign trade, with a director-general at the head to co-ordinate export efforts. But the benefits flowing from these measures will, at best, be marginal in nature, because they do not go to the root of the problem.

The basic handicap of Indian goods is that they are too expensive. They cannot compete in world

markets because production costs in India are too high. The uneconomic size of factories, high raw material and working costs, under-utilisation of installed capacity—these are some of the factors which push up the cost of production. In his speech at the inaugural meeting of the Regional Export Promotion Committee for Engineering, Chemical and Plastic Goods, Mr. Manubhai Shah stated that efforts should be made to reduce costs. While such gratuitous advice is always liberally offered, it would be better if the fiscal and labour policies of the Government supported it. As matters stand, a large element of costs is often beyond the control of the manufacturers, and it affects the marketability of their products.

No less important than price is quality. Indian products are not known abroad for their excellence. The Board of Trade has taken note of the benefits of quality control and pre-shipment inspection in the case of 19 export items, and has suggested their extension to engineering and chemical products, jute goods, cashewnuts, vegetable oils, de-oiled cakes and fish and fish products during 1963. This may be appropriate, but quality-consciousness has to be built into the production system. The impressive progress Japan has made in the export markets during the past few years is due in no small measure to the quality control methods she has adopted. More than 50 percent of her exports are inspected for quality before shipment and most of her products carry a quality control mark. If Indian goods are to make headway in world markets, a phased programme of quality control and pre-shipment inspection will have to be undertaken. It is good that the Government is moving in this direction. A Quality Control Inspection Bill is proposed, which will make the export of sub-standard goods a penal offence. Under this measure, the inspection of exportable goods is likely to be made the responsibility of the export promotion councils.

Current News and Comment

Two Weeks of Gold Control

The excitement which produced the mad rush for buying pure gold ornaments after the promulgation of the Gold Control Rules has subsided considerably. Women have not responded to the appeal made by the chairman of the Gold Control Board to desist from buying ornaments. The Finance Minister, Mr. Morarji Desai, had already made many such appeals before without any success. The buying has subsided mainly because the stocks of popular ornaments, such as "mangai sutras", bangles and necklaces, have been nearly exhausted. Some say that jewellers have removed the stocks from their shops in the hope of realising better prices in the not-too-distant future when pure gold ornaments may be very difficult to get. The brisk business in ornaments, according to a spokesman of the Gold Control Board, was expected; but it had been permitted "in the larger public interest" to minimise the inconvenience to the people. An interesting recent development is the emergence of two different rates for gold—official and unofficial—as in the case of watches which are being smuggled in large quantities. Unaccountable gold (which is another name for smuggled gold) is quoted around Rs. 95 for 10 grams, while the open market rate is around Rs. 110. Transactions, however, are still limited because of the disruption of trade after the enforcement of the Gold Control Rules. Prospects of reduced smuggling have pushed up the value of the Indian rupee in the unofficial exchange market from Rs. 18 to Rs. 16 for £1 sterling.

While the rush for buying ornaments has subsided, the confusion, which stems partly from the interpretation of the Gold Control Rules, still persists in the bullion trade. Speculators have fled the market, leaving bullion brokers alone to explore new avenues for their survival. Bullion dealers, jewellers, goldsmiths and the *jari* industry are all confronted with a new and difficult situation. Bombay last week was the venue of what could be appropriately described as an All-India

Bullion and Allied Traders Conference (such a conference was scheduled to meet on 3rd December, for discussing quite different problems) in the sense that representatives of as many as 45 gold and jewellery associations and allied trades and vocations from all over the country flocked to Bombay to confer with the Gold Control Board which held its first two-day session on 18th and 19th January. Not a few came to seek clarifications on the points raised by the Rules; some pleaded for an extension of the time limit for the sale of ornaments and others came to seek a modification of the gold policy itself by trying to convince the Board that 14-carat gold ornaments would spell ruin to the trade and encourage illegal traffic in the manufacture and sale of ornaments of higher purity. While the Board gave a sympathetic and patient hearing to the trade representatives, it left them in no doubt that the gold policy will be implemented with the "least harassment, but with firmness."

Addressing a Press conference last Saturday, the chairman of the Gold Control Board, Mr. G. B. Kotak, said that the Board had simply been engaged in collecting information and acquainting itself with the trade's problems. It has not yet taken any decisions on the various issues raised by the trade. The discussions at the conference indicated that the Board considers the 30 days allowed for the disposal of existing ornaments to be very reasonable, although it might not be unwilling to accord special treatment to deserving cases. But Mr. Kotak made it clear that the Board is after all only an advisory body where policy decisions are involved. Industrial users of gold will not be allowed to suffer for want of supplies, which, however, will have to be obtained from the free market. Data about the gold needed for industrial uses are being collected and partial relief has already been given by the Government. Mr. Kotak emphasised the need for the utmost co-operation in putting an end to smuggling and bringing down the price of gold. But many doubt whether the measures now taken by the Government will bring

about a substantial reduction in the demand for gold, without which its price is bound to rise, particularly if smuggling is checked.

Cloth Export Trends

Exports of mill-made cotton textiles from India during January to September 1962 totalled 338.54 million metres, against 405.07 million metres in the corresponding period of 1961. The U. K. continued to be India's chief customer, accounting for about 26.8 percent of the total offtake, followed by the Sudan (10 percent), Australia (5.8 percent), Kenya and Zanzibar (5.2 percent), Canada (4.4 percent) and the U.S.A. (4.3 percent). Of the total exports, 56.5 percent was in grey unbleached form and 18.8 percent was white bleached cloth. The corresponding figures for 1961 were 58 percent and 19.1 percent. Exports of "printed" and "woven coloured" varieties showed a modest increase in absolute terms. This is significant in the face of substantial decline in the total volume of exports. About 95 percent of the cloth purchased by the U.K. and the U.S.A. was in grey unbleached form. Of the 36 countries accounting for about 92 percent of the total offtake, only eight countries, namely, the U.S.A., Canada, Australia, Ceylon, British West Indies, Norway, Sweden and Denmark, took more cloth in January-September 1962 than in the corresponding period of 1961.

The increase was particularly marked in the case of the U.S.A. which lifted 14.5 million metres, against only 3.6 million metres in the previous year. Exports to Canada rose from 12.2 million metres to 15.1 million metres. Notable declines were registered in the case of Kenya and Zanzibar (from 27.1 million metres to 17.6 million metres), Nigeria (10.2 million metres to 1.6 million metres), Sudan (39.4 million metres to 33.3 million metres), Tanganyika (15.9 million metres to 13.2 million metres), Morocco (1.9 million metres to nil), Burma (8.3 million metres to 4.4 million metres), Singapore (10.2 million metres to 7.1 million metres), Thailand (2.5 million metres to 900,000 metres), West Germany (2.1 million metres to 900,000 million metres), Belgium (3.3 million metres to 1.8 million metres), and Netherlands (3.4 million metres to 500,000 metres). Mention might also be made here of the most disturbing feature of cotton textile exports following the introduction of the compulsory export scheme. This is the heavy decline in prices realised from the sale of mill-made cloth. In November 1962, India exported 49.7 million metres of mill-made cloth valued at Rs. 38,300,000 which gives an average price of 77nP a metre, compared with 91.1nP a metre in November 1961 when the export of 39.4 million metres fetched Rs. 35,900,000. Handloom fabrics, however, have been realising substantially higher prices, the average price for November being Rs. 2.45 a metre, against Rs. 1.95 a metre a year ago. Exports of handloom fabrics in November last amounted to 2.2 million metres valued at Rs. 5,400,000, compared with 2 million metres valued at Rs. 3,900,000 in November 1961.

Oilseeds Prices Fall

Oilseeds prices have suffered a heavy decline over the past few weeks. Groundnut futures (April contract), which were quoted around Rs. 220 for 250 kilograms by about the middle of December, were marked down to Rs. 197 on 17 January. The maturing January contract was quoted nominally about Rs. 8 lower. During the same period, castorseed March have come down from Rs. 167.50

BUY
**NATIONAL
DEFENCE
BONDS**

to Rs. 154, cottonseed April from Rs. 98 to Rs. 87 for 250 kilograms and linseed March from Rs. 38.12 to Rs. 32.75 for 50 kilograms. All the oilseeds are now quoted lower than the lowest levels recorded by them in 1962 which were Rs. 200.50 for groundnut, Rs. 155 for castor, Rs. 90.50 for cottonseed and Rs. 35.75 for linseed. The pronounced weakness in oilseeds is not due to the abundance of supplies; it is due primarily to a marked change in the general market psychology. No doubt, the supply position is better than in the previous season, but even the most generous trade estimates do not place the total production of five major oilseeds at more than 6,950,000 tons, compared with 6,825,000 tons in 1961-62, which were made up of 4,682,000 tons of groundnut, 1,285,000 tons of rapeseed and mustardseed, 391,000 tons of linseed, 366,000 tons of sesamum and 101,000 tons of castorseed. Production of all oilseeds, excepting groundnut, is expected to be slightly better this season. Of course, the third plan target of 9,820,000 tons is almost impossible to achieve, although it is thought to be the minimum that the country will need to satisfy its internal requirements at reasonable prices and also have a moderate surplus for export.

While the supply position is only slightly better, there has come about a marked change in the market psychology mainly because of the continued political uncertainty, growing monetary stringency and firm Government attitude towards holding the price line. Bulls appear to have turned bears. Growers seem anxious to market their produce and merchants are in no mood to build large stocks. Marketable supplies have, therefore, increased appreciably. The ban on futures trading in bullion and stock markets and a few other markets has turned speculators' attention to oilseeds and cotton markets where speculation has assumed large proportions. The relative movements in groundnut, groundnut oil and extractions suggest that bear speculators have perhaps been overdoing things. Groundnut futures have fallen more steeply than oil and groundnut extractions have continued to hold remarkably steady. Groundnut prices have been marked down in spite of the encouraging export business in groundnut H.P.S. oil and extractions. Most shippers expect exports of groundnut extractions and groundnut H.P.S. to set new records in 1963. The outlook for oil also is considered far better than in 1962. The mood of the market being what it is, it is difficult to say how long the current downward trend in prices will continue, but since the decline is due more to a change in market psychology than to improved supply position, the market could take a turn at any time.

Emergency Insurance Criticised

Trade and industry have expressed some misgivings about the nature and usefulness of the Emergency Goods and Factories Insurance Acts, 1962. During the Chinese aggression, trading interests in Assam had asked for emergency risk insurance facilities similar to those in force during the second World War. In accordance with this demand and in the light of conditions then obtaining, the Bills were enacted by Parliament for insuring property against damage by enemy action during the period of the emergency. The Indian Acts, it should be noted, provide for cover, not against war risks but only emergency risks since India is not officially at war with China. The Acts, namely, the Emergency Factories Insurance Act and the Goods Insurance Act, will remain in force during the period of the emergency proclaimed in October, 1962 or for such periods as may be, notified in the official Gazette.

Following the withdrawal of the Chinese and the recent political discussions initiated by the Afro-Asian countries for a settlement, certain sections of trade and industry are beginning to doubt whether emergency risks do exist, and if so, in what form. Emergency risks have been defined in the Acts as action taken by an enemy or action taken in combating an enemy or in repelling an attack by an enemy, etcetera. A close study shows that the risks arise primarily from action taken by an enemy or action taken in combating an enemy, including precautionary or preparatory measures involving risks to property. The risks also include what is commonly known as the "scorched earth policy." Because of the cease-fire,

some believe that the danger and risk of enemy action have receded. Under the circumstances, trade and industry doubt the need for and usefulness of the Emergency Risks Insurance Acts now in force. Since premium rates are heavy, they are a burden on trade and industry. There is scope for reconsidering the applicability of the Acts. It has also been suggested in some quarters that in the absence of apparent enemy action, the premiums amount to additional taxation.

The Government of India's policy to make Oriental the sole agent for the issue of policies has also been criticised. A vast amount of insurance business will have to be transacted before 31st January, 1963. It has been pointed out to the Government that to obtain the necessary services from a single company will inevitably lead to complications. It would have been better to decentralise the issue of policies instead of entrusting it to one single company. There has been an almost unanimous demand from insurers for the decentralisation of emergency risks insurance, so that the other general insurance companies can also be made agents for the issue of policies. This demand has, however, met with strong resistance from the Government. The fact that official patronage has gone to a public-sector insurance company, invests the Government's move with more than ordinary significance.

Scrap Export Outlook

Exports of ferrous scrap in 1962 fell to a mere 140,000 tons, against 375,000 tons in 1961 and 325,000 tons in 1960. The sharp decline of about 62 per cent provides an odd contrast to the country's drive for boosting foreign exchange earnings. And surprising as it might appear, unlike most other commodities, the disappointing performance is not due to the lack of an exportable surplus. The supply of scrap far exceeds domestic consumption. Ferrous scrap utilisation in 1962—exports plus internal consumption—has been placed at only 285,000 tons, against an estimated scrap arising of 1.5 million tons. The trade attributes the steep fall in exports to the Government's unimaginative export restrictions and inadequate incentives, although lower overseas prices and slackness in demand also contributed.

The trade believes that given the necessary incentives, the drop in export prices would not prove a serious obstacle. During 1962, while the average foreign price of the exportable varieties of scrap was around £10 a ton, against £16 in 1961, the average domestic price was also substantially lower at Rs. 65, against Rs. 110 a ton. The trade argues that there is no reason why free exports of scrap should not be permitted in view of the fact that the annual surplus exceeds the domestic consumption by about ten times. The trade contends that in the light of the steep decline in exports, at least some liberalisation should have been introduced, permitting shipment of No. 1 bundles and some quantity of heavy melting scrap as that would have aided the marketability of the inferior grades. The import of finished steel against exports of scrap is the only incentive for scrap export, but the lack of liberal terms has stood in the way of barter exports reaching the required level in 1962. The trade and industry had a dull time in 1962 and the outlook for 1963 is not considered bright. On the one hand, domestic demand for scrap is not likely to exceed 150,000 tons. On the other, the prospects for exports are in no way encouraging. Foreign prices remain depressed and export restrictions here continue to cripple activity. There are no substantial export incentives either.

Progress of Colombo Plan

The eleventh annual report of the Colombo Plan Consultative Committee has focussed attention on the progress of economic development in the countries of south and south-east Asia. The external assistance given to countries of this region from 1950, when the Colombo Plan was initiated, to mid-1962 has amounted to about \$12,000 million. In 1961-62 the assistance totalled \$1,815 million. The contributions came mostly from the six member countries outside the region—Australia, Britain,

CAPITAL, 24th January, 1963.

Canada, Japan, New Zealand and the United States.

A noteworthy feature of Colombo Plan aid during 1961-62 is the continued increase in resources provided for development. It has been estimated that in 1960-61, the Governments of the 15 countries of the region have spent the equivalent of \$4,400 million on development, and in 1961-62 the equivalent of \$5,400 million. Development expenditure of \$6,700 million is proposed for 1962-63. In most countries a substantial proportion of the development expenditure was devoted to education and health programmes. Among Asian members, India has been the largest donor of technical aid to other member-countries, the number of technical scholarships and training opportunities offered by her totalling about 2,000 up to mid-1962.

If there is one thing which the annual report underlines heavily, it is the danger of indiscriminate expansion of population in the region. The very rapid rise in population has made the task of economic development more difficult. Considerable economic progress has no doubt been made, but it has been progress on a treadmill. Consequently, "there is fully as much scope in the future as there was in the past decade for member-countries to help one another forward in the field of economic development." To make any serious impact on poverty in south and south-east Asia, family planning measures should get first place. The large volume of technical and economic aid channelled into the region will be of little avail if population control is not adopted as a matter of State policy in these countries.

Discussing the tasks ahead, the report says the Colombo Plan was recently extended up to 1966 because its value had been proved, and the question of further extension will be considered at the 1964 meeting of the Consultative Committee. "The Colombo Plan can help each member-nation to help itself through education, through the exchange of information and experience, through the power of constructive example and by assisting it to know and understand more about the entire area". It can also provide the basis for new patterns in regional co-operation.

FOREIGN CAPITAL

WE understand that Lord Curzon was in a particularly happy vein at the lunch given to him at Jherriah last week, and that his hosts were cheered by his courtesy and affability. In the course of conversation with a Calcutta Commercial man, His Excellency expressed his surprise that capital did not more freely come to India for investment in undertakings which appeared to pay a safe seven or eight per cent, and he enquired of the gentleman in question if he could give him a reason for this. The reply was that so long as people at home did not thoroughly believe in the stability of the 16 penny rupee, there would always be an impediment to the free influx of capital into India. There is a good deal of weight in the answer. Capitalists at home are by no means satisfied of the ability of the Government of India to maintain the rupee at 1s. 4d. and when they observe that the Government themselves hesitate to guarantee the payment of interest on their loans at this fixed exchange, their doubt of the ultimate value of the rupee becomes intensified. But there are other reasons why money does not flow into India, apart from this want of confidence in the gold value of the rupee. People at home are constantly receiving reports of the famine and poverty in India; and on occasions they have been asked for financial help to which they have liberally responded. It is difficult to believe that a country which is in such a poverty stricken state can afford a safe field for capitalists to embark their money in. This is another reason. Then again, it may be asked what help has the Government of India afforded to the industries which are already in our midst. The laws that have so far been enacted have been of a repressive not of an encouraging kind. The Tea industry, when things were at their worst, was selected for adverse legislation, which caused considerable excitement and feeling among those whom it affected. The Cotton mills which are doing almost as badly have had an excise duty imposed on their manufactures. Can Lord Curzon point to any other country where legislation has been carried out with the apparent aim and object of stifling its nascent industries? In any other country such a procedure would lead to a revolution.

A Ditcher's Diary

THE WORD "CLARIFICATION" HAS OF LATE BEEN VERY much in use; and I am not surprised that much confusion prevails in consequence. First the Chinese cease-fire proposals had to be "clarified". Then Mr. Nehru's sundry statements on civil defence. Finally, the Colombo proposals. At the moment of my writing, Parliament is discussing—or perhaps considering—the proposals about 900 miles away; and if I took all the speculative reports literally about which way Parliament might decide—although it has not been asked to decide, contrary to an earlier decision—I can come to only two firm conclusions. One, Parliament will reject the proposals. Two, Parliament will accept them. The trouble is that the two conclusions are mutually exclusive and Parliament cannot do both. Or, can't it? I won't be surprised if Parliament does precisely that; come to think of it, India has done just that with the Chinese cease-fire. Why, then, not with the Colombo proposals? There is one snag; and I shall put it as clearly as I can: India has not all that freedom of inaction. (I am rather pleased with the epigram.) With Parliament in session, the political content of India's eventual decision is bound to be considerable. Neither Parliament nor the country should, however, forget that military considerations must be decisive; and on these factors neither Parliament nor the country can be told everything. Parliament and the people may well feel that with the border question left so long as a private preserve of Messrs Nehru and Menon, the country has reached its present predicament and now the people and their elected representatives must take a hand. I do not agree. I thought it was a mistake initially to think of referring the Colombo proposals to Parliament. The most charitable interpretation of that could be that India was buying time or that steam let off in Parliament would impress the Chinese. I rather think that the Government suffered a temporary loss of nerve and surrendered its primary right to take decisions. Parliament's sovereign right to dismiss the Government if it has gone wrong, of course, remains. Going back to "clarification", it is never necessary to "clarify" anything if in the first instance you thought clearly and spoke carefully. Many didn't, either; hence the spate of clarifications that mystify.

THE SUDDEN DEATH OF HUGH GAITSKELL AT THE relatively young age of 56 deprives British politics of a leader of outstanding calibre, one who might well have been at the helm of Britain's

next Government. For the Labour Party, his passing at this juncture is a major calamity; theoreticians and demagogues abound, but of statesmen it has no surfeit. It is indeed one of the strange quirks of history that just at a time when Labour was making a new impact on the electorate—its recent victories in by-elections and local elections have been almost startling—it should stand bereft of Mr. Gaitskell's stewardship. I did not count myself among the warmest supporters of the Labour leader's political beliefs; but his wisdom, persuasive powers and strength of mind could not fail to evoke the admiration of those who followed his career, especially in its later years. Mr. Gaitskell combined political shrewdness with deep scholarship and a certain balance of judgment; he did more than anyone else to bring the wild men of the Labour Left closer to the paths of reason and sanity. It is arguable that on some of the major issues of the time, such as Britain's joining the European Common Market, he displayed remarkable agility in jumping on and off fences. But politics is the art of the possible; and the serious disarray in the ranks of Labour after the last general election required of the leadership a certain nimbleness of foot as well as of mind. To what extent these qualities served their purpose in Mr. Gaitskell's case, we all know; he worked untiringly to put together the jigsaw of Labour's political thinking into a shape that would be more easily recognisable. He fought the old shibboleths of nationalisation with a courage many of his colleagues could not muster; it could even be said that he gave British socialism a new meaning which it desperately needed with the advent of the welfare State. In him, Britain has lost a great leader; India, an old friend.

A COLLEAGUE RECENTLY RETURNED FROM NEW Delhi; and, thinking of nothing in particular and expecting no very informative reply, I asked what it was like in the capital. He twitched his lips, removed the Sherlock Holmes pipe from his mouth and said: "Well, the capital of a country at peace, with few problems to worry about". My first reaction was to reach for the telephone—for I am not E. M. Forster—and hand my friend over to the police, for this, surely, was the most blatant disregard of the Defence of India Rules. I told him so; and his withers were unwrung; he said, "Forget it, chum; I am not spreading alarm and don't you see?" Not long afterwards, I saw. The State Chief Ministers had met in New Delhi

to discuss Prohibition and decided to meet again to discuss Prohibition. The public relations committee of the National Defence Council had met in New Delhi and decided that, at the end of each day's programmes, All India Radio would play the National Anthem. In Calcutta, the Minister of Health had died; may his soul rest in peace. But was it absolutely essential to declare a two-day State mourning, which means doing less work in Government offices, when many *jawns* had died for which we were all being exhorted to work harder? Is it seriously suggested that the decision to play the National Anthem could not have been taken by a programme assistant? On Prohibition, there has been so much talk and cross-talk that I am beginning to wonder whether drink or the Chinese threat is the greater danger. I am well aware that in democracies every war has its phoney phase, a time during which everyone talks of doing something and no one knows what. But Mrs. Vijayalakshmi Pandit and Mrs. Indira Gandhi, among others, have already started deploring a noticeable slackening of effort; and I think they are right. There is a great deal to be said for not working up a war hysteria—although, in its foolish way, A.I.R. is trying hard—but that is a very different thing from behaving as though everything is the same again.

TALKING OF PROHIBITION, I CANNOT SAY THAT I am greatly surprised about the discussions in New Delhi having dissolved in a new variety of mumbo-jumbo. It seems nobody at the conference had the courage to admit that the policy as such has been a total failure, although some Chief Ministers claimed that the general election being far away, and the need for resources more urgent than ever before, there was at least a case for "rationalising" Prohibition. By agreeing to postpone the discussions on the issue to a future, unspecified occasion, the Chief Ministers have, in my view, been guilty of extraordinary timidity. Busybodies like Mr. Shriram Narayan are entitled to their estimates that Prohibition has not affected Government revenues much; it has meant a loss of "only" about Rs. 50 crores a year. But it surprises one that sums of this order can be dismissed so light-heartedly. Mr. Morarji Desai cannot have forgotten that the last two Central Budgets he presented were aimed at raising almost that much extra each year, so the argument could be reversed to imply that if we abolished Prohibition, we could do without Mr. Desai's whims as well as his Budgets. The taxes imposed by all the State Governments taken together, if I remember, have been even less. The specious claim has been made by Madras and Gujarat that, since they went "dry", the revenue from sales and entertainment taxes has improved. But are there many States where the revenue from these levies has not improved? I am prepared to concede that if people spend less on alco-

holie drinks because of Prohibition, they will tend to spend more on other things, which includes anything from shirts (taxed) to prostitution (untaxed). But the point is, do people really spend less? The general impression is that they buy slightly less liquor at much higher prices, so they often actually spend more. The extra goes to bootleggers, whose usefulness at election time nobody will under-estimate. Does not the case for Prohibition, then, really rest on the ground that it is useful primarily as a fiscal weapon in the armoury of certain political Parties?

WHAT DO GENERAL DE GAULLE AND DR. ADENAUER think they are doing with Europe? It is no part of my business to reply to the former's elegant yet crushing rebuff to Britain. Britain is well able to look after herself; and in the art of administering urbane insults Mr. Macmillan is not a poor second by any means. What worries me is that two very old men have talked themselves into believing that fashioning Europe according to their illusions of grandeur is child's play. Nobody would mind if France and West Germany came closer; they have been at each other's throat long enough. What makes a Paris-Bonn axis a potentially dangerous affair is that General de Gaulle and Chancellor Adenauer think so much in terms of military power. Already there is more co-operation in military training and research between France and Germany than the world knows; and with France continuing with her nuclear effort this co-operation acquires a new and menacing edge. If President de Gaulle is not stopped in time, what is there to prevent him from sharing France's nuclear knowledge and weapons with Germany? An overwhelmingly strong power on the Continent has too often in history plunged that part of the world, and not that part alone, into war; and when two combine with similar visions before them, the threat is not smaller. After Cuba, many think, war has ceased to be a practical proposition. China does not think so; nor may General de Gaulle and Dr. Adenauer. The latter probably thinks that, with the U.S.A. and the Soviet Union locked in a nuclear embrace, in which neither can move beyond a certain point, now is the time for western Europe to acquire sufficient military might to talk to the Russians and the Americans as an equal. This is not a pipe-dream; it could come about, constituting a real danger, although it is fashionable to dismiss it as British insular thinking. But, as I said, General de Gaulle and Dr. Adenauer are getting on; the latter will soon get off too. And that will be the end of their vision of Great Europe. Alas, not before both France and Germany have wasted millions and millions of francs and marks on their own Blue Streaks and Skybolts! These national status symbols—steel mills and international airlines for the under-developed and nuclear weapons for the non-hungry—are becoming rather expensive for both.

A MERCHANT LAY DYING. HE HAD BEEN AN extraordinary father, generous to a fault, denying himself almost everything for the benefit of his sons. The sons, three of them, stood at his bedside quietly discussing the forthcoming funeral arrangements.

"Father has always spoiled us," said the eldest. "Now it's up to us to do what little we can to repay his kindness by giving him a wonderful send-off."

"Indeed," said the next son, "Father has been splendid but he is also a man of simple tastes. I think a medium-class funeral would please him better."

"Simple tastes!" echoed the third. "He lived like a monk. In fact, I am certain that anything other than a very austere funeral would only embarrass him..."

At this point the father, who still held on to a few last shreds of consciousness, held up a hand of protest:

"Come, come, my sons. You really mustn't put yourself to all this trouble on my account—I'll walk!"

Guide for Investors

PLANTATION SHARES RISE ON BUDGET HOPES

(BY A CORRESPONDENT IN MADRAS)

THE post-Pongal trading in Madras has commenced with greater freedom for equity shares, as the minimum prices which were fixed in November last, were lifted with effect from 15th January, 1963. The immediate reaction to this measure has been a downward adjustment in the prices of the more active shares. While there is some absorption at lower levels, the market has failed to indicate that prices have stabilised. On the contrary, the general tone of equity shares suggests the presence of instability and scope for a further downward adjustment. Operators, meanwhile, are watching the price movements, before making commitments even in good investment scrip.

In view of the uncertain price behaviour, the firm trend in selected plantation shares is significant. Coffee and tea shares are in a better form, and there is some investment buying. In contrast to the generally bearish expectations about the forthcoming Central Budget, the plantation investor is inclined to be optimistic. Being a large earner of foreign exchange, the plantation industry, it is expected, will be stimulated by concessions rather than retarded by fresh burdens affecting production and export.

Coffee shares on the Madras Stock Exchange are showing sustained steadiness. The post-Pongal week has witnessed a further rise in some of these shares. Such shares as Oucherlony, no doubt, suffer from the lack of floating stock. Nevertheless, interest in this scrip as in some other plantation shares has revived. The improvement in Consolidated Coffee is attributed to slow acquisition by genuine investors, in view of better crops and improved prospects. The world demand for coffee is rising. This has naturally led to the expectation of better demand for Indian coffee in the world market. In the context of an estimate of 53,035 tonnes for 1962-63, the use of the full export quota is likely to lead to a shortage in the internal market. Evidently, the outlook for some of the plantation crops, particularly coffee, is not considered as gloomy as in the past. But, in view of the defence-cum-development Budget for 1963-64, which is bound to initiate certain bold measures, an assessment of the prospects for individual industries should be properly related to the overall economic situation.

National-Standard Duncan Share Offer

NATIONAL-STANDARD Duncan Ltd has been promoted by the joint collaboration of the National Standard Company of the U.S.A. and Duncan Brothers and Co. Ltd of Calcutta. The new Company proposes to build a factory near Bombay for producing bead wire. Land for the factory has been acquired. The National Standard Company of the U.S.A. has a worldwide reputation for the manufacture of bead wire. The new Company is expected to do well since the American Company will be its technical collaborator. The latter will also participate in the share capital of the Indian Company. Prospects for National-Standard Duncan are considered en-

couraging, since the development of the motor-car industry will result in an increased demand for bead wire which is now entirely imported. National-Standard Duncan will enjoy the usual tax benefits which are allowed to new industrial undertakings.

The Company is offering 49,992 ordinary shares of Rs. 100 each for subscription at par. Out of this, National Standard of the U.S.A. will subscribe for 25,000 shares and Duncan Brothers will acquire 12,742 shares. The remaining 12,250 shares are being offered for public subscription. The list opens next Monday. (Fuller details of the offer are printed on a later page in this issue of Capital). The cost of the project has been estimated at Rs. 1 crore. The foreign exchange has been arranged partly by the share subscription of the National Standard of the U.S.A. and partly by a loan from the Industrial Credit and Invest-

ment Corporation of India. The latter loan is being negotiated. Applications must be made for a minimum of ten shares or multiples of ten. A sum of Rs. 50 a share must be paid on application. In view of the good prospects for the Company, the issue is expected to meet with a warm response.

Ashok Leyland Repeats Dividend

ASHOK Leyland Ltd has produced satisfactory results for the year ended September 1962 in spite of many difficulties. The taxable ordinary dividend of 8 percent has been repeated. Addressing the annual general meeting of the Company in Ennore (Madras) last week, Sir A. Ramaswami Mudaliar, chairman, outlined the progress of the expansion schemes (the full text of the speech

is printed on a later page in this issue of Capital). The Company has undertaken to produce 6,000 Comets and 12,000 heavy duty engines a year. The chairman takes an optimistic view of the prospects. Apart from defence requirements, the demand for heavy vehicles is expected to increase since the transport of heavy loads and mineral ores by road will rise. There will also be an increase in the demand for industrial engines. During 1963, the Company hopes to produce 3,600 Comets and an equal number of engines.

Referring to the difficulties of motor-vehicle producers, Sir Ramaswami says that not only have the allocations of foreign exchange been inadequate, but they have also not been given in time. The Company has, therefore, been making vigorous efforts to increase the manufacture of indigenous components as quickly as possible. Steps have also been taken to locate Indian sources of supply for ancillary materials which are not normally produced by automobile manufacturers. The Company will start producing some ancillaries in its own factory. Ennore Foundries Ltd, in which Ashok Leyland owns 25 percent of the share capital, has made satisfactory progress. Most of Ashok Leyland's requirements of iron and aluminium castings are met by this Company. The foundry is now able to meet not only the re-

Builders Specify

Snowcem

for Hotels and Clubs

the first choice
for decoration plus protection

Throughout India, Snowcem is the first choice of discriminating builders for lasting protection and pleasing colour schemes.

Hotels, restaurants, offices, factories, housing colonies, theatres and other structures—Snowcem adds beauty to them whilst waterproofing the interior and exterior wall surfaces.

Easy to mix, easy to apply, Snowcem does not rub, flake or peel off... can be cleaned. Provides a hard, durable, waterproof and damp-proof surface. Ideal for both interior and exterior application.

quirements of Ashok Leyland but also of other manufacturers.

Associated Battery Shows Better Results

THE Associated Battery Makers (Eastern) Ltd has produced satisfactory results for the year ended August 1962. The prospects during the current year have been assessed with cautious optimism. Although the Company has been doing well, the impact of the increased taxation and higher prices of raw materials should be noted. The Company has been asked to make special batteries during the present emergency; the effects of such production need to be carefully assessed. Sales improved from Rs. 2.18 crores in 1960-61 to Rs. 2.28 crores in 1961-62. The demand for storage batteries and components continues strong. The Company has received substantial orders for equipment from vehicle manufacturers and various types of internal combustion power equipment have met with good demand. The demand for industrial batteries for handling materials in factories, docks and other establishments, has increased.

Substantial orders from the Indian railways have been received. Stationary batteries for telecommunications, power stations, railway electrification, railway signalling, telephone exchanges and emergency lighting have been in good demand. Efforts are being made to increase the export of the Company's products. The modernisation programme of the factory has progressed, including the installation of improved plant. Various economies have been effected both in the manufacture and in the use of raw materials. The directors hope that the benefits of these measures will be increasingly felt in the future. The Company has started producing polystyrene battery containers for various requirements. The directors have refer-

red to the difficulties in obtaining raw materials. It is to be hoped that in view of the important services the Company has been rendering to transport and communications, steps will be taken to ensure adequate supply of raw materials to it.

The profit has improved from Rs. 45.57 lakhs to Rs. 50.78 lakhs, after increasing depreciation from Rs. 7.47 lakhs to Rs. 10.05 lakhs. A taxable ordinary dividend of 15 percent has been repeated, which is covered more than two-and-a-half times and offers a yield of 5.3 percent at the present price of Rs. 28.25 a share of Rs. 10 each. Taxation absorbs Rs. 29.10 lakhs (against Rs. 21.58 lakhs), fixed assets replacement Rs. 3.55 lakhs (against Rs. 3.99 lakhs), development rebate Rs. 1.36 lakhs (against Rs. 69,967) and capital reserve Rs. 1.64 lakhs. The carry-forward is Rs. 7.18 lakhs, against Rs. 8.24 lakhs brought in. The share capital is Rs. 1.18 crores divided into ordinary shares of Rs. 10 each. Reserves and surpluses are more than Rs. 1 crore.

Bhopal Sugar Cuts Dividend

THE Bhopal Sugar Industries Ltd has effected a drastic cut in the dividend for the year ended September 1962, from 15 percent to only 3 percent. Even the reduced dividend is being paid by drawing on the reserves. The preliminary results show a heavy decline in the gross profit from Rs. 7.42 lakhs to Rs. 3.50 lakhs. No provision has been made for taxation, against Rs. 1.25 lakhs in the previous year. The allocation to depreciation has been reduced from Rs. 2.71 lakhs to Rs. 2.48 lakhs and that for development rebate from Rs. 89,000 to Rs. 63,000. The directors have transferred Rs. 1 lakh from reserves to provide for the proposed dividend. The ordinary dividend absorbs Rs. 52,000, against Rs. 2,62 lakhs. The preference dividend takes Rs. 79,125, leaving Rs. 3,226 to be

carried forward, against Rs. 1,725 brought in. The Rs. 10-paid share of Bhopal Sugar is currently quoted around Rs. 20.

Central Bank Pays the Same

THE directors of the Central Bank of India Ltd have maintained the final dividend for 1962 at Rs. 2.60 a share, less tax. This brings the total distribution for the year to Rs. 5 a share, less tax—the same as in 1961. The preliminary figures, which are subject to audit, show a modest setback in the profit, after providing for taxation, from Rs. 1.83 crores to Rs. 1.80 crores. Considering that the bank has had to absorb an additional burden of about Rs. 68 lakhs on establishment charges alone and it had to provide Rs. 11 lakhs for the deposit insurance scheme, its working results for 1962 should be considered satisfactory.

Deposits are said to have recorded an increase of about Rs. 14 crores to Rs. 233 crores and new branches opened during the year amounted to 19, bringing the total to 360. The rate of interest on savings bank deposits was raised during the year by 1 percent to 3 percent. With Rs. 23.37 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 2.03 crores, against Rs. 2.01 crores. The allocation to the reserve fund has been reduced from Rs. 45 lakhs to Rs. 38.71 lakhs but provision for bonus to staff has been raised from Rs. 60 lakhs to Rs. 65 lakhs and the staff gratuity fund also gets more—Rs. 10.44 lakhs, against Rs. 10 lakhs. The interim dividend absorbed Rs. 30.24 lakhs and the final dividend accounts for Rs. 32.76 lakhs, leaving Rs. 26.17 lakhs to be carried forward. The Rs. 25-paid share of the bank is currently quoted around Rs. 58 cum-dividend, offering a gross return of about 9 percent on fresh investment.

C. D. F. C. Loan for Indian Cable

THE Commonwealth Development Finance Co. Ltd and the Industrial Credit and Investment Corporation of India Ltd will subscribe £262,500 each to the Indian Cable Company Ltd, of Jamshedpur, in which British Insulated Callender's Cables Ltd is the largest shareholder. These sums will be used to meet the foreign exchange requirements of Indian Cable's modernisation and expansion programme.

Punjab National Bank Repeats

THE directors of the Punjab National Bank Ltd have recommended a final gross dividend of Re. 1 a share for 1962, which together with the interim distribution of Re. 1 a share makes a total of Rs. 2 a share—the same as in 1961. Although the dividend has been maintained, it involves a larger distribution of Rs. 40 lakhs, against Rs. 28.75 lakhs because the 750,000 new shares issued in September 1961 at a premium of Re. 1 a share are entitled to the full year's dividend whereas in 1961 they participated in the dividend for only three months. Subject to audit, the net profit, after providing for taxation and transferring Rs. 15.64 lakhs (against Rs. 12.28 lakhs) to the gratuity fund, amounts to Rs. 1.14 crores, compared with Rs. 1.18 crores in 1961.

Considering that the profit has been arrived at after absorbing a heavy burden of establishment charges because of the latest Bank

CAPITAL, 24th January, 1963.

Award, increased interest rates or savings accounts, about Rs. 8 lakhs on deposit insurance and Rs. 3.38 lakhs more for gratuity to staff, the bank's performance in 1962 seems quite satisfactory. Including the carryforward of Rs. 10.38 lakhs (against Rs. 4.23 lakhs), the disposable surplus amounts to Rs. 1.24 crores, against Rs. 1.23 crores in 1961. The allocation to the reserve fund has been reduced from Rs. 45 lakhs to Rs. 25 lakhs. After providing for the dividend, Rs. 55.17 lakhs is being carried forward, subject to the payment of bonus to staff. The Rs. 10-paid share of the Punjab National Bank is currently quoted around Rs. 19.52 (nominal) cum-dividend, offering a gross return of about 10.8 percent.

Kothari Sugars and Chemicals Starts Production

KOTHARI Sugars and Chemicals Ltd commenced production on 17th January, 1963, with a daily capacity for crushing 1,000 tons to 1,250 tons of sugarcane. According to the original schedule, the erection of the factory was to be completed by early 1962. Due to some delay in the receipt of machinery and components, it was not possible to commence production before January 1963. About 80 percent of the factory's machinery was manufactured in India. The factory is situated in Kattur, in Trichinopoly district.

Sugarcane supply is usually expected from January to May, and if the factory is able to crush 100,000 tons of cane during this period, as anticipated, it will certainly be considered an achievement. It is, however, reported that the factory is finding it difficult to persuade cane growers to turn away from jaggery due to the attractive price available for the latter. Besides, jaggery is completely exempt from excise duty. One favourable factor which is stressed concerning the timing of production by the factory is the absence of any glut in sugar. The factory expects to maintain a crushing period of 200 days in the next season. This will require a total area of 6,500 acres under sugarcane cultivation.

Prospects for Associated Cement

THE shareholders of the Associated Cement Companies were unable to get any clear indication from their chairman, Mr. Dharamsey M. Khatau, at the annual meeting last Friday, about the Company's future prospects. But the chairman could hardly be blamed for that, for apart from the uncertainty about the additional taxation in the forthcoming Central Budget, the Company's future is intimately linked with the Government's decision on a further rise in retention prices. A.C.C. will no doubt get the benefit of the higher retention prices granted with effect from 1st November, 1961, for a full year, but this will be more than offset by the increase in costs. Mr. Khatau said that while the progress made in the previous year was being maintained, there would be no increase either in the capacity or in the production of cement during the current year. The chairman was unable to say how much the Company would have to pay by way of the war risks insurance premium because of some uncertainty about the basis on which it is to be worked out. The premium will be very much higher if the replacement value of fixed assets is taken as the basis than if it is calculated on the basis of the depreciated value of the fixed assets. Mr. Khatau refuted the allegation that

CAPITAL, 24th January, 1963.

A.C.C.'s costs were higher than those of many other units. In fact, the Company's cost of production was the lowest except that of Dalmia Cement (Bharat) Ltd.

Replying to shareholders' plea for a bonus issue, the chairman stated that the question would be considered only when the board felt that the shareholders could be assured of a reasonable dividend on the increased capital. The chairman regretted that the Company had to give up negotiations for the sale of its assets in Pakistan because of the difference of opinion between the American negotiators and the Pakistan Government. A.C.C. is now trying to negotiate with other foreign firms. Mr. Khatau assured the shareholders that the Company's assets in Pakistan were being kept in good condition and the working was satisfactory. In reply to another query, the chairman said that the question of giving shares of A.C.C.-Vickers Babcock to the shareholders would be considered only when raising further capital. A.C.C.-Vickers Babcock is working satisfactorily but it will not be in a position to pay any dividend for another two years. Mr. Khatau said that the Company's income tax assessment had been completed up to 1959. The Life Insurance Corporation is holding 12 percent of the Company's equity capital.

Maiden Dividend from Oil India

OIL India Ltd has declared a maiden interim dividend of 3 percent for 1962, after payment of taxes. The Company earned a net profit of Rs. 1.15 crores in 1961, after providing for depreciation, taxation and statutory development rebate reserve. It is a rupee Company and has a share capital of Rs. 28 crores held in equal proportions by the Government of India and the Burmah Oil Company. It is now engaged in the search for oil, development of its existing oilfields and the final completion of the 720-mile-long pipeline to transport crude oil to the Gauhati and Barauni refineries.

Oil India has drilled 141 wells, of which 106 have been successful commercial producers of oil and gas. Nineteen wells have to be tested further, and two wells, one in Nahorkatiya and another in Moran, are now being drilled; the latter is nearing completion. Total expenses incurred on drilling operations are about Rs. 17 crores. Oil reserves have been estimated at 46 million tons and natural gas reserves at 756,000 million cubic feet. A crude conditioning plant is being installed in order to make the crude oil suitable for pumping through the pipeline. It is expected to be completed shortly. The Company's crude oil is to be sold first to the Gauhati and Barauni refineries and to the A.O.C. refinery in Digboi. Any surplus left is required to be sold to the Government. In 1962, the Gauhati refinery took about 220,000 tons of crude oil from Oil India and the A.O.C. Digboi refinery about 300,000 tons.

Oil India has been constructing a pipeline with all related facilities in two stages from Nahorkatiya to Gauhati in Assam and then to Barauni in Bihar. The construction of the pipeline has been undertaken on a no-profit-no-loss basis. Extending to 250 miles from Nahorkatiya to Gauhati, the pipeline was commissioned early in April 1962. The second stage, extending to 470 miles from Gauhati to Barauni, is expected to be completed within a couple of months. This pipeline is one of the second longest in Asia and one of the most modern in the world.

The cost of the pipeline is estimated at Rs. 50 crores.

The total cost of the entire project of Oil India is estimated at more than Rs. 75 crores. The Company recently floated debenture stock of Rs. 30 crores in order to finance the construction of the pipeline. The foreign exchange cost is being met by a sterling loan of £3 million offered by the U.K. Government to the Government of India and by overdraft facilities of £10 million provided by the Bank of Scotland. The sterling loan overdraft will be converted into a long-term loan in due course.

Associated Hotels Profit Down

THE latest accounts of the Associated Hotels of India Ltd cover a period of 15 months up to June 1962, since the Company has decided to close its accounts at the end of June instead of 31st March every year following its proposed scheme of amalgamation with

Chowringhee Properties Ltd. The amalgamation scheme has been approved by the shareholders and it is now awaiting the final order of the Calcutta High Court. During the period, the Company earned a profit of Rs. 7.62 lakhs, compared with Rs. 8.62 lakhs in 1960-61, after providing Rs. 2.72 lakhs (against Rs. 1.77 lakhs) for depreciation. The decline in the profit has been mainly due to the increased payment to staff and rising power costs and municipal taxes. The usual preference dividends have been paid up to March 1962, and a taxable ordinary dividend of 10 percent has been maintained, absorbing Rs. 2 lakhs. It offers a yield of 9.7 percent at the present price of Rs. 10.31 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 16,271 (against Rs. 16,718) and taxation Rs. 2.85 lakhs (against Rs. 6.57 lakhs). Rates and taxes for previous years absorb Rs. 10,010 and the debenture redemption sinking fund Rs. 80,000. The carry-over amounts to Rs. 1.67 lakhs against Rs. 1.22 lakhs brought in. The directors say that the conveyance of the Pakistan assets has not yet

been finalised, since the formal sanction from the authorities is awaited.

Rights Issue by Mukand Iron

MUKAND Iron and Steel Works Ltd proposes to issue rights shares in the ratio of one new ordinary share for every one ordinary or deferred share held at present. The rights shares of Rs. 10 each will be offered at a premium of Re. 1 a share. The paid-up capital of the Company is made up of Rs. 90.64 lakhs in equity shares and Rs. 1.75 lakhs in deferred shares. The rights issue will bring in additional funds amounting to Rs. 1.01 crores, including the share premium money. Additional funds are being raised to finance the Company's expansion programme which is estimated to cost Rs. 3.70 crores, including Rs. 1.60 crores in foreign exchange. Apart from the expansion of its rolling mill in Kalwe, Mukand Iron proposes to set up a 20-tonne furnace and wire rod mill as well as a continuous casting machine for making billets there. The Rs. 10-paid

The Price Line

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

share of Mukand Iron is currently quoted around Rs. 20.80.

Davangere Cotton to Raise Capital

DAVANGERE Cotton Mills Ltd proposes to raise Rs. 36.75 lakhs by issuing equity and preference shares to cover a part of the cost of its expansion programme. The latter is estimated to cost Rs. 1.50 crores. The balance is to be raised by I.F.C. loans, bank borrowings and by utilising the Company's existing resources. Davangere Cotton, which has at present 40,864 spindles and 300 looms, has been permitted to install 500 automatic looms on the condition that 75 percent of its production will be exported. Recently, the Company had also been given a licence to install 12,000 spindles, 218 plain looms and 82 automatic looms in its new unit in Gadag which is expected to go into production shortly. Of the two issues proposed by the Company, equity shares worth Rs. 15 lakhs, which are being issued at a premium of 25 percent, will be offered as rights shares to the existing shareholders. Of the other issue of Rs. 16 lakhs in 9.5 percent, taxable, redeemable cumulative preference shares of Rs. 100 each, the directors and their

friends have agreed to take up Rs. 6 lakhs, and they are likely to subscribe for another Rs. 2 lakhs. The balance will be offered for public subscription shortly. The Company has a 23-year unbroken record of dividend payment. For the past three years, the dividend has been maintained at 12 percent.

Firth Sterling Steel: A New Venture

A NEW Company known as Firth Sterling Steel Company of India Ltd has been formed in collaboration with the well-known U.S. firm of Firth Sterling Inc. of Pittsburgh, to undertake the manufacture of high speed and high alloy constructional steels. The factory will be located at the Government industrial estate, near Thana, where power, water and other facilities will be readily available. The capacity of the plant will be 300 tons of high speed steel and 300 tons of high alloy construction steel a year on a single shift basis. The Company has received an industrial licence, but the Government's sanction for the issue of capital is awaited. As the Planning Commission has given a high priority to the industry, there is unlikely to be much delay or difficulty in importing

machinery or raw materials for the early implementation of the project.

The project is estimated to cost Rs. 76 lakhs. Of this, Rs. 43 lakhs will be spent on plant and machinery, including erection work. The cost is proposed to be met as follows: the initial equity capital issue Rs. 40 lakhs, a loan from the Industrial Finance Corporation Rs. 25 lakhs and bank borrowings Rs. 11 lakhs. The Company's authorised capital will be Rs. 1 crore, made up of 500,000 equity shares of Rs. 10 each and 500,000 unclassified shares of Rs. 10 each. Out of the equity capital of Rs. 50 lakhs which the Company proposes to issue in the beginning, shares of the value of Rs. 13 lakhs are to be offered to the American firm which is collaborating in the venture. Of these, 30,000 shares are to be issued for consideration other than cash and the balance of 100,000 shares will be reserved for them for three years with an option to subscribe in cash in terms of the technical assistance agreement. The promoters, directors and their friends have agreed to take up shares worth Rs. 17 lakhs. The balance of the issue amounting to Rs. 20 lakhs is likely to be offered for public subscription shortly. The entire public issue is proposed to be underwritten. The Company has a phased manufacturing programme. This will ensure that the plant will commence produc-

tion at an early date. The board of directors includes Mr. M. D. Bhat, chairman, Maharashtra Electricity Board, Mr. Kenneth D. Mann, Mr. S. B. Bilimoria, Mr. I. M. Pai, Mr. D. N. Patkar and Mr. V. G. Rajadhye. PAX Corporation will be the managing agents, subject to the Government's approval.

Kallinugger and Khoreel Tea

THE profit of the Kallinugger and Khoreel Tea Company Ltd has declined from Rs. 34,716 in 1960 to Rs. 6,432 during the year ended December 1961, after providing Rs. 8,903 (against Rs. 9,810) for depreciation. The taxable ordinary dividend has been cut from 6 percent to 2 percent, absorbing Rs. 9,000. The yield works out to 6.9 percent at the present price of Rs. 87 a share. Taxation is allocated Rs. 14,306 (against Rs. 4,500.) The average sale price of tea declined from Rs. 4.30 in 1960 to Rs. 3.37 a kilogram. The entire tea was sold in the domestic market.

New Capital Issues

SEVEN companies are the latest to be given consent to issue capital aggregating Rs. 4.34 crores. Two companies are issuing bonus shares and four equities. One company has been allowed to capitalise money out of its reserves. One is a new company. The consent in all cases is valid for 12 months. The following are the details:

The Godavari Sugar Mills Ltd, Bombay, is raising capital of Rs. 40,00,000 divided into 40,000 equity shares of Rs. 100 each, to be issued as fully-paid bonus shares by capitalising general reserves to a like extent in the ratio of two such shares for every three equity shares held.

Thacker and Co. Ltd, Bombay, will issue capital of Rs. 62,500 divided into 1,250 equity shares of Rs. 50 each, to be issued as bonus shares by capitalising reserves to a like extent, to the existing shareholders in the proportion of one such share for every four held.

The Bombay Burma Trading Corporation Ltd, Bombay, has been given consent to capitalise Rs. 133.75 lakhs out of its reserves.

Kerala Heavy Electricals Ltd, a new Company, is proposed to be established in the State of Kerala, for manufacturing power transformers and other electrical equipment in collaboration with Hitachi Ltd, Tokyo. It is to issue capital of Rs. 1.10 crores divided into 1,10,000 equity shares of Rs. 10 each, for cash at par, of which Rs. 28.6 lakhs will be offered to Hitachi Ltd partly against the import of plant and machinery and partly in cash.

The Orissa Fisheries Development Corporation Ltd, Cuttack, is issuing capital of Rs. 1,00,00,000 divided into 100,000 equity shares of Rs. 100 each to be subscribed entirely by the Government of Orissa.

Sovereign Spinning and Weaving Mills Ltd, Madras, will issue equity capital of Rs. 25 lakhs for cash at par. The proceeds will be used for the establishment of a cotton spinning mill with an installed capacity of 12,000 spindles.

India Pistons-Repeco Private Ltd, Madras, will issue equity capital of Rs. 25 lakhs for cash at par to be subscribed privately up to 51 percent by India Pistons Ltd, Madras, or their nominees and 49 percent by Repeco Ltd, Melbourne, Australia. The proceeds of the issue will be utilised for manufacturing fly wheel ring gears.

PROPOSED ACTIVITIES

The Company was incorporated on 20th August, 1962 with the objects mentioned in the Memorandum of Association of the Company and in particular to undertake the manufacture or production of bead wire for tyres, other types of specialised wires and the sale thereof.

The formation of the Company is the result of collaboration between National Standard Company, U.S.A., which is the world's largest bead wire manufacturer and the well known Agency House, Duncan Brothers & Company Limited, Calcutta. At present bead wire is being obtained from National Standard Co., Ltd., U.K., involving considerable expenditure of foreign exchange by India.

The manufacture of bead wire is a highly specialised process since the product has to withstand long and arduous periods of usage at high pressures and temperatures.

With the development of the automobile tyre industry in India the cost of importing bead wire will increase substantially and the long term prospects of the Company can be considered good.

DATES OF OPENING & CLOSING OF THE SUBSCRIPTION LIST

The subscription list will open at the commencement of banking hours on 28th January, 1963 and will close at the close of banking hours on 1st February, 1963.

FROM WHOM APPLICATION FORMS ALONG WITH COPIES OF PROSPECTUS CAN BE OBTAINED

Application forms along with copies of the prospectus can be had from the Company's undermentioned Bankers and Brokers:

ASHOK LEYLAND LIMITED

SIR A. R. MUDALIAR'S ADDRESS

Speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman, Ashok Leyland Limited, to the Shareholders at the Fourteenth Annual General Meeting of the Company held on 16th January, 1963 at Ennore, Madras.

GENTLEMEN,

I have great pleasure in extending to you a cordial welcome to the fourteenth annual general meeting of your Company.

The Directors' report, audited balance sheet and profit and loss account for the year ended 30th September 1962, have been circulated to you and, with your permission, I shall take them as read.

As the balance sheet and profit and loss account have disclosed, it has not been an unsatisfactory year from the financial point of view, in spite of difficulties regarding foreign exchange allotments for materials which have to be imported. Sales for the year exceeded Rs. 13 crores compared with Rs. 11.5 crores approximately in the previous twelve months from 1st October 1960 to 30th September 1961.

Programme Phased

In my speech last year, I referred to the phased programme of expansion which we have undertaken to produce 6,000 Comets and in addition 1,200 Heavy Duty engines per annum. Accordingly during the year under review, buildings of a total cost of Rs. 31 lakhs have been completed and plant and machinery of a value of Rs. 104.5 lakhs have been installed. Additional plant and machinery of a value of Rs. 21.5 lakhs are either in transit from suppliers or awaiting installation. These figures

represent roughly a total increase of Rs. 135 lakhs in the gross block capital during the year on account of buildings, plant and machinery. You will have noticed that, after making appropriate provision for depreciation, taxation and other charges and for the normal dividend of 8 per cent subject to tax, there is very little surplus which can be transferred to general reserve. We have therefore been expanding our production and for the purpose investing money in plant, machinery and buildings almost exclusively from equity capital. There has been little scope for surplus earnings which normally are utilised to a considerable extent in financing expansion programmes.

When I state, as I did last year, that the selling price of our Comet Chassis has remained constant since 1955 and that any additions made to the 1955 prices represent the additional duties levied by the Government from time to time, it will be realised that we have been obliged to absorb all the rising costs of materials, power and labour in the selling price. No other automobile unit has, I hope, been placed in such a difficult position. I trust that Government will take into consideration the handicaps we have thus been subjected to and give the necessary relief in agreeing to a fair increase in price, corresponding to rising costs—a relief for which we made a request last year.

There is another problem which we are facing and probably it is one which faces all automobile manufacturers in India. Until the latter part of 1961, on the assumption that the foreign exchange allotted would remain reasonably constant, it was the policy of the Company steadily to increase the indigenous content of its products and, utilising the same amount of foreign exchange, decrease the value of imported material per chassis thereby increasing their annual output.

Foreign Exchange Allotment

During the first half of 1962, however, not only was the foreign exchange allotment reduced appreciably but, on more than one occasion, the issue of import licence even for the reduced foreign exchange allotment was seriously delayed. While I do appreciate the problems of Government in this regard, I would like to emphasize that the raw materials or components required by automobiles of particular types are not readily available in the open markets abroad. They have to be specially produced in the automobile factories or by ancillary manufacturers. The effect of these two factors—decrease in foreign exchange and delayed issue of licences—was experienced when, in October last, your Factory had to close down its assembly section for a considerable period for want of the imported components. It was inevitable, though regrettable, that nearly 500 employees had to be laid off for two weeks.

This is not intended to be a catalogue of grievances that I have mentioned but my object is to present to the authorities the actual position which automobile companies generally are facing today. The demand for our products is continually on the increase but we are unable to meet it. We are gradually entering the export market, so much needed for earning foreign exchange. Industries are constantly urged to increase production and productivity councils are giving valuable advice. And yet factors beyond our control are compelling us to reduce the working week to five days. The sense of frustration

among enthusiastic workers is not the least of our anxieties. Fully aware of the emergency period through which we are passing, we and indeed all connected with the industry are desirous to be of the utmost help during this period. I would earnestly plead that this industry specially needs the removal of the handicaps to which I have referred.

Your company was formed with the object of producing a heavy duty vehicle, for which at the inception the demand was necessarily limited on account of the restrictions on gross vehicle weights placed by the Highways authorities. Over the years, the demand has increased and a number of expansions have been undertaken involving large capital expenditure. There is every indication that the restrictions imposed by Highways authorities in some States will progressively disappear so that there will be a greater demand for the Comet vehicles and it may become practicable to produce heavier vehicles and thereby increase the Company's turnover. The present emergency is likely to accelerate this demand either directly or indirectly. Apart from any needs of the Defence services, transport of heavy loads and of mineral ores by road will increase. There will also be an increasing demand for industrial engines and, as you are aware, the expansion programme which is nearing completion provides not only for the production of the Comet chassis but also, in addition, the industrial version of the Comet engine. The plan further envisages the production of 1,200 engines per annum of the 600/680 type which have a considerably greater power than the Comet. These heavier engines will be largely utilised for industrial applications.

Careful Planning

During the year 1963, we hope to produce at least 3,600 Comets instead of the 5,000 that was our target and with a little help in the form of foreign exchange, to produce both the heavy duty vehicle and the corresponding engines to which I have referred. This will mean careful planning and great attention to increase the factory's efficiency while completing the expansion programme which is now in progress. I have every assurance from our resourceful staff that, in spite of all handicaps, progress will be maintained. It has been the policy of the company to give the greatest priority to means for increasing the indigenous content of the chassis and planning to this end has been in progress for some time, so that its benefits may be secured in the immediate future. More vigorous steps are therefore being taken to locate Indian sources of supply for all ancillary materials which are not normally produced by automobile manufacturers; and, in some cases, if absolutely necessary, we propose to undertake the manufacture of such ancillaries in your factory. Additional items, the deletion of which from the Import schedule was not contemplated till 1964, will now be brought into the 1963 production in your factory. Our British collaborators, sharing completely our views on the subject, have shown a remarkably co-operative spirit to achieve this end. They have arranged for a Planning Controller from Leyland Motors to complete these plans in consultation with your company's executives. I would like therefore to assure you that, rather than becoming despondent or helpless in any unexpectedly difficult conditions, the organization will accept these conditions as a challenge to overcome them so that the success, which has so far been achieved, will continue.

Since I last addressed you, Ennore Foundries Limited, in which your Com-

CAPITAL, 24th January, 1963.

pany has 25% of the capital, has made further progress and the import by your Company of iron and aluminium castings has been completely discontinued, all such demands now being met by Ennore Foundries Limited. This has made a considerable contribution to the reduction of the foreign exchange required per chassis. After some initial "teething" troubles, the quality of the castings has become quite satisfactory, with a very low level of scrap in the machine-shop. The Foundries' capacity has reached a stage at which it is possible not only to meet the full demand of your company but also to supply castings to other manufacturers, thus both directly and indirectly saving foreign exchange.

Chinese Aggression

I have reserved to the last a statement on the situation that has suddenly confronted the country by the unprovoked and unjustified aggression of our land by China. I am convinced that this aggression is not merely the result of a dispute over our borders. It poses a threat to democracy and the democratic way of life in our country; but it also consequently poses a threat to neighbouring democracies which have recently become self-governing independent States. In the emergency that has arisen, your Company is determined to play its part worthily and well. The donation of a lakh of rupees, which your Company has made to the Prime Minister's Defence Relief Fund, is a bare expression of that determination in a tangible form. The very programme of production that I have outlined above will indicate our resolution to do whatever is necessary in the present emergency; and the collaboration of our British colleagues in the planning and expansion of their complete identity of views with ourselves on the subject.

Leyland Motors continue to give us every assistance and we are greatly indebted to Sir Henry Spurrier and his colleagues for the valuable work they have done on our behalf in undertaking all the planning for our expansion project.

Since I last addressed you, we have had a visit from Mr. West, Chairman of West Yorkshire Foundries and a Director of Leyland Motors, Mr. Grimshaw, Leyland's Engineering Consultant, and Mr. Tattersall, their Chief Engineer. We are looking forward to another visit in the near future from Sir Henry Spurrier, Chairman of the Leyland group, who will be accompanied by Mr. West. These visits have been of incalculable assistance to us in organizing and regulating our productive capacity. I am sure you will wish to convey to the Leyland Directors and particularly to Sir Henry Spurrier our thanks for all their assistance.

Our relations with our employees have remained cordial throughout the year and the results which were obtained, in spite of many difficulties, were in no small measure due to the co-operation which the officers, staff and work-people of your company have extended to your Directors. The agreement with the Employees' Union, which was executed sometime back, expired at the end of 1961 but remained current while a new agreement was being negotiated. This new agreement was executed recently, effective from 1st July, 1962 till 31st December, 1964. I trust it will ensure a continuation of the happy relations between the management of your Company and its employees. I have already referred to the enthusiasm which our officers and workers have shown in the progress of our Company but I would like specially to refer to one of my colleagues on the Board, as I did last year, whose contribution again has been outstanding. I refer to the Managing Director, Mr. Collins, who has been a tower of strength to his colleagues in the workshop and to his colleagues on the Board.

NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 24th January, 1963.

The Stock Markets

CALCUTTA CUTS RESTRICTIONS, PRICES FALL

Tuesday Evening.

THE Calcutta stock market has relaxed the restrictions on trading considerably during the past week. Except in the case of six clearing shares, the minimum prices have been scrapped. For Indian Iron, Guest, Keen, Williams, Kesoram Industries and Rohtas, the minimum prices have been cut. The minimum prices for Shree Gopal Paper and Orissa Cement will continue as before. The compulsory carry-over in Indian Iron, Kesoram Industries and Rohtas will also continue. Limited forward trading has been permitted. Fresh purchases can be made only from members who already have a net purchase position of Rs. 3 lakhs in clearing shares, the without having paid any margin; the purchases in Indian Iron and Hindustan Motors cannot be more than Rs. 75,000 each. Purchases of other clearing shares cannot be for more than Rs. 25,000 each. Sales can be made against these purchases. Jobbing has been prohibited.

The move appears logical considering that the Bombay and Madras stock markets have already introduced similar relaxations. As a result of freer trading in clearing shares, it is expected that the load of floating stocks will be relieved. The removal of minimum prices is justified as the former minima had become unrealistic in the changed circumstances. Due to the rise in interest rates following a dearer money policy, investors have come to expect bigger dividend yields. Hence a decline in share values has been long overdue.

In response to the new measures, share prices have drifted downwards, although the turnover has increased. It looks as if many holders have been hard-pressed for funds and that they have taken the opportunity to lighten their commitments. The pressure has been the greater as many banks have asked their clients to cut their overdrafts against shares or deposit larger margins against the overdrafts. Whether the present time is appropriate for banks to press for larger margins against share overdrafts, has been questioned in stock market circles. Considering that the political and economic background continues to be unfavourable, any pressure to sell shares weakens sentiment. The Reserve Bank is believed to have asked banks to cut share overdrafts in order to have more funds for lending to trade and industry. It has been pointed out that the total credit lent by banks to the stock market is small in relation to stock market advances. Besides, unless the stock market remains buoyant, the flow of capital into industry will be hampered. In fact, it is necessary to consider seriously whether the margin against share advances should not be raised from the present level of 60 per cent to 70 per cent of share values, as recommended by the committee of stock exchange presidents.

Lyons Range has been worried by the deliberations of the standing committee of the National Development Council which took place in New Delhi last week. It is almost certain that heavier taxation will be imposed in the next Central Budget. Hence the outlook for corporate profits has become less encouraging. As profits have also been squeezed by rising production costs, investors

doubt whether companies will be able to pay good dividends.

The settlement on Tuesday passed quietly. Indian Iron have been offered freely below the minimum price. Investors fear that the Company will not increase the dividend in the near future as funds will have to be ploughed back to finance the expansion schemes which are being undertaken. In the engineering section, stray buying has taken place in Indian Standard Wagon, Guest, Keen, Williams and Jessop.

Coal shares have been neglected and turnover has been small. Amalgamated and Pench Valley have weakened. Cotton mill shares have been subdued on a predominance of sellers. Investors have been worried by the prospect of a further decline in the prices of cloth and yarn. Dunbar have fallen. There has been virtually no support for bank shares.

The selling pressure has declined in jute shares, but buyers remain cautious. The absence of foreign enquiries for jute goods has caused concern. The turnover has been confined mostly to Barnagore, Guapore, Megna, Anglo-India, Union, Kamar-hatty and Birla. Except for Dunlop Rubber, which have been fairly steady, prices of miscellaneous shares have declined in the absence of support. Electric companies have met with scattered buying on hopes of an increase in the "reasonable return" for power undertakings, following the increase in Bank rate. Paper shares have lacked interest. Business has been done in Bengal, Sirpur and Seshasayee. Sugar shares have been difficult to sell even by discounting prices. In tea shares, there has been a predominance of sellers. Buyers are reluctant to increase their commitments considering the uncertainty about dividends and the new crop.

Scattered support has been extended to selected preference shares and debentures in view of attractive yields.

Government securities have been quiet. Buyers have been conspicuous by their absence. The 3 percent Conversion loan 1966 is nominally quoted at the official support level of Rs. 63. Prices of State Government loans have declined further in the absence of buyers. Except for some scattered institutional buying, it has been difficult to negotiate these loans.

Bombay

FURTHER RELAXATIONS ANNOUNCED PRICES REACT BEARISHLY

Tuesday Evening.

THE Bombay stock market has started the new account in a quiet mood. There has been a bearish reaction to the relaxation of restrictions on trading. The authorities have scrapped the compulsory carryover for all forward shares except 12-Century, Indu ordinary, except 12-Indore Malwa, Kohinoor, Indian Iron, Tata Steel, Scindia, Bombay Burmah (old), Hindustan Motors, National Rayon and Associated Cement. For these scrips, the

INCOME-TAX LAW AND PRACTICE IN INDIA

Thoroughly Revised and Enlarged
7th Edition: Price Rs. 15: Postage Extra

By
ANANDA GOPAL BANERJEE
M.A., F.C.A.

Contains Practical Illustrations showing in detail the working and effect of all the principles of taxation and the text of the Income-tax Act, 1961 as amended upto 30th September, 1962.

An ideal Book for Business Managers and Executives.

KNOWLEDGE HOME

59 Cornwallis Street, Calcutta-6.

lion, Bombay Burmah have been steady as the Company has been permitted by the Controller of Capital Issues to issue bonus shares by capitalising reserves. Sugar shares have been subbued on fears of a decline in production during the current season. Cement shares have been sold freely. Mining shares have been difficult to sell even by discounting prices. Steamship and chemical shares have been neglected. Rayon shares have been quiet, and National Rayon have attracted virtually no support. Cash shares have been neglected and turnover has been far too thin. Among banks, business has been done in Bank of India and Central Bank. In electric company shares, scattered support has been extended to Ahmedabad Electric and Bombay Suburban.

Madras

INVESTORS REMAIN CAUTIOUS PRICES DRIFT DOWNWARDS

Tuesday Evening.
THE Madras stock market has been quiet during the past week. The turnover has shrunk considerably and the price trend has been mixed. Except for selected planting shares, prices have generally drifted downwards. Investors have been cautious considering the possibility of heavier taxation in the coming Central Budget. With the removal of various restrictions on trading and the scrapping of minimum prices, it is hoped that greater stability will now return to the market.

Despite good dividends, bank shares have been neglected. State Bank of Travancore has paid a taxable dividend of 5 percent, the Indian Bank a taxable dividend of 15 percent and the State Bank of Mysore a taxable dividend of 10 percent. In electric company shares, scattered interest has been taken in Vellore around Rs. 13.60.

Sugar shares have been freely offered without attracting support. E.I.D. have, nevertheless, been steady on declaring a final taxable ordinary dividend of 14-2/7 percent, making 21-3/7 percent for the year. Among planting shares, Consolidated Coffee and Coffee Lands have been steady on the view that the long-term prospects are good. Consolidated Coffee has declared a taxable ordinary dividend of 15 percent and Coffee Lands a taxable ordinary dividend of 9 percent. Ouchterlony have been taken at Rs. 4.12 and Blue Mountain at Rs. 2.37. Periakaramalai have come to hand at Rs. 3.03. Cotton mill shares have been subbued on a predominance of sellers. South India Viscose and Travancore Rayon have weakened further. Scattered support has been extended to Buckingham around Rs. 281.

Prices of miscellaneous shares have fallen all round. Ashok Leyland have been transacted at Rs. 8.10 on paying a taxable ordinary dividend of 8 percent. Tube Suppliers have been offered freely on news of skipping the dividend. Travancore Chemical Manufacturers have been about steady on paying an interim taxable ordinary dividend of 10 percent. Mysore Electrical Industries have obtained the sanction of the Government to issue 9,000 ordinary shares of Rs. 100 each at par.

Government securities have been depressed. Prices of State Government loans have declined further in the absence of buyers. Good preference shares having high yields have been bought.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

London

UNSETTLED TREND CONTINUES GILT-EDGED FALL

London, 23rd January.
UNCERTAIN conditions continued in the London stock markets throughout the past week, and

CAPITAL, 24th January, 1963.

prices in almost all sections were lower. The Common Market negotiations, following President de Gaulle's anti-Britain statement at his Press conference, were the dominating factors. Not a great deal of selling developed, and buyers were unwilling to commit themselves. Gilt-edged securities were the worst

affected and Continental selling led to sharp falls. The new Australian stock suffered from the fall in gilt-edged securities. No less than 82 percent was left with the underwriters and the stock established a discount when dealings started. Dollar stocks moved up in response

to Wall Street and a substantial rise in the dollar premium. Banking, insurance and property shares lost ground but hire-purchase shares resisted the trend following the good results announced by Bowmaker. Industrial equities fell back on a

broad front and recorded extensive losses on the week. Gold shares responded to selective buying and were firmer on the week. Coppers also improved and other mining shares were well maintained. Oils moved erratically. Rubbers lost their recent firm trend but teas continued to meet with modest demand.

INVITATION TO ENLIGHTENED EMPLOYERS

FROM LIC THERE COMES A WELCOME ADDITION TO FRINGE BENEFITS FOR EMPLOYEES

LIC has now introduced the One-year Renewable Group Term Insurance, so popular in advanced countries like the U.S.A. This low-cost scheme provides financial security for the employee's family and increases his loyalty to the firm. The main features of this morale-boosting insurance plan are:

1. The insurance cover is easy to obtain. There is no medical examination and no individual form filling.
2. The premium rates are low.
3. The amount of insurance can be adjusted automatically from year to year according to a predetermined plan to suit employee's changing needs.
4. The premiums paid by the employer are exempt from income tax to the employer, the employee and the beneficiary.
5. This cover is issued to eligible groups of fifty or more employees.

