London

ACTIVITY STILL RESTRICTED

OPERATORS CAUTIOUS

London, 25th September.

IN SPITE of some particularly helpful economic factors including very good August trade figures, a rise in the industrial production index and yet another encouraging statement from the Chancellor of the Exchequer on economic prospects, buyers still refused to extend themselves very far in the stock market last week and business was moderate. The chief restraining influence was political uncertainties and the imminence of the publication of the Denning report on the Profumo affair caused investors to adopt a cautious approach. There was also much speculation as to when the general election would be held although the most favoured time is next spring. The serious developments between Indonesia and Malaysia had no marked effect on share prices, but towards the week-end, disappointing profit statements from two industrial giants—A. E. I. and Victory provided food for thought. Channel Tunnel shares were very active. Guilt-edged were quiet, but medium and short-dated stocks hardened following the terms of a new £500 million Exchequer loan. Dollar stocks moved in sympathy with transatlantic trends. Gold shares drifted lower in the absence of support and coopers were quiet. Platinums went ahead in advance of the dividends.

OPENING BANK BRANCHES IN NEW AREAS

(BY A SPECIAL CORRESPONDENT)

IN the August 1963 issue of the *Reserve Bank of India Bulletin*, an attempt was made to ascertain the number of unbanked towns in India as at the end of March 1962. Such unbanked places numbered 1,017 out of a total of 2,690 towns listed in the 1961 census. While no town in the higher population group, *i.e.*, 1 million and above and 500,000 and above but less than 1 million, remained unbanked, all in the population groups of below 100,000 were.

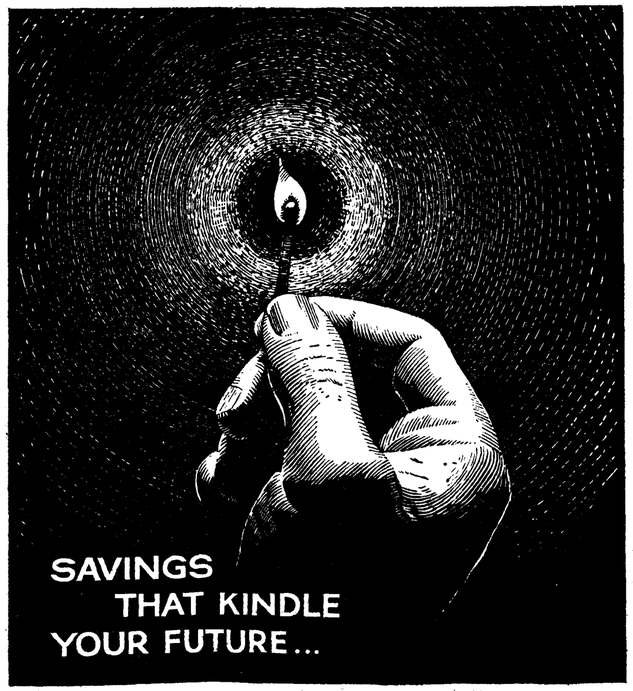
This picture reveals a lop-sided growth of branch banking. This is because even during the five years ended 1962-63, scheduled banks increased their branches at the rate of 250 a year. Only the State Bank doubled its branches and the new offices were mostly opened in unbanked areas. The banks in the private sector, by and large, preferred well-developed towns which offered more remunerative prospects. Apparently, the Reserve Bank did not object to it. One often finds, therefore, the offices of several banks concentrated in the same street or in a specific locality in big towns. The implications of such a concentration are obvious. A large number of banks have to share a limited deposit potential.

Powers of Reserve Bank

The Reserve Bank has enough powers under the Banking Companies' Act, 1949, to promote an orderly expansion of branch banking. It follows that had the Reserve Bank regulated the branch expansion of banks according to the letter and spirit of the law, the position would have been very different from what it is today. Scheduled banks would have branched out, in particular, to untapped areas in search of deposits. But for some strange reasons, the Reserve Bank chose the rôle of a silent spectator.

In the past year or so, especially after Mr. Bhattacharyya became the Governor of the Reserve Bank, the problem attracted much attention. It is understood that the Bank has finalised a new branch licensing policy with accent on opening offices in unbanked areas. Banks will be given permission to open branches provided they undertake to open offices simultaneously in a few unbanked areas in adjacent places. Further permission to open branches in an area already well served by banks will not be given unless the economic development in the town concerned warrants it.

Reorganising Banking Structure



It has also been realised that both the unitary banking system of the British type and the federal type which prevails in the United States should be encouraged. The banks operating in the country are, therefore, to be classified as all-India institutions, regional banks and local banks. The major scheduled banks are expected to come under the first category; the medium banks under the second and the vast majority of banks, scheduled and non-scheduled with deposits below Rs. 10 crores, under the third. The sounder ones among the small banks are to be toned up and not compulsorily merged with bigger ones. The first batch of licences under the new policy, it is understood, was released a few weeks ago.

The major question which arises is the impact of the new policy on existing branch expansion programmes. Commercial banks will find it hard to fall in line. Certain banks which entered the field of branch expansion during the past three or four years, will be the worst hit by this shift in policy. They have to be satisfied with whatever offices they have opened so far in profitable centres; in future, they have to confine themselves to unbanked places which may not be profitable.

Considerable confusion seems to prevail in the licensing of foreign banks. There are reports that the Bank of America is shortly opening an office in Bombay. It is the world's biggest bank and the existing banks, both foreign and indigenous, are viewing this recent development with concern. Again, there are already two American banks operating in Bombay in addition to several British. The existing institutions are adequate, especially the foreign ones, to take care of the requirements of all ventures promoted in foreign collaboration in this country.

Bank Branches in Goa

Yet another question-mark in the branch licensing programme is the permission given to banks to open offices in Goa. During the last two years, any bank which applied for permission, including foreign banks, was given permission to open offices there with the result that there are nearly a dozen banks operating now. The trade potential of Goa is not more than Rs. 30 crores to 40 crores a year and the total deposits of the area are not more than Rs. 10 crores. The reason cited is the quick development of Goa. It is, however, likely that instead of helping quick development of the region, the banks would indulge in cut-throat competition among themselves for the limited deposits and advances business.

The future may be invisible to your eye, but you can shape your future to the extent that you plan and save for it.

The Bank of India Ltd. has various Savings facilities for your benefit—

(1) SAVINGS BANK ACCOUNTS :
You get 100 cheques per year and you can withdraw any amount at any time without previous notice. Compound interest at 3% per annum.

(2) RECURRING DEPOSIT SCHEME :
Our latest savings scheme gives a yield of about 4% per annum.

(3) TIME DEPOSITS :
Deposits from 3 days to 10 years with rates of interest varying from 3% to 5% per annum.

(4) CASH CERTIFICATES :
The Bank's 3 years' and 5 years' Cash Certificates give a yield of 4½% and 4¾% per annum—respectively.

THE CALCUTTA MONEY MARKET

MODERATE FALL IN ADVANCES

Wednesday, 25th September.

THE general level of advances shows a moderate decline in the Calcutta money market during the past week. Most of the decline is accounted for by the sugar mills and the iron, steel and engineering industries. The credit given to the cotton and jute mills and to the foodgrains and seeds trade, remains unchanged. In the interbank market, conditions have tightened considerably and the call rate has risen to 2¾ percent.

The exchange market has been quite active, with a fair supply of tea and gunny bills. The demand for remittances has been moderate. In London, sterling shows an improvement in relation to most of the major currencies with the exception of Dutch, Danish and Swedish ones.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 232.75 to Rs. 233.25 quoted today for ready. The London and New York prices were 111½d and 129.3 cents. Gold was steady. The price of 14-carat gold rose from Rs. 62.25 to Rs. 63.

DURING THE WEEK ENDED 20TH September, Government of India Treasury bills for Rs. 43,92,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 24th September. The total amount offered was Rs. 2 crores only. Tenders at Rs. 99.420 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.318 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 30th September.

IT IS STATED THAT 91-DAY Intermediate Treasury bills will be sold from 25th September to 28th September at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 18th September to 21st September amounted to Rs. 10,30,25,000.

DROPS OF RS. 19.98 CRORES TO RS. 2,204.43 crores in active notes and of Rs. 12.92 crores to Rs. 2,223.37 crores in total note issue were the outstanding features of the return of the Reserve Bank of India for the week ended 20th September, 1963. Consequently notes held in the Banking Department rose by Rs. 7.06 crores to Rs. 18.94 crores. Deposits of the Government of India and of State Governments fell by Rs. 4.34 crores and Rs. 4.59 crores to Rs. 70.20 crores and Rs. 7.13 crores, respectively. Deposits of scheduled banks at Rs. 86.15 crores showed a fall of Rs. 3.83 crores. Balances held abroad were Rs. 1.30 crores larger at Rs. 9.04 crores. Investments at Rs. 196.13 crores showed a decline of Rs. 7.43 crores. Loans to scheduled banks increased from Rs. 1.02 crores to Rs. 1.45 crores. Ways and means advances stood at Rs. 28.72 crores, against Rs. 20.09 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 13th September, 1963, shows a drop of Rs. 1.78 crores to Rs. 589.25 crores in total deposits. Investments in Government securities are up by Rs. 6.95 crores to Rs. 304.40 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 3.58 crores to Rs. 253.78 crores. Cash and balances are, in consequence, shown at Rs. 27.94 crores or Rs. 97 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 13th September, 1963, shows Demand and Time liabilities at Rs. 1,083.60 crores (Rs. 23.09 crores on account of borrowings from banks) and Rs. 1,314.68 crores (Rs. 24.62 crores), compared with Rs. 1,099.48 crores (Rs. 26.76 crores) and Rs. 1,300.14 crores (Rs. 24.25 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 29 lakhs and Rs. 98 lakhs to Rs. 52.45 crores and Rs. 86.86 crores, respectively. There is a rise of Rs. 12.40 crores to Rs. 751.04 crores in investments. Advances and bills discounted at Rs. 1,477.30 crores show a drop of Rs. 9.58 crores. The ratios to total liabilities of cash and balances are, in consequence, shown at 5.8 percent and 61.6 percent, against 5.9 percent and 62.0 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 27-9-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF R.C. PREFERENCE SHARES

"This is an announcement and not a prospectus"

ELECTRIC CONSTRUCTION & EQUIPMENT CO. LTD.

Regd. Office: 9, Kaliprasanna Singhee Road, Calcutta-2.

SHARE CAPITAL

AUTHORISED:

		Rs.
50,000 Pref. Shares of Rs 100 each	...	50,00,000
25,00,000 Equity Shares of Rs. 10 each	...	2,50,00,000
		3,00,00,000

ISSUED:

15,500 9.3% (free of Company's tax but subject to deduction of tax at source at prescribed rates) R.C. Pref. shares of Rs. 100 each	...	15,50,000
6,09,340 Equity Shares of Rs. 10 each	...	60,93,400
		76,43,400

SUBSCRIBED & PAID UP:

3,003 9.3% (free of Company's tax but subject to deduction of tax at source at prescribed rates) R.C. Pref. shares of Rs. 100 each	...	3,00,300
6,09,340 Equity Shares of Rs. 10 each	...	60,93,400

Add Forfeited shares (Amount paid up):

	Rs.	
On Cumulative Redeemable Pref. Shares	2,525	
On Equity Shares	14,375	16,900
		64,10,600

PRESENT ISSUE:

12,497 9.3% (free of Company's tax but subject to deduction of tax at source at prescribed rates) Redeemable Cumulative Preference Shares of Rs. 100 each	... ...	12,49,700

The amount payable shall be:—	Rs. per share
On Application	50.00
On Allotment	50.00

The application for shares must be made for a minimum of five shares or multiples thereof.

The whole issue is fully underwritten by five underwriters as mentioned below and in the opinion of the Directors the resources of the said underwriters are sufficient to discharge their obligations.

Application will be made to Calcutta Stock Exchange for permission to deal in and for official quotation of 9.3% R.C. Preference Shares of the Company.

PRESENT ACTIVITIES AND OBJECTS OF THE ISSUE:

The Company was incorporated on 13th June, 1945 in the State of West Bengal with the objects of carrying on business as electrical, mechanical, general engineers, contractors, manufacturers of electrical equipments and other objects as stated in its Memorandum of Association.

At present the Company is engaged in the manufacture of Power & Distribution Transformers, Switchgears, Electric Motors, Starters in its various factories situated at Cossipore and Budge Budge in West Bengal and at Visakhapatnam in Andhra Pradesh and also manufacturers of Schindler Lifts in India in Technical Collaboration with Messrs. Schindler & Co. Ltd. of Switzerland.

The Company is in need of funds to finance its existing unit at Visakhapatnam for manufacture of Transformers and Switchgears.

PROSPECTUS & APPLICATION FORMS:

Copies of the Prospectus and Application Forms will be available from the Registered Office of the Company, from the Bank of Baroda Limited, 4, Brabourne Road, Calcutta-1, from The United Commercial Bank Limited, Calcutta and their branches at Ahmedabad, Bombay, Delhi, Hyderabad, Indore, Madras, Amritsar, Bangalore, Baroda, Patna, Varanasi & Poona and also from any of the Brokers whose names and addresses are given below.

BOARD OF DIRECTORS

1. **Sri A. V. Birla,** Director of: Hindustan Investment Corpn. Ltd., Bharat Commerce & Industries Ltd., Asian Cables Corpn. Ltd. & thers.
2. **Sri B. P. Khaitan,** Director of: Upper Ganges Sugar Mills Ltd., National Insulated Cable Co. (I) Ltd., Hindustan Motors Ltd. & others.
3. **Sri L. P. Shah,** Director of: Eastern Silk Mfg. Co. P. Ltd., New General Agents P. Ltd., Lakshmi Textile Mills P. Ltd. & others.
4. **Sri P. D. Pasari,** Director of: Aditya Investments P. Ltd., Ashoke Investment Corpn. Ltd., India Automobiles (1960) Ltd. & others.
5. **Sri G. D. Jhawar,** Director of: Jubilee Investment Co. P. Ltd., Kamal Trading Co. P. Ltd., Hindustan Aluminium Corpn. Ltd.
6. **Sri M. L. Nopany,** Director of: Shree Hanuman Sugar Mills Ltd., North Bihar Sugar Mills Ltd., Magnets & Appliances Manufacturers Ltd. & others.
7. **Sri S. C. Dalal,** Director of: Dalal & Jhaveri P. Ltd.
8. **Sri H. P. Barat,** Director of: Usha Martin Black (Wire Ropes) Ltd., Universal Cables Limited, Star Paper Mills Ltd. & others.
9. **Sri G. S. Poddar,** Director of: Rashtriya Metal Industries Ltd., Shree Hanuman Mining Corpn. Ltd., Pulgoan Cotton Mills Ltd. & others.

UNDERWRITERS

1. **The Life Insurance Corporation of India,** 'Jeevan Kendra', Jamshedji Tata Road, Bombay-1.
2. **The Oriental Fire & General Insurance Co. Ltd.,** 'Oriental Building', Mahatma Gandhi Road, Bombay-1.
3. **The Indian Guarantee & General Insurance Co. Ltd.,** Gresham Insurance House, P. M. Road, P.O. Box 165, Bombay-1.
4. **M/s. G. M. Pyne,** 14, India Exchange Place, Calcutta-1.
5. **M/s. A. B. Pandit & Co.,** 32, Apollo Street, Fort, Bombay-1.

SECRETARIES & TREASURERS

Birla Brothers Private Limited, 15, India Exchange Place, Calcutta-1.

2. **Raj Paul Chadha & Co.,** Delite Cinema Building, Asaf Ali Road, New Delhi.
3. **P. Roy Company,** 3/8, M. M. Road, Junction Panchkuin Road, New Delhi.

BANKERS TO THE ISSUE

The United Commercial Bank Ltd., 2, India Exchange Place, Calcutta-1.

The Bank of Baroda Limited, 4, Brabourne Road, Calcutta-1.

DATE OF OPENING OF SUBSCRIPTION LIST: 7th OCTOBER, 1963

Date of Closing of Subscription List: At the Close of Banking Hours on 12th October, 1963.

New Delhi

T.T.K. MODIFIES C.D.S. AND GOLD CONTROL RULES

(FROM OUR NEW DELHI CORRESPONDENT)

ON Saturday, the last day of the monsoon session of the Lok Sabha, the Central Finance Minister, Mr. T. T. Krishnamachari, made an important announcement modifying the Gold Control Order and abandoning the Compulsory Deposit Scheme in so far as it related to persons who were not income tax payers. The Compulsory Deposit Scheme falls into five parts. Two of these have already been implemented—one for persons liable to pay tax under the Income Tax Act, and the other for employees of certain categories earning salaries of Rs. 1,500 or more a year and who are not liable to pay income tax. The other three parts relate to:

(1) persons liable to pay land revenue;

(2) holders of immovable property in urban areas assessed to property tax who are not liable to income tax, and

(3) dealers whose annual turnover for purposes of State sales tax is Rs. 15,000 or more and who are not subject to income tax.

Mr. Krishnamachari said that "three out of the five schemes contemplated under the Compulsory Deposit Scheme Act, 1963, namely, those relating to land-revenue payers, urban immovable property holders and sales tax payers, have not yet been brought into effect. These schemes have to be implemented through the States and local authorities concerned and draft schemes were referred to the State Governments for their comments. The replies received have indicated numerous practical difficulties, notably in the case of land-revenue payers.

"Not only the rates at which tax on land is levied, but also the periods, methods and agencies of collection vary widely from State to State. As for the two other schemes also, it has been represented that collection will pose difficulties. In many cases, the municipal authorities do not impose any urban property tax and will thus have no ready basis for collecting compulsory deposits. The States have also complained that the sales tax payers' scheme will impose additional burdens on their already hard-pressed sales tax authorities. Besides, the outturn from these two subsidiary schemes is expected to be comparatively small.

States Unhappy

"Quite apart from the administrative problems, there were indications that many State Governments were far from happy about the idea that an additional levy, even though it was in the form of savings rather than tax, be imposed upon land owners and the relatively low income urban groups. Since the main beneficiaries of the Compulsory Deposit Scheme were the State Governments themselves and the entire collection from the land revenue paying class would have gone to them, the Government of India felt that it was but fair to ask the State Governments to express their considered opinion once again on the scheme as a whole. Accordingly, I wrote to the Chief Ministers of all the States asking them for their opinion as to whether these three schemes should be implemented, modified, or given up. The replies I have received from them show that almost all of them are in favour of abandoning the scheme for the land revenue payers and most of them would prefer to see the schemes for the urban property owners and sales tax payers also given up. Some Chief Ministers have drawn pointed attention to the fact that the levy of a compulsory deposit on landowners in particular and the urban population generally will affect the contribution to voluntary savings, a consideration which we cannot ignore.

Equity of Sacrifice

"In the light of these comments, the Government of India has made a review of the Compulsory Deposit Scheme as a whole. It is important to ensure equity of sacrifice between people who belong, broadly speaking, to the same income groups or to the same economic levels. We cannot exempt land-revenue payers from this scheme without giving relief to salaried workers as well.

"The Government of India has, therefore, decided that schemes in relation to land revenue payers, urban immovable property holders and sales tax payers, which have not yet come into force, should be given up. As for salaried workers who are not in the income tax paying category, the Government feels that similar relief should, in equity, be given to them. Arrangements will be made to refund the deposits that have already been made with interest with the least possible delay. Income tax payers, however, stand on a different footing. As far as they are concerned, the rate of income tax on them has gone up and they have the option to pay a part of the increase in the shape of a contribution to the Compulsory Deposit Scheme. A mere withdrawal of this scheme might mean greater hardship to them, because in lieu of a refundable deposit they would have to make an outright payment in the shape of a tax. The scheme for income tax payers will, therefore, continue. I trust these changes will have the support of the House." There was loud and prolonged cheering from the members who obviously welcomed this part of the Finance Minister's announcement.

Referring to the gold policy, Mr. Krishnamachari said: "The basic features of the gold policy initiated by my distinguished predecessor were aimed at a curtailment of the facilities to market gold, particularly in its primary forms, so that the smuggler who got past the Customs points did not feel free to dispose of the gold openly and without challenge, and, secondly, at reducing the demand for gold by stopping the production of gold ornaments of a higher purity than 14 carat. The Government feels that both these objectives are basically sound and justified by considerations of national interests. There can be no going back on them. Nevertheless, the many problems which have been thrown up in the administration of gold control in its present form had to be reviewed. We had also to consider whether and to what extent changes were necessary, even if they be of a transitional character, to alleviate hardship to the class of people, who have been working on gold as a means of livelihood, having at the same time due regard to the sentiments of the people, who as I have said before, have a great deal of attachment to gold and gold ornaments.

"On the problem of those working on gold we have to consider firstly the self-employed goldsmiths and secondly those employed by the bigger goldsmiths and jewellers. While we have a programme for the rehabilitation of the self-employed goldsmiths, we had recognised that the fringe of the problem has been barely touched, and it would take much more than the amount of money we have allotted for this purpose so far as well as a great deal of time, before we can successfully rehabilitate most of them. While we propose to proceed with this task of rehabilitation of goldsmiths, who depend purely on the manufacture of gold ornaments for their livelihood, we cannot do all that has to be done in a day.

"The Government has, therefore, decided to grant licences to self-employed goldsmiths on a nominal fee and to permit them on certain conditions to convert existing gold ornaments in excess of a purity of 14 carat into ornaments of like purity. This will restore to them the facility to carry on what was their main avocation. Out-workers, namely, those goldsmiths who worked on gold in their own houses to execute orders received from licensed dealers, will be permitted to handle limited stocks of primary gold up to 14 carat. The Government hopes that these measures will facilitate the continuance in employment of goldsmiths and artisans in this trade, pending the long-term process of rehabilitation.

"I would emphasise that these relaxations do not involve any change in the Government's basic long-term policy to discourage the use of gold generally and the production of gold jewellery of high purity. If anyone wants new ornaments to be made from primary gold, he can only get 14-carat ornaments to whichever source of supply he turns. There will be no sale or display by dealers of jewellery of a purity exceeding 14 carat. The facility to convert existing ornaments into new ornaments of purity above 14 carat is necessarily a limited one and intended to benefit those who possess such ornaments and want them to be reshaped, and to enable the self-employed goldsmiths to continue to earn a living for the time being.

Enforcing the Rules

"Apart from these changes to which I have just referred, the Government proposes to make certain changes in the administrative set-up in order to make enforcement more effective. The present rules provide for the establishment of a board to advise the Government and to be in overall charge of the implementation of policy. The responsibility for enforcement of these rules is, however, entrusted to the Central Excise Department. After a careful examination of the matter, the Government has come to the conclusion that the bifurcation of responsibility for policy-making and for implementation is not wise. The Government has, therefore, decided to centralise the administration by appointing a Gold Control administrator, located in the Department of Revenue, who will be in charge of matters of gold policy and administration and who will seek the assistance of State administrations in this task.

"When the Gold Control rules were originally framed, it was considered that the most convenient method was to issue them in the form of amendments to the Defence of India Rules. Considering the application of these rules to a very large section of the community, in relation to both the use of gold in industry and the use of gold as ornaments, the Government feels that these rules should be replaced by a statute, subject of course to the approval of Parliament. The Government, therefore, intends to bring up before Parliament at a very early date a Bill which might cover both short-term and the long-term objectives of the Government's gold policy."

In this context, it is interesting to note that 42.97 million grammes of gold valued at about Rs. 23 crores at international prices have been declared under the Gold Control rules by dealers, refiners, institutions and individuals. According to an article published in the April 1958 issue of the *Reserve Bank of India Bulletin*, the total quantity of non-monetary gold in all forms in India was about 3,266 million grammes valued at about Rs. 1,750 crores at the international price.

The Central Minister for Defence, Mr. Y. B. Chavan, said in Parliament last week that his Ministry would not be able to spend all the money allotted to it. Meanwhile, the Central Ministry of Finance is engaged in a study of factors which have led to a rise in prices and a decline in investment confidence. Taxes, which have had an adverse effect on production or on the cost of living, are being examined by the Ministry in the context of their financial implications. As far as the investment market is concerned, the official statement that the super profits tax would be levied only during the period of emergency should help revive investment confidence.

The Finance Minister made it clear that no major reform of the existing tax structure should be expected overnight. It is, however, safe to expect that he will take all possible steps to hold the price line and revive the investment market.

PUBLIC-SECTOR PROJECTS

Administrative Set-up

While making a statement last week on the future set-up of some public-sector projects, the Central Minister of Steel and Heavy Industries, Mr. C. Subramaniam, said in Parliament that "the programme I am announcing today has been under consideration for several months. It has been fully discussed with the chairman of Hindustan Steel and in recent weeks it has also been the subject of discussion with the senior officials of the Ministries principally involved in the proposed changes.

"In general, the proposed changes will place a larger measure of operating authority at the plant level, and will minimise the need of scrutiny by my Ministry and by the headquarters at Hindustan Steel Ltd and the Fertiliser Corporation of India in the day-to-day operations at the plants.

"I shall now indicate the main changes which I propose to introduce. The order in which I mention them does not indicate an order of importance.

"The authority to appoint, promote and discharge persons within the plant organisations at Durgapur and Sindri is being placed at the plant level. The General Managers will be made responsible for their organisations and they will delegate to the heads of the several units within their organisations the appropriat

sub-responsibilities. I am convinced that unless such authority is placed by the board of directors in the hands of the General Managers, and unless he in turn places similar authority in his several supervisors down the line, it is not possible for him to hold his supervisors fully responsible for the operation. Of course, in his turn, the General Manager will remain responsible to the board of directors and the Chief Executive for the efficient operation of his plant.

"Steel and fertilisers are produced by machines and men. The men must be organised. Organisation must have a single head to whom the members of the organisation must owe undivided allegiance. To put this in another way, if a General Manager or one of his sub-managers must accept for his organisation, personnel who come to him, are taken away from him, or are promoted under him, pursuant to rules, regulations of higher authorities over which he has no control, then I feel that he may not be able to maintain the discipline, or have the undivided loyalty, or exercise the leadership essential to effective production.

"In the programmes at Durgapur and Sindri, the plant managements will also be given the authority to decide, within the ambit of their budgets, how many senior posts and how many junior posts of each category they will have. They will be free to recognise merit by promoting from one grade to another, or by giving advance increments. It is only where scales of pay for similar types of posts are proposed to be changed that a reference to the board of directors will be needed, so as to prevent awkward pressure on the other plants.

Bonus Schemes

"The plant may also recommend to the board specialised bonus schemes particularly fitted to their needs and the board could well have different bonus schemes to provide the right incentive and the right reward for good work in each plant. Plants, even in the same industry, such as steel, have special and sometimes differing requirements concerning salaries and bonus schemes, and plant managements need flexible authority to devise programmes suited to such specialised requirements. I think there is too much tendency in our public-sector economy to prescribe rigid categories for workers and supervisors and also to set time limits within which promotions cannot be made; so also to give too much emphasis to seniority and not enough to merit for promotions at all levels.

"Purchases of replacements and stores have been frequently delayed in the past, with resulting loss of production. The function of procurement (purchases) is a specialised function, just as specialised as accounting. What is needed is for Purchasing Officers to employ their special aptitudes for procurement of the best values at the most favourable prices in the most expeditious manner, and, above all, in timely response to the requirements of uninterrupted production. While General Managers and Purchasing Officers at Durgapur and Sindri will be free to call upon the Finance Officers for advice, when in their opinion it is needed on purchase matters, and I should like to clarify that it is not the intention to side-track the Finance Officers, the responsibility for timely purchase will be squarely placed on the General Managers and their Purchase Department, and they will have the authority to override the advice given by the Financial Adviser where they consider it necessary to do so in the interest of the plant.

New Post Recommended

"A new office should be established to be known as Commercial Manager or Commercial Superintendent, the new post to be filled by a person with appropriate experience and qualifications. The Purchase Officers will report to the incumbent of this new post. He will be responsible also for maintaining good liaison between sales and production, particularly in the case of Durgapur. I find that in all industry, there is frequently a sharply differing outlook as between sales and production. A centralised sales management is naturally inclined to accept any and every order obtainable, often without considering the feasibility or cost of producing a particular item or quantity in the plant. Production men, on the other hand, are naturally desirous of running the items and quantities which can be run at the lowest cost and with the most efficient results. These differing attitudes need to be reconciled. One of the important functions of the new post of the Commercial Manager will be to provide good liaison between sales and production which will co-ordinate the need of sales to satisfy customers and the need of production to operate efficiently.

"I have concluded that in many of our public-sector plants we need to bring more highly specialised and experienced talent to the office of the personnel manager. Personnel management is a staff function which must remain advisory only to the General Manager and the line supervisors. Contrary to this concept, there is now a tendency for the Personnel Managers to consider themselves as administrators of personnel rules and regulations emanating from some higher authority, often at variance with the judgment of experienced line operators.

"As in the case of the Personnel Manager, so also I consider it essential to emphasise the staff and service functions of the Plant Financial Adviser and Chief Accounts Officer and eliminate the control aspects of this office.

"The idea that public-sector management can be so hedged about with checks and balances that mistakes cannot occur is itself mistaken. Effective management will always make interim mistakes. Mistakes are the price of progress. It is the end-result which counts.

Efficient Production

"If the managers of our public-sector plants are mostly incompetent or corrupt, as sometimes seems to be assumed, and therefore must be hedged in with restrictions, then our public-sector enterprises will progress but haltingly and in the end at prohibitive costs. Efficient production at tolerable costs depends exclusively upon good management. If India's industrialisation is to progress, then we must trust our public-sector projects to managers with full authority and accord to such managers that same trust and confidence which we repose in our leaders in other fields. Since the General Managers remain responsible to their boards, if they betray that trust or fail for any cause, then they must be promptly removed.

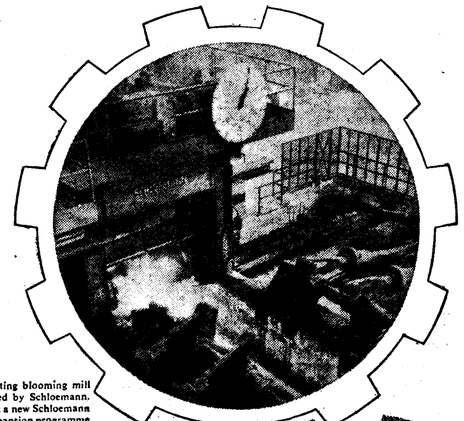
"Consistent with these observations, at Durgapur and Sindri, the functions of the Financial Adviser and the Chief Accounts Officer will be to assist the General Manager with internal plant accounting, cost accounting and financial advice. In fact, at these plants we should think in terms of a top plant management, a plant staff cabinet, so to speak, comprising the Chief Plant Accountant (F.A. and C.A.O.), the Commercial Manager and the Personnel Manager. But it is clearly understood that the function of the Chief Plant Accountant or the Financial Adviser is a staff, not an operating, function. He should be and indeed is no more than one of the trusted lieutenants of the General Manager.

Excessive Manpower

"Excessive manpower besets many of our public-sector plants. This is particularly true at Sindri, one of our older enterprises. Unemployment we have, but to load any given plant with excess manpower is not the way to deal with it. In both steel and fertilisers, our manning a ton of product is several times more than in comparable operations abroad. To contend that Indian conditions require this overmanning is wrong. There are in India today industrial operations in which the manning compares favourably with like operations abroad. Proper manning is a plant management function.

"One of the factors in overmanning is excessive leave, both authorised and unauthorised (absenteeism). The procedures on these matters will have to be tightened up.

"Therefore, the programme, particularly at Sindri, will involve the addition to staff of a labour lawyer, experienced in advocacy and competent to relieve management of its uncertainties in labour law interpretation and to handle claims and litigations if they should arise. It is possible that this need for specialised legal advice in labour matters may have to be served by a continuing relationship with a general labour law practitioner rather than by a full time staff lawyer.



"The Auditor General of India under our Companies Act has the authority to designate chartered accountants, giving them such special instructions as he sees fit to carry out the work of auditing our public-sector enterprises. He has long since designated an approved list of chartered public accountants. They are presently auditing our public-sector enterprises.

"In addition, the Auditor General has his staff located at the plants who go into matters which chartered accountants in this and other countries do not enter into. I would personally have very much preferred that at Durgapur and Sindri, when I am proposing a new system, these auditors could be withdrawn and the audit confined to the examination by chartered accountants as in other countries which also have public-sector plants. Till, however, this can be done, it is the intention that a separate officer be nominated in each plant to deal with whatever audit queries may be received and to leave the General Manager and his operating staff free to devote their entire time to the efficient running of their units.

"The board of directors of Hindustan Steel will decide whether similar changes, with such modifications as may be necessary to suit local conditions, will be introduced in Rourkela and Bhilai also."

Serving heavy industry...

SCHLOEMANN

As early as 1937, the existing blooming mill at TISCO was modernised by Schloemann. TISCO have now installed a new Schloemann blooming mill for their expansion programme

ROLLING MILLS HAMMERS PRESSES

In her steady progress towards economic and industrial advancement, India demands the finest plants and equipment for her heavy industries—and Schloemann have been supplying the country with the latest designs in rolling mills, hammers and presses for over a quarter of a century.

SCHLOEMANN plants for India's Heavy Industry

Sole Distributors:

VOLTAS

Head Office: Bombay 1

Calcutta-Madras-New Delhi

Bangalore-Cochin-Kanpur

Among the industrial undertakings in India which are using or have ordered Schloemann plant and equipment are:
Tata Iron & Steel Co. Limited
Hindustan Steel Limited
Mysore Iron & Steel Works
Tata Locomotive & Engineering Co. Limited
Indian Steel & Wire Products Limited
Krishna Steel Industries
Atomic Energy Establishment, Trombay, Bombay
National Small Scale Industries, New Delhi

PAPER

Raising Production

The production of paper has increased from 185,000 tons in 1955 to 425,000 tons during the current year. On present indications, it is further expected to rise to about 580,000 tons by the end of the third plan period. India will still be short by about 120,000 tons, compared with the targeted production. In order to narrow this gap as far as possible, a plan is being drawn up to increase production in the existing plants to the maximum extent possible by making adjustments in the machinery and equipment. This scheme, it is expected, will be ready shortly. It may help increase production by about 60,000 tons to 70,000 tons. So the gap between the targeted production of 700,000 tons and actual production will be narrowed down to about 50,000 tons to 60,000 tons.

The shortfall may be attributed to various reasons, such as the lack of adequate interest among entrepreneurs in the industry due to low returns, shyness of the capital market and the political situation caused by the Chinese aggression. The licensing policy which was restricted two years ago due to overlicensing of capacity, has been relaxed since applications for expanding present undertakings as well as for establishing new ones in areas where the raw material resources have remained untapped so far, are now being considered on merits. Moreover, applications for small schemes (up to a capacity of 10 tons a day) based on indigenous plants and raw materials have throughout been considered liberally, it is claimed.

The country has had to depend on imported newsprint for meeting the major part of its requirements since the indigenous production of 30,000 tons is hardly 25 percent of India's present-day need for 125,000 tons. This has resulted in a considerable drain on India's foreign exchange resources. With a view to achieving the third plan expansion target of 150,000 tons, industrial licences were issued to three private parties for developing a total capacity of 150,000 tons. These parties have not so far made any progress. Of them, one is still surveying the suitability and sustained availability of raw materials as well as extraction methods, while another has submitted a revised scheme for doubling the capacity already licensed which the Government is at present considering. The third one shows little likelihood of coming up at all. Even if the first two do show some results, it may be during the fourth plan period. The scheme of expanding the capacity of the Nepa mills from 30,000 tons to 75,000 tons of newsprint a year is, therefore, being actively pursued.

MACHINE-BUILDING INDUSTRIES

Preparing Blueprints

The planning group for machine-making industries in the Ministry of Heavy Industries has set up several sub-groups to prepare blueprints for developing these industries in the fourth plan. Some of these sub-groups relate to the heavy machine-building industry, heavy electricals, machine tools, industrial and textile machinery, structurals and pipes and tubes.

ALUMINIUM

Licence Revoked

The Government has revoked the industrial licence granted two years ago to Mr. Murarji Vaidya for setting up an aluminium plant in Mysore in collaboration with Reynolds of the U.S.A. as no tangible progress has been reported towards the commissioning of the project. Side by side, the Government is examining Hindustan Aluminium's request to allow it further to expand its capacity from 50,000 tons to 60,000 tons.

The further progress of the Koyna aluminium project in collaboration with a German company, V.A.W., appears to be linked to the export promotion clause. Meanwhile a new look at the export promotion commitment is apparently necessary. An opinion is gaining ground that it will be futile to insist on exports of an article which is in short supply in India and is, therefore, being imported. If it were an item, the production of which was still in the intial stages, its cost of production should be higher than the prevailing world prices. In other words, exports of such items were being subsidised and foreign exchange was allocated to import them to meet the shortages in the home market.

The demand for aluminium is rapidly increasing, since it is being used as a substitute for copper in the manufacture, say, of cables. As reported earlier, one project planned for Mysore had so far failed to materialise. The Government is considering whether to retain the export promotion clause of the Koyna project. A major policy decision, which will cover the project, is expected shortly.

MOTOR-CARS

Finance from World Bank

The World Bank, it is reported, has shown interest in providing finance to promote the rapid development of the motor-car industry in India. A World Bank mission is expected here shortly to discuss the development plans with the Government and the industry.

EXPLOSIVES

U.S. Help for Licensees

The representatives of the U.S. firm, Dupont, have been here to discuss the terms of collaboration with the Khatau group and the Harshad Rai group for manufacturing explosives. The combined capacity of the two licensees is 17,000 tons of explosives a year. While in India, the representatives of the U. S. firm are also looking round for collaboration for manufacturing such items in which Dupont specialises, such as petro-chemicals and man-made fibres.

HINDUSTAN STEEL

Plans for Technical Training

The Government has asked the the Hindustan Steel Ltd to step up its training programmes in order to make available 30 percent more technical personnel to run the public-sector steel plants.

About 35,000 extra technical personnel will be required for the steel development programme in the public sector up to the end of the fourth plan period. A phased programme for meeting these requirements was already under way and it was hoped that almost all these needs would be met. The first establishment to be started in Bokaro will be the technical training school. The private-sector steel plants have their own training programmes to meet their requirements.

The investment on the three steel plants in the public sector up to 31st March, 1963, is estimated as follows:

	(In Rs. 000,000)
Bhilai	2,247.76
Rourkela	2,713.75
Durgapur	2,019.62
Total	6,981.13

Providing for depreciation and interest on loans, Hindustan Steel is estimated to have suffered a loss of Rs. 61.55 crores up to 31st March, 1963.

BHILAI

Expansion under Fourth Plan

It is proposed to add a coke-oven battery, a blast furnace and ancillaries at Bhilai in anticipation of its expansion in the fourth plan period. A project report for the purpose is at present being prepared by the Bhilai Design Cell.

IRON ORE

Survey Report on Exports

A Japanese survey mission of the Overseas Technical Co-operation Agency of Japan has recently conducted a reconnaissance survey of the development programmes of Orissa in the fields of mining, port construction, industries, power and fisheries and with particular reference to the project for the construction of a deep sea port in Paradip and the export of iron ore from there. The mission thinks that total reserves of iron ore in the Daitari area would be over 55 million tons. This would be equivalent to half that quantity in lump concentrate of 60 percent Fe. It has examined the plans of the State Government for mining and transporation of this ore by truck-trailers through an expressway, now under construction, for the export of 2 million tons of iron ore a year commencing from the end of 1965. The mission has made detailed technical suggestion on these aspects as well as on the port construction programme both in the first stage and the ultimate phase. While the first stage visualises an export of 2 million tons of iron ore from the Daitari area, the mission has recommended the early construction of a railway line from Paradip to Banspani in order to enable the exploitation and export of not only the iron ore of Daitari but of the high-grade ore in the Nayagarh area of north Orissa. For the ultimate development of Paradip port, it has suggested ten berths for miscellaneous cargo in addition to five berths for ore handling and has visualised the gradual development of various industries centring round the port, such as machine repairing, shipbuilding, food processing, and oil refining.

The mission has also covered in its survey the mining of chromite and manganese ore. It has specially stressed the bright prospects for large-scale exploitation of coal around Talcher. In its report, it has dealt with the mechanisation of farming, the manufacture of agricultural implements, the development of fisheries, of small enterprises, electrical power and town planning of the new harbour city in Paradip.

COAL WASHERY

Contract Signed

A contract for setting up a coal washery in Kathara, Bihar, was signed here between the National Coal Development Corporation, a Government of India undertaking, and V/O "Tjazhpromexport", the Russian supply organisation. Under the contract, "Tjazhpromexport" would supply for the washery equipment, instruments, apparatus and other materials valued at Rs. 2.05 crores (3.89 million roubles) out of the Indo-Soviet rouble credit agreement of February 1961.

The washery, which will be one of the biggest units in the country, will have a throughput capacity of 3 million tons of raw blendable coaking coal a year. The detailed project report for the washery, prepared by the Russian designing organisation, "Giproshacht", has already been approved by the National Coal Development Corporation.

Russia had also extended assistance to India in setting up certain other coal mining establishments. These include two coal mines in the Korba area, Madhya Pradesh, with an aggregate annual capacity of 1.7 million tons, a quarry in Korba with an initial capacity of 1 million tons which will later be expanded to 2 million tons and the establishment of the Central electrical and mecha-

nical workshop at the Korba coalfields for repairing a variety of coal mining equipment.

FERTILISERS

Plan Targets and Production

It was officially stated that according to present estimates, the installed capacity and production of nitrogenous fertilisers at the end of the third plan were likely to be about 640,000 tons and 500,000 tons in terms of nitrogen, respectively. The third plan targets for capacity and production were 1 million tons and 800,000 tons, respectively, in terms of nitrogen. The shortfalls were mainly due to the slow progress in the implementation of the private-sector projects. Of the seven fertiliser projects, which had been licensed or approved for establishment in the private sector, only three —in Kothagudam and Visakhapatnam in Andhra Pradesh and Baroda in Gujarat—had made some progress. The licensees of the projects in Hanumangarh, Rajasthan, Tuticorin in Madras, and Mangalore in Mysore have not yet submitted their final proposals for their projects. The future of the Durgapur fertiliser project in West Bengal is also being reconsidered. As for the public-sector projects, it is hoped that the Trombay factory in Maharashtra will start production next year, the Namrup factory in Assam and the Neyveli plant in Madras in 1965 and the Korba plant in Madhya Pradesh and the Gorakhpur factory in Uttar Pradesh in 1966. The Alwaye plant's expansion programme in Kerala should also be completed by 1965-66.

It was stated that proposals for the creation of additional capacity for producing fertilisers during the fourth plan period were already being worked out by the Planing Group on the Fertiliser Industry. As a result of discussions held so far, the group has come to the tentative conclusion that the production target for nitrogenous fertiliser by 1970-71 might be about 1.7 million tons in terms of nitrogen. For phosphatic fertilisers, the tentative target was 800,000 tons of P_2O_5. The group was now engaged in determining the regionwise requirements of both nitrogenous and phosphatic fertilisers at the end of the fourth plan period, as well as the types of fertilisers required in each area. Meantime, the Fertiliser Corporation of India has been asked to investigate in advance the feasibility of expanding the capacity of some of the existing factories in the public sector and also undertake techno-economic studies on raw materials, transport facilities and distribution arrangements.

SUGAR

Subsidy for Losses

The loss on sugar exports during the financial year 1960-61 worked out to about 50nP a maund. This was met by the industry. Since 1961-62, the losses are mainly met by the Government. A subsidy of Rs. 5.5 crores was paid on exports in 1961-62 and Rs. 14.20 crores in 1962-63.

MINERALS

New Corporation Formed

The new Corporation to be known as Minerals and Metals Trading Corporation of India Ltd is expected to start functioning from October 1963. The main objects of the Corporation will be as follows: (i) to organise and undertake exports of mineral ores and imports of metals and alloys, and (ii) to explore and develop new markets for the export of mineral ores and concentrates with a view to diversifying and expanding their exports. The Corporation will have an authorised capital of Rs. 5 crores.

amazing LIQUID... makes CONCRETE DUST-PROOF, WATERPROOF and PERMANENTLY HARD

LILLINGTONS

hardcrete

Lillingtons HARDCRETE, exhaustively tested and used by builders throughout the world, has revolutionised construction technique by its unparalleled superiority over conventional waterproofing and hardening materials. Lillingtons Hardcrete Liquid ensures even penetration and effectiveness throughout the concrete. Setting time can be varied as required.

HARDCRETE
- Waterproofs
- Gives permanent hardness.
- Dust-proofs—protects men and machinery against harmful dust.
- Increases crushing strength of concrete by 33 1/3%.
- Resists penetration of oils and chemicals.
- Sets to required time.

Available in 25 and 50 litre drums.

Manufactured under licence from George Lillington & Co. Ltd., Mitcham, U.K. *by* SNOWCEM INDIA LTD., Bombay

Makers of
SNOWCEM Decorative Waterproof Cement Coating
COLORCRETE Coloured Portland Cement
SURFACIT Concrete Surface Hardening Liquid.

Literature and technical advice from Sole Selling Agents in India: **KILLICK, NIXON & CO., LTD.,** 31, Murzban Road, P.O. Box 109, Bombay.

London

U.K. ECONOMY SHOWS GOOD IMPROVEMENT

(FROM OUR LONDON CORRESPONDENT)

IT is evident that the Government now takes the view that the economy has at last taken a decisive turn for the better. That can be the only interpretation one can place on Mr. Maudling's address to a Rotary Club luncheon the other day, when he said: "I think we can reasonably say that we are in a period of substantial expansion combined with stable prices and a strong pound .... Prospects for the growth of demand at home, with tax reductions and rising Government expenditure, are good."

The Chancellor described the August trade figures, which had been released the same day, as "excellent," and indeed rightly so. Exports of £351 million on a seasonally corrected basis, against £339 million in July, were the highest ever recorded in one month. With imports showing a drop from £419 million to £398 million, the seasonally adjusted trade "gap" in August was only £34 million, compared with £66 million in July. During the first eight months of this year, after eliminating seasonal influences, exports as a whole have been running at 6 percent higher than last year. On the same basis, the rise in imports has been only 4 percent. If this sort of trend can be continued, Mr. Maudling should find a firm basis for industrial re-expansion at home without any balance of payments problems.

On the home front as well, the news was good and the most cheerful this year. Industrial production continued its expansion in July, according to provisional estimates issued by the Central Statistical Office. The index number, taking 1958 to equal 100, reached 112 for July, compared with a revised figure of 119 for June, but seasonally adjusted, the July number was 120, against 118 in June. The unadjusted figure is four points above that for January and the one taking account of seasonal factors is 11 points up. Manufacturing industries alone had an index number of 113 unadjusted and 121 adjusted. Unadjusted figures show the weekly average rate of production in each month, and on this count, the July figures are below all but the first month of the year. The seasonally adjusted numbers, however, exclude movements due to regularly recurring seasonal factors, including holidays, and are designed to make the trend of production more readily discernible. On this score, July proved to be the best month of the year.

Exports Rise

Speaking of the strong rise in exports this year, Mr. Maudling said: "This reflects growing efficiency, enterprise and competitiveness, and is a great tribute to all engaged in industry." He went on: "At the same time, prices have remained remarkably stable and sterling has been strong. The index of retail prices has shown virtually no change this year—and this is at a time when prices on the Continent are rising rapidly. The balance of payments position is sound and the latest returns of our gold and dollar reserves were definitely good."

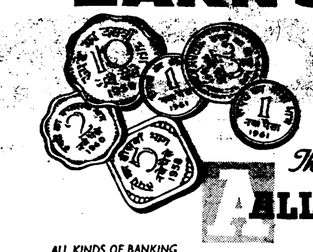
He agreed that there were some weak spots, including the machine tool industry, which was going through a difficult time. There was still real cause for concern about the unemployment situation in the development districts, but there was also a good deal of evidence—from the enquiries reaching the Board of Trade and from applications for industrial development certificates—that the pace of investment in those areas was quickening.

The Chancellor might have gone even further if he had had the latest unemployment returns from the Ministry of Labour, which appeared subsequent to his speech. They show that unemployment has fallen below half a million for the second time this year. On 9th September, the level of unemployment was almost back to that of June, when 480,000 were out of work. This is the first time since 1960 that unemployment has dropped between August and September. There is a normal seasonal rise in the wholly unemployed of roughly 11,000, although this is always partly offset by the number of school-leavers who find jobs. This year the seasonal increase has been counteracted not only by school-leavers starting work, but by the continuing revival of the economy. These factors are believed to have produced a net reduction of at least 10,000 in the August unemployment total of 501,000.

The figure in September 1962 was 465,000, which rose to 566,000 in December, and was then inflated by the severe weather in January and February. Apart from the weather the underlying trend of unemployment was upwards until last March. The measures taken last winter by Mr. Maudling, reinforced by this year's Budget, have reversed the trend. Since March, the fall in the number of unemployed has exceeded the normal seasonal average every month. If the new pattern can be maintained, the usual increase in unemployment during the winter months will be significantly smaller this year. Instead of a normal rise of about 45,000 between now and December, the increase would only be in the region of 20,000. If this can be achieved, it would be a major success for the Government, and would provide a basis for a drastic reduction in unemployment next spring, when the seasonal trend will again be downwards

Expansion with Stability

Summing up the general position, Mr. Maudling said: "When we look at the National Economic Council targets in the light of recent developments the conclusion is a clear one. It is 'Britain can do it.' We can expand at this rate, with all the benefits it will bring to our people. We can do it with stable prices and a strong pound." World trade conditions seemed to be still expanding. Export trade was going well. The lesson to be learned was that the condition of success was to remain competitive. "Because we have controlled our costs, because we have become more competitive at home, because the rise in incomes has been restrained, we are able to sell more and more overseas." The prospects of expansion without inflation would clearly be undermined if income started once again to rise too fast. Britain could do it if all had the will to see that it was done. This meant that we still needed a measure of restraint—"a difficult thing for any Chancellor to call for. But the evidence is increasingly before our eyes of what can be done if we have the will, the restraint and the determination to work together in the national interest."



Easier loans for developing countries are likely to be one outcome of the improved economic outlook. A recent White Paper entitled "Aid to Developing Countries," reviews what has been done since the last White Paper on the subject was issued years ago. It outlines future plans and, in dealing with loans, says the Government has decided on several steps to ease the position of recipient nations "where their circumstances call for this." It continues: "Hitherto we have given loans for a maximum of 25 years, with a grace period for the repayment of principal of up to seven years. For the future we shall be prepared in suitable cases to make loans for periods up to 30 years, with grace periods of up to ten years. Further, where the economic circumstances of the recipient country make it necessary, we shall be prepared to grant a period of complete freedom from all service charges, by granting a waiver of interest as well as the deferment of capital repayment, for seven years. This latter concession is a very substantial one; it would reduce from, say, 5½ percent to below 3 percent the effective rate of interest on a loan for 25 years."

Since the second World War, Britain had disbursed £1,367 million in overseas aid. Last year, the sum was about £159 million; it was expected to be substantially higher in 1963-64. Dealing with what has happened since the last White Paper, the document states. ".. The need for aid has become no less. The difference between the standards of living in the industrialised and in the developing nations has not diminished; on the contrary, it has increased. The developing countries of the world must necessarily depend largely on their own exertions. But the developed nations recognise a responsibility to help them, both by giving financial aid and by providing advice and training facilities..." It is emphasised that everything depends on a balanced Budget at home. "Our ability to maintain, and perhaps increase, the size of our aid programme depends on the soundness of our domestic economy."

Overseas Aid

The Chancellor of the Exchequer took the opportunity of the news conference at which the White Paper was introduced to issue a declaration of what he sees as its value to the nation. Helping the have-nots, Mr. Maudling said, could never be a "painless process"—nor should it be. But it could provide precisely the new source of inspiration, the new sense of moral purpose which so many critics found lacking in British society today. Mr. Maudling made it clear that he would not grudge a penny of the £180 million or more which he would have to find in the current financial year for overseas aid. From public and private sources the total amounts to something like £300 million a year, or about 1¼ percent of the gross national product. Commenting on a statement that the United States' contribution to overseas aid was a lower proportion of their gross national product than Britain's, Mr. Maudling said: "I am rather against these comparisons. The criterion is not what other people do, but what we can afford to do ourselves. I am extremely anxious that we should not look upon our aid effort as a way of fighting communism. It is something we should do for its own sake."

Jute

WAGE BOARD RECOMMENDS MORE PAY FOR WORKERS

THE Wage Board for the Jute Industry has recommended an increase in the emoluments of all categories of workers and clerks engaged in the mills. It has fixed a minimum wage of Rs. 81 a month for workers in West Bengal, linked the dearness allowance with the working class cost of living index and suggested the abolition of contract labour for manual work and a standardised bonus scheme.

Being a party to the Board's recommendations, the industry perhaps stands indirectly committed to implement them, although the annual bill for wages and amenities will increase by more than 10 percent to around Rs. 35 crores. The industry hopes that the concessions will promote peace and stimulate workers to step up their output which alone can absorb the extra incidence of the higher wages without impairing the competitive position of Indian goods in overseas markets.

When accepted by the Central Government, the new wage structure will come into force with retrospective effect from 1st July, 1963, and be effective until 31st December, 1967. Wages will be paid at the new rates as early as possible, and not later than the wages for the week ended 2nd November. The difference in emoluments between the new and the old wages from 1st July till the date from which the new scale is actually introduced will have to be paid on or before 23rd November. The bonus for this year is to be paid on or before 12th October.

The recommendations do not apply to clerks and employees of other categories working in the head offices, situated outside the mill premises. Unless otherwise stated, all workers as defined under Section 2 (S) of the Industrial Disputes Act, 1947, and employed by mills are covered by the recommendations. They will also be applicable to learners and apprentices engaged in the industry, according to the conditions laid down in the in-plant apprentice training scheme for semi-skilled manual operatives. Where bonus at a higher rate is payable in terms of any existing award, it will continue to be so paid.

Minimum Wage for Workers

The Wage Board's recommendations, many of which have been widely known for quite some time, are of special interest to West Bengal where the industry is concentrated. For workers in this State the Board has recommended a total minimum wage of Rs. 81 a month on the basis of a working class consumer price index of 425 for Calcutta (base year 1939 equals 100). This minimum consists of basic wage, the Board's increment and a variable dearness allowance.

The existing eight basic wage groups have been reduced to three groups. Groups I to IV with earnings from Rs. 34.67 to Rs. 37.92 are to be converted into one group with a basic wage of Rs. 40.17. Groups V to VII with wages ranging from Rs. 39 to Rs. 41.17 are to be equated and given a basic wage of Rs. 41.17. The basic wages of group VIII. now Rs. 42.25 and above, remain more or less unchanged.

Besides this all categories of workers (as distinct from clerical staff) are to get a "Wage Board increment" of Rs. 8.33 a month, inclusive of an interim relief of Rs. 3.42. This increment is to be treated as part of the basic wage for purposes of bonus, provident fund, etcetera.

Variable D.A.

The present dearness allowance of Rs. 32.50 is to be considered as having been fixed on the basis of a price index of 425 for Calcutta (base year 1939 equals 100). This should increase or decrease by 20nP for every point of rise or fall in the index. The dearness allowance will be revised every six months in February and August.

Both for time and piece rates, wages have been fixed on the basis of a 48-hour week, but the dearness allowance will not be reduced whatever may be the number of working hours. For time-rated workers, the basic wage also will not be reduced if the weekly working hours are not less than 45, but if they are below this figure the basic wage may be reduced proportionately.

For clerical staff, the scales of pay for four grades have been revised. After merging the "Wage Board increment" of Rs. 8.33, the scales are: SA grade Rs. 222-10-322, SB grade Rs. 152-10-222, grade I Rs. 92-5-162-7½-207 and grade II Rs. 77-4-137. The manner in which the staff are to be fitted into the new scales has also been prescribed.

The emoluments of *mistries*, oilers, *khalasis*, drivers of motor-cars, lorries and tractors, watch and ward staff and other categories such as pin boys, bar boys, etcetera, have also undergone a revision. With some modifications, the pattern recommended for West Bengal has been followed for mills in other States.

Contract Labour

No contract labour should be employed for manual work in jute mills. Even when contract labour is employed, the principal employer will be liable for paying wages to contract labourer and it will be his responsibility to see that all labour laws are fully implemented.

The Wage Board has not examined the basis of the existing piece-rates in jute mills in West Bengal. Since the Board has raised the basic wages of the piece-rated occupations in wage groups I to VI, necessary adjustments have been made in the unit rates applicable to these occupations. The new piece-rates, as also other piece-rates, will remain unaltered.

Exports to Eastern Europe

The I.J.M.A. delegation which recently visited Russia and the east European countries to study the export prospects for Indian gunnies, it is reported, has been impressed with the possibilities. With the rapid expansion of agriculture and industries in those countries, the demand for a versatile packaging material like gunny has been rising very fast. India's adverse balance of payments with all these countries, except Hungary and Yugoslavia, could be reduced by shipping larger quantities of jute goods.

During its tour, the delegation told them that it is not India's intention to compete with their indigenous packaging industries. What she wants is merely to cover the gap between their demand and supply. The jute mills in these countries have remained idle over the years due to the non-availability of fibre. So conditions are favourable for the Indian industry to enter the markets, provided it pursues a scientific sales policy. The markets are not as sophisticated as those in western Europe or the U.S.A. So there is little chance of competition from artificial fibres or substitute packaging materials. It is expected that Indian gunny exports to Russia will rise from about Rs. 8 crores now to Rs. 30 crores by 1967. Other countries in the communist bloc may take goods worth about Rs. 2 crores.

The Calcutta Jute Fabrics Shippers Association, it is reported, has evolved an export promotion plan to take advantage of the Rs. 3.5-crore Marketing Development Fund recently set up by the Government of India. A delegation will visit African and Middle East countries in November. These countries have long-term plans for developing agriculture. So they may require more packaging materials.

Rise in Gunny Offtake

Despatches of jute goods from mills reporting to the I.J.M.A. have risen sharply from 100,500 tonnes in July to 106,000 tonnes in August. The steep rise in sacking from 36,800 tonnes to 45,000 tonnes has been partially offset by the decline in miscellaneous goods from 17,800 tonnes to 16,100 tonnes and in hessian from 45,900 tonnes to 44,900 tonnes.

Total exports have increased by 1,000 tonnes to 82,000 tonnes; sacking has risen by 4,000 tonnes to 26,800 tonnes, but other goods have fallen by 2,000 tonnes to 13,700 tonnes and hessian by 1,000 tonnes to 41,700 tonnes.

Internal consumption has risen by 4,500 tonnes to 24,000 tonnes. The offtake of sacking has been brisk at 18,400 tonnes, against 14,200 tonnes, while hessian consumption is unchanged around 3,200 tonnes and other goods have risen by only 300 tonnes to 2,400 tonnes.

In August 1962, total despatches were 99,900 tonnes—43,400 tonnes of hessian, 43,000 tonnes of sacking and 13,500 tonnes of miscellaneous goods. Exports amounted to 77,300 tonnes—hessian 40,100 tonnes, sacking 26,700 tonnes and others 10,500 tonnes. Internal consumption totalled 22,600 tonnes—hessian 3,300 tonnes, sacking 16,300 tonnes and others 3,000 tonnes.

Buffer Stock Operations

The Government of India has decided to widen the scope of buffer stock operations in raw jute. According to an announcement from New Delhi early this week, jute cooperatives will actively operate in 88 secondary markets and 300 feeding centres during this year. The National Federation of Co-operatives and the State Trading Corporation

have decided to buy 1,900,000 maunds of jute in the first instance. Of this, 500,000 maunds will be lifted from Bihar, 450,000 maunds each from West Bengal and Orissa, 250,000 maunds from Tripura, 200,000 maunds from Assam and 50,000 maunds from Andhra and Uttar Pradesh. They have also decided to go up to any limit to maintain the prices at the official floor and derivative levels.

About 60 co-operatives have so far been organised in the jute-growing States. Their share capital has been contributed by the Government. The latter has also given subsidies for meeting the costs of operating personnel and warehouses. The Central Government is making arrangements to ensure that the co-operatives in the growing States are provided with adequate resources by the S.T.C.

One special feature of the 1963-64 operations is the fixing of derivative prices for fibre in the upcountry markets. They will be widely circulated in the interior areas in order to help the growers.

THE JUTE MARKETS

Manufactured Goods: Despite a steady trend in the gunny market during the past week, interest was poor due to the virtual absence of overseas enquiries or business. A small hessian deal was reported from Canada for ready and near positions. Earlier, low levels attracted brisk short-covering against open positions. Some prominent shippers bought sizable quotas in preparation for early and late October sailings. Hopes of some fresh orders from Australia, Argentina and the Middle East and also from the Government of India led to some advance booking. The futures market moved in line with the general trend. Towards the close, sacking showed a comfortable gain, while hessian made a small recovery. The turnover was moderate and the undertone steady at the close.

Wednesday's quotations were as follows:

	Sept.	Oct.	Oct.-Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	36.75	36.60	36.50	35.95	35.80
40in. 8oz.	39.50	—	—	—	—
40in. 10oz.	49.35	49.15	48.85	47.95	47.80
B Twills	112.95	112.70	114.25	114.00	113.80
Cornsacks	116.75	116.75	116.75	116.50	116.60
Heavy Cees					
(Plain)	112.25	—	—	—	—
A Twills	133.50	134.50	135.50	136.00	135.50
Liverpools	126.75	127.60	127.25	127.25	127.00

Raw Jute: The Calcutta raw jute market was sluggish during the past week. Sentiment was disturbed by the virtual absence of the mills from the market and reports of increasing pressure of new crop arrivals in the upcountry markets. It seems that mills have already lifted their September quota of 750,000 bales. Their godowns were overflowing with stocks and they had also to absorb the last season's stocks from the S.T.C. Sellers were reserved, but a number of weak holders had to transact business in small lots in selected grade fibre at lower than floor levels; this depressed the sentiment. Although the price was ruling above Calcutta parity rates in a majority of upcountry stations, there was a partial softening in scattered pockets due to the wagon shortage. The turnover was small and the undertone hesitant at the close. In the futures market, lower levels attracted stray bear-covering in moderate lots, helping the price score a small gain, on balance, after minor fluctuations. The undertone was steady at the close.

Wednesday's quotations were as follows:

Landed at Mills (Basis Bottoms)

	Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.
Assam-Agartala Jute	80.38	30.00	80.38	30.00
Northern Jute	79.04	29.50	79.64	29.50
Western Desal Jute	73.68	27.50	72.68	27.50

RECOMMENDATIONS OF WAGE BOARD

THE report of the Central Wage Board for the Jute Industry contains the following recommendations:

(1) The recommendations of the Board will apply to all the jute mills now in existence, including the spinning units and also those that might be started hereafter.

(2) No contract labour should be employed in connection with manual work in the jute mills. Even when contract labour is employed, the principal employer should be liable for payment of wages to the contract labour and it should be the principal employers' responsibility to see that all laws relating to labour are fully implemented.

(3) The Board's recommendations apply also to apprentices and learners in the industry according to the conditions laid down in the in-plant apprenticeship training scheme for semi-skilled manual operatives mentioned in Chapter X of the report.

(4) The total minimum wage in the jute mills in West Bengal at the working class consumer price index number of 425 for Calcutta (base year 1939 equals 100) should be Rs. 81 a month. It should consist of (i) basic wage, (2) Wage Board increment, and (3) variable dearness allowance.

(5) The existing eight basic wage groups in the jute mills in West Bengal should be reduced to the following three groups: (a) Basic wages of all workers within the existing wage groups I to IV, namely, Rs. 34.67, Rs. 35.75, Rs. 36.84 and Rs. 37.92 should be equated and fixed at Rs. 40.17; (b) basic wages of workers within the wage groups of V to VII, namely, Rs. 39.00, Rs. 40.09 and Rs. 41.17 should be equated and fixed at Rs. 41.17; and (c) basic wages of workers in the wage group VIII, namely, of workers who are now at Rs. 42.25 and above, will be more or less the same, namely, Rs. 42.25 and above.

(6) The rate for the double (pair) loom weavers should be 80 percent, instead of the present 75 percent of the basic wages on the production of the two looms.

(7) In addition to the basic wages, all categories of workers (except the clerical staff whose case has been dealt with separately) should be paid an increase of Rs 8.33 a month inclusive of the interim relief of Rs. 3.42 a month. This increase should be shown as a separate item "Wage Board increment", in case of all categories of workers. The Wage Board increment should be treated as a part of the basic wage for purposes like bonus, provident fund, etcetera.

(8) The present dearness allowance of Rs. 32.50 should be considered as the one fixed at the working class consumer price index number of 425 for Calcutta (base year 1939 equals 100). The dearness allowance should be a variable one and the rate of increase or decrease should be 20nP for a rise or fall of each point in the average working class consumer price index number for Calcutta. The dearness allowance should be revised every six months in the months of February and August on the basis of this average consumer price index number of the previous half-years—July to December and January to June, respectively.

(9) The wage fixed by the Board, whether time rates or piece rates, are on the basis of a 48-hour week. If for any reason the working hours in a week are less than the normal 48 hours, the wages of workers should be calculated in the following manner; (i) The dearness allowance should not be reduced whatever may be the number of working hours. (ii) The basic wages should not also be reduced if the working hours in a week are not less than 45. (iii) When the working hours are less than 45 in a week, the basic wages fixed on the basis of 48 hours' week may be reduced proportionately.

The conditions laid down in clauses (ii) and (iii) should apply only to the time-rated workers. All categories of workers, except the clerical staff in jute mills outside West Bengal, should be paid Rs. 8.33 a month inclusive of the interim relief of Rs. 3.42 as the "Wage Board increment".

The revised scales of pay of the clerical staff in jute mills in West Bengal (after merging the "Wage Board increment" of Rs. 8.33) should be as follows:

Grade II	Rs. 77-4-137
Grade I	Rs. 92-5-162-7½-207
S.B. grade	Rs. 152-10-222
S.A. grade	Rs. 222-10-322

THE U.K. JUTE MARKETS

SPOT FIBRE RISES

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firm in Pakistan last week, and most of the cheaper sellers withdrew from the market. However, it was still possible to obtain supplies of the lower grades of both white and Tossa jute at under minimum export rates. Dundee spinners showed a little more interest in raw jute, but the bulk of the buying was in spot fibre. This firmed the spot market in Dundee and some sellers raised their prices by £2 a ton. The quantity of jute available ex warehouse Dundee was now very much smaller and should not exceed 10,000 bales. There was also some business in afloat old crop jute.

Continental countries were also in the market. The quantities purchased were not large, but this all helped to make a firmer position. Most overseas spinners are maintaining their raw material stocks by purchasing a quantity equal to consumption. It is estimated that Dundee spinners have at least six months stocks of raw material. Of course, this includes what has already been bought for shipment. Offers of the higher grades were not being so freely made as previously with Mill Firsts at £130, Mill Lightnings at £108 10s, Mill Hearts at £94 and Grade Hearts at £80, c.i.f. U.K. for September-October shipment. Grade Tossa-2/3 was available at £125, but some sellers were asking up to £130. Grade Tossa-4 ranged from £107 10s, Outport Tossa-2/3 from £97 10s, and Outport Tossa-4 from £87 10s, September-October. Cuttings were steady at £56 for S.N.C. and at £47 10s for N.C.

The Siam jute market was again a little quieter and prices were more or less declined to their former level. Some Continental countries were buying towards the end of last week, and this firmed prices for a time. Dundee spinners have shown very little interest in this type of raw material of late, as they consider it too dear compared with mesta. Grade A was offered at £68 5s, grade B at £63 5s and grade C at £59 5s delivered mill Dundee for November-December shipment.

The Calcutta goods market was firm and prices became slightly dearer during the past week. The U.K. was buying to a limited extent. Quotations were at 74s 3d for 40in. 10oz. and at 54s 9d for 7½oz. a 100 yards f.o.b. Calcutta for September shipment, at 73s 9d and 54s 9d October-December and at 72s 6d and 54s 3d January-March. B Twills were at 172s, 173s 6d and 173s 3d for the respective shipment periods.

Dundee yarns and cloth were firm, and a fair amount of business was still being placed for forward delivery. Prices of common hessians advanced and manufacturers were asking 15.97d a yard for 40in. 10½oz., 14.89d for 10oz. and 12.67d for 8oz. These prices were gross per linear yard, delivered Dundee less 3 percent for prompt cash—unmade up.

THE PAKISTANI JUTE MARKETS

LOOSE FIBRE FIRM

(FROM OUR DACCA CORRESPONDENT)

FEARS of a short crop continue to haunt the market, and consequently, the loose jute market has remain all firm. There was considerable buying in most areas. Even a slight increase in arrivals at the larger baling stations did not have a softing effect. In the northern areas and the northern *jat* areas, a long dry spell resulted in a heavy fall in river levels, which caused some concern since the retting tanks were rapidly emptying. The situation there was saved by the recent heavy rainfall which filled the tanks, but river levels remained low.

Throughout the country standing jute can still be seen. This is not normal, allowing for the fact that the crop was late. The first evidence of this overmature jute is appearing in the *jat* areas around Ashuganj where the quality of the fibre has fallen off considerably.

In the pucca bale market, considerably more business was reported in all grades at better prices. One group bought over 18,000 bales of cuttings for delivery between December and May at a premium of £2 10s over the ready position. Since they withdrew, interest in cuttings fell off. The overseas market slowly, and reluctantly, followed the local firmness and sellers' resistance was reported as well as some buying interest at better prices.

The steadiness in white jute is justified by the fact that the percentage of white jute is smaller than last year. The exportable quantity is even smaller and it is possible, that there will be a shortfall of good quality white jute. But the sympathetic rise in tossa is hard to explain in the lower grades, since there is no doubt that there will be once again ample supplies of Outport Tossa 2/3s and even to a lesser degree, Dacca 6s and Dundee 4s.

NEW USES FOR JUTE

By M. C. Mukherji

FOR versatility, jute is unique among textile fibres. It is the world's star packaging; it has innumerable uses in industry. The nicest carpet has a jute backing under the pile. Jute is the cloth base of "tufted" carpets. The common linoleum spread on the floor would not be so strong and durable without jute's support. Boots and shoes have linings of jute, and the very best of woollen suits must have shoulders and lapels stiffened and shaped with a padding of starched jute hessian. The scenery and back-cloth material in film studios and theatres comes from jute. Now, jute can claim new conquests in the apparel and fashion field.

In the U.S.A., bleached jute fabric, beautifully dyed and patterned, is being used to make fashionable shopping kits, ladies' hand-bags, swimming costumes, beach-wear and decorative wall-coverings. Here in India jute is replacing wool in the manufacture of cheap and fairly warm and durable blankets, wrappers, scarves and knitting yarns.

The Technological Research Laboratories of the Indian Central Jute Committee have evolved a simple chemical treatment for woollenising jute. The jute-wool thus obtained can be mixed, up to 50 percent, with low-grade Indian wool. The sharp rise in wool prices in recent years has made jute's use in the woollen industry nearly unavoidable.

Similarly, "jutex", a jute-cotton fabric, is now the rage in Indian homes as it lends itself easily to elegant styling in colour and design. Extensively manufactured for retailing, "jutex" is used mainly as screen, chair cover and place mat. None of these jute uses, however, can qualify for the name of "by-product". They only serve to illustrate the versatility of the fibre and the extension of the utility range of the fabric spun and woven from it, if necessary, with different physical and chemical treatments.

Thanks again to the efforts of the Technological Research Laboratories, the idea of excellent jute by-products, with many industrial possibilities, has been hit upon. The by-products are the new materials made from jute sticks, so far treated as waste. After the commercial fibre has been stripped off the jute plant, the cylindrical stalk has hitherto been put mainly to one use, namely, fuel. If one material in India today does answer to the description of "wealth from waste", it is the jute stick.

India is badly short of coniferous woods to supply the right type of raw material for the growing paper and paper board industry. Bagasse is being tried as an alternative source, but any large-scale diversion of bagasse to the paper industry will aggravate the sugar mills' fuel problem. To the harassed paper industry, the jute stick has, therefore, come as a god-send. It is capable of yielding 65 to 70 percent pulp. The pulp recovery can go up to 75 percent under the mechano-chemical method. The pulp from jute sticks in its various qualities and grades can supply the raw material for hard boards and card boards, common writing and printing paper, and newsprint. While the first three items are already in commercial production, some refinement is yet necessary to get the rayon-grade and newsprint pulp. Work on rayon-grade pulp is in an advanced stage, and when it finally comes off the laboratory, the tremendous boost it will give to India's rayon industry can well be imagined.

The Technological Research Laboratories have also extended the horizon for jute caddies by showing the possibilities of many new by-products. The very short fibres released by mill machinery while processing jute are called caddies. The bulk of the caddies is mixed with cuttings, long jute, etcetera, and reprocessed in the spinning of sacking weft yarns. The remainder, with hardly any spinning value, is sold to the firms making

boards and paddings. Manufacturers of bedding materials like quilts and mattresses and of motor-vehicle seats are large consumers of caddies. Caddies may be converted into resinous substances (thermosetting moulding powders and moulded products) by digestion with acidic substances under pressure. Use of caddies is also well established in the making of needle felts. These find extensive use in modern industry and household requirements, that is, in heat refrigeration and acoustic insulation, as padding in upholstery and as underlays for carpet.

Lately, a novel outlet has been developed by T.R.L. for caddies in the manufacture of non-woven fabrics, using latex or some cheap chemical substitute as the binding material. Non-woven fabrics from caddies are still in an experimental stage. If commercially successful, the new application may bring about a revolutionary change in the jute mill economy. There are promising lines seen in book-binding and in the construction of a jute bag for cement free from seepage.

The largest single loss suffered by jute in packaging has been on account of the cement trade changing to paper bags. The heavy loss of cement due to the porous body of the jute bag hastened the change-over. If a cheap non-woven fabric of caddies can seal off the pores the jute industry will be in a strong position to fight for its share of the cement container market. A non-porous jute bag will also ensure the safe carriage of many other powdery substances in transit or storage. The industry's greatest boon, however, will be the elimination of a dead-weight in the form of a large percentage of caddies that cannot at present be used in jute mills and has to be sold at a give-away price.

HIDES AND SKINS

STEADY

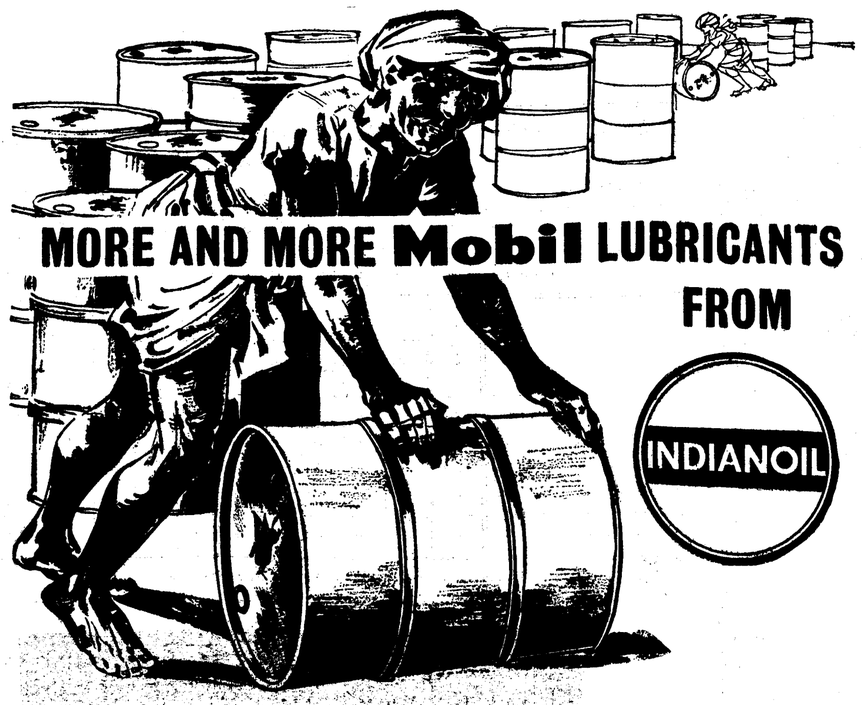
The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales
(Between 17th September and 23rd September)

Cowhides: Wet salted (Ord.) 13,000 pcs. on the basis of Rs. 9 to Rs. 12.62; Wet salted (Slaughtered) 23,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28; Wet salted (Ord.) 3,000 pcs. on the basis of 94 nP a lb.

Goatskins: Wet salted 62,000 pcs. on the basis of Rs. 240 to Rs. 260, Rs. 280 to Rs. 300 and Rs. 360 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 4.50 and (she-killed) on the basis Rs. 4.25 a piece.

Bazaar Stocks
(23rd September, 1963)
Cowhides: Wet salted 60,500 pcs.



Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 52,000 pcs.; Muzafferpore-Patna - Pakur-Purneah-Kissenganj 2,22,000 pcs.; Assam-Dinajpur 26,000 pcs.

Commodity Markets

CARDAMOM PRICES RECOVER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S cardamom crop for the current season is officially estimated at about 3,000 tons, compared with 3,300 tons of the previous season. Sales of the new crop were started in August in the producing centres and the initial sales were marked by an improvement in prices. The lowest and highest prices obtained at the opening sale in Vandanmedu, one of the main producing centres, were respectively Rs. 14.70 and Rs. 19 a kilogram, compared with Rs. 10.70 and Rs. 18 a kilogram, which were the lowest and highest prices realised in the last season. Market reports from Bodinayakanur and Mercara also disclose a similar pattern in the price trend. The latest report from Bodinayakanur says that arrivals are picking up and the buyers are active. The Extra Motta Green, the No. 1 quality, had buyers at Rs. 17.75 to Rs. 18.10 a kilogram in the last sale.

Reports from Bombay which is the main terminal market for cardamom in India say that sales have been suspended in view of the continuing stalemate in the export trade. It is said that there have been practically no despatches from the producing centres to Bombay except for those against pending commitments. But still stocks have got accumulated in Bombay. The Bombay dealers have urged the Central Government to suspend the gradation scheme introduced recently until a more suitable quality control procedure is agreed upon between the trade and the Government. The exporters in Bombay are opposed to the new scheme which came into being on 1st September as it visualises quality specifications involving colour, percentage of empty, malformed, immature or shrivelled capsules.

The Cardamom Development and Marketing Advisory Committee has prescribed a "laborious procedure" for grading under this scheme, the trade says. The authorities say that quality control is the most important step which is to be taken to stabilise the export market. It was the indiscriminate export of all that came in handy for the trade that undermined India's position in the foreign market. Unless immediate measures are taken to build up the confidence of the foreign buyers in the quality of Indian cardamom, this country will not be able to regain the lost prestige in the world market and export more, official quarters say. They believe that the export trade will give up its resistance to the reforms being introduced in the cardamom marketing with the best of intentions by the official agencies. Quality control, and reforms like that, will ultimately prove advantageous to both the producers and shippers and also to the foreign buyer, they assert. They claim that since they interfered in May last, the decline has been arrested and prices have started looking up.

Cardamom prices had been on the decline since 1960-61, and the bottom was touched in 1962-63 when the commodity had to be sold for prices ranging between Rs. 10 to 14 a kilogram. India exported 1,913 tons of cardamom in 1960 and earned Rs. 3.74 crores. Although the export increased to 2,386 tons in 1962, the money earned from it had declined to Rs. 3 crores. India's main markets for this commodity are Sweden, Finland, Saudi Arabia, West Germany, Bahrein Island, Kuwait, Russia, the U.K., Afghanistan and the U.S.A. Two reasons are given officially for the failure of cardamom to hold its own in the foreign market; indiscriminate marketing practices and export of cardamom of uncertain quality. There may be other reasons as well. In recent years, there had been a rapid increase in production in India. The competition from other producers, too, has been on the increase. The reported increase in consumption and the opening of new markets abroad might not be big enough to absorb the increase in supply.

According to an F.A.O. report, the world output of copra this year is likely to be slightly larger, and prices will average somewhat higher than in 1962. It says that in 1962, world production of copra in terms of oil was 2,310,000 tons, a fall of some 70,000 tons from the 1961 level. Exports of copra and coconut oil last year fell to 1,229,000 tons (oil basis) from 1,329,000 tons in 1961. The setback in production last year was mainly caused by dry weather in south-east Asia in the preceding years. The reduction in trade was reflected entirely in small shipments of copra, while exports of coconut oil increased. The Philippines was the largest producer and exporter. Prices of coconut oil which began to recover in the final quarter of 1962 maintained the trend in early 1963, and has since been relatively steady. This review is prepared for the fifth session of the F.A.O.'s group on coconut and coconut products which began a ten-day session last week in Rome with delegates from 15 countries attending. The meeting will discuss the long-term outlook, the effects of national policies to support prices of oilseeds and other fats competing with coconut, import tariffs on coconut oil and fluctuations in export trade.

Future of Rubber

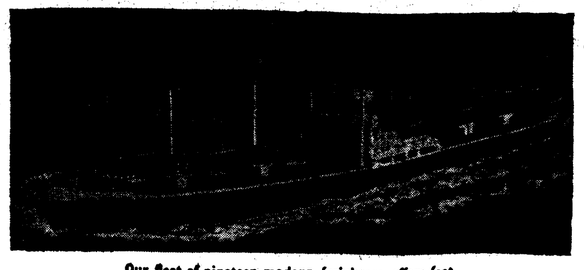
The future of the natural rubber growing industry in India depends upon replanting with high-yielding planting material, says the chairman of the Rubber Board, Dr. Rama Varma. He wants every planter to draw up a system of systematic replanting of all low-yielding areas. That alone will help the industry to meet he demands of labour for fair wages and better amenities and to keep down the cost to compete with synthetic rubber successfully.

Dr. Varma expressed these views while addressing the 45th meeting of the Rubber Board last week. He said that India continued to have the lowest *per capita* consumption of rubber at 0.29 lbs, against 18.65 lbs in the United States. Natural rubber production in the country by itself would not be able to meet the rapidly increasing demand. Pointing out that the demand for cotton fabrics had not diminished in spite of the tremendous advances made by man-made fabrics, the chairman said that the demand for natural rubber as a general purpose rubber would continue to last provided the cost was kept under control.

The price of synthetic rubber produced in this country at present is Rs. 4.40 a kilogram, which is about a rupee more than the control price of natural rubber including cess. This would mean that the synthetic rubber produced in the country is not likely to compete directly with natural rubber in the immediate future. Nor has it any technical superiority to challenge the natural rubber at its

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)



THE Middle Class Cost of Living Indices, by groups, have now been brought up to August 1963. As compared with July, the August index for Food reveals a rise of 7 points, while those for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 602 and 317 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 3 points during August 1963.

This year it's Khajuraho... and Cashier Seshadri has every right to look pleased!

Three years ago, it struck P.G. Seshadri that he had seen hardly anything of his country. He decided to do something about it. ...This year he will complete the final leg of his tour! He's fifty-three, looks ten years younger, and has won the veterans' race at the Burmah-Shell meet for six years running. He has received three long service emblems and his interests include amateur dramatics, social welfare, sports, travel and photography.

...TO THE LAST NAYA PAISA

He signs/endorses some 700 receipt or payment documents every day. Chief Cashier with Burmah-Shell, Madras, Seshadri is in charge of the Cash Section consisting of fifteen men. His section receives money amounting to several lakhs every day and is responsible for making day to day payments. What is his most important task? "Balancing the books," he says, "is of the utmost importance. The accounts must tally each day to the last naya paisa." They always do!

TODAY, AS EVER, PEOPLE LIKE SESHADRI ARE WORKING FOR YOU

Seshadri doesn't just have hobbies. He is good at them. One of his photographs won a second prize in a company competition. Liked and respected by his colleagues, Seshadri can look back with satisfaction on a happy, fruitful career.

Seshadri and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work ...working to ensure that vital petroleum products essential to India's growth and progress are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People

present price. The natural rubber industry has, therefore, got the time to replant with the high-yielding planting material and bring down its cost to be ready to meet any challenge from synthetic rubber. The chairman said that the Rubber Board was now in a position to supply almost all the high-yielding planting materials available in other rubber-producing countries. He admitted that the progress of replanting programme was slow in spite of the grant of subsidy from 1957. As against the target of 45,000 acres fixed for replanting between 1956 and 1962, only 23,980 acres had actually been replanted.

It has been disclosed in the Kerala Assembly by the State Government that the capitalisation so far on the 10,000 acre rubber estates in the public sector has come to Rs. 70 lakhs. Plants have not yet reached maturity. There are two public sector rubber plantations in Kerala, one in Kodumon and the other in Kalady, and their total area now is 10,000 acres. These estates are managed by the recently-constituted Plantation Corporation.

There are another 6,500 acres under rubber cultivation on lands distributed by the Government to landless unemployed persons under its ambitious third plan scheme for expanding rubber cultivation. The system of distributing 3½ acres to private individuals for the purpose of rubber cultivation is now being reviewed by the State Government. Non-availability of suitable land compelled the Government to suspend this system, at least temporarily for this year. It is to be seen whether this system will be revived in the near future, because the State Government is faced with the problem of providing extensive areas for the resettlement of agricultural families being evicted from the hydel project areas on the hills.

Raising Plantation Output

(BY A SPECIAL CORRESPONDENT)

AT the annual general meeting of the United Planters Association of Southern India held recently in Coonoor (already reported in the two previous issues), Mr. Manubhai Shah, Central Minister for International Trade, has stated that the Government is examining the question of giving additional incentives and excise concessions to plantation interests. The Minister, therefore, has urged them to raise plantation production. He is also reported to have said that with the standard of living going up everywhere, there is no need for planters to fear that increased production would lead to a fall in prices. But unfortunately, that is what happens.

All connected with tea trading know that in 1961, the crop was an all-time record, particularly in north India where output was higher by several million lbs or so, but profits did not reach record proportions. On the other hand, a study recently published shows that profits in 1962 when supply was on the short side, were generally higher than in 1961. This correspondent has often noted that it is more profitable to have supply round 97½ percent of demand rather than over 100 percent.

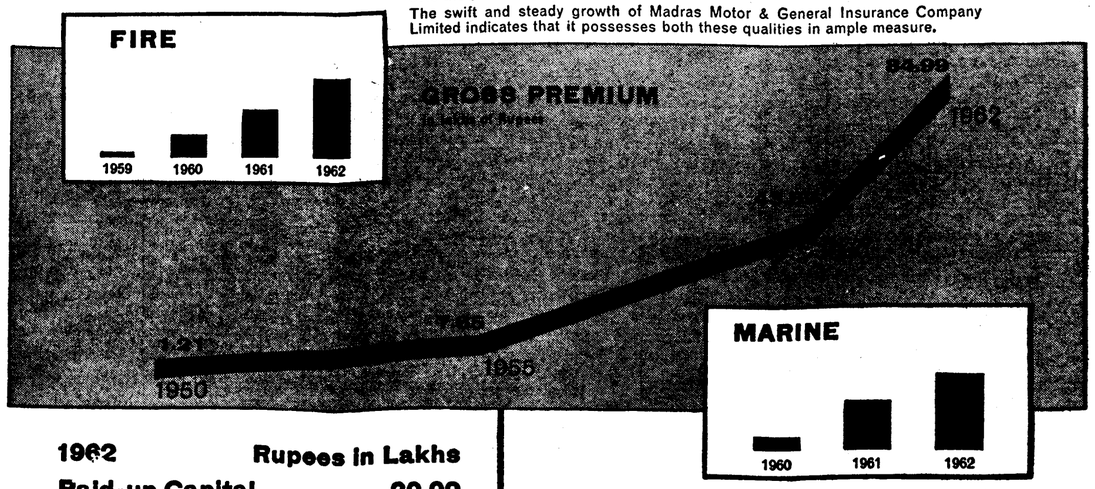
The Minister gave an assurance that the Government would ensure fair prices for all agricultural and plantation crops and referred to official support of the prices for jute, cotton, shellac, coffee, cardamoms and cereals, but tea was not mentioned. To help promote exports, the Government of India has recently set up a market development fund on which the chambers of commerce and tea associations interested in the export business may draw for market surveys or sending delegations overseas, but no mention appears to have been made as to terms, which will presumably depend on the schemes put forward by trade delegations.

The Minister for International Trade drew attention to expanding consumer markets in Australia, New Zealand, Russia, west and east European countries and the European Free Trade Area as also in Asia and Africa, but made no mention of the fact that production in many parts of Africa is going ahead fast. Russian Georgia also claims to be showing world growers how to secure quality and yields. Australia is also experimenting in Papua and even South American companies have been planting tea for many years past.

Indian domestic consumption hold the key to the future and if matters can be arranged as indicated by Mr. Manubhai Shah's opening comments, that is a pool of buffer stocks formed whenever production is surplus to demand, then planters might be prepared in a year to spend more freely on expansion, but as has been shown in this note, surplus production spells losses, and in any case, tea is difficult to stock while cheap finance remains a very important question.

The Minister also offered some comments on the coffee and rubber situation. As far as rubber is concerned, India must have more of it and Mr. Manubhai Shah is reported to have said "there is no conflict whatever in simultaneously increasing production of both natural and synthetic rubber." But as with tea, so also with natural rubber. It takes time and money to produce.

There would appear to be no reasonable prospect of this year's tea shortage being made up, as north Indian output shows a steady decline in 1961, 1962 and in 1963.



The chairman of the Tea Board, Mr. A. S. Bam, also spoke in an optimistic mood, but the fact remains that the Indian crop this year is likely to fall short of 1962. The 1962 output was below 1961 and in spite of two consecutive years of short supply, the prices for common teas continue to sag. Mr. Bam admitted that the total Indian crop this year would come to about only 370 million kilograms, which is still far from the production target of 408 million kilograms by 1965.

One of the fastest growing general insurance companies in India

MADRAS MOTOR & GENERAL INSURANCE COMPANY LIMITED

The stability of a general insurance company depends upon the continued patronage of its clients. The ability to expand the field of activities and serve new clients sets the pace of its growth.

The swift and steady growth of Madras Motor & General Insurance Company Limited indicates that it possesses both these qualities in ample measure.

COMPANY AND PUBLIC NOTICES

BRITISH PAINTS (INDIA) LIMITED

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company, 32, Chowringhee Road, Calcutta-16, at 11 a.m. on Tuesday the 22nd October, 1963, to consider and, if thought fit, to pass the following resolutions with or without modification :—

A. (i) AS A SPECIAL RESOLUTION No. 1:

"That in view of the proposal contained in the succeeding ordinary resolution No. 1 that Mr. Subodh Ranjan Roy be appointed a Director of the Company, consent be and is hereby accorded to Mr. Subodh Ranjan Roy holding and continuing to hold an office or place of profit under the Company as Director Secretary or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration as approved by the Central Government and as set out in the Resolution of the Board of Directors passed on the 12th September, 1963, a copy of which has been laid on the table and signed by the Chairman for the purpose of identification."

(ii) AS A SPECIAL RESOLUTION No. 2:

"That in view of the proposal contained in the succeeding ordinary resolution No. 2 that Mr. Hugh Osbert Sheane-Smith be appointed a Director of the Company, consent be and is hereby accorded to Mr. Hugh Osbert Sheane-Smith holding and continuing to hold an office or place of profit under the Company as Sales Director or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration as approved by the Central Government and as set out in the Resolution of the Board of Directors passed on the 12th September, 1963, a copy of which has been laid on the table and signed by the Chairman for the purpose of identification."

B. (i) AS AN ORDINARY RESOLUTION No. 1:

"That approval of the Central Government having been obtained to the appointment of Mr Subodh Ranjan Roy as a Director and due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Subodh Ranjan Roy be and is hereby appointed as a Director of the Company."

(ii) AS AN ORDINARY RESOLUTION No. 2:

"That approval of the Central Government having been obtained to the appointment of Mr. Hugh Osbert Sheane-Smith as a Director and due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Hugh Osbert Sheane-Smith be and is hereby appointed as a Director of the Company."

By Order of the Board,
BRITISH PAINTS (INDIA) LIMITED,
R. A. GODWIN,
Managing Director.

Calcutta, 26th September, 1963.

N.B.—(i) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and Vote, instead of himself and the Proxy need not be a Member.

(2) **Explanatory Statement as required by the Companies Act, 1956, has been posted to the Members along with the notice.**

THE FAILURES OF THE THIRD PLAN

WHENEVER Mr. Nehru spoke on economic affairs during the session of the Lok Sabha which ended recently, he drew a picture of India's present and future economic position which was startling for its optimism. There must have been many present who wondered where the Prime Minister had got his facts; they bore only a faint resemblance to those contained in Government publications, and almost no resemblance at all to those highlighted in independent surveys such as the review * of the conditions and prospects of the Indian economy published by the National Council of Applied Economic Research recently. The latter is an authoritative but not a cheerful document; indeed there is nothing in it to sustain satisfaction of any kind. Not only do the figures produced confirm the suspicion that the rate of Indian economic growth, taken over the first two years of the third five year plan, has fallen dangerously low; they also suggest that the direction of current economic planning is now such as to make the situation steadily worse.

More specifically, they indicate that despite 12 years of planning the national income of this country remains dependent to an alarming extent on the uncertainties of the weather, that the drive for industrialisation is merely substituting dispensable imports of consumer and other goods for indispensable imports of raw materials—thus tending to make the country more dependent on foreign aid, not less—and that the failure to plan for the parallel growth of the economy's infrastructure threatens to slow down the hitherto fairly satisfactory progress of manufacturing industry. There is little in all this to evoke anybody's optimism. And it is difficult to avoid the conclusion that if the Government's critics had restricted their attacks to its economic management on the basis of the facts as presented in this review, the impact on public opinion would have been considerably greater than in fact it was.

The main drawback of the N.C.A.E.R. review is that its figures are necessarily out of date; some of them are now more than a year old. This is not the fault of the authors, who have done their best to overcome the difficulty by offering their own views on future prospects. It seems unlikely their predictions will be far off the mark, and that leads logically to the conclusion that something ought to be done as a matter of urgency to retrieve the situation. If it is not, then inevitably sooner or later the rate of economic development in this country will be outpaced by the increase of population, even taking good years with bad, and disaster will be staring India in the face. Already these two crucial growth rates roughly coincided during the year 1961-62. Although 1962-63 may show an improvement, the writing is clearly on the wall; and the future position has been further complicated by the increased needs of defence. To avoid what appears from the figures in this review to be virtually the inevitable, drastic changes in planning policies are going to be needed. The Prime Minister would have had greater justification for his optimism if he had been in a position to announce these.

The overall rate of economic growth in the year 1961-62, according to the review, was only 2.2 percent, compared with 7.1 percent for the previous year. The reasons given for the slow-down are the continued shortage of foreign exchange and the agricultural failures due to the weather. The output of foodgrains fell from the record level of 79.8 million tons in 1960-61 to 78.6 million tons; the resulting impact on prices and living standards was cushioned by foreign aid, chiefly American P.L. 480 supplies. Industrial output, although still showing a substantial increase over the period, also faltered. From a rate of growth totalling 10.9 percent in 1960 it was down to 7.2 percent in 1961, less than the average of 8.1 percent for the second plan period as a whole. The chief reason for the slow-down was the shortage of raw materials and components. During the first two quarters of 1962-63 the rate of advance was again 7.2 percent, thus indicating that there was no change in the general trend of industrial production over a fairly long period. The trade deficit worsened; it was Rs. 225.6 crores for the six months from April to September 1962, compared with Rs. 171.7 crores for the corresponding period of 1961. The reason given for the deterioration is the rather ominous one that "invisible" earnings were lower. This means that payments on foreign loans increased—a trend which continues. The only really reassuring fact revealed in the review is that exports in 1962-63 reached their highest level since the Korean war boom, and earned some Rs. 40 crores more than during the previous year. That increment is going to be needed.

Other figures for the year ended March 1963 were not so readily available when the review was written, so its authors were obliged to rely on predictions. Generally, later statistics have confirmed their impression that there has been some improvement over the performance during 1961-62, although not a particularly large one. Agricultural output during 1962-63 has not surpassed the peak level attained in 1960-61. The rate of industrial expansion too has not been accelerated significantly. Exports, fortunately, continue to improve, but imports are also going on increasing, and there is the difficult problem of falling invisible earnings to be taken into account. Finally, and with reference to the national income, the review concludes that for the remaining three years of the plan the rise will have to be at a much faster rate to achieve the plan target. The figure estimated by the review is a 7 percent cumulative rate of growth, and it adds that to achieve this, higher rates will have to be attained in each sector of the economy than during the past two years.

The most depressing feature of the whole picture is the failure of agriculture to gain some measure of independence of the weather. Until this can be done, the figures for overall foodgrains output can have little significance for the country's continued stability. This now depends on constantly increasing foreign aid, and will continue

* *Indian Economy, 1961-63 (Conditions and Prospects).* Issued by the National Council of Applied Economic Research, New Delhi. Price Rs. 6.

to do so for as long as it takes to overcome the fundamental problem. If planning has any meaning at all in this country, it must surely be that by means of it the size and reliability of the nation's food supplies can be assured. But at the moment they are not; and the greatest indictment of the Government's planning policy is that no firm programme exists for rectifying this error. The review makes a number of familiar, though important, suggestions for improvement. These include fuller use of irrigation water; extensive use of fertilisers; use of disease-free improved seeds; timely sowing; weeding and interculture; and the use of pesticides and green manure. It advocates a "crash" programme for tackling the problem.

While some of these proposals have the air of a counsel of perfection and others are already being implemented, there is no doubt about the soundness of the general thesis that agriculture be regarded as a matter of urgency. What is so distressing in the present state of affairs is that the country should be so dependent on foreign aid for the crucial margin in its food supplies which can make the difference between famine and sufficiency, stable prices and inflation, civil tranquillity and commotion, and, most important, victory and defeat. It is surely a fair question whether or not the planners have adequately pondered the possible consequences of placing the country so completely at the mercy of what is, after all, an unreliable feature of international politics. If any doubts remain on this score, they must surely have been dispelled by what has happened over Bokaro.

It is also doubtful whether sufficient thought has been given to the direction in which industrial policy appears to be heading. As the evidence of the N.C.A.E.R. review goes to prove, India is becoming increasingly dependent on foreign aid not only for development resources, but for the raw materials to run the new industries when established. An excellent case can be made out for the industrialisation of this country on the grounds of improving living standards, although not at the expense of agriculture. But it would be difficult indeed to justify a policy leading to the building of new industries which are doomed permanently to dependence on imported raw materials for their continued running, especially when so few of them are making any contribution towards their own upkeep by helping in the country's export trade. Yet that is what appears to be happening. With both agriculture and the day-to-day operation of a large proportion of India's industries now both at the mercy of foreign goodwill, it is scarcely surprising that doubts should recently have been voiced about the wisdom of current planning.

The overall recommendations made in the N.C.A.E.R. review are by no means exceptionable. The logic of giving planning priority to providing the country with an adequate, home-grown food supply, and to ironing out the fluctuations in it, would seem to be so indisputable that the wonder is it has to be proposed at all. Nevertheless, the review rightly considers it necessary to mention the matter again, and points out in the process the defects in governmental administration dealing with agriculture and in the community development organisations and National Extension Services. Clearly, nothing short of a complete reshaping of the Government's policy towards agriculture will now be sufficient to overcome the present difficulties. In industrial policy, the N.C.A.E.R. review underlines the importance of power and transport programmes in order to avoid the bottlenecks which will otherwise inevitably hold up progress. Its point that capacity in both these major industries should always run just ahead of supply, is irrefutable. On the subject of improving the availability of foreign exchange, the suggestions made include stronger steps to mobilise gold hoards, more import substitution, the encouragement of more private foreign investment and the tapping of Indian investments abroad. Some such measures are now imperative if India is to increase defence imports and honour growing loan service payments in a world where the climate for foreign economic aid is distinctly deteriorating. Finally, the recommendations for keeping prices down, although the problem is obviously linked with the economic situation as a whole, should repay considerable study.

The fact that Mr. Nehru might have been wrong in his judgments about India's economic situation, as revealed by the National Council of Applied Economic Research, is by no means as serious a matter as the suggestion of complacency behind it. It would no doubt be doing the Prime Minister an injustice to conclude that his words were intended for any purpose other than to answer his political critics at the end of long and acrimonious debates, and to offer the country some reassurance concerning the efficiency of his Government's economic management. But it is to be hoped that the planners are at least as aware of the facts of the situation as the National Council, and that the lessons they draw from them are equally sound and practicable. Great changes are needed in planning in this country if the alternative to economic collapse and widespread starvation is not perpetually to remain a steadily increasing infusion of foreign aid. Such aid does not now merely represent the difference between growth and stagnation; it has come to mean the choice between life and death. That is where the danger lies.

India's Resources
are Precious
WASTE NOT,
WANT NOT

THE POLICY FOR COTTON

THE Government of India has done the right thing by abolishing with immediate effect the compulsory survey and the supervisory scheme for the marketing of cotton. With prices remaining well below the ceiling for a long time, the compulsory survey and supervisory system had become meaningless. To have continued the restrictions in spite of a large carryover of nearly 2.1 million bales—the largest for about six years—and in spite of a harvest which promises to exceed the 1962-63 record of 5.75 million bales would have exposed the Government to the charge that it was interested in perpetuating certain vested interests to the detriment of the general trade. The compulsory survey was introduced two years ago to check malpractices which followed when prices pierced the ceiling, and the supervisory scheme sought to ensure the proper implementation of the compulsory survey. But in conditions of improved supply these restrictions simply led to corruption, inconvenience and unnecessary expenditure. The trade had long been agitating for the removal of the irksome controls; it has now won its battle for freedom.

The growers' plea for a higher ceiling, voiced through their spokesmen in Parliament, makes little sense, although recently there have been reports that the Government is considering the proposal. If the new cotton crop turns out to be as large as most people expect, the Government may have to support the market to check the decline in prices. Cotton prices have already fallen by between Rs. 50 and Rs. 150 a candy over the past month or so. The fall might have been even steeper but for reports (unconfirmed though) that the Government had almost made up its mind to purchase cotton for the buffer stock if prices fell by more than Rs. 100 a candy from the ceiling. Vague talk of the Government building a stockpile has brought about a marked change in market sentiment and the hedge contract (March delivery) has spurted from Rs. 688 to Rs. 704 in a matter of a few days.

The idea of building a buffer stock has been considered on several occasions in the past, but it could never be given concrete shape because domestic production was unable to catch up with the industry's growing requirements and the country had to spend large amounts of foreign exchange to cover the shortfall. The need for a buffer stock for ensuring adequate supplies to the industry at reasonable prices can hardly be over-emphasised. The size of the buffer stock must depend primarily on domestic production. If current expectations of a crop of 5.7 million to 5.9 million bales materialise, it should be possible to make a beginning in building a buffer stock this season. While it is good to have cotton in reserve to feed the industry and also to beat the market in lean years, there is a danger that injudicious purchases by the Government at arbitrary prices might introduce a strong element of uncertainty and instability in the market. Purchases should normally be made only around the floor prices and not when prices are just about Rs. 100 a candy below the ceiling. If the Government thinks that the existing floor does not provide an economic price to the farmer and that a higher floor will act as a bigger incentive to increase cotton production without adversely affecting the output of other crops, it should raise the floor itself. The possible loss resulting from haphazard purchases at arbitrary prices is not the only problem that one has to bear in mind. There is the danger that if the Government is burdened with unusually large stocks it may later compel the industry to lift the goods against its will and at prices the mills consider too high. There is also a risk that if the purchase price is high—and Rs. 100 below the ceiling is certainly a high price—the Government may be burdened with more cotton than it would like to hold in the buffer stock.

The question has to be examined carefully before any purchases are made for the buffer stock. The grower's desire to get as high a price as possible for his product is understandable. But the support price—the price at which the Government decides to purchase cotton in the open market—cannot be such as would undermine seriously the textile industry's competitive position in the international market. The steady rise in prices in recent years has already made Indian cotton more expensive than the produce of other countries. It should be remembered that the rural population, constituting about 70 percent of the total is the largest sector of cloth consumers; a further rise in the prices of cotton with a corresponding increase in cloth prices is, therefore, not likely to benefit even the agriculturists in the long run.

That the farmer must be assured of a minimum remunerative price for his produce will be readily conceded and this is what the floor price is supposed to do. But, as was rightly pointed out by Mr. A. D. Pandit in his presidential address at the recent meeting of the Indian Central Cotton Committee in Bombay, it would be a mistake to think that the mere provision of an economic incentive through a higher ceiling price would enable the farmer to increase production. Economic incentives may prove futile it efforts are not made beforehand to ensure sufficient technological development. It is unfortunate that a wide gap should continue to exist between the research laboratory and the farmer's field. The poor progress of research is a sad reflection on the working of the Indian Council of Agricultural Research of which Mr. Pandit himself is the vice-president. It is, however, comforting to learn that the Council has plans shortly to appoint project co-ordinators with a view to ensuring the co-ordination of research on an all-India basis. Equally welcome is Mr. Pandit's assurance that research projects in future will lay as much emphasis on schemes to raise yields as on improved strains. So far, there has not been anything like a breakthrough in research which could result in substantial increase in the yield and there has been no outstanding achievement in plant breeding. There seems to be great scope for work, particularly in evolving varieties which are not susceptible to loss on account of shedding of flowers. In India only 7 percent of flowers mature into bolls, against 20 percent in Russia. Cotton production in India is lagging far behind the third plan schedule. Production can be stepped up only through increased productivity because the scope for bringing more area under cotton is extremely limited. The benefits of research in the laboratory have to be made available to the farmer in a way he can make use of them. The farmer needs better seeds, right type of fertilisers, better tools, increased irrigation facilities and last, but not the least important, adequate financial assistance without which he cannot obtain these facilities.

INDUSTRIAL GROWTH

THE Central Minister for Industry, Mr. N. Kanungo, is credited with the curious remark that the growth in industrial output in the past six months was "a matter of satisfaction." Since available figures show a rise of only 7.4 percent in the general industrial index in the period from January-May 1963, compared with the corresponding period of last year, it is difficult to see what makes the Minister so pleased with himself. One may point out, merely for the record, that India is supposed to achieve a 70 percent rise in industrial production over the five years of the third plan. Simple arithmetic would, therefore, require an average annual increase of about 14 percent—almost twice the rate actually achieved since the beginning of the plan. Equally simple logic would suggest that the Minister for Industry should be far from satisfied; but if Mr. Kanungo's comment gives the contrary impression, it can only be because of the semantic barrier that divides the politician from commoner folk.

In case the Minister did not already know, Mr. Akbar Hydari of the Associated Chambers brought up facts at the meeting of the Central Advisory Council of Industries which put industry's present malaise sharply into focus. New issues in the first half of this year have totalled only Rs. 18 crores, against Rs. 51 crores last year. But even this does not give a full measure of the damage done to the capital market since some of these issues were made or had been put under way before Mr. Desai's celebrated Budget. It is possible that the coming months may show a further decline unless the market receives a powerful boost from Mr. T.T. Krishnamachari's efforts to undo the harm done by his predecessor.

The right fiscal measure will undoubtedly make the biggest difference but they may not provide the whole solution. Even in the present difficult conditions, there are intrepid entrepreneurs who are willing to take the long view and have command over the resources needed to launch new ventures. But New Delhi makes things more difficult for them than they need be by its multiplicity of detailed controls, and sometimes by the sheer refusal to face realities. As our New Delhi correspondent reported last week, the possibility of attracting foreign investment into aluminium is wearing thin because of a mulish insistence on an export guarantee. In the world as a whole, the major producers have a substantial proportion of idle capacity, so they are in a position to export aluminium at cut prices. The demand for an export guarantee from a new unit in India starting on one-third or less of the scale of the overseas giants, can only mean turning the intending investor away. The form in which the guarantee is being sought, making directors individually and severally liable for penalties, could not be made sillier even if New Delhi tried. The problems posed by the Government's procedural requirements are not new, but their character is becoming clearer with the slowing down of the tempo of growth which has hitherto obscured its damaging aspects from public view. The ten-man committee set up at the Council meeting to go into some of these problems has been given six months to complete its task, but surely some of the more obvious reforms need not wait that long.

Another equally serious brake on growth is the policy of artificially restraining price increases in the controlled industries while inflation spreads through the rest of the economy unchecked. The president of the Federation of Indian Chambers of Commerce and Industry, Mr. Bharat Ram, pointed to the inhibiting effects of the policy at the Council's meeting, referring in this context to the views expressed in a World Bank survey of the Indian economy earlier this year. What he perhaps intended to convey was that even an objective team from outside felt that unrealistic prices were hampering growth. A typical reaction of Government spokesmen on hearing the World Bank quoted is to freeze up in public and object strongly in private. But it is unnecessary to call in witnesses when the facts of the case are so obvious and telling. A memorandum prepared by the joint committee of the paper industry has just shown conclusively, by citing detailed statistics, that the growth of the industry has come virtually to a halt ever since the 1960 price award ruled out reasonable profitability. A similar study of the coal industry—a key sector where failure will impose very serious penalties on the rest of the economy—has shown that units are unable to meet their third plan expansion commitments because they cannot raise the rupee finance they need. As a result, import licences, so eagerly sought till the other day, are lying unused and there are even instances where imports already made are not being cleared for want of the necessary bank arrangements.

If the Indian entrepreneur feels so nervous and insecure, one can hardly blame the foreign investor for being even more doubtful. No less a person than Mr. G. L. Mehta, chairman of the Indian Investment Centre, has stated that first-class foreign ventures with top-grade collaboration arrangements have flopped in the capital market. Each failure has wide repercussions, and it is safe to say that the damage done to Indian prospects in the last few months will take a long time to repair. No doubt India offers an assured and highly protected market, but the decision to invest is bound to rest finally on the returns after tax that the collaborator may expect to earn. It is pointless to argue that the tax concessions for new enterprises are attractive, but how many investors would judge the profitability of their investment only by what they may earn over a short five- or eight-year period?

Finally, the point deserves to be made that the private sector's expansion should not be made conditional solely upon its ability to find the necessary foreign exchange by itself. Projects like Tata's alloy steel plant would not have fallen through had the Government undertaken to release some part of the foreign exchange required from the resources available to it. Huge amounts of foreign aid are lying unused because the Government is simply incapable of using the funds fast enough. It should be possible to divert some of this aid to essential projects in the private sector, especially those falling in the priority list drawn up last year. Had this been done, some of the serious shortfalls of the past two years might have been avoided.

EXPANDING ROLE OF THE WORLD BANK GROUP

THE World Bank is the largest international source of development finance in the world. Together with its two affiliates, the International Development Association and the International Finance Corporation, the Bank has played a vital rôle in financing development activities in backward countries. The annual reports of the World Bank and its affiliates for the year ended June 1963 point to the great expansion in their activities. The number of loans under preparation in the Bank has increased. Although the total amount lent during the year has declined to $449 million from the previous year's high of $882 million, the fall does not represent a long-term trend. Perhaps a no less important index of the Bank's usefulness is provided by the fact that the number of loans committed has remained about the same as during the previous years. Altogether 28 loans have been granted to 19 countries and territories, the largest share ($179 million) going to Asia and the Middle East. Transportation has received the biggest allocation ($190 million), followed by power development ($124 million) and industry ($110 million).

The World Bank is a major provider not only of development finance but also of technical assistance. It has helped countries in preparing development projects up to the point where they are ready for financing. During the year the Bank undertook seven new project studies, including one to solve the coal transport problem in India. Another important aspect which has engaged the Bank's attention is the improvement of investor confidence in order to foster international private investment. Initially its efforts were confined to persuading Governments to settle defaulted debts due to private investors. Later the Bank studied a suggestion to draw up some form of multilateral scheme to provide insurance cover for international investments. Another approach it is now considering is to establish some machinery under its aegis to offer conciliation and arbitration facilities for investment disputes arising between host Governments and foreign investors; while it will be left entirely to the discretion of the parties concerned to seek the help of this machinery, its decisions or awards will be binding once a reference to it has been mutually agreed upon. These schemes will be of help in improving investor confidence in the capital-exporting countries and it is to be hoped that they will be given concrete shape soon.

From the point of view of the developing countries, even more important than the World Bank's aid has been the assistance from its "soft loan" affiliate, the International Development Association. The World Bank's loans carry relatively high rates of interest (until September 1962 its lending rate was 5¾ percent, but it has since been reduced to 5½ percent). The balance of payments position of most developing countries is already so strained that they cannot take advantage of large loans on commercial terms. In fact, some of them are finding it difficult to service their existing foreign obligations. It is for these countries that the I.D.A. has a special appeal. Its development credits are interest-free (only a service charge of ¾ percent is payable towards the I.D.A.'s administrative costs) and are repayable over a period of 50 years. Repayments do not begin until after ten years; they are at the rate of 1 percent a year over the next decade, and 3 percent in each of the last 30 years. During 1962-63 Asia has received the bulk of I.D.A. credits ($203.5 million) and the largest share ($178 million) has come to India. As in the case of World Bank loans, transport accounted for the major portion of I.D.A. credits ($121 million), followed by power and telecommunications, irrigation and flood control), and industry, in that order. As far as India is concerned, the I.D.A., from among the World Bank group, is likely to provide the largest amount of aid. During the year ended June 1963, the World Bank institutions committed more funds for India than in any previous year, and the bulk of it was in the form of I.D.A. credits. The following table shows the trend:

	World Bank (In million dollars)	I.D.A. (In million dollars)
1957-58	165.5	Not in existence
1958-59	135.0	Not in existence
1959-60	60.0	Not in existence
1960-61	90.0	60.0
1961-62	145.5	62.0
1962-63	30.0	178.0

In view of the long-term nature of its loans, it is evident that the I.D.A. cannot expect its resources to be replenished by credit repayments for a long time to come. The fact makes it necessary for the I.D.A. to seek fresh contributions from its members if it is to keep up its lending operations. Recently 17 countries have agreed to provide it with $750 million in freely usable funds over the next three years. Including the unused holdings of $193 million at the end of 1962-63, the I.D.A.'s resources will enable it to raise its lending rate to an average of about $300 million a year during the next three years, against an average of $165 million a year so far. However, the increase will still fall far short of requirements since many experts consider an annual lending rate of $500 million over the next five years to be both desirable and feasible. A point of special interest to India and Pakistan is that the I.D.A.'s credits may continue to be allocated to countries with the lowest *per capita* incomes. Arguing that any other criterion

cannot possibly be used since that may reduce the aid to insignificant proportions because of the very large number of claimants, Lombard says in the *Financial Times* that this procedure itself will cause "a substantial part of the total" to be reserved for India and Pakistan.

The second affiliate of the World Bank, the I.F.C., aims at helping privately-owned industrial companies by providing them with scarce share capital. By investing in equities—a power which it acquired during the year—it can now actively help the growth of capital markets in the developing countries. The other ways in which it can build investment markets is by underwriting new issues, sponsoring international underwriting syndicates and making standby arrangemets to support local underwriters and issuing houses. Its operations during the year show the wide range of its activities. It has made 11 commitments for financing private ventures in ten countries, seven of the commitments involving investments in industrial companies. The other four investments helped strengthen industrial finance companies. As far as India is concerned, it has invested during the year a sum of $898,000 in the form of loans and shares in Precision Bearings India Ltd, a new Company set up by Indian, U.S. and Danish interests.

Current News and Comment

Regulating Forward Markets

IN his inaugural address at the conference of presidents and Government-nominated directors of associations recognised by the Forward Markets Commission held recently in Bombay, the Central Minister for International Trade, Mr. Manubhai Shah, emphasised the need for ensuring a "fair price" to the farmer. Hedging is primarily designed to protect the farmer, Mr. Shah said. But peasants have always had a raw deal since speculators depress prices at harvest time. The Minister, therefore, urged the authorities entrusted with the task of administering forward markets to take effective steps to prevent "bear raids by powerful interests." Mr. Shah's sympathy for the farmer is understandable, for the lot of the average peasant is still miserable. But his plea for a "fair price" should have been addressed to his colleague, the Central Minister for Food and Agriculture. One fails to understand how forward markets can be instrumental in ensuring a "fair price" to the farmer.

The forward market simply registers prices, which in turn reflect the balance between physical supply and demand for the commodity concerned. If the farmer's share in the total price of the commodity paid by the ultimate consumer is low, it is because his weak holding power compels him to sell his produce as soon as the crop is harvested. The forward market is in no way responsible for his poor return. Mr. Shah's contention that hedge trading is designed primarily to protect the farmer is, therefore, questionable. As it is, the hedging facility exists as much for the producer as for the consumer or the intermediary linking the two. But there is little evidence that producers and consumers take a lively interest in the hedging facilities provided by commodity exchanges.

In his welcome speech, the chairman of the Forward Markets Commission, Mr. A. S. Naik, said that the development of recognised associations on democratic lines, strong action against unscrupulous speculators and a determined effort to stabilise the prices of regulated commodities—particularly with a view to promoting exports—were the main objectives of the Commission's policy. But traders point out that the way the Commission has been exercising its powers is hardly conducive to the growth of recognised associations on democratic lines. Over the years, the Commission has armed itself with wide powers, and it is more dreaded than respected. Its regulatory measures have two broad aspects : the evolving of a common pattern in the structure and practices of different associations and the smooth functioning of markets. It must be conceded in all fairness to the Commission that it has had considerable success in bringing about a common pattern in the structure and practices of various recognised associations. In exercising control over speculative activity, however, it has often played havoc with the markets. Unhealthy speculation has to be checked, but speculation can be called unhealthy only if it threatens the liquidity and solvency of the market. The Commission is known to have intervened in the market even when its liquidity and solvency were not in danger. It acted simply because it did not feel satisfied with the prevailing price trend.

It is risky to question the market's verdict too often. After all, the market is a sensitive mechanism. True, it cannot be allowed to behave in any way it likes. Sometimes the need arises to deflect the course of prices. But this can only be done through proper fiscal and monetary policies or through physical controls. The Commission can play its part only if the rise or fall in prices is due to unhealthy speculation. Rarely has it been faced with the problem of arresting a decline ; it has mostly had to check the upward trend in prices. But the steps taken by the Commission from time to time—including the fixing of arbitrary ceiling rates without even allowing for normal carry-forward charges for various contracts—have only led to an increase in the spread between the futures and spot prices, the latter commanding huge premiums. That the Commission should think in terms of a determined effort to stabilise prices may sound plausible. But it is difficult to imagine how the F.M.C. and the market authorities can stabilise the prices of regulated commodities when they move up and down due to the lack of balance in the demand and supply position.

The meeting of presidents of various recognised associations is always welcome since it promotes better understanding of the purpose of various regulatory measures and the practical difficulties involved in administering them. The success of regulatory measures depends largely on the fund of goodwill between the Commission and the trading community. Not all is well with the latter. Many members of recognised associations are alleged to have been found guilty of irregularities in one form or another. Illegal trading is widespread. Various problems which came up for discussion at the conference included appropriation of non-member clients' business and *dabbas*, control over trading by non-members, the need for statutory registration of commodity brokers, uniformity in trading hours, holidays, units of trading, delivery months, duration of contracts, method of fixing due date rates, circulation of names of some parties convicted for one offence or another to all the associations, arbitration where contracts are challenged, filing of returns by members, appointment of non-trading presidents and the financing of schemes for research in forward trading.

Some of these issues are relatively simple. For example, it should not be difficult to reach reasonably satisfactory agreements on trading hours, units of trading, delivery months, fixing of due date rates, etcetera. The idea of circulating the names of persons found guilty of one offence or another, particularly in meeting financial liabilities, is commendable. It will tend to discourage defaults. The Commission's concern over kerb trading, options and *dabba* business seems exaggerated. Kerb trading is not such an offence as should attract the penal provisions of the Forward Contracts (Regulations) Act. The evil can be checked if the trading hours are increased. *Dabba* business can also be appreciably reduced if the unit of trading is kept small so as to enable the small trader to take interest in the recognised markets. Options, although illegal, are known to be of great value. So there appears to be a strong case for legalising this business. There is, of course, no reason why the law should not be observed. The plain truth is that most of the evil practices in the market can be checked only if the trading community develops high moral and ethical standards.

Taxation and Capital Formation

Capital formation in the Indian corporate sector during recent years has been low, averaging about Rs. 59 crores a year. Consequently, industrial expansion has been hampered. Referring to this fact at the half-yearly general meeting of the Bharat Chamber of Commerce in Calcutta last week, Mr. Mohan Kumar Mookerjee, senior vice president, said that the main reason for the low rate of capital formation is the steep rate of direct taxation by the Government, which has been taking away too large a proportion of the increases in national income. For example, in 1961-62, the national product increased by only Rs. 310 crores at current prices, while additional taxation by the Government siphoned off Rs. 140 crores into the Exchequer ; in other words, 45 percent of the increase in national income went in taxes. In 1962-63, the net addition to the national income was not significantly more than in the previous year, but extra taxation rose further to Rs. 181 crores. During the current year, national income is unlikely to rise at a higher rate than the previous two years, and yet the massive tax efforts of the Government will net in Rs. 357 crores. Mr. Mookerjee stressed that as the taxation of the middle and higher income brackets is very high, these groups, who have the highest propensity to save and invest, have been left with little or no surplus. Drawing attention to the fact that Indian taxation of personal incomes is among the highest in the world, he pointed out that such heavy taxation of individuals with hardly any direct service to them cannot but have an adverse psychological impact on taxpayers. Mr. Mookerjee wondered whether there was "any other country in the world where more than 100 percent of income is taxed directly".

Criticising the Government's fiscal policy, Mr. Mookerjee said revenue has been deliberately under-estimated and expenditure over-estimated. The massive measures of the last Budget are already showing signs of bringing a much larger yield than was estimated. The programme of additional taxation provides for a total of Rs. 1,710 crores on account of both the Centre and the States during the entire period of the third plan, but the measures adopted in the first three years alone are expected to yield Rs. 2,415 crores. The figure may eventually be higher. The damaging effects of such steep taxation and over-buoyant yield in the face of stagnation in savings, investment and production, seem to have been recognised by the new Finance Minister. He has "virtually scrapped" the Compulsory Deposits Scheme, but has yet to revise the high additional surcharge on income taxpayers and abolish the super profits tax on companies. This should be the logical sequence to the realistic assessment of the country's economic situation which the Finance Minister appears to have done. Mr. Mookerjee drew attention to the fiscal policy in Japan, France and West Germany, where the rates of direct taxation have been reduced, but all the same revenues have increased because of using better measures. The United States is going to cut its taxation by $10,000 million over a period of three years in order to provide incentives for business expansion. India, too, could reorganise its tax structure on more rational lines.

Cloth Output Down, Stocks Up

Production of cloth by Indian mills in August is provisionally placed at 396 million yards, against 417 million yards in the previous month and 431 million yards in August last year. The August figure bring the total for the first eight months of this year to 3,202 million yards, compared with 3,366 million yards in the same period of 1962. Yarn output in August is also lower at 161 million lbs, against 166 million lbs in July and 162 million lbs in August 1962. The output of yarn in the first eight months of the current year amounts to 1,260 million lbs, against 1,265 million lbs in the corresponding period last year. The sharp setback in mill cloth output in face of the extremely comfortable supply position of cotton during the season is quite intriguing. It lends support to the popular belief

that the mill industry is not interested in raising production unless the uncertainty about cloth prices is over. The authorities will do well to look into the matter and seek a satisfactory explanation from the industry why production is down in spite of improved supply of cotton.

Mr. Manubhai Shah's reported statement at the recent meeting of the Central Advisory Council of Industries that mill production had not risen because of the policy decision that additional requirements of cloth during the third plan should be met only by an increase in the output of the handloom, powerloom and *khadi* sectors, makes little sense. Mill production is running far behind the plan schedule ; the target for this sector is 5,800 million yards a year. The mill industry had once protested that its share in the total of 9,300 million yards had been fixed on the low side. The modest setback in yarn production suggests that the combined total output of cloth by the organised and decentralised sectors is less than in the previous year.

Cloth stocks with the mills at the end of August totalled 333,300 bales (of 1.500 yards each), showing an increase of 18,500 bales over the July-end figure. Unsold stocks are up from 146,600 bales to 155,500 bales, and there is an increase of 9,600 bales under "sold but delivery not taken". Stocks of yarn have also risen sharply from 70,900 bales to 82,700 bales (of 400 lbs each). Unsold stocks have risen from 32,100 bales to 40,800 bales, and there is an increase of 3,100 bales under "sold but delivery not taken."

National and Grindlays Centenary

National and Grindlays Bank celebrated its centenary on Monday, 30th September, when the main component in this banking group attained its one-hundredth birthday. In India, the centenary will be celebrated later in the current year. The bank was registered on 29th September, 1863, in Calcutta by a small group of British and Indian merchants under the name of the Calcutta City Banking Corporation which was changed to the National Bank of India early the following year. Thereafter until 1958, when further changes of name were made in recognition of the new conditions in south Asia, the title of the National Bank of India was to become familiar to successive generations of customers in an increasing number of countries. Grindlays Bank—the entire capital of which was acquired in 1948—had commenced business in 1828 while Lloyds' eastern branches were absorbed into the organisation in 1961. Thus the centenary relates primarily to that part of the organisation which formerly bore the name of the National Bank of India and around which the later alliances have grown.

In 1866, the head office and control were transferred to London and the bank was registered as a sterling concern under the U.K. Companies Act. This gave it ready access to the world's principal money market, where it speedily established itself as a progressive institution specialising in the financing of eastern trade and commerce. The mid-1860's were a time of great financial stress : with the end of the American Civil War the Indian cotton boom collapsed, while the failure of Overend Gurney in London had its repercussions on India. Banking casualties were heavy, especially in India, but by prudent and skilful direction, the infant National Bank of India weathered the storm. An account of these and other eventful happenings is given in *100 Years of Banking in Asia and Africa*, a book specially written by Mr. Geoffrey Tyson, a former Editor of *Capital*, to mark the centenary of National and Grindlays Bank. The book will be issued at a later date.

By the 1890's the bank was fully established in India (including that part which is now Pakistan), Burma and Ceylon, as well as in Aden and Zanzibar. From the latter place, it was a short step to the east African mainland, where it had the distinction of being the first British bank to begin operations and to bring western banking techniques to the several east African territories. As the railway made its way from the coast to Lake Victoria, the bank went with it on what was literally a pioneering journey. In the process, it was able to provide banking services to Asian merchants, tradesmen, clerks and mechanics who came to east Africa for the construction of the railway or its subsequent operation. Within the area of its activities, National and Grindlays has always endeavoured to provide banking services where they are most needed and, in this matter, it can reasonably claim to have served the countries of the Indian Ocean well.

On 31st December, 1864, the bank's total asets amounted to £328,736 ; today they are more than £277 million. In the first year of operation, there were slightly more than 300 shareholders ; at the end of 1962, the number was about 6,500. In contrast to the dozen or so staff with which the Calcutta City Banking Corporation opened its doors in 1863, National and Grindlays today gives employment to nearly 10,000 employees of all grades in 165 branches operating in a dozen countries. It is also the official banker to four Governments. This is some measure of the progress which the bank is able to record on the historic occasion of its centenary.

Unemployment Problem Worsens

The task of the three sub-committees set up by the Planning Commission's Working Group on Employment and Training to examine the progress of the employment programme during the third plan and to suggest ways and means for increasing opportunities in the fourth plan, will not be easy. The Planning Commission had estimated that some 17 million new entrants to the labour market would have to be provided for during the current plan period. Including the 9 million persons remaining unemployed at the end of the second plan, the number of new employment opportunities to be created would be 26 million. As against this, the Planning Commission provided for only 10½ million persons in the non-agricultural sector, and 3½ million in the agricultural sector. The remaining 12 million persons and the very large number of people, who are underemployed, were left to fend for themselves,

The really disquieting thing is that the third plan is not even likely to provide employment to more than 45 percent of the 14 million people for whom employment opportunities are to be found under the programme. The situation is really worse than these statistics suggest. India's population has been rising at an average annual rate of over 2.4 percent. This means that the number of unemployed persons, which the sub-committees appointed by the Commission's Working Group will have to take into consideration for the fourth plan period, will be very much larger than that at the beginning of the third plan.

As the Minister for Planning, Labour and Employment, Mr. Gulzarilal Nanda told the third meeting of the Central Committee on Employment some time ago, this rising tempo of unemployment is due to a more rapid increase in India's population, and to a shortfall in the achievement of agricultural and industrial production targets in the first three years of the current plan. But the failure of the plan to provide sufficient employment opportunities defeats one of the main objectives of planning in India and creates severe hardship for the people. The rising tempo of unemployment also prevents a proper use of the available manpower.

The main plank of the Government's policy for solving the unemployment problem in the country is the programme of rural industrialisation and rural works. But this programme has so far failed to produce any worthwhile result. Moreover, although small-scale and cottage industries are more labour-intensive than large-scale industrial enterprises, they have failed to provide new employment opportunities to people either in the rural or in urban areas. The Planning Commission's expectation that, within a period of 15 years, the proportion of agricultural population to the total would shrink from 70 percent to 60 percent is not likely to be realised. Any problem for reducing unemployment will, therefore, have to be based on the assumption that the country's population in the near future would continue to rise at the rate of nearly 2.5 percent a year, and the distribution of population as between the urban and rural areas will remain unchanged. It is likely that the Planning Commission's rural projects to absorb the idle population might create some new employment opportunities, but it could not possibly solve the entire problem. Better collection and classification of statistics and an improvement in the working of employment exchanges would certainly help in acquiring a clearer understanding of the problem and in bringing about a better distribution of job opportunities as between different regions. However, the main problem of widening employment opportunities would not be solved thereby.

Complaints against L.I.C.

In an open letter addressed to the chairman of the Life Insurance Corporation, the Policyholders' Servicing and Research Institute, Calcutta, has drawn attention to the serious deterioration in the efficiency of the L.I.C., particularly in the service to policyholders. Due to the decentralisation scheme under which the old units (which existed before the nationalisation of life insurance) have been suspended, the policyholders have been seriously inconvenienced in paying premiums and receiving loans and claims. The letter mentions that in the case of old policies, the surrender values have been arbitrarily reduced. The gross irregularity in the procedure for receiving premiums and issuing receipts has become widespread. In many instances, the unit office has been shifted from Calcutta without telling the policyholders concerned where and how to pay the premiums. Sometimes policyholders are asked to pay the premiums through a particular bank, but that does not always help because the bank is clueless about the details of interest which have to be paid on overdue premiums. As a result, policyholders are compelled to pay the premiums through the bank without obtaining any receipt. The inconvenience is the greater because the bank concerned has been authorised to accept premiums only in cash. The centralisation of cash department has also resulted in unnecessary harassment and avoidable delays, as it happens to be in an out-of-the-way place.

Another disturbing feature is that the energy of the L.I.C. staff has been diverted more and more to procuring new business which has often been underwritten under pressure. Consequently, many new policies have lapsed shortly after their introduction. Policyholders have been persuaded to stop old policies in order to take new ones. This is a very unhealthy practice. Complaints have been received about undue delays in meeting claims, especially on death. Unless the heirs of the deceased are resourceful, they are often likely to find it difficult to win a legal case against the L.I.C. for obtaining their legitimate dues. The Life Insurance Corporation has after two valuations since nationalisation declared bonuses for with-profit policyholders. Many of them are wondering why no definite intimation has reached them yet. Life insurance will flourish only on the good service it can render to policyholders. It is hoped that the authorities will pay attention to the grievances and have them redressed. This is important especially when steps are being taken to popularise insurance in rural areas, where the unsophisticated mass of people are least likely to feel encouraged by the existing practices of the L.I.C.

Sales Tax on Cloth

The memorandum submited by the Millowners Association, Bombay, in response to the questionnaire issued by the Saraiya Committee, contains interesting data on the incidence of sales tax on cloth and yarn meant for export. Following the replacement of sales tax by additional excise duty since 1957, the sale or purchase of cotton fabrics has been free from all taxes under the composite sales tax scheme in force in Maharashtra State. There is thus no problem of sales tax as far as the export of cotton textiles is concerned. But sales tax has to be paid on various items such as cotton, fuel oil and coal, dyes and chemicals, stores and packing materials, which are required for manufacturing of cotton fabrics. The Association has enumerated as many as 59 items liable to sales tax which are used by cotton mills, and has estimated the burden of sales tax on the textile industry in Maharashtra at Rs. 2.67 crores, made up of Rs. 1.30 crores on cotton, Rs. 25 lakhs on electricity, Rs. 13 lakhs on fuel oil and coal, Rs. 5 lakhs on starches,

hessian and hoops, Rs. 94 lakhs on chemicals and dyes, packing materials and other mill stores.

The Association says that the few concessions in the shape of drawback and set-off allowed at present on goods used in manufacturing of cotton fabrics for export have proved to be quite illusory because of the cumbersome conditions which have to be complied with. It is extremely difficult to work out the incidence of tax paid on each item of goods used in the manufacture of such fabrics and often there are differences of opinion between the Commissioner of Sales Tax and the assessees. According to the calculations made by the Association, the sales tax burden works out to 1.33nP a yard on cloth and 21nP a bundle (of 10 lbs) on yarn. In view of the sensitive nature of the international market in cotton textiles even this small burden is considered to be "sufficient to drive away trade from India." The Association has, therefore, urged the Government to remove the entire burden of sales tax on raw materials, fuel, dyes and chemicals, etcetera, used in manufacturing cloth and yarn meant for export. The concessions in sales tax, it is suggested, should be in the form of *ad hoc* rebates. Based on the quantities of cloth exported from mills in the three different categories, the Association has recommended 1nP a yard for grey, 1.5nP a yard for bleached and 2nP a yard for cloth otherwise processed. On value basis, the rebates work out to 1.33nP a yard for grey, 2nP a yard for bleached and 2.67nP a yard for cloth otherwise processed, which gives an average of 1.80nP for every rupee worth of cloth exported, f.o.b. basis.

The Association has also suggested that the mills should be entitled to claim *ad hoc* rebates of sales tax at the appropriate rates against Customcertified AR-5 forms. With cloth exports currently fetching about 79nP to 80nP a yard, the relief sought by the Bombay Millowners Association by way of rebate of sales tax is perhaps too small to make any material difference to the export effort. But at a time when the Central Minister for International Trade goes about telling the trade "export and prosper and the Government will underwrite losses", anything that can help increase the industry's competitive position in international markets deserves to be considered sympathetically. Getting rid of fiscal impediments in the way of exports is much better than subsidising exports since the latter does not carry a good impression abroad.

All-India Body for Scrap Trade

The Iron and Steel Scrap Association of India has been set up through the effort of the Scrap Traders and Exporters Association. The need for an all-India body representing all scrap interests has long been felt. But unfortunately, domestic controls divided the otherwise complementary interests in scrap into rival groups. That made it extremely difficult to give concrete shape to the idea of an all-India organisation. These controls have now largely disappeared, and the conflict of interests has narrowed. The membership of the Association is open to all scrap interests, namely, merchants, dealers, processors, exporters, brokers and domestic scrap uses.

Mr. Sultan A. Nathani's presidential address last week, gave a clear picture of the scrap trade and industry. These have tremendous potentialities for growth. If the authorities follow a realistic export policy and if furnace owners adopt a more helpful attitude by not insisting on export restrictions the prospects for the scrap trades and industry should be good The country has a huge scrap potential of about 1.5 million tons, but the development of the industry has been adversely affected by the export restrictions on scrap and due to the lack of facility for importing scrap processing machinery. Domestic consumption of scrap has been increasing very slowly, compared with arisings. In fact, the growth of scrap-based capacity in the country has shown a progressive decline; domestic consumption which was 10 percent of arisings at the beginning of the first plan is now placed around 8½ percent. According to Mr. Nathani, the home requirements of scrap is unlikely to provide any significant support to the trade and industry in the foreseeable future. The industry's prosperity hinges on exports. Mr. Nathani said that scrap exports could rise to around 1 million tons a year without at the same time causing any scarcity for domestic users, if free export was allowed. The additional foreign exchange which could be earned by the export of scrap surplus now uncollected would be nearly Rs 10 crores. Exports during 1962 were placed at only 135,000 tons. The present restrictions on export, said Mr. Nathani, benefit only the domestic users whose consumption constituted a very small percentage of the total arisings. Between 1952 and June 1963, the total volume of scrap exported from India exceeded 2.8 million tons against the domestic demand of 900,000 tons. Shipments, it was felt, could have been easily twice the figure of 2.8 million tons if export policies had been liberal, and timely incentives had been allowed to exporters. Mr. Nathani also complained about the heavy incidence of railway freight which discouraged the collection of upcountry arisings.

In his inaugural speech, the Central Minister for International Trade assured the trade and industry of every possible help and co-operation from the Government in the task of export promotion. He said that it should not be at all difficult to evolve through mutual discussions a national policy for scrap which would ensure of the domestic users all their requirements and release the surplus for export. Mr. Shah suggested the setting up of an export company to assist small exporters and asked bigger exporters to consider possibilities of entering into long-term sales agreements with overseas buyers. The Central Minister even hinted that if the exporters did all they possibly could to maximise exports, their efforts were likely to be properly rewarded by the Government.

For a nominal charge "Capital's Statistical Department can provide you with a certificate of share prices.

A Satisfactory Year for I.F.C.

The Industrial Finance Corporation of India has now become one of the most important institutions for promoting the country's economic development, particularly in the private sector. It has progressively diversified its activities. Although rupee loans constitute the bulk of its operation, it sanctions loans in foreign currencies, gives guarantees for deferred payments and foreign loans. The I.F.C. underwrites public issues of equity and preference shares and debentures. It also subscribes for these issues. So it is now playing the rôle of a development bank instead of being merely a lending institution, a point which has been stressed by Mr. K. P. Mathrani in his chairman's address at the Corporation's annual general meeting last Monday. (A fuller version of the speech is printed on a later page in this issue of *Capital*.) During the past 15 years of its existence, the I.F.C. has offered gross financial assistance amounting to Rs. 202.7 crores. The net amount of financial facilities is Rs. 164.33 crores, of which rupee loans are Rs. 118.39 crores, foreign currency loans Rs. 9.29 crores, underwriting and direct subscriptions Rs. 9.48 crores and guarantees Rs. 27.17 crores. Assistance amounting to Rs. 102.57 crores has been disbursed up to 30th June, 1963.

The Corporation has tried to promote new projects. It has been estimated that about 30 percent of the total net investment in the organised private industries sector has been due to its assistance. It started underwriting business from Decemer 1956 and up to date it has given sanctions for Rs. 7.66 crores. Although shares and debentures worth Rs. 4.51 crores have devolved on the Corporation as a result of its underwriting business, it has largely been due to the depressed condition of the capital market. Mr. Mathrani is, however, confident that the I.F.C. will receive an adequate return from these investments. The Corporation has also offered substantial assistance to industries in securing foreign exchange. The number of subloans granted in foreign currencies has steadily increased. This has been possible because the Corporation has obtained substantial credits from foreign financial institutions.

There have been two striking features of the Corporation's promotional activity. Firstly, it has adopted a constructive approach towards sanctioning loans to various industries. With the assistance of the technical organisation it has set up, the I.F.C. has helped entrepreneurs with sound financial and technical advice for preparing their plans and projects By collaborating with institutions like the Life Insurance Corporation, the Industrial Credit and Investment Corporation of India, the State Bank and other commercial banks, it has successfully financed several big projects. This kind of financial collaboration should be welcomed since it promotes the exchange of ideas and helps spread investment risks.

The I.F.C. has produced satisfactory results for the year ended June 1963 It has sanctioned financial facilities amounting to Rs. 40.14 crores, of which loans constitute Rs. 22.61 crores, underwriting and subscriptions Rs. 5.19 crores, and guarantees for deferred payments and foreign loans Rs. 12.34 crores. The assistance disbursed has amounted to Rs. 22.43 crores. The Corporation has made a gross income of Rs. 3.95 crores, showing a rise of Rs. 90.54 lakhs over the previous year's figure. The gross profit has risen by Rs. 37 lakhs to Rs 1.67 crores, of which taxation absorbs Rs. 84.95 lakhs. A sum of Rs. 30 lakhs has been transferred to general reserve. The special reserve fund has been allocated Rs. 17.60 lakhs. A further sum of Rs. 15.82 lakhs has been transferred to the special reserve fund under the Super Profits Tax Act. The guaranteed dividend of 2½ percent on the original share capital of Rs. 5 crores, has been declared while the additional share capital of Rs. 2 crores receives a dividend of 4 percent. Mr. Mathrani has stated that a solution to this anomaly in the payment of dividends is being considered. A notable feature is that no provision has been made for bad and doubtful debts since borrowers have been prompt and punctual in paying their dues. Some of the old arrears in relation to the principal have been cleared off, and the percentage of defaults has declined considerably. The Corporation raised Rs. 6 crores by issuing bonds at an issue price of Rs. 99.50 for a bond of Rs. 100. These bonds carry an interest of 4½ percent.

FREEDOM AND FREE TRADE

WE hear so much about the fundamental principles and trade-stimulating elements of Free Trade and such contemptuous denunciation of Protectionism, that we approach with diffidence a discussion in which it is difficult to take a part, especially an unpopular part, without incurring the displeasure of friends with whom we may be otherwise in agreement. But our excuse, if any is necessary, is that we do not understand what fundamental laws and trade-stimulating elements are comprised in the practice of Free Trade as it now exists. Trade consists of three well defined sections—(i) those who produce or manufacture, (ii) those who negotiate between the foregoing and the consumers and (iii) the consumers. Taking these three sections as existing in any one country, the admission of foreign goods of whatever kind without duty must necessarily facilitate their competition with similar home made goods and lower the prices of the latter. But the consumers of course benefit, and the general result is larger consumption at lower cost. No fault could be found with this result if the field for home producers was as open as that of foreign producers, but clearly it is not so, as directly the former attempt to send their goods to foreign markets they are met by prohibitive import duties, and their field in comparison with foreign producers who get their goods free into the home country is limited accordingly. While the consumers benefit the producers suffer. The theory of Free Trade is that producers being also consumers participate in the gain. This like bimetallism is beautiful as a theory, but in practice it is fallacious. Were it not for India, Manchester would be protectionist to a man. Birmingham and the Iron districts ditto. For it stands to reason that no producers or manufacturers having only one market to sell in can compete with those who have not only the same but other markets as well, besides sundry bounties and what it called, cartels. Free Trade therefore only provides the necessaries of living (but not lodging) at the cheapest price to consumers. With them there is perfect freedom of choice among a very large and miscellaneous collection of the good, bad and indifferent order, the two latter predominating Even the luxury of penny dolls is not denied them.

A Ditcher's Diary

MR. DANIEL WALCOTT'S CONSIDERED VIEWS ON THE state of Indian democracy and the Indian administration, as reported in Karachi, are of interest only to himself; he probably knows more about gun-running than about now to run a Government. What will concern this country more is how he was able to get away to Pakistan with such enviable ease. I can understand, without admiring, a communist betraying his country; a few weeks ago I wrote of Guy Burgess on this page with what to some seems indulgence. As I read of Walcott's escape, I thought of another such get-away from Hyderabad soon after India moved into that State. I do not believe that idealism played any part at all in these escapades. Money did it, or some similarly sordid motive. We must, now, wait for the departmental enquiry to be completed before we pass final judgment on men who may have been no more than incompetent. Nor am I passing any. The caveat still seems called for that incompetence may be providing an excellent cover for men that are guilty of much worse crimes. Mr. Walcott's was no simple operation, although he boasted in Karachi as though the whole thing was a pushover. He denied that he had bribed any Indian aviation or airport official; it seems hard to swallow that one or more Indian citizens believed so passionately in the Freedom of this great American that they took all that risk involved in helping a convicted foreigner escape. All Indian airports are protected areas; the silliest of restrictions prohibit photography of the most harmless kind. Yet it was possible for a suspect foreigner to walk into Safdarjang, have his plane refuelled and take off—just like that. And there is supposed to be an emergency in this country, under which to sneeze is to attract the Defence of India Rules. Now I find Mr. Walcott's contempt for the Indian administration almost understandable.

PARLIAMENTARY DEMOCRACY, A RELATIVELY RECENT and essentially unstable form of Government despite the Athenian experience, may yet have to learn a great deal from the mores of absolute monarchy, or so a colleague tells me. He went to Ethiopia some three years ago and was taken by officials to see its new Parliament; the architecture he found mildly interesting and that was all. A few days later he had an opportunity of watching Ethiopia's real Parliament at work. This was on the lawns of the Imperial Palace. Ten or twelve groups of Ministers and officials were hanging around, each waiting for a huddle with the Emperor, in the course of which a five year plan or a complex multi-purpose project report would be placed before His Imperial Majesty. Would H. I. M. then pass orders in writing? No; that would be *infra dig*. He would summon his Minister of the Pen and tell him what orders to issue. My colleague's theory is that under the Kamaraj plan, we are witnessing something that is not very different Mr. Nehru said lately at Lucknow that Messrs Kamaraj, Patnaik and Bakshi Ghulam Mohammed were the keenest, in that order, to implement the plan that bears the name of the first. This may well be correct. In Mr. Bhaktavatsalam, Mr. Kamaraj has a "reliable" man; Mr. Biren Mitra in Orissa was Mr. Patnaik's business associate and friendships forged on the anvil of money are often more abiding than those in politics. Messrs Kamaraj and Patnaik have thus little to fear. In Kashmir, Bakshi Ghulam Mohammed has made it clear that he is in no desperate hurry to quit, that he will accept no office outside the State and that his hold on the National Conference will remain complete; he is, in other words, looking for his Chief Minister of the Pen. Sorry, in his case it is the Prime Minister of the Pen. Whether the pen will prove mightier than the word of the ventrilcquists remains to be seen.