For particulars please apply to any of the following addresses:

(1) The Additional Zonal Manager, Divisional Office, Life Insurance Corporation of India, Jeevan Prakash, Sir Pherozshah Mehta Road, Bombay-1.

(2) The Additional Zonal Manager, Divisional Office, Life Insurance Corporation of India, 16, Hare Street, Calcutta-1.

(3) The Zonal Manager, Life Insurance Corporation of India, P.O. Box No. 2450, Mount Road, Madras-2.

(4) The Zonal Manager, Life Insurance Corporation of India, Laxmi Insurance Building, Asaf Ali Road, New Delhi-1.

Money

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Tuesday, 22nd January.

THERE has been a fair increase in the general level of advances in the Calcutta money market during the past week. The credit requirements of the jute and sugar mills have risen noticeably, while those of the cotton mills are also slightly higher. Advances for foodgrains and seeds remain unchanged, but the requirements of the iron, steel and engineering units have decreased a little. In the interbank market, conditions have been tight, with the call rate quoting 5 percent to 5½ percent.

The exchange market has been moderately active. There has been a freer flow of gunny bills, but the number of tea bills remains rather poor. The demand for remittance has been moderate. Sterling has lost ground against all the major currencies except the Dutch guilder and the Danish kroner.

IN THE CALCUTTA BULLION MARKET, there was no trading in gold during the past week. Dealers were busy making inventories of gold. The price of silver shot up to Rs. 255 for ready due to speculative support. The price was quoted at 125.2 cents in the U.S.A. and at 107½ in the U.K.

DURING THE WEEK ENDED 18TH January, 1963, Government of India Treasury bills for Rs. 171,93,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 22nd January. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.355 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 28th January.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 23rd January to 25th January at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 16th January to 19th January, amounted to Rs. 35,00,000.

THE RETURN OF THE STATE BANK OF India for the week ended 11th January, 1963, shows a drop of Rs. 6.07 crores to Rs. 550.27 crores in total deposits. Investments in Government securities are down by Rs. 3.70 crores to Rs. 239.88 crores while other authorised investments are up by Rs. 5 lakhs to Rs. 10.54 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 4.98 crores to Rs. 281.80 crores. Cash and balances are, in consequence, shown at Rs. 21.99 crores or Rs. 2.61 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended

11th January, 1963, shows Demand and Time liabilities at Rs. 942.06 crores (Rs. 29.40 crores) and Rs. 1,258.30 crores (Rs. 16.37 crores), compared with Rs. 946.36 crores (Rs. 23.82 crores) and Rs. 1,258.68 crores (Rs. 16.73 crores), respectively, in the previous week. Cash has declined by Rs. 2.93 crores to Rs. 49.13 crores, while balances with the Reserve Bank have increased by Rs. 1.79 crores to Rs. 78.30 crores. There is a drop of Rs. 6.71 crores to Rs. 635.51 crores in investments. Advances and bills discounted at Rs. 1,463.53 crores show an increase of Rs. 11.31 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.8 percent and 66.5 percent, against 5.8 percent and 65.9 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 25-1-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
25-1-63	28-4-63	2,00.00	...
18-1-63	21-4-63	2,00.00	Rs. 2.355%
4-1-63	7-4-63	2,00.00	Rs. 2.355%
11-1-63	14-4-63	2,00.00	Rs. 2.355%
21-12-62	24-3-63	2,00.00	Rs. 2.355%

FOREIGN INVESTMENT CHECKLIST

For the increasing number of American executives considering overseas investment, American Express is offering a special foreign investment checklist. The checklist outlines a variety of problems which firms should look into before setting up operations in a foreign country. It suggests a number of questions which might be asked on matters such as monetary systems, export-import controls, marketing considerations, labour relations, real estate, law, taxes and government. The special checklist can be obtained by writing to the Manager, the American Express Company, Inc., 21 Old Court House Street, Calcutta.

New Delhi

N.D.C. DECIDES TO RAISE CENTRAL PLAN OUTLAY

(FROM OUR NEW DELHI CORRESPONDENT)

THE standing committee of the National Development Council endorsed the Planning Commission's proposal for an outlay of Rs. 1,744 crores during 1963-64. The breakdown is Rs. 944 crores for the Centre, Rs. 750 crores for the States and Rs. 50 crores for the Union territories. The Centre's outlay will, therefore, amount to Rs. 1,000 crores. The States' normal resources are placed at Rs. 257.3 crores. This includes additional taxation amounting to Rs. 35.7 crores during 1963-64 and Central assistance of Rs. 400 crores. This will leave a gap in the resources of Bihar, Jammu and Kashmir and Rajasthan amounting to Rs. 8.2 crores. In order to reach the target of Rs. 750 crores, an additional Rs. 57.8 crores will be needed. To sum up, the States' normal resources, including withdrawals from reserves totalling Rs. 26.7 crores and additional taxation amounting to Rs. 35.7 crores, are placed at Rs. 284 Rs. 35.7 crores, are placed at Rs. 400 crores, Central assistance at Rs. 400 crores, and the gap in resources at Rs. 8.2 crores. The additional resources required are Rs. 57.8 crores, to finance a total outlay of Rs. 750 crores.

The Central outlay has been increased from Rs. 712 crores in 1962-63 to Rs. 950 crores in 1963-64, or by Rs. 238 crores. The following are the details:

Head of development	(In Rs. crores) 1962-63 (anti-estimated)	1963-64 (estimated)
Agricultural programmes	12.43	17.07
Co-operation	0.91	9.45
Community development	0.43	0.54
Panchayats	0.56	0.06
Irrigation	2.73	6.83
Power	9.02	18.83
Industries and minerals	277.26	369.40
Village and small industries	23.68	20.73
Rural industries	—	1.60
Railways	232.00	267.00
Roads	31.25	42.50
Tourism	0.28	0.35
Ports and harbours	7.85	13.56
Shipping	5.87	5.80
Posts and telegraphs	12.90	28.00
Civil aviation	7.31	4.05
Broadcasting	2.01	2.00
Other transport	1.92	2.49
Other communications	1.85	1.38
General education and cultural programme	13.72	13.57
Technical education	9.07	10.66
Scientific and technological research	12.74	10.87
Health	8.94	10.97
Housing	3.94	2.71
Welfare of backward classes	5.39	5.00
Social welfare	3.57	2.30
Labour and labour welfare	4.85	10.12
Rehabilitation	9.40	6.78
Public co-operation, local works and rural works	6.77	10.88
Social services	78.48	89.96
Statistics and research	0.31	0.48
Information and publicity	0.32	0.50
Others	2.62	4.59
Miscellaneous	3.25	5.57

The following outlays are to be financed from the internal resources of public enterprises:

	(In Rs. crores)
Steel	20.00
N.C.D.C.	4.25
Singareni collieries	3.50
Oil (sale of petroleum)	4.35
Hindustan Cables	0.40
Hindustan Machine Tools	1.00
Fertiliser Corporation	3.40

In order to assess the total burden on the Central Exchequer, account has to be taken of non-development expenditure and of the outlay on projects which have spilled over from the second plan. Even without the additional expenditure on defence, the demand on the resources of both the Centre and the States may not be less than Rs. 3,500 crores. Emergency requirements may be about Rs. 500 crores, if not more. In other words, India has to find something like Rs. 4,000 crores during 1963-64.

Mass Upsurge

The Prime Minister, Mr. Nehru, said in his opening speech that there were limits to what a nation could bear. "That, of course, is so but the limit ultimately depends upon the emergency." After referring to the mass upsurge following the Chinese aggression, Mr. Nehru said that the people should feel that they are meeting the emergency themselves through their own efforts. As for social services, the Prime Minister said that at least a part of them was equally important. There was very little choice left, except to go on with the plan.

Meanwhile, everyone, however unimportant for the war effort, has geared himself to the emergency. The following are some examples:

"A scheme for the organisation of a village volunteer force in every village has been drawn up by the Central Ministry of Community Development and Co-operation. Each panchayat will organise a village volunteer force with a three-fold programme, namely, production, mass education and village defence. The Ministry has also initiated steps for organising a large number of consumer co-operative stores. A scheme for setting up 200 wholesale and 4,000 primary consumer co-operatives in urban areas is being implemented. Another scheme for the supply of consumer articles in the rural areas through service co-operatives and marketing societies has also been sanctioned."

"Many of the programmes of the Ministry of Health are closely inter-linked with the defence effort of the country and also relate to the maintenance of the health of all sections of the population. High priority is being given to the national malaria eradication programme, the small-pox eradication programme, the control of tuberculosis and measures necessary for the control of cholera."

"The National Council of Educational Research and Training has prepared a scheme for secondary schools called the 'school defence corps pro-

gramme'. The Council is also bringing out a series of publications for use in secondary schools and by teachers in relation to defence needs and efforts. A co-ordinated emergency programme of national discipline and physical education has been launched with the object of covering a crore of students at the middle, high and higher secondary stages."

Referring to the reoriented programme of panchayati raj, the Prime Minister said that the volunteer force scheme was very important as it affected the vast majority of the population. If this programme succeeded to the extent of 50 percent, it would be a "near miracle."

Reviewing the speeches made at the N.D.C. meeting, critics say that there was an unprecedented mass upsurge after the Chinese aggression. But it has spent itself, and it is futile to believe that it will be revived by speech-making. The upsurge has fizzled out primarily because there has been no corresponding effort by the Central Government to convince the masses that it has practised what it preached, namely, hard work and austerity. The Prime Minister has declined to reduce the size of his Council of Ministers, the total strength of which is 53. Unlike the Executive Councilors of the British régime who had only one Personal Assistant each, even Deputy Ministers have a retinue of half a dozen. They often like to see India with their wives at the taxpayer's expense.

Indifference to Economy

The Prime Minister has been participating in civic receptions, which are being arranged almost once a week. A detachment of film stars will join the Republic Day parade. With this indifference to economy and austerity, the man-in-the-street cannot be blamed if he contrasts it with his own contribution to the defence effort.

The standing committee's decision to increase the plan outlay is unrealistic. It can be given only two interpretations, namely, that either peace has come to enable the Government to resume the development programme, or that the Government is out for large-scale inflation. But there is a third possibility, that when the full picture of the defence budget is available, the plan outlay will be cut according to the availability of resources.

RUSSIA

Talks on Trade Pact

A Russian trade mission will shortly arrive here to discuss a long-term trade agreement. The existing trade agreement is due to expire by the end of this year. The Central Minister for International Trade, Mr. Manubhai Shah, may go to Russia to sign the agreement, probably in June.

EXPORTS

Small Increase Achieved

Total exports from India during April-November 1962, amounted to

Rs. 451 crores, or Rs. 13 crores more than in the corresponding period of 1961. Exports during November 1962 were Rs. 65 crores, against Rs. 58 crores in the same month of the previous year. The largest decline in exports during April-September 1962, compared with the corresponding period of 1961, took place in relation to the Asian and African countries—from Rs. 72 crores to Rs. 61 crores. Many Asian countries have imposed severe import restrictions due to their balance-of-payments difficulties. Exports to Japan had fallen from Rs. 22 crores to Rs. 15 crores, mainly on account of the decline in iron and steel scrap exports from Rs. 4 crores to less than Rs. 1 crore. Exports of raw cotton, cotton waste, pig iron and manganese ore to Japan have also fallen by about Rs. 1 crore each.

Exports to the European Common Market countries were also lower by about Rs. 5 crores from Rs. 27 crores to Rs. 22 crores. Exports to West Germany fell from about Rs. 12 crores to Rs. 7 crores, mainly on account of lesser exports of coffee and tanned leather. Exports to the U.S.A. were also lower by Rs. 5 crores to Rs. 53 crores, the fall being mainly accounted for by ferro-manganese which declined from Rs. 4 crores to about Rs. 50 lakhs. Exports of coffee, raw cotton and raw wool to the U.S.A. were also lower during the period. Increase in exports during April-September 1962, compared with April-September 1961, was recorded in the case of east European countries and Canada.

CEYLON

Indian Exports Falling

An agreement has been concluded between India and Ceylon, under which India will supply railway and telephone equipment and other capital goods to the latter amounting to Rs. 5 crores under deferred payments. Export of dried fish is now proposed to be co-ordinated and supervised by the Marine Products Exports Promotion Council which will also be associated with the fixing of prices of dried fish by the Co-operative Wholesale Establishment of Ceylon. Provision has been made for a quarterly review of

protecting the local industry. The restrictions have been broadly of three types:

(i) **Quantitative restrictions:** (a) Licences for the import of the following items have not been issued which has meant a virtual ban on their import: diamonds, soap, tyres and tubes for bicycles, garments, hosiery, handkerchiefs, haberdashery, biscuits, fresh apples and grapes, pearls, precious stones, jewellery, fans, footwear, toys, cinematographic and photographic apparatus, instruments and appliances, bed sheets, pillow cases, motor-vehicles, shoe laces, betel leaves and french polish.

(b) For the following, restricted imports have been allowed: confectionery, jams, jellies, marmalades, preserved fruits, sauces, fruit cordials, chinaware, glassware, photographic plates and films, undeveloped cinematographic films, musical instruments, refrigerators, account books, exercise books, chassis of motor lorries, buses, vans and lorries, powder, fountain pens, crown corks, camphor, electric lamps, bulbs, aluminium holloware, wire nails, wood screws, etcetera.

(c) Import restriction or ban also operates in relation to caustic soda, roofing tiles, sarongs, cotton piece-goods over Rs. 2 a yard (c.i.f.) and sarees over Rs. 12 a yard.

(ii) **Increase in import duties:** Import duties have been increased on a number of items, namely, beedies, envelopes, plastic manufactures and certain items of stationery, leather goods, spare parts, accessories of motor-vehicles, banians and singlets made of cotton and artificial silk, cotton camboys and sarees, assembled wireless sets and joss sticks.

(iii) **Price restrictions:** Ceylon has been fixing the maximum price of dried fish at a level which has been uneconomic for exports. The c.i.f. price of imported cement has also been fixed at Rs. 85 a ton which is not commensurate with the cost of production.

The above restrictions have had an adverse effect on the indigenous cottage industry. There have been various representations from organisations representing the handloom, beedi and joss sticks industries stating that the artisans in the south were facing acute unemployment and under-employment, because of these measures.

EGYPT

Trade Pact Signed

An Indo-Egyptian trade agreement was signed in Cairo recently. It envisages an increase in total trade. India will buy rice, cotton and 100,000 tons of rock phosphates, c.i.f. basis. Egypt, in addition to tea, has agreed to import from India fans, diesel engines, sewing machines, cigarette paper, dry batteries, dried fruits, tobacco and shellac.

FOREIGN COLLABORATION

Schemes Sanctioned

Britain continues to lead in assisting Indian industries in the private sector. There were 54 cases involving foreign collaboration approved by the Government of India during the quarter ended December 1962. Among these, 14 were British, 12 American, six West German, four

Swiss, two each of Dutch, Belgian and Canadian and one each of Norwegian, Danish, French and Italian.

CALCUTTA PORT

Dredger Ordered

A giant dredger costing Rs. 2.5 crores is to be acquired by the Calcutta Port Commissioners for improving the estuarine approaches of the river Hooghly. With a hopper capacity of 5,000 tons of spoil, the dredger will be the biggest in use in the country. Orders have been placed with I.H.C.—the internationally famous Dutch firm—and it is expected to be delivered in two years' time. The dredger is being financed from World Bank loans.

The Calcutta Port Commissioners have a fleet of suction dredgers, but it has been found that they are not quite suitable for dredging the estuary. With the decision to develop Haldia as a satellite port in the estuary capable of taking deep-drafted vessels, it has become necessary to improve the estuarine approaches. Apart from preventing the bars from silting, this will also help in making larger depths available to ships. Estuary dredgers have to be built to special specifications to cope with weather conditions and the swells and waves.

There are 15 bars in the navigable channel of the Hooghly. The port maintains six suction dredgers, primarily for dredging the 11 bars in the upper reaches. The number of dredgers available for continuous duty is limited to four and these have been found to be inadequate for

dredging in the river. The new acquisition will meet this need.

POWER

Central Pool

The Government of India is creating a central pool of electricity generating sets which can be moved to places where power is needed in an emergency. It is proposed to have generating sets with a total capacity of about 100,000 kilowatts of power in the pool. The decision to create pool has been taken because power generation has not kept pace with India's industrialisation and economic development resulting in power shortages in several parts of the country.

CHILE

Trade Pact Extended

Letters extending the Indo-Chilean trade agreement were exchanged here. The Indo-Chilean trade agreement signed in March 1960 expired on 31st December, 1962. The letters exchanged extend the agreement till the end of March this year.

GUR

Forward Trading Banned

The Government of India has decided with immediate effect to ban forward trading in gur throughout the country and to close all outstanding contracts at the rates prevailing as at the close of business on 18th January, 1963.

London

U.K. TRYING TO JOIN E.C.M. DESPITE FRENCH OPPOSITION

(FROM OUR LONDON CORRESPONDENT)

BRITAIN'S chief negotiator in Brussels, Mr. Edward Heath, in accordance with instructions from Mr. Macmillan, is pressing on with the Brussels negotiations for the U.K.'s entry into the European Common Market regardless of the formidable verbal barrier which President de Gaulle has erected against that eventuality. Mr. Macmillan's attitude can be summed up in a sentence: "Whatever President de Gaulle has chosen to say, all that matters is what emerges at the negotiating table." As far as Britain is concerned, the two rounds of Ministerial meetings in Brussels this month will go on as planned and another next month is possible. Only then, towards the end of February, will the Government have to decide whether the final terms available do or do not preclude Britain's entry.

It is repeatedly emphasised in Whitehall that Britain is negotiating with the European Economic Community as a whole, not with France alone. It would be idle to deny that the Government has been stung by the painful clarity of President de Gaulle's verdict, and especially by its timing. What is exercising the Government's mind is whether President de Gaulle's attitude will be fully reflected at the negotiating table in Brussels and, if so, the extent to which the other five Powers will conform with it.

Immediate Reactions

The Ministers of West Germany, Italy, Belgium and Holland made strongly-worded statements to the Press against President de Gaulle. A Benelux spokesman said: "We are pressing on, and if necessary will complete the negotiations with Britain in spite of the French refusal to co-operate. There are ways of bringing pressure, and something is already being done. All Europe cannot be held up by one man." Their immediate reactions indicated that they deplored and resented France's evident determination to keep Britain out. In view of this, it could be argued that President de Gaulle's statement was not after all so very skilfully timed. If it became clear at Brussels that the five other partners are ranged against France, the French will at some stage have to decide where the balance of national advantage lies. It is open to them to exclude Britain by their own vote, as agreement on the entry of another country has to be unanimous. Against that, however, they have to weigh the harm that might result to France's relations with her fellow-members if she frustrated unilaterally their known desires.

But there were certain assertions in President de Gaulle's Press conference which clearly irked British officials by their injustice. It was not true to say that the outcome of the negotiations depended wholly on Britain. International negotiations, by their very nature, depended as to their outcome on the contributions which all parties made to them. Contrary to the President's allegations, Britain had already fully accepted the principle of common tariffs. Nor was she seeking a privileged position for her agriculture. She was seeking common policies acceptable to herself and the "Six."

The British Government is asking for no changes in the text of the Rome Treaty—only such adaptations as will become necessary on the adherence of a new member. As to the President's remarks about Britain's E.F.T.A. partners and the expansion of the European Community, it was pointed out that the Rome Treaty provided for membership by any European State. It was never envisaged that the Community would be restricted to the six founder-members. As for Britain's special links outside Europe, the President himself has always been at pains to emphasise the worldwide nature of France's responsibilities and connections. France, as well as Britain, is a member of S.E.A.T.O. and, again like Britain, has special connections and defence agreements with her former overseas possessions.

Important Moves

Meantime, two important moves forward in the Brussels talks dispelled some of the gloom caused by President de Gaulle's outburst. Both are aimed at securing reasonable terms for British farmers. The first was a compromise plan to end the deadlock over deficiency payments to British farmers. The second was a Dutch proposal that the transitional period of one year for Britain to raise the price of wheat to the European Market price should be increased to four years. M. Spaak, the Belgian Foreign Minister, suggested that Britain should be more helpful in settling a deadline for ending deficiency payments. The "Six" could then be more helpful in solving Britain's problems for dealing with the effects on the British farmer and consumer of adjustment to Market rules. Mr. Heath complimented M. Spaak on simplifying the problem. He agreed that Britain might accept a 1970 deadline for ending deficiency payments on the key farm products. Until now Britain has insisted on payments for farmers continuing until 1972 for pig meat, and until 1974 for eggs. The French later joined in constructive discussion of the idea.

Dr. Luns, the Dutch Foreign Minister, proposed that the transitional period of one year which the French insist should be given to Britain to raise her wheat prices from £20 a ton to the Market price of £32 a ton, should be increased to four years. Most of France's partners supported this. But the French Minister of Agriculture, M. Pisani, accused "the other five" of deliberately stepping backwards and giving way to Britain. It became clear from discussions between Mr. Heath and Ministers of the "Six" and among the "Six" themselves, that a process of isolating the French delegation as a result of Gen. de Gaulle's tactics is now gaining momentum, but the deciding factor here will be the attitude of Dr. Adenauer. If he sides with General de Gaulle, there could well be a complete breakdown of the negotiations. On tariffs affecting items of importance to the Commonwealth, it was decided that Mr. Heath would indicate to the "Six" those of major importance to Britain. In return, the "Six" will be asked to indicate those which are important to them. This, it is hoped, will lead to bargaining and a clearing-up of

one of the last big problems delaying British entry.

Mr. Heath's request that Britain should have the same share of votes and of control of Market institutions as the major powers was approved. The "Six" also agreed on the price level for dairy products. This opens the way for discussing New Zealand's special problems.

Cotton Industry Prospects

The prospects for the British cotton industry if the U.K. joins the European Common Market are anything but rosy. This conclusion is reached by Mr. J. A. Blackburn, economist to the English Sewing Cotton Company, in an article in the *Three Banks Review*. On the basis of available information, Mr. Blackburn says that the U.K. cotton industry, compared with those of the E.E.C. countries, production a worker is mostly lower—a great deal lower in some instances—and mills are considerably less well equipped. Machine utilisation is much poorer, and commercial organisation weaker. This inferiority is confirmed, he says, by Britain's poor performance in export markets.

It is difficult to find fault with the statistics Mr. Blackburn uses or with his interpretation of them, especially as much that he says has already been stated or implied in one form or another by various textile traders and organisations. The Bristol firms at the top end of the scale, he says, should be able to hold their own in competition with E.E.C. countries, but he expresses the belief that the best firms on the Continent are superior to the best ones in Britain. As an example, he says that output an operative hour in one of the best spinning mills in Lancashire is only equal to the average of a sample of 400 mills on the Continent, and only half the rate being achieved by the Continent's best. It seems clear, accordingly, that Lancashire could not avoid losing some ground to the cotton industries of the "Six" if it operated within the European Common Market.

Like other observers and commentators, Mr. Blackburn urges the need for reform of the industry's structure and organisation by establishing larger units operating on vertical lines. An industry operating on horizontal lines, he suggests, would have no place in Europe, pointing out that there is only a small market for intermediate products such as yarn and grey cloth, so that Lancashire's horizontal spinners and weavers will have only restricted outlets in Europe. "The separation of manufacturing and merchandising in Britain," he continues, "has been exploited to the full by overseas suppliers in the past and will continue to be so in the Community. With their intimate knowledge of cloth customers, the British merchandising section will be turned into a body of agents for Europe, and this must not be allowed to happen." Quick action is needed—and Mr. Blackburn does not think it should take a long time—to organise for the sale of finished fabrics in Europe by firms largely conducting the manufacturing and marketing processes themselves. This reorganisation could be carried out during the four or six years of the transitional stage between Britain's first joining the

Community and the completion of the various tariff changes.

There will be no extension of the 1st February deadline under which many British firms, in common with others, will have to register their European trading agreements with the European Common Market Commission. Great confusion had been caused by the report that the E.E.C. Commission was going to ask the Ministerial Council for permission to extend the deadline to 1st January, 1964. A communiqué issued by the Commission later said that the idea had been dropped because the procedure laid down in the Treaty of Rome for arranging a postponement could not be completed by 1st February, 1963.

The Commission added that firms which wanted to obtain exemption for their agreements must notify it before 1st February "if they want to avoid unfavourable legal consequences." For certain types of sole agency contracts and patent licence agreements, firms may make use of a new simplified procedure. But enquiries suggest that this simpler form of registration can be used only for a limited class of agreement.

HIGH PRICES AND THE THREAT FROM SUBSTITUTES

FOR some years, the anxiety of the Indian jute industry about substitutes has centred mainly on the competition from paper, bulk handling and cotton bags in North America. Over the past few years, the use of substitutes for packaging has steadily increased, while the consumption of burlap has fallen, except in 1962. The actual figures show that U.S. burlap consumption dropped from 897 million yards in 1959 to 857 million yards in 1960 and 781 million yards in 1961. But it has risen to 877 million yards in 1962.

It is significant that in 1961, when burlap consumption was at its lowest, prices were at their highest. In the early months of 1961, 40in. 10oz. hessian hovered around Rs. 70 a 100 yards, and this was reflected in the U.S. monthly consumption for April-July that year, which recorded new low levels. As prices dropped in late 1961 and early 1962, U.S. burlap consumption rose, and the complete figures for 1962 indicate that the total consumption of 877 million yards is the best for three years, being surpassed in the last ten years only by the record 1959 total, and in 1956, when consumption was 1 million yards higher.

New Mills

Strenuous efforts have been made by hessian manufacturers to meet the competition from substitutes. But, in addition, the Indian industry has had to face competition on the sacking side from factories which have been built over the past ten years in other countries. In 1952, manufacturing plants were established in Cuba; they are now turning out sugar bags from kenaf or mesta, a plant which is widely grown in tropical and sub-tropical countries. In the Philippines also, the first factory went into production in 1952, and now there is a flourishing industry. Some of the executives are Dundee or ex-Calcutta men, and although their initial machinery was second-hand, purchased in Dundee or on the Continent, many of their latest units contain up-to-date machinery. Australia has its bag factories; kenaf and jute are grown in New Guinea and in the Northern Territory of Australia. South Africa and the Congo manufacture their own bags from local fibres and jute grown from imported seeds. Even Burma, formerly one of India's best markets for heavy sacking, has established factories and is growing its own fibre; so is France, but there it has not turned out to be an economical crop.

All these developments encroach on Calcutta's trade. The Indian industry, therefore, has to turn its attention to developing existing markets for heavy sacking and seeking new ones. The Government of India seems to be unwilling to allow exports to South Africa, which could take a large quantity of sacking. Much of Pakistan's production finds its way there instead. It might be useful to send missions to study conditions in the African continent and in other markets, which, though smaller, are nevertheless important for the industry. Their significance is not due only to their being big consumers of sacking; the manufacture of sacking has an important bearing on the manufacture of hessian, the former being the outlet for raw material rejected from the manufacture of the latter. The cost of hessian is, therefore, closely re-

lated to the problem of disposing of sacking.

Gunny Market Quieter

There has been little interest in the Calcutta jute and jute goods markets over the past week. Gunny prices have continued their fluctuations, but on a reduced scale, and overseas customers still show little or no interest at the current rates. Arrivals of raw jute in the main receiving centres in India have shown a slight improvement and mofussil prices have eased. But sellers continue to complain that there is no parity between upcountry rates and those quoted in Calcutta. The demand for high-grade jute, particularly Tossa and Daissee, remains strong, and in Sheoraphuli prices have risen by Rs. 4 a maund for the superior grades. Even ordinary grades of Tossa at all agencies are now being quoted at Re. 1 or Rs. 1.50 above the minimum level. Mesta varieties, however, are still weak, and so is white jute; in these categories, prices remain below the minima.

It is encouraging to see an improvement in the availability of railway wagons from some areas, but it is regrettable that this has been achieved at the expense of other stations. Bookings have been opened to a number of mills where restrictions had been in force earlier, but bookings to other mills have been closed. It seems, therefore, that the supply of wagons for jute is still inadequate, and at the end of each delivery period contracts for the supply of jute to the mills have to be extended because wagons are not available. It is fortunate that the industry is in a position to grant extensions; in fact, many mills welcome the requests as they would have no godown space for the consignments if they were delivered. However, this has not always been the case, and in spite of a surfeit of jute, cases still arise of mills waiting for particular consignments to ease the qualitative unbalance of their stocks.

Rail Freight Charges

Another matter which the railways need to investigate is the correct calculation of freight charges. In a number of cases—some say in the majority of cases—the charges are incorrect. Rectifying the mistakes and making the necessary adjustments take many man-hours, besides costing the railways many lakhs of rupees. Worse still, the debits for under-charging are often not made until the time for making claims for refunds is about to expire, or has expired, with the result that the jute merchant who is responsible for the freight loses his money.

Frequently, parcels arrive a few bales short, mainly due to transhipment. Claims on this count are only entertained against "short certificates" issued by the goods clerk at the delivery station and here again the claims must be submitted within six months. Cases have arisen where the goods clerk refuses to issue the certificate within the stipulated time, and then the railways take shelter behind the provisions of the Railway Act and refuse to pay. Many more difficulties are suffered by the jute trade at the hands of the railways, but enough has been said to show that there is an urgent need for

overhauling the railway administration.

THE JUTE MARKETS

Manufactured Goods: The lack of enquiries from abroad gave bazaar speculators much scope, and prices again fluctuated widely from time to time. But the general trend was downwards. Small business was done in standard constructions and in a few specialties, but it had no influence on the market. The occasional rises were the result of local covering. There was no serious selling pressure from mills, but all mills were holding jute against which they had no sales and they would have welcomed the opportunity of balancing the position. Last Thursday was a holiday in the Calcutta market. When it opened on Friday, prices were slightly steadier, and ready B Twills stood at Rs. 114.35, with forward shipment at Rs. 113.65. Ready 4" in. 10oz. hessian advanced

to Rs. 50.85, which represented a premium of Rs. 1.85 over the forward position. By Saturday, the gains in sacking had been more than wiped out but hessian showed very little change. Over the week-end, however, a drastic change took place. B Twills collapsed to Rs. 112.30 and 40in. 10oz. hessians to Rs. 50.20, so the undertone was weak in the absence of business.

On Tuesday, opening quotations were as follows:

	Jan.	Feb.	Mar.	Apr.	May	June	Sept.
40in. 7oz.	36.50	38.15	37.60	37.15	36.50		
40in. 8oz.	41.25	41.00	40.35	39.85	39.00		
40in. 10oz.	50.20	50.20	49.70	49.15	48.60		
B Twills	112.00	112.75	112.60	112.50	112.00		
Corn sacks	115.25	115.75	115.50	115.25	114.50		
Heavy Ceess							
(Pain)	110.50	112.25	112.25	112.25	112.00		
A Twills	140.00	139.00	138.50	138.00	137.00		
Liverpools	126.00	126.75	126.50	126.50	126.00		

Raw Jute: Mills continued to purchase jute daily against their quotas but there was little change in the quoted rates. The Daissee and Tossa section was very steady, with indications above the minimum price. But all other varieties were weak, with rates sometimes well below the minimum. The demand for Daissee and Tossa was far greater than the supply. With the season well advanced, most of the good quality fibre

had already been exhausted, and premiums of up to Rs. 1.50 were paid for the lower grades of Tossa. Imports on an all-India basis showed a slight improvement and totalled about 80,000 maunds daily. Upcountry prices in general were above the parity of Calcutta quotations, so sellers were not so keen for business. Arrivals in Cossipore last week totalled 575 wagons.

THE U.K. JUTE MARKETS

DEMAND FOR FIBRE FALLS

(FROM OUR DUNDEE CORRESPONDENT)

THERE was little change in the Pakistani raw jute market during the past week. The market there is still quiet with little buying interest shown. Offers of medium and lower grades are being freely made and, in many instances, these are available at under minimum export prices. Dundee spinners are remaining out of the market as far as shipment jute is concerned, but there

has been some movement in spot parcels. A considerable quantity of spot and afloat jute is at present being offered in the U.K. As holders of these parcels are anxious for business, they are discounting the generally quoted rates in many instances.

Spinners are holding large raw material stocks. It is only when a parcel of good quality fibre is offered at a very low price that business takes place. It is not possible for sellers to discount the bottom grades to any extent as prices have been at minimum levels during the season. However, it is possible to find sellers of better qualities willing to accept low prices to allow them to dispose of their holdings. Shipment offers are being made at £119 for Mill Lightnings, at £94 for Mill Hearts and at £81 for Grade Hearts, c.i.f. U.K., for January-February shipment. Grade Tossa-2/3 is available at £133 and Grade Tossa-4 at £113. Output Tossa-2/3 ranges from £99 and Output Tossa-4 from £89 10s, January-February. Very few sellers are now demanding a premium for forward shipment. Cuttings are also quiet with S.N.C. quoted at £54 and N.C. at £47 15s.

The Calcutta goods market became easier again last week with only a small interest shown by buyers in the U.K. Quotations were at 76s 3d for 40in. 10oz, and at 58s 3d for 7½oz. a 100 yards, f.o.b. Calcutta, for January shipment, at 75s 9d and 57s 9d February, at 75s 3d and 57s 3d March and at 74s 3d and 56s 3d April-June. B Twills were at 174s 9d, 17s 6d, 174s 3d and 174s for the respective shipment periods.

THE PAKISTANI JUTE MARKETS

FIBRE REMAINS DULL

(FROM OUR Dacca CORRESPONDENT)

BOTH overseas and local markets have been extremely dull with little business reported. Yet the E.P.C. registrations for the first week of January totalled 77,252 bales, of which 10,054 bales were cuttings. Destination quantities are not yet available, but it is known that out of this lot, India bought nothing. During December and January, considerable business was done in cuttings at discount prices. In fact, since the beginning of the season, out of 2,792,362 bales registered, 578,374 bales were cuttings. This is in excess of 20 per cent of sales so far. This is a higher percentage than the sales of the last season. If E.P.C. registrations continue in the same proportion, it can only mean that cuttings will be more in demand.

The pucca bale market remains more or less inactive except for limited business in cuttings. In long jute, quotations now vary more with the origin of fibre than ever before. This is an acknowledgment of the wide difference in quality from area to area. This is particularly true in white jute. But in the Daulatpur area, even Export Lightnings are unsatisfactory. To a lesser degree, this is also true for the northern area. The difference is not so apparent in Tossa except that the hard district Tossa is far superior to that from any other district.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in December 1962 was 2 million yards more than during December 1961, but was 3 million yards less than November 1962. Last month's bag cut-up was 57.6 million yards and

CAPITAL, 24th January, 1963.

piecegoods deliveries 16.2 million yards, compared with 54.8 million and 17.3 million yards, respectively, in December 1961. U.S. spot stocks and afloats continued to increase due to heavy buying at the time of the Cuban crisis, and to efforts to increase spot stocks before the dock strike started. At 277 million yards, 117 million yards were spots and 160 million yards afloats. Spots increased by 7 million yards and afloats by 9 million yards, respectively. Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

MR. WILLIS D. McLEAN TO RETIRE FROM BEMIS

Mr. Willis D. McLean, the doyen of the American burlap trade, left Calcutta on 22nd January after a farewell visit to India before his retirement from the post of Burlap Director of the Bemis Brothers Bag Company in the U.S.A. Mr. McLean has been connected with the burlap trade for the last 45 years and has visited Calcutta on many occasions in the past. As chairman of the Burlap Business Relations Committee of the Textile Bag Manufacturers Association of America, he has been closely associated with the jute goods trade in India over a long period. He has done much to foster goodwill between the Indian jute industry and its customers in North America.

During his recent visit, Mr. McLean was accompanied by Mr. B. L. Willmore, a vice-president of the Bemis Brothers Bag Company, with whom he met manufacturers and shippers of jute goods and various Government officials, including in particular the Jute Commissioner. Mr. McLean has always been held in the highest regard by the jute industry and trade in India. Before he left Calcutta, warm tributes were paid to his outstanding services in promoting the trade in jute goods between India and its principal export market in the U.S.A.

CAPITAL, 24th January, 1963.

Commodity Markets

POOR PROSPECTS FOR PEPPER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE immediate outlook for pepper does not appear to be encouraging in view of the continued absence of American buying interest. For some time, Singapore has been underselling India in the world market. It may be difficult for India to maintain a price parity with Singapore because of the distress selling of Indonesian pepper. Indonesia has been selling her accumulated stocks through Singapore at comparatively low prices. This had a dampening effect on the world market. Meanwhile, the prospects for black pepper have to be assessed in the light of available supplies from Indonesia. Reports from Singapore say that Indonesia has a large accumulated stocks. So that country is now in a mood to liquidate its stocks at any price. The United States is still the largest market for pepper, but buyers there are unwilling to enter into any major commitment, presumably due to the dock strike.

This is distressing for pepper interests in India because this is a time when they need active buying support from abroad, especially from the United States. This is the harvest time in India, and the terminal markets like Cochin and Alleppey have reported peak arrivals. New crop arrivals so far are placed at about 7,000 tons. Most of it has been absorbed. There is yet another 20,000 tons to 22,000 tons to be marketed out of the new crop. The present price of Rs. 250 a quintal is at least Rs. 50 less than the price ruling towards the close of the previous season. It is down by a similar amount when compared with the rates prevailing at this time of last year. The present state of the pepper market is all the more disquieting in view of the fact that the previous season was very satisfactory for the commodity. Prices were attractive and exports touched a new high at about 22,000 tons. However, one need not jump to the conclusion that the new season will be bad for pepper. It is only three months since the season started in India. There is yet another nine months for the season to close. So one cannot say definitely what the future has in store for the commodity. Much will depend on the competition from Singapore as well as the buying policy of consumers abroad.

Pepper interests in Alleppey, too, have started asking for forward trading facilities in their place. The Alleppey Oil Millers and Merchants Association has already taken up with the Forward Markets Commission, the Central and State Governments the question of making Alleppey a pepper forward trading centre. Forward marketing in pepper has been going on in Cochin for the past few years. Bombay is expected to get forward trading facilities soon.

Trading in transferable specific delivery contracts in black pepper is likely to begin from the end of this month. The contract shall be for month. The contract shall be for Malabar ungarbled black pepper. Delivery shall be of fair average quality packed in new gunny bags and shall be well dried and free of oil wash. An allowance of 7 per cent is made in the case of hollow pepper of light berries. For over 7 percent and up to 10 percent, the seller shall pay allowance at Re. 1

a quintal on every percent. If over 10 percent, the buyer has the option to reject. A free allowance of 2 percent is made for extraneous matter. All other foreign matter above 2 percent shall be considered as dirt. There is a free tolerance up to 1 percent for mouldy pepper. The quotation for black pepper shall be in 100 kilos or one quintal. The unit of trading shall be 25 quintals or multiples thereof. Upcountry deliveries against transferable specific delivery contracts shall be permitted in Alleppey, Cochin and Calicut.

Cashew Trade Prospects

The cashew trade is optimistic about the immediate prospects for

the raw nut supply and the demand for processed kernels. At present, raw nut supplies are adequate and prices are favourable. Offers from Portuguese and British East Africa are said to be larger this time. The Indian crop prospects are also considered satisfactory. The imported nut is currently quoted at Rs. 565 to Rs. 585 a ton, depending on quality. The trade's fears about import licences seem to have vanished. Import licences for 50 percent of the entitlement have been issued for the October-March period, so arrivals are expected to be well maintained. According to some reports, business to the tune of 30,000 cases of processed kernels has been transacted recently at 42½ cents a lb. Most of it was with the United States. Trade circles are hopeful of doing some substantial business with east European countries shortly.

Rubber Output Up

The world natural rubber output for 1962 amounted to 2,120,000 tons, according to a British estimate. This was 30,000 tons more than the

previous year's production. Of this total, some 750,000 tons was accounted for by Malaya and 670,000 tons by Indonesia. Including minor producers and stockpile releases, 2,185,000 tons of natural rubber were estimated to have been released on to the world markets in 1962 whereas consumption during the same year amounted to 2,180,000 tons. The production and consumption of natural rubber were thus closely in balance in 1962.

In India, too, production is believed to have registered an increase. According to producers' organisations, most of the leading estates were having record increases in crop, although the gain was not reflected in the Rubber Board's production statistics. In the latter half of the year, there was an accumulation of stocks with producers, since manufacturers were reluctant to lift them. Consequently, growers experienced difficulty in selling their rubber at statutory prices. Small growers with limited financial resources

Coffee Demand Rising

The world demand for coffee is rising. The original estimate of 44 million bags has been raised to 48 million bags. Now that India's 1962-63 coffee crop has been estimated at 53,000 tons, the country may actually be confronted with a shortage in the domestic market if full advantage is taken of the export quota of 21,600 tons which it was allotted under the new International Coffee Agreement. Some coffee growers in south India are launching a small project in collaboration with Tata-Fison and Rallis India to study the incidence of the new disease which is affecting coffee plantations and to suggest control measures. Interests sponsoring the project hope that a start will be made on the investigations by the end of this month. The new disease which causes an unusual leaf fall followed by a severe dying of the new wood on the crown of the plant is today fairly widespread in the south-west monsoon zone where over 80 percent of India's coffee is grown. It is stated that the disease was first noticed in 1957, but it was only during the last two or three years that it has tended to affect crops.

The shortfall in the crops between original estimates and the realisations during the past four years has been significant with the exception of 1960-61. In 1960, the Coffee Board decided to set up a project to deal with this problem and intensively study the malady but due to various difficulties, the project could not be started. According to the sponsors of the new project, there are certain economic aspects which need urgent attention. Ameliorative measures have to be undertaken by planters as early as possible if their plantations are not to be put to a damaging strain. Mr. R. Radcliffe who is closely associated with the project has issued an appeal through the *Planters Chronicle*—the official publication of the United Planters Association of Southern India—for funds. The initial subscription to be paid by the sponsoring interests is Rs. 4 a planted acre of coffee, and this has been guaranteed for three years. Tata-Fison and Rallis India will offer their services free of charge. The knowledge gained by this private study will be shared with the Coffee Board, Mr. Radcliffe said.

Raising Tea Exports to U.S.A. and Canada

(BY A SPECIAL CORRESPONDENT)

THE American and Canadian markets should be explored more intensively for raising Indian tea exports. The past year, which included a poor summer in North America, produced good sales of iced tea. Some packers reported "remarkably good business" during the first six months. Consumption of both instant and ordinary tea increased in 1962. Some American reporters state that the increase in business has been "dramatic, spectacular, and meteoric".

Mr. W. Gardner Barker, president and chief executive officer of Thomas Lipton Inc. of the U.S.A. and president of the Tea Association of the U.S.A. is reported to have stated that total tea sales in 1962 will be the highest in the U.S. history, thanks mainly to instant tea. But 1963 is expected to be even more exciting "if quality control and aggressive marketing continue". This makes encouraging reading. But the fact that any one country is consuming more is good news for the trade in general. In support of the above comments, one can cite the following facts from *World Coffee*

and *Tea*. The journal says that the boom in bulked teas is spurred by instants. "Miscellaneous blacks" are up by 200 percent in first eight months. Market shares have also shifted. India, Africa, and South America have gained while Ceylon, Indonesia and Formosa have lost.

U.S. TEA IMPORTS (Percentage of total for 12 months from August to July)			
	1961-62	1960-61	Change
Ceylon	38.70	41.86	- 3.16
India	22.20	22.25	+ 1.40
Indonesia	11.26	13.44	- 2.18
Africa	9.18	8.49	+ 0.69
Formosa	5.11	6.31	- 1.20
South America	1.20	.74	+ .46
Ceylon/India blend	1.26	.93	+ .33
Miscellaneous black blends	7.32	3.10	+ 4.22

The question for India is: how big was the gain and what was this country's share in it? The above figures indicate that the steady loss in India's tea exports to America has been checked. The dismal trend over the past decade has been reversed, and India has captured more business in dollar areas.

This is a matter for congratulation for the Central Government, the Indian Tea Board and the Indian delegation which visited Canada and the United States last year. The rise in exports may be due in part to the reduction of export duties. Now that the initial experiment has shown that by a small sacrifice of internal revenue, the country can increase its foreign exchange earning by a considerable amount, it is reasonable to suppose that the trade and the Tea Board will not rest until they have convinced the Central Government of the necessity for granting more assistance by a further reduction in export duty.

One is pleased to be able to confirm the optimism of the American reporters from local statistics. The following table shows: tea exports from south India:

	1962	1961	1960
(000 omitted)			
January to October	5,654	4,988	4,075 (to U.S.A.)
January to October	4,950	4,921	4,435 (to Canada)

North India is said to be shipping fair quantities of tea to these areas but actual exports are not being published due to the national emergency. The figures, read together with enthusiastic propaganda in North America, suggests that consumption in these places is rising.

As far as the prospects for profitable working by the north Indian gardens are concerned, results should be much the same as for 1962, because although this correspondent now calculates that gross receipts on a smaller crop will be somewhat larger than revenue from lower prices last year, the smaller output this year will be more costly to make. Up to mid-January, Assam teas fetched an average of Rs. 5.99 a kilogram whereas last year the price was Rs. 4.94 a kilogram. The relative figures for Darjeeling teas are Rs. 7.50 and Rs. 6.49 a kilogram.

It is interesting to learn from the chairman of the Dooars Branch of the Indian Tea Association that the district has had a good cropping year

The Mother of Three Jawans Knows No Fear

Three Jawans of like ideals: Jawan on the front, Jawan in the factory and Jawan in the field. Born to enjoy the liberty of a free country, they are now face to face with the duty of protecting liberty. Together a hard-hitting force: protection combined with production: a force no power on earth can conquer.

Transferred to Reserve Fund

Transferred to Pension Funds

Bonus to Staff

Transferred to Staff Welfare Fund

Transferred to Staff Co-operative Housing Fund

Carried forward

319,66,600

ANGELO BROS., LIMITED

NOTICE is hereby given that the Fifty-sixth Annual General Meeting of Shareholders of Angelo Bros., Limited will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta on Wednesday the 20th February 1963, at 3-00 P.M. to transact the following business:—

- To receive and adopt the Directors' report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st August, 1962.
- To consider and declare a dividend in respect of the year ended 31st August, 1962.
- To appoint Auditors and to fix their remuneration.
- To appoint a Director in place of Sir A. K. Roy, who retires by rotation under Article 107 of the Company's Articles of Association and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956, and to consider and if thought fit to pass the following Resolution of which special notice, as required by Section 281 of the Companies Act, has been received by the Company.

AS SPECIAL BUSINESS.

That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir A. K. Roy, who has attained the age of 76 years and who retires by rotation be and is hereby re-appointed a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him.

(As a Special Resolution)

- "Resolved that Turner, Morrison & Co. Ltd., be and are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also if so required by the Company, at any other place or places in which the Company, at Calcutta, Turner, Morrison & Co. Ltd., may be able to provide such accommodation, and the Company shall pay to Turner, Morrison & Co. Ltd., such rents and outgoings as such rents and outgoings shall from time to time, unless determined by the Directors of the Company, be determined by ordinary resolution passed by the Company in general meeting to be fairly and reasonably attributable to the accommodation so provided".

(As an Ordinary Resolution)

- "Resolved that, in variation of the monthly rent of Rs. 45/- per 100 sq.ft. payable by the Company in respect of the office accommodation at No. 6, Lyons Range, Calcutta, provided by Turner, Morrison & Co. Ltd., the Managing Agents of the Company, to the Company in terms of the Agreement dated the 7th May 1959 entered into between the Company and the Managing Agents, the monthly rent payable for such office accommodation

be increased to Rs. 100/- per 100 sq.ft. with effect from the 1st July, 1962, and the Directors be and are hereby authorised to execute such Supplementary Agreement to give effect to the above variation as may be considered necessary.

Note:—

- A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.
- An explanatory note as required under Section 173 of the Companies Act, 1956, has been sent to each Shareholder entitled to notice of the meeting.
- The Share Transfer Register of the Company will be closed from 5th February, 1963 to 20th February, 1963, both days inclusive.

Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
TURNER, MORRISON & CO.,
LIMITED.

D. M. JAFFRAY,

Director,

Managing Agents.

Calcutta, 22nd January 1963.

RATIONALISING THE STEEL CONTROL SYSTEM

ANYONE familiar with the needless difficulties created for both producers and consumers by the present system of steel control and distribution will welcome the basic idea underlying the report presented by Professor K. N. Raj and his colleagues last week. The major change it recommends is the creation of a free market in steel in which non-priority demand adjusts itself to non-priority supplies through the price mechanism. This limited step towards decontrol may not mean anything more than a recognition of present realities since, as is widely known, price control is largely ineffective beyond the first sale from the producer to either the distributor or a quota-holding consumer. By legalising free market prices in relation to such transactions, the Raj Committee's proposal will make the patterns of such trading more easily identifiable, and bring the gains therefrom within easier reach of several tax nets.

More significant in some ways is the Committee's proposal to restore some meaning to the priorities granted to essential consumers. One can readily agree with its view that there has been over the years a tendency to dilute the concept of priority, with the result that total demand covered by priority classifications has swelled to unmanageable proportions. Not surprisingly, the grant of priority carries today no assurance that the demands so covered will be met within any reasonable length of time, reducing the whole system of control to an absurd caricature of its original intentions. It is known that several State Governments and key projects have been forced to buy from the unofficial market what official priority could not obtain for them. The Raj Committee rightly says, therefore, that for any system of priorities to work effectively, conditions of eligibility must be made "extremely strict". Even the Ministry of Defence should not automatically qualify for priority rating for all its demands; it is proposed that priority should be fixed according to the end-use of the steel, and not according to the agency or unit which makes the demand. It is also recommended that once the demand of a project is accepted for grant of priority, all the categories or sections required to meet the specific need should be covered. In the past, it has often happened that work on essential schemes has been held up by the lack of matching steel supplies.

The Committee would like to see all demand considered in only three categories, of which the first will cover only the Defence Ministry's requirements connected with its operational needs. These will have over-riding priority, while demand on account of other essential uses—basic industries and vital social overheads—will enjoy ordinary priority. All other demand is to be treated as non-priority, to be met as best as possible from free market supplies. The abolition of the present system of processing each indent through the Iron and Steel Control is recommended, because it is considered unnecessary for achieving the objective of a rationalised plan of production. All indents should be received direct by the producers, thus cutting out the delay now involved in routing them via the Control organisation. The

function of production planning—the rational distribution of orders over the five steel plants to eliminate duplication and uneconomic runs—would be taken over by a joint committee of the steel producers, on which the Iron and Steel Controller would function as a referee, intervening only when disputes arise. This is a recommendation which producers, both public and private, will welcome, because the procedure of self-control will make planning more realistic than is now possible. The producers know the peculiarities of their plants and what can be effectively rolled within a given time. They are unlikely, therefore, to make promises which they are incapable of fulfilling, and will thus bring some degree of realism into the whole business of official allocations.

The producers will also welcome the Committee's emphasis on indents being of an economic size. Professor Raj and his colleagues have not specified what the minimum size of order should be, but have indicated that it should be determined in relation to three factors. The technical limitations have to be taken into account, but more important in the immediate context are the problems of storage and the rationalised use of wagons. All three would tend to place the minimum above current practices, and the Committee seeks to remedy the difficulties of smaller users by recommending the expansion of facilities for the storage and distribution of steel throughout the country, so that the smaller individual demands can be met promptly and adequately. Unfortunately, the Committee has linked these valuable suggestions to the irrelevant one of requiring much stricter financial arrangements which will make it obligatory for the indenter to deposit at the outset 25 percent or more of the value of the order. This requirement is out of keeping with the spirit of the main body of proposals; if the steel producers are expected to fend for themselves in other more important matters, they can undoubtedly check up on their customers' creditworthiness without the assistance of Government regulations.

In the sphere of distribution, the Committee proceeds on the assumption that injustice to new entrants is inherent in any system with a fixed list of recognised dealers. This may be so, but surely any injustice on this score has been greatly mitigated by the large additions under various categories of dealership made in recent years. The issue need not be debated only at this level because it is pertinent to ask whether unregulated competition is really necessary. The Committee's proposal to allow anyone wishing to enter the steel trade to do so may have the effect of encouraging mushroom growth, with the increased number of traders tending to magnify each bullish or bearish trend. Similarly, the idea of regulating the free market through stock operations conducted by the Government-owned stockyards may sound fine, but its implementation in practice bristles with many difficulties. No stockist can judge demand trends with such unflinching accuracy that he never needs to make a loss. The best he can hope for is to make a sufficient number of

correct decisions over a year to offset the losses he will inevitably have incurred. But this implies flexibility and the use of personal judgment which is ruled out almost by definition from any Government-run enterprise. In suggesting that Government stockyards play the rôle of a resourceful trader in a free market, the Raj Committee may thus be asking for the impossible. It is also not clear why it wants all imports, other than those for actual users, to be canalised through Government stockyards. It has failed to make out a case for bypassing the existing trade channels, and its proposals seem to indicate an ideological bias rather than a valid economic purpose.

Any review of the Committee's report is incomplete without a reference to its plea for a

BETTER STANDARDS FOR INDUSTRY

THE speeches delivered at the seventh Indian Standards Convention held in Calcutta this week spotlighted the importance of standards in promoting exports. (Special articles in connection with the convention are published on later pages of this issue of *Capital*.) Mr. K. C. Reddy, Central Minister for Commerce and Industry, who presided over the meeting, admitted that Indian exports often suffered because of occasional failure to supply goods according to agreed samples or specifications. At a time when export promotion has become a major plank of the economic policy, the importance of quality in production cannot be over-emphasised. Indian exporters will be able to expand their markets and retain their customers only if their goods are of high quality. The Government has in hand a Quality Control Inspection Bill. An export inspection and advisory council has been set up to recommend a phased programme of quality control and pre-shipment inspection on the basis of recognised standards. The programme will cover important items of exports. The Indian Standards Institution will, no doubt, play an active part in suggesting suitable standards which might win for Indian goods ready acceptance abroad.

The I.S.I. which was set up as a joint venture by the Government and industry in 1947, has made a useful contribution to the country's progress. The evolution of standards in various fields and their adoption by manufacturers have meant better and more uniform quality of goods for the consumer. For the manufacturer, the I.S.I. certification marks have ensured ready consumer acceptance of his products. Although I.S.I. standards are not legally enforceable, the advantages they offer have made them popular. Besides, the Government of India uses the standards as the basis for its purchase; this has induced manufacturers to conform to the I.S.I. standard specifications. Standards are important not only to trade and commerce but also to industry. They have fostered industrial efficiency through elimination of wastage over a wide front. Wastage usually occurs in industry through having to handle a large variety of materials and products, loss of effort due to absence of standard practices, etcetera. Standardisation can help prevent such wastage. It is gratifying to note that so far the I.S.I. has issued over 500 licences covering about 135 items. I.S.I. certification marks cover about Rs. 60 crores worth of the country's industrial production, and when they are extended to structural steel, the coverage may increase to

revision of the retention prices to allow adequately for the replacement of plant at current costs. It has had the courage to say, despite the obvious political implications of its suggestion, that the gross block of the steel companies should not be under-estimated out of fear that the general level of steel prices would have to be raised or that older plants in private ownership might accumulate large surpluses. The older plants cannot modernise and expand except at current costs, and hence the pressing need for such surpluses as the price mechanism allows them to retain. Should they fail to use higher retention prices for desirable ends, other measures can be considered. But, as the Committee appropriately points out, the fear of misuse of profits cannot be the basis of a rational price policy.

Rs. 200 crores. It has published more than 2,000 standards, and 1,500 more are being prepared.

In the present context of import restrictions and shortage of industrial raw materials, another major task has fallen upon the I.S.I. It has to evolve standards which can permit the maximum use of indigenous materials, without sacrificing quality. The substitution has also to be extended to permit the use of second-grade material, which may be cheaper, such as scrap in place of virgin metals. The over-riding consideration should, however, be the serviceability of the finished product for the purpose for which it is intended. By evolving such standards, the I.S.I. can help in conserving scarce materials. It has already moved in this direction by publishing standards for the more efficient use of steel in hot-rolled structural sections. The object has been to make a ton of steel go a longer way by devising optimum standards for structural sections and by drawing up a code of practice for their design and fabrication. The I.S.I. works in close co-operation with comparable international organisations, including those in the Commonwealth. This permits a fruitful exchange of ideas and wins international recognition for its standards. An idea of the immensity of its task can be had from the fact that it has some 1,100 technical committees with about 13,000 experts to prepare the standards.

PROGRESS OF PRIVATE LIMITED COMPANIES

THE corporate sector (excluding Government companies) has contributed a great deal to India's economic development in recent years. Although in magnitude the contribution of public limited companies has been bigger, the achievements of private limited companies have been substantial too. Extensive statistical data on the finances of private limited companies during 1960 have just been published in an article in the December issue of the *Reserve Bank of India Bulletin*. The article then goes on to make an interesting comparative study of the performance of this sector and public limited companies during 1956-60. The Reserve Bank's study for 1960 covers 333 private limited companies, each having a paid-up share capital of Rs. 5 lakhs or more, which closed their accounts during the period July 1960 to June 1961. Together their paid-up capital (in 1955) amounted to about 33 percent of the total paid-up capital of all non-Government and non-financial private limited companies. The study is confined to non-Government and non-Government and non-financial private limited companies. For purposes of comparison, 1,001 public limited companies, which were previously studied in the *Bulletin*, have been considered, although there is a wide difference in the representative character of the samples of the two sectors. In terms of paid-up capital, the 1,001 public companies represent about 78 percent of the total paid-up capital in that sector. Some of the industrial sub-groups are not adequately covered by the samples of private companies, and the industrial composition of the two sectors differs widely. Several industries which are important in the public company

CAPITAL, 31st January, 1963.

sector are relatively unimportant in the private company sector.

During 1956-60, the performance of private limited companies in terms of production, sales and profits has been better than of public limited companies. The output of private companies has risen at an average annual rate of 13 percent and their sales at an average annual rate of 14 percent. The comparable figures for public companies are 12 percent and 11 percent, respectively. Although public companies have been able to maintain a relatively low expenditure ratio and a high margin of profit since they have greater scope for economy of operation, the profits (before tax) of private companies have increased at a faster rate. But the public limited companies have fared better in the matter of assets and capital formation. The average rates of fixed assets formation, inventory build-up, capital formation and total assets formation during 1956-60 have been appreciably higher in the public limited companies than in the private limited companies. Additions to the fixed assets of public companies have been bigger, indicating that their expansion, modernisation and rehabilitation schemes have been more ambitious.

The similarity between the two sectors in methods of financing assets formation is great. Both have placed much reliance on external sources for obtaining funds. However, public companies have relied more on borrowings, while private companies have depended more on trade credit. The reliance of the two sectors on bank finance has been more or less the same. Public companies have obtained larger funds in the form of paid-up share capital than private companies. Since the latter are not allowed by the Companies Act to sell shares to the public, they have to depend on their few shareholders for share subscription in time of need. It is interesting that although equity capital has exceeded debt in both sectors, private companies have tended to place greater emphasis on owned funds while public companies have resorted more to borrowings. Hence the debt-equity ratio of private companies has moved down from 1: 2.81 in 1955 to 1:3.35 in 1960, while it has moved up from 1:4.22 to 1:3.36 in the case of public companies. The increase in total debt, relative to net worth, has been larger in the case of public companies. However, their net worth too has risen faster than that of private companies.

Turning to 1960 specifically, there has been an all-round improvement in the financial results of both sectors, compared with 1959. But the improvement in private companies has been more marked. The rates of growth in the value of production and sales have also been bigger for private companies. Barring the margin of profit, which has been higher in the case of public companies, all other profitability ratios—gross profits as percentage of total capital employed, profits after tax as percentage of net worth, and dividends as percentage of paid-up capital—have been higher in the case of private limited companies. The rates of total gross assets formation and gross fixed assets formation too have been noticeably higher in their case during 1960. Compared with 1959, the production, sales and profits of private companies have improved in 1960. The improvement in profits stemmed from the higher value of production combined with a widening of the profit margin. Other important features include the ploughback of a relatively high proportion of the pre-tax profits, after setting aside a bigger amount for paying dividends. Private companies have extended more trade credit to their customers, and that has contributed to the increase in sales.

CAPITAL FORMATION : 1956-60

	Public limited companies	Private limited companies
(In crores of rupees)		
Gross fixed assets formation	891	141
Net fixed assets formation	543	74
Inventory accumulation	343	109
Gross capital formation	1,234	250
Net capital formation	886	183

Current News and Comment

Measures against Smuggling

The Central Government has launched a strong offensive against smugglers. The Gold Control Rules, which are intended primarily to check smuggling of gold in order to reduce the drain on the country's foreign exchange resources, have been followed up with further stern measures to deal with smuggling activity in general. The measures, which have been taken under the Defence of India Rules, have been notified in an Extraordinary Gazette, and have become effective since 10th January. Under them, no person can "acquire possession of or in any way be concerned in carrying, removing, depositing, harbouring, keeping, concealing, selling or purchasing or in any other manner dealing with or financing any goods (including coins and currency, whether Indian or foreign, and foreign exchange) which have been or are attempted to be brought into or taken out of India, in contravention of the prohibitions or restrictions for the time being in force under the provisions of or by virtue of Sections 18 and 19 of the Sea Customs Act, 1878 or any other order under rule 131-A." Rule 131-A relates to powers to prohibit or restrict the import and export of goods.

Where any goods are seized in the reasonable belief that they have been smuggled into India in contravention of the prohibitions or restrictions under Section 131-A, the burden of proving that they are not smuggled goods will be on the person from whose possession the goods have been seized. This will apply to gold, diamonds, manufactures of gold or diamonds, watches and any other class of goods which the Central Government may specify by notified order. Another provision of far-reaching significance is that no person can, in relation to any goods which are entered at or brought to be passed through a Customs house for either import or export, give a false or wrong declaration concerning the sort, quality, quantity or value, in a bill of entry or application presented for passing the goods, or be in any way concerned with such false or wrong declaration. If he contravenes any of the provisions which have now been laid down, he will, without prejudice to any confiscation or penalty to which he may be liable under the Sea Customs Act, 1878, be punishable with imprisonment for a term which may extend to seven years, or with fine, or with both. These measures are far more severe than those provided under the new Customs Act which is to come into force shortly, and they have caused scare among smugglers. Enquiries in the market indicate that unofficial business in gold has declined appreciably over the past few days, and that many smuggled watches which had hitherto been openly displayed have now gone underground.

Cloth Output Down, Stocks Up

The provisional figure of cloth output by Indian mills in December is placed at 413 million yards, compared with 417 million yards in November and 437 million yards in December 1961. The December 1962 figure brings the total for 1962 to 4,988 million yards, which is 151 million yards less than that for 1961. The December figure for yarn at 161 million lbs compares with 162 million lbs in November and 170 million lbs in December 1961, and the total yarn production in 1962 at 1,892 million lbs shows a small fall of 7 million lbs from the 1961 figure of 1,899 million lbs. With the in-the-present facing the crisis of accumulation of stocks and with the prospect of its realising the export target being slim, the setback in cloth production might not seem altogether unwelcome, but it is in odd contrast to the higher targets set under the third plan and the mill industry's plea for a larger share in the total output.

Stocks have continued to pile up with the mills. The December-end figure of 499,800 bales shows an appreciable increase of 103,900 bales (of 1,500 yards each) over the 1961-end figure of 395,900 bales; stocks of unsold cloth are up from 117,200 bales to 263,600 bales, and the figure under "sold but not lifted" has risen from 218,700 bales to 236,200 bales. Out of the total increase of 103,900 bales with all

mills in India, cloth stocks with Bombay mills have increased by 42,500 bales to 149,600 bales. The stock position of yarn has not been so bad. Yarn stocks with the mills all over India increased from 80,300 bales to 86,200 bales (of 400 lbs each). Latest reports from the cotton piecegoods market indicate a fair improvement in offtake, and prices are stated to have recorded an increase of 2 percent to 5 percent from their recent low levels. The revival of confidence is attributed to hopes of a negotiated settlement of the border dispute between India and China. The trade expects that recovery will be maintained if the political situation does not deteriorate.

Warehousing Capacity Raised

The provision of bigger warehousing facilities is essential for stabilising agricultural prices. The third plan seeks to raise the total storage capacity of the Central Government from 2.5 million tons to about 5 million tons (of which 3.5 million tons will be owned by the Government). The capacity of the Central and State Warehousing Corporations is to be increased from 350,000 tons to 1.6 million tons. It is gratifying to note from the Central Warehousing Corporation's annual report for 1961-62 that a record number of 20 new warehouses was set up during the period, bringing the total number to 60. The total warehousing capacity has been raised to 123,533 tons, of which 35,700 tons is owned by the Corporation. The State Corporations have raised their storage capacity to 396,000 tons, distributed over 355 warehouses and 37 sub-warehouses. The hope has been expressed that, at the present rate of progress, the Central Warehousing Corporation will be able to earn sufficient revenue by the end of the third plan to wipe off the headquarters' expenditure. It is claimed that while the target for the opening of new warehouses has been fully achieved, targets in relation to capacity, volume of business and percentage occupancy were exceeded. A number of new commodities including cardamom, coffee seeds, chicory, oils, fertilisers and food products were received in the Central warehouses during the year. Recent legislation has enlarged the scope of warehousing and permits several new commodities to be stored in Government godowns.

Exports of Rubber Products

In his speech from the chair at the annual general meeting of the Association of Rubber Manufacturers in India held in Calcutta recently, Mr. J. Vyoral referred to the increase in the production of motor-car tyres and tubes, mechanical rubber products and foot-wear. Tyre Production, which is the largest section of the rubber manufacturing industry, has progressed satisfactorily and is well on the way to attaining the third plan target for 1965. The expansion of the existing units and the creation of new capacity are making progress. The industry, Mr. Vyoral said, will not only be able to meet the country's demand for motor-car tyres, but will also have a sufficient surplus for export very soon. The production of mechanical rubber products, such as railway rubber fittings, has increased by about 25 percent, waterproof fabrics by 8 percent, rubber-covered cables by 25 percent, and foot-wear by 12 percent over 1961.

Mr. Vyoral stressed the need for increasing exports of rubber manufactures. An Indian rubber trade delegation, which visited the Middle East and east Africa, has just returned. The delegation, it is expected, will make some useful suggestions for raising the export of rubber manufactures. India is a large importer of several commodities from the Middle East and Africa, so their balance of trade with India is favourable. It is, therefore, necessary to increase exports to these countries. For this purpose, "Indian manufacturers and exporters should reorientate their export policy and, while paying scrupulous attention to quality, should also work out competitive export prices. In order to strengthen our export drive more effectively, it may be worth while for a number of manufacturers to get together and pool their resources in

setting up a group office abroad and carrying out intensive publicity for Indian products through such an office," Mr. Vyoral said.

Balancing Spindles for Cotton Mills

Allocations of spindles to unbalanced cotton textile composite mills, that is, units which do not have adequate spindles to feed their looms, have been made by the Central Ministry of Commerce and Industry as a matter of policy. Hitherto, these allocations were being made on the basis of the technical assessment made by the Textile Commissioner. But to avoid any unduly large allocations, each allocation was restricted to a maximum of 3,000 spindles or 5 percent of the existing spindleage in the applicant mill, whichever was higher. The allocations so made were being counted against the 1 million spindles kept apart for uneconomic and unbalanced units out of the 3 million spindles allowed for the expansion of the cotton mills under the third plan. This basis proved unsatisfactory in that it failed to solve the problem of mills, lacking balance in their equipment. The Textile Commissioner had recommended that allocations of spindles to the unbalanced units should be made to the full extent necessary to remove the lack of balance because full allocation alone could enable the composite units to attain the maximum production of cloth from their existing loomage. Moreover, the existing units were in a position to put up the spindles more speedily than parties setting up new mills and the cost of installation would be less than in the case of new units.

The established mills were also able to install these spindles without having simultaneously to install proportionate principal preparatory machinery which is not easily available from indigenous sources. The Textile Commissioner had pointed out that the requirements for balancing purposes were unlikely to exceed the 1 million spindles already earmarked for this purpose. In view of these various advantages, the Central Government has accepted the recommendations of the Textile Commissioner, and the stipulation concerning the ceiling of 3,000 spindles or 5 percent of the existing spindles, whichever is higher, has been withdrawn. The Textile Commissioner has, however, been advised to ensure that the requirements of additional spindles of the unbalanced units are assessed on the basis of the normal production rate which a good mill should yield on existing spindles and not necessarily on the actual production rate of a particular mill which may be below normal in some cases. This will guard against any unduly large allocations being made to unbalanced units whose actual production rate is below normal.

Capital Goods, Industrial Licensing

Something seems to be radically wrong with the Government's procedure for licensing the import of capital goods. Delays, always notorious, show no sign of being reduced. A review of the capital goods licensing policy at an interministerial meeting last week, it is reported, has shown that the licences issued so far cover hardly 25 percent of the Rs. 275 crores worth of imports approved by the Capital Goods Committee since the beginning of the third plan. Thus are red tape and official pettifoggery allowed to retard industrialisation. It is said that there is normally a time-lag of six months to 12 months between clearance by the Capital Goods Committee and the actual issue of an import licence, during which period the application languishes successively in the files of the Development Wing, the Commerce and Industry Ministry, and the office of the Chief Controller of Imports. Sometimes, the licence arrives only after persistent lobbying by the prospective importer. One would have thought that in an emergency, departmental delays would be reduced, but that is apparently not the case. To compensate for the dilatory procedure involved in licensing capital goods imports, the official view now seems to favour granting approval to imports in excess of what has been provided in the third plan for the private sector. The inter-ministerial meeting appears to have agreed that it will be necessary to approve the import of capital goods of the value of Rs. 640 crores during the plan period, although the actual expenditure may be much less. This amount, it is believed, also in-

BUY

NATIONAL DEFENCE BONDS

cludes the additional foreign exchange required to achieve any new targets set for the high-priority industries. The change proposed is rather odd; one would have thought that a precise calculation of requirements was no less necessary now than before.

Licensing delays have greatly hampered industrial growth. Industrial output has suffered mainly because of the shortage of power, transport and imported raw materials. But the uncertainties and delays concerning the licensing of capital goods—especially “balancing” equipment and the machinery required for import substitution—has also contributed to the difficulties. In a related sphere—industrial licensing—the leisurely pace at which the governmental machinery operates has been highlighted recently by the fact that proposals from private industrialists for establishing alloy, tool and special steel units were kept pending for a long time. Finally, impossible conditions were imposed with which the entrepreneurs could not comply. The principles for the grant of industrial licences are often unsound too. The desire to prevent concentration of economic power has prompted the Government to grant licences to untried, new parties in preference to established entrepreneurs. As the establishment of a new unit is fraught with major difficulties which newcomers are often unable to surmount, a number of licences have remained unused. Sometimes “dummy” licensees have applied for licences only to prevent others from getting them. The Government has revoked a number of such unused licences, with the result that capacity in several fields will be far short of the targets. Regional pressures have led to the grant of licences which are economically unjustifiable. The policy of regional balance in the distribution of industries has fostered the growth of inefficient and high-cost industries, increased the pressure on transport, and in the ultimate analysis slowed down the growth of economy. A far-reaching change in the present system of industrial and import licensing is necessary.

More Scope for Private Sector

The private sector in India has vigorously started the production of defence requirements such as lorries, jeeps, woollen goods and cloth. But unfortunately, there has been no systematic effort yet on the part of the Government to use its production capacity fully. There is unused capacity of up to 40 percent in a large number of industrial units. If facilities such as machinery and raw materials are provided, the private sector can meet many defence needs, including small arms and components required by the armament factories. It can produce these goods without materially reducing its normal output. The reservation of some industries exclusively for the public sector under the Industries (Development and Regulation) Act, 1951, was not done on any scientific grounds but out of ideological considerations. The national emergency, which admittedly may last long, has stressed the need for revising the industrial policy. To make the best use of all the available resources and to increase defence preparedness, it is necessary to allow the private sector to produce all categories of goods. Besides, such expansion in the scope of the private sector and improvement in its prestige at home may encourage a greater inflow of foreign capital into India.