SINCE I WROTE LAST WEEK ABOUT THE DEATH OF SIR David Low, I have been thinking about a relationship which was probably unique in the history of British journalism. Low worked for Beaverbrook for 23 years, and undoubtedly attained his greatest heights while doing so; yet no two men could differ more completely in temperament, nor, apparently, have fewer things in common. Low cared deeply about the world and very little for himself. Beaverbrook was in business for Beaverbrook, and so far as he was concerned the rest of the world could take a running jump at itself. Low was left-wing in politics and had all the instincts of an iconoclast. Beaverbrook was right-wing, reactionary, traditional, and, at heart, sentimental. The one reserved his acid for people and institutions in their relation to life generally, the other for those who crossed his personal path. In fact, the only characteristic they shared apart from their genius was their unrelenting individuality; and this alone may have been responsible for the mutual respect which kept them together for so long. Indeed, their long relationship was a tribute to both of them, although perhaps especially to Beaverbrook who, along with his editors, must have swallowed a great deal in his time, particularly from those in authority who would have influenced him to silence his well-paid gadfly. The fact that he did not do so speaks much for his tolerance, but more for the contempt in which he has always held his critics. Besides, he would never have got where he has if he had not been able to recognise a good business proposition when he saw one. I could not imagine a dedicated socialist behaving the way Beaverbrook did; a fervent intolerance such as would have excluded a right-wing Low from a Labour paper has always characterised the very people the cartoonist himself so often supported. I could go on to conclude that this remarkable relationship between employer and employee justifies to some extent the proprietary ownership of newspapers, or the profit motive as a primary feature of their management. But I shall content myself with wondering whether it could ever happen here in India. No. I do not think it could; at least not these days. It could have done once, and perhaps it will again. But at the moment the political climate is not right; the official attitude towards the Press would not permit it; and the owners of newspapers in this country do not always share the otherwise questionable qualities of a Lord Beaverbrook. Then, come to think of it, could it happen in Britain any

IN OR OUT, MR. ASOKA MEHTA HAS EVER BEEN sometning of an odd man. He has not the completely destructive, almost anarchical, spirit of Dr. Ram Manohar Lohia, which makes him what I might call the perfect disorganisation man. Mr. Mehta reads too much, even if he does not think as much: and *pace* Julius Ceasar, such men are not only not dangerous but, frequently, not even effective, at least in the rough and tumble of Indian politics. At the United Nations, Mr. Mehta should impress many with his sincerity, if not with eloquence of the kind Mr. Krishna Menon used to be known for. As deputy chairman of the Planning Commission, Mr. Mehta can be confidently expected to write readable and useful reports; he presided over the Foodgrains Enquiry Committee with competence. Anything more? In spite of his long and active involvement in politics since the days of the Congress Socialist Party, he has remained something of a theoretician of a rather eclectic sort. Not as though this country does not need theoreticians; I could argue that the Congress's chief weakness today is not organisational at all, so that the Kamaraj plan is really a *non sequitur*. What the Congress needs is a new credo based on contemporary realities and aspirations. The Planning Commission too could do with more academicians with Mr. Mehta's application. But the Planning Commission has already been converted into a vast bureaucratic monster; and I shall not be surprised if its deputy chairman soon begins to despair of getting anything done. Does Mr. Mehta's latest transformation mean the end of his political career, such as it was? Not at all unlikely. In a more socialistic society than ours at present, however, amateur-experts like Mr. Mehta may well have a market value; but even in that mechanically efficient system, I can see him crying for the spiritual content of socialism. Mr.

Mehta is never happy unless he is unhappy for something or somebody.

ONE OF HISTORY'S MOST MISJUDGED AND MISUSED characters: that has always been my verdict on Warren Hastings. There is no doubt that he was guilty of grievous wrongs; many people who find themselves in positions of great responsibility are. But the treatment he received at the hands of his fellow-countrymen is an outstanding example of the jealousy and bitter spite which has often characterised the attitude of Britons at home towards those who built their empire. I shall not go into the reasons why this should be so, except to say that it was all too often, as with Burke, disguised in apparently high-minded reasoning and brilliantly presented argument. It was, after all, so easy for the discontented, homebound intellectual to win popularity by denouncing a class of person who certainly made the task easier by his habit of flaunting his wealth and glorifying his achievements. In the end, of course, this was one of the main driving forces towards the abandoning of empire altogether. What has started me off on this philosophising is something I have just read about that most viperish of nineteenth century scholars, Lytton Strachey, the biographer of the Eminent Victorians. It seems that Strachey's own biographer, Mr. Michael Holroyd, has recently unearthed a manuscript of the life of Warren Hastings, and it is entitled Warren Hastings, Cheyt Sing, and the Begums of Oudh. Now we all know that the case of the Begums was one of the most reprehensible of Hasting's career. Of all the crimes laid at his door, this was probably the most difficult to rationalise. And the Cheyt Sing affair was not particularly creditable either. But the fact that any book dealing with the great administrator should concern itself chiefly with these two incidents is an immediate indication of the line it is taking. Frankly I shall be sorry to see another addition to the tiresome list of literary tooth-sharpeners with Warren Hastings as the victim. I shall read the book, if it is published, but I only hope for the sake of Lytton Strachey's reputation with posterity that it is neither as smart nor as partial as its title implies.

SO THE INDIAN HOTEL INDUSTRY IS TO GO THE WAY of Hollywood: it is to have its own star system. I really have no right to object, for my own profession, journalism, is now infested with colleagues who are inconsolable without their by-lines in black capitals on the most trivial of their despatches. Hotels, of course, need to advertise a good deal to attract clients; but the Savoy of London recently learnt the hard way how damaging the wrong kind of publicity can be. Arnold Bennett, who was a director of one of the poshest hotels of his time, wrote somewhat romantically on the hotel business. A grimmer picture of the dirt behind the glitter came out in George Orwell's *Down and Out in London and Paris*; and I shall not be at all surprised if the kitchens in the most expensive Indian hotels are a little more horrifying. Having stayed in some Indian hotels, I have come to the firm conclusion that the most efficient department in those establishments is that concerned with accounts, they really are good at charging the most fantastic prices for such things as cigarettes. At a Government-owned joint in Delhi, a friend was recently asked to pay Rs. 8 for a tin of fags that would cost him only Rs. 5 at the nearest *pan* shop: my friend refused and told the manager what he thought of the hotel. At least one public-sector hotel recently showed a profit, after years of big losses; I do not know whether Parliament which received the balance-sheet with satisfaction realised how much that profit had cost the country in the currency of tourist good-will. The private sector's record is no better; it too mulcts clients until it hurts; and on the way to Muttra Road in Delhi you can see the four-year-old skeleton of what was going to be the "finest" hotel in Asia. Inside, I was told, lies buried a biggish foreign loan. Newcomers in the business have the temptation of a five-year tax exemption; a friend well versed in such matters tells me that tax evasion is easier in the hotel business than in most others.

THE DITCHER

Guide for Investors

TAX BURDEN ON IMPERIAL TOBACCO

THE adverse effects of heavier taxation have been highlighted by Mr. F. A. Collett in his chairman's address (a fuller version appears on a later page in this week's issue of *Capital*) at the annual general meeting of the Imperial Tobacco Co. of India Ltd held in Calcutta last week. Mr. Collett forecast that the profit would show a marked decline during the current year due to the steep increase in excise duties imposed by the 1963-64 Central Budget. The Company has had to bear an additional income tax burden of about Rs 20 lakhs. The substantial rise in excise duty has not only affected consumption and profits but has also raised the working capital requirements. Since there is a considerable time-lag between the despatch of goods from factories and their purchase by consumers, considerable sums are blocked in excise duties. The Company, for example, has been forced to block about Rs. 2 crores in excise. So the Company's claim for getting some credit from the Government on the excise has strong justification.

Mr. Collett said that the increase in excise duty tended to restrain the total turnover. During the five years until the 1962-63 Budget, there was a steady increase in the volume of sales every year. But it is feared that as a result of the 1963-64 Budget, there will be a decline in sales for the first time for several years. Due to the rising production costs, combined with the increases in excise rates, the Company has been compelled to raise the lowest prices of cigarettes up to a level which might restrain consumption. Since the Company sells cigarettes over the entire price range from Rs. 1.40 to 12nP for ten, it is difficult to pursue a long-term policy due to the regular increases in excise duty. The chairman felt that the tobacco and cigarette excise rates had reached the maximum.

The Company has been making efforts to increase productivity and efficiency through various measures. Although the trading profit has been satisfactory, the taxable ordinary dividend has had to be cut from 9 percent to 8 percent, including a final of 3 percent, due to the heavy impact of taxation combined with the blocking of funds in working capital following the increases in excise duty.

India Steamship Skips Dividend

THE India Steamship Co. Ltd has incurred a loss of Rs. 30 lakhs for the year ended March 1963 and the dividend has again been passed. The freight earned fell from Rs. 8.97 crores for 1961-62 to Rs. 8 crores, but the decline has been compensated by a fall of Rs. 53 lakhs in port expenses and other charges.

In his chairman's address at the annual general meeting of the shareholders held in Calcutta last Monday, Sir A. Ramaswami Mudaliar says that rising operational costs have contributed to the unprofitable working. (A fuller version is printed on a later page in this week's issue of *Capital*.) There has been substantial increases in port charges, dock levies and stevedoring rates. Delays in berthing vessels at ports have resulted in additional financial strains. He, therefore, thinks that the recent increase in the freight rates by the Conference lines has been justified, in that it will help compensate the shipping companies for the increased operational costs. He takes a mildly optimistic view of the future outlook since, and hopes that the days of deficits have come to an end. Meanwhile, there has been an improvement in the berthing facilities at some Indian ports. The drafts of the Hooghly river have also been improved. In view of the prospect of a bigger trade, the shipping companies can look forward to better times.

Expansion of Aluminium Corporation

THE Aluminium Corporation of India Ltd has produced satisfactory results for 1962-63. Sales and the trading profit have been substantially higher than those for 1961-62. The dividend has been cut to conserve resources. The expansion programme, meanwhile, has almost been completed. In view of bigger production due to expansion, Mr. Lakshmipat Singhania, chairman, said in his address (a fuller version has been published on a later page in this week's issue of *Capital*) at the Company's annual general meeting in Calcutta last Monday that the reduction in the dividend was likely to be temporary. The expansion project is estimated to cost about Rs. 5 crores to which the shareholders have contributed only Rs. 31.25 lakhs in the form of new share subscriptions. The new smelter has started functioning and has achieved full production capacity. The extension of the alumina plant will soon be completed. The extrusion plant has begun trial production. The A.C.S.R. cable plant and the foil plant are expected to operate before the end of 1964. The full benefits of the expansion should be reflected in the next financial year. The shareholders have, meanwhile, been offered bonus shares in the proportion of one share for every four held. The chairman pointed out that the break-up value of the shares amounted to more than Rs. 36 a share.

Mr. Singhania said that the demand for aluminium would steadily increase due to industrial development and the shortage of other non-ferrous metals. The demand may amount to about 120,000 tons by 1966, but it is doubtful whether production will rise to this figure. Since several licences for setting up new plants have not materialised, it is feared that the production target of 117,000 tons fixed for the third plan will not be achieved. So new factories should be encouraged in areas where sufficient electric power is likely to be available.

Synthetics and Chemicals Plans to Diversify

THE Rs. 100-paid share of Synthetics and Chemicals which had once fetched a premium of over Rs. 200 was sold down to below par some days ago and the latest quotation of Rs. 115 is not very much higher. Shareholders who went to the annual meeting in the hope that they might get some clue to the maiden dividend, returned rather disappointed because the chairman, Mr. Tulsidas Kilachand, told them that in view of the capital-intensive nature of the project, it was too early to assess the profit outlook over a period of time, but he added that he did not take a gloomy view of the times ahead. The Company went into production some five months ago, and the rated capacity of 30,000 tons is likely to be reached by the end of the current year. The teething troubles are nearly over, although this does not mean the end of the Company's worries.

So far the Company has produced about 5,000 tons of synthetic rubber comprising the three principle types used by Indian consumers. The product conforms to international standards and has been approved by the tyre industry. But production costs remain high. When the project was sponsored in 1958, it was hoped that synthetic rubber would be able to compete successfully with natural rubber and imported varieties. The subsequent rise in raw material costs, excise duty, etcetera, has, however, upset all calculations. At present, synthetic rubber is being sold at prices higher than natural rubber and to that extent there is resistance in the market. In a reference to comparative prices, Mr. Kilachand said that American synthetic rubber was cheaper as raw material for the industry there came from the petroleum field, whereas the Company's plant here was based on alcohol.

The chairman held out the hope of some economy in production costs as a result of expanded output and due to a possible reduction in the price of benzene for which the Company had approached the Government. In order to promote the sale of its products, the Company has set up a rubber technical service laboratory in Bombay to demonstrate the use of synthetic rubber in different industries and consumer products as also to train rubber technologists. The chairman revealed that the Company has plans for the diversification of its production by manufacturing various other rubber alloys, chemicals and by-products which are likely to prove quite remunerative. The Company has been assured by the U.P. Government about the supply of alcohol to the plant's full requirements. The supply position for benzene and coal is stated to be fairly easy. Supplies of imported raw materials have also been assured by the Government and the necessary import licences are being received.

Indian Oil Company Sales Rise

THE Indian Oil Co. Ltd has made a profit of Rs. 59.61 lakhs for 1962-63, after providing for taxation. This gives a net return of 18.5 percent on the equity capital. The accumulated loss of Rs. 16.85 lakhs has been wiped out and development reserve has been allocated Rs. 43.44 lakhs. But Mr. P. A. Gopalkrishnan has pointed out in his chairman's address at the annual general meeting in Bombay recently, that the profit would have been higher but for the payments which have been delayed by the Government. (A full text is printed on a later page in this week's issue of *Capital*.) Sales have almost trebled to 629,639 kilolitres. The Company has sold 14 different products. A full-fledged lubrication department has been set up in all branches. The Company has become the sole distributor in India for mobil premium-grade lubricants. Two blending plants are being set up which are expected to go into production in 1964. The storage space of the Company has increased nearly two-and-a-half times. It has established several depôts and retail outlets to promote sales.

Mr. Gopalkrishnan has mentioned that although the Government is prompt in collecting the Customs and excise duties from the Company—the total amount of duties it has paid to the Government amounts to Rs. 22.39 crores since its inception—it has delayed the payment of bills. The outstanding bills amount to more than Rs. 8 crores at the end of August 1963. As a result, the Company has been burdened with big overdrafts and its working capital requirements have gone up. Hence he apprehends that the rate of profit on the equity capital will move down for the current year, particularly in view of the increase in the duty on all kinds of products There has been a steady decline in the operational costs. The activity of the Company will expand greatly when the various new refineries in the country go into production.

present power supply licence expires in 1975. This was disclosed by Mr. N. K. Petigara, a director of the Company who presided over the shareholders' recent annual meeting in the absence of the chairman, Mr. Kasturbhai Lalbhai. Elaborating the point in reply to shareholders' enquiries, Mr. Petigara said that the proposal was only in the exploratory stage and that a clear picture would be available some time next year. He, however, hinted that the Company was thinking of undertaking the manufacture of fractional horse-power motors for which there is a growing demand.

Negotiations for collaboration, it is said, are in progress and it is only when the project is finalised that the directors will consider how the requisite finance is to be raised. Mr. Petigara added that the Company would soon be issuing 7 percent debentures for Rs. 2 crores and that the Company's position would still be fairly tight even after the debenture issue. He assured shareholders that the Company's working was quite satisfactory, and disclosed that the Company had informed the authorities about its intention to revise the tariff upwards with effect from 16th November, in view of the progressive increase in taxation. Many shareholders criticised the Company's proposal to discontinue the payment of interim dividend. To this Mr. Petigara said that the proposal to discontinue the interim dividend was intended to enable the Company to earn interest on the amount of interim dividend which at present amounts to Rs. 26 lakhs. The Life Insurance Corporation holds 15.67 percent of the Company's share capital.

F.A.C.T. Expansion Scheme Making Good Progress

THE Fertilisers and Chemicals, Travancore Ltd has changed its financial year, so the report and accounts for 15 months from 1st January, 1962 to 31st March, 1963, have been published. The most important event has been the introduction of a new technology for the production of synthesis gas required for ammonia manufacture. The wood gasification plant has also been closed. The oil gasification plant has been set up as a part of the second stage of the expansion programme. Although the output capacity is for 80 tons of ammonia a day, the working has been interrupted by the shortage of power and the salinity of the river water. As a result, the Company has sustained a loss of about Rs. 36 lakhs, which has been covered by drawings from previous profits carried over and taxation reserves no longer required. A sum of Rs. 63.88 lakhs has been provided for depreciation, against Rs. 38.75 lakhs for 1962. A surplus of Rs. 3.85 lakhs has been carried forward. The dividend has been passed. But in his chairman's address (a full text is published on a later page in this week's *Capital*) at the annual general meeting of the Company held in Udyogamandal last Monday, Mr. T. A. Joseph has pointed out that benefits of the expansion scheme should be reflected in the current year, provided the power shortage does not hamper operation.

He has outlined the growth prospect of the Company. The Government of India has participated in the equity share capital by subscribing for shares worth Rs. 3.5 crores and thus it has become the majority shareholders. The second stage of expansion has been completed in time. The third stage of expansion is well under way. Various major plants will be set up. It is proposed to complete the oil gasification plant and a tonnage oxygen plant which together will produce about 150 tons of ammonia a day. The programme is expected to be completed before the target date of 1965-66. The Company will then have a total capacity of about 70,000 tons of nitrogen and 33,500 tons of P'O' a year. The Company is now engaged in mapping out its programme for the fourth plan period.

The Government has asked the Company to plan, design and construct at least three complete fertiliser plants before the end of the fourth plan. The total outlay on these three projects may be about Rs. 100 crores. In addition, the Company has planned to use its by-products more fully. It has also been negotiating with Messrs Davy Ashmore Ltd of the U.K. for the establishment of a joint venture to fabricate pressure vessels and specialised steel work. This project may start production at the beginning of the fourth plan. The Company is also negotiating the formation of a joint venture with Power-Gas Corporation of the U.K. for setting up an engineering and contracting organisation to plan, design and erect fertilisers, chemical, petro-chemical and oil-refining plants.

Machinery Manufacturers Fares Well

THE Machinery Manufacturers Corporation did exceedingly well in the year ended March 1963. Production and despatches rose by about 15 percent, sales by 36 percent and the gross profit by 47.5 percent. The dividend was stepped up from 12.5 percent to 15 percent. The chairman, Mr. K. C. Mahindra's annual speech holds out the prospect of still better results for the current year and in the years ahead. (A fuller version appears on a later page of *Capital*) . The Company has now come to be widely accepted as a premier manufacturer of quality carding engines, commanding more than two-thirds of the country's market. Besides, certain integrated plans formulated some years ago have now come to fruition. The Company's basic structure has thus been greatly strengthened. The process of rehabilitation of plant and equipment has continued. The Company has recently received permission to import special machinery for the manufacture of speed frames and the machinery is expected to be received in the next few months. An initial order for 12 speed frames for delivery within the next six months has been received.

The current year's bookings for carding engines are stated to be good. The Company has taken over the installation of the Indian National Diesel Engine Company which will enable it to produce a complete diesel engine from casting to painting, ranging from 6½ to 13½ horse-power. If and when I.N.D.E.C. desires to produce engines of a higher horse-power, Machinery Manufacturers Corporation will have the option to produce them on similar terms as govern the present range of production The Company will also receive the benefit of the arrangements of deferred payment terms for machine tools worth over £60.000 and engine components valued at £180,000 to be sent by the British shareholders of I.N.D.E.C. There has been a marked improvement in the financial position in recent years. Over the past four years, the Company has reduced its indebtedness to the Government and to the Industrial Finance Corporation by Rs. 27 lakhs and it has also added Rs. 35 lakhs to its reserves. The Company is making a useful contribution to the defence effort by earmarking a portion of its production capacity for defence requirements. The Rs. 10-paid share of the Company is currently quoted around Rs. 25.75.

United Wire Ropes to Change Hands

THE Rs. 100-paid share of United Wire Ropes Ltd which had all along been commanding a fair premium was recently sold down to slightly below par. But the quotation has again improved to around Rs. 126 in a matter of few days. Apart from the marked improvement in the general trading sentiment in the stock market, the spurt in United Wire Ropes is in no small measure due to informed buying based on ideas of an early change in the Company's management, which, it is felt, will strengthen the Company's position. Market reports about a likely change in the management have been confirmed by the chairman, Mr. Murarji J. Vaidya, at the shareholders' annual meeting. The chairman informed the shareholders that the control and management are likely to pass from the present agents, C. H. Gandhi and Sons Private Ltd to the managing agency house of Jaikrishna Harivallabhdas of Ahmedabad. Negotiations have been initiated between these two parties for the transfer of the interest of the present shareholders of the managing agency company.

The sale price is said to be between Rs. 125 and Rs. 150 a share. Mr. Vaidya has expressed the view that the transfer, when it takes place, after the necessary formalities are completed and permission of the authorities concerned is obtained, will greatly strengthen the Company's position and will be in the larger interests of the shareholders. It is considered likely that this Company might be made a subsidiary of Ambica Mills Ltd of which Jaikrishna Harivallabhdas are managing agents.

The outlook for the Company is considered to be quite promising. It has been able to adhere to the original estimates of the project cost and the entire project has been completed within less than a year after the start of construction work. The Company has commenced commercial production of steel wire ropes and the plant is expected to attain its rated capacity in about a year's time depending upon the regular availability of raw materials, particularly high carbon steel wire rods. The present output of the Company is 2.5 tons to 3 tons a day on a single shift, and efforts are being made to start the second shift at an early date. The Company's products have an assured market because wire rods continue to be in short supply.

Share Offer by Panipat Woollen

THE Panipat Woollen and General Mills Co. Ltd is offering at par 117,040 equity shares of Rs. 10 each and 9,891 9.3 percent cumulative redeemable preference shares of Rs. 100 each for public subscription. The list will open on 9th October, and will close on the 16th or earlier but not before 11th October. The Company is already a leading manufacturer of woollen goods both for defence and civilian purposes, producing a wide range of goods such as quality suiting cloth, Tush and other shawls and knitting wools. It is also engaged in the production of tentage for the army and woollen cloth for industrial purposes. The Company has now turned its attention to the manufacture of cotton goods. The beginning is being made with the installation of 12,000 spindles. The required plant and machinery have been ordered and the building is already under construction.

The Company's working results for the year ended March 1953 present a bright picture. The sales at Rs. 2.48 crores were up by 40 percent over the previous year's figure of Rs. 1.77 crores, and the gross profit rose by 47 percent from Rs. 10,57 lakhs to Rs. 15.52 lakhs. The dividend has been maintained at 12 percent for the fourth successive year. With the working of the cotton unit, the Company's profits are expected to show a further increase. The directors hope to be able to pay a reasonable dividend on the additional capital of Rs. 40 lakhs that is now being raised. This capital is made up of Rs. 30 lakhs in equity shares and Rs. 10 lakhs in preference shares. Out of this, equity shares of the value of Rs. 12,26,530 and preference shares worth Rs. 10,900 have been allotted to existing shareholders as rights. Equity shares worth Rs. 6,03,070 have been subscribed by the friends and relatives of directors. The balance of 117,040 equity shares and 9,891 preference shares which are now offered for public subscription have been underwritten by stockbrokers and financial institutions.

Tinplate Shortage Hits Poysha Industrial

SPEAKING at the annual general meeting of the Poysha Industrial Co. Ltd held in Bombay last Monday, Mr. M. R. Ruia, chairman, mentioned that the working was interrupted by the shortage of tinplate imports. (A fuller version is printed on a later page in this issue of *Capital*.) The supply of indigenous tinplate has not been adequate and Mr. Ruia said that the quality had not been up to the mark. But steps have been taken to persuade Hindustan Steel to manufacture tinplate of the requisite grade. The supply of aluminium tagger has also been inadequate.

This apart, it has been difficult to produce up to the maximum capacity because the Bombay factory is small and congested. When the new factory is built near Thana, Bombay, it is hoped that production will considerably improve. The Company has supplied cylinders to the Ordnance factories. This business is expected to develop in the future. The Company has taken steps to export its products. In view of the high production costs Mr. Ruia has asked the Government for the restoration of the subsidy in tinplate. Sales amounted to Rs. 94 lakhs, against Rs. 76 lakhs. The results for 1963-64 are expected to improve substantially.

Acme Manufacturing Skips Again

IN spite of an increase of about 8 percent in the sales from Rs. 59.74 lakhs to Rs. 64.44 lakhs, the gross profit of Acme Manufacturing Co. Ltd for the year ended June 1963 is down by a little over 5 percent from Rs. 5.90 lakhs to Rs. 5.59 lakhs. The ordinary dividend has again been skipped, and the Company has still to clear arrears of preference dividend. Out of the year's profits, the directors have recommended the payment of arrears of preference dividend for four years and three months from 1st April, 1952 to 30th June, 1956, which will absorb Rs. 1.53 lakhs. After providing Rs. 1.51 lakhs (against Rs. 1.42 lakhs) for depreciation, Rs. 30,000 (against Rs. 20,000) for development rebate, Rs. 1.40 lakhs (against Rs. 1.82 lakhs) for taxation and deducting other charges, the net profit amounts

to Rs 2.11 lakhs, against Rs. 2.15 lakhs in 1961-62. With Rs. 2.22 lakhs brought forward from the previous year and including Rs. 2,093 being refunds and provisions written back, the disposable surplus amounts to Rs. 4.35 lakhs. From this, the directors have set aside Rs. 76.000 for previous year's taxation, including super profits tax, and allocated Rs. 3.59 lakhs for dividend reserve. The proposed arrears of preference dividend are to be paid out of the dividend reserve.

The directors state that during the first half of the year, the Company faced a general slump in the demand for oil engines. Consequently, it undertook a new line of production—12-inch size shaping machines. At present, it is producing 10 to 12 shaping machines a month and the production is likely to be stepped up to 20 machines a month before the end of 1963. The demand for the Company's products like engine valves and lubricators increased considerably during the year. The Company entered in the spare parts market for selling engine valves. Application for increasing the installed capacity for the production of engine valves from 20,000 to 50,000 a month has already been made to the Government. New valve manufacturing machinery is expected from the U.K. in the month of December, and production is likely to be stepped up to 40,000 to 50,000 a month from early next year. The Company's proposal for manufacturing auto lamps with Italian collaboration has not been approved by the Government. The project has, therefore, been dropped.

Sumitomo-Dunlop Arrangement

PRESENT Japanese minority shareholders of Dunlop Rubber's Japanese subsidiary are shortly to acquire control of the Company. They will put up a further £500,000 capital and thus have a majority of the equity. Capital of the Company will rise from £3¼ million to £4 million. Management will then be in the hands of Sumitomo Electric Industries; the Company's name will be changed to Sumitomo Rubber Industries. It will continue to make Dunlop products with technical aid from Dunlop in England. Dunlop will also continue to have an interest in the sale of these products. Their distribution will be arranged through a newly-formed company called Dunlop Rubber Company (Japan).

Another big British car component group has also formed a link with the Sumitomo group. An agreement between Automotive Producers and Sumitomo will enable the latter to make and sell in Japan a complete range of Lockheed industrial hydraulic equipment.

Malayalam Plantations Earns More

THE Malayalam Plantations Ltd has declared a final dividend of 15 percent, making 20 percent, for 1962-63. The profit has improved from £984,918 for 1961-62 to £1,322,428. The after-tax profit has amounted to £513,817, against £333,398. (Details appear on a later page in this week's issue of *Capital*.) The tea crop amounted to 24.2 million lbs, against 20.1 million lbs, but the average sale price declined from 31.79d to 30.83d a lb. The rubber crop at 10.8 million lbs shows a small improvement. The average sale price amounted to 25.77d, against 25.78d. The tea crop has been well maintained during the current year. Up to the end of August 1963, the crop has been about 927,484 lbs larger than that for the corresponding period of 1962. The rubber crop has shown a decline of nearly 345,113 lbs due to a reduction of the area in tapping.

Rohtas Industries Pays More

THE ordinary shares of Rohtas Industries Ltd have improved to Rs. 12.16 on the decision of the directors to increase the taxable ordinary dividend from 8 percent to 9 percent for the year ended March 1963. At the present price, the yield amounts to 7.5 percent. The profit has risen from Rs. 49.28 lakhs in 1961-62 to Rs. 1.22 crores, after transferring Rs. 61.93 lakhs (against Rs. 59.84 lakhs) to depreciation. The production of almost all departments has shown an improvement. Sugar production, in common with other factories, has, however, been smaller. The directors say that the profit has been higher in spite of the fact that the Government has fixed the prices of cement and paper at unrealistically low levels.

Out of the profit, development rebate reserve is allocated Rs. 6.60 lakhs (against Rs. 3.20 lakhs), general reserve Rs. 12.59 lakhs (against nil), contingency reserve Rs. 56 lakhs for meeting the current tax liability and dividend reserve Rs. 51.92 lakhs. The dividends declared will be paid out of the latter reserve. The participating preference shares will receive a higher dividend. Against an ordinary share capital of Rs. 5 crores, reserves exceed Rs. 2.8 crores. Net block assets stand at Rs. 7.93 crores, against an original block capital of Rs. 15.86 crores.

Publicity Society Earns Less

THE Publicity Society of India Ltd has made a profit of Rs. 4.44 lakhs for the year ended March 1963, compared with Rs. 4.74 lakhs for 1961-62. The taxable ordinary dividend of Rs. 2 a share of Rs. 4 each has been declared, absorbing Rs. 1.43 lakhs. At the present price of Rs. 22.62 a share, the yield amounts to 8.8 percent. Taxation is allocated Rs. 2.85 lakhs (against Rs. 2.50 lakhs) and general reserve Rs. 50,135. The carry-forward is Rs. 48,408, against Rs. 82,859 brought in.

Balmadies Plantations Pays Again

THE working of Balmadies Plantations Ltd for the year ended May 1963, has resulted in a profit which helps the Company not only to wipe off the loss incurred in the previous year, but to resume a dividend (of 5 percent) on the ordinary shares. It was nil in the previous year. But a sum of Rs. 20,000 has been drawn from dividend equalisation reserve to pay this dividend. The net profit for the year after depreciation and taxation amounts to Rs. 1,11,970. With the amount of Rs. 20,000 transferred from dividend equalisation reserve, the total available for appropriation is Rs. 1,31,970. The dividend on preference shares at 6.02 percent, subject to tax, amounts to Rs. 4,515. The ordinary dividend at 5 percent amounts to Rs. 15,000. After adjusting the brought forward loss of Rs. 1,10,974 the balance of Rs. 1,481 is carried forward.

A record coffee crop of 108 tonnes was harvested at an all-in-cost of Rs. 142 a 50 kilograms, against the estimated 75 tonnes at an all-in-cost of Rs. 170 a 50 kilograms. The Company has so far replanted an area of nearly 60 acres with station selections. A programme to replant 30 acres every year during the next four years has been drawn up. The estimated crop for 1963-64 is 70 tonnes at an all-in-cost of Rs. 175 a 50 kilograms.

Walker and Sons Slash Dividend

BLEAK prospects face Walker, Sons and Company, the £3.2 million makers of plantation machinery for estates in Ceylon. In spite of reasonably well maintained pretax profits for the year ended 30th September, 1962, the directors had to cut the dividend from 12 percent to 2 percent because of the penal impact of changes in Ceylon taxation. The effect of these changes has been to impose on the parent company a Ceylon income tax liability equal to 105 percent of its Ceylon profit. The Company has lost, apparently through an official "drafting error", the benefit of development allowances for capital spending, and has suffered also from retrospective changes in the tax on dividends from a subsidiary.

Even the high level of tax imposed by the Ceylon authorities on tea and rubber companies uunderstates the full impact of the real burden. The basic level of tax is about 75 percent, made up of 57 percent income tax, plus 6 percent for sterling companies and not more than 11.1 percent remittance tax. But, additionally, part of employees' travelling expenses, 25 percent of advertising costs and all entertainment expenses are disallowed for tax. This is equal to another 16 2/3 percent on last year's profits. Any improvement in shipments can have little effect on results for the current year, although the board hopes to get favourable quotas under the new control. The £1 ordinary shares are now 8s, x.d., which is still 6d above the 1962 low. The new lease for the Colombo Iron Works remains unsigned, but completion is still being "actively pursued." The lease expired nearly ten years ago.

Wellman Incandescent India Shows Loss

WELLMAN Incandescent India Ltd has produced its first report and accounts for the period from 30th May, 1962 to 31st March, 1963. The Company was incorporated on 30th May, 1962, and the public offer of shares on 19th November, 1962, was over-subscribed. Wellman Incandescent has incurred a loss of Rs. 3.84 lakhs which has been carried forward. The loss had arisen since the Company started its selling activities, design and drawing office and the arrangements for production soon after its incorporation. The good effects of the move are likely to be reflected in results in the near future.

The Company has received a licence for producing industrial furnaces and allied equipment for Rs. 1 crore a year. As the Company expects to manufacture more furnaces, the directors have applied to the Government for an amendment to the licence. The initial production could not be started before March 1963 due to delay in receiving electricity at the factory. The latter has now gone into regular single-shift production and arrangements have been made to introduce a second shift. The Company has already started delivering furnances and ovens built at its factory. Arrangements have been made with Messrs Bridge and Roof India Ltd to manufacture structures for the E.O.T cranes which the Company intends to manufacture to the design of the Wellman Smith Owen Engineering Corporation Ltd. The Company has a substantial order-book. Steps have been taken to ensure quality control and delivery according to schedule.

New Capital Issues

SEVEN companies, including one Central Government undertaking, have been authorised to raise fresh capital of Rs. 5.42 crores. One company is to issue mortgage debentures and three others will issue equities to the public by prospectus. One company is offering part of the capital to its foreign collaborator. The consent in all cases is valid for 12 months. The following are the details :

Voltas Ltd, Bombay, has been authorised to issue debenture capital of Rs. 1 crore. The capital is divided into 7 percent mortgage debenture of Rs. 1,000 each and will be offered to the public for cash at par. The money will be used for manufacturing and refrigeration equipment.

Shree Shawani Cotton Mills Ltd, Calcutta, is to issue capital of Rs. 10 lakhs in equity shares of Rs. 10 each for cash at par to be issued to the public by prospectus. The capital will be used as working capital.

Protein Products of India Ltd, will issue Rs. 70 lakhs worth of equity capital in shares of Rs. 10 each at par. All the shares will be issued for cash except shares of the value of Rs. 7 lakhs which will be allotted in consideration of technical services, etcetera, to Compagnie Rouselot of France. The French firm will also be allotted shares of the value of Rs. 2 lakhs for cash and the proceeds utilised for importing machinery. Shares of the value of Rs. 41 lakhs will be offered to the public by prospectus. The proceeds of the issue will be utilised for manufacturing gelatine, ossein and di-calcium phosphate.

Andhra Sugars Ltd, Tanuku, will raise further capital of Rs. 10 lakhs divided into 100,000 equity shares of Rs. 10 each for cash at a premium of Rs. 3 a share to the public by a prospectus. The money will be used for manufacturing caustic soda.

Cibatul Ltd will issue Rs. 1 crore worth of capital divided into 100,000 equity shares of Rs. 100 each, for cash at par. The entire issue will be offered to the company's existing shareholders. The money will be used on the Cibatul's plastic and sulpha projects.

Heavy Electricals (India) Ltd, Bhopal, a Central Government undertaking, is to raise further capital of Rs. 2.45 crores, divided into 24,500 equity shares of Rs. 1,000 each for cash at par. The capital will be utilised for financing the projects under the control of the Company.

The Mysore Spinning and Manufacturing Co. Ltd, Bombay, is to issue capital not exceeding Rs. 7,43,500 in equity shares of Rs. 50 each by capitalising the Company's reserve to a like extent in the proportion of one share for every eight equity shares held.

The Stock Markets

SHARES RISE ON HOPES OF FISCAL CHANGES

Wednesday Evening.

THE Calcutta stock market has been buoyant during the past week and prices of selected shares have scaled new peaks on sustained support. Although there has been profit-taking at the bulges, the offerings have been absorbed without difficulty. There has also been a great deal of short-covering. Turnover has expanded considerably and buying orders have started flowing into brokers' offices after a long interval. Sentiment has improved, and holders have been generally reluctant to sell shares expecting a further rise. Support has nevertheless been confined largely to clearing shares, which indicates that the present upward trend is mainly due to speculation. Speculators have been inspired by the belief that Mr. T. T. Krishnamachari, Central Finance Minister, will take steps to revitalise the capital market. Optimism has been reinforced by the recent modifications in the gold control order and the compulsory deposits scheme. Lyons Range is inclined to believe that a similar pragmatic approach will be adopted by the Government in relation to the monetary and fiscal policies which have hindered economic development.

The clearing on Tuesday passed off smoothly. It took place a day earlier since the market is closed on Wednesday due to Gandhi Jayanti. Bulls are undeterred by the higher carry-forward charges. In fact, some scrip have been boosted by interested buying. In view of the sharp rise during the past fortnight or so, a fairly heavy bull position has been built up. The market would be healthier if the gains so far achieved were consolidated. In the near term, the trend is likely to be soft since profit-taking will be attracted by the higher levels. This apart, the Puja holidays are approaching. So quieter conditions are likely to set in.

There is no doubt that there have been some favourable developments to restore confidence. The lull in the border situation has been a stimulating factor. Imports are likely to be liberalised during October 1963-March 1964 due to generous foreign aid. Press reports from New Delhi suggest that the Finance Ministry is thinking of liberalising the credit supply. To what extent this will benefit the stock market, it is difficult to assess now. Since there has been no fundamental change in the economic situation, investors are not expected to buy shares in a hurry. They are inclined to wait until a clear indication about the likely changes in the fiscal system is available.

Indian Iron have shot up to about the highest level for the year. Among engineering shares, Guest, Keen, Williams have been a firm feature on rumours of a bonus issue, but this has not been confirmed. Indian Standard Wagon and Texmaco have gained substantially. Interest has been taken in Burn, Jessop, Kumardhubi and Britannia Engineering.

Selected miscellaneous shares have improved due to sustained support, combined with the shortage of scrip. Indian Copper, Indian Aluminium, Dunlop Rubber, Hindustan Motors and Kesoram Industries have been prominent. Indian Cable have gained. Rohtas have gone up on paying a higher dividend. Jaipur Udyog have been steady. Support has been forthcoming for Alkali and Chemical, Metal Box, Union Carbide, Goodyear India and Indian Oxygen. Among new shares, Hindusthan Aluminium have met with influential support. Electric company shares have been sluggish and stray business in Calcutta Electric has been transacted. Managing agency shares have lacked interest. Martin Burn, Jardine Henderson and Balmer Lawrie have been done.

Among insurance shares, Ruby General have improved on replacement buying. In the paper section, Orient have been active. Sirpur, Bengal, Titaghur and India Paper Pulp have been steady. Among cotton mill shares, J. K. Rayon have recovered on short-covering. Interest has been taken in Jay Shree Textiles, Dunbar, Elgin and Bowreah. Sugar shares have been neglected, but Dyer Meakin Breweries have been bought on prospects of a bonus issue.

Selected jute shares are higher. The declaration of interim dividends by the Andrew Yule group of companies has been bullishly interpreted. Birla, Champdany, Anglo-India, Fort Gloster, Gourepore, Northbrook and Union have been supported.

Coal shares have been sluggish, although selected scrip have scored fractional gains. Stray business has been transacted in Burrakur, Bengal, East Indian, Central India, and Amalgamated. Investors are inclined to await the official decision about revising the price of the commodity. The accumulation of stocks at collieries has induced caution.

Among tea shares, selected Assam and Dooars gardens have been bought at rising prices. In Assam gardens, Brooke Bond, Tezpore, Dhelakhat, Bishnauth and Betjan have been prominent. Among Dooars gardens, Hasimara, Birpara, and New Dooars have met with support. In Darjeeling gardens, Margaret Hope and Soom have gained. Government securities have been firm, although turnover has been restrained by the shortage of sellers. The 3 percent Conversion loan 1986 has moved up to Rs. 65.90. The quick return of funds to the banking system has given rise to strong institutional support, especially for short- and medium-dated stocks. The prices of long-dated loans have also hardened due to support from provident funds. The prices of State Government loans have been steady.

Support has been forthcoming for selected preference shares and debentures, but turnover has been restricted in the absence of declared sellers.

Bombay

MARKET AWAITS TAX CHANGES

PRICES DECLINE ALL ROUND AT CLOSE

Tuesday Evening.

THE Bombay stock market was in a cautious and quiet mood towards the close of the past week. At first, share prices improved sharply on hectic support, combined with brisk short-covering. Sentiment was boosted by hopes that there might soon be changes in the fiscal system to stimulate industrial development. Towards the close, profit-taking has reduced prices all round. It is reported that a prominent bull has begun to book his profits. Investors have proceeded cautiously since they are not willing to extend their commitments until the fiscal system is modified. The reduction in the emergency risks insurance premiums has been welcomed. The earlier support for cash shares has declined considerably towards the close.

Tata Steel ordinary have reacted to Rs. 142.50 on profit-taking. Among engineering shares, Tata Locomotive, Mukand Iron, Larsen and Toubro and Alcock Ashdown have been supported. Hindustan Motors have improved among motor-vehicle shares due to support from Lyons Range. Premier Automobiles have been fairly steady.

In cotton mills, Century have been prominent, although the closing price has been below the best level touched, due to profit-taking. Standard have jumped up on favourable corporate rumours. There has been a sharp rise in Mafatlal Fine Spinning and Manufacturing Company on prospects of a rights issue in the proportion of one new share for every four shares held, at a premium of Rs. 275 a share of Rs. 100 each. Navin Flourine Chemicals Ltd in the Mafatlal group has obtained a licence for manufacturing flourine chemicals. This unit will be a separate one within the Mafatlal Fine Spinning and Manufacturing Company. The proceeds of

the new shares will be used to finance this project. Bombay Dyeing have been steady on the assurance that its shareholders will be allowed to participate in the share capital of a new company, which is to be set up for manufacturing petro-chemicals. Kohinoor, Simplex, Morarjee and Svadeshi have been steady.

Miscellaneous shares have moved up in sympathy with the general trend. In the cement section, Associated Cement and Digvijay have gained. Among steamship company shares, Scindia Steam have reacted after an earlier rise. In sugar shares, Belapur and Phalton have been supported. Mining shares have met with scattered interest, and Shivrajpur Syndicate have been taken. Chemical shares have been steady. Tata Chemical, Indian Dyestuff and Colour-Chem have gained. Bombay Burmah have been steady. National Rayon have gained appreciably, although the closing price has somewhat shaded Voltas and Tata Oil have been firm. Among new shares, S.L.M. Maneklal have been active.

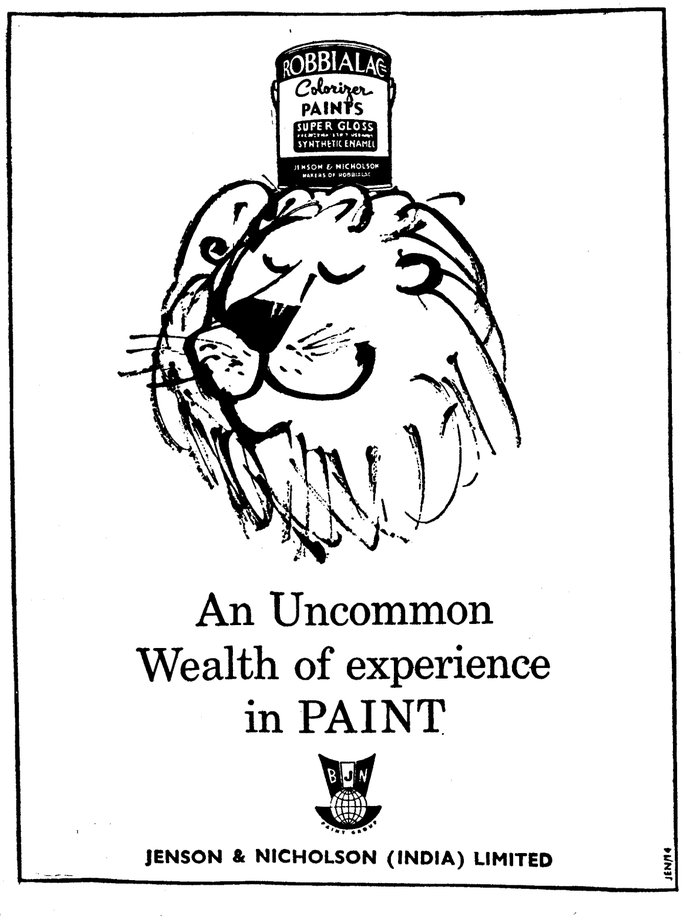
Bank shares have been sluggish, and stray business has been transacted in Bank of India and Bank of Baroda. In insurance shares, New India Assurance have been steady. Electric company shares have shown fractional gains. Bombay Suburban, Tata Power and Ahmedabad have been bought.

Madras

HOPES OF BIGGER CREDIT

OUTSIDE ADVICES AID SENTIMENT

Tuesday Evening.



THE Madras stock market has shown an appreciable improvement during the past week. Prices of clearing and other shares have risen due to renewed support. Higher advices from Dalal Street have been a stimulating factor. Operators have been inspired by hopes that the Government might soon take steps to ensure the flow of more credit to the stock market.

Government securities have been steady and support has been forthcoming for State Government loans. Bank shares have been neglected, and stray business has been transacted in Canara at Rs. 81.75 and in Indian Overseas at Rs. 146.50. Among electric companies, Cochin has come to hand at Rs. 12.30 and South Madras at Rs. 10.35.

Interest has centred mainly on selected tea and coffee shares because of better marketing outlook for the two commodities. Cochin Malabar have gained at Rs. 6.10, while Blue Mountain have been sluggish at Rs. 2.63. Consolidated Coffee have been transacted at Rs. 19.05 and Ouchterlony at Rs. 4.35. Periakaramalai have attracted support up to Rs. 3.65. Kalpetta have been taken at Rs. 11.20 on declaring a taxable ordinary dividend of 11.25 percent on the increased capital. Emerald Valley have been bought at Rs. 6.50, Nelliampathy at Rs. 3.65, Nonsuch at Rs. 23.37 and United Nilgiri at Rs. 23.95. Among coffee shares, Cowcoody have improved to Rs. 4.30, Kumergode to Rs. 3.70, Ossoor to Rs. 3.45 and Rajendra to Rs. 9.80.

Textile shares have been selectively bought. South India Viscose have hardened to Rs. 133 and Travancore Rayon to Rs. 24.50. Lakshmi have gained at Rs. 133.50, but Madura have been available at Rs. 32.50. Buckingham have changed hands at Rs. 269 and Kadri at Rs. 127.40. Mettur have been steady at Rs. 277 and Loyal at Rs. 41.10. Business has passed in Anglo-French at Rs. 139.25 and in Radhakrishna at Rs. 27.

Among miscellaneous shares, Aluminium Industries have come to hand at Rs. 17.30 and Ashok Leyland at Rs. 7.55. In cement shares, Dalmia have been steady at Rs. 12.40 and India at Rs. 5.73. Mettur Chemical have been taken at Rs. 13.60, but F.A.C.T. have been quiet at Rs. 6.40. Seshasayee Paper have gained at Rs. 7.35 and Mysore at Rs. 13.65. Tube Investment have been taken at Rs. 213. Aspinwal have met with support up to Rs. 5.75 on declaring an interim taxable ordinary dividend of 4 percent. Kirloskar Electric have gained fractionally at Rs. 18.12, but Madras Rubber have been sluggish at Rs. 14.50. Rane (Madras) have been firm at Rs. 8, but Spencer have been sold down to Rs. 20.12. Textool have changed hands at Rs. 154.75 and Tubes and Malleables at Rs. 9.48. Mysore Lamp have been taken at Rs. 30, but Binny have been quiet at Rs. 297.

London

MARKET ACTIVITY RESTRAINED

SELECTIVE RISE IN INDUSTRIALS

London, 2nd October.

POLITICAL uncertainties were again a restraining influence in the stock market over the past week, but the much talked-of Denning report came as somewhat of an anti-climax and failed to influence the market one way or the other. The most important company statement, of course, came from the I.C.I. which was up to almost the best expectations. The Decca results came as a keen disappointment and brought the share price back several shillings. E.M.I. were little affected by the unchanged dividend and slightly higher profits. The shares had been dull in advance of the statement. Leading stocks to improve were Rank Organisation, Hudson Bay, Fairey, Distillers and International Computers. Dollar stocks moved with transatlantic trends which in the main were in a downward direction. Gold shares fluctuated somewhat and were not helped by President Kennedy's latest statement that the dollar and the gold price would be maintained. Even so, some overseas support was forthcoming after the statement and a number of leading Free Staters rallied. Coppers moved narrowly and tins have see-sawed. In oils, B.P. went ahead after the good interim statement, but the market as a whole was quiet. Burmahs were supported at times. Rubbers met with selective buying, but teas showed little change.

Money

BANKS EARN MORE, SPEND MORE, SO PROFITS STAGNATE

(BY A SPECIAL CORRESPONDENT)

THE *Statistical Tables Relating to Banks in India* is the most comprehensive document published on the activities of various types of banks—modern commercial banks, co-operative banks and postal savings banks. *The Statistical Tables* relating to the year 1962, just published, is indispensable not only to research workers but also to the policy-makers in commercial banks. Unfortunately the price of the publication is high (at Rs. 12) presumably on the assumption that it is bought only by banking institutions and affluent people. But less affluent sections such as research workers and students may like to purchase the publication too.

The publication is rather belated. The information given relates to balance-sheets which were released in the first quarter of the year. Since any publication released late loses its use, especially for policy making, the Reserve Bank should consider publishing certain important statistics from the balance-sheets of banks as soon as they are available to it. The Reserve Bank should realise that if all important information relating to banking activity lies safely buried in its vaults, it will be difficult for individual banks to formulate meaningful policies. For instance, statistics relating to aggregate deposits of banks—classified as big, medium and others—and the number of offices opened during each month by commercial banks could be usefully published in the *Reserve Bank of India Bulletin*. It would not violate secrecy, and would prove useful to commercial banks.

The *Statistical Tables* contains several useful features. It provides information, probably for the first time, about deposits with banks in centres having offices of more than two commercial banks. It can help in assessing the deposit potential of each town and planning branch expansion programmes. The details given on Indian banks' offices abroad, agents and correspondents of scheduled banks in London and elsewhere would be useful to banks, research workers and the trading public. It is also possible to get, a co-ordinated picture of the progress of the Indian banking system.

Owned Funds Rise

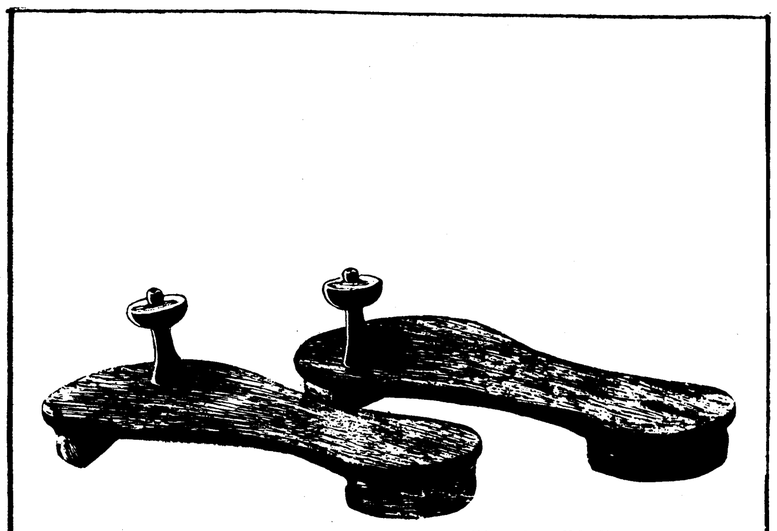
An analysis of the balance-sheets of Indian scheduled banks reveals that owned funds (capital plus reserve) have risen significantly. They have gone up by Rs. 8.6 crores in 1962, after rising by Rs. 2.7 crores in 1961. Even those banks which had reserves equal to their paid-up capital have strengthened them further through transfers from profits in 1961 and 1962 in order to attain the ratio of 6 percent prescribed by the Reserve Bank. However, with a few exceptions, the capital base of the banks in general, especially that of the big banks, has remained unchanged mainly because of the substantial increase in deposits during 1962.

The rise in scheduled banks' deposits during 1962 amounts to Rs. 213.3 crores; this is more than double the increase of Rs. 95.5 crores in 1961. The deposits in 1963, according to latest figures, have crossed the mark of Rs. 2,200 crores. Bank credit has risen during 1962 by Rs. 162.5 crores, as against Rs. 103.4 crores in 1961. Scheduled banks' (excluding the State Bank of India) investments in Government securities have increased by Rs. 43 crores in 1962; the corresponding increase in 1961 was much smaller at Rs. 17 crores. Investments of the State Bank have recorded an increase of Rs. 26.8 crores in 1962, as against a fall in 1961. (The decline in 1961 was more apparent than real because there was a phased transfer of P.L. 480 and P.L. 665 funds to the Reserve Bank.) In contrast, deposits and loans of non-scheduled banks have declined mainly because of liquidation of some banks and amalgamation of the weaker units with sounder ones.

As for foreign banks, the Netherlands Trading Society (in relation to deposits) and National and Grindlays Bank (in relation to branches) have shown good progress during 1962. National and Grindlays Bank has increased the number of offices by 11 to 43 during the year. Among foreign banks, it is the only one to do so. Co-operative banks too have made good progress. Postal savings banks show an increase in the average balance a depositor at Rs. 492, against Rs. 468 in 1961. The balances outstanding at the end of 1962 amount to Rs. 466.5 crores, compared with Rs. 431 crores at the end of 1961. The number of deposit accounts at the end of 1962 has been 9.47 million, against 9.21 million at the close of 1961.

Increase in Earnings

Scheduled banks' earnings have risen further in 1962. This has been mainly due to the increase in the level of advances and investments. Indian banks' earnings from loans and advances have increased by Rs. 10.8 crores to Rs. 67.4 crores, compared with a rise of Rs. 10.7 crores to Rs. 56.6 crores in 1961. Earnings from investments in Government securities have gone up by Rs. 2.6 crores to Rs. 18.7 crores, against a decline of Rs. 3.8 crores in 1961. Total current operating earnings have, therefore, risen by Rs. 16.9 crores to Rs. 120.2 crores in 1962, compared with a rise of Rs. 10.9 crores in 1961.



Current operating expenses too show an equivalent rise (Rs. 16.7 crores) in 1962, compared with Rs. 4.6 crores in 1961. The interest paid on deposits has gone up by Rs. 8.2 crores, reflecting the higher level of deposits. Establishment expenses have appreciated by Rs. 6 crores to Rs. 37 crores following the implementation of the Desai Award. In consequence, profits of banks have declined by Rs. 11 lakhs to Rs. 23.4 crores in 1962, against an increase of Rs. 6.1 crores to Rs. 23.5 crores in 1961. Expressed as a ratio to current operating earnings, the balance of profit has declined from 22.7 percent to 19.5 percent in 1961.

As for foreign banks, operating earnings have increased by Rs. 1.5 crores to Rs. 21.8 crores in 1962, against a rise of Rs. 2.3 crores in 1961. The rise in current operating expenses has absorbed the increase in current earnings, with the result that the profits made in 1962 have been maintained at Rs. 4.7 crores.

Branch Expansion

The number of scheduled banks' offices in the Indian Union have increased by 218 to 4,608, against a rise of 240 in 1961 and 224 in 1960. The number of offices of non-scheduled banks have, however, continued to decline. The increase in the number of offices of the State Bank has been 56, compared with increases of 45 in 1961 and 78 in 1960. As the State Bank has deliberately slowed down in order to consolidate its progress, the major contribution in extending branches has come from the private sector. According to the 1961 census, 1,500 offices of scheduled banks were located in places with a population of less than 25,000, and they represented 32 percent of the total number of offices of scheduled banks as at the end of 1962. Non-scheduled and co-operative banks had 304 and 1,383 offices in these places and they constituted 54 percent and 64 percent, respectively, of the total number of offices of all banks.

The *Statistical Tables* shows that the rise in earnings of Indian scheduled banks has just kept pace with the increase in operating expenses. It is, however, relevant to note that net profits in balance-sheets do not disclose the true position in view of transfers to secret reserves, etcetera. It looks odd, as has been made out by the statistics, that such a profitable business as banking should operate without an adequate margin of profit. There is an urgent need to introduce cost control studies in banking in order to economise on expenses, and prevent frittering away of resources on unproductive and costly branch expansion programmes, wasteful advertisement and entertainment.

Steps to solidarity

"I shall work for an India...
in which all communities
shall live in perfect harmony...
THIS IS THE INDIA OF MY DREAMS"
— MAHATMA GANDHI

To Gandhiji, differences in sect, caste or creed were meaningless. To him the concept of national unity and the attainment of this ideal were more than a mere dream. "I am indeed, a practical dreamer. My dreams are not airy nothings. I want to convert my dreams into realities, as far as possible." He lived and died for this ideal. On this day let us resolve to make his dream a reality. This will be the greatest tribute to his memory.

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Tuesday, 1st October.

THE general level of advances has changed very little in the Calcutta money market during the past week. A slight increase in jute credit has been offset by a corresponding decline in the accommodation given to the sugar mills. Advances to the cotton mills and to the iron, steel and engineering industries are unchanged. The requirements of the foodgrains and seeds trade have varied very little. In the interbank market, conditions have been easier and the call rate is quoted at 2 percent.

The exchange market has been active, with a fair supply of tea and gunny bills. The demand for remittance is moderate. Sterling has shown a mixed tendency, although fluctuations have been narrow.

SILVER WAS QUIET IN CALCUTTA during the past week. The price fell from the previous week's level of Rs. 233.25 to Rs. 230.50 quoted for ready. Gold was steady. The price rose from Rs. 63 to Rs. 64.50.

THE STATEMENT OF THE RESERVE Bank of India for the week ended 27th September, 1963, showed a fall of Rs. 12.12 crores to Rs. 2,192.31 crores in active notes, while the total note issue rose by Rs. 1.52 crores to Rs. 2,224.89 crores. Hence notes held in the Banking Department increased by Rs. 13.64 crores to Rs. 32.58 crores. Deposits showed an all-round decline. Deposits of the Government of India fell by Rs. 5.90 crores to Rs. 64.30 crores and those of State Governments by Rs. 1.05 crores to Rs. 6.08 crores. Balance of scheduled banks were Rs. 50 lakhs smaller at Rs. 85.65 crores. Their loans from the Reserve Bank increased from Rs. 1.45 crores to Rs. 1.88 crores of which advances against usance bills amounted to Rs. 10 lakhs (against nil). Balances held abroad declined by Rs. 1.42 crores to Rs. 7.62 crores. The investment portfolio was Rs. 43 lakhs smaller at Rs. 195.71 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 20th September, 1963, shows a rise of Rs. 8.38 crores to Rs. 597.63 crores in total deposits. Investments in Government securities are up by Rs. 9.97 crores to Rs. 314.37 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 2.18 crores to Rs. 251.60 crores. Cash and balances are, in consequence, shown at Rs. 24.85 crores, or Rs. 3.09 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 20th September, 1963, shows Demand and Times liabilities at Rs. 1,107.81 crores (Rs. 24.06 crores on account of borrowings from banks) and Rs. 1,312.32 crores (Rs. 25.73 crores), compared with Rs. 1,083.61 crores (Rs. 23.09 crores) and Rs. 1,314.68 crores (Rs. 24.62 crores) in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.26 crores and Rs. 2.94 crores to Rs. 51.19 crores and Rs. 83.92 crores, respectively. There is a rise of Rs. 21.61 crores to Rs. 772.65 crores in investments. Advances and bills discounted at Rs. 1,464.88 crores show a drop of Rs. 12.42 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.6 percent and 60.5 percent, against 5.8 percent and 61.6 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 4-10-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

THE FERTILISERS AND CHEMICALS, TRAVANCORE LIMITED

MR. T. A. JOSEPH REVIEWS ACTIVITIES

Addressing the Nineteenth Annual Geaeral Meeting held at the Registered office, Udyogamandal, on 30th September, 1963, Mr. T. A. Joseph said :

You will notice that the financial year of the Company has been changed. This became necessary to fall in line with that of other public sector companies. The accounts circulated to you relate, therefore, to a period of fifteen months, i.e. from 1st January, 1962 to 31st March, 1963.

The period under review has witnessed two major events in the history of the Company. They are—the introduction for the first time in India of a new technology for the production of synthesis gas required for Ammonia manufacture and the closure of the wood gasification plant, which has been serving the Company from its inception. The Oil Gasification Plant installed as a part of the Second Stage of the Expansion Programme of the Company, has introduced a new technology, by which raw light naphtha is utilised for producing hydrogen by the partial oxidation process. The Plant, which has been commissioned in the last quarter of 1962, has a capacity to produce sufficient hydrogen to make 80 tonnes of Ammonia a day. With the introduction of this new process, the Company has closed down the firewood gasificatoin plant. It was mainly on considerations of economy that the wood gasification plant has been closed down, although it had served the Company usefully for 17 years and has fulfilled a very useful purpose in the field of fertiliser development in India.

Severe Setbacks

While we have made a remarkable advancement in technology and have been able to raise our production capacity considerably, the factory has been facing severe setbacks in achieving the production targets. Ever since the Electrolytic Hydrogen Plant was commissioned in 1960, the Kerala State Electricity Board has not been able to supply the Company the full requirements of power required for operating that Plant. As against a total requirement of 31,000 KW the Electricity Board has been supplying only 23,200 KW. Thus, even under normal conditions, the factory could have achieved only approximately 75% of its production capacity, provided power supply to that extent was regular. But during the period, the Company had to face very severe a power-cuts indeed. In 1962 there was a power-cut commencing from the 1st of March to the 10th of May. During 1963 the cut started earlier than usual and it was much more drastic. From 1st February 1963, the factory could work only at 50% production, because of the power-cut. This cut went on till the end of June. In between there was a period of about 3 weeks when Ammonia production was almost nil.

Another unforeseen development that completely upset the production programme of the year was the sudden incidence of salinity in the Periyar river waters during the summer months of 1962. This resulted in a further substantial reduction in the Company's production, as several of the important Plants had to be kept idle for fear of being permanently damaged by saline water.

The power-cuts and salinity in the Periyar waters alone accounted for a loss of production of over 4,000 tonnes of ammonia. On top of this there was the planned closure of the wood gasification plant to facilitate the interconnections of the new Oil Gasification Plant and the commissioning of the latter. This, however, was only in the normal course of things ; but it was unfortunate that the loss of production consequent on this change over also fell in a year when we had to face great difficulties on account of power-cuts and salinity.

The factors which I have just described have been responsible for the poor financial results during the period under review. As you have seen from the Statement of Accounts, these adverse factors have resulted in a loss of nearly Rs. 36 lakhs. This loss, however, has been covered in full by drawing from the previous profits carried over and the taxation reserves which are not required. You will notice, however, that we have provided Rs. 63.88 lakhs for depreciation as against Rs. 38.75 lakhs in 1962. A surplus of Rs. 3.85 lakhs has been carried over to the next year.

In view of the foregoing your Directors have not been in a position to recommend any dividend this year.

Increased Capacity

In the normal course the Company should be expected to derive from this year the benefits arising out of the increased capacity consequent on the installation of the Oil Gasification Plant. But as I stated earlier the current financial year itself has started with a drastic power-cut which kept on till the end of June. Even after the restoration of power supply the Company has not been given its full requirements. We are still working on a 75% load as the Electricity Board is yet to make available the shortage of 7,800 KW. Besides, the rainfall this year has been very much below par so far, and it remains to be seen whether our Hydro-electric sources would be able to keep up their normal supply level after the monsoons are over. I do hope that with the commissioning of the Panniar Project towards the end of this year, the Electricity Board will be pleased to honour its commitments to us in full.

As I mentioned to you last year, we had invited the Government of India to participate in the equity share capital of the Company and to give us the necessary loans to finance the third stage of our expansion programme. Shares worth Rs. 3.5 crores have been taken by the Government of India as on 1st July this year. Thus, the Government of India now holds a majority of shares in the Company. Certain consequential amendments to the Articles of Association have been proposed and placed before you at this meeting.

The second stage of expansion was completed well in time and formally inaugurated on the 8th December 1962. The plant has had the usual teething troubles, but has been performing quite satisfactorily since then. I am glad to inform you that the Company has been able to complete the second stage of expansion according to the sanctioned estimate therefor.

The third stage of expansion, of which I had given an indication last year, is well under way. This expansion involves the installation of a number of major plants, the important ones being an Oil Gasification Plant and a Tonnage Oxygen Plant, which together will produce sufficient gases to make about 150 tonnes of ammonia a day, a 150-tonne ammonia synthesis plant, a phosphoric acid plant of 100 tonnes P205 capacity, a 450 tonne sulphuric acid plant, a 300 tonne ammonium phosphate plant, a 300 tonne ammonium sulphate plant and a 50 tonne ammonium chloride plant. Although the target date for the completion of the third stage is 1965-66, the Company expects to complete the programme well ahead of that date.

When the third stage of expansion is completed, the Company will have a capacity of about 70,000 tons of nitrogen and 33,500 tons of P205 per annum, the ultimate products being 200,000 tons of ammonium sulphate, 135,000 tons of ammonium phosphate and 25,000 tons of ammonium chloride. Superphosphate capacity will continue at the present level of 44,000 tons. In addition, the NPK mixture capacity will go up to 350,000 tons per annum.

Use of By-product

The Company is now engaged in planning the utilisation of some more of its by-products. The Company has already obtained a licence for the production of dry ice. In addition investigations for the utilisation of waste gases of the Superphosphate and Phosphoric Acid Plants are in progress.

The Company is now engaged in planning is programme of activities for the Fourth Plan period. Having regard to the experience of FACT and the planning and designing organisation the Company has already built up for its expanding activties, I am glad to say that the Government of India have decided to assign a very important role to the Company in the field of buliding up additional capacity for fertiliser production in the country. The Government of India have now asked FACT to plan, design and construct at least three complete fertiliser plants before the end of the Fourth Plan period. The Government of India have also indicated that allocation of further units will be considered if the Company has more capacity. I need not tell you that the magnitude of the task involved is immense as the total outlay on the three complete fertiliser projects will be of the order of Rs. 100 crores. The Company is, therefore, taking the necessary preliminary steps to equip itself to undertake the task assigned to it by the Government of India.

In addition, the Company has also been engaged in negotiations with Messrs. Davy Ashmore Limited of U.K., a leading firm engaged in the manufacture of industrial plants and equipment for establishing a joint venture to fabricate pressure vessels and specialised steel work. A scheme drawn up for this purpose has been submitted to the Government of India. According to the schedules drawn up, this unit which is likely to be established in an area adjacent to FACT will go into production in the beginning of the Fourth Plan period. The Company is also negotiating the formation of a joint venture with Power-Gas Corporation of U.K. for establishing an Engineering and Contracting Organisation capable of planning, designing and erecting fertiliser, chemical, petro-chemical and oil refining plants.

The Company has been rendering suitable assistance in the form of technical advice and consultancy services to other units coming up in Kerala. At present the Company is providing the necessary consultancy services to Mannam Co-operative Sugar Mills Private Limited.

Training Facilities

To take care of the additional responsibilities and work that will be devolving on the Company on account of its expansion of activities, we have taken steps to augment the strength of the Company's technical personnel. Technical training facilities have been increased. We have at present 33 engineers including diploma holders and 70 university graduates under training in addition to 62 artisans. With a view to strengthening our middle management and to developing future managers, we have introdued a system of recruitment, training and absorption of executives. The first group recruited under the scheme has started the training on the 1st of August.

On the sales and marketing side. I am glad to inform you that the Company has made very good progress during the period. As a result of the programmes like fertiliser festivals introduced by the Company, fertiliser consciousness has grown considerably among the farmers of Kerala. Consequently, the Company has been able to raise its sales in Kerala from Rs 11 lakhs in 1958 to Rs. 114 lakhs in 1962-63, the figure for 1961 being Rs. 68 lakhs. Although the progress has been good, we still believe, that the fertiliser consumption in Kerala should increase several times more, before we can say that the State is taking reasonable advantage of the facilities available. The Company is, therefore, working according to a long-term plan, with a view to achieving a sale of about Rs. 6 crores worth of fertilisers in Kerala State alone. The Company has also extended its programme of intensive campaign to the neighbouring districts of Madras State. The results have been very encouraging.

While the Company has been going ahead with a rapid expansion programme, our neighbours have also been expanding. New units are coming into our area. Instances are, a Zinc Smelter, a Cement factory based on the calcium carbonate sludge released by our Company, an Oxygen Acetylene unit using our surplus oxygen and an Ossein Plant. All these require considerable quantities of water. During the summer months the flow in the Periyar river has been so low that salinity has been creeping up to a dangerous extent. From a statement made by the Kerala Minister for Electricity a few weeks ago, we have learnt that when the Idikki Power project is completed, the water used for generating power in that project would be dropped into the Muvattupuzha river and as a result the water position in Periyar would be very much worse. This is certainly a matter of great concern. I would take this opportunity to stress that the urgent need now, is to augment the availability of water in the Periyar river and hence it will be suicidal to divert any more of its water to other river basins. The construction of the Idikki Power project should, I feel, be re-designed in a manner that would prevent Periyar waters being diverted elsewhere. If the logistics of Idikki dictate the need to drop the tail waters to the Muvattupuzha river, it is vital that the project also provide for re-diverting the water used by it back into the Periyar river by means of an inter-communication canal between the Muvattupuzha and the Periyar rivers. If such a step is not contemplated now itself, the completion of the Idikki project will place the present industries in the Periyar basin, in a very unfortunate position indeed. The numerous Lift Irrigation Schemes in the Periyar basin would share a similar fate resulting in a substantial drop in rice production in the area.

Management labour relations continued to be cordial during the period. The Work Study and Job Evaluation work is progressing satisfactorily.

I would like to take this opportunity to express our deep appreciation of the excellent work that is being done by the executives and workers of the Company.

I now move that the Directors Report and the Audited Statement of Accounts for the financial year 1962-63, namely for the period 1-1-1962 to 31-3-1963 be adopted.

N.B. This does not purport to be a report of the proceedings of the General Meeting.

MACHINERY MANUFACTURERS CORPORATION LIMITED

CHAIRMAN, MR. K. C. MAHINDRA'S ADDRESS

Speech delivered by the Chairman, Mr. K. C. Mahindra, at the 17th Annual General Meeting of the Shareholders of Machinery Manufacturers Corporation Limited held in Bombay, on 25th September, 1963.

I welcome the shareholders of the Machinery Manufacturers Corporation on the occasion of the Annual General Meeting of the members of the Company. You are gathered here to receive the report which your Directors have submitted on the operations of the Company for the year ended 31st March 1963, and if it meets with your approval, to adopt the audited Balance Sheet and Profit & Loss Account for the period.

The year under review presents two landmarks in the history of the Company. One : there is now wide acceptance of the premier position of MMC as manufacturer of quality Carding Engines. The Company continues to command more than two-thirds of the market in India. The second landmark is that certain integrated plans formulated some years back have now come to fruition. These, in the opinion of your Board, have greatly strengthened the basic structure of the Company. Shareholders will remember my reference to the need for diversified activity. The textile industry in India as such is subject to violent fluctuations. This is not a characteristic of the Indian industry alone. I find that similar upheavals occur in the textile industries of Japan, of Britain and the United States. As supplier of an essential piece of equipment to the textile industry, the Company must, therefore, prepare itself to face the periodic rise and fall in the fortunes of the spinners. For reasons with which you are familiar, the Company was not able to embark on any plan for meeting this sort of a challenge until our original product had received full and ready acceptance by the industry, and secondly, what is more relevant, until such time as the finances of the Company would permit such a development.

Making Diesel Engines

A few years back, after a technical review of the facilities available, your Board decided upon Diesel Engines as a suitable diversified product for the Company. With the help and cooperation of the Managing Agents, they were able to enter into a reasonably long-term contract with the Indian National Diesel Engine Company, for the supply of a large number of components for the Diesel Engines which INDEC proposed to manufacture. INDEC, in its turn, set up a small manufacturing shop comprising only a few specialised machine tools and assembly and testing equipment. It hoped to farm out the major portion of the work to MMC. Over the years, this method of manufacture and assembly was found both uneconomic and unfruitful. To MMC also the particular contracts did not provide a sufficiently attractive base for development. These difficulties led to a conclusion by INDEC that its manufacturing must be centralised. It was finally arranged that MMC would take over the physical installation of INDEC connected with manufacturing as well as the machinery and equipment which INDEC had leased to them. INDEC was in a particularly happy position that its British shareholders were committed to send further machine tools worth over £60,000/-, and also engine components of a total value of £180,000/-, for which deferred terms of payment had been arranged. Despite the sale of its manufacturing facilities by INDEC this arrangement continues and MMC will receive the benefit of these deferred terms.

I have given a brief resume of this position in order to convey to you our conviction that your Company has now placed itself in a position to manufacture a complete diesel engine from castings to painting—engines at present ranging from 6¼ to 13½ h.p. If and when INDEC desires to produce engines of a higher horsepower, MMC will have the option to produce them on similar terms as govern the present range of production.

I should like to repeat that in this venture into diversification the Managing Agents of the Company have played a prominent part, in as much as the plan for a diesel engine company was prompted by consideration for MMC's future. They were able to persuade a prominent British firm to join them in establishing the diesel company and now that arrangements have been concluded for a physical take-over of the manufacturing assets of the company by MMC, the service rendered by the Managing Agents is complete. In the process, a substantial sum of money has been invested by them in the diesel business, and it is hoped that the new arrangements will work out to the mutual benefit of MMC and the diesel company.

Major Financial Crises

It can bear repetition that during its history of 17 years, the Company has gone through several major financial crises. On occasions, the resources at the disposal of the Company were completely exhausted, and I recollect a time when despite substantial help from the Managing Agents the Company was on the brink of closure. On such and sundry other critical occasions the Managing Agents placed their own resources in support. They were also able to persuade the Government of India to come to its assistance in a large way on three major occasions. One was the crisis in 1953-54 when our funds were very low indeed and the Government was persuaded to invest Rs. 25 lacs in the Preference capital of the Company. Another time in 1959 they gave Rs. 5 lacs to the Company as a loan in order to enable it to complete its foundry project. On the third occasion the Government actively encouraged us to put through the Scheme of Compromise or arrangement which was finally enacted in 1960. I should like, on behalf of the Company, not only to acknowledge this generous assistance which Government has given, but also to convey to them our deep appreciation. Here is one shining example of Government assistance readily forthcoming to help in the development of a basic industry—an assistance which was constructively given, and I hope it is to Government's satisfaction that the assistance has been constructively utilised.

The financial results of the operations of the Company over the last four years indicate the turn which has taken place in its fortunes. Coincident with our capital reconstruction scheme there was a spurt in business conditons : your Company was fully ready to meet them with the result that the Company has been able to reduce its indebtedness to Government and to the Industrial Finance Corporation by over Rs. 27 lacs in these 4 years. We have also been able to build a reserve of over Rs. 35 lacs. This is no mean achievement.

I need not elaborate on the Accounts for the year under review except to say that a large portion of the Profits of the Company have been appropriated for taxation. The Company's works have operated during the year at a very satisfactory level. In addition to maintaining an increasing production of Carding Engines, we were able to offer to the Ministry of Defence our resources for the production of Ordnance stores, Certain educational orders have already been completed. It is possible that a portion of our capacity may be utilised for defence purposes. This, of course, must receive priority over production for civilian purposes.

The process of rehabilitation of plant and equipment of the Factory has continued. We are still without certain essential machine tools which would assist us to place the manufacture of Speed Frames on a proper production basis. As the import licences have only recently been received, it is hoped that the special purpose machinery required for the job will be secured by us within the next few months. The prototype designed and engineered by the Company's technicians underwent its final trials last year and we have booked an initial order for 12 Speed Frames for delivery within the next six months,

Research in Carding Technology

Our development section has kept pace with the latest research in carding technology. An aerodynamic card of revolutionary design has been under experiment in France for a couple of years ; in America and in Britain certain high production devices have been evolved. Our engineers have these developments under study ; in fact the Company's Super Card which has been undergoing tests at the Textile Research Institute, is essentially a high production device. If our technical studies lead to the conclusion that any of the devices now being tried overseas are worthy of adoption in our textile industry, your Company will be in a ready position to adapt our Carding Engines to suit the new developments.

Shareholders will be pleased to learn that your Company produced over 70% of the total production of Carding Engines in the country Supplies of equipment to the textile mills continue very satisfactorily, and our bookings for the six months of the current year have been good.

To the workers, the staff and the management a special tribute is necessary, and on your behalf I should like to convey to them our appreciation of their strenuous efforts throughout the year.

Note :—This does not purport to be a report of the proceedings of the Annual General Meeting.

INDIA STEAMSHIP CO., LTD.

CHAIRMAN, SIR A. RAMASWAMI MUDALIAR'S REVIEW

Address of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.) Chairman, India Steamship Co., Ltd. delivered at the Annual General Meeting of the shareholders of the Company, on the 30th September 1963.

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March, 1963, has been in your possession for some time and with your permission, I shall take them as read.

Before dealing with the Directors' Report and the Audited Accounts, I think it would be appropriate that I place before you frankly the course of events during the last two years regarding the financial position of the Lines operating on the India-U.K.-Continent routes and associate routes. It is no satisfaction to me to present a Balance Sheet showing for the fourth year in succession, a substantial loss, and shareholders have a right to know why these losses have been incurred during this period.

In 1961, the Conference Lines engaged in this Trade came to the conclusion that an increase in freight rates both in the Eastward and Westward direction was necessary if they should earn a reasonable margin of profit on their operations. Elaborate calculations were made of the Balance Sheets of various Lines by Auditors specially appointed for the purpose and based on their findings, a Delegation of the Conference Lines visited Pakistan and India, to get the approval of both Governments to a formula that they had devised, for making what they considered to be, legitimate profits for the operating Lines. The Delegation found, when they met the Pakistan Authorities, that they were considering the proposals of a proposed foreign shipping company, which would cater to the entire Pakistan cargo, both ways, from and to Pakistan ports, East and West, on this route, at a lower freight than the Conference was prepared to offer. The Conference Delegation, after consulting the two Indian Lines, and with their approval, decided to visit Pakistan and come to the best arrangements so that the Conference Lines may continue to operate for the Pakistan Trade. The agreement they came to, instead of raising the freight rates, reduced the rates substantially on some of the commodities, notably Jute and Gunnies, moving from Pakistan. They further agreed that till the end of 1962, they would not increase any freight rates from East to West. The Delegation then met the Indian Government and came to an agreement with the Government, whereby, as a corollary to the agreement with the Pakistan Government, they agreed not to raise any freights till the end of 1962. They further agreed with both Governments that there would be six months' notice given by the Conference on the 1st January, 1963, indicating the freight increase they would desire to make, the period of six months being utilised, for negotiations with Shippers and consultation with Government. As you would see, the final result of all these negotiations and agreements, was that the Conference which wanted a freight increase to be made in 1961, agreed in effect to no freight increase in the East to West Trade till the 1st July 1963. The Conference had already increased the West to East freight by 10% on the 1st October, 1961.

Threat of Competition

I stated, that to meet the so called threat of competition from a new shipping company which was going to use tramp shipping, the Conference reduced the freight rate on Jute from Pakistan, from sh. 173/-, (the rate which prevailed from 1958 to 1961) to sh. 160/-. The rate in 1957, when the last increase was made was sh. 187/-. It was quite obvious to the Conference that the freight rates on Gunny exported from India should be in parity with the Pakistan Jute rates. There was, therefore, a similar reduction in the exports from India, which meant a rate of sh. 173/6 per 1,000 kilos of gunnies, against sh. 187/- in 1961. I do not want to go into the comparative figures of other commodities, common to the export trade of India and Pakistan, which had to be kept at parity in the trade of each country. In effect therefore, the Delegation which felt that the Lines were incurring a loss on the existing freight rates in 1961, had to content themselves for nearly two years with the same rates in most cases and at even reduced freight rates in others, before coming up for a revision in freight rates to either of the Governments. The threat of the proposed shipping company, as it happened, and some of us felt that it was bound to happen, was no real threat, for the simple reason, that ships on charter or tramp ships, cannot serve the trade as effectively and carry cargo from and to as many destinations as the Conference, which has about fifteen to twenty Member Lines operating in this trade, each Member with several ships.

It has been generally agreed by shippers and Government ultimately, that an increase in the freight East to West was justified. Both the Shippers and the Maritime Freight Commission have acknowledged that a freight increase East to West was indicated, if the Lines engaged in this Trade were to function and continue to offer to Shippers an adequate service. It is unfortunate that there has not been an agreement on the rate of increase that would be justified. It may be pointed out that during 1960, 1961 and 1962, every Conference of Lines engaged in other overseas trade, increased the freight rate and some of the Conferences have increased it twice during these three years. The Indian Lines had suggested an increase of 10% in the East to West trade, but the Conference fixed an increase of 12½% on the ground that the increase proposed will result only in an effective 10% increase or even somewhat less, because of the non increase or slightly lower increase in commodities, which have been termed sensitive commodities, whose exports may be affected by freight increases. The question of sensitive commodities and how they should be dealt with is a matter still to be discussed with the Authorities, by the Conference, and I hope as a result of the discussions, a more cordial atmosphere will prevail between the Conference and the Governments concerned.

Promoting Export Trade

I have stated, that the last increase in freight rates was in 1957. Comparing the rates then prevailing with the rates now announced, it would be found that in many cases, the rates are only slightly higher than they were at that time. While I am equally anxious that the export trade should be promoted and that our foreign exchange earnings should meet some portion of the present gap in foreign exchange, I would venture to suggest that the price factor and the profit factor of some at least of the export items, should be carefully evaluated before either an increase in freight, or a decrease in the rate proposed, is finally advocated and adopted.

It is with this background that I would like to deal with the results of your Company during the year under review. The Directors' Report discloses that there has been a loss of about Rs. 30 lakhs in the working of your fleet. I would only like to point out that even if a 10% increase had been allowed in the East to West Trade, during that year, the loss would have been avoided.

I have heard it sugested that while other shipping companies are showing a profit, your company is showing a loss. The fleet of your Company is operating on the India-U.K.-Continent route and the Baltic Sea and Black Sea routes, with a small number of calls to South American ports. It is in this route that the freight rates from East to West was not increased from 1957 to 1961 by the Conference, and has further not been allowed to increase for nearly two years by arrangements with Governments. It is the result of the voyage earnings of Lines in these routes alone, that should be compared to get an exact perspective of the functioning of the companies concerned. Many companies have other routes, in which the large number of ships they have, ply. Some of them have large investments of reserves, the income from which is also appropriated towards profits. As I have already stated, every other route of the ocean going vessels of Lines, had had the freight rate increased at least once and in some cases more than once, since 1961. I hope these factors will be appreciated in the unenviable task of indulging in comparisons.

Freight Earnings

The Directors' Report shows that the freight earned during the year was Rs. 8,00,21,725 as against Rs. 8,97,26,920 in the previous year. The decrease in freight is to a large extent compensated by a corresponding decrease of 53 lakhs in port expenses and other charges generally included under this heading.

During the year, the total number of Liner voyages completed, was 48 as against 54 in the previous year.

While there was no increase in the freight rates from India in the routes followed by your vessels, the increase in port charges, dock levies and stevedornig rates, have been substantial, both in India and abroad. There has also been unusual delays in the time taken to berth vessels at these ports, notably at the port of Bombay. Weather conditions and labour strikes, have increased the delay in some ports more than in the previous year. These factors account for a loss of 541 days by the various ships of your fleet. Another unforesecn and unaccountable delay was sustained in one of the ports of the Baltic Sea, when at the time of the Small Pox scare in Western Europe, a seaman on one of our vessels was suspected to be affected by this disease. It turned out that the suspicion was baseless, but the Port Authorities quarantined the ship for 36 days, involving substantial loss in earnings.

In spite of decrease in freight earnings as compared to last year, owing to a rationalisation, there has been a corresponding decrease in expenditure. The number of ports at which your vessels called was 736 in the Liner voyages, as against 947 in the previous year. The average duration of a round voyage was 126 days as compared to 129 days in 1962. There has been a serious attempt at reducing the expenditure on deck and engineering stores but victualling expenses have gone up slightly in sympathy with the rising costs.

The average age of the fleet of your company was nine years in March 1963, and the fleet is in good condition thanks to the attention which has been paid to maintenance.

Slight Increase

I referred earlier, to the fact that even with the increases proposed by the Conference, there is only a very slight increase in actual freights over those prevailing in 1957, for several of the commodities. Even so, I am in complete agreement with the policy of the Government of India, that Export Promotion should not be hindered by unreasonable freight rates. It is the same policy which has been adopted by countries anxious to promote their exports and thereby minimise their dependence on foreign exchange. Though National Lines of some of these countries have been compensated in various other ways for their loss in earnings. I would, however, point out that the Indian Lines, taken together, are themselves earners of very considerable foreign exchange, particularly if their share in the India-U.K.-Continent trade is taken into consideration. The Government of India is naturally anxious to expand Indian Tonnage, particularly tramp tonnage, thereby avoiding over dependence on foreign carriers. It is, therefore, really a matter of balancing two apparently antagonistic factors, but I believe that the balance can be struck if the varying factors are taken into consideration in their proper perspective.

I would have greatly wished that the Maritime Freight Commission had consulted the Indian Lines in particular, at some stage before they gave their final decision as to what they considered was a fair increase in freight rates from East to West, to the Continent of Europe. As I have already stated, the consideration of what are called sensitive commodities from the export angle, will be taken up by the Government in consultation with the Conference, I believe that representatives of Indian Shipping Lines in this Trade, will be in a position, from their local knowledge of facts, to assist the Government in coming to fair conclusions.

When referring to this subject of export, I stated last year "It is to be emphasized that as against the small voice of Indian shipping companies, the loud and uncontrolled menacing voice of some shippers of comparatively small exports sometimes prevails." I expressed the hope that the shareholders of shipping companies will join with the management in impressing on the public the need for fair play as between Indian shipping companies and Indian exporters and importers.

The Future

Shipping is an unpredictable industry—its factors, some of them are outside the control of the Management of Shipping companies. Even so, I express the hope that we have come to the end of deficit Balance Sheets.

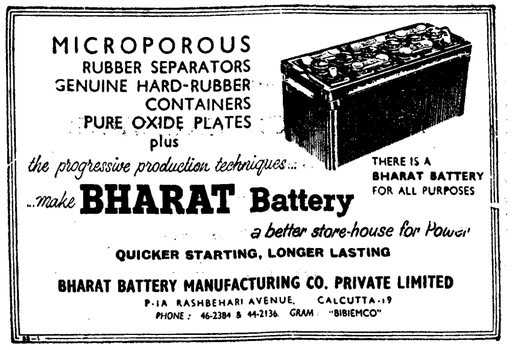
The share of the Indian companies in the import and export trade of the United Kingdom is every year increasing by one per cent. The determined efforts made by the Government to increase exports are beginning to have effect in the volume of trade that is moving both to West Europe and to East Europe.

Recently there has been an improvement in the berthing facilities in some of the Indian ports, and what is more important, the drafts of the River Hooghly, which have the biggest influence in the carriage of cargo to and from the port of Calcutta, have been improved.

The determined effort of the Government to carry through the industrial development that has been planned, affords opportunity for larger import of goods from abroad.

These are factors which may to a certain extent dispel the gloom that shareholders of shipping companies may feel.

Thanks



We are grateful to the Minister of Shipping for his continued interest in Indian Shipping and for his helpful advice from time to time. The Officers of the Ministry of Shipping, the Director-General and his Deputies and Assistants in particular, have helped Indian companies and their advice has benefited the mnagement of these companies. We look to their sympathetic guidance in days of difficulty. I am certain that being in charge of the welfare of Indian Shipping, they will, while having regard to the foreign exchange position, also have equal concern about earnings and requirements of Indian Shipping.

Tribute

It is no conventional language that I shall be using when I offer my hearty thanks on behalf of the Board and myself to the Officers and Staff both afloat and ashore, for the devoted services they have rendered during the year.

I should also like to express my thanks to the Shippers, Brokers and Forwarding Agents, for their firm support to us and for the confidence they have reposed in us and in the quality of our shipping service.

N.B.: This does not purport to be a report of the proceedings of the General Meeting.

POYSHA INDUSTRIAL CO., LTD.

CHAIRMAN, MR. M. R. RUIA'S SPEECH

The following is the text of the Speech delivered by Mr. M. R. Ruia, Chairman, at the 6th Annual General Meeting of the Company, held in Bombay on Monday the 30th September 1963.

Our Bombay factory is small and congested, and we are making do with the single automatic bodymaker and printing unit. These in-built difficulties have been a continuing handicap throughout the year, and our general performance at the end of the year must be regarded as satisfactory in the light of this handicap. When the new factory is built at Dighe near Thana and additional equipment is installed, production is bound to increase rapidly, and this should be reflected in the turnover and profits in the coming years.

We have had to contend with a certain amount of difficulty regarding our main raw material. Inadequate import of tinplate for the manufacture of open top sanitary cans was a feature almost throughout the year, with the result that we had to manufacture cans not according to the requirements of canners, but according to the availability of the varieties of tinplate. Our sales of open top sanitary cans naturally suffered because of our failure to make continuous supplies of the right sizes of cans to the canners.

Indigenous Tinplate

In the matter of indigenous tinplate, too, there were difficulties due to excessive variation in the thickness of the tinplate. This not only prevented us from using the tinplate on our automatic machine, but reduced the rate of production on the semi-automatic lines also. Irregularity in supplies was another feature throughout the last year.

We have brought our difficulties to the notice of the Hindustan Steel Limited (Rourkela) and hope that with their co-operation most of these difficulties will be greatly minimised, if they do not altogether disappear, in the coming year.

During the greater part of last year, the supply of aluminium tagger, from the only manufacturer, Messrs. India Foils Limited, was quite inadequate. They had their own difficulties regarding raw material.

A new development in the year under review has been the receipt of orders for supply of cylinders of various types, etc., from the Government. We have already made supplies against certain substantial initial orders, which have met with approval, and are expecting further orders in the near future. This promise to be quite a significant line of manufacture in the coming years, and special tooling and machinery are being contemplated for this purpose. Our suggestions for the modification of some of the specifications, which would have the effect of greatly cheapening the cost of the products without reducing their technical adequacy in any respect, are being received with sympathy by the authorities concerned. I shall have more to say on this new development in the next annual report.

We have also contributed our humble share to the vital export drive now in progress. About Rs. 16 lakhs worth of goods were exported in our contaniers in 1962-63, of which a little over Rs. 10 lakhs were in sanitary cans. Sixty per cent of these sanitary cans consisted of 5½ Oz. juice cans, of which we are the sole manufacturers, the balance relating to general line cans, mostly containers of paints.

Raising Exports

With a little assistance from the Government, a really large export trade can be developed in these 5½ Oz. juice cans. There is a very ready market in the Middle East countries, which are at the moment being dominated by Cuba, Mexico and Egypt. Unless we are able to sell in this export market at prices not exceeding those at which these countries are selling their products, we cannot make any headway in this export. The canners of fruit juice have expressed certain difficulties regarding the high cost of production, due to circumstances beyond their control, and they are likely to make a representation in this respect to the Government. We have also made an independent approach to the Government, pointing out, among other things, the need for the restoration of the subsidy in tinplate which has recently been abolished.

Our total Sales last year amounted in value to about Rs. 0.94 crore, as against the last year's figure of Rs. 0.76 crore.

Other things being equal, the results for 1963-64 should show a substantial increase in turnover and value.

Note: This does not purport to be the proceedings of the Annual General Meeting.

INVESTORS' GUIDE

The 1963 Edition of the Calcutta Stock Exchange Official Year Book is now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this edition: (1) Information relating to all Bombay Companies, (2) List of Companies which accept vernacular signatures on transfer deeds, and (3) Yield and Interest Tables. Also lists of companies which accept and which do not accept signatures in dot pen on transfer deed.

Copies available from:

THE STOCK EXCHANGE,

7, Lyons Range, Calcutta-1.

at a price of

Rs. 12.50 nP per copy.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. P. MATHRANI'S ADDRESS

The following speech delivered by Mr. K. P. Mathrani, I.C.S., Chairman, Industrial Finance Corporation of India, at the Fifteenth Annual General Meeting of the Corporation held on the 30th September, 1963.

Gentlemen,

I have great pleasure in welcoming you to this Annual General Meeting of the shareholders of the Corporation and placing before you the Fifteenth Annual Report of the Board of Directors and the Accounts of the Corporation for the year ended the 30th June 1963. Printed copies of the Report have been circulated to the shareholders and I shall, with your permission, take the Report as read.

With the close of the year, the Corporation completed the fifteenth year of its service to Indian industry. As the shareholders are aware, the Corporation was established on the 1st July 1948, i.e. during the very first year of our Independence. The activities of the Corporation, therefore, reflect, to some extent, the results of the efforts since Independence to establish a sound industrial base for developing the economy of the country, particularly in the private sector. Starting from a modest beginning, the activities of the Corporation have progressively increased both in scope and in magnitude. Apart from rupee loans, which still constitute the major part of its operations, the Corporation now sanctions loans in foreign currencies, gives guarantees in respect of deferred payments and foreign loans and has, in addition, during the last few years, ventured forth into promotional activities, such as underwriting of public issues in the form of equity and preference shares and debentures and also direct subscription to such issues. The Corporation has thus gradually been assuming the role and functions of a development bank and not merely a lending institution.

Complete Picture

In order to project these widening activities of the Corporation, the form of presentation of the Annual Report has been suitably altered to give a complete picture of the total financial assistance approved and disbursed by the Corporation instead of confining the statistics only to the loans sanctioned, as has been the practice in the past. The appendices, therefore, contain combined statistics of all forms of assistance. Another notable feature of this year's Report is that statistics in the appendices to the Report have been prepared on the basis of net sanctions, i.e. exclusive of the figures relating to the facilities approved by the Corporation which were subsequently not availed of by the applicant concerns or were cancelled or withdrawn by the Corporation for various reasons.

During the 15 years of its existence, the Corporation has sanctioned gross financial asistance of the order of Rs. 202.7 crores. The net amount of the financial facilities approved during this period, after accounting for cancellations and withdrawals aggregating Rs. 38.37 crores, totalled Rs. 164.33 crores, made up of rupee loans of Rs. 118.39 crores, foreign currency loans of Rs. 9.29 crores, underwritings and direct subscriptions of Rs. 9.48 crores and guarantees to the extent of Rs. 27.17 crores. As against the facilities sanctioned, assistance of the order of Rs. 102.57 crores had been disbursed or made available till the 30th June 1963 and the assistance outstanding on that date, after accounting for repayments, aggregated Rs. 78.92 crores.

While the figures of total assistance rendered by the Corporation are impressive enough, they do not tell the whole tale. Even more noteworthy is the total cost of the projects which have come to fruition because of I.F.C. assistance; this is estimated at Rs. 433 crores i.e. roughly 30% of the total net investment in the organised industries in the private sector since Independence. Viewed in this light, I.F.C. may be said to have played not an insignificant part in developing the industrial economy of the country in the private sector. With the contribution it has already made, the experience it has gained and the reserves it has built up, the Corporation now stands poised to assume larger and more positive responsibilities envisaged by the Finance Minister in his statement in the Parliament on the 6th September 1963.

Satisfactory Year

Turning to the year under review, it has been a particularly satisfactory one in every respect—from the point of view of the variety and magnitude of the assistance sanctioned and disbursed, the working results, the areas and regions assisted and the clientele served and the nature of industries financed. During the year the Corporation sanctioned financial facilities of the order of Rs. 40.14 crores made up of loans aggregating Rs. 22.61 crores, underwritings and direct subscriptions amounting to Rs. 5.19 crores and guarantees of deferred payments and foreign loans totalling Rs. 12.34 crores. The assistance disbursed or made available during the year was of the order of Rs. 22.43 crores, out of which the cash out-goings amounted to Rs. 18.1 crores. The figures of both the sanctions and disbursements are the highest in any one year since the inception of the Corporation, being almost twice the corresponding figures of the previous year.

Our gross Income for the year was Rs. 394.72 lacs which shows an increase of Rs. 90.54 lacs i.e. almost 30% over the previous year's figure. The gross profit of Rs. 167.26 lakhs for the year, subject to provision for taxation, is higher than that of the previous year by about Rs. 37 lacs. After providing a sum of Rs. 84.95 lakhs towards taxation, including Rs. 5.76 lakhs towards super-tax for the years ended the 30th June 1962 and the 30th June 1963, the net profit for the year comes to Rs. 82.67 lacs. These results could be regarded as satisfactory and satisfying.

Out of the current year's profits a sum of Rs. 30 lakhs has been transferred to the General Reserve Fund which now stands at Rs. 166.08 lakhs. In addition Rs. 17.60 lakhs have been appropriated to the Special Reserve Fund under Section 36(1) (viii) of the Income-tax Act, 1961. We have further transferred a sum of Rs. 15.82 lakhs to the Special Reserve Fund under Super Profits Tax Act, 1963. With these appropriations, the reserves now total Rs. 3 crores as against the paid-up capital of Rs. 7 crores.

The Corporation did not have to make any further provisions towards the reserve for bad and doubtful debts, the balance in which now stands at Rs. 14.47 lakhs. The existing provision relates largely to three very old accounts, action in regard to which is in progress. It is hoped that the bulk of these will be cleared or regularised during the course of the current year. Apart from these, our borrowers have, with rare exceptions, been prompt and punctual in the payment of our dues. Some of the old arrears of principal have been cleared and the percentage of defaults in the repayment of the instalments of principal has come down further from 1.24% to 0.87%. It is a matter of some satisfaction that one of the concerns which was in arrears for some time past has now been leased out to enable liquidation of the account in an orderly manner.

I am glad to inform you that as envisaged in my last year's Speech, the balance of Rs. 18 lakhs in respect of the subvention availed of by the Corporation from Government for paying the minimum guaranteed dividend was repaid during the year and thus the statutory liability in this regard stands completely discharged. A provision of Rs. 19.25 lakhs has been made in this year's accounts towards the payment of guaranteed dividend at 2½% per annum in respect of the original issue of share capital of Rs. 5 crores and 4% per annum in respect of the additional issue of Rs. 2 crores made in March 1962. I am conscious of the fact that the present position in regard to the dividend in respect of the first issue is somewhat anomalous and I hope that a satisfactory solution of this problem will be found when amendments are made to the I.F.C. Act.

Promotional Activities

As I have mentioned earlier, the promotional nature of I.F.C.'s activities has been progressively increasing in the last few years. During the year under review, we approved 18 proposals for under writing of an aggregate amount of Rs. 3.37 crores—Rs. 1.52 crores in respect of equity shares, Rs. 17 lakhs for preference shares and Rs. 1.68 crores in regard to debentures. In a number of cases, the Corporation has sanctioned underwriting facilities in conjunction with loans as also other facilities for substantial amounts. A notable underwriting undertaken by us during the year was in respect of the 6½% debenture stock 1968-77 of the Oil India Ltd., where we acted jointly with a consortium consisting of the Life Insurance Corporation of India, the State Bank of India and its subsidiaries, the Industrial credit and Investment Corporation of India Ltd., and certain leading commercial banks, insurance companies and share brokers. The Corporation underwrote the stock to the extent of Rs. 1.68 crores and in addition subscribed directly to the extent of Rs. 1.82 crores.

As you are, no doubt, aware, the Corporation did not enter underwriting business till December 1956 after it had acquired adequate experience of other activities and had also built up some reserves. Since then, we have progressively increased our operations in this field and have uptodate given net sanctions in 42 cases to the extent of Rs. 7.66 crores. During this period 28 issues involving a commitment on our part of Rs. 6.25 crores were actually placed on the market and shares and debentures worth Rs. 4.51 crores devolved on the Corporation as a result of these operations. The proportion of the shares and debentures which have devolved on the Corporation as a result of its underwriting commitments is no doubt, quite large, but, as you will appreciate, this is due mainly, to the condition of the capital market. The projects assisted by us are however basically sound and viable and we have every reason to hope that after they have gone into production they will give us adequate return.

The depressed state of the market, particularly during the last few months, is obviously, a matter of concern to us and as you will have seen from the press reports, this question has been a subject of consultation between the Central Government, the Reserve Bank of India and the institutions concerned. It is our feeling that this is a temporary phase which need not hold up the industrial development of the country. We propose to continue to play our part in the fulfilment of the Plan targets in respect of industrial development in collaboration with other sister institutions. We shall, naturally, review our policy in this regard from time to time in the light of the conditions that may develop.

Sub-loans in Foreign currencies

Whereas the bulk of our lending operations continue to be in rupees, the number of sub-loans in foreign currencies has been on the increase. Upto the 30th June 1963, the Corporation had approved sub-loans in foreign currencies for a net amount equivalent to Rs. 9.29 crores. Out of the two loans of 30 million dollars sanctioned to the Corporation by the Agency for International Development (AID) of the United States of America, the Corporation had committed itself to a sum of $14.85 million (Rs. 7.07 crores). We have a number of pending applications as also enquiries with us and we therefore propose approaching the AID through Government for a further allocation. We are also committed to a sum of DM 12.25 million (Rs. 1.5 crores) out of the two DM lines of credit aggregating DM 40 million. The demands made on us for sub-loans from the West German credits are particularly numerous and we hope that these credits will be further supplemented in the near future.

During the year under review the Corporation was also sanctioned a line of credit from the Banque Francaise du Commerce Exterieur, Paris (commonly known as BFCE) to the extent of 50 million Francs for financing the import of capital goods mainly from France and the relative protocol was signed in October 1962. A sum of 6.67 million Francs out of this credit has already been committed. A beginning in the sanction of sub-loans in Japanese Yen equivalent to U.S. $0.25 million out of the amount allocated to us by the Central Government last year has also been made during the year.

With the above additions in foreign currency resources, the Corporation hopes to meet the foreign exchange requirements of its borrowers on a larger scale. However, in view of the fact that except for the West German credit, other credits are tied to purchases in the respective countries, the gap in our resources of a substantial line of credit in convertible currencies remains to be bridged. I hope that with the good offices of the Central Government this vital need of the Corporation will be met in the larger interests of the Indian Industry.

Apart from the quantum of assistance rendered by the Corporation during the year, its distribution is of some importance. For some years past, sugar industry has been the largest single recipient of our assistance. During the last year, however, the position has changed and non-ferrous metals industry—principally aluminium—was sanctioned the largest quantum of assistance, namely 16.8% followed by textiles (15.2%), sugar (15.1%) and basic chemicals (10.9%). While considering requests for assistance we have shown particular sympathy to projects enjoying high priority which will help to fill the vital gaps in the industrial economy of the country. Accordingly, we agreed to assist a small project for the manufacture of glass-lined equipment for use in chemical industry, a scheme for the manufacture of tyre bead wires, a

project for the manufacture of malleable iron pipes and fittings, a unit for the manufacture of gelatine, a scheme for the manufacture of injection moulding machines and moulds and an alloy steel project of the cpacity of 25,000 tons per year. In most of these cases, the parties have been able to secure dependable foreign collaboration and know-how.

The distribution of our assistance according to States has also shown a departure from the pattern obtaining in the previous years. While in the past Maharashtra led the list of our beneficiaries, during the current year that distinction goes to Madras State which was sanctioned 29.4% of the total assistance followed by Maharashtra, Assam and Mysore. Uttar Pradesh, Orissa and Punjab have also claimed a sizeable proportion of our sanctions during the year. Thus, in consonance with the Government directive, a larger proportion of our assistance is being availed of by the less developed parts of the country.

Aid to Industrial Co-operatives

As in the past, the Corporation has paid particular attention to industrial co-operatives. The net financial assistance approved by the Corporation upto the 30th June 1963 to this sector of industrial economy amounted to Rs. 36.86 crores representing about 22% of the total sanctions by the Corporation. This assistance has been sanctioned to fifty sugar factories, three spinning mills and one unit engaged in the extraction of vegetable oil. These co-operatives, I am glad to say, have been meeting their obligations to the Corporation in time.

An interesting feature of the operations of the Corporation during the recent years has been the progressively smaller number of requests which have been finally turned down. During the year under review apart from one request for underwriting, no application was finally rejected by the Corporation. Credit for this goes partly to the entrepreneurs who have been bestowing greater care to the preparation of their projects and have been furnishing the information and data required by the Corporation for processing the requests. But this also reflects the constructive approach of the Corporation in considering these requests. Very few of the applications received by us are complete in all details and much work on them is necessary before they are considered acceptable. During the course of our examination it has been our aim to help the prospective entrepreneurs suitably to modify their schemes, where necessary, so as to make them financially and technically viable. This has been facilitated by the setting up of a technical organisation within the Corporation and by our utilising the services of the Technological Consultancy Bureau of the National Industrial Development Corporation Ltd. The parties are thus assured of sound financial and technical advice and are in a position to revamp their schemes to the mutual advantage of themselves and the Corporation. This may sometimes give rise to complaints of delays. We have, however, found that the time spent in careful examination at that stage leads to more expeditious completion of the projects and their successful operation in the long run.

At the last Annual General Meeting I informed the shareholders that the Corporation had entered the market for the issue of bonds for Rs. 6 crores at 4½% p. a. at an issue price of Rs. 99.50. The issue was fully subscribed. I take this opportunity of thanking the shareholders and other investors for their support in making the issue a success. The Corporation has also, since the 1st January 1963, taken over the management of the bonds which hitherto was entrusted to the Reserve Bank of India.

Total Disbursements

It might be of interest to you to know that the total amount of disbursements so far in cash in respect of loans sanctioned and shares and debentures subscribed to or taken up by the Corporation as a part of its underwriting commitments aggregated Rs. 87.79 crores. These have been financed to the extent of Rs. 22.62 crores out of the repayments of loans to the Corporation, Rs. 24.75 crores from borrowings from the Central Government, Rs. 28.24 crores from borrowings from the market by issue of bonds, Rs. 2.18 crores from the foreign credits and the balance of Rs. 10 crores from the paid-up capital and reserves. It will thus be seen that disbursements have been financed from the internal resources (including share capital) of the Corporation to the extent of about 37% and from borrowings from the market to the extent of 32%; the balance of about 31% coming from Government and foreign loans.

Until last year the Corporation used to levy a small premium for premature repayment of loans by the borrower concerns whether from the accumulated profits or from additional share capital or from other sources. This policy has been reconsidered and with a view to encouraging the borrowers to repay our loans from their internal resources, the levy of premium in such cases has been completely withdrawn. Further the payment of premium in respect of premature repayments made from other sources has also been suspended for a period of two years with effect from the 1st July 1963. The system of levy of commitment charges has also been rationalised. Until recently commitment charges were recovered for late execution of mortgage documents and for non-drawal of loan amount according to schedule. A deposit for ensuring the utilisation of the facility sanctioned was also required. These have been replaced by a single commitment charge levied at 1% on the amount of loan not availabled of, calculated from the date of acceptance of terms and conditions by the borrower concerns. The revised basis for the levy of commitment charge is in line with the practice followed by other long-term lending institutions.

We have continued to act in close collaboration with other sister institutions such as the Life Insurance Corporation of India, the Industrial Credit and Investment Corporation of India Ltd. and the State Bank of India and have financed some of the bigger projects in partnership with them. In respect of one project, we have worked jointly with the International Finance Corporation, Washington and the Industrial Credit and Investment Corporation of India Ltd. to assist in the setting up of an alloy steel plant. Our association with commercial banks has also become closer. Such joint collaboration with other institutions and banks helps not only in bringing to fruition large projects which are essential for the econmy of the country, but also in the exchange of ideas and the sharing of risks. I am grateful to these institutions and banks for the co-operation and consideration they are showing to us at every stage.

Cordial Relations

Our relations with various Chambers of Commerce and our borrower concerns continue to be cordial. We deeply appreciate the constructive suggestions that they have made from time to time for improving our service to our beneficiaries.

Our practice of appointing non-officials on the Boards of our borrower concerns has proved fruitful and we have benefited much from their advice and assistance. I take this opportunity to thank them on behalf of the Board of Directors for the keen interest they have taken in their work. I should also like to convey our thanks to the members of our Advisory Committees for the able and objective assistance they have given to the Corporation.

Our appreciation and thanks are due to the United States of America Agency for International Development with whom our relations have been very cordial. We are also grateful to Kreditanstalt Fur Wiederaufbau and to the Banque Francaise du Commerce Exterieur for the consideration they have shown us.

Before concluding I should like to express my sincere thanks to my colleagues on the Board for their valuable co-operation and wise counsels. In particular, I should like to make a reference to Shri S. P. Virmani and Shri K. S. Sundara Rajan, who ceased to be Directors of the Board and to Shri M. Ct. Muthiah, Shri V. P. Varde and Shri C. C. Desai who are retiring this year. Their sound advice and active participation in the affairs of the Corporation has been of great value. Lastly, I record with pleasure the appreciation and thanks of the Board of Directors as well my own to the General Manager and the entire staff of the Corporation for the loyal and devoted work on their part during the year.

Note: This does not purport to be a report of the proceedings of the General Meeting.

NGB/46C

INDIAN OIL COMPANY LIMITED

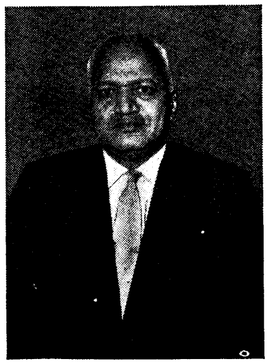
CHAIRMAN, MR. P. A. GOPALKRISHNAN, ICS, REVIEWS ACTIVITIES

Addressing the fourth Annual General Meeting held at the Registered Office in Bombay on September 25, 1963, Mr. Gopalkrishnan said :

The Balance Sheet and Profit and Loss Statement are in front of you for your ratification. You will see that the Indian Oil Company has made a profit of Rs. 59.61 lakhs after making provision for payment of tax in 1962-63 over an equity capital of Rs. 322.25 lakhs. This gives a net return of 18.5% and a net profit per kilolitre of Rs. 9.3. With this amount of Rs. 59.61 lakhs, it is proposed to wipe off accumulated losses of Rs. 16.85 lakhs, make provision for development reserve of Rs. 43.44 lakhs and carry forward a small balance. The net profit would have been over Rs. 90 lakhs if we had received agreement to receive the following amounts from Government or other parties :

(i) Rs. 10 lakhs and odd which was realised by Government as C & F duty which was really not due.

(ii) Rs. 14 lakhs and odd from Government on account of abnormal bridging expenses, emergency risks insurance, demurrage, etc.



(iii) Rs. 3 lakhs and odd from Government on account of unrecovered freight in Nunmati Supply Area.

(iv) Rs. 4 lakhs and odd from other oil companies on account of Central Sales Tax which the IOC has paid on behalf of other companies.

The Indian Oil Company is pursuing these cases. Besides, the Company has paid Rs. 10.79 crores as Customs Duty, Rs. 6.67 crores as Excise Duty and Rs. 1.04 crores as Sales Tax, making a total of Rs. 18.50 crores (Rs. 4.24 crores received from other oil companies). The total amount by way of these three duties paid by the Indian Oil Company from its very inception is Rs. 22.39 crores.

Sales Trebled

The quantity of product sold in 1961-62 was 322 kilolitres per person employed at the end of March 1962. The quantity of product sold in 1962-63

Mr. P. A. Gopalkrishnan

was 482 kilolitres per person employed at the end of March 1963.

Sales have almost trebled in 1962-63 compared with the previous year. They amounted to 629,639 kilolitres, plus 16,764 kilogrammes of greases and 11,498 metric tons of Petroleum Coke as compared to 211,033 kilolitres (plus nil kilogrammes of greases and nil metric tons of Petroleum Coke) in 1961-62. Starting with two oil products, the Indian Oil Company now sells fourteen products viz., High Speed Diesel, Superior Kerosene, Inferior Kerosene, Aviation Turbine Fuel, Furnace Oil, Tea Drier Oil, Light Diesel Oil, Transformer Oil, Axle Oil, Lubricants of different sorts, Iomex, Motor Spirit, Greases and Petroleum Coke.

Technical advice is now available for giving advice to industrialists and others in the use of proper lube oils and fuel oils. A full-fledged lubrication department has been set up with officers in all branches for the purpose.

Blending Plants

Under a series of agreements with Mobil Petroleum the IOC have become the sole distributors in India for Mobil Premium grade lubricants and two blending plants are being set up by the Indian Oil Blending Limited of which the Chairman of the IOC is the Chairman and the IOC and Mobil hold equal shares. The Blending Plants are expected to go into production in 1964 thus leading to saving in foreign exchange. The IOC has already saved Rs. 7.78 crores in foreign exchange in 1962-63 as against Rs. 4.57 crores in 1961-62 by making rupee payments for the oil products from communist countries and avoiding payment in foreign currency.

Storages

The storage space of the IOC at port and main installations has increased nearly two and a half times during the year under review. The company has also established a large number of inland depots and retail outlets to promote its sales and service to the consumer.

The times are difficult. While the Government is ready to collect Customs Duty and Excise Duty as the products are withdrawn for despatch, they are not prompt in paying the bills. Various rules come into play such as Supply Orders, Inspection Notes and Consignees' Receipts. In result the amount outstanding at the end of August 1963 is over Rs. 8 crores. Out of this over Rs. 4 crores is outstanding on account of DGS & D bills alone and about Rs. 4 crores with the State Government and other State Undertakings. Since the Indian Oil Company caters to the needs of almost all Government Departments and State Undertakings, the burden on the Company is terrific. It has to carry big over-drafts and Rs. 2 lakhs per month becomes the interest charged alone. On the one side there is a ceilng price fixed by Damle Committee on certain assumptions and on the other there are terrific outstanding bills owing to Government Rules and Regulations. The burden on the Company is very much and working capital requirements have gone up. So in the current year, the rate of profit on the equity capital is likely to go down, particularly because of the increase in duty on all kinds of products.

Operational Cost

The next important item is the operational cost per kilolitre of product sold. Excluding sales to Hindustan Organizers, which are made from tankers direct, the operation cost in 1960-61 was Rs. 35.16 per kilolitre. In 1961-62, it was Rs. 31.68 per kilolitre. In 1962-63, it was Rs. 30.16 per kilolitre. It would have been Rs. 25.82 per kilolitre if certain abnormal expenses pertaining to previous years had not been met in 1962-63 and if the expenses had not increased as a result of the emergency and other causes.

Almost all the oil products sold by Indian Oil Company as well as by other companies are used both in the rural areas and urban areas. The tax paid to the Government comes from the pockets of the entire population. Many middle men get profits out of the business. So do the oil companies which employ quite a number of persons. Therefore the oil industry is very important to the people as well as the Government.

World Refining Capacity

The oil industry is about a hundred years old and many international giants have risen, particularly in the United States. In 1950, North America had about two thirds of the world's refining capacity. Now it is less than half. Refining capacity is increasing in consuming countries, the sources of supply supplying only crude oil and there is a frantic and systematic search for crude in almost all countries. The world's refining capacity is very nearly 1,200 million tons. Russia exports 40 million tons of oil and oil products per year. So you can imagine the size of the international oil industry. Compared to it, the Indian Oil Industry is very small and the business of the Indian Oil Company is much smaller. Barauni Refinery is expected to go on stream in March or April 1964 and Koyali and Cochin Refineries are expected to go into production by March 1965 and June 1966 respectively. The ultimate capacity of the four Public Sector Refineries is 9.75 million tons and when the Indian Oil Company begins to distribute the production of these refineries it is bound to become one of the oil giants in the country.

Finally, I wish to point out that this young Indian Oil Company has started off well and has made a profit for the first time in 1962-63, which is creditable. I thank you for your co-operation and advice and thank all those officers and staff in the Company, who have worked hard to make the year successful.

MALAYALAM PLANTATIONS LIMITED

ISSUED CAPITAL £2,718,032

IN 2s. SHARES

DIRECTORS :
JOHN SANDS, C.A. *(Chairman)*,
J. A. CLUBB, M.M., M.S.M., F. W. HARPER, F.C.A.,
SIR CHARLES MILES, O.B.E.

Secretaries and Agents : HARRISONS & CROSFIELD, LIMITED.

Summary of the directors' report and circulated statement of the Chairman for year ended 31st March, 1963.

TOTAL ASSETS : £6,467,560 NET CURRENT ASSETS : £779,994

CROPS & PRICES.—Crops and net average prices realised were :—

	Planted Acreage	Crops 1962-63 lb.	Crops 1961-62 lb.	Net Average Prices 1962-63 per lb.	Net Average Prices 1961-62 per lb.
Tea ...	20,713	24,161,314	20,095,370	30.83d	31.79d
Rubber ..	19,869	10,724,056	10,050,110	25.77d	25.78d

PROFIT AND DIVIDEND.—The profit before tax was £1,322,428 compared with £984,918 for 1961/62 and, after tax, £513,817 compared with £333,398. A final dividend of 15 per cent. (making a total of 20 per cent. for the year) is recommended.

CURRENT FINANCIAL YEAR.—The level of tea crops has been well maintained, and to the end of August was 927,484 lb. over the same period last year. However, the rubber crop at the same date shows a decrease of 345,113 lb, mainly due to a reduction in the area in tapping.

The Forty-second Annual General Meeting will be held at 11 a.m. on Wednesday 23rd October, 1963, in The Queen's Room, The Baltic Exchange, St. Mary Axe, London, E.C.3.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

CHAIRMAN, MR. F. A. COLLETT'S REVIEW

The following speech delivered by the Chairman, Mr. F. A. Collett, at the Fifty-second Annual General Meeting of the Company held on 26th September, 1963.

The year under review saw the beginning of the National Emergency with its manifold impact on all aspects of national life. The burden on industry generally of the consequential financial measures introduced in March has been great, but the tobacco industry is affected more heavily than most. In our case there was not only additional income taxation, which involved a further charge of Rs. 20 lakhs after the year's trading had been completed, but also the substantial rise in the level of Excise. This rise affects our business in several ways. Not only do the inevitable increases in selling prices restrict consumption and make the maintenance of adequate profit margins more difficult but the Company's working capital requirements are also increased because of the large amounts of excise and duty included in the stocks of manufactured goods.

I concluded my Speech to you last year with the words "I am confident that taking all foreseeable factors into account we shall be able to maintain our present rate of dividend during the current year after making adequate appropriations to reserves". Obviously we could not foresee the present National Emergency. The trading profits of your Company for the year fully justified my confidence, but the impact of the national financial measures on your Company, and in particular the increased working capital requirements, have obliged your Board with regret to recommend a reduction of the final dividend to 3%, making a total of 8% for the year as against 9% last year.

Additional Working Capital

The need for additional working capital is emphasised by the Company's cash position. Until very recently your Company has been in the position of being able to finance its business without resort to borrowing, but you will see from the Accounts that at 31st March last the Company was dependent on bank finance, albeit for a comparatively small amount.

Whilst the deterioration in the Company's liquidity is in part due to the purchase of our requirements of flue cured leaf tobacco at an earlier date than usual, the most important factor is the very much larger amount tied up in Excise on stocks on hand, due not so much to larger physical stocks as to the higher rate of excise applicable to those stocks as a result of the further increased rates announced in this year's Budget.

As this factor is so important, I think perhaps it would be appropriate if I deal with it in more detail.

Tobacco Excise Duty, with its attendant Special and Additional Excise Duties, is payable at the time that the leaf tobacco is taken into use in the factory, while the much heavier Cigarette Excise Duty (with its attendant Special and Additional Excise Duties) is payable when the finished cigarettes leave the factory.

These cigarettes are then despatched throughout the length and breadth of the country to the many distribution points which we maintain in order to give the ultimate consumer the sales service that he rightly expects. As cigarettes are, particularly during the monsoon, a perishable commodity, it is very much in our interests, and that of the consumer, that the period between the manufacture of the cigarettes and their consumption is reduced to a minimum.

Our Marketing and Traffic departments are constantly and persistently trying to reduce this transit period, and have indeed met with a deal of success. Nevertheless, despite our best endeavours, and with despatches from five factories in different parts of the country, we have not been able to reduce it below an average of three to four weeks, and we are not therefore reimbursed for our outlay on Excise during this time.

Increases in Excise Duty

With successive increases in the rates of Excise this outlay has been steadily mounting : and the 1963 Budget increased it by as much as Rs. 67 lakhs on approximately the same volume of cigarettes, with the result that we now have perforce some Rs. 2 crores of unremunerative capital permanently tied up at any one time in Excise.

I think that it is generally accepted that Excise is intended to be a tax on the consumer, and not on the manufacturer who is taxed by Corporation Tax and Super Profits Tax, not to mention the Excise element in the price paid for raw materials. It is not therefore reasonable to ask the shareholders for new capital to finance this outlay as there is no return on it at all. We have so far been fortunate in that our Bankers have been able to grant us overdraft facilities to enable us to carry this burden.

However, as is well known, in this stage of the country's development Bank funds are not unlimited, and are required for the finance of new development to broaden the base of the economy. We are therefore making representations to Government to allow the industry some credit on their excise payments as is done in many countries, in order that these funds may be put to a more useful purpose than at present, and can only hope for a successful outcome.

The cigarette trade is one of the largest producers of Excise revenue in the country, and consequently our policies are to a very large extent dominated by this impost. The effect of successive increases in excise rates over the last two years has been, and still is, far reaching, particularly as although Government revenue has continued to rise fairly steadily, the volume of business has not.

For the five years until the 1962 Budget there had been a steady increase in volume of some 10% per annum. As a result of that Budget the volume last year was virtually stagnant : and although it is more difficult than ever to forecast the effect of the 1963 Budget it seems highly likely that this year will see a regression in volume, though not in Government revenue, for the first time for several years. In fact, rising costs coupled with annual increases in Excise rates have forced our lowest prices up to a figure which many consumers can no longer afford to pay.

Two Alternatives

In these circumstances after this year's Budget, your Board was faced with two alternative courses : either to pass on the whole of the increased Excise rates to the consumer, thus accentuating the anticipated fall in volume of sales with the consequent laying off of labour in the factories, or, taking the long-term view that this is a temporary setback brought about as a by-product of the National Emergency, to absorb a large part of the Excise increase, thereby restricting price increases to the minimum, particularly in the lower price categories.

We have chosen the latter course because we considered it to be in the best long-term interests of the Company. This must inevitably result in considerably decreased profits for the current year.

In the developing stage of the country periodical increases in Excise rates are probably inevitable : but in the cigarette trade an Excise change means a complete overhaul of the entire business, particularly for a Company such as ours which sells cigarettes over the entire price range from Rs. 1/40 to 12 nP for ten. Thus when the increases come regularly every year it is extremely difficult to maintain a consistent long-term policy, and considerable fluctuations in profits seem inevitable.

In our opinion Tobacco and Cigarette Excise rates have for the time being at least reached the maximum that the consumer can afford to pay, and the trade needs a period of stability : further increases in Excise must clearly be reflected by equivalent increases in prices to consumers, which in present economic circumstances can only result in further decline in volume of sale.

I mentioned to you last year the progress that we were making towards increased productivity through training and this objective has assumed even greater importance under present-day conditions. If volume, and therefore profits, are to remain stagnant or diminish due to the tax burden, any further development must come from greater productivity and greater efficiency. For this reason an intensification of our training programmes is being undertaken and our administrative procedures are being closely re-examined.

Effective Training

The urgent need for effective training, both of our Managers and Labour, has been recognised now for several years and during the past year the momentum in both directions has been stepped up. Wherever possible the fullest advantage has been taken of training opportunities offered overseas for Managers at the senior as well as the intermediate levels, and in this connection two senior Managers have attended sessions at the Administrative Staff College, Henley-on-Thames, in the U.K., and seven of our intermediate Management completed courses at the Training Centre run by our Associates in the U.K. in the recent past. In addition a further seven men have completed other forms of technical training in the U.K. and Australia.

This has not only helped our key personnel to keep up to date with latest developments and techniques but has also assisted us in equipping a larger number of our Indian national staff to take over responsibilities previously held by foreigners in furtherance of the Indianization policy. At home six of our senior Managers were accommodated on courses at the Administrative Staff College at Hyderabad in the past year and two men attended fulltime Management Courses run by the Calcutta Management Association and Indian Institute of Personnel Management. Our own residential Training Centre in Calcutta is being utilized to the full in training Managers at all levels in general management techniques, as well as in imparting a greater awareness of the commercial aspect of their jobs as Managers. Altogether approximately 100 members of the Company's Management have completed courses at this Training Centre during the past twelve months.

The Executive Development Programme is also directed towards the particular objective of more intensive training of labour in which a large number of our Managers are now actively engaged. Our Labour Training programmes are being vigorously carried out in all the Company's branches with two objectives—first to increase the efficiency of operatives and secondly to improve the supervisory and leadership skills of the higher echelons of labour. By these means greater productivity is our aim, and the enthusiasm with which our Labour Training programmes have been received by the labour themselves has also helped to improve our Management's relationships with the work force.

I would like to close with a word about the future and little as I like to end my Speech on a depressing note, the very steep increases in Excise duties imposed by the 1963 Finance Act represent a substantially increased burden for your Company, and our trade has undoubtedly suffered severely. I can only forecast, therefore, that in the current year we must expect profits to show a marked decrease.

ALUMINIUM CORPORATION OF INDIA LIMITED

MAGNIFICIENT WORKING RESULTS: RISE IN SALES 82% AND PROFITS 60%

EXPANSION PROJECT IN ADVANCED STAGE

25 YEARS NATIONAL SERVICE COMPLETED; SILVER JUBILEE BONUS SHARES DECLARED

NEED FOR THE INDUSTRY'S EXPANSION STRESSED

While presiding over the 25th Annual General Meeting of the Aluminium Corporation of India Limited held in Calcutta on the 30th September 1963, Mr. Lakshmipat Singhania said :

Gentlemen,

I have great pleasure in welcoming you to the 25th Annual General Meeting of the Corporation. The formation of the Corporation in October, 1937, was the first concrete step towards the establishment of this highly technical basic industry by pooling all resources available in the country as no foreign technical assistance worth the name was then available. The Corporation has developed the aluminium industry in India in its natural sequence of operations that is from Indian Bauxite Ore to Aluminium-Oxide to Aluminium Metal to finished products like sheets and circles, etc. By following this natural sequence the Corporation can claim that it has laid the foundation for this Industry and created trained technical personnel wealth in the various sections of the Industry. Therefore, the history of the development of the Corporation during the last 25 years can be rightly taken as the history of the establishment of this basic industry in India. Considering the enormous initial difficulties the Corporation had to face technically and financially the present attainment of the Corporation stands as an achievement of the Indian Capital, Indian Management, Indian Labour and Indian Technical Skill who have toiled over long years with faith, courage and single purposeness of objective.

Pioneers have only the glory of blazing a trail with a reward of privations. This is also true in the case of pioneers who while establishing any basic Industry like Aluminium have to face certain difficulties which the subsequent entrants into that Industry do not have to face. The patience and perseverance of the equity shareholders who had to wait for 19 years before they could get their first dividend is a typical example.

Having received nothing for the first nineteen years, for the remaining last eight years the Ordinary Shareholders have received a return of 9.11% on their original capital, thus maknig a total direct return till end of March 1963 of a bare 3.73% on the original capital, excluding the advantages of Right Shares and Bonus Shares. The highly capital intensive nature of this Industry will be borne out by the fact that an investment of approximately Rs. 10,000 is required for one ton metal production capacity per year that is about one-third in money value per year in Ratio of Capital Investment, and similarly from the employment point of view, a capital investment of Rs. 30,000 to Rs. 40,000 will be required per head of direct employment. For any Industrial investment of such magnitude a rate of return of 3.73% is most inadequate. The total earnings of the Corporation during the last 25 years have been distributed as under :—

31 % on Raw Materials and Stores,
30.8% for Employees.
10.2% to Government as taxes and duties,
12.7% for Fund ploughed back for the Industry itself.
5.9% on Dividend,
1.1% to Management.

It will thus be seen that the shareholders of such an Industry are not directly benefited to a great extent but the Industry becomes a national institution for creation and distribution of wealth for the national economy and it has to be viewed from that angle.

Silver Jubilee Bonus Shares

I am happy to state that in order to compensate the shareholders for their patience and restraint and in order to provide a SILVER JUBILEE gift, the Directors have decided to issue Bonus Shares to the existing holders of Ordinary Shares in the ratio of one Bonus Shares for every four Ordinary Shares held. Consents from the Controller of Capital Issues and the Industrial Finance Corporation of India have been received and the necessary preliminaries are being finalised and the shareholders will hear shortly about the date of allotment.

Here I must mention my appreciation of those Shareholders who have been holding the shares of the Corporation from the very inception. There have been ups and downs in the value of the share in the market. Your shares were quoted as low as Rs. 3/- at one time but with continued good performance of the Corporation the shares are again being quoted, for the last few years, in the range of Rs. 13 to Rs. 21. Those of the shareholders who happened to be able to buy the shares at the lowest price have benefited to the greatest extent but these shareholders who have been holding the shares from the very inception, are indeed to be praised. As the direct total return on the Ordinary Shares from the inception has not been more than 3.73%, I am sure this 25% Bonus will be a compensating effect. I may also mention that to-day the net break up value of the share of the Corporation works out to about Rs. 36/- per share and the market quotation of the share is not always the criterion for the actual worth of the shares in a Company.

Progress Maintained

The Directors' Report with the annual accounts for the year ended 31st March, 1963, which has already been circulated to you deals elaborately with the various aspects of your Corporation. I will satisfy myself by mentioning that we have been able to maintain our progress during the year. The sales have reached a new high being 82% higher and the gross profit accordingly has increased by over 60% than last year. But the Directors had to reduce the dividend on the Ordinary Shares with a view to conserve the liquid cash to meet the requirements of expansion programme. I hope that this cut in dividend is only of a transitional nature. In view of the expansion and increased production, there is every reason to believe that the shareholders will be benefited to a greater extent in the future. It might be mentioned that the cost of this expansion programme will be in the vicinity of about Rs. 5 crores and to finance this expansion the shareholders have been so far called upon to contribute only Rs. 31.25 lacs in the form of fresh capital. The rest of the cost of the project is being financed by way of loan and deferred payments and Company's available resources. This has been indeed a very big task. It can be well realised that no new Industry could pay a first dividend in the very first year of establishment. However, I am quite conscious of the importance of servicing the capital by providing a reasonable return to the shareholders and I can assure you that the interest of the shareholders is of as much primary importance to us as any other matter.

Expansion

I have pleasure in informing you that the expansion programme which has been undertaken by the Company has reached to the final stages. The new Smelter which is the most modern in the East has started functioning from June, 1962, and has in a very short time reached full production capacity of quality metal and today the production level is higher than what was planned. The extension of the Alumina Plant is likely to be in full operation by the end of this year. Trials have already started on the Extrusion Plant and we hope that the plant will be in full operation within month or two. Other plants of sales services of metal like ACSR Cable Plant and Foil Plant are expected to be in operation before the end of the financial year, i.e., 31st March, 1964. The full benefit of all these extensions and new products will only be available to the Company during the next financial year. At present I can only say that the Corporation is completing all these plants most economically and in the most modern manner. A good deal of the plants has been designed and fabricated in India and I have no hesitation in saying that probably we have spent the least amount of foreign exchange compared to any other plant of this nature in India.

Need for the Industry's Expansion

The World production of Aluminium metal during the year 1962 has increased by about 10% over the year 1961, the production for the two years being about 5½ million metric tonnes and about 5 million metric tonnes respectively. The slackennig trend of demand in the countries producing largest quantities which was evident two years back has now changed and the demand for Aluminium has increased all over the World. In fact the World consumption of primary metal for 1962 has shown a rise of 13% over 1961. This is the highest percentage in a single year recorded recently. Further it is reported that the stocks at the end of the year 1962 were substantially lower than the stocks at the end of 1961. This shows that the existing uses of this metal are increasing and yet new uses are also being introduced.

The year 1962 has been of great importance in our country also. The production of metal has jumped from 16,382 metric tonnes in Calendar year 1961 to 35,313 metric tonnes in 1962 because of new plants and extensions of the existing plants coming into operation. Adding to this about 35,000 metric tonnes of metal which were imported during the year (actual figures available only for 10 months) the total metal available for consumption in the country for the first time has reached a peak figure of 70,000 metric tonnes. This is indicative of the trend of consumption of metal in the country. However, the basic factor remains that though we are in the middle of Third Five Year Plan period yet we are importing nearly fifty percent of requirements of metal from abroad. According to the estimate of the Third Five Year Plan the production in 1966 should be 1,17,000 tons; but unfortunately certain Licences granted so far back as 1959-60 for the establishment of new plants have not been still utilised and these are blocking the passage for others who could produce more metal in the country. Thus there is going to be a back-log in production at the end of Third Five Year Plan. However, as stated by me on last year's same occasion the estimated consumption of the metal at the end of the Third Five Year Plan may be in the vicinity of 1,20,000 tons or even higher, if the industrial growth of the country is maintained at the present level. Again there is a possibility of consumption of Aluminium metal going further high especially in view of the non-availability of other Non-ferrous metals in the country. It is, therefore, essential that proper planning has to be done, especially as the rate of return on capital for this Industry is very low and capital requirements are very high. In my opinion for the proper development of this Industry a number of plants have to be established in the country and situated at different sites wherever power is available in sufficient quantities. It is not merely a matter of one or two particular sites in the country. As the most important raw material for the Aluminium Industry is power and as it is necessary that Electro-metallurgical industries are to be developed in the country, it is essential that power be made available from bulk generating stations at least to the extent of 10% of the total generating capacity, at suitable rates. Then only the industry will be able to make proper progress and in time attain a growth to compete with Aluminium producers in the World.

At present due to several factors there is a downward tendency of industrial growth and development which is very disturbing, for, the whole future of the country depends on this growth and if the economy will not grow faster than the population growth then the problems of unemployment, and lowering of standard of living will become more acute and the country as a whole will suffer It is hoped that the Government will soon take appropriate action to revise the industrial economic growth so that industries can be established and expanded. Certain measures adopted by the Government in the past including taxation have to be very seriously reviewed, before it is too late and the tempo of industrial development should not be allowed to come to halt.

Gentlemen, I have great pleasure in felicitating all the shareholders, workers, officers, Managing Agents and esteemed customers of the Corporation who have helped the Corporation in its growth to the present position.

Note : This does not purport to be the proceedings of the Annual General Meeting.

New Delhi

STUDY TEAM REPORTS ON TRADE PROSPECTS WITH E.C.M.

(FROM OUR NEW DELHI CORRESPONDENT)

THE Indian Council of World Affairs recently sent a team to the European Common Market countries to study the latest economic, political, and institutional developments in the E.C.M. It was asked to recommend the lines on which a further study of the impact of the European Common Market on India should be conducted. The leader of the team was Mr. G. L. Mehta and its members were Mr. H. M. Patel and Mrs. Dharma Kumar. The team met a large number of individuals and organisations connected with the E.E.C., the European Coal and Steel Community and the European Atomic Energy Commission, in addition to meeting officials in London and Washington. According to the study, the problem of India's trade with the E.E.C. has two aspects. In the short run, the possibilities of reducing tariff quotas, internal taxes, etcetera, have to be studied. In the long run, the changes in the economic structure, both of the E.E.C. and of India itself, may be more important in bringing about changes in the amount and pattern of trade. The team discussed both these aspects with the E.C.M. Commission and other interested parties; several useful points were made on individual commodities.

Textile Exports

Referring to textiles, the team says that in many countries, and particularly in Italy and West Germany, the need for specialising in the higher types and leaving the cheaper varieties to the under-developed countries is being widely recognised. "In West Germany, the Government is clearly prepared for a fall in the production of textile industries, although this will naturally have to be handled with care in order to avoid sudden unemployment, or losses to investors. While the supply of at least certain types of textiles in some countries of the Six may fall, the consumption will rise, particularly in the poorer countries of the E.E.C. where the demand for textiles still has not reached saturation point. For instance, the team was told that in Italy, the consumption of textiles is likely to rise at the rate of 5 percent a year.

"While these are hopeful factors, the continuation of restrictions on textiles and competition from other areas, particularly Japan, must also be borne in mind. Also, the pattern of consumption may alter in favour of the finer varieties. As the G.A.T.T. officials stressed, it is very important for India to work out exactly what types of textiles can be sold and what is the tolerable level of duty on each type. If the problem is broken up in this way, it would sound much more manageable than if the under-developed countries appear to menace the whole of the textile industry in Europe or to demand nil tariffs on all textiles.

"The demand for tea and coffee is also likely to rise as income increases. The West German Ministry of Agriculture felt that the demand for both these commodities is likely to rise in that country. But the very high internal duties on tea and coffee may keep the demand down. It is argued that tea in West Germany is used mainly by the well-to-do, and even if the duty is taken off, the consumption will not increase much. On the other hand, the revenue on tea is small since the total consumption is still small, and the duty could, therefore, be easily removed. But the Finance Ministry asserts that it cannot remove the duty on tea without also removing the duty on coffee, and the latter step is impossible for revenue reasons. The abolition of the duty on tea is also opposed by French coffee interests and German beer interests.

"Also, the distribution system involving importers, packers, wholesalers and retailers raises the prices unduly and prevents tea exports from rising. To some extent, the rationalisation of the system has been impeded by the differential duty on packaged tea; there is a duty of 23 percent in packaged tea, against 18 percent on unpackaged tea. (And even when the duty on unpackaged tea is suspended, a 5-percent duty will be levied on packaged tea).

Import Duties on Tea

"The big question for Indian tea exports now is how they will be affected if import duties are suspended both in the E.E.C. and in the United Kingdom, as is now proposed. The representatives of the Indian Tea Association fear that the mutual lowering of barriers will, on balance, be dangerous to India. Consumption in the U.K. cannot increase much more, and the removal of the Commonwealth preference may divert some trade to other suppliers, such as Argentina, or even China; last year non-Commonwealth tea accounted for 8 percent of the total intake, but this share will increase. And in the E.E.C., the consumption of tea may not rise unless the internal duties are reduced. On principle, however, the team cannot object to any measure which removes discrimination between under-developed countries.

"The growth of production of oilseeds in the associated overseas States is not likely to be large. In fact, an official of the E.C.M. Comission felt that some of these countries might even be persuaded to move from oilseeds to other crops, since the Commission was anxious that they should diversify their pattern of production. But the common agricultural policy on oils, which still has to be worked out, will undoubtedly discriminate in favour of producers in the Community and the associated overseas States. The Six have agreed to make allowances for the interests of developing States, but they want special studies to be made, so that tropical fats can be encouraged, rather than temperate fats. Another problem is the discrimination against processed oils in favour of oilseeds. A member of the Commission himself pointed out that since the duty on processed oils was 15 percent on the entire commodity, this amounted to a protection of 84 percent for the oil-crushing industry. This is clearly excessive, and India should press for the removal of this difference.

Prospects for Jute Textiles

"Jute textiles appear to be one of the very few commodities where India is highly competitive; I.J.M.A. representatives in London felt that Indian jute goods could compete successfully with the Common Market output even if the common external tariff of 18¾ percent were applied. Here it is the import quotas in the various countries which are important. At present, the E.E.C. imports around 16,000 tons to 17,000 tons of jute textiles a year. The French have proposed to the Commission that quotas for jute imports should be 8,000 tons a year for the Community as a whole. The team was informed that the proposal is unpopular with the other countries, but that nevertheless they are unlikely to dispute this point with the French.

"The Germans have rehabilitated their industry after the second World War but with old machinery, while the Belgians developed their industry because they have some raw jute in the Congo. Even so, India's exports could increase. Not only the representatives of the Indian Jute Mills Association but the G.A.T.T. officials too asserted that jute goods sales both in the U.K. and the Continent need not fall for the next ten years. In fact, sales could be raised somewhat if prices could be kept at a reasonable level. The monopolistic practices of jute associations, both in the U.K. and the Continent, not merely keep Indian goods out but reduce the total demand for jute in the long run, since the high prices encourage consumers to use substitutes. Incidentally, officials in the E.C.M. Commission pointed out that it was difficult to get Pakistan and India to agree on jute policy.

"Mineral ores form one of India's main exports to the E.E.C.; unfortunately, in the long term, the demand for some of these ores may not increase. The E.C.S.C. has invested $5 million in prospecting for ore in Africa, and the associated overseas States are likely to grow in importance as suppliers of ores to the E.E.C. since there are good deposits in Guinea and other countries which have not been opened up as yet. The High Authority also felt that the demand for manganese ore as a whole would go down for technical reasons.

"The G.A.T.T. representatives felt that there might be some possibilities for exports of crude steel by India. The country should, therefore, explore the possibilities of exporting crude steel to be finished in Europe.

"India should also study the possibility of increasing the export of goods required in development projects in the associated overseas States, since the rate of investment in these areas is to be increased significantly.

"During negotiations with Britain, the Community had agreed to suspend or reduce, temporarily at least, duties on some of India's main exports, such as heavy jute goods, coir mats, and East India kips; on tropical goods such as cashewnuts, spices, sandalwood and lemongrass oil; and on handloom products and certain sports goods. The Government of India has recently sent an *aide-mémoire* to the E.C.M. Commission asking that these concessions be reconsidered as soon as possible in order to revive India's flagging exports to the Community. The Commission is examining the memorandum and is expected to submit a detailed study to the Council. The premanent representatives will also examine the memorandum in general terms and then send it to a sub-committee. If the former agree to the memorandum, it will automatically be passed when it is put up to the Council. From the talks the team had with the permanent representatives of the Six in Brussels, it appeared that most Governments were favourable to the Indian memorandum in general.

Comprehensive Trade Pact

"As the team has seen, there may be some difficulties in obtaining a comprehensive trade agreement soon, since the Commission is otherwise preoccupied. And even if a satisfactory comprehensive trade agreement is secured, this is only a preliminary step in the struggle to increase export earnings. It is essential to increase the supply of most of India's export commodities and to improve India's sales efforts in the Community. The weakness of India's export promotion measures was pointed out time after time in the Community. The team was frequently asked if the lowering of trade barriers will really make a significant difference, since even in those countries of the Six where tariffs are low, India's exports are not high; this is obviously a point worth examining in detail. The team was told that West Germany gives aid in improving sales techniques; it was suggested that India should avail herself of such assistance. Apart from selling harder, India must produce more, including such agricultural commodities as oilseeds, since duties on tropical primary products will be small."

INVESTMENT MARKET

Revival of Confidence

The feeling in New Delhi is that there are definite signs of a revival of investment confidence. Foreign investors, it is pointed out, are regaining interest in India, and a number of foreign manufacturers are coming to this country to explore the possibilities of setting up factories in collaboration with Indian firms or the Government. Mr. J. A. Clarke of Plessey Electronics, of the U.K. accompanied by a team of experts, for example, will be arriving here on 9th October, for a ten-day visit during which the team will visit Bombay and Bangalore. The firm manufactures a wide range of components ranging from wireles to *radar*. It is interested in setting up one or more units in India in the public or the private sector. The team will survey India's requirements of the products the firm manufactures.

A high-powered British Coal Board team, headed by Mr. Shepherd, is also arriving here on 8th October, for discussions with the Government of India and the coal industry. An Indian mission, led by the Joint Secretary to the Ministry of Mines and Fuel, went to Belgium and England earlier this year, mainly to buy coal-mining machinery.

LABOUR

Creating New Jobs

Dr. V. K. R. V. Rao, a member of the Planning Commision, is working out a scheme for integrating employment targets with India's development plans. According to present estimates, the addition to the labour force by 1976 is expected to be about 70 million. This figure excludes the carryover from the third plan, plus under-employed or "disguised unemployed." The last category consists of persons who are a surplus, say, in the secretariat of the Government of India, but are being maintained in employment on political

grounds. According to rough estimates, at least 50 million new jobs will have to be created by 1976. Plans are being prepared to link employment to projects on a Statewise basis. In other words, the responsibility for finding new jobs will not be confined to the Centre but will be shared by the States as well.

Dr. Rao, in other words, is planning to tell the social service Ministries that under the federal Constitution of India, the responsibility, say, for creating employment opportunities also rests with the States. This has been the constitutional position since 1921. But a practice took root towards the end of the first five year plan under which the Centre has grabbed the responsibility even for basic education. This issue was raised by Mr. Mahabir Tyagi, chairman of the Public Accounts Committee, during the last session of Parliament. The Central Minister for Education explained away the unconstitutional practice by claiming that the Centre had to maintain standards, which would not be done by only doling out money to the States—the presumption being that educational standards were not being maintained in India before independence.

On the one hand, this practice has made the States dependent on the Centre even for financing their ways and means Budget in some cases; on the other, it has made it necessary for the Centre to raise larger and larger resources in the form of taxation to finance projects which constitutionally should be financed by the States.

OIL

Prospecting in Egypt

Phillips Oil Company of the U.S.A. last week signed an agreement with Egypt for prospecting oil in an area of 36,900 square miles. The Company has undertaken to spend about $30 million during the first ten years of operations. In case an oil strike takes place, Egypt will contribute half the development cost. In areas where oil is found, the Company and the Government will divide the production of oil on a 50 : 50 basis. In addition, Egypt will take 50 percent of the profits from the sale of the Company's share of production.

In contrast, the State-owned Company in India is engaged in the search for oil, either by itself or through its contractors. The newly appointed vice-chairman of the Oil and Natural Gas Commision, Mr. P. R. Nayak, will leave for Iran on 15th October with a team of experts to secure concessions for oil exploration in that country. Side by side, intensified efforts are being made to secure untied foreign exchange which may be used for oil exploration.

EXPORTS

Study of Promotion Technique

The Planning Commission, particularly Dr. V. K. R. V. Rao—a member of the Commission—is engaged in a study of the export promotion techniques adopted by the Central Ministry of International Trade. Export promotion, it is pointed out, cannot be operated in isolation. It needs a modification of India's fiscal system. Secondly, incentives have a marginal rôle to play in any scheme of export promotion; competitive prices, marketing standards and marketing aggressiveness need greater emphasis. Furthermore, import controls and import substitutes have their limits. In a developing economy, imports of certain categories of goods will naturally rise. But import substitutes should not impair or weaken export competitiveness, it is pointed out.

FERTILISERS

Sites for New Units

The planning group on fertilisers has divided itself into two sub-groups, one to plan the production of fertilisers and the other to make plant and equipment for producing them. According to present indications, 2 million tons of nitrogen is the target talked about for the fourth plan. The group is examining various sites for five or six fertiliser plants to be commissioned by 1971. The sites suggested are Rihand for a coal-based plant, the Madras region for a plant based on imported naphtha, and one in Goa also based on imported naphtha. There are four alternative sites for the eastern region, namely, Barauni, Haldia, Durgapur and Sindri, the first three being based on gases or naphtha.

Hanumangarh in Rajasthan was selected as a site for a fertiliser plant during the current plan period. The group will have an additional site in Jai Sumandram, near Udaipur. For the economic operation of the plant, it is explained, a formula has been evolved to determine the cost of naphtha from the Kovali refinery in Gujarat. Jai Sumandram will have the additional advantage of having a zinc smelter in its proximity. The latter will make sulphuric acid available to the project.

The group in charge of plant and equipment will, among other things, consider the requirements of the petroleum refining and petro-chemical industries, which require similar equipment.

Another committee under Dr. Kalelkar has been set up to reappraise the need for a second forge and foundry plant. Some two years ago, a committee had recommended the setting up of a second plant. Since then, new developments have only endorsed the recommendation.

All these committees, it is expected, will submit their reports by November this year.

STEEL

Fourth Plan Target

A production target of 20 million tons of steel by the end of the fourth plan is being considered here, against 18 million tons suggested by the Lokanathan Committee. According to Sir Jehangir Ghandy, quoted by the committee, 18 million tons of steel will require 45 million tons of coking coal, 28 million to 30 million tons of iron ore and about 9 million tons of limestone. This leaves out the human and transport factors. As could be expected, a committee has been set up to prepare a blueprint on the basis of a production capacity of 20 million tons of steel by 1971, against 10 million tons by 1966.

Meanwhile, the Government is trying to speed up the commissioning of the Bokaro project without U.S. aid. As was recently indicated in Parliament by the Central Minister for Steel, the Government will make the maximum use of India-made equipment in the project. The balance of the equipment, if any, will be procured through global tenders from the countries whose tenders are backed by credit.

During the fourth plan, there will be expansion of the three public-sector steel plants for which India will be expecting aid from Russia, the U.K. and West Germany. It is doubtful whether West Germany will give aid in addition to that required for the expansion of the Rourkela steel plant. France, Belgium and Austria are not expected to finance the Bokaro project involving an outlay of Rs. 500 crores. Their credit terms are such that it will be financially impracticable for them to build the Bokaro plant with equipment supplied on credit. Russia is not likely to be interested in the project either. The only possibility, as far as Russia is concerned, is to expand the production of the machine-building plant in Ranchi in order to manufacture major parts for the Bokaro steel project. Soundings in this and other directions are reported to be in progress.

The U.S.A. could finance some items of the mill, on a commercial basis, but at the cost of some other projects. This equally applies to the U.K. Meanwhile, a consortium of Japanese firms, it is reported, has offered to set up the proposed steel plant in Bokaro.

It has been suggested here that the European Coal and Steel Community should be persuaded to take up the project along with the U.K. and the U.S.A. A consortium of this magnitude, it is pointed out, can commission the project without much difficulty. By his persuasiveness, Mr. K. B. Lall, India's Amabassador to the European Common Market, may be able to secure the co-operation of the European Coal and Steel Community for setting up the Bokaro steel plant.

Meanwhile, the Central Minister for Steel, Mr. C. Subramaniam, is believed to be eager to appoint an Indian firm as consultants for the project. Since the firm has not built any steel mill so far, the question asked here is whether it is safe to entrust a Rs. 500-crore project to it. It may be added that an earlier report compiled by the firm was a feasibility study for a 2-million-ton steel plant. The detailed report now being examined by the Government is for a 4-million-ton plant.

JAPAN

Use of Yen Credit

Discussion on the use of the $65 million yen credit granted to India by Japan will shortly begin in Tokyo. Discussions will cover the continuation of assistance for the fertiliser projects in Durgapur and Gorakhpur and the allocation of aid money for some new projects, including an alloy steel plant in the private sector and for certain maintenance imports from Japan. The terms of the credit will also be finalised. The talks are likely to last about two weeks. The $65-million yen credit was offered by Japan at the recent meetings o fthe Aid-India Club in Paris and Washington.

AUSTRIA

Avoiding Double Taxation

A comprehensive agreement between India and Austria for the avoidance of double taxation of income was signed here last week. Dr. George Schlumberger, the Austrian Ambassador to India, signed on behalf of the Government of Austria and Mrs. Tarakeshwari Sinha, Deputy Minister of Finance, signed on behalf of the Government of India. The agreement will come into force after it has been ratified by both the Governments and a notification issued by the Central Government. The agreement was negotiated in Vienna in October 1962, when an Indian tax delegation headed by Mr. V. V. Chari, Additional Secretary to the Central Ministry of Finance, visited Austria at the invitation of the Austrian Government.

India has concluded similar agreements with Ceylon, Pakistan, Sweden, Norway, West Germany, Japan, Finland and Denmark and a limited agreement relating to Swiss-Air with Switzerland.

N.C.D.C.

Aid from C.E.K.O.P.

The National Coal Development Corporation and the Polish Organisation, C.E.K.O.P., last week signed two agreements in Warsaw for technical collaboration and the supply of detailed design for the Corporation's deep-shaft mine project in Monidih, Jharia. The supply of detailed design will cost about Rs. 4.35 lakhs.

The Monidih project of the Corporation will have an ultimate target of 2 million tons of coking coal a year and will involve an approximate capital investment of Rs. 17.60 crores. The area has ten workable seams, with a total minable reserve of about 136 million tons of metallurgical coal.

Initial raisings will start when the shafts touch a depth of 1,500 feet, and will ultimately go down to 3,000 feet. The mine will be worked by what is known as the horizon method—common in metal mines and adopted by the Corporation for the first time in its Sudamdih deep-shaft mine. Monidih will have four horizons. According to preliminary estimates, a return of about 12 percent on the total outlay is expected.

B. I. C. C.

New Contract

British Insulated Callender's Cables Ltd (B.I.C.C.) has been awarded a contract worth more than £250,000 by the Indian Railway Board, it has been announced in London. The contract is for the supply and installation of 39 feeding and switching stations for the 25 kV alternating current electrification of the Northern Railway between Moghalsarai, Subedarganj (Allahabad) and Kanpur.

The contract for the supply and installation of the overhead equipment for the Moghalsarai-Subedarganj section of this route was awarded to B.I.C.C. last February. This order is the tenth major contract for B.I.C.C. from the Indian railways since the inception of the electrification programme in 1958.

NATIONAL HIGHWAY

Aid from I. D. A.

The International Development Association in June 1961 agreed to give a credit of Rs. 28.5 crores to assist the Government of India in speeding up the construction of some selected national highways in West Bengal, Bihar, Orissa and Maharashtra and of the Eastern Express Highway in Bombay city. These involve the construction or reconstruction of nearly 660 miles of roads and about 18 major bridges. The programme also covered a traffic study of the city of Bombay to provide a basis for developing a long range road plan to serve the city.

The credit offered by the I.D.A. will help meet about 57 percent of the expenditure to be incurred on the road and bridge works, 70 percent on the purchase of equipment required for the above works and the entire expenditure on the traffic study. The balance of the expenditure has to be met by the Government of India from its own resources. The I.D.A. agreed that equipment worth Rs. 2.5 crores, including Rs. 1.6 crores of imported equipment, should be purchased to ensure good quality of work throughout.

An expenditure of Rs. 12.59 crores has been incurred on the works covered by the I.D.A. credit up to the end of June 1963, against the total estimated cost of Rs. 44.84 crores. Estimates of the value of about Rs. 29 crores have been sanctioned so far.

Three bridges, namely, Mahananda in Bihar, Kansabati in West Bengal and Birupa in Orissa, have been fully completed at a cost of Rs. 1.40 crores under the I.D.A. programme. Eight important bridges —two in Bihar, four in Orissa and one each in West Bengal and Maharashtra—are now under construction. When completed, these will cost over Rs. 7.5 crores.

F. C. I.

Working Results

The net profit of the Fertiliser Corporation of India during 1962-63 shows an increase of more than Rs. 1¼ crores over that of the previous year. The Corporation's operating factories in Sindri and Nangal recorded a substantial increase in production. The profit, before providing for depreciation and interest on loan from the Government of India, amounted to Rs. 7.28 crores during 1962-63. Out of this, Rs. 5.08 crores was provided for depreciation and Rs. 83.82 lakhs was used for the payment of interest on loan from the Government of India. This left a balance of Rs. 1.36 crores. After adding Rs. 1.90 lakhs carried over from the previous year's profit, the net profit amounted to Rs. 1.38 crores. Out of the net profit, Rs. 1.23 crores was appropriated to development rebate reserve. The balance of Rs. 15.31 lakhs was carried forward. In view of the financial needs of the Corporation for the new projects under construction, the available surplus is being used.

The management of the fertiliser plant in Rourkela, a substantial part of which was designed, engineered, procured and built by the Corporation for Hindustan Steel, has been transferred to the Corporation from 1st April, 1963.

The Corporation's new projects—Trombay in Maharashtra, Namrup in Assam, Gorakhpur in U.P. and Korba in Madhya Pradesh—are in various stages of development. According to present indications, the Trombay plant is expected to start production of ammonia and urea in August 1964 and nitro-phosphate by the end of 1964 or the beginning of 1965. The Namrup factory is expected to go into production by the end of 1965 while the Gorakhpur project will be completed fully in 1966.

The Korba plant in Madhya Pradesh will be the first complete fertiliser unit of the Corporation to be designed, engineered and built by its planning and development division. Only necessary process know-hows for coal gasification and ammonia and urea synthesis will be purchased from specialist foreign firms.

INDUSTRY

New Committee Formed

The Government of India has set up a ten-member committee with Mr. T. Swaminathan, Secretary to the Departments of Supply and Technical Development, as chairman to examine the operation of controls on the establishment of additional industrial capacity under the Industries (Development and Regulation) Act, the import of capital goods, the issue of capital, foreign investment and collaboration and to suggest changes in procedure to reduce delays. The members of the committee are: Messrs. A. R. Foster, Bharat Ram, Lakshmipat Singhania, A. M. M. Murugappa Chettiar, P. Chentsal Rao, N. C. Srivastava, Adviser, Planning Commission, P. Govindan Nair, Additional Secretary to the Ministry of Finance, V. K. Ramaswami, Economic Adviser to the Ministry of Industry and K. J. George, Deputy Secretary to the Ministry of Industry (member-secretary).

The committee will submit interim reports as and when necessary and will complete its work within six months. The resolution setting up the committee says that the Government of India is considering the steps needed to accelerate the pace of industrial development. One of the suggestions made in this context is that there is a need to simplify the procedures and regulations relating to the approval of schemes for industrial expansion. It is necessary that controls operate speedily and efficiently so that industrial growth may be accelerated.

POLAND

Making Coal Mining Machinery

A Polish team is expected here shortly to discuss with the Government of India the possibilities of a second coalmining equipment factory in India. The first such factory is being commissioned in Durgapur in collaboration with Russia.

WORLD BANK

Expert Teams Expected

A number of World Bank teams are expected to come to India from October onwards to study projects for which aid could be made available to this country. As usual, there will be a team for the survey of railway development. In addition, there will be teams to study projects such as irrigation, roadways, power generation, for which the Bank has been giving aid to India.

TATA-JOHNSON LIMITED ★ JAMSHEDPUR ★

THE DYNAMIC MAKERS OF
PULP & PAPER
MACHINERY

TATA-JOHNSON LIMITED, are the leaders in the country in designing and supplying top quality equipment for the Pulp & Paper Industry.

STANDARD EQUIPMENT:
Stock Pumps - Hot Liquor Pumps - Chippers - Chip Screens Chest Agitators - High Speed Refiners - Jordan Refiners - Jönsson Screens - Black Liquor Filters - Hydrapulpers - Vacuum Pumps Controllers. These and similar equipment are all supplied against Rupee Payment.

TAILOR MADE PLANTS:
Continuous Digester Plants - Batch Digester Plants - Blow Tanks and Blow Heat Recovery Plants - Brown Stock Washing Plants Bleach Plants - Black Liquor Evaporator Plants - Paper Mills.
The above type of plants are supplied with the highest indigenous content.

London

POUND-CENT SYSTEM FOR U.K. RECOMMENDED

(FROM OUR LONDON CORRESPONDENT)

BRITAIN should retain the pound sterling as the major unit of a new decimal currency system and should replace the penny by a new unit of currency worth 2.4d: this is the majority recommendation of the committee of enquiry on decimal currency, under the chairmanship of Lord Halsbury, whose report has just been published. Two of the six committee members preferred a system similar to that successfully adopted by South Africa in 1961 with 10s as the main unit of currency and made up of 100 cents each worth 1.2d.

The first school of thought consists of Lord Halsbury himself; Professor R. G. D. Allen, Professor of Statistics at London University; Dame Anne Godwin, (former chairman of the T.U.C.), and Mr. R. G. Thornton, (vice-chairman of Barclays Bank). The two dissentients are Mr. V. N. Ely, chairman of Ely's Wimbledon Department Store; and Mr. J. M. A. Smith, a part-time member of the National Coal Board and former assistant managing director of the Ford Motor Company.

In the £-cent system the present £ would be divided into 100 units worth 2.4d each and called "cents," "decimal pennies" or any other name acceptable to the public. Half-pennies, pennies, threepenny bits, sixpences, and half-crowns would eventually disappear and would be replaced by new coins of different sizes worth 1.2d (½ cent); 2.4d (1 cent), 4.8d (2 cents); and 4s (20 cents). The shilling and florin would remain as 5 and 10 cent pieces and would be gradually replaced by coins closely resembling them. The ½, 1 and 2 cent pieces should be bronze coins, and comparable in size to the old silver 3d bit, the farthing and the halfpenny, respectively. The existing halfpenny would cease to be legal tender nine months before the changeover. The 20 cent coin—to be introduced a year before the change—would be a large cupro-nickel coin with the weight of two florins and would be similar to the double florin which appeared briefly in the coinage after Queen Victoria's Golden Jubilee in 1887. The £1, £5, and projected £10 banknotes would survive. The 10s note would ultimately be succeeded by a 50 cent note, but could retain its existing general appearance, colour, and size.

Both Australia and New Zealand have already announced that they will follow South Africa in the adoption of the "10s-cent" system favoured by Mr. Ely and Mr. Smith. In this the sixpence and half-crown would be retained as 5 and 25 cent coins. Mr. Ely and Mr. Smith argue that it would be a simpler system, since it would make it unnecessary to use fractions of the cent. It would, they claim, be cheaper to introduce and would present fewer problems for the ordinary shopper.

Date of Change

The committee says that the date of the change "is a matter for the Government." However, February 1967 is the earliest possible date for decimalisation ("D-Day"). If the change is put off until later the cost is bound to be greater. The measurable cost of the change in 1967, attributable mostly to the conversion of business machines and slot-machines and their replacement and to the minting of new coins, would be about £100 million. The "£-cent" system of decimal coinage was favoured by the majority on the committee mainly because the world's rising standard of living would gradually erode the importance of currency units. The committee's report says: "The retention of the 'heavy' unit to which we have become accustomed is a considerable convenience and its replacement by a major unit of only half the value seems to go against the economic logic of history." Any currency change meant a considerable upheaval. "To make it worth while, we must build a system which will endure." There could be little doubt that in a generation's time a £-cent system, which might well by then have lost its ½ cent, would be more manageable and economical than a 10s-cent system. "The advantage would be increasingly marked thereafter."

The majority regard as important the evidence of the banks and other City interests on "the international case for the £". This, in short, was that a change in the name and value of the U.K.'s main currency unit—the £ sterling—involved a risk that sterling might cease to be held or used as an international trading or reserve currency. This could have serious economic consequences for Britain.

With both the £-cent and the 10s-cent system, the coin nearest in value to the present penny (½ cent and 1 cent, respectively) would be worth 1.2d and only £ s d amounts in multiples of 6d would have exact equivalents in the decimal system. Therefore, many prices would have to be adjusted to the nearest equivalent. There would be some risk of price increases. The committee attempted to estimate how great these increases might be and especially if there were no coin roughly of the same value as the halfpenny. It unanimously decided against such a coin. It concluded that price increases might amount to no more than three-quarters of a point in the retail prices index or 9d in every £5 spent.

To gain some idea of the difficulties, people would face in adjusting themselves to the new coinage, the committee commissioned experiments from psychologists. It concluded that "associability" problems would be fewer and less severe under a 10s-cent system. One experiment suggested that people might need twice or three times as long under a £-cent system to reach their existing standard of proficiency in coin-handling and change-giving. Lord Halsbury said at a Press conference that he expected it would take the man in the street two or three months to acquire the same proficiency as "a lifetime's proficiency in sterling"; but that 90 percent of this proficiency would be acquired in the first few days.

Phasing the Change

On the timing and phasing of the change and the estimated cost the committee was unanimous: it would take at least three years to prepare for the change and another two years to complete it. The committee suggests that the day on which the change should become official—decimalisation day, "D-Day" for short—should be in February, when certain classes of transaction for banks and many retail businesses are at their minimum. Banks, and many Government and private undertakings, would adopt decimal working on "D-Day," and others would do so gradually over a two-year period as adding and accounting machines and cash registers were replaced or modified. Both old and new currencies and coins would be in use during this period ("We shall just have to keep the old coins in one pocket and the new in the other," Lord Halsbury commented) and shops would have price tags showing both currencies before and after the change.

The committee also recommends that an official conversion table—showing, in particular, recognised equivalents for £ s d amounts which did not translate exactly into the decimal system—should be made available to each household in the country before "D-Day." Copies of these tables would also be displayed in shops. Another recommendation to which the committee attaches importance is the appointment by the Government of an executive board "to explore changeover problems in detail, to promote and supervise a campaign of public education, and to do all things necessary to facilitate a speedy and efficient transition." This board should be appointed as soon as possible and should be responsible for selecting "D-Day" itself, which should be preceded by a long week-end (perhaps Thursday night to Tuesday morning, Lord Halsbury suggested). The banks would be closed during this period.

The estimate of February 1967, as the earliest possible date for "D-Day" presupposes, says the report, a firm decision by the Government by the end of this year or very early in 1964. The executive board would have to be set up soon afterwards. The committee recommends that crown pieces and silver 3d bits should cease to be legal tender as soon as possible. Halfpennies should be dropped nine months before "D-Day," and the withdrawal of half-crowns should begin a year before with actual demonetisation six months before the change.

The issue of 20 cent pieces, with legal tender for 4s, should begin a year before, and the ½ cent, 1 cent and 2 cent pieces should be introduced in quantity on and from "D-Day." Pennies, 3d bits and sixpences should cease to be legal tender "as soon as practicable after the end of the transitional period, which we hope would not substantially exceed two years."

Using Decimal Machines

Five and 10 cent coins should, the committee recommends, be issued as soon as practicable during the preparatory period to meet the normal demand on the Royal Mint for shillings and florins, but the actual withdrawal and replacement of circulating shillings and florins should not begin until "towards the end of the transitional period." One of the first tasks of the executive board would be to study in detail, while memories are still fresh, the conversion of business machines in South Africa; and to send representatives to Australia and New Zealand while conversion is going on there. The Board would also study methods of establishing, and advising industry and trade about the scope for the temporary conversion of machines and for the installation of decimal machines before "D-Day."

The Ministry of Education, in consultation with local education authorities and teachers' organisations, should take steps to co-ordinate activity in the educational field to ensure that the best methods of teaching the new currency are adopted. Lord Halsbury said that the committee had been assured that the schools could take the change in their stride and the firms responsible for reprinting textbooks had said, "Don't worry. We can do it." A Government decision is now awaited. Most important questions at issue concern the external and domestic impact of a change on trade and prices. The position of the pound as an international currency makes it difficult if not impossible to draw much guidance from the experience of other countries. The majority report supports the retention of the pound as the main unit. This view has powerful support in the City, especially from the banking and insurance community. The minority report, significantly from two industrial and commercial members, prefers a main unit of 10s on grounds of greater simplicity and less risk of increased prices. When a decision is taken it must be influenced by official thinking on continued inflation. It can, in fact, be argued that the "heavier" pound unit is more forward looking and also has the psychological support of public familiarity.

For many small price-unit industries the 10s unit appears to present fewer problems. But any apparent reduction in purchasing power in the main unit of currency might prove less acceptable to the general public. Trade Commissioners abroad are known to favour retention of the pound as a unit, and this was the strong feeling of the late Per Jacobsson. The City's defence of the pound is a matter of judgment rather than any rather unprofitable attempt to assess reactions and deserves considerable attention.

Jute

STRONGER JUTE PRICE SUPPORT MEASURES RECOMMENDED

A three-pronged approach to stabilise the price of raw jute has been recommended by the eight-man committee headed by Mr. B. P. Patel, the new chairman of the State Trading Corporation. It has recommended that the regulation of fibre purchases by jute mills and the Jute Buffer Stock Association under the Jute Licensing Control order should be continued. Raw jute dealers should be registered for effectively enforcing purchase quotas. It has also advocated the export of marginal quantities of specified varieties and grades from time to time.

The Committee has suggested that purchases should be made at the minimum operational prices by mills (against quotas issued by the Jute Commissioner), by the Jute Buffer Stock Association and by the S.T.C. through co-operatives or other agencies in the upcountry markets. The Jute Commissioner's monthly quotas should be so phased as to absorb the expected arrivals at the terminal and upcountry markets from month to month. The quotas should be rigorously enforced by physical verification of mills' stocks. The Jute Commissioner's establishment should be strengthened for the purpose. The Committee has suggested that buffer stock purchases by the J.B.S.A. during this season should be about 300,000 bales in addition to its replacement purchases. The total holding of the Association at the end of the season should be about 900,000 bales.

Support By S.T.C.

Referring to the S.T.C.'s purchases, the Committee says that its buffer stock operations should take note of the availability and use of jute during the peak marketing period around the end of December 1963. It has estimated that 11.1 million bales of jute will be available on the basis of a crop of 7.4 million bales, a carryover of 3.1 million bales and other supplies, including imports of 600,000 bales. Against this the offtake by end-December will be 8.1 million bales, leaving a supply of 3 million bales.

The S.T.C. will have to keep its machinery ready for timely and massive purchases of this enormous stock to strengthen the market. The S.T.C. will have to make adequate financial, storage and other arrangements in advance so as to be able to lift at least 1 million bales of jute through the co-operatives. If co-operatives are not able to complete the quota, the services of other agencies will have to be requisitioned. The report says that the co-operatives should be so organised as to be always available to purchase the fibre offered by the grower at the minimum operational price. The break-down of such purchases in the secondary and feeder markets can be finalised after mutual discussions with the parties concerned in the various States.

The Committee has suggested the continuance of the present system of 90 percent advance payment against documents for despatching jute to Calcutta godowns by co-operatives. But it has asked the S.T.C. to review the question of charging interest on the advance for the period of transit, on the lines followed by mills and the raw jute trade. Provision has to be made for using the available warehousing accommodation in Calcutta as much as possible. Besides, storage has to be provided in the secondary markets. The Committee says that jute should not be stored for long in Assam and Tripura, but should be shifted to Calcutta as and when transport is available. In the event of purchased jute not moving to the mills or to the Calcutta godowns of the S.T.C. until the beginning of the next season, advance arrangements should be made by the S.T.C. to take over the remaining stocks from co-operatives.

Doubts about Co-operatives

The Committee has expressed the doubt that co-operatives will not be able to lift all the available jute. In such an exigency, the S.T.C. should purchase additional supplies in order to offer effective price support. The report has also suggested that jute trade associations may be asked to supplement the purchasing operations of co-operatives. In any scheme of purchase through the trade, arrangements should be made to ensure that the ultimate price paid to the cultivator is the minimum derivative price, the purchases are so timed as to provide the maximum support to the markets, and the purchases by traders for the S.T.C.'s buffer stock are made on the basis of contracts finalised with them on a yearly basis and confined only to areas where there are no co-operative societies or where the existing co-operatives cannot be expected to work up to the desired extent. A panel of recognised traders should be drawn up by the S.T.C. in consultation with representative associations and the Government.

The Committee says that many established jute brokers and even some kutcha balers in the secondary markets are closely associated with mill interests. It alleges that they are able to depress price, particularly during the peak season, by timing their purchases and in various other ways. One of the main reasons why the grower does not get a reasonable price is his ignorance about the ruling price. The weak financial position of the grower is another factor which forces him into distress sales. Usually he hands over a given portion of his crop to the creditor-dealer at a price much below the market rate. To add to this, there is a lack of storage space at the village level. The Committee is "convinced that under the present marketing system, the benefit of improved quality is taken away by the intermediary". Although better jute fetches a premium, "a proportionate advantage does not percolate to the grower".

Purchase Quota for October

In order to prevent a possible decline in prices due to bigger arrivals of jute in the upcountry markets and in Cossipore, the Jute Commissioner has announced a purchase quota of 920,000 bales for October. Of this, the J.J.M.A. mills will lift 850,000 bales and others 70,000 bales. With this quota, the total purchase quotas so far this season come to 2.76 million bales—2.55 million bales for the J.J.M.A. mills and 210,000 bales for the rest. To strengthen the price support scheme, co-operatives will purchase fibre from the secondary markets at fixed derivative prices, based on the official floor price of Rs. 30 a maund, Assam Bottoms, ready f.o.r. Calcutta. In case these measures fail, the Jute Buffer Stock Association may be asked to buy up to 200,000 bales. To help the co-operatives in their purchases, the State Trading Corporation has already advanced Rs. 1.70 crores to the State Governments. Out of this, Bihar has received Rs. 60 lakhs, West Bengal Rs. 40 lakhs, Assam and Orissa Rs. 30 lakhs each and Tripura Rs. 10 lakhs. If necessary, more advances will be given to the State Governments.

Announcing the price-support measures at a Press conference in Calcutta last Saturday, Mr. G. C. L. Joneja, Jute Commissioner, said that the Government was determined to hold the price line. The co-operatives are expected to lift up to 1 million bales. The J.B.S.A. now has a stock of 625,000 bales. After turning it over, it may lift up to 375,000 bales more. With the co-operation of mills, the prices have remained generally steady around the minimum level so far. In most upcountry markets, prices are slightly higher than the parity levels corresponding to the Calcutta floor rates. Only in Saharsa district in Bihar have prices of inferior quality jute tended to sag below the parity level. The I.J.M.A. has promised to look into the position.

Big Market in Eastern Europe

Mr. Joneja said that the recent trade delegation to Russia and east European countries had reported favourably on the prospects of exporting substantial quantities of jute goods to those markets. Orders, it is expected, will "pour in" towards the end of this year or early next year. Indian jute goods have not been pushed in those markets so far on scientific lines. With the collaboration of the industry and the Indian Standards Institution, effective steps are now being taken to introduce voluntary quality control and preshipment inspection. In order to carry on trade with Russia and the U.S.A., there should be strict adherence to specifications, delivery and shipment schedules and terms and conditions of contracts. Asked whether quality control and preshipment inspection would not add to costs, Mr. Joneja said they would promote cost-consciousness; scientific cost control measures would increase the efficiency of the industry and help it to absorb the extra costs of quality control.

Gunny Traders Meet

The recommendations of the Srivastava Committee are "too inadequate to have any effective influence in offsetting the advantage enjoyed by the Pakistani industry from the export bonus scheme", observed Dr. B. P. Kedia while presiding over the annual meeting of the Gunny Trades Association in Calcutta last Friday. He referred to the gradual loss of sacking markets by India as a result of the unhealthy competition from Pakistan and emphasised the need for granting some temporary relief to the Indian industry.

Despite a 75-percent increase in world consumption of jute goods over the last decade, Dr. Kedia said, India's share of exports has risen by only 10 percent. Had her sacking exports kept pace with the rise in hessian offtake, she could have increased her exports of the former by about 200,000 tonnes.

All the same her total exports have increased by 147,000 tonnes to 935,100 tonnes, valued at more than Rs. 150 crores, thus exceeding the third plan target.

Referring to the fall in India's sacking exports, Dr. Kedia observed that this country was priced out because of Pakistan's big cost advantage and the unethical export bonus scheme. India now gets only orders which Pakistan is unable to fulfil. Today Pakistan has 9,500 looms operating 2½ shifts a day and producing 200,000 tonnes of sacking a year, against India's output of 550,000 tonnes. Pakistan proposes to expand its loomage to 14,000 by the end of its second five-year plan. India will then be exposed to the danger of being ousted from the world's sacking markets. This is a situation calling for serious consideration, he warned.

Increase in Broad Looms

He referred to the phenomenal increase in the number of broad looms installed during the last 12 months and said that India is now the largest producer and exporter of carpet-backing cloth, meeting about 75 percent of the world demand. Exports of this material were worth Rs. 25 crores of foreign exchange last year. The mills have also made considerable progress in diversifying their activities.

Dr. Kedia said that the industry might be able to attain its third plan target by the end of this year, two years ahead. In view of the expansion of agricultural and industrial production, the internal consumption of jute goods is likely to go up considerably. In spite of the declining trend of sacking exports, the total overseas offtake of gunnies is expected to rise due to the fast pace of progress in the developing countries and the potential of the vast east European markets.

For meeting the target of 1.1 million tons for export and 600,000 tons for home consumption for the fourth plan suggested by the Srivastava Committee, Dr. Kedia said the industry would need 10 million bales of jute by the end of the fourth plan. So plans should be geared from now on to ensure an adequate supply of fibre. In view of the increasing needs of foodgrains, a 33-percent rise in fibre output cannot be achieved by raising the area under jute by a further one million acres. Dr. Kedia stressed that a 40 percent to 50-percent rise in fibre yield could be secured by the judicious application of fertilisers, use of better seeds, and adoption of improved farming techniques. He urged the Central and State Governments to make an all-out effort substantially to increase the yield of jute and mesta an acre during the next five years.

He also emphasised the need for improving the quality of jute. With a view to producing carpet-backing cloth the industry will require fibre of very good quality. India now meets 75 percent of the world demand for this fabric and the industry cannot thrive by depending on external sources for supplies of the main raw material. An immediate requirement, according to Dr. Kedia, is the provision of suitable tanks for retting the fibre properly, since the fineness and colour of jute depend primarily on retting. He felt that the low quality *jungli* jute of Bihar could be improved by this proper retting.

Impact of Sales Tax

Dr. Kedia has drawn the attention of the authorities to the levy of sales tax on jute manufactures in West Bengal, which is proving vexatious and troublesome to exporters but does not yield much revenue to the Government. It is estimated that not more than 2 percent of the total production of jute goods is consumed within the State. Furthermore, sales tax is not charged on jute goods purchased by other industries for pack-

ing their products. On balance, therefore, only a very small quantity is subject to the levy. Obviously, the revenue accruing to the Government may not be covering even the cost of administering the tax. But the levy calls for completion of elaborate formalities concerning submission of various forms, maintenance of records and their submission to the Sales Tax Department, etcetera. In the interest of the export trade in jute goods, therefore, he urged the authorities to exempt jute goods completely from sales tax or, if that is not possible, to amalgamate it with the Central excise duty, as has been done in the case of some other commodities.

Dr. Kedia made a pointed reference to the serious hardships being experienced by the gunny trade while being assessed for income tax. These difficulties have arisen of late, because income tax officers have started treating transactions in transferable specific delivery contracts in jute goods involving transfer of mill pucca delivery orders (P.D.O.s) as speculative within the meaning of the Income Tax Act, so they are not allowing the losses sustained therein to be set off against profits made under "other heads", with the result that the traders are being called upon to pay more income tax than is actually due. The system of completing delivery of the contracted goods, against which there is no shipping instruction, by issuing mills' P.D.O.s has been in vogue in the jute goods trade for half a century and, during all these years, these contracts have never been treated as speculative.

THE JUTE MARKETS

Manufactured Goods: Buoyant conditions prevailed in the jute goods market during the past week in spite of the lack of overseas enquiries or business or Government tenders. Holders had made forward sales well up to February 1964, and had not covered some of these positions in anticipation of lower prices. In view of the brisk sacking offtake and the fall in output, they were keen to cover their positions. Some prominent shippers also bought sizable lots of heavy goods against their forthcoming shipment programmes. Since Pakistani mills were booked to capacity, operators expected a large number of orders from overseas. This increased the demand for sacking and imparted a firm trend to the market. Hessian, although neglected, gained nominally in sympathy with the general trend. The futures market moved in line with the spot market. Sacking gained on frantic bear-covering, while hessian hardened somewhat. Turnover was fair in sacking and small in hessian and the undertone was steady at the close.

Tuesday's quotations were as follows:

	Ready	Oct.	Oct.-Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	36.85	36.90	36.90	36.30	36.05
40in. 8oz.	39.50	—	—	—	—
40in. 10oz.	49.40	49.60	49.35	48.40	49.10

Liverpools	128.25	129.00	129.75	129.50	129.25

Raw Jute: Steady conditions prevailed in the raw jute market during the past week. In spite of bigger arrivals in the upcountry stations and in Cossipore, sellers were not keen to discount prices. They were expecting the entry of the co-operatives into the secondary markets and the issue of a purchase quota for October by the Jute Commissioner. On Saturday, the expected relief came. Mills had been virtually absent from the market after completing their September purchase quotas. Routine transactions were reported around the floor levels in selected grades. In the upcountry markets prices ruled above Calcutta parity rates. Turnover was small and the undertone steady at the close. In the futures market, prices hardened on brisk bear-covering, although top gains were pared on intermittent profit-taking. Turnover was fair and the undertone steady at the close.

Tuesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in August was 1,600,000 yards more than in July 1963, but was 3,300,000 yards less than in August a year ago. The average monthly consumption during the first eight months is about 2 million yards a month more than the comparable period of 1962. Last month's bag cut-up was 51 million yards and piecegoods deliveries 18.5 million yards, compared with 54.5 million yards and 18.3 million yards, respectively, in 1962. U.S. spot stocks and afloats fell somewhat. At 278.5 million yards, 159.7 million yards were spots and 118.8 million yards were afloats. It is reported, however, that the spot stock figure is actually about 8 million yards more than what the figures show because of errors in reporting.

THE U.K. JUTE MARKETS

CLOTH AND YARN FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE E.P.C. values of the higher grades of both white and Tossa jute were raised by £2 a ton in Pakistan last week. However, this made little difference to the position in Dundee as these qualities were already commanding a premium over official rates. The market in Pakistan was firm and fewer sellers were willing to discount the minimum export rates for the lower grades. Continental spinners showed a fair amount of interest, and buying was taking place in Dundee. The quantities were not large, but they were more than maintaining raw material stocks held by spinners. Dundee spinners were also buying spot jute, and the quantiy available ex warehouse was now smaller, but further quantities which had remained still unsold to spinners were arriving.

Offers for shipment were being made at £132 for Mill Firsts, at £110 10s for Mill Lightnings, at £95 for Mill Hearts and at £79 15s for Grade Hearts, c.i.f. U.K. for September-October shipment. Grade Tossa⅝ was lowest at £126 and Grade Tossa-4 at £108 5s. Dacca Tossa-5 was named at £129 15s and Dacca Tossa-6 at £108 10s. There were sellers of Outport Tossa-⅝ at £97 and of Outport Tossa-4 at £85, for September-October shipment. There was little change in cuttings at £56 for S.N.C. and at £47 5s for N.C. Although the mesta market became firmer there were still sellers of A at £78, of B at £72 and of C at £67 for October-November shipment.

The Siam jute market was rather quiet, and no buying interest was shown by Dundee spinners. Grade A was offered at £67 10s, grade B at £63 10s and grade C at £58 10s, delivered mill Dundee for November-December shipment.

There was very little change in the Calcutta goods market. Quotations were at 75s for 40in. 10oz. and at 55s 10d for 7½oz. a 100 yards f.o.b. Calcutta for September shipment, at 74s 10d and 55s 8d October and at 74s and 55s 6d November-December. B Twills were at 172s 9d, 173s 6d and 175s for the respective shipment periods. Prices of the equated range of imported goods became dearer in the U.K. at the end of the week.

Prices of Dundee yarns and cloth were very firm and a good business took place. Spinners were now asking 16.70d a lb for 8 lb common cops, and it is possible that other qualities will also be raised. The price of 200 lb Rove is now £87 10s.

As the result of the yarn price increase, manufacturers were now asking more for common hessians. The price of 40in. 10½oz. was 16.37d a yard. 10oz. was at 15.27d and 8oz. at 12.97d.

THE PAKISTANI JUTE MARKETS

FIBRE STEADIER

(FROM OUR DACCA CORRESPONDENT)

THE loose jute market in East Pakistan steadied at prices above the E.P.C. minima last week. This was the case with higher grades such as Export Firsts and Dundee Tossa 4s. In Outport Tossa ⅝ and 4, the market was well within the minima, although keen buyers in one or two isolated pockets raised the price of Output Tossa ⅝s above them. In white jute, minimum prices were paid for Export Hearts, particularly in *jat* areas, but for the better quality of Export Lightnings of pure *jat*, prices as much as £2 to £3 were being paid above the minima Jat Tossas have started to come in. The first fibres appearing were fairly good, but the percentage of Dacca 5s was small and the percentage of Output Tossa ⅝ was large.

The pucca bale market continued to be active and cuttings prices were maintained. There was a fair demand locally for Mill Hearts and Dacca Tossa 5, which were not available or were scarce. The overseas market was undoubtedly firm, and many balers were offering even Export Lightnings at minimum prices.

Against the recent purchase of 3,000 tons, the Russians have bought 1,800 tons. They have had to do this through the Jute Board. They have been allocated 200 tons of J.M.C. jute and 1,400 tons of jute from the new Small Shippers' Corporation. This means that although the jute will be baled by several small balers, the seller will simply be the Small Shippers' Corporation and one cannot be surprised at the report that the Russians are not too pleased, especially as they have only been able to buy about 200 tons from their regular sellers so far. It is apparent that the authorities intend to help the small shippers by channelling as much jute as possible through this new Corporation. If the small balers can agree among themselves and if they maintain a reasonable standard, the authorities' attempt may well succeed.

E.P.C. prices have once again been raised, but only in the higher grades. Registrations during the first half of September were unusually high at 174,839 bales. Once again, the U. K. was the largest buyer. Reports of a short crop still persist and most people seem to agree that there is insufficient white jute. Certainly, there will be insufficient good quality white jute, but there should be no scarcity of ordinary Export Hearts and Export Lightnings.

The P.I.D.C. has recently announced that it will have 28,000 looms operating in Pakistan by 1970. This means a consumption of approximately 5.6 million bales, which will not leave very much jute for export. Pakistan's intention obviously is to increase her gunny exports at the expense of India, but she will rival those European and other foreign mills, which produce sacking and standard grades of hessian.

GROWTH OF COMMERCE EDUCATION IN INDIA

By K. T. Merchant

The golden jubilee celebrations of the Sydenham College of Commerce and Economics were inaugurated in Bombay yesterday. This article recalls how the University of Bombay first instituted the degree course for commerce in India. Sydenham College was the first institution to be affiliated to the university for teaching this course.

THE growth of educational institutions is to be studied in the context of the needs of society. Commerce, as a distinct subject of study, can be said to owe its birth to the development of business and industry. In early days, training in commerce was acquired from practical experience only, through the apprentice system and no attempts were made to make commerce a subject of study at schools or colleges, except that economics was studied at the higher level. Germany was the first country to recognise the importance of the study of commerce. America and Japan followed suit.

England, "the workshop of the world" in the nineteenth century, was at first lagging behind but soon made up its deficiency in institutions for commercial studies. University commerce education in the U.K. began in 1901 in the Faculty of Commerce of the University of Birmingham; commerce was introduced later in Manchester University in 1904, Leeds in 1905, Liverpool in 1906, London in 1910, Durham in 1913 and Bristol in 1932. London and Durham Universities dropped the title of "Bachelor of Commerce" later on, but this does not mean the giving up of commerce from university education. Two considerations were responsible for this change in London University: (1) there has been for some time no essential difference in structure between the degree of B.Sc.(Econ.) and B.Com., and (2) "It is desirable that incoming students should not be deterred from selecting the 'commerce option' for special study because of any mistaken impression that the possession of a degree entitled Bachelor of Commerce might commit them irrevocably to a career in business while they are still quite undecided as to their future."

Early Beginnings

Mr. Kalyan Subramani Aiyer was the father of commerce education in India. It began in India as early as 1886 when the trustees of Pachiyappa's Charities started the first commercial school in Madras with Mr. K. S. Aiyer as headmaster. Round about the same time, the Madras Government instituted examinations in commerce and the Government of India started the school of commerce in Calicut in February 1895, with Mr. K. S. Aiyer as headmaster. The Presidency College, Calcutta, started commerce classes in 1903 which was later converted into the Government Commercial Institute.

The credit for getting a degree in commerce instituted also goes to Mr. K. S. Aiyer. As early as 1900, a scheme was submitted by him to Lord Northcote, the then Chancellor of Bombay University, who took keen interest in this matter and forwarded it to the Director of Public Instruction for being placed before the university authorities. In his convocation address of February 1901, Lord Northcote made a strong plea for the scientific study of commerce, and urged that "commerce should be thoroughly taught and honoured as a study as any other of those branches of learning, which an Indian university delights to honour". But the consideration of the scheme was postponed as the Government of India appointed a University Commission in January 1902. The commission recognised that "the study of commerce subjects should be fostered as far as possible by the universities and the Government" but did not make any specific recommendations on this matter.

In February 1904, Lord Lamington, in his convocation address, admitted the advisability of instituting a degree in commerce but added that "the need for such specialisation might be met when those who were chiefly concerned made the demand as the medical and legal professions had made in the past". Later on, various business and industrial organisations like the Bombay Millowners Association, the Indian Merchants Chamber and the business magnates of Bombay submitted representations for the institution of a Faculty of Commerce in Bombay University. In January 1905, Mr. K. S. Aiyer again submitted a definite scheme for a degree course in commerce to the Syndicate of the University of Bombay, but the latter postponed consideration as it was busy dealing with the question of revising the existing courses of studies.

Committee of Experts

After the work of revision of courses of studies was complete, the Syndicate appointed in April 1911 a committee of nine experts "to consider and report as to the steps to be taken for inaugurating a scheme of commercial education in connection with the university and for encouraging the study of commerce". The committee consisted of two leading syndics, two European and four Indian business men and Mr. K. S. Aiyer. The committee examined the draft scheme which was prepared by Mr. Iyer in March 1910 and unanimously recommended the institution of an additional degree of Bachelor of Commerce in the Faculty of Arts. The Committee said in its report:

> "Without a well-disciplined mind and the faculties specially trained to analyse new commercial and economic situations and without a scientific study of applied economics and, in India without a good grounding in English, it is difficult for young men to handle scientifically and critically the numerous complicated problems of modern commerce and industry . . .
>
> "Should higher commercial training not be recognised by the university, it is likely to be divorced from culture which is as important for men engaged in business as it is for lawyers, doctors and engineers.
>
> "We are of opinion that there is a distinct demand for the services of young men trained in the way we suggest, and that the institution of a degree on the lines recommended will open out new careers for Indian youths, and help business houses in securing the services of trained youths capable of being gradually advanced to the highest positions in business, and we are at the same time convinced that the cause of liberal education will in no way be imperilled by the recognition of the right of applied economics and the study of business problems to a place in the curriculum of the university".

The signatories of the report were: Rev. Dr. D. Machican, Dr. N. N. Allen, the Hon'ble Mr. C. H. Armstrong, Mr. W. A. Haig-Brown, the Hon'ble Mr. Manmohandas Ramji, the Hon'ble Sir Vithaldas D. Thackersey, Kt., Sir Dinshaw E. Wachha, Mr. Pestonji A. Wadia and Mr. K. Subramani Aiyer.

New Degree College

The Senate at its meeting on 27th January, 1912, under the chairmanship of the then Vice-Chancellor, Mr. N. G. Chandavarkar, unanimously accepted the report and resolved to institute a new degree of Bachelor of Commerce in the Faculty of Arts. The duration of the course for this degree was three years and the subjects prescribed were: English, Elements of Economics, Economic History and Geography, Organisation of Industry and Commerce, Banking, Mercantile Law and Practice, and Elements of Accountancy. The subjects for specialisation were: (1) advanced accountancy and auditing or (2) advanced banking and currency, or (3) actuarial science.

Thus, the credit for instituting the first degree of Bachelor of Commerce in India goes to the University of Bombay. Sydenham College was the first college affiliated to the University for teaching this course.

MADE WITH EXTRA SUPERIOR BRITISH & FOREIGN MATERIALS

TODAY experienced travellers do not carry cash; it can be lost or stolen. Wherever you go in India, carry Bank of Baroda Travellers' Cheques—they're absolutely safe. No one but you can cash them. RECORD CASHEW EXPORTS EXPECTED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S cashew processing industry is likely to set up a new export record. Export demand this year has been much better and the industry was able to sell abroad 1.6 million cases of cashew kernels valued at about Rs. 15 crores during the first eight months of 1963. This compares with 1.41 million cases (one case = 50 lbs) worth Rs. 12.9 crores exported during January-August 1962. Almost all the principal buyers like the United States and Russia took larger quantities during this period. There has recently been a brisk revival of demand from the U.S.A. After having paid up to 47 cents a lb for 320 cases last month, American buyers are reported to have bought about 20,000 cases in the last fortnight paying 52 cents for September shipment, 51 cents for October-November and 50 cents for December. It is said that they are interested in sizable supplies of nearby positions.

Russia has not been showing any buying interest at the present high levels. The revival of American demand at what is considered to be higher prices and the larger exports effected so far this year, encouraged the shippers to forecast that cashew kernel exports in 1963 would touch a new high at 2.3 million cases, compared with 2 million cases last year which itself was a record. But this would happen only if the supply of raw nuts is adequate. As in the past, raw nut prices are shooting up with the improvement in the prices of kernels. For instance, the price of African raw nuts has increased from Rs. 650 to Rs. 725 a ton in the course of the past two weeks. According to one report, the first auctions of British East Africa's new crop held a couple of weeks ago in Matwara was marked by a firm tone and the prices realised were between £55 and £60 a ton.

The Chairman of the Cashew Export Promotion Council, Mr. M. K. K. Nayar, has pleaded for a big-scale propaganda in the markets of the West. He did so in the course of his address at the latest annual general meeting of the Council in Ernakulam recently. Cashew, he said, faced competition from many other edible nuts, but it was unfortunate that in spite of its price advantages, India had not made any appreciable progress. This he ascribed largely to the lack of knowledge about this nut in Europe.

The vice-chairman, Mr. T. S. Menon, who read the address in the absence of Mr. Nayar, disclosed that under a code for grants in aid, the Government had agreed to provide generous grants from the Market Development Fund for publicity efforts during the current year.

The Cashew Export Promotion Council proposes to open a fullfledged office in West Germany under the charge of a senior and experienced officer. Apart from looking after the interests of the cashew trade, this officer will be actively and directly concerned with market surveys, publicity campaigns and other promotional efforts of the Council in western Europe. Referring to quality control, the chairman said that the compulsory quality control scheme operated by the Council had been welcomed by foreign buyers. It was creating a quality consciousness among the exporters also. He announced that the Central Government had approved a standard contract form, drawn up by the Council, on the production of which imports of raw nuts from Africa would be permitted. This would ensure the quality of imported raw nuts and thereby reduce the incidence of bad and defective ones. Mr. Nayar pointed out that with progressive diversification and expanding markets, cashew kernel exports would continue to rise. As a result of diversification, total share in the cashew trade other than the U.S.A. had gone up to nearly 45 percent. This had been achieved through larger exports and without any reduction in the actual American offtake.

Cashew kernel exports to east European countries have been on the increase during recent years. Exports to these countries during 1962 amounted to 10,300 tonnes, compared with 6,000 tonnes in the previous year. To the end of August 1963, these countries including Russia imported over 10,600 tonnes of cashew kernels from India. The Cashew Export Promotion Council lists Australia as a good market for the Indian product. The main use there is for direct consumption, in the roasted and salted form, as snacks with drinks. Small quantities of cashew kernel are used in the confectionery industry also. In recent years, consumption has risen very steeply and the average annual consumption of cashew kernel in Australia at present is reckoned at over 0.32 lb a head, which is probably second only to the consumption rate in the U.S.A. Under present conditions, there are good prospects for increasing consumption further as the Australians have acquired a taste for cashew and with prices being very low when compared with almonds, there is no reason why larger quantities of cashew should not be imported into Australia in the coming years, the Indian Cashew Journal, official organ of the Council, says. The Cashew Export Promotion Council has participated in two trade fairs in Australia this year.

Higher Copra Prices

Copra and coconut oil prices have been ruling higher this year in the world market. To the end of August last, there was a gain of 11 percent on an average in their prices, compared with that of last year. A statement issued by the coconut group of the F.A.O. towards the end of its recent ten-day meeting in Rome says that there has been an almost complete absence of short-term fluctuation in copra and coconut oil prices so far this year. Future prices are expected to continue around recent levels. The volume of production and international trade in coconut products has increased during the year. The volume of imports in 17 countries which accounted for the bulk of world purchases, rose 13 percent in the early months of this year. According to the F.A.O. the present phenomenon of higher prices in the face of large supplies of copra and coconut oil reflects the absence of any large increase in world supplies of all edible fats and oils in 1963. The group's investigations showed that there would be a strong demand for oils and fats in the 1960's.

Pepper Prices Soar

The strained relations between the new-born Malaysia and Indonesia have had their repercussions on the world pepper market in New York, Pepper prices soared to 40 cents from 31 cents a lb last week, on rumours that Indonesia had cut off her exports to the Singapore market. Sentiment in New York continues to be strong, although buyer interest is limited to small lots in spot and afloat positions. Political unrest in the Far East is a bullish factor both in pepper and rubber.

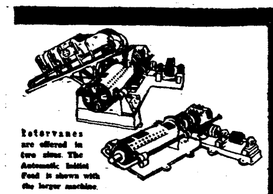
The latest report from Bombay says that the upward trend in black pepper was arrested there on 27th September. Futures met with a small decline. Indonesia which was out for some time has again entered the U.S. market and was offering at 34¼ cents a lb. This affected the market is Singapore which was quoting 36 cents. The offers of Indian shippers at 36 cents a lb is not attractive enough for American buyers, according to this report. However, if tension continues in the Far East, the foreign buyer is likely to turn to India for covering his requirements, at least partially. In India, there cannot be much left behind from the last crop. The new season begins in November and the exportable quality pepper of the new season would become available from December. The new crop may not be as big as the 1962-63 crop in view of the failure of monsoon in Kerala, the main producing centre. There are reports of uneven flowering and fall of berries from several centres.

Categorisation of U.K. Cotton Textile Imports

THE U.K. Cotton Board's views on the categorisation of textile imports have been set out in a memorandum which has been forwarded, through the two Governments concerned, to the Hong Kong Cotton Advisory Board. This represents a further step in the Lancashire textile industry's efforts, to which the President of the U.K. Board of Trade gave his blessing in a written answer to a House of Commons question on 1st August, to ensure that limits are set for particular types of goods within the total quotas which have been fixed for many of the countries whose cotton goods are imported into Britain.

Over a period of many months, several approaches were made on this subject to the Government and its announced agreement that "a reasonable measure of categorisation" was desirable was warmly welcomed by the industry. For some time before the announcement was made, there had been exchanges of views between the Lancashire and Indian Industries, while discussions between the representatives of the two industries were begun in London on 10th September. They were adjourned after three days, partly because some of the participants were to attend the annual meeting in Athens of the International Federation of Cotton and Allied Textile Industries.

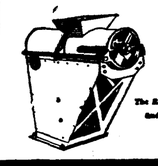
Some division of the total quota between different classes of goods is already provided in the arrangements for imports of Hongkong goods, but it is considered that there are insufficient safeguards against sudden increases in particular types which can disrupt the trade of British producers of those types. Wide swings from time to time in the nature of the imports disrupt distribution of domestic goods, affecting both the volume of demand and the level of prices. This instability is a severe handicap to the efficient operation of machinery and the formulation of economic stock policies. The memorandum from the Cotton



Rotorvanes GIVE YOU A POWERFUL MECHANIZED GRIP ON tea

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.



The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The Automatic Infeed Feed is shown with the larger machine.

The Portable Intermediate feed conveys leaf to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

Board, therefore, requests that Hongkong should consider accepting a greater degree of categorisation. The reasons for the request are set out in general terms and an invitation is given to arrange consultations.

Case for Regulating Tea Production

(BY A SPECIAL CORRESPONDENT)

IT is generally admitted in industry that maximum output reduces costs and, therefore, leads to more profitable working. This rule, however, does not always apply to tea production. In 1952, tea planters experienced overproduction and low prices. Nevertheless, within two years, namely in 1954, short supplies pushed tea prices to a record high which resulted in the biggest tea share boom in the history of the trade. Similarly in 1961, the north Indian tea crop was an all-time record whereas in the following year, about 22 million lbs less tea came to the market. But a study of the reports and accounts of a group of tea estates for these two years shows that the smaller crop made in 1962 produced larger profits than in the previous year with a record supply.

Rubber booms have also been caused by a short supply. The world coffee situation in past years has been a glaring example of the absurdity of producing more and more of the commodity unless the markets are ready to absorb the supply. The points made above indicate the folly of overproducing any commodity. This was fully demonstrated in tea in the early 'fifties. Here are some interesting records: In 1938, north India's prewar output was 376.8 million lbs. By 1951, this had jumped to 531.8 million lbs. The increase caused prices to fall at the Calcutta auctions from Rs. 2.05 a lb in the 1950-51 season to Rs. 1.41 a lb in the 1952-53 season, resulting in serious losses to producers. The amount offered for sale moved up from 1,056,942 chests in 1949-50 to 1,579,094 chests in 1950-51 and 2,102,920 chests in 1951-52 with disastrous results to profits.

The reaction was, however, rapid. From a total crop of 531.8 million lbs in 1951, production fell in two years to 477.8 million lbs, and the prices at the Calcutta auctions jumped up to Rs. 3.09 a lb in the following season. These figures, read in conjunction with the market behaviour between 1961 and 1963, make out a case for regulated production and supplies.

The fluctuating production figures for north Indian tea over a period make it difficult to make a correct forecast. From around 532 million lbs in 1951, supplies improved to 564 million lbs by 1959 (255.8 million kilograms) 273.4 million kilograms was the record in 1961, but the overall increase since 1959 from this area is negligible, the past two years actually showing a decline.

These facts do not, however, tally with estimates. As some members of the I.T.A. planting community admit, newly planted sections are expected to produce between 20 maunds and 30 maunds of tea an acre. It must be noted that over these years, south India has gone steadily ahead, namely, from 34.6 million kilograms in 1938 to 82.1 million kilograms in 1962. In like manner, Ceylon has added to the supply from 112 million kilograms to 211.8 million kilograms over the same period. It, therefore, seems reasonable to conclude that the north Indian crop is due for an increase in the near future.

The question of consumption, therefore, again needs careful consideration. Over the same period, namely, from 1938 to 1961, the world consumption increased from around 497 million kilograms to 807.7 million kilograms. On the basis of these estimates, tea prices should be firm.

So far, the Tea Board's forecast appears to have been more accurate than the forebodings of the F.A.O. If new consuming markets can be developed, the prospects for plantation interests appear to be reasonably hopeful. But there is a growing appreciation that the plantation programmes under the third plan are rather ambitious, one of the main difficulties being finance for extensions.

At the turn of this century Rs. 300 an acre was generally the accepted cost of planting. By 1910, some good estates changed hands on the basis of Rs. 750 an acre. But today the cost figure is nearer Rs. 3,000. The Government is reported to be prepared to lend up to Rs. 5 crores to the Tea Board at 5 percent interest. But the Tea Board is understood to take another 2 percent for supervising details or for providing accommodation. Since it will probably take seven years before profits result, it will be seen that the cost of extending the area under tea is prohibitive.

A tea campaign is planned in all the E.C.M. countries. The programme appears to cover the inauguration of four main tea centres which will serve tea and act as exhibitions for other Indian products. There will also be mobile canteens where tourists and others will be attended to by local waitresses. Centres have recently been opened in Dublin and Edinburgh and plans are in hand for another in Oxford Street, London. These are sensible and praiseworthy efforts to expand the consumer markets.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

SPECULATIVE HOPES AND INVESTMENT REALITIES

THE wave of hope and optimism which has lifted the stock markets since Mr. T. T. Krishnamachari became Finance Minister shows no sign of subsiding yet. The Reserve Bank's index of ordinary share prices (base year 1952-53 equals 100), which stood at 181.4 a year ago and slumped to 160.3 in March 1963, has recovered to 164.5 during the week ended 21st September. The rise in Indian Iron provides a fairer guide to the change in the sentiment of the speculators. Quoted around Rs. 25.08 at this time last year, the shares dropped to a nominal low of Rs. 19.70 after Mr. Morarji Desai's Budget; but by the end of August they had improved to Rs. 23.58, and since then they have shot up to Rs. 24.26. Most of the business done recently has been speculative in nature, since investors are still sitting on the side. But an encouraging feature is that the technical position is not unhealthy; there have been occasional bouts of profit-taking, during which sales have been well absorbed. The more cautious operators, however, feel that the rise in equity prices might have been too sharp considering the vagueness of the assumptions on which it is based. If that is the case, minor measures, such as the imposition of interim margins in Calcutta last week, are not enough. The authorities will need to be vigilant if the stability of the stock markets is to be maintained.

At first glance, the assumptions underlying the recovery in equity prices add up to very little indeed in concrete terms. The economy as a whole continues to stagnate. Agricultural production this year may or may not be higher than it was in 1962-63; nobody seems to know. The growth of industry continues at the old rate of 7 percent or 8 percent, which is well below the target fixed under the third plan. Prices have shot up as consumer purchases have increased with the approach of the festivals, and as the shortage of essential commodities like rice and sugar is becoming desperate. Whatever the speculators may be doing with clearing shares, the capital market as such is dead; hopes of getting a new issue adequately subscribed are not much better now than they were, say, two months ago. The main difference is that the country has got itself a new Finance Minister. Mr. Morarji Desai, overwhelmed by the zeal of his fiscal crusade, might have found that it hurt his vanity unbearably to be compelled to amend some of his favourite economic measures within a year of introduction. Now, Mr. Krishnamachari need have no such inhibitions; although he was a senior member of the Cabinet which in theory bore final responsibility for Mr. Desai's measures, it is perfectly understandable that his private commitment to them is less complete.

As the stock markets see it, Mr. Krishnamachari has already given fair evidence of being flexible, pragmatic and reasonable—at least as much evidence as one would have a right to expect of him after a six-week spell as Finance Minister, of which only three weeks have coincided with a parliamentary session. There was a time not long ago when he had the reputation of not being able to suffer fools gladly. Last month, however, he suffered many fools very gladly. He assured all and sundry that their views would be considered with the greatest respect, to the point where they might even leave an indelible impression on the Government's thinking. Faced with the demand for bank nationalisation from obscure back-benchers, he proceeded to lecture them with patience and courtesy on the untimeliness of their recommendation—until it was withdrawn. Confronted with a demand for the abolition of the gold control rules, he has satisfied those for as well as those against by introducing amendments which in practice make compliance with the rules entirely voluntary. Finally, in response to popular protests, the compulsory deposits scheme has been abolished for everybody except income-tax payers. The stock markets' analysts have noted, therefore, that the list of changes and reassurances forthcoming in a few brief weeks has been long and impressive enough to justify the hope that many more concessions are on the way.

On the one concession which investors as well as speculators are hoping for—the abolition or watering down of the super profits tax—Mr. Krishnamachari has so far said nothing at all. Some claim that he proposes to study the effects of the tax more carefully before he decides to do anything about it, which would seem reasonable but for the fact that the disastrous consequences of the levy are already plain as a pikestaff and so hardly need further "study". Others claim that Mr. Krishnamachari cannot be expected to say what he thinks on such a vital matter outside Parliament, so he will announce his decision as soon as the Lok Sabha meets again next month. Yet others claim that the super profits tax cannot be abolished before the Budget is presented in February next year, as advance collections for the current year have already begun—which sounds strange since adjustments can always be made later when a company is finally assessed for its tax dues. The truth of the matter may be that Mr. Krishnamachari is in no great hurry to do away with the super profits tax, because the political popularity to be gained thereby would be less than has already been gained by amending the gold control rules and the compulsory deposits scheme.

From time to time, reports have appeared that a major way in which the new Finance Minister proposes to revive the capital market is by making bank credit cheaper and more easily available. At the same time, institutions like the Industrial Finance Corporation, the Life Insurance Corporation and the Industrial Credit and Investment Corporation of India would be encouraged to provide more capital for industry, especially by the liberal underwriting of new issues. Cheaper and easier credit would undoubtedly have some influence on the stock markets, but it is likely that the influence would be indirect and psychological rather than real. If the two-tiered structure of interest rates appli-

cable to commercial banks when they borrow money from the Reserve Bank is replaced by a system of liberal lending on Bank rate terms, most of the extra money thus provided would be taken up by trade and industry, especially since their needs, already large, are likely to rise rapidly during the busy season now approaching. The stock market could improve to the extent that easier credit facilitates the normal working of the economy. But the flow of funds directly into stocks and shares is likely to remain meagre as long as the wider uncertainties about fiscal and economic policy continue.

Finally, the point has been made that from the political angle the past few months have been unusually satisfactory for the stock markets. Whatever the dark schemes underlying the Kamaraj plan, operators have for the time being found it possible to dismiss the whole process of implementation as a game of musical chairs among the faceless ones. While senior leaders of the Congress Party have jostled for power, the existence of the Chinese threat too has been largely forgotten. In Lyons Range, as in New Delhi, hardly a soul can be found today who remembers that only two months ago Mr. Nehru was talking about a "massive" concentration of Chinese troops along the northern borders. The assumption that the Kamaraj plan has struck the same terror in the hearts of the Chinese army as in the hearts of the plan's potential victims, may not be wholly correct. What is true, however, is that the markets remain vulnerable to adverse political or military developments. The way share prices drop when news is received of Pakistani rifle-fire across the Assam border indicates that the lions of Lyons Range are no longer the most estimable exponents of once-famous Rajasthani valour.

The next few weeks, possibly months, constitute a period when investors would be justified in tempering optimism with caution. As the Puja holidays are approaching, speculators will tend to reduce their commitments, activity will decrease and price may decline. Looking further ahead, it may be right to assume that the Government is keen to revive the capital market. But it would not be right to assume that any lasting recovery can be achieved without the drastic changes in fiscal policy the Government has not yet shown itself ready to make. Attempts may be seen to push the stock markets up with a flow of soothing words and easier credit but what matter for investors are dividends, yields and growth prospects. The speculators are entitled to think as they please, but as long as the super profits tax continues these three considerations are exactly the ones which make very few shares worth investing in.

SLOW GROWTH IN PAPER

THE slow growth of the paper industry has caused a great deal of anxiety recently. The industry has stagnated during the first two years of the third plan, after having developed satisfactorily during the previous years. The increase in production amounted to only about 18,000 tons a year during 1961 and 1962, compared with an annual rate of growth of 40,000 tons or 45,000 tons from 1958 to 1960. The bulk of the increase during the past two years has been due to five new units coming into production and the expansion of the existing units. All these projects were planned between 1956 and 1959. Meanwhile, the Tariff Commission was asked to recommend fair selling prices for the industry's products. In a memorandum on paper prices recently submitted to the Government of India by the Joint Committee of the Paper Industry, it is shown with the help of statistical data that the stagnation of the industry began early in 1960 when paper prices were pegged down to artificially low levels.

The industry's sluggish growth has naturally given rise to the fear that the third plan target of licensed capacity for 820,000 tons will not be fulfilled. Although the Government issued licences for 1.3 million tons of capacity, some licences were later cancelled. During the year ended March 1963, the Government revoked licences for six big units and 44 small ones, with a total capacity of 233,000 tons, because of the inability of the licensees to implement the schemes. In its mid-term appraisal, the Planning Commission itself has estimated that the industry's production capacity may not exceed 680,000 tons by 1966. Since the demand for paper will rise steadily in the years ahead—the Government has been increasing its own consumption by more than 9 percent a year—there is likely to be an acute shortage of the commodity. In fact, the shortage has already become acute since the retail prices of various grades of paper are much higher than their controlled rates. So consumers have suffered, instead of benefiting, from the low prices fixed by the Government. It is necessary to ensure that the regulation of prices does not retard development.

The prices of paper and boards were fixed on the assumption that the industry would receive a gross return of 12 percent on the capital employed. It was also assumed that a unit would require a net block of Rs. 1,100 and working capital of Rs. 200 for producing a ton of paper. Adding depreciation of Rs. 100 a ton allowed in the costs, the gross margin works out to Rs. 256 a ton. But capital costs have risen substantially since. They now range from Rs. 3,000 to Rs. 4,000 a ton. The joint committee has calculated that even on the basis of the Tariff Commission's formula, the gross return has not worked out to more than 9.8 percent on the capital employed. The return would be substantially less if depreciation has to be provided for on the basis of replacement costs which have risen sharply. According to a study recently published in the *Reserve Bank of India Bulletin*, the industry's gross profit, expressed as a percentage of the total capital employed, has declined from 12.2 percent in 1958-59 to 8.4 percent in 1961-62. In contrast, in the case of other industries, the gross profit, as a percentage of the total capital employed, has risen from 8 percent to 10 percent over the same period. There has, meanwhile, been a sharp increase in production costs. The increases in excise duties, sales tax, Customs duties, coal prices, electricity rates, railway freight rates, etcetera, combined with the premiums under the Emergency Risks Insurance Scheme, have increased production costs by about Rs. 260 a ton since January 1960. But the Government has increased the price of the commodity only marginally.

The industry's capacity to plough back money into the business has suffered greatly as a result of the decline in profits. It has been calculated that it cannot conserve more than Rs. 5 crores a year, including depreciation reserves. But in order to achieve the capacity target fixed under the third plan, an investment of at least Rs. 120 crores is required. This sum the industry cannot possibly raise from its own resources. It is relevant to point out that prior to 1960, most of the expansion was financed by internal resources. The pressure on internal resources is likely to increase during the years ahead, since the industry will have to invest heavily in rehabilitation and modernisation to maintain the existing level of production. Meanwhile, several rehabilitation schemes have had to be deferred due to the shortage of funds.

The possibility of obtaining funds from the open market is also remote. The dividends of paper companies have been slashed as a result of reduced profits. According to a study undertaken by the Reserve Bank which was recently published in its *Bulletin*, the dividends of paper companies, as a percentage of net worth, have declined from 6.80 percent in 1959-60 to 5.5 percent in 1961-62, while they are 6.3 percent in the case of all other industries for 1961-62. The poor outlook for profits and dividends has led to the decline in prices of paper shares by 12.5 percent since the end of 1959, while the shares of other manufacturing and processing industries have gained by 2.7 percent. In spite of the sharp decline in paper shares, there has been no improvement in the yield on these shares because the dividends have been pruned. The yield has fallen from 5.02 percent in 1959-60 to 3.87 percent in 1962-63. The prices of new paper shares are now about 20.7 percent lower than their issue prices. No wonder the confidence of investors has been badly shaken. As for financing rehabilitation, modernisation and expansion by borrowing, the prospect is far from encouraging. Under the present circumstances, it is not possible to borrow funds except at a high rate of interest. A fixed dividend of about 9.3 percent has to be offered if funds are to be raised by issuing preference shares. The Government should, therefore, consider raising the prices of paper and board to a more realistic level. After all, the industry has to have funds for modernisation and expansion if it is to increase production to meet the rising demand.

POWER PUZZLE

THE *First Annual Electric Power Survey of India*, published recently by the Central Electricity Authority, deserves notice only because it marks an important beginning. Anyone turning to it for a reliable and coherent picture of the supply and demand situation is likely to find himself more confused than before because of the wide divergence between the estimates presented in the survey and those published earlier under equally authoritative auspices. No explanation is offered for such differences in the estimates of both demand and supply. One is at a loss, therefore, to understand the basis on which the survey concludes that generating capacity appears "reasonably adequate" for the remaining years of the third plan, when only a few months ago, the Ministry of Irrigation and Power was equally firm in forecasting persisting deficits.

A comparison of the survey's overall estimates with those given to the Lok Sabha Estimates Committee earlier this year shows that the figures for power generating capability have now been revised upwards on the one hand, and demand forecasts lowered on the other. The effect is to raise the positive margin between the two, year by year, whereas the earlier assumption was that the power shortage would last throughout the plan, and would in fact get a lot worse in the peak years 1963 and 1964. A margin of 1,401 MW in 1964-65 is the prospect now held out, against the dire prophecy of a shortage of 1,370 MW in 1964 made earlier. This is a remarkable somersault—capable perhaps of an explanation but none is unfortunately available from the survey.

The difference in the estimates makes the methodology of the survey a matter of considerable interest. Nothing has been said about this except that the phasing of large new industrial loads corresponds to the "latest" information available in the Technical Development Wing in New Delhi, while the generating capability shown conforms to the installation schedules reported by State representatives. It is not clear why it should have been necessary to depend on the Technical Development Wing's data exclusively when a detailed load survey of the country based on field investigation should have been available. (The detailed survey, in progress in one form or another since 1954, was due to have been completed in March 1963.) The questions raised here about methodology derive not merely from an academic interest in how this pioneering exercise was carried out but to judge the degree of reliance that can be reasonably placed in the findings.

These questions gain added interest from the controversy about the way in which future load surveys should be carried out. The Gokhale committee set up to reorganise the Central Water and Power Commission had recommended that each State Electricity Board should make its own arrangements for load surveys in its area. It dismissed the C.W.P.C.'s fear that States might inflate demand figures and thus vitiate the overall national priorities in power planning. The Central Government accepted the recommendation with the proviso that the first load survey should be completed by the C.W.P.C. to evolve satisfactory methodology, which might then be followed by each State to ensure uniformity of approach and comparability of data. The significance attaching to the first annual survey is, therefore, obvious but it unfortunately offers no clue as to how this exercise should be carried out in the future to serve the central purpose of providing dependable forecasts. More will perhaps be known on the subject when the Power Survey Committee, under whose auspices the first survey has been carried out, publishes its report. Its terms of reference specifically require it to recommend the organisational pattern for future power surveys. Apart from having four international experts, the Committee has the advantage of being able to draw upon the experience of the Edison Electric Institute of the U.S.A. whose forecasts have established a high reputation for accuracy. A representative of the Institute is the U.S. expert associated with the Power Survey Committee.

In a developing country like India, where power requirements will continue to double every five years, the need is principally to guard against underestimating demand. The Estimates Committee made a valid point when it argued that a 10 percent excess in power supplies would entail less overall loss to the economy than an equivalent shortage which reduced industrial production correspondingly. The Committee maintained that the cost of installing one kilowatt of power is five to ten times lower than the investment required in setting up power-using industrial capacity. This assumption seems at first too sweeping; whatever the precise ratio obtaining in a particular pattern of industrial development, the idea of investing generously in power and other basic facilities like transport is undoubtedly sound.

Avoiding shortages is not merely a matter of accurate load studies. The shortfall at the end of the second plan was not on account of any misgivings about the level of demand but the sheer inability to execute agreed schemes within the allotted time. It is fanciful to blame the failures on the foreign exchange shortage or the cut made in course of the plan in the total allocation for power. All but 10 percent of the allocation for power was included in the plan core after the 1958 reappraisal but the actual shortfall in terms of capacity installed by 1960-61 was over 25 percent. The purpose in raking up second plan defaults is to underline the fact that administrative delays have hampered progress far more than financial stringency—a fact which is still not adequately realised.

One of the tasks set for the Power Survey Committee is to review the existing organisational structure for power development at the Central and State levels with a view to suggesting improvements. While a fresh look at the problems in this sphere may be of some help, enough is known already on which to base a plan for reform. One specific instance of administrative delay has been the subject of an interesting case study seeking to pinpoint the reasons why a D.V.C. proposal for a fourth power generating unit in Bokaro made in April 1953 should have been cleared only in May 1956. There are also the detailed recommendations made by the Ootacamund seminar on power and irrigation in September 1962, and of the official enquiry conducted by a joint team set up by the Planning Commission, the Ministry and the C.W.P.C. a year earlier. Everyone is agreed on what needs to be done but somehow the means to do it always elude New Delhi's decision-makers.

Whenever the question of delays is raised, the C.W.P.C. attracts a lot of blame because of the time it takes to scrutinise State schemes. The scrutiny is not merely a formality devolving from the Electricity Supply Act but requires going into various technical aspects of the project as a safeguard against mistakes. After the C.W.P.C. has finished its work, each scheme has to come up before an advisory committee set up by the Planning Commission for determining its priority in the overall national scheme. It is then put up before the Planning Commission formally for clearance and goes next to the Finance Ministry which gives the final "go-ahead" after looking into the foreign exchange aspects. There are avoidable delays at every stage, and some means have to be found to cut down the number of steps that are now negotiated. The issues involved here are not technical but purely procedural on which the Power Survey Committee can have little to say. It could, however, usefully enquire into the delay that takes place in the technical examination of schemes by the C.W.P.C. In one recent instance, it took 18 months to clear a hydro-electric project in Mysore but what critics overlooked was the fact that the basic data for making a decision had not been supplied by the State. This is a recurring problem, and has been pinpointed as a major cause of delays by several agencies. The solution may be found in two ways: by building up efficient engineering cadres in the States to undertake the proper and timely investigation of schemes, and by assisting in the growth of consulting engineering services.

INFORMATION ABOUT COMPANIES

AN impediment to the growth of business in continental European shares in London is the inadequacy of information presented in many continental companies' accounts. More information is required by British law (and by the council of the London Stock Exchange) than is obligatory on the Continent. On the other hand, the corresponding regulations are more exacting in the United States than in Britain; and a British investigator, Mr. Harold Rose, has suggested that the obligation to provide more statistical information than is required in other countries is an important factor in the superior management of American companies. Mr. Rose had some years' experience of the financial activities of the City of London before he occupied his present position as Reader in Business Finance at the London School of Economics, and the combination of practical and academic qualities is apparent in his paper on company accounts, published by the Institute of Economic Affairs, which is being carefully studied by business men, accountants and lawyers. It appears opportunely in Britain between the report of the Jenkins Committee, which recommended changes in company law, and a new Companies Act that will, more or less, embody the recommendations.

Mr. Rose's contribution to the discussion is important because it transfers the discussion from the legalistic to the economic plane. To understand the significance of this change it is necessary to remember the origin and development of modern company law. When family firms were formed into companies with limited liability they retained their character as family firms, and the principal concern of the law was to protect their creditors. Later, companies' shares were widely distributed, and the law was adapted to protect their shareholders. More recently, the idea of protecting shareholders was extended to an obligation to provide adequate (or what at the time seemed adequate) information on profits and other finances. The Jenkins Committee did not advance beyond that point although it reflected more modern ideas on the adequacy of information. Now Mr. Rose has argued that more information should be published by companies not simply for the benefit of their shareholders but for the benefit of the whole national economy.

Some of the facts that will be compulsorily revealed if Mr. Rose's recommendations are adopted are: the value of sale, classified by product; the proportion of exports in each category; the contributions of recently-acquired subsidiaries (consolidated accounts including profits and assets of subsidiaries have been obligatory in Britain since the Companies Act of 1948); the insurance values, as well as the book values, of companies' fixed assets; the true reserves of banks (which are at present permitted to retain secret reserves). And the practice of publishing half-yearly figures of sales and profits, and comments on current trading, voluntarily adopted by some companies, would be compulsorily extended to all companies. The customary objection that revealing such information helps competitors cannot be substantiated. Some British companies publish already nearly all the information that Mr. Rose's new law would require, and their position has not noticeably been weakened; they are among the strongest companies in British industry. Regular disclosure of American companies' affairs has made them alert and generally efficient.

The main purpose of Mr. Rose's recommended changes in the law is to reveal the degree of efficiency in companies' management, whereas hitherto the law has been concerned primarily with the integrity of companies' management. Investors are, of course, interested in efficiency in so far as it concerns the capital that they own or control. Mr. Rose is interested in the economic consequences of their reactions. Savings tend to flow towards the most efficient companies and industries and will be directed towards them more rationally if more information on efficiency is revealed. However, the flow of savings is not a simple concept, as it would be if every capital project were financed by a new issue of stock or shares. In reality most capital projects are financed by retained profits, and, as Mr. Rose observes, "the crux of the case for full disclosure by legal compulsion is that without it the check on the use to which retained profits are put is likely to be too weak".

One should not exaggerate the efficacy of the check on the use of resources that would notionally operate if Mr. Rose's requirements were enforced. To many shareholders most of the information presented now is meaningless, and such shareholders would not be competent to interpret additional information and to revise their investments in the light of it. But the big financial institutions are an increasingly powerful factor in investment, and their analysts would quickly discern weaknesses in management, or defects in policy, if full information showed that the return on invested capital was inadequate. Efficiency is not a precise concept, and no one can estimate how much it might, in different circumstances, be improved. But the potentialities of improvement, under compulsion, are considerable.

Current News and Comment

World Population Grows

The population of the world continues to rise. According to the latest figures available from the U.N. *Demographic Yearbook 1962*, the population grew to 3,069 million in mid-1961 (the Population Reference Bureau, U.S.A., calculates it at 3,180 million in mid-1963). The former figure represents a rise of 61 million over 1960, which is equivalent to three times the population of Argentina or one-third that of the United States. Taking the figure over a period of 11 years from 1950 to 1961, the rise is 560 million, which is greater than the total population of India. Asia contributed about 60 percent of this rise. In other words, there has been a net addition of 337 million in 11 years to the population of this Continent. Of the continents, Africa shows the highest birth and death rates. In the tropical and southern regions of this continent, the birth rate averaged 47 a 1,000 and the death rate 26 a 1,000. The lowest estimated birth rate of 18 a 1,000 is reported by northern and western Europe. Russia claims the lowest regional death rate of seven a 1,000. The highest birth rate in the world (56.1 for every 1,000 of population) and also the highest crude death rate (33.3 a 1,000) are reported by the Ivory Coast. The lowest reliable recorded birth rate is 10.6 for every 1,000 of the

population in West Berlin. According to the calculation of the Population Reference Bureau, world population has doubled itself between 1900 and 1962 and it could double itself again in next 18 years or so.

Birth rates throughout the world have either been stable or show increases in some cases, while death rates for most part continue to decline. Consequently, there are now 23 persons for each square kilometre of land in the world, compared with 18 a square kilometre ten years ago. The most densely populated country, according to the *Yearbook*, is the Netherlands with 346 persons a square kilometre. Next come England and Wales (303 persons a square kilometre), Belgium (301 persons), and Japan (254 persons). At the other extreme is Australia where the population density a square kilometre of land is less than one. Tokyo is the largest city in the world and New York the second largest. Next in order come Shanghai, Bombay, Peking, Chicago, Cairo, Rio de Janeiro and Tientsin. But in terms of population density, Hongkong, Singapore, and Gibraltar occupy leading positions. The population of the world, calculates the *Yearbook*, increased at an annual average rate of 1.8 percent between 1950 and 1961, although the rate of rise went up to 2 percent between 1960 and 1961 as during these latter years, the population of South America rose by 3.5 percent, of south-east Asia by 3.2 percent and of central America by 3 percent.

Infant mortality rates are continuing to fall in most countries, except in certain regions of Africa. The estimated mortality rates for Gabon and Togo are 160 and 121 for every 1,000 live-births. Chile comes third with 116.2. Among the lowest reliable recorded birth rates are those of the Netherlands (15.4 a 1,000) and Sweden (15.5 a 1,000). Life expectancy has steadily increased in the prosperous parts of the world, much more than in the poorer countries. Baby girls in Sweden, the Netherlands, Norway and France can now expect to live for almost 75 years, the longest expectation of life for any country in the world. In England and Wales, Denmark, Israel and the United States, a baby girl can look forward to almost 74 years of life. Those in Czechoslovakia expect to live slighty over 73 years, and those in New Zealand exactly 73. There are 16 other countries where girls can expect to live at least 70 years. But boys, says the *Yearbook*, cannot be expected to live as long as girls. As against 26 countries where girls can expect to live at least 70 years, there are only five countries where the expectation of life for boys is over 70 years: in the Netherlands, Sweden and Norway, it is slightly over 71 years and in Israel and Denmark, about 70 years. Another interesting finding of the *Yearbook* is that females outnumber males in most of the countries of Europe, North America and in Russia. Countries of Asia and Oceania have generally more males than females. But regardless of the sex ratio in any one country, males exceed females in number at the younger ages, but the latter outnumber the former at the older ages. This results from the well-known fact, the *Yearbook* comments, that more males are born than females, but females generally have lower death rates at all ages, so proportionately more of them survive to the older ages.

Plan to Boost Rayon Textile Exports

Rayon and synthetic fabric exports realised Rs. 8.41 crores in 1962-63, compared with Rs. 7.6 crores in 1961-62, although the quantity exported was lower at 77.8 million metres, against 81.2 million metres. The improvement has been continued in the current financial year, the figures for the first five months being 29.6 million metres valued at Rs. 3.11 crores, against 28 million metres valued at Rs. 2.81 crores in the corresponding period of 1962-63. Exporters think that the improvement in the trade would have been much better but for the setback received on account of the non-issue of import licences by the Government of Morocco, import restrictions by Ceylon, ban on textile imports in Iran, unsettled political conditions in some countries of the Middle East and British East Africa and the restraining effect on exports to countries linked with the rupee-payment arrangement on account of the non-availability of yarn in those areas. The enlargement of the export trade has been accompanied by a diversified pattern in the items sold as well as the direction of trade. Over 50 items were sent to as many as 73 countries in 1962-63 and exporters continue to explore unchartered markets.

While exports have continued to show an upward trend, the current performance is lagging behind the Rs. 8-crore target set for the current year. But Mr. D. N. Shroff's address at the latest annual general meeting of the Silk and Rayon Textile Export Promotion Council holds out the promise that the current year's target will be achieved. The Council seems fully seized of the need to consolidate the present achievement and to convert the importing countries into well-settled and growing markets. The problem is essentially one of organisation. The export activity has to be so organised that unfair internal competition is eliminated, the overseas buyer is unable to exploit the exporter for the incentive benefits and the exporter is able to realise the maximum price for his product from the foreign buyers To achieve all this, the Council is actively engaged in forming panels of exporters for the markets to which the bulk of the export trade is directed. These panels would lay down the export policy for the respective markets, determine the main qualities, the export price and the target to be achieved. These panels will also keep a watch on the export trade outside their control in order to avoid cut-throat competition and various abuses which have crept into the export trade after the introduction of the export incentive scheme.

The Central Minister for International Trade had recently urged the Development Council for the Art Silk Industry to form a consortium to boost exports. The panels proposed by the Export Promotion Council should meet this end. At a time when competition is getting keener, Governments in different countries are becoming restrictive and marketing of the product is becoming a specialised service practised by large and well-organised firms and consortiums, the Council's decision on shippers' panels is a step in the right direction and it will go a long way in overcoming the structural weakness of the trade.

In order to achieve the standardisation of export qualities, the Council has selected main qualities of export and has laid down constructional specifications and quality standard. These qualities are being given brand numbers which will be widely publicised abroad. The overseas buyer would thus be assured of the quality he is buying. The Council has also prepared an export plan which takes into account the present production, estimated production in the next two years and has fixed an export target which has been distributed marketwise. A long-term plan under which the production and the productive activity will be export-oriented is being prepared. Under this plan, it is visualised that the industry will be equipped with proper preparatory machinery and furnishing equipment. With trained salesmanship, the export activity will recreate itself. Mr. D. N. Shroff has rightly emphasised the need for a separate scheme for the import of machinery in order to enable the industry to modernise itself without which it cannot hope to face international competition in spite of improved organisational effort. Export promotion scheme for art silk fabrics, being raw material-based, depends for its success on early replacement of yarn which in turn provides a quicker utilisation of funds. The Council has succeeded in considerably reducing the time-lag between the shipment and the issue of import licences through quicker preshipment inspection and early issue of entitlement certificates and import licences. It has now prepared a scheme under which the Export Risks Insurance Corporation will issue an open cover for insuring the total exports of rayon and synthetic fabrics. This will enable the manufacturers and exporters of rayon fabrics to obtain short-term and medium-term credits from banks. The scheme, however, has still to receive official sanction.

India's Resources
are Precious
WASTE NOT,
WANT NOT

Provident Fund Contribution Raised

The Government has recently increased the employers' and workers' contribution from 6¼ percent to 8 percent in 18 more industries including textiles, matches, edible oils and fats, rubber products, generation transmission and distribution of electricity, tea, medical and pharmaceutical and toilet preparations, and newspaper establishments as defined in the Working Journalists Act 1955. The action has been taken under the Employees Provident Funds Act 1952 as subsequently amended, but the justification for this is hard to understand. The contribution had already been increased to 8 percent of the basic wage and dearness allowance in five industries, namely, cigarettes, electrical, mechanical and general engineering products, iron and steel, paper (other than handmade paper) and cement. The effort of increasing the provident fund contribution in the other industries would be to increase production costs in all of them. Higher production costs would hamper India's exports, and would create fresh difficulties for industry and the consumer.

It is possible that the Government's intention is to increase the rate of national savings by this indirect method? The industrial worker is already suffering because of the pressure on prices, and any increase in his contributions to the provident fund would cause further hardship. In fact, the compulsory deposits scheme caused such public opposition because the industrial workers, to whom it was applied, were also not in a position to make the additional savings required under the scheme. For the same reason, the workers are unlikely to welcome the increase to 8 percent in their provident fund contributions. It was the Government's declared policy not to create further strains on the industrial economy and to add to the wage bill until the position was consolidated on the basis of labour laws so far enforced. It is not easy to understand why the Government changed its mind so soon in complete disregard of the basic facts of the industrial economy at present.

Foreign Capital in Development

Is India considered a good risk for the foreign investor? Answers to this question in the present context are bound to vary, but the broad trends of investment over the past few years would indicate that India's developing economy has attractions for private foreign capital, and given the necessary incentives and encouragement, the flow would not only be maintained, but might increase. This is the impression one gets from reading the address of Mr. H. K. S. Lindsay, managing director of the Metal Box Company of India, delivered at a symposium in New York held by the Congress International de l'Organisation Scientifique. The subject was the rôle of foreign enterprises in a developing economy and Mr. Lindsay drew on his Indian background and experience to elaborate this theme. The pre-independence attitude of suspicion to foreign capital in India had gradually given way to one of welcome under Mr. Nehru's leadership of the Government, he said. Over the last 15 years, there had been no turning back; in fact, the opportunities for foreign investment had widened over the years, "although the welcome is still selective or 'discriminating' as the Indians would put it." What gives additional emphasis to the rôle of foreign enterprise in this country, as in all other developing economies, is its chronic balance-of-payment deficits. Except for the decreasing proportion coming in as outright grants, foreign aid must carry with it repayment liabilities. In India's case, such obligations went up from an annual average of 1.1 percent of the total export earnings in the first plan to 3.1 percent in the second. More soft loans on a government-to-government basis could be a solution, but Mr. Lindsay pointed out that this by itself was unlikely to suffice. After all, the cost of lending has to be related to the costs actually incurred by donor countries; only the United States is in a position to grant development assistance which carries a service charge of a mere ¾ percent and with maturities upwards of 40 years. This makes foreign private capital very important. Moreover, such scarce factors as managerial talent and technical know-how come only with foreign private investment.

Discussing the broad trend of overseas investments in India, Mr. Lindsay gave the following statistics: the total figure has risen from about $500 million in mid-1948 to $1,400 million at the end of 1960, the latest year for which official Indian figures are available. (The figures include capital provided by foreign official sources, upwards of $160 million from the World Bank—principally in loans to two privately-owned steel plants—and $32 million from the Cooley Amendment Funds which went to 22 Indo-American firms.) An interesting feature in recent years is the rising inflow of U.S. capital—the total of which has gone up from $80 million in 1956 to $225 million in 1960—a rise of 180 percent. Some 130 U.S. firms have entered into collaboration agreements with Indian partners in the last two years. Over 95 percent of the U.S. investment in India is in manufacturing industry and petroleum, two fast growing sectors of the economy. West Germany and Japan are among the other countries taking an increasing interest in this country. Breaking down the investment figures into various sectors, Mr Lindsay said that the most important fact to note is the tremendous increase in the share of manufacturing industries, which has risen from 30.5 percent of the net inflow in 1948-55 to 67.2 percent in 1956-60. The share of plantations has gone down from 17.5 percent to 5.2 percent; of petroleum refining and distribution from 40.7 percent to 20.7 percent; and of services from 12.2 percent to 5.1 percent. The changed ratios were not due to net disinvestment; in fact, the capital at charge has gone up in all the sectors barring trading and cotton textiles in which there has been a fall. Another interesting feature to which Mr. Lindsay referred is the relative decline in the share of branch operations and the corresponding rise in foreign controlled joint-stock companies. Some exclusively foreign enterprises which were already in India have taken the initiative to sell a part of their equity holding to Indian investors—Unilever and Union Carbide, for example.

Dealing with some of the deterrents to foreign investment, Mr. Lindsay said that a major reason for the overseas investor's hesitation had been a misunderstanding about the "socialist" bias of the Indian Government's policies. But "in the Indian context, one must be careful to distinguish between political tub-thumping for the benefit of a domestic audience and the actual policy to which the Government stands committed, a kind of dichotomy not unknown to other maturer democracies." Heavy corporate taxation is yet another discouraging factor. He agreed with an American assessment that in its recent annual Budgets the Government had eliminated some of the grosser inequities in company taxation, but pointed out that taxation had become more burdensome in the new situation created by the border trouble with China.

Working of E.C.M.

When the Treaty of Rome was signed in March 1957, there were genuine doubts even among the participating countries about the success of the European Common Market. It meant the creation of a supra-national economic authority, lifting of trade barriers and exposing national industries to direct competition, and making other far-reaching changes in domestic policies. But the working of the E.C.M. during the last six years has shown how effective and strong the union has been. The Belgian Consul-General, Mr. A. Uyttenhove, explained the historical background, the growth and the present working of the Community at a meeting in Calcutta last Thursday. He stated that the economic results achieved so far by the E.C.M. had surpassed the hopes of even its promoters. The trade within the Market has increased substantially, "much more than the trade among other countries"; there is free movement of almost all industrial products within, 50 percent of the tariff barriers have been removed and the first instalment (30 percent) of a common external tariff has been implemented. The Six have also agreed on the principles of a common agricultural policy. Referring to the blocking of Britain's entry into the E.C.M., Mr. Uyttenhove stated that since the French veto, there have been basic differences between France's foreign policy and that of the other five partners. He, however, felt that the setback to the idea of a unified Europe caused by Britain's exclusion was only temporary and that the E.C.M. would soon open its doors to the other European countries, including Britain. He emphasised that the E.C.M., by becoming the strongest commercial combine in the world, did not aim at becoming an exclusive and self-sufficient community, but wanted the prosperity of the rest of the world since it is basic to its own well-being.

Ferrous Scrap Exports Rise

Ferrous scrap shipments from India in August are placed at 26,480 tonnes. This shows an increase of 3,000 tonnes over the previous month, and is nearly 10,000 tonnes more than the August 1962 figure of 16,676 tonnes. Of the 26,480 tonnes exported in August, 10,599 tonnes were in turnings and borings and the balance in bundles No. 2 and 3. Enquiries in the trade indicate that shipments in August were almost entirely against contracts concluded in April and May Fresh business has been limited because of the sudden fall in overseas prices and increased ocean freight. Scrap exports during the first eight months of the current year total 160,000 tons, which compares well with the rather poor figure for 1962 of around 77,000 tons, but is substantially lower than the figure for January-August 1961, when exports totalled about 200,000 tons. Exports in September are estimated around 20,000 tonnes during the first half of the current financial year—April to September—exports are placed around 130,000 tonnes, compared with the ceiling of 200,000 tonnes for this period.

The shortfall in exports is attributed to a fall in foreign prices, the high incidence of ocean freight and inadequate export incentives. Shippers think that exports can be boosted if freight is reduced by about 15s a ton, and the Government follows a more realistic export policy by allowing the export of heavy melting and No. 1 bundles. The export trade has repeatedly pointed out that there exists a substantial exportable surplus in both heavy melting and No. 1 bundles. The trade is even willing to guarantee all the supplies needed by domestic consumers. It is surprising that the Central Minister of International Trade should not have given sufficient thought to this problem. Scrap has great potentialities for earning foreign exchange, but uncollected it goes waste.

Increasing Tobacco Exports

In his address to the latest annual general meeting of the Tobacco Export Promotion Council, Mr. V. M. Srikumaran Nayar, chairman, pointed out that while the exports of unmanufactured tobacco from India had considerably increased in recent years, those of manufactured products, especially cigarettes, cigars and *biris*, had gone down. Exports of all varieties of Indian tobacco totalled 62.2 million kilograms, valued at Rs. 18.83 crores in 1962-63, compared with only 46.2 million kilograms, valued at Rs. 14.94 crores in 1961-62. It is a matter of concern, however, that in spite of increased world consumption of cigarettes, cigars and *biris*, Indian exports of these products have not increased. One of the reasons, Mr. Nayar pointed out, is import restrictions in certain countries such as Ceylon. But the fact has to be clearly recognised that in all cases, the quality of Indian cigarettes and cigars does not compare favourably with the goods produced by competitors. It is, therefore, necessary that not only has the packaging of export goods to be improved, but the curing of tobacco has to be done better, and the quality of the products must be more acceptable.

As Mr. Nayar disclosed, India's entire 1963 crop of F.C.V. tobacco has been sold out, and there is still some unsatisfied demand. It is, therefore, necessary to step up India's output of F.C.V. tobacco by increasing the yield from each acre of land rather than by bringing more land under cultivation Since there is a considerable demand for air-cured cigarette tobacco, like Burley, and light cigar filler tobaccos, it is necessary to increase their output. There is also need for planning the production of different varieties of tobacco in India according to demand. For unmanufactured tobacco, India has found a good market in several east European countries, including Russia. With some effort, it should be possible to increase the country's tobacco exports to these markets further.

Stainless Steel Utensils

The Central Minister for Steel and Heavy Industries had discussions in Bombay with the representatives of the All-India Stainless Steel Industries Association, in the course of which the difficulties facing more than 400 units manufacturing stainless steel utensils in India, were reviewed. At present, there is an acute shortage of the raw material, which has resulted in the closure of many units, fall in output and a rise in the utensil prices. It is not only for the internal market but also for exports—these latter at present amount to less than Rs. 10 lakhs a year, against an annual target of Rs. 20 lakhs—that the importance of stainless steel utensils is increasing It is unfortunate that the schemes for stepping up the output of stainless steel in the private sector have so far failed for one reason or another.

Under the third plan, the Rs. 50-crore Durgapur special steels project was expected to produce 17,000 tons of stainless steel, as against an estimated home demand of 50,000 tons by 1965 and 68,000 tons by 1970. This plant will be designed to produce good quality stainless steel without the use of nickel which is in short supply; it will use chromium, manganese, nitrogen and copper in which the supply position is less difficult. But the Durgapur project has no chance of going into production before the end of the third plan.

The All-India Stainless Steel Industries Association, therefore, requested Mr. C. Subramaniam that some foreign exchange should be allotted for importing at least 1,500 tons of stainless steel a year for manufacture of utensils until supply from the Durgapur project is available. In 1961, the stainless steel imports totalled 2,100 tons, but since then, they have dwindled considerably due mainly to foreign exchange difficulties. Even if 1,500 tons of stainless steel are imported, only 2 percent to 3 percent of the installed capacity in the utensil manufacturing industry would be kept in production. The future demand for stainless steel utensils, both in India and in foreign markets, is likely to increase. Unless Indian production of these utensils is stepped up, it is not possible to cater in a big way either to the growing internal market or to overseas customers. It has been estimated that nearly Rs. 14 crores have been invested in this industry. In the past, it gave employment to some 25,000 workers But the employment must at present be considerably lower as many of the units have closed down and others have cut down production due to the raw material shortage.

Sales Taxes Affecting Exports

On the recommendation of the Board of Trade, the Government of India appointed a committee to study the incidence of sales taxes on commodities exported from India. The committee was urged to suggest measures for providing relief to traders for increasing exports. In a memorandum submitted to the committee, the Sales Tax Practitioners Association in Bombay points to the need for some uniformity in the sales tax laws of different States. The first and foremost task before the committee will be to devise a scheme which will be acceptable to all the State Governments. In the States of Gujarat and Maharashtra, there are some provisions in the sales tax laws for granting relief to goods meant for export. But there are no such provisions in the laws of other States. Apart from the lack of uniformity in different State laws, the granting of relief to the export trade will not be easy due to a number of complexities. Furthermore, even when a scheme has been prepared and finalised, much will depend on the spirit in which it is implemented in the day-to-day administration.

Although the laws of Gujarat and Maharashtra provide for granting relief, the manner in which

the provisions are being administered is more or less such as to defeat their purpose. The object of providing the benefit is not ultimately achieved because of the bureaucratic zeal to collect revenues. Very exacting proofs are sometimes demanded by the sales tax authorities which, they themselves know, cannot be produced. Moreover, the benefit of the rebate is disallowed on the flimsiest excuse, such as non-production of proof or the slightest departure from technical requirements.

The Association suggests that any schme or rules framed by the committee to give incentives to exporters should be simple and without provisos. Due to the variation in and complexity of sales tax laws in different States, the free movement of goods, for the purpose of export, is sometimes retarded. The Association suggests that the provisions of the State Sales Tax Acts should be such as to encourage "the free movement of goods within a State and from one State to another, from the producer or manufacturer to the ultimate exporter, without any incidence of the sales tax to enable the exporter to compete with goods of foreign countries." The Association also suggests that, with some modifications, provisions should be made in all States on the lines of the authorisation certificates of Maharashtra and there should be no turnover limit for export, under the local State Acts. Provisions should also be made in all States for granting the refund of rebate on the taxes paid by a dealer on his purchases for export on the lines of Rule 43 of the Bombay Sales Tax Rules. Two other suggestions of the Association are that provisions be made for excluding the turnover of non-resident exporter for the purpose of registration, etcetera, under the local sales tax law and that an *ad hoc* rebate be granted to dealers who are exporting the goods.

Inter-linking Power Systems

Every effort is being made to complete the power projects in the third plan ahead of schedule and to set up new projects which would ordinarily have come in the fourth plan period. Yet it may not be possible to achieve the third plan target of 12.7 million kW of electric energy. In view of this, the agreement between the State electricity boards of U.P. and Punjab and the Delhi Electricity Supply Undertaking to inter-connect their power systems, and a similar agreement between the four southern States of Andhra, Kerala, Madras and Mysore to inter-link theirs, is to be welcomed. The generation and distribution of electricity—hydro-electric, thermal and nuclear power—in future will have to be planned on a regional basis. This would ensure the most economical use of the available resources in the shape of coal, lignite, oil and others, and save capital cost. This would also increase the supply of electric energy quickly for industry and others in urban and rural areas. One of the main reasons for the slow progress of power projects has been the inter-State rivalry over the utilisation of available resources. Limited finances at the disposal of each of the State electricity boards is another major cause. With the inter-linking of power systems on a regional basis, these difficulties would be considerably overcome.

The inter-linking of the power systems of U.P., Punjab and Delhi, it is estimated, would result in a saving of Rs. 9.65 crores in capital outlay and Rs. 1.46 crores in the annual running costs. It would also be possible to increase the firm capacity of the system by nearly 100 MW as soon as it is possible to commission the fifth unit of the Bhakra right bank power house. It would also be possible to use a considerable part of secondary power available in Punjab for the Delhi thermal system after the integration process is complete. In the first instance, it is proposed to construct a 220-kV line from Muradnagar to the Delhi C Station. Subsequently, this would be connected with the Punjab system by constructing a 220-kW line from Faridabad. In order to enable an exchange of power under emergency conditions during the interim period, it is proposed to construct a 66-kV single-circuit line between Ghaziabad and Shahdra.

In the case of Andhra, Kerala, Mysore and Madras power systems, there would be an economy of Rs. 22.73 crores in capital cost and Rs. 2.60 crores in annual running charges. There would also be a saving of nearly 265 MW of installed capacity due to diversity in system demands and a reduction in standby capacity. The inter-linking will be achieved by constructing a 220-kV single circuit line between Kerala and Madras, between Madras and Mysore, and between Madras and Andhra. It should be emphasised that both in the case of the U.P.-Punjab-Delhi and the Andhra-Kerala-Mysore-Madras systems, the economy in capital cost and in the annual running expenses would be secured in spite of the capital and running costs involved in the construction of the inter-linking lines, cost of the grid sub-station equipment, and the central load frequency control station.

These inter-linking schemes should be put into operation as quickly as possible. Although the State Governments concerned have accepted the proposition in principle and the necessary plans and schemes have been prepared, the work on any of these schemes has yet to start. As past experience shows, it is necessary to take every possible precaution to avoid delay so that the present electric shortage could be eased as early as possible. It is necessary to ensure in future that there is not only a rapid increase in the generating capacity in different regional grids, but that a proper balance is secured between the hydro-electric and the thermal power generating systems. In the ultimate analysis, it would be necessary to link the entire country under a single grid system to make the most economical use of the available power resources.

CORRESPONDENCE

TAXING THE UNIT TRUSTS

(To The Editor of "Capital")

Sir,

The question of instituting unit trusts in this country was first considered by Mr. Morarji Desai, the former Central Finance Minister, and the scheme, it is reported, is being worked out by the Reserve Bank of India. The new Finance Minister, Mr. T. T. Krishnamachari, also spoke about the matter recently in Parliament. There are a few questions concerning this matter, and it is hoped that the authorities will give full consideration to them in evolving the scheme. The trustees of the unit trust will be holding the trust property for the benefit of the unit holders, and the actual management of the unit trust will be done by a board of management.

The important question is concerning the dividends received by the trustees on the shares held by them. Unless the law is altered, 30 percent of tax will be deducted at source by the companies paying the dividends to the trustees. When the latter further distribute the dividends to the unit holders, they will have to deduct another 30 percent from the dividends distributed by them, so that there will be double taxation, firstly, in the hands of the trust and, secondly, a further distribution in the hands of the unit holders. It is obvious that something will have to be done radically concerning this double taxation. Perhaps the authorities can say that while the trust suffers tax, there will be no further deduction of tax in the hands of the unit holders. But then what about the tax of 30 percent suffered by the trust? As the unit trust is intended, by and large, for the benefit of the middle-class and poor-class people with a view to inculcating the thrift habit among them, some machinery will have to be devised to enable them to claim refund of tax suffered by the trust. Unless this is done, they will have no particular preference for investment in unit trusts.

The second point is in relation to the negotiability. The units are to be freely transferable. This is necessary in order to make them popular with the classes for which they are intended. It will be appropriate if they are made bearer units so that the incidence of stamp and transfer are altogether avoided. But in case this is not considered advisable, they should be transferable like Government paper by endorsement only.

The board of management of the trust will be required to buy and sell the units freely in the market at the rates to be quoted by them. As the office of the board of management will be located in a big city, it is necessary to extend this facility of buying and selling the units through the brokers of recognised stock exchanges in the country at a fixed brokerage, which of necessity must be reasonable.

Looking to the intention in propagating the scheme, it appears to be desirable to exclude limited companies from participation. Therefore, the unit holders must be necessarily individuals. It may also be desirable to impose a ceiling on the holdings of a unit trust by individuals and allowing a higher limit for joint holders.

Yours etcetera,
J. J. Ashar

Bombay, 10th September, 1963.

U. K. WAR COMMISSION REPORT

MR. Austen Chamberlain has been airing his views this week on the present political situation like "a young cock crawin' on its air-midden head" at Birmingham. He is Chancellor of the Exchequer now, and he has been winking through his eye-glass in a pleasant manner to the income tax payers and hinting that he has something nice in store for them when he brings in his first budget. And then he went on in a serious and oracular manner to tell that the Government had no intention of giving up the reins of office until the lessons of the War Commission Report had been applied, and the War Office re-organised. By that time, Mr. Austen is likely to be "a very old man". The majority of his countrymen think that the lessons of the War Report ought to be applied in the first instance to the backs of Lord Lansdowne and his fellow noodles who are primarily responsible for the ghastly mess they made of the whole business. The Government may try to cling to office if they like, but "circumstances over which they have no control" will deal them a twist in an altogether different direction. The country is thoroughly tired of them.

A Ditcher's Diary

Except for purposes of cartoon, satire or stage farce, it is quite impossible to lay down how a good diplomatist should talk, act or look; in fact, apart from such stereotyped and usually erroneous notions as that a poet should have long hair or that a professor should forget where he has left his spectacles, there is no such thing as a typical foreign office man, or editor, or business tycoon. Our Man in Havana, for instance, is already a *cliché*. This country's foreign service, still an infant, discloses, whenever discussed, the weirdest popular notions of what it should or should not do. Much as I might have to say against the bureaucrat turned ambassador, I was recently disturbed to see the theory revived that India should employ more political leaders in the foreign service; of all people, the name of Mr. Jai Prakash Narayan has been mentioned. The cheap gibes at correct cocktail party behaviour or suave dress and conversation I will ignore. I see nothing particularly meritorious in being shabbily dressed on formal occasions or being awkward at dinner parties. But to suggest that a "leader" like Mr. Narayan, for all his obvious diplomatic deficiencies, would "be heard with greater respect in Pakistan and have a deeper impact on the public mind than the conventional type of high commissioner" is to betray a misunderstanding of what an envoy is for. He deals with the Government he is accredited to; for him to venture into having an impact on the public mind is to court early eviction. Would India allow, let alone enjoy, a Pakistani High Commissioner's efforts to reach the Muslims in India, bypassing the Government? An incompetent civil service envoy may not do much good; an inept politician in an embassy is capable of causing irreparable harm—as India should know from past experience in Indonesia and Nepal.

If scientific education in India is in a mess—and perhaps not many would care to deny it—Mr. Nehru was certainly entitled to say so in his inaugural address to the Indian Science Congress on Monday. His frankness was no doubt duly admired; it nevertheless worries me that once the admiration subsides, somebody may one day rise to ask the Prime Minister how far the Government over which he presides is to blame for the mess; and what, if anything, he proposes to do about it. I suppose it could pass as a sign of shrewdness, or great insight, to be able to say, as Mr. Nehru did, that "all is not well" with the national laboratories; that there is too much bureaucracy in scientific institutions; or that talent is inadequately encouraged. The criticisms, however, are familiar ones, and one reason may be that the Prime Minister himself has been good enough to go on repeating them for years. There must be some high purpose in rehashing old complaints at regular intervals, while doing nothing about them, although I cannot at the moment even dimly recognise what the purpose might be. While talking of burgeoning bureaucracies, for instance, it struck me as not wholly uncharacteristic of Mr. Nehru to air phrases approximating to witticisms about the Planning Commission having become a flabby elephant instead of the compact, expert body it was meant to be—forgetting that it is under the distinguished chairmanship of Mr. Nehru himself that the process of expansion has gone merrily on. The Prime Minister found nothing wrong in reminding his distinguished audience that age and seniority were not necessarily the best criteria for promotion, and that those endowed with youth and talent should be given a chance too. Perhaps politicians and bureaucrats are a class apart; but some of the scientists present might have been interested to know from Mr. Nehru how far he himself has succeeded in enforcing this worthy principle in the Government he has led for more than sixteen years. I suppose there is some consolation in the fact that the yearning for youthful enterprise survives even under a gerontocracy, as does others' yearning for honesty in an age of hypocrisy.

Among the more interesting points made by the Denning report is that "something should be done to stop trafficking in scandal for reward". The reference, of course, is to the Press, but after studying newspaper photographs of the queues which formed up outside H. M. Stationery Office in Kingsway, London, hours before the report went on sale, and reading that around 100,000 copies have been sold at 7s 6d each, I have been wondering how much the Treasury has made out of this little disclosure. I cannot think the report cost the Stationery Office 7s 6d to produce; it had no royalties to pay and advertising was quite unnecessary. So just how much profit was made I should like to know? Not that this in any way excuses newspapers guilty of "cheque-book" journalism; but it is important to keep a sense of proportion. In particular, it is useful to remember that a great many people have made money out of the Profumo scandal; it proved to be very big business indeed while it lasted. There were the central female characters, for instance. Miss Mandy Rice-Davies boasted openly of having scooped £10,000, which she fondly hoped would escape the attentions of the tax-collector, and although no final figure has been given for what Miss Christine Keeler got out of it, it is known that she was paid £23,000 for her memoires by the *News of the World*. That paper has had cause to congratulate itself on the wisdom of its investment, because its circulation jumped sharply and not all of the new readers have since been lost. Then there were the other newspapers, all of whom vied for the distinction of titillating their readers' imaginations with the best coverage and presentation of the case, and of Stephen Ward's trial. During the period of recrimination which followed the death of Dr. Ward, the *Daily Mirror*, in answer to the castigations of the *Guardian*, pointed out that this newspaper, despite its claim to moral superiority, had in fact devoted more space to reporting the trial than it had itself. So almost everybody shares some of the blame; it is just not reasonable to place it all on the shoulders of the small group of papers to which at one time, as a witness at the trial put it, nearly everybody involved was under contract. I was surprised that Lord Denning did not express himself in stronger terms on this point, although I do not see what could be done about it. While people are interested in scandal, there are others who will make money out of presenting it to them. It is only human nature.

Under Mr. Morarji Desai, the Finance Ministry seemed to consider it a duty to look after not only the country's finances but also its morals. He found it easy, for instance, to believe that conserving exchange was only part of his purpose in making it impossible for Indian nationals to enjoy overseas leave; he may well have decided that the less Indians have to do with the wicked West, the better it is for their morals. The category of executives entitled to overseas leave are now perforce holidaying in some part of India; their employers are paying their train or air fares. The cost of this travel, however, is taxed in the employee's hand. I have ceased to complain of unfair taxation; it is no use. What intrigues me is a provision to the effect that the employee is not taxed if he is a good boy and moves to his home town. What do you think can be the reason for that? It may well be that Mr. Morarji Desai in his wisdom decided that it is morally elevating for us to go to our home towns, that it is not so good to see parts of the country other than where one had been born. It is difficult to think of a greater and less necessary disincentive to internal tourism. Lots of people, I am sure, are employed in Delhi, Calcutta or Bombay; and that's where they were born. There seems neither logic nor justice in presuming that they must holiday in those metropolitan towns or, if they venture out, they must pay through their nose. The Income Tax Act, it seems, has perpetrated a perfectly silly piece of discrimination: and just because the num-

ber affected is small, and hence electorally negligible, nobody seems to bother. It is because of injustices done to individuals or small groups that I sometimes view the idea of an Ombudsman favourably. But then who will listen to grievances against the Ombudsman? I beg of the Central Board of Revenue to give the holiday regulations a second look and a second thought.

IT IS BEGINNING TO LOOK AS IF THE CHANNEL tunnel will not be built after all, even though a verdict in its favour against the rival project for a bridge has clearly emerged from the findings of a working party representing both sides. All obstacles have been removed from the path of a final decision, but the lack of enthusiasm is becoming more obvious every day. The ostensible reason given in London is the cost, around £143 million, although eventually it would no doubt be higher. But I suspect a deeper motive. The British still want their country to remain an island; it is the same instinct that made them draw back when they had the chance to join the Common Market a few years ago. One cannot altogether blame them for that; their isolation has served them well in the past. But I for one would be sorry to see such a brilliant concept as a tunnel under the English Channel abandoned altogether. Few of man's really ambitious schemes have ever been entirely viable economically; in many cases there has been no pretence that they should be. And when the French and British have already tacitly accepted this fact in their joint project for a supersonic airliner, I cannot see why they should draw the line at a tunnel, especially when on the one side there is such a drive for national self-assertion and on the other a conscious desire to establish a continental identity. Certainly the whole thing should have been done 50 years ago, but that does not mean it will be out-of-date if attempted now. It all depends on the engineering expertise used. Also, it is true that other developments, such as the hovercraft and the hydroplane, might be extremely competitive by the time a tunnel can be finished; but here again the economic facts ought to be looked at in wider perspective. It seems to me that both countries are taking a grave risk by hiding behind purely economic excuses. After all, it is not as if £143 million, spread over seven years, is going to bankrupt either of them; Britain threw away about £200 million on the abortive Skybolt project alone. A tunnel as a symbol of their technical competence and faith in their future should be worth that much money to them.

IF ALIGARH UNIVERSITY'S PURCHASE OF AN American car from the State Trading Corporation for the tidy sum of Rs. 55,000 and more was a bit of a surprise, the explanation offered by the University's public relations officer is astounding too. (Incidentally, it needs a bit of explaining why a university should need a public relations officer.) The defence case includes the fact that the car now purchased is similar to the one hitherto used by the vice-chancellor, that the vice-chancellor has "constantly" to go to Delhi for meetings and that making this "tiring" journey in a small car would be conducive neither to his peace of mind nor to his efficiency. It is further implied that since the profiteering seller is the State Trading Corporation, the Government that finances the University's purchase of the car is the same Government that benefits from the profiteering; there is, therefore, no loss or gain on this account. First, I do not see why the vice-chancellor of a supposedly autonomous university should go to Delhi "constantly". The present vice-chancellor is a former diplomatist who once did serious harm to Indo-German relations by an indiscreet journalistic effort. Perhaps he has got used to limousines and no less, and perhaps his bureaucratic habit of consulting the Government for everything is dying hard? Secondly, the more I hear of the State Trading Corporation's activities, the chief feature of which seems to be that they combine the worst vices of Government with those of trading, the more I am convinced that there is something basically wrong about mixing Government with business. It corrupts both Government and business and does no good to either. When an academic institution gets involved in these goings-on, somebody should really do something about it.

THE DITCHER

Guide for Investors

JUTE SHARES RISE ON GOOD CORPORATE NEWS

(BY A SPECIAL CORRESPONDENT)

THERE has been a fair rise in the quotations of jute shares during the past month. The price of Birla, for instance, has improved from Rs. 30.31 to Rs. 32.56. Ganges have moved up from Rs. 15.62 to Rs. 16.19 and Northbrook from Rs. 30.50 to Rs. 30.75. The improvement has stemmed partly from the general toning up of the stock market on hopes of favourable fiscal changes, and partly because of good corporate news connected with the industry itself. Since all jute companies enjoyed a spell of prosperity in 1962-63, handsome dividends have been declared. The payment of interim dividends by the Andrew Yule group of Companies for the current year suggests that the outlook continues to be fairly encouraging. Yet the profit to be earned during the current year may not be as high as that for the previous year. Dividends apart, some Companies such as Anglo-India and Khardah, have decided to issue bonus shares. A favourable factor has been that several companies have also taken steps to diversify their activities. The diversification has taken place not only in the range of jute products, but also in the field of other commodities.

The prospect of further diversification has had a bullish effect as the Government is likely to adopt a more liberal attitude towards this matter. Some time ago, it was inclined to discourage expansion in spheres other than those in which a company has already been engaged. But this policy defeated the other purpose of the Government to promote development. Hence it is thought that the Government is likely to change its policy soon. As for the diversification of jute products, the mills have taken vigorous measures. During recent months, there has been a substantial expansion in the capacity to produce carpet-backing cloth by installing broad looms. The encouragement has come from the fact that this fabric has met with a rising demand in foreign countries, and in the U.S.A. in particular. But a note of caution needs to be sounded here. In view of the steady decline in the price of this cloth during recent months, it appears that the supply of this fabric has been in excess of demand. Unless vigorous measures are taken to widen the uses of this cloth, the scope of expansion in this particular field is likely to be limited. Since this cloth possesses versatile qualities there is no reason why a bigger demand cannot be promoted, if new uses are exploited commercially.

At the present price of the jute shares, the investors have become more discriminating than before. They are, for the time being busy assessing the outlook of jute goods during the coming months. They wonder whether the increased level of production will be absorbed without difficulty. There is no doubt that the up-to-date statistical position has been fairly sound. But the trend of jute goods has been soft rather than hard. The reasons are obvious. As far as hessian is concerned, the outlook should be assessed cautiously. The U.S.A., a principal buyer, has large stocks amounting to about 286 million yards. Judging by current indications, it appears that during recent months, she has worked off stocks to the extent of about 10 million yards a month. She has bought about 60 million yards from outside sources. Inudia has sold nearly 50 million to 60 million yards, while Pakistan has about 10 million yards to that country every month. Considering the size of the stocks in the U.S.A., it does not look as if she will purchase more aggressively in the coming months. Normally she is expected to take her requirements slowly due to the bumper crops in India and Pakistan. Russia and the Argentine have purchased substantial quantities during the past few months, and they may no longer buy big quantities before the end of 1963. In the circumstances, it remains to be seen whether the total output of hessian up to the end of 1963, will be easily sold.

As for sacking, the outlook looks more encouraging. Judging by the level of consumption during the second half of 1932, it is reasonably expected that the current level of production will be absorbed without difficulty This besides, the internal offtake should increase rather than decline because industrial production has begun to improve. Defence purchases should also be considerable. As far as foreign offtake is concerned, the trade appears to take a fairly bullish view due to the fact that Pakistan is reported to have agreed to supply substantial quantities of sacking to China under an agreement. Anyway, the Pakistani mills are about fully sold for several months ahead. So the spill-over of orders should flow into the Indian mills These fortuitous circumstances should not give rise to a sense of complacency. It should be borne in mind that the Pakistani industry has planned to expand its loomage in the near future. Since it enjoys superior advantages in the matter of raw materials and export subsidy in comparison with the Indian mills, the competition in sacking is likely to increase greatly in the near future. Unless the Indian industry is given the corresponding advantages to counteract Pakistani competition, the outlook on a long-term view appears discouraging.

The broadening support for jute shares is a welcome development. There are substantial investments in this industry. If steadiness in these scrip is maintained the good effects will percolate to other shares. In view of the ample supply of fibre during the current year, the working of the industry should be reasonably satisfactory. Since the prices of jute goods have moved down, it is hoped that the price of the fibre will not be artificially boosted. Considering that the mills have to use a substantial quantity of inferior fibre, it is time to ensure that the prices of these grades are revised downward to make the manufacture of jute goods an economic proposition. This apart, an important factor to discourage the cultivation of inferior fibre is to make its price less attractive.

Indian Rayon to Expand

IN his annual statement to the shareholders, the chairman of Indian Rayon Corporation, Mr. Morarji J. Vaidya, points out that the Company commenced commercial production of rayon filament yarn in September, the rated capacity of 5 tons a day has been reached and the Company is now going ahead with the second stage of the project aimed at doubling the plant's capacity. The chairman says that although the capacity of the existing plant is 5 tons a day, many departments have been designed to produce 10 tons. Apart from raising the capacity to 10 tons of rayon filament yarn a day, the second phase of the project includes the installation of a plant to manufacture 15 tons a day of rayon grade pulp from cotton linters and a plant to manufacture 15 tons a day of sodium sulphate anhydrons.

The Company has received the necessary foreign exchange loan of $4.7 million (about Rs. 2.4 crores) from the Export-Import Bank of Washington for financing the purchase of machinery and equipment for the expansion programme. The order for pulp plant has already been placed with Techno-Puip Machinery Incorporated of the U.S.A. The Company has made satisfactory progress in its project for the manufacture of helical spiral welded pipes. All the necessary licences including the import licence for the plant have been received and necessary arrangements with foreign collaborators have been made. The project is expected to be taken in hand shortly. The original proposal of having a subsidiary company for implementing this project has been given up and other alternatives are being considered. As for the staple fibre unit, the Government has not yet taken any decision on the Company's application. Mr Vaidya has, however, expressed the hope that since the demand and supply position of staple fibre has now been adjusted, the Government would seriously consider the question of permitting the Company to go ahead with the installation of a plant for manufacturing 25 tons of staple fibre a day.

The Company has changed its accounting year from 15th February to 30th June. The latest report for the period 16th February, 1962 to 30th June, 1963, shows a loss of Rs. 1.93 lakhs after providing Rs. 22.050 for taxation. This brings the total deficit to Rs. 4.08 lakhs. The Company incurred during the year an expenditure of Rs. 36.69 lakhs out of which a sum of Rs. 34.31 lakhs has been capitalised. The total capital expenditure incurred so far amounts to Rs. 5.26 crores which includes Rs. 29.81 lakhs spent since the close of the financial year. The Rs. 100-paid share of Indian Rayon is currently quoted around Rs. 86

A Good Year for Nepa Mills

SIR A. Ramaswami Mudaliar, chairman, could not be present at the annual general meeting of the National Newsprint and Paper Mills Ltd held recently in Nepanagar. So his speech was read out by Mr. S. N. Mehta, director, who presided over the meeting. Sir Ramaswami took a fairly optimistic view about the outlook. (A fuller version is printed on a later page in this week's issue of *Capital*.) During the year ended March 1963, the production of newsprint amounted to 26,515 tons, showing a rise of 1,236 tons over that of 1961-62. The target for the current year is 30,000 tons which is the capacity of the plant. Sir Ramaswami hoped that the target would be realised. Steps have been taken to set up a caustic soda chlorine plant in collaboration with a Swiss firm in order to improve the quality of the products. A new method of treating the wood pulp has successfully been tried. So it is hoped that the quality of paper will improve in colour and tensile strength. The caustic soda chlorine plant is expected to start producing in the first half of 1964. As for the prospect of expansion, Sir Ramaswami said that an application for a licence would soon be made to the Government to increase the output from the present capacity of 30,000 tons to 75,000 tons a year. Arrangement to obtain the necessary raw materials is being made with the forest department of the Madhya Pradesh Government.

The profit has amounted to Rs. 50.20 lakhs for 1962-63, after providing for depreciation, development rebate and doubtful debts. The directors could have declared a taxable ordinary dividend of 5 percent but for the fact that there has emerged a contingent liability out of the income tax assessment. But Sir Ramaswami hoped that on appeal, the Company would be exempted from the assessment. He also hoped that the shareholders would soon be rewarded in the form of a satisfactory dividend. For the current year, the Company should pay an ordinary dividend, if not an interim earlier. The debit balance of Rs. 24.83 lakhs brought in has been wiped out and the credit balance of Rs. 25.37 lakhs has been carried forward. There has also been a substantial improvement in the Company's financial position. All loans which carried interest have been repaid to the Central and Madhya Pradesh Governments. The frozen interest on debts to the Government has declined from Rs. 1.11 crores to Rs. 66 lakhs. The Government and

Huldibari Tea Cuts Dividend

THE Huldibari Tea Association Ltd (a Dooars garden) has earned a profit of Rs. 2.07 lakhs for the year ended February 1963, compared with one of Rs. 2.09 lakhs for 1961-62, after providing Rs. 19,500 (against Rs. 25,500) for development rebate reserve and Rs. 1.79 lakhs (against Rs. 1.69 lakhs) for depreciation. A taxable ordinary dividend of 11 percent has been declared which works out to a yield of 8.3 percent at the present price of Rs. 13.31 a share of Rs. 10 each. A taxable ordinary dividend of 22.5 percent was paid for 1962. Contingency reserve is allocated Rs. 2.40 lakhs, out of which the dividend declared will be paid. Income tax liability amounting to Rs. 58,000 has not been provided in the accounts. Tax provision amounted to Rs. 98,087 for 1962.

The crop amounted to 699,826 kilograms, against an estimate of 961,616 kilograms because about 350,972 kilograms of tea were lost due to the hailstorm. The Company has changed over to C.T.C. manufacture. It had run the Katihar jute mill for 11 months during 1962-63, but the results have not come up to expectations. So the directors have taken steps to improve the mill's working. The tea crop for 1963-64 has been estimated at 961,600 kilograms at a cost of Rs. 33.20 lakhs.

Rights Issue by Mafatlal Fine

THE Mafatlal Fine Spinning and Manufacturing Co. Ltd proposes to raise fresh capital for financing a new chemical project. Another Company of the Mafatlal group, Navin Fluorine Chemicals Ltd has obtained a licence for the manufacture of synthetic cryolite, aluminium fluoride and sodium fluoride. The management thinks it is preferable to implement this project as a separate unit within Mafatlal Fine itself instead of under a separate Company. The directors propose to increase the Company's capital by the issue of 29,000 equity shares of Rs. 100 each at a premium of Rs. 275 a share, that is, at Rs. 375 a share.

This would fetch a sum of Rs. 108.75 lakhs, which together with the Company's existing resources, would meet the requirements of rupee finance for the new project. Out of the 29,000 shares, 14,500 shares will be offered to existing shareholders of Mafatlal Fine in the ratio of one new share for every four shares held by way of rights. The balance will be offered for public subscription. The issue is subject to the sanction of the Controller of Capital Issues and also of shareholders. The share of Mafatlal Fine rose impressively from Rs. 690 to Rs. 845 in a matter of few days on ideas of a rights issue; the latest quotation is, however, lower around Rs. 815.

Zenith Steel to Expand

THE spectacular rise in the quotation for Zenith Steel shares from Rs. 13.26 to Rs. 18.76 since about the beginning of July reflects the market's confidence in the Company's future. The Company did exceedingly well in the year year ended April 1963 and paid a maiden tax-free dividend of 60nP a share. The outlook for the current year is much better and with the expansion schemes that the Company has on hand, the future seems brighter still. The director, Mr. S. G. Nevatia, told a Press conference held at the factory premises that the Company's present turnover is around Rs. 35 lakhs a month, against last year's total turnover of Rs. 1.48 crores. In 1962-63, the Company produced 12,000 tonnes of steel pipes, but in the last five months it has already produced 11,500 tonnes. The annual capacity of the plant is 24,000 tonnes on a two-shift basis and it has been permitted to raise the capacity to 36,000 tonnes by working a third shift.

The Company has already started working a third shift and the present production is around 2,500 tonnes a month. Mr. Nevatia told newsmen that the Company proposes to set up a workshop for the manufacture of spare parts to meet its own requirements as well as those of other manufacturers in the country. The outlay on this project is estimated around Rs. 20 lakhs. The Company has also applied to the Government of India for permission to set up a plant for the manufacture of seamless tubes with an annual capacity of 48,000 tonnes. These tubes will be of varying sizes up to 8in. in diameter. The project is estimated to cost about Rs. 4 crores, inclusive of foreign exchange requirements. The Company hopes to receive the necessary industrial licence shortly.

Inchcape Increases Dividend

INCHCAPE and Company, general merchants and shipping agents, are holding their final dividend at 11 percent for the year ended 31st March, 1963. The total rate on the £2,262,031 capital is thus brought up from 15 percent to 16 percent. Shareholders are also to get a one-for-two scrip issue. These decisions have been taken in spite of the warning to shareholders last February that the rise in their interim dividend from 4 percent to 5 percent was intended solely to bring interim and final into better proportion. Pre-tax profit is up from £1,115,101 to £1,209,225, a record. This includes dividends of £197,368, against £183,700 received from subsidiaries operating in India, which are not consolidated. After a tax provision of £465,794, against £431,583, the net profit is £743,431, compared with £683,618, of which £660,662, against £654,675, is applicable to the parent Company.

Fibreglass Will Rise Capital Soon

FIBREGLASS Pilkington Ltd which proposes to set up a plant in Thana (Bombay) for the manufacture of glass fibres and glass fibre products is expected to enter the capital market shortly to raise Rs. 45 lakhs in equity shares of Rs. 10 each through public subscription. The project has been sponsored by Bombay Company (Private) Ltd in collaboration with Fibreglass Ltd of the U.K., which is a wholly-owned subsidiary of Pilkington Brothers Ltd of the U.K.—the largest manufacturer of flat glass in the world. The British firm which is collaborating in the venture will participate in the capital of the Company, act as technical consultants and assign certain patents to the Indian firm.

The proposed plant in Thana will have an annual capacity of about 1,100 tons of glass fibres and glass fibre products and this capacity is expected to be reached within three years of the commissioning of the plant. The Company has also been licensed to manufacture annually 2,500 tons of glass wool, 600 tons of glass textile fibres and 75 tons of glass staple tissue. To manufacture these items, the Company is likely to set up two additional plants, one each in Madras and in West Bengal. The glass fibre project is estimated to cost Rs. 1.14 crores, which is proposed to be met by the issue of share capital of Rs. 1.2 crores and by bank borrowings. The Company has an authorised capital of Rs. 2.50 crores, of which Rs. 1.20 lakhs is being issued in the beginning. Shares of the value of Rs. 60 lakhs are being taken up by Fibreglass Ltd which includes Rs. 15 lakhs for consideration other than cash.

The Bombay Company which has sponsored the project will subscribe for Rs. 4.80 lakhs and shares worth Rs. 10.20 lakhs are being taken up by directors, their associates and friends. The remaining 450,000 equity shares of Rs. 10 each are to be offered for public subscription. Most of the raw materials required in the manufacture of glass fibres are available from indigenous sources. Certain chemicals will, however, have to be imported. Orders for imported machinery have been placed in the U.K. and other countries. The first shipment of plant and machinery, it is expected, will arrive within the next 12 months. The market for the Company's products is assured because there is already a good demand for glass fibres and glass fibre products and the demand is expected to grow with years.

Bombay Gas Pleads for Price Rise

IN his annual speech to the shareholders of the Bombay Gas Company, the chairman, Mr. N. K. Jalan, has reiterated his plea for a substantial increase in the price of town gas supplied by the Company. (A fuller version appears on a later page of *Capital*.) The case that he has made out is indeed strong. Unlike other concerns producing basic commodities or services and receiving the benefit of price increases to meet higher costs, the price allowed to the Bombay Gas Company has been pegged down to a figure which is about the same as in 1926, while costs have gone up substantially since then. Between 1957 and 1962, there has been an increase of about 40 percent in costs as a result of higher prices for coal, and increased wages and better amenities for labour. Costs have registered a further increase during the current year. Unless urgent and adequate relief is offered to the Company through a substantial rise in the price of gas, its working results for the current year are likely to be much worse than those of 1962, which itself was an extremely disappointing year. In 1962, the Company incurred a loss of about Rs. 3.28 lakhs and for the first time since the Company was taken over by the present management 17 years ago, no dividend was paid.

While the Company's plea for a higher price is fully justified on the ground of higher costs, the Company has made a definite offer that, if it is allowed an adequate price increase, it will undertake a substantial expansion programme enabling it to give 15,000 to 20,000 new gas connections over a period of three years. The expansion programme is estimated to cost Rs. 1.5 crores, and it is likely to result in a substantial saving on kerosene imports for lighting and heating purposes. The high price of town gas is unlikely to meet any consumer resistance for the simple reason that the 45,000 odd consumers of liquid petroleum gas (commonly known as bottle gas) are already paying a price which is nearly four times that of the town gas supplied by Bombay Gas. The Company, says Mr. Jalan, is willing to give new gas connections either to private consumers or to such industries as may be specified by the Maharashtra Government. Repeated representations by the Company for an increase in the price of its gas have so far gone unheeded. The new Gas Advisory Committee appointed by the Maharashtra Government to enquire into the matter should consider the Company's case sympathetically.

Paper Packaging from Metal Box

THE Metal Box Company of India Ltd has announced the addition of paper to its metal and plastics packaging services. The Company's paper group will be located in Bombay. The Government granted a licence to Metal Box last year for manufacturing treated and laminated papers and boards and containers made from them. By providing in India paper packaging to international standards, the Company will assist exporters of consumer goods, many of whom must still rely on imports for their package requirements. Metal Box will also introduce specialised paper packaging systems. This will assist many industries meeting home and export demand, including food products (particularly frozen foods), pharmaceuticals, toilet products and confectionery. The Metal Box paper group will also produce tamperproof paper cartons. In common with the Company's metal and plastics services, the paper group will be backed by comprehensive facilities of package research and development, design, machinery and the combined resources of its overseas associates.

Travancore Sugar Earns More

THE working results of Travancore Sugar and Chemicals Ltd for the year ended 30th April, 1963, show a considerable improvement over the previous year's performance. The output of sugar at 12,010 tonnes is an all-time record, and it compares with 10,760 tonnes in the previous year. The gross profit has more than doubled from Rs. 3.43 lakhs to Rs. 8.12 lakhs. Allocation to the development rebate has been stepped up from Rs. 6,000 to Rs. 73,000. Taxation accounts for Rs. 3.85 lakhs, against Rs. 2.96 lakhs. A sum of Rs. 1.15 lakhs has been set side for general reserve, against nil in the preceding year. The directors have drawn Rs. 84,000 from taxation equalisation reserve to equate income tax depreciation with book depreciation. The dividend has been maintained at 5 percent, but it is being paid out of the year's profit whereas in the previous year it had been paid out of general reserve. The equity dividend absorbs Rs. 1.50 lakhs, and prefer-

PRINTERS

D. P. GANGULY & COMPANY.

ence dividend accounts for Rs. 97,500, leaving a sum of Rs. 2,632 to be carried forward, against Rs. 11,202 brought in. The Rs. 10-paid share of Travancore Sugar is currently quoted around Rs. 7.

Bharat Bijlee Repeats on Increased Capital

BHARAT Bijlee Ltd has maintained the dividend for the year ended 30th June, 1933, at 8 percent. But since the dividend is payable on the enlarged capital following the one-for-two rights issue made last June, the total amount to be distributed is higher at Rs. 1.90 lakhs, against Rs. 1.60 lakhs in 1961-62. While the dividend on the old share will be Rs. 8 a share, the distribution on the new 10,000 shares (Rs. 50-paid) is Rs. 3 a share. The Company has fared much better than in 1961-62. The gross profit has shot up by about 63 percent from Rs. 6.64 lakhs to Rs. 10.85 lakhs. The provision for taxation is substantially higher at Rs. 6.92 lakhs, compared with Rs. 3.50 lakhs in the preceding year, with the result that the increase in the net profit is around 25 percent from Rs. 3.14 lakhs to Rs. 3.93 lakhs. The Rs. 100-paid share of the Company is currently quoted around Rs. 160, offering a gross return of a little over 5 percent.

John Fowler (India) Share Offer

JOHN Fowler (India) Ltd is offering 106,700 ordinary shares of Rs. 10 each for public subscription at par. (Fuller details appear on a later page of this week's *Capital*.) The list opens on 15th October, 1963. The subscribed capital consists of 40,300 ordinary shares of Rs. 10 each. The prospect is considered encouraging in view of the existing activities and schemes the Company proposes to undertake further. It was a private limited company until 16th May, 1963, when it was converted into a public limited company. It imports spare parts into India and services road rollers, diesel locomotives, etcetera, supplied by John Fowler and Company (Leeds) Ltd. It has entered into an agreement with Vokes Ltd of England to manufacture filters and elements for combustion engines. It also produces these filters and elements. It manufactures lubricating and insulating and aviation oil and fuel filters in collaboration with Stream Line Filters Ltd of England. It has reached an agreement with Vokes Cardwell Ltd of England to manufacture tobacco processing machinery. The Company has two factories situated in Calcutta and in Bangalore.

Shipping Corporation Earns More

THE Shipping Corporation of India Ltd has produced satisfactory results, for the year ended March 1963. The profit has risen from Rs. 1.07 crores for 1961-62 to Rs. 1.32 crores for 1962-63, after providing Rs. 1.55 crores (against Rs. 1.26 crores) for depreciation and Rs. 10.71 lakhs for taxation. Development rebate reserve is allocated Rs. 80.21 lakhs (against Rs. 90 lakhs), staff welfare reserve Rs. 1 lakh, fleet special repairs reserve Rs. 21.08 lakhs (against Rs. 35 lakhs) and general reserve Rs. 32.70 lakhs (against Rs. 40.42 lakhs). The carry-forward is Rs. 22,359.

The directors look forward to a period of continued expansion and progress. They expect that the sea-borne trade of India will rise in the next few years. The Indian shipping companies will increasingly participate in this trade. The fleet of the Corporation will be expanded to enable it to carry an increasing amount of the sea-borne trade. Expansion in India's coastal maritime activity is foreseen in view of her growing economic prosperity and the need to provide economical transport by vessels for such bulk commodities as coal, timber and foodgrains along the coast. So the directors have taken concrete steps to expand the fleet of the Corporation. The Corporation, it is expected, will handle an increasing volume of cargo from year to year. The Corporation's tonnage has risen from 109,263 G.R.T. in 1960 to 220,266 G.R.T. in 1963. Orders for further vessels have also been placed.

A noteworthy feature is that in addition to participating largely in the overseas cargo-liner trade and selected passenger-cum-cargo routes the Corporation will extend its activity to cover at least two other types of operations, namely, the overseas tanker trade and the specialised Indian coastal coal trade. The Corporation confidently looks forward to owing a fleet of nearly 50 vessels of a total gross registered tonnage approaching half-a-million mark within the next three or four years. Although it has tried to secure economies, wherever possible, the effect of rising prices is beginning to be felt.

Southern Structurals Diversifies

THE directors of Southern Structurals Ltd have published an interim statement of accounts for the half-year ended June 1963, since they feel that they should share their information with shareholders. The profit for the half year, subject to taxation, amounts to Rs. 9.48 lakhs. The interim report says that the company has been able in a large measure to adhere to the development programme outlined last year. During the first six months of the year, the Company added considerably to the production capacity of the factory. In the next six months, the directors hope to increase it further.

The directors have decided that the manufacture of wagon components should make progress to the extent possible, since this this will not only help save money, but also avoid uncertainties resulting from dependence on others. The cost of the wagon building programme has kept fairly close to the estimates. On the structural side, the chairman, Mr. V.P. Menon, says that the Company's capacity now is such that in an emergency it can reach a target of 9,000 tonnes a year. It may become necessary for the Company to request the Government to increase the Company's licensed capacity on the structural side.

The construction of the Avadi heavy vehicles factory has been making good progress, and the directors hope to complete this well before the end of the current year. As for the scope for the Company, the chairman says that prospects for a well-established and well-organised structural factory are excellent in south India.

There has been considerable diversification recently in the types of work done by the factory, the activities covering railway wagons, steel structures for big industries, welded works of different types and such special items as cranes in which the Company is working for the famous firm of Krupp-Ardelt of West Germany in building 15 units for Madras Port Trust. The directors hope to present a very satisfactory balance-sheet for 1963, since the results for the second half of 1963 are likely to be slightly better than those for the first half-year.

Sylvania and Laxman to Raise Capital

SPONSORED by Mr. L. S. Agarwal, Sylvania and Laxman Ltd, which proposes to undertake the manufacture of fluorescent tubes, mercury vapour lamps, photo flash lamps, glass shells and tubes, will soon be in the market to raise Rs. 24 lakhs through public subscription. The Company has secured the technical collaboration of Sylvania Electric Products Inc. Delaware, which is a subsidiary of General Telephone and Electronics International Incorporated, U.S.A. Sylvania will participate in the capital of the Company and it will also supply the plant for the lamp factory. The machinery for the glass plant is being obtained from Japan.

The Company which has been incorporated in Delhi will have an issued capital of Rs. 80 lakhs—all in equity shares of Rs. 10 each. Out of this, shares worth Rs. 36 lakhs will be offered to General Telephone and its subsidiary, Sylvania Electric, payable in U.S. dollars. The promoter and his associates and friends will take up shares of the value of Rs. 20 lakhs. The balance of Rs. 24 lakhs will soon be offered for public subscription. The necessary consent of the Controller of Capital Issues has already been obtained. The Company is stated to have applied for a foreign exchange loan of Rs. 19.28 lakhs to the I.C.I.C.I. and for a rupee loan of Rs. 36 lakhs out of the P.L. 480 funds to finance the project.

Herdillia Scrip for Dyeing Shareholders

THE shareholders of Bombay Dyeing and Manufacturing Company will now be able to participate in the petro-chemical project which has been sponsored by the Company's managing agents, Nowrosjee Wadia and Sons Private Ltd. It is now proposed to offer the shares of Herdillia Chemicals Ltd., which had been formed recently in collaboration with Distiller Co. Ltd. of London and Hercules Powder Company Wilmington, U.S.A., to implement the petro-chemical project. The Company has an authorised capital of Rs. 10 crores—all in equity shares of Rs. 10 each—of which Rs. 4.40 crores will be issued in the beginning. The foreign collaborators will subscribe for shares worth Rs. 1.80 crores. Out of the balance, shares of the value of Rs. 1.32 crores will be allotted to the promoters, directors and their friends and associates and the balance will be offered for public subscription.

Out of equity shares reserved for promoters and their friends, it is proposed to issue one share of Herdillia Chemicals for every two shares held by the shareholders of Bombay Dyeing as on 22nd August. The managing agents have made it clear that if any allotment of share is made, it will not in any case allot "rights shares". Therefore, there is no question of renunciation of these shares in favour of other persons. The allotment is subject to the condition that the shares will not be transferred for a period of one year from the date of allotment.

New Capital Issues

A Central Government undertaking which is being newly set up, is among the five companies which have been authorised to raise capital aggregating Rs. 3.02 crores. Of the others, two are issuing part of their capital to their foreign collaborators, one of which will offer a further part to an Indian company. Two companies are offering a share of their capital for subscription by the public and two are partly issuing preference shares. The following are the details:

The Minerals and Metals Trading Corporation of India Ltd, New Delhi (proposed), a Central Government undertaking, has been given consent to issue capital of Rs. 2 crores divided into 200,000 equity shares of Rs. 100 each for cash at par to be issued privately. With this capital, a new corporation will be established for organising and undertaking exports and imports of minerals, ores and concentrates, metals, etcetera.

Shakti Insulated Wires Private Ltd, Bombay, has been granted consent to issue capital of Rs. 17 lakhs. Of this, Rs. 12 lakhs will be in equity shares of Rs. 100 each for cash at par and 5,000 in 9.3 percent cumulative redeemable preference shares of Rs. 100 each for cash at par. The new capital will be used for manufacturing cotton and paper covered, superenamelled and bare and bright annealed copper wires and strips.

R. R. Loiya Textiles Limited, Nagpur, is raising fresh capital of Rs. 40 lakhs divided into 35,000 equity shares of Rs. 100 each and 5,000 9.5 percent cumulative redeemable preference shares of Rs. 100 each. All the shares will be issued for cash at par. Out of these shares, the entire preference shares and equity shares of the value of Rs. 17.5 lakhs will be issued to the public by prospectus. The money is needed for manufacturing cotton yarn.

Frick India Ltd, Delhi, is to issue Rs. 25 lakhs in equity shares of Rs. 10 each at par. Of this capital, Rs. 12.75 lakhs will be subscribed by Frick Company, U.S.A., and used for the purchase of plant and machinery. Shares of the value of Rs. 6,24,930 will be offered to the public for subscription and the balance to be subscribed privately for cash at par. The money will be used for the manufacture of industrial refrigeration machinery.

Mahindra Owen Ltd, Bombay, is to issue capital of Rs. 20,95,000 in equity shares of Rs. 100 each at par. Of this amount, shares of the value of Rs. 10,68,400 will be issued for cash to Mahindra and Mahindra Ltd and Rs. 10,26,600 to Rubery Owen and Company Ltd, U.K., for consideration other than cash against the supply of plant and machinery. The money is to be used for the manufacture of trailers of various types axles and automotive parts.

The Stock Markets

PRICES RISE ON GOOD CORPORATE NEWS

Wednesday Evening.

THE Calcutta stock market has been very steady during the past week. Despite profit-taking at the bulges, the prices of selected shares have improved. Bulls have been buying more aggressively, so bears have been compelled to cover their sales at rising prices. The cheerfulness has been sustained by several favourable developments. The corporate news has, by and large, been good. Some good dividends have been declared and the profit trend is better than was expected. Operators take the view that in the coming months the foreign exchange shortage will be relieved to some extent. Although the import policy for the current half-year does not contain any changes for established importers, it is believed that the Government will permit bigger imports by actual users. The decision about actual users' imports is likely to be communicated shortly. The World Bank at its recent annual meeting has indicated that it will consider sanctioning loans to the private sector without any government guarantee. This may facilitate the grant of credits to private enterprise. The Bank also proposes to liberalise its lending policy in other ways.

Reports about the recent deliberations between the Central Finance Ministry and the Reserve Bank have hinted at the possibility of the latter liberalising the supply of credit. So it is hoped that trade and industry will receive more financial assistance from banks. The Industrial Finance Corporation too is likely to take steps to supply more funds to industry. Lyons Range is inspired by the belief that during the winter session of the Lok Sabha, the Finance Minister will modify the fiscal system to restore confidence.

Despite rising optimism, turnover has been largely in clearing shares. Support has so far been mainly speculative. Investors are inclined to proceed cautiously and they do not want to extend their commitments in a big way until concrete measures are taken to relieve the tax burden on industry. Since the outlook for profits and dividends has been affected by heavier taxation, they are not likely to take risks unless the prospects improve.

The lull in the border situation has helped to raise the morale of operators. The growing rift between Russia and China has prompted the belief that the latter may be persuaded to accept the Colombo proposals fully. But there is a big question mark: will the recalcitrant attitude of the Pakistani Government change? This apart, investors are inclined to wait and watch how the Kamaraj Plan evolved for revitalising the Congress Party works out in practice.

After an earlier reaction following the decline in the production of the Indian Iron and Steel Company for September, the price of the scrip has improved on sustained buying. The output of pig iron has declined from 115,800 tons in August to 102,648 tons in September and that of steel ingots from 90,125 tons to 81,947 tons. The production of salable steel has fallen from 70,905 to 63,191 tons. Despatches of salable steel have dropped from 69,808 tons to 60,905 tons. The managing agents of the Company have pointed out that the decline in production has been due to operational troubles in one of the large blast furnaces in Burnpur, which has so far produced over 2 million tons in its present campaign. The roughing mill motor has also been burnt out. The repairs in a finishing mill have also contributed to the decline.

Among engineering shares, support has been forthcoming for Guest, Keen, Williams, Indian Standard Wagon, Jessop, Burn and Texmaco. Kumardhubi, Britannia Engineering and Jay Engineering have hardened. Turnover in the miscellaneous section has largely been in clearing shares. Indian Cable, in particular, have met with sustained buying on the prospect that a part of the dividend recently declared will be tax-free. Rohtas have gained on producing better results. Indian Aluminium, Indian Copper, Dunlop Rubber and Hindustan Motors have been steady. Jaipur Udyog and Kesoram Industries have also gained. Alkali Chemical, Union Carbide, Goodyear India, British Paints and Metal Box have risen. Managing agency shares have generally been sluggish. Stray business in Martin Burn and Jardine Henderson has been transacted. There has been little support for electric company shares. Calcutta Electric have been sluggish. Bank shares have been neglected.

Among new shares, interest has been taken in Hindustan Aluminium, Hindusthan Twyfords and Phillips Carbon. In insurance shares, Ruby General have been steady. Among paper shares, Orient have improved on influential support. Sirpur, Titaghur, India Paper Pulp, Bengal and Ballarpur have met with support. Sugar shares have been offered without attracting attention. Dyer Meakin Breweries have nevertheless been steady. But it should be borne in mind that this Company's main interest lies not in sugar but in liquor.

Selected jute shares have met with support at rising prices. The investors take a fairly encouraging view of the outlook for marketing gunnies. Although mill stocks of jute goods at the end of September have risen marginally, it is felt that the stocks may be sold without much difficulty. Birla, Anglo-India, Champdany, Ganges, India, Howrah, Kamarhatty, Northbrook, Delta, Kelvin and Union have been prominent.

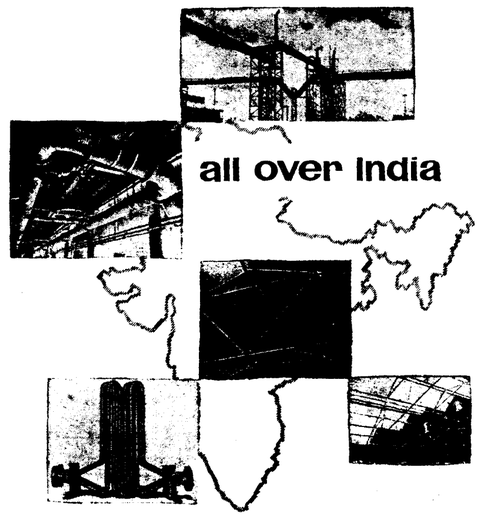
Turnover in coal shares has been small and stray business has been transacted in Burrakur, Bengal, Amalgamated and Central India. In the cotton mill section, J. K. Rayon have recovered on short-covering. Support has been extended to Jay Shree Textiles, Dunbar and Bowreah. Good Assam and Dooars gardens have hardened further. Among Dooars companies, Hasimara and Huldibari have been bought. Among Assam gardens, Tezpore, Dhelakhat and Bishnauth have been steady. In Darjeeling group, Soom and Margaret Hope have attracted attention.