Wastage in Technical Education

A paradoxical situation is developing in the field of technical education. While the need for technical manpower is rising rapidly, there has been considerable wastage of effort in training institutions. In his address to the co-ordinating committee of the All-India Council for Technical Education, Professor Humayun Kabir, Minister for Scientific Research, said that the wastage in the first two years of the third plan was as high as 55 percent in diploma courses and 35 percent in degree courses. If the wastage could be reduced, an additional 1,500 engineers would be available for industry every year. The third plan has earmarked Rs. 142 crores for technical education, the target for the outturn being 40,000 diploma holders a year. Mr. Kabir holds the view that this target

will be hopelessly inadequate since the growing civil demands alone will call for about 100,000 diploma holders.

In trying to reduce the wastage in technical education, it is necessary to ensure that the higher outturn is not achieved by lowering standards. Stricter admissions to technological institutions, closer supervision of the work of students and provision of adequate, trained staff are some of the measures necessary. The co-ordinating committee has recommended the acceleration of training in the third and fourth years of the degree course as one of the measures to meet the large demand for engineers. The Chinese aggression may necessitate the recruitment of large numbers of engineering personnel by the armed forces. The committee has rightly expressed itself against reducing the period of degree courses, as that would lower standards. Instead, it has suggested intensive courses for students in the advanced stages and the cutting out of vacation periods to quicken the training of engineers. The assumption seems to be that engineering studies nowadays proceed at a leisurely pace—which may be true of many institutions. The real answer might be in raising examination standards to make students more serious.

Rapid Progress of Pump Industry

The Indian pump industry has made rapid progress over the past few years. Its output has increased from 33,292 power-driven pumps in 1950 to 120,200 units in 1961. These figures represent the production of only those manufacturers which are on the list of the Department of Technical Development, and do not include the output of a number of units appearing on the lists of various State Governments and many small-scale units registered with the Small-Scale Industries Directorate. Speaking at the annual general meeting of the Indian Pump Manufacturers Association last week in Calcutta, Mr. K. K. Jajodia said that the industry has surpassed the output target set under the second five year plan, and it has already enough capacity to attain the third plan production target of 150,000 power-driven pumps a year. There are, however, a number of units which have been licensed to make pumps, but have yet to start production. They should be asked to surrender their licences voluntarily and the “surrendered capacities” should be redistributed among those who are already manufacturing pumps. The industry has diversified its production considerably. It now makes all types of pumps required by the cement, paper, chemical and petroleum industries. Referring to exports, Mr. Jajodia said that the industry has been able to sell its products overseas in steadily increasing quantities. As against exports worth Rs. 2.50 lakhs in 1958, sales abroad were double this figure in 1961 and 1962.

U.S. Economic Aid to India

Details of U.S. Government assistance to India have been given in a recent fact-sheet issued by the U.S. Information Service. American economic aid to India consists of grants as well as loans. So far, the total aid given under various agreements with the Indian Government stands at Rs. 2,173.2 crores (\$4,563.9 million). Of this, Rs. 1,099 crores are in the form of loans repayable in rupees (some of these can be used again as loan, if necessary). About Rs. 223 crores are repayable in dollars over a period of 40 years, with no interest but with a service charge of $\frac{1}{2}$ percent. A further Rs. 630 crores have been given as outright grants. The latest loans were given to Hindustan Motors (\$15.8 million), the Tata Engineering and Locomotive Co. (\$13.7 million), and the thermal power projects of Satpura (\$25.1 million), Delhi (\$16 million) and Ramagundam (\$8.4 million). Credits have also been extended under U.S. Public Law 480 to enable imports of long-staple cotton and dairy products.

American assistance to India is at present canalised through three agencies. The first is the U.S. Agency for International Development. It was set up in November 1961 to bring American economic aid under a unified administration. It has

taken over the activities of the International Co-operation Administration, which was represented in India by the Technical Co-operation Mission. The second one is the P.L.480 (Food for Peace) Programme, under which the U.S.A. has entered into agreements for the supply of large quantities of wheat, rice, coarse grains, cotton, dried milk powder and tobacco. The total value of the commodities covered by these agreements amounts to Rs. 1,156.3 crores. The third agency is the Export-Import Bank. It has so far authorised ten loans to India of the value of Rs. 129.5 crores (\$271.9 million). The Bank offers loans and guarantees for the primary purpose of promoting the foreign trade of the U.S.A. Loans given by it are repayable in dollars.

British Overseas Insurance

Insurance company shareholders will draw only moderate encouragement from the British Insurance Association's “preview” of overseas business results for 1962. Premium income has continued to grow by about £128 million and may now be £1,900 million, of which £850 million is for life business. But the results of overseas underwriting are expected to show only a “very modest improvement”, thanks mainly to smaller hurricane losses in the United States; however, fire damage there is up by about 6 percent on the 1961 total. This is the same as the rate of growth of premium income, which rose by 6 percent in the first half of this year.

Motor business in America continues to be a major problem, with heavy claims. On balance, restoration of American underwriting to a profitable basis is unlikely for 1962 but investment income, as previously, should make up for underwriting losses.

An exceptional number of motor claims recently in Britain means that British motor business will “produce little or no profit.” Understandably, the B.I.A. adds that “results of individual insurers are likely to vary considerably.”

MONETARY CONFERENCE

THE two great silver producing countries, the United States and Mexico, propose to convene another International Monetary Conference for the purpose of discussing measures calculated to establish the stability of silver relatively to gold. The gold price of silver can only be fixed throughout the world by arranging for the purchase of the latter metal to the full extent offered at a price above its natural price; and it is surprising that the United States, which repels the products of other countries by heavy import duties, should imagine that these countries will combine to buy one of her important products at a price exceeding its fair value. The idea seems to be that the recent drop in the gold price of silver, by disturbing trade with the few countries which still adhere to the gold standard and by hampering China in the payment of her sterling war indemnity, may induce the great Powers, especially those that are threatened with the illicit coinage of silver, to make some sacrifice for the purpose of raising and fixing the gold price of that metal. There is, however, no need for this sacrifice, seeing that China's difficulties and the illicit coinage of silver can both be easily remedied as we have frequently pointed out by imposing import duties on silver. This should be the reply of the Powers to the United States and Mexico, and these two silver-producing and protective duty States will be nicely sold, if the Conference results in the levying of import duties on silver in the chief consuming countries instead of in unlimited purchases of the metal at abnormal prices. What we want nowadays is the disuse of silver as a standard of value, and its extended use as token money coupled with a limitation of its production; and this can best be accomplished by countries in general following the example of India by adopting a gold standard with a very limited gold currency, collected in a central reserve, so as to be available for export when needed, and supplemented by an import duty on silver.

A Ditcher's Diary

IN THE MIDDLE AGES, CHRISTIAN THEOLOGISTS SPENT months and years arguing how many angels could dance on the head of a pin or needle, I forget which. Communist theology, I suggest, is getting as tortuous, as academic and as pointless. Having nothing better to do I tuned in to Radio Peking the other night; and the way the indefatigable news reader went on and on about the “true tenets” of Marxism-Leninism and the declarations of the Moscow statement was truly tiresome. Oh yes, there was a lot about Yugoslav revisionism too. It is not altogether surprising that Peking should claim to be more Marxist than anybody else; after all, when production figures are down it is the more necessary to score ideological points. I am even inclined to think that Peking may be right on this one. For all his prophetic powers, which were considerable, Karl Marx never foresaw the kind of society now prevailing in the Soviet Union. The breakthrough of the Soviet economy came about more through the technological revolution than through ideology; as a matter of fact, the economy really got going only when some dearest Marxist principles were openly jettisoned by Joe Stalin and his successors. China's economy, still primitive in most ways, conforms more to the kind of society Marx had in mind. It thus stands to reason that Peking's thinking is closer to Marx's, even Lenin's. If only Mr. Khrushchev were not obliged to swear by Marx and Lenin—although he has discarded Stalin all right—he would probably say, “Russia has outlived, outgrown Marxism”. Now about war, which Mr. Khrushchev thinks has become too dangerous and Mr. Mao thinks quite a good idea. Here we are back to theology again. Mr. Mao thinks wars are not won by weapons but by the people's will. What is it but faith, faith that believes in the absurd in face of all evidence to the contrary? This is oriental thinking at its worst; and we deceive ourselves in imagining that it is wholly unknown in India. Was it not faith—faith in Chinese goodness—that we left our defence of the Himalayas to?

MELVILLE DEMELLOW HAS, I THINK, EARNED HIS Padma Shri; and it should not be long before Roshan Menon also makes the grade. DeMellow is an excellent broadcaster, one of the very few produced by All India Radio; but in this country merit is not considered the highest virtue. Endurance is rated higher. And think of what DeMellow and Mrs. Roshan Menon had to endure on Saturday last. Sitting in their respective commentators' boxes, they had to go on describing the Republic Day parade in New Delhi, which just went on and

on and on. No wonder I heard, in my intermittent listening, the word “colour” about three hundred times. There have been subsequent reports that this year's parade was even officially considered “too long”; and that, for sure, is the young year's understatement. The celebration, by all reports, was on an austere scale, meaning, I suppose, there was less money spent. What, pray, of time, about which nearly a hundred thousand people were surely culpably profligate? The big show, I will be told, was symbolic of the nation's emergency and its resolve to resist the enemy. And that's what I object to. Far too many people in this country still think in terms of symbols and not in those of realities. If I remember correctly, C.E.M. Joad defined the main feature of decadence as “dropping the object”; and “the object” is the thing most of us seem to be dropping all the time all over the shop. On Republic Day millions of folk in the community development areas took, I understand, a pledge; and that act alone, I imagine, will be acclaimed as a material contribution to the nation's effort. Was it? A foreign newspaperman was discussing the Indian Press with me the other day and he said he was amazed at the quantity of verbiage that in India constituted news. The simple definition that what people say is not news but only what they do does not seem to be known very widely in this country, he said. The “object” dropped again! There are many things Ministers and M.P.s can do. I repeat “do”; walking down Rajpath, it seems to me, should have the lowest priority.

SHOULD A JOURNALIST BE FORCED TO DISCLOSE HIS sources of information if required to do so by a court of law? The old question has come up again during the proceedings in Britain of the Vassall Tribunal, and I am not surprised that the answer given is: yes, he should. Now I am as loyal to the principles of my profession as any journalist can be, if only because I appreciate fully the need for them. Under normal circumstances, nobody would persuade me to disclose my sources if I considered it inappropriate; and there may be people in this city who could confirm this if they were asked. But a court of law is a different matter, and although the Vassall Tribunal is not exactly that, it has full legal powers at its disposal. And why do I consider that such an important point of principle for journalists should be capable of being overridden by the courts? Very simple. I believe firmly that nobody should be above the law, not even journalists. Is there a case for changing the law? That, of course, is a different matter. Personally, I do not think there is.

Journalists are surely no more entitled to privileges concerning the disclosure of their sources than they are to those connected with, say, their responsibilities for libel. Doctors enjoy no such immunity when it comes to disclosing to the courts the secrets normally covered by their professional oath. Nor should any profession be entitled to contract out of its legal obligations, damaging and embarrassing though these might be. Having said that, I must hasten to affirm my faith in the old principle of non-disclosure. Without it, a journalist would not be able to function effectively or discharge efficiently his responsibilities to his readers. But the onus for maintaining it must remain strictly extra-legal. There is no reason in the Vassall case, so far as I can see, why the journalists concerned should not have pleaded for the privilege of disclosing only to the Tribunal chairman himself. But to claim anything more would be to open the door to that unfortunately prevalent vice among yellow-Press journalists, the presentation of “news” without any sources at all.

EMERGENCIES COME IN HANDY, ESPECIALLY FOR authorities in search of excuses for doing things for which they would not find the courage otherwise. While a number of measures have been introduced recently which one would not have imagined as even barely possible four months ago, I often wonder why nothing is done about what has long been a matter of some importance—reducing the extraordinary number of public holidays in this country. There have been five of them this month, apart from the four Sundays; and although the number is somewhat above average, it is not unrepresentative of the leisurely attitudes which survive in a nation otherwise said to be at war. West Bengal is engaged in a fascinating controversy about whether the long Puja holidays should be celebrated in September or in October this year; my prediction may not be far wrong that the controversy will be settled by extending the celebrations quietly over both months. Yet of empty gestures there seems to be no shortage. The order about full Saturday working in Government offices remains in force, although those acquainted with the extra work done in consequence are aware that the whole idea is a hollow farce. Subsequently, the Government has chosen to remind its employees that they should take no more than half-an-hour off for lunch; I shall wait to see what disciplinary action, if any, is taken against those who stay away longer. Exhortations to work harder and produce more continue to arrive at an average rate of a dozen a day from the living great; yet the number of holidays in honour of the great who are dead and gone continue to multiply. The time may not be far off when, if the illustrious sons of the country henceforth distributed the dates of their birth and demise judiciously, the whole year would consist of one long holiday. India has acquired a certain distinction through having one famous lotus-eater; the danger of lotus-eating be-

coming the national occupation ought still to be avoided.

Nobody attacks a village; a city is fair game for any corner. And Calcutta, India's first city pace Mr. Morarji Desai and others, has had more than its share of calumny. The late Mr. James Thurber once said of one of his own plays that there was only one thing wrong with it: "It's kinda lousy". I have no doubt at all that if I had visited Calcutta briefly, instead of living in it for years, I would have had very few nice things to say about the city. This city's charms are not visual; you have to feel them and let them grow on you. If you wanted to see Calcutta with your eyes (not the most sensitive of instruments of human perception) you would see Victoria Memorial and the Marble Palace—as Mr. V. S. Naipaul, a successful novelist from the West Indies, recently did, and if you had access to the *New Statesman* you would publish your not very profound impressions on its pages. I entirely approve of Mr. Naipaul's remarks on Satyajit Ray and Sunil Janah, "a photographer of world stature"; but how wrong he is about the Indians in senior positions in the commercial houses of Calcutta! What on earth is wrong about Anand being called Andy or Dhanadeva Danny? Anybody might have told him that abbreviating longish Indian names for convenience is a common practice throughout India; in Bengal, for instance, every Bishwanath is called Bishu, every Bireswar Biru. I do not personally care for golf; but I do not on that account hold those criminal who do. I remember the early days when Indians first began to be recruited in the British firms; there was air of self-consciousness, of polite patronisation. Now the relations between the Indians and their British colleagues are absolutely normal and human; and I know British youngsters working under senior Indians and seeing nothing unusual in it. In any event, these Indians are a tiny minority; and you do not know a city by concentrating on them. I am surprised that Mr. Naipaul has so little to say about the Bengali middle classes—who are Calcutta—or the masses. Mr. Naipaul says the Bengali pan-seller "doesn't so much as look at you if you don't talk to him in Bengali". Tut, tut. You have to walk many miles in Calcutta to find a Bengali pan-wallah!

A CORRESPONDENT IN LONDON TELLS ME THAT people in Britain often ask nowadays whether Hugh Gaitskell's death means the end of the Labour Party. The question is by no means as far-fetched as it might seem in India, for Labour has never been as solidly rooted in Britain's fundamental political feeling as have the other two Parties. It came into being in response to circumstances which have long since ceased to exist, and was based on theories which are not now current anywhere, except perhaps in this country. It has had the chance to transform itself since it sustained the shock of election defeat in 1955, but even the hard work and compelling intellect of Hugh Gaitskell could not persuade it to turn itself into the kind of modern, scientifically-minded, forward-looking socialist Party which is nowadays sometimes to be found on the Continent. There was a chance that something could have been done with Hugh Gaitskell firmly established at No. 10 Downing Street. But he never reached that goal, and now that his death makes it unlikely that the unity of the Labour Party will survive the next election, the chances of reforming it may have received a heavy blow. So heavy in fact, that the first decision for his successor to make may be whether or not to divide the Party altogether in order to acquire the moderate voting support which will be necessary if the Conservatives are to be defeated at the polls. Those who have been forecasting that the Labour Party's right wing will eventually hive off and join with the Liberals might well be proven correct in the not-too-distant future. My correspondent says it is this insight into the crisis now facing Labour which accounts for the upsurge of doubt. The British are, after all, an unsentimental race where their politics and politicians are concerned; and without consciously realising it, they may have been associating the fate of the entire Labour Party with that of its former leader.

THE DITCHER

Guide for Investors

POLITICAL WORRIES AFFECT NORTH INDIAN TEA SHARES

(BY A SPECIAL CORRESPONDENT)

THERE has been a sharp decline in tea shares during the past year. The index for the ordinary shares has fallen from 154.7 to 141.1 (1952-53 equals 100). Support for the shares has decreased sharply since the Chinese invaded N.E.F.A. last October. The sentiment was also affected by the prolonged strike of the Joint Steamer Companies' crew late last year.

It is feared that there will be little support for tea shares for some time to come. As long as the border dispute between India and China is not settled, investors will continue to be hesitant. This apart, the dividend outlook for 1962 is being assessed cautiously. Although the average price of tea has increased, it is not certain whether profits will rise. The average price of north Indian teas (leaf) has increased to Rs. 5.46, from Rs. 4.76 a kilogram in the corresponding period a year earlier. The average price of dust has gone up from Rs. 4.84 to Rs. 4.91 a kilogram.

But the benefits of the small increase in the price, it is feared, have been more than offset by two factors. The first is a decline of 25 million lbs to 578.1 million lbs in the north Indian crop during 1962, compared with 1961. The second is the increase in production costs due to the interim wage award and the higher prices of coal, stores and fertilisers. Transport charges have also risen, especially because of the recent strike of the Joint Steamer Companies' staff. It is, therefore, thought that tea companies will find it difficult to maintain the dividends for 1962, not to speak of increasing them.

There has been a great deal of concern about the 1963 crop. At this time of year, preparations have to be made for the new crop and the gardens require substantial funds. Due to the present emergency, some banks have become cautious in extending credit to tea estates. Although official efforts have been made to persuade banks to extend credit as freely as before, it remains to be seen whether the tea producers will get the finance. The enforcement of the emergency risks insurance scheme, however, has helped to allay the fears of banks.

In spite of these developments, there have been some favourable factors. Firstly, the marketing outlook for the next few months, until the arrival of the new crop, seems fairly good. The world crop has fallen to 1,367.4 million lbs, against 1,378.9 million lbs in the corresponding period of 1961. Secondly, there has been a small increase in world consumption, and the supply is likely to be in close balance with demand.

An encouraging development is that exports of tea during the current season have been higher than in the previous season. From January to October 1962 exports of north Indian tea amounted to 125.1 million kilograms, against 118.9 million kilograms in the corresponding period of 1961. The increase in exports is partly due to the cut in the export duty. Exports can be increased if Indian tea is made more competitive in foreign markets. It is hoped that in the next Central Budget, the

export duty will be cut further, if not removed altogether.

English Electric to Issue Shares

THE English Electric Company of India Ltd, a wholly-owned subsidiary of the English Electric Co. Ltd of the U.K., which is manufacturing a wide range of fuse-gear distribution equipment at its Pallavaram factory, near Madras, is expected to enter the market shortly to raise Rs. 25 lakhs through public subscription for financing the expansion of the Company's existing facilities and the manufacture of certain new products. The expansion scheme, it is expected, will cost about Rs. 60 lakhs, the whole of which is proposed to be met from the

issue of equity capital. The Company has an authorised capital of Rs. 2 crores out of which it has already issued Rs. 40 lakhs. It is making a further issue of Rs. 60 lakhs, all in equity shares of Rs. 10 each, of which the English Electric Company of London has agreed to take up Rs. 35 lakhs. The balance of Rs. 25 lakhs is to be offered for public subscription. The public issue is not being underwritten. The parent Company has offered to take up without charge any shares which are not subscribed by the public. Such shares will be offered to the other shareholders at par within six months of the closing of the subscription list. If these shares are not taken up by the shareholders, they will be disposed of in such manner as approved by the Controller of Capital Issues. The output of the Company's Madras factory in 1962 is valued at

Rs. 95 lakhs, and it is expected to rise to Rs. 1.20 crores in the current year.

Borosil Glass Issue Soon

Borosil Glass Works Ltd—a joint Indo-U.S. venture—which has been formed to undertake the manufacture of scientific and laboratory glassware, kitchenware, oven glassware of all varieties and descriptions, instruments and apparatus made from borosilicate glass, is likely to enter the market some time in March for raising Rs. 38.25 lakhs in equity shares of Rs. 10 each through public subscription. The Company has been promoted by the Industrial and Engineering Apparatus Company (Private) Ltd which is already established in this line and owns a modern factory with a capacity of 1,500 tons of borosilicate glass. This factory will be taken over by the new Company. Corning Glass Works of the U.S.A., a leading manufacturer of technical glass, is providing technical and financial collaboration in the project.

The Company's factory will be located at the heavy industrial zone, near Andheri (a suburb of Bombay) and it will have a licensed capacity

BUILDING A FACTORY?

GCCP SUPPLIES ALL YOUR ELECTRICAL EQUIPMENT

Electricity makes most things tick. It turns a mass of inanimate metal into an intricately moving, highly functional producer. Electricity—converted to mechanical power—brings a factory to rumbling life.

WHAT'S NEEDED?

A bewildering range of electrical equipment. GCCP supplies all of it—transformers, high and low tension switchgear, distribution boards, motors, starters, V-belt drives, plugs and sockets, lighting fittings and many other items. Producing this equipment to the highest possible standards calls for a concentration of specialized skills and experience. GCCP has them.

GCCP also plans electrification, installs equipment and provides a comprehensive, after-sales service.

The Stock Markets

POLITICAL ANXIETIES KEEP CALCUTTA SUBDUED

Trading in the Calcutta stock market has been interrupted by a number of holidays during the past week. After opening on a weak tone, sentiment improved somewhat due to short-covering. Bears covered their open positions in the hope that India and China would meet to settle their border dispute on the basis of the Colombo proposals. But fresh weakness has again developed towards the close due to the Prime Minister, Mr. Nehru's statement that India will not negotiate with China until the latter accepts the proposals in full. This has revived the political uncertainties.

The trend has been softer on a predominance of sellers in a market where buyers are few. Except for scattered buying in selected shares, business has been difficult to negotiate. Although prices have fallen since the "floors" were scrapped last week, investors continue to doubt whether all the adverse factors have been discounted. The coming Central Budget is the most important discouraging factor, as it is feared that much heavier taxation is in store. Investors are, therefore, inclined to watch and wait. In spite of the lower carry-forward charges at the last settlement, operators have not been encouraged to extend their commitments. They fear that the shortage of funds will become more acute in the near future since many banks are recalling their advances against shares. In any case, the interest rate on advances against shares has been too high to stimulate activity.

Steel shares have been neglected and Indian Iron have been unofficially offered below the minimum price. The interim report of the Raj Committee on steel prices and distribution caused a temporary rally as it stated that the present retention price of steel is too low to provide for adequate replacements. But sentiment has again deteriorated on reports from New Delhi that the Government has no intention of modifying the retention price for the time being. Another report that the Government is going to consider the expansion proposal of the Indian Iron and Steel Co. favourably has been ignored by investors. It is reported that the Company proposes to increase its ingot capacity by a further 300,000 tons at an estimated cost of Rs. 15 crores. The Company does not foresee any difficulty in obtaining the foreign exchange for the project. But investors fear that the Company may not increase the dividend even if it is asked to proceed with the expansion scheme. Apart from the need for bigger ploughback of profits into the business for expansion, its earnings have been squeezed by rising production costs coupled with the low retention price of steel. Except for stray support for Braithwaite, engineering shares have been generally neglected. Britannia Engineering and Dalmia Iron have declined.

In the coal section, turnover has been confined to Bengal, Pench Valley, Amalgamated and Western Bengal. Although there has been little selling pressure in jute shares, buyers have not been many. It is accepted that jute companies will make bigger profits for the current year and larger dividends may be paid, but investors are getting worried over the long-term outlook for gunnies. In recent weeks foreign

enquiries for jute goods have fallen below expectations. Apart from full capacity production in the mills, competition from Pakistan has increased, particularly in sacking. It remains to be seen whether the increased output of Indian mills will be absorbed in the coming months.

Prices of miscellaneous shares have been depressed on a predominance of sellers. It looks as if there has been some distress selling following the pressure from banks. Cotton mill shares have been subdued as the outlook for cloth and yarn continues to be uncertain. Dunbar have declined but Jay Shree Textiles have met with influential support. Dunlop Rubber have been somewhat steady. Hindustan Motors have come in for influential buying. Investors in motor-vehicle shares have not been able to make up their minds whether the diversion of capacity to the manufacture of lorries will help improve the profits. Angelo Brothers have been taken due to the good annual report, though at lower levels. Among managing agency shares, Martin Burn and Jardine Henderson have been transacted. Among new shares, interest has been taken in Hindustan Twyford, Asiatic Oxygen and Isaac Holdens. Among electric companies, Calcutta Electric have been steady on paying an interim dividend. In the paper section, Sirpur have improved on interested buying. Business has been done in Bengal, Titagur and Seshasayee. Sugar shares have been difficult to sell in the absence of buyers. The disappointing results of many companies for 1961-62 have called for caution.

There is virtually no interest in tea shares. Stray business has been done in Methoni and Tezpur. Investors are worried about the dividend prospects.

There has been scattered support for selected preference shares and debentures. Government securities have been dull and quiet due to the absence of buyers. The Reserve Bank has again cut its buying and selling prices for some Central Government securities. The 3 percent Conversion loan 1986 is barely steady at the official support level of Rs. 63. Prices of State Government loans have been depressed.

Bombay

**MIXED TREND IN
DALAL STREET
CENTRAL BUDGET
CASTS SHADOW**

Tuesday Evening.

THE Bombay stock market has shown mixed trends during the past week. The interim report of the Raj Committee on steel prices and distribution led to a temporary rally. There was a great deal of short-covering as the Committee said that the retention prices of steel, as fixed by the Government, do not provide for adequate replacement. Sentiment also improved on hopes that the border dispute between India and China would be settled by negotiation. But the quieter trend has again asserted itself since a New Delhi Press report said that the Government has no intention of chang-

ing the retention prices of steel, at least before 31st March, 1963. Operators have also been depressed by the statement of the Prime Minister, Mr. Nehru, that India will not negotiate with China on the border issue until the latter accepts the proposals of the Colombo conference in toto.

Operators and investors are inclined to cut their commitments by selling at every bulge on fears of heavier taxation in the coming Central Budget. A Press report that the Central Finance Minister has indicated increased taxation at both the Central and State levels, has induced selling. At the close, share prices have declined all round in the absence of support.

After an earlier improvement, Tata Steel have declined to Rs. 117 and Indian Iron to Rs. 21. In the engineering section, Tata Locomotive and Premier Construction met with support earlier, but they have reacted towards the close. Mukand Iron have been slightly steadier on influential support due to prospects of expansion. In motor-vehicle shares, Hindustan Motors are about steady, but Premier Automobiles are depressed.

Turnover has shrunk in cotton mill shares and prices have declined all round. Business has been largely confined to Century, Bombay Dyeing, Kohinoor, Gokak, India United Ordi-

nary and Svadeshi. In the miscellaneous section, sugar shares have been depressed on fears of small production during the current season. In the cement section, Associated Cement and Digvijay have declined. In the mining section, B. B. Petrol have fluctuated widely. Among steamship company shares, Scindia Steam have fallen on a predominance of sellers. Bombay Burmah have reacted at the close after an earlier improvement. Rayon shares have been quiet, and National Rayon have declined further. Chemical shares have been sold freely. Voltas have turned weaker on pressure. Business in cash shares has been negligible. In electric company shares, Ahmedabad and Bombay Suburban have weakened. Bank shares have met with scattered buying.

Madras

SHARE PRICES FALL FURTHER

INVESTORS WORRIED OVER SHORTAGE OF FUNDS

Monday Evening.

THE Madras stock market has been quiet during the past week. Turnover has shrunk considerably

and share prices have declined further. Operators have turned cautious in view of the economic and political uncertainties. Hence, business in clearing shares has been negligible and the trend has been downward. Easier advices from Dalal Street have been an additional deterrent. Investors are worried about the growing shortage of funds. They are afraid that rates of interest may rise further in the coming weeks.

Turnover has largely been confined to plantation shares. Selected tea and coffee shares improved earlier. Tea companies are expected to do well during the current season as the production will be higher. The average price of tea realised has been satisfactory so far. As for coffee, the export outlook is considered more encouraging than before because of an improvement in its international price. But at the close, the prices of plantation shares have declined on a predominance of sellers. Cotton mill and miscellaneous shares have been offered freely at cut rates.

Among banks, Indian has declared a taxable ordinary dividend of 15 per cent and the State Bank of Mysore a taxable dividend of 10 per cent. Indian Overseas has offered a taxable dividend of 14 per cent. In electric companies, support has been confined to Vellore. In the sugar section, Mysore

have met with scattered support. E.I.D. have been steady. In the planting section, Blue Mountain are easier. So are Consolidated Coffee. Business has been done in Periakaramalai and Ochterlony at lower levels. In the cotton mill section, South India Viscose and Travancore Rayon have declined.

Among miscellaneous shares, Aluminium Industries have met with stray buying on paying an interim taxable ordinary dividend of 9 per cent. Seshasayee Paper have reacted on pressure. Ashok Leyland, India Cement and Mettur Chemical have turned weaker. Southern Structurals have issued 300,000 ordinary shares of Rs. 10 each at par to the existing shareholders in the proportion of six new shares for every ten shares held. Krishna Rajendra Mills propose to issue 10,000 taxable redeemable cumulative preference shares of Rs. 100 each to the existing shareholders in the proportion of one new share for every eight ordinary shares held. The new preference shares will carry a taxable dividend of 9.5 per cent. The following shares have been dealt in: Indian Overseas Bank at Rs. 160, Chembra at Rs. 3.59, Periakaramalai at Rs. 3.05, Waterfall at Rs. 2.10, South India Viscose at Rs. 1.26, Travancore Rayon at Rs. 27, Seshasayee Paper at Rs. 7.45, Ashok Leyland at Rs. 8.06, Aluminium Industries at Rs. 23.15 and Mettur Chemical at Rs. 13.15.

CAPITAL, 31st January, 1963.

London

PRICES FALL DUE TO LACK OF SUPPORT

GOLD AND OIL SHARES IMPROVE

London, 29th January.

FAVOURABLE factors were badly lacking in the stock market during the past week, while sentiment was dominated by Common Market uncertainties, and few people were prepared to take a line in advance of the resumed negotiations. A decision either way would come as a relief to the stock market. It was a case of prices steadily drifting lower and gilt-edged came under pressure with the Continent offering stock. Gold shares made the best showing with prices improving on a broad front. Sentiment was helped by Press comment on inflation and the gold price, but actual business was moderate and mainly professional. Equities eased in the absence of support and even Woolworths failed to benefit from the good results. Dollar stocks gave a good performance due to Wall Street's steady improvement. Oils, too, improved for the same reason with British Petroleum particularly favoured. Shell were helped by the good earnings of the U.S. Shell Company. Rubbers were inclined to ease, but teas were selectively wanted.

How ISI Helps the Manufacturer

BY PROVIDING THE SEAL OF INTEGRITY

The ISI Certification Mark may be given to any manufacturer whose products are made to the relevant Indian Standards. It is a recognition of his business integrity and trustworthiness.

Modern methods of quality control, an essential part of any scheme of certification, bring about many economies in production through elimination of defectives, increase in productivity, and securing of uniform quality of output. These benefits far outweigh any additional cost involved in instituting continuous inspection and testing.

Periodical check-up by ISI of manufacturers' own quality control systems constitutes an invaluable service to ensure top management of the high efficiency of production and maintenance of quality.

Consumer satisfaction and competitive marketing position are the obvious advantages enjoyed by all ISI Mark users.

Enquire for details NOW how you too can join the distinguished company of manufacturers who already hold the ISI Certification Mark Licence.

INDIAN STANDARDS INSTITUTION
NEW DELHI • BOMBAY • CALCUTTA • MADRAS • KANPUR

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coil.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a 1 1/2" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

INDIAN STANDARDS CONVENTION

DEVISING STANDARDS FOR INDUSTRIAL SAFETY

By Ram D. Taneja

(Assistant Director, Indian Standards Institution)

WHILE taking a look around Niagara Falls, America's favourite honeymoon resort some time ago, this writer was intrigued to read a sign in one of the hotels which said that marriage guidance counselling service was available to its guests, and without any charge. The American companion hastened to explain, however, that the service had proved quite popular even with the newly married who would want to know as much of the do's and don'ts as possible and thus "play safe" right from the start.

While there may be a difference of opinion about new couples starting off with marriage counselling, there certainly cannot be two opinions on the need for "playing safe" right from the start with those weird electrical, mechanical, and other devices and appliances one uses in the home and in the factory. It is well known that more accidents occur in the home than anywhere else and many of such mishaps are caused by electricity. It is not an uncommon experience, for example, to be whisked away by a greenish explosion while flicking about a switch after connecting up an electrical heater or a press. And one keeps wondering why the plug in the heater which one had just purchased should have behaved in this fashion. But then one heaves a sigh of relief that after all one escaped unharmed. In actual fact, many of these "handy" devices are a sure way to electrocution in one easy step.

Accidents in Home and Factory

This is but one of the many situations with which one is confronted in the workaday life in the home, in the factory and elsewhere. It underlines the need for greater vigilance and check in the production of devices and appliances which conform to certain minimum standards and for provision and observance of safety codes for avoiding mishaps and protecting health, life and property. According to a recent estimate of the Chief Adviser of Factories, about 3 million man-days are lost every year through accidents in industrial establishments (factories, mines, etcetera) in India. The accidents range from cuts to amputations and permanent disablement. The loss to industry due to reduction in productive capacity and compensation paid to the injured under the law would run into millions of rupees.

A review of these accidents would show that most of them arise from simple causes, are readily foreseeable, and could, therefore, be prevented if some simple rules and practices were observed. Failure to take adequate precautions against predictable accidents would involve serious guilt on the part of both the management and the workers.

It is obvious that as industry in India, propelled by technological advance, becomes more and more mechanised, conditions are created in which accident prevention tends to assume a vital significance and requires a national programme of industrial safety encompassing all phases of the environment and operations of an establishment. And, to be effective, such a programme has to be formulated and implemented by safety personnel having specialised

knowledge of codes and practices pertaining to the field.

Safety Consciousness

Several developments have taken place in recent years, which have promoted safety-consciousness among industrial management and workers in private and public sectors. The Labour Ministers Conference held in 1960 made several suggestions to advance the cause of industrial safety. Later, in 1961, a team of industrial executives, safety engineers and Government officials associated with the enforcement of the Factories Act visited the U.K. and the U.S.A. Sponsored by the National Productivity Council, the team was assigned the task of assessing the state of industrial safety movement in the U.K. and U.S.A., and to determine the attitude, methods and techniques adopted in those countries for prevention of accidents. In the light of this study, the team has made several recommendations on the methods and techniques which could be applied to Indian industries. Among others, the recommendations deal with methods of safety training for workers and supervisors, organisation of safety councils and other institutional arrangements, measures for prevention of accidents, and

standards and codes on industrial safety.

About the rôle of safety codes, special mention has been made of the noteworthy success achieved by the American Standards Association in initiating and developing a safety code programme with which are associated State and Federal Government agencies on the one hand and national industrial associations and labour groups on the other. More than 50 U.S. standard safety codes prepared by the Association provide the basis for the regulations enacted by State Government agencies. Extensive participation of industry through its national associations has resulted in wide acceptance of these codes by industrial establishments all over the country.

In the U.K., safety in industry has been, and still is, primarily regulated by the Government, although employers have gone beyond the legal requirements to ensure safety in their plants. The preventive aspect of accidents in industry is also receiving considerable attention. The British Standards Institution, through its Personal Safety Equipment Committee and Codes of Practice Committees on Building and Engineering, is doing valuable work on the formu-

lation and implementation of safety standards for British industry. Associated with these committees are bodies like the Royal Society for Prevention of Accidents, Industrial Welfare Society, associations and federations of manufacturers, institutions of science and engineering, the U.K. Atomic Energy Authority, Medical Research Council, the Factory Inspectorate of the U.K. Ministry of Labour, and the Trades Union Congress. For the benefit of the industrial community, the Factory Inspectorate and the National Service maintain in London an Industrial Health and Safety Centre which is a permanent exhibition of methods, techniques and appliances for promoting safety, health and welfare in industry. The Centre has served as an active agency for publicising safety codes and practices and for educating employers and employees, and their organisations in such matters. It also acts as a clearing house for ideas on the numerous problems arising in industry.

Indian Safety Standards

The Indian Standards Institution has been functioning over the years with a steady awareness of the rôle of industrial safety in promoting industrial efficiency. The codes of practice and other standards dealing with different aspects of safety requirements produced by the various sectional committees of the I.S.I., are designed to meet the need for a body of literature which should serve as a guide to those concerned with accident prevention. To date, the I.S.I. has published about 40 standards on safety items relating to diverse groups of subjects, such as functional

requirements of buildings, refrigeration and air conditioning, fire fighting, welding electrical appliances and accessories, power installation and maintenance, electronic equipment, cargo marking and leather products.

These standards have already been adopted by purchase departments of

the Government of India, like the Directorate General of Supplies and Disposals, Research, Design and Standards Organisation; Directorate General, Ordnance Factories; and Posts and Telegraphs. Besides, they have been recommended for adoption by the industrial projects in the public sector, and the Ministries of

Railways; Finance; Transport and Communications; Defence; Steel, Mines and Fuel; Works, Housing and Supply; and Labour and Employment.

For intensifying the propagation of industrial safety, the I.S.I. has set up five additional sectional commit-

tees. They deal with gas cylinders, boilers, duty conditions in mines, hand tools and chemical hazards. Their main job is to study and explore the existing conditions in the respective fields, tender advice on relevant statutory regulations and generally to assist in the formulation of standards.

PROGRESS OF STANDARDISATION IN INDIA

By Manohar Lal

FOR the development and growth of an industrial economy on a planned basis, standardisation plays a vital rôle. In industrially advanced countries, national standards developed at a rapid pace. But due to various reasons, they have developed in India only in recent years. It was in 1909 that the Indian railways decided that their supplies should be met as far as possible from indigenous manufacture. For ensuring the production of domestic goods to certain specifications, the Government adopted some measures including the setting up of a Government test house in Calcutta, followed after a few years, by the Central Standards Office of the railways.

The first and second World Wars provided some impetus to the development of Indian industries when supplies from abroad became difficult and heavy demands were made on the domestic industrial units to meet both defence and civil requirements. It was at the Twelfth Industries Conference held in Lucknow in December 1940 that a proposal was first made for setting up a national standards body in the country. The matter, however, could not be proceeded with due to war conditions, but immediately after the cessation of hostilities, actions were taken to further the proposal. On 3rd September, 1946, the Government of India passed a resolution for the establishment of the Indian Standards Institution (I.S.I.). With the active support of industry, as well as scientific and research bodies, the Institution started functioning in 1947. Standardisation at the national level in India can thus be said to have begun in 1947.

Aims and Objects

The Indian Standards Institution is the joint venture of both the Government and industry; and its aims and objects include the following:

(a) To prepare and promote the general adoption of standards on national and international basis relating to structures, commodities, materials, practices, operations, matters and things, and, from time to time, revise, alter and amend the same.

(b) To promote standardisation, quality control and simplification in industry and commerce.

(c) To co-ordinate the efforts of producers and users for the improvement of materials, products, appliances, processes and methods.

(d) To provide for the registration of standardisation marks applicable to products, commodities, etcetera, for which it issues standards to be branded on or applied to those products, commodities, etcetera, which conform to standards set.

(e) To provide or arrange facilities for the examination and testing of commodities, processes and practices, and for any investigations or research that may be necessary.

(f) To collect and circulate statistics and other information relative to standardisation in all its branches.

(g) To establish, form, furnish and maintain libraries, museums, and laboratories for the purpose of furthering the practice of standardisation.

(h) To communicate information to members on all matters connected with standardisation and to print, publish, issue and circulate such periodicals, books, circulars, leaflets and other publications as may seem

conducive to any of the objects of the Institution.

According to its constitution, the activities of the Institution are controlled by its General Council on which are represented Central and State Governments, industrial and manufacturing organisations, business and commercial houses, research and technological bodies and organised consumers and purchasers. The day-to-day affairs of the Institution are managed by its Executive Committee, which is advised on financial matters by a finance committee.

Division Councils

For the preparation of Indian standards, the Institution functions through the following seven division councils which look after the work of standardisation in respective industries: (a) agricultural and food products; (b) building; (c) chemicals; (d) engineering; (e) electro-technical; (f) structural and metals and (g) textiles. The technical work of formulating Indian standards is handled by expert technical committees—sectional committees, sub-committees and panels—appointed by the executive committee and the seven division councils. On these technical committees is given representation to all interests concerned with the formulation, implementation and application of standards in their day-to-day life—manufacturers, consumers, purchase organisations, Government departments, research and technological bodies, etcetera.

The experts on these technical committees work in honorary capacity and the number of technical committees as well as their membership increases in proportion to the number of Indian standards prepared. At present, there are more than 1,100 technical committees with a membership of about 13,000. The I.S.I. can, therefore, safely be termed as the biggest co-operative organisation in the country where technical talent and know-how is pooled together for the development of national standards which aim at increasing productivity, reducing cost, minimising wastage, and simplifying processes.

Development of Standards

Indian standards for various products, materials, processes, operations, matters and things have to go through a detailed procedure of a careful study and thorough scrutiny at various stages before their publication as such. After a proposal is received by the I.S.I. directorate, a draft is prepared for the consideration of the technical committee concerned and after going through the preliminary stages, the document is widely circulated for a period of three months to all interests concerned both in India and abroad for eliciting their technical comments which are again carefully considered by the technical committee. The technical requirements specified in the Indian standard are incorporated after a complete scrutiny especially relating to the technological development obtaining in the country and, wherever necessary, they are corroborated by actual tests in independent laboratories.

Thus a final Indian standard, when published, reflects a consensus of opinion among different interests in points of the minimum requirements for quality and performance, of a product. In this way, it is truly a national document capable of guiding, developing and promoting the industry,

trade and commerce on proper lines.

Within the short life of 15 years of the Institution, more than 2,100 national standards have been published, covering a wide range of subjects—from biscuits and vegetable oils to industrial motors and transformers, and from textiles and paints to steel and metals. The following table gives the break-up of the Indian standards for different industries:

INDUSTRY-WISE BREAK-UP OF INDIAN STANDARDS PUBLISHED AS ON 30th NOVEMBER, 1962

Industry	Number of Indian standards published
Agricultural and food products	177
Building	302
Chemicals	607
Engineering	219
Electrotechnical	166
Structural and metals	262
Textiles	364
Others	20
Total	2,117

The country has embarked on economic reconstruction through planned efforts by exploiting the vast natural resources. Two five year plans have been successfully gone through and the third, which is in operation, visualises the need for laying the foundation for rapid industrialisation over the next 15 years.

Industry and commerce have taken many strides because of these plans. Many new industries—large, medium and small—have been set up; existing industries have been further developed and expanded; productivity has increased. Furthermore, self-sufficiency has been attained in many cases, dependence on imports has been reduced and foreign markets for many indigenous products have been built up. In all this venture, Indian standards have contributed their share—by simplification in manufacturing processes, reduction in varieties, and through improvement in manufacturing techniques, increases in productivity, reduction in production costs and elimination of waste.

With the increase in standards-consciousness and the rapid industrial development through planned efforts, the demand for national standards has been rising appreciably. But the Institution has also not lagged behind in coping with this demand. It has formulated its own five-year development plans, the periodicity of which corresponds to the national plans. The third five year plan of the Institution visualises a two-fold increase in its activities. It is expected that the rate of formulation of Indian standards will be gradually increased so as to reach the figure of 500 in the last year of the plan; and the estimated number of standards by the end of the plan are expected to approach the mark of 3,500.

Certification Marks Scheme

It has also fallen within its purview of the I.S.I. to provide a third-party guarantee of the quality of goods to the consumer who possesses neither the technical know-how nor the necessary wherewithal to determine their quality. Accordingly, the Institution is operating the I.S.I. Certification Marks Scheme under the powers vested in it by the I.S.I. Certification Marks Act of Parliament. Under this scheme, licences are

granted to manufacturers to mark their products with the I.S.I. standard mark which conveys an assurance to the purchaser that the products in question have been produced according to the requirements laid down in the relevant Indian standards. The Institution maintains its own machinery for inspection of goods at different levels of production and satisfies itself completely as to the capability of the factory for producing goods continuously according to Indian standards, not only at present but also in the future.

The scheme, which was started in 1955, has made sufficient headway and as on 30th November, 1962, 481 licences were issued and 956 applications received. Many important consumer items of daily use have been covered by the scheme, such as biscuits and other eatables, inks, aluminium utensils, tea-chests, toilet soaps, etcetera.

Voluntary Adoption

Consistent with the democratic principles, Indian standards are voluntary in nature to be implemented by different interests through persuasive efforts. Generally, implementation of Indian standards is ensured through the very process of their preparation which requires getting the widest possible agreement among the interests concerned. Besides, conferences on the implementation of Indian standards are held by State Governments, at which the representatives of various State Departments, local bodies and industrial and purchase organisations are exhorted to adopt Indian standards in their manufacturing and purchase programmes. So far, such conferences at State levels have been held in Orissa, Kerala, Punjab, West Bengal, Mysore, Uttar Pradesh, Bihar, Gujarat, Maharashtra, Himachal Pradesh and Madhya Pradesh.

Most of the Governments—Central, State and local—have agreed in principle to purchase their requirements in goods and services according to Indian standards. Some of the Governments have also issued policy directives to their respective departments to specify Indian standards in their tenders. It is estimated that about 86 percent of the standards have been implemented by important organisations in public and private sectors.

The Institution serves the national interests at international level as far as standardisation is concerned. The I.S.I. has been taking active interests, since its inception, in the work of the International Organisation for Standardisation (I.S.O.) and the International Electrotechnical Commission (I.E.C.)—the two organisations dealing with standardisation at the international level. Secretariats of the following important technical committees of the I.S.O. in which India has vital interest are held by the Institution: TC 30/SCI Measurement of Liquid Flow in Open Channels; TC 34/SC7 Spices and Condiments; TC 50/Lac; TC 56/Mica; TC 88 Pictorial Marking of Handling Instructions for Goods. The secretariat of the Electric Fans Committee (TC 43) of the I.E.C. is also held by the I.S.I.

An industrial revolution is in progress in India. The tempo of activities is on the increase, in which the I.S.I. has been playing its full part. It is, however, necessary that the manufacturers and producers should of their own volition implement Indian standards and continue to make technical improvements in their production not only because it is their primary obligation to the consumer, but also because it is only by maintaining uniform standards and high quality that markets, both internal and external, can be built up.

COTTON PRICES RECOVER AS CURBS RELAXED

(FROM OUR BOMBAY CORRESPONDENT)

THE trade's repeated representations to the Government seeking relaxation of various restrictions on cotton in order to stimulate offtake and check the declining trend in prices, have not been in vain. The measures announced by the Government on 23rd January meet most of the trade's demands. Restrictions on the quantity of cotton which mills can hold in their stocks have been removed and their quotas have been raised. Hitherto, mills in the north zone had been allowed a quota of Indian cotton to the extent of 65 percent of their consumption of such cotton and foreign B cotton during 1960-61, with the provision that a quantity representing 10 percent should be purchased out of local growths in Rajasthan, Punjab and U.P. The total quota has now been increased to 75 percent and the qualitative restriction concerning the 10 percent has been done away with. The quotas of mills in other areas have been raised from 45 percent to 75 percent. The mills are permitted to purchase cotton without waiting for the quota letters.

In order to encourage the growth of long staple cottons, an element of compulsion has been introduced on the use of Cambodia cotton. Mills which have consumed foreign cottons stapling between 1½ in. and 1½ in. and/or Indian Cambodia A and/or B in 1960-61, are now required to purchase Cambodia A and/or B cottons at least to a minimum of 5 percent of their annual quota of Indian cotton for the current season. This will provide considerable relief to Ahmedabad cotton growers who had recently raised a hue and cry against the accumulation of stocks and heavy fall in prices. Yet another concession—more for the mills than for the trade perhaps—relates to the payment of 7½ percent of the purchase price through the intermediary of the supervisors. It had been represented from certain quarters that the payment of this 7½ percent through the supervisors resulted in some delay in the movement of the crop. To avoid this difficulty, the Government has decided that 7½ percent of the value of cotton will be paid directly by the mills to the sellers, but only after the supervisors have checked the invoices.

The trade is not quite happy about the maintenance of the check on invoices, and it would have very much liked the abolition of the entire supervisory scheme which has lost nearly all its significance with the decline in prices substantially below the ceiling. The supervisory scheme had been introduced only to ensure that cotton prices were kept within the ceilings. The general feeling in the trade is that the relaxation of the various curbs will help revive business and impart stability to the market. In fact, cotton prices—ready as well as futures—have already recorded a substantial improvement. Cotton futures (March contract), which had been marked down to Rs. 656 a 3 quintals (in kerb dealings) on 21st January, spurted to Rs. 685 a day later.

Pepper Prices Rise due to U.S. Dock Strike

(BY A SOUTH INDIAN CORRESPONDENT)

LAST week, there was a sudden rise in black pepper prices on account of active replacement buying by the grinders and dealers in the

United States. This was the result of the U.S. dock strike. Prices shot up to 40 cents a lb in New York, when the buying frenzy was at its peak. Since Wednesday of the week, however, there has been an easing of the market trend. Buyers have started withdrawing anticipating an early resumption of movement of pepper from piers and vessels in New York as the strike has ended. Sellers have reduced their price ideas. They were asking 34 cents on Thursday for spot delivery and 30 cents for afloat, but buyers were not keen on making purchases. The disparity between the Indian and Singapore prices has disappeared. Underselling by Singapore was a serious menace for Indian pepper for some time, and on that account this country has had a definite disadvantage since the current season began in November last. Pepper exports are usually at their peak during November, December and January. Although India was able to export as much as 23,000 tons last season, which was a new record, she was not able to do much so far this season because of the competition from Singapore and the poor foreign demand, particularly from the United States. It was difficult to sell the Indian crop even for 28 U.S. cents a lb just before the dock strike in the U.S.A. started. This strike came as a blessing for the pepper exporters. Prices hardened when the U.S. buyers reappeared in the market. The buyers are unlikely to show continued interest at higher prices now that the dock strike is over and normal supply is restored. However, it is felt that if India could retain her competitive level with Singapore and if she is prepared to make some sacrifices to win over the U.S. buyers Indian pepper exports will make a smart recovery.

In the meanwhile, forecasts about world pepper output this year are encouraging for the buyers. World production of black and white pepper in 1962 is estimated at 160.7 million lbs, compared with 168.8 million lbs in 1961. Increases have been recorded for India, Sarawak and the Malagasy Republic, while Indonesia, Brazil and Cambodia harvested smaller crops. Production during the current year, it is expected, will be larger

ger as increased crops are to be harvested in India and Indonesia, which together account for two-thirds of the world supply of pepper. Asian countries account for more than 90 percent of the world output. India is the largest world producer, and her 1962 crop of 67 million lbs was a 7.5 percent gain over that of the previous year. Weather has been good and a further increase is expected in 1963. Indonesian production of 40 million lbs was down by 25 percent on the 1961 crop, and this is attributed to the extended dry period in Sumatra, the major producing area. The 1963 crop of that country is expected to be larger as a result of more favourable weather. The output in Sarawak is estimated at 20.7 million lbs, compared with 18 million lbs in 1961. The increase is attributed to new plantings made in 1958-59 coming into production and to the more widespread use of organic manures. The smaller crop of Cambodia is attributed mainly to the high incidence of disease damage to vines. Production in the Malagasy Republic continues to increase. Output in 1962 of 3 million lbs was three times the average of 1950-54. Significant quantities are produced in West Cameroon and in the Congo, but domestic consumption absorbs most of the production. Brazil's output is estimated to be lower than the 1961 harvest of 11 million lbs. Production has shown rapid gains during the past several years. The average production during the 1950-54 period was only 1.1 million lbs.

Tea Exports Rise Despite Fall in Production

(BY A SPECIAL CORRESPONDENT)

SPEAKING at the recent annual general meeting of the Doora Branch of the Indian Tea Association, Mr. J. G. Day, chairman, said that "during the 1962 season, the weather had been fairly satisfactory and a crop of about 66 million kilograms had been harvested in the area. This was well above the average for the last three years." The average prices which the tea fetched in the London and Calcutta markets had also shown an improvement compared with the previous year. It is hoped that these will be maintained. "Bigger crops and higher prices should result in better profits, but production costs during 1962 may show a rise, as both wages and material prices have gone up."

The speech of Mr. A. S. Bam, chairman of the Indian Tea Board, was read at the meeting. Referring to production, it was noted that north

India was affected by an unseasonal weather in 1962 and production would be lower than that of 1961. Production in south India had, however, improved and was expected to be higher by about 2 million kilograms. The total production in India in 1962 is, therefore, likely to fall short of the previous year's output by about 10 million kilograms.

In spite of the decline in production, the industry's performance in the field of exports has shown a significant improvement in 1962. Referring to exports, it was stated that there was a setback in November and the early part of December because of transport difficulties. Total 1962 exports were estimated at 214 million kilograms valued at Rs. 124.9 crores, against 205 million kilograms valued at Rs. 124.6 crores in 1961.

There is an anomaly here in so far as the Calcutta prices for export teas this season show a rise. The quantity exported also shows an advance but the foreign exchange earned by India remains practically the same at Rs. 124.9 crores compared with Rs. 124.6 crores in 1961. The Government, the Tea Board and the trade all deserve congratulations on having reserved the percentage of loss in Indian exports reported in recent years, but actual receipts shown from foreign exchange are somewhat puzzling.

Sales and shipments are now moving more normally but at the end of December, stocks in Calcutta private and public warehouses were on the low side at 787,496 packages, against last year's 1,093,068 packages. Of course, the 1961 season yielded a record crop. On the other hand, teas afloat were considerably higher than in past years.

From the end of October, tea and coffee exports were reported down by comparison with those of last year. Tea earned less in foreign exchange. Coffee, however, did better, which, in view of the world supply of the commodity, is a hopeful sign. Although India has registered a useful revival in tea exports to North America, it is reported that she is still losing ground in the U.K. where Ceylon's produce continues to gain in favour at this country's expense. Ceylon is reported to have tea centres in London, Birmingham, Exeter, Glasgow and Manchester. Tea sales on the London market have followed the 1961 pattern of fairly violent fluctuations, ending up with much the same total quantity sold at similar prices. But north India has done comparatively well, with the year's average over 5s a lb against 4s 3d in 1961. Africa increased its offerings but secured 4d less than last year.

CAPITAL, 31st January, 1963.

CAPITAL, 31st January, 1963.

New Delhi

OIL POLICY AFFECTS FOREIGN INVESTMENT

(FROM OUR NEW DELHI CORRESPONDENT)

IN his campaign against the three western oil companies, the Central Minister for Mines and Fuel, Mr. K. D. Malaviya has raised the bogey of perennial drain of foreign exchange from India. But such a drain is inevitable in any scheme of foreign collaboration or even for the development of public-sector projects through loans. It is obvious that Mr. Malaviya's attitude towards the western oil companies is affecting the pattern of foreign investment in India. But it is the three foreign oil companies which by their large investment created a favourable climate for foreign investment soon after India's independence. That the tide has turned is evident from the following figures relating to the number of foreign collaboration arrangements:

	Total	U.K.	U.S.A.	West Germany
April-June 1961	105	34	23	29
April-June 1962	80	23	11	12
July-September 1961	96	29	19	18
July-September 1962	43	13	5	7
October-December 1961	101	35	24	10
October-December 1962	53	14	12	6

The decline has started from April-June 1960, when the number of foreign collaboration arrangements stood at the peak figure of 149. In the following quarter ended September 1960, the number dropped to 69 and then to 43 in the quarter ended September 1962.

Under the Industrial Policy Resolution, the Government has reserved to itself the full right to amend or reject the terms of foreign collaboration. But once a foreign entrepreneur was permitted to enter the Indian market—either individually or in collaboration with an Indian partner—he was assured of all rights and privileges enjoyed by an Indian entrepreneur or even by a public sector project. The foreign entrepreneur was guaranteed against discrimination once he agreed to operate within the framework of Indian laws and policies. But the denial of expansion to the private-sector refineries when the public-sector ones are being "expanded" even before they have gone on stream, should be regarded as discrimination under the Government's declared policy.

The south Indian refinery, according to uncontradicted reports, will be built by Phillips Petroleum Company of the U.S.A. Under the proposal, the Government of India will have 51-percent share in the refinery's equity capital and Phillips Petroleum 25 percent. Twenty-four percent will be taken over by the Indian collaborators of the U.S. Company, which will be entitled to buy crude from its own sources. As 25 percent share in the equity capital will be inadequate to meet the foreign exchange cost of the project, Phillips Petroleum will be empowered to raise a dollar loan in the United States. In other words, under Mr. Malaviya's own scheme, Phillips Petroleum will be entitled to take from this country not only interest

on the dollar loan but also profits on its equity capital and other operational charges.

Mr. Malaviya has asked E.N.I. to undertake exploration in the Ganga Valley and build the Gauhati-Siliguri pipeline. These two projects will be financed from the E.N.I. credit. Under the terms of the latter, the Government of India will have to pay in cash 5 percent of the estimated cost of the project, 3 percent after one year and the balance in ten yearly instalments. The credit carries 6 percent interest. The whole scheme involves a considerable drain of foreign exchange, of which India is short. The latest thinking in New Delhi does not distinguish between payments in rupees and dollars. Even so, India will have to pay interest at 6 percent on all the credit taken from the communist bloc to build refineries, involving a drain on foreign exchange resources.

As far as the oil companies are concerned, they have offered to abrogate their refinery agreements and take out industrial licences under which the companies will become rupee companies. If Mr. Malaviya is really solicitous about the drain on foreign exchange, the proposal of the oil companies, which will reduce it considerably, should be accepted.

The Planning Commission told the standing committee of the National Development Council that the total refining capacity in India would increase from 7.1 million tons to 9.6 million tons in 1963, 11.6 million tons in 1964, 12.6 million tons in 1965 and 17.6 million tons in 1966. These calculations are made on the basis that the private-sector refineries were not allowed to expand. The present capacity of the latter is 7.85 million tons a year. According to estimates, the full capacity of the public-sector refineries, including the one in the south, should be 9.75 million tons.

Three Issues

There are three relevant questions. Firstly, Mr. Malaviya's case rests on his claim that all the four public-sector refineries will not only be installed, but will go into full production by 1966. Against this claim, the Barauni refinery has yet to go on stream, the Koyali refinery is in the planning stage and the south Indian refinery is in the talking stage. As far as the expansion programmes of the Nummati and Barauni refineries are concerned, a snap decision was reached only in the middle of December 1962. But the Russians and the Rumanians have yet to be persuaded to extend credit for their expansion. Thereafter they will commence planning, followed by the manufacture of equipment and installations. What will happen to the country if these public-sector refineries do not go into full production by 1966? The alternative will be to grant licences to the three western oil companies to import petroleum products and thereby cause a larger drain on foreign exchange resources. The import of 1 million tons of petroleum products causes a drain of Rs. 5 crores worth of foreign exchange.

The second issue is in relation to demand. One estimate—exclusive of the increase in defence require-

ments—placed the demand for 1965 at 15 million tons and that for 1966 at 18 million tons. Thirdly, even if according to Mr. Malaviya's claim the refining capacity will fully meet the 1966 demand, India will actually be in short supply, at least by about 2 million tons in 1967, unless it is assumed that India will stand still after 1966. This, however, is not the view of the Central Ministries of Steel and Power, which have already started planning for the fourth plan. Past experience has shown that the demand for petroleum products has been rising at the rate of 2 million tons a year. The Productivity Team, which reported last year after visiting Russia and Rumania, has recommended the creation of refining capacity in excess of demand by 20 percent.

A significant statement was made by Mr. Malaviya in Parliament last week. Replying to a question, he said that during the worst days of November, the Russian experts engaged on the Sibsagar project in Assam were posted on duty on various projects in Gujarat. No comment is necessary.

To sum up, the effect of Mr. Malaviya's oil policy is to leave this country unprepared in meeting the demand for oil products. It is also affecting the flow of foreign investments into India. But the issue is whether ideology should triumph over the best interests of the country or vice versa. The only lurking hope is that the Planning Commission has been directed by the Central Cabinet to determine, not only the demand for 1966 but also the rate at which the demand for petroleum products is growing. It is on the basis of the Commission's finding that a decision will be reached whether India needs further refining capacity and, if so, whether it should be met by the expansion of the private-sector refineries. The way the Cabinet reached its last decision, however, does not inspire much hope for the expansion of private-sector refineries.

STEEL ROLLS

New Scheme of Tatas

Talks, it is believed, are in progress between Davy United and Tatas for manufacturing rolls. The economic capacity for steel melting is such that Tatas will have to put in a much larger melting capacity that is needed for the manufacture of rolls. The extra capacity so created will have to be used for making steel ingots, which Tatas can use otherwise. This is possible if the retention price of steel is fixed on a "more realistic basis". This aspect of the problem, it is believed, is being explored.

Another Tata enterprise—the Indian Tube Company—proposes to manufacture seamless tube pipes. The Company has asked for the Government's permission for the expansion scheme in Jamshedpur and for setting up units in Bombay and Madras for manufacturing the item.

Mr. Stephen Lloyd in India

Mr. Stephen Lloyd, a director of Guest, Keen, Nettlefolds, which has an interest in Guest, Keen, Williams

is in India. He has been holding discussions with the authorities of the Heavy Electricals Ltd with a view to selling electrical sheet stampings to the latter.

ASBESTOS

Demand Rising

Asbestos sheet production is over-booked for meeting India's defence needs. Asbestos is mainly of two types—chrysotile and amphibole. India is short of the former, which is needed for various industrial uses. It occurs only in certain districts of Andhra Pradesh in a workable quantity. The other varieties of asbestos are found in various States—Ranchi and Manbhum districts of Bihar, Mayurbhanj in Orissa and Hasan district of Mysore. Small quantities are also found in various places in Rajasthan and Assam hills.

Asbestos deposits in India have not been estimated. The known reserves of chrysotile asbestos are estimated at 250,000 tons. Amphibole reserves are about 26,000 tons. In 1959, there were about 50 mines producing asbestos. The main industrial uses of asbestos are as follows:

- (1) Long fibres for yarn, coir, brade and textiles;
- (2) packing and gaskets;
- (3) felted long fibre, paper and for filtration and asbestos cement goods where maximum strength is required;
- (4) medium length fibres including short spinning shingle and paper grades are used as reinforcing filler in asbestos cement products, as the chief constituents of asbestos paper and mill board, as a binding agent in magnesia insulating compounds used for thermal insulation; and
- (5) short fibres are used as filler in asphalts, paints, plasters, etcetera.

In India, asbestos is generally used for the manufacture of asbestos corrugated sheets, cement pipes, boiler composition, cork fibre packing, hard setting composition and for the manufacture of brake lining. The estimated consumption of raw asbestos during 1959-60 was about 24,000 tons to 25,000 tons.

The bulk of the asbestos requirements, particularly of the superior varieties like chrysotile, is being met from imports which were as follows:

1958	18,354	23,390
1959	22,745	29,459
1960-61	21,605	26,642
1961-62	21,562	23,942

There are at present six units manufacturing A.C. sheets with an aggregate capacity of 250,000 tons. The production of A.C. sheets in recent years has been as follows:

1960	216
1961	220
1962	146

(Seven months)

The consumption of asbestos by various industries has increased between 1959 and 1961-62 as a result of the completion of expansion schemes of many consuming units. The capacity in the A.C. industry alone, which was about 150,000 tons in 1959, has increased by another 100,000 tons. Similarly, industries like insulation materials, cables and wires and building materials have also expanded during recent years. The total overall demand for various varieties of raw asbestos has also consequently increased.

INDUSTRIAL FINANCE

Help from States

The Government of India has formulated a scheme under which State Governments may provide equity capital to those persons who possess sufficient technical know-how

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to December 1962. As compared with November, the De-

cember index for Food shows a drop of 11 points, while those for Miscellaneous, Clothing and Fuel & Lighting remain unchanged at 311, 598 and 299 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 6 points during December 1962.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

Groups	Weights	GROUP INDICES											
		Dec. 1961	Jan. 1962	Feb. 1962	Mar. 1962	Apr. 1962	May 1962	June 1962	July 1962	Aug. 1962	Sept. 1962	Oct. 1962	Nov. 1962

but are unable to start an industry on their own for want of capital. The scheme envisages participation by State Governments in the share capital through the holding of redeemable non-cumulative preference shares which will be repayable in not more than eight annual instalments beginning from the end of the third year of the formation of the company. The dividend rate will not exceed 5 percent and such participation may not exceed 50 percent of the total share capital with a ceiling of Rs. 1 lakh.

STEEL

Streamlining Distribution

The preliminary report of the Raj Committee on the system of planning and distribution of iron and steel was published last week for eliciting public opinion. The Committee says that the pricing policies followed hitherto in relation to steel have not taken adequate account of the need for prices to reflect relative costs. As a result, "prices have exerted pressures of a distorting character on the pattern of steel production." The present retention prices allowed to producers, it is said, do not allow adequately for plant replacement at current (or prospective) replacement costs. It is also pointed out that the current relative prices allowed to different products have the effect of creating a bias among producers against the rolling of certain sections.

To this is attributed, in part, the fact that the product-mix does not conform to the pattern of demand to the full extent feasible. The Committee suggests that a revision of the product price relatives is necessary so that they reflect the true relative production costs of different products. The Committee thinks that there is no point in trying to control prices beyond the first stage in the delivery line. It suggests, therefore, that a free market in steel in relation to sales subsequent to the first sale by the main producers should be legally recognised.

The Committee says that, if the difference between the producers' prices and the free market prices becomes excessively large, and there is no way of narrowing the gap through stock operations by the Government stockyards, the Iron and Steel Controller may route all the available supplies of such categories and sections through the stockyards so that the profits accrue to the Government and the scarce product is distributed on a more equitable basis than would be possible if left to the free market. The Government could, and should, use also the device of excise duties to mop up the difference between the producers' and free market prices when it becomes manifestly large.

The Committee is of the view that the assignment of priority to particular consumers should not automatically carry with it any kind of price preference. However, for those users of steel who, it is felt, should be given a price advantage as well in the national interest, the Committee recommends a system of drawbacks to be allowed by the Government in relation to steel whose delivery is taken direct from producers or from Government stockyards.

For protecting the interests of small consumers, it is suggested that ways must be found for "bulking" their demand one way or the other. There is no reason, for instance, why the depôts organised by the Government for meeting the requirements of small consumers should not place—individually or collectively—orders for large amounts directly on producers and then distribute the supplies among users registered with

them. Arrangements can also be made by which Government stockyards function as commission agents and help in taking delivery of, and stocking, the requirements of the depôts.

CZECHOSLOVAKIA

Trade Mission Expected

The president of the Czechoslovak Foreign Trade Corporation, Strojimport, is on a visit to India. He said at a Press conference that a six-man mission is coming to India in February to explore the possibilities of importing non-traditional goods from India. His country is willing to collaborate with the private sector in India in setting up industrial units. The import of Czechoslovak machine tools into India had risen from 3.9 percent in 1957 to 6.9 percent in 1961. In 1958, Czechoslovakia reached an agreement for the manufacture of slotting machines. Negotiations are going on concerning the production of radial drilling machines and M.A.S. milling machines.

NEW INDUSTRIES

Licences Issued

The Central Ministry of Commerce and Industry received 1,676 applications last year for licences under the Industries (Development and Regulation) Act, 1951, for setting up new industrial undertakings. Licences in relation to 147 applications were issued. Letters of intent, that is, letters conveying consent to issue licences, subject to fulfilment by the applicants of certain conditions, were issued in the case of 24 applications. Eight hundred and forty-one applications were rejected. In 13 cases, applicants either withdrew their applications or were advised that their projects did not require licences under the Act.

CEMENT

Raising Output

There are at present 35 cement factories with a total annual installed capacity of 9,728 million tons. The actual output during 1962 was 8,586 million tons which was 90 percent of the effective installed capacity. Efforts are being made for the maximum utilisation of the existing capacity by ensuring adequate coal supplies and transport facilities and also by encouraging a change-over of fuel from coal to oil in suitable cases. The supply of coal to cement factories, in particular, has been raised since the proclamation of the State of Emergency.

In order to induce the industry to achieve maximum production, an incentive scheme by way of an increased price for extra production over and above the best output during the past three years has been introduced. Under the scheme, an extra payment ranging from Rs. 2.50 to Rs. 5.50 a ton will be paid to a producer who is able to increase production above the highest level achieved by him during the previous three years. The payment will be made on the additional production so achieved. There will be no change in the selling price of cement to the consumer.

New schemes for a total capacity of 7,809 million tons a year have also been so far either licensed or approved. Of the additional capacity licensed or approved, a capacity of 1,286 million tons is to be created on the basis of imported plant and machinery. Indigenous capacity has also been created for manufacturing cement machinery. A capacity

CAPITAL, 31st January, 1963.

of 1,746 million tons, to be installed with indigenous machinery, is already covered by the allocation of foreign exchange for the import of components. Efforts are being made to increase cement machinery manufacturing capacity. Continuous pressure is being exerted on cement licensees for completing their projects within the stipulated period.

Efforts are also being made to set up capacity for manufacturing portland blast furnace slag cement by using the slag which is a by-product of the iron and steel industry.

COAL WASHERIES

Output to be Raised

The capacity already licensed to various units in the private sector for manufacturing coal washery equipment, it is said, is inadequate for the country's requirements. The progress made by these units is also poor. The Heavy Engineering Corporation has, therefore, been entrusted with the manufacture of this item to meet the increased coal production target, laid down for the fourth five year plan period.

While manufacturing coal washery equipment, a few items will be analogous in nature to those to be produced in the coal mining machinery plant in Durgapur and the heavy machine building plant in Ranchi. It is only in relation to certain specialised items that the Heavy Engineering Corporation has to augment its capacity by adding some balancing equipment. A light or medium structural shop, which is also proposed to be set up by the Corporation, will help in the manufacture of a few items required for coal washery equipment.

INDUSTRIAL GEARS

New Plant in Faridabad

A plant for manufacturing industrial gears is being set up in Faridabad, near Delhi. The proposed investment in the project is placed at Rs. 2 crores. The foreign collaboration terms are still being examined. According to the licence issued, the plant is required to go into production by the end of June 1963.

As far as the main motor-car manufactures are concerned, they are either already equipped or are equipping themselves for meeting their requirements of gears. Requirements of other industries are met through imports to the extent they are not available indigenously.

MARINE DIESEL ENGINES

New Scheme Being Considered

Some time ago, the Government issued a licence for manufacturing marine diesel engines. But the licence was revoked because the firm could not make any progress. There are four firms in the private sector which have been licensed under the Industries (Development and Regulation) Act, 1951, for manufacturing internal combustion engines. These firms are in a position to offer marine diesel engines for fitting them to fishing crafts. The firms are collaborating with foreign firms on a royalty basis. At present, the Government is considering a proposal from another firm for manufacturing marine diesel engines.

TRANSFORMERS

Permit Issued

A licence has been granted under the Industries (Development and

CAPITAL, 31st January, 1963.

Regulation) Act, 1951, to Mr. N. J. Nair for manufacturing heavy transformers for a range of 15,000 kVA during the first phase of two years, to be increased to 50,000 kVA in three-and-a-half years. The Government of Kerala is participating in the venture. The terms of collaboration with Messrs Hitachi Ltd of Japan have been approved by the Government of India. The factory is expected to go into production in 1965.

MACHINE TOOLS

Scheme for New Factory

The Government is considering a proposal to establish another machine tool factory in the public sector. The feasibility of locating the factory in Kerala is being examined. The factory will have a capacity of 1,000 standard, medium and heavy machine tools a year. It is proposed to manufacture horizontal boring machines, radial drills, production jig borer, jig boring machines and special purpose machines. The estimated cost of the project is Rs. 7.50 crores, with a foreign exchange component of Rs. 1.75 crores.

MINING MACHINERY

The Durgapur Plant

The coal mining machinery plant in Durgapur will go into production in progressive stages commencing with comparatively simple items. It will start producing more complicated items in subsequent years. Four items, namely, coal cutter, hoisting plant, scraper conveyor and coal loader, were decided to be taken up first. Four more items will be added in the first three years of production. The manufacture of the remaining ones will be taken up progressively thereafter.

PIG IRON

New Plant in Udaipur

Kamani Industrial Corporation Ltd, Bombay, to whom an industrial licence was issued in August 1962, has finalised negotiations with a foreign firm for technical collaboration and for importing plant and machinery for a pig iron plant in Udaipur. The terms of the agreement are being considered by the Government. The production capacity of the plant will be 100,000 tons of pig iron a year. The plant is expected to go into production by about 1965-66.

The Government has accepted in principle the proposal of the Andhra Industrial Corporation for setting up a pig iron plant.

COTTON YARN

Licence for West Bengal

A licence has been issued in the name of the Secretary to the Government of West Bengal to install 25,000 spindles for manufacturing cotton yarn at a place to be selected by the State Government.

CASHEW-SHELL OIL

New Plant in Quilon

A firm has recently been licensed under the Industries (Development and Regulation) Act, 1951, for setting up a new undertaking in Quilon, Kerala, for the manufacture of cashew-shell oil according to the solvent extraction process. The proposed plant will have an annual capacity of 3,000 tons in terms of

cashew-shell oil and will cost about Rs. 20 lakhs in foreign exchange, which the party will repay through the export of finished products. The production of cashew-shell oil in the country exceeds 6,000 tons a year and is valued at Rs. 60 lakhs.

ENGINEERING

Taps and Dies Factory

Production is planned to start soon in the new £120,000 factory built in Khandivli, near Bombay, by Nuckey, Scott and Co. Ltd of the U.K.—a member-firm of the Tap and Die Corporation group. The factory covers an area of 16,000 square feet of a 60,000-square feet site, so there is ample room for expansion. The building itself cost £45,000 and machine tools and other equipment £75,000. The factory will manufacture small engineering goods (taps and dies) and will be administered by a new Company—Warrior (India) Ltd formed with a capital of £145,000. In addition to supplying the Indian market, Warrior (India) Ltd will export its products to Pakistan and Burma.

Built by its Indian agents, Forbes, Forbes Campbell and Co. Ltd of Bombay to plans provided by the Nuckey, Scott and Company, the factory is a single storey building made of prefabricated concrete sections. Initially, there will be 60 employees. But the total will reach 200 by a series of planned increases. Taps and dies of the same standards as apply in the parent Company will be made by Warrior (India) Ltd.

DEFENCE NEEDS

Buying from Small Industry

Using the resources of the private sector for meeting India's defence requirements is not inconsistent with the Government's industrial policy, it is stated here. In placing orders for defence, the Directorate-General of Supplies and Disposals has always been following the declared policy of the Government by encouraging the small-scale sector to the extent it can produce goods of the required quality within the specified period. Items for which small-scale industry is not able to compete with large-scale units, a price preference not exceeding 15 percent is given to small-scale industry.

COPPER

The Khetri Project

The Government of India appreciates the desirability of implementing the Khetri copper project with a capacity of 21,000 tons of electrolytic copper a year, as proposed in the report on the technical and economic feasibility of the project submitted by the consultants, Messrs Western Knapp Engineering Company, instead of 10,000 tons as proposed in the third plan. The consultants have commenced work on Phase II of the consultancy services, which include the preparation of detailed designs and drawings, specifications and bid documents in relation to plant and equipment. Based on the lay-out of the plant as indicated by them, a tender enquiry is being issued for the grading work in the plant area.

TRANSPORT

Allocations Increased

The following steps have been taken to strengthen the third plan transport programmes:

An additional allocation of Rs. 145 crores has been made for the railways—Rs. 120 crores for works and rolling stock for the movement of coal, Rs. 10 crores for line capacity works required to meet the increase in the target for the movement of general goods, and Rs. 15 crores for works for facilitating movements of coal in the early part of the fourth plan.

A programme estimated to cost Rs. 20 crores for the development of roads has been accepted with a view to facilitating the movement of coal by road and road-cum-river routes.

The road programmes have been reviewed in the light of the present emergency. Certain additional roads have been taken up for development on an emergency basis.

PARADIP PORT

Project Report Prepared

It is considered technically feasible to develop Paradip as an all-weather port. A project report has been prepared for the purpose by a United Kingdom firm of engineering consultants. The Government of India has approved the State Government's proposal to get the detailed drawings and estimates prepared by the firm. The question whether Paradip port should be treated as a major port project has not been decided.

COAL

Exchange for Singareni

The Government of India has sanctioned foreign exchange to enable the Singareni Collieries Company to purchase three generator sets of 6 megawatts each. On the basis of tenders received, quotations from Rumania have been accepted. The sets are, therefore, to be imported from that country.

POWER

New Hydel Stations

A number of small hydro-electric stations are being set up in hilly areas to meet local demands. Small diesel generating units with a capacity of up to about 1,000 kilowatts each have been sanctioned for West Bengal, Punjab and Mysore States. These are in addition to four 10,000-kilowatts units and two 12,500-kilowatts units sanctioned for Andhra Pradesh, Mysore, etcetera. It is proposed to keep some of these units in a central pool which is being created to meet emergencies.

COMMODITIES

New Boards Proposed

Proposals for establishing an Agricultural Commodities Board and a Sugar Marketing Board are being worked out in the light of conditions prevailing in the country.

FISHERIES

Corporation Planned

The Government is considering a proposal to establish a fisheries corporation in the public sector. It will undertake deep-sea fishing and process the catch for export as well as for internal consumption. The possibilities of securing foreign collaboration in the venture are being explored. Other details will depend largely on the terms of collaboration.

ACHIEVING FASTER RATE OF ECONOMIC GROWTH IN U.K.

(FROM OUR LONDON CORRESPONDENT)

THE U.K. National Economic Development Council considered on 24th January, a report drawn up by its Director-General, Sir Robert Shone, and his staff of about 50 research workers. The report, it is said, is of the length of an average modern novel—about 70,000 words—and contains the fruit of eight months' work on the implications of a 4 percent annual economic growth rate. The report is not yet generally available, but there has been the inevitable "leak" of its main trends, so that the industrial correspondents have been able to summarise the main conclusions. Their efforts in this matter leave much detail to be filled in later, but according to the *Guardian's* John Cole, for instance, among the conclusions to be inferred from it are:

(1) That Britain can only hope to achieve the average growth rate of 4 percent between now and 1966 if the expansion programmes of her principal industries are more carefully co-ordinated than at present.

(2) That the serious under-utilisation of resources—notably manpower—in the areas of high unemployment is an important obstacle to growth, and must be rectified.

(3) That even in times of higher-than-average unemployment, the shortage of skilled workers remains serious for many industries, and that the Government must pour more money into industrial training to put this right.

The two main sections of the report (which includes a number of appendices and annexes) are a study of conditions favourable to faster growth, and an examination of the prospects of 16 industries of achieving the 4 percent rate. Sir Robert and his staff have indicated, rather than stated, the directions in which the solutions to Britain's economic malaise lie, and it will be for the Council to write into the report recommendations to the Government and the nation—if it thinks fit.

Implications of Planning

Some who have read the report think that it will really make the Government face its fences on the whole issue of economic planning. When Mr. Selwyn Lloyd established the N.E.D.C., the report suggests, he did not really understand the ramifications of the action, and Mr. Maudling who, as Chancellor, presides over the Council's meetings,

has been notably less committed in his attitude to it. A series of meetings will be required before the Council is able to reach its final conclusions, probably some time in the spring. During that period, Ministers will have to decide—as indeed will industry and the trade unions—whether they are prepared to accept the more intimate and detailed planning of their individual activities which, for example, the French system implies.

These portentous conclusions on the Government's attitude stem principally from the industrial enquiry, and it is proper to report that there are already two opinions on it. One is that it forms a key part of the most comprehensive and impressive survey of the British economy ever made. The other is that the basis of the information is suspect, because many of the industries are not equipped to collect it, and that, anyhow, they have been self-protecting and complacent in the analysis of facts they gave to the N.E.D.C. investigators. One theme which does emerge from this section is the essentially inter-dependent nature of British industry and the inadequacy of the machinery for keeping it moving in unison. When the chemical industry, for example, was asked if it could cope with a 4 percent growth rate, it is understood to have replied that it could do so only if developments in both transport and electricity supply were adequate. How far this can be taken as a genuine plea for co-operation in its expansion, and how far it is the sniping of an industry which for years lived under the shadow of nationalisation at existing public-owned industries, is anyone's guess.

These "horizontal difficulties", however, raise the issue of what machinery is needed to keep the various industries in balance. Some people believe that the lesson of the report is that the N.E.D.C., or some other central economic planning body, must be given power to bully, cajole or even instruct industries how their development plans should be drawn. Others think that only if each important industry has a development council—representative of producers, consumers, and trade unions—can detailed planning work. The report examines the depressed areas with the assumption that national growth will be faster and more extensive if their resources

can be properly used. It appears to place little faith in the alternative belief that the movement of workers over long distances to existing centres of industry will achieve a similar result.

The lines discussed are familiar ones—the creation of a sound economic structure on which industry in these older areas can build, with better transport, docks and basic services and amenities; the injection of more capital investment into the areas; and the raising of the general level of demand. This issue, of course, is intertwined with that of skill and industrial training, and the report is understood to be clearly of the opinion that more needs to be done than is proposed in the recent Government White Paper.

Prices and Incomes

Where Sir Robert and his colleagues do appear to have been cautious is in dealing with prices and incomes. They are believed to be against resale price maintenance, but they have not taken the wages issue much further than a suggestion that it is soluble in the context of an expansion on the scale they suggest. This may well be true, since the higher productivity visualised in their original model of the economy was 3.3 percent. But no intelligent trade union leader thinks that this solution will come, even in a growth economy, without changes in structure and attitude among the wage-bargainers.

It seems that the N.E.D.C. office has decided to await the conclusions of the T.U.C. General Council on that thorny problem. But it also seems possible that Mr. Maudling will insist that this central cog must be produced before he can order the machine into action. Ian Coulter, of the *Sunday Times*, goes a bit further by quoting some of the principal figures. Thus, it appears that a tremendous expansion of Britain's economy, to give a 22 percent increase in the total output of the economy by 1966, can be achieved, according to the report. The total increase would represent a compound annual rate of growth of 4 percent—nearly double the present rate.

Sir Robert Shone is believed to have reported that, although there are difficult problems to be tackled, the achievement of a 4 percent average growth rate should not be impossible. The report, likely to be

backed eagerly by the expansionist-minded N.E.D.C., recognises that if Britain does not enter the Common Market, the volume of exports and imports must be lessened. But despite this warning, written before the latest crisis in Brussels, the report still comes down firmly on the side of those who are strongly urging greater economic expansion.

As far as the growth potential of the key industries is concerned, most of these have told the Council that they could cope with the demands of faster growth, although some foresee difficulties in getting enough skilled manpower. The major industries estimate that they can expand by 4.8 percent a year, allowing the rest of the economy to grow at only 3.4 percent, to achieve the overall growth target. But two key industries, chemicals and electricity, say they will find it difficult to expand their capacity to meet this extra demand, because of the time between planning new plants and getting them working. Indeed, it is understood that Sir Robert says that faster growth could mean increased possibility of power cuts and, in the chemical industry abnormally high plant operation for a time. But such underworked industries as car manufacturing and steel would easily meet increased demands on their production.

Labour Mobility

The implications for the whole country of the 4 percent growth rate, which covers the entire gross domestic product and not merely industrial output, are also surveyed in the report. It is understood that manpower is expected to increase by only 0.8 percent a year. And there is also a warning that labour must keep mobile, as many industries fear possible future shortages of skilled labour. Productivity will have to equal 3.2 percent of the total growth, although from 1951 to 1961 the average annual increase was only about 2 percent. But not only has industrial production risen more quickly of late, but increasing expenditure on science and technology should help to guarantee a faster productivity increase.

Perhaps the most interesting part of the N.E.D.C. document will be the way in which its advisers propose that the increased national economic cake should be shared among the various sections of the economy. It is not prepared to divide it equally. Instead, investment and exports should have 3.3 and 5.7 percent, respectively, while consumers' expenditure and public consumption should rise at the slower rates of 3.5 and 3.4 percent. But these are still substantially above the average over the last five years. It is in the field of investment that the report is perhaps most challenging. Investments in stocks must increase with faster growth, and apparently, the backroom boys of the N.E.D.C. have allowed for £50 million in the estimate of total investment to cover funds pushed into the less prosperous regions.

To meet this higher level of investment and maintain improvements in the balance of payments, an extra 2 percent of the gross domestic product must be saved. The report is confident that savings should meet requirements. But it emphasises that exports must rise by 5.7 percent—not only to cover imports, overseas investment, aid to developing countries—but to provide an overall surplus to reduce the need for "stop and go" measures from the Treasury. This is acknowledged to be a formidable task. But the target is not high, compared with the rates achieved by some other countries.

HESSIAN STEADIER BUT SACKING STILL WEAK

THE jute and jute goods markets have been dull, particularly since there have been two local holidays during the past week. The demand for manufactured goods is reported to be poor. It is said that there has been a great deal more interest in hessian recently, and that is why it is steadier in spite of the downward tendency in sacking. Speculators are still bearishly inclined, and as long as they continue to depress prices, buyers abroad will tend to buy only for their immediate requirements. Some in touch with the markets abroad are of the opinion that a period of steadiness here would help stimulate interest from consuming centres. That has generally been the case in the past, and it is not unlikely that it might be so again. It is unreasonable to suppose that consumers will buy any more than their immediate requirements or any earlier than they need when they see the quotations declining week by week. It is natural that they should delay their purchases as long as possible.

There have been rumours of Government orders for both sacking and hessian recently, but no confirmation has been forthcoming as yet. It will be recalled, however, that in many instances the bazaar has had reports of impending Government orders before the mills have had any information about them. There has been criticism of Government orders in the past. The mills are waiting; anything to support the sagging sacking market would be more than welcome.

The jute industry has a history of constantly recurring periods of depression and low prices due to over-production. Some feel that the industry is now entering one of those periods. Maximum production is being carried on month after month, mainly to absorb the surplus raw jute. Admittedly, the surplus has enabled the industry to build a fair-sized buffer stock to meet future eventualities, but sacking prices have fallen to levels which show little or no profit. Often low prices have helped establish new markets for jute goods and induced the manufacture of a wider range of products. But it is uncertain whether that will happen again.

Jute Quotas for February

On Monday, the Jute Commissioner announced fresh raw jute quotas for the mills for February. They amounted to 600,000 bales (3 million maunds) for member-mills of the I.J.M.A. and 40,000 bales (200,000 maunds) for non-I.J.M.A. mills. On this occasion, the Jute Buffer Stock Association has not been asked to increase its holdings. The quotas are slightly lower than those issued for January, and amount to approximately one month's consumption.

The Jute Commissioner has estimated the 1962-63 crop as 7.1 million bales. Although this is very close to the "popular" figure, many feel that it is an underestimate, and does not take into account the quantities smuggled from Pakistan. Some resmuggled from these quantities at ports place these quantities at 500,000 bales. According to the official figures, the balance remaining at the end of January will be 1.5 million bales (of which 640,000 bales will be taken up in February). Most of the balance is low-grade jute, of which the mills have more than enough. This will increase the price of the higher grades, and already

over Rs. 50 a maund is being paid for the better qualities. Prices in general have made a good recovery over the past few weeks, and one now has the paradox of upcountry prices ruling above those quoted in the Calcutta market, to such an extent that there is no parity in sales at these levels. Tossa and Daissee (ordinary) now show a premium of Rs. 1.50 over the minimum price, while selected marks and grades command exorbitant rates. White jute and mesta are still available at the minimum rates, but here again, unless the mills are prepared to accept inferior jute of the jungli variety, higher prices have to be paid.

Buffer Stock

It is understood that there has been no great rush to turn over the jute buffer stock held by individual mills. Fresh purchases made against buffer stock replacements may now be set against the current Jute Commissioner's quotas, but even this incentive has not encouraged mills to take advantage of the turnover procedure. Lack of godown space to store the replacement jute before the release of buffer stock holdings appears to be the main difficulty; there are also extra handling charges which many are not prepared to incur.

Many complaints have been made lately by sellers about the slowness of payment against jute buffer stock goods. An official of the J.B.S.A. states that there has been no delay in passing bills or issuing cheques

as far as the Association is concerned. In many cases, the delays have occurred due to the non-presentation of bills by the mills themselves or incorrect documentation. There have been cases of bills being presented six weeks or two months after the arrival of the jute at the buyer's mill. In some cases, the hold-up occurs when the State Bank is late in taking over fresh godowns for the storage of buffer stock jute, or godown-keepers are not available to sign storage receipts or pledge invoices; but these delays are of a minor nature.

THE JUTE MARKETS

Manufactured Goods: Speculative activity in the opening session saw prices moving up rapidly last Thursday. B Twills advanced to Rs. 112.80 for ready delivery, and Rs. 112.75 for July-September. In hessian 40in. 100z. advanced by 65p to Rs. 50.85 and Rs. 49, respectively, for the near and forward positions. There was very little interest from overseas, and as speculative activity slackened, prices began to fall. By Friday, heavy goods were down 50p although hessians showed little change. Saturday was a holiday, and after the week-end, there was a slight recovery, particularly in hessian, where 40in. 100z. advanced to Rs. 51.20. Ready B Twills moved up to near the week's opening quotations, but there was little real strength in the market.

As Wednesday, 30th January, was a holiday, this report closes on

Tuesday, when opening quotations were as follows:

	Jan.	Feb.	Mar.	Apr.-June	July-Sept.
40in. 70z.	39.10	38.75	38.25	37.65	37.00
40in. 80z.	41.75	41.50	41.00	40.35	39.50
40in. 100z.	51.25	51.15	50.50	49.85	49.25
B Twills	112.85	113.65	113.55	113.40	113.00
Cornsacks	116.25	116.50	116.50	116.25	115.50
Heavy Cees (Plain)	111.50	112.75	112.75	113.00	113.00
A Twills	140.00	139.00	138.50	137.50	137.00
Liverpools	127.00	127.50	127.50	127.50	127.00

Raw Jute: The raw jute market tended to rise during the past week and a fair amount of business was done against quotas. Imports in the upcountry agencies dropped slightly, and on an all-India basis were estimated to be 65,000 maunds daily. Small purchases in the agencies at minimum rates by the State Trading Corporation helped to create firmer conditions, and many sellers represented themselves as reserved, due to the lack of parity between agency and Calcutta indications. Tossa and Daissee were very firm, and premiums of up to Rs. 1.50 were asked. Arrivals in Cossipore during the past week amounted to 630 wagons. With the issue of fresh quotas for February by the Jute Commissioner, it was expected that prices might rise further, and for this reason most sellers were reserved.

Opening quotations on Tuesday morning were as follows:

	Current Prices	Minimum Prices	F.S.D. Rs.	F.S.D. Rs.
	A Qtl. A Qtl. Bot	A Qtl. A Qtl. Bot	A Qtl. A Qtl. Bot	A Qtl. A Qtl. Bot

THE U.K. JUTE MARKETS

LITTLE BUYING OF FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THERE was a slightly steadier feeling in the raw jute market for forward shipment last week, and some sellers were again asking a premium for February-March. However, there was no change in current shipment prices, and offers of medium and lower grades continued to be freely made. Dundee spinners still showed no interest in fibre. They have already secured substantial stocks, and at the same time, a large quantity of spot and afloat fibre is available. This is estimated to be at least 50,000 bales. In many instances, holders of these parcels were willing to discount the generally quoted rates, but this brought out very little buying interest. Mill Lightnings were being offered as low as £112 which was about £7 a ton below the current shipment price. There appears to be ample jute to meet all requirements as far as quantity is concerned, but there is a shortage of the better qualities. There can be no improvement in this position until fibre from the next crop becomes available.

Offers were being made here at £119 for Mill Lightnings, at £94 for Mill Hearts and at £80 for Grade Hearts, c.i.f., U.K. for January-February shipment. Grade Tossa-2/3 was available at £130 and Grade Tossa-4 at £113. Outport Tossa-2/3 ranged from £98 and Outport Tossa-4 from £88 10s for January-February. Many sellers were asking more than the above rates for March-April shipment. This firmer position for forward shipment appeared to be due to smaller imports of loose jute from upcountry in East Pakistan. Cuttings were quiet with S.N.C. at £54 and N.C. at £45 10s. Offers of Siam jute were again being made, but prices quoted were irregular. Grade A was named at £81, grade B at £75 and grade C at £69, delivered mill, Dundee, for February-March shipment.

The Calcutta goods market became easier at the beginning of the week and quotations were at 76s 6d for 40in. 10oz. and at 58s 9d for 74oz. a

100 yards f.o.b. Calcutta for January shipment, at 76s 3d and 58s February at 75s 9d and 57s 6d March and at 74s 9d and 56s 6d April-June. B Twills were at 171s 3d, 172s 6d, 172s 3d and 172s for the respective shipment periods.

Spinners and manufacturers in Dundee remained very busy and had nothing to offer sellers for reasonably earlier delivery. Orders are being received for delivery into the second quarter of the year, and this covers most descriptions of yarns and cloth. The heavy end of the trade is also very busy with sackings and tarpaulin weavers working to the full capacity of the labour force available.

THE PAKISTANI JUTE MARKETS

FIBRE REMAINS DULL

(FROM OUR Dacca CORRESPONDENT)

ALL balers and overseas agents have been reporting a very dull and inactive market for at least four weeks. Nevertheless, even after the very heavy registrations in December, those for the first half of January totalled 112,727 bales. Russia was the biggest buyer with 42,000 bales. Burma came in to the market for 14,000 bales, and the U.S.A. bought 11,790 bales. China once again bought 8,000 bales, and the U.K., which is nearing the end of its season, bought 6,790 bales. France bought 4,765 bales and Belgium 4,500 bales. West Germany took 3,875 bales. India made no purchases. The proportion of cuttings in these purchases remains the same, namely about 20 percent.

It is hard to explain these continual large registrations when one remembers that not only are purchases now higher than last season even excluding some 500,000 bales of this crop registered in the second half of June, but it is reported that there is a large amount of afloat goods and the godowns throughout East Pakistan are heavily jammed. Normally, heavy registrations which imply large sales are a bullish factor, but it is hard to visualise at least the overseas market going up in view of the large stocks available in this country in the balers' godowns in spite of arrivals continuing to be small. In fact, there have been reports that some of the E.P.C. levels might be reduced. This is, however, unlikely. The new chairman of the Jute Board cannot be expected to start his tenure by allowing the E.P.C. levels to be reduced. Nevertheless, it does indicate the weakness in the market.

This rather confused position is also inducing some people to suggest that the crop is after all much larger than expected. This, however, is unlikely. What has probably happened is that for a variety of reasons, the crop was bought in much earlier as used to be the case many years ago when the season finished completely by February or March. In those days, this was expected, but since this has not happened for some years, some balers are assuming that the normal flow will continue up to the end of the season and that, therefore, the crop could be larger. What is more likely however, is that most of the crop has already been marketed and this is suggested by the fact that in spite of a very weak market in all sectors, the sellers of loose jute are not particularly eager to dispose of their jute at these prices, presumably because they have little or nothing left. In the pucca bale sector, prices are more or less unchanged except that slightly better premiums are being paid for premium marks of export lightnings. In cuttings, there has been a very slight discount in the forward position.

Books

PRICE THEORY: DEFECTS ANALYSED

Price Theory: A Provisional Text. By Milton Friedman. (Published by Frank Cass and Company Ltd, 10 Woburn Walk, London, W.C.1. Price 42s. pages 285. Review copy received from Rupa and Company, 15 Bankim Chatterjee Street, Calcutta 12.)

Mr. Milton Friedman needs no introduction to the students of economics who must be acquainted with his essays published from time to time in the *Journal of Political Economy*. The present volume is a collection of mimeographed notes on the theory of price and distribution which the author did not originally intend for publication but which nevertheless got wide circulation. Like all textbooks, Mr. Friedman starts with the definition and scope of economics and the theory of demand. He admirably presents the marginal utility theory and the more sophisticated indifference curve analysis both of which are useful tools for explaining the consumer's behaviour and the demand curve. He correctly points out that "the great defect of the approach underlying the usual demand curve is that it emphasises arithmetic consideration; the great virtue of the approach underlying the alternative demand curve is that it emphasises economic consideration."

In Chapter III, the essay on the "welfare" effects of taxes which originally appeared in his *Essays in Positive Economics*, has been reproduced. The indifference curve analysis shows that to raise a given amount of revenue, an income tax is preferable to an excise tax. This is true for an individual but the author warns against generalising this proposition for the community as a whole. He sets forth his own analysis of the problem (which he regards as the "correct" analysis) and concludes that the relative effects on "welfare" depend on the initial conditions under which the taxes are imposed. In the subsequent chapters, Mr. Friedman presents in detail the utility analysis of uncertainty, supply and cost curves and the law of variable proportions. He introduces an interesting discussion on the controversial issue of the size of the firm where the current theory of the "optimum" firm or the "optimum" scale of output has been put to severe criticism.

The rest of the book is devoted to the theory of distribution and of capital. No theory of distribution can possibly exclude a discussion on the supply of labour which, by its very nature, constitutes a complex problem for economists. Mr. Friedman refers to the "peculiarities" of labour as stated by Marshall. He supports the view that the long run supply of labour should be considered in the context of the theory of population. It is an encouraging sign that economists have started re-integrating the theory of population with economic theory.

According to Mr. Friedman, a major gap in the modern economic theory is due to the absence of a satisfactory theory of the personal distribution of income and "of a theoretical bridge connecting the functional distribution of income with the personal distribution." A large part of the existing inequality of wealth in a community, and also among nations, is produced by men to satisfy their tastes and preferences. This runs contrary to the theories of inequalities developed by economists like Mr. A. P. Lerner who, following Keynes, have put the blame on the deficiency of demand

in a capitalist society and the consequent lack of employment opportunities. It is, however, worth while pursuing Mr. Friedman's suggestion of bridging the theoretical gap and of initiating empirical investigations to enable one to weigh its importance.

LOCATION OF INDUSTRIES

Location of Industries in Mysore State. By M. C. Munshi. (Published by the Indian Statistical Institute, Calcutta. pages 172.)

In Dr. Munshi's book, the emphasis is as much on the rationale of regional planning as on locational factors. It describes the growth of different industries in both organised and unorganised sectors, their respective shares in industrial employment, the emergence of new classes of industries like engineering and chemicals and the concentration of activity in certain areas. It contains information on the inter-relationship between the large-scale and small-scale industries and their impact on the economy of the State in relation to urbanisation, livelihood patterns and the inter-regional trade. The book also makes an attempt to construct statistical ratios for industrial location in order to evolve a suitable set of criteria for regional development. While much statistical information has been collected, out of the 172 pages of the book, 118 pages are taken by these analyses, leaving 50 pages for discussing the author's own views, resulting in a pedantic approach in some sections.

BANK REVIEW

Bank of Baroda Weekly Review. Edited by N. Salivati. (Published by the Bank of Baroda Ltd from Apollo Street, Fort, Bombay 1.)

The first issue of *Bank of Baroda Weekly Review* contains an analysis of the main economic developments in 1962, world foodgrains production, India's oil deposits and the prospects for exports. The section on Indian banking contains a special reference to the activities of the Bank of Baroda. The bank's chairman, Mr. Tulsidas Kilachand, says in his message that although banks in India and abroad publish monographs and treatises from time to time, "no bank in India has attempted to bring out a weekly presenting in a nutshell the latest and exclusive information likely to influence the course of events." This is undoubtedly an ambitious aim, but from the present coverage it would appear that the publishers are making conscious efforts to make the publication popular among the bank's numerous constituents and others.

ECONOMIC TRENDS

Economic Trends and Indications. (Published by Bhikhalal Kapasi from B-5, Pandara Road, New Delhi 11. Price Rs. 7.50, pages 294.)

This is a collection of articles on economic and allied topics published in various newspapers and magazines during the past ten years. The themes are commonplace and the recital pedestrian.

COMPANY AND PUBLIC NOTICES

BURN & COMPANY LIMITED NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held on Thursday the 28th February, 1963, at 11-20 a.m. at the registered office of the Company at 12, Mission Row, Calcutta, to consider and if thought fit to pass the following resolution as a special resolution:

February, 1963, at 10-30 A.M. for the following purposes:—

- To receive and adopt the Directors' Report and Accounts for the year ended 31st August, 1962, and Balance Sheet and Report of the Auditors thereon.
- To declare a Dividend.
- To elect a Director in place of Shri K. Jha, who retires under Article 107 and, being eligible, offers himself for re-election.
- To appoint Auditors for the current year and to fix their remuneration.

As Special Business:

- To consider the appointment of Pandit G. M. Misra, who retires as a Director and to declare that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.
- To sanction payment of remuneration to the Manager for the year ended the 31st August, 1962.
- To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

By Order of the Directors,
W. F. MALDEN,
Secretary.

Lohat,
District Darbhanga,
14th January, 1963.

Note:—

- A member of the Company, who is entitled to attend and vote, is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member.
- The Share Transfer Books of the Company will be closed from the 10th February to the 28th February, 1963, both days inclusive.
- Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 28th February, 1963.

Explanatory Statement pursuant to Sec. 173 of the Companies Act has been circulated with the Notice to the Members of the Company.

THE INDIAN STANDARD WAGON COMPANY LIMITED NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held on Thursday the 28th February, 1963, at 11-25 a.m. at the registered office of the Company at 12, Mission Row, Calcutta, to consider and if thought fit to pass the following resolution as a special resolution:

RESOLVED that this General Meeting having taken under consideration the contracts now exhibited to the meeting and whose material terms are set forth below for the sale, purchase or supply of any property, movable or immovable, or for the supply or rendering of any service, other than that of a managing agent, between the Company and its managing agents, Martin Burn Limited, and their associates, such as (1) The Indian Standard Wagon Co. Ltd., (2) The Hooghly Docking & Engineering Co. Ltd., (3) Saugor Electricity Supply Co. Ltd., (4) Upper Jumna Valley Electricity Supply Co. Ltd., (5) Robert Hudson (India) Ltd., do approve of all these contracts.

RESOLVED that this General Meeting having taken under consideration the contracts now exhibited to the meeting and whose material terms are set forth below for the sale, purchase or supply of any property, movable or immovable, or for the supply or rendering of any service, other than that of a managing agent, between the Company and its managing agents, Martin Burn Limited, and their associates, such as (1) The Indian Standard Wagon Co. Ltd., (2) The Hooghly Docking & Engineering Co. Ltd., (3) Saugor Electricity Supply Co. Ltd., (4) Upper Jumna Valley Electricity Supply Co. Ltd., (5) Robert Hudson (India) Ltd., do approve of all these contracts.

PROVIDED that so far as the said contracts relate to the supply or rendering of any service other than that of a managing agent, this resolution shall be subject for its effectiveness to the approval of such contracts by the Central Government.

MATERIAL TERMS

GOODS AND SERVICES:—All such as may be dealt in or rendered or required by the seller or buyer for the time being and from time to time.

PRICE:—Such as shall be ruling with the seller or supplier at the date of requirement or such as shall be currently in force and be otherwise reasonable.

DELIVERY:—According to Buyers' requirements specified in relevant Advice Notes.

PAYMENT:—As specified in acceptance. Provided that for any property supplied or sold, or any services supplied or rendered, payment shall be made by the Buyer within one month from the date of such supply, sale or rendering as the case may be.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEGE,
Managing Director,
Managing Agents.

Registered Office,
12, Mission Row,
Calcutta-1.

Dated, 29th January, 1963.

Note: An Explanatory Statement is annexed to the convening notice issued to members of the Company.

THE DURBHANGA SUGAR CO., LTD. NOTICE

NOTICE is hereby given that the Fifty-first Ordinary General Meeting, being the Annual General Meeting, of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat on the 28th day of

February, 1963, at 10-30 A.M. for the following purposes:—

PROVIDED that so far as the said contracts relate to the supply or rendering of any service other than that of a managing agent, this resolution shall be subject for its effectiveness to the approval of such contracts by the Central Government.

MATERIAL TERMS

GOODS AND SERVICES:—All such as may be dealt in or rendered or required by the seller or buyer for the time being and from time to time.

PRICE:—Such as shall be ruling with the seller or supplier at the date of requirement or such as shall be currently in force and be otherwise reasonable.

DELIVERY:—According to Buyers' requirements specified in relevant Advice Notes.

PAYMENT:—As specified in acceptance. Provided that for any property supplied or sold, or any services supplied or rendered, payment shall be made by the Buyer within one month from the date of such supply, sale or rendering as the case may be.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEGE,
Managing Director,
Managing Agents.

Registered Office,
12, Mission Row,
Calcutta-1.
Dated, 29th January, 1963.

Note: An Explanatory Statement is annexed to the convening notice issued to members of the Company.

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated with limited liability in the United Kingdom)

THE Directors announce that the consent of the Controller of Capital Issues, Government of India, has now been received to the issue of 144,000 new Ordinary Shares at a price of £1 13s. 0d. per share, including a premium of 13s. per share. Application has been made to the Reserve Bank of India for permission to allot shares to existing shareholders not resident in India to the extent of their respective entitlements and to enable such shareholders to dispose of their rights in this issue, if they so desire.

The new shares will be offered in terms of the Resolution adopted at the General Meeting of the Company held on 3rd October, 1962 to the shareholders registered as on that date in the proportion of three

new shares of £1 each for every five shares held as at that date. In respect of shares which have been the subject of dealings or have been transferred since 3rd October, 1962 Letters of Right will be issued in favour of the person named as the registered shareholder on that date and the present holders will be required to obtain delivery of the Letter of Rights, free of charge, from such registered holders.

Letters of Right are expected to be despatched to shareholders to reach them not later than 15th February, 1963 and the offer will remain open until 8th April, 1963. Full details of the steps required to be taken by the shareholders, whether resident or non-resident and whether on the Calcutta or London Registers, will be included in the Letter of Rights when it is issued.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents and Secretaries.
Head Office:
4, Clive Row,
Calcutta-1.
25th January, 1963.

THE BRUSSELS FAILURE AND ITS EFFECTS ON INDIA

FROM India, it is hard to foresee what exactly the consequences will be now that the U.K.'s negotiations for entering the European Common Market have broken down. The first reaction in this country has been one of sorrow, anxiety and uncertainty. The sorrow is due to the fact that an old friend has met with failure in trying to achieve one of her major economic hopes. Warm tributes to the friendship have been paid by India's spokesmen formally acknowledging that Britain gave this country valuable support during the E.C.M. negotiations, and won important concessions which might otherwise have been difficult to get. The terms of the provisional agreements proposed for India, Pakistan and Ceylon were admittedly not the best from these countries' point of view. They were, however, better than one might have expected from an insular E.C.M.; and it is arguable that that is what the E.C.M. was until Britain's application for entry highlighted the wider problems of trade between the industrialised and the underdeveloped countries.

The anxiety and the uncertainty now centre on one main question: will or will not the E.C.M. become more insular in its thinking since Britain is to stay out? The pessimists say it will; the decision on the U.K. application means that it has shut out not only Britain but also the Commonwealth and most of the E.F.T.A. interests which were hanging on Britain's coat-tails. The optimists, however, maintain that this need not be the case; the main difference is that each country will now have to fight for itself instead of boxing with the aid of British seconds. It is even possible, they claim, that the E.C.M. could show itself to be more liberal than before in the less complex bilateral negotiations which will have to be undertaken by countries like India now, instead of the essentially multilateral ones that had been going on hitherto. In other words, horse-trading could become easier with only two parties in the field instead of several. If the European Six give particular concessions to, say, India, they will no longer be under the same pressure to give comparable concessions to, say, Hongkong or Canada or Australia. The new situation merely makes it necessary for this country to become more direct, independent and forceful in her approach to the E.C.M. Instead of pleading sheepishly from under the British umbrella, India will have to plunge boldly into the political and economic trafficking that will ultimately determine the terms she is going to get.

The first effort will necessarily be to persuade the E.C.M. to stick to the concessions it had promised in the event of Britain's entry. In a formal sense, the trade arrangements that had been agreed upon—concerning tea, for instance—may stand cancelled with the rejection of Britain's application. But India's task is to insist that the more liberal aspects of these arrangements should be retained nevertheless. For instance, if the European Six had promised a zero tariff on tea after Britain joined, there is no reason why they should not lower their tariffs to that level in any case, even without Britain. Unfortunately, the fact is that the E.C.M. has been unnecessarily

protectionist so far in its attitude to exports from the underdeveloped countries. It may not be easily persuaded by the argument that if it was prepared to whittle down its protectionism after Britain's entry, it should be prepared to do the same even now. The counter-argument will no doubt be heard again, as it has already been from E.C.M. spokesmen, that tariff and quota restrictions do not matter much; and ultimately it is aggressive salesmanship that counts if countries like India wish to sell more. This country will have to admit salesmanship is an important factor, and India's is deplorable; but that is no reason why the Common Market should be even faintly protectionist. After all, if the E.C.M. countries sincerely believe that India cannot sell, say, her cotton textiles because her salesmanship is poor, the best way to prove the point would be to remove their import restrictions and show that their textile imports from India still have not risen.

The basic fact is that they can well afford to do so if they are really sincere in their protestations about liberalism; and this fact stands whether Britain is in the Common Market or out of it. The currencies of all the E.C.M. countries are strong, and their foreign exchange reserves are large. They have increased their imports in recent years, and they can well afford to increase them even further. This is particularly necessary in their dealings with countries like India, with whom they have long enjoyed a large and steady trade surplus. The strength of the domestic political pressures they face from their farm, cotton textile and jute goods lobbies is acknowledged. But those pressures have to be fought if a bigger market is to be opened for the relatively few things the underdeveloped countries are able to offer. It may be true that the market for many of these commodities is shrinking in western Europe less because of quota and tariff restrictions, and more because of the powerful competition from synthetics. But that is no reason for reducing the market still further by adopting protectionist policies to suit the selfish interests of what, for Europe, are quite minor industries.

Apart from the uncertainty about future trading arrangements with the E.C.M., a major worry for India will be that the failure of Britain's negotiations might affect the prospects for foreign aid. So far, the largest proportion of the foreign aid this country has got has come from the United States and, to a lesser extent, from Britain. The persuasion these two countries have used has done much to stimulate the interest of the European Six in India's development plans. The failure at Brussels is recognised at root to be due to a conflict of political interests. That being the case, there is a serious danger that the Six may no longer be as amenable to Anglo-U.S. persuasion as they have been hitherto. General de Gaulle is already credited with the intention of concentrating his attention henceforth more firmly on Africa; and the point cannot be forgotten that in the early days of the Rome Treaty discussions, one important idea was that the development aid of the European Six should be diverted increasingly to the African "associates" represented by

the former French and Belgian colonies. The idea receded in importance in subsequent years, but it would not be surprising if it were revived forcefully now. In that event, it is conceivable that the relative harmony in the working of the Aid-India Club (on which the Common Market countries are strongly represented) would suffer. The danger is the greater since the United States has been insisting that any contribution she makes

AS SEEN FROM BRUSSELS

By Malcolm Subhan

ADJUSTMENT is not easy if in the brief space of 48 hours a pattern established over 16 months is deliberately broken. This is precisely what happened on 14th January, when General de Gaulle put into execution his plan to break up the negotiations between Britain and the European Economic Community. The opening of the negotiations had suggested the emergence of a new pattern in European relations. As they proceeded, the sentiment grew within the Community that the extension of the Common Market to the U.K. was as necessary as it was logical. Even many of those who opposed Britain's entry into the Common Market came reluctantly to accept it as inevitable, although they were more determined than ever that Britain would first have to accept the Treaty of Rome without reservations. As a result, it was soon evident that the collapse of the negotiations could be as damaging to the fortunes of the Community as of the British Government.

It is this emerging pattern of an expanding community which has been wiped out. The claim that the negotiations were on the point of succeeding is arguable; one has only to look at the problems which remained unsettled at the moment of rupture to realise this. Nevertheless, the E.E.C. now has to adjust itself not only to the breakdown of the negotiations, but also to the knowledge that the breakdown was deliberately engineered by one of its members in wilful disregard of the wishes of the others. It is still too early to say how the Community will react to the sudden crisis precipitated by General de Gaulle. The remark of Dr. Ludwig Erhard, the West German Minister for Economics, that the spirit of the Community was dead and only a mechanism remained, has been widely echoed since it was made as the ministerial conference broke up. While it accurately reflected the mood of France's five partners following the collapse of the negotiations, all five felt at the same time the need to salvage something from the wreckage. It is in this light that their attempts to come to an arrangement of some kind with the U.K. must be regarded.

All these are, however, the immediate, emotional reactions of men struggling against the course of events which they appear powerless to control. No effective policy can be built on bitterness and rancour, and this is being realised throughout the Community. Among those who are aware that a policy of reprisals would only do lasting damage to the Community are those who were the first to threaten to retaliate against France. It is nevertheless evident that a period of uncertainty has opened for the Community. During this period—on the length of which no one is willing to speculate—the Common Market machinery may be expected to run more or less as before. Thus, while the cuts in the tariffs between member-States will doubtless take place this July as scheduled, none of the Six is expected to show any initiative in the field of economic union. As a result, the establishment of a common commercial policy will certainly be delayed.

In the opinion of observers in Brussels, the E.E.C. will eventually survive the present crisis. Already a reaction to the more pessimistic remarks has begun to set in. Statements made in the heat of the moment are being modified and extreme positions abandoned. The earlier decision to continue the negotiations without France has now been definitely revoked, even by M. Spaak, who was the first to advocate such a course of action. This reaction is partly due to a reassertion of what is termed the Community spirit, and has come from those who want to save the Community above all else. But it has also—and perhaps even primarily—come from those Europeans who were afraid the negotiations would succeed in spite of everything and are now relieved to find that the

should be "matched" by the total contributions of all the other member-countries taken together—for which reason the last meeting of the Club in July 1962 was a partial failure. If France and her fellow-members of the Six now become even more reluctant to match U.S. generosity with their own—because of political differences in other fields—the usefulness of the Club could diminish significantly.

frontiers of the Common Market will not be extended to include the U.K. after all. The sudden burst of generosity towards Britain on the part of at least five of the six members of the Common Market suggests that if the negotiations were resumed tomorrow the five would raise few obstacles to Britain's entry. This would not really be the case. What the present display of solidarity with the U.K. has obscured is the strongly isolationist tendency of a considerable part of the Community.

It is important to remember that France was not alone in her insistence that Britain accept the Treaty of Rome as it stands, although none of the others was as outspoken perhaps in its demands that the U.K. denounce her overseas commitments and abandon her attempts to protect the vital interests of the Commonwealth countries. The attitude of the Six to the Commonwealth generally has been that it was up to Britain to look after her former empire as best she could. The concessions which were finally secured for India and Pakistan, for instance, were obtained only after long and sometimes bitter dispute. In every case, the Six proclaimed their resolution that no safeguards could be considered which were incompatible with the Treaty of Rome. This almost slavish attachment to the Treaty, however understandable it may be, ignored the fact that the Treaty was drafted by Six industrialised powers, none of them with any extensive commitments in the underdeveloped countries. The problems of the major developing countries such as India could nevertheless have been solved within the framework of the Treaty had the Six shown a willingness to extend to them the economic provisions of the association agreement with the African States. But the Six made it clear from the start that they were not prepared to extend the benefits of association on any substantial scale. The only immediate concession they could offer—apart from certain tariff reductions—was to grant the U.K. a six-year period in which to withdraw the right of duty-free entry from Commonwealth countries.

With the collapse of the negotiations for Britain's entry, the question of whether or not the E.E.C. is an inward- or outward-looking Community assumes fresh significance. It had been argued that Britain, with her worldwide trade relation-

ships, would force the Six to widen their horizons to include more of the outside world than the former French and Belgian colonies in Africa. But the French refusal to admit the U.K. into the Common Market unless she first renounced her overseas commitments, including her Commonwealth obligations, suggests that the France of General de Gaulle wants a closed, inward-looking Community. While it is perhaps unfair thus to single out the French, whose views after all are shared by others in the Common Market, the fact remains that it is the French President who has made for the E.C.M. for the time being the choice between a "closed" or "open" Community. Although M. Couve de Murville was careful to point out in his closing statement to the ministerial conference that France was aware of the problems of the Community's relations with the developing countries, it is to be feared that General de Gaulle's plea for a closed, self-contained political community have strengthened the currents of political as well as economic isolationism in the Common Market. This is true not only of France, where fears are being expressed that the giant American corporations are over-running the country, but also of her neighbours.

Economic problems by and large do not appear to interest General de Gaulle, and it is unlikely that he has any specific economic programme in mind. Politically, however, it looks as if what he wants is a small, compact community of six States with which a number of Mediterranean and African countries are closely associated. Inevitably, the economic aims of such a community are self-sufficiency, and may be realised to a considerable extent, thanks in large measure to the African associates. The economic power of such a community, allied to its military power, would assure it a dominant rôle in world politics, enabling it to deal on equal terms with both the United States and the Soviet Union.

The danger is that in the critical period which lies ahead for the Community, these views may provide a focal point for the Community's thinking about its relations with third countries. It is significant in this connection that the Trade Expansion Act, which was hailed by the E.E.C. Commission as "a major step towards a new era in international economic affairs" and a pledge by the United States of "a far-reaching liberalisation of free-world trade," is being strongly criticised in some circles as an attempt by the United States to sabotage the Common Market. It is claimed that President Kennedy plans to use the tariff-cutting powers with which he has been entrusted to destroy the frontier between the Common Market and third countries, which is the common external tariff. As the British negotiations made clear, for the Six the defence of the Treaty of Rome often means simply a refusal to touch the common external tariff, even though it was fixed without particular thought to the needs of the developing countries.

ADVANCE RATES ADVANCING

THE decision of the commercial banks to increase their minimum lending rate from 6 percent to 6.5 percent under the interbank agreement has created a poor impression. Although Bank rate has been raised from 4 percent to 4.5 percent, that is no excuse for the commercial banks raising their own minimum lending rate. The banks did some time ago decide that the minimum lending rate should be 2 percent above Bank rate, but under the interbank agreement they could have stuck to the previous minimum rate of 6 percent. While modifying and simplifying its three-tier system of lending to commercial banks along with the Bank rate increase, the Reserve Bank made it clear that its action did not imply any change in lending rates. The hint to the banking community was obvious: that it should not exploit the new situation for increasing its lending rates.

Nobody questions the right of the banks to increase their lending rates if circumstances justify such a move. But the commercial banks had already raised their lending rates just before the Bank rate increase, so it was thought that they had compensated themselves adequately for the increase in operating costs for the time being.

Those costs have not increased meanwhile. If banks have now again raised their lending rates, it is presumably because they think that they can easily pass on the burden of higher interest rates to borrowers. As credit is tight, borrowers have no option; they have to pay what the banks demand. But the question which now arises is whether the higher lending rates are justified without a corresponding increase in deposit interest rates. The evidence suggests that monetary activity outside the organised sector has increased in recent weeks. It is possible that this is because the banks have not succeeded in attracting all the deposits they could. Not all types of deposits are sensitive to deposit interest rates, but a substantial proportion are. If the banks are to attract the latter, deposit rates may have to be raised in line with the general pattern of interest rates in the market. Thus, if the banks were to increase their deposit rates, the justification for raising lending rates would be less difficult to appreciate.

The Reserve Bank has clearly decided to make credit dearer in order to curb inflationary pressures. But the point has been forgotten that in a poorly-monetised economy like India's, the effectiveness of bank interest rates in restraining

inflation is limited. A large proportion of the credit comes from outside the monetised sector; the so-called instruments of monetary control thus cannot function effectively. In fact, the steady rise in interest rates over the past year or so has done little to restrain credit requirements. The advances of scheduled banks have risen from Rs. 1,324.15 crores to Rs. 1,479.80 crores during the year, and they now constitute about 66.4 percent of the total deposits.

The danger is that with the increase in interest rates, the production costs of industry have risen. Many enterprises have not hesitated to pay more on their borrowings as they have found it easy to pass on the burden to consumers in the form of higher prices. The wholesale price index for manufactured goods, for instance, has increased from 125.9 to 128.3 (1952-53 equals 100) over the past year, even though the index for industrial raw materials has fallen from 137.7 to 132.8. If

HIGH HOPES FOR STEEL

INAUGURAL ceremonies as a rule offer little scope for frank speaking. This can hardly be said, however, of the speech made by Mr. M. A. Fienness, leader of the British Iron and Steel Institute delegation, at the opening session of the International Symposium on Iron and Steel Making in Jamshedpur on Monday. After pointing to the serious lack of skilled manpower, already overstretched in staffing the three new steel plants, he declared that India would be well-advised to expand existing units to their maximum potential before embarking on the construction of new ones. As he pointed out, there is no substitute for time in acquiring experience or expertise, thus discounting Mr. C. Subramaniam's latest idea of forming a cadre of "steel cadets" to accelerate manpower development. Obviously, the top positions in a steel plant cannot be filled by "crash" programmes of training, and it is at this level that the greatest difficulty is currently being experienced. It is possible to argue, for instance, that Rourkela's protracted teething troubles may not have taken so long to overcome if the right quality of leadership had been available there earlier. If New Delhi insists on making the infant public sector in steel run before it has learned to walk, disappointments are obviously in store. International competition in aid-giving may yet bring forth one or two offers of collaboration in steel, as Mr. Subramaniam seemed to hint in his Jamshedpur address, but their successful operation would seem hardly possible without continuing dependence on foreign technicians, as shown by the record of all the three new plants.

Mr. Fienness politely refrained from questioning the premises on which the planners have estimated the future demand for steel at 18 million tons in 1970-71 and 30 million tons in 1975-76. He raised, however, the pertinent question of how growth on this scale was to be financed, and how the foreign exchange was to be secured. Discounting the cool assumption that future progress of heavy engineering industries can be supported by the domestic supply of plant and equipment, he warned that their manufacture must require engineering know-how and experience "which are most hardly won". He wisely urged that India should exploit to the full all the help that the western nations are willing to offer because of the "inevitable need" for continued export of plant and equipment. It will be unfortunate if this friendly and forthright advice is dismissed as being motivated by Britain's self-interest. Although Britain is one of India's principal suppliers of capital goods, and has, like this country, a vital interest in maintaining her exports, she is equally adept in adjusting herself to changing circumstances. For evidence, one need only recall the many joint ventures in which British and other western nations are providing capital and technical assistance to aid the growth of heavy industry in India. Mr. Fienness's own company is understood to have offered assistance in fabricating small blast furnaces in India, apart from its involvement in the public sector project in Wardha for making pressure vessels and heavy structural. The imputations that will perhaps be made before long to discount the British delegation's advice can, therefore, be safely rejected.

Looking beyond the steel industry, Mr. Fienness made a very important point when he mentioned

interest rates are to be raised still further, prices too would rise. The increase in the wholesale price index has so far been small—from 123.4 to 125.7. But there is no cause for complacency. The Central Budget, which is due to be presented at the end of February, is expected to impose stiff indirect taxation in the form of heavier excise and import duties. If the burden of these taxes too is to be transferred to the consumer in a highly-sheltered domestic market, the rise in prices could be serious. To check inflation, therefore, it is necessary to avoid making credit dearer and to increase production. The growth of industrial production during the past year has been discouraging. Despite what the Government says, the small increase of 8 percent achieved during the first nine months of 1962 may not be maintained in view of the dislocation caused by the emergency and by the shortage of coal, transport, power, raw materials and "balancing" equipment.

the doubts that assail the overseas investor as he surveys the Indian scene. He acknowledged that India's record concerning the treatment of foreign capital is "good", and no one need doubt her wish to honour her debts always. But, the growing external payments deficit, aggravated since last year by the emergence of a net deficit on the invisible account, creates worries for the future and consequently a hesitation to add to commitments in India. Something like this appears to have happened in the well-known case of the Tata special steels plant, for the failure to find a collaborator overseas is otherwise hard to explain. Tatas are the biggest name in the Indian private sector and undoubtedly have the experience and managerial resources to set up a 50,000-ton unit alongside their existing two-million-ton plant. Yet they have failed to interest British, American and even Japanese firms to participate in a venture which will never suffer from any lack of demand for its products.

This failure, and others not so well publicised, point to the need for India to do some fresh thinking on her economic policies and reorient them towards achieving greater international viability. Every deal that turns sour affects the climate for investment; the bigger the size of the infructuous deal, the greater the damage. No doubt, New Delhi is aware of all this and has made haphazard attempts to assure foreign capital of a welcome. The results, however, are disappointing, for red tape is still allowed to prolong negotiations to the point where the collaborator loses interest. Even where a joint venture has been approved in principle, far too many matters of detail require individual sanction, leading to further exasperating delays. In particular, New Delhi has of late been resisting the import of foreign personnel although it must know that some measure of supervision by fellow-nationals is a precondition for investment.

While Mr. Fienness's plea for direct equity investment "on good old-fashioned capitalist terms with all its yardsticks and all its disciplines" is undoubtedly sound, one is entitled to wonder if there is likely to be much interest in the present circumstances. Moreover, the foreign investor can hardly be sure that circumstances, at least in relation to the area of his interest, will not change for the worse. When the oil companies moved to set up refineries in the early 'fifties, their enterprise was warmly welcomed. Developments in recent years appear to indicate that the welcome

BUY
**NATIONAL
DEFENCE
BONDS**

has worn thin since all types of arguments are advanced to prevent their expansion. All enterprises intend to leave the money where they put it, as is evident from the share of profits ploughed back each year by foreign business concerns in India. It is important to the whole concept of overseas investments that they should be permitted to grow and reap the legitimate benefits of an early start.

Returning to the future of the Indian steel industry, one cannot help entertaining considerable anxiety. New Delhi's thinking seems to be dominated increasingly by enthusiasts who, to quote Mr. Fienness, exhibit a tendency towards levitation. Obviously, India's hands are far too full to permit her to be over-ambitious, and there is no gain-saying the need to preserve a sense of balance and proportion in all technological adventures. Unfortunately, experienced steel men have no voice in the shaping of New Delhi's policies because they are regarded either as Cassandras, or more charitably, as out of touch with the times. The result is that the Government is left to its own counsels in deciding major technical issues, and seems inevitably to gravitate beyond the realms of practical possibility. For this situation, New Delhi itself is to blame because it has been urged, time and again, to set up a high-powered national body capable of supplying a sense of decisive action. It has created instead the weak, watered-down alternative of a Steel Advisory Council, which is too large and unwieldy to be effective in any way. Not surprisingly, therefore, the "levitators" flourish because the technical leadership which would make them keep their feet firmly on the ground is lacking.

THE REFORMERS AMONG INSURERS

CERTAIN senior members of the executive committee of the General Insurance Council, it is reported, are greatly worried that their pet schemes for "purifying" the general insurance trade of its allegedly illegal practices have not been a roaring success. On their initiative, the committee was made to agree to pre-payment and post-payment audit. Post-payment audit is now under trial. Pre-payment will follow on its failure. This was their main prescription for eradicating malpractices. They also persuaded the committee to incorporate in the directive, now known as Circular No. 33, the essence of the agreements on the non-division of business and on the 3 percent mutual assistance pool. These two measures were tried in Bombay among 17 companies on a voluntary basis, but knowledgeable circles confirm that they have been a costly failure. The senior members agreed to allow the inspecting squad to question and authorise payments before they were made—an extraordinary procedure; but they probably felt that, with official approval, they would at the same time manage to insulate themselves from competition.

The directive, which won the silent approval of the weaker executive committee members, was discussed with insurers. In the first round, most of the insurers wavered and hesitated, and some were positively annoyed. Conferences followed. With great suavity, the "reformers" on the executive committee tried to explain how harmless the directives were. In speeches interspersed with veiled threats, vague references were made to the possibility of getting the Central Finance Ministry to intervene if the insurers did not agree. The Controller of Insurance, it is said, did not like the moves as they did not fit in with his own pet scheme—for a reduction in premium rates. When the "reformers" declared that there would be no more reduction in rates if their directives were voluntarily accepted, they virtually vetoed the Controller's schemes to eradicate malpractices. Naturally, therefore, the Controller of Insurance dissociated himself from the moves, and declined to order an investigation under Section 33 of the Insurance Act into the affairs of those companies which refused to abide by the directives issued by the "reformers". The south Indian companies were prepared to suffer an investigation rather than accept the new terms. They gained added strength from the differences between the Controller and

the "reformers", and refused as a body to toe the line prescribed by the latter.

The executive committee members' worry now stems from the fact that they have not been able to get the general insurers' support. They cannot explain why one set of companies should be put at a competitive disadvantage. They have also not shown the justification for a rule which has no general application. They know that the answer is to withdraw the directives, but they are not prepared to admit that openly. The usefulness of the inspections which the "reformers" have suggested is extremely doubtful. A vague hint was given to company executives that this was one way of averting the nationalisation of general insurance which is often demanded by certain members of Parliament. If the trade, they said, could be purged of illegal practices, there would be no justification for the Government to take over general insurance.

Yet, it is believed that when the squad of inspecting officers was about to swoop down on insurance companies, the nationalisation of general insurance was being seriously considered at the instance of the Prime Minister himself. The emergency has put an end to talk of nationalisation for the time being, but, according to the Central Finance Minister, the move has been only delayed, not withdrawn. A decision, if and when it comes, will be independent of the report which the "reformers" may submit to the Central Finance Ministry. The inspecting squad has sought endless details in its round of inspection of the companies. In most cases, the enquiries are irrelevant, petty

and unwarranted. Barring minor lapses, the inspectors have not been able to gather material which can be used to discredit the trade. So the question now needs to be asked: if a report is submitted to the Government saying that there is nothing fundamentally wrong with the practices of the trade, will nationalisation be averted if other factors persuade the Government to take such a decision? Everybody knows that nationalisation is a larger issue. It is a matter of policy and does not depend on the methods of running the trade.

The second objective of the "reformers", it is said, is to plug loopholes, so that funds do not go out by way of extra inducements and if such practices persist, they would be detected. The question has not been answered whether artificial measures are necessary to support the "price" of insurance—measures like those prescribed by the terms of the Code of Conduct and Circular No. 33. Instead, the vague generalisation is offered that any move in Parliament to amend the Act will strengthen the hands of those who are keen on nationalisation. The statement seems intended only to raise a scare. Over the years, the executive committee has done little to promote the good of the trade; on the contrary, it has been accused of authoritarianism and of serving sectional interests. For once, it can do some good by saying that the waste of money on inspections should be stopped. The bill will have to be paid by the insurers themselves, and it will be particularly onerous at the present time. Loopholes cannot be plugged by stringent "police" measures: if insurers choose to buy business, little can be done to stop them from doing so.

tramps should not be allowed to enter the coastal and liner trades.

Expanding Output of Metals

In his presidential speech at the annual technical meeting of the Indian Institute of Metals in Jamshedpur on Monday, Dr. D. P. Antia visualised the likely growth of the metals and minerals industry in India over the next 20 years. Quoting from the forecasts worked out by the National Council of Applied Economic Research, he said that steel output might be raised to 50 million tons by 1981-82, or the equivalent of 38 million tons of finished steel. The production of aluminium, for which India has plentiful natural resources, might rise to 1.2 million tons, while the output of copper, lead and zinc might go up to 200,000 tons each. However, judging by the country's raw material resources, it seems that the industrial programme will have to rely mostly on steel and aluminium, since the ore reserves of the other metals are very poor.

The present production of copper is about 9,800 metric tons and it is entirely of the fire-refined variety, which is not suitable for electrical purposes. It is proposed to establish shortly a total capacity of 29,000 tons for electrolytic copper—about 20,000 tons by the public sector in Khetri, Rajasthan, and 8,500 tons (based on imported blister) by the Indian Copper Corporation. The Indian Bureau of Mines thinks that 300,000 tons of copper a year can be produced from low-grade ore, but considering the limited tonnages of proved reserves, the idea is highly doubtful. As for lead, current production is about 2,900 metric tons, while the installed capacity is 6,000 tons. The Metal Corporation of India, which is the only producer, plans to raise its capacity to 11,000 tons. Lead and zinc ores are found only in Rajasthan and they cannot sustain a smelter capacity of 200,000 tons. At present no zinc is produced in India, but plans are under way to set up an 18,000-ton smelter in Udaipur (Rajasthan) and a 20,000-ton smelter (based on imported concentrates) near Cochin. A capacity of 200,000 tons will be possible only if the industries are import-based, as in Japan. But this is a remote possibility.

Dr. Antia has rightly stressed the need to re-orientate the mineral policy so that it can support the expansion of basic metal industries. As large quantities of minerals will be required for

domestic consumption, exports of several items like chromite, magnesite and bauxite may have to be restricted as indigenous production rises. Perhaps the main minerals which can continue to meet both export demands and rising internal consumption are iron ore and manganese ore because the reserves are large. Dr. Antia feels that later the country may even have to import certain ores and concentrates besides high-grade coal.

States Face Difficult Task

The standing committee of the National Development Council has suggested a total outlay of Rs. 944 crores by the Centre and Rs. 750 crores by the States in 1963-64. If defence expenditure has to be raised sharply, both targets might prove extremely difficult to achieve. It is perhaps a little easier for the Centre to raise more money. But State Governments will find it very difficult to do the same, especially if the Centre's assistance to them is to be only Rs. 400 crores. The States have already strained hard to increase their revenues in the first two years of the third plan and claim that they are left with very little scope for raising more. They were originally expected to spend Rs. 750 crores during 1963-64 (against nearly Rs. 723 crores in 1962-63 and Rs. 611 crores in 1961-62). The Centre's contribution to the total was to be Rs. 450 crores. The State Governments were not confident of raising the revenue from their own sources for financing the plan outlay. For this and other reasons, the State Governments' plan outlay for 1963-64 was reduced to Rs. 675 crores, with the Centre's contribution at Rs. 400 crores, instead of the original Rs. 450 crores. But the proposed outlay was subsequently increased to Rs. 692 crores; and as it was felt that power and agriculture had not received adequate attention, the plan outlay was raised by a further Rs. 58 crores—Rs. 37.5 crores for power and Rs. 20.5 crores for agriculture—to its original level of Rs. 750 crores. The need for maintaining the plan outlay both at the Centre and in the States at as high a level as possible is understandable. But it creates confusion if the State Governments are not able to raise the necessary resources and some of the plan projects have to be given up or drastically curtailed in the course of the year.

The State Governments made additional tax proposals for raising Rs. 14 crores in 1961-62 and about Rs. 47 crores in 1962-63, which taken together might raise the yield to about Rs. 100 crores a year. The State Governments do not expect to raise more than Rs. 38 crores by way of additional revenue for 1963-64. But since the Centre's contribution has been reduced to Rs. 400 crores, the States will have to raise nearly three times this amount to finance the plan outlay, which appears almost impossible. The major source which has not been fully tapped so far is the rural sector, which pays less taxes as a proportion of the national income than the urban sector. But, for political reasons, the State Governments have not been able to tax the rural sector adequately. The enthusiasm generated during the Chinese invasion is now wearing off, and the rural people may not readily bear additional burdens.

Bank Credit Controls

The Reserve Bank's directive of 28th February, 1962, as amended on 10th May, 1962, regulated bank advances against foodgrains (other than wheat), but advances against warehouse receipts for paddy and rice were exempted. In a revised directive a few days ago, advances against paddy and rice against warehouse receipts issued by warehouses established by the Central and State warehousing corporations to parties other than co-operative marketing and processing societies have been made subject to a 25 percent margin. The Reserve Bank's credit control policy had encouraged the use of warehouses, but the change is likely to reduce the incentive. It is some consolation that the ceiling limits for 1963 will be fixed at the levels actually obtaining in each two-month period of 1962 beginning with the January-February period. In making the change in its selective credit control for paddy and rice, the

Reserve Bank has not been able to establish that greater advances against these two commodities in 1962 were actually responsible for raising their prices in the market. It has also not been able to show that the credit curb it has now imposed will actually help in bringing down the prices of paddy and rice.

In fact, the Reserve Bank seems to have acted on the unsound assumption that since scheduled bank advances against paddy and rice in 1962 were 25 percent or 30 percent higher than in the corresponding periods of 1961, they must have pushed up the prices of these commodities. If the prices of these two commodities in 1962 were somewhat higher than in 1961, it does not establish the fact that this was due to larger scheduled bank advances. In fact, the output of paddy and rice in 1961-62 was somewhat smaller than in 1960-61 and some rise in prices was only natural. In 1962-63, the output of paddy and rice has increased a little, and prices might have fallen even if the Reserve Bank's selective credit control policy was not changed. The credit control policy cannot be consistent if the Reserve Bank acts in haste. It is also unsatisfactory if, in the process, the use of warehouses is discouraged.

For oilseeds, a change in the directive has become necessary because of changes in the export control system. In the past, the increased credit limits allowed to exporters of H.P.S. groundnuts were linked with the export sale contracts registered by the export trade control organisation. But now the free licensing of groundnut exports has been introduced, so a change in the qualitative credit control policy of the Reserve Bank was inevitable. It is gratifying that the authorities have realised the need for increased credit and for the two-month period—January and February 1963—and additional credit limits have been fixed at 200 percent of the additional credit limits for the corresponding period of 1962. But it is not clear why this liberal credit limit has not been announced for the whole of 1963 and has been limited only to a period of two months in the first instance. The reasoning of the Reserve Bank authorities apparently is that they will watch the situation and will again announce liberal credit limits for the subsequent period of two months. But, for export promotion, exporters in India and importers abroad have to be certain of conditions for a considerable period in advance to be able to benefit fully from them. No harm would have been done if groundnut exporters were given the assurance of continued liberal credit facilities.

Poor Results from N. C. D. C.

The latest report of the National Coal Development Corporation Ltd. for the year ended March 1962, throws light on the performance of the public sector collieries. The net profit is only Rs. 11.89 lakhs, after providing Rs. 1.37 crores for depreciation, Rs. 65.29 lakhs for interest on Government loans, and Rs. 49.40 lakhs for losses on the Giridih colliery. A sum of Rs. 1.33 lakhs has been provided for the Korba partnership project. Under this partnership, the Government of Madhya Pradesh will participate financially in the Korba enterprise to the extent of one-third of the capital investment and share profits and losses proportionately. The net profit of Rs. 11.89 lakhs has been transferred to development rebate reserve. Since the total value of shares issued by the Corporation is Rs. 30.81 crores, the net return on capital investment works out to a mere 0.38 percent.

It is interesting to note that the public sector collieries too have suffered in common with the private coal companies due to the transport shortage. In many collieries the output has had to be restricted following large accumulations at pitheads. The glut had created several problems for the Corporation. Firstly, it had caused shortage of storage space. Secondly, it had given rise to the danger of fire from spontaneous combustion. Additional expenditure had to be incurred to prevent fire. Thirdly, the accumulation had led to disintegration of the coal and deterioration in its quality. A portion of the stock had to be written off causing financial losses. Fourthly, the loading of coal into railway wagons from stocks, which had to be situated at some distance from the loading point, involved not only rehandling

of coal but also a longer haul. The rehandling operations have cost the Corporation between Rs. 2.50 and Rs. 3 a ton. Besides, the restricted production has meant idle men and machinery as a result of which production costs have risen.

The N.C.D.C.'s production during 1961-62 was 6 million tons, which was less than 50 percent of the capacity of the mines. Out of the total production target of 30.5 million tons a year to be achieved by 1965-66, projects for a total output of 29.62 million tons are already in hand. Certain other projects are being considered to make up the balance of the third plan target.

The Corporation also proposes to set up a number of coal washeries during the third plan. A project report for the expansion of the Kargali washery to handle an additional 500,000 tons of raw coal a year has been approved by the directors. Work on a coal washery, to be set up at Kathara with an input capacity of 3 million tons a year, has been taken in hand. Another washing plant, to be built at Gidi (Karanpura), with an input capacity of 2.8 million metric tons a year, has been projected. These three projects are expected to go into production by April 1965. This apart, a washery with an input capacity of about 1 million tons a year is proposed to be set up at Sawang. The central workshop of the Corporation in Barkakana undertakes daily maintenance work such as repair and overhaul of engines and other machinery. It has also taken up the manufacture of spare parts, for dumpers, shovels, tractors, dozers, rotary drills, etcetera.

Industry and Technology

Technological development holds the key to industrial and economic progress. Due to the failure to keep abreast in the technical sphere, the Indian cotton textile industry has lost the position of advantage and superiority it once enjoyed. While techniques and technology have to be borrowed from abroad, it is imperative that facilities for research, design and planning are developed in the country itself. This point was ably brought out by Mr. G. L. Mehta in his annual address last week to the Institution of Marine Technologists, Bombay.

Speaking on "Industry and Technology", Mr. Mehta said that too much attention was being paid to setting up what might be called the "hardware" of development—factories, dams, power-stations and so on, but not enough care was taken to see that the country also made a simultaneous beginning with evolving its own techniques conditioned to its own environment and suitable to indigenous needs. He rightly warned that unless India undertook her own research and developed a technology based on it, she is bound to remain a few steps behind other countries. In a competitive world, this has various drawbacks: it would place the country at a disadvantage in the field of exports; it would involve constant borrowing of technology and occasionally failing in the endeavour. It would mean continuous dependence on other countries for maintaining industrial progress. Research, design and technology are in a variety of ways related to social conditions in a country. The technology evolved in the West in response to various pressures in its systems may not necessarily be appropriate for other countries.

As pointed out by Mr. Mehta, the national plans demand continuous technological development and an increasing supply of technicians. Educational institutions should meet the requirements of the modern technological age and adapt education to the development of abilities and skills essential for workers by brain and by hand. Mr. Mehta's view will be widely shared that while research is being carried on in India in many Government-sponsored laboratories and institutions and hundreds of highly qualified persons are employed on the job, there are few signs of application of such research to the country's numerous and urgent problems of agriculture, industry and transport. Surely, massive buildings and expensive apparatus, conferences, committees and delegations do not ensure research. It is imagination, inventiveness, determination and co-operative spirit of those who guide policies and those who work in such institutions that really count. Research consciousness is not yet widespread in industry and unless this becomes ingrained, genuine and widespread, it will

tend to retard the country's progress. Mr. Mehta has reminded industrialists and technologists that it is their task not only to build and work factories, but also to lay the foundations for future growth.