Government securities have been firm. Although strong institutional support following easier money conditions has been forthcoming for short- and medium-dated stocks, turnover has been limited due to the shortage of sellers. The prices of long-dated securities have also gained. The 3 percent Conversion loan 1986 has closed higher at Rs. 66.08. Prices of State Government loans have also risen. Interest has been taken in selected preference shares and debentures.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during September 1963 was: iron 140,600 metric tons; steel ingots 144,100 metric tons and salable steel 119,400 metric tons.

Bombay



LIBERAL CREDIT IN PROSPECT

TURNOVER MOSTLY IN CLEARING SHARES

Wednesday Evening.

NEAR-BOOM conditions have prevailed in the Bombay stock market during the past week. After an earlier reaction, share prices have hardened on a broad front due to renewed support. There was also nervous short-covering since holders were reluctant to sell even at higher levels. Turnover was, however, largely confined to clearing shares. Operators are inclined to take a

bullish view of the near-term trend. It is hoped that the Central Finance Minister will soon take steps to liberalise the supply of credit. The reduction in the rates of emergency risks insurance premiums for the current quarter suggests that the Government is inclined to adopt a more pragmatic policy in dealing with trade and industry.

Tata Steel ordinary have risen to Rs. 145.50 on hectic support. The decline in the Company's production during September has been overlooked because the output during the first six months of the current financial year is higher than that for the corresponding period of 1962-63. Among engineering shares, Tata Locomotive, Mukand Iron, Premier Construction and Larsen and Toubro have met with support. Motor-vehicle shares have shown a mixed trend. Hindustan Motors have met with influential support, but Premier Automobiles have been sluggish.

Selected cotton mill shares have scaled new peaks on influential buying, combined with short-covering. Century, Bombay Dyeing and Standard have risen sharply. Support has been extended to Kohinoor, Svadeshi, Morarjee, Tata Mills and Gokak. Fair business has passed in India United ordinary.

Miscellaneous shares have moved up in sympathy with the general trend. In the cement group, Associated Cement and Digvijay have been prominent. Among sugar shares, Belapur and Walchandnagar Industries have been steady. In the mining section, Shivrajpur Syndicate have met with scattered support. In steamship company shares, Scindia Steam have improved on brisk short-covering. Among rayon shares, National Rayon have been boosted on expansion prospects. Gwalior Rayon have been steady. Chemical shares have been fully steady. Tata Chemical, Indian Dyestuff and Polychem have been wanted. Voltas have improved sharply on a shortage of scrip. Interest in new shares has been at a low ebb. Stray business in Synthetics and Chemicals and Permanent Magnets has been transacted.

Bank shares have been quietly steady, and small business has been transacted in Central Bank, Bank of India and Bank of Baroda. New India Assurance have been steady in the insurance section. Electric company shares have been fairly steady. Business has passed in Tata Hydro, Ahmedabad and Bombay Suburban.

Madras

OUTSIDE ADVICES IMPROVE TONE

SELECTED SHARES HARDEN

Tuesday Evening.

THE Madras stock market has shown considerable improvement during the past week. Turnover in clearing and cash shares has broadened and prices of selected shares have hardened. Higher advices from Bombay and support from outside sources helped improve the tone. It is generally believed that the outlook might improve further since the Government might soon modify the fiscal system to promote economic development.

Government securities have been steady, and selected State Government loans have improved on balance. Bank shares have been sluggish, and stray business has been done in Canara and Indian Overseas. In electric companies, Ellore have been transacted at Rs. 22 on the prospect that the Company might make a further payment of Rs. 5 a share, subject to tax. Business has passed in Vellore at Rs. 14 and in West Coast at Rs. 17.35. In the sugar section, Deccan have been fully steady at Rs. 10.50 on producing better results. Andhra have been done at Rs. 17.36 since the Company has decided to issue 100,000 ordinary shares of Rs. 10 each for public subscription, at par. E.I.D. have improved to Rs. 37.50 and Mysore to Rs. 46.75.

Among planting shares, Cochin Malabar have risen to Rs. 6.10 and Consolidated Coffee to Rs. 19.40. Blue Mountain have come to hand at Rs. 2.67 and Periakaramalai at Rs. 3.68. Ouchterlony have been done at Rs. 4.35. Kalpetta have changed hands at Rs. 12 on declaring a taxable ordinary dividend of Rs. 11.25 percent on the increased capital. Kailas have met with support at Rs. 6.15 on the prospect of a bonus share issue in the proportion of one ordinary share for every two shares held. Kalasa have come to hand at Rs. 4.25. The Company has decided to redeem the entire debenture for Rs. 1.05 lakhs. Kumergode have been transacted at Rs. 3.70 and the Company has decided to issue bonus shares in the proportion of one share for every two shares held. Support has been extended to Teekoy at Rs. 6.18, to Emerald Valley at Rs. 6.50, to Coffee Lands at Rs. 14.87 and to Rajendra at Rs. 11.25.

Among textile shares, South India Viscose have hardened to Rs. 133.20 and Travancore Rayon to Rs. 26. Lakshmi have improved to Rs. 136 and Madura to Rs. 33. Business has passed in Buckingham at Rs. 264.80 and in Bangalore Woollen at Rs. 226.80. Akkamamba have been done at Rs. 9.44. The Company has decided to issue 5,000 cumulative redeemable preference shares of Rs. 100 each for public subscription, at par. Ramakrishna have come to hand at Rs. 217.80 and Rayalaseema at Rs. 136. Mettur have been steady at Rs. 278 and Premier at Rs. 281.

In miscellaneous shares, Aluminium Industries have been steady at Rs. 17.10 and Ashok Leyland at Rs. 7.45. The latter Company has issued rights ordinary shares in the proportion of one new share for every nine shares, at par. Mettur Chemical have been done at Rs. 13. The Company has decided to issue fresh debenture for Rs. 1.37 lakhs. Among cement shares, Dalmia have been steady at Rs. 12.70 and India at Rs. 5.75. In the paper section, Seshasayee have improved to Rs. 7.50 and Mysore to Rs. 12.81. Textool have met with support at Rs. 155 on paying a taxable ordinary dividend of 12 percent. Tube Investment have been steady at Rs. 213 and Spencer at Rs. 20.12. Support has been forthcoming for Forest Industries at Rs. 2.03 and for Rane (Madras) at Rs. 8.02. Madras Rubber gained fractionally at Rs. 14.85, but Kirloskar Electric have been sluggish at Rs. 18.12.

London

GOOD CORPORATE NEWS BOOSTS PRICES

RANK ORGANISATION OUTSTANDING

London, 9th October.

ALTHOUGH political uncertainties had a restrictive influence on business, the stock market gave a good account of itself over the past week. There was a steady selective demand for equities on most days and with the supply of stock becoming scarcer, prices sometimes advanced rather out of proportion to the business transacted. In the last two days, of the week, there was a tendency for investors to hold off while awaiting the outcome of the Conservative Party conference. Some people were tempted to take to profit-taking. This caused some reaction in prices. Good company news of assistance at times and the excellent results from Plessey made a marked impression. Rank Organisation was an outstanding feature on further consideration of the good results and the group's prospects. Sugar shares were wanted following good company results. G.E.C., Dunlops, Boots and B.M.C. were other leaders to have gained ground. Dollar stocks gave a mixed performance. In the gilt-edged market, it was the short-dated stocks which were favoured most. Further comment on the South African political situation did not help gold shares, and although one weekly newspaper recommended gold shares it was of little influence. Coppers were very quiet. Burmah gained little benefit from the interim dividend. Rubbers responded well to selective buying, and teas made some headway.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st October and 7th October, 1963)

Cowhides: Wet salted (Ord) 8,000 pcs. on the basis of Rs. 8 to Rs. 11.25; Wet salted (Slaughtered) 31,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28; Wet salted (Ord.) 2,000 pcs. on the basis of 94 nP.

THE CALCUTTA MONEY MARKET

SMALL INCREASE IN ADVANCES

Wednesday, 9th October.

THE general level of advances has increased slightly in the Calcutta money market during the past week. More money has been given to the jute mills, and to the iron, steel and engineering units, but cotton advances are unchanged. The credit requirements of the sugar mills, and of the foodgrains and seeds trade, have declined a little. In the interbank market, conditions have been changing fairly rapidly. The call rate rose to 4 percent at one time, but has eased to 3¼ percent at the close.

The exchange market has been active, with a good supply of tea and gunny bills. The demand for remittances has been fairly strong. In London, sterling has fluctuated narrowly, and the closing quotations show a mixed trend.

SILVER WAS EASIER IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 230.50 to Rs. 230 quoted for ready. The London and New York prices were 111½d and 129.3 cents. Gold was also quiet and the price of 14-carat fell from Rs. 64.50 to Rs. 62.75.

DURING THE WEEK ENDED 4TH OCTOBER, Government of India Treasury bills for Rs. 56.60 crores were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 8th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.318 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 14th October.

IT IS STATED THAT 91-DAY Intermediate Treasury bills will be sold from 9th October to 12th October at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 3rd October to 5th October amounted to Rs. 1 crore.

THERE WERE RISES OF Rs. 28.38 crores to Rs. 2,220.69 crores in active notes and of Rs. 22.91 crores to Rs. 2,247.80 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 4th October, 1963. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 22 crores to Rs. 1,914.31 crores. This was done by transferring securities from the Banking Department in which investments declined by Rs. 22.44 crores to Rs. 173.27 crores. Deposits of the Government of India rose by Rs. 13.99 crores to Rs. 78.29 crores, while those of other Governments fell by Rs. 3.54 crores to Rs. 2.54 crores. Balances of scheduled banks at Rs. 75.66 crores showed a decline of Rs. 9.99 crores. Their loans from the Reserve Bank rose from Rs. 1.88 crores to Rs. 3.14 crores of which advances against usance bills amounted to Rs. 7 lakhs (Rs. 10 lakhs). Balances held abroad rose by Rs. 98 lakhs to Rs. 8.60 crores. Foreign securities in the Issue Department also increased by Rs. 3 crores to Rs. 92.46 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 27th September, 1963, shows a rise of Rs. 2.02 crores to Rs. 599.65 crores in total deposits. Investments in Government securities are up by Rs. 4.04 crores to Rs. 318.41 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.32 crores to Rs. 250.28 crores. Cash and balances are, in consequence, shown at Rs. 28.15 crores or Rs. 3.30 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 27th September, 1963, shows Demand and Time liabilities at Rs. 1,108.81 crores (Rs. 24.27 crores on account of borrowings from banks) and Rs. 1,316.22 crores (Rs. 24.42 crores), compared with Rs. 1,107.81 crores (Rs. 24.06 crores) and Rs. 1,312.32 crores (Rs. 25.73 crores) in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 27 lakhs and Rs. 2.42 crores to Rs. 50.92 crores and Rs. 81.50 crores, respectively. There is a rise of Rs. 6.78 crores to Rs. 779.43 crores in investments. Advances and bills discounted at Rs. 1,465.69 crores show a rise of Rs. 81 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.4 percent and 60.4 percent, against 5.6 percent and 60.5 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 11-10-63

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
11-10-63	14-1-64	2,00,00	Rs. 2.318
4-10-63	7-1-64	2,00,00	Rs. 2.318
27-9-63	30-12-63	2,00,00	Rs 2.318%
20-9-63	23-12-63	2,00,00	Rs 2.318%

JOHN FOWLER (INDIA) LIMITED

Registered Office: Marshall's Building, Ballard Road, Fort, Bombay.

EXISTING & PROPOSED ACTIVITIES :

(a) The Company was incorporated as a private limited company on 22nd December, 1953. The Company on 16th May, 1963 became a Public Company.

(b) The Company was formed to acquire the business of John Fowler & Co. (India) Ltd., with the object of Importing spare parts into India and servicing Road Rollers, Diesel Locomotives, etc., supplied to India by John Fowler & Co. (Leeds) Ltd.

(c) The Company entered into an Agreement on 27th September, 1957 with Vokes Limited of England for manufacturing of Filters and Elements for mobile and stationary internal combustion engines and also of industrial filters. The Company was issued a manufacturing License by the Government of India bearing Nos. L/8/B-5/N-2/58 of 16th July, 1958 and L/4-2/N-27/60 of 22nd February, 1960, for the manufacture of the said Filters and Elements.

(d) The Company entered into an agreement with Stream-Line Filters Limited of England, a subsidiary of Vokes Group Limited, for the manufacture of lubricating and insulating and aviation oil and fuel Filters. A manufacturing License bearing No. L/4(2)/21/61-AEI dated 1st March, 1961 was issued to the Company.

(e) The Company concluded an Agreement with Vokes-Cardwell Ltd., of England, an Associate of Vokes Group Ltd., on 9th April, 1962 for the manufacture of tobacco processing machinery used for primary processing of tobacco. The Company was issued in connection therewith a manufacturing License bearing No. L/8/B-2/21/61/MET dated 24th November, 1961.

(f) The Company's existing and proposed activities would be carried out at its factories situate at—

(a) 136A, Rash Behari Avenue, Calcutta-29.

(b) Sarjapur Road, Bangalore.

(g) Under licences approved by the Government of India, the Company is either manufacturing or will undertake manufacture of proprietory products of the following Companies :

(i) **Vokes Limited :** (now Vokes Group Ltd.)
Large range of equipment for filtration of air and liquids.

(ii) **Stream-Line Filters Limited :**
Filtration equipment for the clarification and dehydration of lubricating, transformer and fuel oils and gases.

(iii) **Vokes-Cardwell Limited :**
Equipment for threshing, cleaning and classifying of leaf tobacco and pneumatically conveying it to cigarette making machines.

BOARD OF DIRECTORS :

1. **Mr. Frank Charles Kraty,**
Knotts Cottage,
Cross-in-Hand,
Sussex, England.

2. **Mr. Norman Wesley Keyworth,**
Britannia Chambers,
Gainsbourgh,
England.
Director of :—
Marshall Sons & Co Ltd., (U.K.)
Marshalls Tea Machinery Co., Ltd. (U.K.)

Bangalore.

SHARE CAPITAL

AUTHORISED :

	Rs.
5,00,000 Equity Shares of Rs. 10 - each	50,00,000

SUBSCRIBED :

40,360 Equity Shares of Rs 10/- each fully paid up	4,03,000

PROPOSED ISSUE TO THE PUBLIC :

1,06,700 Equity Shares of Rs. 10/- each fully paid up	10,67,000

DATES OF OPENING AND CLOSING OF SUBSCRIPTION LISTS

The subscription list will open at the commencement of Banking hours on 15th October 1963 and will be closed at the close of the Banking hours on 23rd October 1963.

Application forms along with copies of the Prospectus can be had from the underwriters, brokers and bankers to the issue and from the Company's Registered Office.

UNDERWRITERS :

1. **Investment Corporation of India, Ltd.**
'Ewart House',
Bruce Street, Bombay-1.

2. **Messrs. Lewis & Jones,**
Bank of Baroda Building,
Apollo Street, Fort, Bombay-1.

3. **Messrs. Place, Siddons & Gough (Private) Ltd.,**
6, Lyons Range, Calcutta-1.

BANKERS :

1. **National & Grindlays Bank Ltd.,** having their Branches at Bombay, Calcutta, Madras, Bangalore, New Delhi and Hyderabad.

2. **United Bank of India Ltd.,** having their Branches at Calcutta, Bombay, Madras, New Delhi and Ahmedabad.

3 **The Central Bank of India Ltd.,** having their Branch at Indore.

BROKERS :

THE BOMBAY GAS COMPANY LIMITED

CHAIRMAN, MR. N. K. JALAN'S ADDRESS

Chairman's Address by Mr. N. K. Jalan at the Annual General Meeting of The Bombay Gas Company Limited, on the 3rd October 1963, at Bombay.

Gentlemen,

It gives me much pleasure to welcome you to the Annual General Meeting and to present to you the Balance Sheet and the Annual Accounts, together with your Directors' Report, for the year ended 31st December, 1962. These have been in your hands for some time now and, with your permission, we may take them as read.

Disappointing Financial Result

You would have found that the Accounts for the year 1962 reveal, once more, and for the fourth year in succession, an extremely poor and disappointing financial result of the working of the Company. The Accounts under review show a net loss of Rs. 59,636, after providing for taxation at Rs. 52,507. If the income of Rs. 1,32,707, which was derived from the investments of the Company, is excluded, the net financial result of the main operations of the Company, namely, production and distribution of gas, would show a loss of Rs. 1,92,343. To arrive at a correct assessment of the financial result of the Company's working in 1962, however, it is necessary to exclude a further sum of Rs. 1,36,200, being the proceeds of bills for the consumption of gas by the domestic consumers in the earlier years, of which the booking had fallen into arrears due to the altered system of meter reading introduced in 1959 and which were actually booked and realised only in 1962. On this basis, the production and sale of gas by the Company during 1962 actually resulted in a loss of no less than Rs. 3,28,543. On account of this markedly unfavourable financial outcome of the Company's working, your Directors regret very much to say that they were not in a position to recommend the payment of any dividend to the stockholders for the year 1962. This is the first time, since the Company was taken over by the present management seventeen years ago, that a dividend has been passed. It may be recalled that the dividend rate for 1959 and 1960 was 6.5 per cent gross or 4.55 per cent net, each, and for 1961, 5 per cent subject to tax, i.e., 3.5 per cent net and that, even in paying the paltry dividend of 3.5 per cent net for 1961, the Directors had to draw upon the General Reserves of the Company. In your Directors' Reports for the preceding three years, it was explained in detail how a continuous deterioration in the financial condition of the Company had been brought about by progressively increasing costs of coal, railway freight, taxes, wages and amenities for labour, etc. There was a further rise in the main items of cost during the year under review and the result was, as shown by the Accounts, a further serious worsening of the financial position of the Company to the point of a crisis.

Mr. N. K. Jalan

Heavy Increases in Costs

A clear idea of the rapidly increasing costs of manufacturing and distribution of gas will be given by the following figures :

	1957 (Rs.)	1962 (Rs.)	Increase (%)
Price of coal (per ton)	48.12	60.36	25.44
Total cost of coal used	43,14,132	63,18,424	46.46
Wages bill	22,26,922	27,77,468	24.72
Amenities for labour	4,03,634	5,73,198	42.01

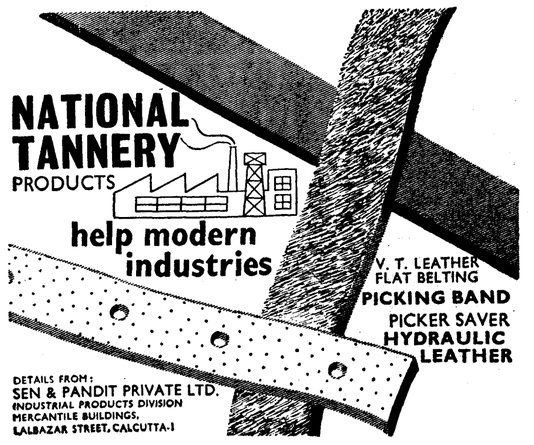
It would be noted that the above three items alone caused an increase in expenditure by as much as Rs. 27,24,401 or nearly 40 per cent. In the last few months of the current year (i.e., 1963), the increases in the cost of coal, freight, Emergency Risks Insurance premium (Rs. 1,74,452), cost of electricity, etc., totalled up to, approximately, Rs. 4,44,000 per year. The effect of this further heavy increase in cost in the current year is to aggravate the financial position of the Company still further day by day. And since three quarters of the year have already passed by without any financial relief having been granted through a price increase, it is to be feared that the financial result of the Company's working for the current year would be far worse than ever before, unless urgent and adequate relief is offered to the Company through a substantial rise in the price of gas.

Unsatisfactory Coal Supplies Still Continue

In my address at the last General Meeting, I informed the stockholders how the present system of loading coal in box wagons had been causing serious losses to the Company both financially and operationally. As the shortcomings of the system still continue to affect the Company adversely, I should like to comment, once again, upon this important matter. As the stockholders are no doubt aware, a box wagon has a capacity of 55 tonnes as against a capacity of 22 tonnes of the four-wheeler wagon in which coal was loaded previously. Moreover, to reduce marshalling time, for the last two years, the Railways have adopted the system of Rake Loadings. A Rake consists of 45 (four-wheeler) wagons on South Eastern Railway and 70 (four-wheeler) wagons on Eastern Railway. Therefore, 18 box wagons on the South Eastern Railway and 28 box wagons on the Eastern Railway constitute a rake. As there are very inadequate numbers of heavy weigh-bridges with siding accommodation, at important stations, short loading of coal cannot be checked most often. For this reason, the Company not unoften receives a shorter supply of coal than it has paid for. Secondly, as it is difficult for the collieries to load a rake of box wagons with good quality coal within the demurrage-free time of 5 hours, there is often a tendency to load inferior coal along with good coal. In consequence, the Company receives considerable quantities of low-quality coal, although it has to pay for good quality coal. This is a further source of loss to the Company. Thirdly, the free time allowed for loading and unloading of coal was reduced from 12 hours to 9 hours, then to 6 hours, and thereafter to 5 hours, in the case of four-wheeler wagons. Now, although the carrying capacity of a box wagon is 2½ times that of a four-wheeler, the free time allowed remains the same 5 hours, instead of being increased *pro-rata* to 12½ hours. Like many other coal users, our Company's unloading arrangements and sidings are related to four-wheelers and not to box wagons, and, consequently, the Company is not able to unload the coal supplies within the demurrage-free time and, therefore, has to incur heavy demurrage charges. We would request the railway authorities to review the position and suitably extend the free time for unloading of coal and thereby save the coal users from unfair demurrage charges.

Gas Advisory Committee

As a result of our representations regarding the serious deterioration of the financial position of the Company, the Government of Maharashtra was pleased to appoint a new Gas Advisory Committee on the 16th February, 1963. In response to the Committee's request to furnish it with relevant information and cost data bearing on the case for an increase in the price of gas, the Company submitted a detailed Memorandum, including carefully worked-out cost estimates and other important information, on the 16th March, 1963. Detailed information on several aspects of the Company's operation was called for and furnished.



The Company stated that, since the take-over by the new management, it had expanded the sale of gas by over 60 per cent and increased the number of gas connections from 14,831 to 18,261. It was explained that, if the per capita consumption of gas had remained at the level of 1946, the increased gas supply would have been sufficient to enable the Company to give as many as 9,000 new gas connections within the period. However, due to a substantial increase in gas consumption per consumer, the number of new gas connections had to be limited to a little over 3,400. The Company also claimed that the quality of the service provided by it compared favourably with that of the most highly reputed public utility companies, such as the leading electric supply companies of the country.

Price Increases for Basic Commodities and Services

Ever since price control for essential commodities and services was instituted, the Government and other price-fixing authorities have sanctioned repeated and substantial price increases to meet cost increases either as a result of ad hoc inquiries or under an Escalator Clause. Thus, successive price increases during all these years have been granted in respect of basic commodities, such as iron and steel, cement, coal, etc., and basic services, such as electricity, telephones and postal rates, rail fares and freights, coastal freights, air fares, B.E.S.T. bus fares. Indeed, it is now an established principle of price fixation in India, in respect of controlled commodities and services, that increases in the costs of basic factors, such as coal, wages, electricity, rail freights, rates and taxes, Emergency Risks Insurance premium, etc., should be covered by adequate price increases. It is also an established principle that controlled prices should provide for sufficient return on capital so as to permit the distribution of dividends at prevailing rates for comparable industries and also a sufficient margin for reserves, to be ploughed back into the industry by way of rehabilitation and expansion. These principles have been followed in India over many years in the cases of practically all controlled commodities and services. Incidentally, these are also the principles that are followed by price-fixing authorities in other advanced industrial countries of the world.

Case for an Increase in Gas Price

But, unlike other important concerns producing basic commodities or services and receiving the benefit of price increases to meet cost increases, time and again, the Bombay Gas Company had the unenviable distinction of providing a unique instance in the country's post-war economic history, of the price of its service having been pegged down to a figure which was slightly lower than that of 1926, even though the costs had indisputably increased by a substantial margin within the period. In the Memorandum submitted to the Gas Advisory Committee, the Company has suggested that, in determining a fair price for gas, the following factors should be taken into account : (a) Actual costs of production and distribution of gas ; (b) provision for reasonable improvement in salaries and wages ; (c) provision for annual bonus ; (d) provision for gratuity ; (e) provision for contingency with an Escalator Clause to take care of unforeseen cost elements arising out of dynamic changes in the economy ; (f) provision for rehabilitation ; and (g) adequate return on capital so as to provide for reasonable dividends to the stockholders and suitable allocation to reserves. In this connection, the Company invited the Committee's attention to the currently prevailing rates of overall return on the invested capital earned by some of the leading public utility companies and certain other high-ranking industrial concerns of the country.

Company's Expansion Programme

The Company's request for an adequate revision of the price of gas, though fully justifiable on the ground of cost increases, was, however, linked up with a definite offer by the Company to undertake a substantial expansion programme designed to enable the Company to give 15,000 to 20,000 new gas connections over a period of three years, at an estimated capital outlay of some Rs. 150 lakhs.

Possible Saving in Foreign Exchange

The Company pointed out that, apart from its importance in the context of the country's determination to step up industrial and defence production, the proposed expansion of gas supplies could result in a saving of the country's much too precious foreign exchange resources to the tune of some Rs. 46.48 lakhs by reason of the resulting reduction in the consumption of imported kerosene for heating and lighting purposes.

High Price of Substitutes

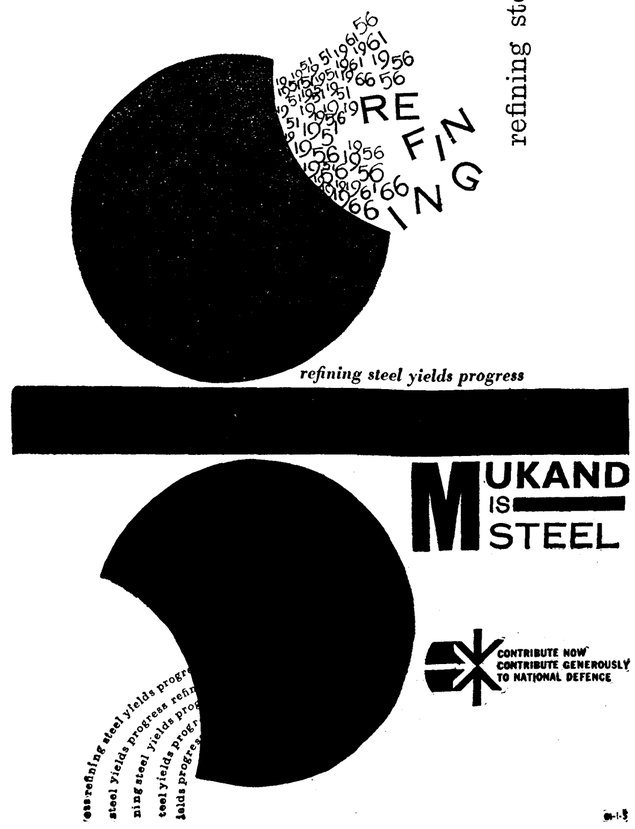
There was one more important and interesting factor which was brought to the Committee's notice. Over the last few years, two of the leading oil companies had placed on the market a close substitute for piped town's gas, viz., Liquid Petroleum Gas (L.P.G.), or, as it is popularly called, bottled gas. The current selling price for this L.P.G., in terms of British thermal units, was almost four times as high as the present rigidly-controlled price of town's gas in Bombay. It is noteworthy that, even at this price, there were reported to be no fewer than 45,000 consumers of L.P.G. in the city of Bombay itself. It was also reported that a far larger number of potential consumers in the Bombay city and elsewhere were eager to obtain supplies of L.P.G. for their use, even at that high price. In view of the fact that, in spite of its appreciably higher price, there was extensive demand for L.P.G. in Bombay and other places, the Company strongly suggested that the Bombay public was certain to welcome a substantial increase in the availability of town's gas even though it would entail a moderate rise in the gas bill on account of heavy increases in the main elements of cost, such as coal, railway freight, taxes, wages and amenities for labour.

We trust that the Gas Advisory Committee would be considering the entire question of price revision in the larger perspective and would recommend an adequate price for gas which would enable the Company to continue to give and extend its good service to the city of Bombay, specially in the context of the current situation and foreseeable future developments in the country. In this connection, we may note the rapid strides which the gas industry has been making in western countries. It may be pointed out that in London there is one gas meter for every five persons, whereas in Bombay there is at present one gas meter for every 225 persons of the population. Recently, a tripartite agreement was signed for the joint sponsorship of a new company formed to extend the network of gas transmission and distribution system in Pakistan. If the Bombay Gas Company is given an adequate price rise, as it has every hope that it will be, it is the Company's determination to go ahead with installation of more and more gas connections in the City, either to private consumers or to such industries as may be specified by the Government, and the Government of Maharashtra would be in a position to demonstrate that, in the matter of amenities, Bombay, which is perhaps the most progressive city in the country from every point of view, is not lagging behind in this matter of the availability of gas, which is the cheapest fuel on tap. As mentioned earlier, we have already given an assurance to the Government that about 15,000 to 20,000 new gas connections would become possible to be given on an adequate price rise being granted, and it will be the endeavour of the Company to fulfil this programme even ahead of schedule. At present there are only two cities in India, Calcutta and Bombay, supplying town's gas. The result of an extension of the network of distribution which the Company will be able to undertake on being granted a price rise would be that the city of Bombay, which is the *Commercial Metropolis of India*, would have taken one more step in the matter of providing amenities and comforts to the citizens of the enlightened State of Maharashtra, which are the hall-mark of every progressive city in the world today.

Plant and Equipment

You will be glad to know that the New Elevated Purifier Box, which, as I informed you on the last occasion, was under construction, had been in commission since 30th December, 1962. On page 13 of the printed Accounts (Statement 2A), you will find that about Rs. 15 lakhs worth of Plant Machinery and Equipments had been newly added to the Capital Block.

Welfare Activities



In the months of October and November, 1962, immediately after the declaration of the national emergency, an appeal was issued by the K.E.M. Hospital Authorities for blood donation. The members of the staff and workers made a very good response and donated 19,000 c.c. of blood. In addition, the workers and the members of the staff gave a contribution to the National Defence Fund to the tune of about Rs. 20,000/-. The workers and staff members continued to take advantage of the facilities provided by the Company in its dispensary at the Gas Works. X-Ray and Screening Plant and Diathermy and Infra-Red Equipments in the Physiotherapy Section were well utilised. The annual medical check up of the employees was conducted as usual.

Appreciation

Before I conclude, I would like to express our warmest appreciation to the workers, the staff and officers, for their wholehearted co-operation, and, specially, to Shri S. Chowdhary, your General Manager and Secretary, and Shri A. S. Rao, your Deputy General Manager, for their invaluable services.

Thank you.

Note : This does not purport to be a report of the proceedings of the Anual General Meeting.

THE NATIONAL NEWSPRINT & PAPER MILLS LIMITED

CHAIRMAN REVIEWS PROGRESS

As Sir A. Ramaswami Mudaliar, Chairman, could not be present at the Meeting, speech prepared by him was read out by Mr. S. N. Mehta, a Director of the Company, who was elected as Chairman of the Meeting held at Nepanagar on 30th September, 1963.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the 16th Annual General Meeting of the Shareholders of the National Newsprint & Paper Mills Limited. The Directors' Report, Balance Sheet and the Audited Accounts for the year ended 31st March 1963, have been in your hands for some time, and with your permission I shall take them as read.

I must apologise for my inability to be present in person, largely due to the difficulties of communication to this somewhat remote place, Nepanagar.

Rise in Production

During the year under review, 26,515 tons of newsprint was produced, an increase of 1,236 tons over that of the previous year. The target for the current year is 30,000 tons which is the capacity indicated for the Plant by the consulting firm which designed and established the Plant.

I have been connected as Director and Chairman of the National Newsprint & Paper Mills Ltd., for over twelve years, and you will excuse me if I give a short review of the progress that has been made durnig this period. Being the first venture of this kind in the country, there were obviously difficulties to overcome before the Mill could come into operation on a satisfactory basis. To these difficulties were added the conditions under which this venture was established. Its location—the raw materials it would use—the supply of water which was essential for the purpose of the Mill and for the township which had inevitably to grow around this area, were so casually dealt with at the inception of the idea, that it produced serious problems which at one time looked almost impossible of solution. Efforts made to overcome these difficulties have not been fully realised by the public who constantly criticise the quality of the paper and particularly its shade. I do not want to go into the manner in which the Board of Directors dealt with these problems and ultimately succeeded in finding a proper solution for them. Difficulties of recruitment of staff had also arisen owing to the rigorous regulations regarding pay and perquisites which the Central Government prescribed.

I must however state, that the great step that was taken by both the Central Government and the Government of Madhya Pradesh in regard to the financing of the scheme, has been the turning point of the fortunes of this public sector venture. In my previous statements I have referred to the fact that the loans given by the two governments were to a certain extent converted into capital and equity shares by the respective governments and that the balance of the loan was repayable with interest thereon to the respective governments. A further concession that was of great value to the Mills was that the M.P. Government agreed that the accumulated interest charges amounting to over 110 lakhs should be frozen and should carry no further interest. The agreement further provided that this accumulated interest should be paid in ten instalments, the first instalment being paid within a year of the reorganisation of the capital structure, i.e., before 1959. Owing to these operations, the position today is that apart from the capital of the two governments and of the private shareholders, all the loans which carried interest have been paid to the two governments, the loans themselves amounting to over 1 crore 37 lakhs. Further, the frozen interest debt to the Madhya Pradesh Government has been reduced from 1 crore 11 lakhs to 66 lakhs, which is the amount now due to that Government.

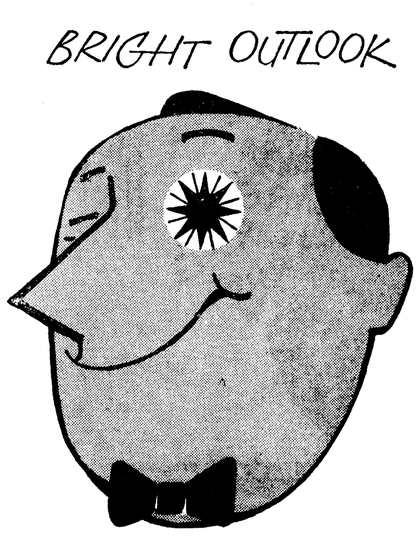
Caustic Soda Chlorine Plant

To meet the very justifiable criticism of the consumers of newsprint regarding the brown shade of your products, the Board decided that a Caustic Soda Chlorine Plant should be constructed and in collaboration with a Swiss Firm, the Plant and Machinery has been obtained and is being installed. It is expected that the production from this Plant will be available for utilisation by the Mill in the first half of 1964.

I referred to the location of this Factory, which as I described, was made in the most casual manner by the entrepreneurs who formed the idea of such a factory. The result has been, that a whole township with a population of over 5,000 had to be gradually established at Nepanagar. The housing had to be done entirely by the Company, schools had to be established, hospital with fairly modern equipment had to be provided for, medical assistance necessary for running the hospital and looking after the patients, men, women and children of the colony, had to be recruited. All these costs have been borne by the Factory. This required an enthusiastic set of officers and workers to join together in running the Factory in fairly economic conditions and it is gratifying to the officers and workers, as well as to the Board, to receive a Certificate of Honour presented by the President of India, to the National Newsprint & Paper Mills Ltd., Nepanagar, for satisfactory performance during the year 1962.

The Management did not content itself with merely attempting to reach the target of 30,000 tons production, fixed initially by the designers of the Plant. For the last three years they have had under consideration, the expansion of the capacity of the Factory, and as the Directors' Report says, have continuously examined with the help of the experts of the forest department of the Madhya Pradesh Government and the Technical Advisers of the Government of India, the availability of raw materials for doubling the capacity of the Plant. The Board has now decided to apply to the Government of India for licence for carrying out substantial expansion which may reach 75,000 tons instead of the present production of 30,000 tons.

Improving Quality



With a view to improving the quality of the paper, experiments are being made for a new method of treating the wood pulp. These experiments have, on the laboratory scale proved successful, and it is hoped that by the utilisation of the caustic soda produced at our own plant, and new methods adopted for treating the hard wood, there will be no serious complaint about the quality of the paper both in the colour and in tensile strength.

In connection with the actual running of the Factory, while I have paid a tribute previously to the Managing Director, Mr. S. L. Visvanadhan, and to the Assistant Works Manager and other technicians in charge of the Mill, I must pay a special tribute to the new Managing Director, Mr. P. S. Kothari, who has given a great impetus to the production in the Factory. I should also like to mention Mr. Singhania who has borne much administrative responsibility and has helped the Board very considerably.

One last word about the net profit which is indicated in the Balance Sheet and how it is proposed to be utilised. The profit after deducting depreciation and development rebate and a small reserve to doubtful debts, amounts 50,19,549.28. There was still a debit balance at the beginning of the year under review of 24,82,980.95. After adjusting the debit balance, the amount at credit will be 25,36,568.33. This profit would have allowed the distribution of a 5 per cent dividend subject to tax on the entire shareholding, and I would have recommended to my colleagues in the Board to accept the proposal, but for the fact that at the last moment, we were presented with a contingent liability from income-tax assessment, which would have absorbed, if correct, the entire profit and a considerable sum over it. The assessment is the subject of an appeal and I am fairly confident that the Company will ultimately be found not liable to this taxation. I have been working in the hope and expectation that during my Chairmanship, I shall be in a position on behalf of the Board, to declare a substantial dividend to the shareholders. Knowing the position of the Company and its working, I feel confident that during the current year 1963-64, the Company will be in a position to declare a dividend, perhaps even an interim dividend during the course of the year. I would like therefore, first to pay tribute to the private shareholders for the patience they have shown and the confidence they have reposd in the successful working of this public project.

My final duty, and it is a pleasant one, is to record my appreciation of the staff and workers for their wholehearted co-operation in making this project a success. To every one of them, from the unskilled worker through all the grades to officers and management, I should like to express my high appreciation for their devoted work.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

New Delhi

EXPERT BODY CONSIDERS STEEL TARGET FOR FOURTH PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THE committee which is considering the fourth plan steel target, with the Secretary to the Central Ministry of Steel, Mr. N. N. Wanchoo, as its chairman, held its first meeting in New Delhi last week. The planners, it is reported, favour a target of 20 million tons, against 18 million tons suggested by the Lokanathan Committee. But the latter has not indicated the cost of raising steel production from 10 million tons in the third plan to 18 million tons in the fourth.

Certain aspects of the problem need to be examined closely. First, the actual production of steel by the middle of the fourth plan is estimated to be 7 million tons. In other words, India will have to stage a leap forward in steel production from 7 million to 20 million tons within a period of two-and-a-half years. Secondly, it takes about thirty months to place orders for equipment and for the plant to go into actual production. Working backwards, it takes a year to obtain tenders and place firm orders for equipment. Before that, it takes at least 12 months for preparing a project report and examining it. In other words, if credit arrangements had already been made, the plans framed in 1963 for new plants and the expansion of the existing ones may yield results by about 1971. Even if these plans materialised, it is doubtful whether the increased production would be of the order of 18 million or 20 million tons. The establishment of the Bokaro steel plant could go a long way in raising production. But the cost of Bokaro is estimated at Rs. 500 crores and each million tons of additional steel could easily cost Rs. 100 crores. The outlay on additional steel production of 11 million tons during the fourth plan is, therefore, estimated at Rs. 1,200 crores. This should provide an indication of what final outlay on steel under the fourth plan is being talked about.

F. I. C. I.

Levies on Exports

In a Press note issued last week, the Federation of Indian Chambers of Commerce and Industry said: "The Federation's stand all along has been that the State Governments must pursue an active rôle in promoting exports and should not merely concern themselves with the question of giving relief in the matter of sales tax. There are various State levies, such as electricity duty, royalties, cesses and the like which impinge on costs. As for sales tax, it is important that the State Governments should take immediate steps to reduce its incidence on export products and also devise ways and means to enable exporters to obtain a rebate, on an *ad hoc* basis, of sales tax paid on raw materials, accessories and components of the finished products exported."

In this context, a report of India's trade representative in Aden, which is reproduced below, is interesting:

Lungi is a traditional dress of the Arabs in Aden. On a rough estimate, it is gathered that, nearly 3,500,000 yards of cloth in the form of *lungies* enter the Aden market every year. Japan, India and Syria are the main supplying countries, but Japan dominates the local *lungi* market. The following are the main causes for the popularity of rayon *lungies* imported from Japan: (i) extremely low prices; (ii) readiness and capability of Japanese manufacturers to offer products strictly in accordance with the samples, designs and patterns furnished by prospective buyers; and, (iii) the periodical introduction of new and modern designs in the market.

Lungies in darker shades are generally popular in this market, but big multicoloured "checks" with a dark background are also preferred. Each Japanese *lungi* is wrapped in cellophane paper; ten *lungies* are put in a bundle wrapped in brown kraft paper; 25 to 30 bundles (depending on the order) are then put in a wooden case. The packing of Indian *lungies* is also satisfactory, since there are comparatively few complaints from local importers.

Reasons for Setback

Of late, the report continues, the number of *lungies* imported from India has been showing a steep decline. Indian handloom *lungies* are gradually losing their popularity in the local market, due to competition from Japanese *lungies*. The main reasons for this setback are: (i) Higher prices of Indian products, compared with Japanese *lungies* manufactured by power-looms; (ii) clinging to old designs and apathy towards introducing new patterns; and, (iii) unwillingness of Indian manufacturers and the incapacity of the handloom industry to comply with the designs, etcetera, suggested by importers.

"The position of Indian *lungies* in Aden which has been one of their major markets for decades is rather precarious. It calls for a realistic approach and a new outlook towards the problem to meet the challenge facing the Indian export trade in *lungies*. This requires, it is felt, complete reorientation of the mechanism and mode of production, leading to the manufacture of the right product at competitive prices," the report says.

The Federation urges the Government to make it profitable for the Indian trading community to undertake exports. As the report from India's trade representative in Aden shows, it is not high prices alone which are affecting India's *lungi* exports. It is the inability of Indian exporters to move with the times.

FREIGHT RATES

Rise Resented

Mr. G. Venkateswara Ayyar, chairman of the Consultative Committee of Shipping Interests in Overseas Trade and Secretary to the Central Ministry of Transport, said while addressing the committee's meeting here last week that "the Government of India must express its grave disappointment at the short-sighted attitude of the India-U.K.-Continent Conference which had imposed a 12½ percent increase in freight rates." He added that the Government "considers itself free to take whatever steps are required to protect the legitimate interests of Indian trade."

Mr. Ayyar said that the Conferences and shipping companies carrying cargo from Calcutta and the east coast of India to the U.S. north Atlantic ports, U.S. Pacific ports and Canada had also announced a 10-percent increase in freight rates effective from 11th October, 1963. This, Mr. Ayyar said, was a second increase within a short period of two years, the freight rates in these trades having been increased in January 1962.

During the course of examination of various complaints received by the Freight Investigation Bureau, according to Mr. Ayyar, it had been observed that shippers in India were placed at a disadvantage *vis-à-vis* exporters from other countries in relation to freight rates, payment of rebates, etcetera. In many cases, freight rates on export cargo from India were high, compared with those on export cargo from other countries. The shippers in the U.K. and the Continent were allowed an option of either 10 percent deferred rebate or 9½ percent cash rebate, but no such option was allowed to shippers in India. This discriminatory treatment led to the locking up of shippers' money.

Side by side, the trade representatives of Germany, Italy and Japan are discussing whether to lodge a protest against what they allege is "flag discrimination" recently started by India. According to a *Gazette* notification of the Government of Goa, there will be three freight rates for the export of iron ore from that enclave. The floor price of $5.25 a metric ton will be allowed to any dealer exporting all his ore in foreign bottoms. He will be given a rebate of $0.15 if he were to send 20 to 30 percent of his ore in Indian ships. This rebate will be increased to $1.20 if he exports 50 percent of his ore in Indian ships. The following seven shipping companies are scheduled Indian companies which are eligible for the carriage of iron ore, for the purpose of earning the rebate: (1) Shipping Corporation of India, (2) India Steamship Company of Calcutta, (3) Scindia Steamship Company, (4) Apeejay Lines and Surendra Overseas, (5) Great Eastern Shipping Corporation, (6) Jayanti Shipping Company and (7) Thakur Shipping Company.

The notification issued from Goa lays down that the "concessions will be available to persons who undertake to make the first offer to ship 20 to 30 percent or 50 percent as the case may be of the ore agreed to be sold to the shipping companies at world competitive freight rates prevailing at the time of chartering or freight fixtures." The *Gazette* notification is slightly different. It says "at international freight rates prevailing at the time of shipping."

In this connection, Japan has lodged a protest against the change in prices. In any case, it reduces the force of Mr. Ayyar's contention. If the price of an Indian commodity like iron ore, which is in a buyer's market, can be reduced by $1.20 a metric ton when it is carried by Indian ships, the commodity can bear an increase of 12.5 percent in the freight rates. Having earlier agreed to increase the freight rates by rail, road and inland water transport, the Government cannot justifiably threaten to use all possible means to prevent the Conference lines from raising freight rates. Meanwhile, an increase in freight rates has been made inevitable by a rise in the cost of operation.

Mr. Ayyar said that all items of discrimination and disparity in freight rates should be taken up again by the Freight Investigation Bureau with the Conferences concerned directly as well as through the Indian shipping companies which are members of the Conferences concerned. The committee was told of specific instances of discrimination in freight rates for such commodities as coffee, aluminium sulphate and decorticated mattress type fibre, as shipped from Indian ports and foreign ports similarly situated. The attention of the Conferences was also invited to a wide disparity between the freight rates for the same commodity from different ports in India to the same destination.

The committee also noted the additional charge of $4 a ton levied on shipments from the U.S.A.-north Atlantic ports to Cochin, Madras, Visakhapatnam, Kandla and Gujarat ports. It decided that the Indian shipping companies, which are members of the Conferences concerned, should pursue this question further and try to persuade the latter to abolish the additional levies.

The committee was informed that although the local representatives of the India-U.K.-Continent Conference had been posted in India, complaints from shippers were still being received concerning difficulties experienced in getting timely shipping space, particularly from Madras, Cochin, Visakhapatnam and Tuticorin. Shipping interests were requested to take steps to ensure that India's exports to the U.K. and the Continent were adequately and fully covered and whenever they were not in a position to provide shipping space, they should grant immediately "dispensation within 48 hours to enable the shippers to make alternative arrangements without losing their accumulated deferred rebate with the Conference."

MACHINE-MAKING INDUSTRIES

Study Groups Set up

The following ten study groups have been set up in the Central Ministry of Heavy Industries to work out plans for the machine-making industries during the fourth plan period:

(1) *Electrical power equipment*: Equipment required for electrical power generation, transmission and distribution, including thermal boilers and heavy electrical equipment, including large motors and electrical traction equipment.

(2) *Transport equipment*: Rail and road transport equipment, including railway rolling stock and commercial motor-vehicles.

(3) *Steel and metallurgical industries equipment*: Equipment for steel plants and other heavy equipment for metallurgical industries.

(4) *Mining and drilling equipment*: Mining, drilling and other equipment for coal, mineral ore and oil industries, including beneficiation of ores, and coal preparation and washing.

(5) *Fertiliser and chemical equipment*: Equipment for fertiliser, petroleum refining, petro-chemicals and other heavy chemical industries.

(6) *Machine tools*: Machine tools, including hand tools, small tools and

heavy machine tools; welding equipment; pressing equipment; and furnaces.

(7) *Industrial machinery*: Equipment for cement, paper, sugar and other industries.

(8) *Textile machinery*: Equipment for cotton, jute, woollen, silk and artificial fibre industries.

(9) *Structurals*: Structurals, cranes, sluice gates and related items.

(10) *Engineering industries*: Items common to various industries such as castings and forgings, pipes and tubes, gears, ball and roller bearings.

The terms of reference of the study groups are as follows:

"1. To make an estimate of the requirements of equipment falling within the scope of the working group, considering the production programmes and investment in the sectors requiring such equipment during the fourth and fifth plans, in so far as they are relevant to the establishment of capacity for the manufacture of such equipment during the fourth plan. In making this estimate, the requirements of replacements and possibility of exports should be taken into account.

"2. To make an analysis of these requirements in terms of category of equipment and value.

"3. To work out in detail the requirements of each category of equipment, by type and by range, during each of the years of the fourth plan.

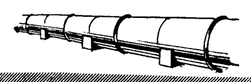
"4. To recommend the capacity and production targets for 1970-71, for each category of equipment, by type and by range, to the extent indigenous manufacture is considered feasible and desirable.

"5. To make an assessment of the production capacity of the existing and projected manufacturing facilities and to work out the gaps for each category of equipment.

"6. To investigate the best manner in which the gaps could be covered to the extent feasible and desirable by the end of the fourth plan; and to make specific proposals to this end, by way of expansion or new projects, etcetera.

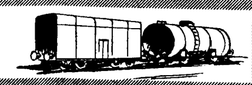
"7. To make an estimate of the investment and foreign exchange on capital and maintenance account required for implementing the production programmes as recommended.

"8. To make an estimate of power, fuel, transport and other requirements of a significant order.



"9. To make an estimate of raw materials, components, etcetera, required for the manufacture of such equipment and to suggest measures for the indigenous manufacture of such items.

"10. To recommend measures by which the use of manufacturing capacity and programmes of production in the consuming sectors are co-ordinated to the fullest extent.



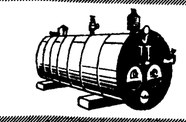
"11. To make such other recommendations as may be relevant."

ALL INDUSTRIES NEED

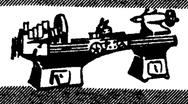
STEELON STABLE
for pipe joints, general repairs and fabrication work

STEELON STANDARD
for wagon building and medium structural work

STEELON ULTRA
for welding of ships, heavy structural work etc.

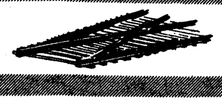


STEELON UNIVERSAL
Low Hydrogen iron powder electrode for welding low alloy high tensile steel for dynamic loading

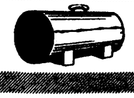


BOILERON
for boiler and pressure vessels welding

TUBERON
for boiler tubes welding



CASTRON (Guss)
for cast iron welding



CASTRON (Kalt)
Shaft welding for giving machineable welds on cast iron

CRONI - MANGAN
for welding and hard surfacing of manganese steels

CRONI - NIOB
for welding stablised stainless steel

MODI ARC ELECTRODES

MODI ARC ELECTRODES
MODINAGAR (U.P.)

FERTILISERS

High Prices

The price policy of the international cartel N.I.T.R.E. for fertiliser supply in the free world may have far-reaching effects on India. According to reports, the organisation has made very large sales to east European countries. Sales of fertilisers at comparatively low prices were also made to China.

To break through the present stagnation in agriculture, India needs large quantities of fertilisers. It is explained that due to high prices, the offtake of fertilisers in India has declined. With still higher prices, the offtake of the Indian cultivator may fall further, lowering agricultural productivity.

Agriculture is a favourite subject of discussion at the World Bank meetings. The president of the World Bank, Mr. George Woods, said at the recent meeting of the Bank:

'The scale of our lending for agriculture has not, in my view, been commensurate with the importance of this sector. Thus far most of it has been for large-scale irrigation, flood control or land clearance projects. I believe that we must now intensify our support of agricultural development on a broader front—through such means as helping to finance storage facilities and farm-to-market roads, and through strengthening agricultural organisation that extend credit and technical help to the farmer. Such programmes are unlikely to yield quick and dramatic returns, and they will be expensive to support in terms of both manpower and administrative costs. But the need is clear and urgent."

Fertiliser supply to farmers to some extent, is already being subsidised in India. But there is a limit to subsidies. India, it will be seen, is faced with the alternative of self-sufficiency in food or the indefinite relience on P.L. 480 supplies from the U.S.A. That self-sufficiency in food is better of the two alternatives is evident. For this, India needs fertiliser imports at reasonable prices, till she is able to produce all the fertilisers she needs.

WEST GERMANY

Investment Guarantee

The recent proposal from West Germany for an investment guarantee agreement with India contains an operative clause. It is as follows:

"Investments by nationals or companies of either contracting party shall enjoy full protection and security in the territory of the other contracting party.

"The investments of nationals or companies of either contracting party in the territory of the other contracting party shall not be expropriated except for the public benefit and against compensation. Such compensation shall represent the equivalent of the investment affected; it shall be actually realisable, freely transferable, and shall be made without delay. Provision shall have been made at or prior to the time of expropriation for the determination and the giving of such compensation. The legality of any such expropriation and the amount of compensation shall be subject to review by the due process of law.

"Nationals or companies of either contracting party whose investments suffer losses due to armed conflicts, revolution, or revolt in the territory of the other contracting party, shall be accorded treatment no less favourable by such other contracting party than that party accords to its own nationals or companies concerning restitution, indemnification, compensation or other valuable consideration. As for the transfer of such payments, each contracting party undertakes to accord to the nationals or companies of the other contracting party a treatment no less favourable than it accords in comparable cases to nationals or companies of any third State.

"The provisions of above paragraphs shall likewise apply to returns from investments. Nationals and companies of either contracting party shall enjoy most-favoured nation treatment in the territory of the other contracting party in relation to the matters provided for in the present Article.

"Either contracting party shall guarantee to nationals or companies of the other contracting party the transfer of the capital, of the returns from it and, in the event of liquidation, of the proceeds from such liquidation.

"The term 'investment' shall comprise every kind of asset, and more particularly, though not exclusively,

"(a) movable and immovable property as well as any other rights in *rem*, such as mortgages, liens, pledges, usufructs and similar rights;

"(b) shares or other kinds of interest in companies;

"(c) titles to money or to any performance having an economic value;

"(d) copyrights, industrial property rights, technical processes, trade names, and goodwill;

"(e) business concessions under public law, including concessions to search for, extract or exploit mineral resources, giving their holders a legal position for a certain period.

"Any alteration of the form in which assets are invested shall not affect their classification as investment. The term 'returns' shall mean the amounts yielded by an investment as profit or interest."

The major question is, however, whether the flow of West German investment into India will improve with the signing at the proposed treaty. The experience of some Indian firms seeking collaboration has not been very happy. A climate of suspicion pervades many Indo-German negotiations.

PATENT LAW

Amendment Opposed

Stiff opposition is expected to the proposed amendment of the patents law. The U.K. High Commissioner, Sir Paul Gore-booth, saw the Central Finance Minister, Mr. T. T. Krishnamachari, last week when, it is believed, he placed before him the point of view of his Government as well as patent-holders. Similar representations have been made by the Governments of the U.S.A., West Germany, Switzerland and Denmark. The Indian pharmaceutical industry is unhappy over the proposed amendments.

Meanwhile, according to New Delhi reports, the Italian Government is having second thoughts over its decision not to recognise patents in food and drug industries. It is learned that since this decision was taken, no advance in those two branches of industry has been recorded in Italy. It may not surprise India if Italy were to reverse her earlier decision and reintroduce patents in food and drug industris as well.

U. S. A.

Loans for Power Projects

The Governments of India and the United States have concluded agreements providing for American loans totalling Rs. 24 crores to the Bandel, Cambay and Birsinghpur power projects. The three thermal power-stations will add 665,000 kilowatts to India's installed power generating capacity. The rupee loans have been made from the sale proceeds of U.S. agricultural commodities supplied to India under Public Law 480. The United States is financing the entire cost of the three projects. Earlier agreements provided for loans totaling Rs. 38.1 crores to meet the foreign exchange costs of the projects.

The Bandel power-station, near Calcutta, will become one of India's largest sources of electric energy. Its four turbine generators will produce a total of 355,000 kilowatts to meet the growing demands for power in the country's most industrialised region. Expansion and establishment of the chemical, heavy and light manufacturing industries and railway electrification will be made possible by power produced at Bandel. Power will also be supplied to a large number of irrigation pump sets.

The 250,000-kilowatt Cambay thermal power-station will play an important rôle in stimulating the industrialisation of Gujarat. Much progress has been made in construction at Dhuvaran village, near Cambay. In the initial stage, the boilers will use pulverised coal, but provision is being made for future conversion to oil firing. Additional power is needed in Gujarat for the expansion of existing industrial and for new industries such as cement, textiles, petroleum, heavy chemicals, and for rural and town electrification.

The Birsinghpur project provides for the construction of a 60,000-kilowatt power-station in Amlai, a rapidly growing industrial centre. The undertaking will meet the energy needs of north-eastern Madhya Pradesh, a region of abundant natural resources. Power produced at the plant will facilitate the establishment of cement, paper, coal-mining, diamond-mining and aluminium enterprises. It will also be used by existing Ordnance and chemical factories and to electrify railways.

CZECHOSLOVAKIA

Trade Team Arrives

A Czech trade delegation has arrived here for preliminary negotiations on a new long-term trade agreement with India. The Indian delegation for the talks will be led by Mr. S. Vohra, Joint Secretary to the Central Ministry of International Trade. Mr. F. Hamouz, Czech Minister of Foreign Trade, who will be arriving in India in the latter half of October, will hold talks with Mr. Manubhai Shah, Central Minister of International Trade, for concluding the five-year trade agreement.

The trade between India and Czechoslovakia is expected to be of the order of Rs. 12 crores each way in 1963. As a result of the negotiations, it is likely to be doubled by the end of 1966.

The major items of export from India to Czechoslovakia are iron ore, jute products, spices, coffee, mica, manganese ore and deoiled cakes. Imports from Czechoslovakia into India are machine tools, capital goods, power equipment, steel products, chemicals, etcetera.

MINERALS, METALS

New Export Body

The Minerals and Metals Trading Corporation of India Ltd, a new Government of India undertaking, started functioning from 1st October. It will handle the export of iron ore, manganese ore and other mineral ores and the import of non-ferrous and other metals. The new Corporation has been created primarily by separating the divisions concerning minerals and metals from the State Trading Corporation.

Mr. Govind Narain, at present chairman of the S.T.C., has taken over as chairman of the Minerals and Metals Trading Corporation. Mr. B. P. Patel, Adviser to the Programme Administration Department in the Planning Commission, has become chairman of the S.T.C.

The new Corporation, which is incorporated as a limited Company under the Indian Companies Act, 1956, has taken over all the assets and liabilities pertaining to minerals and metals trade from the S.T.C. It has a subscribed capital of Rs. 2 crores and all the shares, except two, are held by the President of India. Two shares will be held by the senior officers of the Government of India nominated by the President.

The new Corporation will draw and implement the plans for the export of various minerals and ores and coordinate the work with all the other authorities concerned in order to realise the export targets, through a uniform and synchronised development of mining, transport capacity, port handling arrangements and other facilities.

U.K. COAL BOARD

Lord Robens in India

Lord Robens, chairman of the British National Coal Board, is visiting India as the guest of the Government of India. In Delhi, he will have discussions with the Central Minister of Mines and Fuel. He will also visit Calcutta (leaving Delhi on 10th October) where he will have discussions with the private sector of the coal industry. The British National Coal Board is assisting India's National Coal Development Corporation in developing deep coal mining.

HEAVY ELECTRICALS

Project Report Approved

The Government of India has finally approved the Russian project report on the heavy electrical equipment plant to be installed in Hardwar. When in full production, the plant will manufacture 1.5 million kwt of turbo-generators, complete with steam turbos of 50,000 to 200,000 kwt and 1.2 million kwt of hydro-electric turbine of 10,000 to 100,000 kwt in addition to heavy and medium size A.C. and D.C. electric motors.

London

A PLAN FOR COMMONWEALTH TRADE IN NEXT DECADE

(FROM OUR LONDON CORRESPONDENT)

BRITAIN has put forward a plan for a systematic study of Commonwealth trade, with a view to obtaining a total picture of production and consumption as they are likely to develop in this decade and the next. This was made known recently, when the annual conference of the Commonwealth Finance Ministers ended its work at Marlborough House. The proposal was made by the Chancellor of the Exchequer, Mr. Maudling, in his capacity as leader of the British delegation, at the conference, which was attended by Finance Ministers from all 16 sovereign States in the Commonwealth as well as delegates from some of the larger colonial territories. The final *communiqué* describes the proposal as a suggestion for "a more systematic study of world economic trends in general and those of the Commonwealth in particular," and goes on to describe the potential benefits in these words:

"A collation of the economic and trade prospects of individual countries and of their development plans would throw light on the future pattern of demand for and supply of primary products and manufactured goods within the Commonwealth. It might well reveal new opportunities for the expansion of Commonwealth trade on a mutually satisfactory basis within the existing world-trade system."

Britain's proposal for a survey, or in Mr. Maudling's alternative description, "putting our forward projections together" was specifically made in the context of seeking new ways to raise the overall level of trade. But equally, the Chancellor of the Exchequer was careful to say that he was not thinking of any regulatory function, nor of setting targets, nor of trying to make the Commonwealth into a trading bloc. It was accepted by Britain just as much as any other nation represented at this London conference that Comonwealth Governments are sovereign and that they do not wish to be co-ordinated into a single commercial community. It was accepted that there were great differences in the degree of planning and economic development. But, having accepted those limitations, the Chancellor felt that there could usefully be a collation of data at the national level which would reveal future patterns of demand and supply and thus stimulate greater production and consumption.

Given this integrated picture of the way things were likely to go in the years ahead, Comonwealth exporters and bankers could go ahead to satisfy these demands through normal commercial channels and the free functioning of the market. The conference accepted the idea that such a plan would require detailed studies and a central clearing house. No Government has yet given any commitment, nor were they expected to, but the various Finance Ministers will take home with them the outlines of the plan to report to their Cabinet colleagues.

This means there will necessarily be some interval while this sounding-out process is carried on in various Commonwealth capitals, but Mr. Maudling, having set the ball rolling, is anxious to see practical results, and will welcome initiatives by his fellow Finance Ministers to amplify and carry out the plan. This was the normal gathering of Finance Ministers, which by convention, precedes the World Bank meeting in Washington. Looking forward to that, the delegations discussed the problems of primary producers, their vulnerability when the terms of trade go against them, and their difficulties in paying the cost of development loans by selling the products of their new factories in the markets for the more industrialised countries.

New Initiative

Is it time for a new initiative in the field of Commonwealth trade? The latest report from the Commonwealth Economic Committee, which broadly shows that as a trading "bloc" the Commonwealth is becoming steadily more diluted and absorbed in the general pattern of world trade, can be taken in two ways. Either it is a trend, demanding realistic appreciation and adaption of British commercial policy in a changed world: or it is a challenge, requiring a response in the form of attempts to reinvigorate trade on a more exclusive Commonwealth basis.

The Commonwealth contributed to the further increase in international trade in 1962, but accounted for a slightly lower proportion of the world total than in earlier years. *Commonwealth Trade, 1962* (7s 6d) shows how these movements were reflected in the trade of the Commonwealth, with its main trading partners, as well as in the exports and imports of individual member countries. Prices of primary products, which constitute a considerable part of Commonwealth exports, remained weak, and, although the actual value of Commonwealth sales rose to about £10,200 million, their share of the value of world exports (excluding those of the Sino-Soviet bloc) fell from 24 percent to around 23 percent. Over half of Commonwealth imports are manufactures and prices of these commodities were well maintained, so that total Comonwealth purchases exceeded £12,000 million in 1962 and accounted for almost 26 percent of world imports (again excluding the Sino-Soviet bloc).

In recent years, the Commonwealth has markedly increased its trade with non-Commonwealth countries to almost £6,700 million for exports and £7,750 million for imports in 1962. While this rise was more rapid than the growth of intra-Commonwealth trade, Commonwealth countries sold about 34 percent of their exports and bought 31 percent of their imports within the Commonwealth. Trade between the U.K. and other Commonwealth countries, which reached a peak in 1960, subsequently declined. However, the relative importance of the U.K. to other Commonwealth countries in trade both ways continued at about one-fifth. Although there have been appreciable annual variations, exports of Commonwealth countries, other than the U.K., to each other have shown an upward trend; the 1962 figure, at some £970 million, was one-fifth greater than that for 1958 and accounted for 28 percent of total intra-Commonwealth trade.

Exports to U.S.A. Up

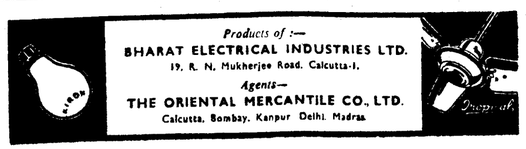
Much of the expansion in Commonwealth trade in 1962 was with the United States. Exports to that market increased by some £230 million and imports from it by £180 million and the United States accounted for over one-fifth of Commonwealth trade in both directions. From the United States' viewpoint, the Commonwealth provided nearly two-fifths of its imports, the highest figure for many years ,and took 35 percent of its exports. The experience of individual Commonwealth countries in the United States market varied, but most of them, with the notable exceptions of Ghana and Pakistan, shipped goods to a higher value than in 1961, and in some cases, such as Australia, the proportionate gain was very substantial. The increase in Commonwealth imports from the United States in 1962 was largely in purchases by Canada, Australia, India and Pakistan; some countries, including the U.K. bought less.

Another feature of Commonwealth trade in recent years has been the growth in trade with European countries. Much of this has been due to higher U.K. sales, but other Commonwealth countries have also shared in the expansion. In 1962, however, the value of U.K. exports to these markets increased substantially, while those of other Commonwealth countries, in the aggregate, declined. The European Economic Community took 15 percent of Commonwealth exports and provided 12 percent of Commonwealth imports last year. The table below gives in summary form the trade of Commonwealth countries with each other and with their main non-Commonwealth trading partners:

	Exports (£ million)			Imports (£ million)		
	1958	1961	1962	1958	1961	1962
Intra-Commonwealth	3,251	3,518	3,417	3,323	3,611	3,555
U.S.A.	1,688	1,903	2,134	2,018	2,471	2,652
E.E.C.	1,062	1,409	1,492	1,046	1,365	1,351
E.F.T.A. a	412	559	588	495	625	629
Eastern Europe	165	312	312	149	244	282
China	77	137	111	163	135	146
Japan	243	452	413	268	401	441

a Excluding the United Kingdom.

The trade of individual countries is reviewed in detail in the memorandum. While the value of exports from most of the major Commonwealth countries continued to increase in 1962, in the majority of cases, the gain was under 3 percent. The increase for Ceylon was greater due largely to the higher value of sales of tea, rubber and most coconut products, while exports and re-exports from Hongkong rose by 11 percent, partly as a result of increased sales of clothing to the U.S.A. Canadian exports, by value in Canadian dollars, were 8 percent higher than in 1961; while sales of wheat and wheat flour and newsprint declined in value, much more was earned by crude petroleum, lumber and wood pulp. Increased returns from meat, wheat and wool were responsible for much of the growth in the value of Australian exports, while for New Zealand the increase in the value of meat and dairy produce shipments offset the fall for wool.



On the import side, the value of purchases by Canada, Pakistan, Malaya, Hongkong and Trinidad reached record levels in 1962, while there was some recovery in these into the U.K. and Australia. On the other hand, imports into Ghana and Nigeria were sharply reduced and there was a further fall in those into India and Ceylon. There was a considerable improvement in the balance of merchandise trade for a number of Commonwealth countries in 1962 and New Zealand, after the small deficit of the preceding year, once again had a surplus. However, the sharp rise in imports into Pakistan and the continued increase in those into Hongkong led to larger deficits for these countries.

Much of the decline in intra-Commonwealth trade arises from the trade of the United Kingdom, whose exports have risen faster in other markets. The U.K.'s import trade has also shifted a little away from the Commonwealth, although it is encouraging to note that it has improved sharply during 1963, with a rise of about 7½ percent so far—especially so because it has been largely due to greater buying from the poorer Commonwealth countries, notably India, Pakistan, and Hongkong.

Recent Recovery

What may be of more practical importance, however, is the recent recovery in sterling area trade. Increased imports from the sterling area do not normally harm the U.K.'s balance of payments because the extra earnings are held in sterling. In fact, the outer sterling area has been a help to the U.K.'s reserves most of the time in recent years—weakness in the reserves has generally been the fault of the U.K. herself. Exports to the sterling area (which excludes Canada, where the Americans continue to displace our exports) have risen due to increased imports by a number of countries, including Ireland and South Africa (not members of the Commonwealth), and could probably increase much more, as the *Guardian* points out, if the U.K. is readier to incur deficits with sterling area countries, not only by imports but also through aid. Over 90 percent of the U.K.'s foreign aid goes to these countries—a recovery of her trade with them is a hopeful sign.

The second series of meetings between the Indian cotton industry delegation and the U.K. cotton industry delegation, at which representatives of both the Indian and U.K. Governments were in attendance, concluded on 28th September. Agreement was reached concerning the categorisation of yarn imports, and for the collection of the necessary statistical information of grey cloth imports from India.

Jute

MR. BAJORIA CRITICISES SRIVASTAVA REPORT

THE rise of the Pakistani jute industry is a natural sequel to the partition of 1947 which left 80 percent of the jute-growing area with that country, says Mr. C. L. Bajoria, former chairman of the Indian Jute Mills Association, replying to the Srivastava Committee's allegation that the growth of the Pakistani industry is a direct consequence of the restrictions on production imposed by the I.J.M.A. since the introduction of the Working Time Agreement. Mr. Bajoria points out that the crippling export duties of Rs. 1,500 a ton on hessian and Rs. 300 a ton on sacking levied by the Government of India some years ago helped the Pakistani industry to become stronger. The heavy export duties deprived Indian mills of the resources which could have otherwise been used to modernise and rationalise their production.

Admitting that during the decade ended 1960, the Indian industry operated around 10 percent below capacity, he says that the restrictions were nothing but an organised adjustment of supply to the then prevailing conditions of world demand. He deplores the fact that the Central Government and the Committee have still not realised the threat to the Indian industry posed by the fast expanding capacity in Pakistan. "The way things are going", Mr. Bajoria warns, "it is only a matter of time before the entire sacking market abroad will be lost." That will be followed soon by a shrinkage of the hessian market. He is surprised that a Committee set up "for the specific purpose of suggesting ways and means to export jute manufactures should have chosen, deliberately, to ignore the greatest single threat not only to the expansion but even to the maintenance of India's existing export markets for jute goods."

Loss of Sacking Market

Referring to two annexures in the report showing the loss of sacking markets between 1948 and 1961, Mr. Bajoria points out that although exports of sacking declined by 38 percent from 451,200 tons in 1948 to 279,200 tons in 1961, the statistical evidence has been ignored in the body of the findings. Another statement shows the countrywise decline in exports between 1957 and 1961 as follows:

	(In tons) 1957	1961
Australia	81,400	36,500
Africa (including Ghana and Nigeria)	90,100	48,700
Burma	24,900	5,500
Cuba	51,400	44,800
Peru	10,400	2,500
Others	116,400	86,500

In fact, these markets were lost to Pakistan. Mr. Bajoria questions the Committee's conclusion that there will be increased opportunities for exporting Indian gunnies to eastern and western Europe and to parts of Asia, Africa and Latin America which do not have facilities for developing jute industries of their own. How could the Committee visualise that these expanding markets would come to India rather than go to Pakistan, he asks.

Referring to the production targets for the third and fourth plan periods, Mr. Bajoria says that the industry has already attained the third plan target of 1.3 million tons. The target can be achieved by the existing capacity with the addition of some spinning and preparatory machinery. Mr. Bajoria describes the "whole exercise in target fixing" as "unrealistic" since it ignores the threat posed by the Pakistani industry.

Working Time Agreement

Replying to the Committee's criticism of the Working Time Agreement, Mr. Bajoria says that its entire approach has been vitiated "by prejudice and a failure to understand the nature, objects and working of the Agreement." Thanks to the Agreement, "there was an orderly adjustment of demand to the available supply of raw jute" during the crucial period of fibre shortage in 1960 and 1961. Every mill got its fair share, price increases in fibre and jute goods were kept down to the minimum, and continuity in production and employment was assured. Denying the charge that the Agreement is "basically restrictionist in outlook", he says that production was curtailed only when fibre, coal or power were in short supply; it was never cut to inflate jute goods prices. Warning that the Pakistani industry will be the biggest beneficiary if the Working Time Agreement is scrapped as recommended by the Committee, Mr. Bajoria says that the smaller Indian mills will have to close down and their export markets will not go to "the bigger and more efficient Indian mills but to Pakistani mills whose competitive strength is greater than that of even the most efficient Indian mills."

To the criticism that the Agreement makes it possible for inefficient units to thrive at the cost of the efficient ones, he says that both in periods of poor and brisk demand, the Agreement has not affected the working of the industry at full capacity. In case of future expansion, the first priority should be given to the smaller mills to raise their capacity to 500 looms. He discourages the suggestion to allot third priority to the setting up of new units.

Buffer Stock for Gunnies

As for the Committee's view that stability in export prices could be better achieved by operating a buffer stock of jute goods than by regulating the level of production by the Working Time Agreement, Mr. Bajoria says that "the operation of the buffer stock will be in the full glare of publicity and closely watched in foreign countries". Foreign buyers will be prone to postpone their purchases in the knowledge that the holding power of the buffer stock will be strained and the stocks may be ultimately disposed of even at unfavourable prices. On the contrary, the use of the Agreement to expand or contract output will not enable overseas buyers to know the correct position. Besides, a jute goods buffer stock will involve heavy capital outlay, it will raise costs because of interest, warehousing and insurance charges. There will also be the problem of storage and of preventing deterioration.

Mr. Bajoria endorses the view that the grower should get an economic price for his crop in order to ensure an adequate supply of raw material for the industry. But he feels that the question of supporting the price of fibre does not arise at present. The all-inclusive cost of cultivation is about Rs. 20 a maund in West Bengal, Rs. 15 in Bihar and Rs. 18 in Assam. On this basis, he feels that Rs. 30 a maund, basis Assam Bottoms, "is clearly far above what can be regarded as a reasonable price." In an export industry in which raw material costs absorb as much as 60 percent of the selling prices of the finished goods, "any shortsighted

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September 1963 as follows:

Description	30th September, 1963		31st August, 1963		Increase over (+) or decrease from (−) last month		30th September, 1962	
	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)
Hessian cloth and bag	16,18,40 (11.14)	32.7 (32.2)	10,69,14 (11.69)	33.7 (33.2)	−50.74 (−55)	−1.0 (−1.0)	8,04,30 (8.80)	24.7 (24.3)
Sacking cloth and bag	12,08,95 (13.22)	54.9 (54.0)	11,12,90 (12.17)	50.0 (49.2)	+96.05 (+1.05)	+4.9 (+4.8)	11,92,63 (13.04)	55.5 (54.6)
Others		19.5 (19.2)		20.0 (19.7)		−0.5 (−0.5)		13.7 (13.5)
Grand Total (000 Metric Tons/Tons)		1.07.1 (1.05.1)		1.03.7 (1.02.1)		+3.4 (+3.3)		93.9 (92.4)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

generosity to the cultivator will inflate the prices of our jute goods and cause further loss of markets to Pakistan which gets fibre of comparable quality 25 percent cheaper". Mr. Bajoria pleads for a reduction in the price of raw jute to a "realistic" level. As for buffer stock operations in raw jute, he agrees with the Committee that the Government should take full control over the agency. But he differs from the Committee's view that the agency should sell its stocks to mills at cost price. As mills have to sell goods abroad at prevailing world prices, he suggests that buffer stock fibre should be sold at market prices.

Concerning speculation, he feels that the only effective way to end the evil is to close down the East India Jute and Hessian Exchange since it has become a predominantly speculative market because of the shrinkage of opportunities for such dealings in gold, silver, opium, linseed and shares. About creating a Products Development Cell in the Jute Commissioner's organisation, Mr. Bajoria says that the I.J.M.A. and the I.C.J.C. are already doing the work visualised for the Cell. If the Government so desires, instead of setting up a parallel third organisation, it may take over and reorganise the I.J.M.A.R.I.

Timely Showers Save Daissee

The Indian Central Jute Committee has called for the speedy implementation of its model scheme for retting tanks by the jute-growing States. While no effort or expense has been spared to put jute agriculture on a stable footing, a great deal is yet to be done to make good the country's deficiency in the natural facilities for retting. In the absence of slow-flowing clear water from rivers and canals as in Pakistan, jute retting water in India has to come mostly from man-made sources like tanks and tubewells.

Discussing the risks involved in having to depend on water resources in wayside ditches and burrow-pits, it says that but for the few heavy showers in the second and the last weeks of September, cultivators in the Daissee districts might have had to leave their jute fields unharvested. Alarm was spreading in the jute belt because the plants in most areas had grown long past the small-pod stage considered ideal for getting an optimum combination of high yield and good quality.

This is not the first time that half a dozen good showers have stood between a fine jute crop and its total loss. Instances can be multiplied of growers in many pockets who in the past had to abandon their jute plants as good only for cattle-feed because there was no water for retting. Water is basic to a high fibre yield, as well as to quality. As a result of delayed harvesting, the fibre extracted may be less fine and lustreless. Bsides, overmature plants take longer to ret than those cut at the right stage.

Reports indicate that the rain water which has accumulated in ponds and ditches during the last wet spell is barely adequate. The risk is that growers, in their anxiety to make the most of it, may feel tempted to do a quick job of retting by making repeated charges of bundles in the same water at short intervals. This practice damages the quality and reduces the value of the fibre.

The use of clods of earth, banana stems and freshly cut logs of mango tree to weight down jute plants for retting is bad. It is far worse when the supply of water is limited. Concrete slabs, dry logs or even big boulders can be used for weighting the bundles.

I.S.I. Standards

The Indian Standards Institution has published specifications for hessian (I.S. 2435-1963), heavy Cees jute bags (I.S. 2436-1963) and jute cornsacks (I.S. 2437-1963). A study group on quality control and pre-shipment inspection for jute goods was set up by the Government of India in February 1963. It recommended the formulation of Indian standard specifications for important items of jute manufactures. The constructions of the above items are covered in the three standards. The first prescribes the details and other particulars of two varieties of hessian of weight 305 g/m² (or 40in. 10oz.) and 230 g/m² (or 40in. 7½z.) the second of heavy Cees jute bags of dimension 102cm. × 71cm. (or 40in. × 28in.) and the third of jute sacks or corn bags of dimensions 104cm. × 58cm. (or 41in. × 23in.). The specifications, it is intended, will serve the purpose of quality control and pre-shipment inspection of these types of goods. The standard specifications are available from the I.S.I. offices in Bombay, Calcutta, Kanpur and Madras.

Rise in Gunny Stocks

Working to the maximum of their capacity, mills reporting to the I.J.M.A. ended September with jute goods stocks totalling 107,100 tonnes, the highest so far this year; the stocks were 103,700 tonnes at the end of the previous month. Sacking rose by 4,900 tonnes to 54,900 tonnes, while hessian declined by 1,000 tonnes to 32,700 tonnes, and other goods by 500 tonnes to 19,500 tonnes. Last year too, end-September stocks were at the maximum level for the year at 93 900 tonnes. Sacking stocks were slightly higher than last month's figure at 55,500 tonnes. But hessian stocks were considerably lower at 24,700 tonnes and other goods at 13,700 tonnes.

THE JUTE MARKETS

Manufactured Goods: A subdued trend prevailed in the manufactured goods market during the past week. Except for scattered buying of hessian by the U.S.A. for near positions, overseas enquiries were absent. Reports of Pakistan being booked to capacity because of a big deal with China aroused expectations of spill over orders from abroad. Shipper-covering against near positions aided sentiment. There were hopes of a Sudanese tender for about 10,000 bales of heavy goods and possible business with Cambodia. Another report of a contract for 10 million yards of hessian from West Germany was received on Tuesday. There was also a chance of a big Central Government tender for heavy goods. Meanwhile, taking into account the dearth of enquiries in hessian and the increasing interest in sacking, some mills have diverted a percentage of their looms to the production of heavy goods. On Monday, the market suffered a modest setback on the announcement of the rise in sacking stocks during September. But sentiment revived partially on reports that all heavy goods meant for shipment last month could not be moved out of the mills due to the congestion at Calcutta Port and at Sandheads. The week closed with small losses, on balance. Turnover was thin and the undertone easy. The futures market also moved downward in sympathy with the spot section. Nervous bull liquidation affected sentiment and bears showed little interest in covering their positions. As a result, prices dipped further after fluctuating within narrow limits. Turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	36.35	36.25	36.25	35.95	35.75
40in. 8oz.	39.00	—	—	—	—
40in. 10oz.	48.50	48.35	48.15	47.80	47.70
B Twills	115.50	116.25	116.00	115.75	115.50
Cornsacks	117.25	117.50	117.50	117.50	117.25
Heavy Cees					
(Plain)	113.50	114.75	114.75	114.75	114.75
A Twills	135.50	136.50	137.00	137.50	136.50
Liverpools	127.50	128.50	128.50	128.50	128.00

Raw Jute: Dull conditions prevailed in the raw jute market during the past week. Despite the issue of a purchase quota of 920,000 bales for October and the directive to co-operatives to commence buying in the secondary markets, activity was poor. Mills were virtually absent from the market although daily arrivals were increasing fast in the upcountry and Cossipore markets. All available warehousing accommodation was full. Sentiment was, however, propped up by the hope that the Jute Commissioner's directives would be complied with by mills and co-operatives before the deadline. But weak holders were reported to be transacting small business in selected grades at prices lower than the operational minimum levels in the interior markets. In Calcutta, routine transactions were reported in selected grade fibres around the floor levels. In the futures market, sentiment was disturbed due to tired long liquidation and the absence of worthwhile bear support. So the price declined from the previous week's levels. Turnover was small in the spot section and moderate in the futures market. The undertone was quietly steady in the former and hesitant in the latter.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.
Assam-Agartala Jute	80.38	30.00	80.38	30.00

THE PAKISTANI JUTE MARKETS

FIBRE REMAINS FIRM

(FROM OUR DACCA CORRESPONDENT)

THE firmness in all local markets continued last week. This was largely attributed to purchases by communist countries. The Jute Board is channelling these purchases as far as possible through the Small Shippers' Corporation. Loose jute everywhere was very much in demand, and prices were rising daily. The first ill effects of a firm market appeared in Narayanganj in the shape of increased moisture content in the fibre.

With prices nearer to the overseas minima, some of the difficulties of the trade have been eased, so it would be bad if wet jute again made its appearance. The quality of jute, especially of white jute, which has been coming in has considerably fallen off. It is reported that this deterioration in white jute does not so much reflect the quality of the crop as the tendency of the seller to produce his lower quality jute, not only because

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

United Bank of India Ltd.

REGD. OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

the market is steady but also because he is concentrating more on tossa for which most attractive prices are being paid.

The rise in the market is more apparent in tossa than in white. There is no doubt that these high prices will be maintained for the higher grades of tossa, but the same cannot be the case with the lower grades since there are large quantities of Outport Tossa 2/3s in a big tossa crop.

The pucca bale market followed the trends in loose jute, but the higher prices are reflected mainly in cuttings with a premium of £2 for forward over ready. Most of the interests seem to be for N.C., and although this may be due to the fact that tossa cuttings are only just appearing, one gets the feeling that later in the season there will be a considerable discount.

Large purchases by the communist countries, namely, Russia, China, Czechoslovakia, Hungary and Poland, mostly in the form of barter, have greatly increased the demand from the other large consuming countries who have also come in for round quantities at the first sign of excitement in the market.

E.P.C. registrations during the second half of September were 311,452 bales, and they are likely to be large during the first half of October. If this steadiness can be maintained at least for a while, balers will be relieved to be able to do business both locally and overseas without any of the unpleasant manoeuvres necessary to sell and buy below the minima.

The authorities are going to start new Pakistan standards with effect from next season. The lowest grade will be Pak Hearts rising to a Pak Lightning, Pak First, Pak Reds and finally to a Pak Special, which will be the highest mark in white. These standards will apparently be set down in writing and will be based on the old original standards where an Export Heart could have up to 2 percent runners and as much as 5-inch hard ends and an Export Lightning could be rough cut. Furthermore, cognisance will be taken of the origin of the jute in certain grades. That is to say, a Pak Special will only be out of jat jute whereas the highest mark in districts will be a Pak Red and the highest mark in northern jute will be Pak First. Similarly and equally complicated will be the grading for tossa.

During the last week, E.P.C. prices in some of the operational grades were raised. All grades of mesta were increased by £1. This quality has just begun to come into the market in quantity. Mill Firsts and upwards, Dacca Tossa 5s and upwards, Crack Tosa 2/3s and 4s and Dundee Tossa 2/3s have all been raised by £2. It is probable that Dundee Tossa 4s and Dacca Tossa 6s and Export Firsts will also be raised, and possibly, Export Lightnings later on.

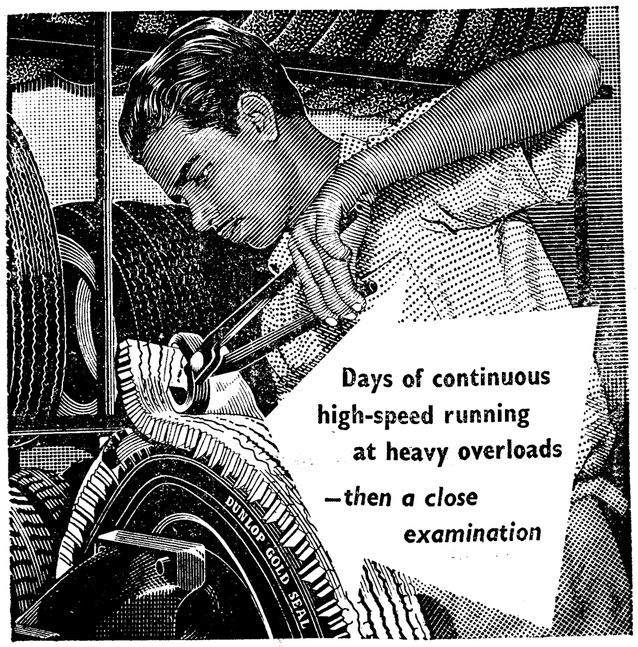
THE U.K. JUTE MARKETS

FIBRE BUYING RESTRICTED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan was very firm last week. The E.P.C. values of the higher grades of both white and Tossa jute were raised by a further £2 a ton. Barter arrangements have been entered into between Pakistan and other countries in which jute figures, and all this tends to make for higher prices. However, there was little change in the lower grades, and there were still many sellers willing to accept less than minimum export prices. Some shippers were refusing to accept less than official rates, and this resulted in their being left more or less out of the market. Dundee spinners showed less buying interest last week and business in the fibre was small.

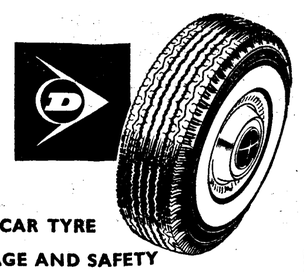
The spot market in Dundee was firm, and holders of these parcels were asking more. Spinners were refusing to pay increased prices except for very good parcels and this slowed down business to a certain extent.



Shipment offers were lowest at £129 for Mill Firsts, at £169 10s for Mill Lightnings, at £95 for Mill Hearts and at £80 for Grade Hearts, c.i.f. U.K., for October-November shipment. Offers of Grade Tossa-2/3 were being made at £125 and of Grade Tossa-4 at £108. Outport Tossa-2/3 was quite freely offered at £97 and Outport Tossa-4 at £85 10s October-November. Cuttings were rather irregular at £56 for S.N.C. and at £47 5s for N.C. More offers of mesta were being made with prices at £78 for A, at £72 for B and at £67 for C, for October-November shipment.

The Siam jute market was quiet and little change in prices would be seen. Grade A was named at £67 10s, grade B at £62 10s and grade C at £58 10s, delivered mill Dundee for November-December shipment.

The Calcutta goods market was firm, but business slowed down because of the Puja holidays. Quotations were at 75s 6d for 40in. 10oz. and at 56s 3d for 7½oz. a 100 yards f.o.b. Calcutta for October shipment, at 74s 7d and 56s 1d November-December and at 73s 6d and 55s 1d January-March. B Twills were at 177s 4d, 178s 4d and 177s 11d for the respective shipment periods.



A good demand was shown for yarns in Dundee. Spinners are very busy and can only accept contracts for delivery in the forward position. The lowest price named for common 8 lb cops was 16.70d a lb, and quite a few spinners were asking more. Prices of other qualities were also tending dearer, but there were still sellers at the old price levels. If present demand continues, it is expected that all spinners will raise their selling rates.

As a result of the firmer yarn position, cloth prices were also raised. Common hessians were at 16.37d a yard for 40in. 10½oz. and at 12.97d for 8oz. Some manufacturers asked more for other descriptions of cloth.

That's how Dunlop Gold Seal car tyres are tested at the factory. From every batch of finished tyres, one is taken at random and run on a rotating drum at high speeds for hours and hours at heavy over-loads—and then cut up into pieces and minutely examined to determine just how ably the tyre has stood up to the strain. A large number of tyres are thus dissected every year to ensure the high quality of tyres for your car.

The Dunlop Gold Seal car tyre is continuously and rigorously tested at the factory and on the road, so that you are assured of high and trouble-free mileage with maximum road safety.

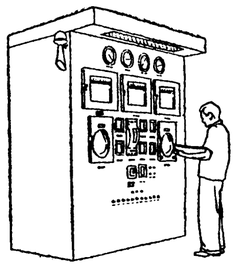
HONEYWELL
INSTRUMENTATION
BY BLUE STAR AT
ROURKELA
FERTILIZER PLANT

One of the four control cubicles in the Nitrolimestone Plant, designed and built in India by BLUE STAR



The plant for the manufacture of nitrogenous fertilizer at Rourkela—the first of its size and complexity in India—is an outstanding triumph of Indian engineering. Entirely designed, engineered, erected and commissioned by the F.C.I., it is a magnificent tribute to the skill, ingenuity and resourcefulness of Indian engineers and constructors.

To ensure maximum production at peak operating efficiency, to achieve optimum utilisation of by-products, to secure safety of plant and personnel, the Rourkela Fertilizer plant, like modern fertilizer plants in the technologically advanced countries, relies heavily on Honeywell instrumentation — Honeywell instrumentation by Blue Star.

Honeywell is the recognized leader in the design and manufacture of automatic control equipment. An organization of more than 50,000 persons, with factories all over the globe, Honeywell products are used in scores of widely diversified fields.

GLOBAL SUPPLY SOURCES

Depending upon the currency available, Honeywell instruments can be obtained from any of their plants in U.S.A., U.K., Europe and Japan.

BLUE STAR COMPREHENSIVE SERVICE INCLUDES: Expert assistance in selection of instrumentation • Engineering, installation and start-up • Prompt, competent after-sales service • Tuition-free training for customer personnel at Blue Star-Honeywell Instrumentation Education Centre, Bombay

Commodity Markets

HIGH COST OF MAKING SYNTHETIC RUBBER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE high cost of synthetic rubber produced in India is considered as a safety valve for the domestic natural rubber. The price of synthetic now rules at Rs. 4.40 a kilogram which is about Re. 1 more than the controlled price for natural, including cess. This would mean that the Indian-made synthetic rubber is not going to compete with the natural rubber in the near future.

The chairman of the Synthetics and Chemicals Ltd, which owns the synthetic rubber manufacturing plant in India, said the other day that the high cost of manufacture of this man-made rubber was due to the high cost of benzine which was at Rs. 2.84 a gallon, compared with the export price of 84nP a gallon besides the excise and other levies. The Company had already taken up the matter with the authorities and the chairman was hopeful that the claims for a reduction in these charges would be sympathetically considered. The U.P. Government had given an assurance to the Company about the supply of alcohol for the plant's full requirements. The supply of benzine from the steel plants was comfortable, and coal supplies were adequate, the chairman Mr. Tulsidas Kilachand told the recent annual general meeting of the Company.

The Company had produced 5,000 tons of synthetic rubber of the three principal types used by Indian consumers. The products conformed to international standards and have been approved by the tyre-manufacturing industry. It hopes to attain the full production target of 30,000 tons by the end of the year. If Mr. Kilachand's hopes concerning the availability of cheaper raw materials are realised the situation may change and the natural rubber growing industry may have to face competition from man-made rubber. The future of natural rubber depends in the ultimate analysis on its capacity to reduce its cost of production. For this, replanting and fresh planting with high-yelding planting materials are unavoidable.

COCOA

World Agreement Plan

The United Nations is at present working for an international cocoa agreement. At present, a conference of producer and consumer countries is being held in Geneva to prepare the agreement on the basis of a draft compiled by a study group of the F.A.O. An up-and-down pattern in cocoa supplies with sharp price fluctuations has characterised the world cocoa market. Historically, the balance between supply and demand is often so delicate that rather small production variations or trade shifts can cause marked price reactions. Over the past few years producing and consuming countries have made efforts through the F.A.O. and other international forums to develop an international arrangement providing stability for supplies and prices to the mutual benefit of producers and consumers.

The world production of cocoa in 1962-63 is now estimated at 1,163,000 metric tons, still second only to the 1960-61 record of 1,187,000 tons. One of the reasons given for this change was bad weather at harvest time in west Africa, where over two-thirds of the world crop is produced. Another was less Government emphasis on subsidised spraying programmes and lower price guarantees to growers in several major producing countries.

Consumption has been increasing but not as fast as production. This has resulted in a high inventory position with low prices. Most excess stocks are held by consuming countries. Producing countries do not have suitable facilities or favourable climate for cocoa storage. The present supply position contrasts with that of a few years ago when supplies were tight and prices were high. The increase in world consumption has been going on over the past several years and in all major consuming countries. In the U.S.A., for instance, grinding of cocoa beans during 1962 totalled 254,400 tons, compared with 254,100 tons in the previous year, and in 1963, they are expected to increase by 4 percent.

The present estimates indicate that world production and consumption of cocoa will be in virtual balance this year, but this assumes a continued substantial increase in consumption which may not take place if prices rise materially above present levels. They have already advanced in recent weeks from 20 cents to 25 cents a lb, following the reduction in the estimate for 1962-63 crop. Continued price increases might reduce consumption because manufacturers will use more of the lower-priced extenders and substitutes. This year, world cocoa production has reached a high level for the fourth successive time. But there are indications that the upward trend may be levelling off.

TEA

U.K. Buys More from Ceylon

(BY A SPECIAL CORRESPONDENT)

IT will be remembered that early in August, the Minister of Finance of Ceylon threatened British owned tea estates in that country with nationalisation. British sources state that one-third of tea consumed in the U.K. now comes from Ceylon where U.K. investors still own about one-third of the country's plantations. During the past ten years, the U.K. has purchased more and more tea from Ceylon. In 1952, less than 25 percent of U.K. imports came from that country, whereas last year, the proportion was over 33 percent, valued at more than £34 million. In view of these facts, tea interests in London were inclined to consider the Minister's threats as tub-thumping.

The secret of preparing an instant tea powder immediately soluble in hot or cold water seems to have leaked out, for a report from Madras says that "the Tea Board is considering a proposal for setting up plants in the Nilgiris for the manufacture of instant tea from fresh green leaves". Two co-operative factories to produce ordinary tea have been under consideration for some time in the same area.

In Kenya, two large co-operative factories are under construction at a cost of £240,000. These are intended to benefit small plantation holders and the Colonial Development Corporation is said to be financing two-thirds of the cost. The balance required will be put up by the Special Corporation Development Authority under a guarantee by the Kenya Government. The two factories are only part of a scheme to erect half a dozen such aids to small holders. The plan is to increase manufacture from 250,000 lbs in 1964 to approximately 1½ million each a year.

The Special Corporation Authority aims to assist small holding interests and to complete planting up to 11,000 acres in the best tea growing areas. Plans to develop another 12,000 acres between 1964-1970 are under way, and an application has been submitted to the World Bank for necessary finance. In view of the high cost of financing new planting in India, some of these ideas seem to be worth attention.

The key to the supply position may be in East Africa. The fact that so far production in Africa has not flooded consumer markets appears to be due to the extensive manufacture of sun-dried tea and its sale throughout that continent. This method is reported to have caused established factories to be short of leaf for orthodox manufacture and it is reported that because of this practice, teas for export have not shown any material increase in the past two years.

Until recently, sun-baked leaf was illegal. The method appears to be restricted to small holdings and apparently, it is caused by the local landowners not paying the pluckers in cash but in kind. The effect on the tea bushes seems likely to be damaging. The authorities are trying to stamp out this practice. The potential supply of surplus tea from Africa remains a danger to be reckoned with. But an interesting feature is the growing internal demand by the African community.

The total output from the major producing countries so far this season at 897.3 million lbs. compares with 893.8 million lbs in 1962 and 891.1 million lbs in 1691. Tea in sight shows only a small advance over the past two years. While north India falls back, Ceylon goes ahead—by about 16 million lbs. South India and Pakistan record small advances over last year, but the latter country is well below its 1961 record figure.

The weekly offerings in Calcutta now run round 70,000 packages for export and 30,000 packages of dust. Prices have been fairly satisfactory. The average for 1963 so far is Rs. 5.93, against Rs. 5.70 for 1962 and Rs. 5.39 for 1961, a kilogram. The average for Dust Rs. 5.02, against Rs. 4.79 for 1962 and Rs. 5.07 for 1961, a kilogram. Exports from Calcutta from 1st July to 22nd September was 47 million kilograms, compared with 49½ million kilograms during the same period last year and 48¼ million kilograms in 1961. In view of the short crop, this is quite satisfactory. The London auctions on 7th October had 23,276 chests from India on offer out of a total of 28,136 chests. Demand for Assams was strong generally at better rates. Dooars also did well, but orthodox manufacture, were somewhat lower.

4th October, 1963.

BURN AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of the above-named company will be held at the registered office of the company, 12, Mission Row, Calcutta-1, on Tuesday, 19th November 1963 at 11 A.M. for the purpose of considering and, if thought fit, passing the following special resolutions.

Special Resolution

1. That the authorised share capital of the company be increased from Rs. 1,20,00,000 to Rs. 2,00,00,000 by the creation of 80,000 new ordinary shares of Rs. 100 each.

Special Resolution

2. That the Articles of Association of the Company be altered by deleting from the beginning of Article 4 the following words namely "The Capital of the Company is Rs 1,20,00,000 divided into 28,000 Preference shares of Rs. 100 each and 92,000 Ordinary shares of Rs. 100/- each" and substituting therefor the following words namely "The Capital of the Company is Rs. 2,00,00,000 divided into 28,000 Preference shares and 1,72,000 Ordinary shares of Rs. 100 each".

Special Resolution

3. That it is desirable to capitalise the sum of Rs. 84,00,000 out of the amount standing to the credit of Works Reconstruction and Expansion Reserve in the books of the Company and accordingly that such sum be capitalised and distributed amongst the holders of the ordinary shares of the company on the register of members at the 19th day of November 1963 (joint holders being considered as one person for this purpose) in the proportions in which they hold such shares respectively on that day and on the footing that they become entitled thereto as capital and on condition that the same be not paid in cash but be applied in paying up in whole at par 84,000 new Ordinary shares of Rs. 100 each to be allotted and distributed credited as fully paid up Bonus Shares to and amongst the said holders of 84,000 Ordinary Shares in the proportions aforesaid, that is to say, at the rate of one of such new ordinary bonus shares for every one ordinary share held by the Members respectively according to the Register of Members at this the 19th day of November 1963 and that the said ordinary shares so distributed shall rank in all respects *pari passu* with the existing ordinary shares save and except that they will not participate in dividends declared in respect of any period ending on or before the 30th April 1963, and that the Directors be and they are hereby directed to give effect to this Resolution.

The Registers of Members and the Transfer Books of the Company for Ordinary Shares will remain closed from the 4th November to 19th November, 1963, both days inclusive.

A member entitled to vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member.

A FIRESIDE CHAT FROM MR. KRISHNAMACHARI

THE feature of the "fireside chat" broadcast by the Finance Minister, Mr. T. T. Krishnamachari, last Friday was that it posed more questions than it answered. The stock markets have reacted bullishly. Motley business men and editorial writers are pleased. But one suspects that the bullishness and pleasure spring primarily from nothing more substantial than the circumstance that the Finance Minister still says some very nice things in a very nice way, and therefore continues to be "flexible" and "pragmatic". Inflexibility and airy-fairy idealism among the arbitrators of a nation's fiscal destinies are, of course, always dangerous. But satisfaction about the virtues which Mr. Krishnamachari has seemed eager to display will be qualified by the reminder that good thoughts are never enough; they have to be supplemented with good deeds if they are to be of practical value. In Mr. Krishnamachari's case, evidence of such deeds is still awaited.

The most reassuring part of the broadcast was Mr. Krishnamachari's statement that the paramount problem he faces is to accelerate the growth of the economy. As he reminded his listeners, during the past two years agricultural production has stagnated. The expansion of industries, especially consumer goods industries, has slowed down. The growth of the economy, therefore, has hardly kept pace with the growth of population. An improvement is expected in the coming months. For example, the crop prospects this year are good. As the supply of basic requirements such as power, transport, raw cotton raw jute, steel and fertilisers increases, industrial production is likely to rise; at the same time, new capacity will come into being with the maturing of past investments. The capital market is "showing glimmerings of revival". Measures have been taken to stimulate agricultural and power development, and to import more fertilisers—all of which should show results in course of time. But the growth thus expected will still not be enough; "it is clearly necessary to take further measures to quicken the process of expansion."

Mr. Krishnamachari's broadcast unfortunately did not convey any clear idea of what those "further measures" might be. Generalisations are one thing specific remedies quite another—and it was a weakness of the broadcast that it was long on the former but short on the latter. It is good to know, for instance, that the supply of credit for productive purposes is to be liberal, although the Reserve Bank will continue its vigilance in order to ensure that the credit is not used for speculative purposes. However, if memory serves, this is exactly what the Government and the Reserve Bank claim has been their credit policy throughout, not only now but for years. In the circumstances, it is possible that the difference between the present policy and the future one may be more one of shade than one of substance. Rumours are circulating that one tier is going to be knocked off the two-tier interest rate structure applicable to commercial banks when they borrow from the Reserve Bank; that the borrowing quotas of the former are going to be liberalised and that the Reserve Bank will stand by permanently ready to rush in with funds should particular banks find their position over-stretched. But these would not be revolutionary changes even in a purely formal sense. The revolution, if any, has to be in attitudes —in particular, in the attitude which assumes that the consequences of physical shortages and of reckless deficit financing can be neutralised by the manipulation of general and selective credit controls.

In other words, the Government first has to learn to restrain its currency-note-printing orgies in accordance with the realities of the economic situation. Only then would the credit policies of the present or the future have a chance of working. Mr. Krishnamachari indirectly showed awareness of the problem when he referred to "a considerable amount of unaccounted money which is used essentially for speculative transactions and more especially in commodities". He added that "this major factor" had to be borne in mind while devising suitable instruments of monetary control. While the statement as such is unexceptionable, it remains to be seen what "suitable instruments" can be devised to cope with an ocean of black money that has not come within a mile of the Government's reach for the last quarter of a century. The fact is that no instruments will be suitable unless the sum total of the black money is itself first reduced. Apart from stricter measures to prevent tax evasion, this might mean avoiding inflationary policies, reducing taxation, mobilising bank deposits more vigorously and bringing steadily more of the unorganised money market under the Reserve Bank's supervision and control. Mr. Krishnamachari, however, gave not the faintest hint whether he had any of these measures in mind.

More liberal credit, a slightly easier supply of imported raw materials and components, and a considerably easier supply of domestic raw materials and components—these are the factors which may be responsible for the modest recovery in industrial growth which the Finance Minister forecast for the very near future. He rightly emphasised, however, that a steady recovery could not continue "without a significant revival of investment activity." Unfortunately, it seems that this is a subject on which no decision of any importance has yet been reached. The question of setting up a unit trust has been in the air for at least eight months, if not eight years. The proposal for enlarging the functions of the Industrial Finance Corporation is of purely marginal importance too. The disappointment will remain, therefore, that relatively minor matters appear to be taking up Mr. Krishnamachari's time when the far more fundamental problem of getting the capital market as a whole moving again is receiving a somewhat leisurely study. The Finance Minister has hinted that he is not unprepared to take another look at the Government's fiscal and pricing policies which may have hampered industrial investment. The important thing, however, is not merely that these policies should be looked over again; but that they should be looked over quickly and the decisions reached soon.

When Mr. Morarji Desai presented his Budget in February, the economy had already achieved

two years of stagnation, as Mr. Krishnamachri was obliged to recall without pride last Friday. The two years have now got to two-and-a-half years. The country has reached the stage where it can hardly afford the tyranny of the fiscal calendar whereby the two-and-a-half years must now extend to three years before anything even begins to be done. In other words, Mr. Krishnamachari has had several months, as Minister for Economic and Defence Co-ordination if not as Finance Minister, to study the fiscal and pricing policies which have retarded capital investment and industrial growth. Known for shrewdness and insight, he could not be finding it difficult to recognise already which taxes and which pricing regulations are bad. No harm would be done, then, if the worst of the taxes and regulations were to be scrapped, amended or replaced as early as possible, while the more thoroughgoing reform of the fiscal structure with reference to "the requirements of growth and social justice" is left over until the Budget in February next year. If India is in the midst of an emergency, the need for quick decisions may be no less than the need for correct ones.

Finally, parts of Mr. Krishnamachari's broadcast last Friday were devoted to outlining his ideas on socialism, social justice and price stability. It is true, as he said, that the word "socialism" has come to mean all things to all men. To him, the word implies that "socialism, far from curbing the individual, seeks to stimulate and reward individual initiative and enterprise. But this enterprise has to be in the social interest rather than in the direction of promoting dynastic and monopolistic tendencies." It is perhaps permissible to say, with due respect, that the definition once again does not carry us very far, since as a generalised package of theoretical goals it would probably be heartily endorsed by all great men from Dr. Wilhelm Röpke to Mr. Liu Shao-chi. It is, to coin a term, non-anti-pro-socialism of a variety that would be readily acceptable to everybody. Perhaps that is what it is meant to be in its theoretical guise, while the practical content remains largely unknown. In some circles, however, a mild quiver of nervousness has been noticed that the "dynastic and monopolistic tendencies" to which the definition refers might be those featuring a class which Mr. Krishnamachari on an earlier and more famous occasion described as "man-eaters."

As for social justice, it is an excellent idea that those with talent should be given not only greater opportunities, but also the means (i.e., probably the money) to use those opportunities. The problem of devising suitable criteria for recognising talent, however, remains. Hitherto, in large areas of Indian society, whether it be business, politics or bureaucracy, the only criterion accepted as infallible has been the genealogical tree. The Almighty in his wisdom seems to have decreed that in this country discoverable talent must exist only in the sons, nephews and nieces of the already great. The Finance Ministry may find that, if it is to dispense scholarships really fairly for example, the same problem remains. Divine assistance will have to be invoked in order to bring about the revolution in private and social attitudes that is necessary to check nepotism and favouritism.

RAISING COAL PRICES

THE problems of the coal industry have been looked at in overall terms for too long a time. While this may have sufficed in the past, it will not serve the nation's interest to continue to do so in the future. This is obvious from a study of the production figures for the last two years, which highlight a disturbing decline in the output of the better grades of both coking and non-coking coal. Current estimates warn that the decline may not only continue but may even accelerate, a prospect which calls for some serious thinking about basic policy issues. It is undeniable that only a small proportion of the country's coal reserves consist of the better grades. While the exact proportion has not been firmly established, the evidence is sufficient to support the case for conserving the better grades by limiting their supply only to those whose needs cannot be met by lower varieties. This is accepted policy—it has been so for some years—but the policy-makers have suffered from a curious reluctance to accept its full implications. How does one otherwise explain the fact that a ton of Selected A coal is priced at only Rs. 4 a ton above grade II, a difference which ceases to have meaning when freight is added—equal in both cases—to make up the delivered price?

That the price differential is too small to discourage unnecessary consumption is obvious. But New Delhi has preferred to rely on the Coal Control Order which gives the executive the right to specify who will receive what coal and from where. The executive's right does not stop agitation and clamour, creating headaches for Ministers and sundry others who are supposed to hold the scales of justice even between competing claimants. The problem need never have arisen if "rationing by price" had been used to reinforce executive fiats. No injustice would have been involved since there is not the least doubt that if New Delhi relied on the allocative efficiency of the free market, the differentials would immediately widen. This is happening on a limited scale even now; with supply having overtaken aggregate demand, the lower grades are frequently available at a discount given officially or otherwise.

The fact of rebating is capable of varying interpretations. Chair-borne policy-makers can conveniently assume that it connotes a handsome margin of profitability in the grades in which rebates are being offered. At first sight, this seems a convincing explanation, but not when one gets down to details. A fact to remember is the wide spread of the industry: there are units employing less than 50 persons at one end and raising less than 5,000 tons a year, while the largest mines at the other end employ over 1,200 and have an annual output of over 200,000 tons. The report of the committee on the amalgamation of collieries—569 out of the 848 collieries are uneconomic in terms of the accepted criterion of a minimum output of 6,000 tons a month—noted that they have no equipment, no technical staff, and limited possibilities, if any, of expansion. They do not, to quote the committee, provide housing and other amenities to labour. "Labour is not paid wages according to the standards laid down and provident fund and other facilities are denied." Not surprisingly, a price that puts large operators in the red may still yield a goodly margin to those working in the manner the committee has described. The view is supported by everyday experience, and by independent testimony. A World Bank team which looked into the coal industry in 1961, prior to the offer of the $35 million for private sector expansion, held that small undertakings—mostly proprietary companies—hardly kept any books and were doing exceedingly well. The lack of proper book-keeping is nothing new; the Bhoothalingam Committee came up against the same problem when it wanted to go into the costs of the lower grade mines.

The fact, therefore, that a section of the industry may be quite well off even at present prices because it manages to escape statutory liabilities must not be allowed to colour the overall judgment. These mines, numerous as they are, account for only 21 percent of the total production. Many of them will go out of commission as the accessible seams get exhausted since they cannot find the capital outlay required to work deeper seams. In sum, the units are anachronisms on both technical and social grounds and means (other than voluntary amalgamation, which has failed) will have to be found to get at the reserves on which they are sitting. This is a plea for better organised mining to ensure that the country's growing demand is met in time and at the lowest possible cost, consistent with the social obligations the community has imposed on the industry in the shape of mining regulations and labour awards. It does not mean that the economy can do without the lower grades of coal, which most of the small mines raise. What was said earlier about rationalising consumption implies that the entire approach to coal should be geared to making the most of the abundant supplies of lower grades as a corollary to the conservation of better grades.

Planning for coal has so far proceeded on the basis that the country's prospective requirements do not call for any encouragement to Grade II production in West Bengal and Bihar and Grade III in the outlying fields. It may be necessary to examine whether the assumption holds true in the light of the overall demand—some place it at 200 million tons by 1970 and 350 million tons by 1980. Lord Robens, chairman of Britain's National Coal Board, expressed the view in Calcutta last week that the targets were much higher than could conceivably be achieved. He might well have added that aggregate targets are somewhat pointless since the demand for coal cannot be usefully assessed except in terms of the qualities required. Even the National Coal Board project must receive not only technical and financial scrutiny but also a separate one to establish whether the quality and location of the additional output meets marketing criteria. There is an important lesson to be learnt here to avoid the present unhappy situation in which the pattern of production bears no relation to the category break-up of demand. A perspective plan for coal worked out in some detail is an urgent need not only to decide on new capacity but also to determine a rational approach to pricing.

Looked at in this way, it will hardly suffice to peg prices at a level that covers current production costs. Cost neutralisation is important to an industry as hard-pressed as coal, but this is less important in the long run than incorporating in the price mechanism a strong growth stimulus. This requires that prices should be high enough to make returns in coal as attractive as in other comparable industries, so that it continues to receive a fair share of investment support. Whether a given price level satisfies this criterion can be readily judged by comparing profits in coal as a percentage of net worth with the all-industry average. At the present time, the comparison is unfavourable, and there is some danger that it may get more so unless immediate steps are taken to neutralise uncovered cost increases. Another equally important consideration, applying especially in the case of coal, is that the price structure should promote sound mining practices. In other words, nothing should be done which inclines the producer to go in for short-term gains—such as an output bonus may offer—to the detriment of developing the property properly so as to recover the maximum possible coal over the whole of its life.

A long-term view on both counts would justify giving every encouragement to the adoption of modern technology. As a logical corollary, the price would have to allow fully for the increasing cost of opening up new seams and mines so that the entrepreneur is not obliged to skimp on development. Such costs are rising not only on account of the inflation in equipment prices but also because mining conditions are gradually becoming more difficult. This may be judged from the fact that putting down a new mine cost Rs. 20 an annual ton in the late 'fifties, Rs. 50 a ton for third plan schemes assisted by the World Bank and is now reckoned at Rs. 100. Unless this higher investment is made, the coal industry will find itself quite unable to improve its productivity fast enough to absorb increases in wage costs. The result will be, as has been the case for some years now, frequent changes in price to accommodate every rise in labour's emoluments. An adequate price rise now which facilitates modernisation may well be the solution cheaper than occasional small increases that leave the basic problem untouched.

India's Resources

are Precious

WASTE NOT,

WANT NOT

A NEW ERA FOR THE FUND-BANK

AS was expected, this year's meetings of the International Monetary Fund and the World Bank did not produce any plans to revolutionise the world's monetary system. What they did do, and this again was foreseeable, was to acknowledge the need for some kind of change and approve the mechanism by which the various possibilities might be investigated. Which is what puts the 1963 Washington meetings among the most significant since the war. Before next year's gathering in Tokyo, not only will the question of quotas have been reviewed under the I.M.F.'s five-year rules, but the whole problem of international liquidity too will have been gone into in great detail. It does not follow, of course, that changes are likely now to be rapid and far-reaching. It is more likely they will be slow and extremely tentative, perhaps too slow for the pace of events if the United States' balance-of-payments deficit is reversed quicker than expected. But the risk of this happening does not appear to be very great at the moment. The main point is that although once again the need for a blanket increase in the world's liquid reserves was ruled out as firmly as Mr. Kennedy's rejection of a change in the gold parity of the dollar, the principle of more change and greater flexibility for the future was accepted, however reluctantly in some quarters. This had already been foreshadowed when the United States acknowledged some weeks ago that its own plans for balancing its external payments might cause embarrassment to others; what is important about the Washington deliberations is that France appears to have accepted the principle too. Now, presumably, the task will be to work for reform and not to let the spirit of change become victim to circumstances.

Two committees are to be set up. The first, which will be of the I.M.F. itself, is likely to be concerned chiefly with seeking improvements in the structure and working of the organisation. Possibilities to be looked into are the extension of borrowing periods and the increase of quotas without corresponding increases in gold subscriptions. This would be of importance to countries such as India. But the main work will be carried on by the "Committee of Ten", which is to include the representatives of the Finance Ministers of the Paris Club group of countries, the ten whose operations at present dominate the Fund. This Committee will meet in Paris with Mr. Robert Roosa of the U.S. Treasury in the chair, and its terms of reference could scarcely be wider. There is considerable danger in this, but there is much promise as well, because the problem of easing international monetary stringencies without actually increasing liquidity is likely to be an intricate as well as difficult one. It is not easy to identify exactly on what lines the Committee will decide to work, and so far little light has been thrown on this question by the authorities concerned. The only creditable guess has to be based on a wide appreciation of the facts involved and the attitudes of the various parties concerned.

The European countries, especially France, have taken the stand that although they are not diametrically opposed to an increase in liquidity should circumstances necessitate, they do object to such an expedient at present, and to its being used simply to get the United States out of the troubles its balance-of-payments problem has landed it in. If the U.S.A. needs credits, the argument runs, then it must take steps to put its economy in order and in the meantime approach the I.M.F. for whatever accommodation it requires. To what extent this stand is based on a desire to see the United States swallow the same medicine as other countries have had to in their time, or on the attitude that Europe's growing importance in international financial matters must be more firmly established, is scarcely important. The real point is that whatever changes are to be made, priority will be demanded for those which favour a more "equitable" relationship between debtors and creditors rather than any which seek merely to increase liquidity. There is considerable justification in this stand, although it is apt to appear somewhat irrelevant to countries which, like Britain, suffer from a chronic shortage of reserves even when their economies are otherwise in reasonable health. In the demand for equality, the non-reserve currency countries are apt to ignore the very important question of just how that proportion of the free world's trade which depends on dollars and sterling can be expanded when they themselves are accumulating, and holding on to, the lion's share of the available liquidity.

For better or worse, then, the Committee of Ten will most likely be confined, at least for the time being, to studying how the present "swap" system of international currency co-operation can be improved. In particular, and as suggested by the French representative, M. Giscard d'Estaing, the provision of some "automatic" machinery for a prompt return to equilibrium when central banks accumulate holdings of other currencies, will probably be looked into, as also the problem of the present iniquitable distribution of the world's monetary gold. More reciprocity is also likely to be urged, as when a reserve-currency country finds itself accumulating a debtor's currency. In other words, the emphasis will be on improving co-operation and making the existing system work better rather than simply on pulling the United States' chestnuts out of the fire. There is a good deal of sense in this, because it is useless to deny that the U.S. refusal in the past to accumulate others' currencies, and its readiness to assume a "holier than thou" attitude towards countries in balance-of-payments difficulties, has not helped to improve the international climate or increase the flow of world trade. If the U.S.A. is now being forced to accept the rules that have hitherto embarrassed other I.M.F. members in the past, then it may be no bad thing for the future.

All this will probably have greater significance for the underdeveloped countries in the long run than appears likely at the moment. There is an all-round gain from greater co-operation and this is what the I.M.F. meeting seems to be promising for the future. The meeting of the World Bank, however, offered more obvious benefits for th underdeveloped, and perhaps more immediate ones too. Under its new president, Mr. George Woods, the Bank has this year acknowledged a crisis in its affairs. This has been coming on for some time now, and it is due to a number of factors not all of which can be attributed either to internal policy or departed personalities. The fact has to be faced that many borrowers are no longer in a position to meet the Bank's wholly reasonable but somewhat stringent lending requirements, despite the fact that their needs have declined not at all. Some of the problems have been resolved by the twin satellite institutions, the International Finance Corporation and the International Development Association. But this has not prevented the point being reached where either the Bank adopts new policies or prepares itself for eventual extinction. Mr. Woods announced that these are now being developed, and the volume of loans is already rising in consequence. Briefly, the idea seems to be to blur the present sharp edges of division between the Bank and its satellites so that, to some extent, it can take over the more orthodox of their functions. It is also planned to enter new fields of lending activity and to reduce or liberalise interest and repayment requirements. These could be developments of major significance.

As with the Bank, the I.F.C. and the I.D.A. too have given the impression of being on the threshold of radical change. The scope of the latter should be increased by the promised discretionary transfer to it of a portion of the Bank's annual investment income. But the calls on the I.D.A. will inevitably grow, and some method of supplementing resources before the state of these comes up for review in three years' time would be a great help to developing countries. The work this institution is at present doing in supplying "soft" loans is invaluable. The problem of the I.F.C. is still to find the right kind of investment project, although this has been helped by the decision to permit the purchase of industrial equities. Along with the I.D.A. its functions can be expected to go on increasing, although by its nature it is unlikely to achieve anything as dramatic as its fellow organisation, whose scope is in any case so much greater.

But the main interest this year centres on the possibilities facing the World Bank itself. In the past this institution has done great work within its limitations. Now the task will be to find other work without necessarily abandoning altogether the principles on which the Bank has traditionally worked. Mr. Woods has suggested three possible fields for new lending. The first, and probably the most important so far as India is concerned, is agriculture. Already, of course, the Bank concerns itself with large-scale irrigation projects which help farmers. But what Mr. Woods appears to have in mind is something in the field of storage provision and assistance to institutions designed to provide credit and technical assistance. It is not obvious at first sight how such ventures can be expected to pay an economic return over any reasonable period, but no doubt Mr. Woods has this point firmly in hand. Also of importance to India are the other two possibilities: the provision of finance for imports of machinery and components for industry, and the sponsoring of suitable educational projects such as schools and colleges. These three proposals show considerable imagination, and Mr. Woods is to be congratulated on his initiative so soon after taking over his new post. The fact that it may prove difficult to reconcile such propositions with the orthodox principles on which the Bank has always worked, does not in the least detract from their virtues.

So this has been a significant annual meeting for both the major international institutions. The new men in charge, and the changing requirements of the times, both appear to have had a part in creating the new image. If this year is an earnest of more promising things to come, then the world has reason to be grateful. Both have done great service in the past. But circumstances are changing rapidly and institutions must be reshaped to suit them. The evidence that flexibility remains one of the virtues of the Fund-Bank set-up is to be welcomed by the developed and underdeveloped nations alike.

STEEL PRICING AND DISTRIBUTION

THE Raj Committee's final report, released last week, may be considered in two parts since the pricing of steel raises some issues quite separate from those involved in distribution. To consider pricing first, the point to note is that the Committee's terms of reference did not really require it to go into the principle on which the Tariff Commission has based its awards in the past. If it did so, it was because it found the differentials among categories—price relatives as it calls them—not only arbitrary but also a hindrance in adjusting the pattern of production to demand. Both producers and consumers were fully in agreement with the Committee on this point and warmly welcomed its interim recommendation that the differentials needed thorough overhauling. Once Professor Raj and his colleagues started to question differentials, they seem to have been struck by the fact that the very basis of pricing is unscientific since it has never attempted to allow for the replacement of assets at current costs.

As they said in its interim report—a view reiterated in the final recommendations—the gross block should not be underestimated simply out of fear that the general price level of steel would have to be raised or that the valuation at replacement cost might enable the older plants in private ownership to accentuate large surpluses. The fear of misuse of profits, the Committee emphasised, is not a satisfactory basis for

price policies. A failure to use surpluses for purposes like modernisation and rehabilitation can be corrected by other means, but in any case the record of the steel companies does not warrant this apprehension.

The Committee has reiterated its earlier suggestion that price-fixing should be made the responsibility of a joint committee of the producers, implying self-regulation in place of control from outside, exercised nominally by the Tariff Commission but actually by the Ministry which has frequently overruled this quasi-judicial body's recommendations to the producers' disadvantage. Self-regulation is, of course, attractive, not because it will allow producers to have their way but because it will remove prices from the arena of political pressures. Yet, in the absence of fuller details of the precise rôle which the Committee envisages for the joint committee, serious reservations are warranted about the feasibility of self-regulation. Are prices to be fixed by majority vote in the joint committee, or is it the intention that the Iron and Steel Controller, who is to function as an umpire, will have powers to reserve decisions for Government approval? There is no getting away from the fact that steel prices are of fundamental importance to the economy. Decisions cannot, therefore, be taken only in the light of production economies but have to take the larger national interest into account.

Is a joint committee of producers competent to decide where the national interest lies? This is not to suggest that producers, whether private or public, do not have a high sense of social responsibility, but their judgment can at best be only sectional. They can hardly decide, even if they felt this to be necessary, that metal prices should be kept low relative to other prices to stimulate industrial development. The corollary that follows is that somebody else, the Exchequer perhaps, should make up the difference to the producers, a matter on which the joint committee can hardly legislate. That steel pricing is properly the concern of public policy is not a socialist heresy In the United Kingdom, the Government has now taken a hand in this matter for over 30 years. As the U.K. Iron and Steel Board, the chosen instrument for regulating the industry, has said in a recent review, the forces of the market alone would not always ensure economic and adequate supplies at reasonable prices. This is described as the principal reason why the Government must concern itself with the affairs of the industry, and why "public supervision" of the industry has become established policy (regardless of the political complexion of the Government in power) in the United Kingdom.

Self-regulation in the present form is clearly not going to suffice, especially in Indian circumstances which require high rates of sustained growth in capacity. It is important, therefore, that prices should be high enough to make adequate investment possible in the construction of new capacity; and, at the same time, low enough to bring economic pressure on producers to modernise and replace obsolete equipment and facilities. Making prices higher than immediate production costs warrant requires sanctions which a joint committee of producers can hardly summon. The private sector of the steel industry has rightly demanded, therefore, that the Government must itself broadly decide the level of prices before making over the responsibility for future changes to the self-regulatory agency of the joint committee. This implies taking a decision on the issue of principle, a duty understandably falling within the domain of the Government. Once the larger questions relating to prices have been settled, it can be left to the joint committee to fix the differentials between categories and the extras to be charged over base prices for non-standard sizes and specifications. But even in this narrow field, the question may well be raised why the consumer should not be associated with decision-making. Or again, why the re-rollers—currently supplying 25 percent of the total demand and perhaps a much higher proportion of the non-Government purchases—should not be given a voice? If the Committee has considered these issues and decided against their representation, this is an aspect which needs to be examined again at the policy level.

As for distribution, the Raj Committee's final report reiterates its earlier recommendation of partial decontrol—the first sale from producers at fixed prices but all subsequent sales at what the market will bear. At first sight, the Committee's recommendation seems to be at variance with decontrol as visualised by both Mr. C. Subramaniam, Central Minister for Steel and Heavy Industry, and the private producers. But there is no real difference; whether there is any statutory control or not, no one—least of all the producers—expected the first sale to be made at anything but firmly fixed and stable prices. Beyond the first sale, the producers are not concerned *qua* producers, whatever bearing it may have on their stockyard operations. The public interest is, however, deeply involved because of the repercussions that free market operations may have on the cost of consumer items and on plan projects financed by the taxpayer.

To judge the issue in perspective, the first point to note is that almost every essential user will continue to obtain his requirements direct from the producers. A free market will not, therefore, have anything but a marginal impact on plan projects and State undertakings whose demands on the producers will be planned by a priority committee in New Delhi, in much the same way as now. These priority demands from Government sources constitute 50 percent of the total, and another sizable chunk is accounted for by public utilities and basic industries such as coal, heavy machinery and equipment manufacture. It is only the residual proportion—perhaps no more than 30 percent—which will be available for free marketing *via* the stockists. Even under the total decontrol that a section of the industry favours, the position concerning supplies will not be materially different. It has always been implicit in the decontrol proposals that producers will accept the responsibility for making supplies available to essential consumers on the basis of "fair shares". One may, therefore, conclude that in this instance also the Committee's views are in agreement with the producers' idea of responsible *laissez-faire*.

As for the 30 percent of the supplies reaching the consumers *via* stockists, the idea of a free market represents nothing more than a recognition of the situation as it exists. Such recognition is to be welcomed because it will do away with the unnecessary deviousness now involved in buying and selling steel, and may perhaps (one hopes) bring under-the-counter profits within the tax-gatherer's net. In any case, free trade will reinvigorate the retailers of steel by introducing a greater element of competition. This will be all to the good because much of the trade has ceased to perform its legitimate function of servicing the consumer by taking over bulk supplies and breaking them down into units and sizes required for retailing. This not only hampers the small consumer but also gets in the way of the producers upon whom a part of the demand for meeting individual requirements falls.

While the Raj Committee's recommendations will receive wide support, some doubts have been raised whether it is necessary that the production programme of the major works should be centrally planned by the joint committee. The issue really boils down to deciding whether, in circumstances where shortages will persist for many years still, planning can help to get more out of the mills than otherwise. Hindustan Steel's view reportedly is that the production of the plants can be so rationalised that it reduces the overlap between them to negligible proportions. In addition, such overlap as still remains can be taken care of by assigning to each plant a marketing zone. The ideas are worth trying since maximum specialisation must be the aim so that the plants achieve long and economic production runs, but it still does not do away with the need for a measure of supervision which joint planning may provide.

FREIGHTS: BARK BUT NO BITE

THE acrimonious controversy touched off by the decision of the India-Pakistan-U.K.-Continent Shipping Conference to raise the freight rates on west-bound cargoes by 121 percent has now reached a stage of noisy futility. The Government of India has issued 16 global licences to Indian shipping companies to operate tramp vessels. An Indian company, Apeejay Lines, has offered to carry cargoes at rates even lower than the Conference lines' original rates. To reduce the dependence on Conference shipping, the Government is also thinking of other measures, such as (1) granting loans liberally for acquiring tramping ships, subject to the condition that the companies taking the loans will operate as genuine trampers and not join any conference; (2) allowing tramps to carry all possible cargo; and (3) permitting foreign vessels to be chartered until Indian tramping strength is built up

In normal circumstances the Government's move to increase the tramping fleet would have been a step in the right direction since tramping is a field where rapid expansion of tonnage is easier. Tramps are necessary for the balanced growth of India's merchant fleet, and for meeting the bulk transport needs of her overseas trade. At present her tramping strength is very limited. Only about 10 percent of her total trade is carried in Indian bottoms and if this is to be raised to 50 percent, the expansion of tramping is necessary. But recent developments in the international freight market have rendered the Government's decision inopportune. Freight rates have jumped up because some major harvests in Russia, China and Europe have been poor, so large quantities of foodgrains will have to be imported from North and South America; the prices of second-hand dry cargo vessels have increased by up to 25 percent in response to the rise in freight rates. The *Liberty* vessels built during the second World War have in fact commanded a price of £90,000 recently, compared with £60,000 last June. Owners of this type of vessel, it is reported, are now holding out for £100,000 as they expect a further improvement in freight rates. They may not be disappointed, considering the latest U.S. decision to sell huge quantities of wheat to Russia.

It remains to be seen how far the global licences granted by the Indian Government to operate tramp services will be actually used. The acquisition of ships, already difficult because of the acute shortage of foreign exchange, has now become much more difficult. The third plan has allocated Rs 55 crores for shipping development, and the tonnage has already almost touched the plan target of 1.3 million tons. This rapid expansion has been possible because of the liberal deferred payment terms offered by shipbuilders in their anxiety to attract orders during the period of depression. But in view of the changed conditions it is doubtful if such terms will be available now. A few months ago the Government raised the permissible limit of foreign share capital participation in Indian shipping companies from 25 percent to 40 percent in the hope of attracting external investments in order to acquire additional tonnage. But so far the response from foreign shipping interests has been poor. Thus the only course now open is to acquire ships from rupee payment countries like Yugoslavia and Poland. But their quotations, even during the earlier depression in the ship business, were very high.

The Government's measures to cut down the dependence on the Conference lines will at best be marginal in effect. They may harm Indian interests since three major Indian shipping companies, including the Government-owned Shipping Corporation of India, are Conference members. Their share in the total trade at present is 39.5 percent, and there is a provision for raising it by annual escalations of 1 percent to 48.47 percent by 1971. So on any reckoning, the move to circumvent the Conference is ill-advised. It will be almost impossible to implement it to any serious extent in the absence of sufficient shipping tonnage.

It is obvious that the Government does not have any objection to a freight rise as such, since it had agreed, on the recommendation of the Maritime Freight Commission, to a rise of 7½ percent. Its quarrel is with the amount of rise, namely, 12½ percent, which, it contends, will adversely affect India's exports. Furthermore, it feels that its plea to exempt "sensitive commodities" from the freight rise has been disregarded. The Conference has pointed out that the freight increase is not applicable to some commodities, while in the case of some others the increase is smaller, with the result that the effective overall increase is less than 10 percent. It has also indicated the incidence of the rise on the major export items The Conference lines point out that the total export trade on its route amounts to only Rs. 204 crores, jute manufactures, tea and oilcakes accounting for Rs. 112 crores. The freight incidence, according to it, is as follows:

Commodity	Incidence of freight on value before increase	Incidence of increase
Tea	4.28%	0.47%
Oilcakes	18.79%	1.48%
Jute products	8.54%	0.96%
Average on all other general cargo	6.52%	0.73%

As for the "sensitive items", the incidence of the freight rise is as follows:

Commodities	Percentage incidence on value of the rate increase
Oilcakes	1.48%
Coir yarn	1.19%
Vegetable oils	0.96%
Coffee	0.56%
C. P. goods	0.2 %
Hides and skins	0.10%
Coir matting	nil

The figures show that the impact of the new freight rates is insignificant, except perhaps in the case of oilcakes. There, too, because of the concessions proposed for shipments under contract for minimum quantities of 15,000 tons a year, the incidence may be reduced to about 1 percent.

If it is seriously argued that exports will be affected by the rise in shipping freight, it is difficult to see how increases have been permitted in the charges of other forms of transport. Railway freights, inland transport costs, coastal shipping rates have all gone up during the past few years. The Conference has pointed out that, even after rationalising its working by pooling arrangements, it is not able to operate economically and provide a reasonable return of 12½ percent on capital unless freight rates are put up by 33 percent. The working of some Indian shipping companies seems to corroborate its contention. The India Steamship Company, for example, has been running at a huge loss for the past four years. It could have averted its loss of about Rs. 30 lakhs for 1962-63, had a freight increase of only 10 percent been allowed in the east to west trade last year When the operating costs of shipping companies have gone up everywhere, a freight rise is only natural. In his annual statement to the shareholders of India Steamship Company, Sir A. Ramaswami Mudaliar has stated that "even with the increases proposed by the Conference, there is only a very slight increase in actual freights over those prevailing in 1957, for several of the commodities." While the rise may not affect the competitive position of many export items. Indian exporters ought to be in a position to absorb the rise in the cases of commodities which are really "sensitive".

Current News and Comment

Fall in Currency Values

"The highest law is the highest injustice. This more than 20 century-old sentence still clearly defines the legal masquerade which continues to surround the unabated technique of expropriation of the currency owner everywhere." So begins Dr. Franz Pick's foreword to the 1963 edition of *Pick's Currency Yearbook*, the ninth in an annual series. Dr Pick continues: "During the 12 months which have elapsed since the previous edition of this publication went to press, the world's monetary justice continued to be raped constantly in every country of the globe. Promises of currency stability were cynically broken, purchasing power of even the 'hardest' units was debased in order to chase rainbows such as full employment.

"Between 1st July, 1962, and 30th June, 1963, not less than 15 full devaluations cut the official values of the monetary units of Afghanistan, Brazil (5), Chile (3), Colombia, Indonesia (2), South Korea, Syria and Uruguay. These fraudulent State bankruptcies did not present one instance in which the unfortunate money owner was compensated by the bankrupting authorities. Twenty-six currencies dropped to historic lows of value in free markets. They were the units of Algeria, Argentina, Brazil, Burma, Ceylon, Chile, China, Colombia, Congo, Cuba, Ghana, Guinea, India, Indonesia, Israel, Katanga, South Korea, Laos, Nicaragua, Pakistan, Paraguay, Peru, Ruanda-Urundi, the Sudan, Tunisia, and Uruguay. More than one-third of the globe's population underwent partial or full monetary expropriation by such drops of currency value."

Commenting on recent monetary developments, the author highlighted the following: "A new wave of rising prices swept over a Europe where only a few years ago some hopeful returns to currency stability were appearing. Under the impact of so-called prosperity or over-full employment, wages were increasing and taxes rose, as did prices of all products and the purchasing power of the various currencies was coldly reduced. It was one of the not fully appraised facts that the globe's best and freest currency, namely, the Swiss franc, was debased to a level of less than 50 percent of its pre-second World War buying value. The hard units of the Common Market and E.F.T.A. countries also shrank in value and the internationally respected pound sterling bought less than 29 percent of its 1938 value." Dr. Pick concludes: "The monetary millenium has not come into human reach. The real tragedy of all these events is the horrible fact according to which governments may continue to cheat or to expropriate the individual who has acquired some savings or assets. But should the individual try to protect himself against such a procedure, he becomes subversive and dangerous. From Washington to Peking, legislation to limit the monetary freedom of the individual increases constantly. The fear of devaluation, dominating the thoughts of currency managers, did not subside anywhere during the past 12 months. It will continue to rule in all central banks or Ministries of Finance in the year ahead.

The revised and enlarged 1962 *Yearbook* presents a thorough analysis of 95 leading world currencies, including a general economic survey, monthly free or black market rates since 1954, official monetary statistics, transferability regulations and summary of ten-year monetary records. In addition to a currency mortality table, there are unique global *per capita* tabulations on gross national product, national debt, foreign trade, and currency in circulation. The currency unit of Algeria is included for the first time. Other sections of the book are devoted to statistics and comments on the leading gold markets, transactions and complete data on world public and private gold holdings and production, including the Russian bloc. A comprehensive international trade directory, with names and addresses of foreign departments of leading banks, currency dealers, gold traders, security arbitrageurs, etcetera, completes the scope of the new *Yearbook*.

State Taxation Affects Exports

State Governments grant relief from sales taxes and other levies in the case of exported commodities, but the defective system of allowing this relief does not help export promotion The memorandum which the Federation of Indian Chambers of Commerce and Industry has submitted to the Saraiya Committee on sales tax makes some useful points in this connection. The rates of State taxes have been increased from year to year, thereby affecting industrial costs. For example, various State Governments in their 1963-64 Budgets, have raised the electricity duty by Rs. 2.8 crores. Since industry consumes 60 percent to 70 percent of the electricity generated in the country, the incidence of this duty on industrial costs has been heavy. For instance, the cost of electricity for the Indian ferro-manganese industry, is as high as Rs. 150 to Rs. 225 a tonne, against Rs. 50 to Rs. 65 a tonne in foreign countries. There are also other levies such as royalty rates, surface rent, dead rent on different industries which push up costs.

It is, however, the sales tax which has probably done the greatest damage. According to the 1963-64 State Budgets, the estimated realisation from the general sales tax is Rs. 186.81 crores and from sales tax on motor spirit Rs. 31 crores, making a total of Rs. 271.81 crores. It is not possible to calculate the precise incidence of sales taxes on industrial costs. The Federation has, however, estimated it between 2 percent and 4 percent The total burden of sales tax on export commodities would be of the order of Rs. 20 crores a year. This is naturally preventing India's exports from rising. The complete removal of this burden of Rs. 20 crores would not create any serious difficulty for State finances. The Governments have not yet appreciated the fact that a slight sacrifice of the sales tax revenue would make a big contribution to the export promotion drive.

The real cause of confusion has been that the expression "sale in the course of export" in Article 286 (1) (B) of the Constitution has been so interpreted that only direct export sales are exempted from sales tax. As the Federation has pointed out this means that only the last export sale, that is, the sale which occasions the final export transaction is free from tax with the result that sales to dealers or merchant-exporters, even though meant for subsequent export, are not exempt from the tax. In the States of Maharashtra and Gujarat unlike the other States, even an exporter other than a manufacturer or producer is entitled to the concession, provided he holds an authorisation granted by the sales tax authorities. But even in these States, the relief is of a limited nature as no exemption from sales tax is allowed on raw materials and intermediate products going into exported commodities.

Since it is not possible to measure the exact incidence of sales tax on each export consignment separately, the best method, as was also recommended by the Import and Export Policy Committee, would be to provide *ad hoc* rebates to whosoever exports the commodity finally. The determination of the *ad hoc* rebate would, of course, depend on the incidence of the State and Central sales taxes on exported commodities—not only on finished commodities but also on raw materials, components, and other materials going into such products. A simple and uniform method of giving the rebate will have to be evolved for this purpose in order to help export promotion,

Advertising and Export Promotion

Advertising plays an important part in export promotion; in fact, its rôle is fundamental. It can not only help build a favourable image of the exporting country in its overseas markets, but can also assist in other promotional activities like market surveys and study of consumer tastes. While reviewing the activities of the seven-year old Clarion Advertising Services Private Ltd, in Calcutta recently, the chairman, Sir Dhiren Mitra, dealt with an advertising agency's function in the context of India's emergence as an industrially developing nation which has not only to export her manufactures to neighbouring countries, but, like a good neighbour, has to provide aid to them for fulfilling their own industrial ambitions.

Sir Dhiren commended India's increasing participation in trade fairs abroad as a step in the right direction. She now has 15 trade centres overseas carrying out visual and commercial publicity for exportable goods. But, as Sir Dhiren pointed out, display of goods does only half the job. The most important part of closing a deal is salesmanship which is lacking at these fairs and trade centres. "Export trade is highly competitive and salesmen of competing countries are in close touch with prospective buyers; we, unfortunately, lag behind in persuasive selling". It is also necessary to set up permanent exhibitions or showrooms at leading industrial centres. There is need design houses to improve Indian products to suit the requirements of foreign markets. Equally important is the need to set up an indus-

trial design institute for improving the design of manufactured products in keeping with varying consumers' preference in different countries. Packaging is another field to which special attention needs to be paid.

An unfortunate fact is that the people responsible for the export trade have not had the basic training, Sir Dhiren observed. But he felt that the establishment of the Indian Institute of Foreign Trade by the Board of Trade could help remove this deficiency. It is an autonomous organisation in which the Government, trade and industry, and universities will participate. Its main functions are training, publicity and research. Foreign experts will be available under aid programmes for guiding research and market survey activities and for planning and organising training programmes. The export market development fund of Rs. 3.8 crores, provided in the current Budget, will be at the disposal of this Institute to finance a programme of training, market research and sustained publicity abroad.

A Survey of Export Trade

In a survey of India's export trade, just published, the World Trade Department of the Indian Chamber of Commerce, Calcutta, says that 59 countries of the world including the U.K., the U.S.A., Russia, Yugoslavia, Australia, Canada, Czechoslovakia and France imported more from India during 1962-63. An encouraging fact is that U.K. importers have recently shown keen interest in a number of new Indian goods such as plastics, chemicals, herbs and drugs, handicrafts, footwear, cigarettes, cigars, galvanised buckets, *saris*, towels, sewing-thread, raw silk ties, canned fish, sugar, plywood and timber. Among 42 countries which reduced their purchases were Belgium, Ceylon, West Germany, Indonesia, Japan, New Zealand, the Sudan and Thailand. During the year, India had a deficit trade balance with 40 countries. The deficit was serious with western Europe, particularly West Germany, the gap being Rs. 82 crores with the latter country.

India's exports to the European Common Market were Rs. 47 crores in 1962-63, against Rs. 51 crores in the previous year. In fact, exports to the E.C.M. have remained at a low level for the past several years mainly because of high tariffs, fiscal regulations and quota restrictions But there has been a big increase in India's exports to eastern Europe. From Rs. 25 crores in 1957-58, they rose to Rs. 92 crores in 1962-63. This was 13.3 percent of this country's total exports during that year. Bilateral agreements and the policy of those countries to increase their domestic consumption were the main factors in this trade expansion.

Exports to the U.S.A. improved only by Rs. 1.5 crores, although individual items like fish preparations, raw cotton, mica, coconut fibre yarn, sewing machines, footwear and art works showed substantial increases. But there was a steep fall in coffee, pepper, sugar and cotton waste. The U.S.A. offers scope for increasing the export of engineering goods, but India has so far not availed herself of this opportunity. Almost all countries in south-east Asia reduced their purchases from India during 1962-63. This was due to various factors like foreign exchange shortages, India's inability to offer adequate supplies and uncompetitive prices of certain products The pattern of this country's exports to the countries of west Asia and Africa was also more or less similar.

In a commodity-wise analysis of the export trade, the survey says that a considerable increase has taken place in many of the traditional items. The earnings from jute manufactures went up by Rs. 12 crores, tea by Rs 7 crores, tobacco by Rs. 4 crores, and hides and skins by Rs. 2.6 crores. Exports of non-essential vegetable oils rose by about Rs. 7 crores and oilcakes by Rs. 14 crores. Among the items whose exports markedly fell were cotton textiles (by Rs. 1.9 crores), leather (by Rs. 2.8 crores), manganese ore (by Rs. 2.6 crores), raw cotton and waste (by Rs. 3.3 crores), raw wool (by Rs. 2.7 crores), iron and steel (by Rs. 7.4 crores) and steel scrap (by Rs. 4.2 crores).

Interlocking of Directorships

The interlocking of directorships between banks and the rest of the corporate sector is a common feature in India, although it also prevails in the industrially-advanced countries of the West. It has so far contributed to the vigour and strength of corporate enterprise. In India, in particular, interlocking has done more good than harm. Since the capital market in this country is relatively undeveloped, the industry has to go to the banks for substantial financial assistance, although the growing proportion of bank borrowings in relation to equity capital has already drawn adverse criticism. But under the present circumstances, reliance on banking funds may have actually to increase, especially if the industrial economy is to make quicker progress. Interlocking of directorships between the banks and the rest of the corporate sector has, therefore, been helpful in various ways. It has facilitated a freer exchange of views between the banks and other companies. Because of their close association and often control of various companies, the banks have felt more confident in investing their resources in industry. As long as interlocking is closely regulated as it is now through the Companies Act and the Banking Companies Act, there is no reason why interlocking should not serve a useful purpose without coming in the way of the Government's professed social policy.

An informative contribution on the subject, under the heading "Interlocking of Directorships between Banking and other Companies" and written by Dr. Raj K. Nigam, Director of Research and Statistics in the Department of Company Law Administration, appears in the annual number of *Company News and Notes*. The author has produced elaborate statistics to show the range of interlocking in this country. The coverage of his study is 20 leading banks in the private banking sector. (Since the State Bank of India is largely Government-owned and fully Government-controlled, it has been excluded.) The proportion of the banks' total capital, reserve and deposits to

PUJA HOLIDAYS

On account of the Puja holidays, there will be no issue of CAPITAL on 24th October, 1963. The first issue after the holidays will be dated 31st October, 1963.

the corresponding heads for the entire private banking sector works out to 68 percent and 71 percent, respectively. The study thus covers nearly three-quarters of the private banking sector.

Dr. Nigam has pointed out that interlocking has grown despite the various restrictions on the appointment of directors in banks and companies under the law. The inter-communication between banking companies and other corporate bodies has taken place due to various factors. Firstly, the banks have secured a right to put their own men on the board of directors of companies by virtue of large shareholdings either on their own or as nominees of their clients. Secondly, the banks generally take a right to nominate some directors on the board of companies to protect their interests in case they lend to companies on a long-term basis. Even among Government financial institutions like the Industrial Finance Corporation and the State Financial Corporations, it has been the practice to reserve this right of nominating directors. Thirdly, the bank managements quite often invite directors of other companies to serve on the boards of the banks to ensure greater confidence and prestige. A closer association of the banks with prominent business houses also helps the growth of the banking business itself. Fourthly, some companies generally invite the directors of banks and financial institutions to join their boards of directors in order to facilitate their borrowings for big projects.

Although the banks have not been sufficiently risk capital-minded, they invest in the shares of corporate bodies and exercise decision-making powers on behalf of their clients who hold substantial interests in various companies. In India, some of the leading business groups have their own banks, insurance companies or investment firms. In this way, the needs of the various groups of business men have been conveniently met and they possibly enjoy priority in the matter of loan facilities. The trend does not necessarily imply that the funds have been misused.