Cotton Prices Down

Many upcountry markets have reported the accumulation of stocks of cotton and a consequent marked decline in prices. The "crisis" provides a sharp contrast to the near-famine conditions obtaining in the cotton market only a few months ago. The record low carryover at the beginning of the season in September and uncertainty about the new 1962-63 crop had pushed cotton prices in October well above the revised ceiling prices. The rates have been drifting lower since the middle of October when it became clear that the new crop would be the best that the country has had so far, the trade estimates varying from 5.4 million bales to 5.7 million bales. Cotton futures which had touched a high of Rs. 754 a three quintals, were sold down to Rs. 663 in unofficial dealings on 17th January. A crop of 5.4 million or 5.6 million bales alone might not perhaps have produced such a big decline if the textile industry had not been faced with the accumulation of cloth stocks. Financial stringency has naturally forced mills to go slow with their purchases. The prevailing market psychology also has not been conducive to the building up of large stocks of cotton. All this has come about at a time when the crop movement is in full swing. Apart from a better harvest, market sentiment has been considerably affected by the uncertain political situation and various restrictions on the trade.

While it is true that cotton prices have suffered a heavy decline over the past few months, concern over this fall would be quite unwarranted. In spite of the recent steep decline, cotton futures are quoted only about Rs. 30 a three quintals below the previous season's ceiling which had been in existence for nearly a decade. The position in relation to ready cotton prices is not much different. Only CO-2 is quoted substantially lower; all other varieties are quoted around the previous season's ceiling prices. Far from being a matter of concern, the decline in cotton prices should be welcomed since this will help hold the price line in cloth. Even with a crop of 5.4 million or 5.5 million bales, the country will need to import sizeable quantities of cotton in order to maintain the carryover at a satisfactory level. But with cotton prices well below the revised ceilings, there is a strong case for going away with the supervisory scheme for the marketing of cotton which is widely resented by the trade.

It is good news to find the export quota of 200,000 bales of Bengal Deshi getting exhausted so very early in the season. This shows what good results can be a timely release of quotas yield. In view of the fairly satisfactory supply position of cotton, the Government will do well to release a further export quota for 50,000 bales or 75,000 bales of Bengal Deshi at the earliest, since the need for earning foreign exchange is pressing.

Policy for Industrial Explosives

The question of indigenous production of industrial explosives and other accessories was recently examined by the Central Ministry of Commerce and Industry in consultation with the Central Ministries of Works, Housing and Rehabilitation and Defence. The third plan targets have been raised in the light of the present demand and likely requirements in future. The Government is of the view that no single manufacturer should be entrusted with the production of blasting explosives, safety fuses or detonators to the extent of the country's total requirements. It feels that it would be more conducive to the maintenance of reasonable prices of explosives, if more than one party are entrusted with the manufacture of these items. The plan target for explosives has been raised from 25,000 tonnes to 45,000 tonnes, for safety fuses from 26 million coils to 45 million coils and for detonators from 120 million to 216 million numbers.

The licensed capacities are 24,750 tonnes for explosives, 23 million coils for safety fuses and 128 million numbers for detonators. The capacities

Current News and Comment

Foreign Share in Indian Shipping

The approval by the National Shipping Board—the most representative and authoritative body in the field—of the move to raise the limit for foreign participation in Indian shipping should clear the way for the Government to implement the resolution adopted by the Congress Parliamentary Party's executive committee early in January. The latter has recommended an increase in the ceiling on the permissible percentage of foreign participation in the share capital of Indian shipping companies from the present 25 percent to 40 percent. The Board's support is, however, by no means unqualified. Increased participation has been approved only in the spheres of tramp and tanker tonnage. It is opposed to any increase in the foreign share in the liner and coastal shipping. The Board's decision, which represents a *via media* policy on a controversial issue, marks a significant change in its earlier stand. In July last, it had rejected the suggestion for increased foreign participation in Indian shipping. Apparently, the National Shipping Board has felt it necessary to revise its attitude towards foreign participation because of the new situation created by the national emergency which calls for rapid development of the shipping industry as the second line of defence.

The Board's compromise formula is intended to protect existing shipping companies engaged in the liner and coastal trades, and at the same time, promote the development of tramp and tanker tonnage. Tramps and tankers handle about two-thirds of the country's cargo but the share of Indian shipping is still a miserable 2 percent or 3 percent. Six vessels in tramp and one tanker is perhaps about all that India has at present. While the Board has no objection to an increase in the upper limit of foreign participation, it wants the Government to ensure that the effective control of management is retained in Indian hands as stipulated by the Merchant Shipping Act. The Board has also recommended that increased foreign participation should be permitted only after a thorough scrutiny and only on a selective basis.

Equally welcome is the suggestion that foreign collaboration in the tramp trade should be only with experienced parties having wide contacts in the field, as that would secure for India the benefit of cross-country trade and return cargo, thereby helping to earn more foreign exchange. In order to ensure that the share of Indian companies is not reduced, the Board has suggested that

remaining to be licensed are 20,250 tonnes for explosives, 22 million coils for safety fuses and 88 million numbers for detonators. The production of industrial explosives which amounted to 7,853 tonnes in 1960 and 10,733 tonnes in 1961 is placed around 16,500 tonnes in 1962. Production of safety fuses rose from 3.30 million coils in 1960 to 9.4 million coils in 1961 and the figure for the January-October 1962 period is placed at 9.96 million coils. The manufacture of detonators has not yet started although capacity for 128 million numbers has already been licensed. Additional capacities which have recently been recommended to be licensed consist of 21,000 tonnes of industrial explosives, 115 million numbers of detonators and 29.3 million coils of safety fuses.

Foreign firms collaborating in the manufacture or proposals for the manufacture of industrial explosives are J. Meissner of West Germany, Atlas Chemical Industries Incorporated of the U.S.A., Spencer Chemical Company of the U.S.A., Inter-mountain Research and Engineering Company of the U.S.A. and Montecatini of Italy. The proposals for the manufacture of detonators visualise collaboration from the I.C.I. of the U.K., Komplex of Hungary, J. Meissner of West Germany, Atlas Chemical Industries of the U.S.A., F.R.B. of Belgium and Montecatini of Italy. The schemes for the manufacture of safety fuses are in collaboration with S.A.P.E.I.C. of Switzerland, Copal of Belgium, Montecatini of Italy and J. Meissner of West Germany.

Protection for Tenants

Since the housing shortage in India is acute, tenants are usually in a weak position. To protect them from harassment and exploitation, Rent Control and Eviction Acts have been passed in all the States, and they are framed on more or less the same lines. A writ petition moved in the Allahabad High Court by a tenant of Lucknow, which was referred by Mr. Justice D. S. Mathur to a full bench for opinion, shows that there are many loopholes in the existing legislation not only in U.P. but in other States too. The type of case from which the writ petition arose is not rare since, in trying to eject tenants, landlords often plead that they need the accommodation for their own use. The majority opinion of the full bench, consisting of the Chief Justice Mr. M. C. Desai, Mr. Justice V. G. Oak and Mr. Justice S. D. Singh, shows that the law as it stands at present does not specify how the district magistrate, the commissioner and the State Government are to decide whether permission should be granted to a landlord for filing a suit against the tenant for ejection. This makes the existing law unfair to the tenant whose position is already weak. It is, therefore, necessary to make suitable amendments in the Rent Control and Eviction Acts in the different States.

The facts of the case were that the landlord, Mr. Radhey Behari Bisariya, applied to the Rent Control and Eviction Officer for permission to start proceedings for ejection against Mr. Parmeshwar Dayal, a tenant of his house in Lucknow, on the ground that he needed the premises for his own use. The Rent Control and Eviction Officer granted the permission under section 3(1) of the U.P. Act. The petitioner then went to the additional commissioner of Lucknow for revision of the order under section 3(3) of the Act. But his plea—that the petitioner's need for the premises was not taken into account in granting the permission—was rejected. The petitioner then moved a writ application in the Allahabad High Court.

In answering the question referred to the full bench, the Chief Justice observed that nothing was laid down in sub-sections (1) and (3) of section 3 or section 7-F of the U.P. Rent Control and Eviction Act to show that the authorities in deciding applications for permission to start ejection proceedings should take the need of the tenants into consideration. The Chief Justice added that the landlord was under no obligation to meet the requests of needy persons. He was, therefore, within his legal rights to ignore the needs of his tenants. The latter had no claim on the landlord or the accommodation, so the question did not arise of comparing their needs in considering applications for permission to start ejection proceedings. On the other hand, Mr. Justice Oak

observed that in case the authorities granted permission to the landlord without considering the needs of the tenants, the decision would be arbitrary and, therefore, improper. Although such an order would not be illegal, it would be in "violation of the spirit of the Act". Mr. Justice S. D. Singh observed that although there is nothing in the Act to indicate that the needs of the tenant should be considered, they, along with the needs and requirements of the landlord, would normally be examined by the district magistrate, the commissioner or the State Government, but it would not be illegal if they did not do so. These learned opinions show that in the case of the U.P. Rent Control and Eviction Act, and in similar legislation in other States, the needs and rights of the tenants are sometimes inadequately safeguarded.

Chemicals Imports Cut

In his presidential speech at the annual general meeting of the Indian Chemical Merchants Association in Calcutta recently, Mr. D. P. Agarwalla pointed out that the licensing policy for the October 1962-March 1963 period is unfair to established importers. In the past few years, the share of established importers in the total import trade has been gradually declining, while imports by the Government have been increasing. Imports of chemicals have declined sharply, although the gap between indigenous production and estimated requirements has increased, at least for some of the essential chemicals. Chemicals imports amounted to Rs. 35.77 crores in 1961, against Rs. 41 crores in 1959, and in the first 10 months of 1962, they declined to Rs. 27.94 crores. Mr. Agarwalla felt that the intrusion of the State Trading Corporation into the fields of import, export and distribution of chemicals has hit the chemicals trade badly. The recent arrangements finalised by the S.T.C. for importing large quantities of important chemicals from communist countries against rupee payment, he felt, would affect the normal trade channels. Mr. Agarwalla suggested that importers' services should be used for distributing the chemicals imported by the S.T.C. He criticised the distribution policy of local manufacturers, who favoured their own agencies.

Tips for Executives

The steps an executive should take to maintain his health and to avoid stress, for his own sake and for the sake of those around him, were listed by Dr. R. A. Gordon Smith, chief medical officer of the Reed Paper Group, at a recent conference in London organised by the Chest and Heart Association. According to Dr. Smith, an executive should try to recognise the characteristics of his own reaction to stress. It is necessary so to order his life that there is a proper balance between life at work and away from work. Some interest and achievement outside his work would put him in a better position to withstand the effects of stress. One should make it a rule not to take work problems home in the evenings, apart from technical journals and reports that can be read at the fireside. It is better to get in earlier in the morning rather than stay late at night if the day seems too short to get through all the work. The executive should take proper holidays, during which he should not maintain contact with the office. He has to be reasonable about the demands he makes upon himself on overseas trips. Other recommendations are: work only a five-day week and have a real break at week-ends if a trip is prolonged; avoid over-indulgence, particularly in food and alcohol; remember the value of physical exercise in maintaining good health; and something should be done about it when an executive recognises that he is unable to adjust completely to some stress.

Blankets from New Fibre

Probably the most unexpected item at the I.C.I. Fibres Division exhibition of household textiles in England recently was a series of blankets in the new polypropylene staple. Three leading Yorkshire blanket manufacturers provided blankets wholly of polypropylene, of the conventional raised types. There was also a cellular blanket in the same staple. The new fibre is

known to be extremely strong and resistant to abrasion, and the blankets shown appear to be warm and soft. They appear in pastel shades based on spun-dyed colours. As it has just been announced that the new polypropylene staple, which as yet has no brand name ("Ulstron" is confined to monofilament and continuous filament yarns) is to be priced at 72d for standard qualities with 6d extra for spun-dyed qualities, and 85d for white tops, it would seem to be competitive with the acrylic fibres in the blanket trade. Another particularly interesting development is in brocade casements in filament "Terylene" warp with a cotton weft. Leading brocade manufacturers, including Warner and Sons, Morton Sundour and Sanderson Fabrics, are producing cloths of this type. The known excellent light-resistance of "Terylene" makes it seem particularly suitable for this trade.

No Slow-down of Power Schemes

In his address at the half-yearly meeting of the Hindustan Chamber of Commerce in Madras, recently Mr. O. V. Alagesan, Central Minister for Irrigation and Power, has stated that the emergency has not so far slowed down or curtailed power and irrigation projects. Apparently the Government will not hesitate to undertake even now any new scheme which may be carried over to the next plan. It is satisfactory that power projects are receiving more attention in the allotment of scarce resources. India has been in the grip of a power famine for some time now because of the greatly enhanced demand for electricity from industries. Defence needs have put additional pressure on power resources, since many industries have to work not only three shifts a day but also seven days a week. The third plan has specified a power target of 12,69 million kilowatts, but so far the total generating capacity has only touched 7 million kilowatts. The delay in executing some major schemes like Koyana, Sharavathi and the Neyveli thermal station has caused generating capacity to fall behind target. Work on these, as also on the proposed thermal units in relatively industrialised States like West Bengal, has to be speeded up.

THE TEA CESS BILL

THE tea industry like ancient Gaul may be said to be divided into three parts, the growers of the tea, the purchasers of the tea in Calcutta for sale in London, and the blenders and distributors. The tea growers who have agitated for a cess are one of those little bands of philanthropists, who desire that a tax should be put on other people. Virtually all the tea grown in India is sold by auction either in Calcutta or London. A very large proportion is sold in Calcutta and after it has passed the hammer, the subsequent proceedings interest the producers no more. Sir Montague Turner laid stress in introducing this novel form of taxation, on the fact that tea producers representing an area of 416,000 acres out of a total of 520,000 acres, desired that a tax may be imposed upon the persons who purchase their tea for the benefit of the tea industry generally. We think that before this tax is levied, the views of the buyers of tea should be taken, because presumably they are the people who will have to pay the tax. If it is intended that the cess shall fall on the producers of tea, it should be legal for the buyers at the auctions in Calcutta to deduct the cess from the amount of their payments, and it should only be levied by the Government on tea shipped direct by the gardens. We would commend to the Government the remarks of Mr. David Yule at the Bank of Calcutta on Monday. Lord Curzon is always anxious to know why capital does not come to India. He should surely know that capital is one of the most sensitive of things, and that when the machinery of the State is used to crush dissent and legislation of not only a novel but of a mischievous kind is introduced by empirical statesmen, such action is not calculated to induce capital to come freely forward. Capitalists desire to embark their capital in countries where legislation is conducted on reasonable and common sense principles, and when a responsible Government departs, therefore, capital also takes its departure.

FROM

CAPITAL

A Ditcher's Diary

ON MONDAY, MR. T. T. KRISHNAMACHARI GREATLY enhanced his already considerable reputation for frankness all around; rudeness, if you like. The Press, I find, took particular notice of his criticism of his own Ministry. Whenever anybody bemoans the absence of a strong Opposition in this country I reply that India does not need an Opposition; there is a built-in Opposition in the ruling Party itself; and I am not consciously facetious when I say that Mr. Nehru is not only the Prime Minister of India but also the Leader of the Opposition. What other Prime Minister in the whole world lashes out so often at his own Government? The latest example was on civil defence; but read his public speeches—and there are so many of them—and you will see that each contains some criticism of the Government he has presided over for sixteen unbroken years. Many of the deficiencies of the Government, surely as numerous as Mr. Nehru's speeches, we might not have known at all if the Prime Minister had not slated them publicly. Mr. Krishnamachari has apparently decided to follow the same political style; and because I believe that every democratic government should be under constant criticism I do not particularly care which quarters this criticism comes from. There, I am afraid, my satisfaction ends. Let me leave the Government and its Ministers alone for a moment. Would not readers of *Capital* find it more than somewhat odd if week after week I criticised the deficiencies of this newspaper—and there must be some—on this page? Readers will be entitled to demand what on earth I have been doing about these defects. The trouble about being in government and playing the opposition game is that similar embarrassing questions may be asked. But I can see why this dual luxury of eating one's cake and having it is so often indulged in this country. You see, you feel better after you've let some steam off. It might be argued that you wouldn't feel better really, for you are the target. You miss the point. A psychological process has taken place while you have been talking: by some alchemy, unconscious self-deception, you have managed to dissociate yourself from things you've been criticising. Maybe the world isn't a better place for that; but you do feel better.

I LIKE THE WAY WEST BENGAL'S CHIEF MINISTER and Revenue Minister have appealed to the people of the State to be prompt in payment of rents, loans and taxes, current and arrears, "and thus help the country in the national emergency". They should have, I submit, appealed first to Government officials, who have an excellent opportunity of setting an example for all of us. Anybody with some experience of dealing with Government

offices knows how heartbreaking it is to get any money out of the Government. Bills remain just "pending" for months and years; and "scrutiny" is apparently an interminable process—unless you've made it worth somebody's while to expedite payment. What the Government can say in its defence is that its incompetence extends not only to payment but also to receipt. To deposit money with the Treasury may be a full-time occupation, which may or may not prove that the Government isn't greedy. I have to appeal for money for the Capital Christmas Toy Fund every year; and Messrs Sen and Bhattacharya, the Ministers concerned, have my sympathy; I too have to request prompt payment, coining such sayings as that to give early is to give double. I think I am, quite by accident, on to a good idea. Paying taxes to our Government is charity, in the sense that you give your money and expect nothing in return. What, come to think of it, does the ordinary taxpayer get from the Government for the taxes he pays? For most people there is no free medical service or free education for children or any unemployment benefit or, indeed, free anything. Law and order? Well, with disturbing reports from Silchar, the Government had better not make exaggerated claims even on this account. Defence against foreign invasion? The subject had better be dropped. The only difference between the Capital Christmas Toy Fund and Mr. P. C. Sen's far larger establishment, meaning the Government, is that the Fund gives toys and the Government gives orders; to enforce these orders the Government has the requisite authority—physical force in the last analysis—and this the Government has purchased with the money it has extorted from the taxpayer. Do I exaggerate? Perhaps; but not much, for such are the essentials of what we call organised existence. Appeals are for politeness; the only reality is Lall Bazar.

IN THIS COUNTRY A FALLING BIRTH-RATE HAS always been one of the hoped-for results of a rising standard of living. Personally, I have often wondered why, unless one marks this theory down as just another of those fallacies put about by the London School of Economics in the 'thirties and forgotten everywhere else but in India. The United States long ago disproved it; so did the Soviet Union. Now it is even having to be abandoned in Britain, where former expectations of a population weighed down by its aged are changing in favour of one with a growing proportion of younger people. All thanks to early marriages and larger families encouraged by economic prosperity. If I were in Britain, I doubt if I should be welcoming the prospect of increased numbers. A

large population, and especially a growing one, has certain advantages, political as well as economic. But in an already overcrowded island it has disadvantages as well, especially, one might say, when every other person decides to take his motor-car on the roads on an August Bank Holiday. It is apt to highlight housing and unemployment problems too, something which is happening in Britain at the moment to the Government's acute embarrassment. But more than anything else, it is tending to make modern communities about as comfortable and convenient as seething ant-heaps. I can never understand why the prospects are not more dreaded in countries which, apart from their congestion, are able to offer their existing inhabitants a level of dignity and easy living undreamt of by the human race throughout its entire previous history. Perhaps it is because we are all naturally lazy when it comes to looking too closely into the future. Besides, there are other considerations which are inclined to colour our thinking in such matters, and not all of them are religious. Some—all the more regrettable in the nuclear age—are still distinctly political, as was shown by President de Gaulle's recent prophetic announcement that France could easily support double her present population. One had hoped such dreams of numerical aggrandisement were reserved to the Chinese, and that eventually they might learn better. With so many people in the world already, the larger proportion of them unable to get a daily stomachful of food, it would be a double tragedy to see the richer countries embarked on pointless competition to increase their numbers.

DURING THE QUEEN'S VISIT TO CALCUTTA THIS newspaper editorially suggested an English University for this city in whose life English has played a part unmatched by any other Indian city. Since it is in Calcutta that British commerce had and still has its centre, it was rightly suggested that British business might be associated with the project. These days one has only to mention the word "emergency"—and every good idea is promptly canned. And one can see that business men have commitments galore without bothering about a university. The next best thing that could happen has happened: an Institute of English. The British Council could hardly have made a better gift to this city; and since the Government of West Bengal is in some way associated with the institute some compromise was perhaps inevitable. I find that English teaching will be taught to teachers. Good, for the standards of both written and spoken English in India today are abominable; and English is learnt badly because it is taught badly. The handicap of our English teachers is that they learnt their English from teachers who had themselves been badly taught. What I do not like is that the courses are in "the teaching of English as a second language". If so, the teaching will assuredly be very, very second-rate. Either you learn a language well, or don't bother to learn it at all; a language learned only for asking for

CAPITAL, 7th February, 1963.

a pint of ale in an English pub is a waste of time. English was never forced on this country; it was a section of the Indian élite that demanded, and got, English. Now that the country is free, the question of force does not arise at all. It is a question of choice, unfettered and free choice. It is a measure of the difference between the Bengali élite of a hundred years ago and that today that, with so much to gain from retaining English at its highest quality, the choice today is for English as a second language. The Education Minister's remarks suggest that it might even be the third language, for he advocated Hindi as a link with the rest of the country. A more basic question: can you teach teachers at all after a certain age? A better investment may yet be for the British Council to lend teachers for direct contact with students before they have acquired their bad habits of speech and writing.

THE PLEASURE OF SEEING A PROFESSIONAL GROUP on the Calcutta stage is inevitably heightened by the fact that the phenomenon is rare. But that is perhaps the least of the reasons for assuming that the Bristol Old Vic Company's visit to this city is going to be a memorable one; more memorable, to my mind, will be the fact that the dramatic performances have been of an exceptionally high standard, as was indeed to be expected of a group so well known for the richness and versatility of its talent. *Arms and the Man*, presented on the opening night last Saturday, is, in my opinion, the greatest success of the present tour. Oliver Neville's direction makes the performance smooth and racy; the sparkling wit of Shavian dialogue is fully exploited; and the play has a freshness and contemporaneity that remains undiminished after seventy years. John Ringham, as the Swiss infantryman Bluntschli, and Sarah Badel, as Raina, are particularly good; so is Hugh Manning as a bluff and hearty Major Petkoff. The presentation of *Hamlet*—judging, let us remember, by strictly professional standards—is less impressive, although I am prepared to concede that the New Empire stage is often apt to impose irritating limitations for Shakespearean drama. Barry Warren, in the leading rôle, gives a powerful performance, but one which might be better if it were occasionally a little more restrained in adding irony to the soliloquies. The supporting cast is competent, even if Sarah Badel, after her Shavian success, fails to exploit the emotional richness of the rôle of Ophelia adequately. The play within the play is expertly enacted, and so is the scene culminating in *Hamlet's* death. Robert Bolt's *A Man for All Seasons*, although relatively little known in this part of the world, is brilliant, and I can recommend it strongly even to those without a taste for Tudor history. With Oliver Neville in the leading rôle, it becomes a moving portrayal of the martyrdom of Sir Thomas More following Henry VIII's decision to divorce Catherine of Aragon in order to remarry. Shakespeare, Shaw, Bolt—rarely do we enjoy such rich and varied dramatic fare in a single fortnight; for that, gratitude is due, once again, to the British Council for sponsoring the tour.

THE ENGLISH REPUTATION FOR *sang-froid*, JUSTIFIED or not, still survives on the Continent. A friend recently returned from Europe tells the story of an Englishman who was leaning serenely on the parapet of the Westminster Embankment, watching the seagulls, when he became aware of a woman a few paces further along, sobbing her heart out. Eventually, unable to contain her emotions any longer, she approached him and confided her troubles. It appeared that her fiancé and she met on the Embankment every Thursday for a chat and that, on this occasion, he had failed to turn up. The girl was convinced that he had deserted her for another woman.

Suddenly she broke off and, quite overwrought, jumped up on to the parapet and flung herself into the swirling, murky waters.

The man watched her, intrigued—then murmured to himself:

"Odd. Very odd. After all, today's Wednesday."

Guide for Investors

INVESTMENT OUTLOOK IN MADRAS DISCOURAGING

(BY A CORRESPONDENT IN MADRAS)

THE posture which the equity market has lately assumed is intriguing. Although it is difficult to draw conclusions from the present behaviour of the stock market, observers are unhappy over its performance. The price drift has been continuing, and even the lifting of the minimum price regulation in Madras has only enabled prices to sag further, without either increasing the turnover or bringing about a feeling of steadiness at the lower levels. So the behaviour of the market has been rather disconcerting. How far this state of affairs is due to psychological and technical factors, and to what extent tangible fiscal prospects are influencing current sentiment, are relevant points for study by the investors.

The pre-Budget feeling in the capital market is interesting for more than one reason. First, the Budget for 1963-64 is considered specially significant by marketmen, because it would be designed to serve two equally pressing national objectives, namely, maintaining the tempo of economic development under the third plan, and building a strong defence for the country. Foreign military and economic aid has been playing a vital part in the economy at present, and it will continue to play an increasingly important rôle both in defence and economic development. Any assessment of fiscal and economic prospects must, therefore, take these factors fully into account, although there will be an increased strain on domestic resources also.

The capital market has been geared to meet the demands of development during the past few years as is evident from the fact that a substantial broadening of the equity base of the country's industries has taken place. This reflects the resiliency of the capital markets. The third plan by itself may not hold any terror in the fiscal sphere during the next year of the plan. But combined with the need for increasing the defence expenditure considerably, the prospective outlay makes the stock market feel unsettled.

Has the national emergency prepared the capital market to stand the strain of further additions to the tax bill which may be proposed in the coming Budgets, Central and States? Will the authorities be fully alive to the urgency for keeping up the tempo of industrial production and private initiative which are more essential than before? As the authorities have made it clear more than once that economic development cannot be sacrificed because of defence needs (in fact, a stronger economic base is considered necessary for building up an effective defence), there is little reason to doubt that the Government will so devise tax measures as to insure incentives for production, initiative and export.

The Budget for 1963-64, will in all likelihood, be designed to curb domestic consumption, while striving to maintain all that is necessary to increase production and exports. As industries engaged in producing consumption goods, particularly for the civilian population, may not get any priority, the investor should be fully aware of the lines of approach in a predominantly Defence Budget. Thus, the Budget for 1963-64 cannot

be a bullish one for the market for a variety of reasons. The main emphasis will be on curbing consumption, so one can expect an increase in both direct and indirect taxation.

Market circles in Madras seem to entertain fears of a further rise in corporate taxation and also a sort of a dividend tax. At the personal level, a stiffer dose is expected in the higher brackets. A more positive distinction may be made between earned and unearned income in the case of individuals and between distributed and retained profits in the case of companies. In the indirect sphere, expectations are that the tax net will be cast wider and deeper too. The impact of further doses of commodity taxation should have to be studied carefully, as any misdirection here will affect industrial production, by raising costs and providing buyers' resistance. Unless industrial efficiency is substantially increased, one cannot expect that restraining domestic consumption will perform the magic of automatically and correspondingly producing larger exports of a profitable nature.

In view of developments in the monetary sphere, the stock market is expecting a further upward revision of the yield on equities. The dearer money policy has begun to affect investor psychology. The load of the market in the form of acquisitions made at higher levels, and financed partly by investors and operators and partly by bank finance and accommodation from other sources, is still not liquidated fully. This could influence share prices before or after the Budget. The performance of the Madras market suggests that the process of liquidation by weaker holders may gather force. Hence the outlook is precariously balanced between technical factors, monetary forces and fiscal prospects; the possibility of a further fall in share prices cannot be ruled out.

Titagur Paper Rights Fully Subscribed

THE Titagur Paper Mills Co. Ltd reports that its recent offer of 1,120,480 rights shares of Rs. 10 each, at a premium of Rs. 5 a share, of which Rs. 7.50 was payable on application by 31st January, 1963, has been fully subscribed. Allotment and the issue of allotment letters, it is expected, will be completed in the course of the next few weeks. The balance of the subscription money of Rs. 7.50 a share is payable before 5th April.

Nellimarla, Chitavalsah Jutes Fare Well

THE Nellimarla Jute Mills Co. Ltd and the Chitavalsah Jute Mills Co. Ltd, both under the managing agency of McLeod and Co. Ltd, have produced satisfactory results for the year ended July 1962. The directors of the two mills take an optimistic view of the current outlook. The supply of raw jute has been abundant and trading conditions continue to be favourable.

The profit of Nellimarla Jute has risen from Rs. 5.54 lakhs for 1960-61

to Rs. 14.02 lakhs for 1961-62, after providing Rs. 4.20 lakhs (against Rs. 5.33 lakhs) for depreciation. The taxable ordinary dividend has been increased from 6 percent to 15 percent, which is covered more than thrice and offers a yield of 13.3 percent at the present price of Rs. 11.25 a share of Rs. 10 each. Taxation absorbs Rs. 7.10 lakhs (against Rs. 2.50 lakhs), development rebate reserve Rs. 7.800 (against Rs. 77.100) and general reserve Rs. 2.50 lakhs. The carry-forward is Rs. 61.184, against Rs. 59.869. Sales rose from Rs. 1.89 crores to Rs. 1.96 crores and gunny stocks declined from Rs. 31.40 lakhs to Rs. 12.81 lakhs.

Chitavalsah Jute has returned to the dividend list after an interval of a year and a taxable ordinary dividend of 5 percent has been declared for 1961-62. It absorbs Rs. 1.51 lakhs and the yield works out to 4.7 percent at the present price of Rs. 10.69 a share of Rs. 10 each. The profit amounts to Rs. 12.49 lakhs, after providing Rs. 6.77 lakhs (against Rs. 7.74 lakhs) for depreciation. There was a loss of Rs. 8.26 lakhs in 1960-61. Taxation is allocated Rs. 1.40 lakhs and development rebate reserve Rs. 1.12 lakhs. The carry-forward is Rs. 61.455, against a debit balance of Rs. 7.86 lakhs brought in.

The directors of both mills point out that the modernisation of the spinning and preparing sections has been continuing. This has helped to improve the operational efficiency of the mills. Since the mills are situated near Visakhapatnam, the high cost of obtaining suitable raw jute has made it uneconomic to operate their broad looms. So it has been decided to transfer the broad looms to the Kelvin Jute Co. Ltd, Calcutta, on a lease basis.

Good Outlook for Voltas

THE preliminary report on the working of Voltas Ltd for the year ended August 1962, showed that in spite of an increase of about 5.5 percent in receipts of sales and services from Rs. 25.73 crores to Rs. 27.16 crores, the net profit had declined by nearly 9 percent from Rs. 73.05 lakhs to Rs. 66.48 lakhs. The directors' full report which has now been released shows that the gross profit is about the same at Rs. 1.47 crores, as in the previous year. The setback in the net profit is due to larger provisions for taxation and depreciation, from Rs. 66.50 lakhs and 6.96 lakhs to Rs. 71 lakhs and Rs. 9.07 lakhs, respectively. The maintenance of the gross profit in face of larger sales, reflects the increase in the Company's total expenses and is not something about which the shareholders could feel happy. But, the chairman, Mr. J. D. Choksi's statement, which has been circulated with the directors' report, strikes a note of cautious optimism.

The chairman says that 1961-62 was the best trading year for the Company since its inception. Fully licensed orders in hand and the margins expected on them were considerably higher as of August 1962 than in previous years. The Company experienced longer delivery periods, particularly from the Common Market countries and from Switzerland, and the completion of formalities in connection with the business financed

under Government-to-Government loans took more time than originally expected. But for these two reasons, says the chairman, the Company's profits in 1961-62 would have surpassed the results for the previous year. In spite of the continuously changing policies of the Government, the Company has succeeded in retaining its share of essential imports under the various licensing and credit arrangements.

Mr. Choksi has expressed the confidence that in spite of increasing difficulties, Voltas will maintain its position in future because of the excellent relationships which have been established with its foreign associates as well as customers supplemented by the Company's flexible and efficient countrywide services. The Company has acquired, over the years, the distributorship of many well-known Indian manufacturers, and today India-made products form over 43 percent of its total turnover, compared with only 7 percent in 1954-55. This share is expected to increase further substantially in coming years.

Satisfactory progress has been maintained in the production of air-conditioners and water coolers, equipment for the mining industry and in electric motor starters. The Company has finalised certain new projects with collaborators abroad and manufacturing licences concerning them have been granted by the Government. Negotiations are also under way with foreign manufacturers of repute to secure technical assistance for the manufacture and distribution of electrical equipment in replacement of the Brown Boveri representation which was terminated in 1961. The directors state that due to legal difficulties, the Company has not been able to secure physical possession of the land which the Maharashtra Government had acquired for the Company in Thana, except for a plot of 33 acres. Proposals are being considered by the management for the commencement of manufacturing operations on this plot. The Company has a paid-up capital of Rs. 2.55 crores—all in equity shares—and it is supported by free reserves amounting to Rs. 1.11 crores. The Rs. 100-paid share of Voltas is currently quoted around Rs. 239 cum-dividend, offering a gross return of a little over 6 percent.

E. I. D.-Parry Makes Progress

IN his statement to shareholders of E.I.D.-Parry Ltd, Mr. H. V. R. Iengar, chairman, refers to the decline in profit, problems of the sugar industry and the teething troubles encountered by the fertiliser project. (A fuller version appears on a later page in this week's issue of Capital.) The output and sales pattern visualised by the chairman is distinctly encouraging, mainly because of the substantial rise in the Company's own manufactures and the maintenance of sales at a satisfactory level. The group's net profit, before taxation, which amounted to £774,536 in 1960, declined to £690,130 in 1961. It has been further reduced to £648,473 in 1962. Mr. Iengar says that the profit has declined due to the rise in expenses. The directors anticipated the fall in profit due to a rise in expenses, so they created a dividend equalisation reserve out of the profits of 1958-59, to enable them to maintain the dividend at a satisfactory level. It is encouraging to note that dividends have been maintained without utilising any portion of dividend equalisation reserve, although the rate of corporate taxation was increased last year from 45 percent to 50 percent.

Discussing future profits, Mr. Iengar strikes a note of caution. In

the normal course, the Company's financial position was expected to improve substantially with the commissioning of the Ennore factory and the completion of the pottery expansion scheme. The chairman takes a cautious view of the future in view of the national emergency which will necessitate a sharp rise in defence expenditure and, consequently, in taxation. But the Government should not be obsessed with the immediate considerations of raising additional revenue, ignoring the long-term effects on the economy. Referring to company taxation, Mr. Iengar says that the fiscal burden on companies engaged in industrial production should not be so heavy as to discourage capital formation. The chairman refers to the burden imposed on companies by the Emergency Risks Insurance Acts. He urges the Government to take this into account in imposing taxes.

The chairman discusses the sugar industry's recurring problems and its future. He feels that the cumulative effect of various burdens may compel the Company to restrict its crushing season in Nellikuppam. The extra payment that the Company may have to make for sugarcane is estimated at around Rs. 7.5 lakhs and the increase in cess at about Rs. 10 lakhs. The chairman says that while the picture is somewhat gloomy, it is hoped that E.I.D.-Parry will be able to absorb the shocks by realising a higher price for sugar in coming months.

Referring to the fertiliser project, Mr. Iengar says that the earlier expectations that the factory will contribute in full measure to the group's profits in 1962-63, have not been wholly realised. The factory is a complex unit and teething troubles have had to be encountered. The difficulties were aggravated by the power shortage. The chairman, however, says that the major problems have now been overcome. The

factory is now in full production and will make a substantial contribution to the group's earnings during the current year.

The directors are considering expanding the Ennore fertiliser factory. They are also considering certain other projects. The Company has already applied for an industrial licence for manufacturing cryolite by using one of the by-products at the Ennore factory. The expansion of the pottery works in Ranipet with the collaboration of Doultons is expected to show substantial profits.

Madura Mills Maintains Dividend

THE directors of Madura Mills Co. Ltd have maintained the dividend at 15 percent gross for the year ended December 1962. According to preliminary figures, the net profit for 1962 amounts to Rs. 31.81 lakhs, after providing Rs. 65.67 lakhs for taxation, Rs. 9.70 lakhs for development rebate reserve and Rs. 10 lakhs for debenture redemption reserve. The previous year's net profit was Rs. 77.49 lakhs, after providing Rs. 69.40 lakhs for taxation and Rs. 10.78 lakhs for development rebate reserve. The transfer of Rs. 10 lakhs to debenture redemption reserve is a new provision in the 1962 accounts. The sharp fall in the profit led to a fall in Madura Mills shares to Rs. 30.75 c.d., from Rs. 31.37.

While the cause of the decline in the profit cannot be known before the receipt of fuller details of the profit and loss account for 1962, it may be noted that in the profit and loss account for 1961, the amount received for five quarters under the export incentive scheme amounted to Rs. 30.09 lakhs on the credit side. The corresponding figures under this head for 1960 and 1959 were Rs. 21.93 lakhs and Rs. 10.20 lakhs, respectively. As the accounts of 1961 in-

cluded Rs. 30.08 lakhs under the export incentive scheme for five quarters, it may be difficult to compare the actual working results of 1961 with those of 1962. In the absence of particulars of quarterly receipts during 1962. The directors have maintained the dividend at 15 percent in spite of the expansion programme and huge capital requirements. In assessing the working results of 1962 and comparing the same with those of the previous year, the under-provision of taxation of Rs. 10.02 lakhs for 1961, now appropriated out of the 1962 profits, the extra provision of Rs. 10 lakhs for debenture redemption reserve and the extent of receipts during 1962 under the export incentive scheme have to be taken into consideration. The balance-sheet, when published, will throw more light on working results.

Sandoz Plans New Drug

SANDOZ (India) Ltd, Bombay, which is already engaged in the manufacture of pharmaceutical preparations, both basic drugs as well as formulation, optical bleaching agents and dyes, has sought the Government's permission for the manufacture of active principles of podophyllin. Reliable reports indicate that the Government of India has approved the Company's manufacturing programme consisting of 24,000 kilograms of glycoside fractions and 30,000 kilograms of aglycone fractions in a single phase. The scheme visualises the extraction of active principles of podophyllin, a plant which grows in the higher altitudes of Himalayan range. In order to ensure the regular supply of this plant, the Company proposes to cultivate it systematically for which full facilities are likely to be provided by the Government. The Sandoz Research Laboratories in Basle have been working on the new drugs, which are now proposed to be manufactured in India, for the last ten years, and clinical trials have proved their usefulness in the treatment of certain forms of cancer.

Raw materials required for the project are methyl alcohol, dichlorethene, podophyllin, benzene, butanol, sodium hydroxide and hydrochloric acid. Of these, only methyl alcohol and dichlorethene will need to be imported which will cost about Rs. 9.40 lakhs a year. The entire project, it is estimated, will cost about Rs. 1.35 crores, of which Rs. 50 lakhs would be spent on the import of machinery, Rs. 10 lakhs for planning and development of the plant specially constructed for the purpose, and Rs. 75 lakhs for machinery to be locally purchased and other constructional work. The cost of imported machinery will be met from a loan of Rs. 50 lakhs from Sandoz Ltd, Basle. Finished products will be entirely exported which will earn about Rs. 30 lakhs to Rs. 40 lakhs a year. The Company has requested the Government of India that 60 percent of the value of exports should be made available to it for the import of raw materials for their existing manufacture.

Share Offer by Devidayal Tube

DEVIDAYAL Tube Industries Private Ltd, which is being converted into a public limited Company, is likely to enter the market shortly—in March or April—to raise capital through public subscription for financing its phased expansion programme for achieving the sanctioned annual capacity of 3,600 tons of seamless copper and brass tubes by the

special extrusion process. The firm is currently manufacturing 1,000 tons of such tubes annually. The Company has been permitted to issue equity capital of the order of Rs. 85 lakhs—all in equity shares of Rs. 100 each—of which the promoters will take up Rs. 41.91 lakhs and foreign collaborators, Delta Metal Company Ltd of the U.K., will be offered shares worth Rs. 2 lakhs in consideration for technical collaboration fees. The balance of Rs. 41.09 lakhs is to be offered for public subscription. The British firm, which is collaborating in the venture, is said to account for 65 percent to 70 percent of the total U.K. production of non-ferrous metal tubes, and controls as many as 68 subsidiaries in the U.K. and other parts of the world. Deltas have agreed to participate in further share capital and supply additional requisite machinery and equipment by way of financial collaboration. Shares worth about Rs. 20 lakhs may be issued to Deltas against the supply of machinery in future, subject to the Government's approval.

Incorporated in February 1962, Devidayal Tube Industries Private Ltd acquired the tube manufacturing unit of Devidayal (Sales) Private Ltd in July 1962 at a cost of Rs. 40.60 lakhs, representing the written down value of the assets. The plant had been set up in Bhandup, an industrial suburb of Bombay, at a cost of Rs. 54 lakhs and it went into production in May 1960. This unit earned a net profit of Rs. 16.12 lakhs in 1961, subject to taxation. The profit for 1962, it is said, will be higher because of the increase in production as well as sales following additions to the plant during the year.

The Company's proposed expansion scheme will involve a total capital outlay of about Rs. 51 lakhs and the plant is expected to reach its full capacity by June 1964. The Company's turnover is likely to increase from the present Rs. 80 lakhs to Rs. 2.50 crores a year after the plant has reached full capacity and the foreign exchange saving to the country will increase from Rs. 20 lakhs to Rs. 60 lakhs a year. The Company's order-books for 1963 are closed; it has secured defence orders to the tune of 100 tonnes of tubes and 50 tonnes of strips. The management seems hopeful of declaring a dividend for the year ending June 1963 after providing for depreciation, development rebate and preliminary expenses. The outlook for the Company is encouraging in that the supply of copper and brass tubes and strips is unlikely to catch up with the growing demand in the foreseeable future.

Phaltan Sugar Pays Less

THE directors of the Phaltan Sugar Works Ltd have reduced the dividend for the year ended September 1962 from 18 percent to 14 percent (from Rs. 9 to Rs. 7 a share) less tax. This is the third successive cut in the dividend. In 1958-59, the Company paid a dividend of 27 percent which was reduced to 24 percent in the following year and still further to 18 percent in 1960-61. The cut follows the Company's disappointing performance which reflects by and large the declining fortunes of the sugar industry. According to the preliminary report on the company's working during the year, the quantity of cane crushed fell from 133,300 tonnes to 125,378 tonnes, and the output of sugar was lower at 150,225 bags, against 157,019 bags. The recovery of sugar was slightly better at 11.94 percent, against 11.74 percent.

In spite of a setback in production, sales increased by nearly 40 percent from Rs. 1.24 crores to Rs. 1.73 crores. The profit before tax, however, is substantially down from Rs. 9.30

lakhs to Rs. 7.41 lakhs. The profit has been arrived at after providing Rs. 4.09 lakhs (against Rs. 4.14 lakhs) for depreciation. The provision for taxation has been raised from Rs. 3.80 lakhs to Rs. 6.43 lakhs, and the disposable surplus amounts to less than Rs. 1 lakh. Apparently, the directors have had to draw from the reserves to pay the reduced dividend of Rs. 7 a share which absorbs Rs. 7 lakhs, against Rs. 9 lakhs. The Rs. 50-paid share of Phaltan Sugar which had touched a high of Rs. 205 in 1960 has been steadily declining since then, and is currently quoted around Rs. 80, offering a gross return of a little over 9 percent.

Mahindra Alloy Steel Project

MAHINDRA and Mahindra Ltd has nearly completed all the arrangements for its proposed alloy steel project which is being undertaken in collaboration with Ugine of France. A new company known as Mahindra Ugine Steel Company Ltd has been formed to set up a factory in Maharashtra for the manufacture of 25,000 tonnes of special and alloy steels a year. This will be the first major alloy steel project in the country, and when completed, will help save a considerable amount of foreign exchange. The current demand for alloy steel is placed around 200,000 tonnes, which is being met almost entirely through imports because indigenous production is small. The foreign exchange requirements of the project will be met by long-term loans from the International Finance Corporation of Washington and the Industrial Credit and Investment Corporation of India. The Company will have an authorised capital of Rs. 10 crores. Details about the capital structure and the amount which is to be issued to the shareholders of Mahindra and Mahindra and the public are being worked out. The firm is expected to enter the market for raising the necessary funds after a few months.

India Star Lines Reorganisation

RELIABLE reports indicate that India Star Lines will soon be converted from a private company into a public limited company with the proviso that no Indian resident, barring the present three directors, will be permitted to contribute to the share capital. The Company's five-member board of directors consists of three residents of the country and two are non-resident Indians. It is proposed to increase the authorised capital of India Star Lines from the present Rs. 5 lakhs to Rs. 5 crores. Almost all the additional capital is to be raised in foreign exchange from Indians abroad in the U.S.A., Japan, West Germany, Africa, Malaya and Hongkong. A sum of Rs. 5 crores, it is reported, has been fully assured.

The Company, it is also reported, has secured the Government of India's permission to charter three vessels to operate on the India-U.K. route. It proposes to charter more vessels to run on the U.S. and Persian Gulf-Middle East routes and acquire three ships of 5,000 gross registered tons each for the coastal trade. Negotiations for the purchase of three coastal vessels are said to be almost complete; only the Government sanction about the specifications is awaited. Tramp services for Gulf and Middle East, it is expected, will start from April and fast cargo vessels will be put on the India-U.S. route in July. While the immediate programme of the Company is to operate overseas routes with chartered vessels, it has plans to purchase some ships in the

next few years. The Company has assured the Government that all its ships will be manned by Indian crew and that it will be fully controlled by Indians. An outstanding feature of the Company's scheme is that it does not seek any loan from the Government, nor does it ask for any release of foreign exchange for its vessels.

Madras Rubber Expanding

THE directors of the Madras Rubber Factory Ltd have recommended a taxable dividend of 45nP a share (Rs. 10-paid) for the period 1st January to 30th September, 1962, against 60nP a share for the full previous year. The preliminary report on the Company's working for the nine-month period shows a profit of Rs. 16.10 lakhs. After providing Rs. 2.26 lakhs for depreciation and deducting other charges, the net profit amounts to Rs. 13.20 lakhs. With amounts to Rs. 13.20 lakhs, the Company has brought forward from the previous year and dividend written excess provision for dividend to Rs. 18.10 lakhs. A sum of Rs. 10.45 lakhs has been transferred to development reserve, and the proposed dividend absorbs Rs. 5.63 lakhs, leaving a surplus of Rs. 2.02 lakhs to be carried forward. It is stated that the Company has been able to maintain its profit in spite of the considerable increase in expenditure. The Government of India has sanctioned substantial expansion of the production capacity of the factory by granting an additional capacity of 60,000 tyres and 60,000 tubes a year, bringing the total installed capacity to 360,000 tyres and 360,000 tubes.

C.D.F.C. Loan for Indian Tube

COMMONWEALTH Development Finance Co. Ltd has agreed to make a sterling loan of £300,000 to the Indian Tube Company (1953) Ltd of Jamshedpur, Bihar. The loan is a contribution towards the total cost, estimated at £2.54 million, required for the installation of a new Pretz Moon plant to manufacture welded steel tubes.

Results of State Bank Subsidiaries

IN spite of a substantial increase in deposits and in gross income, the working results of four of the eight subsidiaries of the State Bank of India—the State Bank of Travancore, Bank of Bikaner, Bank of Hyderabad and Bank of Jaipur—for the year 1962, which are now available, generally show a setback in profits. Only the State Bank of Travancore has made a slightly higher profit of Rs. 8.93 lakhs, compared with Rs. 8.35 lakhs in 1961; the profits are considerably lower in other cases. Bikaner's profit is down from Rs. 7.10 lakhs to Rs. 5.98 lakhs, Hyderabad's from Rs. 12.19 lakhs to Rs. 10.66 lakhs and that of Jaipur from Rs. 3.70 lakhs to a mere Rs. 1.51 lakhs. The working results have been adversely affected by the heavy increase in the salary bill due to the Desai Award, higher costs of deposits following the increases in the interest rates on deposits and the payment of premiums under the compulsory deposit insurance scheme. The Bank of Jaipur which returned to the dividend list in 1961 after a break of three years and paid at the rate of 6 percent, the other dividend for 1962; the other three have maintained their distribution, Travancore at 5 percent and

Bikaner and Hyderabad at 6 percent each. The rise in deposits is mainly accounted for by fixed and savings bank deposits.

State Bank of Travancore: The deposits of the State Bank of Travancore are up from Rs. 17.15 crores to Rs. 19.10 crores and advances have risen from Rs. 7.28 crores to Rs. 7.35 crores, giving a credit ratio of 38.5 percent, against 42.5 percent in 1961. Income from interest and discount, commission, exchange and brokerage has increased from Rs. 71.87 lakhs to a little over Rs. 1 crore. Investments are up from Rs. 5.31 crores to Rs. 7.25 crores. The liquidity ratio works out to 69.8 percent, against 65.7 percent in 1961, and it compares with the average of 42.7 percent for all the scheduled banks. On the expenditure side, interest paid has risen from Rs. 33.90 lakhs to Rs. 54.54 lakhs, and the salary bill has gone up from Rs. 23.67 lakhs to Rs. 32.92 lakhs. Out of the profit of Rs. 8.93 lakhs (against Rs. 8.35 lakhs), the directors have allocated Rs. 2 lakhs (against Rs. 2.32 lakhs) to the reserve fund and Rs. 1.80 lakhs (against Rs. 1.02 lakhs) for bonus to staff. The dividend absorbs Rs. 5 lakhs (the same).

State Bank of Bikaner: The deposits of the State Bank of Bikaner have risen from Rs. 15.79 crores to Rs. 18.59 crores, but advances are down from Rs. 9.8 crores to Rs. 8.94 crores and the credit ratio is down from 62 percent to around 48 percent. Gross income has increased from Rs. 97.48 lakhs to Rs. 1.22 crores. Expenditure under interest paid and salaries has gone up from Rs. 81.80 lakhs to Rs. 1.06 crores. The liquidity ratio is higher at 59.2 percent, against 47.8 percent. Investments have gone up from Rs. 5.48 crores to Rs. 6.13 crores. The profit is down from Rs. 7.10 lakhs to Rs. 5.98 lakhs. Allocation to the reserve fund has been reduced from Rs. 2.25 lakhs to Rs. 1.25 lakhs. The provision for bonus to staff is Rs. 1.75 lakhs, against Rs. 1.63 lakhs, and a further sum of Rs. 10,000 (against nil) has been set aside for staff welfare fund. The proposed dividend of 6 percent absorbs Rs. 3 lakhs.

State Bank of Hyderabad: The deposits of the State Bank of Hyderabad are up from Rs. 24.29 crores to Rs. 26.53 crores and advances have risen from Rs. 14 crores to Rs. 16.17 crores. The credit ratio has gone up from 57 percent to 62 percent. Investments have risen from Rs. 8.70 crores to Rs. 9.62 crores and the liquidity ratio works out to 47.6 percent, against 50.7 percent. The gross income is substantially higher at Rs. 1.46 crores, against Rs. 1.20 crores. The salary bill is up from Rs. 45.45 lakhs to Rs. 58.01 lakhs and interest paid amounts to Rs. 63.15 lakhs, against Rs. 50.03 lakhs in 1961. Out of the profit of Rs. 10.66 lakhs (against Rs. 12.19 lakhs), the directors have allocated Rs. 2.50 lakhs (against Rs. 4.15 lakhs) to the reserve fund, Rs. 4 lakhs (against Rs. 3.50 lakhs) for bonus to staff, Rs. 1.20 lakhs (the same) for pension fund and Rs. 75,000 (the same) for staff welfare fund. The proposed dividend absorbs Rs. 3 lakhs.

State Bank of Jaipur: The deposits of the State Bank of Jaipur are also much higher at Rs. 12.33 crores, against Rs. 10.54 crores, but advances are lower at Rs. 5.16 crores, against Rs. 6.17 crores. The advance-deposit ratio is down from 58.5 percent to 41.8 percent. The gross income has increased from Rs. 65.88 lakhs to Rs. 77.88 lakhs. Investments are almost unchanged at Rs. 4.19 crores, against Rs. 4.17 crores and the liquidity ratio has improved from Rs. 50.8 percent to 62.4 percent. The salary bill shows a marked increase from

New Capital Issues

THE Controller of Capital Issues has authorised eight companies to issue capital totalling Rs. 3.34 crores. Of these, one is a new company. One is a Central Government undertaking. Two companies are going to establish spinning mills. One company will issue bonus shares, five equities and one equity plus cumulative redeemable preference shares. The consent in all cases is valid for 12 months. The following are the details:

Kingsley Golaghat Assam Tea Company Ltd, Calcutta, will raise capital of Rs. 5,40,000, divided into 5,400 equity shares of Rs. 100 each, to be issued as fully paid-up bonus shares, on the capitalisation of Company's general reserve to a like extent, in the proportion of three shares for every two held.

Heavy Electricals (India) Ltd, Bhopal, a Central Government undertaking, is issuing further capital of Rs. 1.27 crores divided into 12,700 equity shares of Rs. 1,000 each, for cash at par.

Mukand Iron and Steel Works Ltd, Bombay, is to issue further capital of the value of Rs. 91,89,225, divided into 918,900 equity shares of Rs. 10 each for cash at a premium of Re. 1 a share to be made to existing shareholders in the ratio of one new share for every two held.

Investa Machine Tools and Engineering Company Ltd, Bombay, will issue capital of Rs. 25 lakhs in equity shares of Rs. 100 each for cash at par to be made to existing shareholders in the ratio of one share for every two held.

Usha Forgings and Stampings Ltd, a new company, will issue capital of Rs. 20 lakhs for the manufacture of forged hand tools, etcetera. The factory will be established in Badarpur in Delhi.

Paramount Meters (Private) Ltd, Jamnagar, is raising Rs. 15 lakhs capital in equity shares of Rs. 100 each to be issued for cash at par.

Ayyappan Textiles Ltd, Madras, is to issue capital of Rs. 15 lakhs in the form of equity shares of Rs. 50 each for cash at par. The capital will be used for the establishment of a spinning mill with an initial spindleage of 6,000.

The Magadh Textile Mills Ltd, Calcutta, will issue capital of Rs. 35 lakhs divided into cumulative redeemable preference shares of the value of Rs. 8.75 lakhs and equity shares of the value of Rs. 26.25 lakhs. The capital is required for the establishment of a spinning mill with 25,000 spindles in Chakradharpur, Bihar.

Empire and Presidency Jute Earn More

IN last week's issue of Capital, the heading for the item on the Empire Jute Co. and the Presidency Jute Co., published on page 153, should have read "Empire and Presidency Jute Earn More". The error is regretted.

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

PLEA TO BONUS COMMISSION BY TEXTILE MILLOWNERS

(FROM OUR BOMBAY CORRESPONDENT)

THE issue of bonus has long been plaguing industrial relations. Although most industries and business organisations are now paying bonus to their workers, questions are still being asked about the basic concept of bonus. Labour contends that bonus is a deferred wage, while employers maintain that it is an ex-gratia payment. The demand for bonus is known to have been entertained as an industrial claim when either the wages paid fell short of the living wage or the industry concerned made a considerable profit.

While agreements exist guaranteeing minimum bonus irrespective of whether or not the industry is making a profit, one view is that bonus is fundamentally a share in the surplus profit. This raises a host of complicated issues relating to the calculation of prior charges such as depreciation, taxes, return on capital, reserve for rehabilitation, etcetera. The position is further complicated by the wide differences in the working conditions not only in different industries located in different regions but also between the units of the same industry located in the same region. It is

thus difficult to arrive at any rigid formula for determining the quantum of bonus. The task before the Bonus Commission, which is at present examining the issue in all its aspects, is thus an extremely difficult one.

The 47-page supplementary memorandum submitted to the Bonus Commission by the Bombay Millowners Association and its earlier replies to the Commission's questionnaire provide a useful study of this complicated issue even though the Association has concerned itself primarily with the problems facing the cotton textile industry in Bombay. The memorandum asserts that labour should rank equally with capital and management in sharing the available surplus, arrived at after meeting all prior charges, and that it can claim no priority whatsoever over others. It is against the bonus of one undertaking being used for payment of bonus to the workers of another undertaking on the plea that the pooling of bonus militates against the sense of participation by the workers in the prosperity of the industrial undertaking. As for the question of maximum and minimum

bonus, the memorandum says that in no case should the bonus exceed 25 percent of the annual basic earnings of the employees. If, however, the surplus, after all prior charges have been deducted from gross profit, warrants a bonus of more than 25 percent, the excess of 25 percent should be carried forward as "set-on" for use in subsequent years if profits in those years happen to be inadequate.

Bonus Equalisation Fund

The size of the "set-on" should not exceed at any given time 25 percent of the annual wages and salaries bill of the industrial undertaking. This "set-on" is intended to serve as a bonus equalisation fund, that is, to ensure the payment of minimum bonus—the Association has suggested the figure of 5 percent—when the undertaking incurs a loss or no surplus is available. The minimum bonus is intended to avoid industrial disharmony that is likely to be caused by one unit not paying any bonus at all while another unit, may be a neighbouring unit, in the industry is paying high bonus. The advocacy of the minimum bonus, says

the memorandum, does not conflict with the dictum of "no bonus if there is no available surplus" because the minimum bonus is a sort of advance payment to be set off against the bonus payable in subsequent years when due to good profits higher bonuses would be payable.

For calculating the bonus, the Millowners Association has supported the Labour Appellate Tribunal's formula as enunciated by the Supreme Court in the Associated Cement Companies' case. The Association has also made the plea that all controversies which have arisen over the interpretation of the items like depreciation, return on capital, employed and rehabilitation reserve, embodied in the prior charges, should be eliminated. In that event, the formula will become extremely simple and it can be easily applied in order to find out what the available surplus is for purposes of determining labour's share from that by way of bonus. As for the ingredients of the formula, the memorandum has suggested that as against the notional normal depreciation visualised in the formula of the Supreme Court there should only be statutory depreciation as a prior charge.

The Association has emphasised the need for special consideration of the rehabilitation allowance which has assumed paramount importance in view of the present need to strengthen the country's foreign exchange resources. As for the return on capital, the memorandum observes that instead of separate returns on paid-up capital and on reserves employed, there should be a consolidated return on capital employed which should be defined to mean paid-up capital plus reserves minus non-trading investment as reduced by borrowings. For the cotton textile industry, the memorandum has suggested that the return on capital employed should not be less than 10 percent, free of tax. If, however, separate returns were envisaged, one for paid-up capital and the other for reserves employed in business, then the return on all paid-up capital should be at least 10 percent net, while on the rest of capital employed, the return should be at least a little over 7.5 percent—the rate at which the banks make industrial advances against securities.

Bonus and Wages

The memorandum contains a mass of statistics to show that the wages paid by the Bombay cotton mills are fair, averaging about Rs. 186 a month. In addition, workers have received, on an average, Rs. 2.3 crores a year by way of bonus between 1941 and 1961. Between 1953 and 1958, the Bombay mills made a net payment of Rs. 6.96 crores by way of bonus against the available surplus of Rs. 4.71 crores and the bonus for 1959 to 1961 amounted to Rs. 10.75 crores, against a surplus of Rs. 10.30 crores.

Labour has thus taken away as bonus not only the available surplus but also something more than that which must have gone out of reserves of the industry or out of its borrowings. The industry has been constantly denied a share in the profits for the purposes of rehabilitation and modernisation of plant and machinery. The return on net worth in the case of Bombay cotton mills, around 4.5 percent, is about the lowest compared with other industries, with the result that the industry is unable to attract the equity capital required for its expansion and modernisation. The Bombay Millowners Association has expressed itself in favour of a scheme of bonus based on production or productivity in place of the profit bonus, and it is willing to consider a concrete scheme which may be framed for this purpose.

CAPITAL, 7th February, 1963.

CAPITAL, 7th February, 1963.

E.I.D.-PARRY LIMITED CHAIRMAN, MR. H. V. R. IENGAR'S STATEMENT

The following statement has been circulated to Shareholders of E.I.D.—Parry Limited by the Chairman, Mr. H. V. R. Iengar.

The Sixty-fifth Annual General Meeting will be held on 27th February, 1963.

When I accepted the Chairmanship of the E.I.D./Parry group in May of last year, I was moved by three main reasons. In the first place, the group has, for generations, played a notable part in the industrial and commercial development of South India, and the name PARRY has become a household word, dating back to as long ago as 1788. I felt it would be an honour to be associated with a firm of this vintage and repute. Secondly, the late Mr. C. R. Srinivasan, the first Indian Chairman of the group, whom I knew well as a colleague on the Board of the Reserve Bank of India, and for whom I had great respect, was very keen that I should succeed him. Thirdly, the late Mr. Wontor, who had been Chairman of the group for several years and was, at the time, Vice-Chairman in London, and also the two British Managing Directors, Mr. Noel-Tod and Mr. Hadfield, told me, on behalf of the British interests in the group, that they would welcome my appointment. Now that I have been functioning as Chairman for some months, I would like to say that I am very happy at the decision that I took to join the group, not merely because of its reputation and the fact that it is expanding its activities in tune with the rising tempo of economic development in the country, but also for the reason that, by a combination of tradition and structural relationship with the United Kingdom, it forms a pattern of Indo-British collaboration which can only be of great benefit to both countries.

Historically, the E.I.D./Parry group was always British, ever since Thomas Parry landed on the shores of Madras in 1788. Many of you have probably read Hilton Brown's fascinating story of Parry & Company's fortunes during the British regime. The Directors, however, were keenly responsive to the winds of change that were sweeping across the country and, in 1947, two important steps in the Indianization of the group were taken.

Public Company

Firstly, Parry & Company Limited (then the Managing Agents of this Company) which was wholly owned by British nationals, converted itself into a Public Limited Company by an offer of shares made to the Indian public in February 1947, as a result of which 25 per cent. of the Ordinary Share Capital came into Indian hands. Secondly, immediately after independence, the control of this Company which had, up to that time, remained in London, was transferred to India; the circular issued to shareholders on this occasion explicitly stated that the change was felt to be in accordance with the changes in the Indian political scene. In addition to the change in the seat of control, the Board was re-constituted. In 1947, the Board consisted of five British and no Indians. The re-constituted Board consisted initially of 2 Indians and 2 British and now consists of 5 Indians and 3 British.

Further, in 1955, Mr. C. R. Srinivasan was appointed as the first Indian Chairman of this Company and, shortly thereafter, in March 1956 this Company acquired financial and executive control of Parry & Company Limited

by the purchase of the whole of its Ordinary Share Capital.

The structure of the Board is broadly in accordance with the structure of capital holding as between India and the U.K. Taking both the Preference and Equity capital into account, some 73 per cent. of the capital is in India and 27 per cent. in the U.K. It would not be correct, however, to think that the transfer of shares from U.K. to India has resulted in a reduction of the U.K. stakes in the group. In 1947 the U.K. investment in terms of nominal value of share capital held amounted to about £228,000, representing some 82 per cent. of the total share capital. Today, this has increased to about £362,000. In other words, although there has been a decisive structural change in that the majority of the share capital, nearly 73 per cent. is held by Indians, the interest of the U.K. group in terms of the amount of capital investment has actually increased by some £134,000.

British Investment

This should not be a matter for surprise, because it is in accordance with the whole tenor of the changes that have been taking place in the pattern of British investment in India since 1947. Naturally, the rapid development of industry that has been taking place in accordance with the Plans is, to a large part, attributable to is, to a large part, attributable to Indian effort in terms of both capital formation and entrepreneurial effort. As a corollary, in terms of percentage of total business investment in this country, British investment has recorded a drop. But the point of interest is that this drop is not indicative of any slackening of interest in Indian industrial development by British interests. On the contrary, British investment has recorded a substantial rise since 1947. According to the figures published by the Reserve Bank of India, at the end of June 1948 the outstanding foreign investment in the private sector amounted to Rs. 256 crores, of which the British share was over 75 per cent. At the end of December 1960, the corresponding figure was Rs. 567 crores excluding investment from official sources such as the World Bank; in other words, the investment in India by private individuals and groups overseas had more than doubled over the period. Of the total investment at the end of December 1960, including investment in the private sector by official institutions, the investment of the U.K. was far and away in the lead, being just about two-thirds. It is worth noting that the figures given are those of investment and not of market value, which, in many cases, has recorded a considerable increase over the actual investment.

An annual meeting of shareholders is scarcely the time to generalize on problems of international relationships, but I will permit myself two observations. In the first place, I cannot help recalling that, during the grave crisis created by the Chinese invasion of our northern frontiers, the response of the U.K. was both immediate and unqualified, showing that in the U.K. there exists an instinctive emotional feeling for the security of India. It is necessary that in the task of economic reconstruction as well, this feeling should be mobilised to the maximum extent. We are at a stage of economic development where we are in need both of foreign capital and of technological assistance. I do think that in this situation the existence of companies

such as E.I.D.—Parry, which have roots in both India and the U.K., must continue to provide a link which should be of great benefit, both politically and economically, to both countries. My second observation relates to the total quantum of capital attracted from abroad. Although, expressed as a percentage of rate of growth, the increase since 1948 is impressive, in absolute terms the quantum of foreign investment in India is almost insignificant. The average annual net outflow of long-term private capital in the last few years, from the main capital exporting countries, has been of the order of Rs. 1,750 crores. Out of this, India has been able to attract, net, only a little over Rs. 21 crores per year on the average, barely over 1 per cent. How to attract a larger inflow without creating, in future years, a serious imbalance in our external payments position is one of the important issues which Government would have to consider.

General Policy

A change in chairmanship offers a suitable opportunity for re-assessing the policies of the Company and its organisational efficiency for the carrying out of these policies; and this I have naturally done. In the speech delivered two years ago at the annual general meeting, Mr. C. R. Srinivasan stated as follows:—

"Progressively the emphasis on the Group's expansion has been on the industrial sector and, more and more, the pattern of our business is changing. As a result of this policy, we have been forced with great regret to disperse with some of our agency representations, in order to concentrate more of our finance and management resources on the administrative problems which are tied to the Group's industrial progress."

This policy of growing emphasis on manufacturing activities is undoubtedly correct, but I think it requires a little elaboration in so far as the trading sector is concerned. Sound trading is one of the essential requisites for the smooth running of our economy—it is unfortunately not as common in India as would be supposed—and it would be a great pity if the expertise acquired over generations by our group was to be lost to the country. I visualise therefore that, although our manufacturing activities will increase—and I hope, increase rapidly—our trading activities will be maintained at a satisfactory level. Necessarily, there will be a reduction in the trading of imported commodities, but I see no grounds for any reduction in the current level of our over-all trading activities. Taking the figures for the last three years, the sales of merchandise produced outside the group were as follows:—

1960	£4.8 million.
1961	£6.0 million.
1962	£6.3 million.

These figures are, of course, exclusive of the sales pertaining to the managed companies. The figures are also exclusive of sales upon which we merely earn a commission, that is to say, of goods which we sell on a consignment basis; and it is of interest to note that those sales in 1962 were approximately £5 million. Considering that we abandoned a number of agencies, the increase in our merchandising figures seems to be highly satisfactory. In regard to the sales of goods, manufac-

tured within the group, the figures are:—

1960	£6.4 million.
1961	£6.8 million.
1962	£6.8 million.

When Ennore is in full production, a point to which reference will be made subsequently, the sales of our own manufacture should record a very substantial rise. With the first phase of Ennore, the rise should be of the order of £2 million, and when we complete the second phase the increase should be of the order of £4 million. We are now actively engaged in the consideration of the problem of expanding the Ennore fertiliser factory; we have also under consideration certain other projects. We have already applied for an industrial licence for the manufacture of cryolite, making use of one of the by-products at Ennore. Shareholders will remember the reference in the Chairman's speech last year to the expansion of our pottery works in Ranipet and to our collaboration agreement with Doultons. This is going well. Although the financial investment, relatively to Ennore, is small, the profits from the pottery expansion should be substantial. Although, therefore, the pattern I visualise is that, while our own manufactures will show a substantial rise and therefore the sale of our own group products will form an increasingly large proportion of our total sales, our actual sales of merchandise produced outside the group, either on a commission basis or otherwise, should continue to be maintained at a satisfactory level.

Change of Name

This is the first Annual General Meeting under the new name of the Company, E.I.D.—Parry Limited. The old name suffered from the disadvantages that it did not adequately reflect the diversification of the Group's interests into the manufacture of Fertilisers, Pottery and Sanitaryware and its close association with Parry & Co., Limited, under whose trade mark "Parry's" the Company's sugar, chemicals, sanitaryware and fertiliser products are marketed.

The change of name to E.I.D.—Parry Limited involves no change in the constitution, management and policies of the Company or in that of Parry & Co. Limited.

Profits

In the year 1960 the group net profit before taxation amounted to £774,536. In 1961 this came down to £690,130 and in 1962 it has been further reduced to £648,473. As was explained last year, the reason for the reduction in the trading profit is primarily due to the expenses, including interest, in connection with the Ennore fertiliser project. This situation was always anticipated and, in fact, out of the profits of the year 1958-59 a dividend equalisation reserve was expressly created to enable the maintenance of dividend at a satisfactory level. It is gratifying that dividends have been maintained without the necessity to utilise any portion of the dividend equalisation reserve in spite of the fact that the rate of corporate taxation was increased last year from 45 to 50 per cent.

In the normal course, our financial position should improve substantially with the commissioning of the Ennore fertiliser factory and the completion of our pottery expansion. It is necessary, however, to utter a word of caution, at this stage, in regard to the level of future profits. A new situation has been created in the country by the invasion of our northern frontiers by China. Although, at the moment, there are no precise indications of the magnitude of extra liabilities in the field of defence, it appears, from statements made by responsible ministers, that the increase in defence expendi-

NGS/44C

ture would be very substantial and that the country must be prepared for substantial increases in taxation. Quite clearly, Government are in a difficult position, and all sections of the community must be prepared to bear additional burdens. I can only express a hope, however, that in regard to direct taxation, Government will not be moved merely by the immediate considerations of raising additional revenue, ignoring long-term effects on the economy. It is particularly important, for example, that in the matter of taxation of companies engaged in industrial production, the fiscal burden is not so heavy as to discourage capital formation, that is to say, the accumulation of adequate profits and ploughing them back into business. There is a danger that, in the pressure of a crisis, steps may be taken which might place in serious jeopardy the long-term strategy of industrial development. I will only add, in this context, that I hope Government, in deciding on their taxation policy, will also take into account the fact that the burden imposed on companies by the Emergency Risks Insurance Acts is itself quite substantial.

Sugar

It would seem that the problems of the sugar industry are never ending. Hardly is one set of difficulties solved before other problems, not of the industry's making, arise.

In his speech last year Mr. Noel-Tod referred to the cut of 10% in production imposed just before the start of the 1961-62 season. Your Company represented to the Government of India that the quota fixed for the Company would leave about 70,000 tonnes cane in the field without any means of disposal. In the event, the quota was increased to accommodate this cane and the Nellikuppam factory produced 35,395 tonnes sugar, incidentally, the highest on record for your Company. Since Government determine what quantity of sugar shall be sold each month and their policy was to release a season's production over 14 to 16 months, the carrying of this large stock together with the balance of the 1960-61 season's production posed problems of storage and finance. It was accordingly decided to offer for export 8,000 tonnes, over and above the export quota of 4,835 tonnes. The price realised on this voluntary export of 8,000 tonnes was approximately the controlled price fixed for U.P. and Bihar at which the Export Agency was then buying for export. Some other factories in the South, placed in the same position as ourselves, followed our example.

While this problem was solved reasonably satisfactorily, others have either not yet been solved or their solution is causing more difficulties.