At the end of 1961, a total of 188 persons were serving as directors on the boards of 20 banks covered under the study. The number of directorships held by these 188 persons in the banks and other companies totalled 1,640. Excluding the 188 directorships held by them in the 20 banks, the total of their directorships in non-banking companies and other institutions, including co-operative banks, was 1,452. The average number of directorships held by these 188 persons worked out to nine, including that held in the banks. Considering that directorships held by a director belonging to big-sized companies was 6.5, the average number of directorships of these 188 persons was higher. It was also higher than that of the directors of the big ten banks in the U.K. The average size of the board of Indian banks has been nine, while the size of the board has generally varied between four and 13 directors.

The average size of the board of directors of the Indian banks has been bigger than that of big-sized companies having a paid-up capital of Rs. 50 lakhs and more. As for the frequency distribution of directorships held by bank directors, it has been shown that about 12.8 percent of them have held one directorship while 12.2 percent have held more than 20 directorships. The comparison between the directorships held by bank directors and those held by the directors of the big-sized companies shows that multiple directorships have been more marked among the former, although they cannot hold more than one directorship within the banking sector itself.

The Bank of India, the Central Bank of India, the Bank of Baroda, the United Commercial Bank and the Punjab National Bank constitute the first five of the private banking sector Their total directorships, including those in the banks, total 744. If their 55 directorships in the banks are excluded, they have 689 directorships in the corporate sector. Hence the number of directorships held by them in other companies is larger than those held by the directors of the other 15 banks covered in the study The directorships held by the directors of the Bank of India and the Bank of Baroda work out to 16, those of the Central Bank of India and the United Commercial Bank to 11 and those of the Punjab National Bank to seven. The directorships of these five banks form 45 percent of the total directorships of all the 20 banks, whereas the directors of the five banks constitute only 29 percent of the total number of directors. Through common directors these five banks have been connected with 33 insurance companies, six financial companies and 25 investmens trusts. These banks have also been connected with 584 manufacturing and other companies, 26 trading companies and 15 non-profit-making associations.

COMPANY NEWS AND NOTES

THE prospectus of the Baraset Basirhat Light Railway Company was advertised in our issue of August 13th, and we recommended the Company to persons desirous of a good and safe investment. The subscription list closed on the 25th ultimo, and the shares offered to the public were applied for so freely that the Directors have only been able to allot half the number required by the principal applicants and nothing below ten shares. It is evident that the public fully appreciate a good thing when their attention is properly drawn to it.

That enterprising firm, Messrs. Marshall, Sons and Co., Limited, are lengthening their cords and strengthening their stakes in India. Mr. J. Harper, of that firm, has just lately returned to Calcutta from Bombay, where he has been engaged in negotiating the purchase of land for the erection of new offices and godowns in the Western Capital.

The Directors of the Victoria Mills Company, Cawnpore, at their meeting on the 14th October current, decided to pay an *ad interim* dividend of Rs. 5 per share on Ordinary and Rs. 3 per share on Preference shares for the half-year ending 30th September last The Directors intimate that the whole issue of Rs. 6 lakhs Preference shares has been fully subscribed.

The Mercantile Bank of India have declared an *ad interim* dividend on the A Preference shares for the year ended 30th June at the rate of 5 per cent per annum.

A Ditcher's Diary

IN ONE OF HIS PLAYS, MR. T. S. ELIOT MAKES ONE OF his characters say that we can only set in motion a certain machine of events; how it will work and what developments it will produce are beyond us. As far as I know, Mr. Kamaraj is not much given to reading modern poetry in his few spare hours, yet he may be reflecting on these very lines as he prepares himself for the first time for an all-India rôle as President of the Indian National Congress. Although it is customary in this country for almost everyone in power to pretend that it has been thrust on him, in Mr. Kamaraj's case I am quite prepared to believe that he has persuaded himself to become the Congress President with extreme reluctance. What does the office mean in terms of real authority? Not, obviously, what it used to. But a truly strong man, such as Mr. Kamaraj doubtless is, can still restore to the office a great deal of power to do good. And I have a feeling that Mr. Kamaraj will. Since Sardar Patel through Govind Ballabh Pant to Lal Bahadur Shastri, it has been the Home Minister's task to make India's warring States pull together. Mr. Nanda has not yet had the time to acquire a comparable stature; and the job is there for the new Congress President to take over. Are Hindi eyes in the north a little moist that the offices of President, Vice-President and Congress President are all occupied by members of minority groups? I should not be surprised; the tendency in recent years has been to make all these offices mainly decorative. Mr. Nehru is apparently happy about the choice of Mr. Kamaraj, whose loyalty to the Prime Minister is said to be unquestionable. Yet Mr. Nehru too may profitably reflect on Eliot's lines Mr. Kamaraj is no man of straw; his relinquishment of the Chief Ministership of Madras does not mean that he has lost his hold on the successor Government; and he is capable of springing surprises. The Dravida Munnetra Kazagham may well be happy that Mr. Kamaraj's attack on it will be inevitably diluted because of his projection over the whole of India, although this was said to be Mr. Kamaraj's main purpose. This is the way our wills get separated from our ways.

IT IS NOT NECESSARY TO LOOK TOO CLOSELY INTO the composition of the new Government of Kashmir. What New Delhi has to remember, and does not seem to, is how it all must look from inside Kashmir. It has been more or less obvious since 1958 that even Mr. Nehru, at times the indefatigable defender of much that is indefensible, was beginning to be a little disturbed over some of Bakshi Ghulam Mohammad's more outrageous unorthodoxies. It took the Prime Minister all of five years to make up his mind and let the Bakshi go. Rightly or wrongly, the impression has been that, after Bakshi, Mr. G. M. Sadiq was New Delhi's choice. (The persistence with which everyone speaks of Mr. Sadiq being an honest man suggests that everybody else is not.) What happens then? Bakshi Ghulam Mohammad suddenly turns very democratic; the leader, says he, must be elected by the National Conference Legislature Party, a body he has stacked with his own men. New Delhi yields. So those Kashmiris who tend to enjoy a match called Kashmir *versus* India are delighted that Kashmir has won. I am not one of those who think that New Delhi should be tough with Kashmir and force its integration; nothing is fraught with greater danger. But I just do not see how New Delhi profits from demonstrating its weakness; and that is how the whole affair has been read. I do not expect the entire world outside to believe it, but it is true that in the past dozen and more years India has done just about everything to be loved by Kashmir; success, let India face it, has not been unlimited. There remains the other objective, no less worthy: respect of Kashmir. This is what India forfeits when she appears to support men and *régimes* of questionable integrity. She earns no more respect when she appears indecisive, as over the recent changes. Stability, New Delhi should know, is the most unstable thing when it is not based on love and/or respect.

ONE QUESTION NAPOLEON IS SUPPOSED ALWAYS TO have asked about a man before promoting him to be a general was: "Is he lucky?". The Emperor knew what he was doing: all the ability in the world is useless without a measure of luck. So when I say that I believe Mr. Macmillan is one of the luckiest men alive, I need not be taken to mean that he has been anything but able both as a politician and a Prime Minister. He has been; and the vision he has shown, notably over Africa and the Common Market, is such that he will always command our admiration. His sudden illness last week is a grave personal misfortune; but it is perhaps permissible to reflect that if the illness had not intervened he would have decided to lead his Party in the next election, and the chances are it would have been to a resounding defeat. I say this because it seems to me that what people in Britain want more than anything else at the moment is a change, not so much a change of Party as of policies and personalities. And the trouble with Mr. Macmillan was that he had become too closely associated with a recent past which the electorate would prefer to forget. Not that any of the dirt of the various scandals rubbed off on Mr. Macmillan. Nor have the numerous disappointments damaged his image beyond repair. Indeed, if they had he might not have been so obviously tempted to carry on—in which case there would have been no fateful choice, from which his illness has so clearly rescued him, between an honoured retirement and the risk of an electoral Waterloo. So I think he will go down in history as one of the outstanding Prime Ministers of this century. I hope his successor will not forget his more forward-looking policies altogether. For instance, I still think that Britain's ultimate destiny is as a member of a united western Europe. But I suppose it all depends on whom the mantle falls. Of the various names I have heard canvassed my choice would be for Mr Maudling, if only because he is so obviously a radical departure from the image of faded aristocracy which still dogs the Conservative leadership. But it will probably be Mr. Butler all the same. I think the Conservatives could do worse, although "Rab", like Anthony Eden before him, may by now have waited in the ante-room too long.

RELUCTANT THOUGH HE WAS TO RESIGN, WHEN Mr. Macmillan steps down his influence on Britain's affairs will cease. Whoever follows him will enjoy a completely free hand, at least so far as his predecessor is concerned. Not so the man who follows Dr. Adenauer: he may have a constant struggle trying to assert his independence. The picture of the crafty old ex-Chancellor manipulating a multitude of tangled strings in his retirement, like some wizened, omniscient puppet-master, is not far from the truth, at least as Dr. Adenauer has probably planned it. Whether he will succeed depends on a number of things, not the least among them being the moral courage of Dr. Erhard. I have too much respect for the latter to doubt that he will play his part adequately. And from what my judgment tells me about the other factors involved, that means I think he will eventually win through. West Germany owes a great deal to Dr. Adenauer, in particular its present internal political stability. But externally, his policies have prospered only because the United States and western Europe have been forced to back him. This has been necessary for one reason only, the cold war; and thanks chiefly to the Chinese, that appears to be disappearing fast. I have my reservations about the trend of events which is bringing the West into line behind the Russians in defence of their Asian colonial possessions, but at least one can say that it has brought a lessening of tension in Europe such as has not been parallelled in the whole postwar period. Thus, by some odd twist of history, Dr. Adenauer is relinquishing office just when the circumstances chiefly responsible for his success are changing. So his successor will soon have an entirely new set to deal with; and that should give him an opportunity of building his own policies and shaking off his predecessor's

patronage. I think Dr. Erhard should be in his element dealing with a state of affairs which promises to call for more flexibility and imagination on the part of any leader of West Germany. It will not be easy for him . it may be his unhappy lot to go down in German history as the Chancellor who first accepted the division of his country as final. But to try to take advantage of Russia's difficulties to force a union of Germany's two halves would be to court disaster, and it seems to me Dr. Erhard is much too sensible for that.

IT SEEMS TO ME THAT MR. HAROLD WILSON'S vision of a marriage between science and socialism could be a sure election winner. Whatever the cynics might say about its being nothing more than a woolly substitute for more detailed policies, there can be few who read Mr. Wilson's words and remained unimpressed. Altogether I do not think a more appropriate formula for Britain in the 1960s could be found. Mr. Wilson should not to overdo it, though. Too much science can be as dangerous as too little. Planning must always be humane as well as efficient in a free society, and scientists can be every bit as intolerant and hide-bound as bureaucrats. In fact, in the affluent societies of the future, inefficiency may eventually become as much sought after as privacy and quietness are now. This point was suggested to me in a Fabian Society pamphlet I have just been reading, entitled *The Meaning of Work*. There, the interesting idea is put forward that employers might in some cases actually benefit in terms of output by abandoning all the welfare devices provided for their workers and devoting the resources saved simply to reducing the efficiency of their operations. I can see what the author is getting at. Man is not a machine and naturally resents anything which appears to turn him into one. That is why perhaps the greatest benefit of wealth is the luxury of being different from others, of being able to make one's own pace in this world. So Mr. Wilson had better watch his step. Whereas the British people could be inspired by the vision of the scientific society now, they could react very sharply against it in the future. It has often seemed to be in the nature of things for the Labour Party periodically to overdo its otherwise admirably appropriate ideas. This time I hope it is going to be more careful, because a thoroughly scientific approach is something which is sorely needed in Britain today and will be for as far ahead as one can foresee.

ANOTHER FRENCH "IMMORTAL" HAS GONE AND DONE what he was supposed not to do—died. When Diaghilev had just about conquered Paris with his Ballets Russes, Jean Cocteau presented himself to the Master and the Master said, "Surprise me"; and the *enfant terrible* never ceased to surprise all. Even his election to the Academic Française was a surprise; when he appeared in that funny formal dress, some said he was now a member of the Establishment. I don't know. It has been said of some great composer that he did not have enough talent for his genius: one view of Cocteau is that he did not have enough genius for his talent. That talent he had in plenty can hardly be doubted; and think of the diversity of interests to which he devoted his talent. He drew sketches, painted, wrote plays, directed films and goodness knows what he did not do—never without distinction. If a masterpiece is the end-product of an obsession, as Cyril Connolly argues, maybe Cocteau never produced one; his talent was never concentrated on any one thing. And he lived a very full life, not entirely free of scandal. Did Cocteau dissipate his talent in versatility? We can never be sure. Some people are simply made that way and cannot help turning to too many things. Cocteau hated writers who wrote on writing: this, he said, was like a pretty flower holding forth on botany. He was himself guilty of this when he published his diary kept during the making of a film. To combine the rôles of observer and participant in life is a rare talent, found more in France than in the Anglo-Saxon world. This may well be Cocteau's best achievement, to be remembered long after his many aphorisms and epigrams have lost their transient sparkle.

THE DITCHER

Guide for Investors

RISING COSTS WORRY INVESTORS IN BANK SHARES

(BY A SPECIAL CORRESPONDENT)

THE downward trend in bank shares has been striking since they have not responded to the general improvement in the investment climate. The index for the ordinary shares has declined to 203.4 (1952-53 equals 100) for the week ended 28th September, 1963, from 204.6 in the previous week and 229.9 for the week ended 29th September, 1962. Although for the half-year ended June 1963, banking results were by and large satisfactory and the interim dividends were generally maintained, investors have been hesitant due to various uncertainties concerning the future outlook.

As far as their working during the the second half of the current year is concerned, it is possible that the banks will show the same performance as they did for the second half of last year. With some luck, the working might as well improve, although modestly. This optimism arises from the prospect that the Government may liberalise credit supply from the beginning of the coming busy season. In his recent broadcast, Mr. T. T. Krishnamachari, Central Finance Minister, hinted at this prospect. Hitherto the Reserve Bank has restrained the supply of credit by lending to commercial banks under a three-tier system. As a result, the supply of credit has not only been restricted but it has been made too costly, since a large part of the borrowings from the Reserve Bank has to be obtained at a rate of interest much higher than Bank rate. The policy has been self-defeating since the legitimate credit requirements of the economy have not been fully met. The high cost of loans has also increased the production costs of industry. Disturbed by the present stagnation of the economy, the Government has apparently been inclined to adopt corrective measures to stimulate economic development. In accordance with this policy, it proposes to ensure an adequate supply of credit. But it is hoped that the Reserve Bank will henceforth lend more freely to commercial banks at an interest rate equivalent to Bank rate. There is little sense in the argument that a more liberal credit supply will necessarily promote speculation and hoarding. Since the Reserve Bank has been armed with sufficient powers to regulate all banking advances, there is no reason why the increased credit supply should be misused.

Borrowings from the Reserve Bank apart, commercial banks have succeeded in reinforcing their resources greatly before the beginning of the coming busy season. Deposits of scheduled banks have risen by Rs. 141.11 crores to Rs. 2,420.56 crores during the current slack season, compared with a rise of only Rs. 62.44 crores in the 1962 slack season. Advances have also fallen sharply by Rs. 126.05 crores to Rs. 1,475.85 crores. During the 1962 slack season, advances dropped by only Rs. 41.34 crores. But the benefit of the increased resources has been partly offset because the banks have shifted larger funds into Government securities. The investment portfolio of scheduled banks during the current slack season has gained by Rs. 179.15 crores to Rs. 786 crores, while in the 1962 slack season investments rose by only Rs. 99.80 crores. The capacity of the banks to use these investments to raise cash for financing the needs of the busy season has been reduced, since they have to increase their liability-investment ratio considerably by September 1964. It is, however, relevant to point out that the Reserve Bank has meanwhile cut the drawing powers of several commercial banks under the bill market scheme. So they have had to suffer since they are unable to obtain sufficient funds from the Reserve Bank under the scheme. The effect of the move has already become evident in the hardening of the call rate which has risen to around 4 percent during the past few days.

Looking beyond 1963, the outlook is less favourable. The move to increase the investments of commercial banks and the insistence on a lower deposit-advance ratio, should reduce the profitability of the banks. The yield on investments is far too low compared with the return available on general advances and loans. To the extent that the deposit-advance ratio will be tightened, the banking profits will be correspondingly reduced. This besides, operational costs of banks have increased sharply due to various factors. Firstly, there has been a substantial rise in the emoluments of staff under the award while their efficiency has not improved. Secondly, the banking community has been asked to embark on a fairly ambitious branch expansion programme. Since banks are asked to expand activity in areas which have no banking facilities, the operational costs of branches might impose an additional burden on them. In any case, a new branch does not usually become self-reliant before three to four years. If a branch has to be opened in an area not hitherto served by any bank, it might take a longer time to make it self-reliant. Meanwhile, the question agitating the minds of bankers and investors is how to absorb the rising operational costs. There is no doubt that they can be, provided the turnover expands considerably. But this will depend on how much the banks succeed in mobilising new deposits. The task looks difficult considering that the competition for funds is expected to increase rather than decrease in the future. Although it has been the Government's policy to press the banks to increase their share capital, they are not likely to succeed greatly in this direction. Judging by the movements in bank shares, it is obvious that the confidence of investors has been shaken. The poor outlook for bank profits has been a major deterrent. Not only have the banks not succeeded in making bigger profits and paying more remunerative dividends; they also find it difficult to raise funds by issuing new shares. Under the circumstances, it is time that the tax burden on banks was lightened, considering that they have to operate within a framework of rigid controls and they are expected to play an important rôle in India's economic development.

Burn to Issue Bonus Shares

THE ordinary shares of Burn and Company have been steady around Rs. 596. An extraordinary general meeting of the Company has been convened to sanction the issue of bonus shares in the proportion of one new share for each one held by capitalising reserves. As a result of the bonus issue, the Company's ordinary share capital will be doubled to Rs. 1.68 crores divided into shares of Rs. 100 each.

As far as the financial position of the Company is concerned, it is exceptional in that its total reserves stand at Rs. 2.99 crores out of which only Rs. 84 lakhs will be capitalised. Fixed assets amount to Rs. 3.59 crores while current assets exceed Rs. 10.99 crores. These figures have been taken from the balance-sheet for the year ended April 1963, which is the latest available. Investors, meanwhile, have started crystal-gazing into the prospects of these shares. They are by and large fairly encouraging. For 1962-63, the profit amounted to Rs. 1.43 crores, out of which the taxable ordinary dividend of 25 percent absorbed only Rs. 21 lakhs and the fixed preference dividends only Rs. 2.35 lakhs. So on the basis of this profit, the doubled share capital will have sufficient earnings to back it. If the profit were to be maintained as it should be, the shareholders might be right in expecting a repetition of the dividend on the increased capital. Anyway, the next dividend is not likely to be much smaller than that for 1962-63. The ex-bonus price of the scrip, on the basis of the present price, works out to Rs. 298 a share. On the basis of the 25-percent dividend, the yield should work out to 8.4 percent.

This is considered sufficiently attractive for a leading engineering concern like Burn. The optimism has been reinforced by the fact that the Company's earnings should rise rather than fall in the future due to several favourable developments. To begin with, it has diversified its activities. There should be a substantial addition to the profit since the Salem plant is expected to work fully in the near future. The progress in building the factory for producing various products in collaboration with A Reyrolle and Co. Ltd of the U.K. has been satisfactory. The Company's existing works have been renovated, modernised and expanded.

Higher Dividend from Barnagore Jute

A DRAMATIC improvement in the fortunes of the Barnagore Jute Factory was announced recently. The 40-percent dividend, which compares with the 10 percent paid for the two previous years, seems to be a record in the history of the group. The preliminary statement shows that the loss of £89,216 for 1961-62 has been transformed into a net profit of £220,306, a result which has been struck after charging £290,000 for tax. Earnings work out at nearly 130 percent, and the sharply increased dividend is covered 3.2 times. At this time last year, the chairman reported capacity working at the mills and a return to profitable trading conditions, but this outstanding result is a surprise. The increased dividend compensates shareholders for the lean years.

Hasimara Industries Earns More

THE tea crop produced by the Hasimara Industries Ltd for the year ended March 1963 has amounted to 3.1 million kilograms, against an estimate of 2.9 million kilograms. The profit has risen from Rs. 12.99 lakhs for 1961-62 to Rs. 30.07 lakhs, after transferring Rs. 11,000 (against Rs. 29,500) to development rebate reserve and Rs. 4.45 lakhs (against Rs. 5.02 lakhs) to depreciation. For 1961-62, a tax provision of Rs. 14.05 lakhs was made, but no tax provision has been made for 1962-63. Tax liability for this year has been estimated at Rs. 14.50 lakhs. A taxable ordinary dividend of 15 percent has been paid, which will be paid out of contingency reserve. The latter has been allocated Rs. 25 lakhs. The yield amounts to 10.5 percent at the present price of Rs. 14.25 a share of Rs. 10 each. General reserve is allocated Rs. 6 lakhs (against Rs. 5.50 lakhs), leaving a carry-forward of Rs. 1.60 lakhs, against Rs. 2.53 lakhs brought in.

The 1963 crop has been estimated at 3.1 million kilograms at a cost of Rs. 1.03 crores. The Company has run the Seksaria cotton mills on a leave and licence basis from 1st April, 1963, but the results have not been satisfactory. The directors have, therefore, taken steps to improve the working of the mills. The Company's tea gardens are situated in the Dooars district of West Bengal.

Gammon India Fares Well

THE preliminary report on the working of Gammon India Ltd showed that the Company had done very well during the year ended March 1963. The turnover of completed contracts rose by about 28 percent from Rs. 4.32 crores to Rs. 5.55 crores and the gross profit increased by nearly 24 percent from Rs. 42.01 lakhs to Rs. 52.08 lakhs. Dividend has been reduced from 16 percent to 11 percent, but the reduced dividend is on a substantially larger capital of Rs. 1.15 crores (against Rs. 60 lakhs in the previous year) with the result that the total distribution is larger at

Grade-1

DAULAT
ALL GEARED LATHES

Armstrong Smith Ltd.
P-17 MISSION ROW EXTN. CALCUTTA 13

Rs. 12.65 lakhs, against Rs. 8.80 lakhs. The directors' report holds out the promise of better results in future. New contract secured during 1962-63 amounted to Rs. 16 crores. compared with Rs. 5.55 crores completed, and brought to account.

Since the beginning of the current year, additional contracts of substantial amount have been secured. Recent undertakings comprise principally the construction of bridges, foundations, water towers, cooling towers and civil enginering work for coke ovens and power stations.

The directors point out that the increased volume of work on hand requires heavy expenditure on plant, machinery and equipment, despite the large accretions of first-class carefully maintained plant which the Company has accumulated in the past.

The Company purchased during 1962-63 plant and equipment of the value of Rs. 32.17 lakhs, against Rs. 23.27 lakhs in the previous year. In addition, it has had under process of manufacture, during the year, a considerable quantity of special plant and equipment on account of which an expenditure of Rs. 11.14 lakhs was incurred. Purchases of plant in the current year are expected to exceed considerably the figures for 1962-63. The directors add that the type of work undertaken by the Company involves more than normal hazards. The management is taking care not to expand beyond its means or with immoderate speed. Assuming that the Company can maintain the present volume of business and that the burden of taxation is not materially increased, the directors hope to get back to the more normal position of financing the contracts with internal resources. They have, however, cautioned the shareholders against undue optimism by adding that the increase in turnover may not yield proportionate increase in profit because of the general rise in price levels, applicable to staff, labour, plant and materials and the increase in rates of Customs duty and excise duty and increased taxation—all of which have a direct bearing on the Company's profits.

Modi Spinning Disappoints

MODI Spinning and Weaving Mills Co. Ltd has fared badly during the year ended April 1963. In spite of an increase of nearly 26 percent in the sales from Rs. 6.20 crores to Rs. 7.83 crores, the gross profit is down by about 23 percent from Rs. 68.07 lakhs to Rs. 51.93 lakhs and the directors have had to reduce the dividend from 16 percent to 9 percent. The reduced dividend is, however, on the increased capital of Rs. 1.51 crores (against Rs. 1.15 crores), the new shares issued during the year being entitled to a proportionate dividend. The directors attribute the Company's disappointing performance to the rise in raw material costs and operating expenses.

Cotton prices were higher by about 6 to 7 percent and electricity charges and cost of stores rose by about 5 percent, while the compensatory increase in the realisation was about 7 percent compared with that of the previous year. As for the silk unit, the prices of art silk and rayon yarn were higher by 9 to 10 percent, while the compensatory realisation showed an increase of only 4 percent, besides the increase in the cost of stores and other items. The Company's profits have also been hit by the "arbitrary" increase in electricity rates by about 32 percent. From the year's profit, the directors have provided Rs. 25.73 lakhs (against Rs. 26.30 lakhs) for depreciation, Rs. 2.51 lakhs (against Rs. 4 lakhs) for development rebate, Rs. 13.10 lakhs (against Rs. 17 lakhs) for taxation and Rs. 10.65 lakhs (against nil) for dividend reserve out of which is to be paid the proposed dividend. No provision has been made for general reserve which received Rs. 2.50 lakhs in the preceding year.

The directors state in their report that they have decided to increase the production of fine and superfine cloth which offers a better profit margin. The Company has installed a mercerising plant and the sanforising range will begin functioning by the beginning of next year. Drafting system of the composite mill is being converted to produce better quality yarn. The additional 6,400 spindles installed in February 1962 are said to be working properly. The Company's exports of cloth increased by about 39 percent, compared with the preceding year which is an encouraging performance in the context of the setback in the country's total exports. The scheme for setting up a new mill comprising 25,000 spindles and 500 looms is being implemented according to schedule. Buildings are nearly complete and the erection of machinery is in progress. The spinning plant is expected to go into production before the end of the current financial year.

The Company has already received Rs. 45 lakhs, out of the sanctioned loan of Rs. 98 lakhs by the Industrial Finance Corporation to meet part cost of this project. In addition to the above project, the Company installed during 1962-63 a saw-gin and cotton seed delinting plant at a cost of about Rs. 14.50 lakhs in Abohar (Punjab). This plant went into production in December last. The scheme for the installation of a distillery factory in Yamunanagar (Punjab) has made good progres. This factory is expected to go into production by the end of 1963. The Company has a paid-up capital of Rs. 1.51 crores which is supported by reserves and surplus amounting to Rs. 74.77 lakhs. The Company's gross block of Rs. 4.48 crores has been written down to Rs. 2.44 crores. The Rs. 10-paid share of Modi Spinning is quoted around Rs. 12.87.

Jubilee Mills Pays Less, Issues Bonus Shares

IN spite of an increase of over 22 percent in the gross profit from Rs. 22.80 lakhs to Rs. 27.86 lakhs, the directors of the Jubilee Mills Ltd have proposed a cut in the dividend from Rs. 7 to Rs. 4.50 a share for the year ended June 1963. The shareholders are, however, being compensated by a one-for-two bonus share issue. A sum of Rs. 5 lakhs from the general reserve No. 2 is to be capitalised for the proposed bonus issue which is subject to the sanction of the Controller of Capital Issues. Before proceeding with the bonus issue, the Company intends to increase its authorised capital from Rs. 21.25 lakhs to Rs. 41.25 lakhs by the creation of 200,000 equity shares of Rs. 10 each.

The Company's realisation from processing charges are up by about 24.5 percent from Rs. 68.57 lakhs to Rs. 85.37 lakhs, and the gross profit has risen from Rs. 22.80 lakhs to Rs. 27.86 lakhs. Allocations include depreciation Rs. 4.46 lakhs (against Rs. 3.36 lakhs), development rebate Rs. 1.50 lakhs (against Rs. 1.64 lakhs), taxation Rs. 11.40 lakhs (against Rs. 9.10 lakhs), special reserve for super profits tax Rs. 2 lakhs (against nil) and general reserve Rs. 6.40 lakhs. Out of the general reserve, the proposed dividends will be paid, absorbing Rs. 5.05 lakhs, of which the equity dividend is Rs. 4.50 lakhs. After making various appropriations, there remains a sum of Rs. 7,800 to be carried forward, against Rs. 85,519 brought in. The Rs. 10-paid share of the Company is quoted nominally around Rs. 79.

Bonus from T. Maneklal but Dividend Slashed

THE directors of T. Maneklal Mfg. Co. Ltd have recommended a drastic cut in the dividend from 27 percent to a mere 6 percent for the year ended 31st May, 1962. Although the dividend is on the increased capital as raised by the issue of 10,000 new shares, which are entitled to a *pro rata* dividend, the total amount to be distributed by way of dividend is substantially lower at Rs. 1.44 lakhs, against Rs. 5.37 lakhs. The directors have, however, also proposed the issue of bonus shares in the ratio of one share for every five shares held, including the new shares. The bonus issue is, as usual, subject to the consent of the Controller of Capital Issues. The bonus shares are to be issued by capitalising Rs. 5.98 lakhs from general reserve which stands at Rs. 9.17 lakhs. The Company's working results for 1962-63 appear to be fairly satisfactory. Sales are up by about 21 percent from Rs. 1.12 crores to Rs. 1.36 crores. The gross profit is shown at Rs. 26.34 lakhs, against Rs. 27.33 lakhs in the preceding year, but the 1961-62 profit included a sum of Rs. 7.92 lakhs received from an insurance company against a loss of raw materials, stores and spare parts. Appropriations of the year's gross profit include depreciation Rs. 5.16 lakhs (against Rs. 3.60 lakhs), taxation Rs. 11.21 lakhs, including Rs. 2.51 lakhs for super profits tax (against Rs. 11.33 lakhs), development rebate reserve Rs. 2.12 lakhs (against Rs. 1.08 lakhs), super profits tax for 1961-62 Rs. 4 lakhs, general reserve Rs. 1.20 lakhs (against Rs. 3 lakhs), gratuities Rs. 41,600 (against Rs. 37,000) and dividend Rs. 1.44 lakhs (against Rs. 5.37 lakhs).

The Company has big expansion plans on hand. It has procured a large number of licences for the manufacture of a wide variety of items required by textile mills such as float dryers, dyeing ranges, mercerisers, stenters, pneumatic mangles, etcetera. The Company is undertaking the manufacture of hard rubber drums, rubber lining vessels and rubber and ebonite rollers in Ahmedabad. The construction of the building has started and production is expected to start shortly. Negotiations are being finalised with a foreign collaborator for the manufacture of rubber blankets for offset printing, textile printing and shrinkage control. The Company has submitted a collaboration proposal to the Government for the manufacture of 300 automatic looms a year for silk, rayon, nylon and staple fibre mixture. The production of fibre machine is expected to start during the current year; licence for imports of components from Benninger Engineering Company of Switzerland has been received and orders have also been placed.

Rohtas Industries Pays More

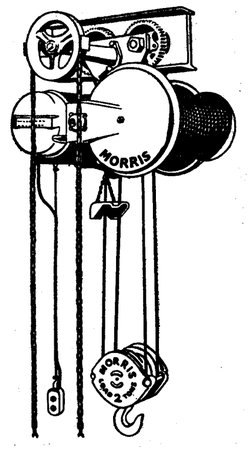
IN their report for the year ended March 1963, the directors of the Rohtas Industries Ltd point to the rise in production of the paper mills. The supply of bamboo has improved but the Company has been forced to take forest leases by paying high rates of royalties to the State Governments concerned. The bamboo pulp mill has worked satisfactorily. The installation of the new equipment should help improve production further. If the Government sanctioned foreign exchange to the industry more liberally, the Company might increase the paper output by about 10,000 tons a year. The production of the vulcanised fibre unit has been interrupted by the shortage of imported base paper. The Company has nevertheless been making efforts to produce indigenous base paper. It has been pointed out that vulcanised fibre has diversified industrial uses.

As for the price of paper, the directors think that it is uneconomic and does not fully cover the rising production costs. Although the cement output has increased, the profit has been held down because the price fixed for the commodity does not fully cover the increased production costs. The incentive scheme for higher production has been of little benefit to the Company since the basic level of production under the scheme has been fixed at a far too high level. The production of asbestos cement has steadily increased but the bulk of the output has been acquired by the Government for defence purposes. So there has been a shortage of supply to meet the civilian needs. The production of the sugar mills has declined considerably due to the shortage of cane. So the mills have had to incur heavy losses. Although the production of *vanaspati* has been satisfactory, the profit has been held down because of the high excise duties.

The profit has improved from Rs. 49.28 lakhs to Rs. 1.22 crores, subject to an estimated tax liability of Rs. 56 lakhs, but the tax will be paid out of contingency reserve. The profit figure has been arrived at, after providing Rs. 61.93 lakhs (against Rs. 59.84 lakhs) for depreciation. The taxable ordinary dividend has been increased from 8 percent to 9 percent to absorb Rs. 45 lakhs. The yield amounts to 6.8 percent at the present price of Rs. 13.16 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 6.60 lakhs (against Rs. 3.20 lakhs), general reserve Rs. 12.59 lakhs, contingency reserve Rs. 56 lakhs and dividend reserve Rs. 51.92 lakhs (against Rs. 46.72 lakhs). The dividends declared will be paid out of the latter reserve. The carry-forward is Rs. 4,305, against Rs. 5.08 lakhs brought in. In view of the large capital base, there would be no liability to the super profits tax.

Textool Earns More

TEXTOOL Company Ltd has done well during the year ended 30th April, 1963. Sales are up by about 17.4 percent from Rs. 2.06 crores to Rs. 2.42 crores and the gross profit has increased by nearly 11 percent from Rs. 26.16 lakhs to Rs. 29.10 lakhs. The dividend has been reduced from 15 percent to 12 percent. but since it is on the increased capital as raised by the one-for-two rights issue. the total distribution is higher at Rs. 6.23 lakhs, against Rs. 5.95 lakhs. After providing Rs. 5.75 lakhs (against Rs. 4.48 lakhs) for depreciation, Rs. 2 lakhs (against Rs. 1.80 lakhs) for development rebate and Rs. 9.20 lakhs (against Rs. 5.70 lakhs)for taxation, the net profit amounts to Rs. 10.36 lakhs, against Rs. 12.72 lakhs in 1961-62. From this, the directors have provided Rs. 4.78 lakhs (against Rs. 6.47 lakhs) for donations and bonus relating to previous years, leaving a balance of Rs. 5.60 lakhs, against Rs. 6.25 lakhs. The directors have withdrawn Rs. 50,000 from the dividend equalisation reserve to which has been credited Rs. 30,000 in the preceding year in order to provide for the payment of the proposed dividend which absorbs Rs. 6.23 lakhs, leaving a modest sum of Rs. 3,132 to be carried forward, against Rs. 16,127 brought in.



In their report, the directors complain about the shortage of raw materials such as pig iron, tin sheets, etcetera, which affected the Company's production. It will soon place in the market the cone winders that it is manufacturing in collaboration with a Japanese firm. The Company's new branch factory in Singanallur for manufacturing frames which went on stream in the latter half of 1961-62, has still to attain full production. The Rs. 100-paid share of Textool is currently quoted around Rs. 155.

Extra from Burmah Oil

HOPES of an increased interim dividend from Burmah Oil were fulfilled with the announcement recently of a payment of 9d a share, or 3¾ percent free of tax, compared with an interim of 2½ percent tax free a year ago. There is also to be a capital payment of 3d a share, not subject to British tax, against nil. In his letter of 20th July, giving reasons for rejecting the British Petroleum-Shell take-over proposal, Mr. W. E. Eadie, the chairman, forecast a total payment for 1963 of 2s 9d. It is now stated that results to-date in 1963 indicate that the forecast can be met.

What the Burmah board in effect is doing is to pass on the 2.73d a share capital payment accruing from B.P. and to round it off to 3d from other group sources. The capital payment from B.P. was included in the break-down of the prospective 2s 9d distribution for 1963 given by Mr. Eadie in his July statement. That statement referred, in fact, to a total distribution in cash of "not less" than 2s 9d a share. Although

Oil and
Karnatic Music...
Sales Service Manager
Chari is
in harmony with both

He has a wealth of information at his fingertips, an active, facile brain, a quick winning smile... And among his fellow officers in the Sales Department at Burmah-Shell's General Manager's Office, Chari is known as the man with the answer. How was this done in 1953? And why was that decided? Chari knows. How will this be done in 1973? Check with Chari. He always helps. But if Sales isn't your interest and Karnatic music is, once again, ask Chari. He is sure to know.

'WOULD BE LOST WITHOUT HIM'

The Sales Manager says, 'I would be lost without him.' He'll write you a contract or quote you a price, produce statistics or analyse a trend, with speed and obvious pleasure. He has enjoyed his work for 31 years and looks forward to another three years of it.

TODAY, AS EVER, PEOPLE LIKE CHARI ARE WORKING FOR YOU

Chari has never been known to flinch before a mass of figures, or duck an argument on Karnatic music! His only daughter has won the President's Prize for vocal Karnatic music and holds a Government scholarship. 'Like father, like daughter,' Chari says chuckling.

Chari and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

the phrase "not less than" did not appear in the latest announcement, this does not indicate any downward shift in emphasis.

Bonus Issue by Mysore Spinning

THE Mysore Spinning and Manufacturing Company has skipped the dividend for the year ended February 1963. Instead, the directors propose to issue bonus shares in the ratio of one share for every eight held by capitalising the share premium account and a portion of the general reserve. In the preceding year, the Company had paid a dividend of 12 percent, that is, Rs. 6 a share. The bonus issue is intended to correct the present unbalance between the Company's equity base and the net block which exceeds Rs. 1 crore. Sales, including income from processing, have been virtually unchanged at Rs. 1.97 crores, but the gross profit is down by about 30 percent from Rs. 13.14 lakhs to Rs. 9.09 lakhs.

Allocations include depreciation Rs. 6.11 lakhs (against Rs. 6.40 lakhs), development rebate Rs. 3.09 lakhs (against Rs. 1.12 lakhs), gratuity reserve Rs. 1.55 lakhs (against nil), compensation under rationalisation scheme Rs. 85,186 (against Rs. 85,180) and donations Rs. 45,500 (against nil). No provision has been made for taxation, against Rs. 82,900 provided last year. The directors have written back depreciation amounting Rs. 3.62 lakhs and excess of interest amounting to Rs. 54,000. After making some minor adjustment and providing for the proposed preference dividend which absorbs Rs. 33,527, there remains a balance of Rs. 38,674 to be carried forward.

Apart from rebuilding 80 looms during the year under the renovation programme, the Company has made substantial additions to the plant including the addition of a cotton waste spinning plant of 1,200 spindles. Orders have been placed for 144 automatic looms for the purpose of replacement of the existing equipment and for a similar number for expansion. The looms for replacement have already arrived and those for new installations are expected next year. The State Bank of India has sanctioned a medium-term loan of Rs. 50 lakhs to the Company to meet a part of the capital expenditure on modernisation and expansion programme involving an outlay of about Rs. 50 lakhs. The Bank has already advanced Rs. 40 lakhs. After the close of the financial year, the Company has placed orders for machinery worth Rs. 22.40 lakhs which includes automatic looms.

Canara Workshops Pays the Same

ALTHOUGH the dividend has only been maintained at 20 percent—Rs. 2 a share—the working results of Canara Workshops for the year ended March 1963 show a fair improvement over the previous year. Sales are up by about 30 percent from Rs. 64.15 lakhs to Rs. 83.19 lakhs, and the gross profit is up by nearly 16 percent from Rs. 21.20 lakhs to Rs. 24.68 lakhs. The performance looks impressive in view of the interruption in production on account of inadequate and irregular supplies of imported raw materials and higher operating costs. The delay of some eight months in the transhipment of a large consignment of American steel from Yokohama adversely affected production both in Mangalore and Nagpur factories.

The provision of depreciation is lower at Rs. 3.46 lakhs, against Rs. 4.50 lakhs, while taxation absorbs a substantially larger amount of Rs. 12.30 lakhs, against Rs. 8.30 lakhs. A sum of Rs. 1.2 lakhs has been set aside for contingency reserve and Rs. 1 lakh has been provided for capital redemption reserve. Preference dividend absorbs Rs. 1.68 lakhs (against Rs. 1.09 lakhs) and ordinary dividend Rs. 5.56 lakhs (the same). The Company has a paid-up capital of Rs. 47.88 lakhs, and its reserves total Rs. 30.4 lakhs.

The directors state that the execution of the alloy steel project has been affected by the delay in the delivery of the electric travelling crane without which heavy machines could not be installed. The crane has since been received and the installation work is making satisfactory progress. The production of brake drums and U-bolts has commenced, but mass production has not been possible due to difficulties of getting power supply. This difficulty also is said to have been solved and the machinery and equipment are on the trial run. The Rs 10-paid share of the Company is currently quoted around Rs. 30.

Hyderabad Allwyn Results Impress

HYDERABAD Allwyn Metal Works has done exceedingly well during the year ended 30th April, 1963. Sales have gone up by about 26 percent from Rs. 2.59 crores to Rs. 3.26 crores, and the gross profit has shot up by nearly 50 percent from Rs. 29.33 lakhs to Rs. 43.47 lakhs. Although the dividend has only been maintained at 10 percent, it is on a substantially larger capital following the five-for-two rights issue and it absorbs Rs. 12.05 lakhs, against Rs. 3.44 lakhs in the previous year.

Appropriations of the year's profit include depreciation Rs. 14.63 lakhs, development rebate Rs. 9 lakhs (against Rs. 4 lakhs), taxation nil (against Rs. 7 lakhs), deferred taxation reserve Rs. 5 lakhs (against nil), warranty reserve nil (against Rs. 4.18 lakhs), general reserve Rs. 2.65 lakhs (against nil) and dividend reserve Rs. 12.05. The proposed dividend is to be paid out of the dividend reserve. After making various appropriations, there remains a surplus of Rs. 26,824 to be carried forward, against Rs. 2.74 lakhs brought in.

The directors state that the Company's working was satisfactory due to improvement in production and sales. The expansion of the plant undertaken last year has been mostly completed. The Company has made arrangements on priority basis to manufacture and supply some defence requirements without affecting the production of normal items. The Rs. 10-paid share of the Company is quoted nominally around Rs. 11.

Mysore Stoneware Profit Down

THE Mysore Stoneware Pipes and Potteries Ltd reports disappointing results for the year ended March 1963. Sales, profit, dividend, all are down—sales from Rs. 14.09 lakhs to Rs. 12.27 lakhs, profit from Rs. 3.62 lakhs to Rs. 1.39 lakhs and dividend from 15 percent to 12.5 percent. The directors have had to withdraw from the reserve for contingencies and from the provision for bonus and make a few other adjustments in order to provide for the payment of the proposed dividend which absorbs Rs. 75,000. Allocations include depreciation Rs. 76,950 (against Rs. 77,159), development rebate Rs. 8,800 (against Rs. 5,325), taxation Rs. 25,000 (against Rs. 1.60 lakhs), employee retiring gratuity reserve Rs. 7,500 (against Rs. 20,000) and bad and doubtful debts Rs. 5,000 (against nil). No provision has been made for rehabilitation reserve which received Rs. 10,000 in the preceding year.

The directors attribute the setback in the Company's working results to the serious difficulty experienced in the supply of coal in the first six months of the year and slack production for about a month. The directors intend to substitute oil for coal due to irregular supplies of coal. Manufacturing costs increased, but the Company found itself unable to raise its selling prices because of the stiff competition in stoneware pipes. From November 1962, many large indents were suspended due to the emergency and this adversely affected the Company's sales. The kiln and plant are reported to have been maintained in good repair.

The expansion in the production of stoneware pipes was completed in November 1962. The directors hope to be able to step up the output if

adequate supplies of coal become available. Experiments in the pilot plant for making sanitaryware have been encouraging and the Company's raw materials are stated to be suitable for making sanitarywares. Expansion of this activity has, however, been put off because of the large investment in this project, and difficulties of obtaining the licence for foreign collaboration.

Saran Engineering Pays Less

THE Saran Engineering Co. Ltd of Kanpur reports unencouraging results for the year ended March 1963. The gross profit is down by about 23 percent from Rs. 8.68 lakhs to Rs. 6.67 lakhs, even though the turnover is almost unchanged at Rs. 36.40 lakhs, against Rs. 36.54 lakhs in the preceding year. The dividend has been reduced from 56nP to 45nP a share (Rs. 4 paid). The directors state that the production during the year consisted mostly of such items on which the profit margin was relatively less. This, coupled with the keen competition from the engineering firms recently established and the high cost of raw materials, adversely affected the Company's working results in 1962-63.

The situation was aggravated by the shortage of raw materials, particularly of pig iron. The directors have, however, assured that all possible steps have been taken to ensure adequate supplies of these materials, and they hope to be able to cover the Company's requirements satisfactorily during the current year. The proposals for rehabilitation of the works have been drawn up. In order to diversify the Company's activities, the management proposes to undertake the manufacture of "Beche" pneumatic hammers in collaboration with Beche and Grohs of West Germany. The Company has applied to the Government for the necessary industrial licence.

From the year's gross profit of Rs. 6.67 lakhs, the directors have provided Rs. 1.10 lakhs (against Rs. 1.22 lakhs) for depreciation. Rs. 3 lakhs (against Rs. 3.50 lakhs) for taxation and nil (against Rs. 1.893) for development rebate. The net profit amounts to Rs. 2.14 lakhs, against Rs. 3.38 lakhs. Including Rs. 11,859 brought forward and Rs. 24,970 being provision made for grautity in the previous year but no longer required, the disposable surplus amounts to Rs. 2.51 lakhs. From this, a sum of Rs. 1.50 lakhs (against Rs 2 lakhs) has been set aside for rehabilitation reserve and Rs. 25,000 (against Rs. 1.25 lakhs) for general reserve. The proposed dividend of 40nP (50nP) a share absorbs Rs. 60,000 (against Rs. 75,000), leaving a sum of Rs. 13,304 to be carried forward.

Madras Rubber Share Allotment

In response to the issue of 625,000 equity shares of Rs. 10 each, Madras Rubber Factory Ltd have received 13,637 applications for a total of 608,745 rights shares and 6,442 applications for a total of 358,326 additionsal shares. The board of directors have allotted 608,745 rights shares. The allotment letters have been posted. As for the 16,255 surplus shares available for the applicants for additional shares, it has been decided in consultation with the Madras Stock Exchange and with the approval of the Controller of Capital Issues to allot in the following manner: Those with one to 20 shares will get one share each: those with 21 to 50 shares will get two shares; those with 51 to 100 shares will get four; those with 101 to 200 shares will get ten; those with 201 to 500 shares will get 20; those with 501 to 1,000 shares will get 45; and those with 1,001 and above will be allotted 65 shares. The above basis leaves a balance of 25 shares which it is proposed to dispose off at the ruling market price or at par whichever is higher.

Bombay Wire Ropes Share Offer

BOMBAY Wire Ropes Ltd which proposes to set up a plant in Kolshet near Thana (Bombay) for the manufacture of wire ropes is likely to enter the market shortly to raise Rs. 27.50 lakhs through public subscription. The Company has been licensed to manufacture 3,000 tons of wire ropes a year on a double-shift basis. The two Japanese firms, Asahi Wire Rope Manufacturing Company and Kobe Steel Works, are providing technical know-how for which they are to be paid a lump-sum amount of 9 million yens (Rs. 1.20 lakhs) and a technical fee of Rs. 23,000 a year for three years. The project is estimated to cost a little over Rs. 1 crore, which is proposed to be met by the issue of share capital of Rs. 55 lakhs, bank borrowings of Rs. 16 lakhs, a loan of Rs. 30 lakhs from the I.C.I.C.I. and deposits of Rs. 5 lakhs from the Company's sole selling agents.

The Company has received the licence for the import of capital goods worth Rs. 38.36 lakhs from Japan. The rest of the plant and equipment is to be obtained from indigenous sources. It has an authorised capital of Rs. 2 crores of which Rs. 55 lakhs—all in equity shares of Rs. 10 each—is proposed to be issued for the present. Out of this, shares worth Rs. 10.03 lakhs have already been taken up by the promoters, directors and their friends and associates. The Life Insurance Corporation is stated to have agreed to subscribe for shares of the value of Rs. 5 lakhs. They and their friends and associates will take up further shares worth Rs. 12.47 lakhs. The balance of Rs. 27.5 lakhs will soon be offered to the public. The entire public issue has been underwritten by the Industrial Finance Corporation, American Express Company and certain firms of stockbrokers.

Mysore Lamp Cuts Dividend

THE Mysore Lamp Works Ltd reports disappointing results for the year ended March 1963. Production, sales, gross profit and dividend—all are substantially down from the previous year's levels. In 1961-62, the Company had distributed a dividend of 37 percent which included a dividend of 12 percent by way of silver jubilee gift. However, for 1962-63, the shareholders will receive no more than 8 percent which had been declared as an interim dividend; the final dividend has been skipped. The dividend has had to be slashed because of the sharp setback in the gross profit from Rs. 5.74 lakhs to Rs. 3.24 lakhs. The total production of lamps during the year amounted to 2.13 million pieces, against 2.41 million pieces in the preceding year. Sales were lower at 1.93 million pieces, against 2.41 million pieces and realisations were lower at Rs. 19.31 lakhs, against Rs. 23.42 lakhs.

From the year's gross profit, the directors have provided Rs. 66,028 (Rs. 46,389) for depreciation, Rs. 27,565 (against Rs. 24,886) for development rebate, Rs. 1.20 lakhs (against Rs. 2.51 lakhs) for taxation and Rs. 45,000 (against nil) for general reserve. After providing for the proposed dividends, preference and ordinary, which absorb Rs. 29,096, there remains a modest surplus of Rs. 1,217 to be carried forward, against Rs. 15,073 brought in.

The Company has concluded a collaboration agreement with the General Electric Company, New York, in pursuance of which 63,052 equity shares forming 49 percent of the total shareholding in the Company have been allotted to the G.E.C. at Rs. 35.07 (including a premium of Rs. 25.07) a share. The Company proposes to manufacture general purpose lamps in collaboration with the American firm. The Company has decided to redeem all preference shares on or before 31st October, 1963.

New Capital Issues

TEN companies have been authorised to raise capital totalling Rs. 11.33 crores. Two of them are yet to be established. One is a Central Government undertaking and two are State Government enterprises. In one company, 51 percent of the shares will be held by the Government of India. Two companies are issuing part of their capital to their foreign collaborators. One is issuing bonus shares and the rest equities of which two companies are partly issuing preference shares also. The consent of the Controller of Capital issues is valid for 12 months in all cases.

Hardcastle and Waud Manufacturing Private Ltd, Bombay, has been authorised to issue bonus capital of Rs. 4 lakhs (in equity shares of Rs. 100 each). It will be offered to its shareholders in the ratio of one bonus share for every three equity shares held, on capitalisation of the Company's reserves to a like extent.

Cochin Refineries Ltd., Kerala, to be floated for refining crude petroleum. in collaboration with Phillips Petroleum Company, U.S.A. is to issue capital of Rs. 7 crores divided into 700,000 equity shares of Rs. 100 each for cash at par. Out of this issue, shares of the value of Rs. 3.57 crores will be offered to the Government of India, Rs. 1.75 crores to the U.S. collaborators, Rs. 14 lakhs to Duncan Brothers and Company, Calcutta, and Rs. 84 lakhs to the public by prospectus. The remaining shares of the value of Rs. 70 lakhs are to be offered to parties to be nominated by the Government.

The Minerals and Metals Trading Corporation of India Ltd, New Delhi (proposed), a Central Government undertaking, will raise capital of Rs. 2 crores divided into 200,000 equity shares of Rs. 100 each for cash at par to be issued privately. The capital will be utilised for establishing a new undertaking to organise and undertake exports and imports of minerals, ores and concentrates, metals, etcetera.

Bharat Bijlee Ltd, Bombay, is to issue further capital of Rs. 60 lakhs for cash at par consisting of Rs. 30 lakhs in equity shares of Rs. 100 each and Rs. 30 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 100 each. The money will be used to finance the expansion involved in the manufacture of three-phase induction motors and power and distribution transformers.

Andhra Foundry and Machine Company Ltd, incorporated in Andhra, will issue capital of Rs. 55 lakhs divided into 400,000 equity shares of Rs. 10 each and 15,000 9.3 percent cumulative redeemable preference shares of Rs. 100 each for cash at par. Of this, equity shares of the value of Rs. 100 lakhs would be subscribed by the promoters and directors of the Company. The capital will be used for the establishment of a workshop and a plant for the manufacture of spun pipes, malleable pipe fittings and railway castings.

Tractor Engineers Ltd, Bombay, is issuing further capital of Rs. 50 lakhs divided into 5,000 equity shares of Rs. 1,000 each for cash at par. The issue will be subscribed as to Rs. 30 lakhs by Caterpillar Tractor Company of the U.S.A. and Rs. 20 lakhs by Larsen and Toubro Ltd, Bombay The proceeds of the issue will be utilised for the manufacture of crawler tractors.

U.P. State Industrial Corporation Ltd. is to issue Rs. 25 lakhs equity capital in shares of Rs. 100 each for cash at par, to be subscribed entirely by the U.P. Government. The capital will be utilised to develop magnesite deposits in Almora district for the manufacture of dead-burnt magnesite.

Mahindra Owen Ltd, Bombay, will raise Rs. 20,95,000 in equity shares of Rs. 100 each at par, of which shares of the value of Rs. 10,68,400 will be issued for cash to Mahindra and Mahindra Ltd and Rs. 10,26,600 to Rubery Owen and Company Ltd, U.K., for consideration other than cash against the supply of plant and machinery. The capital will be utilised for the manufacture of trailers of various types, axles and automotive parts.

The Stock Markets

T.T.K. BROADCAST REVERSES DOWNTREND

Wednesday Evening.

THE Calcutta stock market has shown a mixed trend during the past week. Earlier, share prices reacted on bull liquidation since holders were inclined to take their profits in view of the sharp rise which had already taken place. Operators were also prone to lighten their commitments before the clearing on Monday. The settlement passed off smoothly, and the carry-forward charges were higher since the next clearing will take place on 6th November, 1963, after the Puja holidays.

The reaction was welcomed since it helped improve the technical position. In view of the sharp rise over the past month or so, a corrective process was long overdue. But the bullish grip was so strong that the reaction proved to be very temporary. There has again been a sharp spurt in prices. Although Dalal Street has closed for Divali, kerb prices have shot up. Encouraged by this performance, prices in Lyons Range have gone up on a strong buying spree, combined with nervous short-covering.

Attention has centred on the broadcast of the Finance Minister, Mr. T. T. Krishnamachari, last Friday. Although he has not hinted at any immediate relief in taxation, his observations about the economy have been interpreted bullishly. The market has exaggerated the importance of his assurance about a more liberal credit supply from the Reserve Bank. He has not explained how he proposes to liberalise the credit supply. The broad statement that the Reserve Bank will ensure the supply of credit to promote legitimate economic development does not go far since this has always been the objective of the Bank's monetary policy. If the change were to benefit the economy, the Bank should lend freely to commercial banks at Bank rate. The high cost of credit under the present slab system of lending has hindered economic development. His assurance about reviewing the fiscal and pricing policies of the Government has carried little conviction since the Finance Minister is expected to do this all the time in the normal course of his job.

Anyway, activity is expected to decline in view of the approaching Puja holidays. At this time of year, operators generally keep their commitments light. So no great change is expected in the immediate future. The lull in the border situation has been an encouraging factor, for the time being. Lyons Range takes a complacent view about the border situation in the belief that China will not invade India since almost all important countries of the world have backed India.

Indian Iron have been steady on the prospect that partial decontrol of steel is on the way. Among engineering shares, Guest, Keen, Williams, Texmaco, Jessop, Indian Standard Wagon and Kumardhubi have been prominent. Burn have been steady on the prospect of a bonus issue. Coal shares have been sluggish since the investors have been disappointed by the absence of any announcement concerning the increase in the price of the commodity. Stray business in Burrakur, East Indian, Bengal and Central India have been transacted. J. K. Rayon have been active in the cotton mill section. Support has been extended to Elgin, Jay Shree Textiles and Dunbar.

In the miscellaneous section, clearing scrip have attracted attention. The ex-bonus price of Indian Copper has improved. Indian cable have attracted margin on bulls in view of the sharp rise which has taken place. Indian Aluminium, Dunlop Rubber, Rohtas Industries and Kesoram Industries have been steady. Support has been forthcoming for Union Carbide, Metal Box, Alkali Chemical and Goodyear India. Angelo Brothers and British Paints have recovered. Among new shares, Hindustan Aluminium, Hindusthan Twyfords and India Carbon have been supported. Among paper shares, Orient have gained. Sirpur, India Paper Pulp, Bengal and Titaghur have been steady. Electric company shares have been sluggish and nominal business in Calcutta Electric has been transacted. Managing agency shares have generally been neglected. Stray business in Jardine Henderson and Martin Burn have been done. Bank shares have lacked interest. Sugar shares have been difficult to sell but Dyer Meakin Breweries have been steady on reports of good working.

Jute shares have been fairly steady, although turnover has declined. Barnagore have improved on declaring a taxable ordinary dividend of 40 percent. Birla, Champdany, Anglo-India, Kelvin, Fort Gloster, Gouripore, Ganges and Northbrook have been bought. Good tea shares have met with support. Among Assam Gardens, Betjan, Tezpore and Bishnauth have been steady. In the Dooars group, Hasimara and Jaybirpara have improved. Among Darjeeling gardens, Soom and Margaret's Hope have been transacted.

Government securities have been steady. The 3 percent Conversion loan 1986 has closed around Rs. 66. Support has been forthcoming for short- and medium-dated stocks but sellers have been few. The prices of State Government loans have been well maintained.

Bombay

GENERAL RISE IN NEW SHARES

STEELS UP ON HOPES OF PARTIAL DECONTROL

Tuesday Evening.

THE Bombay stock market closed last Tuesday for Diwali in a buoyant mood. So it is expected that the *moorat* session will take place on Thursday on a cheerful note. Earlier, there was a fair reaction and a prominent bull was believed to have unloaded his shares heavily. The selling was nevertheless absorbed without any strain. Renewed buying and short-covering were touched off by the broadcast of the Central Finance Minister, Mr. T. T. Krishnamachari. Dalal Street has been cheered by his assurance that he will soon review fiscal and pricing policies, and might take steps to remove the hindrances to economic growth. Steel shares, in particular, have been boosted by optimism about the possibility of decontrol of the commodity in the near future. The revival of activity in the piecegoods market because of the Diwali festival has been an additional stimulant.

A salient feature of the stock market revival has been that the prices of new shares have appreciated over a broad front. Several scrip, which until recently were quoted at a substantial discount, have recovered to about their par values. Some of them have even been quoted at a small premium. United Wire Ropes, for instance, have gained considerably and the scrip have been quoted at a substantial premium due to the change in the control of the Company.

Tata Steel ordinary have closed around Rs. 145.25. The price has hardened further in curb trading. Among engineering shares, Tata Locomotive, Mukand Iron, Premier Construction and Larsen and Toubro have gained. In motor-vehicle shares, Hindustan Motors have recovered on strong support from Lyons Range. Premier Automobiles have been sluggish.

Selected cotton mill shares have improved considerably. Century have soared on renewed support, combined with short-covering. Morarjee have improved in spite of a cut in the dividend. Support has been forthcoming for Bombay Dyeing, Kohinoor and Tata Mills. India United ordinary and Gokak have been steady.

Miscellaneous shares have also moved up in sympathy with the general trend. In the cement section, Associated Cement and Digvijay have gained. In sugar shares, interest has been concentrated on Belapur and Walchandnagar Industries. Steamship companies have been buoyant on prospects of higher dividends. Scindia Steam have appreciated considerably on a higher taxable ordinary dividend of Re. 1 a share, against 60nP a share last year. Great Eastern Shipping have benefited from rumours of a bonus issue.

Mining shares have been steady, and fair business has been transacted in Shivrajpur Syndicate. Chemical shares have improved on balance. Tata Chemical and Indian Dyestuff have met with support. In rayon shares, National Rayon have been steady. Gwalior Rayon have gained further. Strong support has been extended to Voltas. Business in cash shares has nevertheless been poor, although fluctuations have been narrow.

Bank shares have been devoid of interest, and stray business has been transacted in Bank of India, Bank of Baroda and Central Bank. New India Assurance have been steady in the insurance section. Limited business has been done in electric company shares. Ahmedabad. Bombay Suburban and Tata Power have been taken.

Madras

LIBERAL CREDIT IN PROSPECT

MARKET EXPECTS TAX CHANGES

Tuesday Evening.

THE undertone of the Madras stock market has been steady during the past week, although turnover has

been limited in view of the forthcoming holidays. Higher advices from Dalal Street and Lyons Range have been an additional stimulant. Operators have interpreted the Central Finance Minister's broadcast on Friday bullishly. It is generally believed that he might soon modify the fiscal system to promote economic development. It is also hoped that he will take concrete steps to revitalise the capital market by ensuring a bigger flow of credit, especially from the Reserve Bank.

Government securities have been steady and selected State Government loans have improved slightly. In bank shares, Indian Overseas have been transacted at Rs. 147.75 and Indian at Rs. 156.10. Among electric companies, South Madras have been steady at Rs. 10.65 on declaring an interim taxable ordinary dividend of 5 percent. Vellore have also been taken up to Rs. 15.25. Sugar shares have improved all round. Deccan have gained at Rs. 11.25 on paying a final taxable ordinary dividend of 11.5 percent. Although the dividend has been maintained, the profits have been higher. E.I.D. have hardened to Rs. 37.65, Andhra to Rs. 17.36 and Travancore to Rs. 7.25.

Despite a decline in turnover, the prices of selected planting shares have been well maintained. Cochin Malabar have been wanted at Rs. 6.15 and Consolidated Coffee at Rs. 19.40. Business has passed in Periakaramalai at Rs. 3.52 and in Ouchterlony at Rs. 4.50. Thirumbadi have changed hands at Rs. 3.03, Haileyburia at Rs. 12.15, Nelliampathy at Rs. 3.50 and United Nilgiri at Rs. 23.87. Good coffee shares have been favoured due to optimism about the marketing outlook for the commodity. Coffee Lands have hardened to Rs. 14.87. Rajendra to Rs. 11.30 and Amalgamated to Rs. 10.01.

Business in textile shares has been meagre. Among clearing scrip, South India Viscose have been bought at Rs. 133 and Travancore Rayon at Rs. 26.50. Madura have been transacted at Rs. 33.10 and Lakshmi at Rs. 135.75. Adoni have changed hands at Rs. 9.40 and Anglo-French at Rs. 139.25. Business has passed in Buckingham at Rs. 266 and in Mettur at Rs. 278. Modi Spinning has been done at Rs. 10 and Rajalakshmi at Rs. 92. Rayalaseema have been steady at Rs. 136 and Ramakrishna at Rs. 217.80.

Among miscellaneous industries, Aluminium Industries have been steady at Rs. 17.35 and Ashok Leyland at Rs. 7.32. Mettur Chemical have been done at Rs. 13.05. In cement shares, Dalmia have been bought up to Rs. 12.70 and India at Rs. 5.75. F.A.C.T. have recovered to Rs. 6 and Seshasayee Paper to Rs. 7.55. Tube Investment have been quoted at Rs. 230 and Enfield at Rs. 9.12. Radio and Electricals have changed hands at Rs. 3.25. The Company proposes to issue 250,000 rights ordinary shares of Rs. 10 each at par. Forest Industries have been done at Rs. 2.03 and Rane at Rs. 8.02. Spencer have been steady at Rs 20.15 and Textool at Rs. 154. Madras Rubber have hardened to Rs. 14.90, but Kirloskar Electric have been freely available at Rs. 18.12.

Two Powerful Tyres for Heavy Duty

Here are two Dunlop tyres of tremendous strength and durability. Massive tyres. Working under the killing sun or deep into the night by the powerful beams of scores of flood lights. Propelling the gigantic earthmoving machines amidst the loud clangour of incessant work... at Koyna, Nagarjunasagar, the N. C. D. C. mines and numerous important projects.

The tread patterns and the especially tough casings of these tyres were developed after prolonged field trials on many kinds of terrain in many parts of the world.

These are tyres proved in service.

HIDES AND SKINS UNCHANGED

The market showed little change. Stock were higher than in the previous week.

Bazaar Sales

(Between 8th October and 14th October, 1963)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8 to Rs. 12.25; Wet salted (Slaughtered) 33,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 47,800 pcs. on the basis of Rs. 240 to Rs. 260, Rs. 300 to Rs. 315 and Rs. 370 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4.00 a piece; Purneah 22,000 pcs. on the basis of Rs. 225 to Rs. 235; Patna-Muzafferpore 20,300 pcs. on the basis of Rs. 250 to Rs. 260 and Rs. 270 to Rs. 285; Forbesganj 3,000 pcs. on the basis of Rs. 475.

Bazaar Stocks

(14th October, 1963)

Cowhides: Wet salted 72,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 51,000 pcs.; Assam-Dinajpur 80,000 pcs.; Muzafferpore - Patna - Pakur - Purneah-Kissenganj 139,000 pcs.

Money

EXPECTED CHANGES IN MONETARY AND CREDIT POLICIES

(BY A SPECIAL CORRESPONDENT)

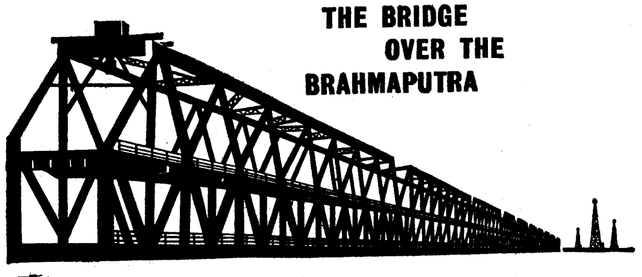
THE Central Finance Minister, Mr. T. T. Krishnamachari, has outlined a "positive policy" for stimulating economic growth. An important aspect is that the Reserve Bank will pursue a "liberal credit policy" in meeting demands for all productive purposes without relaxing its vigilance over speculative tendencies. In devising appropriate instruments of monetary control, the Bank will bear in mind the fact that there is a considerable amount of unaccounted money which is used for speculative transactions. The statement may mark a welcome change in monetary and credit policies.

It is claimed by the Reserve Bank that its policies have succeeded in restraining the monetary pressures emanating from speculative activity. The recent rise in prices, especially since the introduction of the 1963-64 Budget, in spite of the operation of quantitative and qualitative controls, has falsified this claim. It has been clear that speculative forces are being fed by funds beyond the control of the monetary and credit authorities. It is a tribute to the frankness of Mr. Krishnamachari that he has accepted the facts of the situation and has instructed the Reserve Bank to reshape its credit and monetary policies on more realistic lines.

What is likely to be the shape of the new monetary and credit policies? This is the question uppermost in the minds of banking and financial circles. Will the Reserve Bank abandon the selective credit controls altogether since it has been proved time and again that their impact on prices has been only marginal? Will there be a cheapening of bank credit? While a positive reply to these questions will be available after the return of the Governor of the Reserve Bank, Mr. P. C. Bhattacharyya, from abroad, some conjectures may be made about the type of relaxations the authorities may be contemplating.

Co-operative Credit

The first important change of approach in monetary and credit policies is likely to be in the sphere of co-operative credit. This is because agricultural production has been stagnating. It is reported that neither the increase in membership nor the amount of loans advanced by credit co-operatives have been in line with the targets fixed under the third plan. For instance, against the plan target for membership of 4 million every year, the increase was only 2.5 million in 1961-62. The target for short and medium-term credit has been fixed at Rs. 512 crores for the third plan which averages out to Rs. 100 crores a year. During 1961-62, loans increased by Rs. 25.3 crores only. Several States showed heavy overdues, central banks were unable to use the full credit limits except in a few States, and no serious attempts were made to help the weaker sections of the community.



Although the growth of deposits in apex banks and the rise in the share capital of central co-operative banks were satisfactory, the internal resources of the movement did not increase in line with expectations. This in turn retarded the flow of funds to agriculture. An all-out effort is likely to be made by the Reserve Bank to strengthen the movement and stimulate the growth of deposits in the co-operative sector. Deposit insurance is shortly to be extended to co-operative banks. The banks will be permitted to give or quote higher rates of interest than the commercial banks. The State Governments will also be asked to guarantee principal and interest for fixed deposits in the event of failure of any co-operative bank. Local bodies like municipalities are likely to be advised to keep their balances with co-operative institutions. While these measures may to some extent help the growth of deposits in co-operatives, it should be remembered that substantial progress will be difficult without strengthening the base.

No amount of State guidance is a substitute for local initiative and the latter cannot develop as long as there is a dearth of honest and sincere workers. Apart from measures to be taken to strengthen the growth of deposits in co-operative institutions, it is understood that the State Bank may be asked to play a more positive rôle in providing credit. It may function as a sort of apex bank to apex banks with broad policy guidance from the Reserve Bank. The State Bank, it may be noted, has a chairman with a positive rural bias. Undoubtedly, financial supervision by the State Bank would help strengthen the co-operative movement provided there is proper administrative coordination. It is considered unlikely that the emphasis would be on cheapening agricultural credit to the ultimate borrower, because the problem has to be viewed in the context of the present cost of credit in the countryside on the one hand, and the number of intermediaries necessary effectively to supervise the flow of credit, on the other.

Commercial Bank Deposits

As far as commercial banks are concerned, the growth in their deposits during the slack season is expected to take care of the credit needs during the coming busy season. It is the general expectation that except for a few banks with an overstretched position, commercial banks will be able to meet their commitments, and the Reserve Bank will be able to supply the marginal requirements. Since the problem is one of supplying credit liberally for productive purposes, selective credit controls of doubtful utility, such as those relating to rice and paddy, may be scrapped altogether; those on sugar and other commodities will be under close watch. It is to be remembered that the Reserve Bank is giving preferential treatment already to certain sectors like exports and small industries. A relaxation of controls on margins (such as operate in the case of shares) could stimulate investment activity. In this connection, it is understood, a distinction may be made between the credit needed to stimulate investment and production and that used for speculative activity. While the latter will be discouraged, the former will receive encouragement through preferential margins, informed circles say.

It is generally believed that credit will not be made cheaper. This is because the tendency is towards higher interest rates in the economy. The Reserve Bank, along with the World Bank, has succeeded in convincing the Government that low interest rates in a developing economy in the context of physical bottlenecks promote wastage and aggravate monetary pressures. It is, however, likely that the present anomalies in the interest-rate structure will be removed by abolishing the several tiers; a certain amount of Bank rate, and the remainder at a credit may be made available at penal rate of, say, 6½ percent, after a thorough scrutiny of the position of the requesting bank. It is considered possible that the Reserve Bank may prescribe a credit-deposit ratio officially. This is now mentioned in informed quarters at around 65 percent. Banks in a particularly overstretched position may be given a concession of 10 percent with a stipulation that they should correct their over-extended position within a specific period. No major relaxations in the shape of cheaper credit or abolition of restrictions on facilities provided to the commercial banks by the Reserve Bank, are considered likely.

THE BRIDGE OVER THE BRAHMAPUTRA

By day and by night, with deafening roar and rattle, goods and passenger trains hurtle across the new Brahmaputra Bridge, connecting Amingaon and Pandu. When on 7th June 1963, Prime Minister Nehru formally opened the Saraighat Bridge, wholly Indian in design and execution, it marked the culmination of a plan first thought of in 1910.

Work commenced in November 1958, and it took Rs. 10.6 crores and nearly four years of round-the-clock effort to throw the bridge across the mighty and turbulent Brahmaputra.

When the first goods train travelled over the bridge on 31st October 1962, it heralded a new era in the fast-developing economy of north-eastern India. For the first time, an all-rail-cum-road link was established between the tea gardens and the oilfields of Assam and the rest of the country.

No less than 4.2 million cubic feet of concrete, 40,000 tons of cement and 14,000 tons of steel were used to build the 10-span, two-tier bridge with a roadway on top and rail tracks below. Of about 11,000 tons of vital mild and high tensile steel required to build the girders of the bridge, about 60 per cent came from the steel works at Jamshedpur. This is yet another example of Tata Steel in the service of the nation.

THE CALCUTTA MONEY MARKET

SLIGHT DECREASE IN ADVANCES

Wednesday, 16th October.

THERE has been a slight decrease in the general level of advances in the Calcutta money market during the past week. The credit given to the sugar mills has fallen, and so has that given to the iron, steel and engineering industries. Jute advances show a fair increase. But the accommodation given to the cotton and woollen mills, and to the foodgrains and seeds trade, is unchanged. In the interbank market, conditions were fairly tight in the beginning but have eased towards the close. The call rate has dropped to 1 percent.

The exchange market has been active, with a good supply of tea and gunny bills. The demand for remittance has been fair. Sterling has weakened in relation to most of the important currencies with the exception of the Dutch, Belgian, Norwegian and Austrian ones.

SILVER WAS QUIET IN CALCUTTA IN ..e past week. The price declined from the previous week's level of Rs. 230 to 229 75, quoted for ready. The London and New York prices were 111½d and 129.3 cents.

Gold was quiet. The prices declined from Rs. 62.75 to Rs. 62.25.

DURING THE WEEK ENDED 11TH OCTOBER, Government of India Treasury bills for Rs. 231,65,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 15th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st October.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 16th October to 19th October at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 9th October to 12th October amounted to Rs. 2.55 crores only.

THERE WERE RISES OF Rs. 36.39 crores to Rs. 2,257.08 crores in active notes and of Rs. 22.70 crores to Rs. 2,270.50 crores in the total note issue according to the return of the Reserve Bank of India for the week ended 11th October, 1963. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 25 crores to Rs. 1,939.31 crores. This was done partly by transferring securities from the Banking Department in which investments fell by Rs. 5.06 crores to Rs. 168.21 crores. Deposits of the Government of India declined by Rs. 26.09 crores to Rs. 52.20 crores while those of State Governments rose by Rs. 7.82 crores to Rs. 10.36 crores. Balances of scheduled banks at Rs. 86.66 crores showed a rise of Rs. 11 crores. Their loans from the Reserve Bank rose from Rs. 1.79 crores to Rs. 1.95 crores, of which advances against usance bills amounted to nil (Rs. 7 lakhs). Balances held abroad gained Rs. 50 lakhs at Rs. 9.10 crores. Ways and means advances stood at Rs. 56.76 crores, against Rs. 59.38 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 4th October, 1963, shows a drop of Rs 5.14 crores to Rs. 594.51 crores in total deposits. Investments in Government securities are up by Rs. 3.96 crores to Rs. 322.37 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 92 lakhs to Rs. 249.36 crores. Cash and balances are, in consequence, shown at Rs. 18.55 crores or Rs. 9.60 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 4th October, 1963, shows Demand and Time liabilities at Rs. 1,110 54 crores (Rs. 27.27 crores on account of borrowings from banks) and Rs. 1,310.02 crores (Rs. 23.24 crores), compared with Rs. 1,108.81 crores (Rs. 24.26 crores) and Rs. 1,316.22 crores (Rs. 24.42 crores), respectively, in the previous week. Cash has increased by Rs. 4.61 crores to Rs. 55.53 crores, while balances with the Reserve Bank have declined by Rs. 2.06 crores to Rs. 79.44 crores. There is a rise of Rs. 6.57 crores to Rs. 786 crores in investments. Advances and bills discounted at Rs. 1,475.85 crores show an increase of Rs. 10.16 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 61.0 percent, against 5.4 percent and 60.4 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 18-10-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
18-10-63	21-1-64	2.00.00	Rs. 2.320%
11-10-63	14-1-64	2.00.00	Rs. 2.318%

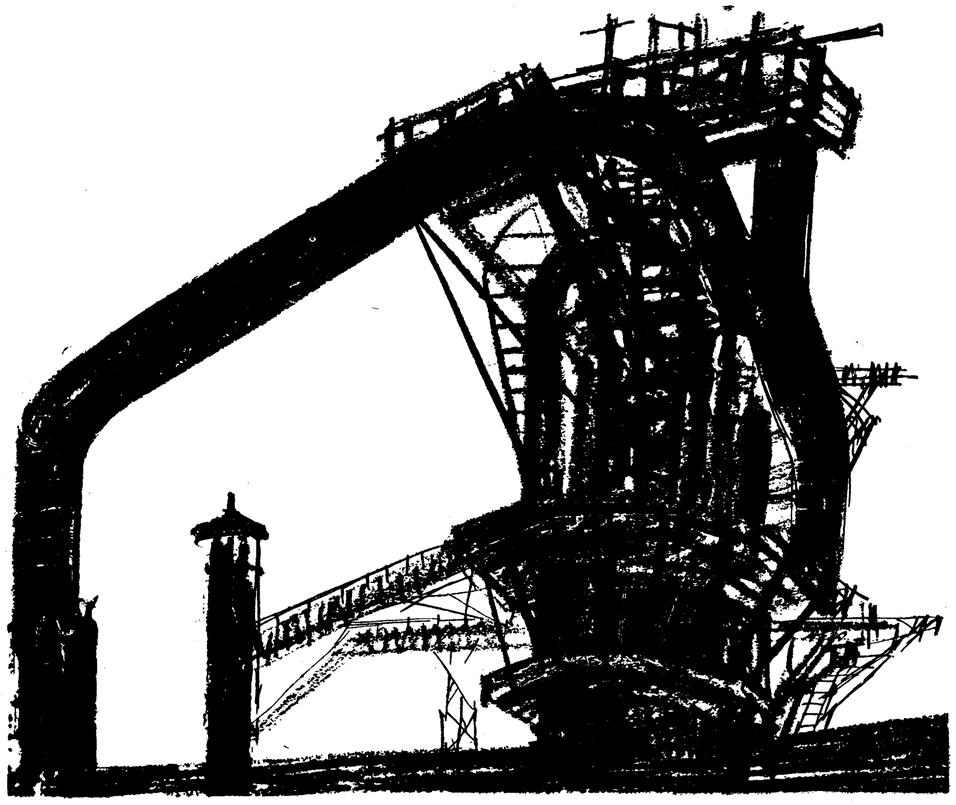
GCCP

TO EXECUTE

ELECTRICAL POWER DISTRIBUTION FOR



1,600,000 TON DURGAPUR STEELWORKS EXPANSION

GREAVES COTTON & CROMPTON PARKINSON LIMITED

GCCP

A good name for electrical installation

A further tribute to our leadership in India has been given by ***Hindustan Steel*** *through the award of the contract for supply, erection and commissioning of the Electrical Power Distribution equipment for their expansion at Durgapur. We, at* GCCP, *are proud to be associated with the engineers of* H.S.L. *in shouldering the responsibility for the electrification of this gigantic project.*

THE LARGEST ELECTRICAL "TURNKEY" CONTRACT AWARDED TO AN INDIAN COMPANY

GREAVES COTTON & CROMPTON PARKINSON LIMITED

DIVERSIFYING THE PURPOSES OF WORLD BANK AID

(BY A SPECIAL CORRESPONDENT)

The World Bank is thinking of diversifying its lending activities by providing money for agriculture, education and maintenance imports. A special correspondent expresses his personal opinion that such diversification may bring little benefit to the developing countries.

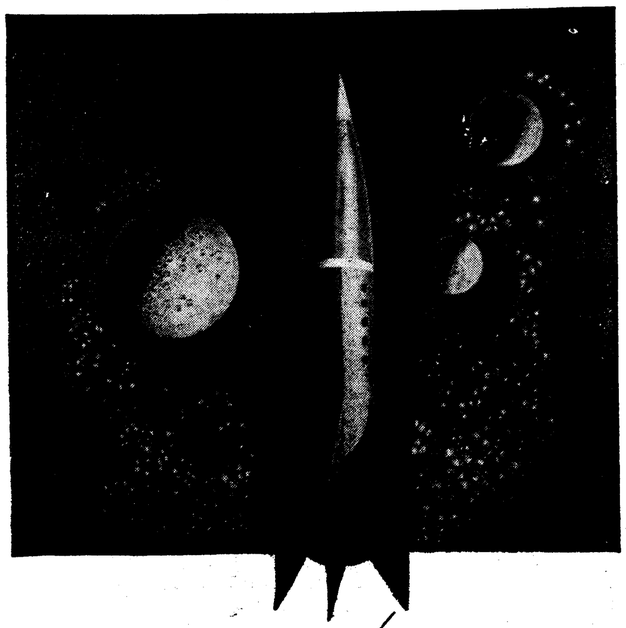
WHILE the recent World Bank and International Monetary Fund meetings provided renewed evidence of concern for developing nations, the liberalisation of lending policies now being discussed may not yield much practical benefit to India and other nations in a similar position. Making agriculture and education eligible for support from the World Bank is an excellent idea as long as aid in these new directions does not cut into the assistance now being provided for industrial development. Whether a cut can be avoided in a situation of more versatile lending depends on the size of the total aid kitty. Little was heard in Washington to suggest that the industrially advanced nations were rushing in to help the Bank enlarge the volume of its lending. Britain seems to provide the rare exception; she is said to be considering stepping up assistance from the current level of £150 million to £180 million next year or even more. This rise and any others that may be offered may, however, prove too small to offset a cut in U.S development aid. The United States provides roughly half of the total of aid from all western sources, and a major reduction in her programmes may be more than what others can hope to make up.

Anti-aid Sentiment

A look at the factors which are hardening anti-aid sentiment in the U.S. Congress is instructive. Most important among these is the disillusionment about the political effectiveness of aid, brought home by such examples as the new Sino-Pakistani *entente* and the Diem *régime*'s perverse refusal to make peace with the Buddhists to strengthen the fight against communism—into which the United States has poured not only money but also men. In a world where the cold war is beginning to thaw, the political necessity of aid is suffering rapid depreciation. In the new period now opening, assistance will depend far more on considerations of economic self-interest than has hitherto been the case.

This self-interest will be felt most acutely in the countries in which exports constitute a high proportion of the national product, such as Britain. The United States has a payments problem but its solution depends on the lowering of tariff barriers by other industrially advanced countries, not on augmenting through credits the import-absorption capacity of developing nations. These trends may make her less aid-minded than in the past, and thus curtail the resources available to bodies like the World Bank.

Trade Opportunities



On this long-term view, it would be safer to reduce reliance on assistance but make up for it by expanding trade opportunities open to the developing nations. This is where the Kennedy round at G.A.T.T. next year dovetails into the efforts to expand the volume of assistance, a point dramatically brought home by the Pakistan Finance Minister, Mr. Mohammad Shoaib. As he told the I.M.F., the assistance it provides to support currencies under pressure is like bolting the stable door after the horse has fled. The I.M.F. and the World Bank may help to buy the developing country a new horse, but that does not compensate for the loss sustained. In this context, Mr. Shoaib made the telling point that developing nations supply less than a quarter of the world's textile imports—1,234 million square yards out of a total of 5,610 million square yards.

Admittedly, the World Bank and the I.M.F. can do little directly in the field of international trade. This is the function which G.A.T.T., or whatever else may take its place in the future, has to fulfil. But it is still open to the Bank to help attack the problem from the other end of import substitution. This is a direction in which the Bank's help for industrial development could be specifically channelled to reduce the import deficits, which may go up four-fold in the next 20 years unless corrective steps are taken immediately. It is not difficult to see that an emphasis on import substitution through the diversification of the industrial base of countries like India will call for a shift in the Bank's lending policies. Its loans have, as in India's case, gone mainly into infrastructure development, and a far smaller proportion into basic industries with a large import-saving potential. The Bank has felt handicapped perhaps by the fact that these basic industries, usually with low profitability, tend to be started in developing countries by the State.

This year's meeting did provide some evidence of the Bank's concern for industrial development. This took the form of a waiver of guarantee that Governments have to provide for loans to private enterprise. The waiver will no doubt reduce the procedural complications but will be of little help otherwise. Whether a formal guarantee is given or not, no country facing payments difficulties can permit companies to borrow overseas without prior consultation with the Government. Once the borrowing is made, the Government concerned will have to provide in its foreign exchange budget for the repatriation liability arising, regardless of whether a guarantee has been given or not.

Maintenance Imports

The Bank's move to grant loans to pay for maintenance imports required by countries like India to work their unutilised industrial capacity is of greater interest. Here again, the net benefit to developing nations is hard to judge. If lending for maintenance needs reduced aid on capital account, it may amount to purchasing short-run relief at the cost of the long-term growth needed to ensure enduring viability. The point may legitimately be made that help in maintenance imports, which yield immediate and tangible benefits, is better provided through short-term commercial credits. Long-term development aid should be reserved largely for fields of endeavour in which results are slow in coming and where credit on commercial terms will impose an intolerable burden. The only advantage in World Bank aid for maintenance needs may be its untied character. But the gain may not be large enough to warrant diversion of Bank aid from helping to build the future to buttressing the present.

New Delhi

T.T.K. PROMISES REVIEW OF FISCAL AND MONETARY POLICIES

(FROM OUR NEW DELHI CORRESPONDENT)

IN a broadcast to the nation on Friday, the Central Finance Minister, Mr. T. T. Krishnamachari, stressed the need for stimulating economic growth. "The way in which we seek to achieve this growth", he added, "must not be inconsistent with the vital objective of achieving a socialist pattern of society".

Reviewing current trends, Mr. Krishnamachari said that the economy would turn the corner on its own momentum, since the setback in the past had not been of a "basic nature." The crop prospects this year are good, and the capital market is showing signs of revival. New industrial capacity is being created throughout the country. There has lately been or is soon likely to be a significant improvement in the supply of basic materials and facilities. Some measures taken recently, such as the additional assistance granted to States and the larger foreign exchange allotment for the import of fertilisers, are expected to produce results in time. The Finance Minister hinted that further measures would be taken to quicken the pace of industrial growth. He proposes to review the present fiscal and monetary policies for accelerating economic expansion and ensuring social justice.

On the question of prices, the Finance Minister said that with the prospect of a better crop this year, the situation should not cause undue concern. Several questions, he said, arise in evolving a price policy. But for the present, he would like to leave it to the people to consider the questions. He, however, added that the policy of maintaining stable prices could only be successful if the Government got the support of the public.

Concluding, the Finance Minister said that it would be the Government's endeavour in the months ahead to explore some practical avenues for expanding the scope of social security for at least some sections of the people and for enlarging opportunities for the talented who lacked the means to develop their talents. "As we open up new horizons of hope by a positive policy of growth, we must also narrow the confines of fear for increasing numbers of our people."

The following is a fuller version of the Finance Minister's speech: "It is now nearly six weeks that I assumed my present responsibility in the Central Cabinet. Financial and economic policy directly affects every citizen of the country. To discharge my responsibility adequately, I must consider the needs and aspirations of every section of the community. Equally, I must tell you what I think of the economic realities that confront us as a nation and as individuals. Only so can we create an environment of mutual responsiveness between the people and the Government. It is in that spirit that I propose to share with you a few of my ideas on the current state of the economy.

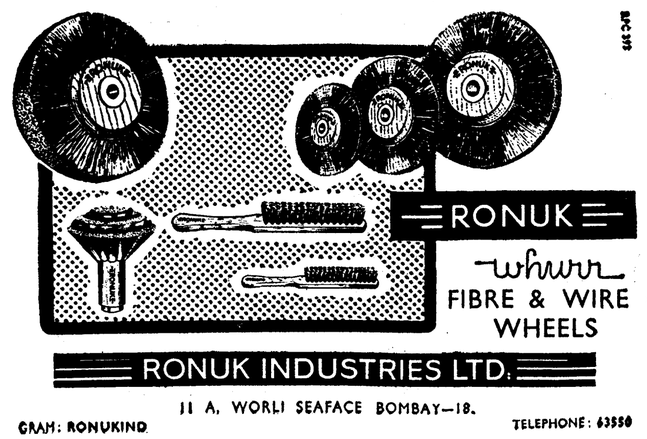
"Most of us in this country are now agreed on the basic objectives of social and economic policy. They can best be summed up shortly 'socialism', and 'planned development' towards that end. Planning for growth, for more food and fertilisers, for more schools and hospitals, for more steel and other materials of essential production—this is the only way in which we can lift the burden of poverty and want. Financial and economic policy has to serve first and foremost the requirements of rapid growth. At the same time, the way in which we seek to achieve this growth must not be inconsistent with the equally vital objective of achieving a socialist pattern of society.

"The word 'socialism' has come to mean 'all things to all men'. In fact, it is rapidly on the way to being debased. To me, however, socialism is real and positive. Its main accent is on performance as distinguished from privilege, on the enlargement of opportunities to all, irrespective of class, caste, inheritance, social status and the like. To some socialism appears to be synonymous with restraining the individual from excercising his initiative. To me however socialism—far from curbing the individual—seeks to stimulate and reward individual initiative and enterprise. But this enterprise has to be in the social interest rather than in the direction of promoting dynastic and monopolistic tendencies. Positive socialism of this kind cannot be achieved by medieval thinking. There must be a readiness to accept desirable social and institutional changes and to subject all our value judgments to the test of reason, science and social purpose. All these different ingredients that I have mentioned, namely, reward for work and merit, acceptance of change dictated by rational and scientific considerations as well as care and concern for the weak and the needy are essential in a positive and dynamic concept of socialism which seeks to create a society with hope for all and want and fear for none.

Removing Poverty

"We have a long way to go even to approach this idea. More than 16 years ago, on the eve of our independence, our Prime Minister recalled that the ambition of the greatest man of our generation was to wipe every tear from every eye in India. But even Mr. Jawaharlal Nehru, with all the support he can command from the people, cannot banish poverty and want in a decade or two. But however difficult the tasks, it must be pursued steadily with determination and mutual goodwill.

"Right now, the picture that our economy presents is hardly one of adequate growth. Over the first two plan periods, we achieved a compound rate of growth of about 3.5 percent a year. This was at least more than the rate of growth of the population. But during the last two years, the rate of growth has been even lower than before and we are hardly keeping pace with the growth of population. To some extent, this might have been due to bad weather conditions which have affected agricultural production. But there has also been a slackening of the rate of increase in industrial production, notably of consumer goods industries. These point to what is the paramount need of the day, namely, to stimulate economic growth all round.



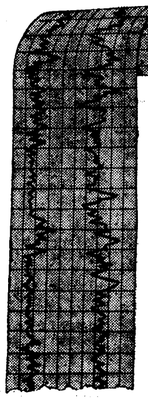
"To a certain extent, we would be justified in expecting that the economy will turn the corner on its own momentum since the setback in the past has not been of a basic nature. The crop prospects this year, for example, are good and the capital market is showing glimmerings of a revival. In the industrial field, new capacity will come into being as a result of past investments and there has lately been or is likely soon to be a significant improvement in the supply of basic materials or facilities such as power, transport, raw cotton and raw jute as well as steel and fertilisers. Some of the measures we have recently taken, such as the grant of additional assistance to the States for accelerating programmes of agricultural and power development, larger foreign exchange allotment for import of fertilisers and the like should produce results in time.

"While we may expect some improvement in production in the coming months, it is, I think, clearly necessary to take further measures to quicken the process of expansion. The demand for credit, for example, in the coming busy season must be adequately met. While fortunately, the banking system is in a better position to do so now than last year, they might still need support and assistance from the Reserve Bank. I have been in touch with the Reserve Bank and I am happy to say that the latter proposes to pursue a liberal and positive policy designed to meet credit demands for all productive purposes, although the Reserve Bank cannot be expected to relinquish its vigilance over speculative and other unhealthy tendencies. We should remember, however, that in our monetary structure, unhealthy tendencies are encouraged not merely or even primarily by bank credit. There is, in our system, a considerable amount of unaccounted money which is used essentially for speculative transactions and more especially in commodities. In devising suitable instruments of monetary control, we cannot lose sight of this major factor.

Imported Components

"Apart from credit requirements, the problem of industrial growth in the short run is one of availability of materials and components. As I have already said, internal availabilities in this direction should show an improvement in the coming months. As for imported components and materials, we have been able to bring about some improvement as a result of the greater availability of non-project assistance from friendly foreign countries and the upward trend in our exports. Nevertheless I am not in a position to hold out any promise of significant liberalisation of imports in the near future, since our underlying reserves and payments position continues to remain difficult. What is more, the requirements of defence will also continue to impinge on our balance of payments till such time as defence production gathers substantial momentum. Altogether, therefore, it is only by vigorous import substitution and the promotion of exports that we could hope to increase substantially the availability of materials and components required for our industries.

"Looking a little beyond the immediate requirement of credit or materials, the rate of growth of industrial production could not be raised on a sustained basis without a significant revival of investment activity. It is my hope that some of the measures we are proposing to take, such as the



establishment of a unit trust and the enlargement of the functions of the Industrial Finance Corporation, would help in this direction. There is reason to apprehend that the ability of the private sector to raise internal or market resources for substantial expansion of investment in the basic sectors of industries may not come up to the expectations in the plan. It is often said that this situation is the result of pricing or fiscal policies. If that is so, it will be necessary to enquire whether these policies need modification bearing in mind the legitimate requirements of both the public and private sectors. If the present situation reflects inadequacy of resources in the aggregate for the tasks that we have set out to achieve, this fact, too, shall have to be taken into account in framing our future policies. It is my intention to review the present fiscal and related policies with reference both to the immediate needs of the economy as well as the requirements of growth and social justice in the years to come.

Rising Prices

"Perhaps the problem that concerns you all most at the moment is the problem of rising prices. There is no doubt about the fact that a steadily rising price level which deprives thousands of families of a part of their livelihood is not in conformity with the concept of socialism that I outlined a few moments back. It is not unlikely that with the prospect of a better crop, the price situation in the coming months may not continue to cause much concern. But I think I am right in saying that by and large, this question of a need for a stable price policy will remain with us for years to come as it has indeed been with us with minor interruptions for at least the past two decades. If this were so, we should, I think, consider a number of consequential questions seriously. Most of us would agree that price policy for essential consumer goods must reconcile the opposing interests of producers and consumers. The producers must get a fair price, both as a reward for their labour and as an incentive for increasing production.

"At the same time, consumers must not be required to pay excessive prices out of line with their incomes. But how can we reconcile these two interests without reducing, in some way, the rôle and the profits of the middlemen? There is a widespread feeling that with the decline in competition, the margin of profit in distribution has increased in recent years. But if this margin is to be reduced, it cannot be done without a measure of regulation or intervention by the State in the machinery of distribution. And such regulation can be successful only with the active support and co-operation of the people. I think all of us should also ask ourselves whether reasonable stability of prices should be assured to all sections of the people irrespective of their incomes or whether it should be assured only to the more vulnerable sections of the community. I do not propose to answer these questions or to lay down tonight the policy of the Government on this matter. I hope that you, as citizens, will give thought to these questions so that the element of wishful thinking that has dogged us for long in this area of price policy is progressively reduced by an enlightened public opinion as, after all, the discipline that goes with the concept of the policy of maintenance of stable prices can only be enforced by a strong backing of public opinion.

"I have spoken to you about the need for stimulating growth and about price policy. But I am not, repeat not, one of those who believe that we should put on the shelf our aspirations for social justice till such time as we achieve a satisfactory rate of growth on a continuing basis. It shall be our endeavour in the months ahead to explore some practical avenues for expanding the scope of social security for at least some sections of our people as also for enlarging opportunities for the talented who lack the means to develop their talents to the fullest. As we open up new horizons of hope by a positive policy of growth, we must also narrow the confines of fear for increasing numbers of our people. And let us hope that, with determination and mutual goodwill, we shall succeed in enhancing social justice without sacrificing economic progress," Mr. Krishnamachari concluded.

ONE LOG, TWO MILES LONG

It is not possible to see more than a few feet down a well, but there are scientific devices which can produce for the oil explorer a complete photographic chart of the inside of a well, all the way from surface to bottom. When interpreted, such charts, or logs as they are called, indicate the variation in the physical properties of underground rock formations penetrated by the drill, thus helping the scientist to locate levels where maximum production may be expected and giving him other information about the nature of the various strata. Other logging instruments make use of electrodes, gamma rays and radioactivity measuring devices to record the characteristics of the earth's crust.

Looking into the earth in this way calls for highly specialised equipment and skilled men to operate it.

B.O.C. SKILLS EXPERIENCE LOCAL KNOWLEDGE

THE BURMAH GROUP OF OIL COMPANIES

OIL

Pact Signed

A contract for the delivery of oil exploration and drilling equipment was signed here last week between the Oil and Natural Gas Commission and Technoexport of Russia. Under the contract, Technoexport will supply drilling rigs, pipes, transport and geophysical equipment, etcetera, valued at about Rs. 8 crores. The contract has been signed in accordance with the Indo-Russian Agreements of June 1960 and February 1961. The equipment will be used by the Commission for exploration and production of oil in various parts of India.

EAST GERMANY

Leipzig Spring Fair

The Leipzig Spring Fair is to be held in East Germany from 1st to 10th March, 1964. It is proposed to set up at the Fair an "Indian Collective Pavilion" for co-ordinating and arranging the display of exhibits from India and help those who desire to participate in it. The pavilion will, as in earlier years, render commercial service to Indian exporters and manufacturers by showing samples to interested buyers and handling trade enquiries and, if needed, even negotiating orders on behalf of the parties.

CZECHOSLOVAKIA

Trade Team Arrives

A trade delegation from Czechoslovakia, led by Mr. V. Rudolf, Deputy Chief of the Asian Department of the Czech Ministry of Foreign Trade, has arrived in New Delhi. It will hold preliminary negotiations for a new trade agreement between Czechoslovakia and India. Mr. F. Hamouz, Czech Minister of Foreign Trade, is expected to arrive here in the latter half of the current month.

The trade between the two countries, which is estimated to be about Rs. 12 crores each way in the current year, is likely to be doubled by the end of 1966 as a result of the trade negotiations. Major items of export from India to Czechoslovakia are iron ore, jute products, spices, coffee, mica, manganese ore and deoiled cakes. Imports from that country include machine tools, capital goods, power equipment, steel products and chemicals.

PALAM AIRPORT

Accommodation Problem

In order temporarily to ease the accommodation problem at Palam airport, the ground floor hall, occupied till now by a restaurant, has been converted into a departure lounge for internal traffic. This has considerably eased the traffic congestion in the main hall. The retiring rooms on the first floor have been remodelled to serve as a restaurant.

Detailed plans for undertaking additions and alterations to the ground floor accommodation at the airport have been prepared, in consultation with the airline operators, Customs and health authorities and the Department of Tourism. This work is scheduled to be taken up shortly. The additions and alterations, which are expected to cost about Rs. 8.75 lakhs, will provide a separate departure lounge, an additional Customs hall, an enlarged transit lounge, a baggage claims office, a freight hall, and a spectators' gallery. When completed, the areas made available are expected to meet the needs of passenger facilities at Palam, for at least four to five years to come.

Since it is not possible to expand the existing terminal area, it is proposed to develop a new terminal area, south of the new jet runway, and to construct a modern terminal building. The scheme which is now being prepared, envisages the use of about 650 acres of land. The terminal building will be planned after ascertaining the requirements of all international airlines operating through Palam, as well as the Customs, health, immigration and tourist departments.

F. I. C. C. I.

New Industries for Nepal

The Federation of Indian Chambers of Commerce and Industry recently sponsored a delegation to discuss with the Nepalese Government and Nepalese business men and industrialists schemes of joint ventures and trade expansion. In a paper prepared by the Government of Nepal, the following were listed as possible industries, in the setting up of which India could co-operate: jute, paper and pulp, fertilisers, hydro-electric power, low-shaft iron smelting, cement, mica, soapstone, ceramics, plywood and hardboard, resin and turpentine, drugs and pharmaceuticals, bicycles, fruit preservation and canning, brewery and soft drinks, and hotel.

The delegation pointed out that the Government of India is already co-operating in a big way in developing hydro-electric power in Nepal. Moreover, power generation and the development of transport and communications fall in the basic infrastructure, and have to be done by and large by the Government. As far as fertilisers are concerned, the industry is so capital-intensive that even in India private business is facing difficulties in relation to this problem. The delegation felt that the demand for fertilisers in Nepal is not likely to be large enough to sustain even a medium-sized plant. Moreover, there does not seem to be any special advantages for setting up the industry there. Low-shaft iron smelting, even in India, is at an experimental stage. A further difficulty in Nepal will be presented by the lack of coal and the transport costs involved in carrying it to the sites of iron ore or *vice versa*. Considered from these various aspects, the setting up of these industries may not be considered feasible by private Indian entrepreneurs. Mica mineowners in India are experiencing a slump in their trade on account of the development of substitutes, and may, therefore, find it difficult to take interest in exploiting this mineral in Nepal. The development of the ceramic industry appears to be uncertain because of the lack of availability of clay.

The industries which offer reasonable prospects are jute, paper and pulp, cement, soapstone, plywood and

hardboard, resin and turpentine, drugs and pharmaceuticals, bicycle assembly, brewery and soft drinks, fruit preservation and canning.

There are already two jute mills in Nepal. One of them is not functioning because it requires thorough overhauling and rehabilitation. Some administrative and managerial problems are reported to be involved. But there seems to be scope for one more jute factory in the Jhapa area, which is to the north of West Bengal. This place is near a rail-head and there will not, therefore, be any problem in relation to transport and ommunications. The quality of raw jute is reported to be good. The prospects for paper and pulp and plywood and hardboard appear to be excellent because of the plentiful availability of sabai grass in the entire Terai area, and timber, particularly in western Nepal.

The establishment of cement factories is a distinct possibility in some areas where plentiful supplies of limestone are available. The main handicap here is power.

The Government of Nepal has announced liberal tax concessions for new industries, its readiness to provide necessary foreign exchange for machinery and equipment, repatriation facilities and retention of foreign exchange earnings for the import of raw materials. It has also set up the Nepal Industrial Development Corporation on the lines of the Industrial Finance Corporation of India. The former has so far given to industries about Rs. 70 lakhs as loans. Rethinking in the field of banking is also going on, and it is quite on the cards that another bank, called the State Bank of Nepal, may be established shortly, which, it is hoped, will be more responsive to the demands of present-day financial requirements of commerce and industry.

MACHINE-MAKING UNITS

Planning Methods

The Government, it was reported last week, had set up various groups to plan for machine-making units to be set up during the fourth plan. The planning for heavy engineering capacity has hitherto been mainly in terms of a certain number of steel plants, cement plants, etcetera.

The products of heavy engineering could be split up into their constituent elements, and classified with reference to certain similarity of features or purpose. A classification of this kind will include what are termed as unit process equipment. Thus, one has size reduction equipment such as crushers, grinding mills or pulverisers; size-separation equipment such as centrifuges or filters; heat exchange equipment such as autoclaves, evaporators, and condensers. Such a classification implies some similarity and a degree of specialisation, either in the processes involved, design, manufacturing equipment or techniques. For this reason, some manufacturers specialise in a range of such equipment supplied to different user industries.

The next step is to break up heavy engineering equipment as so much castings and forgings, so much plate work, gears, pipes and tubes, structurals, machined items, etcetera. These items can be further grouped into ranges—castings and forgings by piece weight, plate work by thickness and total weight, gears by diameter and so on.

Ultimately, one has a list of bare equipment installed in a heavy engineering factory. This is the true "unmanifest capacity." It can be described only in terms of its specifications. Here again, it is possible to group the equipment into ranges—furnaces by melting capacity, hydraulic presses by pressure, boring mills by size, etcetera.

In the last two years, the idea has been consistently advocated that it is not relevant to talk in terms of a paper plant or a cement plant; that engineering capacity is multi-purpose and versatile; and that planning and use of such capacity must proceed on this basis. Mr. Bhoothalingam has also pointed out that too much emphasis is being laid on the measure of capacity and not enough on the character of capacity. Licensing on this basis tends to be restrictive and inhibits development and diversification. The question arises as to how these ideas should be translated into action.

It should be clear that methods of planning are too generalised and too crude for India's present and future level of development. The well-known example of structurals should illustrate the point India's target for the third plan is 900,000 tons and the present installed capacity is 350,000 tons. It is recognised that India has, at the same time, a surplus and shortage in this industry. For some items, India has a surplus capacity, partly aggravated by the shortage of raw materials. For certain other things, India has little or no capacity. No one knows precisely what capacity India has for the manufacture of, say, heavy plate girders. The extent of recognition of this problem is to put light and medium structurals on the "banned" list and to license only heavy structurals. There is, however, no precise definition of "heavy" structurals, nor any method of ensuring that the equipment and facilities proposed to oe installed by an applicant can, in fact, produce heavy structurals. Again, it is meaningless—at the present level of development—to lay down targets or to plan for the creation of capacity in terms of 200,000 tons of castings or forgings, 14 million numbers of ball and roller bearings, 3 million horse-power of motors, 4 million kVA of transformers, etcetera. The planning for these things has to be more sophisticated. It is necessary that these targets should be demarcated into ranges—by type, weight, size, etcetera. The degree of refinement in such demarcation should be no more and no less than is necessary to reflect essential differences in the type or range of equipment required for their manufacture. Even so, any such demarcation is bound to be arbitrary to some extent and should not be elevated into a sacred principle.

MAN-MADE FIBRE

Setting Up New Plant

Two Indian firms are negotiating for collaboration with the U.S. firm, Van Kohorn Inc., to set up a plant for manufacturing man-made fibre. An early indication of how the U.S. Company reacts to these proposals is expected. It is understood that the Government of India does not like that two Indian firms should be negotiating simultaneously with a foreign collaborator.

SWITZERLAND

Transfer Credits

By an agreement signed in July 1960, the Swiss Government had agreed to facilitate the opening of transfer credits to the extent of 100 million Swiss francs (about Rs. 10.9 crores) for payments to suppliers in Switzerland for capital goods required for India's development programmes. The amount of credit was subsequently raised to 110 million Swiss francs (about Rs. 11.99 crores).

It has been agreed that the first instalment of 60 million Swiss francs (about Rs. 6.6 crores) will be used for financing the following:

	Allocation (Rs. crores)
Part of upper Sileru project	2.00
Circuit breakers and switch-gear required for power transmission schemes	0.80
Machinery for modernisation and expansion of the textile industry	0.80
Turbo alternator sets for the sugar industry	0.60
Printing machinery	0.40
Capital goods and equipment required for private-sector industry	2.00
Total	6.60

Under the second instalment of the Swiss credit, the following items are being financed:

	Allocation (Rs. lakhs)
Upper Sileru project	110
Machine tools equipment for Heavy Electrical (India) Ltd, Bhopal, for the manufacture of heavy electrical plant equipment	20
Ropeways for transporting coal	4
Logging and forestry equipment	11
Travancore-Cochin Chemicals hydro-sulphite plant	30
Textile machinery	100
Capital goods for private-sector industries	120
	395

E.C.M.

Patent Law Worries

One of the problems which faces the European Economic Community is the establishment of a common European patent law and a unified patent office. Draft legislation has been prepared, and a city, Munich, has been proposed for the site.

A German patent office was established in Munich in 1948. It succeeded the former Reichs Patent Office in Berlin, which had been founded in 1877, and which had processed 2.4 million applications and issued 760,000 patents by 1944, when it was closed.

SHIPBUILDING

Reducing Yard Capacity

European shipbuilders, plagued by over-capacity and lack of orders and fierce international competition, are now considering a common scheme to avert an all-out crisis. The programme, which would resemble an international cartel, calls in effect for a reduction of capacities and a common price level for new shipbuilding. The plan was initiated by Adolf Westphal, chairman of the Association of German Shipyards and director of the Kieler Howaldtswerke yards, of Kiel. Mr. Westphal urges a "voluntary restraint on bids and an adaptation of yard capacities to the requirements of shipowners."

In 1962, the world's shipyards produced 8.27 million G.R.T., or 2.6 percent more than in the previous year. This was the first increase in four years, but shipbuilders in Germany, Britain or Denmark, for instance, had no part in this turn of events. Their production declined as a result of fewer orders. Their main complaints are that the world shipbuilding capacity is quickly outgrowing the demand for new tonnage. Price "dumping" and "excessive" Government subsidies granted in some countries have made sound competitive conditions illusory.

Deliveries of new ships totalled 1,882 units last year, 91 fewer than in 1961 but comprising more tonnage. Nearly half of the tonnage produced in 1962 originated in the world's three leading shipbuilding countries—Japan, Britain and West Germany. Japan was the only one of the three countries to increase tonnage built and to record a remarkable export boom on top. Britain and West Germany, by contrast, suffered severe setbacks. Japanese shipbuilders completed nearly 2.2 million G.R.T. in 1962, more than Britain and Germany together.

WORLD BANK

Loans for Industries

World Bank assistance, it is expected, will be available in developing the motor-car industry and the makers of its components as well as to those manufacturing industrial and construction equipment. Loans of the order of $30 million each are being negotiated. They will be subject to proper appraisals by World Bank teams.

There has recently been much talk on the heavy structural and vessel plate projects. As far as heavy structurals are concerned, a team is shortly going to Lez in Austria to negotiate terms of collaboration with Voist, which has indicated the possibility of financial participation in the project. The revised thinking, as far as the vessel plate project is concerned, is to have more than one unit. This is largely due to the increased demand for its products required for fertilizer plants, chemical and petro-chemical industries.

Meanwhile, according to reports, the Davy Ashmore power-gas group of Britain will collaborate with Fertilizers and Chemicals, Travancore Ltd (F.A.C.T.) in fabricating specialised equipment needed for the petroleum, petro-chemical and fertiliser industries. Among the items to be produced are mild steel and stainless steel pressure vessels, heat exchangers, tanks, pipework and valves.

A fabricated workshop close to the F.A.C.T. chemical complex, in the Alwaye area, will be established at an initial cost of Rs. 15 crores by a new Indian company to be formed with foreign collaboration.

On a single-shift working, the F.A.C.T.-Davy Ashmore undertaking hopes to produce in one year 450 tons of grade three stainless steel, with an ultimate capacity of 1,440 tons of simple stainless steel and 720 tons of complex stainless steel.

BOARD OF REVENUE

Regulations on Imports

The Central Board of Revenue has published the regulations governing the import of goods by members of foreign diplomatic missions entitled to "diplomatic immunity". Under the regulations, the head of the diplomatic mission concerned or his duly authorised officer shall have to certify that the goods are meant for official use in the mission or for the personal use of a privileged person or for the use of any member of his family and that they will not be sold or otherwise disposed of in India without obtaining prior concurrence of the Central Board of Revenue and without the payment of Customs duty, if any is payable on them. There is a schedule attached to the regulations requiring the importer to state the number and date of the bill of lading, detailed description of goods according to the invoice, quantity in figures and words and their value. Similar details are required in case of imports of motor-vehicles. The regulation is intended to plug another leak, through which foreign diplomats, it is alleged, sell their personal belongings at non-competitive prices.

London

PERSUADING FIRMS TO LEAVE THE CONGESTED CITY

(FROM OUR LONDON CORRESPONDENT)

At the start of each working week, it is safe to say that at least 300 additional people are in jobs in central London offices. By the end of a month the total will be more than 1,300 higher. Over the year, the increase will be 16,000—over ten years, 160,000, about equal to the population of Brighton or Blackpool. Something must be done to stem the flood before London's transport becomes hopelessly overloaded. Something is being done by the Location of Offices Bureau, which has compiled a wealth of facts and figures on towns keen to attract new employment and on the advantages of moving out of central London.

Many firms do not need to be there, or at least to keep all their staff in the capital. These firms are paying dearly for the privilege. Just for the space taken up by one waste-paper basket, the rent in a new building is likely to be around 45s a year. In "prestige" areas, it can be as much as 95s a square foot. Contrast this with suburban rents—generally in the region of 20s a square foot. Further out of London the figure falls to 10s or 15s.

Big savings can also be made in the hill for wages and rates. Altogether, the L.O.B. has calculated that it costs £275 a year more to employ an office worker in central London than outside. At this rate, there is no doubt that money spent on moving is a first rate investment. Firms which have made the move will confirm this. But they mention many other benefits as well. Staff of good quality, particularly juniors, are easier to find. Time-keeping is better. Away from the strain of central London, people work more cheerfully—and more productively. The numbers needed are reduced. At the same time, it has been found that most senior people are willing, often eager, to move with the firm.

But where? The L.O.B. has the answers after surveying 300 areas. It can supply information on available office space and building sites and on the supply of staff locally, including school-leavers. In addition, it has made enquiries about housing, schools, communications and amenities such as shopping, entertainment and sporting facilities. For intending movers, the L.O.B. is preparing a guide spelling out the factors to look for. It will also be able to put at their disposal the experience of firms that have already moved. Most are enthusiastic about the result and only too glad to help.

Before long also, results will be available of a specially commissioned survey on office locations. The Economist Intelligence Unit is putting a series of questions to about 1,600 firms in central London and within 30 miles of the centre. They are asked about their organisation costs, staffing problems and the reasons for their present location. If based in the centre, for example, is it because they need to be in contact with customers, other firms, Parliament or a trading market? Or is it for reasons of tradition, prestige or simply inertia? The survey asks if they have considered moving and, if they have rejected the idea, why they have not moved. Firms that have moved are also being questioned, asking if entire firm or only part has gone; if so, which parts, how many staff moved with them—and what the main advantages and disadvantages are.

Area Survey

The aim of the area survey mentioned above was to obtain quickly a body of background information about areas that might be suitable for officers decentralised from central London. The survey began in June of this year and questionnaires have so far been sent to 287 local authorities. Initial selection was on the basis of population, to keep the volume of work within reasonable limits, but local planning authorities were consulted and other areas have been included on their advice.

The questionnaire asked, among other things, what new office space was already available in the area and still vacant, how much was under construction, and how much approved but not yet started. There were detailed questions on charges for new offices, on the policy of the local authority on housing and, in particular, whether they would be prepared to provide houses to rent for office employees moving in, or mortgages for those who wished to buy. There were questions on the availability of houses for sale and prices. There was an exhaustive survey of educational facilities and transport and communications generally. There was a question on the general policy of the authorities on office development. The information from these questionnaires is being supplemented by information from the Ministry of Labour and the Youth Employment Officers, the G.P.O., Ministry of Transport, Ministry of Public Building and Works, and other sources. Roughly half the areas questioned show enthusiasm, in varying degrees, for attracting offices. About one-fifth go so far as to look favourably on the supply of local authority houses to people who move.

The results confirmed the general thesis of much lower rents in areas outside London—one northern town even states that office accommodation can be made available at 5s a square foot. Generally, there is an easier supply of labour outside London. One northern seaside resort complains that hundreds of its school-leavers go into other and unsuitable jobs, and another town estimates that only 40 percent of its school-leavers who want clerical work can find it. On the other hand, one town had only one person seeking clerical employment and many others have only elderly people seeking clerical work.

A striking exception to this last trend is the new towns: there, the children of the early immigrants are now coming out of the secondary schools in large and increasing numbers and a high proportion are seeking clerical work. The general conclusion that arises from the survey is the diversity of conditions. This, in fact, matches the diversity of the requirements of firms that seek to move.

Eight New Towns

Harlow is one of the eight new towns being developed around London to relieve over-crowding. It is administered by a development corporation appointed by the Minister of Housing and Local Government. Situated 22 miles north-north-east of the city, on the borders of Essex and Hertfordshire, the original site of the town contained only a few scattered hamlets and farms with the villages of Harlow and Potter Street on the periphery. Today the population exceeds 61,000. The original plan contemplated a total of 80,000 but a revised scheme, currently under discussion, envisages a town with a population between 120,000 and 140,000. More than 1¼ million square feet of factory space is already occupied by 50 firms, including the crystal and rectifier divisions of Standard Telephones and Cables Ltd, British Oxygen Engineering Ltd, and the research laboratories of Standard Telecommunications and the Admiralty. A further 11 firms will occupy the 348,875 square feet of factories nearing completion. Many more factories are planned.

Harlow should prove very attractive for office workers from London. Office staffs need never have more than a five or ten minutes' pleasant journey from their homes. Pedestrian paths and a network of independent cycle tracks link homes, shopping centres and the commercial quarter. Some 45,000 square feet of office accommodation is already occupied or nearing completion. Ten acres of land have been set aside to meet firms' individual needs. Office provision can be met in three ways: (1) Standard accommodation at rents averaging about 12s a square foot; (2) building designed according to the client's instructions; or (3) land to be leased to intending developers who wish to build to their own requirements. Officers for Joseph Rank Ltd, the National Health Service and Royal Insurance are established in this new town.

The Eastern Region of British Railways serve Harlow and Burnt Mill Stations on the main line from Liverpool Street to Cambridge. The average journey time is 45 minutes, but three fast trains operating in both directions take only 32 minutes. London Transport country bus services Harlow with many of the main centres in Essex and Hertfordshire. A major radial route out of London to Norwich, designed to improve communications with East Anglia, will pass very close to Harlow, although the likely construction date of this motorway is uncertain.

A wide range of housing accommodation, to rent or to buy, is available to all grades of staff moving with a firm from London. Employees willing to purchase houses from the Development Corporation can obtain loans. Prices of such dwellings range from £3,700 for a three bedroom semi-detached house with garage to £5,000 for a detached four bedroom house with garage. Bed-sitters and one bedroom self-contained flats—for single persons—are also provided.

The children of the early immigrants are now beginning to leave the secondary schools in substantial numbers: some 1,200 in 1963, rising to 1,400 in the next two years. This figure will continue to rise and very markedly so if the proposed further expansion of the town is approved. A remarkably high proportion of these—about 50 percent—seek clerical employment and, as their needs cannot be met locally, large numbers are already travelling daily into London.

Educational Facilities

The first stages of education provide for more than 9,000 pupils in 17 primary schools. Thereafter two grammer/modern schools have places for 1,920 children, three technical/modern for 2,880 children, and one comprehensive school for 960 children. Further education is offered to 2,600 at the area technical colleges. In addition, there are three private schools (two preparatory, one secondary) and a public school in the area. In addition to the neighbourhood centres, which provide for more daily needs, the town centre includes an Odeon cinema, a 10-pin bowling alley, a dance and concert hall seating 300 people, three restaurants and 130 shops of all kinds. An open market operates twice weekly. Ample car parking facilities are provided close to the shopping centres with pedestrian precincts for the shoppers themselves.

Harlow's "Sports Centre" includes an athletic track and arena of Olympic standard. The newly completed swimming pool is also of international standard. Organisations enjoy the use of 18 sports grounds and facilities are available for sailing, cricket, football, golf, tennis badminton, bowls, fishing, fencing, judo, table-tennis, boxing and motor cycling. The medical centres financed by the Nuffield Foundation, where doctors operate group practices and which provide dental and pre- and post-natal care, are notable features of the town.

What is the Bureau and how does it propose to operate? It was set up at the request of Parliament to tackle the problem of increasing congestion in central London. It is a clearing house for information, the kind of information a company would seek if it was considering moving out of London. After completing its research into the availability of alternative accommodation, the L.O.B. intends to launch out on a big publicity campaign aimed at persuading firms which need not stay in London to move out to more suitable areas outside. At the same time, enquiries received by the Bureau will be dealt with individually.

Books

CENTRAL BANKING IN MODERN JAPAN

Monetary Policy and Central Banking in Contemporary Japan. By H. T. Patrick. (Published by University of Bombay. Fort, Bombay 1. Price Rs. 9.50, pages 219.)

The economic history of Japan is one of a high rate of growth with limited resources. During the post-war period, the Japanese economy maintained an average rate of growth of 9 percent a year. But the country lacks essential raw materials for industry, so it depends heavily on their imports from abroad. This gives rise to periodical problems of adverse balance of payments which restrict the country's economic expansion. The Japanese Ministry of Finance has traditionally been in favour of an expanding economy but the authorities in the Bank of Japan have often taken a conservative view of expansion and have advocated a "neutral" policy which emphasises the need for price stability.

The contributions of the Japanese banking system towards the country's expansion are quite significant. The City Banks, operating on a branch banking system throughout the country, hold the majority of commercial bank deposits and are the major suppliers of funds to large-scale business enterprises. The composition of assets of City Banks as at 31st March, 1959, showed that 75 percent of their assets consisted of "loans and discounts to business houses." Their holdings of Government securities and debentures amounted to about 12 percent of their total assets whereas the liquid reserves were kept at a low figure of 2.1 percent. Another important feature is the low proportion of "net worth" to total liabilities. The author says that the size of loans relative to bank capital accounts made to an individual borrower is exceptionally large even by the U.S. standard.

All these features sound disturbing. But the Japanese people must have complete confidence in their banking system, and public deposits—particularly time deposits—have shown a steady rise in recent years. The Bank of Japan too has imposed reserve restrictions on City Banks for controlling bank advances.

The author discusses in detail the various techniques of credit control used by the Bank of Japan and has given an interesting account of their application during the postwar period. The book will be of considerable interest to the student of monetary economics in India.

FIASCO OVER BOKARO

Bokaro: A Story of Bungling. By D. K. Rangnekar. (Published by National Institute of Public Affairs, New Delhi. Price Rs. 1.50.)

The great merit of Dr. Rangnekar's 29-page pamphlet is that it is highly topical, being perhaps the first fairly extensive account of India's prize controversy of the past year. Dr. Rangnekar traces the history of the proposal for building the steel plant in Bokaro—from the time it was originally conceived, through the long and tortuous discussions aimed at securing U.S. aid, until the final fiasco where the aid was virtually refused and the Indian request for it had to be withdrawn in ignominy. The quality of the writing is vigorous and provocative, which adds to the interest even if it detracts from the balance of the argument.

Almost nobody seems to escape the swish of the author's sword, with the perhaps significant exception of Messrs Dastur and Co. The worst thrusts are reserved for Professor J. K. Galbraith, former U.S. Ambassador to India, whom Dr. Rangnekar seems to dislike as heartily as many of the Professor's own voluble colleagues in the U.S. Embassy in Delhi. Professor Galbraith is roundly condemned for raising false hopes about U.S. aid for Bokaro, but the Indian authorities are not condemned as rashly for their gullibility. Few will disagree with Dr. Rangnekar's broad conclusion that the basic reason for the Bokaro fiasco was that the Americans had political and ideological objections to the idea of aiding a public-sector project—and that these objections became stronger with Indian equivocation and bungling. It is not so easy to see, however, what choice India had except to wait for the ultimate U.S. decision. A good deal of brave talk has been heard to the effect that India can build the Bokaro plant with her own resources, but the chief of the latter seems to be a still unproductive fœtus called the Heavy Engineering Corporation. Dr. Rangnekar seems to share the confidence. One hopes events will prove him right, without the country having to pay through the nose for its inexperience in steel plant construction.

INDIAN ADMINISTRATION

Cases in Indian Administration. (Published by the Indian Institute of Public Administration, Indraprastha Estate, Ring Road, New Delhi 1. Price Rs. 7.50, pages 261.)

This is the second volume of *Cases in Indian Administration* prepared under the direction of the Committee on Case Studies of the Indian Institute of Public Administration. It contains five cases of different nature, written by competent authors. For the benefit of the reader, the general background of each case is given and events are stated in a chronological order, discussing how the policy of the Government is executed at different administrative levels. The emphasis is on the administrative process rather than on the relative merits or demerits of the policy.

The first case deals with the decontrol of foodgrains in 1952 which has been written by Mr. Ram Saran. There was unanimity of opinion concerning the ultimate decontrol of foodgrains, but opinions were divided when control should be lifted. The author discusses the successive steps taken towards decontrol. The second case written by Mr. M. A. Muttalib on "the grant of extension to the Inspector-General of Forests", shows how difficult it is to settle the issue of an extension of service of a Government official. "The expansion of the Bokaro thermal plant" by Mr. Parmanand Prasad discusses the difficulties encountered by a public undertaking like the D.V.C., which has to obtain the sanction of the Central Government and the Governments of West Bengal and Bihar before it can implement any major policy decision. The procedure involves delay in executing technical plans.

The next essay "the public hospital case," by Mr. A. Avasthi, deals with the report on a public hospital made by a Government inspector in course of routine inspection. The book ends with a well-written essay on the "basic administrative unit for development in Mysore State" by Mr. Dubhashi. The author stresses the mechanics and the process of decision-making in the Government.

Similar case studies will no doubt promote a wider understanding of the administrative problems and will stimulate healthy discussions and constructive criticisms which are considered essential for the efficient working of a democracy.

HEAVY ELECTRICALS

The Establishment of the Heavy Electrical Plant at Bhopal. By S. S. Khera. (Published by the Indian Institute of Public Administration. Indraprastha Estate, Ring Road, New Delhi 1. Price Rs. 5, pages 128.)

The objectives of the case study programme of the Indian Institute of Public Administration are essentially scientific. The present case study is an attempt to sketch in writing an aspect of administrative decision-making. It traces the history of the establishment of the heavy electricals plant in Bhopal—from the inception of the idea in 1948 to the final decision to locate it in Bhopal in 1956. It deals with a long-drawn-out decision-making process which may be split up into the following three parts: (1) the decision to set up the plant in the public sector, (2) the appointment of Associated Electrical Industries as technical consultants and (3) the location of the plant in Bhopal. It is seen that A.E.I. recommended the location of the plant in Barka Khana, Bihar, but the Government of India overruled it and decided in favour of Bhopal. It is remarked (Page 117) that ministerial controversy delayed the project resulting in imports of over Rs. 45 crores which could otherwise have been avoided.

COMPANY LAW

Company Law Journal, Vol. 1, No. 1. Edited by K. Venkoba Rao. (Published by M. L. J. Press Private Ltd, Mylapore, Madras 4. Pages 64.)

Company law is developing so fast that even knowledgable company executives are finding it difficult to keep pace. The Industries (Development and Regulation) Act, the Capital Issues Control Act, the Companies Act, different rules, important judgments of the Supreme Court and High Courts interpreting these Acts require the constant and continuous attention of the secretarial departments of companies and need the services of such specialised people as solicitors and chartered accountants. To help those who deal with company law, the journal is being published and will contain—apart from feature articles—Acts, rules, notifications, departmental circulars, etcetera

TODAY experienced travellers do not carry cash; it can be lost or stolen. Wherever you go in India, carry Bank of Baroda Travellers' Cheques—they're absolutely safe. No one but you can cash them. And so easily too...just sign your Travellers' Cheques in the presence of the bank official on duty. ■ Your Bank of Baroda Travellers' Cheques can be cashed almost anywhere in India—at *any* Branch of the Bank of Baroda, the State Bank of India, the Bank of Rajasthan, and some branches of the Punjab National Bank. Next time you travel, carry safe, convenient Bank of Baroda Travellers' Cheques—available in denominations of Rs 25, Rs 50 and Rs 100 from your local Bank of Baroda branch.

Jute

FIBRE PRICES FALL AS ARRIVALS INCREASE

THE vigorous price-support measures taken by the Jute Commissioner have not been effective and fibre prices have tended to sag during the first half of this month. Expecting heavy arrivals during October, mills were asked to lift 920,000 bales and the co-operatives were advised to start buying in the secondary markets at fixed derivative prices. The Jute Commissioner also intended to ask the Jute Buffer Stock Association to lift up to 200,000 bales, if necessary. To assist the co-operatives in their purchases, a sum of Rs. 1.70 crores was advanced by the State Trading Corporation to the various State Governments.

Up to the third week of September, prices had responded well to the issue of monthly purchase quotas, and mills purchased a total of 1.34 million bales of the new crop around official floor levels. But this month the pressure of arrivals has increased following the earlier harvesting of the crop. Despite regular offtake by mills at the agencies and over the jetties, prices have tended to react. Weak holders and small growers, it is reported, have even disposed of their stocks at slightly lower than the floor levels.

Industry circles say that the mills have been purchasing fibre throughout the month. But this year, the daily arrivals have increased fast, causing a glut of stocks at the terminal markets. The prolonged restrictions on booking from upcountry stations to Kanknarrah and Sealdah on the Eastern Railway have caused a setback to the movement of the fibre to mill warehouses. Bigger lorry hire charges have raised the cost of road transport to prohibitive levels. Besides, mill warehouses are overflowing with stocks and huge quantities of the fibre have been stacked in the open. These are mostly kutcha bales which are likely to deteriorate due to exposure to humidity. Mills are also experiencing difficulty in financing fibre purchases on such a colossal scale.

Selling by Weak Holders

Circles close to the Jute Commissioner attribute the prevalent downward trend to selling pressure from weak holders and small growers. They say that this temporary phase will end soon. Already co-operatives are making brisk purchases at minimum operational prices. The returns of purchases submitted by mills also show that considerable progress has been made in lifting the October quota. Although these circles expect arrivals to increase further when the rural kutcha roads dry up, they believe that the selling pressure will decrease since stockists with more sustaining capacity will be holding the fibre at that time.

But market sources say that the purchases are not brisk enough to allay the concern of operators and so they have failed to arrest the declining trend. They fear that the pressure on the market will increase further in November and December and it will be difficult for the authorities to prevent a fall in prices.

U.S. Burlap Consumption Rises

There has been a sharp increase in U.S. burlap consumption from 70 million yards in August to 79.7 million yards in September. The latter figure is 8.7 million yards more than the consumption during September 1962. The January-September total this year is 681.3 million yards, against 652 million yards for the corresponding period of 1962. The average monthly consumption so far has been 75.7 million yards, against 72.4 million yards last year.

U.S. stocks during September rose by only 2 million yards to 289 million yards. Of these, 127 million yards were afloat, against 119 million yards at the end of August, while spot stocks declined by 6 million yards to 162 million yards. At the end of September 1962, the stocks were 236 million yards—129 million yards spot and 107 million yards afloat.

At the rate of consumption during September 1963, the stocks will last for 3.6 months. At this time last year the corresponding stock-duration was 3.3 months on the same basis.

Hessian Shipments to the U.S.A.

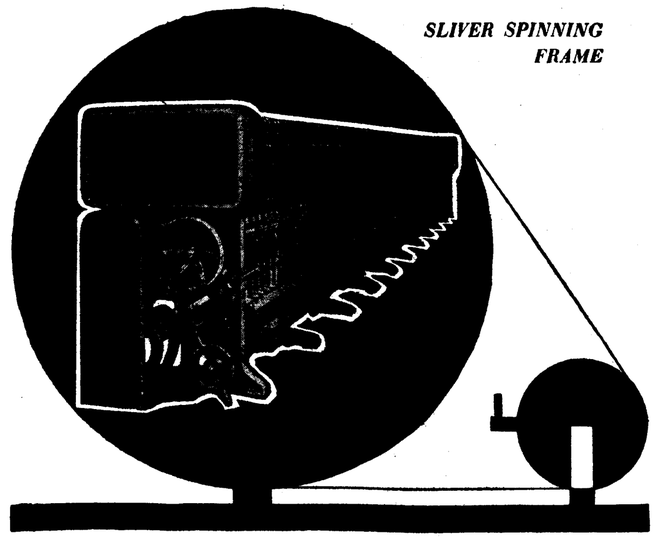
Shipments of hessian from Calcutta to the U.S.A. in August increased by 10.2 million yards to 68.5 million yards, compared with July. In August 1962, fabric shipments to the U.S.A. totalled 79.4 million yards. Total exports during January-August 1963 were 554.9 million yards, against 463.4 million yards for the corresponding period of 1962.

Hessian shipments to South America during August were 18.3 million yards, against 8.9 million yards in July and 13.4 million yards in August 1962. Total exports to that area for the eight-month period showed a small increase from 116.3 million yards to 117.7 million yards.

Fall in Gunny Output

Working at the maximum level for 200 hours in September, against 208 hours during the previous month, the mills reporting to the I.J.M.A. produced 106,900 tonnes of jute goods, against 106,500 tonnes in August. Hessian output declined by 1,500 tonnes to 44,200 tonnes, sacking by 1,200 tonnes to 41,500 tonnes and miscellaneous goods by 2,900 tonnes to 15,200 tonnes. In September 1962, the mills worked for 200 hours, producing 100,500 tonnes. Of this, 41,600 tonnes were hessian, 47,200 tonnes sacking and 11,700 tonnes other goods.

Lower Jute Acreage in West Bengal



The West Bengal Government proposes to reduce the area under jute from 1.1 million acres to one million acres in the next season. The decision has been taken at a conference of agricultural department officials and district agricultural officers in Calcutta during the week-end. A spokesman of the department stated that despite the lower acreage, the total crop would be maintained at around the 1963-64 level by resorting to more intensive cultivation and greater use of fertilisers.

Pakistani Expansion Plans

The preamble to Pakistan's jute policy clearly states that it intends to make the best use of its golden fibre by initially tapping India's sacking markets. Later it will gradually expand its hessian and broad loom capacity and wrest those markets from India. The Pakistani authorities recently announced that the present capacity of 9,500 looms, would be expanded to 28,000 by 1970. The capacity target for the end of the second plan, namely 865, has been revised upward from 12,000 to 14,000.

On this basis, it seems that by 1970 Pakistani consumption of raw jute will increase to 5.6 million bales

(which is equivalent to its current output), leaving little fibre to meet its conventional export demands. Pakistan's chances of increasing the jute acreage are not bright in view of its chronic problem of food shortage. As a result, the foreign jute mills which depend on Pakistan for fibre will face the prospect of either suspending work or finding alternative sources of supply. Since no country has such a huge surplus, the chances of obtaining fibre are slim, and they may have to shut down. This will suit Pakistan, since it will not be able to find an easy outlet for its increased output without encroaching on the markets at present catered to by the U.K. and continental mills.

Pakistani Broad Loom Project

Pakistan has in hand a Rs. 4.8-crore broad loom project, which visualises the setting up of 12 mills with an annual capacity of 135,000 tons of carpet-backing cloth. The mills are to be erected in Khulna, Chittagong, Narayanganj and Ghorasal in East Pakistan. The Industrial Development Bank of Pakistan has agreed to help. It has asked the Government to sanction a loan of Rs. 3 crores for the foreign exchange component of the scheme. The balance of Rs. 1.8 crores, will be found in rupees by the sponsors. Pakistan has the great advantage of producing abundant quantities of high-grade long jute, which is essential for the manufacture of carpet-backing material. Against an average annual world demand of 400,000 tons of carpet-backing cloth (about 80 percent of the demand is from the U.S.A.), the present capacity is only about 175,000 tons. Even after completing the present broad loom projects in India, some think, there will be a gap between demand and supply.

Pakistan Evolves Improved Strains

The Pakistan Central Jute Institute in Tejgaon, Dacca, has evolved two improved strains of jute plants, namely, D-154 *(Capsularis)* and *CG* 13 *(Olitorius)*. The new strains yield 10 percent more of a better fibre, compared with the original ones, generally being grown in India and East Pakistan. Seven other improved varieties of jute have also been developed by the Institute so far.

With six main divisions looking after the various technical aspects, the research wing of the Institute has taken up projects for breeding improved strains, devising cultural and manuring practices for raising the yield an acre and reducing the cost of production, arresting pest attacks and producing nucleus jute seeds for further multiplication in Government farms. Field trials conducted by the Institute have demonstrated that line-sowing yields more jute than sowing by the conventional broadcast method. Line-sown plants have proved more resistant to pests and plant diseases, yielding fibre of a better quality. It has also been seen that the yield can be raised by the proper use of fertilisers. In some experimental plots, the yield has been about doubled by the use of fertilisers.

Since 1957, the Institute has made progress in arresting loss of crop through pest infestation by the application of insecticides. Further work is in progress for devising long-term measures against the menace of insects. Research has shown that retting plays an important rôle in the production of jute. The process depends on the activities of organisms like bacteria and fungi. Studies are in progress to step up the activities of these organisms by evolving better strains.

As the use of quality seeds is essential for getting a higher yield and better fibre, a pilot project has been launched for growing improved seeds in Government seed multiplication farms. These seeds are also being grown by a number of registered farmers in various districts. These high-grade seeds will be distributed to farmers.

The technological research wing has been reorganised. The main objective of the wing is to undertake applied research for the industry. It will carry on fundamental studies on jute fibre from the chemical and physical angles, and evolve new uses for jute.

Exide Batteries still keep going when the rest have stopped

Silver Exide are the strongest, most reliable batteries under the sun. They are quality tested at every stage of production .... that's why you're sure of a long and trouble free life. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—and you'll still keep going when the rest have stopped.

SILVER Exide

A Chloride and Exide Product

THE JUTE MARKETS

Manufactured Goods: Opening on an optimistic note, the gunny market suffered a sharp setback during the past week. At first interest was revived on reports of sizable business with Argentina in hessian, a heavy goods deal with Cambodia and scattered hessian transactions with the U.S.A. But a deterioration followed on the publication of the I.J.M.A. production figures for September, which showed a decline of 5,600 tonnes, indicating lower offtake during the month. On Tuesday reports that the 10,000-bale Sudanese sacking tender had gone to Pakistan caused a further weakening of sentiment. The drift could not be halted by reports of a sharp increase in the consumption of burlap in the U.S.A. Some mills emerged as keen sellers for all positions, depressing prices. At the close, sacking showed moderate losses on balance; hessian showed a minor setback. The freight booking position was not encouraging during the week, although it improved because of the movement of the detained ships and the entry of the vessels held up at Sandheads. Now enough space is available for all destinations. In the futures market, sentiment was governed by the trend in the spot market. Bulls were more active and liquited their positions to reduce their commitments. Bears hesitated to cover their blank positions even at the lower levels. So prices retreated on a wide front with sacking suffering heavier losses than hessian. The turnover was moderate and the undertone easier at the close.

Wednesday's quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	36.65	36.05	36.95	35.90	35.80
40in. 8oz.	38.65	—	—	—	—
40in. 10oz.	48.65	48.05	47.95	47.90	47.80
B Twills	114.40	115.10	115.00	115.00	114.65
Cornsacks	115.90	116.50	116.75	116.75	116.50
Heavy Cees. (Plain)	114.25	114.75	114.50	114.50	114.25
A Twills	134.50	135.50	136.50	137.00	136.00
Liverpools	126.60	127.50	127.50	127.50	127.25

Raw Jute: The raw jute market was sluggish during the past week. Despite the issue of a heavy purchase quota for the mills and buying by the co-operative in the secondary markets, offtake fell short of the arrivals which had increased to around 200,000 maunds a day. Sellers were keen in view of the critical food situation and the approaching festival season. So pressure developed both in the upcountry markets and in Calcutta. Weak holders and small growers disposed of small lots of selected grade fibre at prices lower than the floor. Towards the week-end, Russian buying of some pucca bales against a previous quota did not produce any effect. There was a rumour that licences had been issued by the authorities for importing a small quantity of Pakistani jute cuttings, needed for blending purposes. The futures market also turned quiet following tired long liquidation and the reluctance of shorts to cover their open positions despite the lower levels. The market closed on an easier note with prices dipping to recent lows. The turnover was small in the spot market and moderate in the futures market, and the undertone hesitant in both.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the production of jute goods in the month of September as follows:

Description	Quantity
Gunny bags	
(a) Hessian	
6,712 tonnes	(6,606 tons)
2,02,29 thousand metres	(2,21.2 lakh yds.)
1,34.8 lakh nos.	
(b) Sacking	
40,274 tonnes	(39,638 tons)
8,76,57 thousand metres	(9,58.6 lakh yds.)
4,31.9 lakh nos.	
Gunny Cloth	
(a) Hessian	
37,449 tonnes	(36,857 tons)
12,53.83 thousand metres	(13,71.2 lakh yds.)
(b) Sacking	
1,220 tonnes	(1,201 tons)
27,56 thousand metres	(30.1 lakh yds.)
Other Manufactures	
15,248 tonnes	(15,007 tons)
Total Production (All kinds)	
100,903 tonnes	(99,309 tons)

Summary

	('000 metres and '00,000 yds.) Sept. '63	Aug. '63	Sept. '62
Hessian	14,56,12 (15,92)	15,11,49 (16,53)	13,75,70 (15,04)
Sacking	9,04,13 (9,89)	9,26,74 (10,14)	10,18,23 (11,14)
	('000 tonnes and tons		
	Sept. 63	Aug. '63	Sept. '62
Hessian	44.2 (43.5)	45.7 (44.9)	41.6 (40.9)
Sacking	41.5 (40.8)	42.7 (42.0)	47.2 (46.5)
Others	15.2 (15.0)	18.1 (17.9)	11.7 (11.5)
Grand Total	100.9 (99.3)	106.5 (104.8)	100.5 (98.9)
Hours worked	200.0	208.0	200.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhat with estimates for two non-member mills. The figures in brackets are in British units.

THE U. K. JUTE MARKETS

FIBRE UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firm in Pakistan, but little change took place in prices in Dundee during the past week. Dundee spinners were showing less interest in raw material, but a fair amount of business took place towards the end of September. This included both spot and shipment jute. During the past three months, Dundee spinners have secured about five months' consumption of jute which puts them in a satisfactory position.

Offers being made here were very irregular and most of the lower grades could still be obtained at well under the minimum export rates. Mill Firsts were named at £129, Mill Lightnings at £109 10s, Mill Hearts at £94 10s and Grade Hearts at £79 10s, c.i.f. U.K., for October-November shipment. There were sellers of Grade Tossa-2/3 at £125 and of Grade Tossa-4 at £107 5s. Dacca Tossa-5 was offered at £128 and Dacca Tossa-6 at £109. Outport Tossa-2/3 ranged from £95 and Outport Tossa-4 from £85, October-November.

The Siam jute market was steadier possibly due to more buying interest shown by some Continental countries. Offers were now lowest at £67 for grade A, at £63 for grade B and at £58 for grade C, delivered mill Dundee for November-December shipment.

The Calcutta goods market tended easier with quotations at 73s 9d for 40in. 10oz and at 55s 3d for 7½oz. a 100 yards f.o.b. Calcutta for October shipment, at 73s 6d and 55s 6d November and at 73s 3d and 55s 3d December. B Twills were at 176s 9d, 177s 9d and 177s 6d for the respective shipment periods.

Dundee spinners and manufacturers are very busy and have orders in hand for delivery over the first quarter of next year. Prices of both yarns and cloth are becoming dearer due to demand. Many producers have raised their rates, but it is still possible to find sellers at the old rates for forward delivery.

THE PAKISTANI JUTE MARKETS

FIBRE FULLY STEADY

(FROM OUR DACCA CORRESPONDENT)

THE markets in the interior remained steady with the exception of those in north Bengal during last week. In most areas, prices were unchanged, although there was a slight tendency to rise for better quality tossa. In the jat areas in practically every district, a large amount of hard speck has begun to appear. But avoiding this would mean that a substantial premium would have to be paid for the full-grade Dundee Export Hearts.

In the pucca bale market, there was definitely a weaker undertone. Although cuttings have frequently shown a tendency to rise, they remained unchanged with less interest. After a spurt of buying overseas, there was once again a weaker tendency. For genuine Mill Hearts, there is everly likelihood that prices may rise. Dacca Tossa 6s and Dundee Tossa 4s which have been hovering around the minima, are not likely to fall because it does not look as if they will be freely available. There is ample and excellent Output Tossa, which may soon be available below Export Lightings.

The E.P.C. minima for mesta were again recently raised. There is danger that this quality, which is beginning to be popular in world markets, may be priced out. Reports from Siam indicate a 1 million bale crop and prices are low. Although Pakistani mesta is superior and the assortment more regular, price will always remain the main consideration.

NOTHING IN MODERN INDUSTRIAL TECHNIQUES IS MORE SPECTACULAR THAN MASS PRODUCTION. IT PUTS WITHIN OUR REACH ALMOST EVERY ARTICLE OF DAY-TO-DAY USE... FROM PINS AND NEEDLES TO MOTOR-CARS. ITS BASIC PRINCIPLE? TURNING OUT THOUSANDS OF COMPONENTS WHICH ARE EXACT DUPLICATES — SO CLOSELY ALIKE THAT THEY CAN BE INTERCHANGEABLY ASSEMBLED.

ESSENTIAL TOOLS OF MASS PRODUCTION ARE BONDED AND COATED ABRASIVES, LIKE THOSE MANUFACTURED BY CARBORUNDUM UNIVERSAL. THEY HAVE APPLICATIONS IN ALMOST ANY INDUSTRY YOU NAME. PRECISION GRINDING AND FINISHING - FETTLING AND CUTTING OF METALS. SANDING WOOD. FINISHING LEATHER...

CARBORUNDUM UNIVERSAL USE THE LATEST EQUIPMENT AND PRODUCTION TECHNIQUES TO ENSURE THAT PRODUCT QUALITY IS CONSISTENTLY HIGH - POSITIVE DUPLICATION EVERY TIME (MORE ALIKE THAN PEAS IN A POD!) PLANS ARE ALREADY UNDER WAY FOR INSTALLING ADDITIONAL KILN AND PLANT CAPACITY, TO MEET THE INCREASING DEMAND FOR ABRASIVES. AND REMEMBER, TODAY, MORE THAN EVER, CARBORUNDUM UNIVERSAL OFFER THE MOST COMPREHENSIVE TECHNICAL AND ADVISORY SERVICE TO HELP YOU CHOOSE THE RIGHT ABRASIVE FOR THE RIGHT JOB — AND TO USE IT TO YOUR BEST ADVANTAGE.

CUZ-1900

New York, the city of skyscrapers—so easy to reach by KLM

Before you plan your next trip to America, here is what you should know about KLM's remarkable reliability and its jet services to New York, Houston, Montreal or Mexico City

KLM has been flying across the North Atlantic for years. It is eminently suited to give advice on things American, from tours and sight-seeing to everyday living. KLM has flown longer to the States than any other continental European airline. Read more KLM facts...

1. KLM was the first non-American airline to order DC-8 jets, and the first to operate them. DC-8 jets are flown by KLM on its weekly west-bound services* from Calcutta on Fridays and from Delhi on Wednesdays, and also on its five weekly flights from Karachi on Mondays, Wednesdays, Thursdays, Saturdays and Sundays. Immediate connecting flights are available at Amsterdam to New York. Frequent flights are also operated to Houston, Montreal or Mexico City from Amsterdam.

2. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay *any day of the week*, by providing connections at Karachi, Cairo, Beirut or Teheran (depending on the day of travel), with KLM's flights to Amsterdam and onwards to North America.

3. Another attractive possibility to go to America is to fly across the Pacific. Take KLM's east-bound DC-8 flight from Delhi on Tuesday morning, connecting you at Manila after a night's rest there, with the Philippine Air Lines (PAL) DC-8 service to San Francisco via Honolulu. Going from Calcutta, you can easily avail of interline services to Manila, linking with PAL services to San Francisco on Saturdays. Passengers from Bombay can fly to Delhi to connect with the KLM service leaving on Tuesday morning.

Designed with you in mind

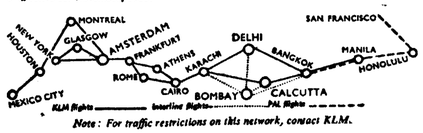
4. Travelling First Class on a KLM DC-8 jet, you sit in unstinted comfort. Your seat is as wide as an armchair, has built-in table lamp, pre-focussed reading lamp, air blower and finger-tip control panel. Each seat costs KLM US $ 1500.00.

5. Every KLM DC-8 jet has a luxuriously appointed lounge, located in First Class. It is a perfect place to meet your fellow travellers over free drinks.*

6. On the normal round-trip fare from Calcutta, Delhi or Bombay to New York, you can enjoy a side trip to either Boston or Montreal. KLM lets you stop off in many cities on your way—at no extra air-fare. For instance, if you are flying from Calcutta to New York, you can visit Rome, Florence, Venice, Munich, Frankfurt, Dusseldorf, Brussels, Paris, London, all for the price of your ticket to New York. For more stopover possibilities ask KLM.