The Government of India published the Tariff Commission's findings on the Price Linking Formula. The Tariff Commission has condemned the Formula. The Government of India have, nevertheless, decided that it would be "more appropriate, equitable and reasonable to apply the existing

formula in a modified form with a more precise determination of the share of the cultivator". The matter rests there and the industry is yet to be told how much more is to be paid to the grower in the four years from 1958-59. The Tariff Commission, after urging the abolition of the formula, recommended in its report that in future payment for cane should be made on the basis of its quality. Accepting this recommendation, the Government of India issued a Press Note on 3rd July that for the sugar year 1962-63 it had been decided to maintain the cane price at Rs. 1.62 per maund and to link it to a recovery of 9.8%. A discount or premium as the case may be would be allowed on this price at the rate of 1.5 nP. for every 0.1% fall or rise in the average recovery for a prescribed duration during the 1961-62 season, subject to a minimum price of Rs. 1.50 per maund for a recovery of 9% or less. The words "prescribed duration" were ominous and I regret to say that the fears of the industry—at any rate in the South—were confirmed when Government finally notified the price payable by each factory. The actual duration of the season at your Nellikuppam factory in 1961-62 was 201 days, from the start of the season on 19th November, 1961 to its close on 7th June, 1962. Instead of taking the recovery of 9.23% over a duration of 201 days, in which case the price would be Rs. 41-12 per tonne, the Government of India has taken the best part of the season—121 days from December, 1961 to March, 1962—as the "prescribed duration". The recovery for this period is 9.8% and the cane price works out to Rs. 43-40 per tonne. This bias in favour of the grower at the expense of the industry goes by the name of payment by quality. In effect, it means that the grower supplying low quality cane before December and after March gets the same price as the grower supplying the highest quality in the peak of the season. To your Company it means an extra cost of Rs. 7.5 lakhs on the anticipated crop in the 1962-63 season.

Cess on Sugarcane

Concurrently, the Government of Madras has increased the rate of cess on cane from Rs. 2 to Rs. 5 per tonne, the ostensible purpose being development of cane. Considering that only a fraction of even the present revenue from cess is spent on cane development, I cannot help feeling that the industry is being taxed once again without justification, for the purpose of increasing the general revenues of the State. With a sales tax of 3 per cent *ad valorem* and a cess of Rs. 5 per tonne, Madras has the distinction of charging the highest tax on cane in the country in terms of its incidence on the cost per tonne of sugar.

The cumulative effect of these imposts can well be serious and may compel us, at Nellikuppam, to consider restricting our crushing season. It would be with the greatest reluctance that we could take any such step because it would cause hardship to agriculturists and reduce the income of our own labour force. Other com-

panies may well find themselves in the same position. I do hope that this situation will not arise, but that would all depend on a more flexible approach by Government.

Representations have been made to the Government of India on the question of cane price and to the Government of Madras on cane cess and it remains to be seen what relief, if any will be afforded.

Now turning to the All-India picture, the cut of ten per cent resulted in a production of a little over 27 lakh tonnes in 1961-62 against 30 lakh tonnes in the previous season. Together with the carryover of 12 lakh tonnes on 31st October, 1961, 39 lakh tonnes were available of which 25.5 lakh tonnes went for domestic consumption, 3.3 lakh tonnes were exported, leaving a balance of 10.2 lakh tonnes as carryover on 31st October, 1962. A situation has now arisen whereby large-scale diversion of cane to jaggery and khandasari is taking place in U.P. and Bihar and in some places in the South. As a result, production in 1962-63 is expected to be not more than 25 lakh tonnes. The available quantity will therefore be 35 lakh tonnes of which 25 lakhs will be required for internal consumption, the country is committed to export 4 lakh tonnes and the balance 6 lakh tonnes will be the carryover. This is the normal carryover; and with judicious releases and distribution I see no reason why there should be any shortage of sugar, provided Government do not commit themselves to larger exports in 1963-64. Some statements made by those in authority have been very ambiguous on this point, and I hope Government will not commit themselves to additional exports before a reasonably accurate estimate of production in 1963-64 can be made.

You will see from this review how the fortunes of the industry can fluctuate from year to year and how difficult it is to plan for the future when the various factors influencing the industry are beyond its power to control. I have already indicated that we may have to pay an extra Rs. 7.5 lakhs for cane. The increase in cess will cost your Company another Rs. 10 lakhs. The cost of the compulsory Emergency Risks Insurance is likely to be Rs. 3.5 to Rs. 4 lakhs to be added to the cost of sugar as there is as yet no way of recovering it as a separate charge. While thus the picture is somewhat gloomy, I can only hope that we will be able to absorb these shocks by realising a higher price for sugar in the coming months. The prices we have been realising in the last few months have been even below the erstwhile controlled price as a result of heavy releases in quick succession and competition among factories anxious to unload on a market unwilling to commit itself except on a hand-to-mouth basis.

Fertilisers

In his speech at the Annual General Meeting last year, Mr. Noel-Tod referred to the new ammonium phosphate factory at Ennore and indicated

that the factory would be contributing in full measure to the Group's profits in 1962-63. This hope has not been wholly realised. The factory, as is well-known, is a complex unit, incorporating many new features in the manufacture of compound fertilisers and as is not uncommon with a highly complex modern chemical process, teething troubles have been encountered during the commissioning and running-in period. In no small measure these have been further aggravated by the inconsistent supply of electrical power, and, repeatedly, just as certain of the processes were about to be brought into balance, an interruption in electric supplies has upset conditions and almost a fresh start had to be made. As a result, instead of the Works being in full production at the commencement of the present financial year, as anticipated, there has been delay, but I am pleased to be able to tell you that the major problems appear to have been overcome and the factory is now in full production and will make a substantial contribution to the earnings of the group during the current year.

In Mr. Noel-Tod's speech last year, he referred to the issue of a licence by the Government of India to a consortium of two well-known American companies and your Company to erect a fertiliser factory at Visakhapatnam. This project is progressing as well as can be expected under the present conditions; there are still some matters on which Government's decision is awaited. I hope that these will be settled at an early date. It is essential that the Visakhapatnam project, which is one of the major projects included in the Third Plan, gets off to as early a start as possible.

Staff and Labour

Our relations with Staff and Labour have been good and I should like to thank all the employees of the Company for their co-operation during the year. As anticipated in the Chairman's speech last year, I am glad to be able to record that, after a series of direct negotiations with the Unions concerned, satisfactory long-term settlements have since been concluded, covering Terms of Service and Bonus, which will be effective until the end of 1965.

Mr. Noel-Tod

Mr. Noel-Tod is retiring from the Managing Directorship of E.I.D.—Parry Limited with effect from the 1st of April this year. I take this opportunity of paying a tribute to him for his distinguished service to the Company over the last 30 years. Some of the shareholders may be aware of the fact that his grandfather was Chairman of the Company when its headquarters was in London. Hilton Brown, in his book on Parry, quotes this as "yet another example of Kipling's devoted families, since Noel-Tod's father and three of his uncles spent their service lives in India." I am glad to be able to say that Mr. Noel-Tod will continue to be a Director and Vice-Chairman of the Company and will also be Managing Director of our London subsidiary, Parry Murray & Co. Limited so that his vast knowledge of the Company's affairs and his experience will be available to the group for some more years to come. I am sure the shareholders will wish to congratulate him on his being honoured with a C.B.E. in the recent Honours' list. It is an unusual occurrence that in the same year Mr. Edwards has also been honoured with an O.B.E.

Mr. M. J. Edwards, Deputy Managing Director, will become Managing Director, and Mr. John K. John, Deputy Managing Director, with effect from the 1st April.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on 27th February, 1963.

The Stock Markets

TAX FEARS AFFECT TRADING IN CALCUTTA

Wednesday Evening.

AS expected, turnover has shrunk considerably in the Calcutta stock market during the past week due to Budget uncertainties. Operators have been reluctant to extend their commitments. Buyers are conspicuous by their absence; hence if anybody must sell he has to do so at below current prices. As bears have been keen on covering their positions before the Budget, there has been a fair number of transactions on this account. The resilience of the market has attracted attention. In spite of many adverse developments, it has stood up well, as is evident from the decline in selling pressure. The shortage of funds has been acutely felt and many holders have been forced to dispose of their shares on pressure from banks.

Although the breakdown of the Brussels negotiations concerning the U.K.'s entry into the Common Market may not immediately affect India's economy, its long-term implications should not be ignored. It is difficult to say whether the concessions given by the E.C.M. countries regarding India's exports will remain valid in the changed situation. It is also feared that the Aid-India Club may raise some difficulties in sanctioning aid to India.

Lyons Range is preoccupied with thoughts of the forthcoming Central Budget. It is generally felt that the Finance Minister will levy heavier taxes in order to meet the increased defence and plan expenditure. The stock market thinks that new taxation may seek to raise between Rs. 100 crores and Rs. 150 crores. In the last Budget, additional taxation was estimated at Rs. 70 crores for 1962-63. The question that is being asked is to what extent the corporate sector will be burdened with fresh levies. The emergency risks insurance premiums have already imposed heavy financial burdens on companies; there have also been voluntary contributions to the National Defence Fund. Since the fiscal policy cannot disregard incentives to production, the Finance Minister may find it difficult to increase the company tax further. The present rate of 50 per cent does not permit sufficient plough-back to finance expansion and modernisation. However, the stock market fears that taxes may cut corporate profits further. Operators have been speculating whether the development rebate will be whittled down or an excess profits tax imposed.

Steel shares have been neglected. The deliberations of the international symposium on iron and steel held in Jamshedpur last Monday have made no impression. Today's settlement passed quietly and carry-forward charges were about normal. Indian iron have been freely available around the minimum price. The production of pig iron by the Company rose from 116,804 tons in December to 120,068 tons in January. The output of steel ingots declined from 91,175 tons to 86,248 tons, but that of salable steel improved from 66,444 tons to 68,972 tons. Despatches fell from 80,395 tons to 70,408 tons. The managing agents of the Company say that 8,400 tons of finished steel could not be despatched due to the wagon shortage.

Except for Braithwaite, engineering shares have declined on balance. The decline in prices of jute shares seems to have increased the turnover some-

what. Selling pressure has abated due to some good reports. Coal shares have been subdued and prices have fallen due to predominance of sellers. Bank and sugar shares have been neglected. There has virtually been no interest in tea shares. Stray transactions have taken place at cut prices.

Miscellaneous shares have been quiet in the absence of buyers. Hindustan Motors, Dunlop Rubber and Alkali Chemical have been transacted. Electric Construction have enjoyed influential support on hopes of a rights issue. In the paper section, Titagur have recovered somewhat. The recent issue of rights shares by the Company at a premium of Rs. 5 a share has been fully subscribed.

Government securities have been quiet. Business has been difficult to negotiate in the absence of buyers. Prices of all dated loans have declined. State loans have been difficult to sell even by discounting current prices. The 3 per cent Conversion loan 1986 has been barely steady around Rs. 63.

Tata Steel Output

Messrs Tata Industries Private Limited, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during January 1963 was: iron 151,700 metric tons; steel ingots 159,100 metric tons and salable steel 126,500 metric tons.

Bombay

POOR TURNOVER IN DALAL STREET

BUDGET FEARS WORRY INVESTORS

Wednesday Evening.

THE Bombay stock market has been subdued during the past week. Turnover has been very thin and the trend has generally been downward. Buyers have stayed out, so share prices fall whenever sellers appear. Operators and investors have been worried by fears of heavier taxation in the next Central Budget. The emergency risks insurance premiums have already eaten into the funds of companies. If fresh taxes are imposed on them, the outlook for profits and dividends will be very unfavourable. Except for stray support to selected shares such as Tata Locomotive, Gokak, Morarjee and Voltas, there has been a predominance of sellers. Carry-forward charges were higher in the past settlement as the clearing period has been extended up to the Budget.

Tata Steel have been freely sold at the minimum price. The decline in the Company's production during January has restrained activity. In the engineering section, Tata Locomotive were bought at a lower price. The rights issue of New Standard Engineering at a premium of Rs. 20 a share has been fully subscribed.

Mukand Iron have met with scattered buying on prospects of expansion. The Company may soon issue rights shares in the proportion of one new ordinary share for every three held, at a premium of Re. 1 a share. Among motor-vehicle shares, Hindustan Motors were barely steady, but Premier Automobiles were quieter.

In the cotton mill section, turnover has been difficult in the absence of buyers. Although the minimum price of Century has been cut further, the scrip have been sold freely. Kohinoor, Bombay Dyeing, Simplex and India United ordinary have been weaker.

Miscellaneous shares have fallen in line with the general trend. Sugar, mining and cement shares have been offered freely without attracting support. In steamship company shares, Scindia Steam have reacted sharply, although the scrip have recovered somewhat at the close on short-covering. Rayon shares have been easier on a predominance of sellers. Bombay Burmah have declined on pressure. Voltas have been quiet in spite of the repetition of a taxable ordinary dividend of 15 percent. The cash section has been very quiet. T. Maneklal have met with interested buying because of the expansion plans. The Company proposes to set up a second factory near Ahmedabad for producing rubber and ebonite

Madras

PRICES FLUCTUATE NARROWLY

ELECTRIC SHARES ATTRACT BUYERS

Tuesday Evening.

SHARE prices have fluctuated narrowly in the Madras stock market during the past month. Turnover has been small and operators have stayed out due to various uncertainties. The prospect of heavier taxation, combined with the growing shortage of funds, has restrained activity. Even in clearing shares, transactions have been few. There has virtually been no outside support.

Government securities have been dull and prices of State loans have

declined further. Bank shares have been neglected, but selected electric company shares have been bought due to attractive yields. Vellore and Salem-Erode have been transacted. In the sugar section, Andhra have paid a taxable ordinary dividend of 16 percent and E.I.D. a final taxable ordinary dividend of 14-2/7 percent, making a total of 21-3/7 percent for the year. But the latter scrip have met with selling pressure on a cautious statement made by the Company's chairman.

Except for scattered support to planting companies producing tea and coffee, there has been virtually no buying. Among composite companies, Kil Kotagiri and Nilgiri have been taken. Prices of other planting shares have declined on balance. Anapalai have paid a taxable ordinary dividend of 10 percent, Mercara an interim taxable ordinary dividend of 15 percent and Devashola an interim taxable ordinary dividend of 7.5 percent on the increased capital. Turnover has been negligible in textile shares, although Rayalaseema have met with scattered support on paying a taxable ordinary dividend of 15 percent. Madura have repeated a taxable ordinary dividend of 15 percent. Miscellaneous shares have fallen all round and buyers have been difficult to locate. Mysore Lamp have declared an interim taxable ordinary dividend of 8 percent. The authorised capital of the Company

has been increased from Rs. 10 lakhs to Rs. 1 crore. Madras Rubber have paid a taxable ordinary dividend of 45nP a share.

Deccan Sugar have been transacted at Rs. 9.25, Blue Mountain at Rs. 2.20, Consolidated Coffee at Rs. 15.60, Madura at Rs. 30.50, South India Viscose at Rs. 124, Aluminium Industries at Rs. 23.15, Ashok Leyland at Rs. 7.72 and Mettur Chemical at Rs. 13.05.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

THE CALCUTTA MONEY MARKET
FAIR INCREASE IN ADVANCES

Wednesday, 6th February.

THERE has been a fair increase in advances in the Calcutta money market during the past week. The requirements of jute mills have increased the most, but more credit has also been given to the sugar mills and to the iron, steel and engineering industries. Advances for cotton, foodgrains and seeds remain almost unchanged. In the inter-bank market, conditions have been tight and the call rate has moved up to 5½ percent.

The exchange market has been extremely active. At first, tea bills predominated, but subsequently there has been a large supply of gunny bills also. The demand for remittance is keen towards the close. Sterling has lost ground against all the major currencies, except the Canadian dollar and the Swedish krona.

IN THE CALCUTTA BULLION MARKET, only ready silver was transacted. The price closed steady around Rs. 228 due to good speculative support. The price was quoted at 107½d in London and at 125.6 cents in New York.

DURING THE WEEK ENDED 1st FEBRUARY, Government of India Treasury bills for Rs. 87,33,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 5th February. The total amount offered was Rs. 2.50 crores. Tenders at Rs. 99.410 percent were accepted and allotted approximately 80 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.360 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 11th February.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 6th February to 9th February at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 30th January to 2nd February, amounted to Rs. 17.25 lakhs.

THERE WAS A RISE OF Rs. 1.83 CRORES to Rs. 2,166.68 crores in active notes, according to the return of the Reserve Bank of India during the week ended 1st February, 1963, while the total note issue was Rs. 73 lakhs smaller at Rs. 2,185 crores. Notes held in the Banking Department consequently fell by Rs. 2.56 crores to Rs. 18.32 crores. Deposits of the Central Government rose by Rs. 17.43 crores to Rs. 79.17 crores, but other Government accounts fell by Rs. 6.43 crores to Rs. 13.58 crores. Balances of scheduled banks declined by Rs. 1.57 crores to Rs. 74.20 crores. Balances held abroad fell by Rs. 29 lakhs to Rs. 7.09 crores. The investment portfolio was Rs. 5.13 crores bigger at Rs. 241.88 crores. Loans to scheduled banks rose from Rs. 23.57 crores to Rs. 36.10 crores of which advances against usance bills were Rs. 23.68 crores, against Rs. 15.44 crores. Ways and means advances stood at Rs. 16.55 crores, against Rs. 19.79 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 25th January, 1963, shows a rise of Rs. 10.34 crores to Rs. 568.53 crores in total deposits. Investments in Government securities are up by Rs. 7.71 crores to Rs. 254.60 crores, while other authorised investments are down by Rs. 1 lakh to Rs. 10.56 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 3.30 crores to Rs. 287.71 crores. Cash and balances are, in consequence, shown at Rs. 25.56 crores or Rs. 70 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 25th January, 1963, shows Demand and Time liabilities at Rs. 948.90 crores (Rs. 25.92 crores on account of borrowings from banks) and Rs. 1,279.34 crores (Rs. 18.53 crores), compared with Rs. 951.87 crores (Rs. 24.28 crores) and Rs. 1,266.39 crores (Rs. 15.91 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 4.45 crores and Rs. 3.31 crores to Rs. 50.37 crores and Rs. 73.48 crores, respectively. There is a rise of Rs. 7.63 crores to Rs. 649.83 crores in investments. Advances and bills discounted at Rs. 1,479.80 crores show an increase of Rs. 6.94 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence shown at 5.5 percent and 66.4 percent, against 5.9 percent and 66.4 percent.

New Delhi

INDIA SORRY ABOUT BREAKDOWN IN BRUSSELS

(FROM OUR NEW DELHI CORRESPONDENT)

INDIA has reacted sharply to the breakdown of the talks at Brussels. The official reaction is one of sorrow and sympathy for Britain. India feels sad because with the U.K.'s entry into the European Common Market, she would have improved her trade with the "Six". She sympathises with the U.K. because it is largely over the safeguards for the Commonwealth trade that the talks have broken down. Although the final British proposals did not fully meet India's needs, the Government of India gives full credit to the U.K. Government for the stand it took, particularly to safeguard India's trade interests. The official view is that the situation which has now developed should be examined afresh. India's trade with the Common Market shows a big adverse balance against India. This makes it necessary that India should enter into trade negotiations with the E.C.M.

Originally, the negotiations were to follow the U.K.'s entry into the latter. India's stand in such negotiations will now be different. With Britain as a member of the E.C.M., India would have asked for compensation for the loss of trade preferences. She will now seek a balance in trade with the European Common Market countries. The need for a long-term trade agreement with the Common Market is, therefore, regarded as imperative. To meet the growing needs of development and defence, India is anxious to import a larger volume of goods from the Common Market countries provided her exports also rise simultaneously.

In the course of its negotiations with the European Common Market organisation, the British Government was able to reach the following agreement in relation to India, Pakistan and Ceylon. The agreement said that the enlarged Community would seek to negotiate comprehensive trade agreements with India, Pakistan and Ceylon, at the latest by the end of 1966. The objective of these agreements would be to develop trade with a view to maintaining and increasing the foreign currency earnings of these countries and to facilitate the implementation of their development plans. The means by which this could be done would include tariff, quota and export policies and measures to facilitate the promotion of private investment and the provision of technical assistance. An agreement was reached on the abolition of the existing common external tariff of 18 percent on tea.

Cotton Textiles: The common external tariff, it was agreed, could not be applied to these imports in accordance with the normal time-table but in four stages. The first step of 20 percent was to be taken on the accession of the United Kingdom to the Community; a second step of 20 percent 18 months later; a third step of 30 percent a year thereafter; and the final step of 30 percent when the common external tariff applied throughout the Community. As, in the main, the rate of duty in the common external tariff is 18 percent, the rates applied by the United Kingdom in the first three stages would have been about

3½ percent, 7 percent and 12½ percent ad valorem.

It was agreed that until the conclusion of the trade agreements referred to above, or the end of 1966, the enlarged Community would take steps without delay to restore the situation if, as a result of the progressive application of the common external tariff by the United Kingdom, exports to the Community were to decline. Such a decline would be measured in relation to a base level for such exports to the Community which would be established before the accession of the United Kingdom. It would be at least the average tonnage of imports into the member countries of the enlarged Community during 1959 and 1960. Provision for certain additions in accordance with the Geneva arrangement was also agreed in principle as far as the markets of the present Community are concerned. The United Kingdom was to restrict its imports from India and Pakistan to about the present limit.

Arrangements were agreed that during the period when exports to the United Kingdom of Indian or Pakistani grey cloth pay a rate of duty lower than that represented by the common external tariff, control should be exercised over exports of goods made from this material from the United Kingdom to other members of the Community in the event of difficulties arising in the latter's markets.

Other manufactured goods and processed foodstuffs: Agreement was reached that the common external tariff should be abolished in the case of some minor sports goods. As for the remainder of products under this heading, it was agreed that there should be a substantial delay in the normal time-table for the application of the common external tariff. The agreement provides for the application of the tariff in the following stages: 15 percent of the appropriate rate on Britain's accession; 15 percent on 1st July, 1965; 20 percent on 1st January, 1967; 20 percent on 1st July, 1968 and the final step on 1st January, 1970.

Jute goods: The provisional proposals provided for the progressive application of the common external tariff. The United Kingdom was to establish a quota for goods (other than heavy jute goods) from other member States of 3,000 tons, increasing annually by 700 tons. Quantitative restrictions were to be abolished on 1st January, 1970, at the latest.

Tropical products: A suspension of duties (under Article 28) was agreed for a number of items including cashewnuts and handloom products (the latter subject to an agreement on Customs definition). The treatment of other tropical products, including coffee, which are also of interest to associates of the Community, was to be considered at a later stage.

Items for further discussion: The British Government's proposals for nil duties on East India kips, coir mats and mattings certain heavy jute goods and hand-knotted carpets were to be discussed further. The Common Market Organisation had also agreed to enter into negotiations with India for a long-term trade

agreement, immediately after the United Kingdom had become its member. India's request for the postponement of tariffs pending the agreement was, however, refused.

It is obvious that the concessions agreed upon for India were subject to the U.K.'s becoming a member of the Community. In other words, concessions were given because India was

		(In Rs. lakhs)						
		1956	1957	1958	1959	1960	1961	April-Sept. 1962
Exports to Indonesia	...	781	570	287	382	430	607	292
Imports from Indonesia	...	189	381	331	383	395	187	60

a member of the Commonwealth. Thus India will now have to enter into negotiations, this time through its representative, not on the basis of the agreement already reached, but from scratch, seeking certain safeguards for her trade.

FOREIGN AID

Offers Made

Negotiations between the U.S.A. and India for development aid and, in particular, untied aid are in an advanced stage. According to earlier expectations, India should get untied aid of \$200 million to \$250 million almost immediately. This will not be new aid but the unused part of \$1,000 million offered for the first two years of the third five year plan.

The Netherlands has offered \$30 million as aid to India spread over three years. It will not be tied to any specific project, but the understanding is that purchases in relation to the aid will be made from Holland. Of this, 65 percent is a Government-to-Government loan and the remaining 35 percent will be an export guarantee loan. The credit will be made available in the ratio of 40 percent each in the third and fourth years of the plan, and the remainder in the last year of the plan. As far as the Government-to-Government loan is concerned, it will be advanced by the Dutch Bank of Development and Reconstruction.

The \$10-million credit offered by the Belgian Government is being suitably used, it is stated here.

INDONESIA

Trade Talks End

The preliminary talks between an Indian delegation led by Mr. Manubhai Shah, Central Minister for International Trade and an Indonesian delegation led by Mr. Umarjadi, Assistant Foreign Minister for Economic Affairs in Indonesia, ended here according to a Press note issued last week. An aide memoire containing the gist of discussions between the two delegations was exchanged. A long-term trade agreement between the two countries was agreed upon in principle.

Both the delegations reiterated their desire to expand trade and economic relations between the two countries. A list of projects in which India could assist Indonesia by supplying goods, machinery and

technical know-how was indicated. Both India and Indonesia will increase their purchase of goods from each other in a variety of products. Indonesia may purchase industrial machinery, machine tools, electrical and engineering goods, pharmaceuticals and drugs besides cotton textiles, jute goods and other traditional items. India will purchase from Indonesia larger quantities of items like rubber, non-ferrous metals, crude oil and petroleum products.

Mr. Manubhai Shah conveyed through the Indonesian delegation the cordial invitation of the Government of India for the visit to this country of a trade delegation led by the Indonesian Minister for Trade and Industry. The Indonesian delegation is expected here shortly.

The following table shows the position of India's trade with Indonesia:

		(In Rs. lakhs)						
		1956	1957	1958	1959	1960	1961	April-Sept. 1962
Exports to Indonesia	...	781	570	287	382	430	607	292
Imports from Indonesia	...	189	381	331	383	395	187	60
		+ 592	+ 189	- 44	- 1	+ 35	+ 420	+ 232

While petroleum products account for the bulk of India's imports, the major items of India's exports to Indonesia are cotton textiles of cheap quality and bed tickings, voils and drills, etcetera. In addition to cotton textiles, India also exports a considerable quantity of jute goods to Indonesia. The Indonesian Government has severely restricted the imports of commodities which do not fall under the categories of "food and clothing", "most essential industrial raw materials" and "mechanised appliances required for developing projects". This is on account of the foreign exchange shortage which Indonesia is facing. The present trend indicates that this policy will continue for some time to come. However, the main difficulties in trading with Indonesia arise from the uncertainty on the granting of import quotas and licences.

The fact, however, is that Indonesia has no foreign exchange to pay for her imports and has been demanding a system of deferred

London

U.K. REACTIONS TO FAILURE OF BRUSSELS TALKS

(FROM OUR LONDON CORRESPONDENT)

BRITAIN last week was formally refused entry into the European Economic Community. The Foreign Ministers of West Germany, Italy, and the Benelux countries accepted the fact that the French Government was determined to veto the British application for membership. Whatever may happen all over the world, there was bitter regret in Brussels. The Dutch and Belgians said that the Community would not be the same again, and the Italians said they were deeply disappointed.

Mr. Edward Heath, the leader of the British delegation, put his view plainly: "We entered these negotiations 16 months ago in good faith and have endeavoured strenuously to reach a successful conclusion. Five countries and the Commission have said publicly that all the remaining problems in the negotiations were capable of solution. I share that view. The five Governments and ourselves all wished to continue the negotiations and bring them to a successful conclusion. The high hopes of so many have thus been thwarted for political reasons at the will of one man. The end of the negotiations is a blow to the cause of that wider European unity for which we have been striving".

Since July 1961, when Mr. Macmillan told the House of Commons that Britain would apply for negotiations for entry into the Community under the terms of the Treaty of Rome, Government policy—economic, foreign and defence—has been directed on the assumption that Britain would enter the Community. Mr. Macmillan had to persuade the Commonwealth Prime Ministers and his own Party that this was a proper course for the Government to follow. Now the Government faces the vast disturbance of a readjustment of policies and Mr. Macmillan, after his many meetings with President de Gaulle, must take the full responsibility of his complete identification with the policy of Britain's entry.

Two Main Conclusions

The Government has apparently drawn two main conclusions from the events in Brussels:

(1) The political necessities of the western alliance compel Britain to maintain all existing links with western Europe.

(2) The economic inducement to Britain to make her industries com-

petitive, which membership of the Common Market would have given, must be replaced by domestic inducements.

Mr. Macmillan in a broadcast to the nation said that the U.K. is not going to let the break-down of the E.E.C. negotiations weaken her resolve to master her own problem. This was to expand the economy, to get growth, to maintain full employment without inflation. "That means that we must rely on our own determination, our own vigour, our own resources. We must be ready to accept change, to modernise, to adapt, to get rid of obsolete plant and perhaps more important, obsolete ideas—wherever they are: to work together, all of us".

Was this a gloomy or grim prospect, he asked? Not at all. It is the kind of situation in which Britain has always done best in the past, and so it will be again. Why had the negotiations broken down? Mr. Macmillan said: "Not because they were failing, but because they were succeeding. This seems a strange paradox, but it is true". In spite of assurances to the contrary, the only explanation was that the French Government hoped that the thing would break down for one reason or another—"either because the Commonwealth conference would not accept it, or because I would not be able to carry it through the Conservative Party conference, or that the arguments would go on for so long that the talks would sort of run in to the sand and never reach the end. But when in the last few weeks, it had become clear that the remaining points were about to be settled quite quickly, then the French Government brought the negotiations firmly and rather brutally to an end."

"What happened at Brussels on Tuesday (of last week) was bad: bad for us, bad for Europe, bad for the whole free world. There was no disguising that a great opportunity had been missed."

French Ambition

Mr. Macmillan said that before explaining what the U.K. should do now, "we ought to look at what we were trying to do". Europe, although the cradle of civilisation, had been the scene of some bitter struggles. He added: "This was generally brought about by attempts of one nation, or sometimes one man, to dominate the whole of Europe to create a kind of sham united Europe not by agreements, or by partnership, or co-operation, but by power. We want to stop this happening again by developing a strength and prosperity which would spread to a whole world". France, or at least the present French Government, was looking backwards not forwards: they seemed to think one nation could dominate Europe and that Europe could live alone without friends and allies.

Mr. Macmillan said: "Of course we must co-operate with the rest of the world, the Commonwealth and United States in equal and honourable partnership. That is why we in Britain are determined to stand by the Atlantic alliance". The U.S. had given Europe the chance to "pull ourselves together" after the war

and had thwarted the advance of communism by the creation of N.A.T.O. and the Atlantic Alliance. "What folly it is for anyone now to try to put all this at risk". Membership of the E.E.C. would have opened new prospects for the Commonwealth countries in a prosperous and expanding European market. "We had hoped by creating an enlarged market in Europe to create a great community, equal in strength to Russia on the one side or America upon the other. Our idea of it wasn't that Europe should be a kind of inward-looking, protected fortress. It should be outward-looking, helping the trade of the world, helping particularly the other poorer countries, the developing, the undeveloped, the new countries coming into being—and have come into being since the war".

What was the alternative? "There is no alternative in the sense of a ready-made plan better than the one we have been pursuing. If it had been possible to create a common market inside the Commonwealth we would have done it years ago. It would have been very attractive to us because of reasons of history and sentiment. But there is a lot we can do and must do. We must be creative and constructive not vindictive. What we do must be in harmony with our purpose, our theme and our aim".

Contact with Allies

All through the negotiations close contact had been maintained with the Commonwealth. "Now we must take counsel with them again and with the E.F.T.A. countries and the U.S.A. We must work for a lowering of tariffs all round as one of the best ways we can hope to increase world trade".

The immediately predominating reaction in the Commonwealth to the break-down of the Brussels negotiations will be one of relief that the British market will remain open with the continuation of Commonwealth preferences. Had Britain joined the European Economic Community she would have been obliged gradually to abolish Commonwealth preferences and to impose the common external European tariff on imports from non-members. This would have reversed Commonwealth preference into European preference. On the other hand, Commonwealth countries will not now qualify for many benefits that Britain had negotiated for them in Europe. Another offer which will not now materialise is that of associate status for Commonwealth countries in Africa and the Caribbean, and for various colonies.

Britain's exclusion from the E.E.C. will mean a dramatic increase in direct investment in Europe by British firms. Many projects for new manufacturing plant on the continent, in abeyance while negotiations continued, will now go ahead. The suspension of negotiations involves firms and industrial organisations, which have been gearing their whole outlook towards the likelihood of European entry, in yet another reappraisal of their future. One expected development was foreshadow-

ed recently by the British Employers Federation, which said: "The most important incentive to expand on the Continent would be provided by a decision not to enter the Common Market". In the four years to the end of 1961 British companies invested £60 million, excluding the oil and insurance fields, in E.E.C. countries. The figure is now expected to increase considerably, as more firms decide to extend production facilities from Britain into Europe in order to manufacture goods actually made inside the tariff wall.

Another sequel to Britain's exclusion from the Common Market will be that U.K. firms will have to intensify their efforts to export to E.E.C. markets. Tariff barriers will rise against British goods, but this is a challenge to be taken up and met. In this connection, the report on the first two years of the Export Council for Europe's work provides an interesting pointer.

The Council has been encouraged by the achievement of British industry in Europe. Although these have not been traditional markets for Britain, last year they took no less than £1,500 million of British goods, more than 39 percent of the U.K.'s total exports. Moreover, these exports had grown by 16 percent in 1961 and by another 12½ percent in 1962. Sales to the Common Market countries alone had risen even more, by 18 percent and 17 percent, respectively.

Sir William McFadzean, the chairman, commenting on the report, stresses that in Europe to-day there are "the most dynamic markets in the world, sophisticated, competitive, technically demanding". He refers to the continental countries outside the Iron Curtain which the Council was set up to deal with. In spite of the great progress made in the last two years, Britain's share of these markets is still only 8 percent overall and less than 6 percent in the E.E.C. countries. This indicates the great opportunities for further growth.

European Industry

Much of European industry is, however, not only highly efficient, but is becoming more and more closely co-ordinated in many ways. Great strides forward are being made in the means and organisation of transport. For Britain to be competitive and to succeed, she must not only be as efficient in manufacture but also in financing services and in each sector of transport and shipping, including the ports and Customs services. The Export Council has been particularly successful in getting a large number of small firms which had never before exported to enter this field. A series of regional conferences organised by the Council to explain the scope for selling in Europe has led to striking results. Many small firms have been helped to form export groups to share selling agents and other services.

Commenting on the recent slowing down in shipments to Europe, especially to the Common Market, Sir William said that exports of capital goods had probably become more difficult as the investment boom in Europe was slowing down, but there was immense scope for expanding sales of consumer goods. The Council was convinced that Britain had the right kind of goods to offer at the right prices and that her competitive position had greatly improved as a result of the relative stability in costs during the last year or so while many continental countries had seen their costs shoot up rapidly.

Jute

NEW CROP LIKELY TO BE AS BIG AS CURRENT ONE

ONE of the gratifying features of the jute goods market during the past week has been the recovery, albeit slight, of sacking prices towards the close. The rise is due to speculative activity rather than genuine business. The earlier fall was the result of overproduction, and sacking prices are still low in spite of the fact that many mills have been transferring looms from sacking to hessian manufacture. There seems to be little justification for the low prices that have existed for some time. If there is any substance in the contention that low prices are necessary for increasing the consumption of jute goods, there should be an early rise in demand.

During the period from May to August 1962, there was much uneasiness among certain speculators about the increase in sacking stocks. Although the increase was rather more than could normally be expected at that time of year, it was to some extent seasonal. It was pointed out that, unless there was a large increase in production or fall in demand, stocks would decline in the "buying season" from October to December. Stocks did actually decline, as was then predicted, but were left at a figure which was very nearly double that of December 1961. Now, the stock figures for the end of January 1963 are eagerly awaited.

New Crop Prospects

As the time for sowing the new jute crop approaches, it is appropriate to study the prospects. So far, there is no indication of a sharp decline in supplies, and enquiries in the districts have brought the information that there is only a little less jute available than at this time last year. The availability of Daissee and Tossa is strictly limited. But nearly all other grades, with the exception of high-quality jute, are plentiful. Stocks with mofussil balers consist mainly of low-grade fibre, and fairly large stocks are in the hands of well-to-do middlemen. These stocks, however, are held by people who are not pressed to sell as their cash position is quite good. A fall in prices at present would, therefore, probably cause them to delay sales until the prospects for the new crop are clearer.

Before examining the outlook for 1963-64, it is necessary to review the factors that may influence the size of the crop. The average price of jute in the mofussil areas so far this season is below what it was in the corresponding period of the last season. So the ryots have received rather less a maund this season than they did in 1961-62 until just before the time of sowing. On the other hand, many have had more jute to sell this season. With notable exceptions due to the recent emergency, some have already received more hard cash, and still have jute in hand. This is an important point, because in many districts jute is the only cash crop, and it is the actual amount of hard cash received rather than the rate a maund that influences them.

Reports from the districts indicate that the farmers intend to sow as large a crop this year. They are influenced in this by the minimum price scheme, and the knowledge—mistaken or otherwise—that help will always be available through buffer stock or S. T. C. purchases. Jute cultivation

tors to sow a big crop is the knowledge that local mills are still producing their maximum, while export demand has not diminished. The fact that mills here and abroad still have large stocks does not count with the farmers. They cannot see these stocks and, as long as buyers go on buying jute, the stocks do not have any obvious effect on prices. A cessation of buying, accompanied by a fall in rates at sowing time, would tend to reduce the size of the next crop. But if prices rise, as they seem to be doing now, adverse weather would be the only danger.

THE JUTE MARKETS

Manufactured Goods: With the due date settlement figuring largely in the day-to-day business, prices eased at the opening last Thursday. This was particularly noticeable in the sacking section, where February B Twills dropped to Rs. 113.25 with July-September shipment at Rs. 112.85. Hessian opened slightly better at Rs. 51.35 for February shipment. During the day, rumours of a Government tender for February-March shipment caused prices to firm up, but after the initial excitement, prices did not really show any signs of rising until Saturday, when the losses in sacking were made up. Confirmation of business over the week-end saw a further rise, so February B Twills advanced to Rs. 113 and 40in. 10oz. to Rs. 51.45. Reports of an Indonesian tender at this stage kept the market steady and fractional gains were recorded in both sections. But hessian was quiet and moved only in sympathy with sacking.

Opening quotations on Wednesday morning were as follows:

	Feb.	Mar.	April-June	July-Sept.
40in. 7oz.	38.85	38.25	37.50	36.85
40in. 8oz.	41.50	41.00	40.25	39.35
40in. 10oz.	50.80	50.20	49.60	49.10
B Twills	114.55	114.55	114.35	114.10
Corn sacks	117.00	117.00	117.00	116.50
Heavy Cees (Plain)	113.00	113.75	114.00	114.00
A Twills	140.50	140.00	138.00	138.00
Liverpools	128.00	128.00	128.00	128.00

Raw Jute: The fibre market ruled firm throughout the past week. Daissee and Tossa were very strong, and sellers were reserved, business being reported up to Rs. 33.50 basis Bottoms. Mills continued to buy steadily against quotas, but Assam white jute and mesta were comparatively neglected, although their prices were raised. High-grade jute passed at premium rates, and offers were very small. Upcountry prices were still quoted above Calcutta parity, and it was difficult in most cases to show a profit at present levels. Stockists released some jute at the higher rates, but only in small lots. In Cossipore, arrivals amounted to 430 wagons. Arrivals of jute on an all-India basis were estimated to be about 60,000 maunds daily.

Opening quotations on Wednesday were as follows:

	Current Price	T.S.D. Minimum Price
	Rs. Rs.	Rs. Rs.
	A Ql. A Md.	A Ql. A Md.

THE U.K. JUTE MARKETS

FIBRE REMAINS DULL

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market remained quiet in Pakistan during the past week. Shippers continued to make offers at current E.P.C. levels, but this was not attracting buyers. The position in the U.K. remains weak as a large quantity of jute is available on spot and also afloat, and that at a time when spinners are holding considerable stocks of raw material. Holders of these parcels are anxious for business and although some low prices are being named, very little movement is taking place. Approximately 15,000 bales of raw jute were destroyed in a fire at the Dundee harbour at the end of last week, but with so much fibre available ex-warehouse here, it has made no difference to the market. In fact, spinners are in no hurry to cover this loss as they expect prices to fall still further.

There appears to be ample jute available from the present crop to meet all requirements, but there has been a definite shortage of good quality material. Very few offers of the higher grades of both white jute and Tossa are being made and there can be no improvement in the position until fibre from the next crop becomes available.

Offers were irregularly made. Mill Lightnings ranged from £111 to over £120. Mill Hearts were lowest at £93 10s and Grade Hearts at £80, c.i.f. U.K., for February-March shipment. Grade Tossa-2/3 was named at £128 10s and Grade Tossa-4 at £112 with Output Tossa-2/3 at £97 15s and Output Tossa-4 at £87 15s, February-March. Offers of cuttings were not being so freely made as previously. The price asked for S.N.C. was £54

and for N.C. £46 15s. There were very few sellers of Siam jute and supplies were difficult to obtain. Grade A was at £82, grade B at £76 and grade C at £70, delivered mill Dundee for February-March shipment.

The Calcutta goods market was steady. Some buying interest was shown in the U.K. Quotations were at 77s 9d for 40in. 10oz and at 59s for 7½oz. a 100 yards f.o.b. Calcutta for February shipment, at 76s 9d and 58s 3d March and at 75s 9d and 57s 3d April-June. B Twills were at 173s 9d, 173s 6d and 173s for the respective shipment periods. Although spinners and manufacturers were still very busy in Dundee and have orders in hand for delivery several months ahead, less buying interest was shown during the past week. This could be due to the quieter raw material market and the possibility of lower rates being brought into force.

THE PAKISTANI JUTE MARKETS

E.P.C. PRICES REDUCED

(FROM OUR Dacca CORRESPONDENT)

THE fibre market is dull and inactive. The only thing with which traders can occupy their minds in this dull period is the coming crop, although it is too early for anything but pre-rain preparation of the land. There is, however, speculation on what growers intend to do. The consensus of opinion from widely different parts of the country produces one trend of thought. This appears to be that size of the next crop will not be affected at all by Government restrictions or otherwise and that if there is good weather during the sowing period, the crop is likely to be well sown. If during the next month or so, prices rise, growers will sow extensively. Sowings of the next crop must be closely watched since the only factor which might push the market up is the report that a small crop is going to be sown.

This apart, it would appear that overseas buyers are well bought to resist any serious rise.

Locally, the market is as dull as overseas, only slightly more active at much lower prices than are being paid overseas. In sympathy, the E.P.C. prices were reduced in the higher grades. Dundee Tossa 4s were reduced by £2, Mill Firsts by £3 and Export Firsts, Dacca Tossa 5s, Output Tossa 2/3s and 4s and Dundee Tossa 2/3s were all reduced by £4. This still puts the E.P.C. levels above the sale values. It is unlikely that the reduction will induce any increase in business, but it may bring out some delayed registrations.

N.C.D.C. COAL SALES POLICY HITS SMALL TRADERS

(BY A SPECIAL CORRESPONDENT)

THE small coal trader forms an important link in the whole arrangement of coal supplies prevailing at present. The trader who may be referred to as the middleman has varied functions to perform. To guarantee regular payments from the consumers is only one of his many functions. It is also his function to get the programmes and the bulks issued regularly and get amendments made in case of any mistake. It is again his function to arrange for regular tenders by collieries and secure allotments by the railways. In case of any difficulty, which is a normal feature, he has to arrange for special allotments. He has to ensure the quality of supplies, proper loading, etcetera. He ensures proper performance by the supplying colliery and arranges for transfer in the event of any failure.

All these measures are necessary to ensure regular supplies to the consumer. It is in consideration of these vital functions that the middleman in coal has come to play an important role. A very useful link between the producers and consumers, he is already being threatened, and his very existence is becoming precarious due to the policy being followed by the National Coal Development Corporation, a Government of India undertaking.

The N.C.D.C., besides engaging itself in production of coal, also sells the commodity produced in its collieries. It is as a seller of coal that its policy needs to be modified in the interest of the small trader. Its present sales policy and the rules governing it are too rigid and tend to create monopolies of a few big traders to the exclusion of a large mass of small traders in the coal trade. This situation as created by the N.C.D.C. is highly undemocratic, and against the declared objectives of the Government to support the small man.

Demand for Bank Guarantee

Under the present set-up governing the middleman, the N.C.D.C. insists

that the party concerned should furnish a bank guarantee for twice or thrice the value of the monthly supply desired. It is clear that this is a very harsh condition and tends to favour only a few selected big traders who are in a position to afford a bank guarantee. The inevitable result is that the entire business of the N.C.D.C. is getting concentrated in the hands of a few selected big traders and thereby monopolies are created, while the highest in the Government have deprecated, and rightfully so, the monopolistic tendencies in business.

What should be important from the point of view of the N.C.D.C. is the creditworthiness of the consumer concerned and not that of the middleman. As for the latter, what is important is his capacity to ensure regular payments by the consumers. Therefore the N.C.D.C. can at best demand an undertaking from the consumer concerned instead of a bank guarantee by the middleman through whom the supply is routed. The N.C.D.C. may also standardise the period of credit which is normally one month from the presentation of the bills. An undertaking by the consumer, especially those registered under the Industrial Development and Regulation Act, to pay the bills direct to the N.C.D.C. within the stipulated period of one month should provide the necessary solution and security for the N.C.D.C. However, in case of consumers not registered under the said Act, the N.C.D.C. may do well to ask for a bank guarantee covering the value of one month's supply only.

Commission for Traders

In the matter of commission too, the N.C.D.C. should set itself up as a model for every one in the coal industry including the private sector collieries. It must agree to give a minimum commission of 6 annas a tonne on all grades of coal and from all fields. It should also firmly lay

down that all business transactions will be placed through middlemen and that no orders for supplies will be entertained direct from any consumer. This should be another essential feature of the N.C.D.C.'s policy and should be implemented forthwith without any exception.

The N.C.D.C. at present entertains orders for supplies from any one particular consumer from only one middleman. This presents difficulties for all, the N.C.D.C. included. This procedure, if followed by a small private sector colliery having a limited clientele, is understandable, but the N.C.D.C. is a vast corporate organisation operating a large number of collieries in different parts of the country. If a middleman draws supplies from any one of the N.C.D.C.'s collieries, it should not preclude consumers from drawing supplies from the rest of its collieries through some other middleman. In the absence of this, the consumer is put to difficulties. This is also not in the best interest of the N.C.D.C. which is precluded from making larger supplies to the consumers concerned. It tends to create monopolies ousting small middlemen from the business.

Supply through Middlemen

In actual practice, large consumers have found it necessary to draw supplies from different collieries through different middlemen. This practice helps guard against any force majeure. For State undertakings it has been provided that they should draw their requirements from Government collieries. But this they have found impracticable to follow in actual practice. For better supplies, they have found it advantageous to distribute the supplies over a number of collieries in the public as well as the private sectors and through different middlemen. It is, therefore, necessary in the interest of all that the N.C.D.C.

CAPITAL, 7th February, 1963.

also permit supplies to the same consumer through different middlemen and from different collieries. This modification is considered essential in the interest of small middlemen and will be a definite step against creation of monopolies in the coal trade.

It is common knowledge that the N.C.D.C.'s production is in a very large proportion in the lower grades of coal. The middleman plays an important rôle in the disposal of such grades of coal. To encourage small middlemen is, therefore, in the interest of the N.C.D.C. itself. The N.C.D.C. is at present engaged in expanding production in outlying fields where there is considerable demand for coal and is likely to go up steadily in the years to come. Transport facilities vital for stepping up coal production are also readily available in these areas. For the purpose of expanding output, the N.C.D.C. is acquiring small pockets from small lease-holders. These are no other than the small traders who are gradually being thrown out of their traditional business. It is desirable for the N.C.D.C. to initiate suitable measures to rehabilitate these small traders.

Approach by Big Traders

Reports are current that some big traders are approaching the N.C.D.C. for sole selling rights concerning their newly developed collieries for certain regions. It will be highly disadvantageous for the corporation to accede to such requests in so far as it would lead to complete elimination of the small trader. The small trader has a special significance in arranging supplies in the outlying fields. Road transport not being so developed in these areas as in the north, the entire supplies even in smaller lots are made by wagons. It will be unfortunate if the N.C.D.C. were to take any step which would tend to eliminate these traders or sap their initiative. They have to be maintained and encouraged in the interest of all concerned. The smaller trader has already been eliminated from various lines. It is essential in the interest of employment that the Government should prevent the same thing from happening in the coal trade as well.

PROGRESS OF PLANTATION LABOUR HOUSING PLANS

(BY OUR SOUTH INDIAN CORRESPONDENT)

THE working group on housing set up by the Central Government visited south Indian plantations recently to study the problems of plantation labour housing. When the Plantation Labour Act came into force in 1954, rules were framed with a view to ensuring that the total labour dwellings in the plantation industry were brought up to prescribed standards at the annual rate of 8 percent of total requirements. That was a year of unprecedented boom in the tea and coffee industries. So the burden imposed on the plantation industry for labour housing was accepted by the management without much of a protest. The situation, however, changed within a few years and planters started complaining that investment required to satisfy the standards prescribed for labour housing is becoming unbearable. But the planters started constructing labour quarters without seeking any assistance from the Government. The achievements in the past eight years deserve better public notice than they have so far received, the planters claim.

According to one estimate, the south Indian plantation industry has to provide at least 100,000 houses for its workers according to Plantation Labour Act specifications. Provision of housing is a statutory obligation laid on the industry. Consequently, estate owners have to make substantial investments on labour quarters. A tea estate in south India, it is estimated, will have to spend Rs. 900 a worker to fulfil this obligation. It is said that 60 percent of the existing labour quarters are of the prescribed standard. The remaining 40 percent require improvement. The plantation industry in India will have to spend a huge amount to discharge its obligations under the Plantation Labour Housing Rules. The cost of production of the industry is mounting and the tax burden imposed on it is increasing. These factors are reducing the industry's capacity to discharge its obligations to workers. Besides, prices of building materials are going up, and there is a shortage of some of the items like cement. So there is a genuine case for fresh thinking on plantation labour housing.

Emergency Insurance

Emergency risk insurance has been clamped on the south Indian plantations. This is said to be rather unnecessary because plantations in the south do not face any immediate threat of war unlike their counterparts in Assam which asked for this type of protection when confronted with Chinese aggression. There is no provision in the Act to adjust the premium rate according to the difference in danger from the war threat. The north Indian plantations, which are in the danger zone, and the south Indian plantations which are far away from the area of war are to pay the same rate of premium. So the south Indian planters are unhappy about this situation.

Black pepper has lost most of its recent gains which were sudden and unexpected. American replacement buying, which was responsible for the recent upward spiral in pepper prices, was short-lived. According to latest reports from New York, the demand is negligible in spite of the reductions made by sellers in their quotations. It is stated that both America and

Russia are not interested in Indian pepper at present prices which are substantially lower than in the last year. The undertone, therefore, continues to be uncertain.

Boom in Coconut Oil

Coconut oil, on the other hand, is enjoying a price boom. It touched a new peak recently at Rs. 315 a quintal on the Alleppey market which is the principal terminal market in India for this commodity. The price is now firm around Rs. 310 a quintal, against Rs. 225 a quintal at this time of last year. Market circles are puzzled over this, since normally prices tend to come down during this time of year on account of increased arrivals of the new indigenous crop. The present firmness is attributed to the cornering of stocks by big millers, increased consumption and smaller production. Another factor is the delayed arrivals caused by an unfavourable weather this year. Import also is comparatively small, according to reports.

The technological sub-committee of the Indian Central Coconut Committee, which met recently in Madras, has reported considerable progress in the wet extraction of coconut oil and proteins in the Central Food Technological Research Institute. The extraction efficiency has increased from 75 percent to 90 percent. According to experts serving on the committee, proteins in coconut are superior to those in other oilseeds and are good for the manufacture of infant food, etcetera. Dr. V. Subramanian, chairman of the sub-committee, said that the formulation of infant foods and weaning foods based on coconut proteins could supplement milk and other infant foods. The work carried out at the Central Food Technological Research Institute in this direction had attracted the attention of different U.N. bodies like the Food and Agriculture Organisation, the World Health Organisation, and the protein advisory group of the United Nations International Children's Emergency Fund. Dr. Subramanian further pointed out that the U.K. was keenly interested in purchasing substantial quantities of high grade desiccated coconut processed at the Central Food Technological Institute.

Further Cut in Export Duty on Tea Urged

(BY A SPECIAL CORRESPONDENT)

WITH the Central Budget due for presentation at the end of February, speculation continues as to what new imposts will be levied on various commodities. Considering the need to increase exports to help pay for development and defence expenditures, it is obvious that there should be no interference with the despatch or shipment of any commodity which adds to India's foreign exchange earnings. In view of the marked improvement in tea exports since the reduction of exports last year, the industry port duty last year, the industry will undoubtedly benefit from a further reduction of the duty. Taxes are already too high now. Additional imposts will only add to costs which are already much too high. So there is a clear case for not imposing further taxes in the immediate future.

From time to time, this correspondent has drawn attention to the importance of cultivating the North American markets in order to earn more dollar exchange. Although in December 1961, the original Tea Council of the U.S.A. faced the possibility of being disbanded, a reconstituted Council was fortunately set up to serve the tea interests of Ceylon, India, Indonesia and the U.S.A. By the end of January 1962, the Council was an established fact and its committee welcomed the tea delegation from the India which visited the United States early in 1962. The original Council received the steadfast support of only eight firms whereas today 33 firms are extending their support to the reconstituted Council. The latter also enjoys the support of Ceylon, India and Indonesia. The new Council has also prepared some programme for areas where there is no brand promotion activity. The management of the Council believes that by propaganda in new areas, an infinite variety of promotional and educational opportunities will be found to be available. The drink-more-tea campaign will be committed to an all-out drive to woo young Americans. This drive is being made to the student community and a booklet entitled *Guide to Physical Fitness* is being published recommending tea to them. Other forms of advertising are also receiving careful attention. This year, the propaganda campaign will be more intensive. It looks as if tea consumption in the U.S.A. will continue to gain ground.

more favourable during the 1963 growing season and sufficient fertilisers are made available, the country may be compelled to import a few million lbs of tea. Production last year was reported down by about 7 million lbs. As a result, sales during January 1963 have opened with a firm undertone. But it remains difficult to assess the outlook for the 1963-64 season until up-to-date figures of production and consumption for 1962-63, are available.

Planters in Ceylon are reported to have advised their Government that India had profited at Ceylon's expense by last year's reduction in export duties. The industry, therefore, requested the Government to effect a similar reduction on low-grown teas, but the Government is reported to have advised them that in view of the present state of the country's finances, no reductions could be considered.

Costs in U.S. Synthetic Rubber Industry Rise

THE recent indications of rising costs in the U.S. synthetic rubber industry are taken as hopeful signs that the natural rubber industry may have to face less severe competition. According to some market observers, while the price of natural rubber may continue its long-term decline, depreciation will be slower than had hitherto been expected. Developments in the U.S. market during 1962 also suggest that although natural rubber continues to satisfy a smaller share of the demand for new rubber, this need not necessarily involve any loss of markets. Its share of the total demand for new rubber was 27 percent in 1962, against 28 percent in 1961. As a matter of fact, the U.S. rubber manufacturing industry took 422,500 tons of natural rubber in the first 11 months of 1962, compared with 390,000 tons in the same period in 1961.

Rotorvanes

GIVE YOU
A POWERFUL
MECHANIZED
GRIP ON

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for. The Rotorvane will help you make good tea.

The Portable Intermediate food conveyor belt to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerial Machine.

POOR PROSPECTS FOR THE NEW GOVERNMENT LOANS

THE gilt-edged market has greeted with relief the news that the Central and State Governments are going to centralise their borrowing programmes for the coming financial year, 1963-64. The idea of centralised borrowing is not new; it was given a half-hearted trial some years ago. It was revived last November, shortly after the Chinese invasion, and has now been formally accepted. The decision is welcome because the methods adopted by certain State Governments for achieving their borrowing programmes in recent years have had a strongly adverse effect on the securities market. It is true that the States have managed to raise all the money they wanted, but the success has usually been achieved at heavy cost. Often, for instance, certain State loans have been sold under pressure to unwilling subscribers; the subscribers have thereafter taken the first opportunity to get rid of their holdings even by discounting prices. Sometimes the discounts have been so large that the morale of the gilt-edged market as a whole has suffered. During the current year, the stage has been reached where a number of State Government securities are almost unsaleable, so their prices are merely nominal. From the point of view of the market, therefore, the centralised borrowing programme which has now been decided upon will be a major improvement. As all loans will be issued by the Government of India, the open market operations of the Reserve Bank will become easier and more effective.

The idea of centralised borrowing has admittedly been accepted not as a matter of choice, but under the compulsion of circumstances. One such compulsion comes from the fact that the Government will have to borrow very large sums during 1963-64 if its requirements are to be adequately met. Apart from the new money that has to be raised, the redemption of the issues which are nearing maturity has to be provided for. It is estimated that the redemption of Central and State loans during the coming financial year may total up to Rs. 209.28 crores. About Rs. 58.06 crores of the 3½ percent 1963-65 loan has to be repaid. Approximately Rs. 116.17 crores is outstanding on account of the 3 percent 1963-65 loan; although the Government is not obliged to redeem this during the coming financial year, many feel that the repayment will be done then, since the redemption of loans maturing in the 1964-65 financial year will be even heavier. For the current year, 1962-63, the Central Government borrowed a gross amount of Rs. 250 crores, while the State Governments borrowed Rs. 100 crores. On this basis, it is estimated that the Centre will want to borrow a net amount of at least Rs. 150 crores during the coming year and the State Governments will want to borrow Rs. 100 crores. If the requirements of both are to be fully met, the gross borrowings of the Governments may total up to Rs. 500 crores.

Raising such a huge sum of money will represent a formidable task for the Central Finance Minister. But exactly how formidable it will be, will be known only when the Central Budget is presented in a fortnight's time. The present state of the gilt-edged market does not inspire the hope that the total sum can be borrowed easily. The interest of individuals in Government securities has been declining steadily over the years and is only marginal now. They seem to feel that the returns from gilt-edged are unattractive when compared with the returns from other investments. Furthermore, the capital depreciation suffered as a result of the decline in security values has been too great; over the past year, for instance, the index for Government and semi-Government securities (base year 1952-53 equals 100) has dropped from 100.7 to 99.2. The attention of personal investors now seems to be confined mainly to the small savings schemes sponsored by the Government.

The support from individuals being limited, the Government will have to rely heavily on the funds it can attract from the institutions. But the banks are unlikely to be able to contribute liberally; under the law, they are compelled to invest a certain minimum proportion of their funds in Government securities, but after that minimum has been invested, the surplus remaining for further investment in gilt-edged is very small. The banks' difficulties will be accentuated by the fact that the growth of deposits (excluding the transfer of P.L. 480 funds) has been sluggish in recent months. In contrast to banks, considerable support will no doubt be forthcoming from the Life Insurance Corporation. The interest of the provident funds will also be substantial. It is likely, however, that even after all these contributions have been added up, a shortfall will remain. Part of it could perhaps be covered by the investment of P.L. 480 counterpart funds. But most of the remainder will presumably have to be taken up by the Reserve Bank, as has been the case in recent years.

Any loans the Reserve Bank takes up, however, are of little practical significance unless they can be disposed of speedily through open-market operations. If they cannot be, the Reserve Bank's contribution is almost indistinguishable in its effects from deficit financing. The difficulties in completing a borrowing programme of almost Rs. 500 crores during the coming year are likely to be so great that the Government might be compelled to lengthen the subscription period considerably and keep the loans "on tap". The prospect is not one which private industry will relish; even if it is allowed the opportunity, it will not find it easy to raise capital in the open market while the official loans are on sale.

In the gilt-edged market, many people are seriously wondering what the rates of interest on the new loans are likely to be. For the 1962-63 borrowing programme, the Central and State Governments offered higher interest rates than in the previous year. Now, over the past six months, interest rates in the money and capital markets have risen further. Not only have the commercial banks increased their advance rates; they also have to pay more on any money they borrow from the Reserve Bank. The Reserve Bank itself has supported the introduction of the dearer money policy by increasing its Bank rate from 4 percent

to 4½ percent with effect from 2nd January, 1963. The result of the general move towards higher interest rates is that the prices of Government securities have fallen quite sharply.

But nobody can say for certain yet whether the fall fully discounts the new interest rate structure. It is noteworthy, for instance, that the redemption yields on medium-dated Central Government loans are more than 4½ percent, while in the case of the 4½ percent 1974 State loans, they range up to a little short of 5 percent. The figures suggest that the Government might have to pay more interest on the new loans it floats later this year than it did on the ones floated in 1962-63. But there is one consolation: it is that some State Governments, if they were to borrow on their own, would probably have had to pay prohibitive rates of interest. Now, under the new scheme for centralised borrowing, the Central Government will be able to raise their requirements more cheaply. The centralisation of borrowing also means that the

range of potential investors will be broader. For example, it would include provident funds which have hitherto generally been prohibited from investing in State Government loans.

It is conceivable, however, that certain important difficulties might arise as the scheme for centralised borrowing begins to be implemented. One difficulty might centre on State Governments' jealousies about how the sums raised through the new loans are to be shared. No indication has been given whether the shares of individual State Governments will be decided on the basis of subscriptions, or population, or other criteria. There is a danger that if the sharing is not done on the basis of subscriptions, the State Governments will lose the incentive to ensure success for the borrowing programme. Whatever the principle of sharing might be, the Central and State Governments will need to make co-ordinated and vigorous efforts if the new loans are to be successful.

BRITAIN AFTER BRUSSELS

THE dream of hegemony in Europe has occurred to French rulers before General de Gaulle. And it has invariably resulted in years of war and generations of chaos to follow. This time there is a difference. The President's design is peaceful enough; and it gains strength from being based on some sound aspirations of economic unity and progress. But it is precarious nevertheless. States other than Britain might challenge France's right to European leadership, especially when its main motivation appears to be distrust of the United States and the assertion of outdated nationalist pride. The French President paid Britain a frank compliment when he castigated her as a "Trojan horse" which could wreck such plans. But in doing so he clearly denigrated the other members of the Common Market Six who, by implication, he appears to consider as likely to be more compliant with his illusions of French grandeur. In this he might well be wrong. The main result of his decision to veto British membership of the Common Market could be to wreck the European Community. Not all the remaining five members share General de Gaulle's dream of France's destiny. Enthusiastic for economic and political fedecacy, they may still draw the line at empire. The risk is a real one, and in laying himself open to it the French President could unwittingly have ensured that Britain's membership will eventually become an indispensable necessity for the survival of European unity. In other words, in showing his cards the way he has done, he might in time prove to have overplayed his hand.

That is why, although the negotiations in Brussels have failed, the ultimate accession of Britain to the Community remains a distinct possibility for the more distant future. Each needs the other, and the realisation of this fact has grown in proportion as the difficulty of the negotiations has increased. Talk has been heard about the "historical inevitability" of it all. That is as may be: the more concrete fact is that in an increasingly inter-dependent world, not only is the unity of western Europe and Britain a logical development of current trends, but so, eventually, is that of the whole Atlantic community. General de Gaulle may have set his face against this concept, but he has as good as admitted that it is unavoidable when he is out of the way. Such an admission only underlines the irrationality of his present stand, a fact which has not been lost on his critics. The present disturbing state of European unity is, therefore, the responsibility of one man. It cannot be expected to go on like this for ever.

The possibility of Britain's joining Europe ultimately does not, however, solve the immediate economic problems arising from the breakdown of the Brussels negotiations. So many of Britain's hopes for ending the present phase of stagnation in her economy have been based on entry to the Common Market. Now the hunt for alternatives is on. There is no shortage of these, especially in the long run. But, in the short period, there has to be a substitute for the "shot in the arm" which it was hoped membership would bring. An immediate expansion of the present programme for stimulating the British economy would seem to be indicated, including possibly a Budget deficit and mas-

sive public spending. Failure at Brussels must complicate the problem of revitalising the British economy, and even cause considerable delay; but there is no reason why it should wreck the chances altogether. The main difficulty will be to find a substitute for the international, and especially American, investment which it was hoped membership would attract to Britain. One only slightly less important will be to revive the confidence of British industry itself, where practically all investment plans drawn up during the past two years have taken Common Market membership for granted.

It is the question of exports which is likely to present the main and most immediate difficulty now that Britain has not succeeded in negotiating an early entry into the Common Market. The plan for growth, which is being considered by Britain's National Economic Development Council, provides for an annual rate of export expansion of 5.8 percent to support an overall growth rate of 4 percent. Last year—a good one—British exports increased by no more than 3 percent. It was hoped the Common Market would provide the necessary scope. If that is not now possible, then other opportunities will have to be investigated. It is doubtful whether the Commonwealth can substitute; freer trade is scarcely a practicable possibility in the circumstances in which most Commonwealth countries other than Britain find themselves at the moment. A world trade conference has been suggested, and the calling of one might well be among the first results of the failure at Brussels. But perhaps the best hope for Britain at the moment is, in association with the United States, firstly to negotiate a reciprocal reduction of tariffs between the two large blocks from which Britain could benefit, and secondly to investigate the possibilities of wider Atlantic trading co-operation.

A closer association with the United States has always been regarded in Britain as one possible consolation for the breakdown at Brussels. To what

extent the idea is justified is difficult to assess. The United States has all along been anxious to secure Britain's membership of the Common Market, and General de Gaulle's action has been as much a slap in the face for President Kennedy as it has been for Mr. Macmillan. Whether this will persuade the United States to grant Britain improved access to her own internal market when there is so little to offer on a reciprocal basis, is another matter. Certainly there is nothing in the history of America's attitude towards trade protection to suggest that it will, whatever the compelling economic reasons. The whole question must wait on a new initiative from Mr. Kennedy whose interest in a strong Britain and a low common tariff is obvious. Other expedients at Britain's disposal for increasing exports are, of course, a revision of the tax system so as to provide some much-needed incentives. This is something which might be expected of Mr. Maudling when he announces his first Budget next April.

The failure at Brussels leaves Britain with the short-term necessity of planning her economic expansion during the next few years without the benefits of Common Market membership, and the long-term one of working towards increased western unity and closer co-operation with the Commonwealth. In this, her efforts will inevitably be circumscribed by the attitude of the United States, whose enthusiastic initiative in any Atlantic-Commonwealth trading arrangement would be indispensable to success. In other words, the eventual aims of British policy should be much the same whether the country enters the Common Market or not. The logical extension of west European unity is Atlantic unity, a fact which has already been recognised by almost every European statesman except General de Gaulle. Clearly, the French President is not going to stand permanently in the way of progress towards this objective, provided of course there is no change in the present forces working towards unity. Britain can safely base her long-term policies on this incontrovertible axiom, and indeed appears already to be doing so.

So far, very little thinking seems to have been done on the problem of what effect the failure at Brussels will have on the Commonwealth. If one were to judge purely from what was said at the Commonwealth Prime Ministers conference in London last September, all the important member-countries would merely experience relief that their present trading arrangements are to remain unchanged. In fact, this is not the case. They know that even if Mr. Macmillan's warning about curtailing access to the British market is not to be taken too seriously, there remains the fact that the opportunities offered by the Common Market might be lost to them. To compensate for these, the Commonwealth would also be well advised to turn its attention to the general problem of expanding world trade. In doing so, there is no reason why it should sacrifice its present claims for protection, although the more these can be modified, the better for all concerned. The main thing is to recognise that the expansion of world trade, by whatever expedient, is the only answer to the general growth of protectionism and economic exclusiveness which threatens to take place in the European Common Market.

THE STEEL SYMPOSIUM

(BY A SPECIAL CORRESPONDENT)

THE International Symposium on Iron and Steel Making, which concluded in Jamshedpur last week, undoubtedly helped to clarify ideas on a number of major issues. In some ways, the most interesting feature was the widespread support for proposals about setting up new steel plants along the coast based on imported coal. The visitors' point of view was summed up by Sir Charles Goodeve, head of the British Iron and Steel Research Association, when he said that if Japan could build a large and viable steel industry importing both ore and coal, there was no reason to assume that the import of coal alone for suitably located Indian steelworks would be uneconomic. Sir Charles suggested organising an exchange of iron ore for coal, using large 45,000-ton bulk carriers. The ships could carry a revenue-earning pay-load both ways and thus help to reduce not only the delivered cost of coal to India but also the

price at which ore from this country could be placed on world markets. Something like this is already under way; New Delhi has permitted the setting up of a plant in the private sector to process Goa ore into pellets for export to the United States in exchange for American coal. Perhaps more such two-way deals will be organised, on a long-term basis.

Britain and West Germany, both large producers of coking coal, are seriously considering the import of cheaper American coal in the hope of gaining an advantage in the international steel trade. Indian coal producers recognise the need for imports, and one may note here that the idea of imports was mooted by the chairman of the Indian Mining Association three years ago, only to be rejected out of hand by the then Minister for Steel, Mines and Fuel. Undoubtedly, the foreign

exchange aspect will require careful thought (put forward as an objection to imports by Mr. S. K. Nanavati, general manager of the Tata Iron and Steel Company at the Jamshedpur symposium). But in making a rational assessment one would need to balance the outgo against the import-saving made possible by the additional production of steel. One would also have to take into account the gains in terms of higher productivity of the capital investment obtained for setting up any new plants. It is hardly a serious objection that a plant based on imported ore will be subject to the logistic uncertainties of a long supply line in the event of a major war. Where would Japan be in a similar situation? She imports 90 percent of the ore and 40 percent of the coal needed by her steel industry. The United States, so well endowed by nature, imports some 35 million tons of iron ore each year from Africa and Latin America over long ocean routes. India herself depends on imports of crude oil, rubber and non-ferrous metals for a major part of the requirements of her industries.

Once the idea of importing coal is accepted in principle, several issues follow. Must imports be confined to what a future coastal plant may need, or should the idea be extended to existing steel plants where productivity is suffering because of high ash in the coals used? Admittedly, four of the five steel plants are not organised today to use imported coal because of the lack of blending equipment. More important, port facilities and railway capacity will pose serious difficulties. But some say that the difficulties could be overcome if it were shown that definite advantages would accrue by the use of imported coal. This is a question which calls for careful examination, but one may note here the technical arguments put forward in favour of the idea by Dr. M. N. Dastur, the steel consultant.

Dr. Dastur recognises that it is technically possible to wash Indian coals to get any given percentage of ash, but it may not prove practical to go below 16 percent or 17 percent, the current norm, because the yield of clean coal comes down precipitously beyond this level, upsetting the economies of washing. Economies apart, the total reserves of coking coal are limited and the need to conserve resources would make such a course unwise in the national interest. Noting that the output of better grades of coking coal has remained at the level of about 7 million tons—much the same as it was ten years ago—Dr. Dastur takes the stand that washing by itself may not help to overcome the difficulties faced by the steel plants because of the intractable problem of ash. While there is no need to rush into any decisions, it will obviously be necessary to take this viewpoint into account in charting the long-term course of steel development.

Another feature of the Jamshedpur symposium was the support given to the idea of dispersing the steel industry by siting small integrated plants at convenient locations throughout the country. Two British papers presented at the conference show that a small plant need not cost any more a ton of annual capacity than, say, a one-million-ton unit provided the former is not required to roll either sophisticated end-products like sheets or too wide a range of categories. Operating costs would certainly be higher in a small plant but the margin of difference could be offset by savings in freight. It was in reviewing this argument that Sir Charles Goodeve made the suggestion that the economies of such plants would depend on a careful comparison of the delivered cost of a product from an alternative source of supply, existing or potential, and using the means of transport available today or likely to be in use within the foreseeable future. He had in mind the specific case of small plants in south India which might find themselves deprived of their economic justification if large units based on imported coal came up, as proposed, in Goa or in the Visakhapatnam area.