7. KLM has its own rest houses in Karachi and Bangkok. Both have spacious rooms with private baths and showers, and recreational facilities. KLM flies in fresh food and delicacies regularly from Holland. The service in these rest houses matches the standards of a good European hotel.

Amsterdam Advantages



8. The Tax-Free Shopping Centre at Amsterdam Airport is the largest on the European continent. Cameras, tobacco products, perfume, wrist watches and tape recorders are just a few of its bargains.

9. Take advantage of "Hilton Special"—a stay of two days and a night at the Hilton Hotel, Amsterdam; plus sight-seeing tours covering a canal boat trip, visits to Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond cutting factory and other places of tourist interest. And all this for US $ 17.00.

10. Your travel agent will help you with all your travel arrangements. He is an expert and his experience will tell you where and how you can make the very most of your time and money. Your travel agent's advice is valuable. He'll tell you about the advantages of flying KLM.

"Miniguide to the USA"

Before you visit the USA, ask KLM for a free copy of the "Miniguide to the USA". This pockets-size booklet is packed with information on what to see, where to stay and how to live—economically—in the States.

Note: For traffic restrictions on this network, contact KLM.

* *effective 1st November, 1963.*

* *Outside prohibition areas*

Commodity Markets

NORTH INDIAN TEA CROP FALLS: COSTS RISE

ALTHOUGH due to adverse growing conditions the north Indian crop showed a shortfall of 7.5 million kilograms up to the end of September, the overall world supply position remains unchanged since the Ceylon crop up to the end of July showed an increase of 7.4 million kilograms while south India produced 800,000 kilograms more than in 1962. The result of the north Indian shortfall has been to raise the general level of prices on the Calcutta market, particularly for common varieties which are quoted some 95nP a kilogram higher than in 1962, say Messrs J. Thomas and Company Private Ltd in their tea market review for September. While the improved price averages realised by some estates in north India may possibly help to offset the effect of losses in crop, this may not be, in many cases, adequate to cover the increased cost of production, while at the same time the trend of lower production and higher prices must, in the long run, prove detrimental to India's exports, since many of her outmarkets are bound to find other markets cheaper and more attractive. In fact, many Indian exporters during this season have experienced great difficulty in trading against Ceylon and African teas. It is, therefore, imperative that concerted efforts are made to increase production as rapidly as possible to cater to the internal demand and to release more teas for export at cheaper rates. While efforts have admittedly been made to grant loans to the industry, this in itself will not suffice since it will only increase its indebtedness. Bolder measures like plantation subsidies and rebate on exports have to be taken if the industry is to progress on sound lines and attain the targets set for the third five year plan in relation to production as well as exports.

The firm says that manufacture and offerings of tea from north India have experienced two clear trends during the current season. On the one hand, yet more estates changed over to the C.T.C. process of manufacture not only in Assam but also in the plain tea growing areas of the Dooars, Terai and Cachar. This has been a healthy change in view of the fact that many of these teas have now become exportable types. At the same time, they have contributed to satisfying the growing demand for such teas from internal buyers and blenders. On the other hand, many gardens, particularly in upper Assam, have been manufacturing both orthodox and C.T.C. teas simultaneously, especially during the second flush period. As a result, the Calcutta market has seen during this season a wide range of offerings of stylish and tippy teas of orthodox manufacture of a commendable standard. This has gone a long way in catering to the requirements of many of India's traditional overseas buyers for such teas. Such gardens have also stood to gain as prices of orthodox teas have been lucrative. The sale averages of these estates have, by and large, been substantially higher than those of comparable gardens producing only C.T.C. teas.

When the end of August crop figures became known, prices of the cheapest varieties started hardening, while exporters continued to purchase C.T.C. teas in the best category. This improvement in demand in the lower price range was an indication of the underlying strength of the market and may be expected to spread to other descriptions in the coming months, especially if the shortfall in the north Indian crop is not made up during the remainder of the season when the imminence of a sudden drop in supplies following on the little surplus carried over from the 1962 season is bound to create a feeling of urgency among the internal buyers, the firm concludes.

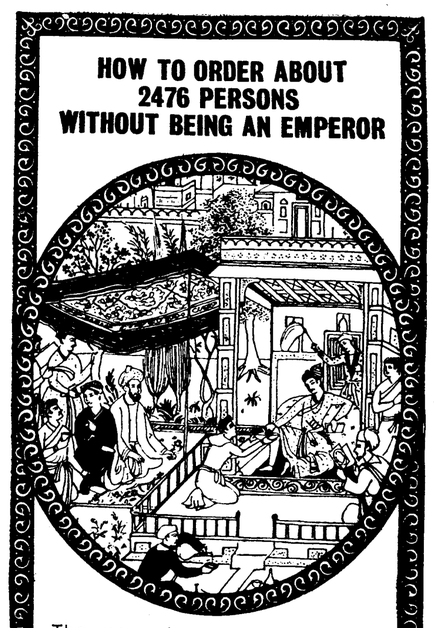
A special correspondent adds: World output of tea is already moving too fast. Had north India harvested normal output during the past two seasons, commodity prices would have collapsed. But according to the law of averages, one would expect 1964 to be at least as good in yield as 1961 was. That will mean about 35 million lbs more than this season. If other areas move forward normally, the F.A.O. forecast of a surplus will prove to be correct in 1964. Had north India produced an average crop instead of a short one in 1961 and 1962, the F.A.O. estimates might have proved correct earlier. With the short crop in north India, commodity prices remain fairly satisfactory for teas above medium grades, but commons are already difficult to sell profitably and if 1964 adds another 25 million to 35 million lbs from north India without an equivalent reduction elsewhere, it will be time to regulate supplies.

To the end of September, the north Indian crop was approximately 16.5 million lbs below last year's. The latest weather reports do not hold out the hope that the shortage will be made good. In north Assam, it is too dry. In the centre it is too wet and lower Assam reports abnormally dry weather. In parts of Cachar, conditions are normal, but in the south, the outlook is unfavourable. News from western Dooars says it is cold. Prospects in the Terai are not favourable. So after a heavy fall in output in 1962, this season will see a further loss of from 17 to 20 million lbs of tea.

Sir Percival Griffiths and other responsible people in the tea trade and industry have already pointed out that steps should be taken to renew a tea producers' agreement to restrict supplies. If north India returns to normal production in 1964 and equals the 1961 figure and the other main producing areas continue to forge ahead, conditions will become chaotic in commodity markets.

The following optimistic remark comes from East Africa. "It is interesting to record that the *per capita* annual consumption of tea over the entire world population now amounts to ½ of a lb, and, if consumption continues to keep pace with population growth, as it has done in the past, there should certainly be no fear of overproduction—average yields are put at 1,500 lbs an acre and improved techniques in manuring, pruning and general cultivation will go a long way to stimulate yields. The Tea Research Institute of Africa is giving serious attention to clonal materials from rooted cutting from the Research Institute at Kericho".

It is reported that on 10th September the U.K. and Common Market authorities signed a two-year agreement to abolish all duties on tea imports from January 1964. Further negotiations with G.A.T.T. will be necessary before this agreement can become permanent.



The Tea Board propaganda in the U.K. is making fair progress. An exhibition centre has been opened in Edinburgh. The Oxford Street branch is expected to be opened soon, and it is understood some Indian women will be appointed to supervise the general routine. These efforts to increase consumption are very necessary.

COFFEE

India Wants Higher Export Quota

(BY A SOUTH INDIAN CORRESPONDENT)

IT has now been officially disclosed that India has asked for an enhancement of her export quota under the International Coffee Agreement from 21,500 tonnes to 50,000 tonnes a year. There is a feeling in Indian Government circles that the initial quota this country got under this agreement was on the low side. But a larger quota would become meaningless unless this country is able to produce more. The next crop in India is expected to be round about 60,000 tonnes only, some 5,000 tonnes more than the 1962-63 crop. The internal market would require about 35,000 tonnes a year at present. If the local consumption is allowed to have its normal growth, an annual increase

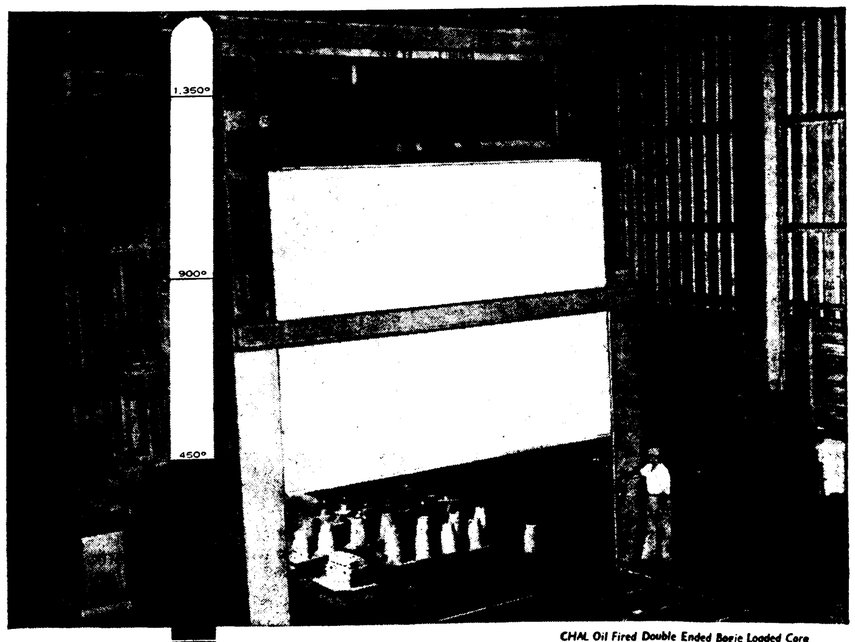
ASP/UBI-10

of 2,000 to 3,000 tonnes can be expected. In order to take advantage of any increase in the export quota, the coffee-growing industry has to make a concerted effort to raise production in a big way. The Central Minister for International Trade, Mr. Manubhai Shah, has given an assurance to the coffee growers that they need not fear that the drop in prices experienced three years ago will be repeated if a high output is achieved. He has promised a minimum price in the event of a slump in the market.



The world market for coffee is at present experiencing a boom. Prices have been looking up since the natural disasters in Cuba and Brazil. The Cuban crop was being harvested when the hurricane "Flora" hit and destroyed the crop in a big way. Consequently, the marketing and distribution of coffee have been halted. Cuba has made arrangements with Russia to make available to her 5,000 tons of Brazilian coffee beans. In Brazil itself, the devastation caused by the fire and frost in the wake of a prolonged drought in the principal coffee-growing States of Sao Paulo and Parana, and the forecasts of the next season's crop have been reduced by as much as a half to 13 million bags. The 1963-64 crop which was a good harvest has already been sold with a heavy New York buying during the summer, and very little will be available for shipment during the early months of 1964. Brazil produces over two-fifths of the world's coffee. Coffee for January shipment is currently quoted in London at over 225s a cwt, compared with 214s a month ago.

President Dr. Radhakrishnan inaugurated on 9th October the new multi-storey building of the Coffee Board in Bangalore. Speaking on the occasion, the President said coffee was a natural beverage healthier than others. He assured the coffee growers that they would get every possible financial assistance to increase production. The Government, the President said, would guarantee a minimum price for growers so that they need not be affraid of over-production.

SYNTHETIC RUBBER

Prices Cut

The Synthetics and Chemicals Ltd, the manufacturers of synthetic rubber in India, have reduced the prices of synthetic rubber with effect from 1st October. The price of grade 1,500 (staining) has been reduced to Rs. 4.05 a kilogram from Rs 4.40 a kilogram of grade 1712 (oil extended) to Rs. 3.40 a kilogram from Rs. 4.10 a kilogram and that of grade 1502 (non-staining) to Rs. 4.05 a kilogram from Rs. 4.40 a kilogram. The reduction follows a representation from the Indian Rubber Industries Association to the Government, according to which prices of indigenous synthetic rubber is higher than those of the imported. The association has also stated that the consumption of synthetic in this country would go up to 13,000 tons in 1963, against 10,400 tons in 1962. The reaction of the rubber manufacturers is that they would be satisfied only when the prices are brought down to the price level of the imported synthetic rubber. The original price of synthetic rubber in India was around Re. 1 more than the controlled price of natural rubber, and that was considered to be an advantage for natural rubber in competition with synthetic. Even at the revised rate, synthetic is costlier than natural.

CHAL Oil Fired Double Ended Bogie Loaded Core Drying Oven installed in a reputed steel foundry in India.

WELLMAN INCANDESCENT LOW TEMPERATURE HEAT TREATMENT OVENS

Wellman Incandescent India Ltd., in collaboration with Controlled Heat and Air Ltd., Smethwick—England, are now manufacturing in India industrial ovens for low temperature heat treatment up to a maximum of 450° C.

These ovens cover the whole CHAL range of products. Ovens for Stoving, Tinprinting, Drying, Metal Heat Treatment, Core Plate Varnishing, Maturing as well as Filtration equipment are available.

Wellman Incandescent are also specialists in Mechanical Handling Equipment and have commenced to manufacture progressively many products which hitherto had to be imported.

COTTON TEXTILES

Improvement in World Trade

(FROM OUR LONDON CORRESPONDENT)

THERE are signs that the decline in cotton textile production in the non-communist part of the world may have slowed down, or even possibly been reversed, according to the latest *Quarterly Statistical Review* issued by the Cotton Board. In the second quarter of this year, cotton yarn output in those countries for which regular figures are available seems to have been about 1 percent less than in the same period of 1962, against a 5 percent drop, compared with a year earlier in the first quarter. Much the biggest decline in cotton yarn production compared with a year earker occurred in the U.S.A. The decrease in the U.K., western Europe as a whole and Japan was no more than marginal, while production in India was greater than in the second quarter of last year.

World trade in cotton fabrics seems also to have taken a turn for the better. In the second quarter of this year exports from the main non-communist exporting countries were much the same as in the first quarter; compared with a year earlier, they showed a drop of only 3 percent as a decrease of 9 percent in the first quarter. Shipments from Japan, the U.S.A. and the U.K. were still running below last year's level, but there were increases in exports from India, Pakistan, Hongkong and the west European countries taken as a whole.

Exports of man-made fibre fabrics from the principal non-communist exporting countries in the first quarter were slightly less than in the same period of 1962, but in the second quarter, they seem to have been much the same as a year earlier. Exports from the U.K., the U.S.A. and west European countries as a whole continued to run at above last year's level, but shipments from Japan were still substantially less than in the corresponding period of 1962.

Cotton yarn output in India expanded in the second quarter, when it was about 3 percent greater than in the second quarter of 1962. Mill production of cotton cloth, on the other hand, was about 4 percent less than a year earlier. Exports of cotton piecegoods expanded further in the first quarter, totalling 156 million yards, against 141 million in the corresponding period of 1962. A big expansion in trade with the U.S.A accounted for the whole of this increase. It is understood that exports in the second quarter continued comfortably to exceed last year's level in yardage terms, but the obligation to export a fixed proportion of production has led to such a degree of price cutting that the return in terms of foreign exchange has been very disappointing. Recently, the percentage of cloth production which must be exported has been cut from 12½ to 10, but the required percentage of yarn production has been increased from 3 to 4. A mission has recently been visiting Russia and eastern Europe in an attempt to step up trade with those countries. Exports in 1962 totalled 3 million yards, against a target of 30 million yards for that year and one of 40 million yards for this year. The Indian Minister of International Trade has been urging the industry to step up exports of finished cloth at the expense of grey cloth.

Other items reported to be under official consideration are a plan to expand spindleage and one to increase the cotton import entitlement granted to exporters of cotton textiles. The industry has asked to be allowed to increase prices on the home market, stating that rising costs have severely eaten into profit margins. It is rumoured, however, that the existing "voluntary" scheme of price ceilings is being widely evaded. The rapid expansion of the Hongkong cotton industry seems to have come to an end, and a problem of surplus capacity has arisen. It is even reported that spindles and looms have been sold to other Asian countries. Exports of cotton piecegoods in the first half of this year seem to have been much the same in total as in the first half of last year and considerably greater than in the second half of 1962.

SHELLAC UNCHANGED

During the week ended 15th October, the market was unchanged.

CORPORATE FINANCE 1956-61

BY V. G. KULKARNI

This book intends to present a statistical study of the finances of joint stock companies and their development during the Second Five-Year Plan period (1956-61).

The study covers as many as 377 joint stock companies belonging to 20 industrial groups and broadly accounts for the entire industrial sector.

The analytical studies will provide the interested investor, government official, and scholar, a basic set of data on which to both base and evaluate private investment decisions and government policy in the modern industrial sector.

ECONOMIC PLANNING IN EASTERN EUROPE

THE Council for Mutual Economic Assistance (C.M.E.A.) was set up in 1949 as the Soviet *bloc's* east European answer to the Marshall Plan. But as the amount of assistance which Russia could offer the poorer members was very limited indeed, what the C.M.E.A. was able to do for Europe east of the Elbe was small by comparison with the contribution of Marshall aid to the postwar economic recovery of western Europe. Nonetheless, it has survived as the co-ordinating agency for a group of national economic plans, and to this extent it has an established place in the framework of the communist *bloc*. In theory membership is open to all the territories of the communist world, irrespective of particular ideological affiliations; in practice, China does not belong, but the Mongolian People's Republic does, while Albania lost its founder-membership in 1961 as a result of incurring the Kremlin's displeasure. The Council for Mutual Economic Assistance, sometimes also known as Comecon, holds periodical meetings, employs a permanent secretariat and has created a number of technical limbs to assist it in the business of planning. During the years of Stalin's rule, the emphasis was on the dominance of Moscow from which it was held all economic wisdom derived; since his death in 1953, and particularly since the Hungarian and Polish uprisings of 1956, there has been a movement towards more independence of action for the Soviet satellites. This has made things difficult for the C.M.E.A. whose economic logic demands more and more centralised planning, while the political tide flows in precisely the opposite direction.

With the possible exception of Czechoslovakia, prewar eastern Europe was industrially backward. Eighty percent of the population lived in the countryside, and considerably more than half the working population was employed in wresting an exiguous livelihood from the land. Living standards were low and the terms of trade mostly operated against countries exporting primary products and semi-manufactures. Although we generally categorise the poorer countries of Asia, Africa and Latin America as "underdeveloped", a large part of eastern Europe was—and still is—in that condition. But the second World War gave an impetus to industry and, whatever else may be said about Nazi rule, it considerably expanded the manufactures of Czechoslovakia, Hungary and East Germany. Within her new frontiers Poland was also industrially well placed; Rumania, Albania and Bulgaria remained primary producers. Immediate postwar industrial development took place on foundations largely laid down during the years of Nazi rule in central and eastern Europe, and with the help of dismantled German plant.

The 1956 anti-communist uprisings, which disrupted trade and communications over a wide area, represented a major turning point in Comecon thinking. It was clear that in both Russia and the satellite countries, populations already disgruntled by years of low consumption could not be further antagonised, and in 1957, national economic plans were revised so as to hold out some prospect of an early improvement in the standard of living—subject always to the overriding priority of the defence and capital goods industries. To help recovery from the 1956 setback, Russia gave Comecon countries emergency credits valued at the equivalent of about $1,000 million and in the intervening half-dozen years, there has probably been less reliance on Marxist dogma and larger investment allocations to light industry, housing and agriculture. Within Comecon the need for intra-*bloc* specialisation of production and joint development of resources has been stressed. A succession of good harvests have reinforced the somewhat more liberal policies and the result has been some gain in living conditions which are nonetheless still a good long way behind those of western Europe. But throughout the *bloc*, Communist Party control is still rigidly enforced and no economic innovation that does not satisfy the Party line has a chance of acceptance.

It is not easy to calculate (or compare with others) statistics of growth in communist countries. The concept of national income is accepted, but in deference to Marxist materialistic teaching national income is so defined as to include only "material product" and to exclude the value of such important "non-material" activities as education, health services and administration, the rôle of which is growing in the communist part of the world as elsewhere. Thus, the indices used to calculate economic growth in communist countries usually have a narrower base than in the western world. Also as between the Comecon countries, the reliability of the statistical apparatus varies a good deal; in all of them, the accuracy of agricultural data is suspect and greater credibility is generally accorded to figures of output of particular goods in physical units. Economic progress is signposted by a series of production "targets" and success or failure is measured by the extent to which these are attained. Russia herself is currently in the midst of a seven year plan covering the years 1959-65, and it is claimed that in the first three years there has been an annual growth in industrial production of 10 percent, against a planned 8.3 percent, although it seems that the rate of over-fulfilment has lately begun to decline.

Planners are prone to do ever larger and larger sums, and at a recent congress of the Communist Party of Russia a 20 years' economic "perspective" laying down targets up to the year 1980 was submitted for endorsement by the delegates. Even among the most faithful Marxists, such a document can command only a limited credibility and presumably serves as a statement of intention rather than as an integrated economic plan. Among the targets for 1980 is the provision for every family of a well-appointed flat, and it is significant that promises of better and more residential accommodation have figured in every Russian manifesto since 1917. The problem is how to accommodate the ever increasing number of town dwellers which the authorities consistently under-estimate. In this matter, Russian calculations seem to be just as fallible as those made elsewhere.

Planning among the satellite countries is on a smaller scale and the expansion of industry has been the chief contributor to national income growth in eastern Europe. Consumption has been

deliberately restricted in order to achieve a high level of gross capital formation which in some cases is said to have reached 25 percent or more of national income. Two factors have, however, operated against the consumer reaping the full benefits in increased personal consumption: they are high investment in defence and heavy industry and inadequate investment in agriculture. With the possible exception of Poland, shortfalls in agricultural performance have held back the growth of national income in the Comecon territories, penalised the urban consumer and condemned the farmer to a comparatively low standard of life. For the period of the five-year plan 1961-65, fairly high targets for industrialisation and national income growth have been prescribed for all the east European States where the plans are meeting with varying degrees of success.

Except in Czechoslovakia and East Germany, it is claimed that rates of industrial expansion have exceeded the prescribed targets; but the exceptions are important in that Czechoslovakia is regarded as communism's "shop window" in central Europe and failure there is likely to have repercussions throughout the *bloc*. In August of last year it was announced in Czechoslovakia that the 1961-65 plan was to be abandoned and a seven-year plan introduced to cover the period 1964-70 after a one-year interim plan. As late as the end of 1962, no 1961 national income figure had been published for East Germany—an omission which the pundits regarded as an ominous sign that all is not well, and indeed there is other evidence pointing in the same direction. Whether by accident or by design, for communism the rule seems always to be "jam tomorrow and jam yesterday, but never jam today". Everything is for the next generation, although it is to be recognised that policies enshrining this philosophy have brought about—by whatever means—the partial industrialisation of eastern Europe in a matter of 15 years.

Nevertheless, the senior member of Comecon, Russia herself, is still a very substantial net importer of engineering products, of which she currently imports twice as much as she exports. Her export sales are mostly adapted to the needs of the underdeveloped countries inside and outside the Sino-Soviet group and she does very little trade in engineering goods elsewhere. The steel plant in Bhilai and the heavy machine building project in Ranchi, both part of Russian aid to India, are good examples of that country's enterprise in the export of engineering skills and equipment which, in the light of the new connection with Dr. Fidel Castro, it may now endeavour to extend to the Caribbean. This would be about on a par with the proclaimed intention of Bulgaria, a country without any significant industrial base, to achieve a production of 1.2 million tons of steel by 1964. But in communist eyes, iron and steel are the lifeblood of every economy, and the engineering industry its sinews. Each State seeks to have these things without regard to considerations of internal costing or the needs or plans of the other members of the *bloc*. So the construction of large metallurgical complexes, based mostly on imported raw materials, goes ahead practically everywhere in the communist world. The aim is to create an industrial base in each country and to foster specialisation in particular products. Czechoslovakia and East Germany are considerably ahead of the other members of the Soviet *bloc* in the matter of industrial skills, but that is due more to the progress made by private enterprise in the 1930's and 1940's than to the efficacy of more recent communist planning.

Bilateral agreements, which are the chief means by which intra-*bloc* trade and the external trade of the east European States is conducted, do not encourage automatic growth. The members of the C.M.E.A. have not made a free trade area of themselves, nor apparently do they aspire to such an arrangement. They do not maintain a common external tariff or a pool of convertible currency and the C.M.E.A. does not regulate the affairs of a single market in the sense visualised by the signatories of the Rome Treaty. The political sanctions under which the countries of the C.M.E.A. are held together are of a much tougher kind than could be applied in the field of trade. Nevertheless, the promotion of intra-*bloc* trade is regarded as an ideological imperative. Since the political explosions of 1956 the aim has been to establish price parities with outside ("the capitalist") world. In the words of Mr. Mikoyan, a deputy prime minister of Russia, communist philosophy now concedes that "the world market and world prices are not a fiction". Following its meeting in December 1962, the C.M.E.A. announced that average world prices in the period 1957-61 were the base from which price adjustments should proceed—a somewhat vague and exhortatory formula. Inevitably, in bilateral bargaining inside the *bloc*, Russia starts from a strongly entrenched position as the main supplier of many things and the chief customer for others. Over half of the exports of the countries of eastern Europe go to that country, making up more than half of the latter's total imports. As a supplier of capital goods, Russia's rôle is paramount and her importance as a source of raw materials has grown steadily in recent years.

Not only does Russia dominate the internal trade of the east European group, her commerce with the outside world is larger than that of any other communist country. Approximately half of the east-west trade of the Soviet *bloc* is carried on by Russia herself. As to about 80 percent, Russia's exports to western Europe consist of primary products—foodstuffs, fuels and raw materials—a pattern which is common to the exports of the other members of the *bloc*. Britain and West Germany are the principal western trading partners of the east European countries, and Britain's trading ties with Poland are particularly close. Although it has many of the features of a "closed shop" itself, the *bloc* does not conceal its dislike of the European Common Market organisation and criticism was particularly vocal when, a few months ago, there seemed a fair prospect that Britain would join the organisation. Communist anti-Market propaganda against western economic integration takes two main lines: one is that the European Economic Community is the economic counterpart of N.A.T.O. and, therefore, aggressive in intent; the other alleges that the Community is a rich man's club whose real purpose is to subordinate the true interests of the newly independent Afro-Asian countries to European economic purposes. Apart from these crude propaganda claims, the *bloc* has certain genuine and well-grounded apprehensions which would have been even more real had Britain joined the Common Market.

Temperate foodstuffs are a not unimportant item in the *bloc*'s traditional exports to western Europe, and it would be in this sector of their trade that the east European countries might prove most vulnerable to the Common Market discriminatory mechanism. It may be that Russia would not suffer greatly on this count, but Poland, for instance, which does the largest east-west business in foodstuffs, would almost certainly be hard hit especially if her chief customer, Britain, had gone into the Common Market. Oil and petroleum products constitute the largest single item of Russian exports to western Europe and they are highly important to Rumania's trade as well. In recent years, Russia has embarked upon a spectacular drive for oil exports which has met with a measure of success. If the Common Market countries were to take up a more restrictive posture towards oil imports from non-members the effect on the export trade of Russia might be quite serious. Meanwhile, consignments of Russian oil reaching selected points in both the eastern and western hemispheres serve to earn both foreign exchange and political kudos for that country.

But it is not merely in Europe that the Comecon countries are searching for trade openings; in varying degrees practically every member of the east European *bloc* has been able to increase its trade with the south Asian countries, especially India, to which the *bloc*'s exports in 1962-63 amounted to over Rs. 100 crores. Of this, exports from Russia accounted for more than half, with Czechoslovakia coming next with approximately one-fifth of the total. A new bilateral agreement with Russia provides for the exchange of goods worth approximately Rs. 100 crores each way by 1966, and if this target is reached, it will make Russia one of India's most important trading partners.

For the most part, the bilateral trade agreement is the instrument by which the members of the Soviet *bloc* seek to promote, regulate and formalise their external trade. Generally speaking, these agreements fall somewhat short of a formal trade treaty; they express the good intentions of the contracting parties towards one another, reiterate their desire to expand mutual trade, suggest the directions in which this can be done and in some cases quantify the volume of goods or commodities which it is hoped to exchange over a period of time. Where special payments arrangements are involved, these may be specified in some detail, but most bilateral trade agreements are essentially an expression of good intent based on good faith. They practically never provide for any kind of sanction or penalty for non-observance, but they serve to assert respective sovereignties and to that extent are popular with newly sovereign States. Russia and her satellites in eastern Europe are well aware of these facts and the number of bilateral trade agreements which have been signed in their chancelleries must be legion.

These bilateral trade agreements very often enable the contracting parties to surmount currency difficulties by deals that have many of the characteristics of barter transactions; but in a world in which currency relationships are frequently far awry, a plausible case can be made out in their favour. Although the technique of bilateral business is improving, it remains a poor substitute for trade done by the ordinary machinery of international commerce, and from time to time leads to embarrassing surpluses and shortages. Inevitably, Governments play the major rôle in negotiating and executing them, and in those States in which the details of economic policy are directed exclusively by Governments this is regarded with favour. Sometimes the impact of a trade agreement penetrates beyond pure trade to offers of technical and military assistance, thus opening the way to political infiltration. But usually the typical bilateral agreement provides for an exchange of goods or raw materials with perhaps a provision for the use of local currency on one side or the other. The east European economies represented in the C.M.E.A. are criss-crossed with bilateral trading arrangements.

Ten years after Stalin's death, the economic picture which emerges from the east European *bloc* is mixed, but may well appear encouraging to the communist leadership in the jaundiced view which Marxist doctrine bids it take of the free enterprise economies of the West. On the credit side, there is evidence that real wages have risen in publicly-owned projects and that consumption standards have been raised. But nowhere is there anything approaching a condition of affluence, although social services have improved, particularly among urban dwellers. Unemployment appears to be fairly small, but it is persistent. Trade has to some extent been diversified and new commercial links have been established with the West and with some of the developing countries of Asia and Africa to whom it has also been possible to offer a growing quantity of aid. (Three-quarters of Soviet *bloc* aid is distributed among eight countries, namely, India, Egypt, Indonesia, Guinea, Afghanistan, Cuba, Iraq and Ghana.) Russia has scored spectacular successes in the exploration of outer space and the scientific genius which lies behind these triumphs has been universally acclaimed. But no one has questioned whether the hard won assets of what is still a relatively poor country should be expended in this way. For at the heart of the communist doctrine lies the unchallengeable proposition that the State is all-wise and omnipotent and the individual can have no choice in the ultimate disposal of the community's resources.

On the debit side of the account, the progressive collectivisation of agriculture has failed to raise production to the desired levels, and what has been described as "the silent contracting out" of the farmers from the planned economy, remains the biggest single problem of the communist Governments of eastern Europe. Price rises and food shortages when they occur are felt first in the towns, where low housing standards and other disabilities are a constant reminder that the millenium is a long way off. Indeed, the prospect is that the east European States will continue economic dependence upon Russia, which must necessarily play a major rôle in the groups' [illegible] which there is little chance of any of the sa[illegible] breaking away. However ardently these junior members of the *bloc* may desire economic independence, it is likely to be denied them as long as their manufactured exports are lacking in competitive power and they are unable to produce adequate farm surpluses.

A POLICY FOR JUTE

INDICTMENTS come easily to official committees, not least because this is a popular attitude to adopt towards a well-established industry. Anyone looking objectively into the Srivastava Committee report, which recently reviewed the problems of the jute industry, will find not only a good deal of attitudinising but also a persistent effort to score points off the industry by innuendo. In a section which ostensibly presents the basic facts of production and exports in the decade of the 'fifties, the level of operations obtaining in India is juxtaposed with the comment that the Pakistani industry, starting from scratch, developed during this period a capability equivalent to 20,000 looms. It seems to be implied that restrictions on Indian output brought this about, which is wholly unwarranted by the facts. In the normal course, one need not have bothered unduly about how a group of officials interpret the course of events, especially if the analysis is as skimpy as presented in this particular report. A correct understanding is important, however, if New Delhi is to arrive at a coherent policy for the future which will be shaped more than anything else by the measures taken to restore competitive parity with Pakistan.

In March 1962, when the Srivastava Committee was appointed, Pakistan had just completed a record year of exports. Its declared plans to install a further 6,000 looms, representing a 75 percent increase over present capacity was at last beginning to register in New Delhi. There was a glimmering of recognition that the strength of Pakistani competition was reducing India in some ways to the rôle of a residual supplier. The pressure was acutest in sacking, in which India had lost a good deal of ground already in her traditional markets. In Australia, sacking shipments were down from about 100,000 tons a year before 1955-56 to a mere 33,000 tons and in the Far East from over 80,000 tons to 50,000 tons. The realisation that further losses were in store finally persuaded the Government to have the industry's prospects assessed so as to evolve a new policy. A report was required in three months but the Committee apparently found its allotted task so difficult that it took over nine months to complete its labours. The delay was compounded by the fact that it took New Delhi another eight months to make the report public.

One would have little reason to grumble about the delay had the time taken been used to formulate a well-conceived plan of action in consultation with the interests concerned. What specific proposals the Committee has in view to deal with the central problem of unequal competition with Pakistan is not yet public knowledge since this is the subject of a separate and supposedly confidential report. While there are no doubt good reasons for secrecy, the obvious drawback is that it limits the scope for interchange of ideas on the concrete measures to be taken. In relation to jute goods exports, with an infinitely diversified pattern of trading, one need hardly point out that arm-chair theorising is worse than useless. It is to be hoped, therefore, that further consultations will take place between New Delhi and the jute industry before any decisions are taken. There can be no objection to these being held *in camera* since there is no point at all in giving advance notice to one's competitors of counter-measures until one is ready to implement them. Secondly, even in the present troubled political situation between the two countries, the door must be left ajar as long as possible in the hope of arriving at a *modus vivendi*. India and Pakistan together account for over 90 percent of the jute goods entering the world market, and growing competition between the two might involve both in losses. Finally, Pakistan's export bonus vouchers—the main point at issue—are not a device that India can easily counter without going in for something similar herself. Such a step cannot be taken lightly for it amounts to operating a dual exchange rate with inevitable repercussions on the whole economy.

Since the Committee's view on these difficult issues are still New Delhi's secret, one has to judge its contribution by its approach to the wider problem of ensuring the industry's orderly growth. One finds here a curious contrast between the helpful and constructive attitude to matters like the release of foreign exchange to facilitate modernisation and renovation, and the arbitrary, *ex cathedra* pronouncements against the Working Time Agreement used by the industry for many years to regulate production. Going by the fact that India's share of the world market has declined over the last ten years, it is immediately assumed without any further enquiry into the circumstances in which this happened that the Agreement is "basically restrictionist" in its outlook. It is further alleged that it has operated to protect inefficiency in the jute industry by safeguarding marginal units from the full fury of competition.

The first point to note is that the Srivastava Committee held its enquiry at a time when the basic circumstances of the industry had already undergone important changes. Jute has been in plentiful supply for three seasons running, and overseas demand has been maintained at surprisingly high levels. In these conditions, as an I.J.M.A. memorandum pointedly remarks, it is easy to advocate being progressive, overlooking the factors which justified—and indeed dictated—restraints in the past. From partition right up to 1961-62, except in one single year the domestic supply of jute fell short of the mills' consumption of fibre by a large margin—ranging from 2 million bales in 1954-55 to 600,000 bales in 1960-61. The fibre consumption, as calculated here, represents only the requirements of the I.J.M.A. members and three reporting mills, which leaves a certain percentage of the loomage still unaccounted for. It is of some interest to recall what happened in the freak 1958-59 season when a 7-million-bale crop was produced. The operation of the mills geared to the level of world demand required no more than 6.46 million bales, which left a sizeable surplus. Acting with a full sense of responsibility, steps were taken to cope with the fibre surplus, as is evident from the published statistics which show an increase in the end-of-season stockholding of the I.J.M.A. mills alone of very nearly 600,000 bales. Prices did drop during the season by an average of Rs. 4 a bale, which may have discouraged farmers from growing enough jute during the next season, as has at times been alleged. But if this was the case, there was no means of anticipating the outcome since an average of over Rs. 25 a bale was not at that time regarded as unduly low. It is to the credit of the mills that they soon reconciled themselves to the idea of assuring the grower of a higher return in advance of the growing season, regardless of the prices realised for jute goods. In a trade subject to such wide variations, a commitment of this nature cannot be easy to give because the price of the fibre accounts for 60 percent of the production cost of jute goods.

Since the 1961-62 season, price maintenance has relied heavily on the I.J.M.A.'s co-operation. The Association operated a quota scheme designed to support the fibre market. Additionally, it took the initiative to organise a Jute Buffer Stock Association which has, by and large, worked to good effect. Not only is the Government represented on the J.B.S.A.'s managing committee by the Deputy Jute Commissioner; all major decisions have been arrived at after full consultation at other levels in Calcutta and New Delhi. The Srivastava Committee complains that the working of the J.B.S.A. does not enjoy the full confidence of the growers or the trade, and goes on to suggest that the Government should take over full operational control. The reasoning is difficult to understand: if individual reservations are held sufficient to discredit the J.B.S.A., this may well be the case with a Government-controlled agency because no particular course of policy can be expected to satisfy everyone.

A more fundamental objection to a bureaucratic takeover is that a commercial operation like the buying of raw jute must be safeguarded from political interference if it is to succeed. Unless one wants the J.B.S.A. to be diverted from its real purpose, would it not be much better to insulate its management from political pressures which an official agency may find hard to combat? There is, for instance, a very real danger that price support may be carried to a point where it begins to hurt not only the mills but also the long-term interests of the growers and the States. In West Bengal, warnings have already been given by responsible leaders against the unnecessary diversion of paddy land to jute with disastrous consequences for the price of rice. The right policy is obviously one which relies upon higher yields, rather than extension of acreage, to raise a crop of the size that the industry will need to maintain its present momentum of growth. At the same time, grade differentials should provide a built-in incentive for the improvement of quality. These considerations are vital for the future of jute goods exports, and cannot be expected to weigh sufficiently with local political aspirants to make them desist from agitation which deflects the State and Central Governments from pursuing a rational policy.

PROSPECTS FOR METALS

THE prices of the four major non-ferrous metals—copper, lead, zinc and tin—have been very high in India because of an acute shortage. A quintal of copper scrap now fetches as high a price as Rs. 590, as against Rs. 520 about a year ago. Lead costs about Rs. 210 a quintal (against Rs. 140), zinc Rs. 260 a quintal (same) and tin Rs. 3,400 a quintal (against Rs 2,650). Tin, in particular, has risen appreciably on fears of reduced imports as a result of high international prices. With the improvement in exports and bigger availability of credits for maintenance imports, the trade had hoped that the import policy for the October 1963-March 1964 period would be liberalised. The decision to continue the previous restrictive policy for established importers has naturally caused much disappointment; it has been pointed out that their considerable experience in importing metals, a highly specialised activity, is not being sufficiently used. Since the importers are subject to strict controls—although controls do not operate after the metals pass out of their hands—there is little justification for continuing State trading in metals, which reduces the share of the established importers without offering any special advantage to the consumer.

Indigenous production is limited, amounting to barely 9,800 tons of fire-refined copper and 3,000 tons of lead. Zinc is not being produced, but the 10,000 odd tons of concentrates obtained from the combined lead-zinc ore in Rajasthan are shipped to Japan for refining. As for tin, there are no domestic resources and the entire demand has to be met out of imports. The Development Council for Non-ferrous Metals estimated that during the third plan period, the annual demand for copper would rise from 85,000 tonnes to 170,000 tonnes, for lead from 35,000 tonnes to 65,000 tonnes, for zinc from 85,000 tonnes to 185,000 tonnes, and for tin from 7,000 tonnes to 10,000 tonnes. Imports, however, have lagged considerably behind demand because of the foreign exchange shortage. In 1962, imports amounted to only 67,500 tonnes of copper, 35,000 tonnes of lead, 75,000 tonnes of zinc and 4,900 tonnes of tin: imports during the first half of 1963 have been 37,000 tonnes, 20,000 tonnes, 43,200 tonnes and 2,200 tonnes, respectively. Except perhaps in the case of lead, supplies of which have been more or less adequate, there is a serious shortage of metals, which has caused substantial idle capacity in the non-ferrous metal industries. Since this is a feeder industry, meeting the requirements of the engineering, electrical and allied units, the shortage has far-reaching consequences. The recent spurt in the international prices of metals will aggravate the shortage since the import licences are based on value.

Lately, the prices of both zinc and lead have touched new highs in London after remaining depressed for some years. Cash zinc has risen to £83¾

a ton on the London Metal Exchange (as against £65⅞ a ton on 15th October last year) and the market seems to have settled down at the higher level. The rise is due to the improved business outlook in both the U.S.A and the U.K. Market analysts in the U.S.A. are expecting a record consumption of both zinc and lead in 1963. Economic activity, particularly in the motor-car industry, is expected to increase still more in the autumn months. It is confidently forecast that zinc consumption in the U.S.A during 1963 will reach a high of 1.2 million tons because of the record sales of galvanised sheets and larger use of die-castings in the motor-car and appliance industries.

On the supply side, there is a shortage of zinc concentrates in the world, a shortage which has persisted for a long time. Stocks of zinc with U.S. producers have been declining for some months, and the September figures recently released by the American Zinc Institute show a further shrinkage. The tightness in U.S. stocks has raised hopes ot some releases from the Government stockpile surplus which amounts to about 1.4 million short tons. But, according to some observers, there is little immediate prospect of stockpile disposals because of the opposition such a move is likely to provoke from U.S. mining interests. There are also possibilities of increased offerings of zinc and lead by Russia to earn foreign exchange for her grain purchases, but so far that country has been selling only moderate quantities. The offerings, however, are not likely to be very big because Russia and, to a lesser extent the other communist countries, are consuming a larger proportion of their output.

In common with zinc, lead is experiencing a boom. Compared with £52⅜ a ton for cash lead on 15th October last year, the London quotations are now around £70¼ a ton, the highest level for about three years. Demand is rising faster than production, with a consequent fall in world supplies. The boom originates from increased activity, particularly in the U.S motor-car industry. According to observers, U.S. lead consumption this year may exceed the previous peak level of 1.23 million short tons in 1955. Russian offerings on the London market have been quickly absorbed and the trend is strong The latest reports suggest that world consumption is somewhat higher than the total of new production and imports from Russia.

With industries working at a high level in the U.S.A. and fair indications from Europe, tin consumption so far has been very good and may continue to exceed new production. The political friction between Malaysia and Indonesia has prompted the latter to transfer her smelting arrangements from Malaya to Holland—a move which caused some dislocation in supplies. Cash tin jumped from £932½ a ton on 16th September to £962 on 19th September in the wake of the disturbances, but later declined gradually. Now, it has again shot up, this time to £976½ a ton in spite of the sales from the International Tin Council's buffer stock when the price pierced the ceiling of £965 a ton. This boom is attributed to the falling output in Bolivia and Indonesia. From the long-term point of view, a more important influence in the tin market—and one which has dominated it for well over a year—is the U.S. stockpile surplus. Total U.S. stockpile holdings stood at 346,000 long tons on 31st March this year. Of this, 161,000 long tons were "in excess of maximum objective". This surplus alone is about equal to the total world consumption in a year. If the stockpile releases continue at the present rate of 400 tons a week, no serious disruption of the market is feared in view of the rising consumer demand both in the U.S.A. and in Europe. The International Tin Council will be shortly sending a mission to Washington to obtain a firm undertaking about the future disposal of stockpile tin. The object is to ensure that disposals will be made in such a manner as not to jeopardise the development of the tin mining industry. However, if experience is any guide, it is doubtful if anything concrete—such as about the size and pace of releases and the price at which they will be made—will result. The Tin Council wants the stockpile sales to stop when tin falls below £910 a ton in London and to increase when the price touches £965 a ton.

As for copper, price changes on the London Metal Exchange have not been wide. Producers continue to support the cash wirebar price at £234 a ton. Consumption prospects are considered reasonably good in view of the high level of industrial activity in the U.S.A. In the U.K. too, consumption is higher than in 1962 and sales to European countries have been good. However, the producers have not yet been able to decide whether the position warrants restoration of the production cuts now in operation.

Dastur Report on Bokaro

It is not necessary to agree with all the formulations made by Dr. M. N. Dastur and his colleagues in their detailed project report on the Bokaro steel plant to recognise that their work constitutes something of a landmark. The report is the first blueprint for a major engineering enterprise prepared by an Indian group without any assistance from abroad. The basic technical concepts adopted by Dr. Dastur have, in effect, been endorsed by the team of experts sent out by the U.S. Steel Corporation on behalf of U.S. Agency for International Development because the plant, equipment and facilities proposed by the two are in many ways identical. Both approaches recognise that the Indian perspective of demand justifies setting up a plant exclusively for flat products, which is designed from the start to make the most of economies of scale. Hence the choice of both is in favour of units with an in-built capacity for expansion.

But the differences between the two are as striking as the points of agreement. Dr. Dastur sets a price on the total complex which, at Rs. 588 crores, is 21 percent lower than the U.S. estimate of Rs. 712 crores. In terms of the foreign exchange component, the Dastur estimates are almost half of what the U.S. team proposed—a disparity which calls for an explanation since both sets of figures are based on U.S. prices for equipment. The inference from published reports is that the U.S. estimates included a much bigger provision for capital charges accumulating in the 20-year period over which the construction of the plant to its 4-million-ton capacity was to be spread. Secondly, the U.S. team relied to a far greater extent than Dr. Dastur does on imported supplies and services on the plea that these were not likely to be available in time and on the scale required. Since the last stage of construction was, according to the U.S. schedule, phased to start only in 1972 for completion in 1976, this assumption seems questionable. It is difficult to say more on the available evidence but one assumes that the difference between the two reports is basically one of outlook—one trying to make the most of Indian resources, existing and potential, to reduce the foreign exchange component, while the other prefers the safety of assured supplies. There is something to be said for caution unless a policy decision is taken to use Bokaro to stimulate the growth of supplying and servicing agencies. This will involve some uncertainty and risk but the price may be well worth paying because of the permanent increase in India's capability to build major plants herself that may be expected to accrue. Where the line is finally drawn will depend on the proportion of risk to certainty that the Government feels it can accept.

The same sort of considerations are involved in deciding on the construction schedule—Dr. Dastur's proposals require only eight years from start to finish, against 20 years recommended by the Americans. There is no dispute that demand, present and prospective, requires building up flat product capacity as rapidly as possible. But the U.S. team thought it preferable to go slow because of several factors, one being the time it would take to build up the raw material and manpower base. Dr. Dastur obviously disagrees with this view; his argument is that a good deal of work has been done to prepare for Bokaro unlike in the case of the three Government steel plants set up during the second plan. The raw materials sources have been located, and mining development has begun. Even though the preparations should have been much further advanced by now had they been pushed as hard as in the past year, it is not rash to think that the necessary quantities can be raised and moved by the time Bokaro's first stage is commissioned.

That still leaves unanswered the question of how Bokaro is to be built. The present presumption is that the Aid-India Club members other than the U.S.A. will allow some part of their credits to be used for purchasing equipment for Bokaro over the next few years. The interest shown by supplier-firms from the member-countries is no doubt encouraging but not very much more. As far as Britain and West Germany are concerned, they will be called upon to assist in expanding the Durgapur and Rourkela works during the fourth plan. It is only natural that they should treat these projects as having the first claim on their help. Will there be enough left in the aid kitty, in the case of these two countries, to be of any great benefit to Bokaro? From the aid-giver's viewpoint, excessive concentration on steel creates political difficulties at home because the benefits of aid in the shape of contracts would then flow only to a limited number of large engineering firms. There are, of course, other Western nations to look to but can they collectively put together a plant of the size and complexity of a 4-million-ton flat product plant?

Tax Impact on Company Profits

In a study of the balance-sheets of several listed companies issued during August and September 1963, the Calcutta Stock Exchange Association Ltd has discussed the heavy incidence of taxation on profits and retained profits. Although the profit trends have been mixed, almost every company has suffered due to heavy taxation. It is not possible to measure the exact incidence of the super profits tax, as all companies have not shown their provisions for liability to this levy. It is, however, believed that its impact is considerable. The companies have been classified into three categories. In the first category have been included companies which have made bigger profits in 1963, but their net and retained profits have considerably fallen because of heavy taxation. The second category of companies have earned smaller incomes and lower profits. Hence their retained profits have fallen.

The study says that these profits would not have been so disappointing had the tax provision not moved up. The third category of companies have earned bigger profits. So they have shown larger net and retained profits, but the results would have been much more impressive but for the high rate of tax. It may be interesting to note that the first category consists of Dyer Meakin Breweries, Hindustan Motors, Bararee Coke, Indian Plastics and Kusum Products. In the second category have been included Bhartia Company, Gwalior Rayon, Hindusthan National Glass, Metal Box, Jiyajeerao Cotton, Orient Paper and Teesta Valley Tea. The third category covers, among others, Auckland Jute, Agarpara Jute Company, Anglo-India Jute, Bally Jute, Birla Jute, Dalhousie Jute, Fort Gloster Industries, Gourepore Company, Howrah Mills, Hukumchand Jute, India Jute, Indian Iron and Steel, Imperial Tobacco, India Paper Pulp, Jardine Henderson, Kinnison Jute, Lawrence Jute, Megna, Nuddea Mills, Northbrooke Jute, Union Jute and New Chumta Tea.

New U.K. Aid for India

An agreement was recently signed in New Delhi under which Britain is to make a £4 million loan to the Indian Government. The loan, which is for a period of 25 years, is part of an offer, made by the British Government at the recent meetings of the Aid India Consortium in Paris and Washington, of £30 million of additional aid in 1963 and 1964 as a contribution towards the foreign exchange costs of economic development under India's third five year plan. It has been agreed that the money should be used to improve the operating efficiency of manufacturers in India who traditionally look to Britain for their supplies and who are at present experiencing difficulty because of India's tight foreign exchange situation. The need to make funds available for this purpose was emphasised to both the British and Indian Governments by Sir Norman Kipping, director-general of the Federation of British Industries, following a visit to India earlier this year.

The loan will be allocated among three categories of companies. Firms producing machinery and equipment of British design will be given additional licences for components, and, in exceptional cases, for small amounts of specialised raw materials essential to production which have to be obtained from Britain. Small amounts may also be used for spares in certain cases. Those eligible for allocations in this first category—which is expected to receive about half the total—include firms producing sugar, cement, textile and electrical machinery, and motor-vehicles and their components. The second category covers representatives of British manufacturers of machinery and equipment who have received import licences in the past as established importers They will be given additional allocations to import the spare parts necessary to service and maintain the equipment which is already installed in India. The spare parts which can be imported under this scheme include those for machine tools, coalmining machinery, weighing and office machinery, electrical machinery, and transport and earth-moving equipment. The third category covers firms producing metal products which may wish to replace obsolete and written-off machine tools and other equipment of British origin.

Repayments are not to begin until after the seventh year, and the interest due during the first seven years of the loan will also be waived. On the basis of current interest rates, it is estimated that the effect of the waiver of interest is equivalent to a reduction in the interest rate over the life of the loan from about 5½ percent to below 3½ percent. Conclusion of the loan agreement brings to £112.5 million the total of loan agreements signed since the beginning of the Indian third plan period in April 1961, out of a total of £125 million now committed. Discussions are currently taking place between the two Governments on the allocation of the balance of £12.5 million.

Coal Production Paradox

It is officially claimed that coal production in the country has already overtaken demand. How misleading the claim is, is shown by the presidential speech of Mr. D. C. Driver at the latest annual general meeting of the Coal Consumers Association of India recently in Calcutta. Production of coal, of course, has increased, but the improvement is only in quantity. As Mr. Driver rightly points out, this has led to the anomaly that there is now more low-grade coal than the country needs. During the year ended 31st March, 1963, output totalled about 64 million tonnes, compared with the previous year's 55 million tonnes and the plan target of about 75 million tonnes for the year. Low-grade production, it is estimated, is 2 million tonnes in excess of its target, but the fall in the production of the better grades has been serious. The selected A grade coal produced in 1960 was 7.577 million tonnes. Its output fell to 7.439 million tonnes in 1961 and to 6.899 million tonnes in 1962. Selected B grade coal production fell from 10.059 million tonnes in 1960 to 6.685 million tonnes in the following year. It rose only slightly to 7.753 million tonnes in 1962.

It is generally suggested that the anomaly can be corrected by washing lower-grade coals to remove its higher ash content, but the remedy itself has created a new difficulty. Middlings, which are a by-product of washing, have only a limited use as fuel in newly-designed boilers and in brick burning; they are otherwise difficult to sell. This pushes up the price of washed coal of better quality to "unaccustomed heights". Mr. Driver observed. Coal has to be washed to supply adequate good coking coal of the steel industry. But, Mr. Driver points out, the same reasoning cannot apply to the washing of ordinary non-coking coal of lower grades. The output of middlings is already much in excess of demand. By the end of the fourth plan, there will be a glut of these in the market. The Central Minister of Mines and Fuel, Mr. O. V. Alagesan, himself has estimated that the annual production of middlings by the end of the fourth plan will be 25 million tonnes.

There is now a tendency in the economy to consume less coal. Mr. Driver lists several causes for this, apart from the well-known one that during and after the emergency, organised industries have built up a stock of over 3.5 million tonnes. The following are some of the other causes: the rate of industrial expansion has slowed down, and the unsatisfactory supply during the last three years has forced industrialists starting new units to indent both oil and coal-using equipment. For example, Tata Chemicals new boilers in Mithapur burn 40 percent oil and 60 percent coal, and the Indian Wire Products Company's new units in Jamshedpur can use both oil and coal. Cement factories in the northern and western regions of the country are gradually switching over to oil. The railways, a major consumer of coal, are speeding up the process of dieselisation in the entire north-east frontier, in Saurashtra and in south India. Electrification of tracks is proceeding apace. The railways, will, thus be using 1 million tonnes of coal less by the end of the third plan, and lesser during the fourth plan. The development of hydro-electric energy, the production of lignite in south India for power briquetting and low temperature carbonisation are some of the other factors which may lessen the demand for lower grades of coal. Thus the economic outlook for the industry as a whole is far from satisfactory. Mr. Driver urges the Government to take timely and appropriate measures to forestall the coming crisis. A badly needed measure is to curtail the production of lower grade coals wherever possible, and to find new uses for them. Another is to reduce the cost of transporting coal by rail and road. Mr. Driver has, however, omitted to stress the important point that the coal industry's economic problem will not be solved only by reducing the output of lower grades: it is necessary to raise the production of better grades through realistic price incentives.

Raising Engineering Exports

The study group on the export of minerals, steel and engineering products with Mr. C. M. Poonacha as chairman, is reported to have reached the conclusion that it is feasible to increase engineering goods exports. The level of these exports stood at nearly 3 percent of the output in 1962—that is, Rs. 11 crores out of a total production worth Rs. 366 crores. In the study group's view, the proportion can be raised to 7½ percent, that is, Rs. 163 crores out of an expected output of 2,000 crores by 1970-71. There has been an encouraging rise in the exports of engineering products from India during the past few years. These goods are being sold not only to countries in Asia, Africa, as well as to Australia and New Zealand, but also to the industrially developed countries in Europe and the United States. The new export target will have little chance of being fulfilled unless some of the difficulties standing in the way of higher engineering production are first removed.

One of the difficulties is the shortage of raw materials and machinery, and their high costs. The study team has suggested that pig iron, steel, aluminium and other engineering materials produced internally should be made available to the industry at world prices for manufacturing engineering products for export. A point which the study team does not appear to have sufficiently emphasised is that in order to be able to produce engineering products in India at competitive prices, it is necessary that the industry's dependence on imported raw materials and components should be reduced by raising their domestic production. Unless this could be done, it might not be possible to increase engineering goods exports to the desired level. Moreover, the exports need to be diversified to enhance their marketability abroad.

As long as production costs in the engineering industry remain high, it would be necessary for the Government to subsidise these exports. One of the methods suggested by the study team is that an export cess might be levied on all engineering industries in the country for reimbursing exporters to the extent of the difference between domestic and international prices for their end-products. But the great disadvantage of this suggestion is that it will further increase the prices of engineering products for Indian consumers who are already paying high prices.

A remarkable suggestion of the study team is that manufacturer-exporters who are able to sell an appreciable percentage of their output overseas, say, 10 percent or more, should be treated more favourably than those who sell less, while allocating raw materials and components, power and transport facilities. This would not only encourage producers to become export-orientated, but would also raise the output of exportable goods. The present system of refunding Customs, excise and sales tax levies on export goods is not working satisfactorily. The study team has suggested that concessions given in the shape of drawbacks of Customs or excise duties, reduction in pig iron and steel prices, and refund of sales tax and other levies should be lumped into a consolidated packet for each item of export and granted promptly and expeditiously.

Finance for State Plans

In a communication to State Chief Ministers, the Planning Commission has emphasised the need to pay greater attention to tax collection, economies in non-plan expenditure and in general administrative costs. This, it is pointed out, is necessary to finance State development programmes in the fourth year of the third plan. According to the Commission's estimate, State Governments total outlay on the plan in 1964-65 is likely to be Rs. 850 crores—nearly Rs. 100 crores more than the expected total outlay in the current financial year—out of which Central assistance would be Rs. 500 crores. So the States will have to provide Rs. 350 crores from their own resources. In the current financial year, their performance in mobilising resources has not been quite satisfactory. This is so especially in the case of Assam, Andhra Pradesh, Kerala, Madhya Pradesh, Jammu and Kashmir and Rajasthan.

The third plan target for raising Rs. 610 crores from additional taxation in the States is not likely to be realised. Concerted efforts will, therefore, have to be made to tax the rural sector more. The increase in taxation as well as fresh levies by the States so far are expected to yield an additional revenue of Rs. 425 crores over the entire plan period. But in view of the withdrawal of the compulsory savings deposit scheme for the cultivators and for persons in lower income groups and because of the suspension of measures to increase land revenue in U.P., Madhya Pradesh and Bihar, the total yield from additional taxes is likely to be even smaller.

As the Planning Commission has rightly emphasised, there is considerable scope, roughly estimated at not less than Rs. 50 crores for all the States taken together, for increasing the funds available for plan projects, if the States make efforts to economise on non-plan outlay and to avoid waste in general administration. But this will not suffice. The State Governments will have to increase their tax revenues to be able successfully to finance their plan projects. The conclusion is irresistible that they will have to tax the rural population more courageously than they have done so far. There may be some scope for increasing the revenue from sales tax, excise duties and other State taxes on trade and industry and on people in their urban areas, but the scope is necessarily limited. It is only through ot

increased land revenue, betterment levies and other taxes on land that the State Governments can hope to raise Rs. 610 crores from additional taxation during the plan period.

In the first three years of the third plan, the State Governments used nearly Rs. 1,200 crores out of a total allocation of Rs. 2,375 crores for the entire plan period. A sum of Rs. 1,175 crores remains unused and would be available in the remaining two years of the plan period, out of which nearly Rs. 500 crores would be available in 1964-65. This means that the scope for the State Governments to draw on Central assistance for implementing their plan projects is limited and there is no escape from increasing the level of taxation.

As far as the State Governments' expenditure is concerned, the Planning Commission has emphasised the need for giving high priority to the outlay on agriculture. The States have been rightly warned against the tendency to divert funds from agriculture and co-operation to other schemes. In order to be able to achieve the third plan target of 100 million tons of foodgrains a year and to achieve higher outputs of raw cotton, jute, sugarcane, oilseeds and other cash crops, it is necessary not only to strengthen the agricultural administration in the States, but also to provide for a larger outlay on irrigation and farm production programmes.

Sugar Company Land Take-over Void

The Maharashtra High Court has declared Section 28 of the Maharashtra Agricultural Lands (Ceiling on Holdings) Act *ultra vires* of the Constitution and hence void, while saving the rest of the Act. This ruling has been given in a special judgment on the writ petition filed under Article 226 of the Constitution by certain sugar companies and owners of sugarcane lands challenging the validity of the Act. Section 28 of the Act made a special provision for land taken over from industrial undertakings in order to ensure efficient cultivation and continued supply of raw material. The Act seeks to secure the distribution of the agricultural land to landless and other persons, and the imposition of a maximum limit on the holdings of agricultural land in the State and for providing for the acquisition of land in excess of the ceiling. Their Lordships felt that vesting surplus land in the Maharashtra State Farming Corporation would bring into being a state of things contrary to the very purpose of the enactment. Section 28 has been held repugnant to the Constitution as the acquisition of lands was not for a public purpose; nor was it an agrarian reform. The competence of the State to pass a ceiling Act like the Maharashtra Agricultural Lands (Ceiling on Holdings) Act has, however, been upheld.

The High Court judgment is likely to create a complicated situation as several sugar companies are known to have already surrendered their surplus lands to the State Government. The uncertainty will naturally persist for quite some time because the State Government is bound to take the matter to the Supreme Court. The stock market's immediate reaction to the High Court ruling has been to mark up sugar shares, but it might prove to be risky to "bull" sugar shares purely on the basis of the Court ruling declaring Section 28 as null and void, because of the Constitution (Seventeenth Amendment) Bill which is now being examined by the Select Committee. This Bill seeks to amend Article 31A of the Constitution which provides that notwithstanding anything contained in Article 13, no law providing for acquisition by the State of any estate or of any rights therein, or the extinguishment or modification of any such right shall be deemed to be void on the ground that it is inconsistent with or takes away or abridges any of the rights conferred by Articles 14, 19 and 31. The expression "estate" contained in Article 31A is sought to be amended so as to include therein lands held under Ryotwari settlement and all other lands for which provisions are normally made in the Land Reform Enactments. In addition, the Bill seeks to add to the Ninth Schedule of the Constitution 124 State Enactments passed during the last 13 years in order to remove any uncertainty or doubt which may arise concerning their validity. The proposed amendment will have far-reaching implications. Business circles feel that it would leave great scope for arbitrary action by the executive in the acquisition of Ryotwari land or any other land held or let for purposes of agriculture. The Indian Merchants' Chamber has represented to the Central Government not to put through the proposed amendment.

Protection for Piston Assembly

The Central Government has accepted the Tariff Commission's recommendation to continue protection to the piston assembly industry for a further period of three years, that is, up to December 1966, at the existing rate of protective duty. Although the industry has made considerable progress in recent years, indigenous production of pistons, piston rings and gudgeon pins by the four major producers in the organised sector and some 80 units in the small-scale sector is still far short of the country's requirements. Protection is, therefore, necessary for the stabilisation and future expansion of the industry. In the absence of imports on account of restrictions, comparison of all types of indigenous products with the corresponding types when imported is not feasible. But if taken with due weightage of products for the costed units, the average disadvantage, according to the Tariff Commission's report, works out to 22 percent of the c.i.f. value which is lower than the present landed cost with duty at the protected rate of 50 percent plus a 10 percent surcharge. For this reason alone, the Commission has not recommended any reduction in duty. Till indigenous raw material becomes readily available at prices comparable with those at which overseas producers are able to get, a certain disadvantage will persist. The Commission has, however, strongly deprecated the practice of marking up the prices of motor-vehicle spares at 70 percent or 100 percent over the landed cost of imported products, particularly when a higher rate of protective duty is taken as part of the landed cost. Producers have been advised not to show any complacency concerning their performance by comparing their current selling prices with such mark-up over the landed cost, including the duty on imported products.

The acid test of an industry having properly established itself under the shelter of protection is the extent to which, by achieving economies of output, it can gradually bring down prices so that part of the benefit of protection can be passed on in later years to the consumer who had to bear the full impact of the burden in the early stages of protection. Fortunately, with good technical collaboration, the piston assembly industry has developed satisfactorily and the quality of its products has improved considerably. The manufacturers are now more confident about diversifying production. But the size of the domestic market as such precludes the producers reaching a unit size and product economy comparable with that of the main motor-vehicle or ancillary producers overseas. Higher efficiency in operation, coupled with a comparative lower conversion cost a unit, will alone help domestic industry to face open competition. Economies of large-scale production will only accrue with the implementation of the expansion plans involving substantial capital investment which the main producers have already on hand.

In view of the rising targets of demand and the installation of capacities of new units before 1965-66 being unlikely, shortages are likely to develop if the expansion plans of established producers are not expedited and priority accorded to them in the matter of releasing foreign exchange. The main producers have pointed out certain lacunae in the import control policy. They contend that neither the protective duty nor the restriction on imports has been able to check effectively this, some consumers, particularly of agricultural tractors, have complained against the meagre allocation of import quota and suggested the issue of actual user licences for items not available indigenously. The Commission has suggested that in order to remove the complaints of producers, the list of restricted categories of pistons should be revised so that the indigenous industry may be helped and import restrictions relaxed where small and special requirements of customers cannot be economically met by indigenous producers.

WONDER-WORKER

IN *The Mystics, Ascetics, and Saints of India*, by John Campbell Oman (T. Fisher Union, 14s. net) the author tells a story of a wonder-worker, a certain Hassan Khan, well known in Calcutta some thirty years ago, whose performances could not be easily matched. He was not a conjuror, nor in any way a professional performer, but sometimes he could be induced to show his powers. One was that of producing at will bottles of European wine which bore the label of a well known firm. Once when a fellow traveller by railway said he wanted a "drink" "Put your hand out of the window," said Hassan Khan. The traveller did so and had a bottle of wine put into it. The man's explanation was that he was served by a djinn whom he had learned to control by mystic signs taught him by a Hindu whom he had protected from insult. If Hassan Khan is still among the things that are seen and temporal, I would like to make his acquaintance, not alone on the score of satisfying my occasional thirst, but of having a talk with one of a class of men said still to exist in India but who apparently never reveal themselves to Europeans. If there are any old residents in Calcutta whose memory goes back upwards of thirty years and who knew Hassan Khan, or even about him, I would be glad to hear from them. The djinn who was able, at Hssan Khan's bidding to make so free with some wine merchant's cellar belonged, according to Mahommedan Mythology, to a class of spirits somewhat lower than angels, made of fire, and excercising supernatural influence over mankind both for good and evil. They are called genii in the *Arabian Nights Entertainments*. When they appeared in Human form the good ones were handsome and the evil ones hideous. Hassan Khan's djinn must have been one of the handsome order.

A Ditcher's Diary

AS WE BEGIN TO LOOK FORWARD ALREADY TO THE END of 1963—myself no less impatiently than the rest—I imagine to most of us it will seem, in retrospect, to have been a thoroughly dismal year. It is no consolation to be told that others have been worse; nor is it necessary for once, to heed the admonition of the proverb which implored the ancient Latins to speak not ill of the year till it be gone. The last two months of 1963 could not possibly be gloomier than the first ten months have been; only in that measure could our pessimism be circumscribed. For *Capital*, however, 1963 is a very special year and Wednesday of next week will be a very special day; assuming regretfully that the world survives until then, the achievement will be duly recorded in an issue of this newspaper on the following Thursday—an issue which will mark our having completed seventy-five years of publication and entered the seventy-sixth. I am well aware of the dictates of fashion which prescribe that birthdays be celebrated with lavish tea-parties, complete with cakes and ale and windy speeches. We shall desist from inflicting upon friends and well-wishers so mortifying an experience. Devoted, as ever, to the supply of provender for the soul rather than the stomach, we shall commemorate the occasion instead by issuing a special seventy-fifth birthday number in December this year as an alternative to our Annual Supplement—a special number, incidentally, which we hope will contain articles from rather more than the usual quota of distinguished contributors.

THAT, HOWEVER, IS NOT OUR MAIN CONCERN for the time being; the more immediate interest centres on the circumstance that this week marks the rebirth of an institution which, although younger than *Capital*, is no less valued—the institution being, of course, the *Capital* Christmas Toy Fund, which is now open for subscriptions. With sorrow, I have to record that last year the Fund did not prosper: total collections were only Rs. 3,580, against Rs. 4,410 in 1961. But, considering the orgy of fund-raising at the time, to fight an invasion that almost was, we perhaps did not do too badly. This year, the rapacity of the tax-collectors remains undiminished, but the appeals to charity are perhaps not as numerous. The generosity of old contributors, and of several new ones each year, therefore moves me to hope that the disappointing shortfall of 1962 will be more than made up by the liberal donations of the coming eight weeks. Please remember that the Fund provides small, inexpensive toys to thousands of children on Christmas morning; and for the vast majority of them, the only gift they receive is the one that comes from the readers of *Capital*. The children, without exception, are all poor: many are orphans; and in distributing our toys we take no account of race, colour, caste or creed. Few causes can be as worthy as the one the Fund represents: the effort to bring a little happiness into the lives of young ones far less fortunate than ourselves. So please be liberal: send as much as you can, as soon as you can. Cash, cheques and toys for the little ones—all are welcome, addressed to *Capital* Christmas Toy Fund, 5 Mission Row, Calcutta 1.

SO I WAS WRONG ABOUT MR. BUTLER; BUT THEN, so were many millions of others. Not that there was any real excuse for being. When I look back I begin to suspect strongly that in fact it was Lord Home all the time: Mr. Macmillan had it fixed a few hours after entering hospital, perhaps even before. What happened subsequently was simply a ruse to convince the British electorate and the less discerning members of the Tory Party that in fact there was only one possible choice. I am surprised the Conservatives tolerated such eyewash, although they themselves never tire of reaffirming that for them unity comes before everything. Apparently Messrs Macleod and Powell do not think so. But as Mr. Macmillan put it afterwards in the tones he usually reserves for pariahs, no doubt they will work their way back in time. For the rest, and especially for Mr. Butler, it has been simply a question of making the best possible job of an ingeniously contrived, but nevertheless blatant, *fait accompli*. The fact they have done so in such double quick time must be a tribute to something or other, but perhaps I may be forgiven if I cannot quite put a name to it at the moment. Will Sir Alec Douglas-Home make a good Prime Minister? Quite honestly I do not know enough about him to judge; nor for that matter does the vast majority of the electorate. But I do think the Conservatives will find him a big risk. When discussing Mr. Macmillan's resignation two weeks ago I spoke about "the image of faded aristocracy which still dogs the Conservative leadership". Well, there you have it: who personified that better than the fourteenth Earl of Home? I am not under-estimating the British love of a Lord, even one who has renounced his title. But I can see what Mr. Wilson is driving at when he questions whether such a man can possibly understand the problems of ordinary people in the twentieth century. In the hands of skilful opposition, the point could be a certain election-loser for the Conservatives. And it is no answer for Sir Alec Douglas-Home to say, as he has done, that because of his experience in farming everything is going to be all right. The British people have little in common with Scottish grouse, and their complicated economic society cannot be run on the lines of an eighteenth century deer-park. One only hopes for Britain's sake that Sir Alec's undoubted personal qualities prove sufficient to outweigh his obvious lack of professionalism. But I should imagine there is not going to be any hurry to consult the electorate: Britain's new Prime Minister will be too eager for achievements before he risks his Government at the polls. There should be consolations in next April's Budget.

THERE IS, FOR OLD-FASHIONED FOLK LIKE ME, something odd about Government servants, past and present, criticising the Government and its policies. Even if Mr. Nehru had not decided to act at once as Prime Minister as well as Leader of the Opposition in this country—a point made here some years ago and adopted since by, of all people, Dr. Ram Manohar Lohia!—the mix-up between the public sector and the private was certain to blur the necessary dividing line. Mr. Nehru, bound by no norms or rules (with some good side-effects), lately criticised the monster the Planning Commission had grown into, not only under his very eyes but also with his presumed indulgence; this was curious but welcome. Mr. A. K. Chanda, former Auditor-General and Comptroller, apparently took this as a cue and then proceeded to say some rather harsh things about planning in general and the Planning Commission in particular. I have not always been kind to either; but then I am not a former Government servant. Mr Chanda's side of the argument must also be placed on record: he knows more than most people about the ways of the Government and private enterprise and is thus more than usually qualified to speak on the respective demerits of both. It still looks somewhat odd. Anybody who points to an evil in public life does something useful; I am the first to admire criticism of the kind Mr. Chanda lately came out with. Yet, apart from the question of propriety, there is that of what I have in the past called "innocence by dissociation". Mr. Chanda's case against the public sector or the private, it doesn't matter which, would be so much stronger if his independence of interest could be easily demonstrated. I, as a journalist, am entitled to theorise: it is not so obvious that Government servants not quite in retirement also are.

DID INDIA I WONDER, SEND A DELEGATION TO THE recent International Conference on Tourism? If she did, I read nothing about it in the Calcutta papers, although that may have been my fault. It was

the first conference of its kind, it was held in Florence, and from what I have heard subsequently this country could have learned a good deal from what passed there. Interest in tourism here has not been what it should be since the Chinese attack last year. I suppose that is only to be expected; tourists themselves have been thinking twice before paying us a visit. But tourism is still a valuable foreign-exchange earner and it is distressing to think that we are neglecting it, since India has so much to offer visitors, especially those who are getting tired of the usual haunts. One of the more prominent of these, Italy, has recently found her tourist trade declining in relation to the world's as a whole, although last year the number of visitors topped the 20-million mark, and the earnings from tourism are still the largest single item in the national revenue. The Italians themselves have been discussing their problem with a great deal of frankness, and their conclusions are that the main reasons may be noise and dirt. I would certainly agree on the former. Noise these days has become inescapable in Latin countries; I have always myself put it down to some long-dormant predisposition in the local character brought to life by the advent of the motor-scooter. It is the same in France, although the popularity of the French Riviera continues to grow immoderately, a fact which, at least this year, can hardly be ascribed to the weather. I was struck some years ago by the contrast between the French and the German-speaking parts of Switzerland in the degree of noise emitted: compare Lausanne or Neuchâtel with Freiburg or Berne. So it must be a matter of communal temperament. I suppose it would be unfair to say categorically whether any communities in India are "noise prone", although I have my suspicions. But mercifully the motor-scooter is still a novelty here, and although heavy lorries and low-flying aircraft are more common than a few years ago, they are still not the problem they have become in Europe. That might be a good reason why India could gain some of the tourist traffic which is by-passing Europe these days. It may be true that there is nothing noisier than an Indian bazaar, and all visitors like to see those. But there are still vast areas of this country where peace and quietness are the features of a traditional life. Before they disappear, and I suspect eventually they will, there is just a chance that with a bit of initiative we could turn them to excellent advantage.

EACH YEAR IN THIS DIARY I DRAW ATTENTION TO the season's concerts to be given by the Calcutta Symphony Orchestra. This year, however, there is to be a rather special concert season. Forty years ago, on 25th November, 1923, the first symphony concert was given by the Calcutta Symphony Orchestra, conducted by Mr. A. de Bois Shrosbree and it is to this gentleman and to Dr. Philip Sandre who was then Principal of the Calcutta School of Music, that one has to pay tribute for the enthusiasm and hard work which enabled the Orchestra to grow and flourish through many difficult years. The coming season thus marks the fortieth anniversary of symphony concerts by the Orchestra in Calcutta—a run which has not been broken by war or civil commotion, which has taken place annually and which has given much pleasure to lovers of Western music in this city. The first concert this year is on 7th November; the second, on 28th November, is planned as a gala concert. To celebrate the fortieth anniversary, there are to be seven concerts instead of the usual six. Apart from performances by Daphne Spottiswoode and Liesl Stary, the Orchestra will be accompanying the famous Swedish mezzo soprano, Kirsten Meyer at the gala concert, while the first concert will be given by the Swiss pianist, Paul Baumgartner. The season promises to be an interesting one; and I hope the concerts get the strong support they undoubtedly deserve.

THE ANNUAL REPORT OF THE AVANA ASSOCIATED Bakeries Ltd, of Britain, states that "at the Dowlais factory the automatic tart production plant is working and has effected an improvement in quality, output and production costs."

The company, I am assured, sought no technical guidance from Miss Christine Keeler.

THE DITCHER

Guide for Investors

SELECTIVE SUPPORT FOR TEA SHARES

(BY A SPECIAL CORRESPONDENT)

TEA shares have received selective support during the past month or so. Attention has been concentrated on the shares of good Assam and Dooars gardens. Bishnauth have risen from Rs. 19.06 to Rs. 19.94 and Jaybirpara from Rs. 12 to Rs. 20.31. The rise has largely been due to the improvement in the general investment psychology following hopes of fiscal reliefs. But investors have been cautious since the index for ordinary shares has declined to 141.8 from 143.2 (1952-53 equals 100) a year ago. The confidence in these shares suffered heavily towards the close of 1962 when the Chinese army invaded India. Prices have not recovered since because the border situation continues to remain unsettled. Until the Sino-Indian conflict is resolved, investors are likely to remain cautious.

The political factor apart, the industry's economic condition has not been particularly encouraging. Since only about a month is left to close the plucking season in north India, it is now possible to have an idea about the total crop. Up to the end of September, the north Indian crop has been 16.4 million lbs smaller at 397.8 million lbs, compared with that in the corresponding period of 1962. The shortfall has helped maintain a fairly steady price level for the commodity but it is doubtful whether the estates have benefited from this. It is true that the average price of leaf tea has improved from Rs. 5.65 to Rs. 5.77 a kilogram over the past year, but it is unlikely that this small rise has been sufficient to compensate the tea companies for the fall in output since the production costs have meanwhile risen substantially due to statutory and other obligations.

This besides, the improvement in the average price has not been uniform throughout all districts. The average price for Assam gardens has declined from Rs. 6.25 to Rs. 6.21 a kilogram and that for the Darjeeling ones from Rs. 7.73 to Rs. 7.47 a kilogram over the past year. Under the circumstances, it is unlikely that estates situated in Assam and Darjeeling will make better profits during 1963 than in 1962. But this general observation might not apply to all gardens if the trends of manufacture and offerings are studied more closely. During the current season, several estates have changed over to the C.T.C. process of manufacture not only in Assam but also in the plain tea growing areas of the Dooars, Terai and Cachar. The trend is welcome because the C.T.C. teas have generally become popular exportable types. Internal buyers and blenders have also evinced greater interest in these grades. At the same time, several gardens—particularly in upper Assam—are manufacturing both orthodox and C.T.C. teas simultaneously. Some orthodox manufacture has, in fact, been of such a commendable standard that the requirements of several traditional buyers have been satisfied. These composite gardens have also succeeded in realising remunerative prices for the orthodox teas. As a result, the sale averages of these gardens have been substantially higher than those of comparable gardens producing only C.T.C. teas. So investors will be rewarded if they exercise discretion in buying tea shares.

Judging from the trend of production during October, it is almost certain that the north Indian crop will close with a substantial shortfall during the current season, compared with 1962. So the marketing outlook for the rest of the season is likely to be fairly steady. Bigger support from internal buyers, in particular, is expected in the coming weeks. The small carryover from the 1962 season, combined with the shortfall during the current season, might create a feeling of urgency among internal buyers. The market for Dusts, meanwhile, is expected to remain buoyant. The smaller crop has not, however, been an unmixed blessing because it has not been helpful in promoting exports. Due to the high price of Indian teas, the latter have been difficult to sell in foreign markets against Ceylon and African teas. It is, therefore, necessary to take steps to raise production in the interest of export promotion. Although the Government is providing more funds to tea gardens, it is doubtful whether production can be raised up to the third plan target by merely giving loans to the industry. In view of the less favourable marketing outlook, the industry has not been prone to borrow on a large scale. It is, therefore, time to think whether bolder measures like plantation subsidy and rebate on exports could be adopted to help the industry make progress on sound lines.

Although the statistics relating to internal consumption are not reliable, it has been guessed that domestic consumption declined in 1962. The trade has rightly expressed its concern over the trend. There is no reason to think that the decline in domestic consumption necessarily promotes exports. On the other hand, the importance of a strong internal demand to act as a buffer against possible overproduction cannot be exaggerated. The *per capita* consumption of tea in India is extremely low, but if the tea drinking habit is discouraged, it will be difficult to revive it at a later date.

Over the past month or so, the average price of tea has not risen in spite of the shortfall in the north Indian crop. The reason is that the deficit has been made up by bigger production from south India, Pakistan, Ceylon and Africa. The world supply has, therefore, been about 18.5 million lbs larger at 1,023.5 million lbs to-date. So there is likely to be an abundant supply of the commodity in the world markets. Since the other producing countries enjoy certain advantages compared with India, the latter will meet rising competition in foreign markets. So steps should be taken to make Indian teas cheaper by holding the production costs down and relieving the industry of the onerous tax burdens.

Brooke Bond India Maintains

THE Brooke Bond Estates India Ltd has maintained the taxable ordinary dividend at 7.5 percent for the year ended June 1963, absorbing Rs. 2.63 lakhs. At the present price of Rs. 12.72 a share of Rs. 10 each, the yield works out to 5.9 percent. The profit has risen from Rs. 3.09 lakhs for 1961-62 to Rs. 4.12 lakhs for 1962-63, after increasing depreciation from Rs. 2.88 lakhs to Rs. 3.11 lakhs and providing Rs. 5.40 lakhs (against Rs. 2.85 lakhs) for taxation. General reserve is allocated Rs. 2.50 lakhs and development rebate reserve Rs. 1,200. The carry-forward is Rs. 7,816, against Rs. 2.43 lakhs brought in.

The crop declined by 75,000 kilograms to 1.4 million kilograms. But the directors say that the current crop prospects have become favourable. The average price rose from Rs. 4.75 to Rs. 5.27 a kilogram. The adoption of the C.T.C. process of manufacture has been successful, and the quality of teas has improved. Steps have been taken to install further equipment to improve the standard of production. The extension programme of the estates has made good progress. The directors point to the rising taxation. Direct taxes have absorbed nearly 57 percent of the profits earned by the Company. There have also been a substantial rise in the cost of materials and wages.

Higher Dividend from Brooke Bond, U.K.

BROOKE BOND, which supplies roughly one-third of the tea consumed in Britain, is raising total (tax-free) distribution from 6½ percent to 7½ percent with a final dividend of 5 percent. Net profits have recovered from £2,146,144 to £2,538,587 after paying £388,930 more tax at £3,473,817 and deducting tax adjustment of £55,423 (against nil). World turnover of the group rose from £113,565,000 to a record £117,382,000, Mr. John Brooke reported to the shareholders. Net attributable profits (after deducting minority interests of £62,898, against £72,729) show an increase of 19.4 percent at £2,475,929. This cheerful brew is topped up with a one-for-four scrip issue.

Sales of packed tea and coffee products were again higher, although sales of export teas from Ceylon suffered a temporary setback as a result of strike conditions in the closing months of the year. Results also benefited by the inclusion of a full year's profits from Doom Dooma (£278,887 before tax), compared with three months in 1961-62. Improved profit margins in some overseas offshoots also played a part in the recovery, though profits earned in the U.K. were "not greatly changed." This suggests that margins in the U.K. are under some strain, since home sales accounted for most of the £2,285,000 increase in the half-year turnover reported in April.

The sales increase appears to have slowed down slightly in the second six months of the financial year, showing a gain of 3½ percent, compared with 4 percent at the half-way mark. But overall profit margins have widened significantly from 4.6 percent to 5.1 percent. Earnings have risen from 29.5 percent (or 18.1 percent on a tax-free basis) to 35.4 percent (21.7 percent), leaving the current payment 2.8 times covered. Even allowing for overseas tax burdens (the new Indian tax absorbed £184,150 in 1962-63), this gives ample scope for a further increase in the dividend.

Tata Chemicals Sets New Records

THE impressive rise in the quotation for Tata Chemicals from Rs. 12 to Rs. 18 over the past few months seems fully justified by the Company's excellent performance during the year ended June 1963. Sales, profit and dividend have set new records. Sales are up by about 34 percent from Rs. 5.31 crores to Rs. 7.15 crores and the gross profit has shot up by as much as 156 percent from Rs. 52.69 lakhs to Rs. 1.24 lakhs. The dividend has been raised from 6.5 percent to 10 percent. Since the dividend is payable in full on the new 503,920 equity shares issued in the previous year at a premium of 50nP a share (in 1961-62, these shares were entitled to only one month's dividend), the total distribution among the equity shareholders is substantially larger at Rs. 30.24 lakhs, against Rs. 16.65 lakhs. The increased dividend is being paid on the increased capital after providing large sums for taxation, development rebate and general reserve which did not receive anything in the previous year. In 1961-62, the Company has had to draw on its reserve for the payment of dividend.

The impressive performance is said to be due to record production and increased efficiency allround. Apparently, the Company's expansion programme is beginning to bear fruit. Informed sources expect the Company to show still better results in the current year. Out of the gross profit of Rs. 1.34 crores earned in 1962-63, the directors have provided Rs. 44.18 lakhs (against Rs. 35.75 lakhs) for depreciation, Rs. 41 lakhs (against nil) for development rebate reserve, Rs. 10.49 lakhs (against nil) for taxation and Rs. 3.94 lakhs (against nil) for general reserve. The preference dividend absorbs Rs. 4.28 lakhs (the same) and the ordinary dividend Rs. 30.24 lakhs (against Rs. 16.65 lakhs). After making all these appropriations, there remains a modest surplus of Rs. 3,923 to be carried forward, against Rs. 4,550 brought in.

Case of Calcutta Tramways for Higher Fares

IN his chairman's address at the annual general meeting of the Calcutta Tramways Co. Ltd held recently in London, Mr. David Webb

AIR FRANCE
THE WORLD'S LARGEST AIRLINE
New Delhi — Bombay — Calcutta — Madras — Cochin

has hinted at the possibility of an upward revision of the fare structure. (A fuller version appears on a later page in this week's issue of *Capital*). An increase in the fares is justified on various grounds. There has been a substantial rise in expenses all-round. The costs of electrical energy and materials have risen. There has been an urgent need to put more trams on the road to handle the growing traffic. The equipment also needs to be modernised and brought up-to-date. The Company has, meanwhile, been forced to spend a lot of money due to the various projects of the Government. The new Majerhat bridge and the raising of the Tollygunge bridge have involved the Company in additional expenses. This apart, the emoluments to the staff need to be increased. Mr. Webb has rightly pointed out that these additional costs cannot be met except by increased receipts made possible through a rise in fares.

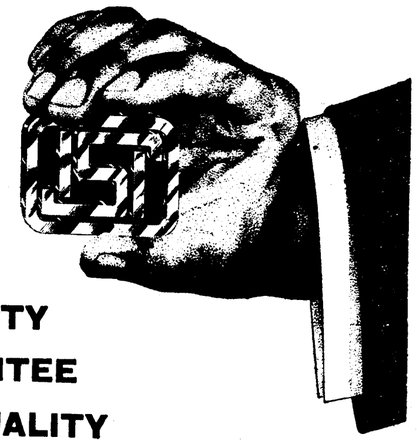
The rising trend of receipts during 1962 has been well maintained in the current year. The track and rolling stock have been brought back to the former first-class condition. The receipts have improved due to the vigilance of the traffic department, and better results are expected in the current year. The chairman has pointed to the heavier taxation which has increased by £14.000 to £86.000. The shareholders' account has received £58.778 for 1962, against £53.252 for 1961, but the sum is still below £87.457 which the shareholders are entitled to, after payment of all expenses and taxation, under the agreement with the Government of West Bengal. The final instalment of the loan received from the Government to cover the expenses in connection with the track realignment at Dalhousie Square was repaid on 1st January, 1963. So in three years £75.000 has been borrowed from and repaid to the Government.

Scindia Steam Raises Dividend

THE Rs. 20-paid share of the Scindia Steam Navigation Company which had been sold down to Rs. 9.76 earlier in the year—a record low for many years—is currently quoted around Rs. 14.40. The sustained support for these shares in recent months reflects the market's growing belief that the Company has at last turned the corner. The market's optimism does not seem misplaced. The preliminary report on the Company's working results for the year ended June 1963, shows a marked improvement over the previous year's performance and this has encouraged the directors to step up the dividend from 60nP a share to Re. 1 a share. What is more, for the first time after four years, the Company is not drawing on its reserves to meet even a part of the dividend distribution.

The gross income of the Company is shown at Rs. 18.20 crores, against Rs. 17.01 crores in 1961-62. Of this, freight and passenger money earned account for Rs. 17.68 crores, against Rs. 16.49 crores in the preceding year. The gross profit is higher at Rs. 3.31 crores, against Rs. 2.46 crores. A sum of Rs. 1.92 crores (against Rs. 1.95 crores) has been set aside for depreciation and allocation to the special depreciation reserve (statutory development rebate reserve) amounts to Rs. 9 lakhs, against Rs. 64.50 lakhs. While no provision had been made for taxation in the preceding year, the directors have provided a sum of Rs. 68 lakhs out of the 1962-63 profit. The proposed dividend absorbs Rs. 56.32 lakhs, against Rs. 33.79 lakhs in 1961-62. The Company's working during the current year is stated to be quite encouraging. According to the latest information received from the Company, the net dividend for 1962-63 will work out to 74nP instead of 70nP because out of the gross dividend of Re. 1 a share, no tax deduction will be made from 18nP which is exempted from taxation.

No Bonus and Rights from Morarji Mills



IN spite of an increase of about 26 percent in the sales from Rs. 4.61 crores to Rs. 5.82 crores, the gross profit of Morarji Goculdas Spinning and Weaving Company for the year ended June 1963, shows a small decline from Rs. 73.43 lakhs to Rs. 71.17 lakhs. Since the Company has had to make large provisions for bonus to employees and for depreciation and development rebate, the dividend has been reduced from 24 percent to 20 percent, that is, from Rs. 24 to Rs. 20 a share. Even for the payment of the reduced dividend, the directors have had to draw heavily on the reserves. They have also decided not to issue bonus and rights shares which had already been approved by the shareholders. Last year the Company had resolved to issue one bonus share for every three equity shares held and this was to be followed by a one-for-two rights issue. The bonus issue is said to have been given up because of the setback in the Company's working results which have compelled the management to reduce the dividend even on the existing capital. The rights issue is said to have been dropped because of the insistence on heavy premium by the Controller of Capital Issues.

Allocations include managing agents' commission Rs. 1.56 lakhs (against Rs. 5.50 lakhs), additional provision for bonus to employees for 1959, 1960, 1961 Rs. 18.85 lakhs, depreciation Rs. 36.21 lakhs (against Rs. 17.26 lakhs), development rebate Rs. 13 lakhs (against Rs. 3.35 lakhs) and taxation Rs. 8.90 lakhs (against Rs. 26 lakhs). The preference dividend absorbs Rs. 1.11 lakhs (the same) and the equity dividend Rs. 10.35 lakhs (against Rs. 12.42 lakhs). The directors have withdrawn Rs. 17.72 lakhs from general reserve which had received Rs. 8.25 lakhs in the previous year. Additions to assets made during the year amounted to Rs. 1.48 crores. In 1962-63, the Company had acquired the assets of B R. Cotton Mills for a compensation of Rs. 1 crore. The Rs. 100-paid share of Morarji Mills is currently quoted around Rs. 395.

West Coast Paper Pays More

THE West Coast Paper Mills Ltd has reported highly encouraging results for the year ended June 1963. Production, sales, profit and dividend —all are higher compared with the previous year. Production of paper has increased from 25.604 tonnes to 27.252 tonnes. Sales are higher at Rs. 4.83 crores, against Rs. 4.36 crores. The gross profit has increased from Rs. 92.27 lakhs to Rs. 109.87 lakhs. The steady improvement in the Company's working results has encouraged the directors to raise the dividend for the third successive year to 11 percent, against 8 percent in 1961-62, 7.5 percent in 1960-61 and the maiden dividend of 6 percent in 1959-60. Apart from higher production, the increase in the Company's turnover in 1962-63 is attributed to the rise in paper prices with effect from 21st June, 1962.

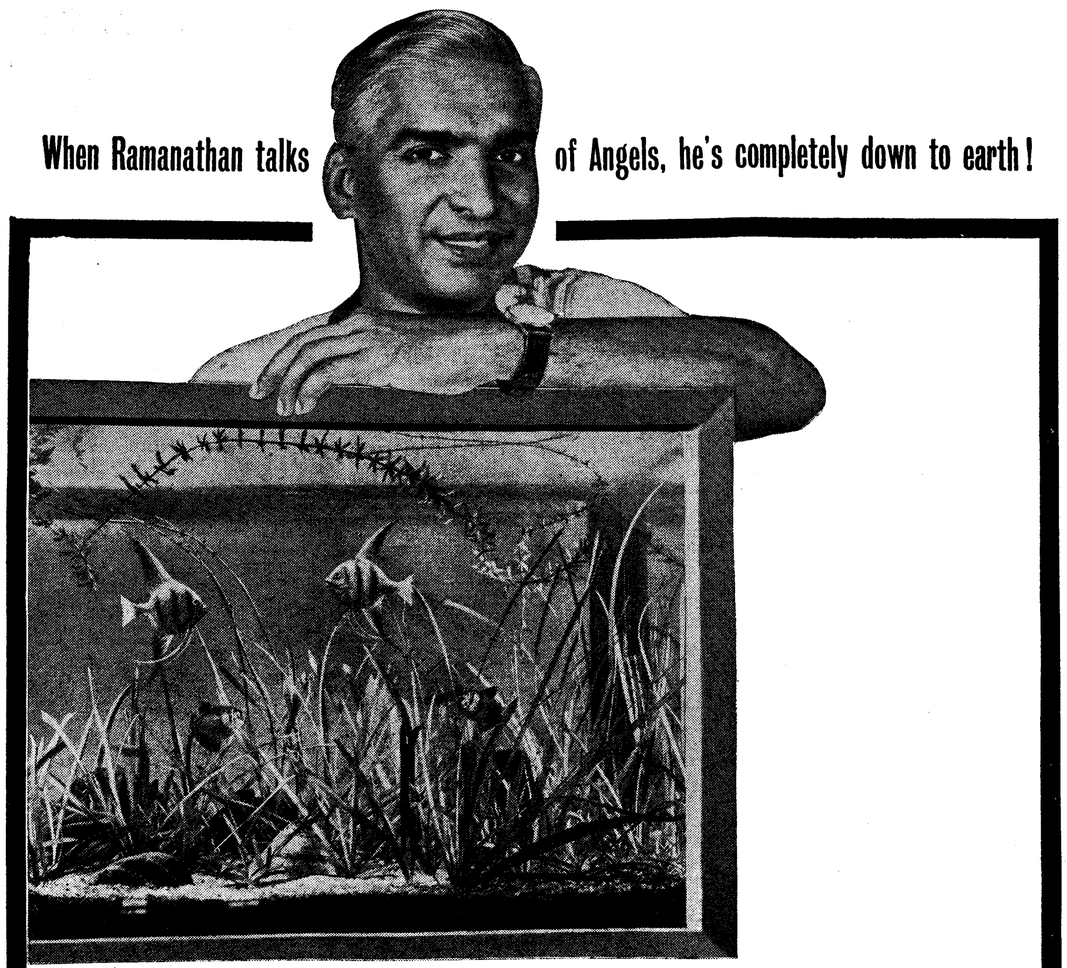
Appropriations of the year's profit include depreciation Rs. 39.38 lakhs (against Rs. 39.12 lakhs), development rebate reserve Rs. 75.000 (against Rs. 25 lakhs), taxation Rs. 10 lakhs (against nil), general reserve Rs. 39 lakhs (against Rs. 7 lakhs), preference dividend Rs. 7.02 lakhs (the same) and the equity dividend Rs. 16.5 lakhs (against Rs. 12 lakhs). After making these appropriations, there remains a surplus of Rs. 6,036 to be carried forward, against Rs. 2.84 lakhs brought in. Part of the dividend for 1962-63 is likely to be exempted from income tax as the management feels that part of the year's profit should be exempted from payment of tax under Sections 84 and 101 of the Income Tax Act, 1961. The exact amount of the tax-free dividend will, however, become

ISI Certification Mark is

A THIRD-PARTY GUARANTEE OF QUALITY

When you see the ISI Certification Mark on any article you buy, you can be sure of its quality and performance. For, the ISI Mark is affixed only on goods in the production of which appropriate materials have been used, the processes have been under strict control, and tests at various levels have been properly carried out, so that they conform to the requirements of the relevant Indian Standards.

Before granting a licence to a manufacturer to use the ISI Mark, the Institution makes a thorough inspection of the machinery and equipment at the factory, the manufacturing processes and facilities for testing and satisfies itself completely about the capability of the factory for producing goods uniformly according to Indian Standards not only at the time of inspection but also continuously in the future.



During the operation of the licence, the Institution exercises a continuous control over the production inspection of the licencee, as the ISI Mark is a third-party guarantee of the quality of products.

As a consumer, exercise your right to get full value for your money by insisting on buying goods bearing the ISI Certification Mark.

When Ramanathan talks of Angels, he's completely down to earth!

'Angel fish,' says Ramanathan 'are among the nicest things with fins.' He's kept an aquarium for six years and has a vast reservoir of fish lore. 'My Black Mollys and Swordtails,' he says, 'have reproduced half a dozen times.' The only fish which produce live young, they have large families. Ramanathan rears fish as he does most things with deep interest, care and knowledge. Ramanathan is a Fuelling Superintendent with Burmah-Shell, New Delhi.

SIMPLE PISTONS . . . SOPHISTICATED JETS. His job is to supervise the receipt/storage/delivery of aviation fuels. It's a complicated and difficult task. There are many grades of aviation fuels that must meet the highest standards of quality; oils and specialities; aircraft ranging from simple pistons to sophisticated jets; time schedules—worked to the minute. Constant vigilance is an absolute necessity. And there's the question of speed,' says Ramanathan. 'A record 45 litres per minute in 1943 when I joined and 4,500 litres per minute now.' Presently on a special assignment at the Branch Office, Ramanathan co-ordinates quality control, equipment and stores for eight airfields in the Delhi area.

TODAY, AS EVER, PEOPLE LIKE RAMANATHAN ARE WORKING FOR YOU. 'Ramanathan,' says a colleague, recalling Kipling, 'can move with kings and keep the common touch. He's friendly and respected.' His interests are few and simple. They include a good library and travel. 'I've seen India,' Ramanathan says, 'working for Burmah-Shell!' Ramanathan and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work . . . working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

known only when the certificate from the Income Tax Department is received. The Company's working during the current year is said to be as encouraging as in the previous year. The Rs. 100-paid share of West Coast Papers, which could be had around Rs. 125 earlier in the year, is currently quoted around Rs. 165.

Prospects for John Fowler (India)

THE recent offer of shares by John Fowler (India) Ltd has met with a warm response in view of the good business the Company has been transacting and the expansion it has undertaken. The issue has been thrice over-subscribed. At the inception, the Company used to import spare parts and service road rollers supplied by John Fowler and Co. (Leeds) Ltd. With the restrictions on import, and the decline in the supply of road rollers, the Company started manufacturing ventures in the country itself. It has entered into an agreement with Vokes Ltd of the U.K for producing filters and elements for mobile and stationary internal combustion engines. Encouraged by the results, the Company has negotiated with Stream-Line Filters Ltd of the U.K. for manufacturing lubricating and insulating and aviation oil and fuel filters. The necessary collaboration agreement has been finalised. It has also made an agreement with Vokes Cardwell Ltd of England to produce tobacco-processing machinery used for the primary processing of tobacco.

Land has been acquired to set up a new factory in Bangalore. The income from the new factory will enjoy the usual tax benefits available to a new industrial undertaking. The cost of the project has been estimated at Rs. 12.67 lakhs. Arrangements have been made to obtain the necessary raw materials from foreign and domestic sources. Under the licences, John Fowler (India) will enjoy the exclusive privilege of producing these goods. Since the scope of the industry served by its products is very wide, the prospect is considered encouraging. There has been a good demand for the products of the Company and its turnover should improve with the installation of the new factory. The directors are confident of earning good profits and pay reasonable dividends in due course.

Tube Investments Earns Less

THE preliminary report on the working of Tube Investments of India Ltd, Madras, for the year ended July 1963 shows a further setback. The gross profit is down from Rs. 1.35 crores to Rs. 1.29 crores. The dividend has been maintained at 10 percent for the fourth year in succession. Out of the gross profit, the directors have provided Rs. 40.43 lakhs (against Rs. 37.11 lakhs) for depreciation, Rs. 3.22 lakhs (against Rs. 20.76 lakhs) for development rebate and Rs. 45.25 lakhs (against Rs. 40.60 lakhs) for taxation. The net profit amounts to Rs 40.08 lakhs, against Rs. 36.87 lakhs. From this, a sum of Rs. 13 lakhs (against Rs 15 lakhs) has been set aside for general reserve, Rs. 2 lakhs (the same) for dividend equalisation reserve and Rs. 3.58 lakhs (against Rs. 4 lakhs) for additional tax liability in relation to the previous year. After providing for the proposed dividend which absorbs Rs. 25 lakhs (the same), there remains a surplus of Rs 50,510 to be carried forward, against Rs. 4 lakhs brought in. The Rs. 100-paid share of Tube Investments is currently quoted around Rs. 213 cum dividend, offering a gross return of about 4.9 percent.

Kusum Engineering Earns More

THE Kusum Engineering Co. Ltd has made a profit of Rs. 73,256 for the year ended March 1963, compared with one of Rs. 42,635 for 1961-62, after transferring Rs. 85,701 (against Rs. 82,237) to depreciation. The taxable ordinary dividend of 6 percent has been declared to absorb Rs. 25,864. Taxation is allocated Rs. 25,165 and general reserve Rs. 67,230. The carry-forward is Rs. 28,777, against Rs. 73,771 brought in. Sales rose from Rs. 15.66 lakhs to Rs. 16.98 lakhs. The directors say that the working has been interrupted by the shortages of raw materials, power and coal. The productive capacity of the machine shop has increased and the steel foundry has been expanded. There has been a rising demand for the Company's products.

W. S. Insulators Share Offer

THE offer of shares by W. S. Insulators of India Ltd should meet with good response in view of the fact that there is a rising demand for the products the Company will manufacture. (Details of the share issue are published on a later page in this week's issue of *Capital*). The Company will build a factory in Chingleput, Madras, for producing electro porcelain products consisting of H.T. insulators of all types and distribution apparatus like lightning arresters and fuse cutouts of all voltages and types. The original licensed capacity has been doubled to 4,800 tons a year by an expansion licence already granted. Technical collaboration has been arranged with Messrs Westinghouse Electric International Company of the U.S.A. The foreign collaborators will also participate in the share capital of the Indian Company.

The issued capital of the Company is Rs. 1.10 crores consisting of 900,000 ordinary shares of Rs. 10 each and 20,000 cumulative preference shares of Rs. 100 each. The foreign collaborators will take up shares worth Rs. 238,750. The directors and their friends will subscribe for shares of Rs. 20.11 lakhs. The Life Insurance Corporation is taking up ordinary shares of Rs. 5 lakhs. The remaining 625,000 ordinary shares and 20,000 preference shares are being offered to the public for subscription at par. Preference shares carry a fixed dividend of 9.5 percent which is considered attractive. The list opens on 6th November, 1963. The entire public issue has been underwritten.

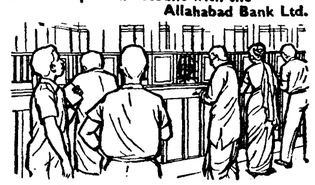
The capital outlay is estimated at Rs. 2.06 crores. The Industrial Credit and Investment Corporation has agreed to give a foreign exchange loan of Rs. 58 lakhs, and a rupee loan of Rs. 10 lakhs. Production may begin by the end of 1964. The Company will enjoy all tax benefits available to a new industrial undertaking.

Burma Corporation Makes Profit

THE Burma Corporation (1951) Ltd produced 160,512 tons of ore for the year ended June 1963, compared with 38,266 tons for 1961-62. The gross revenue has risen from £472,853 to £2,161,470. Expenditure has increased from £484,178 to £1,988,078. A sum of £86,175 (against £20,527) has been provided for depreciation. So the net profit has amounted to £87,217, compared with a loss of £31,852 for 1961-62. Capital expenditure has risen from £5,063 to £50,940.

The directors have pointed out that it has been decided to close the Corporation's accounts for the 15-month period ended September 1963, instead of the usual year of June 1963 in order to conform to the new Burma Income Tax Act Amending Law 1963. So the net profit and loss account and the balance-sheet will cover the 15-month period mentioned and their issue may be somewhat delayed.

Textool Profit Rises



THE working of Textool Co. Ltd for the year ended April 1963, has resulted in a net profit (before taxa-

J. Ritchie
General Manager

ACI-AB-29

tion) of Rs. 21,58,791, after providing Rs. 5,75,865 for depreciation, compared with the previous year's net profit of Rs. 20,21,965, after providing Rs. 4,47,835 for depreciation. With the balance of Rs. 16,127 brought forward from the previous year and with a sum of Rs. 50,000 transferred from dividend equalisation reserve, the total available for appropriation comes to Rs. 22,24,918. Out of this, provision for taxation is higher at Rs. 9,20,000 (against Rs. 5,70,000). A sum of Rs. 200,000 is transferred to development rebate reserve (against Rs. 1,80,000), and bonus paid for the prior years amounted to Rs. 4,47,753. Donations and contributions totalled to Rs. 25,849. Share issue expenses amounted to Rs. 4,634. A dividend of 12 percent is declared on the increased capital (against 15 percent), and this dividend accounts for Rs. 6,23,550 (against Rs. 5,95,481 last year). The balance of Rs. 3,132 is carried forward. Provision for taxation includes that for super profits tax for the years ended April 1962 and April 1963, which amounts to about Rs. 1,90,000.

An encouraging feature is that turnover has increased by about Rs. 36 lakhs over that of last year. The directors point out that although the prices of raw materials as well as stores have increased, the management has not raised selling rates appreciably. It is also reported that the new branch factory in Singanallur, which was commissioned in the latter half of 1962, for production of fly frames, has not gone into full production.

Outlook for Inchcape

THE chairman of Inchcape expects satisfactory results again. During the year ended 31st March, 1963, profits before tax were up from £1.1 million to £1.2 million and the dividend was raised by one point to 16 percent. But the current period will certainly not be without its problems. One example is the ending of a valuable agency held by the U.K. merchant banking, travel agency and secretarial subsidiary of Gray, Dawes. Another is the rapidly shifting world economic and political situation to which this worldwide concern is susceptible.

Still, last year had its full share of these latter problems and they did not stifle the advance in income from the U.K., Australian, North American, Indian and Pakistani assets. For the future, the improving east African political climate, the development of the U.K. merchant banking service, interests in tea and coffee vending machines and hydrofoil marine craft, and the rising sales of Kilburn and Company in India, are among the more encouraging points in Lord Inchcape's review.

For the second year in succession, Lord Inchcape gives a table showing the group's sources of income in terms of book value at 31st March. This shows that British interests represented a higher proportion of group assets and income in March 1963, than in March last year. They held 36 percent of total assets, against 35 percent, and contributed 26 percent of income, against 23 percent. The Persian Gulf and east Africa represented a smaller part. Their share of group assets fell from 27 percent to 26 percent, and they supplied 27 percent of income, against 31 percent. India and Pakistan retained the major share, practically unchanged, representing 38 percent of assets and 47 percent of income. Bank loans and bank customers' balances of £5.26 million are well matched by liquid funds, but the chairman's observations on the need for a high level of retentions can be taken as a warning not to read any immediate dividend significance into the proposed one-for-two scrip issue.

Consolidated Coffee Pays More

THE directors of Consolidated Coffee Estates Ltd have recommended a higher dividend of 20 percent on the ordinary shares for the year ended June 1963 (against 15 percent in the preceding year). According to the preliminary figures, the net profit of the Company for the year amounts to Rs. 18,19,961, against Rs. 13,50,234 in the previous year. Adding to this profit a sum of Rs. 1,86,053 brought forward, and also Rs. 1,25,000 being provision for taxation relating to previous years no longer required, the total surplus available for appropriation comes to Rs. 21,31,014. Out of this, a sum of Rs. 300,000 is transferred to generel reserve, and Rs. 2,70,000 is transferred to dividend equalisation reserve. Super profits tax for previous year amounts to Rs. 10,000. The dividend on preference shares at 6.24 percent subject to tax, amounts to Rs. 1,17,000. The ordinary dividend of 20 percent amounts to Rs. 14,31,000. The balance of Rs. 1,607 is carried forward.

S. B. Joshi and Company Fares Well

SHAREHOLDERS of S. B. Joshi and Company have no reason to feel uneasy over the cut in the dividend for the year ended June 1963 from 15 percent to 12 percent as the dividend for 1962-63 is on a substantially larger capital with the result that the total distribution among the equity shareholders is appreciably higher at Rs. 1.15 lakhs, against a mere Rs. 17,984 in the preceding year. The Company has done very well indeed. Its turnover at Rs. 82.21 lakhs shows an increase of about 23 percent over the 1961-62 figure of Rs. 67.05 lakhs. The gross profit has risen nearly three-fold from Rs. 2.57 lakhs to Rs. 7.23 lakhs. Provision for depreciation has been raised from Rs. 1.16 lakhs to Rs. 1.76 lakhs and for development rebate reserve from Rs. 18,500 to Rs. 84,300. After providing Rs. 2.99 lakhs (against Rs. 48,000) for taxation, the net profit amounts to Rs. 1.75 lakhs, against Rs. 1.26 lakhs. Allocation to general reserve is lower at Rs. 60,000, against Rs. 75,000. The proposed dividend absorbs Rs. 1.15 lakhs (against Rs. 17,984), leaving Rs. 87 to be carried forward, against Rs. 11,847 brought in. The Company, it is stated, has an adequate volume of work secured to maintain the turnover for the next three years. The Company issued equity capital of Rs. 19.36 lakhs in September 1963. The new shares rank for dividend for the current year.

Sirpur Paper Disappoints

THE preliminary report on the working of the Sirpur Paper Mills Ltd during the year ended June 1963, shows that the Company has fared badly. The gross profit had declined sharply by about 54 percent from Rs. 84.06 lakhs to Rs. 38.49 lakhs which, of course, was not altogether unexpected because of the closure of the mills for nearly three months early in the year. The sharp decline in the profit has obliged the directors to reduce the dividend from 8.5 percent to 5 percent, that is, from 85nP to 50nP a share. Even for the payment of the reduced dividend, the directors have had to withdraw Rs. 11 lakhs from general reserve and Rs. 5 lakhs from contingency reserve. Out of the year's gross profit of Rs. 38.49 lakhs, the directors have provided Rs. 32.46 lakhs (against Rs. 39.05 lakhs) for depreciation and Rs. 3 lakhs (against Rs. 7 lakhs) for development rebate. The proposed dividend absorbs Rs. 18.04 lakhs, against Rs. 28.75 lakhs in the previous year.

The directors think that the Company has no income tax liability for 1962-63 due to the carry-forward of unabsorbed depreciation and development rebate of the previous years. In spite of the Company's disappointing performance, the quotation for the share of Sirpur Paper has firmed up from Rs. 12.76 to Rs. 13.40 on considerable influential support.

Oriental Power Cables Shows Loss

THE directors of Oriental Power Cables Ltd state in their second annual report for the year ended May 1963 that the Company is likely to go into regular production by April 1964. The erection of machinery is expected to be completed by March. The trial production of certain section of the plant in Kota, Rajasthan, is likely to start in January. The Company has received the licence for the import of plant and machinery worth Rs. 90.90 lakhs. The suppliers of foreign machinery have already shipped about 56 percent (in terms of value) of the machinery and a considerable part of it has also reached the factory site. Arrangements have also been made for the import of raw materials. The Company has executed a regular mortgage deed in favour of the Industrial Finance Corporation for the loan of Rs. 85 lakhs agreed to be granted to the Company against its existing as well as future fixed assets.

The Company's accounts for 1962-63 show a small loss of Rs. 19,211 (against Rs. 12,973), after providing Rs. 27,000 (against nil) for taxation and after transferring Rs. 5.79 lakhs to construction account expenditure. This loss, together with the loss of Rs. 12,973 brought forward from the previous year, is being carried forward.

United Carbon will Enter Market Soon

UNITED Carbon Ltd, which proposes to undertake the manufacture of carbon black, furnace black, gas black, natural gas black, etcetera, in collaboration with the United Carbon Company of the U.S.A., will soon be in the market to raise funds required for the project through public subscription. The plant which will have an annual capacity of 13,600 tons of furnace black will be located in Mulund, Bombay. The factory building is expected to be completed during 1964. The U.S. firm will provide the technical know-how, supply machinery and participate in the capital of the Company. The project is estimated to cost Rs. 2.82 crores, of which Rs. 2 crores will be spent on plant and machinery. Machinery worth Rs. 47.80 lakhs will be supplied by the United Carbon Company. The cost of the project is proposed to be met by the issue of share capital and by bank borrowings.

The Company has an authorised capital of Rs. 3 crores, of which Rs. 155.35 lakhs in equity shares of Rs. 100 each is to be issued. Out of this, the promoters, directors and their friends have subscribed for Rs. 6 lakhs and the United Carbon Company has taken up Rs. 4 lakhs. Out of the balance of Rs. 145.35 lakhs, the U.S. firm will take up shares worth Rs. 58.14 lakhs, including Rs. 14.34 lakhs for consideration other than cash. The directors and their friends will take up further shares worth Rs. 40.61 lakhs. The balance of Rs. 46.61 lakhs will shortly be offered for public subscription.

Omega Insulated Cable Share Offer

THE Omega Insulated Cable Co. (India) Ltd which is setting up a factory in Ambattur, Madras, for manufacturing V.I.R. and P.V.C. cables, is offering 40,000 equity shares of Rs. 100 each for public subscription to raise part of the funds for the project. The list will open on 4th November and will close on 20th November or earlier but not before 11th November. The entire public issue has been underwritten by leading financial institutions. The Company has been licensed to manufacture 45 million core yards of V.I.R. and P.V.C. cables and 280 miles of P.I.L.C. cables a year. The present programme is to manufacture 30 million core yards of V.I.R. and P.V.C. cables of all sizes and descriptions. Apart from the steadily growing demand in the country, there is considerable scope for the export of these cables and wires to other countries in the Middle and Far East. The total outlay for the first phase of the project is estimated around Rs. 1.15 crores which is proposed to be met by the issue of equity capital of Rs. 70 lakhs and by bank borrowings. The Company has an authorised capital of Rs. 3 crores, of which Rs. 70 lakhs is being issued in the first instance. Shares worth Rs. 30 lakhs are being taken up by the directors, their friends and associates and the balance is being offered for public subscription.

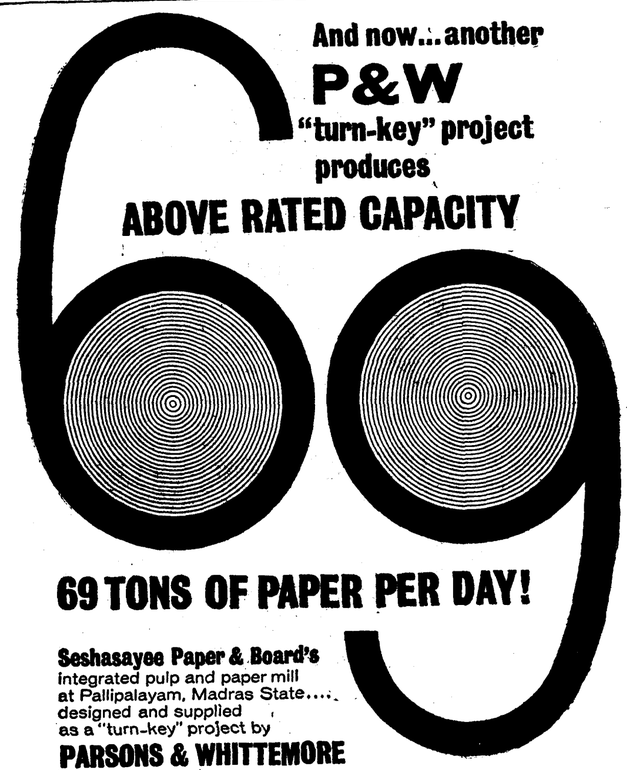
The Company has secured the technical collaboration of the reputed Kelsey Engineering Ltd of Canada. Besides bringing the factory into commercial production, the technical collaborators will also arrange for the training of Indian operators in Canadian and U.S. factories. The construction of the factory in Ambattur is in an advanced stage and it is expected to be completed by about the middle of December 1963. Orders for imported machinery worth Rs. 32.64 lakhs have already been placed. If all goes well, the factory is likely to be ready for production by about the middle of 1964.

New Capital Issues

FOUR companies have been authorised to raise fresh capital amounting to Rs. 97.84 lakhs. Two

COOL RUNNING
no trouble on long hauls;
more profits per vehicle

Tyre trouble on a long haul can eat into your profits. It means costly delay and much trouble and expense. On long, fast runs heat acts as the great enemy of your tyres. It weakens the tyre cord, softens the tread rubber and damages the casing.



Dunlop truck and bus tyres are unequalled for their cool running. They are made to stand up to the heat of long runs in hot temperatures without weakening. They will help you to earn more profits per vehicle on those strenuous thousand-mile trips by giving trouble-free service. One more reason why Dunlop tyres will help run your truck or bus at the lowest cost per mile.

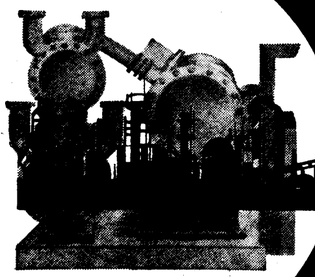
companies are issuing bonus shares, one cumulative redeemable preference shares and the other equities. One of the companies is throwing open for subscription by the public equities worth Rs. 25 lakhs. In all cases, the consent of the Controller of Capital Issues is valid for 12 months. The following are the details:



Mahalakshmi Fibres and Industries Ltd, Calcutta, is to issue a capital of Rs. 39,84,800 divided into Rs. 10 lakhs in cumulative redeemable preference shares and the balance in equity shares. The capital is required for the establishment of a spinning mill with 12,000 spindles in Ranchi.

Waldies Zinc Pigments Ltd, Calcutta, is issuing 60,000 equity shares of Rs. 10 each as fully paid-up bonus shares on capitalisation of reserves to the extent of Rs. 6 lakhs. The bonus shares will be issued in the ratio of one bonus share for every two shares held.

D. Waldie and Company (Lead Oxides) Ltd., Calcutta, will issue 7,000 equity shares of Rs. 100 each as fully paid-up bonus shares on capitalisation of reserves to the extent of Rs. 7 lakhs. The bonus shares will be issued in the ratio of one bonus share for each one held.

Bombay Cutting Tools Ltd., Bombay, will issue a capital of Rs. 45 lakhs in equity shares of Rs. 10 each for cash at par: out of this, shares of the value of Rs. 25 lakhs would be issued to the public by prospectus. The proceeds of the issue would be used for the manufacture of hand taps, two-piece dies, round dies, milling cutters, reamers, tool bits, dies etcetera.

Engineered climate aids India's industrial progress

Indian industry has invaded many new fields. Whether it is fertilizers or synthetic fibres; ball-bearings or penicillin, chemicals or newsprint, insecticides or explosives, tyres or textiles, Indian industry is forging ahead in diverse ways.

In these as in many other modern industries, manufacturing processes are greatly dependent on engineered climate—air conditioning and refrigeration—for improved productivity and better working conditions.

All over the country, in a great many industries, Blue Star engineered Worthington air conditioning and refrigeration is helping to step up production, reduce waste, improve quality and increase efficiency.

This is one of the many ways Blue Star serves Indian industry.

THIS IS BLUE STAR

The Stock Markets

INDIAN IRON FALL IN KERB TRADING DURING HOLIDAYS

Wednesday Evening.

THE Calcutta stock market closed on 25rd October for the Puja vacation and will reopen on 4th November. There has nevertheless been vigorous activity in the kerb market. The price of Indian Iron has drifted downwards on profit-taking, prompted by the sharp rise in price. It is distressing that whenever the upward movement begins, activity is largely transferred to the kerb. This is very undesirable considering that kerb trading promotes speculation. The evils of excessive speculation on the kerb take no time to affect trading inside the stock market.

Despite protestations to the contrary, it is commonly believed that there is a quiet alliance between some operators on the stock exchange and those on the kerb market. It is time the stock exchange authorities took strong action to stop kerb trading. Since the police has been ineffective in discouraging this evil, remedial measures need to be taken from inside the stock market. Unless excessive speculation is voluntarily restrained, the entire clearing system may attract severe criticism. It should be remembered that the clearing system, which allows futures contracts in shares, has for the time being been tolerated on the ground that in the present undeveloped condition of the capital market its existence has some justification.

Investors have used the holidays to crystal-gaze into the near-term prospects. The bullish spree has so far been sustained on expectations of fiscal reliefs within the next few months. The enthusiasm about credit liberalisation has cooled down since the recent meeting of the directors of the Reserve Bank held in Madras has decided nothing. It is, however, believed that the Reserve Bank will announce its credit policy shortly since the busy season begins from November. Current indications, however, call for caution. It is doubtful whether the Bank will make any fundamental changes in its credit policy. It has reiterated that by continuing its policy of selective credit controls, it has taken due steps to ensure an adequate supply of credit for meeting the legitimate requirements of the economy. But the main point does not seem to have attracted attention. This relates to the high cost of credit, which is due to the Reserve Bank charging an exorbitant rate of interest on its loans to commercial banks. The authorities have not been bold enough to admit that the high cost of credit has not succeeded in restraining inflation. Anyway, a bigger supply of credit from the Reserve Bank has little relevance for the time being.

By sheer coincidence, the banking system has been bursting with funds. There has been a sharper decline in advances during the current slack season than during the 1962 slack season. During the past three months or so deposits have substantially increased. Since Government disbursements may be considerable in the coming months the rising trend in deposits should continue. So banks may not be hard-pressed to go to the Reserve Bank for funds to finance the credit requirements of the next busy season. However, the stock market may be disappointed if it were to expect a bigger credit supply from commercial banks. Trade and industrial demands may absorb a substantial part of bank funds. Due to the poor outlook for corporate profits more funds for investment in stocks and shares may be difficult to attract.

Despite a corrective decline, steel shares have been favoured on prospects of decontrol of the commodity. Since decontrol, if introduced, is likely to be only partial, it is difficult to say whether the producers will fare better. Engineering shares have generally been supported on the view that the idle capacity may be reduced due to the possibility of bigger imports of raw materials, components and spare parts. The outlook for miscellaneous shares depends greatly on whether the tax burden on the corporate sector will be relieved in the near future. The prospects for paper, cement and sugar shares will continue to be bleak, unless the prices of these commodities are raised.

Investors in jute shares have been hesitant due to the uncertain marketing outlook for gunnies. The foreign enquiries for jute goods have fallen in face of rising production. The industry has already decided to continue the maximum level of output until the end of November. The competition from Pakistani mills has, meanwhile, been increasing. Vigorous efforts are being made to hold the price of Indian fibre up, although the price of jute goods has steadily declined.

The fall in the demand for coal, combined with the growing accumulation of stocks at pitheads, has made coal shares unattractive. Talks about fixing a smaller output target for the commodity during the third plan have begun. Investors have, meanwhile, been watching closely whether the Government decides to raise the price of the commodity to promote production. Except for scattered support in selected cotton mill shares, they have generally been dealt in cautiously due to the uncertain export prospect for piecegoods. Tea shares are not likely to attract interest in view of the shortfall in the north Indian crop. It is doubtful whether the estates will succeed in compensating themselves for the smaller crop by realising higher prices for the commodity.

Government securities have been quietly steady, but business has been restrained. There has been good support for short- and medium-dated stocks. The prices of long-dated loans have been lower. The prices of State Government loans have been fairly steady.

Bombay

CREDIT MAY NOT BE LIBERALISED

SMALL TURNOVER TOWARDS CLOSE

Wednesday Evening.

THE Bombay stock market has reacted during the past fortnight, but the decline was expected

Managing Agents:—LIONEL EDWARDS (PRIVATE) LTD.

In view of the sharp rise which had taken place earlier. Although all offerings have been absorbed, turnover has been very small towards the close. Operators are inclined to take a cautious view of the near-term outlook. It is believed that the Reserve Bank may not make any fundamental change in its credit policy. There has been growing concern due to the fact that Mr. T. T. Krishnamachari, Central Finance Minister, has turned his attention to the substantial volume of "unaccounted money". Operators have wondered whether he will take stern measures to immobilise a part of this money in order to restrain inflation. Dalal Street was somewhat cheered by the news that the export of cloth to the United Kingdom might not be affected by the recent agreement between India and Britain.

Towards the close, sentiment improved somewhat due to good corporate news. Tata Steel ordinary have recovered to Rs. 147.25 on short-covering. The prospect of decontrol of the commodity is being bullishly interpreted. Among engineering shares, attention centred on Tata Locomotive, Larsen and Turbo, Premier Construction and Mukand Iron. Among motor-vehicle shares, Hindustan Motors were active on influential support. Premier Automobiles were steady. The prospect of a substantial foreign exchange loan by the World Bank to the motor-vehicle industry has been an encouraging factor.

Selected cotton mill shares improved on replacement buying. Century were prominent on hopes of expansion. Interest was shown in Kohinoor, Bombay Dyeing, Gokak and Morarjee. Khatau, New Great and Shree Niwas were steady.

In the miscellaneous section, sugar shares were prominent. The Bombay High Court judgment declaring the Maharashtra Land Ceilings Act void, has led to bullishness. Belapur rose on reports that the Gangapur Sugar Mills Ltd, a subsidiary Company, might be sold at a satisfactory price. Walchandnagar Industries and Phalton were steady. Among steamship Company shares, Scindia Steam improved on a higher dividend. Great Eastern Shipping were steady on prospect of a higher dividend or bonus shares.

Mining shares were quietly steady and scattered business in Shivrajpur Syndicate was transacted. Cement shares were steady. Associated Cement and Digvijay met with support. Bombay Burmah rose smartly on producing a good report. Larger dividends, including a centenary one, have been paid. National Rayon spurted on bear-covering. In banks Central Bank forged ahead on reports that the Company might issue rights shares which were deferred earlier. Selected electric company shares met with support. Ahmedabad, Bombay Suburban and Tata Hydro were wanted.

Madras

OPERATORS AWAIT NEW CREDIT POLICY

ATTENTION CENTRES ON PLANTINGS

Tuesday Evening.

THE Madras stock market has been dull but steady during the past fortnight. Turnover has declined to almost a trickle partly due to the reactionary trend in Dalal Street and partly because of the holidays. Business in clearing shares has been negligible but the trend is steady. Operators are inclined to proceed cautiously until the credit policy of the Reserve Bank for the next busy season is announced. The investors are restrained due to the uncertain prospects of fiscal relief.

Government securities have been steady. Limited business in selected State Government loans has been transacted. Among bank shares, Canara have been prominent at Rs. 88 and Indian Overseas were done at Rs. 147.75. In electric companies, South Madras have been steady at Rs. 10.95 and Vellore at Rs. 15.25.

Attention has been largely concentrated on planting shares. Coffee shares in particular have attracted interest due to an optimistic assessment of the export outlook. The improvement in the international price of the commodity has been bullishly interpreted. Selected tea shares have been favoured on good output, combined with satisfactory prices realised for the commodity. Consolidated Coffee have improved on paying a bigger dividend of 20 percent, taxable. The price is quoted around Rs. 21.80. Blue Mountain have fetched Rs. 2.67 and Cochin Malabar Rs. 6.18. Ouchterlony have come to hand at Rs. 4.70 and Periakaramalai at Rs. 3.55. Coffee Land have been done at Rs. 14.87 on paying a taxable ordinary dividend of 9 percent. Interest has been shown in Thamarapally at Rs. 16.40, in Peermade at Rs. 20.55 and in Kil Kotagiri at Rs. 5.30. Mysore Coffee have been bought at Rs. 4.25 and Wartyhully at Rs. 2.80.

Among cotton mill shares, South India Viscose have changed hands at Rs. 135 and Travancore Rayon at Rs. 27.50. Asher have been bought at Rs. 218.50 on declaring a taxable ordinary dividend of 12.5 percent. Akkamamba have been done at Rs. 9.44. The Company has issued 5,000 cumulative redeemable preference shares of Rs. 100 each for subscription at par by the existing shareholders. The shares carry a fixed dividend of 9.5 percent. Lakshmi have been transacted at Rs. 136 and Madura at Rs. 33.65. Mettur have been steady at Rs. 282 and Loyal at Rs. 41.75. Bangalore Woollen have met with support up to Rs 226.80 and Kothari have been done at Rs. 9.30.

Among miscellaneous shares, Aluminium Industries have been prominent at Rs. 18.20, while Ashok Leyland have been transacted at Rs. 7.50. Among cement shares, Dalmia have been steady at Rs. 13 and India Cement at Rs. 5.42. Mettur Chemical have come to hand at Rs. 13.05 and Seshasayee Paper at Rs. 7.58. Tube Investments have been transacted at Rs. 213, Standard Motor Products have been dealt in at Rs. 11.15 on issuing 250,000 rights ordinary shares at par in the proportion of one new share for every Rs. 20 of paid-up capital on the equity and deferred shares. Business passed in Madras Rubber at Rs. 15 and in Kirloskar Electric at Rs. 18.25. Rane (Madras) have improved to Rs. 8.10 and Parrys Confectionery to Rs. 3.40.

THE TRANSACTIONS

ITC-439

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

The Sixty-sixth Annual General Meeting was held on October 24th at Victoria House, Bloomsbury Square, London, W.C.1., Sir William Lamond, the Chairman presiding.

The Report of the Directors was adopted and payment was sanctioned of a Final Ordinary Dividend of 4% (actual) for the year ended 31st March. 1963. Sir William Lamond, Mr. J. W. Gauntlett and Sir Walter Michelmore were re-elected Directors. The remuneration of the Auditors was fixed.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

London

INVESTORS MORE CONFIDENT

GOOD CORPORATE NEWS BOOSTS INDUSTRIALS

London, 30th October.

WITH the domestic political uncertainties very much diminished, the stock market looked a good deal more confident, and a vigorous investment demand was experienced. With the new Prime Minister rapidly establishing himself and with a steady flow of good economic news and company statements to help sentiment, buyers returned on a considerable scale. The buying came from all types of investors, from the small man to the large institutional investors and unit trusts. Equities, of course, were the main attraction and many prices reached new 1963 peaks. The excellent interim statements from Courtaulds and Dunlops came as a considerable boost and the shares of both these companies were in the forefront of the market rise. Shipping shares were prominent on the recent sharp rise in freight rates and shipbuilding and other engineering shares moved up sharply. Gilt-edged, however, were out of the picture. Indeed there was a marked weakening in prices last Monday following Press comment on Bank rate which put forward the view that a rise was likely in order to curb what looks like a return to inflation. Although Wall Street surged upwards to a new all-time peak, London prices for dollar stocks did not always respond. Commodity shares were very much in the limelight, and a feature was the strength of tin shares following the exhaustion of the buffer stock and the consequent jump in the metal prices.

Money

COLLECTING RURAL SAVINGS THROUGH MOBILE BANKS

(BY A SPECIAL CORRESPONDENT)

ALTHOUGH the growth of deposits and the contraction of credit during the current slack season has been satisfactory, there is reason to believe that the big banks have not fared as well as the medium and small ones. One of the handicaps faced by big banks in mobilising deposits is the insurance of bank deposits which has made deposits in small banks equally secure. The ½ percent higher interest paid on deposits by medium banks is seemingly working to the disadvantage of big banks. The latter are, therefore, forced to search for new devices for increasing deposits. The Bank of Baroda, for example, has recently announced two innovations. One is the introduction of a "drive-in bank" in Ahmedabad and the other is the starting of mobile banks in some areas of Gujarat. The bank is also experimenting with the "teller system" in some of its offices, especially at the head office in Baroda.

Mobilising Deposits

In his annual speech to the shareholders, Mr. Tulsidas Kilachand, chairman, said that the bank had applied to the Reserve Bank in August 1962 for operating mobile banks in certain areas. The object of the experiment is to mop up deposits from the countryside where the operation of an office—even a pay office—of the bank is considered uneconomical. Several questions need to be answered in this context. Is the idea of mobile banks feasible on a large scale? What are the chances of success in such experiments? The answers to the questions can be provided by examining the idea of mobile banks against the background of economic conditions in India.

The idea of mobile banks is not altogether new. Some banks in Punjab and Rajasthan experimented with the idea, but it was abandoned after trial because mobile banks proved uneconomical. The papers read at the Indian Banks Seminar held last year highlighted this fact. In logic, the idea of mobile banks has much to commend itself. Since it is not feasible to open bank offices in every small town or village, and there are over 1,000 unbanked places in the country, a mobile bank should in theory be able to mobilise the rural savings without an undue increase in operational costs. In some advanced countries these banks have worked successfully. There is no reason, it is argued, why they cannot be successful in India too. It is true that conditions in the countryside during the past few years have changed for the better because of the rise in incomes and the improvement in literacy. Even so, can one say that conditions in the Indian countryside are anything like those prevailing in advanced countries with the exception of some neighbourhoods of well-developed cities? The latter are well supplied with a network of commercial bank branches, but in the underdeveloped countryside, which the mobile banks intend to serve, there is a lack of communication facilities. Even now, several regions are practically cut off from the rest of the country during the monsoon season.

Problem of Security

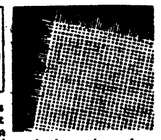
In addition, there is the problem of security. Bank robberies are not unknown even in such big cities as Bombay. In England, a bank robbery committed recently, involving several thousands of pounds, has raised doubts whether it is advisable to transport large sums of money. Several parts of India are still under medieval conditions. For instance, in Madhya Pradesh, Rajasthan and Uttar Pradesh regular dacoit gangs operate and police vigilance there has so far proved to be poor. Likewise, even in Gujarat until recently, conditions were extremely insecure due to the depradations of a notorious dacoit gang. Under the circumstances, the experiment with mobile banks may prove somewhat risky. None of the banks in south India, where conditions are comparatively secure, has ventured with the experiment. It is probably felt that the idea is not worth the trouble because the countryside in the south is well served by a network of offices of the State Bank of India, its subsidiaries, post-office savings banks and co-operative institutions.

A few other questions require to be answered in this connection. It is the people in the countryside who support the post-office savings banks and buy small savings certificates and "janata insurance" policies. Besides, co-operative institutions are clamouring for deposits. Their progress so far is unsatisfactory in mobilising deposits from the public. Furthermore, various fiscal measures included in the 1963-64 Central Budget, such as the levy of heavy excise duties on a wide variety of consumer goods, will leave very little savings for fruitful mobilisation by commercial banks. The layer of savings in the rural areas is quite thin and the Indian villager is, by and large, conservative. He does not believe in keeping his savings in mobile banks which come once or twice a week in his area. He prefers to put the money either in gold or in land or real estate, such as houses or cattle. The hold of the village moneylender-*cum*-landlord-*cum*-trader is still very strong in the countryside. It is obvious that mobile banks have to function against heavy odds. The banks should, therefore, launch a sustained educational campaign in favour of mobile banks before undertaking experiments. The Indian Banks Association can launch this campaign since the experiment, if it proves successful, will benefit every bank.

High Interest Rates

There is yet another angle from which the experiment requires to be examined. The rates of interest which the banks offer on deposits from the public bear no relation whatsoever to those prevailing in the countryside. Against 3 percent offered by banks on savings deposits and 4 percent on fixed deposits for varying periods, the normal rates of interest in the countryside, which again vary from region to region, are around 12 percent against the mortgage of immovable property and 17 percent to 18 percent for clean credit. Loans for business purposes are given at an interest of 25 percent and often for a share in profits also. Savings in villages are concentrated in the hands of a few—moneylenders, landlords and traders—and they are able to employ their resources profitably. This explains the shyness of rural savings to come to the organised money market. Under the circumstances, it is clear that banks will not be able to attract deposits unless they offer a rate of interest which is commensurate with that prevailing in the countryside. Are the commercial banks in a position to do so? Probably they are not. This is because the difference in interest rates between rural and urban areas is very wide and the demand for funds in rural areas is much in excess of supply. This is the greatest hurdle for launching a successful experiment with mobile banks in this country.

It is obvious that none of these difficulties is within the capacity of banks to overcome since they stem from the general economic conditions in the country. Mr. Kilachand is not unaware of the difficulties. Yet if he feels that the idea is worth pursuing, it must be because there are some rural areas where conditions are favourable. The Reserve Bank could perhaps obtain fuller particulars from the promoters of new ideas so as to examine the prospects of success. It should satisfy itself, in particular, that the experiment does not retard the branch expansion programme of commercial banks.



ENJOY THE COOL COMFORT

OF BINNY'S MOKOLIN AND WB 275 X DRILL

MOKOLIN shirting because its specially designed 'porous' structure lets your skin breathe. Now available in dyed shades. WB 275 X DRILL because it is bleached a cool white to keep you comfortable. WB 275 X is mercerised and bears the 'SANFORIZED' label. * Undeniably fine value for your money.

Buy your requirements of BINNY fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

26th October amounted to Rs. 6.59 crores.

ACTIVE NOTES DECLINED BY Rs. 5.70 crores to Rs. 2,251.38 crores, according to the return of the Reserve Bank of India for the fortnight ended 25th October, 1963. The total note issue was Rs. 32 lakhs smaller at Rs. 2,270.18 crores. Notes held in the Banking Department consequently rose by Rs. 5.39 crores to Rs. 18.80 crores. Deposits of the Government of India declined by Rs. 4.23 crores to Rs. 47.97 crores while those of State Governments rose by Rs. 4.44 crores to Rs. 14.80 crores. Balances of scheduled banks improved sharply by Rs. 31.84 crores to Rs. 118.50 crores. Their loans from the Bank amounted to Rs. 1.75 crores, against Rs. 1.83 crores of which advances against usance bills were again nil. Balances held abroad were Rs. 84 lakhs larger at Rs. 9.94 crores. Investments rose by Rs. 68.58 crores to Rs. 236.79 crores. Ways and means advances to Governments stood at Rs. 36.38 crores, against Rs. 56.76 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 18th October, 1963, shows a drop of Rs. 1.56 crores to Rs. 592.49 crores in total deposits. Investments in Government securities are up by Rs. 11.23 crores to Rs. 313.62 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts, bills discounted and purchased have increased by Rs. 56 lakhs to Rs. 251.55 crores. Cash and balances are, in consequence, shown at Rs. 20.73 crores or Rs. 10.30 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 18th October, 1963, shows Demand and Time liabilities at Rs. 1,095.48 crores (Rs. 21.65 crores on account of borrowings from banks) and Rs. 1,319.88 crores (Rs. 23.43 crores), compared with Rs. 1,101.43 crores (Rs. 24.62 crores) and Rs. 1,316.04 crores (Rs. 21.94 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 95 lakhs and Rs. 11.96 crores to Rs. 56.98 crores and Rs. 75.20 crores, respectively. There is a rise of Rs. 10.64 crores to Rs. 769.09 crores in investments. Advances and bills discounted at Rs. 1,488.19 crores show a rise of Rs. 4.43 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.4 percent and 61.6 percent, against 6 percent and 61.4 percent.

THE CALCUTTA MONEY MARKET

ADVANCES DECREASE A LITTLE

Wednesday, 30th October.

THE general level of advances has decreased a little in the Calcutta money market during the past fortnight. The main fall is in the credit given to the sugar mills, and to iron, steel and engineering units. But the accommodation given to the cotton and woollen mills, and to the food-grains and seeds trade, is also nominally down. Only jute advances show a minor increase. In the interbank market, conditions have been easy and the call rate quotes 1 percent.

The exchange market has been active, with a good supply of tea and gunny bills. The demand for remittances has been moderate. In the London foreign exchange market, sterling has shown a mixed tendency after narrow fluctuations.

SILVER WAS STEADY IN CALCUTTA during the past fortnight. The price rose from Rs. 229.75 to Rs. 231.75 quoted for ready. The London and New York prices were 111½d and 129.3 cents. Gold was quiet on lack of demand and the price of 14 carat dropped from Rs. 62.25 to Rs. 61.75.

DURING THE WEEK ENDED 25TH OCTOber, Government of India Treasury bills for Rs. 54,86,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 29th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.318 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 30th October to 2nd November at Rs. 99.436 percent, subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 23rd October to

ANNOUNCEMENT REGARDING PROPOSED ISSUE OF CAPITAL

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of the Prospectus, copies whereof are available from the Company's Bankers, Underwriters and Brokers.

A copy of this Prospectus together with the documents specified therein has been duly delivered to the Registrar of Companies, Madras, for registration as required by Section 60 of the Companies Act, 1 of 1956.

Consent of the Central Government has been obtained to this issue by an order, a complete copy of which is open for inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed in regard to them.

An Industrial Licence (bearing No. L/34(6)/12/60/L/IND dated 15th July, 1960 together with an amendment letter No. 6 (58) L ind/60 dated 5th November, 1960) has been obtained from the Central Government for the establishment of this new industrial undertaking at Madras (Porur, Saidapet Taluk, Chingleput District, Madras State) a copy of which is open for inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinion expressed in regard to it.

Application has been made to the Madras Stock Exchange and an application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation for the shares of the Company

The Subscription List will open at the commencement of banking hours on 6th November, 1963 and will remain open until the close of banking hours on 18th November, 1963 unless closed earlier if the issue is oversubscribed or later at the discretion of the Directors but not earlier than the close of the banking hours on 8th November, 1963.

W. S. INSULATORS OF INDIA LIMITED

Licensed by Westinghouse

(Incorporated on 23rd August, 1961 under the Companies Act, 1956)

SHARE CAPITAL

		Rs.	
(i)	**Authorised:**		
	50,000 9.5% (free from Income-tax payable by the Company, but subject to deduction of taxes at source at the prescribed rates) Cumulative Preference Shares of Rs. 100/- each		50,00,000

			1,10,00,000
(iii)	**Subscribed:**		
	The Promoters, Directors of the Company, their friends and associates have subscribed as under:		
	51,000 Equity Shares of Rs. 10/- each subscribed and allotted	Rs. 5,10,000	
	1,50,125 Equity Shares of Rs. 10/- each which will be allotted in full	Rs. 15,01,250	20,11,250

It is a condition of the consent of the Controller of Capital Issues that the above shares shall be non-transferable for a period of one year from the respective dates of allotment thereof.

(iv)	**Capital agreed to be reserved for firm allotment:**	
	(a) The Technical Collaborators M/s. Westinghouse Electric International Co. of New York (U.S.A.) have agreed to subscribe for 23,875 Equity Shares of Rs. 10/- each of the aggregate value of ...	2,38,750
	(b) The Life Insurance Corporation of India, Bombay, against underwriting arrangement with them have agreed to subscribe for 50,000 equity shares of Rs. 10/- each to an aggregate value of ...	5,00,000
(v)	**Now offered at par for public Subscription:**	
	20,000 9.5% (free of Company's tax, but subject to deduction of taxes at source at the prescribed rates) Cumulative Preference Shares of Rs. 100/- each ...	20,00,000
	6,25,000 Equity Shares of Rs. 10/- each	62,50,000
		82,50,000

Necessary resolution under Section 81 of the Companies Act, has been passed by the Company in General meeting on 29th October, 1962 for the public issue of Capital.

UNDERWRITING:

The entire issue offered to the public for subscription is fully underwritten as follows:

		Class and face value of shares underwritten	
		Equity Shares. Rs.	Preference Shares. Rs.
1.	The Madras Industrial Investment Corporation Ltd. ...	16,00,000	11,50,000
2.	The Life Insurance Corporation of India	10,00,000	5,00,000
3.	The Industrial Finance Corporation of India ...	15,00,000	.....
4.	The Punjab National Bank Ltd. ...	10,00,000	.....
5.	The Canara Bank Ltd. ...	5,00,000	.....
6.	The Canara Industrial and Banking Syndicate Ltd. ...	2,50,000	2,50,000
7.	M/s. H. P. Mehta & Co., Share Brokers, Delhi ...	3,00,000	.....
8.	M/s. Raja Ram Bhasin & Co., Share Brokers, Delhi ...	3,00,000	.....
9.	The Oriental Fire and General Insurance Co., Ltd., Bombay ...	.....	1,00,000
10.	M/s. Chitra & Co., Share Brokers, Madras ...	1,00,000	.....
11.	M/s. Paterson & Co., Share Brokers, Madras ...	1,00,000	.....
12.	M/s. Subramaniam & Co., Share Brokers, Madras ...	1,00,000	.....
		67,50,000	20,00,000

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

TERMS OF PAYMENT:

6,25,000 Equity Shares and 20,000 Preference Shares offered for public subscription at par for cash in terms of this Prospectus are payable as follows:

Equity Shares:

On application—Rs. 2.50 per share.

On allotment—(within 2 months from date of allotment) Rs. 2.50 per share.

The balance Rs. 5/- per share payable will be called up in two equal instalments at the discretion of the Directors at an interval of not less than 3 months between the calls, the first of such calls being made not earlier than 4 months from date of allotment.

Preference Shares:

On application—Rs. 25/- per share.

On allotment—Rs. 25/- per share (within two months from date of allotment).

The Balance of Rs. 50/- per share payable will be called up in two instalments at the discretion of the Directors at an interval of not less than 3 months between the calls, the first of such calls being made not earlier than 4 months from date of allotment.

The application moneys not utilised will be returned within a period of two months from the date of closing the subscription list or within such extended period as may be found necessary by the Board and agreed to by Government.

The Calls on both the Equity and Preference Shares will be made simultaneously so that at no time the ratio of the paid up Equity Capital to the paid up Preference Capital is less than 9: 2.

No shares have been issued at a premium nor are any shares presently to be issued at a premium.

OBJECTS

The Company was incorporated on 23rd August 1961 for carrying out the several objects set out in its Memorandum of Association The main objects of the Company are as set out in the Memorandum of Association, a printed copy of which is available for inspection and include inter-alia the following:

To manufacture, buy, sell, exchange, alter, improve, manipulate, prepare for market, import or export or otherwise deal in all kinds of insulators of all types and of all voltages from low tension to high tension voltages upto 330 K. V. and above, porcelain supports, separaters, baffles, fixtures, bushings, condensers of all makes and of all types for all industrial, domestic and other uses, apparatus insulators, condenser bushings transformers and circuit breakers for voltages upto 330 K. V. and above distribution transformer bushings bulk type transformer bushings, capacitor oushings, fuse cutout prcelain, voltage regulator bushings, potential and current transformer oushings wall bushings, ceramic condensers, switch, bus station and post insulators for outdoor voltages upto 330 K. V. and above, indoor switch and bus insulators station porcelain insulators, distribution insulators guy strain insulators H. V. and L. V. type insulators, suspension type insulators, line post insulators, spool type insulators upto 330 K. V. and above, telegraph and telephone insulators insulators for Railway requirements, Insulators for Electronic and Radio Industries Fuse Units, Outdoor and Indoor Fuse Cutouts of all voltages and ranges L. T. and H. T. Switchgear insulating materials, switch bases and all kinds of porcelain and other insulating products, disconnecting and air break switches of all types and descriptions.