As all technical participants in the symposium took pains to emphasise, large and small plants are not mutually exclusive. India might need both on account of her sub-continental dimensions, which make the freight element an important part of the delivered cost, even if this is today obscured by the uniform railroad price introduced in 1957. The case for small plants is strengthened by the possibility of local manufacture of much of the equipment. A large British engineering group is believed to have offered its assistance; so has

another enterprise connected with some of the most famous names in West German heavy industry. The stage is thus set for purposeful planning in the context of the rising demand for steel, which large works are unlikely to be able to meet in full even after their current expansion programmes are completed. No time need be wasted in debating the merits of alternative technological processes for iron-making. Sufficient work has been done to evaluate the choices available in relation to particular locations.

In one way, however, the Jamshedpur symposium proved disappointing. Little was heard on the possibilities of using non-coking coal for metallurgical purposes, an issue of great importance because of the abundance and the wide geographic dispersal of such coals in India on the one hand,

and the shortage and concentration of coking coal deposits in a small area on the other. In an informal discussion with journalists in Calcutta on Monday, technical members of the U.K. delegation still seemed uncertain about the feasibility of using lignite deposits, but gave their qualified approval to the idea when it was suggested that the Indian proposal was to use lignite to generate power for electric smelting after the ore had been pre-reduced with lignite coke. In relation to the Salem-Neyveli plant, the question is really one of either using lignite in some such manner or doing without a steel nucleus at all in that area. The final decision may, therefore, depend—as suggested in a different context by Sir Charles—on the locations proposed for new coastal plants and their economic marketing zones.

Current News and Comment

Pepper Futures in Bombay

Persistent efforts by the Pepper and Ginger Merchants Association, Bombay, to seek recognition under the Forward Contracts (Regulation) Act to transact business in transferable specific delivery contracts have at long last borne fruit. Forward trading in black pepper was resumed from 7th February. Mr. R. Doraiswami, the outgoing chairman of the Forward Markets Commission, inaugurated it. The Commission had recommended a futures market for Bombay four years ago, but the Government of India did not favour the proposal, mainly because of the objections raised by the India Pepper and Spice Trade Association, Cochin, and the Kerala Government. The Cochin traders had expressed serious misgivings that certain concessions allowed under the by-laws of the Pepper and Ginger Merchants Association would cause a diversion of the trade from the producing region. In order to allay these fears, the by-laws of the Association in Bombay have been suitably amended to make them more or less similar to those of the Cochin association. Bombay had been agitating for a futures market on the plea that the lack of hedging facility was a great handicap to local exporters who handle nearly 60 percent of the total exports in black pepper which is an important foreign exchange earner. Furthermore, Bombay acts as an important distributing centre for north Indian markets.

According to Mr. Vallabhdas V. Mariwala, president of the Pepper and Ginger Merchants Association, the resumption of futures trading in Bombay will broaden the trade in the commodity and help promote exports. Bombay will not be a rival to Cochin, Mr. Mariwala said. Much has often been made of the need for hedging facility for stimulating exports. But the existence of futures markets in groundnut, linseed and castorseed has done little to promote vegetable oil exports. On the contrary, informed opinion is that in an economy characterised by shortages, speculation tends to push up prices thereby undermining export prospects. The export performance depends on the competitive position of the commodity concerned and speculation cannot in any way improve the competitive position. There are few items figuring in the country's export list in which speculation is permitted and nobody has ever suggested that hedging facilities will boost the export trade. Exports of black pepper have recorded an impressive rise from 10,960 tonnes in 1959-60 to 17,264 tonnes in 1960-61 and further to 23,225 tonnes in 1961-62. If additional hedging facilities can help promote exports, the resumption of futures trading in Bombay will have been well justified.

According to the latest estimate made by the U.S. Department of Agriculture, world production of black and white pepper during 1963 is expected to be higher than in 1962 when 160.7 million lbs were produced. Bumper crops are forecast for India and Indonesia which together account for two-thirds of the world supply of pepper. In 1962, the output in India—the world's largest producer—amounted to 67.2 million lbs, 7.5 percent more than in 1961. Indonesia's output at 40 million lbs was, however, some 25 percent below the 1961 figure.

Sarawak, Africa and Brazil are the other important producers of pepper.

A few words about the terms and conditions of the contract seem necessary. The basis of the transferable specific delivery contracts in Bombay will be Malabar ungarbled black pepper dried and free from oil wash and packed in new single gunny bags of 48in. x 26½in., containing not more than 7 percent of light or hollow pepper. The extraneous matters such as dust, chaff, and pickings, are not to exceed 2 percent. There are to be eight contracts during the year and the unit of trading will be a minimum of 25 quintals. In addition to Bombay, delivery can be effected in three up-country producing centres, namely, Cochin, Alleppey and Kozhikode. There will be weekly clearings on every Thursday. The delivery order rate will be fixed on the last day of trading—"poornima". Business will come to an automatic standstill whenever the price rises or falls by more than Rs. 12 a quintal from the previous day's closing rate. The first 50 quintals in a contract will be exempted from margin but beyond that, members will have to pay a margin at the rate of Rs. 30 a quintal on the highest outstanding business on any working day of the week. The Chaitra contract, which started at Rs. 297 a quintal on 7th February, was marked down to Rs. 286 on the following day.

Trends in Commonwealth Trade

Commonwealth trade accounts, on average, for about a quarter of the total international transactions. The rapid increase in world trade in 1960 slackened in 1961, but Commonwealth exports kept pace with the general trend of expansion. Although imports fell slightly during the year, the Commonwealth's share in world trade as a whole was maintained because of the rise in exports. In a memorandum which it has just issued, the Commonwealth Economic Committee has analysed the various movements in Commonwealth trade in 1961 and in the first half of 1962, in relation to its transactions with the rest of the world as well as within itself. The memorandum shows that in spite of the continued downward trend in the prices of primary commodities, which account for a large part of Commonwealth exports, these countries sold goods worth about £10,000 million, representing nearly 24 percent of the value of the world total. However, following very heavy purchases in 1960, a number of Commonwealth countries

had the time and the sense. And Colonel Mahdawi was a disaster. Is it possible that the successor, Colonel Aref (who will no doubt soon be a General, if not a Field-Marshal), will bring Iraq closer to Egypt, which still calls itself the U.A.R.? Even after the Syrian débâcle, President Nasser would perhaps like such a consummation; he could do with Iraq's oil, something Egypt hasn't got. But oil is an inflammable commodity in more senses than one; and I can see trouble ahead. What seems depressingly certain is that whoever wins the future the people of Iraq won't.

THERE IS AN OLD LAW OF MOTION WHICH SAYS THAT if you go round and round, you stand an excellent chance of ending where you began. Perhaps the main consequence of the Indo-Pakistani talks on Kashmir so far is that the law has once again been reaffirmed: both sides have spent their time singing their way round the mulberry bush, with the result that their achievement has been almost precisely nil. The mulberry bush is, of course, the question of Kashmir Valley; and there is no dearth of evidence that on this point neither India nor Pakistan is prepared to make any concessions at all. If the discussions have instead got bogged down on "principles"—i.e., theoretical possibilities as far divorced from reality as political convenience will allow—the fact cannot be entirely surprising. Even on "principles", perhaps the only, somewhat nebulous achievement is that Pakistan may be beginning to see that there could be a solution other than a plebiscite for Kashmir; and India, in turn, is preparing to recognise that Pakistan has a certain genuine political and economic interest in the area. In that sense, I suppose there is some substance in the claim that the two countries have acquired "a better understanding" of each other's point of view. But my optimism about such well-worn phrases might be greater if experience did not show that, for writers of *communiqués*, they are the traditional disguise for disagreements which are not only polite but also complete. One often hears it said that the Chinese threat makes it more necessary than ever that the subcontinent should resolve its differences; and with the plea as such, couched in general terms, I would not for a moment disagree. Yet the suspicion remains that the Chinese action has made a reconciliation between India and Pakistan not less, but more, difficult. I do not set much store by Rawalpindi's flirtations with Peking; they represent opportunism of a sort not unknown to Indian diplomacy. For India, however, the crux of the matter is that if Ladakh is to be defended, the main access must necessarily be through Kashmir Valley. Woolly talk of condominium notwithstanding, no one has yet suggested a way in which that access might be guaranteed.

WITH MOST OF THE NORTHERN HEMISPHERE shivering through several feet of snow, I suppose we should be grateful that Calcutta is already entering the season of shirt-sleeves. Indeed, no; for many years can I remember enjoying a pleasanter spell of cold-weather in this city than the one now ending. The temperatures have been uniform, with a regular nip in the evening air the occasional winter clouds have mercifully stayed away; and the warm, sunny days have induced a languor reminiscent of the glorious Mediterranean summer. Perhaps one's major regret is that the city looks rather more parched than in former years. The verdure on the Maidan is fading; in trees, nature's sentinels against urban ugliness are dying away. I remember there was a great furore some years ago about the marauders who stole the bark for firewood from the Maidan. But now, even Alipore, once Calcutta's nearest boast to a suburban garden, wears a dishevelled look. The *bustees* remain; new mansions are rising; but there seems to be not the faintest attempt to preserve the fresh, green look for which it was once remembered. A famous Ditcher once wrote of parts of the city where "the shady roads, overhung by a variety of fine trees, are a joy to every passer-by; and when in the month of May the branches are ablaze with flowers, those streets may perhaps be the most gorgeous in the world." That was seventeen years ago: how far down the road of shabbiness has Calcutta gone today.

THE DITCHER

Guide for Investors

SUGAR SHARES NEGLECTED ON BAD WORKING RESULTS

(BY A SPECIAL CORRESPONDENT)

SUGAR shares have remained dull in the Calcutta stock market for quite some time now. It has become almost impossible to transact business even by discounting current prices. Only the shares of those companies which produce liquor have met with stray support, since the outlook for them is considered fairly encouraging on hopes that Prohibition may be relaxed. The reports of sugar companies for 1961-62 have generally been disappointing. Most companies have either passed the dividend or reduced it. The working results have been affected by the poor quality of sugarcane resulting in a smaller recovery. Production costs have increased sharply as wages have risen following the Sugar Wage Board's recommendations. Freight charges have been higher and prices of various raw materials have risen. Factories have had to pay heavy interest charges due to the accumulation of sugar stocks. Besides, the increase in corporate taxation has reduced profits.

Investors are scared since most of these unfavourable trends continue to operate during the current season also, especially in the case of Bihar and U.P. mills. Most of the shares transacted in the Calcutta stock market represent companies operating in these areas. The outlook for the current season has also deteriorated due to fears that the total output in 1962-63 may not exceed 2.5 million tons, against 2.7 million tons in 1961-62. Not only has sugarcane supply been smaller and poorer in quality; there has also been considerable diversion of cane from sugar mills to gur and khandasari manufacturers, especially in Bihar and U.P. The cane shortage is due to the fact that at the time of sowing, the 10-per cent cut in sugar production was continued. When the cut was restored at the beginning of the current season, it was too late to encourage the cultivation of a bigger acreage. The quality has also been affected by floods and bad weather.

Due to smaller production during 1962-63, unit production costs have increased. But the accumulation of stocks is likely to be relieved in the next few months. The 1962-63 season started with a carryover of more than 1 million tons. Domestic consumption is expected to be 2.5 million tons during the current season.

the sugarcane cess. But it is unfortunate that only a small portion of the cess collected has been spent for cane development so far. The object of the cess is to raise money for cane development, but the funds have been used liberally for other purposes.

Ramnugger Cane Cuts Dividend

IN their report for the year ended August 1962, the directors of the Rammugger Cane and Sugar Co. Ltd say that during the current season, the factory has been crushing 1,200 tons of sugarcane a day but the cane supply has started declining. Supply of cane is reported to be inadequate because of reduced planting, following the sugar production cut imposed during the 1961-62 season and the poor yields caused by insufficient rainfall. Besides, cane supplies have been diverted to gur manufacture since the price of gur has increased sharply. To meet this competition, the Company has been paying higher price for cane. During the current season, the price of cane has been linked with the recovery of sugar. The Government will also set up machinery for determining the additional amounts payable for cane supplied to north Indian factories during previous years. The quantity of cane crushed by the Company so far during the current season amounts to 87,627 metric tonnes and the recovery is 9.54 percent.

The taxable ordinary dividend has been cut from 35 percent for 1960-61 to 30 percent for 1961-62, which is covered one-and-a-half times. The yield works out to 0.9 percent at the present price of Rs. 30.37 a share of Rs. 10 each. The profit has declined from Rs. 12.99 lakhs to Rs. 8.47 lakhs, after cutting depreciation from Rs. 3.93 lakhs to Rs. 3.75 lakhs. Taxation is allocated Rs. 8.80 lakhs (against Rs. 9.90 lakhs) and development rebate reserve Rs. 16,530 (against Rs. 6,570). The carry-forward is Rs. 79,042, against Rs. 61,005 brought in. The cash crush was 1.2 million quintals with a recovery of 10.35 percent, against 1.4 million quintals with a recovery of 9.62 percent. A quantity of 1,594 metric tons of sugar was tendered for export below the market price.

include depreciation Rs. 5.7 lakhs (against Rs. 3.65 lakhs), development rebate reserve Rs. 2.25 lakhs (against Rs. 1.84 lakhs), taxation Rs. 8.80 lakhs (against Rs. 5.75 lakhs), general reserve Rs. 2.80 lakhs (against Rs. 1.50 lakhs) and dividend Rs. 6.09 lakhs. After making all these adjustments, there remains Rs. 12,311 to be carried forward, against Rs. 8,374 brought in.

The directors say that the demand for the Company's products has been steadily increasing. In view of the Government's move to raise the third plan target for generation of electricity by 1 million kilowatts, the directors are optimistic about the Company's future. Most of the Company's products are required for the transmission of power. It is hoped that the development of the industry will continue unhampered in spite of the national emergency created by the Chinese aggression. After initial teething troubles, the Company's Vizag factory is now working in full swing. The switchgear and lift manufacturing unit in Budge Budge commenced production from November 1962 according to schedule. Due to unusual delay in the receipt of import licences for equipment, the meter factory project could not be implemented in 1962. Construction work for the project in Hyderabad is now in progress and the factory is expected to go into production towards the latter part of the current year.

The Company proposes to set up a factory for manufacturing transformers and switchgears in Sonapat, Punjab, for which an industrial licence is awaited. In view of the marked increase in the Company's activities and the expansion plans on hand, Electric Construction's financial requirements have increased considerably. The Company proposes to raise Rs. 31 lakhs through the issue of 15,500 9.5 percent cumulative redeemable preference shares of Rs. 100 each and 155,000 equity shares of Rs. 10 each, both at par. The permission from the Controller of Capital Issue has already been secured, and the Company will soon take a decision on the issue of rights shares. The Rs. 10-paid ordinary shares of the Company are currently quoted around Rs. 13.62.

South Karanpura Coal to Expand

THE Government of India has approved the project report of the South Karanpura Coal Co. Ltd. for expansion during the third plan. The World Bank has allotted the Company foreign exchange worth Rs. 12.45 lakhs for importing equipment. Most of the equipment will be delivered before June 1963, and will help to increase the raisings considerably. The Company has made a profit of Rs. 1.57 lakhs during the year ended August 1962, after providing Rs. 20,323 for taxation, Rs. 89,000 for development rebate reserve and Rs. 1.87 lakhs (against Rs. 1.63 lakhs) for depreciation. But the dividend has again been passed. After making all adjustments, a balance of Rs. 2,926 has been carried forward. There was a loss of Rs. 1.74 lakhs in 1960-61.

Shalimar Wires to Diversify

Raisings increased from 192,666 tons to 208,133 tons and despatches from 187,082 tons to 206,787 tons. The output was affected by power and wagon shortages.

THE Shalimar Wires and Industries Ltd proposes to manufacture "Fourdrinier" wiremesh in collaboration with a Norwegian firm. Used in the manufacture of paper, it is now entirely imported. The new project has already made some progress. Land, building and power house have been acquired in Uttarpurra, near Calcutta. Production is expected to begin soon but full-scale production will be achieved only a year hence. The licensed capacity is 396,000 square feet of mesh a year on single-shift basis. The issued ordinary share capital of the Company is Rs. 8 lakhs divided into shares of Rs. 10 each. It is proposed to issue further 220,000 ordinary shares, of which the directors have agreed to subscribe for 72,500 shares. The remaining 147,500 shares will be offered to the public for subscription in the near future.

Ravalgaon Sugar Fares Well

RAVALGAON Sugar Farm Ltd reports encouraging results for the year ended September 1962, which is in pleasant contrast to the performance of most other sugar companies. Sales of sugar, confectionery, etcetera, are up by about 16.5 percent from Rs. 1.62 crores to Rs. 1.89 crores, and the gross profit has shot up by as much as 73 percent from Rs. 10.19 lakhs to Rs. 17.65 lakhs. Lower cost of raw materials and a smaller salary and wage bill, higher recovery of sugar and better results from the confectionery division—all these have contributed to the improvement in the Company's profits. After providing Rs. 7.90 lakhs (against Rs. 8.25 lakhs) for depreciation and Rs. 4.25 lakhs (against nil) for taxation, the net profit amounts to Rs. 4.54 lakhs, against Rs. 1.69 lakhs in 1960-61. With Rs. 16,591 brought forward from the previous year and including Rs. 1.04 lakhs, being refunds and provisions made in previous years but now no longer required, and transferring Rs. 2.30 lakhs from the investment reserve, the disposable surplus amounts to Rs. 7.88 lakhs. Allocation to the development rebate reserve has been raised from Rs. 13,559 to Rs. 43,260, and a sum of Rs. 2.48 lakhs has been set aside for taxation relating to years up to September 1958. Contingency reserve gets Rs. 50,000 (against nil).

After providing for the ordinary dividend of 10 percent (the same), deferred dividend of 7 percent (the same) and the usual preference dividend which absorbs Rs. 4.38 lakhs, there remains a small surplus of Rs. 25,451 to be carried forward. The factory crushed during the year 121,000 tonnes of sugarcane, producing 143,000 bags of sugar at an average recovery of 11.63 percent. The corresponding figures for 1960-61 were 143,000 tonnes of cane, 152,000 bags of sugar and 10.48 percent recovery. The production of confectionery, however, rose from 1,653 tonnes to 1,737 tonnes, and sugar candy output was also substantially higher at 910 tonnes, against 850 tonnes.

The directors state that as a result of the Maharashtra Agricultural Land (Ceiling on Holdings) Act, 1961, the agricultural profits of the Company would vanish. It owns 6,424 acres of land and has taken 2,147 acres on lease. Besides, the Maharashtra Government has recently passed the Maharashtra Agricultural Income Tax Act, 1962, whose object is to replace

the sugarcane cess since declared *ultra vires* by the Supreme Court. The Act is deemed to come into force from 1st April, 1962, and covers the agricultural profits for the previous year. However, it is encouraging to note that the Company has entered the field of machinery and offers a number of items for the sugar industry. The diversification of the Company's activities is expected to yield good results. It has an equity capital of Rs. 30 lakhs which is supported by free reserves amounting to Rs. 43.16 lakhs. The Rs. 50-paid share of the Company is currently quoted around Rs. 55 cum-dividend, offering a gross return of about 10 percent on fresh investment.

Kirloskar Brothers Share Offer

KIRLOSKAR Brothers Ltd is offering for public subscription 60,000 9 percent redeemable cumulative preference shares of Rs. 25 each at par and 40,000 equity shares of Rs. 25 each at a premium of Rs. 12 a share. The entire issue has been underwritten, half by the Life Insurance Corporation and half by a stock-brokers' firm. The subscription list will open soon. The entire amount on preference as well as equity shares, including the premium, is payable on application. The prefer-

ence shares will be redeemable at any time after 31st July, 1976, but not later than July 1981. The new shares will be entitled to a proportionate dividend as may be declared for the year ending July 1963.

The additional funds are required for financing the Company's expansion schemes. Kirloskar Brothers is already engaged in manufacturing power-driven pumps and agricultural implements at its factory in Dewas, Madhya Pradesh. In 1958, the Company entered into a collaboration agreement with the Swiss firm of Sulzer Brothers Ltd for manufacturing pumps. It now proposes to undertake the manufacture of machine tools, namely, vertical turret lathes and horizontal boring machines in collaboration with Bullard Company, Connecticut, U.S.A. The Company has also obtained licences to manufacture hermetically sealed compressor units, hoists, lifting gears and cranes, keyway milling machines, column, pillar and turret drilling machines, controlled slip couplings, adjustable speed electric drives and reduction gears. The total capital outlay on the expansion programme is estimated at around Rs. 58.48 lakhs which will be met by the proposed issue of Rs. 29.8 lakhs (including the premium on equity shares), internal resources and borrowings from banks. The Rs. 25-paid share of Kirloskar

Brothers is currently quoted around Rs. 41.

Kerala Electricals: A New Venture

SPONSORED by Mr. N. J. Nair, managing director of the Textile Supplies Syndicate (Private) Ltd of Bombay, the Kerala Heavy Electricals Ltd is a new Company which proposes to set up a factory in Ankamali, Kerala, for manufacturing power transformers of the range of 1,000 kVA to 50,000 kVA for H.T. voltages of 33 kV to 132 kV. The factory will have a capacity of 600,000 kVA a year of power transformers. The well-known Japanese firm, Hitachi Ltd, is collaborating in the venture. The project is estimated to cost Rs. 1.10 crores. This is proposed to be met by the issue of share capital. The Company will have an authorised capital of Rs. 2.20 crores in equity shares of Rs. 10 each. The issued capital will be Rs. 1.10 crores. The Government of Kerala has agreed to subscribe for shares worth Rs. 28.60 lakhs and a like amount is being taken up by Hitachi Ltd of Japan. The promoters, directors and their friends have agreed to subscribe for shares worth Rs. 5.80 lakhs. The balance of the issue amounting to Rs. 47 lakhs is to be offered for public subscription.

The Company is expected to enter the market within two or three months for raising the funds. The outlook for the heavy electrical industry is promising. The demand for power transformers is fast increasing, and it is expected to improve further in view of the stress on power development in the third plan. The bulk of power transformers of the capacity which the Company proposes to manufacture is at present being imported. Textile Supplies Syndicate (Private) Ltd is proposed to be appointed as secretaries and treasurers of the new Company.

Arunoday Mills Share Issue

ARUNODAY Mills Ltd which proposes to set up a textile mill, comprising 12,000 spindles and 324 looms, in Morvi, is expected to enter the market shortly to raise Rs. 17.5 lakhs through public subscription. The spinning unit will be put up in the first stage and the installation of looms will be taken up at a later stage. The project, it is estimated, will involve an outlay of about Rs. 8 lakhs, of which Rs. 27 lakhs will be spent on machinery—indigenous as well as imported. The Company has received the essentiality certificate from the Textile Commissioner for the import of machinery worth about Rs. 10 lakhs from the U.S.A. and

Japan, against credits granted by these countries.

The Government, it is stated, has agreed to allow the Company to import machinery worth Rs. 5 lakhs against foreign participation in the Company's equity share capital. The construction of the factory is likely to start by the end of April, and the mill is expected to go into production by about the middle of next year. The cost of the project is to be met by raising Rs. 30 lakhs through the issue of share capital and the balance by borrowing. The capital issue will be made up of Rs. 25 lakhs in equity shares and Rs. 5 lakhs in preference shares. The promoters, directors and their friends have agreed to take up equity shares of the value of Rs. 12.5 lakhs. The balance of Rs. 12.5 lakhs in equity shares and Rs. 5 lakhs in preference shares is to be offered for public subscription. Mr. Chinubhai Chimanlal, an industrialist of Ahmedabad, will be chairman of the Company.

Usha Refrigeration to Raise Capital

USHA Refrigeration Industries Ltd—a Shri Ram group enterprise—which proposes to set up a factory for the manufacture of sealed units for domestic airconditioners and refrigerators in technical collaboration with the Westinghouse Electric International Company of the U.S.A., will, it is expected, enter the market before the end of March for raising Rs. 24.5 lakhs through public subscription. The factory will be located in Sanath Nagar, an industrial suburb of Hyderabad, for which the Company has already acquired about 100 acres of land. The factory is expected to be ready for production before the end of this year, but full capacity is likely to be reached in about three years. Sealed units for airconditioners and refrigerators are not manufactured in substantial quantities in the country at present, and their inadequate imports because of the difficult foreign exchange position have been impeding the progress of the domestic industry.

The requirements of domestic air-conditioners and refrigerators in India, it is officially estimated, will rise to 120,000 by 1965. The foreign exchange requirements of the project are placed at Rs. 18 lakhs. Import licences have been obtained, one for Rs. 12.17 lakhs under I.L.F. credit, and the other for Rs. 5.90 lakhs for imports from the rupee payment area. The collaboration agreement with the U.S. firm which has already been approved by the Government, provides for technical assistance and the right of use of the U.S. firm's patents for the manufacture of sealed units. Under the agreement which, in the first instance, will be in force for ten years, Westinghouse is to be paid \$50,000 in three instalments, of which two have already been paid. In addition, the U.S. firm will be paid a royalty of 4 percent on domestic sales and 5 percent on exports, subject to Indian income tax. The Company has an authorised capital of Rs. 10 2 crores in equity shares of Rs. 10 each, of which Rs. 50 lakhs is being issued for the present. Out of this, shares worth Rs. 25.5 lakhs have been reserved for allotment to the promoters, directors and their friends. The balance of Rs. 24.5 lakhs is being offered for public subscription.

Milk Products From Creamery Company

AGAINST the third plan target of 30,000 tons, the current output of milk powder—skimmed and whole—is placed at no more than 1,000 tons. The position concerning condensed

milk and cheese is even less satisfactory. The plan target for condensed milk is 6,000 tons, while the current output is hardly around 250 tons and the production of cheese is almost negligible against a target of 4,000 tons. There are some 18 firms which have so far been permitted to undertake the manufacture of milk powder, condensed milk and cheese of which hardly three firms are said to be in actual production. These are: Kaira District Co-operative Milk Producers Union, Anand, Food Specialities Private Ltd of Moga and Aarey Milk Colony, Bombay. In order to promote the development of the dairy industry on scientific lines, the Central Government is likely to introduce a Bill during the current Budget session empowering State Governments to form statutory milk boards. The Bill has been prepared along the lines suggested by the Gujarat Government, which has been pressing the Centre to allow it to form a statutory milk board with a capital of about Rs. 1 crore.

According to reliable reports, Mr. G. S. Bhandari has sought the Government of India's permission to set up a new undertaking in Madhya Pradesh in collaboration with the well-known British firm of Cow and Gate for the manufacture of milk products. The proposal is to manufacture 2,400 tons of skimmed milk, 600 tons of cheese, 900 tons of butter and 900 tons of ghee a year. The plant will be located in Makshi in Shajapur District (Madhya Pradesh). The project will be implemented by a new Company to be known as Creamery Company of India Private Ltd which will have an authorised capital of Rs. 70 lakhs, of which Rs. 45 lakhs, it is proposed, will be issued at the beginning.

Plant and machinery are estimated to cost about Rs. 18.33 lakhs, of which Rs. 13.33 lakhs will be spent on imported equipment and Rs. 5 lakhs on indigenous machinery. Requirements of foreign exchange, it is proposed, will be met from capital partnership of Cow and Gate of the U.K. The scheme, it is said, has been approved in principle by the Government as there exists scope for licensing further capacity.

Trichy Steel Share Offer Soon

THE subscription list for the Rs. 22-lakh public issue—all in equity shares of Rs. 10 each—of the Trichy Steel Rolling Mills Ltd will open soon. The entire public issue has been underwritten, partly by the Madras Industrial Investment Corporation, and partly by stockbrokers and the Canara Bank. The Company is setting up a steel rolling mill in Tiruchirappalli (Madras State) for the manufacture of iron and steel bars, rods, angles, channels, sheets, hoops, wires, wirenails, etcetera. At a later stage, the Company proposes to erect an arc furnace for manufacturing billets which will enable the mill to meet part of its own raw material requirements. It also has plans to manufacture some of the special steel sections required for the motor-vehicle industry. These are not being manufactured in the country at present.

With the accelerated construction activity covering both industrial and housing development, the demand for building materials, and, in particular, of round bars for reinforcement, wire rods for wire drawing and other purposes, special light sections of mild steel for the fabrication industry, has outgrown available supplies. The land has been purchased, and the construction of the factory buildings has been completed. The Company is now proceeding with the erection of plant and machinery, most of which have arrived at the factory site. It

is expected that the plant will go into production by about the middle of this year. The project is estimated to cost about Rs. 69 lakhs, of which Rs. 40 lakhs will be spent on plant, machinery and buildings. Working capital requirements are estimated at around Rs. 27 lakhs. The Company proposes to obtain Rs. 37 lakhs in the form of share capital. It proposes to meet the balance of the requirements, through medium and short-term borrowings from financing institutions and banks.

The Company has an authorised capital of Rs. 50 lakhs made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in redeemable cumulative preference shares of Rs. 100 each, carrying an interest of 10 percent, subject to tax. The issued capital will be Rs. 37 lakhs in equity shares, of which shares worth Rs. 15 lakhs have been taken up by the promoters, directors and their friends and the remaining 22,000 shares will be offered for public subscription. The board of directors includes Mr. T. S. Krishna (chairman), Mr. V. S. Tyagaraja Mudaliar, Mr. S. B. Sankar, Mr. A. Somasundara Reddiar and Mr. S. Ravindran. Sree Sankar and Company will be the managing agents.

Plastics Machinery from Windsor India

A NEW Company known as R. H. Windsor India Private Ltd has been formed in Maharashtra to undertake the manufacture of the well-known Windsor range of plastics injection moulding and extrusion machines. The Company takes its name after the reputed British firm of R. H. Windsor Ltd, Chessington, Surrey, England, which has promoted the enterprise in collaboration with Indian partners. The factory is being constructed in Thana—an industrial suburb of Bombay—and it is likely to be completed by September. Production is expected to start early next year. The initial production will comprise smaller capacity machines. This will be gradually extended to larger machines in keeping with the growth of the industry, particularly in the technical and trade moulding field. The British firm will supply the majority of machine tools as part of its capital contribution. No royalties are involved. Windsor machines are known for their high quality, and the promoters are optimistic about exporting the machines from India. The authorised capital of the Company will be Rs. 30 lakhs.

Bombay Potteries Maintains Dividend

IN spite of an impressive increase of 21.7 percent in production, sales of Bombay Potteries and Tiles Ltd for the year ended September 1962, show only a modest rise from Rs. 41.75 lakhs to Rs. 42.37 lakhs. The gross profit is down by about 15.4 percent from Rs. 18.46 lakhs to Rs. 15.99 lakhs. The profit margin has been badly squeezed, as the Company has had to reduce the prices of its products to meet growing competition in the face of a rise in production costs. After providing Rs. 2.71 lakhs (against Rs. 1.79 lakhs) for depreciation and Rs. 6.85 lakhs (against Rs. 7.50 lakhs) for taxation, the net profit amounts to Rs. 6.43 lakhs, against Rs. 9.17 lakhs in 1960-61. The ordinary dividend has been maintained at 15 percent, less tax, absorbing Rs. 2.13 lakhs. The preference dividend accounts for Rs. 63,434, against Rs. 57,002. The allocation to reserves has been reduced from Rs. 6.64 lakhs to Rs. 2.72 lakhs, but Rs. 24,960 has been provided on account of short provision for bonus for 1960-61 and Rs. 13,926

towards short provision for taxation for the same year.

The directors say in their report that while the total output rose from 2,217 tonnes in 1960-61 to 2,696 tonnes in 1961-62, there was a slight fall in the production of refractories and vitreous tiles at the Darukhan factory due to a 50-percent fall in coal supplies. In order to maintain uninterrupted production, Bombay Potteries is contemplating converting the furnaces at the Darukhan factory into oil-fired ones. Under the expansion programme, the Company's new furnace was commissioned in June 1962, raising the capacity of glazed tiles from 900 tonnes to 1,800 tonnes. Bombay Potteries has been unable to avail itself of the foreign exchange loan sanctioned by the Industrial Credit and Investment Corporation of India in the absence of the requisite import licence from the Government which insists that the Company must guarantee exports to the extent of the value of the import licence. The directors are not optimistic about the export outlook. The Rs. 100-paid share of the Company is currently quoted nominally around Rs. 197.50 cum-dividend.

Bank of Rajasthan Repeats

ALTHOUGH the State Bank of Rajasthan has maintained the dividend at 10 percent, less tax, the preliminary report on the working results for 1962 shows a sizable setback, compared with the previous year's performance. Deposits have been barely maintained at Rs. 6.27 crores, against Rs. 6.24 crores at the end of 1961. The net profit is substantially lower at Rs. 2.34 lakhs, against Rs. 3.50 lakhs in 1961. The directors have transferred Rs. 47,475 (against Rs. 71,000) to the reserve fund and provided Rs. 90,000 (against Rs. 87,000) for taxation. The proposed dividend absorbs Rs. 92,410. The bank's working funds have recorded a small increase from Rs. 7.42 lakhs to Rs. 7.67 lakhs.

Bank of Saurashtra Skips Dividend

IN spite of a 10 percent increase in deposits from Rs. 13.57 crores to Rs. 14.94 crores and a much larger increase of about 21.5 percent in advances from Rs. 7.28 crores to Rs. 8.85 crores, the State Bank of Saurashtra has made a substantially smaller profit in 1962, compared with the previous year. The bank's income is up from Rs. 78.38 lakhs to Rs. 83.47 lakhs, but the profit, after providing for taxation, has declined from Rs. 7.15 lakhs to Rs. 4.73 lakhs. Out of this, bonus to staff absorbs Rs. 2.10 lakhs and Rs. 2.50 lakhs has been transferred to general reserve. The dividend has been skipped.

Bank of Indore Earns Less

THE preliminary report on the working of the State Bank of Indore for 1962 shows a fall in its profit, although both deposits and advances have recorded a rise. Deposits have increased from Rs. 10.86 crores to Rs. 11.99 crores and advances are up from Rs. 6.15 crores to Rs. 7.04 crores. The profit, after providing for taxation, is down from Rs. 6.61 lakhs to Rs. 5.14 lakhs. A sum of Rs. 1.48 lakhs has been set aside for bonus to staff and Rs. 1.10 lakhs have been transferred to general reserve. The 8 percent taxable dividend absorbs Rs. 2.80 lakhs.

Heat-seal coating for dehydrated food and pharmaceutical packaging.

60 YEARS IN INDIA

LAMINATING

The making and shaping of aluminium foil is an extremely skilled process. It calls for rigid control in rolling to gauge. Special techniques in applying scientifically formulated coatings. Skill and know-how when mounting foil on carefully selected substrates. Machine techniques, and material and production quality control demand the highest order of technical knowledge and experience—the kind of experience that India Foils have acquired in 60 years.

TURNOVER IMPROVES IN LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has been steadier during the past week. Turnover has been bigger and a wide range of scrip have been transacted in the trading ring after a long interval. There has been a great deal of short-covering, but fresh purchases have been restricted. Bears have been forced to cover because of an appreciable recovery in Dalal Street. As some investors think that prices have fallen too far, they are making replacement purchases.

Meantime, the political situation has become less unfavourable. The fact that the last conference between India and Pakistan over the Kashmir issue did not break down is being interpreted by the stock market as a somewhat favourable factor. In spite of the recalcitrant attitude of China, it is believed that she will eventually accept the Colombo proposals. In any case, there is no immediate prospect of a fresh flare-up on the Sino-Indian border.

Although the possibility of heavier taxation in the next Budget has been taken for granted, the stock market has been veering round to the view that the Finance Minister, Mr. Morarji Desai, may not put too great a burden on companies. The Stock Exchange Directorate of the Finance Ministry has taken great interest in ensuring the stability of the market during recent months. This suggests that the Government will do nothing to spoil the investment climate.

Trade and industry have already been forced to bear heavy burdens since the corporation tax was raised from 45 percent to 50 percent in the last Budget. Besides, there has been a substantial rise in the cost of labour, raw materials and transport. The payment of premiums for emergency risks insurance has greatly strained the finances of companies. Preliminary reports about these premiums indicate that they may amount to more than seven or eight percent of the pre-tax profits of companies. The burden may prove too much, especially for new companies. Since normally they do not start making profits before four or five years, they cannot afford to pay these premiums. Hence it should be considered whether the new companies can be exempted from the emergency risks insurance scheme. Even in the case of other companies, the premiums should be cut.

This apart, many companies have already volunteered to contribute a portion of their profit to the National Defence Fund. It should also be borne in mind that the trend of profits has been downward during recent months. Since the emergency, many industries have switched over to defence production and further tax burdens may affect their working. In the circumstances, the scope for a further rise in the corporation tax is virtually nil.

The levy of an excess profits tax also seems unwarranted. Since profits are unlikely to move up in the near future, such a tax cannot yield much revenue. But its adverse effects can be far-reaching. Whether the Finance Minister will try to raise more revenue from the corporate sector by whittling down

the development rebate is anybody's guess. Even if he were to withdraw this concession, he must take care to ensure that incentives to development do not suffer.

Indian Iron have been quoted above the minimum price after a fairly long time. Among engineering shares, interest has been taken in Braithwaite, Indian Standard Wagon, Burn and Jessop. Scattered support has been forthcoming for Britannia Engineering, Kumardhubi, Texmaco and Dalmia Iron. Selected coal shares have been bought. Burrakur, Bengal and Amalgamated have gained fractionally. Interest has also been taken in Central India. South Karanpura have attracted interest on prospects of an improvement in raisings. The Company will soon import equipment under the World Bank loan.

Turnover has increased in jute shares on account of some good reports. The profits of jute companies are expected to be substantial for the current year and satisfactory dividends will be paid. Birla, Gourepore, Northbrook, Union, Anglo-India, Barnagore, Kamarhaty and Reliance have been taken. Kelvin have gained on reports of good working. Chitavalisah and Nellimarla have improved on paying bigger dividends.

In the cotton mill section, support has been confined to Dunbar and Jay Shree Textiles. Bank shares have been neglected. Sugar shares have lacked interest on reports that many factories may have to close down soon because of the shortage of cane. Tea shares have been offered freely without attracting support since it is feared that the dividends for 1962 may fall below expectations. Talk about the amalgamation of Hantapara with Birpara has created no interest in these scrip.

Miscellaneous shares have gained because of the absence of selling pressure. Among clearing shares, Hindustan Motors, Dunlop Rubber, Jaipur Udyog, Indian Copper and Indian Cable have been transacted. Goodyear India have been maintained on prospects of a rights issue. Interest has been taken in Alkali Chemical, British Paints, Associated Battery and Angelo Brothers. Among managing agency shares, Martin Burn have improved. In paper shares, Titagur have gained.

In Government securities, scattered support has been forthcoming for short-dated stocks but medium and long-dated loans have been easier. Prices of State Government loans have been depressed.

Bombay

PRICES IMPROVE IN DALAL STREET SECOND THOUGHTS ON THE BUDGET

Wednesday Evening.

THERE has been a marked improvement in the Bombay stock market during the past week. Short-covering, combined with replacement purchases, has helped raise share prices all round. Bears have covered their open positions in view of the

forthcoming Central Budget. Some institutional buying has also taken place because current prices are considered sufficiently attractive. There is a general feeling that new taxes in the next Budget may not be as high as was feared earlier. Most of them may be in the form of indirect ones. The current account will close on 21st February. At the close, share prices have reacted due to profit-taking, but selling pressure has been conspicuous by its absence.

Tata Steel have improved to Rs. 117.50 and Indian Iron to Rs. 21.16. Among engineering shares, support has been extended to Tata Locomotive at Rs. 281, to Mukand Iron at Rs. 15.92 and to Larsen and Toubro at Rs. 24.24. Among motor-vehicle shares, Hindustan Motors have been taken at Rs. 17.20 and Premier Automobiles at Rs. 104. Although cotton mill shares have been dealt in cautiously, prices improved fractionally on balance. Century have come to hand at Rs. 521, Bombay Dyeing at Rs. 58.80, Kohinoor at Rs. 278, Gokak at Rs. 176.50, Svadeshi at Rs. 250 and Morarjee at Rs. 451.

In the miscellaneous section, sugar shares have been subdued on fears of a big decline in production during the current year. Belapur have been available at Rs. 200 and Walchandnagar Industries at Rs. 141. In cement shares, Associated Cement have been bought at Rs. 140.75 and Digvijay at Rs. 171. Steamship company shares have lacked interest, and Scindia Steam have been transacted at Rs. 10.08. Among mining shares, B. B. Petrol have been fairly steady around Rs. 440 on hopes of reorganisation. Bombay Burmah have recovered to Rs. 634 on short-covering. In rayon shares, National Rayon have recovered to Rs. 380 and Gwalior Rayon to Rs. 45.50. Baroda Rayon have met with demand at Rs. 114 on the news that the factory has started production in full swing. Chemical shares have been quiet, and Tata Chemical have been done at Rs. 13.12. Voltas have lacked interest around Rs. 248 due to the decline in profits. There has been little interest in cash shares, but Permanent Magnets have improved to Rs. 200 on the news that the factory has started production. The Company also proposes to go in for further expansion.

Small business has been done in bank and insurance shares. Central Bank have been quoted at Rs. 59.50 and Bank of Baroda at Rs. 94.50. New India Assurance have come to hand at Rs. 54.50. Among electric company shares, Ahmedabad have been dealt in at Rs. 92.70 and Tata Power at Rs. 1,052.50.

port has been forthcoming on a very small scale. Investors have been disturbed by the prospects of heavier taxation in the next Central Budget. They are also worried about the growing shortage of funds. As the call rate has been quoted at a higher level than in the corresponding period of 1961, it is feared that the flow of bank credit into stocks and shares will be restricted.

Bank shares have been neglected, and nominal business has been done in Canara and Indian Overseas. Canara Bank has declared a taxable ordinary dividend of 15 percent. In electric companies, scattered interest has been taken in Vellore at Rs. 13.60 and in Negapatnam at Rs. 11.40. Planting shares have shown mixed trends. Selected tea and coffee shares have been bought on crop reports, but rubber shares have been sold freely. Interest has largely been confined to Blue Mountain at Rs. 2.37, to Cochin Malabar at Rs. 6.36, to Consolidated Coffee at Rs. 15.55, to Periakaramalai at Rs. 3.02, to Nelliampathy at Rs. 2.73 and to Peermade at Rs. 22.50. Sugar shares have been easier on a predominance of sellers, although scattered support has been extended to E.I.D. around Rs. 39.10.

Cotton mill shares have been offered freely without attracting support, although sellers have become fewer on reports of an increase in the price of yarn. Bangalore Woollen have weakened to Rs. 228, South India Viscose to Rs. 125 and Travancore Rayon to Rs. 26.75. Interest has been taken in Madura at Rs. 30.75.

Turnover has declined considerably in miscellaneous shares. Aluminium Industries has issued 350,000

rights ordinary shares of Rs. 10 each at a premium of Rs. 3.50 a share, in the proportion of one new share for every 3.5 shares held. The scrip have been quoted at Rs. 22.85. Metallur Chemical have come to hand at Rs. 12.05 and Madras Rubber at Rs. 18.50. Mysore Paper has been dealt in at Rs. 14.25 and Parry's Confectionery at Rs. 3.50. Government securities have been weaker, and prices of State Government loans have fallen in the absence of buyers. The trend is not expected to improve in view of rising interest rates.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.

London

UNSETTLED TREND IN PRICES SHIPPINGS RISE ON FREIGHT INCREASE

London, 13th February.

THE London stock market remained unsettled during the past week with operators still unable to take a definite line in view of the many uncertainties. The January gold figures helped to some extent, and there were one or two other satisfactory economic pointers. But with unemployment likely to reach the 900,000 level when the figures would be announced next week and the uncertainty about exports, in spite of the U.K. Government's moves in this direction, there was a fairly general reluctance of buyers of enter into fresh commitments. There was a poor market for gilt-edged and prices wilted under persistent small selling. With Wall Street also unsettled, dollar shares drifted lower. The feature of foreign rails was the sharp rise in Costa Rica second debentures, on the interest arrears' scheme. A feature in equities was the strength of shipping shares following the sharp rise in the tanker freight rates.

FRESH THINKING

... IS

ORGANISATION'S GREATEST ASSET!

Any one who searches deeply into the reasons for business success comes to realise this. The greatest asset Management has is the ability continually to bring fresh thinking into business problems, because it can reaffirm past decisions, confirm past policies or detect need for change.

With a business background and experience of over 150 years, the J.K. Organisation has always applied Fresh Thinking with sound judgement and have given to the people varied commodities for use. Today its single-minded devotion to the cause of India's industrial prosperity is the GREATEST ASSET.

J.K. ORGANISATION

C. I. PRESSURE PIPES BY IISCO

IISCO-STANTON Cast Iron Spun Pipes

Made to BS6 1211 of 1958 and Vertically Cast Pipes to BS6 76 of 1958. IISCO pipes are used throughout the length and breadth of the country. Among the big projects that have already used IISCO pipes are: the Mattancherry Project at Ernakulam, 8,62,000 Rft; the Water Supply and Drainage Scheme in Madras State, 48,02,000 Rft and the Ajmer Water Supply Scheme, Rajasthan, 3,69,000 Rft. Today, IISCO pipes are being again employed at:

Patratu Water Supply Project, A/c. Chief Engineer, P.H.E.D., Bihar, Patna.	4" to 30" Spun Pipes	1,36,050 ft.	5355 tonnes approx.
Coal Mines Water Supply Scheme A/c. National Coal Development Corporation Ltd.	14" to 27" Spun Pipes	1,25,591 ft.	5456 "
Municipal Corporation of Delhi.	24" to 36" Spun & V.C. Pipes	5,676 ft.	11943 "
Ahmedabad Municipal Corporation.	60" V.C. Pipes	5,676 ft.	2345 "
Fertilizer Corp. of India Ltd., Namrup Project.	16" to 24" Spun Pipes	22,674 ft.	1461 "
The Chief Engineer, L.S.G.E.D., Lucknow.	15" to 27" Spun Pipes	25,695 ft.	1448 "
Corporation of Madras.	21" to 33" Spun & V.C. Pipes	23,766 ft.	2135 "
The Executive Engineer, P.H., Visakhapatnam.	14" to 18" Spun Pipes	16,405 ft.	196 "
The Public Health Engineer, P.H. Bhopal.	30" to 36" Spun & V.C. Pipes	10,454 ft.	1375 "
Maharashtra State Electricity Board.	21" Spun Pipes	21,000 ft.	1761 "

Money

THE CALCUTTA MONEY MARKET

INTERBANK CONDITIONS VERY TIGHT

Wednesday, 13th February.

THE general level of advances in the Calcutta money market has shown a fair increase during the past week. Most of the increase is accounted for by the iron, steel and engineering industries. But the requirements of the jute and sugar mills, and of the foodgrains and seeds trade, have also risen. Cotton credit remains almost unchanged. In the interbank market, conditions have been very tight and the call rate is between 6 percent and 6½ percent.

The exchange market has been less active. The supply of tea bills has been fair, but there have been very few gunny bills. The demand for remittance is poor. Sterling has eased in relation to all the major currencies except the Danish and the Swedish kroners.

THE CALCUTTA BULLION MARKET transacted only ready silver during the past week. The price was quoted around Rs. 268.75 for ready delivery. No forward business was reported. The London and New York prices were 108d and 125.6 cents.

DURING THE WEEK ENDED 8TH FEBRUARY, Government of India Treasury bills for Rs. 66,70,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 12th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.405 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.365 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th February.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 13th February to 16th February at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 6th February to 9th February, amounted to Rs. 78,00,000.

RISES OF Rs. 41.83 CRORES TO Rs. 2,226.83 crores in the total note issue and of Rs. 44.41 crores to Rs. 2,210.82 crores in active notes were notable features of the return of the Reserve Bank of India during the week ended 8th February, 1963. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 45 crores to Rs. 1,903.42 crores. This was done by transferring securities from the Banking Department in which investments fell by Rs. 44.42 crores to Rs. 197.26 crores. Deposits of the Central Government were Rs. 10.14 crores larger at Rs. 89.31 crores, presumably due to the payment of emergency risks insurance premiums while those of State Governments fell by Rs. 5.59 crores to Rs. 7.99 crores. Balances of scheduled banks at Rs. 73.42 crores showed a decline of Rs. 78 lakhs. Balances held abroad rose by Rs. 3.57 crores to Rs. 10.66 crores. Loans given to scheduled banks increased from Rs. 36.10 crores to Rs. 43.72 crores.

res, of which advances against usance bills were Rs. 27.72 crores, against Rs. 23.68 crores. Ways and means advances stood at Rs. 24.51 crores, against Rs. 16.55 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 1st February, 1963, shows a drop of Rs. 8.43 crores to Rs. 560.10 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 9.97 crores and Rs. 52 lakhs to Rs. 244.63 crores and Rs. 10.04 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 6.95 crores to Rs. 294.66 crores. Cash and balances are, in consequence, shown at Rs. 21.29 crores or Rs. 4.27 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 1st February, 1963, shows Demand and Time liabilities at Rs. 947.45 crores (Rs. 20.06 crores on account of borrowings from banks) and Rs. 1,270.68 crores (Rs. 18.88 crores), compared with Rs. 948.90 crores (Rs. 25.92 crores) and Rs. 1,279.34 crores (Rs. 18.53 crores), respectively, in the previous week. Cash has declined by Rs. 1.09 crores to Rs. 49.28 crores, while balances with the Reserve Bank have increased by Rs. 12.33 crores to Rs. 85.81 crores. There is a drop of Rs. 12.80 crores to Rs. 637.03 crores in investments. Advances and bills discounted at Rs. 1,502.85 crores show an increase of Rs. 23.05 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.1 percent and 67.8 percent, against 5.5 percent and 66.4 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 15-2-63.				
Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate	
15-2-63	18-5-63	2,00.00	Rs. 2.365%

New Delhi

AGRICULTURAL PROGRESS REMAINS DISAPPOINTING

(FROM OUR NEW DELHI CORRESPONDENT)

SPEAKING at the meetings of the panel on agriculture last week, experts said that India's food production had been disappointing. There is a gap of about 4 million acres between the irrigation potential of major and medium projects and the actual area irrigated. The Planning Commission examined this problem nearly four years ago. The main reasons for the gap are still almost the same: field channels and water courses are lacking, the prevailing system of inundation irrigation is wasteful, and suitable crop patterns are not demonstrated. A large number of old irrigation works originally belonging to zamindars or village communities have suffered on account of neglect, it was reported.

Soil conservation and dry farming are being given a high priority. The targets for these have recently been raised by the National Development Council from 11 million and 22 million acres to 16.5 million and 50 million acres, respectively. The Council has also said that it will remove the financial bottlenecks. An additional allocation of Rs. 72 lakhs was sanctioned for 1962-63. The actual achievement during the first two years has, however, been slow—only 2.8 million acres (1.3 million acres in 1961-62 and 1.5 million acres in 1962-63). The target for 1963-64 has been fixed at 2.41 million acres, excluding the additional targets to be undertaken with the help of extra allocations for the year outside the plan ceiling.

The third plan envisages an increase of 148 million acres in the area under improved seeds of food grains, resulting in 3.5 million tons of additional production. Seed multiplication farms numbering 3,616 were set up during the second plan period. Four hundred and sixty-one are proposed to be set up during the third plan. The total additional area likely to be brought under improved seeds by the end of 1963-64 is 41 million acres or 27.7 percent of the third plan target. Poor irrigation facilities, the absence of pucca threshing floors, want of proper seed stores, inadequate and untimely supplies of nucleus seeds, poor arrangements for technical supervision of the farms and the lack of technical know-how have hindered the progress of these farms.

Apart from making up the deficiency in the institutional structure for the distribution of improved seeds by setting up more seed stores, the system of distribution to scattered farmers calls for a change of approach, namely, the areawise coverage by supplying improved seeds to all farmers in a village or group of villages in a particular year so that the entire stock of that village is replaced and the danger of mixture reduced. Furthermore, barring a few areas, the programme of improved agricultural implements, on which a large number of improved practices depend has not made much headway. As, for the consumption of chemical fertilisers, the plan target of 1 million tons, in terms of nitrogen, for the consumption of nitrogenous fertilisers in 1965-66 was based on the assumption that the consumption in 1960-61 was about 300,000 tons. The actual consumption in that year was, however, 210,000 tons of nitrogen. The two

problems hampering the increased consumption of chemical fertilisers are: (i) non-availability of adequate quantities of fertilisers, mainly due to the tight foreign exchange position, and (ii) consumer resistance to new types of nitrogenous fertilisers (e.g., calcium ammonium nitrate and urea) and slow acting phosphatic fertilisers.

Against the membership target of about 37.3 million for co-operatives by the end of the third plan, the present membership is about 20.8 million, against 17 million at the end of the second plan. Against the third plan target for short and medium-term credit of Rs. 530 crores, it is estimated that in 1961-62 the loan advanced amounted to Rs. 232 crores. Only a small rise is expected in 1962-63. Without a special drive to develop co-operative marketing, it will be extremely difficult to reach the plan target. The position concerning medium-term credit, for which the target is Rs. 110 crores, remains unsatisfactory. Similarly, for long-term credit, loans outstanding in June 1962 are estimated at about Rs. 45 crores, against the target of Rs. 150 crores.

The programme for rural godowns, which is intimately connected with co-operative marketing and with the distribution of agricultural supplies and consumer goods in rural areas, is lagging behind. Against the plan target of 9,199 godowns, only 1,350 godowns were completed during 1961-62 and 1,185 are expected to be completed during the current year, the target for 1963-64 being only 1,111 godowns. Furthermore, the organisation of co-operative marketing societies and the volume of turnover are much below the mark. The measures calculated to speed up the progress of co-operative credit, storage and marketing needs to be considered by the panel.

The present state of affairs, it is clear, is a matter for concern. The position cannot improve unless the responsibility for the poor performance is fixed. The Central Minister for Community Development, Mr. S. K. Dey, has put the blame squarely on State Governments. Last year, he criticised politicians and public workers. But the obsession with Defence Labour Banks—the latest brainmove of the Ministry—is unlikely to raise agricultural production. How to fix responsibility is the basic issue. The Government has made it impossible to fix responsibility since it has created too many organisations and functionaries. Although such subjects as agriculture, education, health, irrigation, social services, co-operatives, panchayati raj and community development were transferred to the States in 1921, the Government of India has created its own organisation to deal with them. Mr. S. K. Dey may put the blame on the States, but he should first state the achievements of his own organisation. A great deal of public money was spent about five years ago, when a gap between the irrigation potential and its actual utilisation was discovered. The Planning Commission sent out teams to find out the reasons for the gap. The results were nicely printed. Solemn directives were issued to the States in

terms similar to those proposed to be issued now, namely:

"Obligations resting upon beneficiaries to construct the field channels should be enforced. Where the necessary legislation does not exist, in the present emergency it would be appropriate to undertake legislation as soon as possible and in anticipation of this, if necessary, an ordinance should be issued or other appropriate action taken."

"Responsibility for securing the observance of obligations on the part of beneficiaries and for utilisation of the available irrigation should be placed on panchayati raj institutions, specially panchayat samitis and village panchayats. Where the beneficiaries fail to carry out their obligations, the works should be undertaken by these bodies, funds available under the block budget being utilised for the purpose. Where masonry works are required for speeding up the construction of field channels, these should be undertaken on behalf of the Irrigation Department by panchayat samitis and panchayats."

CEMENT

New Plant for Gujarat

The Government has decided to grant an industrial licence to a co-operative cement plant to be set up in Sri Amargarh, Gujarat. Its installed capacity is placed at 600 tons a day.

TRACTORS

Making Spare Parts

Caterpillars of the U.S.A. are negotiating an arrangement for manufacturing spare parts for tractors in India. It will be the first manufacturing venture of Caterpillars in India.

POLAND

Trade Expert in India

Mr. Komdirowsky of the Polish Government's foreign trade enterprise, Cekop, is now in New Delhi. He is discussing some collaboration arrangements. The discussions include proposals for setting up a coal washery manufacturing plant and a coal mining machinery manufacturing plant under the State-owned Heavy Engineering Corporation of Ranchi.

OIL REFINERY

New Body Set Up

The Union Cabinet has set up a three-man committee, consisting of Mr. S. S. Khara, Secretary to the Cabinet, Mr. L. K. Jha, Secretary to the Department of Economic Affairs in the Central Ministry of Finance, and Mr. Damle, Secretary to the Central Ministry of Mines and Fuel, to examine the various proposals for building a refinery in south India. There have been at least two proposals for a refinery in the south, one from Phillips Petroleum and the other from Burmah-Shell. The committee has mainly been set up to compare the costs of the two proposals. It is claimed that

the price quoted by Phillips Petroleum is on the high side—more than double that quoted by Burmah-Shell.

Two advantages are claimed for the proposal made by Phillips Petroleum. One is that it will be in the public sector "which will cause no outflow of foreign exchange". The other is that "the earnings from the export of motor spirit will fully pay for the crude oil imports and its share of profits that Phillips will be entitled to remit abroad." Under the proposal, Phillips Petroleum and its Indian associates will hold 49 percent of the equity capital. But some say that such a venture cannot be regarded as a public-sector enterprise. The negotiating committee which has been set up will probably have to enquire whether a similar set-up will be acceptable to Burmah-Shell.

FERTILISERS

Probe by U.S. Expert

The vice-chancellor of the University of Buffalo, Dr. Ewell, is paying another visit to this country. He is surveying the fertiliser industry with reference to the fourth plan. His visit has been sponsored by the Ford Foundation.

FOREIGN EXCHANGE

E.C.A.F.E. Report

India's foreign exchange reserves are at present at an alarmingly low level. This is due to the fact that, unlike in normal years, there has been no seasonal rise in the reserves this winter. How such a low level of reserves will be able to stand the withdrawals in the summer is anybody's guess. The unsatisfactory state of affairs is primarily due to India's exports not rising sharply, in spite of the various measures adopted for their promotion.

An E.C.A.F.E. report discusses the rôle of foreign trade in economic development of the region. The report says that "the fact that most countries of the region plan to import at the same rate as they increase their national income need not in itself suggest any conclusions as to the soundness of the plans themselves or of their foreign trade programmes. With some foreign trade-oriented economies, it might reflect only a continuing dependence on imports."

"The planned rates of growth of exports appear to indicate that the picture is somewhat mixed, with some countries such as Ceylon, China (Taiwan), Japan and South Korea aiming at higher rates and others such as India, Pakistan and the Philippines lagging behind the growth of national income. Even these export targets will depend for their realisation upon substantial increases in agricultural, mineral and industrial production and effective external demand."

"The efforts at import substitution under the plans involve either one or a combination of the following measures: increased domestic production of a number of food and agricultural products which are presently being imported in large quantities; domestic production of a variety of manufactured goods (largely consumer goods) and light industry products not locally produced or produced in insufficient quantities; and capital goods, machinery and basic industrial materials at present predominantly imported. Most programmes combine the above measures in varying degrees, depending on the extent of their self-sufficiency in foodgrains, the level of industrial development, availability of resources and the

THE

order of priorities in economic development.

"Most countries have also programmes to increase their production of other non-food agricultural products—in many cases to curtail imports and in some cases to increase exports as well; for example, cotton (Burma, India, South Korea and Pakistan); jute (Burma, India and Pakistan); rubber (India and the Philippines, not to mention the principal exporters, namely, Ceylon, the Federation of Malaya, Indonesia and Thailand).

"Import substitution is also planned to be achieved in varying degrees by different countries in relation to a wide range of manufactured goods (particularly consumer goods) and light industry products. Examples of such goods are textiles, drugs, and pharmaceuticals, leather goods, plastics, paper, glass, wood products, etcetera. The establishment of industries to produce relatively simple manufactures is generally recognised as the first step in industrial development, and since most of these industrial units can be established on an economic scale or a national basis, import replacement in such items should be regarded as both desirable and inevitable. Due to the lack of adequate data, it is not possible to assess the extent to which the countries of the region will be able to meet their own requirements for these products by the time their current developmental plans are completed. But it seems that, except for some countries, notably India, Pakistan and to a somewhat lesser extent Formosa and the Philippines, their domestic production programmes are relatively modest. (Japan is, however, in a special position.) Even these limited programmes will affect those imports from regional as well as non-regional sources. But, in general, international opinion recognises that this is inevitable and, what is even more important, that the developing countries should be given encouragement to develop exports of

these products to the developed countries.

"As for capital goods, machinery and industrial raw materials, it is quite evident from the plans that most countries will continue to import their requirements. Japan is in a special category—it plans not only to import but also to export large quantities of machinery and finished goods. Next to Japan, India has the largest programmes for the domestic production of these goods, but again the imports required for the installation of these facilities are considerable indeed. While there will be import substitution of a number of items, additional imports will be needed for many others.

"Import substitution—in the context of the dynamics of development—does not necessarily mean a reduction in imports, as the secular factors such as the growth of population together with the income-generation implicit in developmental investment and the movement towards higher standards of living generally tend to raise import requirements to a level higher than what they would otherwise be.

"The development plans of the countries of the region bring out that a very substantial increase in the volume of imports of all types of capital goods and industrial raw materials is likely to be needed for the implementation of the plans. Not all the published plans contain detailed or even rather general quantitative estimates of such requirements. But available data indicate a shift in the composition of imports, resulting in a higher proportion of developmental imports. For instance, under the Ceylon plan, capital goods imports are expected to rise from 9.1 percent to 22.5 percent of total imports, and intermediate goods from 33.1 percent to 33.5 percent, whereas consumer goods imports are expected to decline from 57.8 percent to 40 percent of total imports. The Indian plan assumes a total volume of imports of

Rs. 6,243 crores, of which the preponderant portion will consist of machinery, metals and other industrial materials.

"The large increase in the volume and relative importance of capital goods and industrial materials visualised in the plans clearly implies an immediate and corresponding increase in the region's imports from countries outside the region, which are the largest suppliers of such goods. Their main regional supplier is Japan and, under its export programme which foresees a sharp increase in exports of machinery, durable consumer goods, transport equipment, etcetera, the share of south-east Asian countries is expected to show a decline."

JUTE

Trade Prospects

Referring to developmental plans and the trade prospects for jute, the E.C.A.F.E. report says: "Most countries in the region which grow jute and allied fibres have programmes for expanding production. The Pakistani plan aims at increasing the production of jute from 972,000 tons to 1,324 million tons, namely, a 36 percent increase by 1964-65. The Indian plan aims at a 45 percent increase in output to reach 1,125 million tons of jute and 236,000 tons of mesta by 1966. China: Taiwan does not have any definite target in its plan; its future production will depend on the world demand and the availability of land for jute cultivation. The Burma plan provides for an increase in the production of jute from 3,500 tons in 1960-61 to about 20,000 tons by 1964-65. On a longer-term basis over the next ten years, Burma appears to be aiming at 100,000 tons of jute, mainly for export. Thailand, which has achieved a remarkable increase in production in recent years (from 21,000 tons in 1957 to 340,000 tons in 1961), does not pro-

vide for any definite target in its plan; obviously, production can be raised according to the world demand. South Viet-Nam also has programmes to increase jute production.

Against these estimates of increased production, the estimates of world requirements for jute and jute products should be considered. According to F.A.O. projections, taking the main industrial countries as a whole, the consumption of jute manufactures in 1970 might lie somewhere between -15 percent and +20 percent of the 1957-59 level, on various assumptions. On the other hand, in the primary producing and developing countries jute is not likely to be replaced in packaging to the same extent as in the developed countries and the total requirements of jute in the Far East is estimated to rise by some 35 percent or 50 percent between 1957-59 and 1970. On balance, the probability appears to be that a jute surplus might emerge in 1970 although a continued and substantial increase in the import demand of the centrally planned economies for jute might help to alleviate it.

"The extent to which the countries of the E.C.A.F.E. region will export jute manufactures instead of raw jute will depend on the quota and tariff policies of the jute manufacturing countries of western Europe and on the growth of the jute manufacturing industry in the Asian countries themselves. If a surplus of jute emerges as estimated, this might have the effect of reducing intra-regional trade in the E.C.A.F.E. region to some extent and increasing the competition among the countries of the region in selling their raw jute and/or processed jute goods in the E.C.A.F.E. region as well as in other areas."

EMERGENCY INSURANCE

Date for Paying Premiums

The Government of India has been receiving a number of representations

for an extension of the date for paying premiums in relation to the first quarter ending 31st March, 1963, under the two emergency risks insurance schemes. The representations have come from persons who are liable to insure their property under the schemes and also from chambers of commerce and other organisations.

According to the schemes already notified, these payments were to be made by 31st January, 1963. The schemes and other connected notifications and forms were given extensive publicity all over the country both before and after they were brought into force. Necessary facilities for complying with the provisions of the law were available to the general public for a whole month. Premiums amounting to several crores of rupees were paid within the prescribed period of 30 days. But considering the difficulties which have been reported in the valuation of property for purposes of insurance under the two schemes and others which may have been experienced by certain owners or occupiers, the Government of India has continued to allow the payment of the premiums and the issue of policies covering the first quarter, in spite of the expiry of the time-limit prescribed for the payments.

After reviewing the position, the Government has now decided that premiums for the first quarter will not be accepted, even as a matter of grace, after 28th February, 1963. Persons who are liable to insure their property under the emergency risks insurance schemes, or under either of them, are, therefore, advised, in their own interests, to complete all the formalities for complying with the provisions of the law before the end of this month.

If any person liable to insure his property is found to have evaded this responsibility or to have insured his property for an amount lesser than that for which it is required to be insured, he will be liable—after the end of this month—to be assessed for the amount which he has failed to pay and also to be prosecuted, if necessary, in accordance with the provisions of the law.

HANDICRAFTS

Raising Exports

The Government of India has revised and enlarged the scope of the export promotion scheme for handicrafts with a view to boosting their exports. Handicrafts against the export of which import entitlements will be allowed are: items of copper and of copper and zinc alloys; manufactures of coral; manufactures of ivory, ivory inlay articles, ivory boxes, etcetera; manufactures of alabaster; zari goods and embroidered articles, imitation jari; manufacture of mother of pearls, natural coral trees, coloured Brazilian stones, broken pearls, demi-pearls and ocean pearls; woollen carpets, rugs and druggets.

The list of import entitlements to be allowed against specified export items, includes: copper, zinc, unprepared coral, unmanufactured ivory, ivory scrap, metal fittings, piano keys, etcetera, raw alabaster, glass beads and chattons, copper, art silk yarn and raw silk, synthetic fibres, guilting chemicals, mother of pearls, natural coral trees, Brazilian stones, broken pearls, demi-pearls and ocean pearls, permissible dyes and chemicals, wool tops, shoddy wool and raw wool.

The scheme will be administered by the All India Handicrafts Board, New Delhi, and will be applicable to

exporters registered with the Board for the purpose of the scheme.

SHEET GLASS

Selling Prices Fixed

The Government of India has considered the Tariff Commission's report on the fair selling prices of sheet glass. It has decided to fix the selling prices of the commodity with certain modifications. The fair ex-works selling prices will be as follows:

Thickness of sheet glass	Fair ex-works price Rs. 10 a square metre
2 mm.	41
3 mm.	58
4 mm.	83
4.8 mm.	107
5.5 mm.	119

These prices will be exclusive of excise duty and State and local levies. As the production patterns of various sheet glass units differ, it is left to the manufacturers to work out the prices of the various cut-sizes produced by them in each thickness group within the average ex-works selling price worked out for that group and obtain the Government's approval for the same. Retail prices should not exceed 20 percent of the corresponding ex-works selling prices.

These prices will remain in force till 31st March, 1964, when the industry's position will be reviewed.

COMMUNICATIONS RECEIVERS

New Pact Signed

To meet the rising demand in India for electronic communications receivers, Racial Electronics Ltd. of Bracknell, Berkshire, England, has concluded a licensing agreement with Bharat Electronics Ltd., Bangalore, for manufacturing Racial R.A. 17 communications receivers. Racial will supply a number of complete units of the equipment, followed by sub-assemblies and later kits of components to Bharat Electronics in accordance with a phased programme. Ultimately, a large proportion of the components will be made in India by Bharat Electronics. Apart from supplying manufacturing information, Racial will aid the Indian firm by providing technical assistance. It will also offer training facilities for Indian engineers in Britain.

CHEMICALS

Fisons Executives in India

The chairman of Fisons Overseas Ltd., Mr. G. V. K. Burton, the managing director, Mr. C. Merrick, and the joint managing director of Whiffen and Sons Ltd. (Fisons' industrial chemical subsidiary), Mr. A. P. Lowes, are on a 15,000-mile tour of India. They will visit all Fisons' subsidiary and associate companies in India and concern themselves with extending the range of Fisons' activities in India's chemical industry. The firm is building a large agricultural distributive organisation throughout India, a scheme which started with Tata-Fison Ltd. A major topic for discussion will be the combining of the interests of Fisons with Fisons' 45-percent holding in Rallis India Ltd., which was acquired last year.

RAILWAY BRIDGES

Order for B.I.C.C.

In order to construct three railway bridges, the Government of India has ordered unit parts from British Insulated Callender's Construction Co. Ltd., London.

The order is worth more than £100,000. The units are for three

single-span bridges, one of 155 feet and two of 260 feet.

AGRICULTURE

U.S. Grants Announced

The U.S. Government has given grants totalling Rs. 26 lakhs for conducting research on five agricultural projects in India. Of these grants, the Indian Council of Agricultural Research, New Delhi, is the largest recipient. The Council has received more than Rs. 20 lakhs for conducting research on maize diseases in India; for determining the effect of different agricultural practices on the production of maize; and for studying the distribution, importance, and seasonal life cycles of insect pests which attack maize. The fourth programme to be conducted at the Government Agricultural College and Research Institute, Ludhiana, relates to the evaluation of groundnut varieties, to select those which not only produce protein of high biological value and oil of good quality, but also give high yield an acre and can be grown under varied climatic and soil conditions.

For this, 100 selected varieties from among 2,000 included in the U.S. collection and a similar number of varieties from the collection maintained in Ludhiana will be grown in Tifton, Georgia, U.S.A. and in Ludhiana, Punjab.

The fifth project relates to research on the microbial destruction of cotton fibres and fabrics by organisms indigenous to the Bombay area. To be conducted at the technological laboratory of the Indian Central Cotton Committee in Bombay, the study will provide information needed for the development of satisfactory protective treatments for cotton fabrics.

CALCUTTA

Survey of Water Supply

A beginning of the survey of water supply resources of Greater Calcutta was marked by the arrival of Mr. Chester Cohen in Calcutta on 5th February. Mr. Cohen will take up the post of resident-engineer of the World Health Organisation (W.H.O.), the executing agency for the United Nations Special Fund in the project for which the fund has allocated

about \$324,000 to the Government of India. According to the plan of operation, the project will extend over a maximum period of three years from the arrival of the W.H.O. resident-engineer.

The purpose of the project, the first of its kind to be financed by the U.N. Special Fund, is to advise West Bengal on current and future works and plans for the solution of the water supply and related sewerage and drainage problems of the Calcutta metropolitan area. In drawing up the plan for the giant project, the W.H.O. has entered into a contract with a consortium of consulting engineers, Metcalf and Eddy Ltd. of Toronto, Canada, and Engineering Science Incorporated of Arcadia, California, U.S.A.

As resident-engineer, Mr. Chester Cohen will represent the W.H.O. in Calcutta and provide liaison between the consulting engineers and the numerous Governmental agencies which will be assisting in the collection and analysis of data required for the project. Representatives of the W.H.O. consulting engineers, responsible for making the blueprints, will arrive in Calcutta shortly.

IP6101a

the fire in Dundee which destroyed 15,000 bales. The Czech goodwill mission bought 4,185 bales and the Philippines bought 2,250 bales. India bought only 590 bales.