To carry on the business of manufacturing, buying selling, reselling altering, importing, exporting, improving, assembling, distributing lightning arresters or surge divertors of all voltages and of all types ranging from low tension to high tension voltages upto 330 K. V. and above distribution type lightning arresters, station type lightning arresters auto-valve lightning arresters, encapsulation type lightning arresters and all other types and designs of lightning arresters required for the electrical trade industry, power stations, substations, distribution networks and for all other allied uses.

To carry on the business of manufacture of Porcelain fuse cutouts of all types and Enclosed, open and distribution by-pass switches and of all voltages.

SCOPE AND PROSPECTS

Electric Power Generation Transmission and Distribution in India are to be more than doubled during the Third Five-Year Plan. The installed generating capacity by the end of the Third Five-Year Plan will be 12.69 million K. W. as against 5.7 million K. W. in the Second Five-Year Plan. No large scale transmission and distribution of electrical power is possible without insulators and lightning arresters. The present installed capacity for H. T. and L. T insulators in the country is about 13,250 tons. However, only about 8,500 tons of Insulators are manufactured. The demand anticipated by 1965 is 30,000 tons and by 1970, it is likely to be about 47,000 tons.

The factory proposes to manufacture High Tension Insulators of all types from 11 K. V. to 220 K. V. Apart from Insulators required for power transmission and distribution systems, there is a growing demand for Apparatus Insulators like busbar supports, bushings for current, potential and high voltage transformers and for circuit breakers and switchgears. These are at present mainly imported and will have to be met by future production. The company, therefore expects to satisfy to a very large extent the present demand for these products at prices which will be attractive to the consumers.

TECHNICAL COLLABORATION

The Company has concluded a technical collaboration agreement with the approval of the Government of India with Messrs. Westinghouse Electric International Co., New York, U.S.A. The period of the agreement will be for 10 years in the first instance The Collaborators besides providing the Company with Technical Know-how with regard to the design and manufacture of licensed products, have agreed to train necessary Indian personnel at their works in the U.S.A. The agreement provides for the payment, in two equal instalments of U.S. $30,000 to "Westinghouse" towards the Know-how charges and for the training of three Indian personnel for a period of 4 months each. The Company will get the benefit of all Westinghouse patents for these products and also of the research continuously carried on by over 6,000 scientists and engineers in the Westinghouse Laboratories, which are spread over the World

In the field of Electrical Porcelain, over 80% of all major design developments have been made by Westinghouse. A tremendous store of experience goes with the manufacture of Westinghouse Electrical Porcelain.

LOAN CAPITAL

The Industrial Credit and Investment Corporation of India Limited have agreed in principle as per their letter No. PW/12342 dated October 19, 1962 to lend to the Company an amount in foreign currencies equivalent to U.S. $1,218,000 (about Rs 58 lakhs), subject to the approval of the Agency for International Development, U.S.A. and a rupee loan of Rs. 10 lakhs to meet the capital cost of putting up a plant.

FACTORY SITE

The Company has taken possession of about 40 acres of land sanctioned for acquisition by the Government of Madras in Porur Village, Saidapet Taluk, Chingleput District, Madras State on the St. Thomas Mount—Poonamallee Trunk Road. The site has the advantage of road and rail (metre and broad gauge) transport facilities. Madras Port facilities can also be availed of for export promotion.

INDUSTRIAL LICENCE

The Government of India have issued an Industrial Licence for the establishment of a new industrial undertaking with a capacity of 2,400 tons per annum of H. T. and L. T. Insulators, Lightning Arresters, Condenser Bushings, etc. on a single shift basis.

The Company also holds an Industrial Licence for the manufacture of Fuse Cutouts, Distribution By-Pass Switches, etc., with a capacity of 1,200 Nos. per annum.

EXPANSION

It may be mentioned that the Company has also received an industrial Licence for doubling the capacity

PLANT AND MACHINERY

It is estimated that the total cost of Plant and Machinery will be about Rs. 81.7 lakhs (erected at site). Out of the above Plant and Machinery, the equipment to be imported amounting to Rs. 58 lakhs will be paid out of the ICICI loan as aforesaid.

The American Suppliers of Plant and Machinery have offered very favourable delivery periods, which will enable the Plant to go into production at an early date.

IMPORT LICENCE

The Import Licence has been received and further action is being taken to import the machinery

RAW MATERIALS

Raw materials required like china clay, ball clay (partly), quartz, feldspar, etc are available in South India: Silicon Carbide and part of ball clay have to be imported The Company is making necessary arrangements for the timely supply of these raw materials.

POWER AND WATER SUPPLY

The Madras State Electricity Board has agreed to supply electric power to an extent of 1,250 KVA maximum demand Adequate water is available from wells at site.

PRODUCTION AND PROFITABILITY

Production is expected to commence by the end of 1964. The Plant and Machinery to be installed will make this Plant one of the most modern industries in the World

With the Westinghouse collaboration the scheme is expected to be very successful.

TAX BENEFITS

The Company will be entitled to the tax benefits under Sections 33 and 84 of the Income-tax Act, 1961 and the Shareholders will be entitled to the benefits under Section 85 of the above Act. It may also be noted that the shareholders who are Companies, will be entitled to exemption from super-tax under Section 99 (i) (iv) of the Income-tax Act, 1961

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allot shares offered by this prospectus to the public for subscription is Rs. 50,00,000. Subscription of this amount is assured in terms of the underwriting arrangement referred to below.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

Mr. DAVID WEBB'S SPEECH

The Annual General Meeting of The Calcutta Tramways Co. Ltd. was held on October 15 at 30, Cursitor Street, Chancery Lane, London, E.C.

Mr. David E. Webb, F.C.A., chairman of the company, who presided, said :—

The latter months of the year 1962 were overshadowed by the calamities on the Northern Frontiers of India. Whilst these did not affect the day-to-day running of our undertaking, the indirect repercussions from them in the form of increased costs and taxation may well remain. Nevertheless it was a year of steady progress in bringing our track and rolling stock back towards their former first-class condition.

During the year there was a small increase in receipts, the result of a vigorous policy pursued by the Traffic Department in the better utilisation of the rolling stock and the introduction of improved measures of control and supervision in the collection of fares. The results of the measures taken should be more apparent in 1963. Equally, expenditure was rigidly controlled, with the result that total operating expenses for the year increased only by some £8,000. Taxation, however, at £86,000 was up by £14,000.

The final result for the year was that Shareholders' Account received £58,778 against £53,252 for the preceding year. This is still a long way from the £87,457 to which the Shareholders are entitled, after payment of all expenses and taxation, in the terms of the Agreement with the Government of West Bengal.

The Balance Sheet shows that the final instalment of the loan received from Government to cover the expenses in connection with the track re-alignment at Dalhousie Square was repaid on the 1st January 1963. Thus, in three years, £75,000 has been borrowed from and repaid to Government to enable us to carry out a re-alignment of our tracks at the request of Government. No extra receipts have accrued to the Company from this re-alignment or are likely to do so, and £75,000 which would otherwise have been available for extra rolling stock or improved permanent way cannot now be used for this purpose. It is to be hoped, in the future, that where such items of expenditure have to be undertaken at the behest of Government some form of longer term financing can be arranged.

Current Year

With regard to the current year, the receipts have continued to show an increase, mainly as the result of the efforts of the Traffic Department, but this has, unfortunately, been accompanied by heavy increases in the cost of electrical energy and materials. In addition, there is the urgent and long-standing need for more trams on the road, the ever pressing necessity of bringing our equipment up to date, and there are always a number of Government projects coming forward or in being, such as the new Majerhat Bridge and the raising of the Tollygunge Bridge. In these cases the Company is expected to bear a share of the costs, which amount to considerable sums.

Finally, and by no means least, there is the necessity of looking after our employees. The time is fast approaching when their emoluments ought to be reappraised, though this is not possible on the present fare structure.

Your Directors are fully conscious of the importance of keeping the fares down to the lowest possible level, but all these additional expenses mentioned can only be met by increased receipts, and increased receipts sufficient to meet such demands can only come from an increase in fares. We are, therefore, proposing to make some changes in the structure of our fares in the near future. At the same time our staff have continually under review the possibility of introducing concessions where these are practicable in an endeavour to attract more passengers.

In conclusion, may I once again, on your behalf, express our appreciation of the splendid work on the part of our agent in Calcutta and all his staff in running our undertaking so efficiently in the face of the constant difficulties which beset them.

The report and accounts were adopted.

"The above statement is not a report of the proceedings of the Annual General Meeting referred to".

W. S. INSULATORS OF INDIA LIMITED—*Cont'd.*

UNDERWRITING COMMISSION AND BROKERAGE

Underwriting Commission at the rate of 2½% on the nominal value of the share underwritten is payable to the Underwriters. In addition to the said commission, brokerage at the rate of 1% on the nominal value of the shares on allotments made in respect of applications made or procured by them provided that the relative forms of applications bear their respective stamps.

Brokerage at the rate of 1% on the nominal value of the shares will be paid on allotment in respect of application bearing the stamp of a Bank or of a member of a recognised Stock Exchange.

No underwriting commission or brokerage will be allowed on shares which have been agreed to be subscribed by the Promoters, Directors, their friends and associates, Managing Agents and foreign collaborators.

MANAGING AGENTS

Messrs W. S. Industries, Madras have been appointed as Managing Agents of the Company for a period of 10 years from the date of appointment on terms defined in the prospectus.

APPLICATION FOR ALLOTMENT OF SHARES

The application forms duly completed together with cheques or draft for the full amount of Rs. 2.50 per share for Equity Shares and Rs. 25/- per share for Preference Shares payable on application must be delivered before the closing of the subscription list to the Registered Office of the Company at No. 33, Errabalu Chetti Street, Madras-1, or the Office of the Underwriters or Brokers to the issue or to any one of the Company's Bankers or their Branches.

Application sent to the Registered Office of the Company and accompanied by cheques drawn on the offices of any of the scheduled banks only at the following places will be considered.

MADRAS, BOMBAY, CALCUTTA, BANGALORE, NEW DELHI, HYDERABAD, AHMEDABAD AND INDORE

Cheques or demand drafts should be made payable to "W. S. INSULATORS OF INDIA LIMITED Equity Issue "Preference Issue". Alternatively, cheques may be made in favour of one of the Bankers to the issue drawn on any scheduled bank at the places where the applications are submitted: "A/c W. S. INSULATORS OF INDIA LIMITED, Equity Issue/Preference Issue".

For the applicant's protection, cheques or drafts should be crossed "Account Payee only".

A separate cheque or draft must accompany each application.

FIBREGLASS PILKINGTON LIMITED

This announcement is not a prospectus. Persons interested in full details are requested to obtain copies of the Prospectus which are available from the Registered Office of the Company or from the offices of the Company's Underwriters Brokers and Bankers.

FIBREGLASS PILKINGTON LIMITED

(Incorporated on 27th day of June, 1962 under the Companies Act, 1956).

REGISTERED OFFICE :

9, Wallace Street, Fort, Bombay-1. BR.

EXISTING & PROPOSED ACTIVITIES OF THE COMPANY :

The Company was incorporated on 27th day of June, 1962 as a public Company limited by shares with the objects stated in its Memorandum of Association and with the immediate object of carrying on the business of manufacturers of and merchants in glass fibres and glass fibre products, the three main types of products to be manufactured being—

1. **Glass Wool Insulation. This can be used to preserve heat and cold, to reduce sound and noise, as insulation for boilers, ships, cold stores, refrigerators, air-conditioning equipment, cooking equipment, road and rail transport, and many other varied applications.**
2. **Glass textile yarns, fabrics and mats which can be used as a basic reinforcement material for the manufacture of glass fibre reinforced plastics, translucent roofing sheets, boat and car bodies, structural parts of road and rail vehicles, containers and many other products. Glass textile yarns can be woven into decorative textiles, coated fabrics and material for the insulation of electrical equipment.**
3. **Glass staple tissue, which can be used as an anti-corrosive wrapping for pipelines, as a base for bituminous roofing felts and canal lining membrane, and as a spacer in electric batteries, and in many other ways.**

The Company holds a number of patents and patent licence and the Technical Consultants of the Company are Fibreglass Limited, England, who are the leading manufacturers of glass fibres in the United Kingdom.

LOCATION OF THE INDUSTRY :

The first plant of the Company will be erected at Thana near Bombay. The Company has purchased two plots of land which together have an area of approximately 50,664 sq. yds. The Company has also entered into an agreement with The Bombay Company (Private) Limited for the purchase of a further plot of adjacent land admeasuring 5,607 sq. yds. approximately.

The site is connected with Thana by road and Thana is directly linked with Bombay by rail.

BOARD OF DIRCTORS

Name	Description & Address :	Occupation
1. Mr. John Creek (Chairman), British.	Ravenhead Works, St. Helens, Lancashire, England.	Managing Director, Fibreglass Limited, England.
2. Mr. Rajendra Ambalal Shah, (Alternate for Mr. John Creek), Indian,	State Bank Building Annexe, Bank Street, Bombay	(1) Solicitor & Partner of Crawford Bayley & Co. Solicitors. (2) Director of (a) Suhrid Geigy Ltd. (b) Rockwell India Ltd and other Companies.
3. Mr. Muthiah Annamalai Chidambaram, Indian,	Catholic Centre, No. 6, Armenian Street, Madras-1.	(1) Chairman of South India Steel & Sugars Ltd. (2) Director of (a) Indian Aluminium Co. Ltd (b) Machinery Manufacturers' Corpn. Ltd and other Companies.
4. Mr. Nityanand Mangesh Wagle, Indian,	1, Forbes Street, Bombay.	(1) Managing Director of Greaves Cotton & Co. Ltd. (2) Director of (a) Bombay Dyeing & Manufacturing Co Ltd. (b) Central Bank of India Ltd. and other Companies.
5. Mr. Ghanshyam Vishwa Nath, Indian,	9 Wallace Street, Fort, Bombay-1. BR.	(1) Chairman The Bombay Company (Private) Ltd. (2) Director of (a) The Bombay Burmah Trading Corpn. Ltd (b) The Lakshmi-Vishnu Cotton Mills Ltd and other Companies.
6. Mr. Dipti Kumar Basu, Indian,	National Insurance Building, Parliament Street, New Delhi.	(1) Solicitor & Partner of (a) Orr, Dignam & Co. Calcutta & New Delhi. (b) King and Partridge Madras. Ootacamund & Bangalore. (2) Director of (a) Goodyear India Ltd. (b) Arbor Acres Farms India Ltd. and other Companies.
7. Mr. Reginald Gordon Hayes, British.	9, Wallace Street, Fort, Bombay-1 BR.	Managing Director, Fibreglass Pilkington Limited.

MANAGING DIRECTOR

Mr Reginald Gordon Hayes,
9, Wallace Street, Fort Bombay-1. BR.

SHARE CAPITAL

	Rs.
Authorised :	
25,00,000 Equity Shares of Rs. 10/- each	2,50,00,000
Issued, Subscribed and Fully paid :	
7 Equity Shares of Rs. 10/- each	70
Present Issue :	
11,99,993 Equity Shares of Rs. 10/- each	1,19,99,930
	1,20,00,000
Out of the Present Issue the following have agreed to take up shares as follows :—	
(i) Fibreglass Limited, U.K.	60,00,000
(ii) The Bombay Company (Private) Limited.	4,80,000
(iii) Directors, Friends and Associates	3,19,930
NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION	
5,20,000 Equity Shares of Rs 10/- each (on which Rs. 5/- are payable on application)	52,00,000
	1,19,99,930

DATE OF THE OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The Subscription List will open at the commencement of banking hours on 11th November, 1963 and will close at the close of banking hours on 20th November 1963 or earlier at the discretion of the Directors but not earlier than the close of Banking hours on 13th November 1963.

COPIES OF APPLICATION FORMS AND PROSPECTUS CAN BE OBTAINED FROM THE REGISTERED OFFICE OF THE COMPANY OR FROM THE UNDERMENTIONED UNDERWRITERS, BROKERS AND BANKERS.

UNDERWRITERS

1. **The Bank of India Limited,** Mahatma Gandhi Road, Bombay-1 BR.
2. **The Chartered Bank** 23/25, Mahatma Gandhi Road, Bombay-1. BR.
3. **Place, Siddons & Gough (Private) Ltd.,** 6, Lyons Range, Calcutta-1.
4. **Messrs Lewis & Jones,** Bank of Baroda Building, Apollo Street, Bombay-1 BR
5. **The Investment Corporation of India Ltd.,** Fwart House, Bruce Street, Fort, Bombay-1 BR.

BANKERS TO THE ISSUE

The Bank of India Limited
At their Branches at Bombay, New Delhi, Calcutta, Madras, Ahmedabad, Indore, Hyderabad and Bangalore.

The Chartered Bank,
At their Branches at Bombay, New Delhi, Calcutta and Madras.

First National City Bank,
At their Branches at Bombay, Calcutta and Madras.

BROKERS

Bombay

1. **Messrs. Lewis & Jones,** Bank of Baroda Building, Apollo Street, Fort, Bombay-1. BR.
2. **Messrs. Batlivala & Karani,** Union Bank Buildings, Dalal Street, Fort Bombay-1 BR.
3. **Messrs. Harkisondass Lukhmidass,** Stock Exchange Buildings, Apollo Street, Bombay-1 BR.
4. **Messrs. Merwanjee Bamanjee Dalal,** Allahabad Bank Building, Apollo Street, Fort Bombay-1. BR.

Calcutta

1. **Place Siddons & Gough (Private) Ltd.,** 6, Lyons Range, Calcutta-1.
2. **Messrs. G. M. Pyne,** 14, India Exchange Place, Calcutta-1.

Madras

1. **Messrs. Paterson & Co.,** P O Box No 48, 22 Errabalu Chetty Street, Madras-1.
2. **Messrs. Chitty & Co.,** Post Box No. 1557, 322/323, Linghi Chetty Street, Madras-1.

INDO-E.C.M. TRADE PROSPECTS: THE COMING TALKS IN GENEVA

By Malcolm Subhan

BRUSSELS:

WITHIN six months or so, two major international trade conferences will have opened in Geneva. As one of the principal export markets for the less developed countries, the E.C.M. may be expected to play an important rôle in both. If coming events do cast their shadow, then the discussions within the Community on how to help India, culminating in the recent decision to grant a number of tariff suspensions on a unilateral basis, deserve close attention.

Any account of these discussions must read like a twice-told tale. All the products on which the Six are now offering to suspend their tariffs were fully considered during the British-E.C.M. negotiations. What is new is the fact that the concessions are being offered directly to India (although they will be available to all countries enjoying most-favoured-nation terms), within the framework, this time, of the Community's commercial relations with India. The main point at issue, therefore, has been not whether concessions should be granted, but whether there should be official negotiations between the Community and India over the entire field of Indo-E.C.M. relations.

Five events may be said to mark the unofficial negotiations between the E.C.M. and India. The first was represented by the *aide-mémoire* of last April. The second was the Six's decision to suspend their tariffs on tea and tropical woods. The third was the Commission's request to the Council of Ministers in July for authorisation to hold exploratory talks with India on the possibility of concluding a trade agreement. The fourth event was the second Indian *aide-mémoire*, submitted during the discussions in late-September-early-October among the permanent representatives of the Six in Brussels, while the fifth was the Council's decision of 15th October.

At this meeting, the Council agreed in principle to suspend the common external tariff on a number of products for which India is the Community's main supplier. The list contained no surprises, although official sources were quick to point out that it was incomplete as discussions on a number of other products—notably, handloom textiles—were still going on. However, none of the important Indian manufactures, such as heavy jute goods, hand-knotted carpets and coir matting, had been discussed, although minor tariff suspensions had been offered in each case during the British negotiations.

The Commodities

The products on which the Six have agreed to suspend their tariffs entirely for a two-year period include cashewnuts, cardamoms and amons, pimento, capsicum, coriander, crystallised and preserved ginger, curry powder and paste, mango chutney, condiments, tobaccoseed oil, bleached gum lac, and polo and cricket bats. The tariff on castor oil will be suspended at 7 percent (it is 8 percent at present). The Six have agreed to suspend the tariff on handloom products also, provided a satisfactory definition can be adopted by the experts (satisfactory in this context meaning one which will keep out handloom fabrics from the Far East as well as mill-made fabrics masquerading as hand-made).

One very technical, but extremely important, point has yet to be clarified. The decision is to suspend the common external tariff; given a firm decision next month this could be carried out by 1st January, 1964, when the tariffs on tea and tropical woods are to be suspended. The major problem is one of nomenclature: several of the products in question will have to be separated from the tariff position in which they appear at present. But the common external tariff only serves as the basis for the calculation of the national tariffs; it does not come into force before the end of the transitional period, towards 1970. In the case of tea, the six member-Governments agreed to adopt the new common external tariff as their national tariff from 1st January, 1964. Some such step will be necessary in the case of the score or so of products covered by the decision of 15th October, as otherwise the national tariffs will only be reduced by 30 percent of the difference between them and the reduced common external tariff.

All these problems may be solved by 4th November, when the Council of Ministers is to take a final decision on the concessions it wants to offer India. In principle, it could have done so at its last meeting; after all, the consultations with the Community's 18 African partners are a mere formality—the latter have no veto power and can only draw the Community's attention to the possible harmful effects on their own exports which the suspensions may have. The Greek Government was, in fact, consulted on certain products, even while the matter was under discussion by the permanent representatives.

Reason for Hesitation

The principal reason for the hesitation shown by the Council of Ministers is that it wishes to avoid giving the impression of rejecting out of hand India's request to be consulted before the concessions are made. The Six feel that the difference between what they are offering and what the Indian Government has been seeking is no more than one of language, a procedural difference at most; nevertheless, they wish to assure themselves that the Indian reaction will be favourable before proceeding to take the final decision.

In order to understand the differences in approach, it is necessary to go back to last January. The Six took the view that with the collapse of the British negotiations, the various concessions which they had offered India lost their justification. The Indian *aide-mémoire*, thereafter, sought to dissociate these concessions from the British negotiations. It pointed to India's growing trade deficit with the Six and her efforts to expand her exports and put her trade relations with the E.C.M. on a more normal basis. The *aide-mémoire* suggested that as a first step, the tariff measures approved in August 1962 be given effect to at once. More comprehensive arrangements for a more balanced economic relationship could be worked out in due course, bilaterally as well as multilaterally through G.A.T.T.

Even before the *aide-mémoire* was delivered, the Six had decided to suspend their tariffs on tea and tropical woods. They felt that tea being one of India's principal exports, a suspension of the duty would go far towards meeting India's wishes. This largely explains the Six's manifest reluctance to take up the *aide-mémoire*, and the cool reception they gave the Commission's proposals for exploratory talks with India. The proposals suggested a trade agreement incorporating not only various tariff concessions, but also other measures to promote trade between the Community and India. In the Commission's view, the projected agreement could also provide for a mixed commission along the lines of the one which was being discussed with Iran at that time.

At its meeting in July, the Council decided to seek additional information, hoping by this means to shelve the proposals until after the autumn. Some of the Six in fact refused to say precisely when they would take up the matter again, although unofficially it was agreed to do so in November. However, under pressure from India, the Council agreed to consider the *aide-mémoire* in October, provided the permanent representatives were in a position to report on it by then.

Two Schools of Thought

Both the permanent representatives and the experts held a number of meetings in September and October; their last meeting was held on 12th October. It was soon evident that there were two major schools of thought. One favoured the immediate grant of a series of tariff concessions on a unilateral, autonomous basis; this was the "package deal" school. The other, which was in the minority, supported the Commission's request for authorisation to hold exploratory talks. (The latter was the solution favoured by India also as she feared that a unilateral offer would be followed by a long silence.)

The unilateralists, including Belgium and Italy, maintained that the Community would retain its freedom of action if the concessions were granted unilaterally, an important consideration in their view being the multilateral negotiations fixed for next year. Some also argued it would be unwise to open bilateral talks now when many of the same problems will come up in due course in Geneva, although others felt that the Community should try to settle bilaterally what it can, leaving only the basic problems for the Kennedy round. Some felt that exploratory talks would serve no useful purpose as the Community had little else to offer India once the unilateral concessions had been made. As a result, they saw nothing to recommend the compromise—the immediate grant of certain suspensions to be followed by exploratory talks on the other problems raised by India—which the Commission as well as India have recommended.

Against this, the minority in favour of exploratory talks appears to have had little to say. The French, who favoured both alternatives equally, declared themselves willing to support the majority provided the concessions were reasonably substantial—that is to say, included handloom products as well. But as the French textile industry (along with the Belgian and Italian) fears massive imports from Asia, the search for an adequate definition is proving long and difficult.

The position of the Commission has been altogether simpler and more consistent. As a Community rather than a national body, it inevitably favours measures which strengthen the powers of the Community over those of the member-States. In its view, the conclusion of a trade agreement with India would mark a step forward in the development of the Community's commercial policy, which must be in force by the end of the transitional period. Since the breakdown of the British negotiations, the Commission has been particularly anxious to develop a Comunity policy towards third countries: unfortunately for it, the member-Governments have become equally reluctant, since January, to subordinate national policies to a supra-national one.

Indian Suggestions

The obvious disagreement among the Six seems to have promoted the second Indian *aide-mémoire*, which was delivered to the member-Governments and the Commission at the end of September. After noting that the majority favoured unilateral concessions on a number of products—but not some of the most important—the *aide-mémoire* welcomed the proposed suspensions and expressed the hope they would be in force by 1st January, 1964, in order to enable a concerted sales campaign for both tea and the other products to be launched. In an obvious attempt to reconcile the conflicting viewpoints, the *aide-mémoire* suggested that for the problems on which prompt and unilateral action was not possible, more detailed discussions should take place. It proposed, therefore, informal high-level talks during October and November, between representatives of India and the member-States, the results of which would be embodied in a report to be presented to the Council.

These talks, according to the Indian view, would cover the question of tariff reductions on traditional Indian exports, preferential tariff quotas for the products of India's new industries, and co-operation between Indian and west European producers for the sale of each others' goods. They would allow a distinction to be made between those problems requiring national solutions and those for which only a Community solution was possible. At the same time, they would enable both India and the E.C.M. to formulate their policies towards the various problems which would be raised in G.A.T.T. and the U.N. World Trade Conference.

Although it was clear during the recent Ministerial session that the Indian proposals had been received with little enthusiasm, almost none of the delegations was prepared to reject them outright. One delegate pointed out that the Community had already refused a British proposal for talks with the permanent representatives on the grounds that contacts between the Community and third countries should be through the Commission. He felt that exploratory talks would serve little purpose as the Six did not foresee negotiations in the immediate future. Moreover, the Community was already discussing in Geneva the Indian proposal for preferential tariffs for manufactured goods from the developing countries. It was, therefore, possible that tariff concessions on other products would be offered by the E.C.M. in Geneva.

However, none of the Six wished to give the impression that the Community was not prepared to discuss India's problems any further. It was pointed out that informal exchanges of views between the Commission and the Indian mission in Brussels would continue as in the past, as also with India's representatives in the six E.C.M. capitals. There is a difference between talks which have the Council's blessings and routine exchanges of views, but that has been disregarded.

Paradoxical as it may seem, the very importance of India is one of the obstacles to formal talks. The problems which are raised are so important and their solution will have so profound an effect on the Six's relations with other developing countries, that the member-Governments are unwilling to undertake their examination. They have preferred to shy away, perhaps in the hope that, unlike the bilateral formula, the forthcoming multilateral talks in Geneva will favour a fairly vague, and relatively ineffective, compromise.

enjoy unique JAL service on your next flight to LONDON and other gay cities of Europe

Leave Calcutta Sunday or Thursday evening (2220 hours) aboard a luxurious JAL DC-8 Jet. (Also by connection at Karachi.) Arrive in Rome for breakfast; London for lunch. Visit Cairo and Frankfurt along the way. Or, fly JAL's morning service east through Bangkok and Hong Kong to Tokyo, where JAL's trans-Pacific jets leave daily for the U.S.A. Either way, JAL's wonderful hospitality will make your flight truly enjoyable.

Serving heavy industry...

SCHLOEMANN

As early as 1937, the existing blooming mill at TISCO was modernised by Schloemann. TISCO have now installed a new Schloemann blooming mill for their expansion programme

ROLLING MILLS HAMMERS PRESSES

In her steady progress towards economic and industrial advancement, India demands the finest plants and equipment for her heavy industries—and Schloemann have been supplying the country with the latest designs in rolling mills, hammers and presses for over a quarter of a century.

SCHLOEMANN plants for India's Heavy Industry

Among the industrial undertakings in India which are using or have ordered Schloemann plant and equipment are:
Tata Iron & Steel Co. Limited
Hindustan Steel Limited
Mysore Iron & Steel Works
Tata Locomotive & Engineering Co. Limited
Indian Steel & Wire Products Limited
Krishna Steel Industries
Atomic Energy Establishment, Trombay, Bombay
National Small Scale Industries, New Delhi

Sole Distributors:
VOLTAS
Head Office: Bombay 1

Experience on the line makes the General Electric, U.S.A. boiling water reactor your best investment

3 BILLION KILOWATT-HOURS

Through October, 1963, five G-E boiling-water-reactor plants operating on utility systems had generated more than three billion gross kwh, most of it in the last 30 months. By 1968, at least six more G-E BWRs will be on the line, and the power they produce will have passed 16 billion kwh.

So we speak from experience — operating experience — when we detail the advantages of the G-E BWR's design simplicity... low operating costs... high availability... and easy maintenance.

The simple, direct-cycle design needs less structural material and less auxiliary equipment. There's no heat exchanger to reduce steam temperatures and to complicate maintenance. Steam flows directly to the General Electric turbine-generator at 1000 psi and 545F.

The reactor building is accessible even during operation. To simplify reactor maintenance and refuelling, G. E. uses a bottom-mounted system of mechanical control for the BWR. These bottom-mounted mechanical drives also allow more efficient control and use of fuel. How does this work out in practice? The operators of Dresden Nuclear Power Station (220,000 kwe) report that their BWR plant has matched the *best* coal-fired plant on their system in availability.

What happens when the turbine does need inspection or maintenance? Experience has shown there is no delay. When the turbine is thermally *cool enough* to work on, it's radioactively *safe* to work on.

General Electric boiling water reactors are the most economical nuclear-power producers for utilities... now and for the future. We are offering BWRs in whatever rating you require, at firm prices, with performance warranted. We'd welcome a chance to discuss them with you. Contact **International General Electric Company (India) Pvt. Ltd., Thackersey House, Graham Road, Ballard Estate, Bombay-1** or write *International General Electric Company, Dept. 30-32 CP, 159, Madison Avenue, New York, NY 10016, U.S.A.*

NATIONAL 3446J

EXPORTING INDIAN TEXTILES TO WEST GERMANY

By Kamal Rohtagi

With the sharp rise in national income and consumer spending, people in West Germany are buying more and more textiles. So textile imports into that country are rising steadily Most of the imported textiles come from the E.E.C. countries, and the share of Asian countries is only 5 percent of the total. There is scope for increasing Indian textile exports to West Germany.

WITH the growth of economic prosperity in West Germany, it was only natural that imports of consumer goods into that country should increase. Quality textiles are a case in point. Improved retail sales have shown that along with the growth of consumer spending, West Germany has bought more and more textiles in the past six years than before. The trend is towards further growth and expansion, especially as the Germans attain the lavish living standards of their North American cousins.

A measure of this growth is that during the current year, textile imports into West Germany are running at the rate of some Rs. 450 crores a year, which is about 5 percent higher than those in 1962. Since 1958, textile imports into West Germany have been increasing steadily. Imports in 1962 were higher by 18 percent over 1961, those in 1961 were higher by 12 percent over 1960 and the 1960 figures were higher by 9 percent over those for 1959 and so on. But this is no consolation to Indian or for that matter other Asian, exporters because their exports to West Germany are restricted through severe quotas, although Asian countries (and certainly India) have an unfavourable balance of trade with that country.

Share of Asian Countries

Most of the textile imports into West Germany came from the European countries, principally the E.E.C. countries. Italy to be more specific. A greater part of these consisted of woven materials and finished goods as knitwear in the woollen range. The share of the Asian countries, like India and Japan, was less than 5 percent of these huge imports and consisted mostly of woven cotton and cellular woollen materials. There is definitely more scope for the export of quality Indian woollen goods (knitwear and heavy suitings) as the import quotas are gradually being lifted because of the general demand to liberalise this trade and also because of the U.S. pressure on the European Economic Community, more so after the failure of the talks on Britain's entry into the E.E.C.

India's protected markets are already being affected by the stagnation in the British economy and a mild protectionist wave in that country. Today it is imperative for her to seek fresh European markets, and West Germany is the ideal market for her textiles. It is a big market and is expanding every day. It offers opportunities for exporting semi-finished materials (as grey cloth exports to the U.K. market) and to finish them to its own requirements as well as for exports to third countries, even within the E.E.C.

TOTAL SALES AND IMPORTS OF TEXTILES INTO WEST GERMANY

Selected categories

	1960		1961	
Categories	Sales in million deutschemarks	Imports percent of sales	Sales in million deutschemarks	Imports percent of sales
Total textiles	16,461.6	15.2	17,081.1	11.6
Cotton fabrics	2,782.2	7.8	2,777.0	6.7
Cellular wool fabrics	505.8	10.2	491.2	14.8
Synthetic fibres	44.9	0.8	81.9	1.1
Woollen fabrics	1,368.5	27.7	1,326.9	30.2
Velvet and plush	127.0	29.5	114.8	39.6
Tapestry	128.1	7.8	121.8	9.2
Woollen worsteds	765.8	48.8	792.3	54.7
Jute yarn	128.7	4.5	132.1	4.4
Jute bags	33.8	30.3	29.9	83.6

Source: the West German Ministry of Economic Affairs

The West German textile industry is unable to take full advantage of this growth in demand for textiles because of its high production costs. Wages in that country are still increasing. West German cotton weavers have most up-to-date machines but have been unable to reduce production costs because of several factors. For instance, West German wages are roughly Rs. 5 an hour. They have a 40-hour week and Sunday working is prohibited and so is the night shift in the textile industry. These are irreversible factors and favour the low cost countries like India. No wonder, therefore, that in spite of the increase in total sales of textiles in West Germany, the net increase in the domestic textile production in that country during the 24 months from January 1961 till December 1962, was only slightly less than 2 percent. So the imports had to be stepped up. The following table will show the respective sales and imports of textiles into that country for 1960 and 1961 (the 1962 figures are not available yet). But the trend is confirmed otherwise too.

One can see that the biggest increase in imports is in the case of woollen fabrics, worsteds and the velvet. India should, therefore, concentrate on these lines. The latest trend in West Germany is that more cotton weaving factories are going out of production and more cotton yarn imports will be necessary to meet the growing demand.

Quota Restrictions to Go

The West German Government has appreciated these factors and has told the textile producers there that the protection granted to them hitherto will not be available for good. Quota restrictions will have to go, although gradually. In the case of Spanish, Portuguese and Greek textile imports, to that country in a better and more organised manner. At the moment, Indian textile exports to that country are running at roughly Rs. 5 crores to Rs 7 crores a year. This could easily go up to Rs. 30 crores to Rs. 40 crores a year, if suitable arrangements for finishing the Indian grey cloth could be made. It is in this field that Indian manufacturers and exporters should look and plan. One has to be cautious in matters of textile exports, because these are highly susceptible to fashion changes. So the designs have to be up-to-date and prints must have a fresh look every season. Novelties do not remain novelties if these are repeated many times.

Competition from Synthetics

There is, however, a serious danger to textile exports to West Germany. All over the world, synthetic fibres are tending to replace cotton and wool yarns. The German chemical industry is concentrating on new types of synthetic fibres and at a cheaper cost. If textile developments in India lag behind in exploiting the synthetic yarns to their full, then Indian textile exports to West Germany will certainly sag. So the development of synthetic fibre plants in India (as an urgent export measure) has become an urgent necessity It is reported that at the moment synthetic yarns account for 30 percent of all textiles produced in West Germany. But by 1970, these would account for nearly 70 percent. So the cost advantage India has today with home-grown cotton and raw wools may tend to lessen or may even vanish by 1970 when the production of synthetic textiles will sharply increase. By that time, India's wage costs may also go up. It is this point that needs watching.

At the moment, when India's textile exports have sagged and stagnated, the new chances to increase Indian exports to the West German markets are a welcome change and also a challenge. One only hopes that India's textile industry will be able to meet this challenge.

where quota restrictions do not apply for much and where wages are sometimes as low as in India, the authorities in Bonn have shown their helplessness.

A sort of similar situation is developing in West Germany, which developed in the U.K. a decade ago. The continued export of German goods to underdeveloped countries now largely depends on the country's liberalised trade with them and especially in admitting their consumer goods. The U.K.-Commonwealth trade would have got a severe jolt if the U.K. Government had taken a full-fledged protectionist view of its domestic textile industry. They had to sacrifice some British textile interests in the larger perspective. because countries like India could not otherwise balance their trade with the U.K.

Having ruled out the protectionist danger in West Germany, one can begin to plan Indian textile exports

PHILLIPS PETROLEUM OFFERS TO SET UP SYNTHETIC RUBBER PLANT

(FROM OUR NEW DELHI CORRESPONDENT)

PHILLIPS Petroleum of the U.S.A. has put up a proposal to the Government of India to set up a plant for manufacturing synthetic rubber. The proposal hinges on the availability of naphtha in this country. On the basis of the "Malaviya plan", which visualises the expansion of public-sector oil refineries, including the one in Gujarat and the proposed one in Cochin, 3 million tons of naphtha is expected to be available in India by 1966. Half of this quantity will be used for producing motor-spirit. According to tentative estimates, the demand for naphtha for manufacturing fertilisers should be 1 million tons by 1970. By that time, at least two more oil refineries, one in Madras and another in Haldia, may go on stream. Side by side, the production of gas in Cambay and Ankleshwar is being increased and the output may reach 1 million cubic metres a year. Gas is now largely being used for the generation of electricity in Gujarat.

The proposal of Phillips Petroleum for setting up a synthetic rubber plant can be considered if two issues are settled. Firstly, it is necessary to be definite about the total supply of naphtha and the priorities that will be officially accorded to the fertiliser plants and the petro-chemical units, including the plants for manufacturing synthetic rubber.

It is interesting to consider in this context India's refinery capacity and the proposals of Burmah-Shell and Esso Standard Eastern to replace their refinery agreements by industrial licences, granted under the Industries (Development and Regulation) Act. The Government's first priority is to set up a 2-million ton oil refinery in Madras in the "public sector". The "public sector", as far as new oil refineries are concerned, now means majority participation in the equity capital. In addition to Burmah-Shell, Esso and Caltex, E.N.I. of Italy, Phillips Petroleum, Standard of Indianna of the U.S.A., a Japanese and a German concern have shown interest; two of them—presumably E.N.I. and Phillips Petroleum—have submitted project reports. The Government's plan appears to be to start negotiations early next year.

Refinery Agreements

As for the refinery agreements, both Burmah-Shell and Esso Standard Eastern have given up their earlier demand, under which the replacement of the agreements by industrial licences was linked with the expansion of their refineries. As desired by the Government, they are ready for the question of expansion to be considered on its own merits. They are, however, convinced that the expansion of their oil refineries is inevitable, firstly because the demand for petroleum products is rising faster than originally anticipated and secondly because of the reported difficulties in the expansion programme of the public-sector oil refineries. The Nunmati refinery, for example, may not be expanded to the targeted figure.

As far as the replacement of the refinery agreements by industrial licences is concerned, there seems to be three stipulations which the two oil companies have made as *sine qua non* to the changeover. Both Burmah-Shell and Esso want to have an assurance from the Government that they will be allowed to import crude oil from their sources at competitive world prices and that the Government of India will not reduce their competitiveness by levying import duties on crude. Secondly, they want an assurance from the Government that they will not be discriminated against, particularly in relation to taxation and marketing *vis-à-vis* public-sector oil refineries. This is a principle which is being observed in all industrial units, such as iron and steel, in which private-sector units compete with those in the public-sector. Thirdly, they want an assurance that foreign exchange will be made available to them for the repatriation of their profits or the price of crude. Esso, in addition, proposes merging its refinery and marketing organisations into the unit.

It needs to be examined why these demands have been made. The demand concerning the import of crude may be regarded as reasonable, the Government having permitted Phillips Petroleum to do the same. As for discrimination, the cardinal principle underlying the Prime Minister's statement on foreign capital is that once a foreign company is permitted to enter the Indian market, there should be no discrimination against it. Unfortunately, there is a wide gap between precept and practice. The Caltex refinery on the east coast of India is a case in point. Judged by modern standards, this is too small a unit. And yet the Government will first set up an oil refinery in Madras and another in Haldia, near Calcutta, before it considers the question of the expansion of the Caltex refinery. The expansion of the other two refineries in the private sector has been ruled out, at least for the present.

The former Central Oil Minister, Mr. Malaviya, had laid down that the refining capacity in the public sector should be at least 51 percent of the total. In other words, it could be said that the refining capacity in the private sector should not exceed 49 percent. Since the Prime Minister recently told Parliament that there was no change in India's oil policy after Mr. Malaviya had resigned from the Cabinet, the rigid proportion probably still holds good for the oil industry. The question of a drain on India's foreign exchange resources is usually raised to counteract the demand for expanding the refinery capacity in the private sector. But there is bound to be a drain on those resources in the whole scheme of development proposed by the Planning Commission. The drain on foreign exchange is a universal phenomenon. There will be a drain on India's resources even under the agreement with Phillips Petroleum for constructing the Cochin refinery.

THIRD PLAN

MID-TERM APPRAISAL

The following are some of the important findings of the mid-term appraisal of the third plan recenaly made by the Planning Commission:

The implementation of a number of industrial projects has been impeded due largely to delays in finalising schemes and in arranging foreign aid or collaboration. As a result of this delay, some of the benefits which were expected to accrue in the last year of the third plan would be available only in the initial period of the fourth plan.

Among the important projects which are likely to be completed in the first or second year of the fourth plan instead of the last year of the third plan as originally scheduled are: the Gorakhpur fertliser factory, Korba fertiliser factory, second heavy electrical project (Ranipur), high-pressure boiler plant (Tiruchi), heavy electrical project (Ramchandrapuram), heavy machine tool factory (Ranchi), machine tool factory (Kerala), precision instrument project (Kotah), ophthalmic glass project (Durgapur), alloy and tool steel plant (Durgapur) and the expansion of Praga Tools. The Gujarat and Durgapur fertiliser factories are likely to be completed even later.

Projects which will at best be only in the preliminary stages and will be carried forward substantially into the fourth plan are: the organic intermediates plant (Panvel), phyto-chemicals plant (Kerala), basic refractory project (Bhilai), heavy structural works and heavy plate and vessels works (Wardha), precision instrument project (Kerala), ball and roller bearing project, heavy compressor and pump project and marine diesel engine factory, and the expansion of Nepa Mills. No progress has so far been made in relation to the second heavy structural works and the second heavy plate and vessels works.

Although in terms of industrial licensing, capacities to the full extent of the plan targets have already been covered in several industries, the progress in the private sector in certain crucial fields has not been satisfactory. The overall investments in the private sector in the first two years of the plan have been broadly up to plan expectations; but the plan priorities have not been adhered to. So in several basic industries such as steel castings, steel forgings, machine tools, industrial machinery, alloy steel, cement, fertilisers, aluminium and paper, there will be large shortfalls. Basically, the difficulty is that the private sector does not seem to be keen on entering into fields involving difficult technology and/or uncertainty about providing immediate and large returns. There are also difficulties of arranging foreign collaboration.

Experience in the last few years has shown that delays in the implementation of public-sector projects can be minimised or avoided if adequate care is taken initially to plan the projects in detail, to define their scope (and adhere to it), to estimate the cost and foreign exchange requirements with precision and to lay down realistic schedules of implementation. The lack of preparatory planning has largely contributed to the delay in the implementation of several projects in the public sector for which foreign exchange or foreign credit was available. In order to ensure that such delays are reduced, it is necessary to set up or strengthen the appropriate planning machinery in the Ministries and in public-sector undertakings. This matter is currently being examined in consultation with the Ministries.

The Gestation Period

Because of the change in the structure of industrial development as well as on account of the limitations on foreign exchange, the establishment of industries takes a considerably longer time than in the past. On average, the gestation period for industries is about three to four years and in some of the heavy industries it is as much as seven to eight years. The preliminary investigations on projects to decide their scope, location, arrangements for foreign credit, etcetera, are time-consuming. It is, therefore, necessary to initiate action on major projects to be undertaken in the fourth plan sufficiently in advance so that these are ready to be taken up for construction in the early years of that plan. A list of such projects to be undertaken in the public sector has to be drawn up and studies on them initiated straightaway. Similarly, in the case of private-sector projects, licensing beyond the third plan targets should be considered in industries having a comparatively long gestation period, *e.g.*, aluminium, paper and newsprint.

Reduction of the cost of production is an important aspect requiring attention in planning and operation of industries. Reduction of costs will help increase the surpluses available for further investment; it will strengthen the position of Indian industry in the export market. The emphasis in implementation has hitherto been on the achievement of certain predetermined physical targets; adequate attention has not been bestowed on economies of scale and the cost of production. Two steps are essential. Firstly, productivity in industries has to be improved and waste eliminated to bring down costs in existing units. Secondly, it is necessary that in the creation of further capacity, the expansion of existing units to optimum size and establishment of new units of only economic size should be permitted. These considerations are particularly relevant in the context of heavy industries like steel, aluminium, petro-chemicals, and fertilisers.

On the basis of present expectations, the commercial vehicle capacity will be only about 54,000 in 1965-66, against the target of 60,000. In the case of passenger cars, production up to the targeted capacity may be possible if adequate foreign exchange is provided. But in view of the low priority attached to the industry, the output may not increase beyond 25,000, against the target of 30,000.

Fertiliser Production

There will be a significant shortfall in the fertiliser programme. A recent review carried out by the Department of Heavy Industries shows that the output in 1965-63 will be only of the order of 500,000 tons, against the target of 800,000 tons (in terms of nitrogen). One of the main reasons for the shortfall in production is the failure of the private sector to fulfil its programme as originally envisaged. None of the major private-sector projects has so far advanced beyond the preliminary stage.

In the case of phosphatic fertilisers, there is expected to be a significant shortfall in production in relation to the target. This is not so much on account of the inadequate capacity as such as on account of the poor offtake of fertilisers. The anticipated production in 1962-63 is only about 75,000 tons and it is unlikely that the offtake in 1965-66 will be more than about 200,000 tons (of P.O.).

Paper and paperboard and newsprint: In both these industries, there will be significant shortfalls. Although capacity over 1 million tons has been licensed in the paper and paper board industry, the progress in

implementation of these projects has been extremely slow. In the case of newsprint, three schemes have been licensed in the private sector, but there have been various difficulties and no significant progress has been made. It is, therefore, unlikely that any substantial increase in output will be achieved during the third plan period.

Cement: Against the output target of 13 million tons in the third plan, production in 1965-66 is expected to be only about 12 million tons. One of the reasons for the slow progress of the cement industry is the decision taken some time ago to tie the further expansion of the industry with the purchase of indigenous machinery. Unfortunately, there has been a lag in the implementation of the cement machinery programme, and this has in turn slowed down the implementation of cement projects. A decision has recently been taken to allow the import of a few cement plants. This decision may, to some extent, help in stepping up capacity at a somewhat faster rate than would otherwise have been possible.

Refinery Programme

Petroleum refining: Considering the revised estimates of demand for petroleum products made by the Oil Advisory Committee, the refinery programme has been enlarged to include (a) marginal expansion of the coastal refinery in Bombay by 410,000 tons, (b) expansion of the capacity of the public sector refineries by 2.25 millions tons and (c) establishment of a new refinery in Cochin (capacity 2.35 million tons) in collaboration with Phillips Petroleum of the U.S.A. With the implementation of these programmes the total capacity will be 17.9 million tons. The Central Oil Ministry expects that the expanded capacity of the public-sector refineries will be in full commission by early 1966, which is doubtful considering the experience in Gauhati. The question whether further additional refining capacity is required to be in effective operation in the third plan, is being examined in view of the possibility of delays that may occur in the completion of these schemes.

As for the products pipelines, the Calcutta-Barauni section of the products pipeline is expected to be completed by April 1965 and the Barauni-Kanpur section by June 1964. The Barauni-Calcutta section will—in addition to moving products from the refinery—also transport crude oil from Calcutta to Barauni. The Gauhati-Siliguri pipeline is expected to be completed by August 1964, against the original schedule of March 1964. Subsequent to the finalisation of the plan, five pipelines for transporting oil and one for gas in the Gujarat area were considered necessary. They are expected to be completed by December 1964.

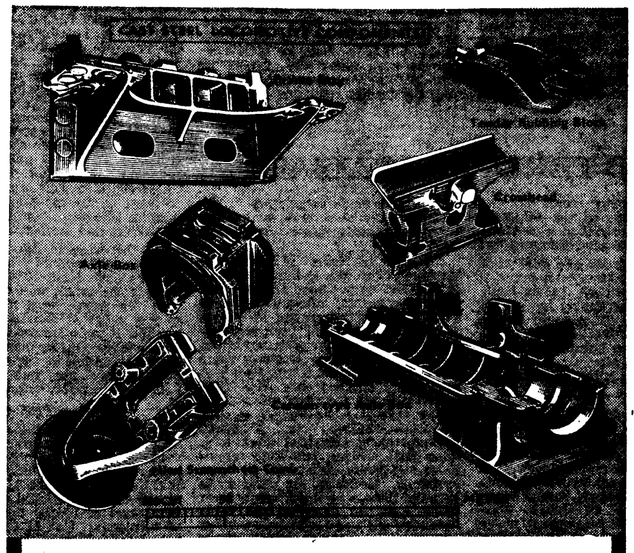
The actual production of foodgrains in 1951-62 was 78.6 million tons, compared with 79.7 million tons reached in 1960-61. The final estimates of production of all foodgrains for 1962-63 are not yet available, but production is not expected to exceed that in 1961-62.

The district, block and village plans are intended to serve as a medium for placing before the people certain vital objectives, bringing resources and skills to them and seeking from them the maximum effort of which they are capable. This object has not been realised. The observations of the Central teams show that the village production plans have not become a reality in any State. Even where village production plans have been prepared, they are—for the most part—unrealistic, incomplete and unintegrated. The plans have not attracted the farmers as they have not been backed by commitments for the provision of necessary resources and services, such as technical guidance, supplies and credit. There is no organic link between the plans at the district, block and village levels. The State plans, in most cases, have not been broken into district and block plans so as to provide the necessary framework for the village production plans.

The gaps and deficiencies arising from diffused and divided responsibility, lack of definition of relationship between different agencies and organs dealing with inter-related and inter-dependent aspects of the same programme, clogged lines of communication, inadequate arrangement for co-ordination at various levels, insufficient opportunity for the technical staff to have an effective voice and to play a key rôle in the planning and implementation of agricultural programmes, unmanageable area of operation of village level workers, their quality, training and service conditions, too frequent transfers of the staff, inadequate arrangement for technical support, guidance and supervision, etcetera call for immediate and careful consideration.

Licences Revoked

The appraisal does not disclose how many industrial licences had to be revoked during the last 18 months and the reasons why they had to be revoked. It may be news to many that till 31st December, 1962, as many as 679 licences had been revoked. The number of licences revoked since then could easily raise the total of revoked licences to 1,000. This was done after issuing a proper "show-cause" notice, asking a licensee to explain why his licences should not be revoked.



One obvious answer to the question as to why the licences had to be revoked could be that they were given to the wrong party. The case of aluminium plants licensed in the private sector illustrates the point. In one case, the licence had to be revoked with the result that the foreign collaborator lost interest in the project. In the other case, the licensee had to be changed. Then again, in one case a well-known foreign collaborator was directed to tie up, say, with Mr. X instead of Mr. Y, which the foreign collaborator declined to do. In another case, an Indian party was permitted to go abroad a number of times for which foreign exchange was given. He was able to secure a first-rate foreign collaborator with equally first-class terms of collaboration. But his collaboration agreement was handed over to an unknown party, with whom the foreign collaborator was directed to collaborate.

Some units in the public sector have shown an unsatisfactory performance. In its appraisal, the Planning Commission should explain why the organic intermediates project has not made any progress and why the German collaborators, Bayers, cooled off.

In the agricultural sector, the Planning Commission has been fixing production targets without making any attempt to prevent the diversion of acreage, say, from food crops to cash crops. The results could have been anticipated. In Himachal Pradesh, the food acreage is being diverted to the production of fruit. Meanwhile although there had been no grow-more-sugarcane campaign, the acreage under sugarcane has been going up at the cost of foodgrains.

In the third year of the third plan, the Planning Commission has discovered that the stagnation in agriculture was, by and large, due to faulty administration at the village and district levels and that there have been too many unco-ordinated agencies dealing with the farmer. Yet some of the men who had been pointing to these lacunae in administration have been sacked and the planners, meanwhile, are being promoted.

The whole exercise betrays a large element of self-delusion. Attempts are being made to show that the Planning Commission, like the king, can do no wrong. The State Governments, or the private sector, or the Government of India are blamed for their unsatisfactory performance. Yet, after providing finance on the basis of its own planning, the Commission has discovered after seven years that the Community Development organisation has not helped

agricultural progress. Even today, the organisation is busy organising village defence force, labour banks and village schools for offering as gifts to the Prime Minister on his birthday.

The plan is drawn in the same way as the Finance Minister draws up his Budget. The strategy of a Budget is to estimate a year's exjenditure and then find ways of financing the expenditure. The Commission likewise puts together all the items of expenditure and recommends its financing from internal resources, existing or assumed. The gap is left over for the foreigners to bridge, on the well-known theory that the West has a moral obligation to finance India's development.

The exercises for the fourth plan are now well on the way, despite the admittedly unsatisfactory implementation of the third plan. The Central Ministry of Steel, for example, is working on a target of 20 million tons of steel by 1971 at an estimated cost of Rs. 2,125 crores. This is an indication of what the total outlay under the plan could be. It is easily forgotten that it is the present generation which has to pay for the presumed prosperity of its unknown successors.

UREA

Purchase Pact with Japan

The Government of India has entered into an agreement with Japanese suppliers for purchasing 50,000 tons of urea for cash. A further quantity of urea may be purchased provided there is an agreement on prices. The Government has also decided not to make any purchases of ammonium sulphate because its price is unduly high. It is said that this year, there is a world shortage of fertilisers, particularly of ammonium sulphate because of fresh demand from east European countries. Nevertheless, the Government feels that a line has to be drawn somewhere and a combination of producers, especially from western Europe, should not be allowed to push up prices to the detriment of food production and maintenance of the price line.

ENGINEERING

Talks on Consultancy Firms

A meeting of the committee, which was appointed last summer to examine and make recommendations in relation to consultancy engineering firms to be set up with foreign collaboration, was held here recently under the chairmanship of Mr. T. Swaminathan, Secretary to the Department of Supply and Technical Development. The committee was set up to review the principles to be adopted to govern the approvals to the establishment of consultancy, design and related services by foreign firms in the light of experience since gained with particular reference, among others, to the following:

(1) What are the fields in which scope exists for setting up technical consultancy organisations.

(2) What should be the scope of activities of the organisations: whether they should be limited to technical consultancy or design only or whether they should undertake turnkey jobs also.

(3) What are the safeguards to be observed to see that foreign exchange is not spent abroad on jobs that can be undertaken in India by Indian organisations.

There are nine consultancy engineering firms which have so far been approved by the Government, including Simon-Carves Ltd, Koppers India Ltd, Tata-Ebasco Consulting Engineering Services and National Rayon Corporation Ltd. There are 12 applications pending before the Government.

During the discussion one view was that consultancy firms should not have a tie-up with financiers or suppliers of machinery and equipment. The meeting, however, felt that it would be advisable to consult various institutes, such as the institutes of engineers, of chemical engineering and of metallurgical engineering before reaching any final conclusions.

UNIT TRUST

Bill Drafted

Reference was recently made in these columns to a proposal for establishing a unit trust in India. Enquiries show that the Reserve Bank of India has drafted a Bill, which will be examined by a U.S. expert who is due to arrive here shortly. The Bill, it is expected, will be brought up before Parliament during its forthcoming winter session.

Two other Bills are planned by the Central Ministry of Finance, one to convert the Industrial Finance Corporation into a development bank and the other to amend the Reserve Bank of India Act to enable the Bank to exercise a larger measure of control over commercial banks, and in particular to ensure that they are not used by any business group to its own advantage.

The Company Law Department, meanwhile, has ceased to exist. It has been temporarily merged with the Revenue Department in the Central Ministry of Finance. Its future set up is at present being discussed here.

EASTERN EUROPE

More Trade Teams Expected

In addition to the Czech trade delegation which is already in New Delhi, trade delegations from Hungary and East Germany are expected here shortly. They will help draw up longer-term trade plans, as was recently done with Russia.

While on the subject of export trade, it may be pointed out that the manufacturers-*cum*-exporters have been demanding more and more incentives while the Government has been setting up committees creating more of bureaucratic machinery and entering into bitaleral trade agreements, particularly with the communist *bloc*. In contrast, there has been severe criticism of the selling section of the British cotton industry for the lack of vigorous campaign in the European markets. The criticism was made not by the Government, nor by the trade unionists but by the deputy chairman of the Cotton and Rayon Merchants Association, who, among other things, said that "too few salesman visit the markets. Of those who do, all too few are really fluent in the language. Clearly, in the countries of smaller populations it is less important to know the language to convince a Frenchman, a Belgian, a German or an Italian that you seriously want his business: it is almost essential to have a fluent command of his language." *The British Board of Trade Journal* has been publishing a series of articles on the U.S. market for British goods. These articles are featured in advance of a seven-week tour of Britain by six of British Government's commercial officers in the U.S.A., who will be talking to business men individually about the prospects for exporting their goods to the American market.

A contraversy is going on in Britain whether the fall in British exports was due to lack of innovations or high prices or both. These matters are of little interest to India in whose case an importer is expected to buy Indian goods on India's conditions without making any complaint. How many, for instance, know here that Indian shoes are becoming unpopular in Russia?

KHADI

Scrutiny of Rebate System

The Khadi and Village Industries Commission, it will be recalled, had made a proposal to the Government that the present system of allowing rebate sales of *khadi* cloth should be replaced by a system under which the cost of weaving *khadi* yarn into cloth was met by the Government. The Government is having the whole question examined, not with a view to ending protection to *khadi* but to find out whether the change-over will be more expensive to the tax-payer. Three questions need to be considered in this context. It is not time to end the protection to *khadi*, granted without any reference to the Tariff Commission, in view of the fact that *khadi* has become a dollar-earner because Americans are becoming *khadi*-minded. Secondly, why has not a wage board been set up for this labour-sweated industry? Thirdly, what is the incidence of tuberculosis on *khadi* weavers?

JAPAN

Talks on Yen Credit

Discussions were recently held in Tokyo from 2nd October, 1963, between the representatives of the Governments of Japan and India concerning Japan's third yen credit of 23.4 million yen (Rs. 30.95 crores) to India for her third five year plan. The credit offer was announced by the Government of Japan at the Aid-India Club meeting concluded on 7th August, 1963.

As a result of the recent discussions, an understanding has been reached to the effect that the Export-Import Bank of Japan, together with the private Japanese banks, will make available to the Government of India a credit of 23,400 million yen for India's third plan to assist in financing purchases from Japan as was the case with the previous yen credits. The credit will be used for further financing the Gorakhpur fertiliser factory and the Durgapur alloy and tool steel plant as well as for other projects and for purchases from Japan of plant and machinery and equipment required for the economic development of India.

The credit of 23,400 million yen is repayable in 15 years, including a grace period of five years, the rate of interest being 5.75 percent a year. This compares with 6 percent interest in the case of previous credits. The details of the procedures have been discussed and agreed upon and a loan agreement has been signed by the Government of India and the Export-Import Bank of Japan and the Japanese banks concerned.

GOLD CONTROL

Rules Clarified

Under the Gold Control Rules, no person other than a licensed dealer can buy or otherwise acquire gold for the purpose of manufacturing ornaments or any other article. In order to meet the difficulties of persons employed as outworkers by licensed dealers to carry on the manufacture of gold ornaments in their own premises, the Central Finance Minister announced in the Lok Sabha on 21st September, 1963, that such outworkers will be permitted to handle limited stocks of primary gold up to 14 carats. The Gold Control Administrator has issued the necessary directions explaining the procedure to be followed in this matter.

Persons who have been notified to the Central excise authorities as outworkers of licensed dealers may now be issued primary gold of purity not exceeding 14 carats for manufacturing ornaments for which an order has been placed with the licensed dealer. The outworker is permitted to keep in his possession at any one time not more than 100 grammes of primary gold belonging to any one dealer. There is no objection to any person being employed as an outworker by more than one licensed dealer, provided the total quantity of primary gold received by such outworker from all dealers does not exceed 250 grammes at any one time. The outworkers are required to return to the dealers the ornaments manufactured by them together with the residue of gold. Simple accounts are required to be maintained by the licensed dealers as well as their outworkers about these transactions.

Since self-employed goldsmiths have been given the concession of remaking ornaments of over 14-carat purity, they are not eligible to work as outworkers of any licensed dealer.

PLAN PROJECTS

Directives on Location

The Planning Commission is understood to have stressed the need for a "systematic and concerted attention" to the location of projects. The general objective suggested is to use further the available facilities like transport, power, water and townships, and not to disperse too many projects as if they are units by themselves. This advice is part of the several suggestions which the Commission has made to the chairmen of groups working on the future targets for industry, minerals, transport and power.

The Commission has also recommended a comparative study of different lines of action for a particular project. In the past, the Commission feels, projects were selected and investment decisions taken without detailed cost-benefit studies. Another thing pointed out is that the available construction organisations are too inadequate for the tasks in the third plan, including those of the Centre, States and the private sector. The situation would still be aggravated in the future. Some thought will, therefore, need to be given to the building up of a larger construction potential.

The working groups have also been advised to pay attention to the manpower aspects of development, both quantitative and qualitative. It has been suggested that the study should cover not only the needs of individual groups but also the overall demand. In the past, the Commission feels, projects have been included in the plans without they being adequately worked out. Consequently, time schedules and cost estimates which were indicated in the plan could not be realised. The real weakness was that much more was promised than the facts could sustain. Therefore, in the future, unless the feasibility study of a project is available, it should not be included in the plan. For projects not fully worked out, the provision in the plan should be on a broader basis.

Prior to the finalisation of the fourth plan, the Commission feels that decisions on advanced action should be taken. Steps would entail the initiation of negotiations for foreign exchange, sanction of preliminary works, etcetera.

The Commission has also pointed out that there are a number of industrial projects from the third plan list on which action has yet to be initiated. These projects should be con-

sidered specifically and proposals made at an early date.

Scientists and technologists in universities and national laboratories, according to the Commission, are not being made use of adequately. Given time and specific problems, they could make valuable contribution, especially by way of import substitutions and development on the basis of indigenous materials and techniques. This should be done and, where necessary, the resources required should be made available.

CHEMICALS

Producing Ethyl Alcohol

All India Distillers Association and the U.N.E.S.C.O. had organised a symposium earlier this month on new developments of chemical industries relating to ethyl alcohol, its by-products and wastes Among the papers read was one on the operational efficiency of the industry. It gave a brief account of its establishment. Another stressed the need for reducing production costs. In his paper on operational efficiency, Mr. S. L. Venkateswaran said:

"The establishment of the ethyl alcohol industry in India was rather haphazard during the early stages. The industry was conceived as a source of supplementary motor fuel during the war years and the entire approach to the establishment and organisation of the industry between 1945 and 1955 was coloured by this objective. The industry had to be established at a short notice and any entrepreneur showing a certain amount of initiative was allowed to go ahead. Questions of economic capacity or appropriate locations were treated as more or less of secondary importance. The licensing under the Industries (Development and Regulation) Act was a procedure applied only in 1951-52 and prior to that the State Governments were granted permission for such enterprises. The import of plant and machinery not being possible, the entrepreneur had to take the initiative for getting the required distillation equipment designed and fabricated within the country. Some of the early plants were exact copies of one or two units which had been imported prior to the outbreak of the second World War.

"The early development of the alcohol industry was also circumscribed by the need to sell alcohol as a motor fuel at the price at which petrol was being sold. The pressure of oil companies was a force to be reckoned with and the Government of India had to guarantee that no fiscal or other preferences was given to alcohol used as fuel. Not only did the selling prices of petrol dictate the price to be paid to an alcohol producer but the oil companies were also assured of margins of profit on alcohol at levels earned by them by selling petrol itself. The pressure of circumstances required the use of 90 percent alcohol as a fuel for some time and large quantities of such material were absorbed before the distilleries installed dehydration equipment and started producing absolute alcohol. For some time, absolute alcohol was also used as a neat fuel and it was only gradually that arrangements for the mixing of alcohol with petrol were made at petrol depôts so that the absolute alcohol could be used more advantageously in admixture with petrol.

"Gradually the alcohol industry settled down to a programme of fuel usage and such use was developed substantially during the period of the first five year plan and the programme of mixing was extended to States adjacent to U.P. so as to absorb the increasing production. The above circumstances governing the development of the alcohol industry emphasise the difficulties in maintaining maximum efficiencies of operation due to the early handicaps when producers could not plan efficient or economic units.

"It was in 1952 that the E.C.A.F.E. organised a seminar on the power alcohol industry in Lucknow in U.P. This was the first occasion when the industry itself was made conscious of the need to have highly efficient plants. The seminar brought out several suggestions for improvement and economy in the production of alcohol. The general impression left on experts who visited some Indian factories was that the industry was not properly organised and that the levels of efficiency varied widely from unit to unit. Many plants being only copies of old prewar models, the techniques of distillation were rather old fashioned. It was only in one or two cases that improved processes like Demelle's fourth techniques system introduced at most of the units and in most cases even a measure of the steam consumed was not available.

"As a follow-up of the seminar, the Development Wing constituted a small committee to formulate standard methods of tests and analyses which could be adopted by distilleries uniformly throughout the country and to suggest appropriate norms of efficiency. This committee carefully examined several available methods of analysis and control and worked out a system of uniform control for the alcohol industry, dealing separately with the two distinct processes of fermentation and distillation. The system of uniform control has been adopted by most distilleries even though there was no method of enforcement.

"The first Development Council for Alcohol and Fermentation Industries reviewed and recommended a fresh norm of efficiency not only for fermentation and distillation sections but also for the steam consumption in the distillation section in 1959-60. Some State Governments have attempted to enforce these norms out not with any measure of success, and the general impression is that the maintenance of norms of efficiency is largely a matter for the industry itself. The recent shortage of coal has affected the industry very greatly so that the need to reduce the fuel requirement of this industry has become very important. The industrial programmes for using alcohol have also been planned in a big way so that it is now necessary to produce the maximum quantities of alcohol from all available molasses if adequate supplies of this raw material were to be maintained. The price of alcohol which prevailed when it was used as motor fuel has now become the standard yardstick, for it is this price which has attracted alcohol-based industries in India. It is in this context that the Development Council for Organic Chemical Industries was obliged to constitute a sub-committee to study the standards of efficiency maintained at different units and to suggest possible lines of improvements. The sub-committee has recently completed its report and made several useful recommendations which will be considered by the Development Council as well as a technical body of the Distillers Association."

Reducing Production Costs

In his paper on the economics of alcohol manufacture, Mr. G. Narasimha Iyengar of Mysore said:

"With the establishment of several chemical industries during the second and third plan periods, alcohol has become an indispensable chemical as a raw material. Since most of the distilleries that were established in the preplan periods were more for the disposal of molasses produced from the sugar industry economically or otherwise, the distilleries then were more looked upon (at any rate by the sugar factories who owned distilleris) as a sort of a 'disposal plant'. Naturally, therefore, greater economies in the process of manufacture did not come in for consideration in that context. Moreover, as the major use for alcohol then was for beverage purposes, there were certain inhibiting excise laws which came in the way of adopting progressive methods of operation. Hence, if alcohol-based industries have to survive at all, they will have to be assured of alcohol at economical and workable prices, and in adequate quantities. It is, therefore, appropriate to consider some of the ways and means of lowering the cost of production."

SHIPPING

New Service to U.K., Continent

For the first time, Indian shipowners will provide a monthly sailing from India to the U.K. and the Continent on a regular basis. This follows discussions held in Bombay on 19th October, 1963, between the independent Indian shipowners, shippers and representatives of the Central Ministry of Transport.

The service, which will be outside the India/U.K. Continent Conference, is a reflection of the determination of all shipping and other interests in India to develop an independent service which "will not be subject to such arbitrary increases in freight rates were recently announced by the India/U.K.-Continent Conference."

The Inter-Governmental Maritime Consultative Organisation Convention has elected India as a member of the I.M.C.O. Council. India is one of the maritime nations having a substantial interest in providing international shipping services. The leader of the Indian delegation, Dr. Nagendra Singh, Additional Secretary to the Central Ministry of Transport, has been elected as president of the I.M.C.O. Assembly.

U.S.A.

New Loan Pacts

The Governments of India and the United States concluded three agreements providing for U.S. loans totalling $39.6 million (Rs. 18.8 crores) for the expansion of the Chandrapura thermal power-station, supply of 54 diesel locomotives for the Indian railways and a ropeway project in the Jharia coalfields. The loans are repayable by the Government of India over a period of 40 years with a grace period of ten years. They are free of interest and carry a service charge of three-quarters of 1 percent a year.

The largest of the loans, $16 million, is for meeting the foreign exchange costs of adding a 140,000-kilowatt generator to the Chandrapura thermal power-station in the Damodar valley. Earlier U.S. loans totalling Rs. 34.8 crores were for financing the entire cost of the first stage of the project, which is nearing completion and provides for construction of the power-station and the installation of two 140,000 killowatt units. On completion of the second stage covered by the latest agreement, Chandrapura will have a total installed capacity of 420,000 kilowatts, which will make it the largest thermal power-station in India.

The second loan of $15.5 million will finance 54 broad-gauge diesel locomotives for the Indian railways. The third plan calls for 229 broad-gauge diesel locomotives to be put into service. All of these are being supplied by credits extended by the U.S. Agency for International Development and its predecessor, the U.S. Development Loan Fund. The U.S. Export-Import Bank has authorised a loan of $19 million for India's only diesel locomotive factory currently under construction in Varanasi. Compared with a steam engine, the diesel locomotive has a higher speed and can haul a larger load. Furthermore, it can operate for long periods without taking time off for maintenance. The diesel engines already in service are helping in the faster movement of goods trains carrying coal, iron ore and steel.

The third loan, for $7.7 million, is for a ropeway project in the Jharia coalfields, Bihar, which will transport 3 million tons of sand annually. The sand, obtained from the Damodar river bed, will be used to fill up mined spaces in the coalfields. The roofs of the rich coal mines in the region are supported by vast coal pillars. By stowing sand, most of the good quality coking coal in the pillars can be removed. The project will increase coal production by 1.5 million tons a year.

POWER

New Grid for South

Details for setting up a super-power grid for the southern region were discussed at a high level meeting in Bangalore on 26th October. The four States have already agreed to interlink their power systems. The forthcoming meeting will discuss the details of administrative set-up, the need for setting up a regional agency and other technical details connected with the formation of the grid. At present arrangements are being made for constructing a 220-kilowatt single-circuit line between Kerala and Madras, Madras and Mysore and Madras and Andhra. There will be a saving of about 265,000 kilowatts in the installed capacity when the power systems of these four States are interlinked. In terms of money, it will mean a saving of Rs. 22.73 crores in the capital outlay and Rs. 2.60 crores in the annual running charges.

Apart from the four southern States, Punjab, Delhi and U.P. have also agreed to interlink their power systems. This link-up will make it possible to increase the firm capacity of the systems by about 100,000 kilowatts at the commissioning of the fifth unit of the Bhakra Right Bank Power House. The saving in money will be Rs. 9.65 crores in capital outlay and Rs. 1.46 crores in annual running charges.

Measures are also being taken to inter-connect the power systems within those States where no such connections exist at present, such as U.P., Rajasthan, Bihar and Gujarat. This is an essential preliminary step for deriving full benefits from super-power grids when they are set up.

Five new power schemes, which will yield results in the beginning of the fourth plan, have been sanctioned by the Central Ministry of Irrigation and Power. The schemes have been sanctioned in advance to ensure that there is no lack of balance in the demand and supply of power in the beginning of the next plan. The five new schemes consisting of nine units will generate 715,000 kilowatts of power. The power-stations sanctioned include the following:

Dhuvaran thermal station extension	Gujarat	= 250 MW
Harduaganj thermal station extension	U.P.	= 120 MW
Kodayar hydro electric station	Madras	= 75 MW
Durgapur coke oven thermal station extension	Andhra Pradesh	= 150 MW
Kothagudam thermal station extension	WestBengal	= 120 MW

London

NEW U.K. CABINET TO PROMOTE ECONOMIC EXPANSION

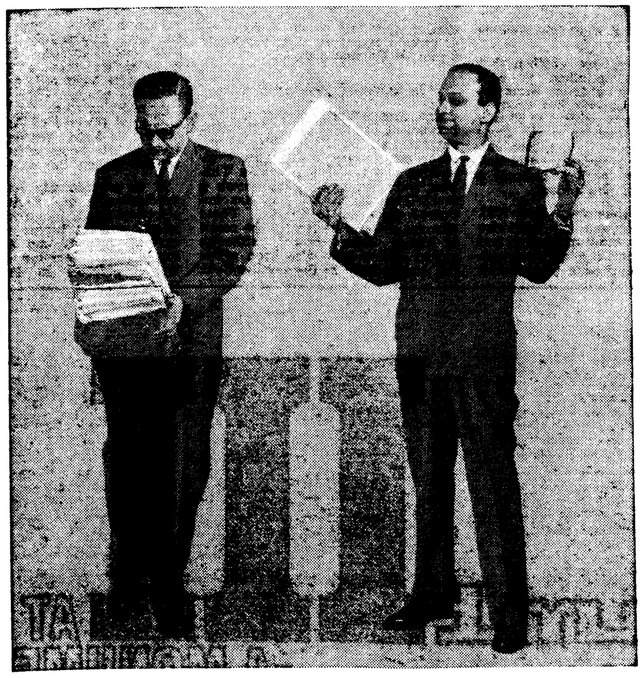
(FROM OUR LONDON CORRESPONDENT)

THE past fortnight has given Britain a new Prime Minister, Sir Alexander Douglas-Home (formerly the fourteenth Earl of Home and Foreign Secretary), and a reconstituted Cabinet. Most of the old faces are still there, and the majority of them carrying on with their former Ministerial activities, but the few changes which have been made are undoubtedly significant ones. They suggest that whatever reservations there may have been—and, perhaps, still are—at the selection of a peer as leader of the Conservative Party and Mr. Macmillan's successor in the Premiership, events may well prove that the selection has been a good one from the point of view of the country's economic well-being.

The apointment of Mr. Heath as co-ordinator of regional development plans does appear to underline a new trend. For good or bad reasons, economic or political (probably a mixture of them all), the Government has become convinced that more active intervention to steer capital investment, contracts and social expenditure towards the underdeveloped areas of the country is on balance worth while. Until fairly recently, these efforts had been rather half-hearted because of a basic conviction in Whitehall that an artificial redistribution of work on non-economic grounds would weaken the competitiveness of the economy as a whole.

Mr. Maudling has cleared up the misunderstanding that Mr. Heath's appointment in some way resembled the production planning Ministry which the Labour leaders have proposed. The Treasury remains supreme. All that will happen inside the Government machine is the creation of an office within the Board of Trade charged with the co-ordination of steps taken by various departments to put into effect the regional development policy. A Cabinet Minister had to be placed in charge to give the necessary authority to this work.

A good deal has, of course, been done already. There are the important tax incentives for capital expenditure in well-defined areas. Some contracts from the services and nationalised industries have been deliberately placed with firms in these areas—presumably without much regard to comparative costs. The large fund for shipbuilding credits works in the same way. From now on, however, much more is to be done. Details should become clearer when the two regional surveys—on the North-east and on Scotland—are published next month. It will remain problematical whether the venture will really help the British economy as a whole. On economic grounds, much regional expenditure has, in the past, proved to be wasteful. But there is a broader case to be made in favour of intervention. Apart from the relief of unemployment, the resources of the north are essential if the economy is not to run up against a low ceiling within a year of starting to expand.



Investment Implications

If it is correct that a new policy is afoot then the investment implications have to be carefully reviewed. Many firms now depressed by the general slackness of business in the north would find their prospects transformed if public money were to be spent in their neighbourhood on a large scale. Action taken last year is just beginning to show some results. Anything done in the coming months may not show up in employment, production or profits before next summer. By that time industry in the Midlands and the South may well be working at full stretch and the extension of boom conditions to the less privileged areas could give expansion a new lease of life.

Confident expectations that the Chancellor of the Exchequer would seize the opportunity of the Mansion House dinner to the bankers and merchants of the City of London to give a fresh push to the expanding economy were amply fulfilled. Mr. Maudling reaffirmed his view that "we are at the beginning of a phase of expansion" and that the bottlenecks which may impede rapid growth are being tackled effectively. Public expenditure and public investment he sees as moving upward and even in the field of private investment in manufacturing industry he discerned "clear signs" that the tide is now on the turn. On the monetary side, he saw no reason for fearing such pressures as might jeopardise further progress, with sterling riding high and supported by massive reserves.

A refreshingly expansionary contribution also came at the Mansion House from the Governor of the Bank of England. Giving point to his conviction that the British economy is now expanding on sound lines, the Earl of Cromer disclosed that fresh steps have recently been taken to give more elbow room to the joint-stock banks in sustaining growth by supplying an adequate volume of lending. In the spring, the Bank of England intimated that no exception would be taken if the banks saw fit to allow their liquidity ratios to drop from the conventional 30 percent to a minimum of 29 percent. Now the clearing banks have been informed that they should aim to achieve a ratio of not less than 28 percent between now and April 1964.

On the broader issues of economic policy, the Bank Governor made the right distinction between expenditure in the public sector and the demands

One Purchase Officer with a headache cut his inventory down from 30 products to only 8!

The Caltex "Stop-Loss" plan was the headache antidote... When each department in a plant specifies a lubricant it wants without reference to the purchases of other departments, there is bound to be a lot of waste and costly over-lapping. The Caltex "Stop-Loss" programme helps to eliminate this waste of lubrication by effectively reducing the total plant lubricant inventory. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

Find out today how Caltex "Stop-Loss" can specifically stop the problem in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

SAVE FOR SECURITY

of the private sector of the economy. In the past 18 months, he pointed out, a significant proportion of the stimulation which has been applied has been in the public sector This, he thought, should be kept in mind if and when overall demand reaches a height which might again threaten stability He posed the right question in asking whether the appropriate action might not be to withdraw some of the demand from the public sector which has recently been brought in to take up the running while private expenditure has lagged.

Business Optimism

Continued optimism among British manufacturers is shown in the latest survey of the Federation of British Industries. Confidence in both home and export trades remains at the high level first shown in June. Of the 644 firms which replied to enquiries, 42 percent reported increased production since June (against 37 percent who reported higher production in June over February). Only 13 percent report a drop in output. The majority is more optimistic about the general business situation in the country than they were four months ago.

The detailed results confirm that this continued optimism is well founded. The number of firms reporting spare capacity has dropped since June from 65 percent to 56 percent. About a quarter of the firms report an increase in numbers employed and only 17 percent a decrease. Nearly half the replies indicate a higher inflow of new orders.

For the first time since June 1960, those firms expecting to authorise more capital expenditure on plant and machinery in the coming year outnumber those expecting to authorise less. As the F.B.I. points out, there are as yet few signs of strain on available resources, although the replies point strongly to a full tide of boom in 1964. But the shortage of skilled labour is beginning to limit further expansion of output in 14 percent of the reporting firms.

Another optimistic forecast for industrial production and employment in the next few months is made in a survey of industrial trends carried out by the National Association of British Manufacturers. The enquiry covered about 500 firms, mainly small and medium-sized manufacturers employing less than 500 workers each. The results show an even more encouraging picture of industrial recovery than was revealed in the forecast made by members of the Association at the end of June. At that time, 38 percent of the firms questioned forecast a rise of production in the third quarter, while 53 percent expected no change. In the event, 51 percent of the sample now state that production has been rising, 40 percent say that it was unchanged and only 9 percent record a fall. In making a forecast for the fourth quarter, 48 percent expect the expansion of trade and output to continue, 44 percent expect no change and only 8 percent forecast a decline.

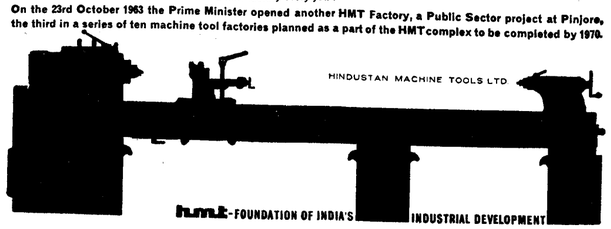
Industrial Production

The Association says that the improvement has been general throughout industry, but the position seems to be particularly good in the engineering and vehicles industries. Textiles and food have also shown a marked advance. Building has improved according to forecast. These changes seem to be largely the result of higher home orders, although export orders have also been growing, particularly in the textiles field. The survey also indicates that costs have continued to rise in most industries. About half the firms record increased costs and virtually all the others report no change. Prices were largely unchanged with some reductions, mainly in chemicals and textiles Most firms (65 percent) report employment as unchanged: the greatest improvement was in engineering and vehicles. Increasing shortage of skilled labour was reported, particularly in the London area and in the Midlands.

In contrast to the F.B.I. survey, which was based mainly on reports from large companies, the Association has found that "there is little likelihood of any marked increase in private capital investment during the next three months." Perhaps most encouraging of all, however is that good news comes at last from the engineering industry. In August, there was a further rise in the volume of net new orders received by industries producing engineering and electrical goods, the Board of Trade reports. Taking July and August together to eliminate the different timing of holidays this year and in 1962, the increase in net new orders was more than one-fifth. In the July-August period, new export orders were 17 percent higher than a year earlier while new home orders increased by almost a quarter. The high rate of new ordering made for larger order-books; at the end of August, export orders on hand reached a record level, while home orders on hand were 8 percent up on the year.

It is provisionally estimated that production in the engineering and electrical goods industries in August was 6 percent higher than a year earlier. In July and August taken together, the increase on the year was 5 percent. In the first six months of 1963, the level of production had been unchanged from a year earlier. Deliveries in July and August were 6 percent up on the year for exports and 5 percent up for home markets These statistics refer mainly to capital goods The abrupt change for the better at mid-year has raised hopes that the improvement may be spreading to the heavy engineering section which has, so far, received little benefit from the general expansion.

Demand for Steel



One indication that this may have begun to happen is the dramatic improvement in the heavy sector of the steel industry Demand for heavy products including plates and universal beams has sharply increased and some of the mills specialising in these products are working at a higher rate of capacity than they have done for two years. But managements are not yet certain whether the rise in orders is due to a turnround in stocks (which had previously been run down for longer than anyone foresaw) or to a real increase in steel consumption.

To some extent, perhaps to a large extent, the increase in these orders may reflect the sharp rise in the Government's electricity programme, which was decided on last year, but is now working through to the contract stage As these large contracts are processed, there is much subcontracting and ordering of materials and components to be done. What is not known so far is how much the new upsurge in orders has spread to mechanical engineering. The direct evidence from companies is interesting but not yet conclusive. However, one or two more months of rising orders would clinch this question which is so vital for the British economy as a whole.

hmt III AT PINJORE
-A MONUMENT TO VISION, COURAGE AND DYNAMISM

VISION—of the Government of India to plan for the manufacture of machine tools in the Public Sector to meet the industrial needs for "Machines that make machines". **COURAGE**—to go into the manufacture of machine tools against the opinion of experts who considered the project economically unsound and doubted the ability of the Indian worker to acquire the necessary skill. **DYNAMISM**—of the workers and management of HMT whose resolution and hard work made such an unparalleled success of the two machine tool factories and the high precision watch factory at Jalahalli, and their continued determination to gift the nation a new factory every year.

On the 23rd October 1963 the Prime Minister opened another HMT Factory, a Public Sector project at Pinjore, the third in a series of ten machine tool factories planned as a part of the HMT complex to be completed by 1970.

hmt-FOUNDATION OF INDIA'S INDUSTRIAL DEVELOPMENT

Jute

MILLS TO CONTINUE MAXIMUM PRODUCTION

DESPITE the uncertain marketing outlook for jute goods and a gradual decline in prices, the I.J.M.A. has decided to continue the maximum level of production till the end of November. Although the prices of raw jute are 50nP or Re. 1 a maund lower than what they were a year ago, those of manufactured goods are down even more, mainly due to Pakistani competition. Assam Bottoms ready, for instance, have declined from Rs. 30 to Rs. 29.50 a maund, Nothern Bottoms from Rs. 29.50 to Rs. 28.50 a maund. Daissee Bottoms have been around Rs. 32. But during the period, B Twills have reacted sharply from Rs. 121.15 to Rs. 113.10 a 100 bags for November, Rs. 121 to Rs. 113.50 for December, Rs. 121 to Rs. 114 for January-March and Rs. 119.75 to Rs. 113.75 for April-June.

In hessian, the decline has been sharper—40in. 10oz. has slumped from Rs. 59 to Rs. 47.55 a 100 yards for November, Rs. 57.25 to Rs. 47.60 for December, Rs. 54.50 to Rs. 47.65 for January-March and Rs. 53.50 to Rs. 47.55 for April-June. In the futures market, prices have fallen similarly. Meanwhile, production costs have risen further due to the impact of higher wages following the implementation of the Wage Board award with retrospective effect from July 1963. There has been a sharp rise in the prices of other raw and processing materials, spare parts and accessories. Power-shedding during the summer months has raised production costs. Furthermore, the holding of heavy stocks of raw jute, equivalent to about seven months' consumption, has caused extra expense to the mills in the form of interest and insurance premium. Previously, Pakistani competition had been mainly in sacking, but now it is keen in hessian too. Soon Pakistan may enter in a big way the more remunerative market for carpet-backing cloth.

U.S. Hessian Purchases

U.S. hessian purchases for August show that out of a total of 36.95 million yards, India's share has been 29.53 million yards, or 79.9 percent, and Pakistan's 7.27 million yards or 19.7 percent. Of 11.16 million yards purchased for ready delivery, 10.81 million yards had been supplied by India and the remainder by Pakistan. Of 12 million yards bought for September-October delivery, orders for 9.92 million yards were secured by India and 1.97 million yards by Pakistan. For the November position 8.8 million yards went to the former and 4.95 million yards to the latter. Against the total forward purchases of 140.2 million yards up to the end of August, India's share was 81.7 percent or 114.49 million yards and Pakistan's 17.7 percent or 24.78 million yards. From these figures it is evident that Pakistani competition is growing.

Since Pakistani mills were fully booked with orders, Indian mills had hoped that they would get all the surplus orders. But the optimism vanished when Pakistan bagged the 10,000-bale Sudanese tender for grain sacks. The Australian tender for 6,000 bales of cornsacks and woolpacks was shared equally by India and Pakistan. Except for a Government of India tender for 10,000 bales of B Twills for October shipment and scattered business of a routine nature, Indian mills have not been able to secure any sizable order during the past fortnight.

With stocks of 289 million yards of burlap, equivalent to about 3½ months consumption, and substantial forward business in hand, the U.S.A. has been sitting on the sidelines anticipating a further fall in the price. Barring fresh political developments, it is not likely to enter the market in a big way at present prices. Argentina may buy slowly because of the foreign exchange shortage. Russia may buy more under the bilateral trade agreement. But she has bought briskly from Pakistan. She may also be running her own jute mills on full steam with an adequate supply of fibre from Pakistan and India.

In sacking, the trend has been quiet because the Middle East countries, Australia and Argentina have virtually completed their purchases. So the industry will have to depend largely on domestic offtake. Internal consumption has risen due to the broadening of economic activity. But this will not be sufficient to absorb the rising output.

Fall in Gunny Offtake

Despatches of jute goods from mills reporting to the I.J.M.A. have sharply declined from 106,000 tonnes in August to 96,500 tonnes in September. The setback is attributed mainly to the difficulty in shipping substantial lots of heavy goods due to the congestion of lighters in Calcutta Port and the bottleneck caused by incoming vessels at the sandheads. Sacking offtake has fallen sharply from 45,000 tonnes to 35,500 tonnes and that of miscellaneous goods from 16,100 tonnes to 15,200 tonnes. Hessian, however, showed a small rise from 44,900 tonnes to 45,800 tonnes. Total exports have fallen from 82,000 tonnes to 74,000 tonnes. Sacking declined by 7,500 tonnes to 19,100 tonnes and other goods by 1,300 tonnes to 12,400 tonnes. But hessian offtake is 800 tonnes higher at 42,500 tonnes.

Internal consumption shows a minor decline of 1,500 tonnes at 22,500 tonnes; of this, the small increase in the offtake of miscellaneous goods by 400 tonnes to 2,800 tonnes and in the offtake of hessian by 100 tonnes to 3,300 tonnes has been more than offset by the decrease in sacking by 2,000 tonnes to 16,400 tonnes. In September 1962, total despatches were 96,800 tonnes—42,200 tonnes of hessian, 43,000 tonnes of sacking and 1,600 tonnes of other goods. Exports absorbed 75,400 tonnes—hessian 43,000 tonnes, sacking 28,100 tonnes and others 8,300 tonnes. Internal consumption totalled 21,400 tonnes—hessian 3,200 tonnes, sacking 14,900 tonnes and other goods 3,300 tonnes.

Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during Septemoer rose to 536,710 bales from 306,100 bales in August, according to the Bengal Chamber of Commerce and Industry. The inflow of Indian jute increased from 295,200 bales in August to 530,130 bales in September But imports of Pakistani fibre declined from 10,900 bales to 6,580 bales.

In spite of a substantial increase in imports during the month raw jute arrivals during the first quarter of the current jute season were lower at 1.07 million bales, against 1.21 million bales during the corresponding period of 1962. The inflow of Indian fibre fell from 1.18 million bales between July and September 1962 to 1.03 million bales during the same period this year, while arrivals of Pakistani fibre rose from 27,150 bales to 42,380 bales.

THE JUTE MARKETS

Manufactured Goods: Dull conditions marked trading in the gunny market during the past fortnight. The holiday spirit, combined with the virtual absence of overseas enquiries or business, depressed sentiment. Barring scattered covering of a routine nature, some hessian business with the Middle East and the U.S.A. and an Indian Government tender for 10,000 bales of B Twills for October delivery were reported. Shipping instructions for October were considered disappointing. The decline in offtake was attributed to lower shipments to Russia and Argentina. Operators feared that hessian stocks would record a marked increase at the end of the month. Those for sacking might be more evenly balanced because of the backlog of September shipments. Although mills were keen sellers for all positions, there was little evidence of selling pressure. Besides, there was no tendency to discount prices further. But tired long liquidation in the futures market with bears reluctant to cover their open positions even at the lower levels depressed sentiment, and prices quietened both in the spot and futures markets. Sacking suffered more for ready and near positions, although hessian too was marked lower in sympathy. After the holidays, sentiment continued to be depressed. Shippers deferred covering against forthcoming shipments on reports that loading would be restricted during the severe bore tides from 30th October to 6th November. Due to the restrictions on the movement of incoming vessels from sandheads during the period, shipments might also be affected during the second week of November. The turnover was small in hessian and moderate in sacking and the undertone hesitant in both the spot and futures markets.

Wednesday's quotations were as follows:

quota of 920,000 bales for October, and by co-operatives in the secondary markets, sentiment could not be maintained due to the heavy pressure of arrivals. Towards the middle of the month, the Jute Commissioner asked the J.B.S.A. to lift 150,000 bales from the market in a renewed effort to revive sentiment. But a predominance of weak holders and urgent pre-puja demand for funds induced distress sales in all the markets with prices declining by about 50nP to 75nP from the operational minimums. After the holidays, there was a mild reversal of the trend due to reduced selling pressure and hopes of the Jute Commissioner issuing a larger purchase quota for November. The decline in arrivals following heavy rains, which made the rural kutcha roads unsuitable for cart traffic, also helped in reducing the selling pressure. So prices closed steadier around the official floor levels. The futures market moved in line with the spot market. Stray covering by bears at lower levels towards the close helped the price of Upper Assam White Bottoms December close firm with a modest gain on balance. Turnover was fair in the spot market and moderate in the futures section. The undertone was cautious but steady at the close.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in September was 10.2 million yards more than in August 1963 and was 9.2 million yards more than in September a year ago. The average monthly consumption during the first nine months continued to be about 2 million yards a month more than during the same period of 1962. Last month's bag cut-up was 58.7 million yards and piece-goods deliveries 21 million yards, compared with 51.6 million yards and 18.9 million yards, respectively, in 1962. U.S. spot stocks and afloats increased over last month, but the increase was in afloat stocks due to buying goods before the ocean freight rate was increased while spot stocks declined (after making allowance for the reporting error last month). At 288.6 million yards, 161.6 million yards were spots and 127 million yards were afloats. The afloat figure next month is expected to be lower as the U.S.A. reduces its purchases and stocks.

THE U.K. JUTE MARKETS

FIBRE IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

THERE was little change in the raw jute market in Pakistan during the past two weeks, and the position generally was very quiet. Some shippers reduced their rates, but this was not general. However, the position in Dundee was very irregular with little or no buying interest shown by spinners. Offers of the lower grades of both white and Tossa jute were being made at well below minimum export rates in spite of measures adopted by Pakistan.

Offers were lowest at £128 10s for Mill Firsts, at £109 for Mill Lightnings, at £94 for Mill Hearts and at £78 15s for Grade Hearts, c.i.f. U.K. for October-November shipment. Grade Tossa-½ was available at £125 and Grade Tossa-4 at £106. Outport Tossa-½ was at £95 and Outport Tossa-4 at £84, October-November. There was nothing to indicate that much change was likely to take place in raw prices in the near future as the available supply should be ample to meet demand.

Commodity Markets

BETTER PROSPECTS FOR INDIAN PEPPER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S new pepper season begins next month on a hopeful tone. Prices have improved as the present indications are that the world supply will be smaller in 1963-64 with no sign of a proportionate fall in consumption. The standing crop in India has been adversely affected by the failure of monsoon in Kerala, which is the main producing centre in the country. Sarawak and Indonesia—the other important sources of supply in Asia—are in the grip of a political turmoil so much so they too are not expected to contribute more than what they did last season. Natural calamities like floods have also played their part in reducing supply from these countries as well as from South America which is developing into an important production centre. If the present forecasts materialise, the world supply will be less than last year's, so one can expect an improvement in price.

India, it is estimated, has produced 28,000 tons of pepper during the season ended October 1963, against 31,000 tons of the previous season. Exports might have come to round about 17,500 tons. The previous season's export was over 23,000 tons. Domestic consumption is believed to have remained at the previous year's level of 10,000 tons.

Prices were zigzagging and that, too, at a level lower than previous year's during the period under review. From the initial rate of Rs. 300 a quintal, the price of ready garbled variety slipped down to Rs. 244 by mid-January, and after maintaining that level for one month, it went up suddenly to Rs. 284. The market saw another landslide when the price fell to Rs. 256 by the end of March, and there was again a marked improvement in April to Rs. 289. For the succeeding two months, there was again a fall. From the second week of June, prices started to recover. By the end of September it had reached Rs. 295. The factors that contributed to these variations were the international developments like the Cuban crisis, the Sino-Indian border conflicts and Indonesia's quarrel with Malaya on the formation of Malaysia, the American dock strike and the threat of a smaller supply.

The strained relations between the Indonesian Government and the Government of the newly-formed Malaysia are expected to place India in an advantageous position over Singapore in the pepper trade during the coming season. Singapore may not get the normal supply from Indonesia for its export trade with major consuming countries like the U.S.A. and they will have to depend more on India for their requirements unless the relations between these two neighbouring countries of the Far East become normal in the meanwhile. Another factor which is expected to help the Indian export trade is the introduction of quality control. The foreign buyer's confidence in the quality of the pepper he buys from India will grow on account of this, and that might result in larger exports. The steady growth of the Indian pepper export trade with east European countries including Russia also holds out better chances for pepper export trade in the coming years. These countries are taking more and more of Indian pepper.

The pepper trade in the country is divided over the proposal to set up a corporation for undertaking export trade in this commodity. The smaller dealers are apprehensive that they would be muscled out from the field once this corporation is formed. They are trying to create the impression among the growers that their interests would be adversely affected by this officially-sponsored move. The avowed objective of the constitution of this corporation for the pepper export trade is to stabilise the trade and to ensure reasonable prices for the producers.

BANANAS

Selling More Abroad

Banana is also becoming an export commodity of some importance. An Indian delegation which visited recently several countries of West Asia and western Europe has secured firm orders for the export of 11,000 tons of bananas to Italy. The shipment will commence next month. Tentatively, another 10,000 tons of bananas also can be exported during the year to Iraq, Iran, Syria, Lebanon, Switzerland, Belgium and the U.K. But this quota has to be finalised after further discussions. These exports are likely to yield a foreign exchange earning of Rs. 1.25 crores.

RUBBER

Fears of Competition Allayed

Mr. A. M. Thomas, Central Deputy Minister for Food and Agriculture, has assured the rubber growers of Kerala that there need be no apprehension about the future of natural rubber, and the indigenously produced synthetic rubber was not going to offer any serious competition to the natural product. While inaugurating the Rubber Board's new extension office in Moovattupuzha in Ernakulam District recently, he said that the demand for raw rubber was increasing at a much faster rate than what the natural rubber industry could produce in the near future. Although the production of synthetic rubber in the country was expected to go up from the present 2,000 tons to 30,000 tons a year within a year from now, the demand for natural rubber as a general purpose rubber would continue. He said there was no likelihood of any threat from the synthetic rubber industry if the production of natural rubber could be brought about with an increase in yield an acre and at reduced cost. If the rubber industry could get an average yield of 1,000 to 1,200 lbs an acre, synthetic rubber would not be able to compete with natural rubber in price, in the opinion of Mr. Thomas.

ORANGES

Exports Rise

Indian oranges are getting a larger export market. The U.K. which is a fairly big market for oranges has started accepting Indian oranges, too. The Ministry of International Trade is taking measures for developing the export trade in this commodity. The U.K. and Europe are big consumers of orange. Italy and Spain provide supplies to some extent. Californian oranges are also dumped in these markets. The Indian varieties ranging from the loose-jacketed Nagpur and Coorg to the tight-jacketed Sathgudies of Madras and the Maltas of Punjab and Rajasthan are now finding better consumer preference than their Californian rivals, according to some trade reports. Until recently, Indian oranges had only a limited export market—Afghanistan, Persian Gulf countries and Kuwait. To match the export effort, a number of measures have been taken in the field as well to produce more. The Food and Agriculture Ministry has created two zones—Nagpur and Coorg for this purpose of enhancing production. The orange cultivation in the South was until recently threatened by pest attacks. The I.C.A.R. could successfully combat this threat.

TEA

Indian Share in World Exports Falls

(BY A SPECIAL CORRESPONDENT)

NORTH India's production continues to fall while that from the other major producing countries is rising. To compensate India for the loss, the commodity price should have shown a marked improvement. In the early part of this season, prices were maintained at a healthy level, but apart from quality lots, the tendency for some time past has been disappointing. For the week ended 19th October, prices at the Calcutta auctions showed a discouraging trend. At the Dust Sale No. 20 held on 16th October, better C.T.C. medium, opened 20nP easier, but the demand fell off further and by the close, these teas were difficult to sell. Good C.T.C. were supported, but sometimes only at a fall of 30nP a kilogram.

At the Colombo Sale, prices have been reasonably satisfactory at the following rates: high-grown B.O.P. Rs. 3.25 a lb, good medium B.O.P. Rs. 2.27 a lb, medium liquoring B.O.P. Rs. 2.12 a lb, medium liquoring B.P. Rs. 1.35 a lb, medium liquoring P. FNGS. Rs. 2.40 a lb, medium liquoring O.P. Rs. 1.75 a lb, low medium Rs. 1.90 a lb, medium Fannings Rs. 1.95 a lb, low medium O.P. Rs. 1.60 a lb, low medium pekoe Rs. 1.70 a lb, medium pekoe Rs 1.90 a lb, and good pekoe Rs. 2.60 a lb.

Gross earnings for the current year may still work out near the 1962 figure, because during the first half of the season prices recorded a moderate advance over last year's. But apart from taxation, costs of production continue to rise and the Wage Board set up by the Central Government is expected to conclude its hearings early next year, and the general impression is that the award will cost more money.

It will be noted that the official programme appears to be contrary to the national needs which are to maximise exports. A few years ago, tea actually headed the list of foreign exchange earners. Although official efforts to increase other exports, need to be praised, tea remains the commodity which could earn more foreign exchange but the industry is not being assisted to produce and offer the goods at world competitive prices. It still looks as if costs in 1964 will be higher instead of lower. Of the export earning of around Rs. 650 crores last year, tea secured Rs. 125 crores and the value remains constant, within small limits. The percentage of Indian exports, as compared with total world tea exports, is actually going down. It has fallen from approximately 45 percent in 1951 to 37½ percent in 1961.

The Indian Tea Board is continuing its "drink more tea" campaign and has set up a "promotional unit" in

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1963. As compared with August, the September indices for Food and clothing reveal rises of 8 points and 7 points, while those for Fuel & Lighting and Miscellaneous remain unchanged at 308 and 317 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 5 points during September 1963.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100.

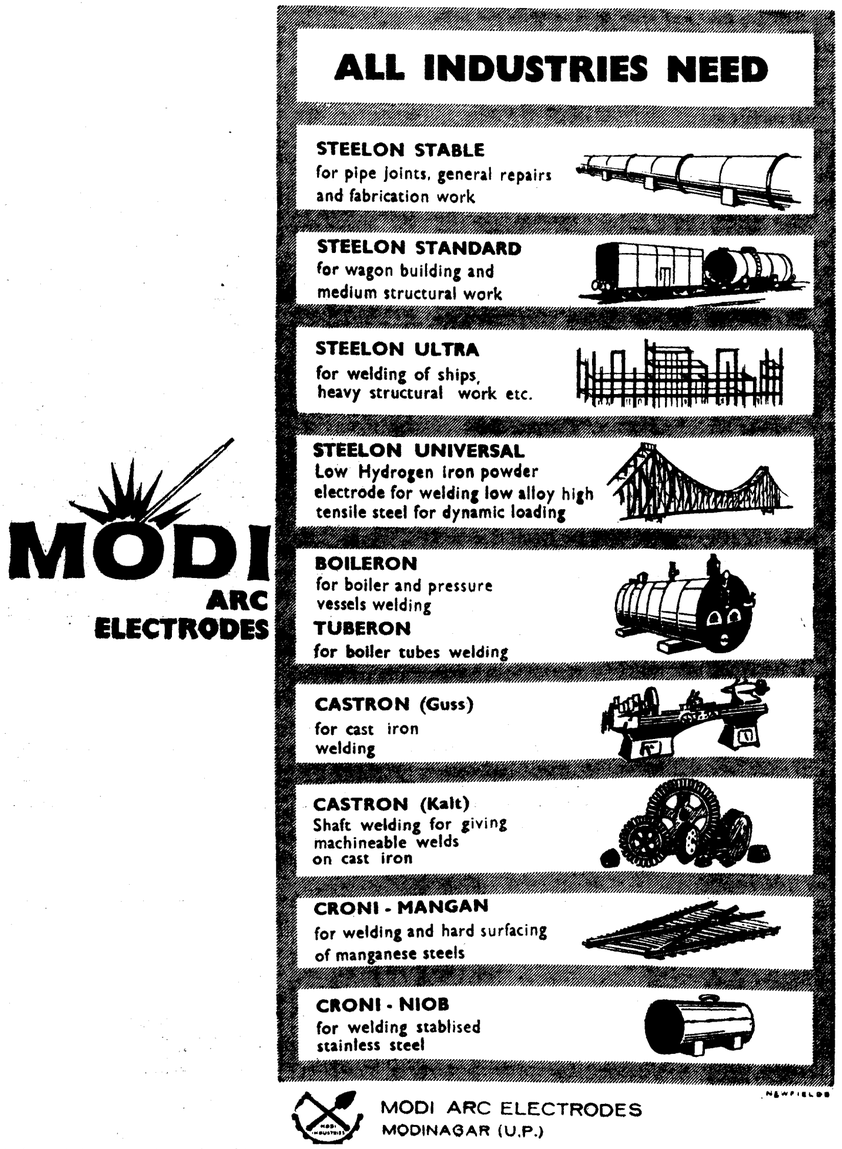
Compiled and constructed by the Statistical Department of "Capital"

Brussels. It will also have representation in the 1964 Fair in New York. Tea vans are also serving tea free in selected campaign areas.



For many years past, it has been known that Russia has devoted much study to scientific development of tea production. Latest advances state that that country is now cultivating hardy types of bushes which will stand up to snow and frost, but yet give a vigorous yield in the sunny season. Darjeeling district has tea gardens at high elevations, so there is really nothing particularly remarkable in these Russian claims. The average yield claimed in the Caucasus area is "1 tonne of tea an acre, say 25 maunds. If they mean green leaf, it would come down by 75 percent. However, some recent reports on this subject give Russia's production record at 65,000 tons of tea a year with imports round 11,000 tons of tea a year. The Sino-Russian troubles seem to have made the wind more favourable for India as imports from China have fallen, and that shortage appears to have been made good by increased trade with India. Export prospects, therefore, seem more favourable, particularly because in addition to the E.E.C. markets which will be duty-free from next January, the countries of eastern Europe are entering into new commitments with India direct.

According to a recent publication from American sources Ceylon is making much headway in tea production. In 1948, that country's output was 298½ million lbs but by 1953 the estimated output is 470 million lbs.

Over the same period, India raised her production from 262.1 million kilograms in 1948 to an estimated, 344.4 million kilograms in 1963. It will be noted that while India added about 32 percent, Ceylon has moved forward by approximately 50 percent. To achieve this result, the U.S. figures state, Ceylon increased the acreage under tea from 491,500 to approximately 591,100. Figures (in hectares) from Indian sources compare as follows: From 224,634 hectares in 1948, the acreage has increased to 240,000 in 1962, but because of unfavourable climatic conditions, output has been restricted.

India planted more over the same period, namely, from 311,000 hectares to approximately 333,325 hectares yet why is Ceylon making quicker progress? Tea crops in China and Indonesia were seriously curtailed until about 1950. But in the last decade, China appears to have made a marked recovery. The American statistics recently published show that from less than 100 million lbs in 1949, Chinese production this year may reach 350 million lbs.

The International Tea Committee's *Annual Bulletin of Statistics* confirms China's production in 1949 at 90 million lbs exclusive of Formosa. This island does not appear to give cause for anxiety, but Japan has more than doubled her offerings during the above years.

COMPANY AND PUBLIC NOTICES

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE

NOTICE is hereby given that the One Hundredth Annual General Meeting of the Shareholders of the Corporation will be held at the Birla Matushri Sabhagar, 19 Marine Lines, Bombay 1, on Friday the 22nd November, 1963, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st May, 1963.
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Mr. Pratapsinh Mathuradas, who retires by rotation and being eligible offers himself for re-election.
4. To elect a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and being eligible offers himself for re-election.
5. To elect a Director in place of Mr. P. E. Isserlis, who retires by rotation and being eligible offers himself for re-election
6. To appoint Auditors for the period until the next Annual General Meeting of the Corporation and to fix their remuneration.
7. To appoint Branch Auditors at a remuneration to be fixed by the Board.
8. To consider and, if thought fit, to pass the following resolution as a Special Resolution :—

That the following alterations shall be made in the Articles of Association:—

(A) That Article 53 be deleted.
(B) That the words "or dividend" shall be added at the end of Article 159.

By Order of the Board,
WALLACE AND COMPANY,
Secretaries and Treasurers.

Registered Office:
9, Wallace Street,
Fort, Bombay.
Dated 23rd October, 1963.

Notes: (1) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(2) An Explanatory Statement, in terms of Section 173 of The Companies Act, 1956, and covering material facts in respect of item 8, has been forwarded to the members of the Company.

(3) The Memorandum and Articles of Association of the Company are open for inspection at the Registered Office of the Company at 9, Wallace Street, Fort, Bombay, on any working day, except Saturdays, between the hours of 3 p.m. and 5 p.m. and on Saturdays between the hours of 11 a.m. and 1 p.m.

(4) The Transfer Books of the Corporation will be closed from the 26th October, 1963 to the 16th November, 1963, both days inclusive.

(5) Warrants for the dividend, if declared, will be posted to shareholders on the 25th November, 1963. Dividend will be payable on and from that date to those shareholders whose names stand on the Register at the close of business on the 16th November, 1963.

BROOKE BOND ESTATES INDIA LIMITED

Notice of the Sixteenth Annual General Meeting

NOTICE is hereby given that the Sixteenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Brooke House, 2, Metcalfe Street (Ganesh Chandra Avenue), Calcutta on Friday the 29th November, 1963 at 12 noon for the following purposes—

1. To consider and to adopt the Profit & Loss Account for the year ended 30th June, 1963 the Balance Sheet as at that date and the Reports of the Directors and Auditors thereon.
2. To declare dividends on Ordinary and Preference Shares.
3. To appoint Directors in the places of those retiring.
4. To re-appoint the Auditors and to fix their remuneration.

NOTICE is also hereby given that the Register of Members of the Company will be closed from the 3rd November to 29th November, 1963, both days inclusive.

By Order of the Board,
BROOKE BOND ESTATES INDIA LIMITED,
D. A. SHARMAN,
Secretary.

Calcutta, 23rd October, 1963.

NOTE:

A member entitled to vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

NEW CENTRAL JUTE MILLS CO., LTD.

Registered Office: 11, Clive Row, Calcutta-1.

(W) After giving six months notice
(X) Rs 5,00,000 will be redeemed each year from and after 1964.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

IMPLICATIONS OF THE NEW CREDIT POLICY

As expected, the Reserve Bank announced its new credit policy on Wednesday of last week—just before the commencement of the 1963-64 busy season. The policy has three main features. The first is that the quota of statutory borrowing permitted from the Reserve Bank at each of the two tiers of interest rates—4½ percent and 6 percent—has been increased. The second is that the penal slab of 6½ percent has been abolished. The third is that the obligation to maintain a minimum margin of 40 percent on bank advances against shares has been scrapped. The stock markets have greeted the new credit policy with a substantial rise in share prices, but the reception from leading bankers has been lukewarm.

What are the implications of the new credit policy for the busy season? The most important point to note is that the policy has been framed against a background of comfortable conditions in the money market. The call rate has been hovering around the low level of 2 percent or 2½ percent, with lenders over. The accretion to bank resources during the slack season this year has been considerable. For instance, the reduction in credit during the 1963 slack season has amounted to Rs. 114 crores, as against only Rs. 53 crores in the 1962 slack season. The growth of deposits too has been substantial—Rs. 150 crores, compared with an increase of Rs. 95 crores in the 1962 slack season. The banking system has thus increased its resources by about Rs. 265 crores during the past six months. A substantial portion of this money has been invested in holdings of gilt-edged securities, with the result that they touched a new high in October.

On the other hand, the demand for bank credit is expected to be somewhat higher in 1963-64—maybe 15 percent or 20 percent more than it was a year ago. During the 1962-63 busy season, bank credit increased by Rs. 205 crores—the increase being almost the same as in the 1961-62 busy season. There are several reasons for expecting that the demand for credit during the new busy season will be bigger than in the busy seasons of 1962-63 and 1961-62. Agricultural production, including the output of foodgrains and cash crops like cotton, oilseeds and sugarcane, is expected to improve. Industrial production is estimated to be running at a level 7 percent or 8 percent higher than last year. With several big industrial projects going into operation in the next few months, the demand for credit, especially for inventory accumulation, raw materials and components, is expected to be sizeable. In informed circles, credit during the 1963-64 busy season is expected to expand by around Rs 250 crores, and this figure too may prove an under-estimate. The banking system is well placed to meet this demand without any strain. Under the circumstances, the relaxations announced by the Reserve Bank may turn out to be symbolic gestures designed to take care of unforeseen contingencies.

It is worth noting that the Reserve Bank has not made any modifications in the two-tier system of lending rates. The quota of credit available at each tier, which was hitherto 50 percent of the statutory reserve of an individual bank, has now been increased to 75 percent of the statutory reserve. Assuming that the aggregate of statutory reserves at present is Rs. 66 crores (calculated on the basis of deposits at Rs. 2,200 crores), banks would be entitled to borrow another Rs. 33 crores from the Reserve Bank, in terms of the relaxations announced last week. The amount the banks can borrow will of course also increase with each successive rise in deposits. Another question to consider is the extent to which the cost of credit might be reduced. One calculation is that the average cost of credit will decline from 5 percent under the previous system to 4½ percent if the borrowing equals 75 percent of the statutory reserve; from 5¼ percent to 4¾ percent if the borrowing equals 100 percent of the reserve; from 5⅜ percent to 5¼ percent if the borrowing equals 150 percent of the reserve; and from 5½ percent to 5⅛ percent if the borrowing equals twice the reserve.

Considering the limited nature of the facilities under the statutory reserve criterion, the total relief to the banking system will be less than Rs. 35 crores, with deposits at the present level of Rs. 2,200 crores. Furthermore, the advance-deposit ratio of individual banks varies so widely that in many cases the actual gain is likely to be negligible. In some big banks, the advance-deposit ratio is very high, being 70 percent or so even now. These banks will presumably try to secure more funds from the inter-bank call money market—where interest rates will tend to rise as the busy season advances. It is unlikely that the banks will lend money more cheaply to their customers since, in effect, the concessional terms of credit are of no great significance to many banks, taken individually. The Reserve Bank has expressed the hope that the banks will pass on the benefits of cheaper credit accruing from last week's relaxations to customers but it is unlikely that this fond hope will materialise.

The minimum margin of 40 percent prescribed for advances against shares has been abolished. Once again, this does not mean much in practice. Abolishing the minimum for the margin does not absolve banks of the responsibility to keep their usual prudential margin on advances against shares. Before the minimum margin was introduced by the Reserve Bank, individual banks were keeping a margin of 20 percent or 25 percent on advances against shares. Only a few banks lend against shares, and they have their own system of margins against each specific share, based on their experience of fluctuations in the stock markets. The Reserve Bank has now removed the minimum margin against shares because the stock exchange authorities have their own margin system against both bulls and bears to check abnormal fluctuations. Informed observers are, therefore, surprised that the response from the stock markets should have been bullish. The ban on banks investing in *budla* operations continues, but it has no practical significance since such transactions are nowadays

financed by the so-called "unaccounted money" floating on the fringe of the banking system.

The relaxations in credit policy announced last week are thus at best of psychological value. They are intended to maintain the mood of optimism generated by such events as the modification of the compulsory deposits scheme in September and the pep talk broadcast by the Finance Minister, Mr. T. T. Krishnamachari, in October. The intention is to keep industry and the stock markets in hopeful good humour. This the concessions seem to have achieved for the time being. But it has to be remembered that credit and monetary policies are only part of the overall programme for reviving the economy which Mr. Krishnamachari has yet to announce. The schemes for starting a unit trust, for converting the Industrial Finance Corporation into a development bank and for amending the Banking Companies Act, are yet to be finalised. The real direction of monetary policy will be known only when the nature of these changes is clear. Until then, the credit relaxations announced by the Reserve Bank are of no great consequence. Conditions in the money market are expected to be fairly comfortable even in the busy season, and banks may, therefore, have no major difficulty in raising the resources they need without approaching the Reserve Bank for large sums.

NEW ISSUES STAGNATE

THE recent rise in prices in the stock market has created a sense of complacency about the revival of investment confidence. The weakness of the upward movement lies in the fact that it is based only on speculative support, so activity has centred on clearing scrip. Investors have shown their lack of confidence in the new issue market, so most new shares are quoted below par. It is disturbing that new issues in such important industries as paper, cement and sugar have been offered freely at a substantial discount. Various factors have contributed to the lack of confidence. The working of new companies has been hindered by the shortages of raw materials, power, transport and spare parts. Some new companies have failed to show progress according to their original plans, which is partly their own fault and partly due to factors beyond their control.

Although gross mismanagement has harmed only a few new companies, some of them have suffered because they have been sponsored by inexperienced people. Progress has been hampered by the cumbersome procedures relating to licensing and imports. Project costs have often exceeded the original estimates due to the sharp rise in the price of foreign equipment following the imposition of heavier import duties. Investors have been shaky since the gestation period has been far too long. This apart, their enthusiasm has cooled due to the poor profit outlook for the corporate sector. In such industries as paper, cement and sugar, the outlook has suffered since the prices of these commodities have been fixed at unrealistically low levels which do not even ensure an adequate return, let alone an attractive one. Although new undertakings enjoy the benefit of tax exemption in the initial years, they have lost a great deal of attraction on a long-term view. They stand to suffer due to heavier taxation in the long run along with the established companies.

Statistics relating to new issues for 1962-63 are depressing in that greater reliance has had to be placed on raising funds through debentures rather than shares. Although total new issues have amounted to Rs. 59.12 crores for 1962-63, compared with Rs. 26.41 crores for 1961-62, shares of new companies have contributed only Rs. 16.44 crores to the total for 1962-63 and new issues of established companies have accounted for Rs. 8.42 crores, while debenture issues have been worth Rs. 34.25 crores. The trend has deteriorated subsequently. A large part of the recent new issues have had to be taken up by the underwriters themselves. If the latter continue to be burdened with new issues, they might be less inclined to underwrite them in future.

At its recent meeting in Bombay, the Advisory Committee on Capital Issues has recommended some measures in a bid to revive investment confidence. The Committee has recommended that the exemption limit on capital issues not requiring the consent of the Controller of Capital Issues should be raised from Rs. 10 lakhs to Rs. 15 lakhs. Since the Rs. 10-lakh limit was fixed in August 1959, there has been a substantial decline in the purchasing power of the rupee. Project costs have risen sharply. Under the circumstances, the recommendation is worth accepting. The Committee has also suggested that the Government should allow existing companies to diversify their activities. Although diversification is commendable under certain circumstances, the Government should regulate it carefully. Diversification is justified when a company has surplus funds which cannot be profitably employed in the existing line of activity. But before a company is permitted to diversify its activity, it should be asked to get the specific approval of its shareholders. It is also necessary to see to it that the company has the expertise and experience necessary for the new line it proposes to undertake. Funds may be misused unless close vigilance is kept on such activities. But there is not much scope for diversification under present circumstances since a large part of the existing industrial capacity has been rendered idle by the shortage of raw materials, spares and components. The committee has also endorsed the principle of maintaining the ceiling on the corporate debt-equity ratio at 2:1. This is a harmless recommendation. But it is likely to be of little practical significance in the present circumstances. In view of the poor prospects for the corporate sector, combined with the high cost of credit, companies by and large have been less inclined to borrow funds.

The new issue market is not expected to benefit from the Reserve Bank's credit policy formulated for the 1963-64 busy season. The stock market has exaggerated the significance of the move to scrap the restrictions on bank advances against shares. Although the banks will henceforth be able to advance funds against shares freely at their discretion, it is doubtful whether they will consider it prudent to advance more than 60 percent of the share value due to the prevailing uncertainties. Banks have hitherto been permitted to advance money against shares by keeping a margin of at least 40 percent of the share value. The latest liberalisation is insignificant for all practical purposes as far as new shares are concerned. It has generally been the practice of banks not to advance funds against new shares Banks generally are not willing to advance money against shares unless they have a continuous dividend-paying record for several years. This apart, it is not sensible to buy new shares by borrowing. The main aim of offering new shares is to mobilise savings for industrial investment. This objective is unlikely to be achieved if the purchase of new shares by borrowing is encouraged. Considering the high cost of credit, it is also doubtful whether investors will take the risk of buying new shares with borrowed funds.

To revive investment confidence will be difficult. Political factors apart, investors will not take the risk of starting new ventures unless they are assured of an attractive return in the long run. So it is urgently necessary to take concrete measures to improve the outlook for the corporate sector. The gestation period for new industrial undertakings in India has been unnecessarily prolonged by bureaucratic delays in licensing and sanctioning foreign collaboration agreements and in allocating foreign exchange. Cumbersome Governmental procedures can be removed to some extent if red tape is cut to the minimum. The Government has been influenced by ideological rather than practical considerations in fixing the prices of various commodities. It is not possible to promote industrial development unless the price of a commodity is fixed in such a way that a fair and reasonable return is ensured on capital employed. The industry must be allowed to earn a profit which helps it to pay good dividends and allows it to plough back funds for modernisation and expansion. Although new industrial undertakings enjoy some tax concessions in the initial stages, they have not been sufficient to attract investors. The outlook for corporate profits will not improve until the tax burden is lightened. Meanwhile, the Controller of Capital Issues has not hesitated to impose the penalty of a premium on the issue of rights shares even by a new company which has not started paying dividends. There can be no logic in asking shareholders of a new non-dividend-paying company to buy its rights shares at a premium. The Government should, therefore, suitably modify its policy on the sanctioning of rights shares, particularly in the case of new companies.

A LONG LOOK AT COAL

WHEN technical issues have wide social implications, one can hardly blame professional men from entering the lists even if this involves straying into the alien sphere of politics. Perhaps some such considerations provoked Mr. Narendra Singh Singhi, president, into a detailed discussion of several controversial issues last week in his address to the Geological, Mining and Metallurgical Society in Calcutta. The intervention would have served a better purpose, however, if the views expressed from this respected professional forum had looked beyond the operating day-to-day problems towards the long-term policy goals. After all, current problems have already been aired adequately by the trade and industrial bodies directly concerned, making further reiteration only of marginal value.

Consider, for instance, Mr. Singhi's thoughts on the problems of coal transport. Quite rightly, he points out that the railways have adopted an unreasonable basis for calculating the demurrage charged on box wagon rates or are being needlessly rigid in their insistence that the full cost of strengthening railway sidings to take the heavier trainloads should be borne solely by the collieries. These are valid points but they have already been discussed several times over between the parties concerned. It would have been far more useful if Mr. Singhi had, from a professional viewpoint, offered some ideas on what the pattern of future transportation should be, and the concrete steps to be taken to move towards it avoiding unnecessary hardship and disruption *en route*.

Anyone looking into the future of coal will agree that the size of output and demand are fast approaching the level where present concepts about the industry will have to undergo very substantial changes if further progress is to be reasonably orderly. Whichever way one looks at it, the problems posed by a production level of 70 million tons—the estimated figure for 1963—are of an order entirely different from what obtained seven years ago when the output was only 39 million tons. The gap between the past and the present will widen steadily as production rises, even though the pace of advance may not be as dizzy as some people expect. The changing dimensions require an appropriate response in many ways but perhaps most of all in the mental approach to the industry.

It needs to be firmly recognised that the rising output cannot be transported by methods which may have served well in the past. To cling to them may avoid immediate difficulties but it will only mean accumulating headaches for the future. Units of movement have to rise in step with increasing production. If once the maximum trainload was around 600 tons, the aim should be to move 1,500 tons or 2,000 tons at a time to reduce the strain on the railways' carrying capacity. This is the rationale of the box wagon rakes that the railways are progressively using for moving bulk traffic, an effort at rationalisation which should receive support, particularly from those who are alarmed at the steady rise in freight rates. A large part of the investment in the five year plans already goes into the railways; the burden will become heavier if the country fails to get better value out of existing plant and equipment through more intensive use. In principle, the railway users

—the coal industry the biggest among them—has a direct stake in the efficiency of the system.

Principles cannot, however, be translated into practice without a great deal of mutual adjustment between the railways and the consumers. This adjustment is being impeded by the lack of funds to carry out changes at the colliery end corresponding to the larger units of movement. If 1,500 tons or 2,000 tons are to be loaded in a few daylight hours, the task cannot *prima facie* be handled by an old-style labour gang supplied by a contractor. First, the size of the gang will be too unwieldy—a minimum of 400 persons being required to load one rake. But that is less intractable than providing regular employment on a year-round basis because of fluctuations not only in wagon supplies but also in demand. Again, the placement of rakes at sidings is subject to such uncertainties that it is almost impossible to make any advance arrangements. Inevitably, therefore, one has to assume the gradual adoption of mechanical loading devices—bunkers for the larger collieries and mobile loading equipment for small individual collieries or groups of them. Leaders of the coal industry recognise that this is the direction to take, while continuing to press for an extension of the free-loading time to facilitate the transition. The only snag, of course, is the simple one of funds, including the foreign exchange component, needed for mechanising the loading operation.

In today's situation, where the industry is so short of resources for its basic needs, collieries are understandably reluctant to invest money in handling equipment when it can be more usefully employed both from their and the national viewpoint in augmenting their raisings. This points to the conclusion that the transformation of the industry from its present technological level requires enlarging the scale of every operation not only to break even but for the new system to work at all. Collieries have to attain a minimum economic size through expansion where feasible or mergers. Trying to load block rakes—the tonnage moved on each train should go up even further in due course in line with worldwide trends—while production is distributed over 844 units is like coupling a powerful motor-car to a bullock cart. In 1956, an official committee said that any unit producing less than 72,000 tons a year was to be regarded as uneconomic, a criterion by which 569 units were judged to be below the minimum viable size.

The Government is committed to promoting a healthier structure within the industry by encouraging mergers but this does not seem to prevent it from licensing new units well below the minimum size it has itself prescribed. In the week ended 19th October, the list of industrial licences includes one for a colliery which will start with an output of 6,000 tonnes and go up in the fourth year to only 18,000 tonnes. It would have been useful if Mr. Singhi had, while protesting against present inequities, made it clear that responsible sections of the coal industry are not averse to technological changes. They only want that these should be put through with some consistency so that reforms do not defeat themselves.

The plea separately entered by Mr. Singhi for conserving coking coal and the better grades of non-coking coal is entirely sound. In fact, there has never been any disagreement on the need for conservation but the practical means of doing so continue nevertheless to elude definition. There is, for instance, the problem of supplying steam locomotives with a suitable fuel on which no agreement is yet in slight. The thermal efficiency of the steam locomotive is already so low that forcing it to use low-grade coal may well make the situation intolerable because of the technical difficulties arising from the small size of the boiler. Is the washing of low-grade non-coking coal the right answer to the railways' problems? Since steam traction will continue to provide a sizeable part of the total transport needs for many years yet, the issue is not going to be solved by letting matters drift. But, as Mr. D. C. Driver pointed out in his speech to coal consumers, the weight of middlings which will be thrown on the fuel market by coking coal washeries alone will be so large that any increase is hard to contemplate. Mr. Singhi did not go into any of these issues; he confined himself only to a statement of broad principles. These principles already being well understood, no helpful lead to public opinion can be given unless one gets down to the problems in detail.

This has already been done in the steel industry in relation to coking coal. Blending of non-coking coal is an idea many years old but at last a beginning is being made towards its implementation At the last meeting of the steel steering group, the decision was taken to conduct full-scale trials in existing coke ovens on the basis of the work done in laboratories and pilot plants. Similarly, a start with fuel injection has been made at Jamshedpur. The point in recalling these efforts is to underline the urgency of moving over from the general to specific in this vital field of fuel technology.

A final word about Mr. Singhi's views on the conservation of India's mineral resources. He has asked for a ban on the export of bauxite, chromite and sillimanite. Whatever may be said about the last two, where bauxite is concerned the plea is hard to justify. According to the latest reckoning, India has 30 million tons of proved high-grade ore and another 34 million tons of quotable reserves, but the latter does not figure at all in Mr. Singhi's calculation. At current and prospective rates of consumption, these reserves will last more than 70 years—long before which technology will undoubtedly have found the means to use low-grade ores, of which India has further large reserves. On grounds which he does not clearly specify, Mr. Singhi has warned against complacency about iron ore presumably because he thinks that better prices may be realised for exports in the future. His judgment runs counter to all authoritative estimates of the situation. It is difficult to assess, therefore, the validity of Mr. Singhi's highly individualistic standpoint, and one only hopes that he will some day explain it more fully.

THE CHALLENGE OF AUTOMATION

BRITONS have become unusually aware of politics, and British politicians have become unusually aware of automation. But ideas on this immensely important subject are various. Mr. Edward Heath, whose function in the reorganised Government is concerned with industry, has said that some of the biggest British companies are already fully exploiting automation, and that the Government is now trying to improve efficiency in the broad mass of British companies by the same means. Mr. Harold Wilson, the science-conscious leader of the Labour Party, has hinted that his Party, if put in power, will exert stronger pressure in the same direction. Mr. Basil de Ferranti, head of the Ferranti electrical group (whose computer division has recently been acquired by International Computers and Tabulators) has criticised the Government for unnecessarily buying foreign computers, thereby failing to promote in Britain the basic equipment of automation. But Sir Geoffrey Vickers, an eminent British social scientist, has argued that the whole process should be slowed down, throughout the western world, to avert the violent social upheaval that it will cause if it proceeds at its present pace.

Sir Geoffrey was speaking at the Conference on Automation and Social Change in Toronto a few weeks ago—in a region where automation is already a major social problem. In North America, not even substantial increases in production this year have appreciably reduced the big surplus of labour. In Britain, by contrast, the growth of the economy has reduced unemployment, even reversed the normal seasonal trend: the mid-October figure this year, for the first time since the end of the War, was lower than the mid-September figure. But even in Britain, where the national average of unemployment is comparatively low (a little over 2 percent of the registered working population), there are areas of serious unemployment, where big new factories are being built but, because they are semi-automated, are not absorbing much idle labour.

Mainly, however, Britain has avoided the ill effects of automation. This year she has increased her production, improved the standard of living, strengthened her balance of payments: and these improvements, achieved mainly by conventional means, have involved no social problems. This happy position seems to be an outcome of "the British genius for compromise". Closer inspection reveals it to be, rather, an outcome of British conservatism; and conservatism in business can accumulate a load of trouble for the future. British companies are modernising their organisations and their plants faster than their critics acknowledge, but not as fast as their competitors, particularly in the United States. Mr Basil de Ferranti has attributed the comparatively slow progress of the British computer industry not only to the unhelpful policy of the Government but also—indeed, primarily—to the comparatively low cost of British labour. But the labour unions are responding to the evidence of increasing profits, and the cost of labour is rising. The position of British industry as a whole, in the world market has been improved this year by a comparative improvement in wage costs; it can be maintained in the future only by a comparative improvement in efficiency. The movement towards automation is already perceptibly accelerating.

Britain is advanced in the technology of automation (it has been estimated that about two-thirds of the theory that evolved computers was British) but backward in the application of it. More than four-fifths of the world's computers are made in the United States, and British computers are accepted more readily in continental Europe than at home. Inevitably, this anomaly will be corrected. The evidence of savings in costs achieved by computers—in planning production, optimising industrial processes, controlling stocks, calculating wages, performing the routine functions of banking and insurance, and so on—cannot be ignored. No advanced country can permanently avoid a consequence of the new technological revolution, technological unemployment, unless it succumbs to the demands of organised labour that workers be kept on payrolls regardless of the need for them; and if it succumbs it will let its industry languish in a competitive world: so it will only delay, not prevent, unemployment. The representatives of both employers and employees seem generally willing to discuss the problem sensibly, but conflict is inevitable. Even ships are being automated now, and British shipowners who have tried to get agreement that stewards shall do the jobs of ordinary seamen at the beginning and the end of a voyage, because there are no jobs for ordinary seamen during the voyage, have encountered strong resistance.

Optimists assert that economic expansion can solve this problem. They remind us that similar fears in the early phase of the first industrial revolution were not justified by subsequent events, be-

cause mass-production techniques expanded the market for goods and so broadened the whole industrial base, so that labour displaced from one industry was easily absorbed in others. The relevance of this comparison is debatable. The new techniques are so versatile that almost any industry or service can be partly or wholly automated. But the temptation to apply orthodox solutions will be strong. Any British Government confronted by a serious problem of unemployment would be urged to inflate the economy; for, Britain, peculiarly dependent on international trade, could not evade the issue by restraining modernisation. American experience shows that orthodox monetary stimulants are irrelevant. Yet Sir Geoffrey Vickers's suggestion to inhibit automation is impracticable. A monetary upheaval coinciding with a social upheaval would be disastrous.

Current News and Comment

Feeble Move to Raise Sugar Output

The basic sugarcane price to be paid by sugar factories in 1963-64 for a recovery of 9 percent or less was recently increased to Rs. 1.56 a maund —which could be raised to Rs. 1.75 a maund in case the factories were facing severe competition from *gur* and *khandsari* units—and restrictions were imposed on the production and inter-State movement of *gur* and *khandsari*. Yet the sugar mills were not getting cane in sufficient quantities. *gur* and *khandsari* prices in most Indian markets have been 25 percent to 50 percent higher than those of factory sugar. Consequently, the producers of the former commodities have been able to pay a price of Rs. 2.50 for a maund of sugarcane.

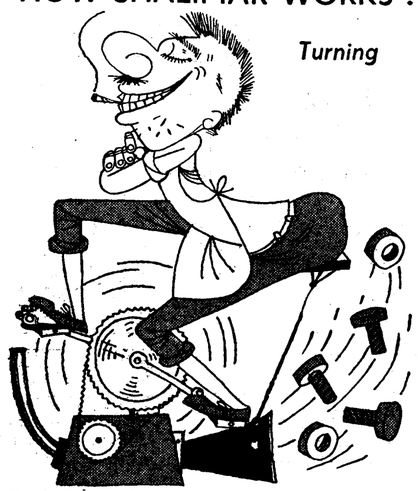
In order to prevent the diversion of cane, the Central Government has announced last week an increase of 12nP a maund in cane prices. This would increase the basic price to be paid by sugar factories to Rs. 1.68 a maund for a recovery of 9 percent or less; in extreme cases where sugar factories are facing severe competition from *gur* and *khandsari* units, the price would be raised to Rs. 2 a maund. It is obvious that even the higher price to be paid by sugar factories would not prevent diversion. Besides, the higher prices of cane would be taken into account in determining the ex-factory costs of sugar under the Tariff Commission formula. When sugar prices increase, those of *gur* and *khandsari* are also bound to rise. In that case, the producers of the latter commodities would be able to pay still higher prices for cane. It is thus likely that as a result of the competition for the raw material, the sugar factories may not get more cane than what they got before the cane price was raised by the Government. If this were to happen, sugar consumers would have suffered without the factories deriving any benefit and without moving towards the target of 3.3 million tons fixed for 1963-64.

At the present time, the effective method of increasing the supply of cane to factories is to control the production and distribution of *gur* and *khandsari* more rigorously. Although the Central Government's order raising cane prices also provides for the regulation of inter-State movement of *gur* to ensure a fair and equitable distribution of the commodity, it is the States which actually control *gur* and *khandsari* production. Either because the State officials have not realised the urgency of this problem or because the necessary administrative machinery is lacking in most of the States, *gur* and *khandsari* units are able to function as they please in spite of the restrictions which the State Governments have imposed upon them.

Shortfall in Oil Capacity

Burmah-Shell is credited with the view that the gap between refinery capacity and the supply of petroleum products may widen to 4.35 million tons at the end of the third plan. This merely confirms the suspicion held all along that the neat calculations made in the Central Ministry of Mines and Fuel disclosing a fine balance between domestic supply and demand rested on no securer a basis than the hopes of the redoubtable Mr. Malaviya, who has now mercifully moved to other pastures. Some day Indian refining capacity will indeed go up to the 17 million tons that Mr. Malaviya had planned, but no amount of socialist zeal can cut down construction time below a minimum. Nor can enthusiasm and hope coax oil out of a field in which prospecting has barely begun.

Oil India, which is to supply crude from the upper Assam field to Barauni and Nunmati, could not get started on the essential task of extending its operations because the State and the Central Governments were engaged in a long-drawn tussle over royalties. Present expectations are that actual supplies flowing down the pipelines will not be much more than 3 million tons, just sufficient to keep the two public sector refineries in eastern India going at the capacity originally scheduled, before the jacking up operation performed by Mr Malaviya to convince himself, if no one else, that everything was right with his refinery programme. Barauni's completion, now put back to June 1964, will, therefore, contribute no more than 2 million tons, but the third million will depend less on the Russian construction schedule than on the supplies of crude. Since the Calcutta-Barauni pipeline will not be ready until well after the third plan, this means abandoning hopes of additional production.



Nunmati, never a happy choice for locating a refinery, has run into a series of problems qualifying it to be called the oil industry's "sick child" a phrase once applied to Rourkela. Its current rated capacity is 750,000 tons, but sustained output at this rate has yet to be achieved. Design defects were discovered and eventually acknowledged after an initial attempt to pass the buck by the Rumanians. These have reportedly been set right by a team of technicians who brought in a top-ranking Minister to pacify the irate Indian crew who had been left to take the rap. Adding to difficulties within the refinery is the waywardness of the Brahmaputra, which by changing its course, has left Nunmati without water. In the light of all this, one can readily agree with the assessment that Nunmati will have done well indeed if it achieves production at its present rated capacity by 1966. There will be plenty to do to get to this goal. To expect anything more is just not practical. The story of Koyali in Gujarat runs on closely parallel lines; scheduled to be completed by June 1964, the deadline has now been put back to the end of 1965. According to the Burmah-Shell study, the autumn of 1966 would be a more realistic target, although the delay of a few months will make little difference in the final analysis. This is because the Gujarat field is presently capable of producing only 2 million tons of crude while the refinery has been ambitiously enlarged to 3 million tons. Unless more oil is found or some steps taken to pipe imported crude to the inland site, Koyali can well afford to take its time in getting the third million ton of capacity into commission.

Cochin is to work wholly on imported crude and has, therefore, no worries of the kind facing Barauni and Koyali. But as anyone in Calcutta can find out for himself, the private participants are having a hard time getting New Delhi to complete the formalities which must be got over before building can start. The site has not yet been finally selected and the import licence for bringing in equipment is still to come. There are quite a few other unsettled problems waiting for the Central Minister's attention who has had little time to devote to this apple of his predecessor's eye. If Phillips Petroleum succeeds in building the refinery in three years, Cochin should be ready for operation by the end of 1966.

On this showing, refinery capacity in commission in the public sector in late 1966 or early 1967 will not be more than 6.75 million tons. Adding the 7.75 million tons existing in the private sector, the total is only 14.50 million tons. Output will, of course, be lower since it takes time to build up to full production. Assuming 1966 production to be 12.50 million tons, the shortfall may well be as serious as Burmah-Shell's forecast.

Deficit-covering imports will cost the country Rs. 35 a ton more than equivalent crude, thus aggravating the drain on foreign exchange resources at a time when the strain on the balance of payments will have reached a peak. Burmah-Shell does not, however, need to predicate its plea to be allowed to expand on the size of the deficit in 1966.

HOW SHALIMAR WORKS ?

Turning

Turning was unknown until the wheel was invented. The skill of our Turners stems from a very close connection with the inventor Turner Morrison. The patent of course ran out 5142 years ago, so today we have many copyists. However, our experience is just that much longer.

After all, demand will not stay put. If the further increases year by year have to be met, there is every reason to let anyone, who is willing to put in the money, add to his existing refining capacity. And there is also the bonus to consider—the scrapping of the old refinery agreements which the oil companies have offered as a gesture to propitiate New Delhi.

Company Finances Surveyed

In an interesting study on the finances of small public limited companies in 1961, published in the September issue of the *Reserve Bank of India Bulletin*, a comparison between the working of these companies and that of the large and medium-sized public limited companies has been made. It covers small public limited companies each with a paid-up capital of Rs. 5 lakhs or below and covers 1,018 small companies which represent 28 percent of the paid-up capital of the entire sector of non-Government non-financial small public limited companies. Their working, on the whole, has been adversely affected along with the medium and large companies by the general slackness in economic activity. The working of the corporate sector has been hampered by the shortages of raw materials, power and transport following the slow rise in agricultural and industrial production. There has also been a considerable increase in manufacturing and other expenses which have held down sales and profits. So the profitability of all companies has suffered in 1961, compared with 1960.

The poor working of the small companies compared with that of the large and medium companies is understandable since the latter enjoy the advantages of large-scale production. In view of their well-balanced size, they also enjoy greater facilities in obtaining funds from banks and other financial institutions. They can obtain funds from the open market more easily since they have been able to give larger dividends due to their greater profitability. The margin of profit measured by the ratio of gross profits to sales for 1960 and 1961, has been around 6 percent for the small companies, against 8 percent to 12 percent for the bigger ones. The return on capital employed has also been lower at 7 percent to 8 percent for small companies, against 10 percent for the bigger ones. The ratio of tax provision to profits before taxation has tended to be larger in the case of smaller companies than in the case of the bigger ones. It has been around 49 percent to 55 percent in the case of the former. The small companies have paid dividends ranging between 6 percent and 7 percent while the dividends of the bigger companies have moved between 10 percent and 12 percent.

Motor-vehicle Expansion Held Up

Although the total motor-vehicle output in India in 1962 at 56,967 was about 6 percent higher than in the previous year, it is not likely that the industry will reach the third plan target of 60,000. In fact, the output by the end of the plan may be much short of the demand estimated at about 100,000 vehicles. Inaugurating a meeting of the reconstituted Development Council for the Automobile Industry in New Delhi last week, the Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, pointed out that in view of the tight foreign exchange position it was not possible for the Government to allow an expansion of motor-car and motor-cycle production unless the third plan target of 90 percent indigenous content was achieved by the end of 1964. The indigenous content of motor-cars at present is around 65 percent. With proper effort, the percentage could be increased further by the end of the third plan period. But it is not in the best interests of the country to hold up capacity expansion in the motor-vehicles industry.

The industry's requirements of foreign exchange, in addition to the amount already allotted under the third plan, is estimated at $(U.S.) 60 million. Out of the World Bank loan of $90 million for three Indian industries—motor-vehicles, machine tools and construction equipment—the motor-car industry would get $30 million. In this way, the gap between requirement and availability is now being reduced and with some adjustment it should be possible for the Government to allot a slightly larger amount of foreign exchange from its own resources to fill this gap further.

At present, the ancillary industries are contributing nearly 30 percent in terms of value to the manufacture of a complete vehicle. They have made remarkable progress during the past few years. Excluding the output of tyres, tubes, batteries, lamps, bulbs, cables, springs, ball bearings and bodies and the production of small-scale manufacturers (estimated at Rs. 10 crores in 1962), the value of component production in India has increased from Rs. 2¼ crores in 1956 to Rs. 20 crores in 1962. There are at present nearly 200 organised units producing such components, but some 50 percent of their capacity is lying idle for want of imported raw materials and machinery. Their capacity could be fully used if the foreign exchange allotment to them is increased from Rs. 5 crores to Rs. 10 crores. There is also the problem of improving the quality of indigenous components, of standardising them and of increasing the servicing facilities, but the industry should be able to take care of these requirements provided it gets the foreign exchange it requires.

Stepping Up Cloth Output

The chairman of the Indian Cotton Mills Federation, Mr. Ramnath A. Podar, has done well in appealing to the member mills to increase production by working a larger number of looms in all shifts, particularly in the third shift. The mill industry's performance has not been creditable. Cloth production by the organised mill sector has not only failed to keep pace with the plan schedule, but it has actually suffered a decline and that, too, in spite of improved availability of raw cotton. While yarn production during the first nine months of the current year at 1,442 million lbs shows a modest increase of 21 million lbs, compared with the corresponding figure in 1962, cloth production is appreciably lower at 3,605 million yards, against 3,773 million yards in January-September 1962. Unlike many other industries, the cotton mill industry has had no problem concerning the supply of its raw material: cotton has been available in plenty throughout the year and at prices which have been generally lower than in the previous year. The setback in production cannot be explained away in terms of mills having gone finer in line with consumer preference. Nor can the argument that uneconomic cloth prices have been restraining production, carry much conviction. The decline in cloth production in face of improved supply of cotton is a matter of serious concern. It deserves to be looked into very carefully.

There seems little doubt that a higher rate of production can be attained by stepping up loom activity. It is significant to note that there has been a fall in the number of looms run during the current year, the monthly average for the first, second and third shifts during January-July being 178,000, 173,000 and 50,000, respectively. The monthly average for 1962 was 183,000, 177,000 and 54,000, respectively. There was, on the other hand, a small improvement in the number of spindles, the monthly average for the first, second and third shifts being 12.45 million, 12.28 million and 8.27 million, respectively, against the 1962 monthly average of 12.37 million, 12.20 million and 7.98 million, respectively.

With a view to stepping up yarn and cloth output in the organised mill sector, the Central Government has recently permitted mills to expand their spindleage and loomage within certain specified limits for which they have been assured necessary assistance. The composite mills have been allowed to increase their spindles and looms up to 7.5 percent and 10 percent, respectively, of their licensed capacity and purely spinning mills can become composite units by installing up to 100 looms each. When there is an unbalance between the expanded spindleage and the total preparatory capacity after installation of the minimum number of preparatory machines required to feed the 7½ percent additional spindles, mills can install further spindles up to an overall limit of an increase of 10 percent of the present licensed spindleage in order to achieve balanced and economic working. The authorities have promised necessary assistance for expeditious installation of additional spindleage. The Textile Commissioner has emphasised that "it is desirable that the expansion in the loomage as permitted is effected by automatic looms."

It is understood that the existing limitation of earmarking cloth produced from automatic looms for purposes of export will not apply to the expansion contemplated under the latest decision. The expansion of spindleage and loomage which has now been permitted should help to rectify the unbalance between loomage and spindleage about which several composite mills have long been complaining. But it is difficult to appreciate why the

KEEP A BOTTLE HANDY

DYER MEAKIN BREWERIES LTD.

DMB—NP—337

authorities should have stipulated that the mills should install the additional spindles and looms before the end of the current year. It is extremely doubtful whether the industry will be able to complete the additional installation within such a short period of time.

Working of Co-operatives

The All-India Co-operative Week has provided an occasion for political leaders to reiterate the merits of co-operation. Inaugurating the International Co-operative Day and the all-India week in Jaipur last Saturday, the Prime Minister, Mr. Nehru, stated that co-operatives were essential for setting up a socialist society. He called co-operation the first step towards socialism. While co-operation undoubtedly has its merits, in that it offers freedom and opportunity to the small man and also the benefits of large-scale organisation, it has unfortunately taken the colour of a political dogma in this country. For this reason it has all along been a Government-imposed movement, bereft of the real spirit, namely, its voluntary nature. The third plan has provided Rs. 80 crores for developing co-operation and visualises its development in various fields, including agriculture, minor irrigation, small industry and processing, marketing, rural electrification, housing and construction, and distribution of goods. But so far its progress has been mainly in the supply of credit, although it has also progressed in a few other spheres under active Government sponsorship. But even in the sphere of credit provision, the development has been very uneven in various States, as was brought out in a recent Reserve Bank study. In some States the proportion of dormant societies has been high and all efforts to revitalise them have been of no avail.