In the local pucca bale market, limited business was reported last week except that there was some local business in new crop for September-October delivery at about £4 10s a ton below the current market rates. This underlines the general fear that the current crop is much larger than expected and that the new crop will not be smaller and will have to contend with a fairly large carryover. Some of the bears maintain that the carryover from the 1961-62 crop was 1.2 million bales with growers and 600,000 bales with the balers. They maintain that the 1962-63 crop should amount to 6 million bales. It appears, therefore, that there will be a large carryover into the 1963-64 crop. What appears likely is a crop of 5.7 million bales instead of 6 million bales and a total carryover not exceeding 1 million bales.

In the loose jute market, arrivals are now exceedingly small. This has induced growers to try to get better prices but interest is so limited that loose jute prices remain at the minimum.

In the last report, it was wrongly stated that the E.P.C. prices for Outport Tossa 2/3s and 4s had been reduced by £5. This is incorrect, since E.P.C.s for these grades are already at the minimum; reference was to Crack Tossa 2/3s and 4s.

THE U.K. JUTE MARKETS FIBRE FALLS DUE TO LARGER SUPPLIES

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices were easier during the past week. Dealers say there is a possibility that this trend will continue. The Pakistani market is quiet. Although many shippers are still offering at the current E.P.C. levels, it is evident that buyers are unwilling to purchase on a large scale. The market in Dundee is weak because a substantial quantity of jute is available on the spot. More unsold parcels will be arriving shortly. With spinners already holding large raw material stocks, the demand is still small, so business has had to be transacted at low prices. Sellers are anxious to dispose of their holdings, but they may have to reduce their prices still further to attract buyers.

Afloat parcels are being offered at a considerable discount, compared with the current shipment rates. At the end of last week, Mill Lightnings were sold afloat at £111. But there are now sellers at £109 10s, compared with the lowest shipment rate of £118.

Offers are being made at £146 10s for Mill Firsts, at £118 for Mill Lightnings, at £92 10s for Mill Hearts and at £79 for Grade Hearts, c.i.f. U.K. for February-March shipment. Grade Tossa-2/3 is available

at £127 10s, Grade Tossa-4 at £110 10s. Outport Tossa-2/3 at £97 and Outport Tossa-4 at £87 5s, for February-March shipment. On average, this is a fall of about £1 a ton. Cuttings are steady with little change in price with S.N.C. at £53 15s and N.C. at £46.

Offers of Siamese jute are still scarce, and the prices quoted are irregular. Grade A is quoted at £83, grade B at £78 and grade C at £71, delivered mill Dundee for February-March shipment. The first direct shipment of Siamese jute to Dundee is expected early next month with a consignment of 4,816 bales.

The Calcutta goods market was firm last week for both hessians and sackings. Quotations were at 78s for 40in. 10oz. and at 60s for 74oz. a 100 yards, f.o.b. Calcutta, for February shipment, at 77s and 59s March and at 76s and 57s 9d April-June. B Twills were at 177s 3d, 177s and 176s 9d for the respective shipment periods.

Although there has been less fluctuation in yarns and cloth at the Dundee market, orders are still being received for forward delivery. The decline in demand appears to be solely due to the easier raw material supplies and the fact that producers can only enter into new business for forward delivery. Business has been taking place in sackings and other heavy cloth for delivery into June, and the position remains satisfactory.

Books

STOCK EXCHANGES IN THE ECONOMY

Stock Exchanges in a Developing Economy. By Kersi Doodha. (Published by the Registrar of the University of Bombay, Fort, Bombay 1. Price Rs. 9.50, pages 162.)

Dr. Doodha's book is an example of how gyrations in the stock market can make even a painstaking work completely out of date. As Senior Research Officer in the Money and International Trade Section of the Department of Economics, University of Bombay, he studied the character of the stock market boom which started in 1958 and continued in full force right up to the first few months of last year. The subsequent depression has, however, deprived much of his analysis of validity. There is no discussion, for example, of how the collapse in Wall Street on "Blue Monday," towards the end of May last year, affected sentiment in both London and India, although the increase in corporate taxation in the last Central Budget and the prophecies of doom on account of the conjunction of eight planets did not affect the enthusiasm of operators.

It is true that many of the recent developments could not be anticipated even by inveterate Cassandras, much less by research investigators. Few, for example, could foresee that the Chinese would invade India and that development activities would be geared to defence. Nor, for that matter, could one predict with certainty that the foreign exchange shortage would deteriorate further and affect industrial expansion. Stock market sentiment has apparently been affected by both internal and external factors, including shortages of raw materials, power, transport and foreign exchange. The author's discussion of speculation in the stock exchanges has become out of date, not only because of the ban on forward trading in shares, but also because of the fixing of minimum prices due to the abnormal slide in share values. Under the circumstances, there are more sellers than buyers, and even veterans are beginning to think whether it would not be wise to change their avocation for something more worth while. The new issue market, meanwhile, has virtually dried up.

The author's approach is defective in so far as he has taken a partial view of stock market behaviour. Moreover, his analysis indicates an economist's obsession for the saving, investment and multiplier principles. It is small wonder, therefore, that the book lacks the professional touch and cannot be classified among the many competent monographs, which are in the nature of guides for investors. But the work is not without its merits. It shows how painstaking the author has been in marshalling a large mass of facts and figures. Dr. Doodha has also made a number of suggestions for improving the working of stock exchanges. If certain chapters are revised and the mechanism of stock market trading is more fully explained, the book may serve a more worthwhile purpose.

ANNUAL NUMBERS

The Eastern Economist Annual Number, 1963. Edited by J. G. Gadkari. (Published by the Eastern Economist Ltd, United Commercial Bank Building, Parliament Street, New Delhi. Price Rs. 10, pages 237.)

The annual numbers of the *Eastern Economist* are always notable for

their imaginative and enterprising choice of subjects. The subject chosen this year—"India after the Emergency"—is clearly topical, and it has called for a great deal of hard work considering the dearth of facts and statistics. The work was apparently undertaken immediately after the declaration of the state of emergency when newspapers had to be cautious in presenting news and views so that strategic information was not passed on to the enemy. The annual number, one has to concede, has been varied subjects as planning, food-grains production, trade unionism, State finances and foreign trade, but the emphasis is on the effects of the present emergency on India's third plan. There are a number of well-

present crisis and much besides. A novel feature in the latest annual is the inclusion of two guest contributors' articles—one on "Chinese invasion, its genesis and aims" by Sir N. Raghavan Pillai and the other on the "financial implications of the present crisis" by Mr. H. V. R. Iengar, former Governor of the Reserve Bank. Although Part II of the annual is largely confined to a summary of developments in the sphere of agriculture, industry, transport, foreign trade, etcetera, the imprint of an analytical mind is noticeable in many sections.

Commerce Annual Number, 1962. Edited by S. V. Rayan. (Published by Commerce (1935) Ltd, Brady House, Veer Nariman Road, Bombay 1. Price Rs. 10, pages 220.)

The latest annual number of *Commerce*, in keeping with an old tradition, is extremely useful. It contains a large number of articles on such varied subjects as planning, food-grains production, trade unionism, State finances and foreign trade, but the emphasis is on the effects of the present emergency on India's third plan. There are a number of well-

written articles on the subject, the most notable one being on "economic mobilisation and the third plan" by Mr. Tarlok Singh. Apart from analysing the consequences of mobilisation for India's balance of payments, the author examines the prospects and possibilities of harnessing internal resources in the context of the changes in plan priorities. In another useful article, Dr. P. S. Lokanathan discusses the economic implications of the state of emergency and arrives at the conclusion that heavy additional taxation will be inevitable for making the defence effort successful. The annual, like its predecessors, contains reviews of the major industries, and also of petrochemicals, engineering, paint and pharmaceuticals.

For a nominal charge. "Capital's Statistical Department can provide you with a certificate of share prices."

As industrialisation in India gains momentum, the need for technically trained personnel increases progressively. NSE, with its staff of highly qualified and experienced engineers, is excellently placed to provide training facilities.

The NSE training scheme was launched in 1958. Every year, 60 apprentices are recruited and trained at the NSE Technical School. Stipends are paid and incentives given. After two years of intensive training, many of the apprentices are absorbed as regular employees of NSE.

NSE thus offers gainful employment to hundreds, and creates a pool of technically trained men to serve India's industries and contribute towards national strength.

NSE — service to industries

An adventure
with austerity

Little things count a lot. A small self-denial here, a certain measure of austerity there, and we have the moral weapons that it takes to throw back the Chinese aggression. Even sitting at table for lunch or dinner can in itself turn out to be a quaint adventure with austerity. To feel the presence of an unknown, nameless, but nevertheless courageous jawan sitting with us to share our meal can be an exalting experience. Even if we personify our entire defence effort in one such individual, feel his presence intensely, realise the lengths to which he is prepared to go to safeguard our freedom, our hearth and home, our way of life, we have begun to press into service our secret weapon—*austerity*.

BUILDING A FACTORY? GCCP INSTALLS EVERY ITEM OF ELECTRICAL EQUIPMENT

Factory owners know that a machine is only as good as the man who runs it. They try to ensure that both machine and man are the best available. But there's another factor—and it's rarely kept in mind.

SOUND INSTALLATION— A VITAL ASPECT

Much money and time is spent on electrical planning and equipment. Often, all this effort is jeopardized by contracting for cheap installation. The result: shoddy work, breakdowns which stop machines and hamper production, constant repairs and a generally unhappy situation. The correct installation of electrical equipment calls for a concentration of specialized skills and experience. GCCP has them.

GCCP also plans your electrification, supplies the equipment and provides a comprehensive after-sales service.

Commodity Markets

INCREASE IN RAW RUBBER OUTPUT PLANNED

(BY OUR SOUTH INDIAN CORRESPONDENT)

INDIA had to spend about Rs. 10 crores in foreign exchange last year on raw rubber imports to meet the requirements of the manufacturing industry. Imports in 1962 were 20,729 tonnes of natural rubber, 11,224 tonnes of synthetic rubber and 5,000 tonnes of reclaimed rubber. The consumption of locally produced natural rubber showed a nominal increase on the previous year's, actual quantities being 30,325 tonnes in 1962 and 29,992 tonnes in 1961. Producers complained that in spite of the acute shortage of natural rubber, the quantity produced was not readily absorbed by manufacturers and that it was difficult to sell the commodity at the statutory price of Rs. 162.60 a 50 kilograms. This was due to the liberal issue of the import quota, growers and dealers in south India argued. Manufacturers, on the other hand, maintained that import licences were issued by the Government only to meet the "minimum requirements" of the industry as in the past. Besides, they had no special attraction for imported rubber because the difference between the controlled price and the import price was payable to the Rubber Board. The world price, on average, ruled at 123 a 100 lbs, against the Indian controlled price of Rs. 155.75 a 100 lbs.

The rubber growing industry in south India is conscious of the manufacturing industry's rapid growth and the increased consumption of rubber. So it is taking active measures to increase production both by bringing larger areas under cultivation as well as by raising the yield an acre by using high yielding clones. The Government is giving subsidies as incentives for replanting and loans for new planting. There were 350,000 acres under rubber in south India in 1962. A scheme to bring another 100,000 acres has been in operation. There is also a programme for replanting an equivalent acreage at a cost of Rs. 12 crores spread over a period of ten years. The synthetic rubber plant, which is being set up in Bareilly, is expected to go into production from this year. It will make available 30,000 tons of S.B.R. a year. While these will help to some extent in meeting the rubber requirements of the manufacturing industry, the consumption which is normally expected to reach well above 100,000 tons by the end of the third plan, will still need an import of 30,000 tons of rubber a year by 1965, manufacturers say.

Two more factories for the manufacture of reclaimed rubber are expected to be set up shortly. One of them will be in Kerala and the other in West Bengal. The demand for reclaimed rubber, which was to the tune of 7,000 tons in 1962, is expected to reach 16,000 tons by 1965. In order to produce this quantity locally, there should be a total installed capacity of 22,000 tons a year. Up to the end of last year, a production capacity of 16,320 tons had been licensed, of which one unit with a capacity of 1,200 tons had already gone into production. The Rubber Development Wing had supported the licensing of the two units to meet the balance capacity.

Price Cutting in Coffee

There are reports of a price-cutting bid by Brazil, the world's largest producer of coffee, in Europe, India's traditional market for the commodity.

It is said that if the Brazilian Coffee Institute continues its price-cutting tactics, the world coffee market will be faced with a depression. It is said that Brazilian producers are quoting prices to European distributors with special discounts since December last. If this situation continues, it is likely to undermine the International Coffee Agreement which has recently been given a longer life and larger coverage. Meanwhile, world coffee supply in 1962-63 will be smaller than what it was in the previous year. According to the latest estimate of the U.S. Department of Agriculture, the world crop will amount to Rs. 65,550,000 bags, 8 per cent lower than the 1961-62 crop of 71,190,000 bags. Exportable surplus is placed at 52,140,000 bags, against 57,947,000 bags in the 1961-62 season. Brazil does not seem to be affected by the bad weather that has hit several other South American producers who are having smaller crops. The total South American crop is placed at 37,097,000 bags, against 45,217,000 bags in the last season.

The United States, which accounts for 50 percent of the world import of coffee, has not yet ratified the new long-term International Coffee Agreement drawn up in September last within the framework of the United Nations, although many countries have ratified it or promised to do so. The U.S. Government is not likely to ratify the agreement until the Senate gives its approval. The agreement requires the signatures of ten countries accounting for 80 percent of the imports, and another 20 supplying 80 percent of exports. India is one of the producing countries which has agreed to join the new International Coffee Agreement. The new agreement is to be inaugurated in April next according to the present programme. The U.S. approval is expected before that time. There were three coffee group meetings recently in Washington. The board of directors of the existing international agreement met to discuss the operation of the existing quotas; the nine-nation consultative committee set up to organise the transition and the 34-nation study group set up in 1958 to study the short and long-term problems of the coffee industry also met. Although comfort is generally drawn from the progress of the International Coffee Agreement, the world price of coffee remains low.

India will have a crop of 53,000 tons this season, according to the latest estimate, against the last season's 45,650 tons. Of this, the home market will require at least 35,000 tons. If India is determined to take full advantage of the export quota of 21,000 tons which she has got under the new International Coffee Agreement, the home market will have to face a coffee shortage.

Enquiry on Cardamom

The Government of India has set up an advisory committee with the Coffee Board chairman, Mr. Sitarama Reddy as the chief to examine the ills of the cardamom growing industry and suggest measures for their remedy.

Revising Tea Wages

The Tea Wage Board had a three-day sitting in Madurai last week. It

heard representations from employers' and workers' organisations in south India. The board's next sitting will be in Calcutta early next month when employers in the tea industry in north India will be examined. After the sitting in Calcutta, the enquiry part of the work of the Board will be over. It will then begin the compilation of the report.

Outlook for Tea Company Earnings

(BY A SPECIAL CORRESPONDENT)

TEA share quotations are considerably lower than a year ago. The outlook for the Dooars companies, many of which have manufactured more tea and sold it at higher prices, seems reasonably good. The majority should have no difficulty in maintaining their 1961 dividend payments. Assam and Darjeeling gardens have also sold

their produce at better rates. If the current prices can be maintained until the end of the season, which looks probable, then companies with properties in these areas should show profits comparable to those of 1961.

Dealings in tea shares in the Calcutta market remain subject to the minimum prices. Most operators feel that political worries will not affect share values in the immediate future. Nevertheless, the index for the ordinary shares (base year 1952-53 equals 100) is down from 154.7 to around 141. The question arises whether the index at 141 is too high in comparison with 100 in 1952-53. The answer is "no", because 1952 was one of the most disastrous years for tea in recent memory.

A second point is: how do the prospects compare today with the outlook a year ago? This correspondent thinks the situation is more

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1953) has now been brought up to February 1962. Compared with the preceding month, there were decreases in sugar 35.32

points, tea 1.35 points, jute 8.15 points, yarn 12.28 points, cloth 9.86 points, cement 10.35 points, coal 4.49 points, pig iron 27.50 points, finished steel 14.42 points, paper 23.47 points, tyres

24.16 points, motor-cars 11.81 points, electricity 19.03 points and railway ton-miles 12.23 points. Bicycles increased by 38.31 points.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 8.4 points during February 1962.

**Revised in December 1957.

General Index figures from 1950-51 to 1955-56 are taken from old series.

favourable. At this time in 1962, the statistical position indicated a considerable surplus, which resulted in low prices. Today the statistical position appears to be sound because in 1962 the main producers are estimated to have manufactured 1,367.5 million lbs, compared with 1,379 million lbs in 1961—a fall of 11½ million lbs. Meantime, world consumption is estimated to be slightly higher than a year ago. Therefore, there may be no surplus to carry into the 1963-64 marketing season.

Furthermore, a year ago the available supply was augmented by exports of 8.4 million lbs from Pakistan. But this quantity is not likely to be available now because the Pakistanis can consume their entire output. World consumption is likely to rise further, and during 1963 the extra supply from new areas is not likely to be much more than 20 million lbs, which the market should be able to absorb. Thus, so far, the calculations support the view of the Indian Tea Board that the surplus expected by the U.N. Food and Agriculture Organisation will not materialise in the immediate future.

Tea continues to meet with ready buyers in Calcutta, while the freight markets report a strong demand for shipping space to the U.K. where, in spite of fairly heavy shipments, stocks were actually down during the week ended 1st February from 144½ million lbs to 143½ million lbs. This is well below the figures for the end of January in 1961 or 1960. In 1959, the U.K. figure was 192½ million lbs. But the quantity afloat today at over 42 million lbs, is comparatively large and could explain why prices at the Mincing Lane auctions have recently shown some irregularity. The weekly average price is 50.42d a lb, against 52.38d a lb a year ago.

It is reported that the Ceylon Tea Board is seeking to co-operate with the Indian Tea Board for the purpose of a joint "drink more tea" campaign—Canada, the U.S.A. and West Germany being specially mentioned. Ceylon also appears to have an eye on the U.K. market. Any unimproved move to boost world consumption would be helpful. As Ceylon is reported to have spent about £650,000 a year during the past two seasons on propaganda, the suggestion will doubtless receive careful consideration.

* 1962

These notes refer to the Debentures on the next page.

Option to repay at par on 6 months' notice—

(a) Option to extend the redemption period for further 10 years.

(b) at any time after.

(c) on or after 1-1-61.

(d) option to redeem at 2½% Prem. after 14-5-64 and before 15-5-69.

Option to repay on 6 months' notice—

(e) at any time after 30-6-61 at 10½%.

(f) at 10½% between 1-1-60 & 31-12-64.

(g) at 10½% after 30-6-60 but before 30-6-64.

(h) at any time after 30-6-65 at 10½%.

Option to repay on 3 months' notice—

(i) at any time at 3% Premium.

(j) at 1% Prem. after 1-3-64 but before 1-3-67 and 1% Prem. on or after 1-3-67.

(k) at any time at par.

(l) at any time after 31-3-62 at the rate of 1% Premium.

(m) redeemable at 10½% on 31-12-64 with option to redeem on any interest date at same premium after 30-6-59.

(n) at any time on two months' notice—

(o) to be redeemed at a premium of 10

COAL COMPANIES

collecting them). If not, then an increase in tax rates would make a contribution neither to socialist ideology nor to the defence effort; it would merely provide a greater incentive to dishonesty.

As the stock markets see it, the main thing Mr. Desai has to bear in mind while adjusting corporate or personal taxes is that the incentives to work, save and invest are strengthened. Theoreticians attached to the Planning Commission are credited with the view that there is almost no limit to such taxes in an emergency. But the Finance Minister must know that wars, both phoney and real, are not fought by draining the people's pockets in whatever may be politically the most convenient way; they are fought by building the nation's productive capacity through the energetic and equitable mobilisation of resources. The mobilisation can never be complete unless the opportunity of the emergency is taken to cast the tax net over a much wider field. Political shibboleths concerning the salt tax need to be dropped; so do those concerning Prohibition. After that, there would be a sound case for a substantial increase in indirect levies on a wide range of other goods. The taxes on industrial raw materials and intermediates have already been raised so high as to undermine India's ability to compete in export markets; if they cannot be reduced, there is at least a case for boldly extending the system of duty rebates and drawbacks on the manufactured goods which are finally exported. Heavier taxes on so-called con-

sumer luxuries like motor-cars, refrigerators and air-conditioners will never yield much since the production of these items is basically small. In the circumstances, a fair increase in the indirect taxes on articles of general consumption cannot be avoided.

From the point of view of investors, whatever the scheme of new taxation the Finance Minister may devise, its first and most important aim has to be a vigorous revival of economic activity. Progress during the first two years of the third plan has been poor, particularly in agriculture but also in industry. The stage has now been reached where, whatever luck the monsoon may bring to the farms, the expansion of industry might almost stop. To the extent that the expansion depends on the foreign aid required for importing raw materials, components and machinery, the Budget can perhaps do little directly. To the extent that the expansion depends on an increase in power and transport facilities, and in fuel supplies, the Budget by itself perhaps cannot do very much either. But the indirect contribution it can make can still be of fundamental importance, in the sense that it can give clear incentives for economic expansion in those sectors where the shortages today are most serious. No shortage at present is more serious than that of foreign exchange; the phoney incentives to exports given last year need to be replaced by strong and practical ones now.

RAIL FREIGHTS UP AGAIN

THE Railway Budget for 1963-64, presented by the Railway Minister, Sardar Swaran Singh, in Parliament on Tuesday, is about as bad as anybody might have feared. It does not propose any increase in passenger fares. But it does propose a very substantial increase in freight rates, and the main purpose of the increase is to raise money for the temporary or permanent use of the general exchequer. Sardar Swaran Singh has suggested that the surcharge of 5 percent imposed on goods freight rates since 1st April, 1960, should now be increased to 10 percent; defence, postal and the railways' own traffic will, however, still be exempt. In addition, a surcharge of 10 naye paise in the rupee should be imposed on parcel traffic; here, vegetables, milk and newspapers will be exempt. The first of these changes will yield an extra Rs. 17 crores and the second an extra Rs. 2 crores. Of the additional Rs. 19 crores, Rs. 4 crores will be handed straightaway to the general exchequer in the form of a bigger dividend on the railways' capital-at-charge. About Rs. 10 crores will be credited to the depreciation reserve fund and Rs. 5 crores to the so-called development fund. But both these sums will not be required by the railways for their own use immediately; they will, therefore, be available for temporary use by what Sardar Swaran Singh calls "the railways' banker"—meaning, of course, the Central Government.

There is some substance in the view that the Government, faced with a huge increase in defence and development expenditure, should make a serious effort to get larger returns from the enterprises it runs. The railways being the biggest of the Government's semi-monopolies, it is not entirely surprising that they should have been asked to open the 1963-64 milking season with a powerful squeeze on their customers' udders. The main criticism of the Railway Budget, however, is not that the railways have agreed to the squeeze but that the wrong udders have been chosen. Freight rates on most types of goods traffic have been raised sharply in recent years, and there is no justification for raising them further. The rise in passenger fares has been comparatively modest; they should have been raised first if the railways or the general exchequer wanted more money.

A few simple facts indicate how rapid the rise in freight rates on goods traffic has been. In April 1956, when the second five year plan was launched, most freight rates were raised by 64 percent; and in July 1957, by another 64 percent. Following the recommendations of the Railway Freight Structure Enquiry Committee, there was an increase averaging about 4 percent from October 1958. And following the recommendations of the

Pay Commission, there was a further increase of 5 percent from April 1960. Then came the Railway Budget presented by Sardar Swaran Singh last April, which raised freight rates by at least 4 percent with effect from July 1962. Now come the latest Budget proposals, for a further increase of about 5 percent on goods traffic and 10 percent on parcel traffic. The evidence clearly shows that railway freight rates, on average, have gone up by almost 30 percent in seven or eight years, the increase in the case of short-distance traffic having been particularly sharp.

The increase in passenger fares has been less frequent and also less sharp. From 1951 to 1957, fares were virtually unchanged. In the latter year, the passenger fare tax was imposed, for the benefit not of the railways but of the State Governments. Only from July last year were the fares as such raised—by about 15 percent for first-class passengers, less than 10 percent for second- and third-class passengers and 5 percent for season-ticket holders. The argument for raising passenger fares, however, does not rest on the ground that they ought always to increase in the same proportion as freight rates do. It rests on the ground that passenger fares in India are basically too low; as such, they encourage unnecessary travel, especially at festival time, and thus increase the strain on the railways' already inadequate resources. "Travel only when you must" was the slogan of the second World War; "travel when you wish" seems to be the slogan now.

The second major objection to the Railway Budget is that it continues the thoroughly irrational practice of increasing freight rates by means of flat surcharges. The whole purpose of appointing the Mudaliar Committee some years ago was to rationalise the railways' freight structure. After laborious and detailed investigations, the Committee produced its recommendations in 1957. The Railway Ministry sat on the report for several

months, and ended up by mutilating the recommendations on the excuse that instead of increasing freight rates by an average of 13 percent (as the Committee had suggested), it wanted to be generous and raise them by an average of only 4 percent. By July last year, however, the freight rates had gone up by the full 13 percent. Now, under the latest Railway Budget proposals, they are to go up by another 5 percent or so. But the difference is that the increases obtained through a succession of flat surcharges have once again rendered the railways' freight structure thoroughly irrational. The labours of the Mudaliar Committee thus seem to have been largely wasted.

In proposing the latest increases in freight rates, Sardar Swaran Singh has followed an old and deplorable tradition by pretending that their impact will be minor. He says, for instance, that for goods traffic "for a distance of 600 kilometres, which is about the average lead of general merchandise, the levy will amount to about 5 naye paise a maund on salt, which is hardly one-eighth naye paise a kilogramme, about 9 naye paise a maund on sugar, which is less than one-fourth naye paise a kilogramme, and about 4 naye paise

RAILWAY BUDGET AT A GLANCE

	(Rupees in crores)			
	Actuals 1961-62	Budget 1962-63	Revised estimate 1962-63	Budget 1963-64
Gross traffic receipts	500.50	545.38	549.62	598.00
Working expenses, net, i.e., after taking credits or recoveries	325.51	356.94	363.28	379.50
Net miscellaneous expenditure (including cost of works charged to revenue)	10.24	16.35	14.91	16.40
Appropriation to depreciation reserve fund from revenue	65.00	67.00	67.00	80.00*
Total	400.75	440.29	445.19	475.50*
Net railway revenue	90.75	105.07	104.43	124.50
Payment to general revenues:				
(a) Dividend on railway capital-at-charge (at 4.25 percent for 1961-62 and 1962-63 and at 4.50 percent for 1963-64)	62.85	68.35	68.73	80.61*
(b) In lieu of passenger fare tax	12.50	12.50	12.50	12.50*
Net surplus	24.40	23.22	23.20	31.39

*Includes additional provision of Rs. 10 crores for appropriation from revenue to depreciation reserve fund as also Rs. 4.05 crores for dividend on railway capital-at-charge, according to the Budget proposals for 1963-64.

a maund on foodgrains, which is one-tenth naye paise a kilogramme. For commodities charged at lower classifications, the increase will be correspondingly less. The effect of the additional levy on parcel traffic, for the same distance of 600 kilometres, will work out to less than 2 naye paise a kilogramme in respect of parcels moving at full parcel rates; the increase will be less on various commodities moving at less than full parcel rates, for instance, perishables in general. The Railway Minister cannot be unaware that such mathematical jugglery is irrelevant and misleading. Why, for instance, stop at one kilogram of sugar instead of saying that the increase will really be only 0.001 naye paise per spoonful? The fact is that the freight increases are going to bring in Rs. 19 crores. This is a very substantial sum, and it will come out of the pockets of consumers, trade and industry. The increase in production costs and selling prices cannot by any means be negligible.

There might have been some justification for the increases in freight rates in recent years if the railways could have shown that: (1) they had kept down their operating costs; (2) they had improved their efficiency; and (3) the extra money was needed for their expansion programmes. Instead, in his speech on Tuesday, Sardar Swaran Singh gave some astonishing statistics to show

what had long been widely suspected—that the railways have been squandering much of the extra revenue they have raised. It is understandable that since 1956-57, their fuel costs, which constitute the second largest item of their "ordinary revenue working expenses," should have risen by nearly 15 percent. It is also understandable that, in a period of inflation, the prices of other materials consumed by the railways should have risen by 20 percent or more. But there is absolutely no

NEW ERA IN U.K. BANKING

THE main subject of the British bankers' statements this year is not monetary policy, nor the condition of sterling, nor Britain's place in the world, but simply—banking. The bankers express opinions, of course, on high politics and high finance; but this year, exceptionally, changes in their own particular business claim more of their attention. The chairman of the Westminster Bank, Mr. Duncan Stirling, recalls that the Chancellor of the Exchequer inaugurated last September the use of the new computer centre in his Bank's head office. It can sort, "read," list and record all the items relating to customers' accounts, and prepare the ledger sheets and statements. "We are proud", he said, "that this installation was the first of its kind in Europe."

This year, for the first time, the British bankers discuss automation as a major factor in banking, capable of economising human labour and thereby reducing costs. "In the field of electronic accounting," says the chairman of Lloyds Bank, Mr. Harold Peake, "we are now passing from the research stage to that of practical application." But, warns the chairman of Martins Bank, Sir John Nicholson, a fundamental change from orthodox book-keeping to electronic processes will not be achieved easily or quickly. "An entirely new store of technical banking knowledge requires to be built up as rapidly as possible." Banking business is growing, and it will presumably grow faster in Britain after the beginning of March this year, when it becomes lawful to pay wages by cheque. But an increase in the number of customers' accounts will require some expansion of properties, in a period of inflated property values. All the resources of modern technology will be needed to hold operating costs down and to maintain the ratio of profit to turnover.

Advances to customers are the banks' most profitable assets. They cannot be expanded easily. In the few recent months of complete official freedom to lend, the British banks have increased their advances only slightly. In more active economic conditions, demand for bank credit will doubtless expand. But the banks' available resources are not limitless. The chairman of Barclays Bank, Mr. John Thomson, observes that his Bank's advances are nearly three times the size of its holdings of Government stocks, whereas at the end of 1958 (in a comparable period of relaxation) these assets were approximately equal. "In contrast to 1958, when we had larger holdings of Government stock, we could not now view with equanimity a large increase in advances without some better rise in deposits than is occasioned merely by the addition to credit balances of those sums which arise from the creation of loans and overdrafts."

The chairman of Midland Bank, Lord Monckton, devotes particular attention to deposits. He mentions various "special influences tending in some instances to reduce the demand for advances and in others to diminish deposits"—integration of businesses, extension of institutional and corporate savings, the growth of the public sector of the economy, and, more important, the Government's technique of adjusting business conditions through the medium of banking; a technique, Lord Monckton observes, which "has held back development in banking and presented opportunities to other financial institutions". He mentions particularly local authorities, building societies, hire-purchase and finance companies, accepting houses and overseas banks in London, and, of course, the Government itself, which has attracted substantial funds

into Treasury bills, tax reserve certificates, and "small" savings media. "In aggregate, the net amount moving into all these channels during the past few years has grown much more rapidly than has the total for bank deposits." So "the part played by banking in the financial arrangements of the country has diminished".

Bankers do not see much prospective advantage in competing for deposits by offering higher rates of interest. (Traditionally, their rates are closely related to Bank rate.) They recognise that the whole mechanism of borrowing and lending has become more sophisticated and elaborate in recent years, and that the importance of financial institutions other than banks has increased permanently. But they feel that the authorities, using the mechanism of credit to regulate the economy, should more effectively control the institutions which have increased their share of the community's savings. Such problems are important to the banks' shareholders (some of whom feel that they over-estimated the growth potential of bank shares when they bought them a few years ago), but the interest of the ordinary customer is different. The relative importance of banks in the financial system may have diminished, but the range of services that they provide is unique. As Lord Monckton observes, funds employed elsewhere are not a full substitute for bank balances, and bank accounts are used more and more intensively. A current account, as such, is not always profitable to the banker, but it is a facility of immeasurable importance in modern living.

PROVINCIAL PRESSURES IN INDUSTRIALISATION

A MAJOR aim of India's five year plans has been to achieve the balanced development of various regions, so that the benefits of economic progress may be distributed equitably. Unfortunately, however, the clamour for more industries, particularly the heavy ones, has led to inter-State rivalry which has threatened the very process of economic growth. Addressing journalists in Hyderabad last Friday, Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, stated that "positive action" would have to be taken to remove the regional differences in industrial development. He added that the Government had been discouraging the issue of licences for establishing new industries in industrially advanced regions. It is surprising that even when the country is facing an emergency, and the greatest need is to mobilise resources with the maximum economy, regional considerations should continue to weigh with the Government.

There is a long-standing grievance in the south, particularly in Madras State, that too many heavy industries are being located elsewhere and that the south has not been receiving enough attention from the planners and the Government. Although in theory there may be some justification for locating industries on a regional basis, the idea is fraught with economic risks. Local resources of nature and talent play a decisive part in the success of an industry. The siting of an industry in a region which has few raw material or other facilities will result in inefficiency and high cost of production, and strain the already inadequate transport system. Furthermore, products of the industry may not be able to stand competition in either domestic or export markets. The principle of regional balance often stirs up inter-State jealousies on larger eco-

omic issues in a manner that jeopardises economic progress. It is not uncommon to find large projects entrusted to States which do not have the resources, but do have a pull with the Central Government. Such a step hits the country in two ways. It is uneconomic to the State which gets it; and it deprives another State, which has the necessary resources of its rightful share. Resources being limited, there is economic justification only for employing them in those regions where the returns are sufficiently high. Hence the policy of regional balance calls for serious rethinking.

A major defect of the principle of regional balance is the emphasis it places on heavy and large-scale industries. Such industries are preferred because of their glamour. It is easy to exaggerate the contribution of heavy industrial units to the living standards of a large number of people. There are many instances, both of countries and of regions within a country, where without heavy industries an appreciable rise in living standards has been achieved through the proper exploitation of local resources. For example, within India, Punjab has no heavy industry, but is better off than Orissa, which has a large steel plant. The primary aim of planned development should be to bring about the fullest use of the resources of each region. Each State is endowed with certain resources in the form of natural wealth, skill and capital. Its growth potential should be properly exploited, but obviously the process cannot be identical for all the States. In certain areas, the development may take the form of improvement in agriculture, power, processing and small industries. In others, it may be through large-scale industries. Planned development has thus to be viewed as a total, national effort. A natural corollary is that the States which have been chosen for intensive industrial development cannot look upon the projects as their exclusive possessions but as national ventures. The employment potential which the new projects generate has also to be offered to people of other States. This is particularly important because the scramble for large industrial projects stems largely from their employment potential.

SILVER PRICES RISE SHARPLY

THE storm raised by the Government of India's Gold Control Rules has not blown over yet. There still exist doubts about the interpretation of some of the rules. Goldsmiths all over India are carrying on a strong agitation to seek a better deal from the Government in order to stave off the threat of unemployment as a result of the enforcement of the rules. Not many goldsmiths are equipped to make 14-carat gold ornaments. But since the restriction on the fineness of gold in new ornaments is the hard core of gold policy, the Government is not willing to offer any concession on this score. The Central Finance Minister, Mr. Morarji Desai, has so far refused to grant any concession to the gold trade except the promise to consider a reduction in the licence fee from Rs. 100 to Rs. 50.

It is perhaps too early to sit in judgment over the Government's gold policy which seeks to segregate smuggled gold, achieve a progressive reduction in demand and bring down the price to around the world parity. Whether or not smuggling has been checked since the promulgation of the rules, is difficult to say because smuggling is not a free, open market activity which can be easily known. But all the available indications show that the policy has failed to bring down the price of gold. On the contrary, the market has been displaying marked strength recently. The price of gold has improved from around Rs. 95 to Rs. 106 for 10 grams due to the scarcity of offerings. Business has, however, been on a restricted scale. Restrictions on spot business in gold seem to have turned public attention to silver which has shot up to a new all-time high of Rs. 234 a kilogram. Towards the end of last month, spot silver was marked down to around Rs. 219 a kilogram. Enquiries in the trade indicate that apart from the

India's Resources
are Precious

normal seasonal demand. there has been a considerable improvement in silver offtake for hoarding purposes. Floating stocks are said to have

Current News and Comment

Exporting Surplus Petrol

According to a Press note just issued by Burmah-Shell, the Company has exported 78,000 tons of petrol worth Rs. 1.12 crores during 1962, after meeting its domestic marketing requirements. All told, it has exported over 200,000 tons valued at Rs. 3.25 crores so far. Since the refinery in Bombay will be maximising the throughput in 1963, the Company hopes that it will more than double its petrol exports and foreign exchange earnings this year. Furthermore, Burmah-Shell has informed the Central Ministry of Mines and Fuel that its suppliers of crude oil have agreed to buy any products made from their crude in the Bombay refinery which are surplus to the Company's requirements.

This is apparently a reply to the statement made by the Minister for Mines and Fuel, Mr. K. D. Malaviya, at the annual dinner of the Mining, Geological and Metallurgical Institute of India in Calcutta recently. Mr. Malaviya had contended that the expansion of refinery capacity to process 17 million tons of crude by 1965-66 might create a surplus of about 1.5 million tons of petrol worth Rs. 20 crores. He was reported as saying that none of the private oil companies offering to set up new refineries or expand the existing ones had given a firm undertaking to export the surplus petrol. Hence he would prefer marginal imports of petroleum products rather than large imports only of crude. In view of Burmah-Shell's exports of petrol and the undertaking from its suppliers of crude, Mr. Malaviya's contention wears thin. It sounds very much like an excuse following the public criticism of his refusal to permit the expansion of the two Bombay refineries' capacity from 6.25 million tons to 10 million tons. In any case, the argument about likely surpluses of petrol can apply equally to the private and public sectors. If it were to be taken seriously, it would entail cancelling the proposals to expand the public sector capacity from the present 2.75 million tons to 9.75 million tons.

Surplus production of petrol is common in petroleum refining and is by no means peculiar to India. Export markets for the product are shrinking because of the expansion of refining capacity in the neighbouring countries. Hence India may have to rely, at least to a limited extent, on increased consumption by motor transport. The emergency created by the Chinese aggression may call for bigger civilian and military movements over a long period, and this is likely to broaden the demand for petrol. The larger use of naptha (the light distillate from which petrol is made) in producing nitrogenous fertilisers and petrochemicals, and in generating town gas, is another potential outlet. In view of the large requirements of petroleum products, the choice before the Government is either to import them at great cost or to set up adequate refining capacity and import only the crude. Mr. W. B. Metre, director of Oil India Ltd, stated at the meeting of the Mining, Geological and Metallurgical Institute in Calcutta that a ton of imported crude may cost about Rs. 65 worth of foreign exchange, whereas the major refined products cost an average of over Rs. 110 and the minor products much more. Taking the case of lubricants, India's annual consumption may rise from 300,000 tons at present to over 500,000 tons by 1966. Lubricants being the costliest of oil products to import (the average price is about Rs. 400 a ton), India's import bill on this account was Rs. 10.5 crores last year. The only manufacturing unit in Digboi produces less than 30,000 tons a year—barely a tenth of the requirements. A lubricants plant will be built in Barauni in due course with a capacity of about 75,000 tons. These and the other proposals may take the total output to only 300,000 tons by 1965-66, against an estimated consumption of 500,000 tons. According to Mr. Metre, a 100,000-ton plant can be added to any of the existing refineries at an extra cost of only

shrunk considerably as a result of sustained good offtake over the past few weeks. A further rise in the price of silver has been forecast by dealers.

Rs. 5.5 crores (the foreign exchange component of which will be 60 percent).

Medium-term Loans for Industry

In a speech at a meeting organised recently by the study group of the Gujarat Chamber of Commerce in Ahmedabad, Mr. N. M. Chokshi, managing director of the Bank of Baroda, pleaded for larger advances by commercial banks to industry for periods of three to five years or even up to seven years. He pointed out that total bank advances to industry had increased from a little over Rs. 200 crores in 1952 to over Rs. 685 crores in 1962. Medium-term advances have probably increased as a proportion of the total advances. However, in spite of the Reserve Bank's efforts and help from the Refinance Corporation, the commercial banks have not been able to increase adequately their medium-term advances to industry. This is unfortunate because, besides helping industry, the loans would offer commercial banks a profitable and safe investment for their spare funds.

Why have term advances not increased rapidly? It is not because the short-term advances are more liquid than the medium-term ones. As Mr. Chokshi observed, it has been possible for the banks to supply medium-term credit to industry "without violating the principle of liquidity". Whereas short-period advances given for periods of six months to 12 months are "rolled over" again and again, the term loans are paid back in definite instalments and the bank is sure to get back the stipulated amount at the proper time. In this sense, the liquidity of medium-term loans is more than that of short-period advances. But the basic difference between the two is that whereas a bank can quickly call back a short-period loan if it feels doubtful about its safety, it cannot do so easily in the case of medium-term advances.

The main difficulty which commercial banks face in giving medium-term loans to industry is that, while in the case of short-period advances the creditworthiness of the borrower and the soundness of the security offered satisfy the bank, they do not prove adequate for medium-term advances. The industry asking for medium-period advances naturally pledges its future assets, but if the enterprise is not successful the assets might prove worthless. The real difficulty, as Mr. Chokshi pointed out, is that in taking up a medium-period liability it is necessary for a bank "to consider the potential development and hazard". The commercial banks in India, barring a few large ones, are not equipped to judge properly the future prospects of industrial enterprises, which apply for accommodation. They can, no doubt, consult other institutions, which deal in such matters, about the magnitude of risk involved. But, as is only to be expected, they are not usually guided by such advice. Another difficulty is that the promoters do not always draw up the project reports in sufficient detail to help the banks to assess the prospects. While in the case of short-period advances the standing and creditworthiness of the borrower are adequate, what really matters for medium-term loans is the future profitability of the project concerned. Hence to increase medium-period advances it is necessary to devise some practicable method by which the banks can assess the profitability of industrial ventures. The small industries offer still greater difficulties because of the absence of a sound accounting system, and of proper trading accounts and balance-sheets.

Strengthening the Co-operatives

The two-day conference of State Ministers of Co-operation in Lucknow early last week considered measures to vitalise the different types of co-operative societies in order to increase agricultural

production, improve the economic condition of the farmers and to hold the price line. One reason why food production has not increased adequately in the first two years of the third plan—the total output of foodgrains in 1962-63 is expected to be only 79½ million tons, against 78½ million tons in 1961-62 and 79½ million tons in 1960-61—is that State Governments have made no effort. Mr. S. K. Dey, Central Minister for Community Development and Co-operation, deprecates the fact that several State Governments are likely to reduce the total outlay on co-operation, and especially on co-operative farming, in 1963-64. He points out that pilot projects have been sanctioned in the sphere of co-operative farming to provide a fund of experience and ability which has hampered the progress of co-operative farming in India. The real difficulty is that the farmers lose their initiative and are not interested in forming co-operative farming societies or working for them. Most of the co-operative farming societies now in existence are those sponsored by the Government. It appears that, by and large, the Indian cultivator has not taken to co-operative farming, in spite of the official enthusiasm. The Lucknow conference also failed to devise any practical method of rousing the farmer's interest. Mr. Dey's suggestion that the Government should settle landless labourers on co-operative farms on Government land does not solve the problem.

The tragedy of co-operation in India is that even now it is primarily a credit movement and there also the base is weak. The emphasis of State Governments has so far been on increasing the number of agricultural credit societies without caring for the quality of membership or the viability. The natural result has been that many such co-operative credit societies are either defunct or have inadequate funds. Moreover, while official supervision and interference in the working of co-operative societies discourages the people and defeats the purpose of such societies, the absence of official supervision leads to corruption and waste of funds. The Lucknow conference has recommended that both official and non-official cadres should be developed for the promotion of the co-operative movement. A committee under the chairmanship of Mr. V. L. Mehta of the Khadi and Village Industries Commission will study measures for the stabilisation of official cadres and the National Co-operative Union will study the problem in connection with the expansion of the non-official cadres. It is hoped that a co-ordinated scheme will be drawn up when the two reports are available.

About primary agricultural credit societies, which are the weakest link in the chain, two valuable suggestions were made. One is that a time limit should be fixed for all weak societies to come up to a viable standard, failing which they should be liquidated. The second is that members should be persuaded to deposit every year a fixed amount in such societies on the basis of either their borrowings or their cultivable area. It was pointed out at the conference that, while co-operative marketing has made some progress in the case of sugarcane and cotton, it has made very little progress in the case of oilseeds, jute and other commodities. To be really effective, the co-operative marketing societies will have to make outright purchases of the commodity but a great risk is involved in that. It was, therefore, suggested that a special price fluctuation fund should be created; part of the loss arising from fluctuating prices should be met from this fund and part from the normal profits of the society concerned. It was also suggested that the State Bank of India should assume a positive role in the development of co-operative marketing as the Reserve Bank has done for short-term co-operative credit.

Rationalising Coal Grades

The present system of classifying coals is the product of a series of coal control orders issued from time to time. As a result, the price which the consumer pays bears no rational relationship to the grade of coal he gets. Among the diverse elements which are built into the price structure are a multiplicity of compromises; cesses and excise duties imposed at various times and the cost

of implementing labour awards are all added pro rata without regard to the usefulness of the fuel. By and large, the prices depend on whether the coal is metallurgical or non-metallurgical, on its ash content (in the case of low-moisture coals) and on its ash and moisture content (in the case of high-moisture coals). A committee of experts was appointed last year by the Government of India to report on the procedure for the sampling and grading of coal. It is understood that the committee considered the present system of classification irrational since even slight variations in ash and moisture content may cause coals to be placed in different groups, although such variations have limited effect on its usefulness in terms of heat value. The Committee also criticised the present methods of sampling as being unscientific and recommended instead the sampling of "coal in motion". It is welcome news that the Government proposes to implement the recommendations shortly. Such a step should rationalise the present grading structure and the method of sampling.

The expert committee has suggested that the basis for classifying coal should be its heat value, since it takes into account all the major industrial properties of the fuel—its combustibility, moisture content, the non-combustible mineral matter in the coal which is left as ash, etcetera. It will be readily conceded that in any system of fuel evaluation, energy content should be the main criterion. The price paid for any grade of coal should be related to its potential heat value, since coal is invariably used for combustion or for producing heat for steam generation. Even in metallurgical industries, coal (or coke) is used for producing heat to initiate and accelerate the chemical reactions, as well as for reducing the ore; its function as a reducing agent is related to its thermal value. Besides, the use of energy content as a principle in the grading scheme facilitates easy control over the consumption of coal. Consumers will become more conscious of the need for improving the efficiency of combustion; at present little attention is given to this matter.

Although the coal industry has welcomed the proposal to classify coal on the basis of its heat value, it has suggested that certain other factors too should be taken into account. It is easy to appreciate its view that a major consideration for commercial grading should be the usefulness of the coal for the purpose for which it is required. It is well known that a moisture content of up to 10 percent accelerates combustion. The railways, who are one of the largest consumers of coal, may prefer high-moisture coal (even of lower calorific value) since it will burn fast—an important factor in locomotive furnaces, which with a limited grate area have to meet sudden, large demands for steam. Coke ovens, however, will want low and medium-moisture coking coals, either by themselves or blended with lower ash coals, since they can be used by metallurgical industries without beneficiation. Another factor which the industry would like to be taken into account is the prevailing regional differentials. Although strictly speaking there seems no reason why a calorific should cost more, say, in Madras than in West Bengal, this suggestion apparently seeks to provide for local supply conditions and the transport and other costs involved in carrying coal from a producing area to the consuming centres. It is hoped that the new grading system will take these factors into consideration.

Manufacture of Tinplate

The Government of India, it is reliably understood, does not propose to consider any fresh applications for setting up additional capacity for tinplate. The Working Group on Steel has estimated the demand for tinplates by 1965-66 at 300,000 tons. The existing capacity for the production of tinplate is about 130,000 tonnes, made up of Tinplate Company of India 70,000 tonnes, the Rourkela steel plant 50,000 tonnes (half of this capacity is ready) and Messrs Khemchand Rajkumar, Calcutta, 10,000 tonnes. Besides, a licence has already been granted to Messrs Satyashil Gupta for setting up a capacity of 10,000 tonnes a year in Kerala State. For meeting the requirements of the third plan, a licence for substantial expansion of capacity has already been granted to the Tinplate Company of India for 90,000 tonnes, raising its capacity from 70,000 tonnes to 160,000

tonnes. Besides, an electrolytic tinning line with a capacity of 100,000 tons is also being set up at the Rourkela steel works. The principal raw material required for manufacturing tinplate is black sheets which are being produced by the Tata Iron and Steel Company and the Rourkela steel plant. But there is an acute shortage of black sheets. In view of this consideration and also the fact that the third plan target has already been covered, the Government does not propose to consider new applications for additional tinning lines. If there is any shortfall in the implementation of the capacity already sanctioned, this will be made good by developing capacity in the public sector. The establishment of tinning lines is likely to be placed on the banned list.

Engineering Goods for West Europe

India is now exporting more than 150 engineering items to countries in western Asia, south-east Asia and Africa. Some items like sewing machines, diesel engines, pumps, castings, stainless steel and E.P.N.S. ware and screws are also being exported to highly industrialised countries like the U.S.A., the U.K., France, Holland and Belgium. As a result of efforts made by the Engineering Export Promotion Council, exports to west European countries have improved. Not only has the value of engineering exports gone up, but some new items have also been introduced. While in 1958 the exports were mostly of metal ware, in 1962 nearly Rs. 50 lakhs worth of exports is accounted for by other items such as sewing machines, padlocks, cutlery, textile machinery, machine tools, wood screws and E.P.N.S. ware. A trade delegation sponsored by the Engineering Export Promotion Council is now touring western Europe to study the specific requirements of engineering industries, to establish contacts with importing houses there and, wherever possible, to arrive at some long-term arrangements for the sale of Indian goods. The delegation will also study the working of the E.C.M., particularly its effect on the export of engineering goods from India.

Stainless Steel Crisis

The 400-odd units engaged in manufacturing stainless steel utensils, employing a capital of Rs. 14 crores, of which Rs. 3 crores to Rs. 4 crores is sunk in steel dies, and providing employment to some 25,000 workers, are faced with a crisis due to the acute raw material shortage following the recent ban on imports. The industry has had a phenomenal growth over the past few years in spite of its complete dependence on imported raw material. This, according to the spokesmen of the industry, is in no small measure due to the encouragement given by the Government itself with a view to creating a market for the raw material expected to be produced by 1965 by the Durgapur tool and alloy steel plant. According to the All India Stainless Steel Industries Association, imports of stainless steel in 1961 and 1962 at 2,097 tons and 4,172 tons, respectively, were not enough to work even 5 percent of the industry's installed capacity. Imports have been banned since 7th December and current stocks in the country are said to be less than 200 tons. The industry will, therefore, face a serious crisis unless the Government is able to arrange timely imports of stainless steel sheets.

The Association has urged the Government to permit imports of at least 3,000 tons, especially because the metal pressing units of the industry can be switched over for defence production. The industry has also a considerable export potential. In 1961, the industry earned about Rs. 12 lakhs from the export of stainless steel utensils and the figure for the January-October 1962 period is placed substantially higher at Rs. 24.32 lakhs. The main markets are Aden, Ceylon, Kenya and Singapore, but the industry has also recently secured a foothold in such advanced countries as the U.S.A., Canada, West Germany and the U.K. The industry seems confident of bringing about a sizable increase in its exports provided the raw material is made available to it in sufficient quantities to cater to the needs of the domestic market

along with exports. It is not possible for the industry to live on exports alone because these have to be made almost at cost price.

Financing Small Industries

The rôle of State Financial Corporations in the present emergency was outlined by Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India, in his speech at the annual conference of the Corporations' representatives held in Calcutta last Monday. He pointed out that the emergency calls for a more decentralised location of medium and small industries, particularly of those with a strategic aspect. This means that the Corporations have not only added opportunities but also extra responsibility. The loans sanctioned by all the Corporations amounted to Rs. 49.25 crores at the end of September 1962, against Rs. 37.30 crores on the corresponding date in 1961. However, as Mr. Bhattacharyya stated, the volume of assistance offered by them has not kept pace with the needs.

The supply of term-credit to small industries is usually fraught with risks since it is difficult to assess their prospects. The main handicap of the State Financial Corporations is that they do not have either the machinery or the expertise to appraise the profitability of small industries. Another difficulty which they experience is the shortage of funds. Some of the Corporations raise additional funds from the market by issuing bonds. In the present state of the stock markets, it is doubtful if they will be able to raise funds, unless they offer sufficiently high returns. With their lending rates fixed at 7 percent a year, it will not be economic for them to borrow money at high rates. Steps have, no doubt, been taken to improve their position. Firstly, their borrowing authority has been increased. Secondly, the Refinance Corporation for Industry can now offer refinance facilities to the loans given by them. Thirdly, the Government of India has extended the guarantee scheme for loans to small industries throughout the country from 1st January, 1963. It remains to be seen how far these measures will strengthen their position. Their activities have been diversified in recent years by enabling them to underwrite new capital issues. This offers them a new source of revenue.

VICTORIA MEMORIAL

IN February, 1901, a very numerous signed requisition was presented to the Sheriff of Calcutta, and in response thereto, he convened a meeting on the 6th of that month, to place on record the deep sorrow of the citizens of Calcutta at the death of their late beloved Queen and to determine upon a suitable memorial to be erected to Her memory. On that meeting being opened by the Sheriff on February 6th he proposed that His Excellency the Viceroy do take the chair, and Lord Curzon delivered, as is his wont, an excellent address to the audience. The first Resolution, which was unanimously carried, ran thus:—"That subscriptions be invited from all India for the purpose of raising a national memorial to Her late Majesty Queen Victoria, Empress of India, that shall be a perpetual monument of her great and glorious reign. That a General Committee be formed hereafter and that the following gentlemen be appointed to a Provisional Executive Committee to carry out the purpose of this Resolution." Then followed the names of some twenty-nine noblemen and gentlemen, and this Executive Committee has added to their number some nine other gentlemen. We see it stated in the public prints that a Building Committee has decided upon a site upon which to erect the Victoria Memorial Hall, which will form an encroachment on the maidan, and which is quite opposed to the wishes and feelings of the citizens of Calcutta. We are not quite clear what *locus standi* this Committee possesses, and it certainly seems to us to be in the nature of an unwarrantable interference with other people's affairs; for the meeting at the Town Hall clearly appointed a Committee to raise a national memorial to the Queen, and it seems to us that it only is the proper one to decide the question of what shape that memorial is to take, and where it is to be located.

of Dalmia-Jain companies (Investigations and Recommendations)" and is published by the Department of Company Law Administration. The feature of the pamphlet is that not one of the star performers in the whole episode, from the outgoing president of the Federation of Indian Chambers of Commerce and Industry onwards, is mentioned by name. This part of the enquiry was evidently conducted under the chairmanship of Mr. V. R. Sen, and has resulted in certain broad recommendations about amending the company law. The question still remains unanswered why the Government should have run short of ink and paper while printing what surely was the essence of the Vivian Bose Commission's report—on the actual investigations. It may be difficult to dissuade Parliament from holding a debate on the subject, a debate which may not be confined to the report itself but which could also cover the small point as to why its circulation is so cunningly restricted. The debate may show whether anyone remains to deserve the mantle so bravely worn on another famous occasion by the late Feroze Gandhi.

THOSE WHO WALKED OUT OF PARLIAMENT ON Monday because the President's address was not in Hindi did their beloved language no good at all, for the non-Hindi speaking people may now be more anti-Hindi. The Dravida Munnetra Kazhagam has only to cite this instance to "prove" what the North will be up to, given half a chance. Mr. Nehru lately reiterated that the amendment promised to let English continue as an associate official language beyond 1965 will be introduced; but the leisurely manner in which the Home Ministry has been handling the question makes many wonder whether everyone in the Central Cabinet shares Mr. Nehru's sensible respect for the other languages. If I remember correctly, Mr. Lal Bahadur Shastri once said that the Constitutional amendment had been delayed because of the emergency, because the measure would excite controversy. If he were more specific he would have been obliged to admit that it is the Hindi militants who would have raised the controversy, emergency or no. The four Socialists of Delhi went about their mission noisily and clumsily; but others have for years been active more subtly and their achievement is by no means insignificant. After criticism in the Press, All India Radio in the non-Hindi regions has somewhat reduced its quota of Hindi programmes; perhaps the departure of Dr. Keskar from the Ministry of Information and Broadcasting also had something to do with it. On the other hand, in Bihar and Uttar Pradesh it is becoming increasingly difficult for people without Hindi. The South too has adopted the folly; and travellers from other parts will often not know which bus to take. Thus are the many linguistic areas of the country isolating themselves from one another. The Socialists are a negligible quantity; what makes their recent performance ominous is that there are many in the Congress, and in the Government, who would have liked to behave as the Lohia men did. Here is a most distressing feature of Indian politics: personal and group convictions cut right across Party loyalties. The Congress contains elements that would be indistinguishable in Swatantra, the Jan Sangh or—yes, sir—the Muslim League.

A FRIEND ASSURES ME THAT A NEWSPAPER I CAN strongly recommend to those interested in the affairs of Western Nigeria is the *Mid-West Echo* of Benin City. A recent issue includes a survey of timber, starting "in time immemorial when the habitation of caves became insatiable for humanity" and going deeply into the problems of today—"Does the broker's claim constitute a torn? Though economically it constitute an inquisitiveness yet it really focus many unknown business relegations. Extensively investigated, many affected parties have been ignorantly pelted with wanton blames."

Turning to entertainment, the *Echo* covers films ("The Benin-Delta Screen Entertainers delightfully present at 9 p.m....") and boxing—"Distinguished honours have been won on the ring. Many more will be won as many corpses and battered faces of boxers will be hauled down from it."

Guide for Investors

INDIAN ALUMINIUM FARES WELL

THE steady support for the ordinary shares of the Indian Aluminium Co. Ltd. around Rs. 32.75 is due to the excellent results achieved by the Company during the year ended December 1962. The taxable ordinary dividend on the fully-paid ordinary shares has been increased from 15 percent to 17.5 percent, including a final of 10 percent. A taxable ordinary dividend of 5 percent has been declared on the partly-paid ordinary shares. The Company increased the share capital last year by issuing rights shares in the proportion of one new share for every five held at a premium of Rs. 15.50 a share of Rs. 10 each. The usual preference dividends have also been paid. Sales rose from Rs. 8.39 crores in 1961 to Rs. 10.50 crores in 1962. The net profit has improved from Rs. 1.05 crores to Rs. 1.26 crores, after providing Rs. 1.06 crores (against Rs. 60.6 lakhs) for depreciation and depletion, Rs. 61.5 lakhs (against Rs. 45.5 lakhs) for development rebate reserve and Rs. 52.5 lakhs (against Rs. 59 lakhs) for taxation.

The directors say that the integrated expansion programme was completed well ahead of schedule and within the originally estimated budgeted figures. The expanded Hirakud smelter for producing 20,300 tons of ingot a year was commissioned last year when additional electric power was made available. The expansion of the sheet rolling facilities in Belur, West Bengal, and the expanded facilities at the alumina plant in Muri, Bihar, and the bauxite mines in Lohardaga, Bihar, were commissioned in 1962. The installation of the new extrusion press in Alupuram, Kerala, was completed in 1961. The Company has launched its latest expansion projects. It is proposed to double the smelter capacity in Alupuram, Kerala, to 10,850 tons of ingot a year. The project is expected to be completed in 1964. An aluminium foil rolling mill is being built in Kalwa, Maharashtra, with a capacity of 2,500 tons a year. This factory is expected to be completed in 1965.

Eastern Investments Repeats Dividend

EASTERN Investments Ltd. has repeated a taxable ordinary dividend of 12 percent on the increased share capital for the year ended December 1962. It absorbs Rs. 9.23 lakhs and offers a yield of 9.3 percent at the present price of Rs. 129 a share of Rs. 100 each. The profit has amounted to Rs. 11.15 lakhs during 1961-62, compared with Rs. 17.24 lakhs in 1960-61. Taxation is allocated Rs. 3.96 lakhs (against Rs. 7.77 lakhs) and general reserve Rs. 18,504 (against Rs. 2 lakhs). There is a carry-forward of Rs. 1.33 lakhs, against Rs. 2.68 lakhs brought in. Its ordinary share capital was increased last year to Rs. 76.89 lakhs by 25,630 rights shares of Rs. 100 each at a premium of Rs. 10 a share. The funds from the rights issue have been used for taking the majority of the Company's entitlement of rights in the recently issued share capital of the Titagarh Paper Mills Co. Ltd.

The shares held by the Company are quoted on the Calcutta stock exchange with the exception of only a few shares costing Rs. 78,178. The

total market value of all the investments for which quotations are available together with the worth of unquoted investments as valued by the directors, exceeded the book value by Rs. 71.03 lakhs on 31st December, 1962.

Rights from Goodyear India

THE ordinary shares of Goodyear India Ltd. have been steady around Rs. 38.87 on the news that the Company has received the consent of the Controller of Capital Issues to issue 998,500 ordinary shares of Rs. 10 each to the existing shareholders at a premium of Rs. 16 a share. Out of these, 348,500 shares will be offered as rights shares to the Goodyear Tyre and Rubber Company of the U.S.A. The remaining 650,000 shares will be offered as rights shares to the existing Indian shareholders in the proportion of 6.5 new shares for every four held. The Company issued to the Indian shareholders 400,000 ordinary shares of Rs. 10 each at a premium of Rs. 7 a share on 25th April, 1961, when it decided to have an Indian shareholding.

The Controller of Capital Issues appears to have fixed higher premiums on the new issue due to the rise which has taken place in these shares since the first issue was made in 1961. But it is questionable whether the mere increase in the share value is a sufficient reason for imposing higher premiums. As the Company has not yet paid any ordinary dividend, it was expected that the new issue would at least be made at the same premium as before, if not at a smaller premium.

On the basis of the present price, the ex-rights value of the shares works out to Rs. 30.90 a share. At this price, support to the rights issue seems well assured as investors may be inspired by two factors. The first is the prospect of dividends for 1962, although the rights issue will not participate in this distribution. The second is the growth value of the shares. During the year ended December 1961, the Company earned a profit of Rs. 28.06 lakhs, after providing Rs. 10.87 lakhs for depreciation. As substantial sums to the extent of more than Rs. 1.75 crores were ploughed back into the business, the ordinary dividend was passed, which was not welcomed by shareholders. But the benefits of the new tyre factory which was completed in Ballabgarh, Punjab, could not be reflected in the 1961 results. The effects of this are likely to be reflected in the results for 1962. So it is hoped that the Company will make bigger profits in 1962, and the directors will decide to pay a satisfactory ordinary dividend.

Goodyear shares are rated highly since it is thought that even the present level of profits should be sufficient to pay satisfactory dividends on the increased capital. The existing ordinary share capital is Rs. 2 crores, which will be raised to Rs. 3 crores when the rights shares are issued. The share capital is backed by reserves of more than Rs. 3.66 crores, of which share premiums exceed Rs. 1.88 crores. In view of the impressive reserves, combined with the fact that the Government has sanctioned the Company's scheme to increase the output capacity of the Ballabgarh factory, investors would be justified

in hoping for a gift of bonus shares in the near future.

Shree Sitaram Sugar Shows Loss

SHREE Sitaram Sugar Co. Ltd. has incurred a loss of Rs. 66,684 during the year ended August 1962, compared with a loss of Rs. 2.98 lakhs in 1960-61, after providing Rs. 1.22 lakhs (against Rs. 1.28 lakhs) for depreciation. The dividend has been passed, and a debit balance of Rs. 43,631 has been carried forward.

The cane crush amounted to 1.3 million quintals with a recovery of 9.28 percent, against 1.6 million quintals with a recovery of 9.25 percent in the previous year. The crush may be about 840,000 quintals with a recovery of 9.5 percent during the current 1962-63 season. The factory has been facing a sugarcane shortage due to smaller cultivation, combined with the diversion of cane to the production of gur. So the current season is likely to be shorter than in 1961-62.

Birpara and Hantapara Teas

THE ordinary shares of the Birpara Tea Company and the Hantapara Tea Company have not responded to the news that the Controller of Capital Issues has sanctioned the necessary capital issues for amalgamating the two Companies. Ordinary shares of Hantapara Tea are being quoted around Rs. 104 and those of Birpara Tea at Rs. 150, the par value of the shares of both Companies being Rs. 100 a share. The two Companies will be amalgamated under the name of the Birpara Tea Company Ltd. The latter proposes to issue a further share capital of Rs. 24.50 lakhs divided into 24,000 ordinary shares of Rs. 100 each and 500 cumulative preference shares of Rs. 100 each carrying a fixed dividend of 8 percent. These shares will be allotted to the shareholders of the Hantapara Tea Company Ltd. Hence for every three ordinary shares held in Hantapara Tea, the shareholders will receive two ordinary shares in Birpara Tea. This distribution is logical on the basis of the present price of these shares.

The amalgamation move has been made with a view to effecting economies in various ways. The amalgamated Company, it is hoped, will show a better performance than hitherto. The scheme will be implemented after obtaining the sanction of the Calcutta High Court.

The present share capital of Hantapara Tea is Rs. 38.50 lakhs divided into 500 cumulative preference shares of Rs. 100 each carrying a fixed dividend of 8 percent and 36,000 ordinary shares of Rs. 100 each. Reserves are more than Rs. 41.20 lakhs. During the year ended December 1961, the Company earned a profit of Rs. 2.83 lakhs and paid a taxable ordinary dividend of 5 percent. It has two tea estates in the Dooars district of West Bengal. The Hantapara estate produced a crop of 752,221 kilograms and the Dumchhipara estate 680,801 kilograms. The average price realised by the former was Rs. 4.04 a kilo-

gram and that by Dumchhipara Rs. 4.10 a kilogram. The total planted area is 1,034.45 hectares comprising 533.93 hectares in Hantapara and 500.52 hectares in Dumchhipara.

The share capital of Birpara Tea is Rs. 10 lakhs divided into 1,000 cumulative preference shares of Rs. 100 each carrying a fixed dividend of 8 percent and 9,000 ordinary shares of Rs. 100 each. Reserves are more than Rs. 20.17 lakhs. During the year ended December 1961, the profit was Rs. 3.52 lakhs, and a taxable ordinary dividend of 12.5 percent was paid. The crop was 666,763 kilograms, and the average selling price was Rs. 4.37 a kilogram. The planted area is 567.66 hectares. The estate is situated in the Dooars district of West Bengal.

In January 1948, Birpara Tea issued bonus shares by capitalising reserves in the proportion of one bonus share for every share held. Hantapara issued bonus shares twice. In March 1948, bonus shares were issued in the proportion of one for one. In May 1956, bonus shares were issued in the ratio of one bonus share for every two shares held.

Deoria Sugar Passes Dividend

THE Deoria Sugar Mills Ltd. has incurred a loss of Rs. 6.76 lakhs during the year ended August 1962. The dividend has been passed. The Company incurred a loss of Rs. 3.56 lakhs in 1960-61. Depreciation is allocated Rs. 1.34 lakhs (against Rs. 1.71 lakhs), before arriving at the profit figure.

The cane crush amounted to 1.2 million quintals with a recovery of 9.15 percent, compared with 1.5 million quintals with a recovery of 9.31 percent. During the current 1962-63 season, the crush is expected to be 840,000 quintals with a recovery of 10 percent. The directors refer to the possibility of a sugarcane shortage due to its diversion to gur manufacture. In order to supply 8,000 tons of raw sugar for export, the factory has started producing it during the current season. The production of raw sugar has been 49,070 bags so far.

Offer from Indo-American Electricals

INDO-AMERICAN Electricals Ltd., which proposes to set up a factory in Durgapur for manufacturing super-enamelled copper wires, popularly known as winding wires, will soon be in the market to raise funds for the project. The plant will have a capacity of 60 tons a month. The plant and machinery will be imported mostly from America, excepting the wire drawing section which will be obtained from West Germany. The Company has already received licences for the import of machinery, and firm orders have been placed. The plant and machinery are expected to arrive in June or July, and the factory is expected to go into production by the end of the current year. The project will receive the technical collaboration of the International General Electric Company of the U.S.A., and the financial backing of Indo-Burma Petroleum Co. Ltd. The Company has plans to diversify its activities in other modern electrical equipment in association with G.E.C. The project will involve a capital outlay of Rs. 50 lakhs.

The authorised capital of the Company is Rs. 1 crore, made up of Rs. 80 lakhs in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.3 percent cumulative redeemable pre-

ference shares of Rs. 100 each. The issued capital consists of 250,000 equity shares and 5,000 preference shares. Of this, 55,000 equity shares have been reserved for allotment to the promoters, directors and their friends and 70,000 equity shares for the Indo-Burma Petroleum Co. Ltd. The balance of 125,000 equity shares and 5,000 preference shares are to be offered for public subscription. The board of directors includes Messrs M. L. Khaitan (chairman), Ashok Kumar Khatau, B. R. Khandelwal, P. W. G. Adair, S. B. Billimoria, N. N. Saher, Servi Singh, N. Whitehead and Man Mohan Singh (managing director).

Nataraj Spinning Mills Share Offer

NATARAJ Spinning and Weaving Mills Ltd is a new Company which proposes to set up a cotton spinning mill in Nirmal, Adilabad district (Andhra Pradesh), with an installed capacity of 12,000 spindles for spinning fine yarn with an average count of 60's. The plant will be producing high quality combed yarn, hosiery yarn, mercerised yarn, doubled, etcetera, in addition to yarn on hanks. The application for import licences for preparatory machines like blow room, drawing frames and slubber-inter have been made, and orders have been placed with indigenous manufacturers for ring frames and carding engines. The project is estimated to cost Rs. 54.25 lakhs, including working capital.

The Company has an authorised capital of Rs. 50 lakhs, made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 9.5 percent cumulative preference shares. The issued capital consists of 200,000 equity shares and 50,000 preference shares, of which the promoters, directors and their friends are taking up 53,950 equity shares and 857 preference shares. The remaining 146,050 equity shares and 49,143 preference shares will be offered for public subscription. The board of directors includes Messrs C. S. Loganathan, T. S. Narayanaswamy, K. Palani, P. Suryanarayana, C. S. Narasimhan, P. Balarama Sastry, P. Nataraja Sastry, L. N. Agarwal, P. Harinarayana and R. Venkatasubba Reddy.

Shree Digvijay Cement Rights Issue

THE directors of Shree Digvijay Cement Co. Ltd have decided, subject to the consent of the Controller of Capital Issues, to issue 50,000 new equity shares of Rs. 100 each at a premium of Rs. 10 a share. These shares will be issued in the proportion of one new share for every three held. Additional capital is being raised in order to finance the Company's expansion plans. The capacity of the Company's cement plant is proposed to be raised from the present 430,000 tons to 630,000 tons a year. The expansion, which is expected to be completed by the end of March 1964, is estimated to cost about Rs. 1.5 crores. The proposed rights issue will yield Rs. 55 lakhs, including Rs. 5 lakhs by way of premium. The balance is to be met from retained earnings, borrowings, etcetera.

The plant and machinery, which had been ordered against a licence under D.L.F. credit, are due to arrive by the end of April. It will be recalled that in August 1962, the Company issued 13,500 equity shares to its collaborators, John Manville International Corporation of the U.S.A. at a premium of Rs. 50 a share, as was then approved by the Controller of Capital Issues. The directors have asked for the Government's

permission for a rights issue at a smaller premium of Rs. 10 a share because of the depressed conditions in the investment market. The Rs. 100-paid share of the Company, which recorded a high of Rs. 218.25 last year, is now quoted around Rs. 172 after having been sold down to Rs. 157.75.

Permanent Magnets Plant. Opened