The recent rise in prices and talk of "holding the price-line" have brought to the fore the idea of consumer co-operatives. The Government proposes to establish a wide network of consumer societies to supply essential commodities at fair prices. The scheme seeks to set up 200 wholesale stores, with 4,000 primary societies affiliated to them, and also open consumer stores in all factories employing over 300 persons. The aim is that these stores should be made to handle about 25 percent to 30 percent of the total wholesale and retail trade, so that a price rise could be checked. However, so far no definite blueprint for such a big expansion has been made public. It is also highly doubtful if co-operatives could fulfil the big rôle visualised for them in view of their indifferent working so far.

CORRESPONDENCE

WORKING OF HINDUSTAN MACHINE TOOLS

(To The Editor of "Capital")

Sir,

One swallow does not make a summer and the recent statements on the working of Hindustan Machine Tools look more like the boosting of its successful working *vis-à-vis* companies in the private sector than a factual appraisal. What are the figures? Its funds comprise: share capital Rs. 6.56 crores, of which Rs. 1.25 crores was further obtained from the Government during the years; advance from the Government for the third H.M.T. plant in Pinjore, etcetera, Rs. 1.50 crores; loans Rs. 2.82 crores; and reserves Rs. 1.70 crores; total Rs. 12.58 crores. Against this is the outlay on block of Rs. 9.16 crores, less depreciation Rs. 1.97 crores, or Rs. 7.19 crores, works in progress at the second H.M.T. plant Rs. 9.42 lakhs, and the third H.M.T. plant Rs. 44.60 lakhs, and others Rs. 136 lakhs; total Rs. 9.09 crores.

Against the estimated cost of Rs. 7.5 crores on the third H.M.T. plant in Pinjore, a loan of Rs. 1.75 crores has already been taken from the Government, the expenditure so far is Rs. 54 lakhs and there is Rs. 7 crores still to be spent. The fourth H.M.T. plant is also expected to cost Rs. 7.50 crores and no expenditure has been shown in the accounts for 1962-63. The estimated cost of the fifth H.M.T. plant has not been given and for its execution it is expected that foreign aid will be made available by the Government of Poland.

The third H.M.T. plant has just begun to function and the fourth H.M.T. plant is expected to start working before the end of 1963. It is rather too much of an exaggeration to state that the later H.M.T. plants are being entirely begotten by the earlier H.M.T. plants. It used to be the talk in certain quarters that in the early years of its working, the H.M.T. imported machines in parts, assembled them locally and included their proceeds in the sales, thus giving a rather exaggerated picture of its working. It would be reassuring to know that the figures shown under sales relate to machines produced in the factories only and that the figure under "raw materials" relate entirely to raw materials and that the sum of Rs. 60,145 under sales agency commission does not relate to sales proper referred to above.

The sale price is said to have been fixed with effect from 1st April, 1963, at a uniform rate of 15 percent below the current landed cost of European machines of equivalent quality. As the term landed cost includes packing and freight charges, insurance, etcetera, plus import duty the total ranging between 25 percent and 50 percent of the cost of the machine alone, it is difficult to understand how the cost of manufacture by H.M.T. compares with the cost of production in foreign countries. Such information should be useful for effecting economies in manufacture and in other ways.

The sum of Rs. 274.60 lakhs is shown as loan from the Government and includes Rs. 7.51 lakhs as interest accrued and due, whereas a sum of Rs. 12.25 lakhs is shown under expenditure as interest on account of loan from the Government. It would be interesting to know the rate of interest charged by the Government and how such rate compares with that which private companies of good standing have to pay for loans obtained by them from banks or the Government Finance Corporations.

Yours etcetera,

K. V. Iyer

Madras, 29th October, 1963.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations for the 1963 Fund:

Rs. 100

J. Vyoral

Rs. 50 each

I. G. Kennedy, Mrs. Priyambada Devi Birla

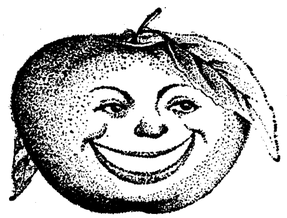
Rs. 20 each

R. H. Wright, J. Ritchie

Rs. 10 each

D.B., H. Harms

The Fund totals Rs. 566.25, including a carry-forward of Rs. 306.25.



DISCIPLINE IN CORPORATION

The following notice is posted up for the benefit of all whom it may concern as servants of the Calcutta Corporation: "The chairman has noticed an article which appeared without authority in a newspaper regarding Corporation matters. He directs that anyone sending a communication to the Press in connection with the affairs of the Corporation without authority will, on discovery, be instantly dismissed from the service." This kind of conduct is not only petty, it is supremely silly. Mr. Greer may as well shake his fist and gnash his teeth at the Man in the Moon to try and frighten him out of his solemn smile, as imagine that the breathing out of such threatening and slaughters will reveal anything else than his own impotency to prevent Corporation matters of public interest reaching the Calcutta Press, without what he is pleased to call his authority. Mr. Greer knows well enough that he has no power to direct the instant dismissal of any servant of the Corporation drawing a salary of over Rs. 300 a month for sending communications to the newspapers or for anythnig else, not even for visiting a newspaper office and kicking up a row with the editor, or else he might have enquired at his Secretary and have obtained information about such individual on whom he could have tried his powers.

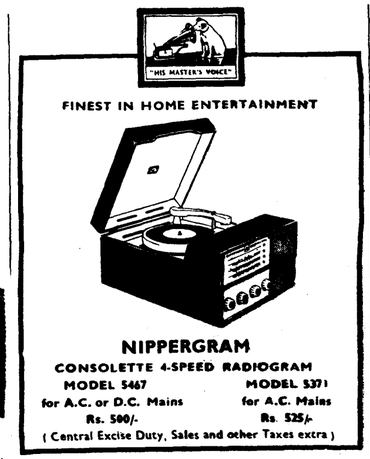
A Ditcher's Diary



Quite frankly, I have not read every word of the million or so filed by our industrious correspondents from the A.I.C.C. session at Jaipur. (Perhaps some kindly reader will be good enough to write and tell me what I may have missed?) I have, however, read enough to gather that, ten years after Avadi, the Congress has decided to ask itself what it meant when it adopted socialism as its credo. I am surprised that nobody has thought of congratulating the Congress with the highly original observation that it is better late than never. Is it, really? Being no believer in socialism myself, it is not for me to accuse the Congress of being insufficiently socialist; Mr. Malaviya is quite right in saying that the Party has always contained Right and Left elements, and he certainly demonstrated how maddeningly Left he himself is. What Mr. Morarji Desai meant when he spoke of the non-existence of Right and Left in the Congress is that he is implacably Right, for it always helps the Right to pretend that there is no such thing. In the middle, totally undecided, stands Mr. Nehru, who will go on moaning that disparities of wealth have increased since the Congress plumped for socialism, without recognising that this is the direct result of his own Government's policies, some of them wise. Did the Jaipur session serve the minimum purpose of giving some Congressmen an opportunity of letting off steam? I am beginning to doubt even that. Messrs Tyagi and Ghulam Mohammed reduced the proceedings once to a sort of Urdu *mushaira* and Mr. Nanda remained the most tiresome pedlar of platitudes. If the Bhubaneswar jamboree is going to produce further meaningless verbiage, as seems more than likely, I suggest the Congress call it off. There are better uses even for black money than holding pointless, aimless *melas*. Everyone seems to have forgotten that there is an emergency, or is it impolite to mention that?

In the United States, it is a common saying that the probe is always worse than the racket; and I have been wondering whether in this matter, as in so many others, this country is not going American. I take Mr. Nehru's word for it that Messrs Sankar and Damodara Menon of Kerala did nothing improper, if only because impropriety is a flexible term, hard to define. In any event, the Prime Minister has discovered the Kerala gentlemen's innocence through his own efforts, such as they may have been. In the case of Punjab's Chief Minister, however, Mr. Nehru has adopted a different procedure: it is an ex-Chief Justice of the Supreme Court who will conduct the enquiry. I wonder why. If my information is not wrong, on this occasion Mr. Nehru failed to find a working judge to do what in fact is not judicial work at all. Be that as it may, is there by any chance a kind of caste system in it all? So that if a Minister is accused of a particular category of misdemeanour it is all right for the Prime Minister to set himself up as the judge, while for another set of alleged offences a Minister makes the grade for a real or former judge? In a Bengali farce of yesteryear, a landlord's wife was most annoyed when told by the doctor that she had a temperature of only ninety-nine while her maidservant had a hundred and four. Similarly, I wonder whose *amour-propre* has been hurt, Mr. Sankar's or Mr. Kairon's, that his case has gone to the Prime Minister and not to a judge. Mr. Nehru, I fear, has made a mess of this whole business of corruption and enquiry into it. The point, I think, was made by Mr Rajagopalachari that this country had something called the Indian Penal Code to take care of all allegations of corruption: and that it was quite unnecessary to appoint commissions of enquiry. But then we all know why courts of law have to be bypassed for certain individuals; either the Congress needs them or the Congress boss loves them. That is all there is to it.

In his latest television interview in aid of American audiences, President Ayub Khan described a renewal of Indo-Pakistani hostilities over Kashmir as "unthinkable" and then proceeded to demonstrate that, as far as he was concerned, he can think of little besides. But let that pass; so far as verbal toughness over Kashmir is concerned, India has not done too badly either in recent months. More interesting, if utterly pointless, was President Ayub's mighty generous offer to play the "very honest broker" between China and the United States. The phrase has a familiar ring, hasn't it? I seem to remember that someone called Krishna Menon once sought to play that rôle between I forget who and who; he mediated so often in so many disputes. And now see what has happened to him. It is possible that small boys have on occasion a useful part to play in rows between big boys; but small boys always overreach themselves when they imagine they can go beyond the line drawn by the big boys. Between enemies there is that much accord that the small ones must not be too impertinent. Even Mr. Kennedy's "new frontiers" do not obliterate the age-old frontier between the small and the big; and Pakistan, let us say it, is small. If there is to be a dialogue between the Americans and the Chinese—about which, at this point, I discern no desperate hurry—it is the Americans or the Chinese that will have to bring it about. The manner in which Pakistan has allowed itself to be wooed by China to the detriment of India's interests, and hence of the free world's interests, must make Americans ask just how honest this latest "honest broker" is. Come to think of it, even the Chinese may look rather closely at President Ayub's credentials. It was a bit much, I thought, when he linked himself to Napoleon, Cromwell and such personalities in history.

The Commonwealth Immigrants Act has certainly cut down the number of people migrating to Britain, but the 14,680 voucher-holders admitted in the first 12 months represent a total which is still considerable. What surprises me about the figure is that almost one-half was made up of people from India and Pakistan. Hitherto, the majority of migrants have gone from the West Indies, and I am told that in many ways they have proved more suitable. For one thing, the standard of spoken and written English among them has tended to be much higher than among those from the subcontinent. As a result, they have been more easily absorbed into employment and into Britain's social life generally. Also, their living standards being more western, they themselves have been happier in their new surroundings. Indians and Pakistanis have had to face a number of drawbacks. Where their knowledge of English has not been up to scratch they have often found themselves unable to get suitable employment. What is worse, perhaps, their children have been backward at school, and the brake this has imposed on educational progress in the districts in which they have congregated has in some cases driven British parents to take their children elsewhere, thus giving rise to a form of spontaneous and undesirable segregation. Lack of familiarity with western living has sometimes caused new immigrants to crowd into sub-standard accommodation, and this has rapidly brought them into conflict with the law. Indian and Pakistani landlords have not helped matters either; their tendency to exploit their fellow-countrymen as tenants, and the genius they have often shown for evading their legal responsibilities, have attracted charges of "Rachmanism" All this is unfortunate, because otherwise Indians and Pakistanis have made good immigrants. For example, they have been far less violent than the West Indians, more easily disciplined and not as likely to become involved in crime—always a danger with new entrants to any country. They have not aroused as much colour conflict either, partly because they do not have the same tendency to carry a chip on their shoulders. Finally, although they do tend to concentrate in communities and often insist on trying to live some semblance of their

traditional lives, their attitude towards their British neighbours has been much more tolerant and accommodating.

WHATEVER THE BRITISH ELECTORATE MAY THINK OF Sir Alec Douglas-Home, he must find it consoling to know that he has already gained the warm approval of the *Tailor and Cutter*. The fulsome praise from that unyielding arbiter of men's sartorial fashions—"Britain now has a Prime Minister who at least looks like one"—is a contrast to what it had to say about Mr. Macmillan. The latter was the despair of the *Tailor and Cutter*—to the extent that when Mr. Macmillan resigned it delivered itself of the immortal judgment that his sartorial image "had been projected in such eccentric terms of late that despite the unhappy circumstances of his departure we were not too distressed to see him go". So much for a Prime Minister: such are the terrible consequences of offending the mighty. But whether Mr. Macmillan deserved such an epitaph or not—and he always seemed elegant enough to me—the *Tailor and Cutter* does have a point. Politicians have to think of their public "image", and remember that publicity being international these days they have a responsibility towards their country's too. Slack habits of dress can create an impression of shortcomings elsewhere; at worst they can suggest irresponsibility. That is why I have been watching anxiously for some improvement in India during the past few years, so far without result. Mr. Nehru sets a good enough example, although I suspect his preference for what has now become almost a uniform would break the heart of the *Tailor and Cutter*. But with a few exceptions the remainder of India's politicians run a grave risk of laying themselves open to a charge of neglecting hygiene, never mind elegance. I wish it were better at the State level, but on the whole the situation is worse. Perhaps it is a feature of India's unfortunate tendency always to equate the desirable with the traditional. Or possibly it is the result of having an electorate 80 percent of which can afford no form of dress other than a single white cloth. But whatever the reason, something ought to be done about it if only because this country has a habit of intruding into the world's limelight rather more often these days than she used to.

A COLLEAGUE SHAMELESSLY HOLIDAYING IN Kashmir when friends are in harness seems at last to have been stung into a mild sense of remorse or contrition. He writes: "There must be an airport not very far from where I am staying. An incorrigible early riser, as you know, I now wake up even earlier; by about 4-30 I begin to hear the whirl of planes taking off or landing. One needs no military intelligence to know that these are the planes carrying supplies to our posts in distant Ladakh. There, you immediately feel, somebody somewhere is doing his job, without a thought of what they say in Parliament or what you or I write in the papers about the country's military inadequacies. Some journalists and M.P.s have sometimes been taken to Leh and shown a thing or two; it still seems to me that the magnificent job done by the Air Force and auxiliary services in flying supplies to faraway posts in the most difficult flying conditions has never been given its due in terms of publicity. Lying in bed, warm and comfy, I suddenly felt a rapport with those anonymous airmen as I had never experienced before. I am fully aware of the risks, to both, in permitting too free intercourse between the civil and the military; it may yet be true that the estrangement of the colonial days continued a shade too long. How come that I, who have written much about the emergency, had to wait until this morning, purely fortuitous, to know that the *jawans* in inaccessible Leh and those who keep them supplied were all part of me? I have not many constructive ideas to offer on how to improve our defence publicity; but it seems to me that far too much effort has been expended on making the war national rather than personal. The war effort will not be total until each one of us feels somewhat as I am doing at this moment: that there is a little more I could do and am not doing for those who are risking their lives". New Delhi is free to use this extract from a letter as it wishes, with or without acknowledgment.

Guide for Investors

BONUS ISSUE FROM GUEST, KEEN AND INDIAN ALUMINIUM

THE strong support for the ordinary shares of Guest, Keen, Williams Ltd during recent weeks has been well-founded on good reasons, as has now been testified by the decision of the directors to issue bonus shares in the proportion of one bonus share for every two shares held by capitalising reserves. The Company has applied to the Government for its sanction.

Prospects for these shares are fairly encouraging in that the ex-bonus price works out to only Rs. 27.37 a share. If the dividend of 14 percent, taxable, were to be repeated on the increased share capital, the yield would amount to 5.1 percent. Shareholders might be well justified in expecting a repetition of the dividend, judging by the results achieved for 1962, the year for which the latest balance-sheet is available. The profit amounted to Rs. 1.28 crores for 1962, out of which the ordinary dividends absorbed only Rs. 56 lakhs. This apart, the Company's future working should improve with a more liberal supply of raw materials. The greater flow of maintenance imports should help contribute to the improved working of the engineering industry in general and Guest, Keen, Williams in particular. The diversification which the Company has undertaken should be an important factor to reckon with. The ordinary share capital will rise from Rs. 4 crores to Rs. 6 crores when the bonus shares are issued. The ordinary share capital has been backed by impressive reserves of more than Rs. 6.98 crores, out of which Rs. 2 crores will be used to capitalise the bonus issue. The scrip have been quoted at Rs. 41.06 a share. The directors have also declared a taxable interim ordinary dividend of 6 percent for 1963.

The price of the ordinary shares of Indian Aluminium Co. Ltd has shot up from Rs. 37.56 to Rs. 39 over the past month. The support is justified as the Company has decided to issue bonus shares in the proportion of one share for every four held by capitalising reserves. An extraordinary general meeting of the Company will be held on 16th December, 1963, to pass a resolution sanctioning the issue of the new shares. When these shares are issued, the ordinary share capital of the Company will rise from Rs. 4 crores to Rs. 5 crores. The ex-bonus price of the scrip works out to Rs. 31 a share. Judging by the recent performance of the Company, the scrip look fairly attractive for investment.

According to the latest available balance-sheet of Indian Aluminium for the year ended December 1962, the profit amounted to Rs. 1.79 crores out of which ordinary dividends at the rate of 17.5 percent absorbed a sum of Rs. 74 lakhs. In view of the adequate cover, it may be expected that the dividend will be maintained on the increased share capital. The hope is strengthened because the Company should show steadily improved results in view of the expansion which has taken place. The integrated expansion programme for the Hirakud smelter has been completed, and its capacity has been doubled. A new extrusion press has been installed in Alupuram. The expansion of the Muri alumina plant has been completed. The sheet-rolling facilities in Belur have been expanded. The Company has also undertaken further expansion programmes. The ingot capacity at the Alupuram smelter will be increased to 10,850 tons by putting up a second smelter adjacent to the existing one.

An aluminium foil rolling and finishing mill will be set up in Kalwa with an annual capacity of 2,500 tons. The new smelter in Alupuram should go into production by the middle of 1964. The foil mill may be completed by the middle of 1965. Considering these expansion schemes the profit trend is expected to improve. It is encouraging that the directors have already declared an interim dividend of 7.5 percent on the ordinary shares, subject to tax, for 1963. Since the interim has been the same as that for 1962, the total final dividend for 1963 is expected to be maintained at 17.5 percent. If this dividend were paid on the increased share capital, the yield at the ex-bonus price of Rs. 31, would amount to 5.8 percent.

Gillanders Tea Group Crop Results

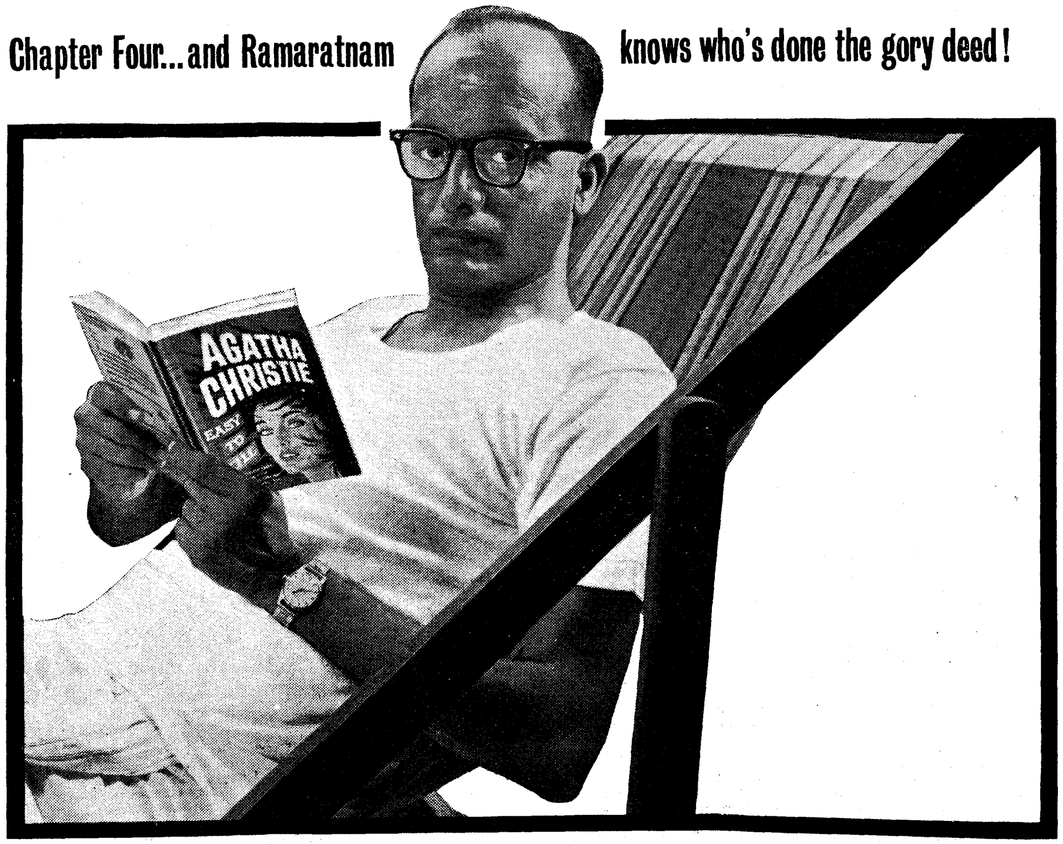
THE crop results of the Gillanders group of tea companies up to the end of August 1963, have been published. Except the Gairkhata Tea Co. Ltd, which is a Dooars garden, all the estates are situated in Assam. The Tengpani Tea Co. Ltd has produced a crop of 170,243 kilograms, against 176,542 kilograms for the corresponding period of 1962. Combined sales have declined from 27,096 kilograms to 14,766 kilograms, but the average sale price has hardened from Rs. 7.06 to Rs 10.64 a kilogram. Export sales have dropped from 12,694 kilograms to 11,026 kilograms, although the average price has improved from Rs. 8.12 to Rs. 12.07 a kilogram. Internal sales have fallen sharply from 14,402 kilograms to 3,740 kilograms, but the average price has been up from Rs. 6.12 to Rs. 6.44 a kilogram. The Jutlibari Tea Co. Ltd has produced 250,905 kilograms, against 291,898 kilograms. Combined sales have dropped from 64,944 kilograms to 23,813 kilograms, but the average price has improved from Rs. 6.33 to Rs. 8.76 a kilogram. Exports have been down from 42,368 kilograms to 15,369 kilograms, and the average price has risen from Rs. 7.01 to Rs. 10.05 a kilogram. Internal sales have declined from 22,576 kilograms to 8,444 kilograms while the average price has increased from Rs. 5.62 to Rs. 6.40 a kilogram.

The crop of the Ananda-Bag Tea Co. Ltd has risen from 156,352 kilograms to 159,878 kilograms. Combined sales have dropped from 15,438 kilograms to 7,044 kilograms while the average price has risen from Rs. 7.33 to Rs. 12.63 a kilogram. Export sales have amounted to 3,696 kilograms at an average price of Rs. 18.15 a kilogram, compared with 4,704 kilograms at an average price of Rs. 7.35 a kilogram. Internal sales have dropped from 10,734 kilograms to 3,348 kilograms, but the average price has improved from Rs. 5.88 to Rs. 6.54 a kilogram. The Betjan Tea Co. Ltd has produced a crop of 201,381 kilograms, against 227,410 kilograms. Combined sales have declined from 22,032 kilograms to 19,945 kilograms, but the average price has improved from Rs. 7.32 to Rs. 10.91 a kilogram. Exports have risen from 13,494 kilograms to 16,076 kilograms and the average price has hardened from Rs. 7.97 to Rs. 11.93 a kilogram. Internal sales have declined from 8,538 kilograms to 3,869 kilograms and the average price has risen from Rs. 6.29 to Rs. 6.71 a kilogram. The Gairkhata Tea Co. Ltd has produced 238,973 kilograms, against 267,280 kilograms Combined sales have dropped from 83,316 kilograms to 76,864 kilograms, but the average price has risen from Rs. 5.31 to Rs. 5.48 a kilogram. Exports have improved from 39,594 kilograms to 43,655 kilograms and the average price has risen from Rs. 5.39 to Rs. 5.49 a kilogram. Internal sales have amounted to 33,209 kilograms at Rs. 5.46 a kilogram, against 43,722 kilograms at Rs. 5.23 a kilogram.

Mysore Kirloskar Earns More but Cuts Dividend

IN spite of substantial improvement in its working results, the Mysore Kirloskar Ltd has reduced the dividend for the year ended June 1963 from 12 percent to 10 percent. The sales are up by about 23 percent from Rs. 1.81 crores to Rs. 2.23 crores, and the gross profit has gone up by as much as 53 percent from Rs. 39.34 lakhs to Rs. 60.38 lakhs. Appropriations include depreciation Rs. 13.86 lakhs (against Rs. 11.86 lakhs) development rebate reserve Rs. 6.08 lakhs (against Rs. 1.45 lakhs), general reserve Rs. 1.05 lakhs ((against Rs. 20,000), contingency reserve Rs. 2 lakhs (against nil), replacement and rehabilitation reserve Rs. 2 lakhs (against nil) and debt redemption reserve Rs. 1.25 lakhs (against Rs. 2 lakhs). After making some minor adjustments and providing for the proposed dividends which absorb Rs. 6.75 lakhs (against Rs. 7.90 lakhs), there remains a small surplus of Rs. 2,975 to be carried forward, against Rs. 3,365 brought in.

The directors state that the Company has continued to make good progress in the manufacture of existing lines. But its progress in the manufacture of No. 4 capstan lathes and 7B combination turret lathes could not be according to plan on account of the delay in receiving the imported components. The Company has plans to take up the manufacture of No. 2D capstan and No. 9C combination turret lathes. It also intends to undertake the manufacture of automatic chucking lathes and other types of machine tools for which negotiations are in progress. The Rs. 100-paid share of the Company is currently quoted around Rs. 162.50.



Bombay Burmah Fares Well

THE Bombay Burmah Trading Corporation reports encouraging results for the year ended May 1963 —the centenary year. The gross trading receipts are higher at Rs. 5.92 crores, against Rs. 5.77 crores in the preceding year. Income by way of dividends from subsidiaries and sundry receipts is up from Rs. 38.71 lakhs to Rs. 54.20 lakhs. There has also been an increase, from Rs. 7.99 lakhs to Rs. 11.57 lakhs, in profit on sale of assets concerning a wide range of surplus equipment and properties, mainly in overseas countries. The directors have attributed the increase in gross trading receipts to the increase in sale income from tea, coffee, manufactured goods and timber. Against this is to be offset a fall in proceeds from boat-building and repair work in Rangoon. Other income has also shown an overall increase, the closure of earnings from the Joint Timber Company, Thailand, being more than offset by receipts from rosewood disposals and from the North Borneo Timber's higher dividend. Stocks of finished goods dropped slightly, while work in progress relating to the Rangoon boat-building yard showed little change. Expenses showed a substantial increase, mainly due to the rise in the consumption of stores and spare parts in North Borneo, south India and Rangoon, additional salary and wage costs and higher transport and carriage and miscellaneous expenses. Purchases of materials recorded an overall increase, a decline in Rangoon being offset by higher purchases of logs in North Borneo.

Appropriations of the year's profits include depreciation Rs. 36.64 lakhs (against Rs. 33.11 lakhs), taxation, including bonus tax liability of Rs. 13.30 lakhs, Rs. 60.60 lakhs (against Rs. 49.50 lakhs), development rebate reserve Rs. 5 lakhs (against Rs. 4.10 lakhs) and general reserve Rs. 16.50 lakhs (against nil). No transfer has been made to dividend equalisation reserve and investment reserve which received Rs. 6.50 lakhs and Rs. 5.50 lakhs, respectively, in the preceding year. A sum of Rs. 4.95 lakhs has been provided for the National Defence Fund. Dividends, including centenary dividend, absorb Rs. 53.50 lakhs (against Rs. 44.14 lakhs). Contributions to the National Defence Fund and the centenary dividend are being met out of the dividend equalisation reserve and general reserve. After making various appropriations there remains a surplus of Rs. 2.26 lakhs to be carried

Chapter Four... and Ramaratnam knows who's done the gory deed!

You or I would suspect the moustachioed foreigner who appears on Page Five. Or the elderly spinster who keeps cats. We would reserve opinion on the cheerful undergraduate. And our hearts would go out to the beautiful, blonde wife of the violently departed. We would, of course, be wrong. Not so K. S. Ramaratnam, Selection Grade Clerk with Burmah-Shell, Madras, and armchair detective. By Chapter Four, he'd have guessed that the ravishing widow murdered her spouse to marry the bright young undergraduate. And by book's end, he would be proved right.

'A MATTER OF COMMON SENSE'

Ramaratnam works in Supplies section. The section plans for and arranges supplies of bulk and packed products to main Installations and Depots to meet the day to day demand. Demand fluctuates and his section must anticipate... divert a supply, tide over a gap in stock and flex to suit any change. 'It's a matter of common sense,' says Ramaratnam, 'applied to data and trends.'

TODAY, AS EVER, PEOPLE LIKE RAMARATNAM ARE WORKING FOR YOU

On Sundays, you'll find Ramaratnam playing cricket with his five sons. Simplicity appeals to him. 'All a man needs,' he says, 'is a good job and a happy family.' As an afterthought, he adds, 'And a good "Whodunit" on a rainy afternoon!'

Ramaratnam and people like him — at all levels of responsibility — are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People

forward, against Rs. 2.03 lakhs brought in.

The directors' report states that the activities of the Wallace Bay branch were adversely affected by exceptionally bad weather conditions which hampered forest working, impeded rafting and shipping operations and occasioned extra outlay on road and equipment repair and maintenance. There were resultant cost increases which reflected also the extended length of timber haul. The production of hardwood logs from the Kalabakan concession, however, rose slightly from 178,731 tons to 183,571 tons. Mill production of sawn timber declined from 5,926 tons to 4,920 tons. Selling prices realised on log shipments were satisfactory and sawn timber sales showed an increase. Continued progress was made in survey of new areas for future working. The forest workings of the North Borneo Timbers were seriously affected by the adverse weather conditions. Costs tended to rise and there was some contraction in log supplies from the Bay lands around Sandakan. The profit for the year from this Company fell from M$ 5.38 million to M$ 3.19 million. The Company declared two interim dividends of 20 percent each free of North Borneo tax. No final dividend was recommended.

Plantation development work continued during the year. As for south Indian plantations, the directors state that all estates, with the exception of Nilgiris, showed an increase in production. Tea output at 3.81 million kilograms was an all-time record. The unit cost rose from Rs. 3.07 a kilogram to Rs. 3.20 a kilogram while the average return increased from Rs. 5.26 to Rs. 5.42 a kilogram. The final coffee crop totalled 930 tonnes, against 785 tonnes. The cardamom crop was 10,627 kilograms, against 8,126 kilograms. The Namshan Tea Factory was closed on May 1962, and most of the tea stocks were sold during the year. Activities at the Rangoon dockyard continued to decline. Activities in the Burma branch centred on the concrete products plant and the asbestos cement plant, both in Rangoon. Production in the Tanganyika estates showed an increase. The Company's activities in Thailand were confined to a holding in Thai Tapioca Ltd. The working of N. V. The Indo Java Rubber Planting and Trading Company suffered a setback. The construction of the factory of Formica India Ltd has begun.

Great Eastern to Issue Bonus Shares

THE preliminary report on the working of the Great Eastern Shipping Co. Ltd for the year ended June 1963 shows that the Company has done exceedingly well, with gross earnings and profit recording impressive improvement over the previous year's performance. The freight and charter hire earnings have risen by about 40 percent from Rs. 3.25 crores to Rs. 4.51 crores—an all-time record. The gross profit has gone up by nearly 70 percent from Rs. 74.30 lakhs to Rs. 1.26 crores. The directors have, however, decided to skip the dividend, and instead, they have proposed the issue of bonus shares in the ratio of one share for every two fully-paid equity shares of Rs. 10 each, and to increase the paid-up amount on the partly-paid shares from Rs. 5 to Rs. 7.50 a share,

The decision to issue bonus shares has been taken with a view to strengthening its financial position. The development and expansion of the Company's activities are dependent on the ploughing back of profits. It might be recalled that the Government and the Shipping Development Fund Committee consider the granting of loans to shipping companies only if their total loans and borrowings have not exceeded four times their capital plus reserves. For the purpose of bonus issue, which is subject to the sanction of the Controller of Capital Issues, the directors propose to draw the entire sum of Rs. 25 lakhs standing to the credit of the capital redemption reserve account and another Rs. 20 lakhs from general reserve No. 2. Out of the 1962-63 gross profit of Rs. 1.26 crores, provision for depreciation is Rs. 64.10 lakhs (against Rs. 60.93 lakhs) and allocation to development rebate reserve has been stepped up from Rs. 16 lakhs to Rs. 51 lakhs. A sum of Rs. 6 lakhs (against Rs. 1 lakh) has been transferred to general reserve No. 2. The directors propose to transfer Rs. 5.62 lakhs from general reserve No. 2 to meet the bonus tax liability when it arises. The Company has no tax liability for 1962-63. The Company's working results for the current year (1963-64) are expected to show a further improvement. The implementation of the expansion programme at a cost of Rs. 1.70 crores is likely to result in a substantial increase in freight earnings although the full benefit will be reflected only in 1964-65. The Rs. 10-paid shares of Great Eastern Shipping which could be had around Rs. 15 a few weeks ago were bid up to Rs. 20 in kerb dealings on 31st October after the announcement of bonus issue. Later, the quotation receded to Rs. 18.36 on corrective profit-taking.

Modella Woollens Pays More

THE preliminary report on the working of Modella Woollens Ltd for the year ended June 1963 shows that the Company has done exceedingly well, with the gross profit shooting up from Rs. 7.24 lakhs to Rs. 18.11 lakhs. The dividend has been stepped up from a maiden 4 percent in 1961-62 to 6 percent, and, what is more the dividend for 1962-63 is on the increased capital of Rs. 51.67 lakhs, against Rs. 30.83 lakhs in the preceding year. A part of the proposed dividend is expected to be exempt from tax and an application is being made to the income tax authorities for ascertaining the percentage of such exemption. Allocation to depreciation has been raised from Rs. 2.02 lakhs to Rs. 5.25 lakhs and provision for development rebate reserve is substantially higher at Rs. 5.82 lakhs, against Rs. 1.88 lakhs. Taxation accounts for Rs. 1.31 lakhs, against Rs. 1.10 lakhs. After bringing in a surplus of Rs. 45,995 from the previous year, the directors have created a general reserve with an allocation of Rs. 2.50 lakhs. A small sum of Rs. 56,626 (against Rs. 54,824) has been used to write off preliminary expenses. The proposed dividend absorbs Rs. 3.10 lakhs, against Rs. 1.23 lakhs. The Rs. 10-paid shares of the Company is currently quoted around Rs. 15.

Better Results from Indian Telephone Industries

THE Indian Telephone Industries Ltd has done well for the year ended March 1963. The profit has improved from Rs. 64.43 lakhs for 1961-62 to Rs. 1.02 crores for 1962-63, after providing Rs. 31.30 lakhs (against Rs. 27.58 lakhs) for depreciation on fixed assets and Rs. 7.99 lakhs (against Rs. 8.29 lakhs) for depreciation on tools and gauges. The dividend has been increased from 3.5 percent to 4 percent on the share capital of Rs. 4 crores. Taxation absorbs Rs. 62 lakhs, including a sum of Rs. 7.56 lakhs for super profits tax. Tax provision amounted to Rs. 39.50 lakhs for 1961-62. Development rebate reserve is allocated Rs. 5 lakhs (against Rs. 4.84 lakhs), capital reserve Rs. 26,033 (against Rs. 8,409) and general reserve Rs. 25 lakhs (against Rs. 6 lakhs). The carry-forward is Rs. 53,828, against Rs. 38,455 brought in.

Sales rose from Rs. 5.65 crores to Rs. 7.73 crores. They are expected to amount to Rs. 9 crores for 1963-64, so it is hoped that the sales target of Rs. 40 crores set for the third plan will be achieved in due course. I.T.I. has diversified its activity. In addition to telephone exchange lines and long-distance channelling equipment, it has begun to produce resistors, magneto generators, special relays for railways and various cable equipment. The instrument division has produced several instruments. It has also made efforts to export its products to earn foreign exchange. The expansion scheme has been progressing satisfactorily. New plant and equipment have arrived. The Company is expected to manufacture new types of switching equipment. It may be mentioned that the 15-year collaboration agreement with the Automatic Telephone and Electric Co. of England expired on 3rd May, 1963.

Hindustan Polymers Will Enter Market Soon

HINDUSTAN Polymers Ltd which has been licensed to manufacture 10,000 tons a year of styrene monomer, 7,500 tons of polystyrene and its copolymers and 1.5 million gallons a year of power alcohol, will soon be in the market to raise Rs. 1.27 crores in equity shares of Rs. 100 each. The project is estimated to cost Rs. 6.35 crores which will be met by the share capital of Rs. 3 crores, foreign exchange loans of Rs. 2.16 crores and bank borrowings of Rs. 1.19 crores. The Company has entered into technical collaboration agreements with Universal Oil Products Co. of Illinois, U.S.A. and BX Plastic Ltd, England, a wholly-owned subsidiary of Bakelite Xylonite Ltd, London. The U.S. firm will be paid a lump-sum of $350,300 for technical know-how and royalty for the manufacture of styrene monomer, designs, drawings, etcetera. The British firm will be paid Rs. 20 lakhs in pound sterling for the technical know-how and assistance. Machinery will cost Rs. 4.39 crores of which the imported component will be worth Rs. 2.36 crores. Plant and equipment will be supplied by the Power Gas Corporation Ltd of the U.K. The foreign exchange requirements will be met by loans from the Commonwealth Development Finance Company, I.C.I.C.I., and the Industrial Finance Corporation and the Mercantile Bank.

The factory will be located in Visakhapatnam which is well situated concerning the supply of molasses, a major raw material. The other important raw material, benzene, will be obtained from Hindustan Steel and other steel plants. If all goes well, the factory is likely to go into production of power alcohol by the first quarter of 1965 and of styrene monomer and polystyrene by the second half of 1965. The authorised capital of the Company is Rs. 5 crores and the issued capital will be Rs. 3 crores of which the directors, promoters and their friends will take up Rs. 52.60 lakhs. Shree Ram Mills Ltd will subscribe for Rs. 60 lakhs and Bakelite Xylonite Ltd. C.D.F.C. and the I.C.I.C.I. will each take up shares of the value of Rs. 20 lakhs. The balance of Rs. 1.27 crores is to be offered for public subscription. The board of directors includes Mr. Kasturbhai Lalbhai (chairman), Mr. Pratap Bhogilal, Mr. Bhogilal Leherchand, Mr. R. G. Saraiya, Mr. R. V. G. K. Ranga Rao, Mr. J. P. Patel, Mr. N. K. Petigara and Mr. R. K. Parikh.

New Products from Mysore Sugar

THE Mysore Sugar Co. Ltd has obtained an industrial licence from the Government of India for manufacturing a new product called "Acetate". The licensed capacity is 10 tons a day. The project will be undertaken by a new Company, the Mysore Acetate and Chemicals Co. Ltd, which is being formed. The Mysore Sugar Co. Ltd contemplates manufacturing two products from alcohol, namely, acetic acid and acetic anhydride which are the two important chemicals required for the manufacture of "Acetate". Mysore Sugar will sell these products to the new Company. The latter has a programme to produce, 1,000 tons of cellulose triacetate a year and the balance in the form of acetate moulding powders. It is proposed to sell the cellulose triacetate to a leading photo films manufacturing company since this is an important raw material for manufacturing raw films. Acetate moulding powders are employed in the plastic industry. There is a good market in India for both cellulose triacetate and acetate moulding powders.

As for foreign collaboration for the new venture, the Mysore Sugar Co. Ltd has made arrangements with well-known foreign firms for the supply of plant and machinery as well as technical know-how. The project is estimated to cost Rs. 4.15 crores, of which Rs. 2.25 crores will be raised through share capital, Rs. 1 crore through a dollar loan and the balance through the I.C.I.C.I. and other banks. The authorised capital of the Company will be Rs. 5 crores. Out of the proposed capital issue of Rs. 2.25 crores, the foreign collaborators will take shares worth Rs. 68 lakhs in part payment of the cost of plant and machinery and the supply of technical know-how. The Mysore Sugar Co. Ltd and the Government of Mysore will take up shares worth Rs. 30 lakhs and Rs. 50 lakhs, respectively. The balance of Rs. 77 lakhs is expected to be offered to the public for subscription.

Arunoday Mills Share Offer

THE subscription list for the Rs. 17.5-lakh public issue of Arunoday Mills Ltd will open soon. The Company has been licensed to set up a cotton textile mill with a capacity of 12,000 spindles and 324 automatic looms. The project is estimated to cost Rs. 79.50 lakhs, which it is proposed to meet by the issued capital of Rs. 30 lakhs, deferred payment of Rs. 5.50 lakhs and bank borrowings of Rs. 44 lakhs. The authorised capital of the Company is Rs. 1 crore. The issued capital is Rs. 30 lakhs made up of Rs. 25 lakhs in equity shares of Rs. 10 each and Rs 5 lakhs in 9.5 percent redeemable cumulative preference shares. Of this, the directors and their friends and associates have subscribed for Rs. 12.5 lakhs of equity capital. The balance of Rs. 12.5 lakhs of equity capital and Rs. 5 lakhs of preference capital is now being offered to the public. The Company has been permitted to import combers, cone winders, etcetera, against foreign exchange obtained by the issue of equity shares worth Rs. 4.45 lakhs to non-residents. Orders for machinery, indigenous and imported, have been placed. Building construction in

Morvi is in progress and the erection of machinery is expected to start soon. The directors expect to start partial production by the second half of 1964, and full production by the end of 1964. The Company's turnover, when in full production, will be around Rs. 70 lakhs and the directors hope to be able to declare a maiden dividend for 1965-66. Mr. Chinubhai Chimanlal of the Kasturbhai Lalbhai group will be the chairman of the Company.

Indo-Nepal Industrial Corporation

INDO-NEPAL Industrial Corporation Ltd is a new Company which has been promoted by the house of Birlas for setting up a cotton textile mill in Simra, Nepal, at an estimated cost of Rs. 1.70 crores. The mill will be a composite unit with 12,000 spindles, 300 fully automatic looms and complete processing plant. The output is expected to be 50,000 yards of cloth a day on a three-shift basis, of which 50 percent will be grey cloth. It is expected to meet nearly 20 percent of the demand for cloth in Nepal. The Government of Nepal has granted many concessions to the Corporation. There will be no excise or any other duty on the mills' production and the corporation will be exempt from income tax for a period of 12 years from the date of commencement of production. Full facilities have been granted for the remittance of dividends, management fees and managing agency commission, etcetera. The Government of Nepal has also given an undertaking that the mill will not be nationalised for a period of 41 years.

The cost of the project, estimated at Rs. 1.70 crores, will be met by the share capital of Rs. 1 crore (Rs. 1.60 crores Nepalese currency), deferred payment credit and loan from the Nepal Industrial Development Corporation and other sources. The Nepal Industrial Development Corporation has agreed to give a loan equivalent to Rs. 60 lakhs (Nepalese currency) of which Rs. 40 lakhs will be in Indian currency and Rs. 20 lakhs in U.S. dollars. The authorised capital of the Company is Rs. 3 crores in Nepalese currency (Rs. 1.87 crores in Indian currency) made up of 1 million equity shares of Rs. 20 each (equivalent to Rs. 12.50 Indian) and 50,000 preference shares of Rs. 200 each (equivalent to Rs. 125 Indian). The issued capital will be Rs. 1 crore of which the Government of Nepal and the promoters will each take up 160,000 equity shares of Rs. 12.50 each (Indian currency). The public will be offered 320,000 equity shares of Rs. 12.50 each and 16,000 9 percent redeemable cumulative preference shares of Rs. 125 each (Indian currency). The subscription list is expected to open shortly.

THE CHEMPRODUCTS CO.,
12, TAMER LANE, CAL.-9.

Devidayal Tube to Raise Fresh Capital

DEVIDAYAL Tube Industries Ltd, manufacturers of brass and copper tubes, is offering for public subscription 41,040 equity shares of Rs. 100 each and 10,000 9.5 percent cumulative preference shares of Rs. 100 each to raise additional funds required for the expansion of its activities. (Details of the issue appear on a later page in this issue of *Capital*.) The subscription list will open on 11th November and close on the 16th or earlier, but not before 13th November. The entire public issue has been underwritten. The Company's plant in Bhandup (Bombay) has a licensed capacity of 3,600 tons of tubes a year. Its current rate of production is around 1,500 tons on a double shift basis. The directors hope to achieve full capacity by the end of 1964. The total capital outlay on the project is estimated at Rs. 1.831 crores. Of this, a sum of Rs. 95 lakhs is provided by the share capital already subscribed and the capital now offered for public subscription. A sum of Rs. 12 lakhs will be provided by the collaborators—Delta Metal Co. Ltd, London—in the form of machinery. The balance of Rs. 76.43 lakhs will be met partly by borrowings and partly from internal resources. The Company is already doing well. Its sales during the year ended June 1963 amounted to Rs. 67.91 lakhs, on which it made a gross profit of Rs. 13.98 lakhs. The net profit after making various provisions amounted to Rs. 4.38 lakhs. The Company paid a gross interim dividend of Rs. 7 a share and the directors have recommended a final dividend of Rs. 3 a share. The Company's sales during the current year are expected to be around Rs. 1.50 crores, and the sales are estimated to rise to around Rs. 2.75 crores when the expanded plant comes into operation. The directors think that in the absence of any unforeseen circumstances, the Company would be able to maintain the dividend on the increased capital for the current year also. The order-book is stated to be full till the first half of 1964.

The Company has an authorised capital of Rs. 2 crores dividend into 150,000 equity shares and 50,000 preferences shares, both of Rs. 100 each. The issued capital is Rs. 1.25 crores of which Rs. 1 crore is in equity shares. Out of this, equity shares worth Rs. 34.89 lakhs have been allotted to the promoters—Devidayal (Sales) Private Ltd—in consideration for the transfer of net assets. The promoters have further subscribed for cash shares of the value of Rs. 6.90 lakhs. The technical collaborators have been allotted equity shares worth Rs. 2 lakhs for the supply of technical know-how. The subscribers to the memorandum and the directors have taken up equity shares worth Rs. 17,000. The Company is now offering equity shares worth Rs. 41.04 lakhs and preference shares worth Rs. 10 lakhs for public subscription.

Kerala Industrial Development Corporation

PRESIDING at the recent annual general meeting of the Kerala State Industrial Development Corporation Ltd, Mr. K. R. K. Menon, chairman, pointed to the satisfactory working of the Corporation during the second year of its working. (A full text of the speech is published on a later page in this issue of *Capital*.) The Corporation has earned a small profit. The more significant feature of its working is that it has suceeded in attracting investments and deposits from the public without much difficulty.

Mr. Menon said that the main objective of the Corporation was to develop a congenial climate in Kerala State for industrial expansion. Since the State has been under-developed, industrial development there depends on attracting outside capital and entrepreneurial skill. If the political stability of the State is ensured, it will greatly help in attracting outside capital for industrial expansion. Mr. Menon urged the Central Government to take a sympathetic attitude towards the developing industries in the State. Industrial licences for the State should, therefore, be more liberally sanctioned. If a free trade zone near Cochin or any other suitable port in Kerala were established, it would stimulate economic development of the State. An important impediment to industrial expansion has been the shortage of electric power. The State Government should, therefore, take active steps to ensure a regular supply of cheap electric power to attract investments from outside.

Fibreglass Pilkington Share Offer

FIBREGLASS Pilkington Ltd, which has been licensed to manufacture annually 2,500 tons of glass wool, 600 tons of glass textile fibres and 75 tons of glass staple tissues, is offering 520,000 equity shares of Rs. 10 each for public subscription to raise funds for the project involving a capital outlay of Rs. 1.15 crores. (Details of the issue appeared in last week's *Capital*.) The list will open on 11th November and will close on 20th November or earlier but not before 13th November. The public issue has been fully underwritten by leading financial institutions and two prominent firms of stockbrokers. The Company has been promoted by Fibreglass Limited of the U.K. and the Bombay Company (Private) Ltd to undertake the manufacture of fibre glass and fibre glass products which have a wide variety of uses. The Company has entered into an agreement with Owens-Corning Fibreglass Corporation of the U.S.A. for the assignment of patents and it has been licensed by Fibreglass Ltd to operate specialised centrifuge wool process. Fibreglass has been appointed its technical consultants and the Company will have the ability to draw on the most advanced technology.

Glass fibre products have a varied range of potential uses in the growing industrial economy of India as in other progressive countries, such products constituting a versatile basic engineering and constructional material because of their unique combination of properties. Up to now, glass fibres have only been made in India in relatively simple forms, and it has been difficult in recent years to import products from abroad. These products will be made on a large scale for the first time when Fibreglass Pilkington's plans materialise. To begin with, the Company proposes to set up a rotary type glass wool plant in Thana (Bombay), together with a continuous filament plant and a staple tissue plant. This plant has been designed to achieve quick expansion of textile and reinforcement production. The initial capacity of this plant is placed around 1,108 tons of glass fibres and glass fibre products. Thereafter, the Company will erect a second rotary type glass wool plant in West Bengal and another similar plant in Madras.

The first commercial production of glass fibres will be possible some 18 months after the commencement of the factory building in Thana. Except for certain chemicals and special alkali-free glass known as "E" glass which will need to be imported, other raw materials—sand, soda ash, dolomite, feldspar, limestone and saltcake—are available indigenously. The project is estimated to cost Rs. 1.15 crores of which Rs. 38.93 lakhs is to be spent on land and buildings and Rs. 43.93 lakhs on plant, machinery and equipment. Arrangements have been made in consultation with Fibreglass to place orders for machinery to be imported from abroad. The first shipment of such plant and machinery is expected to arrive in India within the next 12 months. The cost of the project, it is proposed, will be met by the issue of share capital of Rs. 1.05 crores and by bank borrowings.

The Company has an authorised capital of Rs. 2.50 crores—all in equity shares of Rs. 10 each. The issued capital will be Rs. 1.20 crores of which Fibreglass Ltd will take up Rs. 60 lakhs, including Rs. 15 lakhs to be allotted for consideration other than cash. The Bombay Company will be allotted shares worth Rs. 4.80 lakhs against cash payment. The directors, their associates and friends have agreed to subscribe for Rs. 3.20 lakhs. The balance of Rs. 52 lakhs is to be offered for public subscription. The board of directors includes Mr. John Creek (chairman), Mr. Reginald Gordon Hayes (managing director), Mr. Rajendra Ambalal Shah, Mr. Muthiah Annamalai Chidambaram, Mr. Nityanand Mangesh Wagle, Mr. Ghanshyam Vishwa Nath and Mr. Dilip Kumar Basu. The Bombay Company (Private) Ltd will be the sole selling agents. The Company has developed an extensive organisation for the sale of glass fibre products as it has been the sole sales agents of Fibreglass Ltd since 1947.

New Capital Issues

THREE companies have been authorised to raise fresh capital aggregating Rs. 1.7 crores. One company is issuing bonus shares and the other two equity and preference shares. One of the companies is offering part of its shares for public subscription by prospectus. In all cases, the consent of the Controller of Capital issues is valid for 12 months. The following are the details:

Ruberoid Company of India Ltd, Bombay, is to issue capital of Rs. 25 lakhs—Rs. 20 lakhs equity and Rs. 5 lakhs preference—in shares of Rs. 10 each, out of which equity shares of the value of Rs. 2 lakhs will be allotted to Ruberoid Co. Ltd, London, in consideration of know-how and trade marks. The proceeds will be utilised in the manufacture of asphalt corrugated sheets and roll roofings.

Vijay Spinning Mills Ltd, Vijayawada, is to issue capital of Rs. 25 lakhs divided into 200,000 equity shares of Rs. 10 each for cash at par and 5,000 cumulative redeemable preference shares of Rs. 100 each for cash at par. Shares of the value of Rs. 15 lakhs would be offered to the public for cash by prospectus. The proceeds, will be utilised to erect a spinning mill of 12,000 spindles in Krishna district.

The Indian Aluminium Company Ltd, Calcutta, is issuing 12,01,915 equity shares of Rs. 10 each as fully paid-up bonus shares on capitalisation of its share premium to the extent of Rs. 1,20,19,150. The bonus shares will be issued after the existing outstanding convertible 5 percent debenture stock has been converted into equity shares.

The Stock Markets

PROSPECT OF LIBERAL CREDIT HELPS SENTIMENT

Wednesday Evening.

WEDNESDAY has been a quieter day for the Calcutta stock market, although the general undertone is firm. The clearing has passed off smoothly and the higher carry-forward charges have not been a deterrent. Turnover has been confined to clearing scrip. The growing tension in Indo-Pakistani relations has been overlooked. The buying spree has continued because Lyons Range has exaggerated the importance of the move to liberalise credit supply from the Reserve Bank. Although the minimum margin requirement against share advances by banks has been scrapped, it is likely to be of little material benefit. Banks have always followed the prudent policy of advancing money against shares after keeping a sufficient margin. It is doubtful whether they will take the risk of relaxing the margin under the present circumstances. Not only has there been a rapid rise in share values during recent weeks, but there are also possibilities of sharp fluctuations in view of excessive speculation. The danger has been indicated by the substantial broadening of option business.

The authorities have, meanwhile, imposed interim margins for Hindustan Motors, Guest, Keen, Williams and Kesoram Industries, since the prices of these scrip have risen by more than 10 percent above their last clearing rates. Corporate news has been good. Two leading companies —Guest, Keen, Williams and Indian Aluminium—will issue bonus shares by capitalising reserves. So the bullish trend has survived despite profit-taking at the bulges.

After touching a new high for the year, Indian Iron have reacted on profit-taking. The output and despatches of the Company during October have been satisfactory, compared with September. The output of pig iron has, nevertheless, declined from 102,648 metric tons to 81,704 metric tons due to one furnace being put out for relining. Production of steel ingots has risen from 81,947 metric tons to 85,840 metric tons and that of salable steel from 63,191 metric tons to 76,520 metric tons. Despatches of salable steel have improved from 60,905 metric tons to 73,051 metric tons. Guest, Keen, Williams have been a firm feature and have risen satisfactorily due to informed buying. The Company will issue bonus shares in the proportion of one new share for every two held by capitalising reserves. Texmaco, Burn, Indian Standard Wagon and Jessop have been firm, although their closing prices have reacted somewhat.

In the miscellaneous section, attention has centred on clearing scrip. There has been an all-round improvement, although the top prices have been pared towards the close due to profit-taking. Indian Aluminium have been supported because of the decision to issue bonus shares in the proportion of one new share for every four held. Hindustan Motors have enjoyed support since the World Bank has agreed to give a substantial loan to the industry for development and modernisation. Indian Oxygen have shot up on sustained investment buying. Alkali Chemical, Union Carbide, British Paints and Associated Battery have hardened. India Steamship have gained on optimism concerning the freight outlook. Among new shares, Hindustan Aluminium, Universal Cable, Hindusthan Twyfords and Phillips Carbon have attracted attention. In paper shares, Orient and Sirpur have been active on influential support. Stray business in Titaghur, India Paper Pulp and Bengal have been transacted. In the banking section, United Bank of India have hardened. Sugar shares have been generally neglected, since the start of the new season has been marked by a shortage of cane.

Jute shares have been steady. Birla have reacted after an earlier rise. Fort Gloster have been bought on prospects of a rights issue at a premium of Rs. 90 a share. Barnagore have improved on producing good results. Interest has been taken in Champdany, Union, Northbrook, India, Kelvin and Ganges. Stray business in coal shares has been transacted. Burrakur, Bengal, Central India and East Indian have been steady. In cotton mills, Elgin and Dunbar have been prominent. J. K. Rayon have moved both days. Despite limited turnover in tea shares, good Assam and Dooars gardens have been bought. Jaybirpara in particular have improved sharply.

Government securities have been quietly steady. Turnover has been limited. Banks are interested in short-dated securities but their support has been restrained due to advent of the busy season. The 3 percent Conversion loan 1986 has reacted to Rs. 65.60. There has been support for selected State Government loans.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during October 1963 was: iron 144,800 metric tons; steel ingots 153,500 metric tons and salable steel 125,300 metric tons.

Bombay

MARGINS RELAXED A LITTLE

REACTIONARY TREND AT THE CLOSE

Wednesday Evening.

THE Bombay stock market has begun the new account on a buoyant note during the past week. Share prices have generally scaled new peaks for the year, although a reactionary trend has set in towards the close due to profit-taking. All offerings have, nevertheless, been absorbed without difficulty. The Stock Exchange authorities have relaxed the margin restrictions somewhat in that the interim margins imposed on purchases of Century and Hindustan Motors have been halved. The authorities claim that the rise in the prices of these scrip has taken place due to an improvement in the economic outlook, and not due to speculation.

Dalal Street takes the view that the scrapping of the minimum margin requirement against share advances might lead to a bigger supply of bank credit for investment in stocks and shares. Knowledgeable circles, however, hold different views. Banks are not likely to invest liberally in shares because of the possibility of wide fluctuations in prices. Towards the close, there is an undercurrent of caution, since investors are inclined to wait until the Central Finance Minister unfolds his policy concerning tax changes during the winter session of the Lok Sabha.

Tata Steel ordinary have shot up to Rs. 147.25 on higher production figures for October in comparison with those for September. Among engineering shares, Tata Locomotive, Alcock Ashdown and Mukand Iron have met with support. Hindustan Motors have been active in motor-vehicle shares due to the prospect of a World Bank loan for expansion of the industry. Premier Automobiles have gained.

Selected cotton mill shares have improved on balance because of the decision of the Government to allow expansion of looms and spindles in the mill sector. Century have risen sharply and have attracted an interim margin. Support has been extended to Kohinoor, Morarjee, Bombay Dyeing, Svadeshi and Tata Mills. Standard Mills have gained. India United ordinary have been bought freely.

Miscellaneous shares have moved up in sympathy with the general trend. Sugar shares have been buoyant on expectations of a higher output during the current season. Belapur, in particular, have shot up on hopes of a higher dividend. Phalton and Walchandnagar Industries have been steady. In steamship company shares, Scindia have risen. Great Eastern Shipping have enjoyed support on prospects of a bonus issue. The Company has nevertheless skipped the dividend.

Cement shares have been steady. Associated Cement and Digvijay have been bought. In mining shares, Shivrajpur Syndicate have met with stray buying. Bombay Burmah have been active. Rayon shares have gained. National Rayon and Gwalior Rayon have been prominent. Among

chemicals shares, Tata Chemical have improved on an optimistic assessment of the outlook by the chairman of the Company in his address at the annual general meeting. Support to cash scrip has been selective.

In banks, Central Bank have been active on prospects of a rights issue. Among insurance shares, New India Assurance have met with support. Selected electric company shares have gained on balance. Ahmedabad Electric and Bombay Suburban have enjoyed support. Tata Power have been bought.

Madras

MORE L.I.C. PURCHASES EXPECTED

ATTENTION CENTRES ON PLANTINGS

Tuesday Evening.

THE undertone of the Madras stock market has improved appreciably during the past week on higher advices from Dalal Street. There has also been substantial support from outside sources. The more liberal credit policy announced by the Reserve Bank has been interpreted bullishly. Operators have also been cheered by the prospect that the Life Insurance Corporation might increase its purchases at the Madras centre.

Government securities have been steady, and selected State loans have hardened on balance. Business in bank shares has been scattered. Canara have been transacted at Rs. 88 and Indian Overseas at Rs. 147.50. In electric companies, Salem-Erode have fetched Rs. 14 28 and West Coast Rs. 17.35. Selected sugar shares have been supported. Cauvery have changed hands at Rs. 110 on paying a taxable ordinary dividend of 6 percent. Deccan have hardened to Rs. 12.40, but E.I.D. have reacted to Rs. 37.40.

Most of the attention has been concentrated on planting shares. Tea shares have been bought on good crop reports. Coffee shares have been favoured due to the improved export outlook. Blue Mountain have been transacted at Rs. 2.70 and Consolidated Coffee at Rs. 22. Cochin Malabar have been taken at Rs. 6.18 and Ouchterlony at Rs. 4.70. Periakaramalai have been at Rs. 3.45. Business has passed in Nonsuch at Rs. 23.80 on declaring a taxable ordinary dividend of 15 percent, making 20 percent for the year. Interest has been taken in Pullangode at Rs. 22.42, in Rajagiri at Rs. 18.60, in Kalpetta at Rs. 12 and in Peermade at Rs. 20.55. Composite gardens producing tea and coffee have been steady. Kil Kotagiri have changed hands at Rs. 5 30, Nilgiri at Rs. 8.40 and Stanes Amalgamated at Rs. 14.55.

Selected coton mill shares have been buoyant. South India Viscose have shot up to Rs. 140 and Travancore Rayon to Rs. 27.50. Business has passed in Lakshmi at Rs. 137.50 and in Madura at Rs. 33.65. Hemalatha have been taken at Rs. 8.98 on paying a taxable ordinary dividend of 5 percent. Bangalore Woollen have been transacted at Rs. 233.50 and Buckingham at Rs. 268. Kothari have reacted to Rs. 9.25, but Mettur have been steady at Rs. 285. Radhakrishna have been wanted at Rs. 29.25 and Ramakrishna at Rs. 217.80.

In the miscellaneous section, Aluminium Industries have hardened to Rs. 19 and Mettur Chemical to Rs. 13.20. Ashok Leyland have been sluggish around Rs. 7.50 despite the prospects of a rights issue. Among cement shares, Dalmia have come to hand at Rs. 13 and India Cement at Rs. 5.70. F.A.C.T. have been quiet at Rs. 6.25. Seshasayee Paper have gained at Rs. 7.58. Standard Motors have been transacted at Rs. 10.58. Kirloskar Electric have reacted to Rs. 18.45 on declaring a taxable ordinary dividend of 10 percent on the increased share capital. Business has passed in Madras Rubber at Rs. 15 and in Ogale Glass at Rs. 4.60 Spencer have been transacted at Rs. 20.37 and Parry's Confectionery at Rs. 3.42. Textool have been steady at Rs. 14.60 and Rane (Madras) at Rs. 8.10.

THE TRANSACTIONS

[In the following list of Stocks and Shares in which transactions took place on 4th, 5th and 6th November, the figures indicate Opening, Highest, Lowest, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

QUICKER BANK PAYMENTS AT THE COUNTER

(BY A SPECIAL CORRESPONDENT)

Commercial banks compete keenly among themselves to attract deposits, but they are not as keen to serve their customers well. Payment facilities, especially across the counter, are generally unsatisfactory. Only a few have adopted a quick method of payment known as the "teller system".

COMMERCIAL banks in India have been operating as if they were in a sellers' market. They have evolved various interest rate agreements to borrow and lend at specified rates. Thus a system of controlled banking obtains in this country. Even though there is keen competition to attract deposits, the urgent need to improve payment facilities—especially across the counter—does not seem to be enjoying as high a priority as, say, the modernisation of offices. That is why when customers go to an Indian bank they are often made to wait for a long time. One has to visit the counters of some commercial banks, especially the bigger ones, to see long queues on heavy payment days, such as the first few days of each month or when the payment of big sums like income tax and sales tax has to be made to the State Bank.

While this is the general picture, the foreign banks and a few Indian banks, such as the Bank of Baroda and the Punjab National Bank, have been experimenting in a few offices with what is known as "the teller system" for making quick payments across the counter. The system is not yet common enough to make its impact on the public. Under the system, payment is often made to a customer in a matter of minutes. Since the "teller system" reduces the abnormal delay involved in banking transactions and saves the customer time, its *modus operandi* is of particular interest.

What is the "teller system"? The term "teller" is used to indicate a bank cashier abroad. The cashier discharges the important functions of the cheque-receiving ledger-keeper, the passing officer and paying cashier. A limit is usually fixed for cashing cheques under the system. For instance, when it introduced the experiment for savings bank accounts in 1962, the Punjab National Bank fixed a limit of Rs. 1,000 at some of its offices. The significant feature of the system is that the customer is paid cash immediately on presenting the cheque.

Record Card

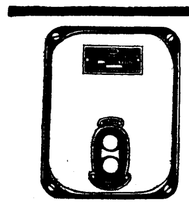
How is this done? The "teller" maintains a record card of each customer which, among other things, shows the specimen signature of the account holder, the serial number of the cheque book and the last outstanding balance. Insurance cover is obtained by the bank for unforeseen risks, if any, under the system. In certain foreign banks in Bombay, the system followed is as follows: As soon as a customer comes to cash a cheque, he signs it like a traveller's cheque in the presence of the teller and hands it over to him. The teller verifies that the cheque is in order, namely, that the amount is in order or words and figures of the amount tally and the signature is clear and puts it in the pigeonhole behind him. The peon hands over the cheque to the ledger-keeper sitting immediately behind the teller. The ledger-keeper verifies the last outstanding balance which is available in an adjacent indexing cabinet.

Meanwhile, the teller keeps the requisite denominations of cash ready. On receiving the payment, the customer is requested to sign the cheque once again. If both signatures tally, the payment is made immediately. Thus the "teller system" cuts down the three stages of transaction in payment—through the ledger-keeper, the passing officer and the cashier—to a single transaction. There is no formality of issuing and receiving back tokens. In foreign banks operating in India and abroad the system is widely practised. This is because the customers, by and large, are well known to bank staff, and the minimum balance maintained in each account is usually a comfortable figure. Usually, the tellers are given limits in case of various customers and they are authorised to make payments to the extent of such specified limits.

In some banks following the "teller system", the specimen signature is pasted on the loose leaf of the savings bank ledger. The teller quickly verifies the signature. Since the minimum amount of withdrawal is fixed at a low figure, it is probably possible to limit the risk involved in transactions.

Some Preconditions

The teller system requires certain preconditions for its implementation. These are, firstly, experienced senior officers should attend at the payment counters; secondly, the accounts are required to be maintained in loose leaf ledgers or cards; and thirdly, it involves a certain amount of risk in view of the large number of customers to serve and the absence of the personal touch between the banker and customer, especially in big banks. In almost all banks, the present practice is to keep the junior staff—mostly clerical staff—at the counters The senior staff perform supervisory functions. If the system is to be implemented, there should be a complete reorientation of the attitude of the staff, especially the senior staff. This will not be easy to achieve since the staff are, by and large, conservative and resist changes.



Again, there is the question of the switchover to loose leaf ledgers in account books. It is the considered opinion of several experienced bankers that loose leaf ledgers are undesirable since they enhance the risk of loss through carelessness or wilful neglect. The existing procedures followed in various banks also require considerable reorientation if the teller system is to be introduced.

In view of the reluctance to take risks involved in the teller system, certain banks in India have started experimenting in other directions. A leading bank in Bombay has rearranged its seating arrangement in counters and claims that it is able to make payment to customers within a few minutes. This is only confined to its head office. All other banks are not, however, in that happy position since most of them suffer from a shortage of space which does not permit a drastic rearrangement of the counters. This is particularly the case with the State Bank of India where congestion at the local head offices is common. One of the medium banks in Bombay introduced a conveyor belt system for carrying cheques from ledger-keepers to cashiers to cut the time lag in the carriage of cheques by peons from one end to another. Several banks are planning to go in for "drive-in banks" to save the customers' time. This helps, however, only big customers. But the zeal for experiments is confined to a few banks at a few centres. By and large, it is, the general experience of a bank customer that he has to waste a precious half an hour even in an uncrowded suburban office to cash his cheque or to withdraw the money he has deposited. In other words, no effort is generally made by commercial banks in this country to save the time of their customers.

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 6th November.

THERE has been a moderate increase in the general level of advances in the Calcutta money market during the past week—due entirely to the rise in the requirements of the iron, steel and engineering industries. The credit given to the cotton and jute mills, and to the foodgrains and seeds trade, is unchanged, while sugar advances show another slight decline. In the inter-bank market, conditions were relatively easy at first, but have become tighter towards the close, and the call rate is quoted around 2¾ percent.

The exchange market has been active, with an excellent supply of tea bills and a fair number of gunny bills. The demand for remittances has been moderate. The trend in sterling has been mixed: the closing quotations show fractional losses in relation to all the major currencies except the Austrian and the Scandinavian.

SILVER WAS STEADY IN CALCUTTA during the past week. Turnover was small. The price closed at Rs. 231.35 for ready. The price was quoted at 111⅛d in London and at 129.3 cents in New York. Nominal business in gold was transacted The closing price of 14-carat stood at Rs. 62.

DURING THE WEEK ENDED 1ST NOVEMBER, Government of India Treasury bills for Rs. 109,79,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 5th November. The total amount offered was Rs. 3,03,00,000. Tenders at Rs. 99.425 percent were accepted in full, and those at Rs. 99.420 percent were allotted 49 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.310 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 11th November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be closed from 6th November to 9th November at Rs. 99.441 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 30th October to 2nd November amounted to Rs. 8.10 crores.

THERE WAS A DROP OF RS. 7.46 CRORES to Rs. 2,243.92 crores in active notes, according to the return of the Reserve Bank of India for the week ended 1st November, 1963, while the total note issue was Rs. 30 lakhs larger at Rs. 2,270.48 crores. Notes held in the Banking Department consequently rose by Rs. 7.76 crores to Rs 26.56 crores. Deposits of the Central Government were up by Rs. 71 lakhs to Rs. 48.68 crores while those of State Governments declined by Rs. 7.43 crores to Rs. 7.37 crores. Balances of scheduled banks were Rs. 19.77 crores smaller at Rs. 98.73 crores. Their loans from the Reserve Bank rose from Rs. 1.75 crores to Rs. 2.04 crores, but there was no advance against usance bills. Balances held abroad fell by Rs. 2.63 crores to Rs. 7.31 crores. The investment portfolio was Rs. 6.69 crores smaller at Rs. 230.10 crores. Ways and means advances to Governments amounted to Rs. 37.14 crores, against Rs. 36.38 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 25th October, 1963, shows a rise of Rs. 9.17 crores to Rs. 601.66 crores in total deposits. Investments in Government securities are down by Rs. 5.02 crores to Rs. 308.60 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.02 crores to Rs 250.53 crores. Cash and balances are, in consequence, shown at Rs 42.70 crores or Rs. 21.97 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 25th October, 1963, shows Demand and Time liabilities at Rs. 1,111.05 crores (Rs 18.93 crores on account of borrowings from banks) and Rs. 1,328.20 crores (Rs. 25.07 crores), compared with Rs. 1,095.48 crores (Rs. 21.65 crores) and Rs. 1,319.88 crores (Rs. 23.43 crores), respectively, in the previous week. Cash has declined by Rs. 52 lakhs to Rs. 56.46 crores, while balances with the Reserve Bank have increased by Rs. 38.57 crores to Rs. 113.77 crores. There is a drop of Rs. 9.75 crores to Rs. 759.34 crores in investments. Advances and bills discounted at Rs. 1,482.04 crores show a fall of Rs. 6.15 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7 percent and 60.8 percent, against 5.4 percent and 61.6 percent.

TREASURY BILL MATURITIES

KERALA STATE INDUSTRIAL DEVELOPMENT CORPORATION LTD.

CHAIRMAN, MR. K. R. K. MENON'S SPEECH

Speech delivered by Mr. K. R. K. Menon, Chairman, at the Second Annual General Meeting on 30th October, 1963.

Gentlemen

I have great pleasure in placing before you the accounts of the Kerala State Industrial Development Corporation Ltd. for the year ending 31st March, 1963 and the Report of the Board of Directors of the Corporation on the working of the Corporation during that period. With your permission I shall take the report as read.

You will perhaps agree that purely from a statistical point of view—and against the background of our admittedly limited monetary resources—the Corporation has done fairly well last year, and what it has done in that year represents a definite advance, qualitatively as well as quantitatively, on our achievements in the previous year, which was the first year of our existence. The total paid-up capital of the 9 concerns for whom financial assistance was sanctioned by the Corporation during the year under review amounted to Rs. 170 lakhs. It is also worthy of note that in our very second year such services as we were called upon to render to industry have been performed by us on a financially self-supporting basis with a small profit thrown in. I confidently hope that with progressively better balance sheets to our credit in the coming years we should be able to attract investments and deposits from the public without much difficulty, I take this opportunity to express our thanks again to our Managing Director and the staff who have worked hard and loyally to make a financially success of our operations last year.

Satisfactory Climate

The adequacy or otherwise of a Development Corporation like ours cannot, however, be truly assessed wholly in terms of either the numbers and categories of new industrial enterprises which the Corporation helps to bring into existence or old ones which it helps to expand, nor indeed in terms of the Corporation's own balance sheet, reflecting as it does the financial results of its operations during a particular year. The more appropriate basis for judgment, should in my opinion, be the contribution that the Corporation makes towards the creation of a progressively congenial "climate" for the expansion of existing industrial units and the institution of new ones. This is particularly so in the case of an industrially backward State like Kerala, where the crux of industrial expansion is very definitely the creation of a satisfactory "climate" for attracting capital and entrepreneurial skill from outside the State. The main question that I therefore propose to ask of myself this afternoon—and on which I should like to share my thoughts with you if I may—is whether and if so to what extent, this climate for industrial investment in our State has bettered since I had the pleasure of addressing you last. I shall also attempt, briefly, to bring to your notice certain salient aspects of this problem which strikes me as being worthy of serious consideration by you, the representatives of the Government of Kerala, who happen to be the sole shareholders of this Corporation.

My own personal assessment of the degree of improvement that has been brought about in the climate for investment of outside industrial capital and entrepreneurial skill in Kerala over the past twelve months is that, taken by and large, it has been fairly satisfactory, though, I must hasten to add that I had hoped it would have been much better than it actually was. Our personal contacts with outside entrepreneurs—including those from abroad—during the past year were more numerous and frequent than in the preceding year, and I am glad to say, the results of these contacts—some of them which are still in the process of active negotiations, will therefore take some time to bear fruit—have also been somewhat better. The labour problem, which is usually one which weighs greatly on the minds of outside investors, has, I am glad to say, presented no serious difficulties during the year under report. Other, and more serious difficulties, however, there have been, and it is about these difficulties only that I propose to speak today, I trust I will not be misunderstood as a pessimistic prophet of doom for choosing to dwell exclusively on the dark side of the picture.

Doubts and Difficulties

The first and the foremost factor which has tended to—and still continues—to engender doubts and difficulties in the minds of outside capitalists and industrial enterpreneurs so far as large-scale investment in Kerala is concerned, is the "alleged" instability in the political situation in the State. I use the word "alleged" in this connection deliberately and advisedly, as I do not know anything about the real state of affairs so far as this particular aspect is concerned. I do know, however, that doubts and suspicions regarding political stability, however baseless they are, and however hazy and incoherent in shape and content, are nevertheless insidious and destructive in their cumulative effect on the minds of business people who are invited to risk the investment of appreciably large amounts of capital in industrial ventures in politically "instable" areas. Also, a rather curious feature of the operation of this political "instability" factor so far as Kerala is concerned, is that, contrary to the ordinary laws of physics, the visibility —and therefore, unfortunately, the impact—of this factor seems to grow in alarming and direct proportion to the distance at which the onlooker is placed. The result is that the slightest ripple, the gentlest whisper, the most innocuous gesture, emanating from the political front in Kerala have a disastrous habit of swelling into shapes and forms of almost cataclysmic proportions by the time they fall on the eyes and ears of people outside the State, and more especially the business community who are quite understandably more sensitive to this factor than others. I recollect that on one of the occasions when doubts and suspicions regarding the Kerala political situation happened to make their periodic and unfortunately, all too frequent, appearances in Delhi—a leading businessman, whom I had been trying to induce to come to Kerala with an appreciably large investment in an industrial unit asked me quite bluntly whether I did not think that it would be safer for him to wait for a few days more to make up his mind—that was, he told me, till after the President's rule for the State had been declared in a formal announcement which he thought was imminent! We in Kerala of course know that nothing could have been more ridiculous than this, but I sincerely hope and trust that neither our political workers nor the press and public of our State will treat this as a ludicrous or insignificant incident to be laughed away. I aver solemnly that this is a matter which deserves our serious attention if we wish to ensure an appropriate degree of economic progress in our State. There is a moral to this which is obvious, as it is inescapable, namely, that we in Kerala are dangerously vulnerable.

We are vulnerable not only because by a sheer freak of fortune a long and tiresome distance separates us from the seat of Central power and authority in the country, but also because this same distance factor tends to distort the very image of our being to the vision of our friends outside on whose active help and co-operation we depend almost solely for our industrial expansion. It is my humble opinion, therefore, that all of us, from the highest political dignitaries of our State-ministerial and otherwise to the smallest worker, should refrain from saying or doing anything which, however innocent or innocuous it might look to our own domestic eyes, would lend itself to distortion and exaggeration in quarters outside which matter to us most. I hope you will not consider it presumptuous on my part if I were to take this opportunity to make a special appeal to those who are in the forefront of Kerala politics to bear in mind that, today, economics is our prime problem, and that, in this view, we just cannot afford to take the risk of being hurt by placing ourselves continuously in this vulnerable position. The crucial—and in a sense fundamental—economic problem of our State today is the problem of attracting outside capital for our industrial expansion, which alone can help us to tackle our twin problems of poverty and unemployment. In the solution of this problem we are dependent almost totally and completely on the creation of a proper climate of political stability and unity in the State, which would give businessmen from outside the necessary confidence and courage to risk investing their capital in industrial enterprises in our State. I beg leave to say with all the emphasis at my command that to ignore this will be at our peril.

Travancore Titanium Products

Before I leave this subject I crave your indulgence for being allowed to cite one more example of how the creation, and fostering, of the necessary "climate" for outside industrial capital to flow into our State can be impeded by even the most well meaning among us. The example that I am going to give you pertains to the negotiations that I had been conducting on behalf of the Corporation during the past year for inducing one of the biggest business houses in India to invest a risk capital of a few crores of rupees in the expansion scheme of our Travancore Titanium Products Ltd., who had been granted, more than two years ago, an industrial licence for increasing their daily output from 18 tons of titanium dioxide to 68 tons. On two different occasions during my negotiations when I had come to a stage where success was not only in sight, but could easily have been achieved, a spanner was thrown into the works—not deliberately perhaps—by an eminent citizen of Kerala agitating each time at the highest quarters in New Delhi, the point that the success of these negotiations would mean the swalling up of a public sector concern by a unit of the private sector. The 2 eminent gentlemen who had initiated this move in the midst of my delicate negotiations had not unfortunately paused to ascertain the relevant facts. If they had done so they would have known that the balance of advantage for our State would certainly have lain in our inducing this firm to collaborate with our Government in working this scheme on terms and conditions which could have been settled to the satisfaction of both parties. However, my negotiations had to be suspended twice on account of this opposition, which was presumably based on "ideological" grounds. Finally, when the threads were taken up again I found that the party concerned had cooled off—a not unnatural or surprising sequel—and, very politely and quietly, they withdrew their offer. We are now left still searching high and low, and far and wide, for a suitable collaborator to work this very expensive, but highly profitable, scheme. The moral of this is obvious, namely, that you cannot have the cake and eat it too. It is perhaps incongruous to speak of cake in present conditions in Kerala; so, if I may change over to its poor country—cousin, bread, it is good to remember that the proverbial half a loaf is certainly very much better than none. If we ignore or forget this almost arithmetically true aphorism in our ideological or other enthusiasm in the economic field we are bound to suffer, and we shall have only ourselves to thank, for it.

A very important factor which continues to operate as an effective handicap in the way of speedy industrialisation in Kerala is the paucity of industrial licences which can be implemented is our State. I must make it quite clear that by this I do not mean that the Central Government have not treated applications for industrial licences from Kerala with sympathy and expedition. Indeed they have done so, and I wish to take this opportunity to place on record our Corporation's appreciation of and gratefulness for, this. I must however repeat now, what I ventured to say in my last year's speech in this connection, namely, that in the case of a State like Kerala, where local capital and entrepreneurship are almost totally absent, a solution to our large-scale industrial development problem must necessarily be looked for in the direction of positive intervention on our behalf and in our favour by the one all-powerful authority in our controlled economy of today, namely, the Central Government. It just will not do for the Central Government to be merely liberal and sympathetic—as they undoubtedly are—in the disposal of such applications as come forward from Kerala or elsewhere for the setting up industries in this State. I suggested last year—and I repeat this suggestion again today—that the Central Government must be persuaded to take steps to ensure that, out of the large number of industrial licences granted throughout the country, an adequate number is reserved for and divered to Kerala till such time as our backward State attains a minimum level of industrialisation suited to the requirements of its relatively large and poor population.

Geographical Imbalances

Action on these lines to set right geographical imbalances in the distribution of industrial potential is by no means so revolutionary or so unorthodox as it may sound. You will be interested to know in this connection that, recently, the Indian Investment centre —one of the leading organisations in this country which has been set up by the Government of India for promoting industrial investment—conducted a special study of this problem of imbalances in the geographical distribution of industries in India, with a view to locating specific areas where industrial development has been lagging behind and is essential and feasible. The Centre's recommendations are now understood to be under active consideration by the Government of India. I would suggest that the Government of Kerala should take this opportunity to press our case on the Central Government for special and preferential treatment with renewed strength.

Besides industrial licences there is another field in which the Central Government can assist Kerala to an appreciable extent in the matter of acceleration of our industrial development. This is by the establishment of a Free-Trade Zone near about Cochin or any other suitable port in Kerala. This will help the establishment of many engineering industries such as copper rods, sheets, circles and tubes, portable machine tools, sewing machine needles, typewriters, duplicators, water-coolers, etc., the manufacture of which is dependent on imported raw material in short supply. A Free-Trade Zone is, as is well-known, "an area, separated from the rest of the country, in which foreign merchandise, machinery, raw materials, processed goods and finished products can be brought in and exported without customs duty. Its main purpose is to encourage the exports of the country by reducing the restrictions and red tape involved in import and export procedures". There are Free-Trade Zones even in advanced industrial countries like the U.S.A. round about the great port cities of New York, Bosten and Philadelphia. In India we have one at Khandla, and it is understood that the feasibility of having one at Shewa-Neva seven miles east of Bombay harbour is under active consideration at present. Kerala would, from many points of view, be an ideal place to locate a Free-Trade Zone, and I trust this matter will be taken up seriously by the Government of Kerala with the Central Government.

It may be useful, before I leave this topic of geographical imbalances, if I place before you certain observations that have been made by a celebrated American economist, Mr. W. W. Rostow, Counsellor and Chairman of the Policy Planning Council of the United States, Department of State in an article entitled "The question of Rich and Poor." Starting with the observation that "the most critical difference among nations is not whether they are rich or poor, but whether they are regularly growing or stagnant", Mr. Rostow goes on to point out that "within most of the major nations, whatever their average level of income, there are rich and poor areas". Italy and France for example, Mr. Rostow says, still have special problems of under-development, in their southern regions; so has Brazil in her north-east region. And these problems of the under-developed areas in each of these countries are being tackled with concentrated vigour by the respective government concerned. It need, therefore, cause no special alarm or uneasiness if Kerala also, by coincidence, located in the southern corner of India, which has a similar problem of under-development, and possibly in a more acute form, seeks to impress on the Central Government the urgent and pressing need for special steps being taken to solve this problem urgently and effectively. The per capita annual income in Kerala is only Rs. 124, as against the national figure of Rs. 544. This latter figure is itself piteously low in all conscience, but I submit that, as the Kerala figure is even lower—I would say, dangerously lower—there should be no hesitation on the part of the Government of India or of the Central Planning Commission to give top priority to Kerala's case, the case of the "weak and needy", in the words of our Central Finance Minister, in the great family that India represents.

It is pertinent to recall here another significant Statement made by Mr. Rostow in the article from which I have been quoting; it is this—

"In short, the critical problems of difference in level of income and of growth rate may not lie as between different nations but within developing nations themselves". It would almost seem—but of course it is not true—that Mr. Rostow might have had Kerala in mind when he said this. I would, therefore, very respectfully, and with all the emphasis at my command, again urge the Government of Kerala to take up this matter with the Central Government and try and persuade them to give a re-orientation to their industrial development policy, and start on an effective scheme of giving special and preferential treatment, in the matter of industrial licences, to backward States like Kerala.

Supply of Electric Power

Another step that I would strongly urge the Government of Kerala to take as early as possible in connection with the creation of a proper climate for the attraction of outside industrial capital into the State is the adoption of a rational and effective scheme for the supply of adequate amount of electric power to industrial units, without the interruptions that have of late become a normal incident of our electric supply system. Cheap electricity is about the biggest attraction we can offer to the industrial entrepreneurs from outside, but we have now arrived at the stage where talking of the quantity we can supply and the cheapness of our rates alone will not cut much ice with the managements of factories. To them, an uninterrupted supply is of equal, if not, greater, importance and, much as we may aver that the interruptions are due, almost entirely, to factor beyond our control, such as, fall in the level of our reservoirs at our Hydro-Electric stations on account of drop in the rainfall, we must face the problem squarely in the face, and set about remedying this defect, which looks as if it is going to be an almost perennial one, by setting up thermal stations of the requisite capacity wherever possible and necessary. I trust this matter also will claim the urgent attention of the Government of Kerala.

It is possible that my repeated references and appeals in the course of this speech, to the two Governments concerned—Kerala Government and the Government of India—might have jarred on your ears as inappropriate, coming from the Chairman of an Industrial Development Corporation registered as a private limited company whose primary function is the development of large-scale industries in the private sector. In case it has, let me in self-defence, quote again from Mr. Rostow, who, as I said, is a top-ranking official of the Government of the United State of America, which country, as is well known, is deeply attached to the virtues of private enterprise. Here is what Mr. Rostow says :—

"We believe national programming of the development process is required as a basis both for the domestic mobilisation of resources and effective foreign aid. National programme are needed because, as Adam Smith noted long ago—when prescribing for under-developed Britain of the eighteenth century—governments must help create their basic framework within which a modern economy can develop."

"It is the government which must organise and finance the education system and reshape it to the nation's changing needs. It is the government which must lay out and, in most cases, finance the fundamental social overhead projects—highways, irrigation projects, and the like—on which private agricultural and industrial development depends. It is the government which must solve problems of land tenure and create the framework within which agricultural productivity can be improved by the individual peasant."

"It is the government which must assure that the savings of the community are effectively mobilised be equitable taxation, so that social overhead projects can be financed without inflation and on terms the people will regard as fair. It is the government which must devise policies which insure that the foreign accounts are kept in balance and that the development effort is not frustrated by a foreign exchange crisis."

"These minimal functions were performed by governments even in nations most deeply committed to private enterprises, blessed with ample land and an old tradition of private entrepreneurship—like Canada and the United States."

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

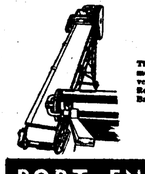
Rotorvanes

GIVE YOU A POWERFUL MECHANIZED GRIP ON **tea**



Rotorvanes are offered in two sizes The Automatic Initial Feed is shown with the larger machine

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.

The Rotorvane will help you make good tea.

The Portable intermediate feed conveys leaf to another Rotorvane or to a Ball Brusher.

The Rotorvane Ball Brusher and Aerating Machine.

LOCATION OF THE FACTORY

The Company's factory is situated at Kanjur Village, Bhandup, a Suburb of Bombay and is functioning since 1960.

ACTIVITIES

Messrs. Devidayal (Sales) Private Ltd., Bombay obtained an Industrial Licence No. L/20/10/56 dated the 6th November, 1956 for the manufacture of 3,600 tons of non-ferrous Metal Tubes per year. The said Company was running its Tube Manufacturing as a distinct and separate unit.

Devidayal (Sales) Private Ltd., promoted Devidayal Tube Industries Private Limited on 7th February, 1962 as a Private Limited Company. The Company took over the Fixed Assets of the Tube Department of Devidayal (Sales) Private Limited as on 29th June, 1962 at the written down value and also took over the Current Assets of the Tube Department of Devidayal (Sales) Private Ltd. as on 1st July, 1962 The Industrial Licence has been transferred to the Company by Devidayal (Sales) Private Ltd without any consideration The Company was converted into a Public Limited Company on 30th April 1963. Non-ferrous Metal Tubes and pipes particularly Copper and Brass Tubes produced by special extrusion process are particularly required for Sugar Industry, Chemical Industry, Refrigeration and Air Conditioning and Electrical Industries, Petromax and Stove Manufacturing Industries, Automobile Industries, Railways and Defence purposes. Manufacture of these tubes in a highly specialised process and the Company has entered into a Technical and Financial Collaboration Agreement with Messrs. Delta Metal Co. Ltd. London. The benefits of their technical skill and experience in manufacture of non-ferrous metal tubes, pipes, etc by the special extrusion process as well as of their patent rights are available to the Company

FROM WHOM APPLICATION FORMS ALONG WITH COPIES OF THE PROSPECTUS CAN BE OBTAINED

Application forms along with copies of Prospectus can be had from the Company's Brokers mentioned above as well as at any of the following offices of the Company's Bankers:

AHMEDABAD, ALLAHABAD, AMRITSAR, ANAND, BARODA, BOMBAY, BANGALORE, BHAVNAGAR, BROACH, BULSAR, CALCUTTA, COCHIN, COIMBATORE, DELHI, NEW DELHI, GOA, GWALIOR, HYDERABAD, (Dn.) JAIPUR, JAMNAGAR, KANPUR, LUCKNOW, MADRAS, PUNJAB, PATNA, POONA, RAJKOT, SURAT, TRIVANDRUM, VIJAYAWADA

The subscription list will open at the commencement of Banking hours on the 11th November 1963 and will close at the close of Banking hours on the 16th November 1963 or earlier at the discretion of the Directors provided that the subscription list will not in any event be closed earlier than the close of the Banking hours on the 13th November, 1963.

This is only an announcement of the proposed issue of capital and not a prospectus and interested persons may apply for a copy of the prospectus.

THE OMEGA INSULATED CABLE COMPANY (INDIA) LTD.

Registered Office: 122/2, Mount Rd., MADRAS-6.

The subscription list has opened on the 4th November, 1963, and will close at the closing of the banking hours on 20th November, 1963, or earlier at the discretion of the Directors, but in no case earlier than the close of banking hours on the 11th November, 1963.

SCOPE AND PROPOSED ACTIVITIES

In the first phase, the company will produce 30 million core yards of PVC and VIR cables per annum. But the company has got also an industrial licence for 45 million core yards of VIR and PVC and 280 miles of PILC cables per annum. The company has been fortunate in securing the technical collaboration of Messrs Kelsey Engineering Ltd., North Vancouver B.C., Canada, who have long experience in designing similar factories in many parts of the world.

The total outlay of the project is Rs. 1.15 crores, out of which Rs. 70 lakhs is equity capital and the balance loan capital arranged through banks. Orders have been placed for the entire machinery for the factory valued at Rs. 32.64 lakhs from American suppliers and all the machinery will be shipped before December 1963 and commencement of production is expected to be by May 1964.

The demand for cables and wires has been rapidly rising in tune with the growing tempo of industrialisation in the country.

LOCATION OF THE INDUSTRY

At Ambattur, 8 miles from Madras. For this purpose 16.31 acres have been assigned by the Government of Madras.

BOARD OF DIRECTORS

1. Sri M. N. M. Veerabhadra Chettiar,
2. Sri Kamatchi Chettiar,

"A WOODEN BOWL

CANNOT BE USED TWICE ON A COOKING STOVE"

The first order is only half as important as the second order. Therefore exporters must maintain a very high standard of business in order to make long term profits and uphold the country's prestige—particularly as new competitors with highly industrialised countries.

The export market can be a source of continuous earning power—if quality goods, prompt service, competitive prices and service facilities are provided.

Export is a Sacred Trust

EXPERT TEAM BLAMES RAILWAYS FOR COAL SHORTAGE

(FROM OUR NEW DELHI CORRESPONDENT)

THE team sponsored by the World Bank to study India's coal transport problems has submitted its interim report to the Government of India. The World Bank has liberally advanced loans to India for the development and modernisation of the Indian railways. It has also advanced a loan for the development of the coal industry in the private sector. The team now says in its interim report: "The one, single, all-embracing cause of the transport crisis in 1960 and 1961 was the failure to provide transport capacity, especially in rolling stock, ahead of demand. At no time was a real reserve of capacity created to take care of changes in plan, fluctuations in traffic or unexpected events which add to the demand."

The team was asked to recommend measures to put coal transport on a sound footing, in the light of (i) the coal programme for the third plan and the projections for the fourth plan; and (ii) other bulk transport requirements and the overall limitations on the resources, particularly foreign exchange, likely to be available in India for development. Its study was to embrace all available and possible means of transport, including the railways, lorries, inland waterways, coastal shipping, pipelines and ropeways. Under the terms of reference, particular attention was to be given to the following subjects:

(a) Measures for rationalising the use and transport of coal, including substitution by petroleum products, natural gas or other sources of agency.

(b) geographical distribution of coal production, considering the data available on mines and deposits, and the possibilities of more rapid development of production in the outlying fields where the transport situation is comparatively easy;

(c) considerations affecting the present and prospective magnitude and the location of the demand for coal and other energy sources;

(d) techniques and equipment for facilitating the transport of coal by the railways through increasing the line capacity, use of improved wagons, better marshalling and turnround facilities for wagons, dieselisation, electrification, etcetera, with specific attention to the following: (i) Movement in full train-loads of bogie wagons for large consumers, including steel plants, thermal power-stations and merchant coke-ovens, and for small consumers by setting up coal dumps at suitable points; (ii) improved manual or mechanical handling facilities for rapid loading and unloading of full terminal loads and (iii) the feasibility of pooling the output of groups of small collieries for facilitating movement in full train-loads;

(e) feasibility and comparative economies of short haul transport of coal by rail and the means other than rail with special reference to: (i) transport of coal from mines to coal washeries and thermal power plants; and (ii) disposal of middlings from washeries to power plants and other users;

(f) for movement by road, the study may specifically cover its economics, types of vehicles and loading and unloading arrangements; and

(g) principles affecting the apportionment of coal traffic between different modes of transport with special reference to relative costs and charges.

Interim Report

The study team was asked to prepare an interim report within a period of six months, recommending measures which could be implemented readily with a view to providing quick relief for the present shortage of coal transport, particularly in the West Bengal-Bihar area. The interim report was to include measures for the maximisation of coal movement with the facilities already available or those which can be provided within a period of one year from the date of submission of the interim report, in the light of the items under (d), (e) and (f). The terms of reference said that it would be useful if the interim report also included separate recommendations on the measures which could be implemented by the end of the third plan period. This would be followed by a final report which would recommend measures for establishing a sound long-term basis for the transport of coal in India. The entire study would be completed in about one year.

The consultants' work-plans and time-schedule, it was pointed out, shall be determined in consultation with the steering committee. Preliminary drafts of reports and tentative recommendations shall be made available to the members of the committee for their comments and suggestions. The steering committee shall decide as to what interim reports will be prepared by the consultants in addition to that referred to in the previous paragraph. The Government of India was to provide a team of specialists to assist the consultants.

After examining the viewpoints of the industry and the railways, the study team, in appraising the costs and losses caused by the transport crisis, says:

Costs Raised

"In our judgment, the most important effect of the transport crisis of 1961 and 1962 was the heavy cost and losses imposed upon the collieries, industry and the railways. It is impossible—even with an exhaustive study—to state accurately the total of the sums involved. Factors which did result in losses to each of the three groups involved in the situation can, however, be stated. In the case of the collieries, they include (1) extra payment to additional wagon loaders and packers incident to irregular placement of wagons; (2) demurrage of wagons retained at colliery siding for completion of loading; (3) losses incident to the overloading of coal; (4) losses incident to the underloading of coal; (5) effect on production because of the irregular supply of wagons. In the case of washeries, the irregularity in the movement of coal for washing likewise affected the operations of these plants. It has been stated that the production of the Kargali coal washery was affected to the extent of 10,000 tons in May and 4,500 tons in June 1963 on account of the irregular supply of wagons, and that this loss in production resulted in an increase in ashing cost of 47nP and 24nP a ton.

"In the case of other industries, the crisis unquestionably resulted in both added costs and decreased revenues. Such added costs included those incident to irregularity in the receipt of coal and consequent higher costs for unloading, and higher cost because of the necessity of moving coal by other means such as by highways. One of the most important industries in Delhi found it necessary to transport coal by lorries from the coalfields to Delhi for a long period because of the non-receipt of coal. Higher costs were imposed on some of the industries which used the railway and sea routes even though certain of these costs were met by subsidy. Losses in revenue were due to the slowing down of production because of the non-receipt or fear of non-receipt of coal. Losses in certain fields were caused by the necessity of shutting down plants entirely. Higher costs were imposed on the construction industry through the difficulty of brick burners in obtaining coal for that industry with the result that the price of brick rose rapidly in some areas because of the shortage.

"The railways themselves have also been subjected to higher costs because of these shortages. This situation has necessitated the holding in service of cars which long since should have been retired and which unquestionably added to the hot-box problem. The shortage of locomotives has made it impossible for the railways to obtain the full benefits of electrification and dieselisation. Motive power was assigned to areas to assist lime capacity, as a result of which a rational dieselisation programme was impossible.

"As previously stated, it would be impossible, even after an exhaustive study, to estimate with any accuracy the cost of the transport crisis and the results of the shortage of wagons and motive power. It is our considered judgment, however, that, from the point of view of the nation, these losses in production and added costs would have paid the carrying charges of a substantial amount of new railway rolling stock.

General conclusions on transport demand and railways capacity. As previously stated, the main purpose of the above discussion is to supply a background for the study of the coal transport problem. We believe that the evidence is overwhelming that the fundamental causes of the transport crisis of the year 1961 and 1962 and the present shortages of rolling stock are the following:

"(1) Inadequate supply of wagons at the start of the first plan;

"(2) A rapid increase in transport demand during the first plan which was in excess of the small increases in equipment added in that period;

"(3) A similar lag during the period of the second plan when added capacity in equipment did not quite meet the added demands;

"(4) The strain on the transport structure of enormous increases in the volume of traffic while various improvements on line capacity were being carried on; and

"(5) The shifts in the demand brought about by unexpected or unplanned events."

Annual Production

According to the study team, the total annual production of coal in the private sector increased from 45.8 million tons in 1961 to 50.6 million tons in 1932 or by about 10 percent. The total daily supply of wagons increased from 3,658 to 3,842 or by 5 percent. The annual production of the N. C. D. C. coalfields decreased from 6,011,000 tons in 1961 to 5,979,000 tons in 1962. The number of wagons supplied daily increased from 630 in 1961 to 641 in 1962 or about 2 percent. The relationship between annual production by the National Coal Development Corporation and the number of wagons supplied did not vary significantly in the two years. The total annual production at Singareni increased from 2,795,000 tons in 1961 to 3,121,000 tons in 1962 or about 12 percent. The total number of wagons supplied daily increased from 330 in 1961 to 345 in 1962 or about 5 percent.

Referring to the railways', rôle in coal movement, the World Bank team says that "through personal interviews with colliery operators and communications from them and mining associations, we have assembled considerable information about their dissatisfaction with the railway service. The most frequently voiced complaint is about the irregularity in the supply of wagons, both as to time of delivery of empties and the number delivered. These irregularities have the following bad effects on colliery operation:

"(1) With the five-hour loading period required by the railways, it is frequently difficult to assemble loading crews at any hour of the day or night to meet the varying time schedule. This difficulty is aggravated by the failure of the railways to notify the collieries when to expect the delivery of wagons or how many. This difficulty is aggravated by the failure of the railways to notify the collieries when to expect the delivery of wagons or how many. This failure apparently is caused partly by the inadequacies in the telecommunication system.

"2. When a rake has only one or two wagons still left empty at the end of the five-hour loading period, demurrage has to be paid for the whole rake and the next allotted rake is cancelled. This rule is not in effect now. Demurrage is charged at the rate of Rs. 42 a wagon a day. At times the pilots are arbitrary in enforcing the five-hour rule and will not wait a short time for the complete loading of a rake. This lack of co-operation not only causes the collieries extra expense for labour and demurrage but decreases the use of wagons.

"3 Many large collieries have screening plants which, for economical use, are designed generally for continuous operation. Their function is primarily for the separation of different grades of coal and only as a by-product the loading of coal. There seldom are storage bins or bunkers to take up the surge in production as related to the supply of wagons. When there are too few or no wagons available for loading, coal has to be stockpiled along the siding and loaded later. The screening plants are used mostly for the separation of steam and slack coal. Frequently, wagons are supplied for one kind of coal only, the other kind must be dumped for subsequent hand loading.

"There have been many complaints about the adequacy of transport in general. Eight of the colliery managements interviewed reported that their production had been cut by the lack of transport. While no definite estimate of the amount of production loss was obtainable, the fact that the problem was brought out merits attention.

Case of the Railways

"In the first nine months of 1961, 5.4 percent of the allotted wagons

were left behind in the National Coal Development Corporation and the private sector and 1.3 percent were drawn empty from private-sector collieries. In the first eight months of 1962, these percentages were 7.2 and 1, respectively. We have seen data indicating that there were times when no coal was on hand for loading at some collieries. There appears to be some support for arguments on both sides about the irregularity and unevenness in the supply of wagons.

"The railways have made good progress in the use of block rakes for more efficient handling of coal, both in four-wheel and box wagon block rakes. However, there are problems at the collieries:

"(1) Few collieries have sidings of sufficient capacity to handle block rakes. This fact is shown in our analysis of the five-hour loading capacity of collieries.

"(2) Many collieries have insufficient labour to load a block rake in five hours and short notice does not permit increasing the force.

"(3) The effort to load wagons in poor light causes some collieries to load them with whatever kind of coal comes to hand which results in many consumers receiving the wrong size or quality of coal. Also, the coal from many collieries has been downgraded on the basis of wagon samples which show inferior quality of coal because of the unsatisfactory loading conditions. These collieries have been adversely affected financially by the interruption of production programmes and the increase in stockpiles while consumers are found that are eligible for the lower grades of coal.

Many Complaints

"Many complaints have been received from collieries concerning the delivery of covered wagons by the railways instead of open wagons requested. The 1961 report of the Indian Mining Association on coal statistics shows the percentage of open wagons to the total supplied to collieries in 1960 and 1961. The following table shows this percentage at four depôts:

Year	Sitarampur	Radhanagar	Chowrashi	Asansol
1960	35.2	47.5	61.1	41.5
1961	36.1	52.2	73.8	41.5

"There are almost no mechanical facilities in India for loading covered wagons; nevertheless, many of these are delivered to collieries that have only standard means of loading open-top wagons mechanically. The labour cost for hand-loading covered wagons is higher than that for open-top ones. The obvious reason for supplying covered wagons for coal movement is the shortage of the open-top type on the Indian railways. The greater increase in the demand for transport facilities for the movement of coal compared with a lesser increase in other traffic is one of the reasons that the supply of wagons by type does not now fit the coal transport requirement.

"Finally, there is a general and strong criticism of the attitude of the railway management and personnel towards the problems of the collieries. Their attitude is characterised as arbitrary and arrogant with little realisation and scant sympathy for the collieries' problems. The statements of the representatives of the collieries, which characterised the attitude on the part of the railway management as intransigent, include the following examples in support of their position:

"(1) The strict adherence to the five-hour loading rule without considering the local or special problems at certain collieries.

"(2) The charging of demurrage on occasions when the fault lay with the railways.

"(3) The insistence that the collieries must accept responsibility for the condition of the wagons which they load.

"Many wagons in poor condition are supplied by the railways; hand-shunting is necessary to remove them from rakes, causing delay in loading and extra expense for crews. The situation has been made worse by the controversies over whether the railways or collieries should pay in various instances for the strengthening of colliery sidings and the pressure by the railways for the installation of weighbridges at collieries with a capacity of 10,000 tons or more a month.

"The problems mentioned last are not within the terms of reference of this study, and these items are mentioned merely as added reasons for the poor relationship that exists between many of the collieries and the railways. Nevertheless, we find ourselves sympathetic with many of the complaints of the colliery operators because it is obvious that their own operations are seriously affected by poor railway service. Whether or not the railways are in a position to supply better service with the equipment at hand, the fact is that colliery operations have been seriously disrupted by poor service. We agree that the railways should be a service organisation and that they should be in a position to meet the reasonable demands of shippers and consignees. The regular supply of empty wagons and withdrawal of loaded wagons in accordance with the requirements of the production of the collieries is a service which collieries have a right to expect.

"In our judgment, the provision of adequate service to the collieries cannot be met by the railways without an additional supply of wagons. Our analysis has shown clearly that the irregularity in the timing, the inadequate supply of wagons, the inclusion of wrong types of wagons and those in poor condition all stem from a basic shortage. The various efforts of the railways, such as the use of the box wagon, the use of block rakes, and the insistence on quick loading are devices of the railways to make an inadequate supply cover the demand in a better manner. Even if the problem of the relationship between the two groups was solved in an entirely satisfactory manner, the problem of inadequate service would remain. The fundamental conclusion which we draw from the analysis of these complaints and the railways' answers is that more wagons must be available in order to assure the service which the collieries require if they are to meet production targets. The question of whether the additional wagons can be provided by more efficient operation as some of the colliery representatives claim is a subject for consideration. What needs to be made clear at this point is that the real solution of the transport problems of the collieries is a greater supply of the right type of wagons to haul their production.

Problems of Consumers

"As in the case of coal operators, the problems of coal consumers and their complaints about railway service were solicited so that the viewpoint of all groups concerned with rail transport would be made available. The principal complaints of coal consumers are as follows:

"(1) Irregularity in receipt of coal and fluctuation in the amount received, resulting in the necessity for larger inventories than otherwise required. This problem also affected labour costs because of the necessity of calling unloading crews in varying numbers and at various times to unload wagons within the five-hour limit.

"(2) Arrivals of wagons short of weight. Such shortages are attributed to lack of weighbridges at points of shipment and to pilferage in transit. The use of lines marked on the wagons in the absence of weighbridges is considered unsatisfactory by the consumer.

"(3) Receipt of either the wrong grade of coal or coal of a lower quality than that required. This trouble is blamed on the collieries which in turn attribute the mistake to the necessity of loading some coal at night, making the selection of grades difficult.

"(4) Difficulty in the handling of box wagons. While it is desirable to use wagons made empty for outgoing loads, the steel plants object to the use of box wagons for shipping out their finished products because some of the steel consumers cannot handle the longer and heavier wagons. Furthermore, some steel plants, coking plants and power-stations have underground bins for receiving coal in bottom dump wagons. With box wagons such installations are ineffective.

"(5) Difficulty in handling block rakes. As shown earlier, many of the coal consumers do not have adequate siding capacity to handle full rakes. Furthermore, they prefer to receive coal more often and in smaller amounts, all of which enable them to operate with smaller coal inventories.

"(6) Inability to obtain coal. These complaints include those from companies which have such a low priority that their authorisations to obtain coal are not fulfilled, or from industries which have authorisations but whose coal is received at such irregular intervals that they must move coal by lorries in order to assure an adequate supply.

"The complaints of coal consumers, as in the case of those from coal producers, illustrate the many aspects of the coal transport problem. Some of the complaints, particularly those involving poor service, are fully justified, as the results of the poor service affect their costs and probably the prices of their products. Other complaints reflect the fact that industry in some cases is itself not providing additional capacity to meet the demands of the rapidly growing economy of the country. As stated previously, there is no question that the use of the bogie wagon and the block rake for the large consumer is sound and essential. The appropriate method of distribution to the small consumer, however, is subject to further study and will be covered in the final report.

Other Complaints

"Other complaints are a part of the controversies existing between producers and consumers of coal on the one hand and the railways on the other. Private sidings adequate to handle increasing amounts of coal received are a necessity. Likewise, in our opinion, weighbridges should be used for all shipments of coal, and, except where the amounts shipped currently are small, weighbridges should be close to the collieries.

"As previously stated, the terms of reference do not include participation in the settlement of the dispute between coal producers and the railways on the question of the appropriate party to supply the capital for weighbridges. Nevertheless, we believe that weighbridges of adequate capacity are essential for both. Certainly the consumer is entitled to receive the grade and quantity of coal which he is authorised to receive and should not be deprived of these by controversies between other parties. One possible solution, in the event the parties to the controversy cannot come to an agreement, would be for the appropriate Governmental machinery to supply the needed capital and charge both parties for the services rendered.

"Finally, the complaints involve the question of inadequacies in the supply of wagons. The problems of irregularity in the receipt of coal and the requirement that the consumer must maintain stocks greater than would normally be necessary are a cost to the economy of the country chargeable to the wagon shortage. As previously indicated, this wagon shortage can be met only by the purchase of additional rolling stock.

"A general comparison of the operating performance of the Indian railways with those of other countries leads to the conclusion that the performance of the former is a creditable one, especially in the light of the conditions under which operations are conducted. Traffic is exceptionally heavy, line capacity intensively used, signalling and types of motive power and wagons are antiquated by modern standards. Nevertheless, the operating performance compares very well with those of other more highly developed countries, indicating that the managements are to be commended for this performance".

The D.V.C. Canal

The study team points out that even under conditions most favourable to movement via the D.V.C. canal, the cost of transporting coal to industries on the Hooghly river would be approximately 22 percent greater than the present rail rates.

"As a result of an analysis, we conclude that it would not be economical to use the D.V.C. canal for the bulk transport of coal. In the final report, the interest rate established for all capital expenditures will be used, and the calculations compared with actual rail costs. For reasons stated above, we seriously doubt that the final results will justify the canal as an economical mode of transport for coal.

"At the request of certain officers of the Indian Government, a special study was made to determine if the volume of coal now being transported by sea to southern and western areas could be handled by the railways. The reason given for this request is because the cost a ton by sea exceeds the present rail rates, with the Government absorbing the excess cost. This movement was inaugurated to relieve the railways during the transport shortage.

"The coal transport by sea is hauled to Calcutta by rail from the West Bengal-Bihar coalfields. A portion of this coal is consumed at the destination ports and the remainder hauled inland by rail.

"During the year ended 31st March, 1963, the volume of coal so handled, divided between that consumed by the railways and by industries, is shown in the table below:

Port	(In tons) Railways	Industrial	Total
Southern			
Madras	402.592	127.778	530.370
Cochin	230.200	65.748	355.948
Cuddalore	104.561	79.192	183.753
Tuticorin	263.536	104 497	368.033
Nagapatnam	—	4 486	4.486
Sub-total	1,060,889	381,701	1,442.590
Western			
Bombay	181.562	—	181.562
Bhavnagar	83.400	53.074	136.474
Okha	65.220	44.893	110,113
Sikha	—	93,453	93.453
Sub-total	330.182	191.420	521,602
Total	1,391.071	573.121	1,964,192

"To determine the ability of the railways to take on this additional volume of tariffic, it was necessary to determine the effect on lines capacity and equipment requirements, and the availability of both.

"All of the coal to Madras, Cochin and Bombay could be transported by broad-gauge railway without transhipment. The remainder, 896,312 tons, would require transhipment from broad to metre-gauge.

Movement to Ports

"The most direct rail movement of coal to the southern port areas would be via the east coast route, the South Eastern Railway to Waltair and on the Southern Railway to Madras. The movement over this route would be increased by 2.5 or three trains a day each way. This route is over some sections which at the present time have no extra capacity. The improvement works now under way on this route to increase the line capacity are not expected to be in full operation until 1965-66 or later. This condition of shortage of line capacity precludes the handling of the 1,422,590 additional tons now being transported by sea to the southern port area.

"The volume to the western port areas would be transported over railway lines which do not lack line capacity for additional trains. The problems of trans shipment of the indicated volume to metre-gauge do not appear to be particularly difficult to overcome.

"After taking into account the present locomotive and car usage to move coal from the coalfields to Calcutta, and to distribute coal over the areas beyond the ports, we have determined that under optimum conditions this additional volume would result in the operation of at least 1,200 to 1,300 more trains a year.

"Assuming an additional turnround time of ten days a load, the additional wagons required would be of the order of 2,500 four-wheelers or 1,000 box wagons. Based on additional distance of 1,500 kilometres one way a train, the additional power required would be at least 66 steam locomotives, or 27 diesel locomotives.

"As shown in preceding sections, there is already a shortage of both locomotives and wagons.

"In view of the lack of any surplus line capacity on the east coast route at this time and the present shortage of locomotive and car equipment on the railways generally, we believe that it would be impossible for the railways to carry this additional volume during the next few years without drastically disrupting railway operations.

"In the final report to be submitted later, the subject of the movement of coal by sea, including the relative costs of rail and sea transport, will be covered fully."

Estimated Traffic

The study team holds that "even if the actual traffic demand at the end of the third plan should fall below the estimates by 10 percent, because of failures to meet production targets for other reasons, the planned increases in rolling stock would not equal the rise in estimated tonne-kilometres in the third plan period. The minimum gap of 20,000 wagons and 200 locomotives would remain.

"As a result of the analysis of the rolling stock situation and of our appraisal of the railway situation in the 12 years since the beginning of the first plan, it is our judgment that further additions to rolling stock

THOUGHT FOR FOOD ■ What a wide variety of tins! They all contain edibles. Naturally a great deal of care must go into the manufacture of these containers ■ Poysha, one of the leading tin container manufacturers in the country, know that in their work quality and service count. Quality control begins with the selection of only the best tinplate and continues through every stage of production. The essential features of Poysha service are prompt delivery and personal attention to customers' requirements right up to the stage of canning ■ It is no wonder, therefore, that leading canners today are beginning to rely more and more on Poysha for their requirements, and in the last four years Poysha's turnover has increased by about 70% annually.

IMMEDIATE DELIVERY

BIRD'S SILLIMANITE BRICKS AND BLOCKS

Standard Sillimanite Bricks are now available ex-stock. Sillimanite Wedges, Arches and Blocks (including cement kiln blocks) within 4 to 6 weeks.

KFS is but one of the many progressive divisions of the Bird-Heilgers Group. The Group, with its varied industrial activities, plays a significant role in the country's economy.

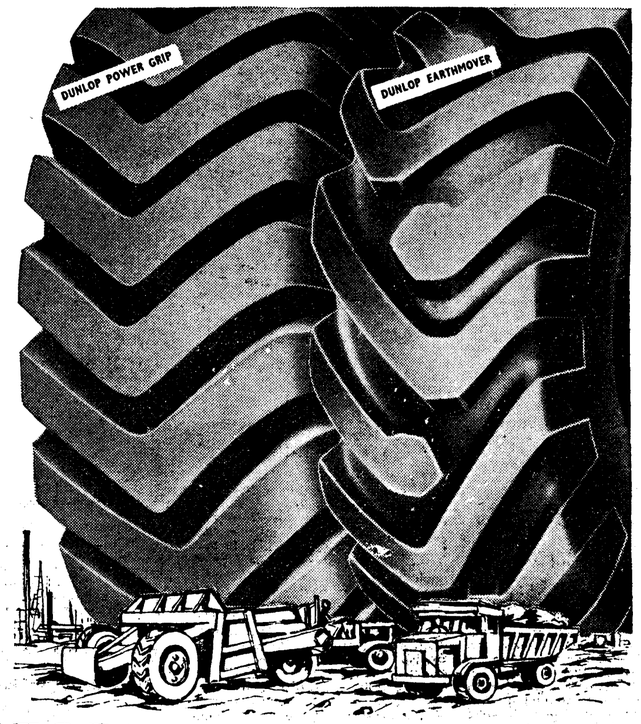
For your immediate requirements: KUMARDHUBI FIRECLAY & SILICA WORKS LIMITED
Managing Agents: BIRD & CO. (PRIVATE) LTD., Chartered Bank Buildings, Calcutta-1
Works: Kumardhubi, Dist. Dhanbad, Bihar.

62/KFS.6A

should be provided for as early as possible. We believe that it is necessary in the course of the remaining years of the third plan at least to make a start in closing the gap between transport demand and rolling stock available. We recommend the purchase of all of the rolling stock called for in the latest revision of the third plan, and that, in addition, 4,000 wagons and 100 diesel locomotives should be ordered promptly. This would not close the estimated gap, but if measures are approved promptly this equipment might be in service at the end of the third plan.

"The estimated cost of 4,000 box wagons, to be manufactured in India, is placed at Rs. 22.40 crores and for the 100 diesel locomotives should be of the type already in service or on order. Thirty of them should be for use in hump and marshalling yards where the continuity of service of the diesel locomotives at Rs. 11.90 crores. We recommend that the diesel locomotives would improve . . . g operations," the study team concludes.

SUGARCANE



Minimum Prices Raised

The Government has reviewed the question of fixing the minimum cane price for the 1963-64 season in the light of prevailing conditions and circumstances governing such price under the Sugarcane Control Order and, in particular, the need for increasing the availability of sugar to consumers at reasonable prices. It considers that the prices which had been settled earlier are inadequate to meet the needs of the situation and have, therefore, decided to make an increase of 12nP a maund in the price of sugarcane related to recovery at all points from 9 percent or below and upwards. The base price at 9 percent or below would thus be Rs. 1.68, instead of Rs. 1.56 and corresponding increases would be made at all higher levels of recovery. The schedule of minimum prices on this basis is being worked out and a notification applying the formula to individual factories will be issued shortly.

The Government has decided that "in factory areas in which the factories are likely to experience difficulty in securing cane supply due to higher cane prices which manufacturers of *gur* and *khandsari* can afford to pay and where the minimum price would be less than Rs. 2 under the new formula, the factories should be enabled to pay a price of Rs. 2 a maund, instead of Rs. 1.75 a maund as previously decided". The Government expects that this price should be sufficiently competitive to enable the factories to obtain adequate supplies of cane for their allotted production in competition with *gur* and *khandsari* manufacturers. This price would be used for working out ex-factory costs under the Tariff Commission's formula.

The Government has been keeping a careful watch on the prices of *gur* and *khandsari* during recent weeks and find that the prices still rule at a high level. It finds that prices vary from State to State and consequently affect inequitably the supplies for local consumption in various States. In order to ensure supplies and distribution of *gur* in a fair and equitable manner at reasonable prices to consumers, the Government considers it necessary to regulate the inter-State movement of *gur*. Accordingly, a Gur Control Order is being promulgated under the Defence of India Rules prohibiting the import or export of *gur* from one State to another except under permits. Administrative arrangements are being devised to allocate quotas to exporting States for export and to importing States for import. The arrangements would generally be that in the light of transactions that may be settled in the normal course of business, the importing States will appoint nominees from among importers to lift quotas from exporting States and to transport them to their own States. The quantities already booked will not be affected by this order so that supplies to consuming States would be assured for some time until new arrangements are completed. For the time being, provisional quotas for November are being communicated to the States concerned and the final arrangements would be settled as soon as possible in consultation with the State Governments. Powers are also being taken to regulate transport of *gur* by rail, road and water as may be deemed expedient from time to time.

MASSIVE TYRES

FOR MASSIVE WORK

The scraper and the dumper. Two powerful modern beasts of burden, indispensable for moving thousands of tons of earth at project sites with continuous operation. Tremendously heavy and strenuous work, requiring the toughest pneumatic tyres. Dunlop Power Grip and Earthmover tyres are proving themselves superbly in service . . . at Nagarjunasagar, Koyna, Neyveli and many other projects.

The tread pattern and especially tough casings of these Dunlop tyres were developed after prolonged field trials in different kinds of terrain in many parts of the world.

DUNLOP

Longest tyre manufacturing experience in India

DTC-18

FERTILISER

Raising Production

Addressing the Development Council for Inorganic Chemical Industries here, Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, stressed the need for raising fertiliser production "much faster than we have done so far." The Minister said that "the total licensed capacity for nitrogenous fertilisers today is more than 1 million tons. The actual installed capacity today is only 380,000 tons and by the end of the plan period, we expect to reach a capacity of 640,000 tons of nitrogen.

"We will thus be short of 350,000 tons. I do not want to get into an argument as to who is responsible for this, but the stark fact is that out of the seven fertiliser projects which we have approved for establishment in the private sector, only the ones in Kothagudam, Visakhapatnam and Gujarat have made some progress. The licensees for the projects in Hanumangarh, Tuticorin and Mangalore have not yet submitted their final proposals for their projects. In the case of the Durgapur fertiliser project, it has been found that the surplus of coke-oven gas from the Durgapur coke-oven plant is not adequate to sustain a fertiliser plant. As you may know, the State Government has requested the Central Government to take up the project through the Fertiliser Corporation of India. This is being examined.

"For the fourth five year plan, some tentative proposals have been formulated by the Planning Group for the Fertiliser Industry. We visualise the production of 1.7 million tons of nitrogen and 800,000 tons of P. O. in 1970-71. The Planning Group is currently engaged in determining the regionwise requirements in both these fertilisers. Meantime, the Fertiliser Corporation of India is also investigating the feasibility of expanding some of the existing factories. The techno-economic studies of location have also commenced in Rihand, Madras, Barauni, Durgapur, Haldia, etcetera.

"One creditable feature of our fertiliser industry in the public sector is the fact that the Fertiliser Corporation of India has built up adequate talent to design and build fertiliser plants without foreign collaboration. You may be aware of the pioneering achievement of the Corporation in the building up of the Rourkela fertiliser plant. It is our intention that future fertiliser plants should be built by using Indian technical know-how and Indian organisation. With this end in view, we have authorised, besides the Fertiliser Corporation of India, the F.A.C.T. Ltd., Alwaye, to gear itself for setting up new fertiliser plants.

"As for sulphuric acid, I am informed that in this industry, the targeted capacity of 1.5 million tons for the third plan is being achieved. This is a very heartening picture. Although all the sulphur needed for the production of sulphuric acid has been imported so long, the Pyrites and Chemicals Development Company will shortly be placing orders for a large sulphuric acid plant near the Sindri Fertilisers for supplying sulphuric acid for the manufacture of ammonium sulphate. This would enable us to open up Amjore mines and I hope, in the years to come, the yield from these mines will feed several such factories for the production of sulphuric acid. In addition to this, a sizable production of sulphuric acid based on materials other than elemental sulphur is expected to materialise in the near future such as sulphur from refinery gases, zinc smelter gases, and coke oven gases. It is visualised that at least 175,000 tons of sulphuric acid will be made from indigenous sulphur resources in the next five years.

"The prices of fertilisers and inorganic chemicals in this country are still very much higher than corresponding prices in the world market. This is a very distressing picture as this is bound to hamper not only the development of the industry and our country but also our ability to export at competitive prices in the international market."

MOTOR-CARS

Higher Indigenous Content

Addressing the Development Council for the Automobile industry, Mr. C. Subramaniam recently said that in view of the difficult foreign exchange position, it would not be possible for the Government to allow the expansion of motor-car and motor-cycle production unless the target of 90-percent indigenous content was achieved.

The biggest problem facing the industry, he said, is that of foreign exchange shortage. The industry required, at the present level of production, Rs. 30 crores in foreign exchange every year for importing components and raw materials "while we require much larger production to meet the full requirements of transport vehicles of all types." But this is hardly possible, unless the drain on India's foreign exchange resources is stopped. Although the motor-car manufacturers may not be able to do much in the matter of stopping imports of raw materials, it is only they who can solve the problem of component imports. They should themselves produce more components indigenously and also buy more of them from indigenous ancillary industries.

POWER

New Regional Board

At a conference held here last week, Jammu and Kashmir, Himachal Pradesh, Punjab, Delhi and Rajasthan agreed to form the Northern Regional Electricity Board. The main function of the board, which will have an advisory status, will be to plan and ensure integrated operation of the systems in the region in such a manner that at any time the total amount of electricity generated and transmitted gives the maximum possible benefit to the region as a whole.

This is the second regional board which has been constituted. Earlier last week, Madras, Andhra Pradesh, Mysore and Kerala agreed to form the Southern Regional Electricity Board. It is proposed to have seven regional boards in the country which will operate regional supergrids and ultimately help form an all-India power grid.

The scope of the regional board, to start with, would be very limited. It will not interfere with the generation or distribution of electricity within a State or a Union Territory. It will, however, help in reducing the standby capacity which can be distributed among the States. The board will also ensure supply of electricity in a particular State in case of a power failure.

The functions of the board will ultimately include the following:

(1) Reviewing the progress of power development schemes in the region.

(2) Planning and ensuring integrated operation of the systems in the region in such a manner that at any time the total amount of electricity generated and transmitted shall give the maximum possible benefits to the region as a whole.

(3) Preparation of a co-ordinated overhaul and maintenance programme for the generating plants in the region.

(4) Determining the generation schedules to be followed by the constitutent systems.

(5) Determining the amount of power available for exchange from time to time between the States, over and above the requirements of each State.

(6) Determination of a suitable tariff structure to govern the exchange of power within the region.

(7) Consideration of any other relevant matter for appropriate action.

POWER TILLERS

Imports from Japan Planned

The Government of India, it is understood, has decided to import Japanese power tillers to help raise agricultural production. Until recently, the power tiller was unknown to agriculturists in India. Its use in the four State farms set up in Ranaghat in West Bengal, Chakuli in Orissa, Arrah in Bihar and Vyara in Gujarat, where cultivation is carried on under the Japanese method with the aid of Japanese implements, has shown that the power tiller is a good implement, and its efficiency and utility have been appreciated by agriculturists as well as the Central Government. The import of these power tillers, it is understood, is to be financed out of the third yen credit.

The Government of India, it is learnt, is also examining the possibility of importing some power tillers as part of the assistance under the Colombo Plan.

DURGAPUR STEEL WORKS

Orders for U.K. Firm

The Erith Works of G.E.C. (Engineering) Ltd has received two orders for blending plant, worth a total of about £164,000 for extensions now being carried out at the Durgapur Steel works, it has been announced in London. The plant is similar to the one supplied by G.E.C. in 1958. The first order, which was received through Head Wrightson Iron and Steel Works Engineering Co. Ltd, includes two Mark III Robins-Messiter reclaiming machines, a double-wing stacker and four apron feeders, all of which will be incorporated in the ore preparation plant for which Messrs Head Wrightson are the main contractors.

The second order, placed with G.E.C. by Simonacco Ltd, covers the supply of a new wing stacker and the uprating of an existing wing stacker in the coal preparation plant. The equipment is to be supplied complete with the necessary motors and control gear. Part of it will be manufactured in Britain and part in India.

FOREIGN EXCHANGE

Reserve Bank Directive

The Reserve Bank of India has directed all authorised dealers in foreign exchange against granting overdraft facilities in excess of Rs. 5,000 to foreign nationals temporarily resident in India, without its prior approval, which, it has been made clear, will not be given in those cases where advances or overdraft facilities were required by the applicant for the purpose of investment or dealing in stocks and shares. Even in cases falling within the general list of Rs. 5,000, the facilities should not be granted if used for investment or for dealing in stocks and shares. In other words, a foreigner is debarred from investing or dealing in stocks and shares by means of overdraft facilities.

The authorised dealers may, however, continue the existing overdraft arrangements in excess of Rs. 5,000 for such temporary period, not exceeding beyond 31st December, 1963, as may be required to enable the borrowers to liquidate their dues or bring them within the limit of Rs. 5,000.

THIRD PLAN

Prospects for Untied Aid

From deferred payments to non-project loans is a deliberate and well-planned development of India's technique to finance the third five year plan. The basic mistake the Planning Commission made in formulating the second plan was that it made no provision for maintenance imports, which have been rapidly rising. Main efforts of the Government of India were, therefore, directed in securing non-project aid to finance maintenance imports. The British were first to object to this practice, because their traditional exports to India were being bagged by the U.S.A. through the mechanism of non-project aid. West Germans took a definite step by earmarking 100 million deutschemarks to finance imports needed by the German-based undertakings in India. Britain followed suit by earmarking £5 million for similar imports, following the recommendations of Sir Norman Kippings, Director-General of the Federation of British Industries.

The other countries raised objections to these non-project loans on psychological, commercial or institutional grounds. Special efforts are, therefore, needed to explain India's viewpoint. It is explained that all non-project aid is not used in financing maintenance imports.

India is fast industrialising herself and is producing many an item needed in an industrial project. Items, which are not yet being manufactured in India have to be imported, for which foreign exchange is needed. Then again, in many a project financed by tied aid, there are items of equipment which the financing country doing manufacture. Some parts of equipment, say, for the Nunmati oil refinery, had to be financed from free foreign exchange resources. Meanwhile, psychological resistance is melting away in France, Belgium and West Germany, which have started giving small untied aid for the import of capital goods. Canada has been financing a variety of imports for India. As already reported, a World Bank team is now in this country to assess India's requirements, among others, of motor-car components. Meantime, a $30 million loan is expected for three Indian untied projects. New Delhi is confident that a larger portion of assistance for next year will be untied.

COAL MINING

Training Scheme Planned

The chairman of Britain's National Coal Board, Lord Robens, spent a busy week here, discussing the problems of the coal industry and the training schemes for miners. Lord Robens has gone back convinced that India needs training facilities for coal miners. His plan includes the training of miners as well as of trainers. A training centre in India may be set up and facilities provided for trainers to be trained in Britain. Lord Robens has returned to Britain to have a project report prepared. He proposes to come here again in January. His plan, it is felt, has met with an enthusiastic reception in India.

WEST GERMANY

Investment Guarantee Pact

The West German Government, it is learned, has demanded an investment guarantee. The Government of India will be prepared to enter into such an agreement, provided it is on the pattern of the India-U.S.A. investment guarantee agreement. Present thinking is opposed to any deviation from this pattern, it is learned.

COFFEE

Higher Export Quota Wanted

India wants a higher export quota for Indian coffee through the International Coffee Council, the next meeting of which is scheduled to be held on 30th November. India is seeking the support of the U.K. and the U.S. Governments in this matter.

ATOMIC POWER-STATION

Talks on Rajasthan Project

The Central Cabinet Secretary, Mr. S. S. Khera, the Canadian High Commissioner in India, and the Secretary of the Atomic Energy Commission, Dr. J. H. Bhabha, are flying to Ottwa this week to negotiate on a 200 megawatts Canada-type power-station to be located in the vicinity of Rana Pratap Sagar, near Kotah, in Rajasthan. It will use natural uranium oxide and heavy water as moderator and coolant. The cost of the power-station will exceed $65 million, including $30 million in foreign exchange. The latter amount may be increased, if necessary. Negotiations in Ottawa will mainly relate to safeguards for ensuring the use of the power-station for peaceful purposes. The Ottawa meeting will commence on 11th November.

London

TRADING STAMPS START A WAR AMONG GROCERS

(FROM OUR LONDON CORRESPONDENT)

TO the majority of housewives, the advent of the trading stamps now being issued to her when she buys her weekly groceries represents a new gimmick in retail trade salesmanship. In fact, however, trading stamps have been quite widely used in Britain for many years. They represent a £6 million turnover a year and this is estimated to be increasing at something like 30 percent each year. This boom stems from the increasing bargaining power of consumers in a competitive retail market. Why it should have developed now is discussed in "Why Trading Stamps Now?", an article by Mr. Walter Taplin, formerly Research Fellow in Advertising and Promotional Activity at the London School of Economics, in the latest *District Bank Review*. He claims that because rationing continued in Britain until 1954, the growth of the stamp system has lagged behind the United States, where turnover is more than $800 million and stamps are given with 18 percent of retail sales (about 50 percent in the food trades).

But, he adds, since the end of rationing, and especially in the past five years, the buyers' market has forced retailers to compete for shoppers' custom in a way which has not been seen before. Before and during the war, writes Mr. Taplin, "trade associations, encouraged in many cases by Government agencies, restricted competition" and "this attitude persisted well into the 'fifties." But now, he says: "Shoppers must be wooed; retailers must make concessions." And retailers find trading stamps a happy compromise to more aggressive competition, such as across-the-board price cutting.

Convenience to Consumers

The consumer, he says, "welcomes the convenience of being able to buy a number of items in one place and obtain a series of small incidental benefits at the same time. The lower income consumers can do a little painless saving and thus obtain household items without either putting aside cash or the inconvenience of hire-purchase payments." A number of the largest multiple stores groups, however, are getting together to fight the spread of trading stamps. They have announced that they plan to form a "distributive trades alliance", under the leadership of Lord Sainsbury, chairman of J. Sainsbury, the grocery group, and Mr. Malcolm E. Cooper, chairman of Allied Suppliers—Home and Colonial, Lipton and Maypole group with 3,289 shops in Britain and Ireland. Firms which have already pledged their support to the alliance include Boots, the chemists (with 1,29 retail shops), British Home Stores (82 branches), Marks and Spencer (238 stores), W. H. Smith and Son (302 bookstalls and 362 shops), Express Dairies (300 shops), United Dairies, Mac Fisheries, Victoria Wine Company, International Stores (1,262 branches), Key Markets (part of the Fitch Lovell group) and Moores Stores (980 branches). These groups and their supporters claim to represent 81 percent of the membership of the Multiple Shops' Federation, covering a total of 37,536 shops.

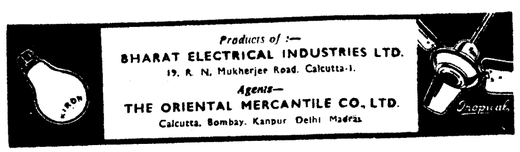
The formation of the alliance means there is now a split in the attitude of the members of the Federation towards trading stamps. Two members, Associated British Foods (through Fine-Fare supermarkets, which is controlled by a Canadian associate) with 650 shops and supermarkets, and Pricerite, have already announced the introduction of stamps. Pricerite controls 27 supermarkets in London and south-east England. The Green Shield Trading Stamp Company, with which Pricerite has made its agreement, already supplies stamps to more than 70 supermarkets. Altogether it issues more than 8,000 million stamps a year, covering about £250 million of retail turnover.

Opposition by Grocers

Trading stamp schemes were also decisively rejected in a statement from the executive committee of the National Federation of Wholsesale Grocers. The committee said it had decided, after comprehensive examination of various schemes, that the only beneficiaries in the end were the stamp companies themselves. "In the Federation's view," the statement continued, "there can be no stable or permanent advantage to the retailer, because the claim that the stamps increase sales clearly cannot apply in a situation of stamp saturation. Similarly, there can be no permanent advantage to the housewife. Stamp trading companies incur operating expenses and make profits. It seems abundantly clear to the Federation that the main source of the funds required to cover these items of cost and profit must eventually be the housewife's purse even if, initially, they are borne by the retailers or the manufacturer." A Federation spokesman said: "We are afraid that we are moving towards a cut-price war, which in the ultimate will help nobody." Reliable sources believe that more than four-fifths of all leading multiple shop companies are opposed to stamp schemes. The general view is that the stamps would be bad business for the trader, since they would be injurious to profits, and bad business for the housewife since, as one man put it, "she would be fooled over values."

The rise in the popularity of the trading stamp could be explained in some cases—according to an authority—as a way out when competition was becoming too hot. In such a situation a trader might be anxious to "confuse the issue." The trading stamp companies see things differently. The Yellow Trading Stamp Company, of London, whose public relations officer described it as the oldest in the country (35 years), announced that it was negotiating with many large multiple organisations to introduce a new "super" stamp. Apart from the usual range of articles, super stamps could be exchanged for holidays and life insurance. They could be saved in bookfuls to the value of 15s which would be placed in a savings bank yielding 5 percent a year.

Drive-in Centres



The Company plans to open drive-in centres on the outskirts of cities to display the goods which will be obtainable with the stamps. The spokesman said: "You just drive in, choose your gift, and collect it without getting out of the car." There will also be mobile showrooms for people who live too far from the redemption centres. The Gift Coupon Company Ltd, London, which issues Star stamps, said that it regarded threats of a price war as a vindication of the effectiveness of trading stamps. In its *communiqué* from the trading stamp front, the Company said: "Where necessary we will provide extra stamps on any items drastically cut. The extra stamps will be worth more to the housewife than the cut in price.

Mr. Tompkins, the 44-year-old managing director of Green Shield Stamps, was in the mail order advertising business until just over five years ago. Now he has cornered 65 percent of the trading stamp market, has 32 gift shops, 18,000 retailers on his books. His stamps are collected by one in every seven British audits. So far in 1963, Green Shield have had 8,000 million of their stamps licked. This is more than the G.P.O. can manage. Mr. Tompkins explained: "When we move into an area we guarantee that our stamps will bring the retailer a 30 percent in turnover. We put it in writing." The cost of the stamps works out at about 2 percent of the shopkeeper's gross turnover. And the profit to Mr. Tompkins? From every £1-worth of stamps given away he gets between 5s and 6s. This, he claims, has to cover the cost of the stamps themselves, the gift catalogues, salaries for his 700 staff, the little skyscraper office he has in Edgware, and the capital expenditure on the gifts. Green Shield shopkeepers now have 3 percent of retail trade. Mr. Tompkins calculates that the most one stamp company could hope for is 10 percent, and he reckons he will get that in the next few years. He deals in discount, but he does not discount the harm the Sainsbury opposition can do him. "The noise of the war will hurt us, but in the end it is the housewife who will decide who is the winner. I think we'll win, you know. Housewives know when you're on to something."

LOSS OR GAIN ON USE OF TRADING STAMPS*

Sales	Percentage Increase in Sales	Cost of Goods Sold	Operating Expense	Stamp Cost	Operating Profit	Loss or Gain on Stamps
1,000	—	830	150	—	20	—
1,000	—	830	150	20	—	Without stamps −20
1,050	5	871.5	150	21	7.5	With stamps −12.5
1,100	10	913	150	22	15	−5 — Break-even point
1,140	14	946	150	22.8	21	+1
1,150	15	954.5	150	23	22.5	+2.5
1,200	20	996	150	24	30	+10
1,250	25	1,037.5	150	25	37.5	+17.5
1,300	30	1,078	150	26	45	+25
+ 83% of sales						= 2% of sales

* These figures were calculated using a 17 percent gross margin and keeping operating expense and margin constant. The table was adapted from "Trading Stamps" by Harvey L. Vandenburg as Indiana Business Report No. 21, published by the Bureau of Business Research, School of Business Indiana University (1956).

INCREASING SUGAR PRODUCTION THROUGH TOTAL DECONTROL

By M. N. Mitra, M.Sc.
(Managing Director, The National Sugar Mills Ltd)

In spite of the latest incentives, the controlled sugar industry is unlikely to reach the 1963-64 production target as long as gur and khandsari producers take away cane in increasing proportions. Only total decontrol of sugar prices will enable the industry to compete for the raw material on economic terms and raise its output substantially.

THE Central Ministry of Food and Agriculture has fixed the production target of sugar during the 1963-64 season at 3.3 million tons. This estimate has been arrived at on the basis that the industry produced 3 million tons of sugar in the 1960-61 season, against an installed capacity of about 2.4 million tons. The Government, therefore, expects that with the present installed capacity of 2.7 million tons, it will not be difficult to achieve the production target of 3.3 million tons during the coming season. The Government has also fixed the following State-wise production target for sugar during the coming season:

Name of the State	Quantity produced during the 1962-63 season (In '00,000 tons)	Anticipated production during the 1963-64 season (In '00,000 tons)	Percentage of increase of production in the 1963-64 season over that of the previous season
Punjab ...	0.62	1.40	126.00
Bihar ...	1.70	3.50	105.09
Uttar Pradesh ...	8.48	15.00	76.9
Madras ...	0.90	1.40	55.55
Andhra Pradesh ...	1.72	2.50	45.35
Mysore ...	1.13	1.50	32.75
Maharashtra ...	5.15	6.50	26.2
Madhya Pradesh ...	0.34	0.40	18.00
Other States ...	1.46	0.80	
	21.50	33.00	

Unrealistic Target

The industry contends that the target is most unrealistic in view of the exorbitant prices of *gur* and *khandsari* now prevailing in the country. It is true that India produced 3 million tons of sugar during the 1960-61 season, as against an installed capacity of 2.4 million tons. But during that season, the prices of *gur* and *khandsari* were extremely low and the mills could secure abundant supplies of sugarcane. Since the 1960-61 season, the prices of *gur* and *khandsari* have been gradually on the increase. As a result, sugar production during the 1961-62 and 1962-63 seasons has gradually declined as is evident from the following figures:

Season	Quantity of sugar produced (In '00,000 tons)
1960-61	30.29
1961-62	26.80
1962-63	21.50

In between the 1960-61 and 1962-63 seasons, sugar production in India has dropped by about 30 percent due to the large diversion of cane into *gur* and *khandsari* manufacture. During the 1962-63 season, the prices of the latter ruled between Rs. 20 and Rs. 22 and Rs. 30 to Rs. 32 a maund, respectively. But now their prices have shot up to Rs. 40 to Rs. 44 and Rs. 60 to Rs. 64 a maund. Naturally, it is futile to anticipate that with these high prices of *gur* and *khandsari*, the sugar industry can produce 3.3 million tons of sugar, against an installed capacity of 2.7 million tons.

The 1962-63 season started with a huge carryover of 1,012,000 tons. To this is to be added the season's production of 2.15 million tons—thus making the total availability of sugar in the country of a little over 3.162 million tons. By making allowances for internal consumption at about 2.6 million tons and the export at about 500,000 tons, there will be an insignificant opening stock of about 62,000 tons only on 1st November, 1963. It is, therefore, clear that the entire requirement for internal consumption as well as the firm export commitment of 300,000 tons of raw sugar will have to be met from the 1963-64 season's production. The industry holds the view that the total production of sugar during the current season will not exceed 2.6 million tons.

Due to the acute shortage of sugar, the consumption of *gur* and *khandsari* has naturally gone up and that is the principal reason why the prices of these two commodities have shot up beyond any expectation and calculation. It is paradoxical to state the fact that the present average ex-mill and control price of sugar—exclusive of Central excise duty—is Rs. 30.80 only a maund while that of *gur* is Rs. 40 to Rs. 44 a maund. The production of white sugar needs now a capital investment of over Rs. 1 crore for a medium-sized plant, but practically no capital outlay is necessary to produce *gur*. This disparity in the prices of sugar and *gur* is also due to another reason. While the Government has imposed a very heavy Central excise duty on sugar at Rs. 10.70 a maund, there is no duty at all on *gur*. The *khandsari* units have to pay only a nominal excise duty.

The reason for the gradual decline in sugar production in the past two seasons is not any actual shortage in cane production but the unavailability of raw material, because a larger portion of the crop was diverted for the production of *gur* and *khandsari*. The following percentages of utilisation of the cane crop in India in the 1961-62 season for various purposes would conclusively prove that only 36 percent of the total crop is being used for the production of white sugar:

(i) *Gur*	39.61 percent
(ii) *Khandsari*	6.00 percent
(iii) White sugar	35.69 percent
(iv) Chewing and for seed purposes	18.70 percent

It used thus appear that during the 1961-62 season about 46 percent of the total crop in India was diverted for the manufacture of *gur* and *khandsari*. This diversion was much more in the 1962-63 season when the production of sugar fell from 2.68 million tons in the 1961-62 season to 2.15 million tons. Sugar production is bound to increase if sufficient inducement can be offered to the growers not to divert their cane for the production of *gur* and *khandsari*, but to sell it to the mills. This is the crux of the problem. The Government is also fully aware of this aspect of the present crisis of the industry and has, therefore, offered the following incentives:

The Incentives

(i) The minimum price of cane has been raised from Rs. 1.62 a maund to Rs. 1.75 a maund.

(ii) A rebate of 50 percent of the basic excise duty has been allowed on additional production between 1st July, 1963, and 31st October, 1963, compared with the corresponding period of 1962 concerning those mills which commenced their production during this period. This concession will benefit the mills in the south where they have a special advantage of a second crushing season from July to October. The majority of the mills, located in the northern region, will not be able to derive any benefit out of this tax rebate.

(iii) A similar rebate has also been granted for an additional production in Novtmber 1963, compared with the production of November 1961.

In view of the high prices of *gur* and *khandsari* which are yet prevailing, most of the mills have not thought it profitable to start production in November 1963, when the recovery percentage of sugar from cane is very low.

(iv) For additional production during the normal season commencing from November or December 1963, and ending on 31st March, 1964, the mills would be entitled to a rebate in the basic excise duty to the extent of 20 percent—base year being the 1961-62 season.

A peak production of 3.029 million tons of sugar was achieved by the industry during the 1960-61 season while the prices of *gur* and *khandsari* were very low. The industry will reap the benefit of this tax concessions if it can produce sugar over 3.029 million tons during the 1963-64 season. In the present context of *gur* and *khandsari* prices, it is rather impossible for the industry to go beyond the peak production of 3.029 million tons achieved during the 1960-61 season.

(v) Maximum deduction for road transport charges is limited to 12nP a maund, and the balance left from the existing maximum of 36nP a maund will be allowed in calculating the ex-mill prices of sugar.

These incentives were announced by the new Central Minister for Food and Agriculture on 6th September, 1963. During the time of this announcement and according to the Minister, the prices of *gur* and *khandsari* were Rs. 35 and Rs. 60 a maund, respectively. It was admitted by the Food Minister that the prices of *gur* and *khandsari* were over 100 percent more than that prevailed during the 1962-63 season. The Minister anticipated that the incentives would lower down the prices of *gur* and *khandsari* to Rs. 18 or Rs. 20 and Rs. 37 a maund, respectively. But in fact, the prices have been pushed further.

The Government evidently appears to put much reliance on the incentives to attract sufficient supplies of sugarcane to feed the mills. But a Press message from New Delhi dated 24th October, 1963, stated that the *khandsari* and *gur* units in Uttar Pradesh had already begun to purchase cane at Rs. 2.44 a maund. Against this price, the industry can now offer to the growers a price of Rs. 1.75 a maund. The result can well be imagined.

Defence of India Rules

The Government was also fully conscious of the fact that the incentives would not help the industry to achieve the production target of 3.3 million tons during the coming season. It has, therefore, assumed powers under the Defence of India Rules to regulate the supply of sugarcane to the mills through the creation of reserved zones. The following are the salient aspects of the scheme of reservation:

(a) Dependent on the crushing capacity of the mills and the availability of sugarcane in its neighbourhood, sugarcane areas will be reserved for the mills.

(b) In the reserved areas, the sugarcane growers will have to deliver a "specific portion" of the crop to the nearest mills.

(c) Similarly, it will be obligatory on the part of the mills to accept and crush the reserved sugarcane.

(d) If necessary, the Government might restrict the use of sugarcane or sugarcane juice by the manufacturers of *gur* and *khandsari*.

(e) The Government may also lay down that in the reserved areas only the licensed units would be able to produce *gur* and *khandsari*.

Apparently, it may be considered that the scheme, if it can be at all enforced, might ensure an assured supply of sugarcane to the mills. But it would be wise to remember the following defects and loopholes:
