Among bank shares, Indian have been steady at Rs. 161.50 on payment of a taxable ordinary dividend of 7 percent, including a bonus of 2 percent for the half-year ended June. Indian Overseas have been quoted at Rs. 140. Scattered business has been transacted in electric company shares. Negapatam have been steady at Rs. 11.40 on declaring a taxable ordinary dividend of 10 percent. Among sugar shares, E.I.D. have been steady at Rs. 39 on paying an interim taxable ordinary dividend of 7-1/7 percent, but Deccan have been somewhat easier at Rs. 9.95.

Cotton mill shares have lacked support and business has been negligible. Among clearing shares, South India Viscose have reacted to Rs. 125 and Travancore Rayon to Rs. 24.37. Lakshmi have slipped back to Rs. 141 and Madura to Rs. 31.25. Cauvery Spinning have been taken at Rs. 16.25 on declaring a taxable ordinary dividend of 10 percent. Business has passed in Rajapalayam at Rs. 160 on payment of a taxable ordinary dividend of 16 percent. Tirupati have come to hand at Rs. 11.65 on declaring a taxable ordinary dividend of 10 percent. Buckingham have been done at Rs. 263.50 and Bangalore Woollen at Rs. 233. Ramakrishna have met with scattered buying at Rs. 217.80, but Kothari have been easier at Rs. 9.30.

Miscellaneous shares have drifted downwards on a predominance of sellers. Aluminium Industries have declined to Rs. 17.75, although the Company has declared a final taxable ordinary dividend of 60nP a share. Ashok Leyland have been easier at Rs. 7.30. In the cement section, India Cement have been bought at Rs. 5.55 on declaring a taxable ordinary dividend of 9 percent. Dalmia Cement have been quoted up to Rs. 12.25. Among engineering shares, Indian Steel Rolling have been steady at Rs. 11 on paying a taxable ordinary dividend of 9 percent.

In the chemical section, F.A.C.T. have been sold freely down to Rs. 7 on passing the dividend and Mysore Chemical Manufacturers have been taken at Rs. 17.75. Among paper shares, Mysore have been quoted at Rs. 13.85 on declaring a taxable ordinary dividend of 12 percent and Seshasayee Paper have met with support up to Rs. 7.25. Radio and Electrical Manufacturing have been taken at Rs. 3.25 on declaring a taxable ordinary dividend of 18 percent. Tubes and Malleables have been quoted at Rs. 10 on paying a taxable final ordinary dividend of 7.5 percent. Kirloskar Electric have been quiet at Rs. 20 and Madras at Rs. 14.75. Spencer have come to hand at Rs. 21.08 and Textool at Rs. 154.

Government securities have been steady and support has largely been confined to selected State Government loans. Turnover has, nevertheless, been small due to the absence of sellers.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parantheses and will not be given where such a quotation is not available.]

HOLIDAYS RESTRICT ACTIVITY

SELECTIVE DEMAND FOR EQUITIES

London, 31st July.

WITH the holiday season approaching its peak, there was little inclination on the part of investors to open new commitment during the past week, and the turnover in business dwindled on most days. However, until last Monday, when sentiment was upset by reports of growing tension on the Sino-Indian border, there had been a good selective demand, much of which had been stimulated by encouraging economic trends and good company news. That there is no lack of funds for investment has been well illustrated by the overwhelming subscription to attractive new issues which have made their appearance. Some of these have been many times oversubscribed. Gilt-edged were meeting with a good demand at one time, but interest waned in the last day or two, and prices eased.

Dollar stocks moved in the wake of Wall Street and Canadian stocks were rather erratic. Equities gave a fairly good account of themselves, and there was no lack of good features. Imperial Tobacco went ahead on the good interim statement, but ran back later on talk of an intensification of the Government's anti-smoking campaign. Hoovers and Thorns reflected their satisfactory statements and in stores Debenhams were wanted while Marks and Spencer improved on the Company's decision to revalue the properties. Gold shares saw a certain amount of activity, but it failed to last and the market was now quieter. Charterеds were a firm feature in coppers, at one time. Oils see-sawed and Burmahs and Attock fell away on the reports of tension in the east. Tins and teas fell sharply for the same reason, but rubbers held steady following comment on the profit-earning potential of the companies by reducing costs.

GOVERNOR DEFENDS RESERVE BANK CREDIT POLICY

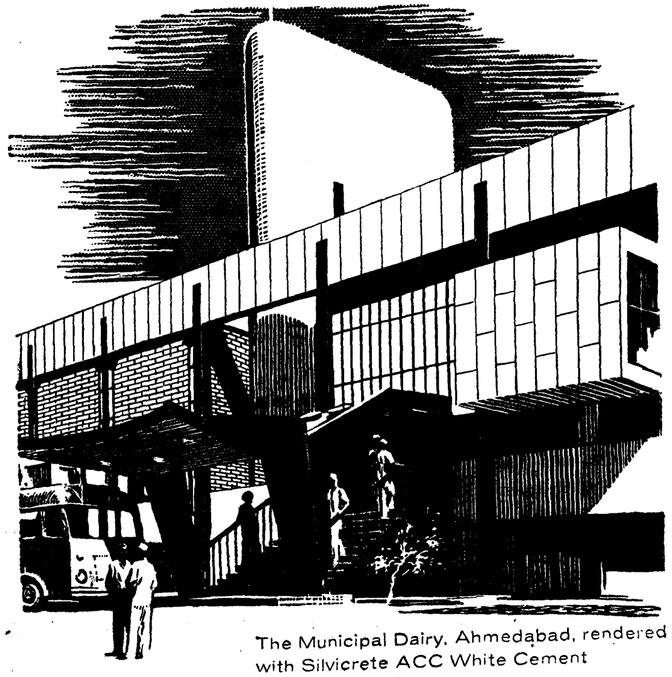
(BY A SPECIAL CORRESPONDENT)

PRESIDING over the annual celebrations of Bombay Bankers last week, Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India dealt with some of the problems which are uppermost in the minds of the banking community. A few days ago, it will be recalled, some leading bankers called upon him to express their fears about the slow growth of deposits and the desirability of relaxing credit restrictions in the 1963-64 busy season. They had urged that the ceiling on bank borrowings from the Reserve Bank should be removed, the statutory liquidity rule should be put off beyond 16th September, 1964, and that the difficulties of individual banks should be considered sympathetically. Besides giving an almost point-by-point reply to the issues raised by the bankers, Mr. Bhattacharyya has given a few hints as to what the Reserve Bank considers to be the right solution to some of the problems.

In view of the emergency, the Governor has admitted that the banking system is faced with a variety of growing demands. The problem before bankers now is not to find fresh profitable outlets for funds, but to find adequate funds to meet the growing credit needs. Unquestionably, the pressure on bank liquidity is growing, and is accentuated by the rise in prices. As experience shows, there has been no absolute shortage of liquidity in the sense that the growth in money supply has lagged behind the increase in production. Against an increase of about 50 percent in real income in the last decade, the rise in money supply was nearly 60 percent. So the economy was never starved of liquidity but it has suffered from latent inflation. The steady rise in prices and the cost of living are indicators that the flow of money incomes, in the aggregate, has not fallen short of the growing requirements. The liquidity problem faced by the banking system in the 1962-63 busy season was due to the smaller contraction of credit in the 1962 slack season and the relatively slow growth of deposits (Rs. 101 crores in 1962-63, against Rs. 158 crores in 1961-62) in the 1962-63 busy season.

Credit Restraint Necessary

In the context of the pressure on the liquidity of banks, the Reserve Bank's policy of restraining credit might have looked odd, but this was inevitable because "the Bank has to take note of the dual necessity of generating enough credit to meet genuine requirements of productive activity and keep a watchful eye on current indicators of inflationary pressures." If the Reserve Bank had not exercised caution, the total expansion of credit would certainly have been excessive, with consequent inflationary effect on prices. The Bank operated its policy in a flexible and judicious manner, although it raised the cost of credit and placed restrictions on its availability. No genuine productive or defence requirement was starved of credit.



While the Reserve Bank has recognised the obligation to help banks in difficulty as a lender of the last resort, it cannot, in view of the inflationary pressures in the economy, allow indiscriminate credit expansion. It is not true to say that the Reserve Bank's monetary policy leaves the unorganised sector untouched. The impulses generated by the monetary policy are communicated to the unorganised sector *via* the indigenous bankers and the shroffs although a certain amount of money may be floating on the fringe, without finding its way into the organised units. If one looks at the liquidity of the banking system as a whole, the position is not bad. But this is not to deny that the position of a few units in the banking system is pretty fully extended. The Governor of the Reserve Bank has pointed out in no ambiguous terms that the existing situation does not warrant any liberalisation of monetary and banking policies. The problem is confined only to particular units and, therefore, requires a more selective approach.

Mr. Bhattacharyya has laid stress on the point that the banker is primarily a trustee of the depositor. The new statutory requirements for liquidity are intended to provide a sound basis for future expansion of banking and, in spite of some pressure which they are likely to exert, they are necessary. This rules out any postponement of the higher liquidity requirements beyond 16th September, 1964. The Governor, however, is of the opinion that the contraction of credit during the current (1963) slack season has been satisfactory and if the growth of deposits continues at the present rate, the problem would be simpler. The bankers' efforts to open more branches and the speedy and steady improvement in the range and quality of services will also before long ease the situation.

Co-operative Lending

Mr. Bhattacharyya has suggested that banks should explore the possibility of co-operation in meeting the working capital requirements of big projects. This is a solution aimed mainly at rectifying the over extended position of the big banks. It would help not only to limit the commitment of a bank in relation to a particular party but also provide relief to those whose position is overextended. He has also hinted that some banks have set the ball rolling in this direction and what is required now is a wider propagation of the idea. The practice of joint lending although not quite common in India is widespread in West Germany and the U.S.A. There is, however, an important difference between credit conditions in this country and those in other countries. Generally speaking, there is more customer honesty abroad. Under these circumstances to what extent it will be possible to experiment with the idea on a big scale, requires to be explored. It should, however, be noted that the Governor has referred to the need for co-operation in financing only the big projects; these compare favourably with similar enterprises abroad.

There is, however, one point in Mr. Bhattacharyya's address, which is likely to induce a complacent view among bankers. His analysis shows that there is no reason to worry about the rate of resource accretion in the banking system. It is, therefore, possible that the bankers might postpone indefinitely the issue of raising the rate of interest on deposits. While the dearer money policy has come to stay, depositors are not benefiting. This is because the Reserve Bank has been implementing the policy in small doses. One expected the Governor to be more explicit on the question of stepping up the interest rates on deposits. If the rate of interest on deposits is raised, the growth of deposits would gather momentum.

THE CALCUTTA MONEY MARKET

SUBSTANTIAL FALL IN ADVANCES

Wednesday, 31st July.

THERE has been a substantial fall in the general level of advances in the Calcutta money market during the past week. The accommodation given to the iron, steel and engineering industries has decreased sharply, while the credit requirements of the jute and sugar mills are also a good deal smaller. Advances for the storage of foodgrains and seeds are down slightly, although cotton credit is almost unchanged. In the inter-bank market, conditions have been fairly easy, with the call rate quoting 2 percent.

The exchange market has been quite active. More tea bills have been seen, but the supply of gunny bills has been moderate. The demand for remittance is fair. Sterling shows a mixed trend after narrow fluctuations and has closed with nominal gains against the Canadian, West German and Dutch currencies.

SILVER WAS QUIET IN CALCUTTA IN the past month due to lack of buying. The price dropped from the previous week's level of Rs. 274.50 to Rs. 271.25, quoted today for ready delivery. There was no business in forward. The London and New York prices were 111¼d and 129 cents. Gold was not transacted.

DURING THE WEEK ENDED 26TH JULY, Government of India Treasury bills for Rs. 16,88,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 30th July. The total amount offered was Rs. 2 crores only. Tenders at Rs. 99.420 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at Bangalore, Bombay, Calcutta, Kanpur, Nagpur and New Delhi centres up to the close of business on 5th August and at Madras centre up to 11 a.m. on 6th August. Successful tenderers should make payment on 9th August at all centres.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills will be sold from 31st July to 3rd August at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 22nd July to 27th July amounted to Rs. 1,13,25,000.

THERE WERE DECLINES OF Rs. 29.24 crores to Rs. 2,208.34 crores in active notes and of Rs. 22.40 crores to Rs. 2,234.41 crores in the total note issue according to the return of the Reserve Bank of India for the week ended 26th July, 1963. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 25 crores to Rs. 1,901.31 crores. This was done by transferring securities to the Banking Department in which investments rose by Rs. 13.39 crores to Rs. 331.56 crores. Subscriptions to the new loans helped raise deposits of the Central Government by Rs. 94.32 crores to Rs. 149.27 crores while State Governments' deposits fell by Rs. 6.71 crores to Rs. 9.11 crores. Balances of scheduled banks were Rs. 25.73 crores smaller at Rs. 83.78 crores following subscriptions to the new loans. Their loans from the Bank fell from Rs. 47 lakhs to Rs. 34.70 lakhs of which advances against usance bills were the same at Rs. 9 lakhs. Ways and means advances stood at Rs. 29.16 crores, against Rs. 23.67 crores.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 19th July, 1963, shows Demand and Time liabilities at Rs. 1,061.35 crores (Rs. 26.49 crores on account of borrowings from banks) and Rs. 1,329.56 crores (Rs. 23.04 crores), compared with Rs. 1,051.52 crores (Rs. 27.51 crores), and Rs. 1,314.97 crores (Rs. 21.35 crores), respectively, in the previous week. Cash has fallen by Rs. 1.40 crores to Rs. 52.06 crores, while balances with the Reserve Bank have increased by Rs. 16.12 crores to Rs. 103.32 crores. There is a rise of Rs. 6.05 crores to Rs. 697.08 crores in investments. Advances and bills discounted at Rs. 1,509.18 crores show a fall of Rs. 13.56 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.5 percent and 63.1 percent, against 5.9 percent and 64.3 percent.

THE RETURN OF THE STATE BANK OF India for the year ended 19th July, 1963, shows a rise of Rs. 7.34 crores to Rs. 581.90 crores in total deposits. Investments in Government securities are up by Rs. 3.74 crores to Rs. 285.65 crores, while other authorised investments remain unchanged at Rs. 9.35 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 4.14 crores to Rs. 269.29 crores. Cash and balances are, in consequence, shown at Rs. 25.26 crores, or Rs. 4.94 crores higher.

A NEW PHASE IN AGRICULTURAL DEVELOPMENT

By Varuna

The establishment of the Agricultural Refinance Corporation may help production not only of the major crops but also in related sectors such as dairy farming, poultry development and pisciculture. The Corporation could do much to encourage large-scale production in the subsidiary sectors by organised private enterprise.

THE Agricultural Refinance Corporation, which was inaugurated in Bombay by the Central Finance Minister recently, will fill an important lacuna in the system of farm credit by providing long-term finance. It is welcome for another reason too: its functions include the provision of finance for various types of plantations on the one hand, and for orchards, dairy and poultry farms, and pisciculture on the other. While plantations have received some attention from the authorities and already get financial assistance from scheduled banks, relatively little attention has so far been paid to financing the activities in allied sectors. There are, of course, programmes for developing fruit, dairy, poultry and fish farming—programmes which are being implemented with varying degrees of efficiency by the State Governments. However, no organised effort has been made so far to help these activities by providing them finance on a scale and for a term which would make it possible for entrepreneurs to take up projects in these sectors on a sufficiently large and organised scale.

An increase in the output of fruit, meat, dairy products, poultry, eggs, vegetables and fish is of the utmost importance for meeting the rise in demand for these supplementary foods within the country. As the incomes of the people increase, they will need more of these products. Availability of adequate supplies of these products will help the economy in many ways. It will relieve, to some extent, the pressure on the supplies of cereals. At the same time, it will mean a definite improvement in the diet of the people, and consequently their health and efficiency. It also mean an increase in employment opportunities, and a substantial flow of incomes into the community.

Export Potential

It is, however, the export aspect which deserves special attention. There is a large and growing demand abroad for these products. It is mainly because the country has not been able to expand their production that it has so far been unable to exploit the foreign markets. As in some other spheres, increasing the exports of these commodities is primarily a matter of expanding the output. The products concerned must, of course, be properly processed, packed and marketed. For this purpose, it may also be necessary to create sufficient facilities for processing and packing these products and to make suitable arrangements for marketing them abroad. This should not, however, be difficult and should probably be expected to follow the growth of large supplies of these products within the country.

It is clear that attention must be concentrated on increasing the output of these various food products. There are two approaches to the problem. One is that which has been followed for supplying milk to Bombay from the Kaira district of Gujarat. The other is to encourage organised enterprise to take up large-scale production in these sectors as a business proposition and thus bring to them the efficiency and drive which they have so far lacked. In Kaira district, an increase in milk production was stimulated by organising the sale of the product and thus creating a high and steady demand for it. The prospect of earning a high income by selling his products regularly at attractive prices will stimulate the farmer to work harder and invest more to increase his output. It will, of course, be necessary to provide financial assistance to him, but the amount that each farmer may require will be relatively small. It should be possible to handle this through the co-operative credit societies because of the support they receive from the apex co-operative institutions and the Reserve Bank. The requirement being essentially of long-term nature, it may also be possible for the Agricultural Refinance Corporation to refinance credits made available by apex institutions to the primary co-operatives for projects involving development of a particular type over a large area. Long-term finance may also be needed for large projects complementing a scheme of this kind, which calls for development of a particular productive activity over an entire area.

However, considerable organisational effort will be necessary before a whole district can be galvanised into productive effort in this manner. Wherever an effort of this kind is warranted, it should certainly be made. The financial assistance required for these efforts should be made easily available. However, if increase in the production of these items is to depend on the success of the authorities in persuading thousands of individual farming families to step up the scale of their operations or to take up production for the first time, it is extremely unlikely that there will be a sufficiently large rise in output.

Large-scale Production

If a rapid increase in output is to be achieved, it will be necessary to encourage organised, large-scale production by the private sector in these fields, as is being done in industry. There is no reason why these activities in the agricultural sector cannot be treated on par with industry. A policy of this kind is implicit in the powers and functions of the new Agricultural Refinance Corporation.

Very large projects involving a capital of up to Rs. 50 lakhs can now be easily undertaken in this field. Such large projects would naturally fall within the purview of the organised sector. A score of large enterprises, organised perhaps in the corporate form and raising substantial capital of their own in the form of equity, could, with the assistance provided indirectly by the Agricultural Refinance Corporation, substantially raise the production of poultry and eggs, vegetables, fish and the wide varieties of fruit grown in the country. Similarly, rabbit farming for both meat and fur, or farming of some of the fur animals for whose skins there is a world market, could also be undertaken by organised private enterprise. The same is true of frog farming. In each case, the country could hope to earn substantial amounts of foreign exchange. Problems of quality control would be considerably eased.

Rôle of Organised Enterprise

The introduction of organised private enterprise into these sectors is implicit in the functions of the Agricultural Refinance Corporation. There needs, however, to be a wider recognition of the basic change in policy implied by it. Conscious implementation of the new policy could in fact bring about a revolution in the agricultural sector, at least as far as the subsidiary activities are concerned.

There need not be any conflict between the policy of encouraging co-operative production in these fields by thousands of farmers in a particular district and the encouragement of large-scale production by the organised private sector. As a matter of fact, these two approaches could be tried side by side and could be through suitable arrangements, also made complementary to each other wherever possible.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

New Delhi

WORLD BANK MISSION REPORTS ON INDIAN ECONOMY

(FROM OUR NEW DELHI CORRESPONDENT)

A WORLD Bank mission has made some well-considered suggestions to the Government of India for the more rapid and orderly growth of the economy. The main findings are contained in the following paragraph:

"Whatever the solutions, the problems discussed in this report have a direct bearing on the central issue at stake. The growth of population must be curbed if India is to have any chance of securing a tolerable minimum standard of living for the mass of her people. The present rate of expansion in agricultural production must be at least doubled—such was indeed the objective of the third plan, but it obviously will not be reached. Ways have to be found of improving the efficiency of industry and securing a more rational allocation of resources for future industrial investment, and it is difficult to see how this can be done within the limits set by a political democracy without a radically different approach on the part of the Government to questions of incentives, controls and prices. Continued external assistance, with greater emphasis in future on non-project assistance, will be needed to maintain the momentum of industrial expansion. At the same time, India has to increase her exports very substantially in the long run if she is to make a success of her present plans for development."

The mission visited India during the last cold weather season to evaluate this country's economic progress in general, and particularly the progress achieved during the first two years of the third five year plan. The report also enables the aid-giving countries to decide the amount, type and conditions of financial assistance they should offer. It has, for example, laid special emphasis on the untied aid which India needs to sustain her economy.

From the time of the famous, and now forgotten, letter of Mr. Eugene Black to India's Finance Minister, the World Bank has been sending each year missions to evaluate India's progress with the avowed object of helping this country secure more aid from the consortium of friendly western countries. The missions have often offered India advice which has seldom been seriously considered. This time, too, the mission has offered some valuable suggestions in its report suitable extracts from which are reproduced below:

"In the nature of things, no one can hope to present an entirely objective assessment of what India has achieved, of her successes and failures. In one sense, it is remarkable that the Government has been able to hold the country together and carry through a programme of economic development involving large increases in taxation without serious political disturbance or infringement of essential political liberties. Few governments in history have had such daunting problems to tackle or have tackled them with such a high sense of responsibility. Communalism has been held in check, English has been retained alongside Hindi as an official language, the Government has given the lead in instituting a campaign for family planning, women have been encouraged to participate more fully in the life of the country, efforts have been made to break down the caste system, educational opportunities have been widely expanded and a beginning has been made with the transformation of the traditional village society through land reforms and the community development programme. From an economic point of view, these are all changes in the right direction, and though it is easy enough to find fault with what has been done and to demonstrate the limited effectiveness of Government policy, the record as a whole is impressive.

"For all this, the results so far achieved are painfully inadequate to the need. The sheer size and poverty of India are its greatest problems. It has been calculated on the basis of quite moderate assumptions about population increase and income distribution that, in order to provide the poorest 20 percent of the population with an average per capita income of Rs. 20 a month by 1975, the economy as a whole must maintain an annual rate of growth of 7 percent over the next 12 years. In other words, the present rate of growth would have to be nearly doubled. This may be considered unrealistic, yet no one could fairly regard the goal as excessive.

Balanced Regional Development

"Another objective of Government which is in conflict with the aim of securing more rapid economic growth is expressed in the policy of 'balanced regional development.' This is a perfectly understandable policy, and up to a point, may be part of the price that has to be paid for maintaining the Union. But the fact should be recognised that, if the limited resources available for investment are to be dispersed widely over the country instead of being concentrated on the projects and areas where they will yield the highest economic returns, the growth of the economy as a whole must be impeded. Numerous examples can be quoted of wasteful investments resulting at least in part from the desire to advance particularly backward areas and to ensure a 'fair' allocation of resources between different States and regions. The location of the first Government oil refinery in Nunmati in Assam is a classic case. Other instances are to be found in the proposals for having a new fertiliser plant and a new public sector industrial project in each State (although these have not been fully implemented), in plans for the development of certain ports, in the State and central programmes of highway construction, and in the extension of the package programme for foodgrains from the original seven districts to 17.

"The aim of maximising employment and the aim of maximising output come into conflict in all countries. In India, for obvious reasons, the conflict is particularly sharp. The creation of more jobs for the unemployed and under-employed was singled out as a principal objective of the third plan. It is true that in practice investment in the plan, particularly in the public sector, has been concentrated on industries which are generally capital-intensive and provide comparatively little employment in relation to the value of their output. At the same time, however, considerable effort and expenditure are devoted to maintaining or expanding employment in the small-scale sector. For example, expenditure during the second plan on khadi and village industries is estimated at Rs. 87.5 crores (Rs. 68.6 crores for khadi, Rs. 18.9 crores for other industries), and provision for further expenditure of Rs. 92 crores has been made in the third plan.

"The protection of inefficient, labour-intensive techniques in village industries (for example, in cotton spinning and the manufacture of matches) acts as a drag on efficiency and output in the organised sector, reduces the volume of savings available for investment elsewhere and slows down the overall pace of development. Similar consequences follow from attempts to freeze levels of employment in organised industry and to discourage the introduction of modern equipment. Restrictions on the retrenchment of labour, which almost everywhere have the Government's support, have been a powerful factor making for rigidity and inefficiency. Incidentally, production and price controls tend to have similar effects. Consequently, a disturbingly large number of inefficient producers are being kept in existence at considerable cost to the community when they should be encouraged to go out of business.

"A different sort of problem arises out of what can only be described as excessive concern for the rights of private property owners and the protection given to these under the law. Development projects are frequently held up for long periods by difficulties over acquisition of land and compensation of the existing owners. This has been one of the main obstacles to schemes for slum clearance and urban development in Calcutta; it has also been a cause of delay in starting several of the important industrial projects in the third plan. The way in which property owners in the United States can be dispossessed to make room for new highways or other public services stands out in striking and ironic contrast to the situation in India. The mission is now qualified to comment in detail on the legal aspects of this matter, but we would suggest that it merits urgent consideration by a judicial commission to see what new legislation would be needed to give the Government more effective powers to take over private property, subject to appropriate compensation. Meanwhile, advantage should be taken where possible of the defence regulations to bypass time-consuming legal processes where these are holding up development.

Emphasis on Heavy Industries

"India has deliberately made a choice in favour of building up large-scale, generally capital-intensive industries such as iron and steel, heavy engineering, fertilisers, oil refining and basic chemicals. The wisdom of this choice has been widely debated in India and outside. In part, the argument is academic. Choice of techniques in modern industry is fairly limited, and it would be difficult to find a meaningful pattern of development that would satisfy the advocates of more labour-intensive forms of production. A programme oriented towards the production of capital goods is better suited to India's needs than the expansion of consumer goods industries whose products would be beyond the reach of the vast majority of the population at present levels of income. India's resources of iron ore and coal in any case offer her natural advantages for the production of iron and steel which have made this the focus of her industrial development.

"It is becoming increasingly clear, however, that the process of industrialisation will be more difficult, slower and more expensive than assumed when the third plan was prepared. The number of projects undertaken by the public sector—in heavy industry, petroleum and coal, for example—is greater than the public sector is yet really capable of managing efficiently, and the restrictions on private enterprise starting new ventures in various basic industries has limited the scope for the participation of private capital, including foreign capital, in the financing of India's development. A tendency towards excessive use of capital has been encouraged by low interest rates and by the natural desire of foreign collaborators to erect impressive plants and to promote sales of their equipment, components and spare parts. The organisation and management of public enterprises is being gradually improved, but too many civil servants are still being employed in top positions, and the methods of personnel selection leave much to be desired. Only gradually is it coming to be recognised that industrial management is a professional job requiring special experience and expertise, and that work in any industry like steel, heavy engineering or oil should be generally regarded as a life career. The number of changes in recent years in top management positions in public industrial enterprises has been a source of much confusion and inefficiency.

High Production Costs

"Costs of production in manufacturing industry in India are generally high compared with more advanced industrial countries. Some of the reasons for this are temporary, others of a more lasting nature.

Lack of ancillary industries frequently means that a firm has to make for itself components and tools which in other countries would be bought from outside. In many industries, of which motor-vehicles is one, the level of production in any one firm is still too small to permit full advantage to be taken of economies of scale. The problem has been aggravated by the deliberate policy of encouraging the establishment of small and medium-sized units in preference to large ones. This policy stems from a deep-seated and historically well justified suspicion of 'big business', allied with a fear of what is usually termed excessive concentration of economic power. Such a policy is out of place in India today, and tends to hamper efficiency, while doing very little in practice to weaken the hold of the big financial groups who still directly or indirectly control a large segment of organised industry.

"Capital costs in the newer industries are inevitably high, particularly when setting up a new plant means building a new town, as it often does. Equipment imported from abroad is liable to be all the more expensive when it is financed out of aid tied to particular sources of procurement, since suppliers take advantage of this situation to raise their prices. On the other hand, labour costs in India should be lower than in more advanced countries. It is by no means clear, however, that they always are. A steady upward pressure on labour costs is accentuated by the influence of the trade unions, and when profits are so heavily taxed or when there is no particular incentive to make profits as in public sector enterprises, firms have little incentive to resist this pressure. Unless labour costs a unit of output can be kept well below the levels prevailing in other countries, there is little prospect of the newer industries becoming competitive or of older industries, like cotton textiles, holding their position in world markets. It goes without saying that, unless the established industrial countries are prepared to allow India the comparative advantage which she ought to derive from lower labour costs, India cannot hope to achieve a reasonable balance of trade with these countries.

Industrial Location

"Indian planning has tended to neglect the space dimension in economics. Despite much talk of 'balanced regional development' and the need to tackle the formidable problems of congestion and overcrowding in the big cities, there has been no comprehensive and well thought out policy of industrial location. On the one hand, there are the factors that favour the cumulative concentration of industrial investment in a few strategic places; the need, for example, to economise on transport investment and transport costs; the advantages of having a large market for industrial products capable of supporting economic units of production and a pool of skilled and semi-skilled labour on which new industries can draw; the attractions of the big city for the entrepreneur, particularly in so far as contacts and the exchange of ideas are easier in an established business community; and all the external economies that concentration provides. On the other hand, account has to be taken of the rôle which industry can play in opening up the traditional rural society to new ideas and encouraging social change —a consideration which favours dispersing industrial investment more widely over smaller towns and villages, so that the economic and other ties between the urban and industrial areas can be as close as is technically feasible.

"Part of the trouble lies in the uneasy choice which India has made between a centrally planned economy and a decentralised economy guided essentially by market forces within the broad framework of policies laid down by the Government. The way in which industry is controlled is of greater significance than the way in which it is owned.

"Some degree of planning is clearly needed, and complete decontrol is out of the question. But at present, there appears to be too much centralisation of control in the hands of officials—and committees of officials—who are neither supplied with accurate and up-to-date information about what is happening in the economy nor are professionally qualified to take the decisions expected of them. The Planning Commission functions essentially as a co-ordinating body without executive responsibility, and neither the Planning Commission nor the Ministries responsible for economic affairs have at their disposal enough specialists to form technical and economic planning groups capable of working out and supervising the execution of industrial plans. Such groups are certainly needed, whatever the type of planning adopted, and a start has been made by establishing two survey groups for electric power and energy. Use is being made of a private consulting firm for planning the development of the iron and steel industry. Hindusthan Steel and the Fertiliser Corporation of India have been gradually building up their planning and design staffs. All this is helping to provide a basis for better planning in future.

The strengthening of the planning machinery and the improvement of economic statistics are both necessary if controls are to be operated sensibly. But however good the machinery, there is an overwhelming case for simplifying the controls. Controls over prices are the obvious place to start. If the price mechanism is allowed to function more freely as a guide to the allocation of resources, it will reduce the need for elaborate physical controls.

Lack of Proper Price Policy

"Price relationships in India have got more and more out of line with reality as a result of a piecemeal approach to price fixation, the lack of any clearly thought out and coherent price policy and insufficient appreciation of the difference between real costs and money prices. Goods for which prices are subject to control include iron and steel, coal, fertilisers, cement, paper, motor-vehicles, tyres, certain basic chemicals and a wide range of other industrial commodities. Cotton textiles are subject to a system of voluntary price control operated by the industry. Goods and services provided by the Government at subsidised prices include power, irrigation and certain forms of transport.

"In general, one must assume that prices fixed at levels below those which would prevail in a more or less free market economy will tend to encourage consumption at the expense of savings and investment (except to the extent that indirect taxes are added to the prices paid to producers). Low prices will also tend to discourage production, reduce the incentive to invest in expansion and encourage wasteful use of resources. The policy of controlling prices in key industries, while prices in less important industries have been left free, is particularly difficult to justify. It has had the effect in India of diverting capital away from the priority sectors where the need for expansion is greatest. Thus the coal and cement industries have both experienced difficulty in attracting capital for development in recent years. Price controls have probably also had something to do with the reluctance of private capital to exploit the opportunities for investment in fertiliser production, notwithstanding the fact that promoters have been assured by the Government that prices will be fixed on what is essentially a cost-plus basis. In the case of coal, it is difficulties over local finance which have been primarily responsible for the long delays in utilisation of the $35 million World Bank loan signed in 1961 for the expansion of the private sector.

Given the choice, the Indian investor tends to steer clear of the basic industries which are under close Government control and prefers to put his money into new ventures in chemicals and engineering where prospects of making profits are very much brighter.

"Price controls have tended to introduce an undesirable rigidity into the economic system just at a time when patterns of costs, production and demand are changing rapidly, and continuous adaptation is required. Prices once fixed are very difficult to alter since vested interests become entrenched behind them. Nor can anyone conceivably have the knowledge and foresight needed to establish the right prices, or to change them promptly in response to new conditions. The cost-plus formula which is the normal basis for price fixation is singularly unconducive to efficiency.

"There is growing recognition in India that the prices fixed for basic commodities such as coal, iron and steel and cement are too low. Several upward revisions in coal and steel prices have been made during the past two years, but these have been too small to have much effect. Further price increases are now under consideration. There appears to be a very strong case for raising substantially the prices of the better qualities of coal, if not for removing controls over coal prices altogether. Railway freight rates on coal and other bulk commodities also need to be increased, electric power rates should be raised substantially, and much higher retention prices should be paid to the iron and steel plants in both public and private sectors.

Idle Industrial Capacity

"The inadequate and erratic supply of imported materials, components and spares is the most obvious and immediate restraint on industrial output. No reliable assessment exists of the extent to which industrial capacity in India is at present under-utilised, but it is clear that much equipment is lying idle for lack of spare parts and that a good many firms have at one time or another in the past two years been compelled to slow down production or been prevented from expanding because of difficulties in obtaining some imported items. Imported materials which are reported to be particularly scarce include special steels, steel sheet, copper, lead and various types of chemicals. Stocks of spare parts and accessories in the motor-vehicle industry are totally inadequate in relation to the number of vehicles now on the roads (or immobilised for repair). Because of the uncertainty of supplies, established manufacturers try to hold larger stocks of imported items than would otherwise be necessary, and this makes it difficult for the newcomer, or for the small firm, to obtain a share of whatever is available. It is in fact usually the fairly small private manufacturer who suffers most severely from the shortage of imports.

"The production of a whole plant can be dislocated or an expansion scheme held up for lack of a minor item, the need for which has been overlooked by the licensing authorities. Two examples may be quoted which came directly to the mission's attention. One of the three large bicycle producers in India was nearly forced to close down altogether some months ago because it was unable to obtain a small quantity of potassium cyanide, and the works manager had to pay a special visit to Delhi to get the necessary allocation. A small manufacturer of canned food products in Bombay, with foreign sales of around $100,000 a year, had to give up a scheme for doubling his exports because he could not obtain a licence to import a machine costing less than $6,000.

"While there is no chance of getting rid of import licensing in the foreseeable future, the pressure on the licensing controls can be eased by raising the price of imports through taxation or a change in the exchange rate. A step in this direction was taken in this year's Budget by the levying of a general surcharge of 10 percent on all import duties and by the raising of import duties on a number of items including mineral oils, machinery, iron and steel products, raw cotton, rubber, palm oil, cinema films, tobacco, dyes, hardware, electrical apparatus and motor-vehicle parts. For example, the general rate of duty on machinery was increased from 15 percent to 20 percent.

Poor Export Performance

"The most serious criticism of Government export policy is perhaps the failure to take full advantage of the opportunities for developing exports of agricultural and mineral products. Agricultural policy has not been export-oriented, and little thought has been given to ways in which agricultural exports might be increased. An even more expensive weakness in planning has been the delay in arranging for the mining and transport of additional supplies of iron ore. Three years ago, the Government was assuming that 4 million tons of iron ore could be exported in 1960-61 and more than this in 1961-62. In fact, the quantities shipped, apart from Goa, have shown very little increase over the past three years, remaining around the 1959 level of 3 million tons a year. The recession in the Japanese steel industry has introduced a further unfavourable factor into the situation, and India is now facing increasingly severe competition in supplying the Japanese market.

"Internal prices of many of the goods which India exports are out of line at present exchange rates with world prices. Such goods fall into two main categories—agricultural products, where inefficient methods of Indian agriculture have resulted in high costs (namely, groundnut oil and sugar); and the newer industrial manufactures, where at the present stage of development the high cost of imported equipment and components and the small scale on which production is organised usually more than offset any advantages that may be derived from 'cheap' labour (and, as previously noted, Indian labour is by no means always cheap). Manufacturers can usually obtain a considerably better price at home than abroad for such products as bicycles, sewing machines, electric fans, metal containers, dry batteries and diesel engines, all of which are being exported. It is, of course, a common practice in other manufacturing countries for firms to sell abroad at prices which cover only their marginal costs and which are well below the prices charged in the home market. India is by no means exceptional in this respect. But the trend of industrial costs in India is a matter for real concern.

Lack of Good Hotels

"More and better hotel accommodation is the first essential. India has very few hotels which come up to international standards, and many of those which call themselves first-class are unable to provide the standards of service, comfort and *cuisine* which the international traveller has come to expect. Foreign management, which is one of the answers to this problem, has not been encouraged. The Government has been reluctant to invest its own money in hotel construction unlike countries such as Greece and the United Arab Republic which have been much more successful in improving tourist amenities in recent years. Nor have private entrepreneurs been offered the special inducements and official support that are needed if they are to be persuaded to invest their capital in what is otherwise liable to be an unprofitable business—especially when there is little money to be made out of drinks, which elsewhere are usually the main source of the hotelier's income. A new first-class hotel in Delhi, started as a private venture some years ago, has been left half-completed because of financial difficulties, while foreign visitors are being regularly turned away from the other hotels in the capital or provided with makeshift accommodation.

Steep Increase in Taxation

"The further steep increase in indirect taxation and the need for the upward adjustment of prices of many basis goods and services should result in a fairly general increase in the cost of living. There is always the danger that this may lead to another twist in the wage-price spiral, particularly when the pay of public employees and most industrial workers is directly linked with the cost of living index. The disadvantages of such linking arrangements in a situation like the present are obvious enough, and the Government will have to exert all its powers of persuasion to avert a cost-push type of inflation in the modern sector of the economy. Its chances of success will depend on the quality of its own leadership and on the readiness of the industrial community to accept sacrifices for defence. But whatever the risks of price increases in the immediate future, we believe that it would be a shortsighted policy to try to suppress inflation by maintaining artificially low prices in such industries as iron and steel, coal, rail transport and electric power. The paramount needs in these industries are to expand production and to mobilise savings for future development. Price controls may disguise, but they do not reduce, real cost; indeed, they tend to have the opposite effect.

"One of the most questionable decisions that the Government has taken in an effort to economise in foreign exchange is to tighten the restrictions on travel abroad by Indian nationals. Foreign travel by business men and students is potentially one of the most invigorating influences to which the economy can be exposed. The savings likely to be achieved by the latest restrictions are comparatively unimportant. The mission would strongly urge that the Government's policy in this matter be reconsidered.

"As far as imports of industrial materials and fertilisers are concerned, the mission considers that the Government's estimate of requirements in 1963-64 is, if anything, on the conservative side. In the absence of a detailed industry-by-industry study, it is quite impossible for anyone to say exactly what increases in these imports will be needed to ensure full utilisation of existing industrial capacity, but it is clear that the expansion of industrial production is already seriously hampered by import restrictions, and the likely rise in demand for iron and steel, non-ferrous metals, petroleum and fertilisers during the coming years will exceed any foreseeable increase in domestic production."

MOTOR-CAR MANUFACTURE

Survey of Progress

The Central Minister for Heavy Industries, Mr. C. Subramaniam, is planning to set up a committee to examine the progress of the motor-vehicle industry, particularly relating to the manufacture of cars. As the World Bank report has pointed out, the production of a whole car under one umbrella has led to its high costs. It is only in recent years that some ancillary industries have been developed. When these industries go into full production, some reduction in costs may be possible. The bigger snag is the low rate of production. In fact, some of the well-known foreign manufacturers did not show any enthusiasm for the small car project because of the small size of the Indian market.

There is, therefore, a growing realisation that the Indian policy for making motor-vehicles is unrealistic and is wrongly conceived. Some of the South American countries have permitted freedom to foreign entrepreneurs to set up car manufacturing plants provided they do not import any components, after, say, five years. This brought in not only self-supporting units, but also competition, which compelled motor-car manufacturers to reduce prices by cutting costs and even profits.

Three other features of Indian manufactured cars have been specially stressed. Firstly, their durability. It is felt that the Indian manufacturer has adopted the American method under which an article is produced, say, for one year's usefulness. The Americans can, however, afford to change their cars every year. It is not possible to do so for the majority of car users in India. Secondly, this country's economy does not require a new model every year. What is, therefore, being planned is to evolve an Indian model of a car, which would remain unaltered, say, for ten years. This will also mean an equal assurance of durability. Thirdly, in order to reduce prices, it is felt that the manufacture of cars should be on a bigger scale than has so far been attempted in India. The personnel of the Committee now proposed to be set up may have some foreign experts, probably, from the U.K. and West Germany. An early decision is expected.

INDUSTRIAL LICENSING

Procedure to be Reviewed

The Central Ministry of Industries is planning to set up a small committee to review the procedure for industrial licensing and make recommendations for such amendments as are considered necessary. The committee, it is learnt, will include the Secretary of the Ministry of Industries, Mr. S. Ranganathan; the Secretary, Ministry of Economic Affairs, Mr. L. K. Jha; the Special Secretary, Ministry of Defence and Economic Co-ordination, Mr. T. Swaminathan; the Joint Secretary, Ministry of Heavy Industries, Mr. R. V. Raman; the president of Associated Chambers of Commerce, Mr. A. R. Foster and the President of the Federation of Indian Chambers of Commerce and Industry, Mr. Bharat Ram.

PARLIAMENT

New Legislative Business

Thirteen new Bills are being introduced in the coming session of Parliament starting from 13th August. Among them is the Press Council Bill, 1963, to provide for the establishment of a Press Council so as to preserve the liberty of the Press and the standards of newspapers.

Three Bills relate to excise or income tax. The Customs and Central Excise (Amendment) Bill, 1963, is for levying duty on all goods exported or imported or produced by State Governments irrespective of the nature of their end-use. The

Central Excise and Salt (Amendment) Bill will amend the parent Act so as to bring in certain changes in the tariff descriptions. The Income tax (Amendment) Bill seeks to alter the provisions of the Income-tax Act, 1961, in the matter of development rebate. Through the Dakshin Bharat Hindi Prachar Sabha Bill, 1963, the Sabha is to be declared an institution of national importance.

Two Bills relate to Delhi. They are, the Delhi Development (Amendment) Bill, 1963, and the Slum Areas (Improvement and Clearance Amendment) Bill, 1963. The Government will also seek powers through the Public Premises (Eviction of Unauthorised Occupants) Amendment Bill, 1963, to expedite the removal of unauthorised squatters from Government lands. To make the provisions of the Food Adulteration Bill more stringent, an amendment will be brought through the Prevention of Food Adulteration (Amendment) Bill, 1963.

Proposed labour legislation includes the Industrial Disputes (Amendment) Bill, 1963, which seeks to give effect to the recommendations of the Indian Labour Conference and the Standing Labour Committee and the Personal Injuries (Compensation Insurance) Bill, 1963, which will impose on employers a liability to pay compensation to workmen sustaining personal injuries. It also provides for the insurance of employees against such liability. Other Bills are the Antiquities (Export Control) Amendment Bill, which seeks to remove certain lacunae experienced in the working of the parent Act, and the code of Civil Procedure (Amendment) Bill, 1963, which raises the exemption limit of attachment of salaries and will extend the benefit of Section 80 of the Act to the State of Jammu and Kashmir.

ECONOMIC TRENDS

N.C.A.E.R. Survey

The National Council of Applied Economic Research has introduced a new annual feature in the shape of a review of economic and financial conditions of India. The object is to bring out a new issue in January each year, which will review the economic and financial conditions in the year immediately preceding and will indicate the prospects of the Indian economy in the year that has just commenced. The present review, however, covers two years 1961-62 and 1962-63.

According to this review, a decline in national income from an annual growth rate of 7.1 percent in 1960-61 to 2.2 percent in 1961-62 (in real terms) indicates a slackening in the tempo of economic development. With an annual rate of rise in the population around 2.2 percent, there was no net increase in *per capita* income in 1961-62. The information available so far indicates that the rate of growth of national income may go up slightly in the year 1962-63; but it is unlikely that it will reach the 7 percent increase in the annual rate of growth.

The small increase in national income in 1961-62 is largely accounted for by the poor agricultural output in 1961-62, which remained stationary against an increase of 8.9 percent in 1960-61 when the weather had been unusually favourable. To realise the plan objective of obtaining a quick rise in national income, a short-term "crash" programme for agricultural development has been recommended in the review. The purpose of this "crash" programme will be to raise yields as much as possible within a period of a year or so.

It was not only the rate of growth of agriculture that got a setback in the first year of the third plan, but the rate of growth of industrial production in 1961 was also lower than in the previous year. Industrial production in the second year of the third plan has also lagged behind the targets, because of scarcity of foreign exchange for importing raw materials and other intermediate products, shortage of transport facilities and of non-availability of sufficient power for running the wheels of industry. It is doubtful whether in the remaining years the shortfall can be made up. For the moment, the review suggests fuller utilisation of existing capacities and maximum production, through working double and triple shifts. The basic and heavy industries should have first priorities for development, and particular attention should be given to alloy and special steels, non-ferrous metals, engineering components and electronics and chemicals including plastics.

There is not much scope for cutting down imports to solve the payments difficulties because India will need more foreign exchange for defence preparation, for strengthening the industrial base of the economy and to build up economic overheads in the form of more power and transport. The obvious way out of the payments difficulties is, therefore, to make an all-out effort to push up export earnings to pay for imports. But, it is doubtful whether India's exports can catch up with the trade deficits, at least in the short run, in spite of the vigorous export drive now launched.

There is continuing tremendous pressure on both wholesale and retail prices in the current year because of stepping up of Government outlay both for defence and development purposes. Some of the measures in the annual Budget, 1963-64, for example, enhanced duties on kerosene oil, soaps and other articles of consumption, are bound to lead to some increase in prices. In addition, the shortage of foreign exchange will lead to diversion of resources from the production of consumer goods to defence and export purposes, resulting in restricted availability of several consumer goods for civilian use. Higher taxation and compulsory savings in the 1963-64 Budget will, however, mop up considerable extra income generated by greater economic activity and expenditure necessitated by the "emergency". But, on balance, it appears that there will be an increase in prices in 1963-64, which may reach serious proportions unless strict price control measures coupled with rationing of some products could effectively be implemented.

INDO-BURMESE TRADE

Mr. Shah for Rangoon

The Central Minister of International Trade, Mr. Manubhai Shah, and the Secretary, Ministry of Commerce, Mr. D. S. Joshi, are soon leaving for Rangoon to discuss plans for expanding Indo-Burmese trade. The question of Indo-Burmese collaboration for setting up some industries in Burma will also explored, so also the question of importing some additional quantities of rice.

BHILAI STEEL WORKS

Expansion Under Way

The expansion programme of the Bhilai steel plant to increase the production capacity from 1 million tons to 2.5 million tons of steel ingot a year is likely to be completed by the end of 1965, it is learnt. Work on the expansion programme, which began about a year ago, includes the setting up of more coke oven batteries, blast furnaces and open hearth furnaces, further development of the existing mills and addition of a new wire rod mill. Expansion of power generation and other facilities is also under way.

According to the detailed time-table already prepared for the progress of the work, the first new unit, to be commissioned by the end of this year itself, will be a group of soaking pits in the blooming mill. This will be followed by the opening of other units, one after another.

Under the expansion programme, the Bhilai steel plant will have three more coke oven batteries of 65 ovens each, in addition to the existing three batteries. There will be two more blast furnaces (1,719 cubic meters each) in addition to the existing three furnaces (1,033 cubic meters each). Also, there will be four more open hearth furnaces, each with a capacity of 500 tons. An existing 250-ton furnace will also be converted to 500-ton capacity. In all, there will be ten open hearth furnaces after the expansion. The new wire rod mill will increase the number of Bhilai's mills to five. When the expansion programme is completed, Bhilai will produce 2.5 million tons of ingot steel a year, which will be rolled into 1,965,000 tons of finished and semi-finished products. The new wire rod mill will produce 400,000 tons of wire rods annually.

It is understood that during the 1 million-ton stage construction, the services of about 900 Russian specialists were used at Bhilai. As Indian engineers have now acquired considerable experience, it is proposed to invite only 240 Russian specialists for the expansion work and 30 specialists for the suppliers design supervision group. Meanwhile, the iron ore mine in Rajhara and the limestone quarry in Nandini, which supply raw materials to Bhilai, are also being developed further.

This official hand-out does not say that orders for the expansion of the Rourkela steel mill were placed in the first months of 1963, and those for the expansion of the Durgapur steel mill are still in the process of being placed. As the supplier for equipment in the case of the Bhilai steel mill is the same authority as has given credit for it, the orders for its expansion could be placed as soon as the project report was mutually accepted. The credit for the speedier expansion of the Bhilai steel mill is due to the Government-to-Government deal, under which credit is given in the shape of equipment and know-how.

ECONOMIC PLANNING

Working Groups Formed

Planning and working groups have been formed in the Central Ministry of Food and Agriculture for the preparation of long-term economic development plans up to the end of the fifth plan, and more specially, for the preparation of the projects for the fourth plan. This follows a recent proposal by the Planning Commission that such groups may be set up with the following terms of reference:

(1) to make a critical review of the progress of the programmes and schemes in the third plan;

(2) to assess, in the light of current trends and other available data, the position likely to be reached at the end of the third plan period; and

(3) to formulate proposals for the fourth plan broadly in the perspective of the 15-year period 1966-81 or more concretely of a ten-year period, 1966-76.

In the Food Department of the Ministry, there will be a policy group to co-ordinate proposals for the Department as a whole and also consider other aspects concerning food policy in relation to the fourth plan. There will also be four working groups, one each for (a) fisheries, (b) food processing (including subsidiary foods), (c) storage and warehousing and (d) sugar and sugarcane. The Food Secretary will be the chairman of the policy group.

The Department of Agriculture will have one planning group which will co-ordinate proposals for the Department as a whole, and also consider other policy aspects concerning the agricultural sector in relation to the fourth five year plan. The Agricultural Secretary will be its chairman. There will also be 24 working groups. The Agricultural Secretary will head the working groups relating to foodgrains production; land and water utilisation and crop planning; price incentive and subsidies for agricultural production; agricultural marketing; and plan implementation, pattern of assistance and progress.

The other working groups in the Department of Agriculture relate to demand projections; commercial crop production, horticulture; animal husbandry and livestock development; dairying; forests; land reforms and resettlement of landless workers; minor irrigation (including drainage); soil conservation and land reclamation; manures and fertilisers; improved seeds; improved agricultural implements and machinery; plant protection; agricultural research, agricultural administration and personnel and education and training; agricultural extension and package programmes; agricultural statistics; agro-economic research and farm management studies; and agricultural credit.

The working groups will consider all the important aspects like consumption, export trends, projected demand, production targets, programmes and estimates of various inputs, personnel, training, finance, marketing research and extension and legislative measures. The reports of the working group are expected to be made available to the Planning Commission by the end of this year.

EXPORT MARKETS

Fund for Development

The Government of India has recently set up a marketing development fund for meeting the expenditure on schemes and projects for developing markets abroad for Indian products. The fund, administered by a three-man committee, will, to begin with, consist of Rs. 3.8 crores provided for in the current year's Budget. To utilise this fund, which is to play a great part in the export effort, a code of grants-in-aid has been formulated. The code gives the export promotion councils, commodity boards, export promotion advisory committee, export houses and other institutions and exporters, all information about the grants which the Government of India will provide to them for specific programmes connected with the export effort.

Among the programmes and activities for which grants will be available from the Government are trade delegations, study teams, market and area surveys, commodity surveys, export publicity, commercial intelligence, advertisements abroad, documentary films and opening of foreign offices. The quantum of grants-in-aid for these activities differs according to the nature of the work. In the case of trade delegations and study teams, the fund may grant 50 percent of the expenditure.

For market studies, out of the total expenditure incurred in conducting commodity surveys within the country for determining export potential and market studies abroad, the fund may grant 75 percent to 100 percent where the studies are sponsored or undertaken by universities and institutions recognised by the fund for this purpose; two-thirds where the studies are sponsored or undertaken by an approved organisation; and 50 percent for studies undertaken by a recognised export house with the prior approval of the fund.

In the case of export publicity and information, the fund may grant about 75 percent of the net expenditure on publications, including journals, directories, brochures, pamphlets and folders. There are varying rates of grants for advertisements abroad, public relations and for making publicity films. For opening foreign offices, the fund may grant 75 percent of the total expenditure of the first two years and 50 percent of the third year in the case of offices which are opened by an approved organisation. Where the foreign office of an export house agrees to function also on behalf of an approved organisation, the fund may grant one-quarter of the amount spent on accommodation and staff for the first three years.

STATE STEEL PLANTS

Study of Operations

The Central Ministry of Steel and Heavy Industries has decided to set up a three-man committee to make a comprehensive study of the steel plants in the public sector. The committee will consist of Mr. S. Ratnam, formerly Secretary, Central Finance Ministry, (chairman) and Mr. B. S. Sindhu, retired Member (Engineering), Railway Board, and Mr. U. Ananda Rau, retired special chief engineer, P.W.D., Madras, (members). The terms of reference of the committee are as follows:

(i) To study the problems connected with the setting up of the first phase of the three steel works of Hindustan Steel Ltd in the public sector, namely, the 1 million ton plants in Bhilai, Rourkela and Durgapur, with particular reference to the agreements with consultants, project reports, contracts, and arrangements made for the training of personnel. The principal object of the study will be to draw lessons from the past with a view to suggesting measures for avoiding similar difficulties in future.

(ii) To examine in particular the contracts for civil engineering work of the blast furnaces and rolling mills at Rourkela, and more generally the other contracts entered into by Hindustan Steel Ltd in the past.

(iii) To examine the increase in estimates of the cost of the power plant at Rourkela.

U.K. INCOMES BODY PLEADS FOR PROFITS CONTROL

(FROM OUR LONDON CORRESPONDENT)

AN important contribution to the continuing public debate on incomes policy is made by the National Incomes Commission in its second report—this time covering three agreements in the electrical, domestic engineering and exhibition contracting industries. Any assessment of the Commission's pronouncements must, of course, take into account the sad fact that the unions still refuse to take any part in its enquiries. But, despite this, the report remains an interesting and fair-minded document which responsible employers and union leaders should make it their business to read.

The conclusion to which the N.I.C. has now come is that profits must come more into the picture. A scrutiny of the pricing, profit margins and dividends of the construction industry—of which both the principal industries involved in the present enquiry and the industries covered in the Commission's first report are part —would be "highly relevant." The report recognises the validity of the point that profits are subject to the forces and risks of competition, unlike negotiated wages and salaries. But it does not accept that this competition is adequate in the construction industry. A survey is, therefore, needed; the Commission's vain attempts to extract the required information from the industry suggest that new powers may be necessary to obtain it.

As a political exercise designed to reawaken union interest in the National Incomes Commission all this has obvious attractions. It is no surprise that the Chancellor, who puts the question of incomes restraint near the centre of his thinking, has given the report a warm welcome and has agreed that "new steps" are needed to get details of profits. The report deals with agreements reached in March and February this year in the electrical contracting, in the heating, ventilating and domestic engineering, and in the exhibition contracting industries. It finds that two of the agreements are not in the national interest, but rules that one is. This was an agreement in the electrical contracting industry, which provided an increase of 9½d an hour for journeyman electricians spread over three years, plus a non-contributory sickness scheme in the first year, and a reduction in the working week from 42 to 40 hours in the second year.

The Commission rejects the employers' contentions that wage increases exceeding the standard of 3 to 3½ percent were justified because the agreement was long-term and contained no cost of living variation clause, and because electricians were highly skilled craftsmen for whom other industries competed. But the report continues: "The one circumstance which in our judgment may have the requisite quality (of mitigation) lies in the past history of time-wasting practices in this industry, which we accept as being of an exceptional degree, and in the prospect presented of their renunciation."

Wage Pacts

The Commission makes it clear, however, that while not ruling the agreement against the national interest, it does not approve of the way it was reached. "Time-wasting practices of the kind described to us should never have existed and their relinquishment should not require to be brought," it comments. The agreement in the exhibition contracting industry, which provided for a reduction in the standard working week from 42 to 40 hours from 11th March, 1963, accompanied by an increase of 4½d an hour, is condemned as being "substantially higher than the newly accepted range of 3 to 3½ percent."

The Commission says that the agreement could be justified only on the grounds of special circumstances, but since no evidence was put before it from either the employers or the union side, the "strong *prima facie* case against it was not displaced," and the Commission was, therefore, bound to find the agreement contrary to the national interest. In its report the Commission also condemns the agreement in the heating, ventilating, and domestic engineering industry, although in very moderate terms. The agreement was for three years, giving a 3½d an hour increase to craftsmen in the first year (3d to adult mates), a 3d an hour increase to craftsmen in the second year (2½d to adult mates), and a reduction of two hours in the working week to 40 hours without loss of pay in the third year.

The Commission concedes that "there is much in this agreement to commend it." But it adds: "The only trouble is that in the end, for the sake of agreement, both parties seem to have allowed themselves to lose touch with the requirements of the national interest and arranged to take for themselves in three years a benefit which, even on the basis of the new range of 3 to 3½ percent, should be spread over at least four."

The Commission describes the difficulties it found in trying to establish profit figures in the electrical contracting industry and in heating, ventilating and domestic contracting. The two employers' associations concerned declined to authorise the Commission to get information on turnover and profits of their members from facts already in the possession of the Board of Inland Revenue. Information from published sources also proved inadequate. Adding to this its feeling that the construction industry as a whole is "sheltered" from competition, the Commission concludes that "there is now an urgent case in the national interest for a representative survey of the policies and practices in relation to pricing, profit margins, and dividends in the separate branches of the construction industry, paticularly in view of the decade of further expansion on which this industry is about to embark."

No Enforcing Power

"Such a survey," the report goes on, "in the absence of voluntary agreement, requires an authority and a power of enforcement which we do not possess. Our experience of the two references relating to this industry which we have been directed to undertake has shown that unless such a survey is conducted, by whatever are the appropiate means, and the results are placed before us, we shall not have been given the evidence which we require to enable us to observe an important part of our terms of reference. We can reach and have reached findings on wage agreements in the industry which are based on clear evidence and which seek to take account of the national interest. These findings will not and cannot, in terms of an incomes policy, be affected by evidence on profits in the same industry.

"As we have already pointed out, however, increases in profits not justifiable in terms of an incomes policy can, like wages, by themselves lead to inflation. The margin which provides the source of such profits should be applied towards reduction in prices. Without proper evidence and findings on profits, there is a danger not only that our findings relating to wages will be regarded as one-sided, but that they will, again in terms of an incomes policy, reveal only a part of the picture."

In a general chapter on incomes policy, the Commission again takes up its theme that profits which exceed the terms laid down for an incomes policy should be used to lower prices "It is no less incumbent on employers than it is on workers not to appropriate an unfair share of the fruits of increased efficiency," the report says. If workers in their wages bargains conform with certain principles (also described in the report), "it is vital that their self-restraint should not be made a source of higher profits for their employers. "It should not be necessary to wait for the promised fiscal measures to impose restraint on profits: the signs should be visible from the outset in the trend of prices. It is the duty of employers and workers alike to extract no more than their proper rewards as indicated by the overall rate of increase in national productivity. If, in their own industry, there is then a balance of enhanced productivity outstanding, the prices of the products of that industry should be reduced and the benefit thereby dispersed to the community at large."

This is the Commission's way of tackling, among other things, the problem presented by profits which are not distributed but ploughed back into a business, but which thereby subsequently give rise to increased capital values, and thus in the end "provide a source for the exercise of spending power." The Commission's observations on profits will be welcomed by the trade unions, which have repeatedly asserted that wages cannot be considered in isolation from profits or other incomes. But the unions can be expected to continue their opposition to the Commission. They will not be satisfied until it is wound up, and they have a pledge from Mr. Wilson, the Opposition leader, that this will be done under the next Labour Government. The unions refused to attend the three hearings. At that concerning exhibition contracting even the employers were not present. The Chancellor, Mr. Maudling, welcomed the report and accepted its contention that more information on profits was necessary. He said he had begun discussions with the Federation of British Industries on the best way of tackling the problem. But the means the Chancellor has chosen to tackle the profits question seems to indicate a lack of urgency in his approach to the problem. It is understood that the F.B.I. will prepare a paper, probably through its economic directorate, which will be presented to its Grand Council for approval in the autumn, and then passed on to the Chancellor as an indication of industry's views.

Power to Find Facts

If the Chancellor had intended to make profits a matter of real urgency, he might have announced his intention to seek administrative or legislative powers to enforce the disclosure of information by business. This could be done by empowering the Board of Inland Revenue to disclose information on profits, confidentially to the N.I.C. In welcoming the Commission's views on the need for information on profits, the Chancellor said that a great deal of statistical information was already published. Most of it, however, was published under broad headings, "and I agree that for the future new steps will have to be taken to obtain a more detailed breakdown of the figures than trade associations are able to provide."

Mr. Maudling also declared that the report of the Commission showed the need for all parties to supply relevant information, and appealed for the co-operation of unions and employers' associations. "The Commission's report makes clear the direct and urgent interest of the consuming public in those matters and the consequent obligations of all parties concerned," he concluded If the Government—this Government or the next—means business about formulating a national incomes policy, one or other of its fact-finding agencies must be given powers to find facts. The National Incomes Commission has politely pointed out the need for such powers, but it does not follow that it is the right body to possess them. Indeed, the functions of the N.I.C. in relation to those of the National Economic Development Council become more and more obscure. How many incomes policies are there to be? And if the N.E.D.C is charged with giving advice about the economy generally, why are questions about incomes left to somebody else? The N.I.C.'s own report complains that wages cannot be studied in a vacuum: can incomes be studied at all without reference to the rest of the nation's economic life? Of course, they cannot The proper body for sponsoring fact-finding surveys about incomes is the N.E.D.C., and if the N.I.C. continues to exist at all, it should be as a specialised agency of the N.E.D.C. reporting to the Council. And if the N.E.D.C is authorised to enquire into the facts of British economic life, it should be given adequate powers to obtain the facts.

Jute

BUMPER CROP MAY AGGRAVATE DIFFICULTIES OF MILLS

NEW Delhi's latest estimate, which places the current season's jute and mesta crop around 7 million bales, seems modest in view of a 10-percent increase in acreage and the favourable climatic conditions. Jute circles in Calcutta place the output around 7.5 million bales. So far, the plants have received timely sunshine and showers. Pest infestation has been checked. Adequate supplies of improved seeds and fertilisers have been arranged. There has been no flood damage. Retting water has also been available in plenty. The early crop, already harvested, is reported to be of fairly good quality.

The problem of marketing this crop has now come to the fore. The authorities have already fixed the minimum price at Rs. 30 a maund for Assam Bottoms, f.o.r., Calcutta, which seems rather high. In fact, during the previous season the official floor price of Rs. 30 was never realised and the fibre changed hands at prices Re. 1 or Rs. 2 lower than the minimum. Even the support from the State Trading Corporation could not help the market. The same conditions prevailed during this season too, and prices tended to sag to Rs. 26 until the Jute Commissioner issued a compulsory purchase quota of 440,000 bales for July. This halted the drift and prices have firmed up to around Rs. 28.50.

Smuggling from Pakistan

Another factor which has depressed fibre prices is the continuing inflow of contraband jute from across the border. Although the Government of Pakistan has imposed drastic restrictions on the cultivation of jute in the border areas, reports say that a bumper crop has been grown there. The shortage and high prices of foodgrains, the low prices of jute in Pakistan, are providing the incentives for clandestine barter trade. On a modest estimate, against the official import of 210,000 bales, mainly of cuttings, the contraband from Pakistan amounted to about 700,000 bales. Despite the fixing of a higher minimum export price by the Pakistani Government, the flow of contraband is likely to continue, upsetting the price-support plans of the Indian Government.

The Government of India has widened the network of jute co-operatives to implement the price-support scheme. The *ad hoc* committee of the National Agricultural Co-operative Marketing Federation has recommended that adequate circulating capital should be provided to the co-operatives to work the scheme. It has also urged the granting of priority to co-operatives in the allocation of wagons, weighment arrangements, inspection and warehousing facilities.

With the completion of the modernisation and rationalisation drive and the extension of broad loom capacity, the industry is well set for using more fibre. But it has problems of its own. Its warehouses are overflowing with stocks. A considerable amount of liquid resources has been tied up, adding to the real cost of the fibre in the shape of interest charges, insurance premiums, etcetera. In view of the tightness of the money market, it is difficult to get financial accommodation. The shortage and high prices of building materials rule out the chances of extending warehousing capacity. The erratic supply of power, the comparative lull in overseas business and the keen competition from Pakistan are some of the other problems the industry has to face.

Power-cut Threat

Calcutta is facing another threat of a power-cut following the D.V.C.'s notice to the Calcutta Electric Supply Corporation about the reduction of its present supply by 18 MW a day. The reduction has become necessary because the level of water behind the Rihand dam has gone down, causing a decline in the generation of power. So the Rihand authorities have curtailed their supply to the D.V.C. grid. The C.E.S.C. has requested consumers to minimise the use of energy. The maximum load drawn by the C.E.S.C. from the D.V.C. during recent months has been around 130 MW a day. The 14-percent power-cut will entail load-shedding, and affect the working of industries. The production of jute goods was not appreciably affected by the power-cut in May. This time the load-shedding will be less although it may continue for a longer period until the D.V.C. thermal power station in Bokaro is recommissioned.

U.P. Scheme for Jute Purchase

To extend price-support to jute, the U.P. Government is considering a scheme for State trading. The scheme aims at purchasing 500,000 maunds out of the likely marketable surplus of about 700,000 maunds. A sum of Rs. 1 crore may be provided for this purpose. It is proposed to cover the five principal markets in the State, including Lakhimpur-Kheri, which alone handles about 50 percent of the surplus. Jute collection, sorting and baling centres are to be set up in the interior areas to facilitate the movement of the crop to the final destinations. The three jute mills in the State will concentrate on the use of locally-grown fibre. U.P. had 162,400 acres under jute in 1962-63. During the current year East Bengal refugees resettled in the Terai area of Naini Tal district have sown jute on their lands. Profits from the jute extension scheme are proposed to be distributed to them as bonus.

THE JUTE MARKETS

Manufactured Goods: Barring small hessian business with Canada and the U.S.A., and scattered covering by shorts and shippers for the ready and near positions, trading was devoid of interest in the jute goods market during the major part of the past week. Towards the close, hopes of brisk business were aroused following reports of heavy Chinese troop concentrations on the northern border. Frantic covering was also induced by the threat of a protracted power-cut, so the market closed with a steady undertone. Earlier in the week, most mills were keen sellers for the forward positions and a substantial volume of business was transacted; this softened the price trend. Later on they became reserved. In the freight market, demand for overseas booking continued to be thin and was restricted to prompt shipments. The futures market moved in line with the spot market. Activities were restrained to some extent because of the limit imposed on trading in hessian August, which had exceeded the limit of 70 million yards imposed by the Forward Markets Commission. Hence hessian transactions were mainly of a squaring-up nature. In sacking August, interest seemed to be thin and prices fluctuated within narrow limits. Hessian and sacking November were transacted in small lots. At the close, there was a mild revival of interest on reports of a steady trend in the spot market and prices closed with a gain over the previous week's level.

Wednesday's quotations were as follows:

	Aug.	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	35.70	35.70	35.45	35.19
40in. 10oz.	48.90	48.50	47.75	47.15

Liverpools	124.00	124.25	124.50	124.25

Raw Jute: Steady conditions prevailed in the fibre market during the past week. Mills continued to lift jute from the Calcutta and upcountry markets against their July quota, which halted the drift in prices. Despite an increase in arrivals of the new crop in the upcountry and Cossipore markets, sellers became reserved expecting the issue of a fresh quota for August by the Jute Commissioner. At the end of the week, prices closed with an average gain of 50nP over the previous week's level. But they were still much below the official minimum of Rs 30 a maund, basis Assam Bottoms, ready f.o.r., Calcutta. In view of the prevailing shortage and the rising trend in foodgrain prices, jute circles feared that it would be difficult for the authorities to arrest a decline in fibre prices a month hence when large quantities of jute would come to the market. Middle men might step in and lift the jute at low rates in spite of the Governments' vigor-

THE PAKISTANI JUTE MARKETS

IMPLICATIONS OF THE NEW POLICY

(FROM OUR DACCA CORRESPONDENT)

THE Government's new jute policy is but the first step taken by the Pakistani authorities towards nationalising the jute trade. The policy came into effect on 20th July. The 20 largest exporters of raw jute from Pakistan as well as any other shippers who are not 100 percent Pakistanis and are subsidiaries or in some way connected with the first 20, must sell jute at the new minimum prices. All other shippers, that is to say, small Pakistani shippers may sell jute abroad £2 below the minima. The jute Marketing Corporation is also allowed to sell £2 cheaper.

There has been a hue and cry about this new policy from overseas buyers, from local shippers of all categories and from the opposition newspapers. This system was forecast in these columns a year ago, and it means that provided the Jute Marketing Corporation can be run efficiently, it will, with the £2 advantage, gradually capture markets from foreign shippers until eventually it rises not merely to the level of exporting 2 million bales, but handles practically the entire raw jute export trade of Pakistan. To have introduced straightforward nationalisation would have completely disrupted the trade, would have meant disaster for shippers who would either get no compensation or who would get it very late or at a reduced valuation. Overseas buyers too might have felt put out.

The small non-Pakistani dealers who do not export, will obviously close down and leave the country. This will initially cause trouble because the areas they are in, are not attractive to Pakistani dealers. For a while, therefore, in these areas, there will be distress, and subject to the geographical situation, attempts will be made to smuggle jute out of the country. Gradually however, the Jute Marketing Corporation should be able to expand its internal organisation and set up buying agencies in these places. With the advantage of being allowed to buy 10 percent below minimum prices, there is no reason why the corporation should not be able to afford to expand rapidly to these remote areas when the only limitation will be the availability of suitable staff. Although it may be hard on the growers that the corporation buys 10 percent below minimum, the fact is that in these remote areas, the market now and frequently is more than 10 percent below the minima. In other areas, where the market is not 10 percent below the minima, the growers would simply not sell to the Corporation unless it is prepared to pay higher prices.

The non-Pakistani shippers in the first 20, will no doubt struggle to compete with the Jute Marketing Corporation. Some shippers have good enough connections and good enough reputations to be able to compete in some markets successfully. As long as the market is £2 or more below minima, the corporation being a Government organisation, will find it difficult to sell. Its rather big problem, however, will be to convince overseas buyers that in spite of the expansion of its organisation, they can still maintain a regular standard suitable to the requirements of the buyer. This will be a difficult task and will call for first-class management. On this depends the success or failure of the whole scheme.

It is also reported that a quota system is to be introduced, the aim being to restrict expansion of the large balers and to encourage the expansion of small balers and the Jute Marketing Corporation. The quota system is cumbersome and will not benefit the small shippers and is not likely to work. It is in fact an admission of weakness, in that it suggests that in spite of every effort being made to help the corporation, the authorities fear that the big shippers may still compete successfully. Details of the quota have not yet been announced, but they are likely to be based on restricting future shipments of the first 20 shippers to 80 percent of their past performances over the last three years. In fact, steps have already been taken to get the machinery moving to issue quotas for exports to India.

A most unfortunate aspect of the so-called new policy is the timing of its introduction and the raising of minimum prices. The new minimum prices are as follows: In brief, Export Firsts and above, Dundee Tossa 4s and above, S.N.C. and D.T.C. and S.M.R. have been raised by £2. Export Lightnings, Outport Tossa 2/3s, N.C. and T.C. have been raised £1. Simultaneously, those few grades such as Dacca Tossa 5s, Dundee Tossa 2/3s whose E.P.C.s were above the old minima have been reduced to the new minima so that the E.P.C.s and the new minima are now the same.

The timing of this new scheme is unfortunate for Pakistan in that it has come at a time when the overseas buyers are well stocked and are sitting out of the market. The overseas market was already in most grades several pounds below minima. To increase the minima now is inopportune, and it is hard to see the reasoning behind it, unless the authorities felt that by increasing the gap between the minimum prices and the market they made it too expensive for shippers to be able to sell.

Too much accent is placed on earning foreign exchange. This in itself is laudable under normal circumstances, but at present, it only means that the carryover will mount up from year to year until eventually the grower will not be able to sell his jute however little he grows. If the market is allowed to find its own level with reasonable price control, then each season's jute will be absorbed by overseas buyers and the country can start its new season in a healthy manner. This in the long run will benefit not only the growers but Pakistan.

The minimum prices fixed under the new policy are given below: Dundee Firsts £137; Dundee Hearts £120; Mill Firsts £105; Export Lightnings £86; Dacca Tossa 2/3 £133; Dacca Tossa 5 £104; Crack Tossa 2/3 £117; Dundee Tossa 2/3 £102; Outport Tossa 2/3 £91; Crack Daissee 2/3 £97; Dundee Lightnings £127; Mill Reds £112; Export Firsts £97; Export Hearts £73; Dacca Tossa 4 £120; Dacca Tossa 6 £97; Crack Tossa 4 £104; Dundee Tossa 4 £97; Outport Tossa 4 £80; Grade Daissee 2/3 £86; Superior N. C. £55; N. C. £41; Habi Jabi £42; T. C. £41; S. N. C. £48; Cut Ropes £38; W.R.S.-T.R.S. 53; and D. T. C. £48.

The overseas market appeared weak and dull and during the first fortnight of July, and 127,043 bales were registered for export. The U.K. was the largest buyer with 30,400 bales, and the U.S.A. bought 29,650 bales, mostly cuttings. Japan bought 11,030 bales and Czechoslovakia 10,975 bales. Burma bought 9,800 bales and France 8,741 bales. Italy bought 6,719 bales and Belgium only 4,800 bales.

During the same period, 1,963 bales of mesta were bought consisting of 1,000 bales cuttings and 963 bales of long mesta. The cuttings went to Japan and 500 bales of long mesta were sold to Italy and 463 bales were sold to Poland.

In the local market although prices vary from area to area, the market is depressed. For some reason which is not known, smuggling has fallen off which has weakened the market. In other areas, lack of buying by dealers through lack of licences, and lack of buying by shippers while they are considering the new jute policy, has also weakened the market.

After a spell of good weather, heavy rain has started again and the rivers are rising in many areas. There is a small possibility that there may be floods in certain jute growing areas. At this time of the year, the worst that floods can do is to reduce the quality of the standing tossa unless, of course, the floods cover the tops of the jute which is unlikely. In the local market, there have been little or no transactions and the general attitude is to wait and see.

Commodity Markets

RUSSIA MAY IMPORT MORE INDIAN TEA

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THERE are encouraging reports about the Indian exhibition now being held in Moscow. According to these, the exhibition will yield good dividends in the form of larger orders from Russia for Indian goods. Among the items widely mentioned are tea and cashewnuts. Premier Khrushchev showed a special interest in Indian cashewnuts when he visited the exhibition on the opening day. It is said that India will be able to almost double her exports of tea and cashewnuts to Russia as a result of this exhibition. The Indian Minister for International Trade, Mr. Manubhai Shah, who visited Moscow in connection with the inauguration of this exhibition, is reported to have secured a commitment for exporting tea and cashewnut for Rs. 2 crores more in each case. Russia is already a substantial buyer of several Indian agricultural products like tea, cashew and pepper.

There has been a perceptible improvement in the export of Indian cashew kernels during the first half of 1963. Shipments during this period amounted to 1.1 million cases of 50 lbs each. It is estimated that the exports this year will be 150,000 cases more than last year's 2.1 million cases, which itself was a record. A favourable factor from the point of view of the foreign buyers is the steadiness in prices noted this year, it is said.

There has been a significant increase in the Russian offtake of Indian cashewnuts. That country has bought more than 220,000 cases so far, against 230,000 cases in the whole of 1962. Russia has taken as much as 80,000 cases in the first week of July, and is expected to come again in a big way round about October to cover her requirements of the last quarter of the year. Exhibition orders will be over and above these normal purchases. The U.S.A. which is the largest buyer of Indian cashews bought 572,000 cases during the first six months of 1963, against 527,000 cases in the corresponding period of 1962, and 490,000 cases in the first half of 1961.

Prospects For Cashew

The present indications are that the cashew processing industry in India can look forward to a bright future with an expanding overseas market for its products. A major handicap with the industry is that it has to depend for the bulk of its raw material requirement on imports from Africa. India at present produces only less than one-third of the industry's requirement of about 200,000 tons of raw cashewnuts. Efforts have been going on under official patronage to expand cashew cultivation in India by making good use of the agricultural waste lands. According to one estimate, the area under cashew cultivation has increased by about 90 percent during the past one decade.

A sum of Rs. 1.9 crores has been provided in the third plan for the development of cashew cultivation. The programme is to bring under cultivation an additional 800,000 acres, particularly in Maharashtra, Orissa and Mysore. Planting will be concentrated on waste lands rather than in forest areas. Coffee cultivation is to be extended to new areas in India. Four States, Orissa, Madhya Pradesh, Maharashtra and Assam, have crossed the experimental stage in coffee cultivation and joined other producing States in south India, Mysore, Madras and Kerala, in the endeavour to produce more coffee for meeting the expanding home and export demand. Mysore and Madras are the largest producers with 66,566 acres and 60,000 acres respectively, under coffee cultivation at present. Coffee-growing in Andhra Pradesh is negligible, as the acreage is only 74. In 1959-60, Orissa had 23 acres, Maharashtra 185 acres, Madhya Pradesh 36 acres and Assam seven acres under experimental cultivation. Now these four States are having acreages which are roughly three times the 1959-60 figure, indicating that they have joined the ranks of regular producers. At present, the quality produced in these States is not superior, but is suitable for normal internal consumption.

The present situation is that India is producing hardly sufficient to meet the demand for export and internal consumption. In 1962-63, India exported 21,300 tonnes of coffee and earned Rs. 8 crores. The peak figure touched was 32,271 tonnes in 1960-61. Since the country joined the International Coffee Agreement, is has been allotted an export quota of 21,600 tonnes. Internal consumption is to the tune of 35,000 to 36,000 tonnes at present, and it shows signs of increasing by about 2,000 tonnes a year. Last season's production was 54,672 tonnes. Unless production keeps pace with the increasing demand either the home market will have to starve or the export programmes will suffer.

World coffee production for 1963-64 is estimated at 66 million bags with an exportable surplus of 52.3 million bags. This is only a very slight change from the previous season's crop, and again will exceed world requirements by about 4 million bags.

Tea Crop Down

Monsoon is very weak this year in south India so much so that plantation crops grown in this part of the country are being adversely affected. Fall in production is reported by tea estates. The south Indian tea crop which was running ahead that of last year earlier this year has failed to keep up the tempo due to inadequate rainfall and cut in electricity necessitated by dry weather. Power supply has been restored, but below average rainfall now experienced might retard production progress. The south Indian tea crop during the first half of 1963 is placed at 45 million kilograms, showing a slight decline over the previous corresponding period's output. A more serious fall is reported from north India where production to the end of June was only 47 million kilograms, against 53.8 million kilograms in the same period last year. The present trend in the country's tea output is thus not encouraging. It may be too early to make any firm forecasts concerning the final shape of the 1963 crop, but still it will be no wonder if India fails to show any improvement over the previous year's crop this year. The crop prospects for the other major producers like Ceylon are, however, considered good at present.

As in the case of coffee, it is now doubtful whether the South Indian tea estates will be able to achieve the third plan target of 408 million kilograms. Production suffered a setback of 10 million kilograms in 1962, compared with an output of 354 million kilograms in 1961. To achieve the target of 408 million kilograms by 1965, production will have to be stepped up by 65 million kilograms, or by about 22 million kilograms a year. Extension and rehabilitation programmes chalked out for the tea industry has made very little progress. Shortage of funds is mentioned as the main reason. The Tea Board introduced last year a scheme to extend financial assistance to needy tea planters. The Central Government provided Rs. 5 crores for this purpose and also indicated its willingness to consider the question of sanctioning additional funds. It is said that the Board could make very little progress in the implementation of this scheme.

According to one report, the Board has received about 130 applications for loans amounting to Rs. 6.16 crores, against an available amount of Rs. 5 crores. Of the total applications, the Board was not able to process about 35 applications for a total amount of Rs. 1.83 crores due to inadequate particulars provided by the applicants. Another 15 applications for a total sum of Rs. 50 lakhs have been rejected, while over a dozen applications have been withdrawn by their authors. Only 62 applications for a total sum of Rs. 3 crores alone

Rotorvanes
GIVE YOU
A POWERFUL
MECHANIZED
GRIP ON tea

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.
THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.
The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine.

The Portable intermediate feed conveys leaf to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

have been accepted by the Board. Since the acceptance of the loan applications is to be followed by the execution of loan agreements, further delay at that stage comes in the way of successful loanees immediately obtaining the amounts sanctioned. It is said that only 31 applications for a total of Rs. 1.31 crores have passed all the hurdles, and only a small amount of Rs. 21.5 lakhs has been actually disbursed by way of first instalment against the committed amount of Rs. 1.31 crores. It is estimated that when the entire amount is disbursed, the scheme will help replantation and extension in about 15,000 acres.

New Process for Rubber

The Malayan Rubber Research Institute has perfected a process which will enable the budding of newly planted rubber seedlings in a much shorter time. According to a report bud grafting can now be carried out when the seedling root stock is three months old, instead of waiting for the nine months' growth normally required. This is called the green budding technique. The financial saving by the adoption of this technique when reckoned in terms of several acres over a large-sized estate will amount to something quite considerable. The upkeep expense can be halved and the trees would come into bearing six months earlier.

The American Spice Trade Association (A.S.T.A.) is advising the Indian shippers to pack pepper which has passed Indian Government inspection, in polythelene-lined bags during the monsoon season to avoid pepper taking on additional moisture during transit with a view to avoiding detentions in America for these reasons. The A.S.T.A. has welcomed the Government of India's scheme for compulsory preshipment inspection and quality control of black pepper along with cardamom and chillies from January this year. The regulations under this scheme which visualises that all the containers of these articles exported should bear the Agmark label, conform to the recommendations of the quality committee set up by the A.S.T.A. This committee was constituted by the A.S.T.A. after the wholesale detention of pepper shipped to America from India in 1952, on the ground that it was affected by mould and insects. The quality committee of the A.S.T.A. recommended packing of pepper in polythelene-lined bags. The practice followed by Indian shippers is to pack in double jute bags.

Prospects for Tea Crop Still Uncertain

(BY A SPECIAL CORRESPONDENT)

AT the time of writing, India's output remains on the low side. Figures of production by the major producing countries indicate normal trends.

Unless climatic conditions improve considerably, the Indian third five year plan target of 900 million lbs will not be realised. That may be a blessing, for it would seem that only by considerable additions of chemical fertilisers can the crop be materially augmented, and the tea planting community has drawn attention to the fact that much heavy fertilising would probably affect quality. The net result would then be too much poor tea produced at a high cost for sale at a low price.

On this vital matter of costs, Messrs J. Thomas Co. Private Ltd in their latest annual report have made it clear that producers should be allowed to make sufficient profit to plough back into their business, and in this correspondent's view, forcing nature is a doubtful long-term policy.

Quality and Crop

While wage boards sit and ponder as to what extent salaries should again be raised and as producers call for reductions of taxation and remission or refund of sundry charges necessary to put this country back into a world competitive basis in exports, the question of pay by results seems to go by default. Fifty years ago a good woman worker was paid by results, namely, the poundage of green leaf plucked every day, and that method was an incentive to work. Men did not overexert themselves on the estate, but factory labour in the busy season worked prodigiously. Today by contrast, most gardens carry surplus labour and it is reported that absenteeism frequently runs round 20 percent of the actual workers carried on a company's books. The question of a fair day's work in return for the daily wage is now before the Central Wage Board, and a sound decision might go some way in bringing down the cost of production. The Board of Trade has suggested that more aid should be given to the tea industry, for although there now seems to be a better trend in India's total export markets, tea and jute are the vital traditional foreign exchange earners of India; and with a little assistance, would probably yield results in tens of crores of rupees compared with only lakhs from new export lines.

This correspondent is aware that the Government has sundry schemes such as tea replanting subsidy and the rehabilitation programme. But these appear to aim at production whereas the sights should be set on costs. Quality and costs are the hallmarks for the sale of practically all commodities, and, as this correspondent continues to try and emphasise, there is no point in producing unwanted "Commons" at relatively high cost. It may be noted that apart from wages, the Plantation Labour Act, 1951, compels a plantation to provide: canteens, crèches, recreational and educational facilities, housing, sickness and material benefits including free medical aid and other comforts such as blankets and umbrellas.

News from Cochin shows that good teas are meeting with a ready enquiry, but the trend for commons remains irregular. The same tendency is reported from Calcutta, but news from London reports a firmer tone in Mincing Lane in the past few weeks. Only 46,000 packages were offered for sale. North Indian and African teas were firmer by ¼d to 1d a lb. There was some improved bidding for south Indian teas and those from Ceylon were well supported at firm to dearer rates.

In the 18th July issue of *Capital* it was reported that producers in Ceylon are somewhat agitated about future prospects of selling Ceylon's ever-increasing production. The manufacturing side of the industry also feels perturbed due to what it terms "drastic and thoughtless import restriction". Those difficulties are said to affect road transport as well as tea machinery. The Kandy District Planters Association has stated that "unless the position is rectified forthwith, retrenchment or stoppage of production is imminent". So unless one or both parties are exaggerating, the situation of excess crops recently expected may not mature because machinery capacity will be automatically curtailed by the shortage of replacements. However, it was officially notified on 22nd July that import quotas by Ceylon for 1964 will be published during December 1963.

COMPANY AND PUBLIC NOTICES

THE PUNJAB NATIONAL BANK LIMITED,

REGD. OFFICE: PARLIAMENT STREET, NEW DELHI.

Notice of Interim Dividend.

THE Directors of the Punjab National Bank Limited, New Delhi have decided to pay an interim Dividend for the current year at the rate of Re. One gross per share. The dividend will be payable at the Registered Office of the Bank at New Delhi on or after 9th September, 1963 to the shareholders whose names stand on the Register of Members as on 7th September, 1963.

The Transfer Books and Register of Members of the company will remain closed from 13th August, 1963 to 7th September, 1963 (both days inclusive).

By Order of the Board
of Directors,
MOHAN SINGH,
Offtg. General Manager.

Dated, 23rd July, 1963.

Note: Shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

THE BIRLA JUTE MANUFACTURING CO., LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 15, India Exchange Place, Calcutta, on Wednesday, the 25th September, 1963 at 4 P.M. for the following purposes:—

1. To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1963.
2. To declare dividends on Preference, Second Preference and Ordinary Shares.
3. To elect a Director in place of Shri H. L. Somany, who retires by rotation, but being eligible, offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.
5. As special business, to consider and if thought fit, to pass with or without modification, the following special resolutions:—

(i) "Whereas Messrs. Birla AG incorporated in Switzerland an associate of Messrs. Birla Brothers Private Limited, the Managing Agents of the Company, maintain an office in ZUG in Switzerland and WHEREAS the said Company is established to carry on business *inter alia* of acting as agents in Europe and other countries for purchase and sale of goods including stores, plant and machinery, etc. and propose to have dealings and business connections with parties all over Europe and other countries and operations on a large scale and Whereas their expenses of maintaining their office establishment are likely to amount approximately to Swiss Francs 200,000 per annum in the initial stages and Whereas expenses which can be attributed to the work to be done for and on behalf of the Company would depend on the value of purchases effected through the said Company in relation to their total turnover in each year, NOW it is hereby RESOLVED that Messrs. Birla AG be and are hereby appointed to act as buying agents and selling agents of the Company for periods of 3 years and 5 years respectively with effect from 1st October, 1963 in Europe and other countries on the following terms as to commission—

(a) for purchase of stores, etc. 5% of the invoice price;
(b) for purchase of plant and machinery—2½% of the invoice price; and
(c) for sale of goods manufactured / produced by the Company—2% of the invoice price.

Provided that if anything to be done in pursuance of the above arrangements requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done in accordance with such permission.

(ii) "RESOLVED that the Company do hereby approve of the arrangement with Messrs. Birla AG who are associates of Messrs. Birla Brothers Private Limited, the Managing Agents of the Company, for utilising their services for employment of technical personnel and/or consultants, making arrangements for securing Know-How, credit facilities, attending to enquiries and generally to act as representatives of this Company as and when required for negotiations in Europe and other countries and for such services they be paid all expenses incurred and/or apportionable in respect of work done by them in each particular case provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, the same will be done in accordance with such permission."

The Register of Members and Share Transfer Books of the Company will remain closed from the 4th September, 1963, to the 25th September, 1963, both days inclusive.

By Order of the Board,
Per Pro: BIRLA BROTHERS PRIVATE LTD.,
G. MAKHARIA,
Managing Agents.

Regd. Office:
15, India Exchange Place,
Calcutta.

Dated, the 24th July, 1963.

N.B. (i) The Directors have recommended the following dividends for the year subject to deduction of tax under the I.T. Act, 1961.

On Preference Shares:
@ 7.5% per annum (increased by 11% under the Preference Shares (Regulation of Dividends) Act, 1960, and after deducting Company's Income-tax).

On Second Pref. Shares:
@ 7.86% per annum.

On Ordinary Shares:
@ Rs. 1.50 per share.

If dividends on shares as recommended by the Directors are approved at the Meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 25th September, 1963, or to their order or to their Bankers. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 15th October, 1963.

(ii) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) **An Explanatory Statement in respect of items of above special business is being forwarded to the Members of the Company along with the convening Notice of the Meeting.**

THE KARANPURA COLLIERIES LIMITED

AT a meeting of the Board of Directors held on Thursday, the 25th July, 1963, the following Dividends were recommended for declaration at the Annual General Meeting to be held on 29th August, 1963, to be paid for the year ended 28th February, 1963, subject to deduction of Tax.

On Ordinary Shares at the rate of 10 per cent per annum.

On 9895 5½% Cumulative Preference Shares at the rate of 4.579 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960:

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

Registered Office,
Chartered Bank Buildings,
Calcutta, the 25th July, 1963.

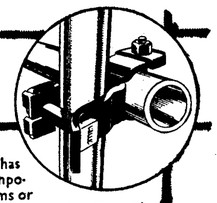
DISHERGARH POWER SUPPLY CO., LTD.,

8, Clive Row,
Calcutta-1.

THE Board of Directors have today decided to recommend to the forthcoming Annual General Meeting of members the following dividends in respect of the year ended 31st March, 1963.

On the "A" Preference Shares at the rate of 6.50%.

On the "B" Preference Shares at the rate of 5.85%.



On the Ordinary Shares Rs. 10/- per share.

Tax will be deducted from these dividends before payment in accordance with the provisions of the Finance Act currently in force and the Warrants for the dividends, if declared, will be despatched to Shareholders on the date on which the Annual General Meeting is held.

30th July, 1963.

WHICH HOLDS THE GREATER LOAD?

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a ½" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

CONTROVERSY OVER SHIPPING FREIGHT RATES

A STRANGE controversy is going on these days over the decision of the India-Pakistan-U.K.-Continent Shipping Conference to raise ocean freight rates on west-bound Indian cargo by 12½ percent from 1st August, 1963. In fact, the decision looks like a reasonable compromise between the claims of the Conference lines for an increase and the understandable fears of Indian shippers that exports might suffer in consequence. Some months ago, the Conference had proposed an increase of 15 percent. But after sounding the Government, along with commercial and industrial interests, the smaller rise of 12½ percent has now been decided on. It seems, therefore, that care has been taken to ensure that the adverse effects of a rise in freight rates are softened as far as practicable.

Some increase was justified on purely economic grounds. As the Conference lines have pointed out, the last general increase in freight rates took place in 1957. In 1958, freights were actually cut. In 1962, the freight rate for jute goods in particular was reduced. In the meantime, there has been a substantial rise in the operational costs of the shipping companies. Several items of costs have increased by more than 50 percent. The Government of India is to blame in large measure for the rise in operational costs because it has been lethargic about improving port facilities. Indian ports have become notorious for the slow turn-round of vessels. The Conference lines point out that they have to operate in such a way as to earn a fair return on the capital employed. But at the existing freight rates, there is a substantial deficit compared with the fair return. The latest move to raise freight rates will compensate partly, but not wholly, for the shortfall in the return on capital employed.

The Maritime Freights Commission, which was asked by the Government of India to investigate the claims of the Conference for a rise in freight rates, supported the case for an increase. But it recommended an increase of only 7½ percent for two years in the first instance. From the scanty reports available so far, it does not look as if the Commission's figure was arrived at after proper scrutiny of the profit-and-loss accounts of the shipping companies. The companies nevertheless contend that even the latest increase of 12½ percent will not be sufficient to compensate for the deficit in the net return on capital employed. Whether this implies that a further increase might be demanded in the near future is anybody's guess. Anyway, it is difficult to resist the claim for an increase in principle in view of the steep rise in operational costs. The Government of India cannot be so hypocritical as to forget that there have been substantial rises in railway freights, road transport charges and coastal freights in recent years. Despite strong protests from trade and industry, the Government itself has contrived steadily to raise domestic freight rates and has thus helped make Indian goods more expensive in foreign markets.

The effects of the rise in freight rates announced by the Conference lines are likely to be marginal. Although the general increase amounts to 12½ percent, the Conference has fixed concessional freight rates for several commodities such as myrobalan extract, coir matting, canned provisions, oilcake, manioc meal and rice bran. Knowledgeable circles estimate that the increase, on average, will amount to 10 percent. In endorsing the recommendations of the Maritime Freights Commission, the Government of India has put forward a claim that several sensitive commodities should be exempted from the rise. But the suggestion is difficult to support on practical grounds, in the sense that it is difficult to pick out the so-called sensitive commodities. Some would say that almost every export commodity is sensitive, especially since agricultural products constitute the bulk of India's exports. If the Department of International Trade were to select a list of sensitive commodities, it would probably want to describe all exportable items as "sensitive". The Conference lines have already voluntarily given concessions on some commodities; the number could perhaps be expanded by negotiation.

Since the increase in freight rates is relatively small and shippers have been making fair profits on exports, there is no reason why the burden of the freight increase should be passed on to foreign buyers. It can be borne by the shippers themselves, who can compensate themselves for the loss by improving their turnover. In this way, any possible adverse effects of the freight increase will be minimised. Meanwhile, attention can be concentrated on promoting exports in a business-like manner. It has to be remembered that the high price of Indian commodities is due largely to the cost inflation at home. The unit production costs of several commodities have risen as the proportion of idle capacity in factories has increased. The rise in wages, and in transport and raw material costs, has posed a serious problem. Modernisation has been retarded by a tax policy which impairs the capacity of companies to plough profits back into the business.

Although there is considerable justification for the increase just announced, there is no reason why constant efforts should not be made to persuade Shipping Conferences to keep freight rates as low as practicable. The Indian Government has recently succeeded in getting concessions from U.S. shipping companies for its own imports and for the imports made by State Governments and public sector undertakings. Private imports which are financed largely by foreign aid may also benefit from these concessions. Although the rise in freight rates will involve an increase in foreign exchange expenditure, the size of the increase should not be exaggerated. Under the pooling system, Indian shipping companies have been allotted a fair percentage of the liner trade, so part of the benefit arising from the freight rise will accrue to them. If India wants to spend less foreign exchange on freight, the answer lies in expanding the domestic tonnage more quickly. It is encouraging to find that the shipping target set for the third plan will be exceeded. But what is more important is that India should concentrate on increasing her tanker tonnage which has

hitherto been a major drain on her foreign exchange resources. More liberal chartering of tramps might also help, especially since it will take time to increase the liner tonnage.

FIDDLING WITH FOOD

FEW people can have any clear idea of the sense and purpose underlying last week's comedy wherein Mr. S. K. Patil first offered, and then was persuaded not to press, his resignation from the Food and Agriculture Ministry and the Central Cabinet. Reports from New Delhi indicate that the prologue to the farce was enacted last month, just before the ministerial reshuffle necessitated by the departure of Mr. K. D. Malaviya. Hafiz Mohammed Ibrahim and Mr. K. C. Reddy from the Cabinet. The Prime Minister, Mr. Nehru, felt at the time that Mr. Patil should be moved to the Railways Ministry, and Sardar Swaran Singh moved in the reverse direction, to Food and Agriculture. Mr. Patil, understandably, objected that unless the change was to be part of a major Cabinet reshuffle, it would imply a lack of confidence in his policies, especially since these had been subjected to severe criticism only a little earlier. Mr. Nehru, it seemed, saw the point and decided to drop the idea for the time being. But then, for some mysterious reason, it occurred to the Prime Minister last week that the game of musical chairs started a month ago had not quite been completed, so he wrote to Mr. Patil suggesting that he exchange portfolios with Sardar Swaran Singh. Whereupon Mr. Patil did what Congressmen nowadays rarely do—handed in his resignation.

It is not easy to decipher what Mr. Nehru's aim might have been in originally recommending the change, inviting the rebuff implicit in refusal, then repeating the recommendation, and acquiescing in a second rebuff. Dark rumours have been heard to the effect that the moving spirit behind the machinations was Mr. G. L. Nanda, Minister for Labour, Employment and Planning, and deputy chairman of the Planning Commission—who is desperately looking round for scapegoats to carry the blame for the failure of the third plan. According to other rumours, the Patil-Swaran Singh exchange was meant to be of no great significance: the Congress Party being short of ministerial talent, the Prime Minister has no option but to try and give his Cabinet a "new look" periodically by redistributing portfolios according to the laws of the roulette wheel. But, uncharitable as these explanations might seem in their suggestion of personal failure, frustration and jealousies, it does appear likely that one point of policy and principle was involved. It was that Mr. Nanda and the Planning Commission—happy in the knowledge that they have no direct responsibility for the weaknesses of the food administration—were in favour of rationing and controls as an answer to the food shortage. Mr. Patil, on the other hand, while recognising the need for stricter regulation, felt that the regulation should remain far short of rationing in view of the well-known deficiencies of India's food-dispensing bureaucracy.

In this argument, there can be no doubt that Mr. Patil was right; and from that narrow point of view, it is satisfying that he was ultimately prevailed upon not to press his resignation. In any case, the precise advantage to be gained by moving Sardar Swaran Singh to the Food and Agriculture Ministry was never very clear. He does not have the organisational drive that Mr. Patil is (or was) reputed to have (was, that is, until he arrived in the Food and Agriculture Ministry). Nor is Sardar Swaran Singh's political stature in dealing with the Congress Party or State Governments greater than Mr. Patil's—an important consideration where food policies have to be chosen and implemented. The main purpose the former might have served is that he would probably have been more pliable in accepting the views of Mr. Nanda and the Planning Commission. But considering that the latter entities are themselves to a large extent responsible for the crisis in food and agriculture, that could hardly have been counted as a major gain for the country.

In a speech delivered last Friday at a joint meeting in New Delhi of State Ministers for Agriculture and Community Development, Mr. Patil gave some idea of the reasons for the crisis. The essence of his complaint was that the Planning Commission merrily goes on fixing ambitious targets for agricultural production, but the money required to fulfil those targets is not forthcoming and procedural delays constitute a formidable handicap. The result is that, because the resources provided are inadequate, a target of only 8.4 million acres now looks feasible for minor irrigation, instead of the 9.5 million acres mentioned in the third plan. In the case of soil conservation, the achievement is likely to be only 8 million acres, as against the target of 11 million acres. Plant protection measures have suffered because the foreign exchange available for importing equipment and pesticides is far less than was originally expected. Finally, perhaps the most serious failure is that the supply of fertilisers has remained well below the annual targets; there seems to be almost no hope at all that the production target for fertilisers will be achieved by the end of the third plan.

All these are symptoms of one fundamental deficiency—that while ministers and their cohorts interminably parrot ancient *clichés* about the importance of agriculture, in reality they care little for it. Mr. Nehru set the fashion 15 years ago by announcing that the Government was going to tackle the food problem "on a war footing." But it was perhaps not wholly uncharacteristic of his achievement that, within two years of those famous words having been spoken, India found herself on the verge of famine from which she was saved only by a massive American wheat loan. The subsequent years have seen the same story repeated: tall talk and hearty self-congratulation after a good monsoon, followed by excuses, mutual recrimination and yet another American wheat loan after a not-so-good monsoon. The way to deal with this situation is not to pat the Central Food and Agriculture Minister on the back when the crops are satisfactory, and to kick him out when they are not: the way to deal with it is for the Prime Minister first of all to demonstrate through action, not words, that agriculture is being given a priority second only to defence. The anomaly has to be remedied where the Planning Commission goes on framing fancy schemes, while the Food and Agriculture Ministry goes on looking in vain for the authority and the money to implement them. Most important of all, perhaps, the indifference or inefficiency of State Governments in putting through programmes for helping the farmers has to be corrected. All these measures call for major political decisions inspired by the Prime Minister himself. The realisation has to dawn that India's food shortage stems from organisational and political failures as much as from anything else: it cannot be relieved by a periodic round of musical chairs in the Central Cabinet.

PRIVATE STEEL EXPANSION

THE announcement by the chairman, Mr. J. R. D. Tata, that further expansion is contemplated at the Jamshedpur works of the Tata Iron and Steel Company is welcome on several counts. In the first place, it should provide concrete evidence to sensitive U.S. senators that public sector expansion need not come in the way of private enterprise contributing as fully as possible to the growth of Indian steel manufacturing capacity. Secondly, Jamshedpur has unique locational advantages in that fewer ton-miles are required to assemble raw materials there than at any other steel plant site, existing or prospective. This advantage deserves to be fully exploited, and not merely for the cost benefits that it will bring to the Jamshedpur steelworks. Thirdly, the Tata plant has reserves of capacity in its rolling mills which should be fully utilised so as to achieve low-cost expansion. All three factors, it is important to emphasise, relate to the overall national interests quite apart from the considerations which a privately-owned enterprise working for a profit must keep in view. Judged in terms of the latter, Jamshedpur's expansion is equally valid because additional capacity at low cost realises the economies of scale upon which the success of many industries depends.

Every country expanding steel capacity has to try to achieve a balance between new units at "green field" sites and the expansion of existing works. The latter is not only less expensive (for the simple reason that "green field" sites call for heavy initial investment), but also makes development more manageable. In India, striking this balance is more difficult because of the rate at which steel capacity must expand to meet the economy's rising needs. Expansion alone obviously will not suffice, but even so the task for the future can be lightened by building new plants from the start with maximum provision for expansion. This means providing space for additional facilities in the plant layout and laying on services and utilities in a manner which would facilitate additions to meet future needs. It also means choosing basic equipment like the primary rolling mill with a built-in reserve of capacity to the extent justified by demand prospects. Both these principles are illustrated by Jamshedpur's experience, where the plant site has accommodated a 20-fold expansion since it started as a 100,000-ton unit in 1911 and still has space for another million tons of capacity. In India's special circumstances, where expansion outside the existing plant area may have run into political difficulties after the 1948 Industrial Policy Resolution, the flexibility of Jamshedpur's layout has indeed been providential. In equipment as well, Jamshedpur now stands to benefit from the fact that a 2 million ton blooming mill was installed during its last expansion programme (taking total capacity to 3 million tons) when the immediate requirement would have been met by equipment half that size. There is a lesson here to bear in mind while making the investment and technical decisions on the new steel nucleii which have to be started.

The Jamshedpur announcement completes the picture of the rôle that the private sector expects to play during the fourth plan. Indian Iron has already received approval for the first part of its programme to double capacity and may yet decide to telescope the second part with the first in order to launch a more comprehensive programme of development. For both Tata Steel and Indian Iron, the decision to go ahead will eventually depend on the outlook for steel prices. At their present level, the returns seem to be too low to justify asking shareholders for the very large sums that further expansion will require. In fact, as both the Raj Committee and the World Bank agree, present prices fail to cover replacement costs by a wide margin, the effect of which must be an uncompensated erosion of assets to the grave detriment of their owners' interests. Fortunately for the steel companies, whether publicly or privately owned, New Delhi appears now to recognise that steel prices should be allowed to reflect the true costs both to stimulate the industry's growth and to promote the long-term interests of the consumer. If this more realistic view should finally overcome the resistance it has encountered in some quarters, it will mark a turning point not only in steel but also in all the other key sectors where the precedent will certainly be used to great effect. Given a level of prices which permit reasonable profitability, there is no doubt that both the private-sector plants will wish to go full steam ahead with the expansion programmes now in view.

Between them, Burnpur and Jamshedpur can contribute an additional two million tons, certainly by 1970-71 but possibly earlier. That still leaves a big gap between the 9 million tons of capacity expected to be installed as a result of the current expansion of the three State steel plants, and the target of 18 million tons for 1970-71 to which the Cabinet is understood to have given its approval. How much of this 7-million ton gap will be filled by the new steelworks in Bokaro is still somewhat uncertain since the decision on its size and its phasing depends to a considerable degree on the terms that the Americans set, provided of course they finally decide to assist in its construction. The feasibility study carried out by the U.S. Steel Corporation for A.I.D. accepted the Indian view that Bokaro should be designed as a 4 million ton plant, in terms of the ultimate capacity of its rolling mills. U.S. Steel suggested, however, a phasing of construction to yield an interim production of 1.4 million tons in the first stage and 2.5 million tons in the second stage before the full 4 million tons was attained in almost 20 years. This slow unfolding of an urgently-needed project is unlikely to be acceptable to the Indian Government, but it remains to be seen how far it will be able to make its wishes prevail.

In the light of the Government's declared intention to proceed with Bokaro with U.S. aid or without, one may assume that this plant will make some contribution towards the fourth plan target. The residual gap will have to be filled partly by expansion and partly by new units such as those proposed in Neyveli, Goa and Bailadilla. Considering expansion first, Bhilai will again be in the best position to go ahead because, as things stand, it will be the first to complete its current expansion. The prospects look fairly good for Bhilai going up to 4 million tons, even though the blooming mill may not be able to do more than 3.5 million tons. This broad intention has already been voiced by both Indian and Russian spokesmen, and the investment requirements should come up for discussion when talks on aid for the fourth plan begin. As for Rourkela and Durgapur, it seems too early to start talking of further expansion when even the current one has yet to get fully under way. Looking at it, however, only from the technological standpoint, both plants may go up to 2.5 million tons, as appears to have been indicated in the studies made by Hindustan Steel for their current expansion. There thus seems a fair possibility of getting something like another 3 million tons from the three State plants over and above the capacity that will be in existence at the end of the current plan. This should set the sights for the number and size of new units on which work is to be started during the fourth plan. A case for a unit in Goa can be made irrespective of the domestic supply-demand picture since it is assumed that it will be built mainly to meet export demand and will be financed by credits granted against long-term purchase contracts.

The actual decisions need not be made until a clearer picture of the financial aspects of the fourth plan and its physical targets is available. This will show whether the country should in fact take on the sizable task of adding 9 million tons of steel capacity in five years or should be content to lower its sights to something more easily manageable. Mr. Tata has expressed himself in favour of a target of 15 million tons although several demand estimates place requirements at the higher level of 18 million tons. It is premature to start a controversy at this early stage and, in any case, there is no harm done in getting the preliminary planning exercises going on the basis of a higher figure, which will make the final decisions easier to make.

Current News and Comment

Planning and Economic Management

As Director of the Centre of International Studies at the Massachusetts Institute of Technology, Professor Max Millikan has been in close touch with developments in India through the studies the Centre has sponsored on various aspects of the Indian economy. This has enabled him to interpret with authority the aims of Indian planning to U.S. policymakers, serving often to remove misapprehensions which may have otherwise done the country great damage. His views on the current state of the economy are, therefore, of great interest, and the Calcutta Management Association is to be commended for persuading him to attend its two-day conference held at the beginning of this week. In Professor Millikan's view, the Indian economy is approaching the take-off stage, but it may not get off the ground unless development is accelerated to build the required momentum. Although he was disinclined to offer cut-and-dried prescriptions, he seemed to be recommending that India's fourth plan should aim at a rate of growth of about 5 percent a year. On the assumption that each additional unit of output will call for three units of capital investment, this implies the economy ploughing back something like 15 percent of the total income each year. At the end of the second plan, the annual rate of investment had reached the level of 10 percent or 11 percent, but this was only possible because a third or a quarter of the resources were provided by foreign aid. By the end of the third plan, the planners have counted upon the rate going up to 14 percent but this seems unlikely to be achieved on present indications.

What Professor Millikan would like to see is India achieving the rate she had hoped for by making a larger effort during the fourth plan. In his judgment, it is unlikely that this country will get foreign aid much above the current level of about $1,000 million from the West. He advocated, therefore, relying upon domestic resources to find the extra investment which a larger effort would require. In a regimented economy, this extra could be squeezed out of the consumer by depressing standards of living. Such a choice was not open, however, to a free society which believed in planning by consent. The only alternative was to strive for an improvement in productivity by bringing better standards of administration and management to bear on all economic activities. In this context, he underlined the need for using scarce foreign exchange to the best advantage.

Professor Millikan's plea for more ambitious planning seemed, at first sight, to miss the fact that the shortage of foreign exchange has become the most serious impediment to growth. He appeared, however, to be arguing that foreign exchange would have been less of a bottleneck if planned projects had not been grievously delayed by poor management. This view is valid as the case of steel readily illustrated. Had the three new plants come into production as scheduled, a large part of the outgo on steel imports—averaging Rs. 100 crores a year—might have been saved in the last two years. In the case of these plants, the delays were clearly administrative, but one might argue that other import-saving projects like the heavy engineering complex in Ranchi or fertiliser plants were held back because credits for the purchase of capital goods were initially not forthcoming. Professor Millikan and others of his view might not accept the argument as conclusive, and would take the stand that the allocation of foreign exchange should have from the start been more judiciously made.

A debate over past priorities is today largely beside the point, except to reinforce the plea for using foreign exchange to the best advantage. In this matter, business opinion will readily agree that industrial development should follow a proper order of priorities as was belatedly attempted last year when a short list of 21 industries was drawn up for the licensing of capital goods. But what of the wastage of foreign exchange implicit in licensing new units when the additional production can be more economically (and quickly) obtained through the expansion of existing ones? What, again, about the drain on resources caused by the undue emphasis on regional development? In many instances, the distortions stem from political compulsions, and not from any lack of economic common sense. These compulsions are present, perhaps in varying degrees, in all economies, but specially so in a newly independent, federal State subject to centrifugal pressures. Friends of India—more so those like Professor Millikan who come from countries where political give and take has developed into a fine art—will be less than realistic if they miss out this dimension of economic policy-making in this country.

India's Resources
are Precious
WASTE NOT,
WANT NOT

Progress of Rural Industries

Inaugurating the recent two-day conference on rural industries in New Delhi, the Prime Minister, Mr. Nehru, said that the progress of rural industries in India had been poor. This, along with the rapid rise in population, has been responsible for the increase in the unemployed labour force at a much faster rate than was estimated in the third plan. But the progress of rural industries in all parts of the country has not been equally slow. As Mr. Nehru pointed out, the progress of rural industries in Punjab, especially in Ludhiana district, had been "commendable" while in rural Madras conditions were quite "exciting" and in the eastern districts of U.P. and the whole of Bihar they were "very depressing". Although rural industries, like other industries, have had to face the shortage of raw materials, electric power and transport as well as financial difficulties, the main causes for their slow growth appear to be the shortage of entrepreneurial talent and organising capacity and the poor planning of rural industries by the Planning Commission and State Governments. A precise definition of what constitutes a rural industry is not, in fact, yet available. In his speech, Professor D. R. Gadgil called for a clear definition before the industrialisation of rural areas could be expected to make the desired progress.

The problem is not as simple as may appear at first sight. Mr. Jayaprakash Narain's suggestion that in order to be successful rural industrialisation should be accelerated by the Khadi and Village Industries Commission and Professor Gadgil's suggestion that small industries with a high employment potential should be started in rural areas to take advantage of the available local raw materials will not really solve the problem. The problem is not only one of starting such industries but also of making them viable units producing quality products. Except where such small industries have been started to supply the ancillary needs of large-scale enterprises, they have generally failed to make much headway. Besides, the problem is as much to provide additional employment opportunities to people in rural areas as to increase the income of artisans and other skilled persons in rural areas. This objective will be served better if some modern large-scale units are set up as far as possible in rural areas and not in or around big towns and cities.

The Planning Commission and the Government have mainly relied for rural industrialisation on co-operatives. But for various reasons, the co-operative movement has failed to tackle this problem. So Professor Schumacher's suggestion that "area development corporations" should be set up by the Government to take care of rural industries deserves careful consideration. These corporations should, in the first instance, undertake an industrial survey of the rural area under their charge. They will then devise practical ways and means of bringing about the industrialisation of such areas. Furthermore, efforts should be made to evolve "intermediate technology"—methods and techniques which are neither very sophisticated nor hopelessly tied down to primitive modes of production—for use by rural industries so that their costs of production might be reduced, productivity a labourer increased and the quality of output improved without either involving too heavy a capital investment or reducing the employment potential of rural industries. It should be possible to accelerate rural industrialisation if concentrated and centralised efforts are made in right earnest.

Raising Productivity through Work Study

At its annual meeting last December, the Associated Chambers of Commerce passed a resolution

hitherto been a major drain on her foreign exchange resources. More liberal chartering of tramps might also help, especially since it will take time to increase the liner tonnage.

FIDDLING WITH FOOD

FEW people can have any clear idea of the sense and purpose underlying last week's comedy wherein Mr. S. K. Patil first offered, and then was persuaded not to press, his resignation from the Food and Agriculture Ministry and the Central Cabinet. Reports from New Delhi indicate that the prologue to the farce was enacted last month, just before the ministerial reshuffle necessitated by the departure of Mr. K. D. Malaviya. Hafiz Mohammed Ibrahim and Mr. K. C. Reddy from the Cabinet. The Prime Minister, Mr. Nehru, felt at the time that Mr. Patil should be moved to the Railways Ministry, and Sardar Swaran Singh moved in the reverse direction, to Food and Agriculture. Mr. Patil, understandably, objected that unless the change was to be part of a major Cabinet reshuffle, it would imply a lack of confidence in his policies, especially since these had been subjected to severe criticism only a little earlier. Mr. Nehru, it seemed, saw the point and decided to drop the idea for the time being. But then, for some mysterious reason, it occurred to the Prime Minister last week that the game of musical chairs started a month ago had not quite been completed, so he wrote to Mr. Patil suggesting that he exchange portfolios with Sardar Swaran Singh. Whereupon Mr. Patil did what Congressmen nowadays rarely do—handed in his resignation.

It is not easy to decipher what Mr. Nehru's aim might have been in originally recommending the change, inviting the rebuff implicit in refusal, then repeating the recommendation, and acquiescing in a second rebuff. Dark rumours have been heard to the effect that the moving spirit behind the machinations was Mr. G. L. Nanda, Minister for Labour, Employment and Planning, and deputy chairman of the Planning Commission—who is desperately looking round for scapegoats to carry the blame for the failure of the third plan. According to other rumours, the Patil-Swaran Singh exchange was meant to be of no great significance: the Congress Party being short of ministerial talent, the Prime Minister has no option but to try and give his Cabinet a "new look" periodically by redistributing portfolios according to the laws of the roulette wheel. But, uncharitable as these explanations might seem in their suggestion of personal failure, frustration and jealousies, it does appear likely that one point of policy and principle was involved. It was that Mr. Nanda and the Planning Commission—happy in the knowledge that they have no direct responsibility for the weaknesses of the food administration—were in favour of rationing and controls as an answer to the food shortage. Mr. Patil, on the other hand, while recognising the need for stricter regulation, felt that the regulation should remain far short of rationing in view of the well-known deficiencies of India's food-dispensing bureaucracy.

In this argument, there can be no doubt that Mr. Patil was right; and from that narrow point of view, it is satisfying that he was ultimately prevailed upon not to press his resignation. In any case, the precise advantage to be gained by moving Sardar Swaran Singh to the Food and Agriculture Ministry was never very clear. He does not have the organisational drive that Mr. Patil is (or was) reputed to have (was, that is, until he arrived in the Food and Agriculture Ministry). Nor is Sardar Swaran Singh's political stature in dealing with the Congress Party or State Governments greater than Mr. Patil's—an important consideration where food policies have to be chosen and implemented. The main purpose the former might have served is that he would probably have been more pliable in accepting the views of Mr. Nanda and the Planning Commission. But considering that the latter entities are themselves to a large extent responsible for the crisis in food and agriculture, that could hardly have been counted as a major gain for the country.

In a speech delivered last Friday at a joint meeting in New Delhi of State Ministers for Agriculture and Community Development, Mr. Patil gave some idea of the reasons for the crisis. The essence of his complaint was that the Planning Commission merrily goes on fixing ambitious targets for agricultural production, but the money required to fulfil those targets is not forthcoming and procedural delays constitute a formidable handicap. The result is that, because the resources provided are inadequate, a target of only 8.4 million acres now looks feasible for minor irrigation, instead of the 9.5 million acres mentioned in the third plan. In the case of soil conservation, the achievement is likely to be only 8 million acres, as against the target of 11 million acres. Plant protection measures have suffered because the foreign exchange available for importing equipment and pesticides is far less than was originally expected. Finally, perhaps the most serious failure is that the supply of fertilisers has remained well below the annual targets; there seems to be almost no hope at all that the production target for fertilisers will be achieved by the end of the third plan.

All these are symptoms of one fundamental deficiency—that while ministers and their cohorts interminably parrot ancient *clichés* about the importance of agriculture, in reality they care little for it. Mr. Nehru set the fashion 15 years ago by announcing that the Government was going to tackle the food problem "on a war footing." But it was perhaps not wholly uncharacteristic of his achievement that, within two years of those famous words having been spoken, India found herself on the verge of famine from which she was saved only by a massive American wheat loan. The subsequent years have seen the same story repeated: tall talk and hearty self-congratulation after a good monsoon, followed by excuses, mutual recrimination and yet another American wheat loan after a not-so-good monsoon. The way to deal with this situation is not to pat the Central Food and Agriculture Minister on the back when the crops are satisfactory, and to kick him out when they are not; the way to deal with it is for the Prime Minister first of all to demonstrate through action, not words, that agriculture is being given a priority second only to defence. The anomaly has to be remedied where the Planning Commission goes on framing fancy schemes, while the Food and Agriculture Ministry goes on looking in vain for the authority and the money to implement them. Most important of all, perhaps, the indifference or inefficiency of State Governments in putting through programmes for helping the farmers has to be corrected. All these measures call for major political decisions inspired by the Prime Minister himself. The realisation has to dawn that India's food shortage stems from organisational and political failures as much as from anything else: it cannot be relieved by a periodic round of musical chairs in the Central Cabinet.

PRIVATE STEEL EXPANSION

THE announcement by the chairman, Mr. J. R. D. Tata, that further expansion is contemplated at the Jamshedpur works of the Tata Iron and Steel Company is welcome on several counts. In the first place, it should provide concrete evidence to sensitive U.S. senators that public sector expansion need not come in the way of private enterprise contributing as fully as possible to the growth of Indian steel manufacturing capacity. Secondly, Jamshedpur has unique locational advantages in that fewer ton-miles are required to assemble raw materials there than at any other steel plant site, existing or prospective. This advantage deserves to be fully exploited, and not merely for the cost benefits that it will bring to the Jamshedpur steelworks. Thirdly, the Tata plant has reserves of capacity in its rolling mills which should be fully utilised so as to achieve low-cost expansion. All three factors, it is important to emphasise, relate to the overall national interests quite apart from the considerations which a privately-owned enterprise working for a profit must keep in view. Judged in terms of the latter, Jamshedpur's expansion is equally valid because additional capacity at low cost realises the economies of scale upon which the success of many industries depends.

Every country expanding steel capacity has to try to achieve a balance between new units at "green field" sites and the expansion of existing works. The latter is not only less expensive (for the simple reason that "green field" sites call for heavy initial investment), but also makes development more manageable. In India, striking this balance is more difficult because of the rate at which steel capacity must expand to meet the economy's rising needs. Expansion alone obviously will not suffice, but even so the task for the future can be lightened by building new plants from the start with maximum provision for expansion. This means providing space for additional facilities in the plant layout and laying on services and utilities in a manner which would facilitate additions to meet future needs. It also means choosing basic equipment like the primary rolling mill with a built-in reserve of capacity to the extent justified by demand prospects. Both these principles are illustrated by Jamshedpur's experience, where the plant site has accommodated a 20-fold expansion since it started as a 100,000-ton unit in 1911 and still has space for another million tons of capacity. In India's special circumstances, where expansion outside the existing plant area may have run into political difficulties after the 1948 Industrial Policy Resolution, the flexibility of Jamshedpur's layout has indeed been providential. In equipment as well, Jamshedpur now stands to benefit from the fact that a 2 million ton blooming mill was installed during its last expansion programme (taking total capacity to 3 million tons) when the immediate requirement would have been met by equipment half that size. There is a lesson here to bear in mind while making the investment and technical decisions on the new steel nucleii which have to be started.

The Jamshedpur announcement completes the picture of the rôle that the private sector expects to play during the fourth plan. Indian Iron has already received approval for the first part of its programme to double capacity and may yet decide to telescope the second part with the first in order to launch a more comprehensive programme of development. For both Tata Steel and Indian Iron, the decision to go ahead will eventually depend on the outlook for steel prices. At their present level, the returns seem to be too low to justify asking shareholders for the very large sums that further expansion will require. In fact, as both the Raj Committee and the World Bank agree, present prices fail to cover replacement costs by a wide margin, the effect of which must be an uncompensated erosion of assets to the grave detriment of their owners' interests. Fortunately for the steel companies, whether publicly or privately owned, New Delhi appears now to recognise that steel prices should be allowed to reflect the true costs both to stimulate the industry's growth and to promote the long-term interests of the consumer. If this more realistic view should finally overcome the resistance it has encountered in some quarters, it will mark a turning point not only in steel but also in all the other key sectors where the precedent will certainly be used to great effect. Given a level of prices which permit reasonable profitability, there is no doubt that both the private-sector plants will wish to go full steam ahead with the expansion programmes now in view.

Between them, Burnpur and Jamshedpur can contribute an additional two million tons, certainly by 1970-71 but possibly earlier. That still leaves a big gap between the 9 million tons of capacity expected to be installed as a result of the current expansion of the three State steel plants, and the target of 18 million tons for 1970-71 to which the Cabinet is understood to have given its approval. How much of this 7-million ton gap will be filled by the new steelworks in Bokaro is still somewhat uncertain since the decision on its size and its phasing depends to a considerable degree on the terms that the Americans set, provided of course they finally decide to assist in its construction. The feasibility study carried out by the U.S. Steel Corporation for A.I.D. accepted the Indian view that Bokaro should be designed as a 4 million ton plant, in terms of the ultimate capacity of its rolling mills. U.S. Steel suggested, however, a phasing of construction to yield an interim production of 1.4 million tons in the first stage and 2.5 million tons in the second stage before the full 4 million tons was attained in almost 20 years. This slow unfolding of an urgently-needed project is unlikely to be acceptable to the Indian Government, but it remains to be seen how far it will be able to make its wishes prevail.

In the light of the Government's declared intention to proceed with Bokaro with U.S. aid or without, one may assume that this plant will make some contribution towards the fourth plan target. The residual gap will have to be filled partly by expansion and partly by new units such as those proposed in Neyveli, Goa and Bailadilla. Considering expansion first, Bhilai will again be in the best position to go ahead because, as things stand, it will be the first to complete its current expansion. The prospects look fairly good for Bhilai going up to 4 million tons, even though the blooming mill may not be able to do more than 3.5 million tons. This broad intention has already been voiced by both Indian and Russian spokesmen, and the investment requirements should come up for discussion when talks on aid for the fourth plan begin. As for Rourkela and Durgapur, it seems too early to start talking of further expansion when even the current one has yet to get fully under way. Looking at it, however, only from the technological standpoint, both plants may go up to 2.5 million tons, as appears to have been indicated in the studies made by Hindustan Steel for their current expansion. There thus seems a fair possibility of getting something like another 3 million tons from the three State plants over and above the capacity that will be in existence at the end of the current plan. This should set the sights for the number and size of new units on which work is to be started during the fourth plan. A case for a unit in Goa can be made irrespective of the domestic supply-demand picture since it is assumed that it will be built mainly to meet export demand and will be financed by credits granted against long-term purchase contracts.

The actual decisions need not be made until a clearer picture of the financial aspects of the fourth plan and its physical targets is available. This will show whether the country should in fact take on the sizable task of adding 9 million tons of steel capacity in five years or should be content to lower its sights to something more easily manageable. Mr. Tata has expressed himself in favour of a target of 15 million tons although several demand estimates place requirements at the higher level of 18 million tons. It is premature to start a controversy at this early stage and, in any case, there is no harm done in getting the preliminary planning exercises going on the basis of a higher figure, which will make the final decisions easier to make.

Current News and Comment

Planning and Economic Management

As Director of the Centre of International Studies at the Massachusetts Institute of Technology, Professor Max Millikan has been in close touch with developments in India through the studies the Centre has sponsored on various aspects of the Indian economy. This has enabled him to interpret with authority the aims of Indian planning to U.S. policymakers, serving often to remove misapprehensions which may have otherwise done the country great damage. His views on the current state of the economy are, therefore, of great interest, and the Calcutta Management Association is to be commended for persuading him to attend its two-day conference held at the beginning of this week. In Professor Millikan's view, the Indian economy is approaching the take-off stage, but it may not get off the ground unless development is accelerated to build the required momentum. Although he was disinclined to offer cut-and-dried prescriptions, he seemed to be recommending that India's fourth plan should aim at a rate of growth of about 5 percent a year. On the assumption that each additional unit of output will call for three units of capital investment, this implies the economy ploughing back something like 15 percent of the total income each year. At the end of the second plan, the annual rate of investment had reached the level of 10 percent or 11 percent, but this was only possible because a third or a quarter of the resources were provided by foreign aid. By the end of the third plan, the planners have counted upon the rate going up to 14 percent but this seems unlikely to be achieved on present indications.

What Professor Millikan would like to see is India achieving the rate she had hoped for by making a larger effort during the fourth plan. In his judgment, it is unlikely that this country will get foreign aid much above the current level of about $1,000 million from the West. He advocated, therefore, relying upon domestic resources to find the extra investment which a larger effort would require. In a regimented economy, this extra could be squeezed out of the consumer by depressing standards of living. Such a choice was not open, however, to a free society which believed in planning by consent. The only alternative was to strive for an improvement in productivity by bringing better standards of administration and management to bear on all economic activities. In this context, he underlined the need for using scarce foreign exchange to the best advantage.

Professor Millikan's plea for more ambitious planning seemed, at first sight, to miss the fact that the shortage of foreign exchange has become the most serious impediment to growth. He appeared, however, to be arguing that foreign exchange would have been less of a bottleneck if planned projects had not been grievously delayed by poor management. This view is valid as the case of steel readily illustrated. Had the three new plants come into production as scheduled, a large part of the outgo on steel imports—averaging Rs. 100 crores a year—might have been saved in the last two years. In the case of these plants, the delays were clearly administrative, but one might argue that other import-saving projects like the heavy engineering complex in Ranchi or fertiliser plants were held back because credits for the purchase of capital goods were initially not forthcoming. Professor Millikan and others of his view might not accept the argument as conclusive, and would take the stand that the allocation of foreign exchange should have from the start been more judiciously made.

A debate over past priorities is today largely beside the point, except to reinforce the plea for using foreign exchange to the best advantage. In this matter, business opinion will readily agree that industrial development should follow a proper order of priorities as was belatedly attempted last year when a short list of 21 industries was drawn up for the licensing of capital goods. But what of the wastage of foreign exchange implicit in licensing new units when the additional production can be more economically (and quickly) obtained through the expansion of existing ones? What, again, about the drain on resources caused by the undue emphasis on regional development? In many instances, the distortions stem from political compulsions, and not from any lack of economic common sense. These compulsions are present, perhaps in varying degrees, in all economies, but specially so in a newly independent, federal State subject to centrifugal pressures. Friends of India—more so those like Professor Millikan who come from countries where political give and take has developed into a fine art—will be less than realistic if they miss out this dimension of economic policy-making in this country.

India's Resources
are Precious
WASTE NOT,
WANT NOT

Progress of Rural Industries

Inaugurating the recent two-day conference on rural industries in New Delhi, the Prime Minister, Mr. Nehru, said that the progress of rural industries in India had been poor. This, along with the rapid rise in population, has been responsible for the increase in the unemployed labour force at a much faster rate than was estimated in the third plan. But the progress of rural industries in all parts of the country has not been equally slow. As Mr. Nehru pointed out, the progress of rural industries in Punjab, especially in Ludhiana district, had been "commendable" while in rural Madras conditions were quite "exciting" and in the eastern districts of U.P. and the whole of Bihar they were "very depressing". Although rural industries, like other industries, have had to face the shortage of raw materials, electric power and transport as well as financial difficulties, the main causes for their slow growth appear to be the shortage of entrepreneurial talent and organising capacity and the poor planning of rural industries by the Planning Commission and State Governments. A precise definition of what constitutes a rural industry is not, in fact, yet available. In his speech, Professor D. R. Gadgil called for a clear definition before the industrialisation of rural areas could be expected to make the desired progress.

The problem is not as simple as may appear at first sight. Mr. Jayaprakash Narain's suggestion that in order to be successful rural industrialisation should be accelerated by the Khadi and Village Industries Commission and Professor Gadgil's suggestion that small industries with a high employment potential should be started in rural areas to take advantage of the available local raw materials will not really solve the problem. The problem is not only one of starting such industries but also of making them viable units producing quality products. Except where such small industries have been started to supply the ancillary needs of large-scale enterprises, they have generally failed to make much headway. Besides, the problem is as much to provide additional employment opportunities to people in rural areas as to increase the income of artisans and other skilled persons in rural areas. This objective will be served better if some modern large-scale units are set up as far as possible in rural areas and not in or around big towns and cities.

The Planning Commission and the Government have mainly relied for rural industrialisation on co-operatives. But for various reasons, the co-operative movement has failed to tackle this problem. So Professor Schumacher's suggestion that "area development corporations" should be set up by the Government to take care of rural industries deserves careful consideration. These corporations should, in the first instance, undertake an industrial survey of the rural area under their charge. They will then devise practical ways and means of bringing about the industrialisation of such areas. Furthermore, efforts should be made to evolve "intermediate technology"—methods and techniques which are neither very sophisticated nor hopelessly tied down to primitive modes of production—for use by rural industries so that their costs of production might be reduced, productivity a labourer increased and the quality of output improved without either involving too heavy a capital investment or reducing the employment potential of rural industries. It should be possible to accelerate rural industrialisation if concentrated and centralised efforts are made in right earnest.

Raising Productivity through Work Study

At its annual meeting last December, the Associated Chambers of Commerce passed a resolution

which urged that in view of the national emergency, standards of productivity should be raised all round. Productivity can be most effectively increased and true economic costs lowered, the resolution emphasised, by the full and efficient utilisation of plant and machinery and by the adoption of realistic schemes of incentive payments based on expert study of the work concerned, and the replacement, wherever possible, of bonus payments by scientifically-designed incentive schemes. For the attainment of these ends, Assocham advocated a national campaign. As part of its own effort, the Chambers sponsored the visit of Mr. Russell Currie, president of the European Work Study Federation and a pioneer of work study in Britain and Europe, who came to India also as a guest of the Government. His visit—the second—stimulated considerable interest in the question of raising industrial productivity in India. He led discussions on these questions in Calcutta, Delhi, Madras, Bangalore and Bombay, through the good offices of the productivity councils and management associations and the Employers Federation of India. Some of the ideas which formed the basis of those discussions are contained in a booklet just published by Associated Chambers. Modern work study, the booklet explains, has moved a long way from the limited concepts of time and motion study. The new science is broadly divided into two branches—method study and work measurement. The former is concerned with improving ways of doing work and covers such matters as buildings and workplace layout, plant and equipment design, manpower and materials handling, standardised methods, safety standards and working environment. The latter is concerned with the application of techniques designed to establish the time for a qualified person to carry out a specified job at a defined level of performance: in other words, the evaluation of the work content of a job. The booklet explains the basic principles and procedures for the application of these branches of work study to all spheres of industrial activity. In a foreword, the Assocham president, Mr. A. R. Foster, hopes that this booklet will help spread a better understanding of what is involved, and how productivity can increase the national wealth.

Investment of Co-operative Funds

On the occasion of the latest meeting of the Reserve Bank's Standing Advisory Committee on Agricultural Credit recently in Bombay, some notes were prepared by the officials of the Bank on the administration of farm credit for the Committee's consideration. One of the notes reviewed investment trends of co-operative funds in the shares of other co-operative institutions. It was stated that of the total investment of central co-operative banks, about 93 percent had been invested in Government and trustee securities, fixed deposits and in the shares of apex banks. The investment of apex co-operative banks had been always fully in Government and other securities, or in fixed deposits with other banks. A good portion had gone to shares of institutions promoted in partnership with the Government, while a substantial part had been invested in marketing societies, consumer stores, ginning and pressing factories, printing presses, and other undertakings.

The most significant items, however, were in the shares of sugar factories and spinning mills. The total investments of all apex and central banks in the sugar factories as on 30th June, 1961, amounted to Rs. 52.64 lakhs. Subsequent to that date, four more banks, invested a further amount of Rs. 4.50 lakhs in these shares, raising the total to Rs. 58.14 lakhs. The total investment of central co-operative banks in the shares of spinning mills as on 30th June, 1961, amounted to Rs. 7.93 lakhs. After that date, two more banks invested a further sum of Rs. 2.50 lakhs in these mills, bringing the total to Rs. 10.43 lakhs. In this connection, the note pointed out that intrinsically, such investments by co-operative financing institutions were unsound, and they should be discouraged "both as a matter of principle and for important practical considerations." The bulk of the resources of the apex and central banks consist of borrowed funds of a short-term nature. It is, therefore, not prudent for these banks to lock up funds in long-term investments. It may not also be advisable for the banks to invest their funds in such shares because, in view of the difficulty of marketing them, banks would be unable to draw on them in times of emergency. The Standing Advisory Committee after a full discussion of the question agreed with the suggestions contained in the note. It added that it would also be improper for these institutions to get their funds locked up in the shares of other co-operatives organised for such purposes as production, marketing and transport. Care should be taken to see that investments were made in easily realisable assets, the Committee stressed.

Making Income Tax Assessment

While it is the duty of the Income Tax Officer to see that no income escapes tax liability, he has strictly to comply with legal provisions. He has also to be sympathetic to the assessee in order to ensure that while the Government gets the due revenue, the assessee is not subjected to undue hardship. An important case which has a special bearing on this point recently came up before a division bench of the Allahabad High Court consisting of the Chief Justice, Mr. M. C. Desai and Mr. Justice R. S. Pathak. The facts of the case are that under Section 13 of the Income Tax Act, the Income Tax Officer had assessed Messrs Beni Prasad Vishwanath Prasad of Varanasi, dealing in cloth and silk goods, for 1946-47 on an estimate of income made by him. A cash credit entry of Rs. 20,000 was subsequently discovered in the account books of the firm. So the amount was added by the Income Tax Officer to his own estimate of the firm's income for 1946-47 for the purpose of assessment. This was done on the ground that this income arose from "sources within the knowledge and not disclosed to the department".

There was no conclusive evidence whether the sum of Rs. 20,000 arose from the silk and cloth business or from some other source. The Income Tax (Appellate) Tribunal referred to the High Court the question whether on the facts and circumstances of the case, there was any ground to hold that the sum of Rs. 20,000 was income of the assessee from some other source and was not income included in the assessed income as estimated by the Income Tax Officer on the rejection of the account books of the assessee firm. If it was found that the income of Rs. 20,000 was from the silk and cloth business, the Income Tax Officer would not be justified in including it in the firm's income as estimated by him because in that case, the income of Rs. 20,000 would already be covered by his estimate. But if the income was proved to arise from some other source, the Income Tax Officer would be fully justified in adding it to his estimate of the firm's income for assessment of the tax.

The Court concluded that since the Income Tax Officer had treated the income of Rs. 20,000 as being the income from an undisclosed source merely because the source was not known to the income tax authorities, it could not be said that the income was not from the silk and cloth business whose income had been estimated by the I.T.O. The division bench of the High Court stated that this income might have arisen from the silk and cloth business or from some other business or in fact from a source under another head of income altogether.

But there was an important legal point in this case. The I.T.O. had added this income of Rs. 20,000 to the firm's taxable income as it was credited in the firm's books within the period for which the assessment had to be made. The firm's explanation as to the source of the income was unacceptable to him. The division bench of the Court held that the fact of the income having been credited to the accounts of the firm and the further fact that the assessee's explanation as to the source of the income had been found unacceptable or even false did not justify the presumption that the cash and credit entry was the firm's assessable income. This means that the I.T.O.'s rejection of the firm's explanation about the source of its income did not create any presumption concerning the latter. Unless it could be proved conclusively that the income arose from a source other than the silk and cloth business for which the I.T.O. had estimated the income, he was not justified in adding this income to the firm's taxable income. Since the judgment of the Allahabad High Court differed from those of some other High Courts in similar cases and since an important legal question was involved, the division bench of the Allahabad High Court considered it a fit case for appeal to the Supreme Court.

Raising Industrial Output

In his presidential address at the annual general meeting of the Merchants Chamber of Uttar Pradesh recently in Kanpur, Mr. P. D. Singhania criticised the lack of a sense of urgency in the Government's working in spite of the emergency. He found from his experience that it took, on average, about 26 months before any project could be cleared through the Licensing Committee, the Capital Goods Committee, the Controller of Capital Issues, the ministries and the import control authorities. As a result, industrial expansion has virtually come to a standstill. Even the use of existing capacity is hampered by shortages of raw materials, stores, power and transport. Both the Government and industry should co-operate in speeding up production without going into controversies about the shares of the public and private sectors. "Once production in increasing measure gathers momentum, natural forces of demand and supply, will ultimately take care of social justice, which, it must be remembered, cannot be secured any more by legislation, however well-meaning it may be, than by actual physical output of goods and services."

Apart from using existing capacity fully, it is necessary to establish new capacity in order to step up production and offset the inflationary effects of increased Government spending. The corporate sector is now subject to pressure from two directions. If the Government's fiscal policy has greatly curtailed its earnings, the monetary policy of the Reserve Bank has restricted the supply of bank credit even for productive purposes. Apparently the credit restrictions have been imposed to arrest the rising trend of prices, but in effect they are curtailing production and thus adding to the pressure on prices. Mr. Singhania pointed out that the fiscal levies imposed by the Government, the rising cost of transport and other allied factors had pushed up prices. Credit restrictions are not the answer. As things are, the industries which were set up during the last three years and which are now going into production will find it extremely difficult to get working capital. If production is hampered thereby, shortages will continue and prices will keep rising. Mr. Singhania also pleaded for scrapping the increase in the import duties on industrial raw materials. If there was any justification for keeping import duties low in 1957, it is all the more important that they should remain low now. A rise in the duty on raw materials will naturally be reflected in the prices of finished goods. This argument is also true in the case of excise duties.

Raw Materials for Plastics

The plastics industry in India has made a remarkable progress over a period of ten years. Its production has increased from 725 tonnes in 1951-52 to 10,600 tonnes in 1960-61. But the industry's progress could have been still better but for the shortages of raw material and imported machinery, precision tools, moulds and dyes. The situation has deteriorated since the state of emergency was declared because of reduced imports of machinery and the diversion of the indigenous output of plasticisers to the making of D.B.P. for defence requirements. But the observations of the Central Minister for Industry, Mr. Nityanand Kanungo, at the All-India Plastics Manufacturers Conference in Bombay that imports of finished plasticisers would be made not only from the rupee payment area but also under the A.I.D. programme, created the hope that the third plan target of 74,000 tonnes would be achieved and that in the future it would be possible to produce a still larger output of plastic goods. Four units have already been licensed for making machinery required by the industry and two of them are soon expected to go into production. It is also expected that with the development of the petro-chemicals industry, the supply of cheap raw materials will increase. The industry's output is in great demand not only in India, but also in foreign countries. If the industry concentrates on the production of those goods which could really be substitutes for some engineering construction materials, as is possible, there will be a much increased demand for plastics goods produced in India.

Like other industries, the plastics industry in India suffers from excessive taxation. There is not only a 60 percent Customs duty on imported raw materials, but also an excise duty of 24 percent on the industry's products. According to Mr. Kalyan Sen, chairman of the reception committee of the Association, the Government is collecting a revenue of Rs. 1.50 crores from the industry, against the budgeted amount of Rs. 40 lakhs. This shows that there is ample scope for reducing the incidence of taxation on the industry without upsetting the Government's finances. The difficulties of the smaller units have been accentuated by the discriminatory policy of the State Trading Corporation which prefers large-scale units to small producers for the distribution of imported P.V.C. resin powder.

Increasing Sugar Production

The sugar industry in Madras, Mysore and Maharashrta is not faced with the same degree of competition from the *gur* and *khandsari* industry for the available sugarcane supplies as in U.P., Bihar and Punjab. The yield of sugarcane an acre there is also much higher than in northern India. But the industry in Maharashtra and the south is suffering from some identical difficulties as that in the north. Unless the Government grants some tax relief to the industry and provides some incentives for increasing production, the output of factory sugar in India is not likely to reach the target of 3.3 million tons in 1963-64 and 4 million tons by the end of the third plan period. In view of this, the statement which Mr. S. K. Patil, Central Food Minister, made at the annual general meeting of the Deccan Sugar Factories Association in Bombay that the Government would provide incentives to the sugar industry for higher production "the like of which it has not seen before" is very much to be welcomed. But it would have been better if the Central Food Minister had given a more definite idea of the nature of incentives. In any case, its policy should be finalised much before the next crushing season starts so that the sugar factories might get full advantage of the incentives to be provided by the Government.

In most parts of the country the crushing season usually starts from 15th November. In 1963-64, it might be necessary to start the crushing season a month earlier, i.e., on 15th October, 1963, not only because the existing sugar stocks with the industry might not last longer but because it is necessary to have a longer crushing season to increase the output of factory sugar. But since the recovery of sugar in the early period might not exceed 7 percent, against the average of at least 9½ percent in the entire crushing season, it would be necessary to provide incentives to sugar factories which start early crushing operations on the same lines as in the 1959-60 crushing season, but at a more generous level in view of the higher production costs. The ex-factory prices of sugar fixed by the Government on the basis of the Tariff Commission's recommendation have proved uneconomic to the industry. Strangely enough, when consumers all over the country have paid higher prices for sugar than ever before, sugar factories, it is claimed, have not benefited from the higher prices. In spite of the increase of Re. 1 subsequently allowed by the Central Government in the ex-factory prices for U.P. and Bihar mills, the fixed prices are said to be uneconomic. The Association's president, Mr. M. L. Apte, pointed out that the ex-factory price of Rs. 109.85 fixed for the Maharashtra factories did not compensate them for the higher production costs. Besides, it was lower than the ceiling of Rs. 115 on *gur* prices fixed by the State Government. In order to be able to increase sugar production in 1963-64, the Government will have to fix more economic ex-factory sugar prices and will have to take care that *gur* and *khandsari* prices are not higher so that the supply of sugarcane might not be diverted from factories to the *gur* and *khandsari* units.

Although it is the Government's declared policy to encourage the growth of co-operative sugar

CARBORUNDUM
UNIVERSAL
ABRASIVES

a
change
in

marketing
arrangements

The Carborundum Universal Branch Office at Calcutta is now functioning for the direct marketing of their well-known range of Coated and Bonded Abrasives.

All inquiries (both Trade and Consumer) may please be addressed to:

Carborundum Universal Ltd.,
Armenian College Building (Second Floor),
56-D, Free School Street, Calcutta-16
Telegrams: "CUMICAL, CALCUTTA"

Territories Covered:

For Grinding Wheels and other Bonded Abrasives: West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Eastern half of Madhya Pradesh.

For Coated Abrasives: West Bengal, Bihar, Assam, Orissa, and Part of Madhya Pradesh.

Carborundum Universal are grateful to M/s. William Jacks & Co., Ltd., Calcutta, for their valuable services all these years in the distribution of their abrasive products.

CARBORUNDUM UNIVERSAL LTD.
Head Office: 52/53, Jehangir Street, Madras-1
Telephone: 29141 (8 lines)
Works: Tiruvottiyur.

factories, Mr. Apte said that joint-stock sugar companies were finding it difficult to get an adequate supply of sugarcane because of the drive of co-operative sugar factories. If this condition is allowed to continue, the balance between the joint-stock companies and co-operative sugar factories will be disturbed which will affect the production of sugar in the country. Another point which Mr. Apte raised was that whereas in the past sugar factories with a cane crushing capacity of 1,000 tons were considered optimum, now optimum units would be those with a crushing capacity of 1,500 to 2,000 tons.

CORRESPONDENCE

C. L. R. P. SHARE ISSUE

(To The Editor of "Capital")

Sir,

The particulars given by the Ditcher in the issue of your journal dated 18th July concerning the issue of shares worth £170,600 (face value) by the City of London Real Property Company for the acquisition of the assets of another company, valued in the market at £580,000, are interesting. Had the sum of £580,000 been paid in cash there is no doubt that the same would have appeared on the assets side of the balance-sheet. But as for the objection that the block of shares could have been placed on the market and the proceeds likewise accounted for, an important point to remember is that the shares placed on the market at one time, are not likely to have fetched the said sum of £580,000. On the other hand, what went out of the Company's hands was shares of the face value of £170,000, and it appears correct to hold that only this sum should enter the balance-sheet. Moreover, the liability on account of dividends, etcetera, is for £170,000 only. Further, the figures in the balance-sheet remain "un-inflated," a conservative and cautious step in contrast with the present-day practice of several companies to revalue the block account and to exhibit larger sums on the two sides of the balance-sheet.

All things considered, there appears to be more justification for the course adopted by the Company with the concurrence of its counsel and of the consulting accountants than for the other view. That the Company has on competent advice rejected the view of its auditors is no reason for the two quarreling with each other and insisting on separation unless there had been other grounds of differences brewing for some time justifying separation as the best course. Aftar all, the Company's auditors should bear in mind that they cannot have everything their own way and be prepared to tolerate legitimate differences of opinion.

Yours etcetera,
K. V. Iyer.

Madras, 31st July.

FREIGHT RISE RESENTED

(To The Editor of "Capital")

Sir,

The decision of the Karmahom Conference Lines to fix the general freight rise on west-bound cargo at 12.5 percent with effect from 1st August is both surprising and unfortunate. Surprising, because this completely disregards the recommendation by the Maritime Freight Commission which has been accepted by the Government of India. And unfortunate, because the increase has been effected at a time when the country is making an all-out effort to step up exports in order to earn the badly needed foreign exchange. Informed observers have, in fact, been critical even of the 7.5 percent rise recommended by the Freights Commission as the Commission does not seem to have thoroughly examined all the relevant basic factors. Its assertions that "there is no doubt that the costs of operation have been steadily increasing since 1957 when the Conference had announced its last general increase in freight rates", cannot carry conviction unless it can be established after a thorough check-up of the expenditure side that the Conference Lines have not been faring well. The Commission's attempt to justify the case for higher freight rates by referring to the increase in India's road, railway and coastal shipping freights is hardly convincing. It is regrettable that it should have recommended an increase in freight without making a scientific study of the rates charged by the Conference for different kinds of cargo carried by it to different countries. Such a study might prove to be quite revealing. Enquiries in informed circles indicate that the Conference Lines quote net freight to shippers of other countries whereas Indian shippers have long been pleading in vain for the abolition of the deferred rebate system. Why this invidious discrimination? The decision of the Conference Lines to increase the freight by much more than that approved (unwittingly perhaps) by the Indian Government is an indication of the Government's helpless—hopeless might be more appropriate—position. Apart from the fact that freight constitutes nearly 10 percent of the value of total exports, the concessions achieved by India from the Continental countries through long-drawn-out negotiations are virtually nullified by the freight rise.

While recommending the 7.5 percent freight rise the Maritime Freights Commission had suggested that the sensitive commodities like cotton piecegoods, cotton yarn, coir products, oilcakes, vegetable oils, engineering goods and specific categories of ore should be excluded from the revised freight structure. Under the rates fixed by the Karmahom Lines, only myrobalan extract and coir matting are to be exempt from the higher freight; crushed bones and canned provisions will be subject to an increase of 7.5 percent; oilcakes will pay an additional 8 percent, while the freight on rice bran will rise by 9 percent and that on manioc meal by 4 percent. Little consolation can be had from the fact that the Conference Lines have decided to increase the freight by 12.5 percent instead of the original 15 percent flat increase. If the 2.5 percent concession was about all that the Conference was to concede and that, too, after the Government of India's acceptance of the Freights Commission's ill-advised recommendation of the 7.5 percent increase, then it was hardly necessary for the Conference to carry on protracted discussions with the Indian shippers and the Government. It is time the Government adopted a really firm attitude towards the Conference Lines. And the least it can do is to dissociate itself from the Conference. The other private shipping companies which are members of the Conference should also leave the Conference to protest against the recent freight rate increase which is bound to hit the country's export trade. It also emphasises the all-too-obvious need to expand Indian tonnage and to secure a larger share of the country's foreign trade.

Yours etcetera,
D. P. S.

Bombay, 4th August.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

UNNATURAL DEATH

The tribute of human life exacted by the wild animals and snakes year by year in India during the past quarter of a century is remarkable in this respect, viz., that the yearly figures approximate to each other with marvellous regularity. So much is this the case that if any one were to predict that in Bengal, during the present year, 1,600 persons will be killed by wild animals, and 11,000 by snakes he would run the risk of being a true prophet. In Bengal in 1901, there were 1,631 killed by wild animals (491 by tigers, 151 by leopards, 521 by jackals, and the remainder by other beasts), and 11,343 by snakes, the yearly average during the past 25 years being 1,540 by wild beasts, and 10,000 by snakes. In 1901 the tigers and other wild animals in India killed 10 people every day, and the snakes no fewer than 62. Out of a total of 26,461 killed last year in India, the share of Bengal was 12,974. The tribute exacted from the cattle by these wild animals and snakes is about three times the number of contribution from humanity. Wild animals killed 78,896 cattle in 1901, and snakes 9,123. The respective figures for Bengal were 24,710 and 850. The annual average for India during the past 10 years works out at 84,383 cattle killed by wild animals, and 7,212 by snakes. The average number of cattle so killed every day in 1901 was a little over 240, or 10 during every hour, day and night, all the year round. The Government spend about one lakh of rupees every year in rewards for the destruction of wild animals and snakes. In 1901, 14,301 wild animals were destroyed, including 19 elephants (reward Rs. 100), 1,361 tigers (Rs. 36,642), 4,181 leopards (Rs. 41,520), 2,611 wolves (Rs. 9,421), 1,380 bears (Rs. 7,849), 569 hyaenas (Rs. 988), other animals 4,180 (Rs. 432). 70,093 snakes were killed, and the rewards amounted to Rs. 2,978, being at the rate of about 8 pies each. The marvellous thing is that when the figures for 1902 are published, they will not differ a great deal from those now given. It may be mentioned that the number of licences in force, which have been issued under the Indian Arms Act for the purpose of Destruction of Wild Animals, or of Protection of Crops, stands at present at 41,249.

A Ditcher's Diary

You never know what the newspapers will be up to when they have no hard and solid news to serve. Yesterday morning was typical. First I read that the Boothalingam mission to Moscow had been successful. Good, I said, and then couldn't think of a recent Indian mission anywhere that hadn't been reported at the time as similarly successful. Then I read that Mr. R. K. Nehru, Secretary-General of the Ministry of External Affairs, had explained in Moscow the implications of the latest Chinese moves on the border. How, please tell me, how do I explain something that I myself do not know? New Delhi has lately reported a massive concentration of Chinese troops all along the border. As to its implications, we have had nothing but a political speech or two from Mr. Nehru, Prime Minister (and not S.-G. of M. of E. A.), and Mr. Chavan, Defence Minister. Neither said anything of substance, as indeed they could not, for it is never easy to "unscrew" the inscrutable Chinese. Against this background of uncertainty, perfectly understandable, we are told that India would not agree to talk with China, even if she accepted the Colombo proposals, while the Chinese show of force continued. Now this is what Mr. R. K. Nehru is said to have told Moscow. Mark you, this represents a material change in India's declared policy, which is that India will talk the moment Peking accepts the Colombo proposals with their clarifications. I haven't got all the facts before me; so I do not know whether a change in policy is, or is not, justified. What amazes me is the manner in which crucial decisions are handed out to the Indian public. The general impression in New Delhi had been that Mr. R. K. Nehru, a harmless bureaucrat at his best, had been given a free round-the-world trip before his retirement, due in months. Even he could not have believed that he had been sent out on an important mission. Yet on his return to the capital he breezily makes an important policy statement which, I should have thought, nobody had a right to make except the Prime Minister. No, the whole China policy must be thought out more clearly, as far as the circumstances permit, and New Delhi only weakens its case by seeming many-voiced, two-faced and without a single mind.

It is awfully difficult to place the life and death of Stephen Ward in perspective. I think he was slightly mad, the madness consisting mostly of a pathological degree of euphoria. Right to the moment of the judge's summing up, which I thought was unusually hostile, Ward must have believed that he would, after all, get away with it, even as "Jack" Profumo thought that he had only to threaten libel action to silence everyone. It seems to me more than likely that we have not heard the last of the affair; it is astonishing how some well-known names are mentioned quite freely, and credibly, in private conversation in London; and few private things remain private forever. We in India, however, read foreign news in vain if we do not constantly bear the Indian frame of reference in mind. In too many have I noticed a certain smugness, usually expressed in the fatuous phrase "it couldn't happen here". So far as India is concerned, Stephen Ward has died in vain if the complacency persists widely. It is simply not true that sex plays no part at all in Indian politics. I would not know to what extent security may be involved too. Perhaps not much, because India has few secrets that everyone does not know already; and I read a report last week that India's military intelligence is only now being organised. (In 1947 the late Sardar Patel is believed to have disbanded military intelligence for fear of *putsches*!) In spite of the battered image of British politics at the moment, they are probably cleaner and more moral, in the narrowest sexual connotation, than almost anywhere else in the world. For all their moralising and *khadi*, Indian politicians in general are not a very clean lot; and the general atmosphere of high hypocrisy makes the spectacle more unappetising. Although Mr. Nehru has laid it down that Ministers are not to be held responsible for the doings of their relations, I really cannot see the difference between a Minister putting money into his own bank account and his wife's or brother's or son's. The recent reference to a Minister's son's fleet of air-conditioned cars does not appear to have been contradicted or followed up. Despite Wards and Keelers, in Britain it would have been.

The name of the *Ghanaian Times* is not one of those I would include in my list of the world's best newspapers, and I do not attach too much importance to its recent attack on President Kennedy's "Peace Corps". I never much liked the idea behind the Corps myself, having always regarded it as another amusing example of that intriguing conviction among Americans that everything would be all right with the world if only everybody could be taught to behave as they do; but the Ghanaians' discovery that the Corps is an instrument of imperialism is quite simply absurd. Ghana is becoming rather tiresome in her habit of finding a western imperialist under every bush while maintaining an attitude of friendly understanding towards other imperialists, such as the Russians and the Chinese. But that is something we are used to by now, and in fact I am digressing. What I started out to say was that although I can appreciate that there may be great personal advantages for the youths concerned in undertaking a spell of manual work in the under-developed parts of the world before embarking on their careers, I can see little benefit for the host countries themselves. At best, with their limited practical training and ignorance of local conditions, the jobs of which they are capable could be done equally well by the native inhabitants. At worst, they could simply exacerbate an already difficult local unemployment problem and perhaps implant a resentment which was not there previously. My preference has been for the alternative and, so far, mainly British method of technical assistance, although I do feel there has not yet been nearly enough of it, perhaps because it has not been easy to get recruits. But there might be a change soon, because I see that steps are being taken to tackle that characteristically British prejudice which holds that once a man has set foot on foreign soil he thereby automatically renders himself totally unfit for future employment in his own country. Of course, even technical assistance has its limits—any technical expert who has worked in an under-developed country will tell you about the grateful peasant or artisan who has thanked him profusely and politely for the simple improvements suggested to the traditional way of doing things, then has quietly gone on with the old methods as soon as his back has been turned. But this is infinitely better than letting loose bands of untrained, over-enthusiastic and tiresomely idealistic youths in countries they know nothing about and among people to whom their attitude is all too often insufferably patronising. Besides, as the *Ghanaian Times* points out, what would happen if all the communist countries decided to do the same thing?

You've got to hand it to him: Mr. Nehru has a way with resigners. As I read of Mr. S. K. Patil resigning and then not resigning after all, I thought of the many resignations Mr. Nehru has handled in his sixteen years of Prime Ministership. First the L.I.C. furore; out goes Mr. T. T. Krishnamachari, only to come back a few years later. The resignations of Messrs Krishna Menon, Malaviya and Ibrahim are too recent to need detailed recalling. But the real parallel is General Thimayya's resignation, which was spirited away as deftly as Mr. S. K. Patil's. In the end you didn't even know whether they had resigned or they hadn't. Sheer political wizardry I call it. We have been told that Mr. Patil's food policy, such as it is, was under criticism. We didn't really need to be told this, for Mr. G. L. Nanda had obliged us with his views on it some time ago. What I suggest is that policy has little or nothing to do with arrivals in and

departures from the Nehru Government, which is being reconstructed piecemeal without the leader taking many or any of the decisions. In Mr. Patil's resignation and its subsequent withdrawal some may be tempted to see yet another bout of the ceaseless interplay of Right and Left; it is in theory possible that Mr. Nehru first backed the "Leftist" Nanda and then backed out in favour of the "Rightist" Patil. Little has been heard lately of the alleged unbalance between the Right and the Left in the Nehru Cabinet after the reluctant departures of Messrs Menon and Malaviya; but one has to read only *Patriot* and *Century* to know that the battle has not been given up. Nor is there any reason why it should be. What is disturbing in it all is that the Prime Minister's foreign policy of non-commitment is reflecting itself on the internal scene, with no less harm done. In some recent comments from the capital I noticed a certain Leftist impatience with Mr. Nehru; why isn't he firmer with the avowed conservatives in his Government? I understand the impatience which, it is not very well known, is fully shared by the Right too. Mr. Nehru will probably claim that it only shows how right and impartial he is. Impartiality, let me add, is only a partial virtue in leaders—and I do not mean the leading articles in a Calcutta contemporary.

THE TRUE PROPHET OF THE TWENTIETH CENTURY, IN my view, was not Karl Marx, nor even Lord Keynes; it was Henry Ford. I have occasionally found people to agree with me, although on visits to Britain and western Europe, where their traffic problems are choking them, I did meet rather more who would cheerfully have joined me in burning him in effigy. Nevertheless, I cannot let the one-hundredth anniversary of his birth go by without paying some tribute to this remarkable man who, I often feel, has a great deal to teach under-developed countries. For one thing, he was the tradition-breaker *par excellence*, and there can be no economic growth without breaking from tradition not once, nor even twice, but in a constant and continuing process. He was also a great exponent of mass production as a method of cutting costs, although he was by no means a pioneer in this, except perhaps for motor-cars. And, as we all know, mass-production is something which can be used just as easily—in fact Ely Whitney did it—for pouring out implements to destroy life as to enrich it. But what I feel was Ford's great personal contribution to humanity was the use of mass-production techniques for supplying a wholly consumer market, thus establishing the primary principle that a modern economy is intended to serve its consumers, not the other way round. I often think this point is not sufficiently appreciated in under-developed countries, where the emphasis is on building industry to serve the interests of the State rather than the individual and his needs. I know that most industrialising nations are at present passing through a peculiar transitional period. But it is the principle which is important: and there *is* an alternative to the types of economies which provide either fabulous wealth for a few private individuals or allow ambitious politicians to build powerful industrial empires. Quite simply, it is one which works according to the needs of the consumer and is moulded and changed by his desires. The establishment of this principle, strangely enough, was the unique contribution of the union-hating Henry Ford, whose own personal attitude to over-fastidious consumers is still enshrined in those immortal words that they could choose any colour of car they liked as long as it was black.

EVEN THE MOST RESPECTABLE OF BRITISH NEWSpapers occasionally lapse into complete nonsense about India. Thus Pendennis in the *Observer* recently discussing a new razor-blade sharpener, which it is claimed will make a blade last six weeks, said it should be available within the month: "But not in shops that sell razor-blades apparently. That would be asking too much. Demand is likely to be strong abroad—in places like Calcutta where, for reasons of status, white collar workers are obliged to shave more often than under the British Raj." I have heard many blessings claimed for British rule, but never before that it obliged me to shave less.

THE DITCHER

Guide for Investors

OUTLOOK FOR INDIAN IRON EXPANSION

THE statement of Sir Biren Mookerjee, chairman of the Indian Iron and Steel Co Ltd, dealing with the Company's working for the year ended March 1963, has highlighted two important points. (A full text is printed on a later page in this issue of *Capital*). Firstly, the Burnpur works has achieved the rated output capacity of 1 million tons of steel. The profit for 1962-63 has not been impressive compared with that for 1961-62, but it needs to be pointed out that in the latter year, the profit figure was inflated by a special factor such as the retrospective rise in the retention price of steel. A net sum of Rs. 88.51 lakhs accrued on this account. Secondly, the growth prospects of the Company have been frankly discussed.

Transport is among the main difficulties facing the present working of the Company. The irregularity in the movement and the supply of unsuitable types of wagons have posed a constant problem. The supply of inferior coal is another major difficulty. It is, therefore, creditable that in spite of these hurdles the factory has achieved 90 percent of the rated capacity. It is unfortunate that in fixing the retention price of steel, the Government has given no credit for this performance. The retention price allowed is lower than that recommended by the Tariff Commission. As a result, the Company has lost gross earnings of nearly Rs. 4.05 crores for two years. Since the Government insists on the attainment of 100-percent output capacity, the Company has been forced to do so by sacrificing quality. A doctrinaire attitude towards producing more by sacrificing quality may do a great deal of harm to the industry in the long run. In steel production, it is of the utmost importance to pay attention towards maintenance. This may involve some loss of production, but it should be permitted.

Sir Biren's observations on expansion prospects have been cautious. The Burnpur works has the potential for a further output of about 1 million tons of steel. This expansion has to be achieved in two stages. The first phase aims at increasing the output capacity by 300,000 tons. In the second phase, a further 700,000 tons can be produced. The first stage of the expansion has been approved by the Government in principle. The World Bank has also indicated its interest in the first phase of the expansion.

Whether the expansion scheme will be finally launched will depend on the availability of sufficient metallurgical coal. The Company will have to arrange for the supply on its own responsibility. Whether Indian Iron can do so will depend on the success of the Chasnalla project which has been undertaken for developing the coal-bearing properties of the Company. For this project, a foreign exchange loan of $19.5 million has been negotiated with the World Bank. The Company is now worried about the rupee cost of the project. The requirements of internal finance for this scheme have risen sharply by nearly Rs. 4.59 crores due to the lack of Government support in the matter of land acquisition. The severe 1963-64 Budget has caused the prices of several materials and services to rise. This apart, a substantial part of the earnings has been lost as the retention price of steel has been fixed at an unremunerative level.

The working of the Kulti foundries faces a big problem since the Government has asked the Company to cut the supply of pig iron from Burnpur to Kulti in order to divert it to other foundries and pipe-manufacturers. As a result of the shortfall in the pig iron supply, the earnings of the Kulti foundries may decline by about Rs. 55 lakhs a year. In addition, there is likely to be a great deal of unemployment and labour unrest.

Commenting on the move to decontrol the distribution and price of steel, Sir Biren has welcomed it in principle, but he feels it is difficult to work the proposed scheme of decontrol under the present circumstances, since there is an overall shortage of the commodity in relation to present demand. The industry is, therefore, considering whether a modified control system on a voluntary basis can be substituted for the existing Government control.

The Company has increased the production of pig iron from 1.19 million tons to 1.29 million tons. The output of steel ingots has risen from 934,498 tons to 1 million tons, and that of salable steel from 736,970 tons to 795,120 tons. The profit has amounted to Rs. 9.12 crores compared with Rs. 9.19 crores for 1961-62, after transferring Rs. 3.40 crores (against Rs. 3.35 crores) to depreciation. The taxable ordinary dividend of 16 percent has been maintained, which is more than twice covered and offers a yield of 7.1 percent at the present price of Rs. 22.38 a share of Rs. 10 each. Taxation absorbs Rs. 3.56 crores (against Rs. 3.96 crores), development rebate reserve Rs. 22.14 lakhs (against Rs. 21.57 lakhs) and general reserve Rs. 3.64 crores (against Rs. 3 crores). There is no balance to carry forward on the profit and loss account, compared with Rs. 24.72 lakhs brought in. The directors comment that "following upon the fixation of the steel sales retention prices for the two-year period ended 31st March, 1962, the Company has again been placed in the unsatisfactory position of being compelled to continue its operations without knowledge of the ultimate value of its sales, the previous retention prices, subject to escalation on certain counts, having been continued as provisional only from 1st April, 1962, and the future position at the date of this report being still more obscure in view of current deliberations regarding the possible discontinuance of Governmental control over the selling prices and distribution of steel."

There is a provision of Rs. 6 lakhs for super profits tax. The directors point out that although as a result of the prudent policy followed in the past in the matter of building up reserves of the Company and spreading depreciation claimable for taxation purposes, the possible liability to super profits tax for the year is small, they find difficulty in reconciling the position that any question of the earning of super profits should arise in the case of an industry whose selling prices are subject to statutory control.

As for the formation of a subsidiary Company under the name of IISCO-Stanton Pipe and Foundry Co. Ltd to manufacture spun iron pipes and specials in collaboration with Stanton and Staveley Ltd of England, the project has made progress. It has been approved by the Government of India.

Tata Steel Considering Expansion Proposal

THE statement of the chairman of the Tata Iron and Steel Company, Mr. J. R. D. Tata, which has been released along with the directors' report for the year ended March 1963, provides a pleasant contrast to his statements in the past few years. (The full text of the statement appears on a later page in this issue of *Capital*). There is no criticism of the Government's policy on steel retention prices which figured prominently in the previous year's statement. On the contrary, the chairman has complimented the Minister for Steel and Heavy Industries on taking a lead in reviewing the Government's approach to the complicated and difficult problem of steel distribution and pricing. Nor is there any reference to the unsatisfactory quality of raw materials, especially coal.

The chairman rightly takes credit for the vast sums spent on modernisation and expansion of the Company's plant. In the field of industry, says Mr. Tata, an enterprise which fails to grow and to replace old plant and machinery with new equipment must inevitably decline and ultimately die. The chairman has stated that the Company has accepted, in principle, its willingness to play its part in the expansion of the steel industry as a whole, provided such an expansion could be financed without undue strain on its resources and would safeguard the interests of its shareholders. The matter is still in an exploratory stage and no decision is likely to be taken for some time. The chairman has stated that according to the preliminary studies a further expansion of something between 500,000 tons and 1 million tons of steel ingot a year could be undertaken economically within the existing plant area. The cost of 1-million-ton scheme is likely to exceed Rs. 100 crores, at least half of which would be in foreign exchange. The chairman has assured shareholders that in considering the question of further expansion, the management will be guided solely by the technical and economic soundness of the project, the financial stability of the Company, the interest of the country, and the interest of the shareholders.

Mr. Tata has stated that the Government is considering the possibility of abolishing wholly or in part the statutory control over the steel prices and distribution which has been in force since 1941. The representatives of the industry, he says, have informed the Government that they will welcome decontrol provided at the same time steps are taken to ensure that the transition is a smooth one and that reasonable prices are fixed which will be fair to both the consumer and the producer. Mr. Tata adds that if the steel industry is allowed to conduct its own affairs in future, under a carefully thought-out scheme which will safeguard the public interest, a progressive step will have been taken to the advantage of all concerned and of the country as a whole.

The chairman has held out the promise of better results in the near future. He has assured shareholders that every effort will continue to be made to run the plant to its full capacity of which over 90 percent was achieved in 1962-63. The erection of the tonnage oxygen plant will be completed shortly, and it should be in operation before the end of the year.

The directors in their report say that although the year's profits show a gratifying increase over those of the previous year, the net return on the total invested capital is still hardly adequate for the legitimate needs of a highly capital-intensive industry which is continually in need of larger funds for expansion and modernisation. They believe that any substantial improvement in the return on the capital invested must come from a more favourable price structure which would enable the Company to service past loans and provide a modicum of funds for expansion, while meeting the legitimate requirements of the shareholders in the matter of dividends.

The arrears of development rebate brought forward from previous years have been fully absorbed in the year's profits and a small assessable profit has arisen for the first time since 1957-58. A sum of Rs. 80 lakhs has, therefore, been provided for income tax and corporation tax, there being no liability for super profits tax. The Company repaid a further amount of Rs. 4 crores to the World Bank, bringing down the outstanding amount of the loan to Rs. 36.3 crores. Borrowings from local banks have also been reduced, bringing down the total outstandings to Rs. 44.6 crores, compared with Rs. 54.1 crores at the start of 1962-63, and Rs. 76.5 crores in 1959 when the figure was at its highest.

The construction of the factory of the new Company, Tata-Robins-Fraser Ltd, has started and equipment is being ordered. This factory is expected to begin production in the second half of 1964. The Company was promoted in collaboration with Hewitt-Robins Inc. of the U.S.A., Fraser and Chalmers Engineering Works and the General Electric Company Ltd of the U.K., and the Associated Cement Companies Ltd

THERMOCOLE®

IS RIGHT AT THE TOP AT LARSEN & TOUBRO

This is one of the interiors of the LARSEN & TOUBRO office at Powai, Bombay: insulation of ceilings by THERMOCOLE.®

In Larsen & Toubro's Office at Powai, as in many other offices throughout the country, a THERMOCOLE® insulated roof keeps the interior comfortably cool and quiet, no matter how hot and noisy it is outside.

THERMOCOLE® is foamed polystyrene — the lightest rigid insulation in the Industry. It has a very low thermal conductivity.

It can deaden airborne and vibrational sound and cut out heat, dust and humidity.

There is one sure way to work under ideal conditions, insulate against heat and sound with THERMOCOLE.®

The Trade Name—THERMOCOLE®

Your guarantee of Quality for Expanded Polystyrene

for the purpose of manufacturing materials handling and processing equipment and for undertaking turn-key contracts for the designing and erection of conveyor systems and the like.

Salable steel production during 1962-63 was about 93 percent of the target planned under the 2-million-ton programme. Pig iron production increased from 1.61 million metric tons in 1961-62 to 1.81 million metric tons in 1962-63, an increase of 7.2 percent. Steel ingot output rose from 1.61 million metric tons to 1.71 million metric tons, showing an increase of 9.5 percent and salable steel rose by 7.2 percent from 1.31 million metric tons to 7.41 million metric tons. In terms of percentages of the T.M.P. target, pig iron production reached 91.5, steel ingots 88.5 and salable steel 92.7. The increase in output is partly due to the improvement in raw material supplies during the year. The Company started receiving washed coal from the Government's coal washery in Bhojudih from October last. The production of the medium and light structural mill went up from 149,000 tons to 171,000 tons, while the output of merchant mill No. 2 increased by about 30,000 tons.

Hindustan Motors Earns More, Pays Less

HINDUSTAN Motors Ltd has done well during the year ended March 1963. The output of motor-cars and lorries has improved in spite of the various difficulties, such as the shortages of foreign exchange, power, components and spares. The U.S. Agency for International Development has granted a loan of $15.8 million to the Company for raising the production of components and increasing the lorry output capacity. Orders for the necessary plant and machinery are being placed. The Company has also negotiated a loan of Rs. 60 lakhs from the Commonwealth Development Finance Company of the U.K. The directors hope to complete this project in 1964.

The Government has permitted the Company to increase its lorry-making capacity to 15,000 vehicles a year. The programme for manufacturing Bedford diesel and petrol engines has also been sanctioned. The heavy engineering division has made substantial progress. Shovels, dumpers and bull-dozers are being produced. The output of scrapers and cranes has begun. The U.S. Agency for International Development has been approached for a loan to import equipment for making shovels. The working of this division, it is expected, will improve during the current year.

As for the manufacture of motor-cars and lorries, the outlook is considered good, but it should be remembered that the shortage of components and raw materials will continue. The directors have stressed the fact that costs continue to rise, but the increases have not been adequately covered by the selling prices of the products. The Company has been executing a large number of orders for the Defence Department.

Although the profit has improved from Rs. 3.13 crores in 1961-62 to Rs. 3.50 crores in 1962-63, after providing Rs. 71.50 lakhs (against Rs. 73 lakhs) for depreciation and Rs. 9.75 lakhs (against Rs. 11.50 lakhs) for development rebate reserve, the taxable ordinary dividend has been cut from 12.5 percent to 11.5 percent due to the impact of heavier taxation. Tax provision has been raised from Rs. 1.52 crores to Rs. 2.23 crores. The dividend absorbs Rs. 93.13 lakhs, and the yield works out to 7.3 percent at the present price of Rs. 15.75 a share of Rs. 10 each. General reserve is allocated Rs. 25 lakhs (against Rs. 50 lakhs), leaving a carry-forward of Rs. 3,043, against Rs. 1.26 lakhs brought in.

Orissa Cement Cuts Dividend

THE profit of the Orissa Cement Ltd has fallen from Rs. 1.61 crores in 1961 to Rs. 1.42 crores for 1962 in spite of an increase of nearly 10 percent in sales. The ordinary dividend has been reduced from 15 percent to 10 percent, but it will not be subject to deduction of tax at source since the distributable profit has been exempted from income tax. Commenting on production incentives given by the Government in his chairman's address at the annual general meeting of the Company held in Rajgangpur, Orissa State, last Monday, Mr. J. Dalmia thinks (a full text is printed on a later page in this week's *Capital*) that they are of little help. A Company will qualify for the production incentive if it produces in excess of a specified output. Since the latter has been fixed at a high level, several companies are unlikely to qualify for the incentive. As for the increase in the retention price of cement allowed to the Company, it has fallen below expectations since it does not cover the rising production costs adequately.

Referring to the refractory industry, he points out that the installed capacity has been excessive. The supply of refractory has exceeded demand. The requirements of the steel industry for refractories have declined due to two factors. Firstly, the rise in steel production has been less than was anticipated. Secondly, the demand of the steel industry has diminished due to the technological advancement in steel-making. Orissa Cement has, nevertheless, been able to do well in the refractory line of its business, because it has developed the production of special types.

Ruby General Insurance Does Well

PRESIDING at the annual general meeting of the Ruby General Insurance Co. Ltd, held recently in Calcutta, Mr. B. M. Birla, chairman, referred to the satisfactory progress which the Company has made during the past few years. (A full text is printed on a previous page in this issue of *Capital*.) The premium income has risen from Rs. 70.38 lakhs in 1952 to Rs. 1.85 crores in 1962. It has made a profit of Rs. 13.36 lakhs for 1962, after providing for taxation. Mr. Birla mentioned that although the private insurance companies had offered their services to the Government to work the emergency risks insurance scheme, the latter preferred to work the scheme through the General Insurance Company, a subsidiary of the Life Insurance Corporation. He maintained that it would have been convenient for the insuring public and economical to the Government, had other general insurance companies been authorised to undertake this work. As for the super profits tax, he requested the Government to allow the reserves for unexpired risks of general insurers to be treated as free reserves for computing the total capital under the Super Profits Tax Act.

Lukwah Tea Earns More

THE Lukwah Tea Co. Ltd (an Assam garden) has increased its profit from Rs. 3.88 lakhs in 1961 to Rs 9.14 lakhs for the year ended December 1962. A taxable ordinary dividend of 15 percent has been declared. This absorbs Rs. 1.20 lakhs. Taxation is allocated Rs 5.65 lakhs (against Rs. 1.52 lakhs), general reserve Rs. 2 lakhs and development rebate reserve Rs 4.580 (against Rs 17,525). The carry-forward is Rs. 78,852, against Rs. 85,387 brought in. The crop was 612,629 kilograms, and the average sale price amounted to Rs 5.98 a kilogram. It is proposed to set up a new factory to manufacture tea. The directors are also considering a scheme for large-scale new plantation and replantation.

Singell Tea Skips Again

THE Singell Tea Co. Ltd (a Darjeeling garden) has made a profit of Rs. 47,720 for the year ended December 1962, compared with one of Rs. 21,845 for 1961, after providig Rs. 22,694 (against Rs. 20,035) for depreciation. The dividend has again been passed, but the debit balance has been reduced to Rs. 5.80 lakhs. The crop amounted to 138,742 kilograms, against 133,674 kilograms, and the average sale price rose from Rs. 6.20 a kilogram to Rs. 6.51 a kilogram.

Machinery Manufacturers Pays More

THE Machinery Manufacturers Corporation Ltd has produced excellent working results for the year ended 31st March, 1963, according to the preliminary statement released recently. The directors have recommended an increase in the dividend from 12.5 percent to 15 percent. Production and despatch of cards showed an increase of about 15 percent over the previous year's performance. Sales were substantially higher by about 36 percent, rising from Rs. 1.491 crores to Rs. 2.03 crores, and the gross profit jumped by more than 47.5 percent from Rs. 37.55 lakhs to Rs. 55.43 lakhs. The directors have raised the provision for depreciation from Rs. 9.61 lakhs to Rs. 10.27 lakhs, but that for development rebate reserve has been lowered from Rs. 3.50 lakhs to Rs. 1.91 lakhs. The Company had no tax liability in the previous year, but for 1962-63 the directors have set aside as much as Rs. 17 lakhs for income tax and super profits tax. Allocations include Rs. 3.50 lakhs (against 5.50 lakhs) for gratuity and Rs. 17.30 lakhs (against Rs. 10 lakhs) for general reserve. The proposed dividend on equity shares will absorb Rs. 4.52 lakhs (against Rs. 3.51 lakhs) and that on preference shares Rs. 2.10 lakhs (against Rs. 4.38 lakhs) for the years 1960-61 and 1961-62.

Bajaj Electricals Expanding

BAJAJ Electricals Ltd, which celebrated its silver jubilee last month, has achieved further expansion in its business and that of its associates and subsidiaries during the year ended March 1963. Hind Lamps, in which the Company holds 50 percent interest, showed a further considerable increase in the production of fluorescent tubes and lamp components. Allied Lamp Exporters, another concern in which the Company has a fair interest, exported about 900,000 lamps and over 80,000 fluorescent tubes. The Company is awaiting the Government's approval to its proposal to invest Rs. 13 lakhs in Matchwel Electricals (India) Ltd with a view to expanding further its fan business. The transformer business of the Company, too, showed improvement with sales rising to Rs. 1.53 crores from the previous year's level of Rs. 1.15 crores. Bajaj Electricals will not, however, be required to invest in a company to be established in India by N. V. Philips of Holland for the manufacture of tungsten filament, molybdenum wire and allied products, as it has been decided that the project will be undertaken by Philips India Ltd alone, which will supply these components to the Indian lamp industry. Construction of a factory for the manufacture of instruments is to start soon in Poona.

In his statement released with the annual report, Mr. Kamalnayan Bajaj, chairman, has forecast an acute shortage of electric lamps and tubes in the years to come since he feels that light-consciousness in the country is spreading and the demand for lighting material is on the increase. He has estimated the demand by 1965-66 for the lighting materials around 90 to 100 million lamps and 5 to 6 million tubes, besides miniature and the oher special types of lamps. The present production, acording to Mr. Bajajj, is in the neighbourhood of 55.5 million lamps and 3.2 million tubes a year.

Nickel Sulphate from Indian Copper

RELIABLE reports indicate that the Government of India has approved, in principle, the scheme submitted by Indian Copper Corporation Ltd for the manufacture of 260 tonnes of high purity nickel sulphate a year. Indian Copper is installing an electrolytic copper refining plant and it has a proposal to recover the small amount of nickel associated with copper ore and finally to manufacture nickel sulphate. The capital equipment for the project is estimated at Rs. 28.2 lakhs of which Rs. 13.1 lakhs will be spent on imported machinery. At present, nickel sulphate is manufactured indigenously by four organised firms and a large number of small-scale units. As against the total installed capacity of about 700 tonnes a year, indigenous production is placed around 200 to 250 tonnes a year. The country's requirements of nickel sulphate are estimated around 300 tonnes a year.

The import of nickel sulphate is at present banned in order to enable the maximum utilisation of the domestic installed capacity. Imports are restricted because of the foreign exchange scarcity. It is said that the manufacturing process to be employed by Indian Copper will be a detailed one, and will enable the manufacture of very high purity nickel sulphate which will be free from objectionable impurities like cobalt, zinc, etcetera. The manufacture of 260 tonnes of nickel sulphate will amount to a recovery of about 60 tonnes of nickel metal which will mean a saving of foreign exchange of about Rs. 6 lakhs a year. With the increasing demand of nickel electroplating for various engineering manufactures, the demand for nickel sulphate is rapidly increasing.

Sidhpur Mills Pays Less

FOLLOWING a sharp fall in the profit of Sidhpur Mills Co. Ltd during the year ended March 1963, the directors have reduced the dividend from 12 percent to 8 percent which, however, is payable on the capital as enlarged by the Rs. 4.90

lakhs issue. Gross profit has come down from Rs. 15.83 lakhs to Rs. 7.62 lakhs. Out of this, depreciation absorbs Rs. 4.92 lakhs (against Rs. 9.56 lakhs). Provision for depreciation in the preceding year included arrears to the tune of Rs. 4.60 lakhs. Allocations include Rs. 25,600 (against 1.24 lakhs) to the statutory development rebate reserve and Rs. 50,000 (the same) to the gratuity reserve. No amount has been earmarked for general reserve which had been allocated Rs. 1.65 lakhs previously. The proposed dividends will take away Rs. 1.60 lakhs, compared with Rs. 1.81 lakhs a year ago, and the surplus sum of Rs. 8,888 is to be carried forward, against Rs. 14,300 brought in.

In their annual report, the directors say that with a view to improving the quality of the products and making them more competitive in the home and export markets, the Company's modernisation scheme is being continued. Due to the difficulties in obtaining adequate and regular supplies of coal, the management proposes to convert two boilers to oil firing. The conversion is already in progress and all the boilers will be switched over to oil firing in due course.

Travancore Chemicals Cuts Dividend

THE directors of Travancore Chemical and Manufacturing Co. Ltd have recommended a final dividend of 10 percent on ordinary shares for the year ended March 1963, making a total of 20 percent for the year (against 22½ percent). Although the pre-taxed profit and sales for the year are higher than those of the previous year, the net profit is lower than that of the previous year due to a higher tax provision, including Rs. 2.25 lakhs for the super profits tax.

The net profit for the year amounts to Rs. 4.51 lakhs, after providing Rs. 2.28 lakhs for depreciation, Rs. 41,272 for development rebate, Rs. 7.05 lakhs for income tax and super tax, and Rs. 2.25 lakhs for the super profits tax. The previous year's net profit was Rs. 4.94 lakhs, after providing Rs. 2.04 lakhs for depreciation, Rs. 58,229 for development rebate and Rs. 5.20 lakhs for taxation. Total sales for the year amounted to Rs. 73.30 lakhs, against Rs. 70.69 lakhs for the previous year. Adding to the year's net profit of Rs. 4.51 lakhs, a sum of Rs. 26,251 brought forward from the previous year and Rs. 5,900 being the excess provision for taxes in 1961-62, the total available surplus comes to Rs. 4.83 lakhs. The interim dividend of 10 percent on ordinary shares and the interim tax-free preference dividend of 3⅛ percent absorbed Rs. 2.13 lakhs. The proposed final ordinary dividend of 10 percent and the final tax-free preference dividend of 3⅛ percent will absorb Rs. 2.13 lakhs. A sum of Rs. 50,000 (against nil) is transferred to general reserve. The balance of Rs. 6,516 is carried forward.

The directors state that the preference capital of Rs. 3 lakhs is repayable at par at any time after 31st July, 1963, at the option of the Company by giving three months' notice. The directors have decided to repay the preference capital on 1st August, 1963. They add in their report that in spite of the shortage of some raw materials, total sales during the year increased due to increased production and sales of certain chemicals at the Alwaye factory. The production of chlorate of potash at the Kundara factory also increased due to the availability of extra power. The Company has also obtained a licence for importing electrical equipment for further increasing the production of chlorate for which there is good demand at present.

Nil from Puthutottam Estates

DUE to a marked decline in the profit for the year ended March 1963, the directors of the Puthutottam Estates Ltd have passed the dividend for the year (against 7½ percent). The net profit for the year amaunts to Rs. 52,296, after providing for depreciation and all charges and Rs. 46,000 for taxation. The previous year's net profit was Rs. 1.16 lakhs, after meeting all charges and providing for depreciation, and after setting aside Rs. 85,000 for taxation. With Rs. 52,850 brought forward from the previous year, the total comes to Rs. 1.05 lakhs which is carried forward.

Against an estimate of 147,000 kilograms, the tea crop for the year amounted to 164,896 kilograms. A major portion of the tea crop was sold during the year. The net average sale price works out to about to Rs. 3.61 a kilogram. The Arabica coffee crop amounted to 182 tonnes and 710 kilograms, against an estimate of 210 tonnes. This was because of the marked dropping of berries due to adverse weather. The Robusta coffee crop amounted to 62 tonnes and 287 kilograms, against an estimate of 100 tonnes. The increase in wages and salaries and the payment of gratuity to an unusually large number of workers who resigned, were reflected in the working results. As the Puthutottam coffee plants have become very old, they will have to be replanted over a reasonable period for ensuring optimum yields. For 1963-64, the tea crop is estimated at 150,000 kilograms, Arabica coffee at 210 tonnes and Robusta coffee at 85 tonnes.

Balanoor Tea Profit Up but Dividend Down

WITH a substantial rise in coffee crop and a modest fall in tea crop during the year ended March 1963, Balanoor Tea and Rubber Co. Ltd, has earned a higher profit. But the dividend has been reduced to 10 percent from 12 percent, as the provision for taxation has substantially increased. The net profit for the year amounts to Rs. 3,62,103 (against Rs. 3,34,006) after meeting all expenses and after providing Rs. 33,803 (against Rs. 37,891) for depreciation. With the amount of Rs. 48,095 brought forward from the previous year, the total comes to Rs. 4,10,198. Out of this, provision for taxation amounts to Rs. 1,80,000 (against Rs. 76,000). Short provision for income tax in the previous year has absorbed Rs. 4,998. A sum of Rs. 50,000 has been transferred to dividend equalisation reserve (against Rs. 75,000).

The dividend at 7½ percent on preference shares accounts for Rs. 20,700. The proposed dividend at 10 percent on ordinary shares has absorbed Rs. 1,09,899. After these appropriations, there is a balance of Rs 44 601 which has been carried forward to the next year.

The tea crop for the year amounted to 254,836 kilograms, against the previous year's crop of 260,310 kilograms. The all-in-cost of production was higher at Rs. 3.34 a kilogram, against Rs. 3.04 a kilogram last year. The average sale price was lower at Rs. 4.29 a kilogram, against Rs. 4.58 a kilogram. The coffee crop amounted to 166 tonnes, against 124 tonnes. The rubber crop was 13,990 kilograms, against 16,023 kilograms. The tea crop estimate for 1963-64 is 275,000 kilograms, while the coffee crop is estimated at 220 tonnes. The rubber crop is estimated at 15,500 kilograms.

Devon Tea Reduces Dividend

A LOWER tea crop and a marked increase in the cost of production have led to a fall in the profit of Devon Tea and Produce Co. Ltd, for the year ended March 1963. The profit amounts to Rs. 1,78,933 (against Rs. 1,95,062, after providing Rs. 41,689 (against Rs. 28,936) for depreciation. With a sum of Rs. 30,350 brought forward from the previous year, the total comes to Rs. 2,09,283. Provision for taxation amounts to Rs 72,000 (against Rs. 80,000). A sum of Rs. 30,000 has been transferred to dividend equalisation reserve (against nil).

The dividend on preference shares at 7½ percent accounts for Rs. 16,660. The proposed dividend of 10 percent on ordinary shares (against 12 percent) will absorb Rs. 67,465. The balance of Rs. 23.158 is carried forward to the next year.

The tea crop for the year was 178,500 kilograms, against 190,192 kilograms. The all-in-cost of production was Rs. 3.47 a kilogram, against Rs. 2.98. The average sale price was lower at Rs. 4.22 a kilogram, against Rs. 4.47. The coffee crop amounted to 79.73 tonnes, against 56.10 tonnes. The tea crop for 1963-64 is estimated at 190.000 kilograms, and the coffee crop at 114 tonnes. Devon Plastics unit has been working satisfactorily. The turnover during the year increased to Rs. 7.5 lakhs from Rs. 1.90 lakhs last year.

Cochin Malabar Earns Less

COCHIN Malabar Estates Ltd has reported a sharp fall in its gross profit from Rs. 18.10 lakhs in 1961-62 to Rs. 11.18 lakhs for the year ended 28th February, 1963, forcing the directors to cut the dividend by 8 percent to 12 percent. The shrinkage in the profit has been caused mainly by the decline in the rubber crop from 11.60 lakh kilograms to 11.05 lakh kilograms and the increase in the estate cost of production from 248.79 cents to 283.69 cents a kilogram. At the same time, the all-in-cost of production went up from 296.83 cents to 326.08 cents a kilogram.

Provision for depreciation has been raised from Rs. 1.53 lakhs to Rs. 1.73 lakhs, while that for taxation is lower at Rs. 4.68 lakhs (aganst Rs. 8.92 lakhs.) A sum of Rs. 25,000 (against Rs. 1.30 lakhs) has been set apart for the rehabilitation reserve. The preference and equity dividends take away Rs. 3.40 lakhs (against Rs. 5.46 lakhs). The directors have also provided Rs. 51,000 towards shortfall in the provision for Mysore agricultural income tax after taking into account the profit of Rs. 14,380 on disposal of fixed assets. The surplus sum of Rs. 28,851 is to be carried forward, against Rs. 23,405 brought in.

New Capital Issues

EIGHT companies have been authorised to raise capital totalling about Rs. 12.72 crores. Of these, one is a new company and one is a Central Government undertaking. Three companies are raising part of their capital through public subscription and two are offering part of the share capital to their foreign collaborators. Five companies will issue equity shares, one debenture stock and two equity plus cumulative redeemable preference shares. The consent in all cases is valid for 12 months. The following are the details:

The Fertilizer Corporation of India Ltd, Delhi, a Central Government undertaking, has been accorded consent to issue further capital of Rs. 7.60 crores in equity shares of Rs. 1,000 each, for cash at par. The entire issue will be subscribed by the Central Government.

The Nagargali Cement Co. Ltd, Hubli, will issue capital of Rs. 1 crore divided into 1 million equity shares of Rs. 10 each for cash at par. Of this. 750,000 shares will be offered for public subscription. The money will be used for setting up a factory for the manufacture of Portland cement.

Graphite India Ltd. Calcutta, is to issue capital of Rs. 90 lakhs in equity shares of Rs. 10 each. The capital is required for the manufacture of various types of graphite and carbon products in collaboration with Great Lakes Carbon Corporation of the U.S.A. which will subscribe Rs. 25 lakhs.

The Indian Graphic Arts Equipment Co. Ltd, a new company to be incorporated in Madras State for doing business as manufacturers, dealers and assemblers of all types of printing presses and machinery for the graphic art, is issuing capital of Rs. 30 lakhs. This amount is divided into 300,000 equity shares of Rs. 10 each for cash at par. Out of this, shares for Rs. 15 lakhs will be offered to the Company's foreign collaborators Miehle-Goss-Dexter Incorporated of Chicago, U.S.A., against supply of plant and machinery.

In supersession of the consent granted previously for Rs. 25 lakhs, *Bellary Spinning and Weaving Co. Ltd*, has been given consent for a further issue of Rs. 26,85,500 divided into 26,855 equity shares of Rs. 100 each, to be issued for cash at par. Of these, not less than 14,700 shares will be offered for public subscription by prospectus. The capital will be used for setting up a spinning mill in Bellary (Mysore State).

Ahmedabad Electricity Co. Ltd will issue debenture stock of the value of Rs. 2 crores in units of Rs. 1,000 each at a rate of interest of 7½ percent for cash at par. The money will be spent in strengthening its distribution mains and other power service facilities.

Kalyan Pulp and Paper Mills Private Ltd, Bombay, is to issue capital of Rs. 34,93,000 divided into 299,300 equity shares of Rs. 10 each and 5,000 redeemable cumulative preference shares of Rs. 100 each, for cash at par. Out of this, equity shares worth Rs. 18 lakhs and all the preference shares will be offered for public subscription. The capital will be used for the establishment of a new project for the manufacture of pulp and paper.

Ajanta Textiles Ltd, Delhi, recently incorporated for manufacturing cotton yarn of various counts, will raise capital of Rs. 30 lakhs (inclusive of Rs. 15,040 already issued, subscribed and paid-up capital of the Company) divided into Rs. 25 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in cumulative redeemable preference shares of Rs. 100 each carrying dividend at 9.3 percent a year for cash at par. The money will be used for financing the installation of 12,180 spindles duly licensed under the Industries (Development and Regulation) Act.

The Stock Markets

SHORT-COVERING BRINGS A MODERATE RALLY

Wednesday Evening

THERE has been a moderate rally in the Calcutta stock market during the past week. The selling pressure which developed after the news concerning the concentration of Chinese troops along the northern border has decreased. There has been a great deal of short-covering as bears are keen to book their profits. In the earlier shake-out, prices fell too sharply due to panic. But now buyers have picked up courage because the political news has not been too unfavourable during the past few days.

Operators are nevertheless chary of extending their commitments. Apart from the many uncertainties, clearing considerations have restrained activity. The clearing on Wednesday has passed off smoothly, and the carry-forward charges are moderate since the technical position has improved due to large selling by weak holders. Turnover has been confined largely to clearing shares.

Business in cash shares has been negligible. Sentiment has become steadier on reports of buying by the Life Insurance Corporation. Along with other financial institutions, it is expected to take greater interest in equity investment in the near future. Since the prices of several good shares have now moved down to attractive levels, the scope for discriminating purchases has increased. The near-term trend is likely to depend on the political news. Although India has strengthened her defences, the massing of Chinese troops along the northern border poses a major threat.

Indian Iron have recovered due partly to short-covering and partly to fresh support. The growth prospects of the shares have been outlined by the chairman of the Company in his statement, which has been circulated to the shareholders along with the report and accounts for 1962-63. The rise in the output of pig iron and salable steel, and in despatches, during July, compared with June, has been an additional stimulant. The production of pig iron has risen from 112,028 tons in June to 113,540 tons last month, while that of steel ingots has fallen from 86,413 tons to 83,553 tons. The output of salable steel has increased from 61.612 tons to 74,124 tons. Despatches of salable steel have improved from 68,910 tons to 73,838 tons. Among engineering shares, Guest, Keen, Williams, Burn and Jessop have recovered. Texmaco have improved on short-covering. Scattered interest has been taken in Britannia Engineering and Jay Engineering.

The prices of selected miscellaneous shares have hardened due to the absence of pressure. Indian Aluminium have been bought on prospects of a bonus issue. Indian Cable are steady on a good report. Indian Copper, Dunlop Rubber and Jaipur Udyog have gained. In managing agency shares, Jardine Henderson have spurted on knowledgeable buying. Electric company shares are neglected. Bank shares have been dull. New shares have weakened. Hindustan Aluminium and Isaac Holdens have been quiet. In paper section, Orient have recovered on short-covering, but Sirpur have been easier. Sugar shares are difficult to deal due to the absence of buyers.

Although turnover in jute shares has been small, there has been selective buying. Alliance and Champdany are steady. Interest has been taken in Ganges, Union and Barnagore. Birla have fluctuated narrowly. Coal shares are subdued on fears that the demand for the commodity has fallen. Stray business has been done in Burrakur, Amalgamated and Central India. J. K. Rayon have been a weak feature in the cotton mill section since the dividend has been skipped. Bharat Commerce, Dunbar and Elgin are easier. Only a few transactions have been reported in tea shares. Investors have held back due to the border news.

Government securities have been dull and turnover has been small. The new loans—the 4 percent 1969 and the 4½ percent 1973—have been quoted at a small discount. The 3 percent Conversion loan 1986 has moved down to Rs. 64.15. Selected State Government loans have hardened on institutional support.

Bombay

SHARE PRICES IMPROVE

SUPPORT FOR TATA STEEL

Wednesday Evening.

THE Bombay stock market has been steadier during the past week, although the highest gains have been pared towards the close on profit-taking. Share prices have hardened on a broad front because of replacement buying, combined with short-covering. The earlier panic created by the border developments has disappeared, although support has been extended on a cautious scale pending favourable news. Dalal Street has been impressed by the prospects for steel shares. The statement by the chairman of the Tata Iron and Steel Company, circulated with the report and accounts, has been interpreted bullishly. Since the industry has been asked to work out a scheme to replace the existing Government control on the distribution and price of steel by an agreement on a voluntary basis, it is believed that the private sector of the industry will benefit from the proposed arrangement. Investors have been impressed by the performance of the Company since it has begun to produce at its rated capacity. The equity purchases by the Life Insurance Corporation have provided an additional stimulus. The prospect of institutional support in the capital market is encouraging. Easier money conditions have also been a helpful factor.

Tata Steel ordinary have recovered to Rs. 137.75. Among engineering shares, Tata Locomotive, Larsen and Toubro, Alcock Ashdown and Premier Construction have gained. Mukand Iron have met with interested buying. Among motor-vehicle shares, Hindustan Motors have improved on a good report. Premier Automobiles have been steady.

Prices of selected cotton mill shares have hardened. Century, Bombay Dyeing, Kohinoor and Svadeshi have been prominent. Interest has been taken in India United ordinary, Morarjee and Standard.

Miscellaneous shares have moved up in sympathy with the general trend, but support has generally been selective. Among cement shares, Associated Cement have been steady. Sugar shares have been bought on prospects of bigger production during the 1963-64 season. The fact that production incentives may be given by the Government has helped restore confidence. Belapur, Walchandnagar Industries and Phalton have risen. Among steamship company shares, Scindia Steam have moved up on short-covering. Mining shares have generally been quiet, and stray business has been done in Shivrajpur Syndicate. Chemical shares have been steady. Tata Chemical have been taken on prospects of expansion. Indian Dyestuff have recovered on maintaining the dividend. Interest has been taken in Polychem. National Rayon have improved, as have Gwalior Rayon. Business in cash shares has been fairly heavy, and the prices of several scrip have been higher on balance. Synthetics and Chemicals have gained.

Bank shares have been quietly steady. Central Bank and Bank of India have been transacted. In electric supply company shares, scattered support has been extended to Ahmedabad and Tata Hydro.

Madras

TURNOVER IN SHARES SHRINKS

BORDER NEWS UPSETS OPERATORS

Tuesday Evening.

THE Madras stock market has turned quiet during the past week, and turnover has shrunk considerably. Business even in clearing shares has fallen off. Operators and investors have been shaken by the border developments. Easier advices from the Bombay and Calcutta stock markets have dampened enthusiasm.

Government securities have been steady, and support has been extended to selected State Government loans. Among banks, Indian have been bought up to Rs. 161. Selected electric company shares have been taken due to good dividends. Negapatam have been done at Rs. 11.40 and Vellore at Rs. 15.00. Turnover in sugar shares has been small, but the prices of selected shares have been more or less maintained. E.I.D. have been quoted at Rs. 39 and Deccan at Rs. 9.95.

Excepting discriminating support for selected tea and coffee shares on good crop reports, investors have been cautious. Cochin Malabar have declined to Rs. 5.90 on reducing the taxable ordinary dividend from 20 percent to 12 percent. Blue Mountain have been easier at Rs. 2.48 and Consolidated Coffee at Rs. 17.25. Ouchterlony have been quoted at Rs. 4.43 and Periakaramalai at Rs. 3.59. Balanoor have been taken at Rs. 12 on declaring a taxable ordinary dividend of 10 percent. Devon have come to hand at Rs. 12.66 on paying a taxable ordinary dividend of 10 percent. Mysore Coffee have been freely offered down to Rs. 4.12 on passing the dividend, while Coorg have attracted attention up to Rs. 5.15 on declaring a taxable ordinary dividend of 15 percent.

In the cotton mill section, South India Viscose have reacted to Rs. 126

and Travancore Rayon to Rs. 23. Lakshmi have been available at Rs. 137, and Madura at Rs. 30.50. Kasthuri have been done at Rs. 20.75 on paying a taxable ordinary dividend of 6 percent. Business has been done in Bangalore Woollen at Rs. 233, and in Buckingham at Rs. 264.

Small activity has been seen in miscellaneous shares. Aluminium Industries have been sluggish around Rs. 17.56, although the Company proposes to issue 350,000 ordinary shares of Rs. 10 each to existing shareholders. Ashok Leyland have been quiet at Rs. 7.20, but Dalmia Cement have been steady at Rs. 12.25. India Cement have been bought at Rs. 5.50, but Mettur Chemical have fallen to Rs. 13. F.A.C.T. have been sold freely down to Rs. 7 on passing the dividend. Interest has been taken in Travancore Chemical Manufacturers at Rs. 19.10 on declaring a taxable final ordinary dividend of 10 percent. Mysore Stoneware have been taken at Rs. 12.45 on paying a taxable ordinary divident of 12.5 percent. Radio and Electricals have been steady at Rs. 3.25 on paying a taxable ordinary dividend of 18 percent. Tube and Malleables have been quoted at Rs. 10 on the payment of a final ordinary dividend of 7.5 percent. Support has been extended to W.I. Plywoods at Rs. 190 on declaring a taxable ordinary dividend of 15 percent. Madras Rubber have been quoted at Rs. 14.37 and Kirloskar Electric at Rs. 20.

THE WEEK'S TRANSACTIONS

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

One Purchase Officer with a headache cut his inventory down from 30 products to only 8!

The Caltex "Stop-Loss" plan was the headache antidote... When each department in a-plant specifies a lubricant it wants without reference to the purchases of other departments, there is bound to be a lot of waste and costly over-lapping. The Caltex "Stop-Loss" programme helps to eliminate this waste of lubrication by effectively reducing the total plant lubricant inventory. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

Find out today how Caltex "Stop-Loss" can specifically stop the problem in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

London

OPERATORS MORE CONFIDENT

SELECTIVE BUYING OF EQUITIES

London, 7th August.

ALTHOUGH holidays still kept business in check, the stock market looked somewhat more confident. Some people took a more optimistic view of the Government's prospects following recent favourable economic trends and encouraging statements from the Treasury and from individual Government leaders. The latest public opinion polls also made out a good case for Conservative victory. Also helping was the advance on Wall Street which pushed the Dow Jones industrial index through the 700 mark. Selling disappeared, and small selective buying of equities went on. Leaders like Turner and Newall, Dunlops, Sears Holdings, Associated Cement and Courtaulds were all back in favour after tending to drift lower in the early days of the week. Stocks did not always respond to reports of booming sales in the shops, but Debenhams were a good market. Dollar stocks were dull at one time, but the Wall Street advance caused an upward adjustment in prices. Gilt-edged were quiet, but small investment buying lifted prices slightly. Gold shares moved narrowly, and generally speaking, lacked a definite trend. Platinum shares were wanted after the Rustenburg profit forecast. Coppers were quiet. Tins were unsettled by the reported India-China border tension, but prices rallied well later. Teas also recovered after early dullness. Oils were inclined to ease, but looked steadier later.

SHELLAC DULL

During the week ended 6th August, the market was dull.

	Rupees a package
Pure Buttonlac	100 value.
Lemon One Shellac	106 to 100 buyers, 110 to 104 sellers,

REVIVING CONFIDENCE IN THE CAPITAL MARKET

(BY A SPECIAL CORRESPONDENT)

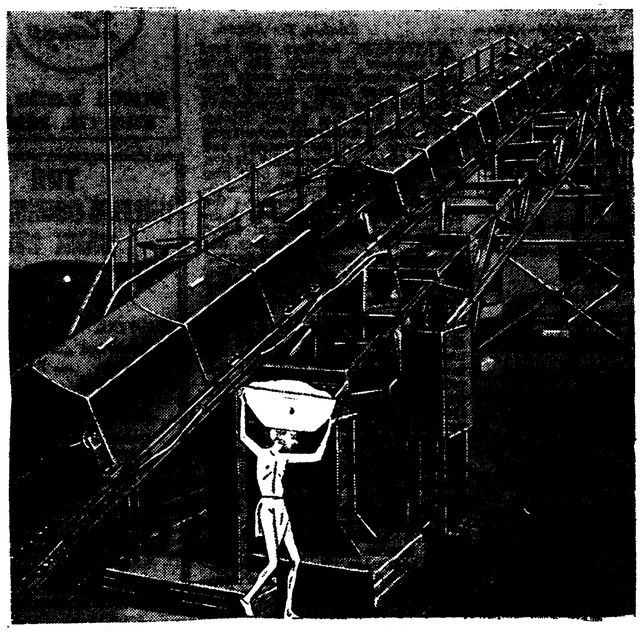
PRICES on the Bombay Stock Exchange fell sharply on 31st July following reports of border intrusions by Chinese troops. Rates dropped by nearly 5 percent in a single session. Commenting on the nervousness of the stock exchanges, Mrs. Tarakeshwari Sinha, Central Deputy Finance Minister, observed in Surat the next day that "the Bombay Stock Exchange did not reflect a true picture of the country's economy." She deprecated the crisis mentality of share market operators. She took Indian business men to task for not boldly meeting the challenge facing the country. She made it clear that the Government of India cared very little about conditions in the investment market.

But obviously this view does not represent the attitude of the Government of India as a whole. The Finance Minister, his Secretary, Mr. L. K. Jha, and the Governor of the Reserve Bank are anxious to do all they can to improve the investment climate. A few days before Mrs. Sinha spoke in Surat, Mr. Bharat Ram, as the representative of industry and trade, had waited on the Finance Ministry. He requested officials to take immediate measures to restore confidence in the capital market and do something to end the dangerous stalemate in the new issues business. Mr. Jha reportedly conveyed the Government of India's anxiety about the trends in the investment market and the difficulty in raising equity capital for new issues. He is believed to have referred to the rôle of financial institutions such as the I.F.C. and the I.C.I.C.I. in reinforcing the confidence of the investor.

Proposed Official Measure

Mr. Jha also gave an indication that the Government of India might take some measures to revive the investment market, although the precise details were not given. It is no secret that the Finance Minister and the Secretary had detailed discussions on the subject with the Governor of the Reserve Bank, when the latter called on them on 23rd July, to discuss the economic situation. It is, therefore, clear that Government spokesmen are not consistent in their pronouncements on important economic issues. They blow "hot" and "cold" on the same subject within a few days. Obviously, there is no co-ordination and it is of paramount importance that at least on important issues, they should speak with one voice. Or else the public will be confused and will not know when and how to take a Government pronouncement seriously.

Two Proposals



Among the several measures contemplated to tone up the capital market, two are prominent. One is the investment or unit trust to channel the savings of small investors into the investment market. A second proposal is to use the funds of the Life Insurance Corporation to support the capital market. Leading representatives of trade and industry are reported to have objected to the use of L.I.C. funds for the purpose. According to these critics, the Government decided to nationalise life insurance with the object of mobilising resources for promoting rapid development. The L.I.C. funds should be used, therefore, only for approved plan projects, just as the private sector might have done had there been no nationalisation of life insurance. The L.I.C. would be guilty of indulging in speculation and in misusing the funds entrusted to it by policyholders. The strong and critical reaction of certain well-known industrialists has certainly surprised the Government of India. The latest move seems to be to work out greater co-ordination in lending selective support to the investment market by the official lending institutions such as the I.F.C. and the I.C.I.C.I.

In a mixed economy, stock exchanges play an important rôle by mobilising savings for productive investment. If they are functioning as "speculative dens" without reflecting true economic conditions, as the Central Deputy Finance Minister has suggested, the best course would be to remove the abuses. The Government has already moved in this direction by imposing heavy margins on outstanding purchases and sales by both bears and bulls; credit has been regulated by the imposition of selective controls. The levy of super profits tax, to which all business men object, is mainly responsible for the depressed investment climate. A modification of the super profits tax without sacrificing the revenue might go a long way in restoring business confidence. Once the important rôle of stock exchanges is acknowledged, the Government must take measures to revive confidence. Half-hearted ones do more harm than good.

The setting up of unit trusts might help in stabilising the investment climate. An important point here is the time of the start. With compulsory deposits, heavier taxation and rising prices, it needs to be considered whether the present time is opportune for starting another venture for attracting public savings. Again, there is the question of getting the right type of personnel. The Government would do well to consider the experience or performance of existing investment trusts before venturing into the field.

Using L.I.C. Funds

There seems to be no valid reason for objecting to the use of L.I.C. funds for supporting new issues. When other Government-partnered institutions like the I.F.C. and the I.C.I.C.I. are supporting the new issues market by underwriting, there is no reason why the savings of the public should not be used to support selective new issues. The L.I.C.'s support to the market has become the main prop after nationalisation. To prevent the use of L.I.C. funds, on the ground that they belong to the public, in blue chips or in attractive new issues, would be to shut down an important avenue of productive investment for the Corporation. The L.I.C. will be losing an important outlet which would help in bringing down the cost of insurance policies and stepping up the bonus available for distribution among policyholders.

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Wednesday, 7th August.

THERE has been a fair increase in the general level of advances in the Calcutta money market during the past week. The accommodation given to the iron, steel and engineering industries is appreciably higher. The credit given to the jute mills remains almost unchanged. But advances for the sugar and cotton mills, and for the storage of foodgrains and seeds, are fractionally down. In the interbank market, conditions have eased and the call rate is quoted at around 3½ percent.

The exchange market has been fairly active. More gunny bills have been seen, and the supply of tea bills has been well maintained. The demand for remittance has been moderate. Sterling has strengthened in relation to most of the major currencies except the Belgian and Swiss francs and the deutschemark.

SILVER WAS QUIET IN CALCUTTA during the past week. The price fell from the previous week's level of Rs. 271.25 to Rs. 266.75 quoted today for ready delivery. There was no business in forward. The London and New York prices were 111½d and 129 cents. Gold was not transacted.

DURING THE WEEK ENDED 2ND AUGUST, Government of India Treasury bills for Rs. 124,67,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 6th August. The total amount offered was Rs. 3,05,00,000. Tenders at Rs. 99.425 percent were accepted in full, and those at Rs. 99.420 percent were allotted 65 percent. The total amount accepted was Rs. 2 crores only, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th August.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 7th August to 10th August at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 31st July to 3rd August amounted to Rs. 2.71 crores.

ACTIVE NOTES ROSE BY Rs. 6.23 CRORES to Rs. 2,215.14 crores, according to the return of the Reserve Bank of India for the week ended 2nd August, 1963, while the total note issue was Rs. 42 lakhs smaller at Rs. 2,233.99 crores. A rise of Rs. 3.01 crores to Rs. 1,904.32 crores in rupee securities was offset by a decline of the same amount to Rs. 92.26 crores in foreign securities of the paper currency reserve. Deposits of the Government of India fell by Rs. 28.11 crores to Rs. 121.16 crores while those of State Governments rose by Rs. 23.68 crores to Rs. 32.79 crores due to the transfer of funds from the Central Government. Balances of scheduled banks were Rs. 3.12 crores smaller at Rs. 80.66 crores. Balances held abroad rose by only Rs. 42 lakhs to Rs. 5.98 crores in spite of transfer of securities from the Issue Department. Investments fell by Rs. 4.45 crores to Rs. 327.10 crores. Loans given to scheduled banks rose from Rs. 34.70 lakhs to Rs. 2.08 crores, of which advances against usance bills amounted to Rs. 59 lakhs (Rs. 9 lakhs). Ways and means advances were Rs. 11.31 crores, against Rs. 29.16 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 26th July, 1963, shows a rise of Rs. 3.53 crores to Rs. 585.43 crores in total deposits. Investments in Government securities are down by Rs. 18.93 crores to Rs. 266.73 crores, while other authorised investments remain unchanged at Rs. 9.35 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 6.51 crores to Rs. 262.78 crores. Cash and balances are, in consequence, shown at Rs. 24.70 crores or Rs. 56 lakhs less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 26th July, 1963, shows Demand and Time liabilities at Rs. 1,069.19 crores (Rs. 22.20 crores on account of borrowings from banks) and Rs. 1,313.09 crores (Rs. 22.43 crores), compared with Rs. 1,061.35 crores (Rs. 26.49 crores) and Rs. 1,329.56 crores (Rs. 23.04 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have fallen by Rs. 61 lakhs and Rs. 23.99 crores to Rs. 51.45 crores and Rs. 79.33 crores. There is a drop of Rs. 9.91 crores to Rs. 687.17 crores in investments. Advances and bills discounted at Rs. 1,494.10 crores show a fall of Rs. 15.06 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.5 percent and 62.7 percent, against 6.5 percent and 63.1 percent.

THE FOLLOWING IS A STATEMENT OF the cash balances of the Central Government on the last day of April 1963:

	Rs.
(1) At the Reserve Bank of India (A)	91,89,06,000
(2) At treasuries in India	(-)42,33,000
(3) In England (sterling converted at 18d the rupee)	40,63,000
Total	91,87,36,000

(A) Represents net of cash in treasuries and remittances in transit.

The steel comes hissing out at 2,000 feet a minute. Then it's sheared, bent, shaped and joined into cars and cabinets, freezers and fryers, washing machines and scouts' canteens. To keep fine steel products within the reach of everyone, steelmen rely on Timken tapered roller bearings . . . monsters weighing four times as much as your car, yet precise to a hair's breadth. They roll 24 hours a day under millions of pounds of pressure, yet require only the simplest, most economical lubrication system. And because they're made of case-hardened nickel-rich steel, they roll for years without costly shutdowns.

QUALITY TURNS ON TIMKEN® REGISTERED TRADE-MARK TAPERED ROLLER BEARINGS

The Timken Roller Bearing Company, Canton, Ohio, U. S. A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U. S. A.

THE TATA IRON AND STEEL COMPANY LIMITED

STATEMENT OF THE CHAIRMAN

The following statement by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company Limited, dealing with Company's working for the year ended March 31, 1963, has been issued to shareholders. The Annual General Meeting of the Company will be held on Thursday, August 29, 1963 at 4-30 p.m. at the Birla Matushri Sabhagar, 19, Marine Lines, Bombay 1.

To the Members,

The year under review has been a difficult one for India, overshadowed by the Chinese attack on our Northern Frontiers. While military operations, which ceased abruptly with the Chinese withdrawal in December 1962, left substantially unaffected the country's territorial integrity, the economic aftermath of the invasion has been a serious one. Although viewed in retrospect the limited Chinese attack on India may prove in the long run to have been a blessing in disguise for having swept away dangerous illusions and policies based on them, concerning China's avowed friendship for India, it has placed on us a grievous, and possibly permanent, burden of additional defence expenditure at a time when all our resources were required for economic development. With the realisation of our military unpreparedness against such a powerful and ruthless enemy, the need to strengthen and modernise our defence apparatus at the cost of a much larger part of total available resources, slender as they are, became inescapable.

The Finance Act has made only too clear to us all the magnitude of this new burden. While there is, I am sure, none amongst us who would deny the need to provide whatever funds are required to strengthen our defences, much concern and doubts have been expressed in regard to the specific provisions of the Act and particularly in regard to the Super Profits Tax. The matter was so fully argued and discussed both publicly and privately at the time that little purpose would be served by my using this occasion to repeat here what has been so thoroughly ventilated earlier. We can only hope that the Finance Minister who, much to his credit, gave the assurance that he would review this particular measure if it was found in practice to be detrimental to the country's economic growth, will, in fact, do so at a suitable opportunity. It is fortunate that, in our own case, the Super Profits Tax will place no burden on our Company, thanks to the large capital and reserves employed in our business.

Gratifying Progress

Coming to our own affairs, shareholders will see from the Directors' Report and the Accounts that the Company made gratifying progress during the year under review. Both output and profits have risen appreciably and the Company has now begun to reap the fruits of its heavy investment in money and effort undertaken over the last seven years.

I am particularly happy, that the improved results have made it possible for the Directors to recommend a slightly higher dividend on ordinary shares. The fact that the dividend in the hands of the shareholders is still considerably less than prior to the Expansion Programme is solely due to the change in the tax laws of the country since 1960, but that is a matter entirely beyond our control the burden of which would have been felt even if the Expansion Programme had not been undertaken. In fact, there is no doubt in my mind that had we not grasped the opportunity of doubling the capacity of our plant, the position of the shareholders would be less favourable than it is today and it would progressively deteriorate year by year as the plant got older and more costly to operate.

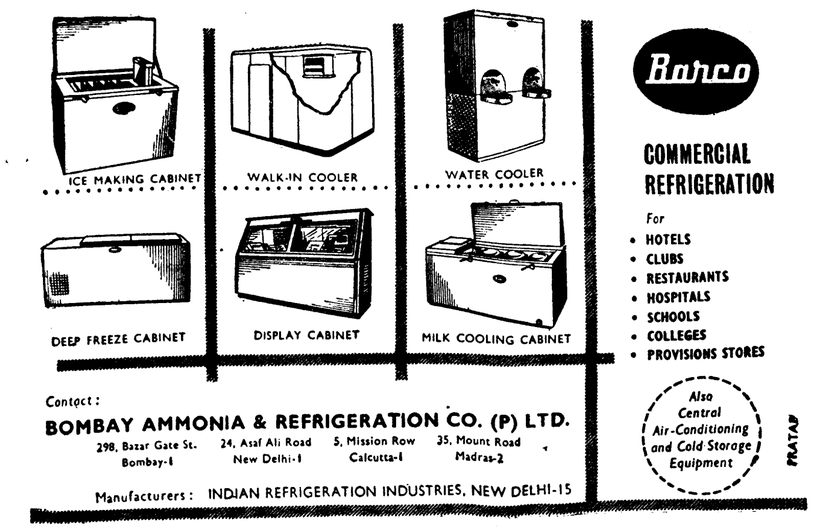
Shareholders will remember that, when the Expansion Programme was first mooted and some of them expressed serious doubts as to the wisdom of spending so much money on expansion, I pointed out that the Company's prosperity and, in fact, its ultimate survival would depend on its continued ability to remain competitive in the changed situation in the Indian Steel Industry as a whole which would emerge from its rapid growth and the creation of a number of large modern plants.

Competitiveness, in a controlled industry like ours, means, in essence, the ability to produce steel cheaper, or at least at no higher cost, than the rest of the industry. We could never have achieved this with a plant most of which was built after the first World War and which required an unduly large labour force in relation to its output. In any field of industry, an enterprise that fails to grow and to replace old plant and machinery with new and more efficient equipment must inevitably decline and ultimately die.

Modernisation and Expansion

I am sure that even our most sceptical shareholders are today glad that the Company embarked upon the Modernisation and Expansion Programme (MEP) and the Two Million Ton Programme (TMP) and I have no doubt that the wisdom of this step will become more evident as the years go by. I hope, at the same time, that they will realise that this process is a continuous one and that the Company, so long as it exists, can never afford to sit back and feel content that the modernisation and expansion achieved between 1956 and 1960 will be sufficient for ever after. We must be prepared not only to replace old plant and machines as they wear out and as new and better ones become available, but also to expand further if and when we are given the opportunity to do so on a sound and remunerative basis. Efficiency and low costs nowadays are increasingly linked with large-scale production. Whereas a few years ago, a million ton steel plant and, say, a thousand ton a day blast furnace were considered exceptionally large and efficient, today even a two million ton plant is small by world standards and a two thousand ton blast furnace is by no means amongst the largest built. In this heaviest of all industries particularly, the size of steel plants and of the individual items in them has grown continuously over the years not only in order to make more steel, but because, by the better and more efficient use of materials, power, transport and labour, they are able to produce at lower cost. In addition, technological advances and new processes have increased efficiency and lowered costs.

Those, therefore, who intend to remain shareholders of this great Company of ours must, in their own interests, be prepared to take a long term view and allow the Company to accept the additional burdens and responsibilities involved in continued modernisation and, wherever the opportunity occurs, in further expansion. For only by such means can we remain strong, efficient and competitive and can dividends be maintained or improved.



An opportunity for further modernisation and expansion may, in fact, come our way sooner than expected. As shareholders will have gathered from recent press reports, Government, in their advance planning of steel-making capacity in the Fourth Plan period, are considering a further expansion of capacity in the Private Sector in addition to that proposed for the Public Sector. We have been asked whether our Company would be interested in a further expansion at Jamshedpur and willing to undertake it during the Fourth Five-Year Plan. This matter is still at an exploratory stage and no decision is likely to be taken for a considerable time. The Management of your Company is at present engaged in a preliminary study of such a project. In the meantime, we have informed Government that we would in principle be willing to play our part in the expansion of the Indian steel industry as a whole provided such an expansion could be financed without undue strain on the Company's resources and would safeguard the interest of the shareholders.

Further Expansion

From the preliminary studies we have already made, it would seem that a further expansion of something between half a million and a million ingot tons could be undertaken economically within the existing plant area. In considering this matter, we will be guided solely by the technical and economic soundness of the project, the financial stability of the Company, the interests of the country and, by no means last, the interests of the shareholders.

The most important obstacle to surmount will be the question of finance. The cost of such a scheme, if for a million tons, would probably exceed Rs. 100 crores, at least half of which would be in foreign exchange. The World Bank, to which we still owe Rs. 34 crores, out of the Rs. 51 crores they lent us for the Two Million Ton Programme (TMP), would obviously be primarily concerned in such a scheme, whether they financed it themselves or not, and we would have to satisfy them that it could be undertaken without affecting our capacity to service their existing loans, let alone any fresh borrowing raised for the new Expansion Project.

Shareholders would probably look upon such a proposal from their own point of view and particularly the effect it would be likely to have on their dividends and on the market value of their shares. It is too early for me to give shareholders any indication of how these will be affected by a further programme of expansion. I can, however, assure them on behalf of my colleagues on the Board and

myself, that we will recommend a scheme of further expansion only if we are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair, and even attractive, to the shareholders.

While on this subject, I may refer briefly to Government's plans for the expansion of the industry as a whole. While the present steel-making capacity of the five major plants in India is about six million ingot tons, the Planning Commission have estimated the country's requirements at ten million tons at the end of the Third Plan and eighteen million tons at the end of the Fourth Plan.

Because of the long time it takes to expand existing plants and to build new ones and the many and difficult problems involved in correspondingly increasing supplies of raw materials, coal, transport and power to cope with the increased output of steel, it is doubtful that these targets will be reached according to schedule.

Fourth Plan Target

It is my personal view that the maximum practical target that can be reached at the end of the Fourth Five-Year Plan will not exceed fifteen million tons which itself would be a considerable achievement and in my view adequate. Of the present firm decisions, taken, the proposed creation of the Bokaro plant is by far the most important. Some shareholders and others may have been surprised that, as Chairman of the largest producer in the Private Sector, I should have gone out of my way to support publicly the Bokaro project both in India and abroad. I am sure, however, that most people, including our shareholders, will approve of my action. India's economy and the standard of living of our people cannot grow without additional steel it is clear that the Private Sector, even if permitted to do so, would not be able to undertake on its own a programme of expansion at an average rate exceeding a million tons of new capacity per year.

Assuming a capital cost per ton of installed capacity of anything between Rs. 1,500 and Rs. 2,000 per ton, the sums involved are so enormous, as to be clearly beyond the present and foreseeable resources of the Private Sector. It would be both unreasonable and unpatriotic of anyone to place the interests of private enterprise above those of the nation as a whole, and I therefore had no hesitation in publicly supporting the Bokaro project, when it seemed that such support might help in allaying some of the doubts expressed in America in regard to aid for this project. I sincerely hope that the U.S. Government and Congress, who have contributed so generously upto now to India's economic development, will find it possible to give their support to this vital project.

Shareholders will also have learnt from press reports that the Government of India were considering the possibility of abolishing wholly, or in part, statutory control over steel prices and distribution which has been in force since 1941. With the increased availability of steel from the five major plants in the country and the gradual narrowing and, in some cases, disappearance of the gap between retention and selling prices, the situation in the country in regard to steel supplies has materially changed, and Government have decided to review the whole question of continued control over the steel industry.

The Minister for Steel and Heavy Industries is to be complimented on taking a lead in reviewing Government's approach to the complicated and difficult problem of steel distribution and pricing. It is also gratifying to find that, before coming to a final conclusion on the subject, he decided to seek the views of the industry. For this purpose the Minister called a meeting of the three main producers early in July 1963, at which the whole subject was tentatively explored.

In expressing their views and suggestions in Delhi, the representatives of the basic steel industry informed Government that they would welcome decontrol provided that, at the same time, steps were taken to ensure that the transition was a smooth one and that reasonable prices were fixed which would be fair to both the consumer and the producer.

Tentative Views

The meeting was purely of an exploratory character and no decision was taken. The tentative views expressed by the industry were sympathetically heard, and I am grateful to the Minister, who was good enough to preside over the meeting, for his fair-minded and pragmatic approach to the problem. The Minister asked the representatives of the three main producers to discuss the matter further amongst themselves and to place their considered views before Government as soon as possible.

At this early stage it would not be proper for me to express any views on the subject. I can only say that I personally believe that if the steel industry is allowed to conduct its own affairs in future, under a carefully thoughtout scheme which will safeguard the public interests, a progressive step will have been taken to the advantage of all concerned and of the country as a whole. I therefore hope that these constructive discussions will fructify.

I regret to report that the Special Alloy Steel Project, which the Company has had under consideration for the last three years, has had to be shelved for the time being for two reasons: First, it has been found impossible upto now to interest a foreign collaborator in participating in the project on the condition imposed by Government that the whole of the foreign exchange cost should be wholly provided by the foreign partner and, second, the Government of India have decided that this project should be transferred to the Public Sector. I can only regret this decision and hope it will be possible to revive our project at some time in the future.

In last year's Directors' Report and the Chairman's statement a reference was made to Government's request that we should increase the output of our coal mines by about 1.5 million tons of raw coal or 1 million tons of washed coal so as to become self-sufficient in coking coal supplies. The study of this project has taken longer than expected mainly because, owing to the prohibitively high estimates of cost first submitted to us, we had to have the matter re-examined by another firm of consultants whose preliminary techno-economic report has just been received. The estimates contained in this second report are, I am glad to say, substantially lower than in the first. Discussions on the subject have been initiated with the World Bank, who have taken a special interest in the development of the Indian coal industry, and I hope that by the time the next annual report is submitted to you, a satisfactory decision will have been taken.

Tonnage Oxygen Plant

I have nothing special to report in regard to the operations of the Company during the current year, of which four months have elapsed at the date of this statement. A further advance in production may be expected during the year, particularly as a result of the commissioning of the Tonnage Oxygen Plant which is to supply oxygen to SMS 3. The erection of this plant will be completed shortly and should be in operation before the end of the year. I must, however, point out once again that in such a complex industry as ours, involving the close co-ordination of many elements and factors beyond our control, continuous operation at hundred percent of capacity is not an easy task. I can assure shareholders, however, that every effort will continue to be made to bring the plant to its full production and efficiency of which over ninety percent was achieved by the end of the year under review.

In conclusion, I am sure the shareholders would like to join my colleagues on the Board and myself in thanking our officers, staff and workers whose sustained efforts over the past few years have been largely responsible for the continuous improvement in the performance of the Company.

Note: The above statement is not a document purporting to be a report of the proceedings of the Annual General Meeting.

THE INDIAN IRON AND STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S STATEMENT

The following statement by Sir Biren Mookerjee, Chairman of the Indian Iron & Steel Company Ltd., dealing with Company's working for the year ended 31st March 1963, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 3rd September 1963, at 3 p.m. at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry, 6, Netaji Subhas Road, Calcutta-1.

The highlight of the year under review was the attainment by the Burnpur Works of a production of iron and steel approximating to the rated capacity of the plant, an achievement which reflects great credit on the entire operational staff, who have refused to admit defeat in the face of the many adverse circumstances with which they have had to contend.

Accounts

The effect on profits of the increase in production is not immediately apparent from the Profit & Loss Account. I should, therefore, perhaps point out that in the 1961-62 account there was included a sum of Rs. 2,28,51,875 arising from the retrospective increase in retention prices but relating to the year 1960-61. Against this has, however, to be set the adjustment of Rs. 1,40,01,141 relating to previous periods by which the value of the sales for 1961-62 had to be reduced by reason of the disallowance by Government of an element in the retention prices to compensate the interest chargeable on their Special Advance. The net special inclusion was accordingly Rs. 88,50,734 and if this is deducted from the gross profit of Rs. 9,18,78,416 shown for 1961-62, the comparative gross profit figure for that year becomes Rs. 8,30,27,682 in relation to the gross profit of Rs. 9,11,89,201 earned in 1962-63.

The 1963-64 Budget proposals in regard to the levy of a Super Profits Tax at penal rates on profits earned in excess of 6% on Capital and Reserves caused us grave anxiety, since in their original form they would have imposed on our Company a liability for the year exceeding Rs. 1 crore. As a result of widespread protest, these proposals were however subsequently considerably modified, the concessions primarily affecting us being the allowance of a deduction of 10% of total income in the computation of chargeable profits and the inclusion in Reserves of Development Rebate Reserve (in our case amounting to some Rs. 367 lakhs) not originally admissible. Although, in the result and in the circumstances explained in your Directors' Report, the possible immediate liability for the year is in our case now small, I cannot but regard the tax as ill-conceived. I say this for the reason that the tax can so readily operate to impose a penalty on efficiency and to constitute a positive disincentive to the expansion of the industries of Indian on which the entire future of the country depends.

Operating Conditions

You will be fully aware from my previous Statements of the difficult conditions under which operations are perforce carried on at Burnpur, the transport position, both as regards irregularity in the movement of wagons and the utilisation of wagons of unsuitable types, posing a constant problem in the handling of raw materials and the quality of purchased coal and limestone being a matter of the gravest concern. The position in regard to the latter materials was rendered still more acute by the commissioning of the remaining blast furnaces of the Hindustan Steel Limited during the year which led to a further deterioration in the quality of our supplies, the average ash content of our coal being 18.22% as against 18.01% for the previous year.

We are, in the matter of raw materials, contending against conditions far worse than those being experienced by the other producers due to our very small allotment of washed coal (about 8% of our requirements against nearly 100% in the case of all other producers) and might, therefore, with some justification boast of our production achievements in keeping with the example set in certain other quarters. I must, however, confess to some feeling of inquietude at the position which has been forced upon the industry by the apparent view of the Steel Ministry that quantity of production alone shall be the criterion of efficiency without regard to quality. For the two years ended 31st March, 1962, in our fight to maintain quality, we produced to approximately 90% of our rated capacity, about 80% of our outturn of saleable steel being of tested quality. This position was accepted by the Tariff Commission after full investigation and their recommendation as to the sales retention prices for the period based accordingly. Despite this and the fact that a basis of 90% capacity production constitutes also practically a world standard for the steel industry, these recommended prices, as I advised you last year, were cut by the Steel Ministry by no less than Rs. 19.50 per tonne, the major part of this reduction being made on the grounds that "the plant should have worked at 100% of capacity instead of 90% optimum mentioned by the Tariff Commission." The effect of the cut made by Government was in our case to impose on us a penalty by way of loss of gross earnings for the two-year period of no less than Rs. 405 lakhs. Faced with such a position where we have been penalised for our performance in place of the commendation we might justifiably have expected, we have had no option but with the greatest of reluctance to lower our standards, for the maintenance of which I have fought throughout my entire association of over thirty years with the Company, and the attainment of a production of 100% of rated capacity has been achieved only at the expense of a drop in the proportion of tested quality steel to about 60% of the total outturn, the rest being of commercial quality, with further reduction possibly still to come.

A consant drive for more and more production is fraught with many risks which, although apparently contrary to the views of those in authority, I cannot help but feel should not be taken, particularly having regard to the period of emergency through which the country is now passing. With the present quality of raw materials and the irregularity of their supply, the task of maintaining production is difficult enough in all conscience, for the efficient working of a steel plant is, in effect, a combination of art and science superimposed on an essential and fundamental background of rhythm. To the extent that more constants can be established so is the rhythm improved but where there are many and serious variables as now, then is the rhythm broken, this in turn cutting into production and quality—a set of conditions which the steel producer most dreads.

A modern steel plant is robustly built but nevertheless there are many delicate sections in it where constant care and vigilance is needed. Hence, maintenance must get the highest priority even at the cost of some loss in production. Just like the human body, where, although the stomach can stand a lot, the heart, brain and lungs are very delicate, so in a steel plant the Turbo-Blowers, the Ilgner Plant and the Cogging Mill are the vital points. Unless these are attended to regularly with special attention at the slightest sign of irregularity a major breakdown may ensure. The position is particularly hazardous in the case of our Indian steel mills where the holding of a large quantity of spares of all kinds is not possible owing to foreign exchange shortage and where any major breakdown could accordingly involve a prolonged and very serious loss in production. If, therefore, at the goad of the Steel Ministry capacity production must be obtained to avoid penalty, there is always the danger of chances being taken which might result in disaster. These are commonsense and practical matters allowing no scope for arbitrary decisions which, I suggest, should not have been and should not be made without the support of the highest expert advice available within or, if necessary, without the country.

Further Expansion

I advised you last year that dependent upon the availability of raw materials in general of the requisite quality and, in particular, of coking coal of reasonable ash content, there existed a potential for further expansion of the production capacity of the Burnpur Works by approximately one million tonnes of crude steel per annum and that such expansion for planning purposes had been phased into two parts. Phase I, which is that under immediate consideration, would cater for an increased annual production of some 300,000 tonnes of equipment ingot steel to be processed in the existing Rolling Mills, while Phase II, to follow in due course to accord with the overall planning of Government, would cover the balance increase of some 700,000 tonnes of crude steel, the form of final processing of which would be dependent upon the future requirements of the country. The World Bank has expressed its interest in the implementation of Phase I and the position so far as Government are concerned is that they have officially announced that there is no objection in principle to the further expansion of the Private Sector steel plants and have called for technical and financial reports in regard to this first phase of the Company's expansion programme.

It has been pointed out to Government that the availability of adequate quantities of good quality metallurgical coal is a prerequisite to any further expansion and that since Government have previously indicated that the Private Sector plants must make themselves self-sufficient in the matter of their coal requirements, the position, of necessity, hinges upon the ability of the Company to implement the Chasnalla Project for the development of the Company's coal-bearing properties, for the finance of the foreign cost of which a loan of $19,500,000 has been negotiated with the World Bank as reported last year. The difficulty in this matter lies, therefore, not in connection with the foreign cost which is fully covered by the loan, but in the finding of the finance necessary to cover the local cost of the Project in view of the fact that the position in this latter respect has gravely deteriorated since arrangements were concluded with the World Bank in December 1961.

This deterioration is due to two factors. Firstly, an increase of Rs. 459 lakhs in the estimate of such local cost caused by (a) lack of Governmental support in the matter of land acquisition which has necessitated the abandonment of the proposed open-cast mining section of the project and a compensatory enlargement at considerably greater expense of the deep-mining section and (b) the very heavy impact of the 1963-64 Budget on construction costs by reason of the enhancement of import and excise duties, higher freight charges and increase in the prices of various controlled commodities, together with the general rise in the cost of all materials and services that must inevitably follow under the present economy of the country. And secondly, the severe loss of earnings, to which I have earlier referred, caused by the drastic cut imposed by Government on the sales retention prices of steel that were recommended by the Tariff Commission.

Certain proposals by which the position could be covered have, however, been put forward to Government whose reply is awaited.

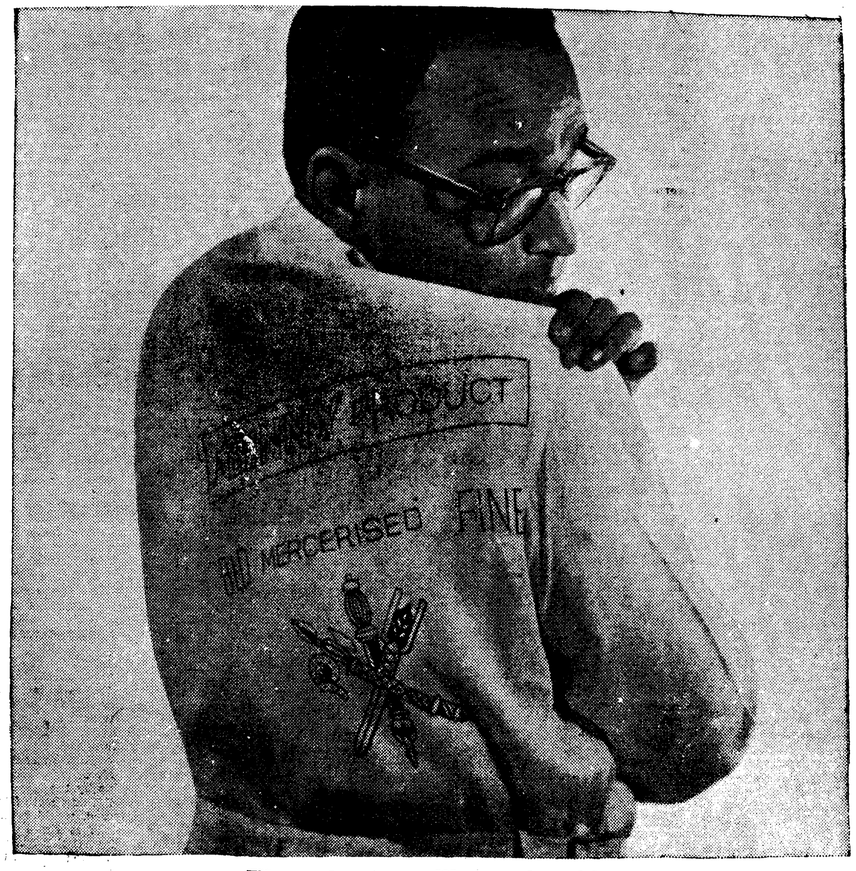
In view of the remarks made in the Report by your Directors you may perhaps question my present reference to the Chasnalla Project and I should therefore explain that since the date of that Report, an Order has been promulgated by Government under the Defence of India Rules, 1962, relaxing the provisions of Rue 52 in their application to the Company.

Kulti Foundries

To prejudice still further the financial position, another adverse factor has recently been introduced in the shape of attempt by the Steel Ministry to impose a cut on the supply of pig iron from Burnpur to Kulti and to divert supplies to such extent for the benefit of other and competing iron founders and pipe manufacturers despite the fact that at the time the agreed decision was reached some years ago to scrap the two obsolete blast furnaces at Kulti it was made clear to and accepted both by the Ministry of Commerce and Industry (at that time having jurisdiction in the matter of iron and steel) and the Planning Commission that the full requirements of Kulti must be met from Burnpur before any iron could be made available by the latter Plant to outside parties. The effect of the proposed cut, if imposed, would be a curtailment of operations at Kulti which, apart from rendering surplus 3,263 staff and workers involving payment of retrenchment compensation of approximately Rs. 20 lakhs, would result in a loss of earnings to the Kulti Foundries to the extent of some Rs. 55 lakhs per annum. Moreover, such a situation would inevitably lead to the gravest impairment of labour relations not only at Kulti but also at Burnpur, the possible result of which could be disastrous both to the Company and to the country.

The Company has naturally made the strongest representations in the matter the result of which is awaited and I may perhaps be forgiven if, in the face of the many adverse circumstances with which we have to contend, I confess to some feeling of frustration at times at the difficulties it would appear are unnecessarily and without due consideration thrown in the path of the Company in seeming discouragement of its efforts towards

the advancement of the industry of the country.



Decontrol

You will doubtless be aware that Government have presently under consideration the possibility of decontrol of the distribution and prices of steel. In this connection a meeting was convened in New Delhi by the Steel Minister on the 6th July, 1963 which was attended by the Chairmen of the Public and Private Sectors of the industry when the overall aspects of the matter were discussed. The relaxation of one of the multifarious Governmental controls over the industries of the country would naturally be welcomed. It must, however, be appreciated that the steel industry is not yet in a position to meet the full demands of the country and that the fullest and most effective utilisation of capacity must therefore be ensured, this involving the elimination of wasteful competition and the most economic usage of the over-strained railway transport system. It will be apparent, therefore, that in the interests of the country, the consumers and the industry, direct Governmental control would of necessity have to be replaced by some form of possibly modified control on a voluntary basis by the industry itself and the detailed joint proposals of the main producers in this connection are now being worked out for submission to Government.

Acknowledgements

In conclusion, I would express on behalf of the Board of Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, his Executive Heads and the entire Staff and Workers of the Company who by their ability, determination and wholehearted effort have made possible the results that have been achieved.

ORISSA CEMENT LIMITED

CHAIRMAN, MR. J. DALMIA'S REVIEW

Summary of the speech of the Chairman, Mr. J. Dalmia, delivered at the Thirteenth Annual General Meeting of the Company held at Rajgangpur (Orissa State) on 5th August, 1963.

Gentlemen,

I have great pleasure in welcoming you to the Thirteenth Annual General Meeting of your Company. Despite an increase of 10% in the gross sales, the profit earned by your company is lower at Rs. 142.20 lakhs compared to Rs. 160.59 lakhs in 1961 for the reasons discussed in the Directors Report. After a good deal of thought your directors decided in favour of strengthening the General Reserve by transferring Rs. 13.50 lakhs to the said reserve even though this necessitated a reduction in the dividend from 15% to 10%. I am, however, glad to inform you that the representation made by your company to the Central Board of Revenue for grant of tax concession pursuant to Sections 84 & 101 of the Income tax Act 1961 in respect of the profits from the various refractory plants has been successful. The total quantum of the tax exempt profit available amounts to Rs. 31,01,873/- and this being more than the dividend for the year 1962, no deduction of tax at source will be made from the said dividend. An amount of Rs. 6,17,873/- out of the tax exempt profit is carried forward and would be available for future dividends.

Incidentally, I would like to point out that the system of tax deduction at source from dividends and interest on Government securities is causing a great deal of hardship to the lower income groups, inspite of the provision in the law for grant of exemption certificates to persons whose income might be below the taxable limit. These people with low incomes are already finding it difficult to sustain themselves and their families especially with the persistent rise in the cost of living. They deserve to be assisted and I would urge the Finance Minister to consider and give exemption from tax deduction in respect of dividends of say Rs. 300/- or less to an individual shareholder.

As mentioned in the report of your Directors, on account of difference of opinion between the two Arbitrators, the dispute regarding electricity charges had been referred to the Umpire, Shri M. C. Mahajan, Ex-Chief Justice of India. The Umpire has given his award in which he has decided the basis to be adopted in computing the electricity charges to be paid by the Company. Actual calculations will take some time but the amount payable by your Company would work out to well below half the figure of Rs. 92.09 lakhs which has been shown in the Balance Sheet as Contingent Liability.

Incentive Scheme

I would now like to refer to the incentive Scheme introduced by the Government of India with effect from 1st January 1963, for maximising production in the cement industry. In the case of your company, the incentive would become payable at Rs. 5.50 per tonne for the extra tonnage, if any, produced in 1963 over 3,80,000 tonnes. The objective underlying the scheme is indeed commendable and I hope that this scheme which is valid only for the current year to begin with, would be made a regular feature of the price system so long as the retention prices are regulated by Government, I should like, however, to point out that the norm adopted for the purpose of this scheme, that is, the maximum production attained in any calendar year during 1960-1962 places at undeserved disadvantage those producers who kept up their efforts to maximise production and reached the optimum or near optimum level during any of the three years of the reference period. Worked on this basis, the incentive will be self-defeating and will cease to provide the continuous impetus necessary to make the scheme a success. A better and more workable method would be to relate the norm to the average production of each unit during the last three years. I am sure that with this and a few other minor modifications, the scheme would well serve its purpose by providing a positive incentive for all the cement units.

After examining the impact of various levies, which have been imposed from time to time since the cost investigation by the Tariff Commission, the Government has now allowed an increase of Rs. 2.75 nP. per tonne in the retention prices payable to the Cement Producers with effect from 1st June, 1963. The retention price payable to your company would now be Rs. 72.25 nP. per tonne. The increase falls short of the demand made by your company and covers partially the increased cost consequent on Governmental action. Moreover, this has not been given retrospective effect from 1.11.1961. I hope the Government would take a realistic view and would provide adequate relief to the Cement Producers for the actual increases in production costs due to Governmental actions, which are beyond their control.

The Refractory industry is today faced with certain crucial problems. The installed capacity of the Industry (excluding mortars and deadburnt magnesite) at the end of 1962, and as anticipated at the end of years 1963 and 1964 on the basis of figures discussed at recent meetings of the Panel on Refractories are 6,67,400 ; 8,31,700 ; 9,40,700 tonnes respectively and with the licences under active implementation and plants under construction, it may rise to about 12 lakh tonnes during 1965. This expansion of the Refractories Industry was based on the steel production capacity reaching a target of 10 million tonnes per annum by the end of the Third Five Year Plan. It appears, however, that by 1964-65 and perhaps even in 1965-66, the steel industry would not exceed a production rate of about 6 million tonnes per annum.

Refractory Requirements

I will now turn to the requirements for refractories, actual and anticipated. In 1962, the production which may be taken to represent approximately the demand of Fireclay, Silica and Basic refractories, was 5,32,787 tonnes i.e. 80% of the installed capacity. The requirements for 1964-65, when the steel industry may have a production rate of about 6 million tonnes per annum, would be 6,35,501 tonnes i.e. 67% of the installed capacity in 1964-65.

A consideration of these figures will show a progressive deterioration in the position of the industry when its overall unutilised capacity of 20% in 1962 would increase to 33% in 1964-65. If, as I have mentioned earlier, the installed capacity for fireclay, silica and basic bricks increases to 12 lakh tonnes during 1965, and the demand remains around the same level as in 1964-65, at only somewhat over 6 lakh tonnes, the industry would have an idle capacity of as much as 50%. This in itself would be disastrous. The Industry also cannot ignore the possibility that there is an over estimation in the rate of consumption of refractories per tonne of steel produced. This is particularly so in the case of basic refractories, as I had mentioned last year. We are further concerned with the indications that new capacity in the steel industry may be largely planned for making steel by the L.D. process or by other Oxygen processes where instead of the conventional basic refractories, only tar bonded dolomite bricks are required.

The changeover in the steel industry to all basic open hearth furnaces is taking place even more rapidly than was expected with a consequent rapid decline in the demand for silica bricks. I realise that while very major expansions are being planned in the capacity of the steel industry, the demand for refractories cannot remain at a constant level, linked only to the operational requirements of the steel industry. This will be increased appreciably by the constructional requirements for refractories, which might increase the demand by about 20%. It would be to the mutual benefit of both, the steel industry and the refractory industry, if the steel industry were to formulate and place its demands for refractories for constructional purposes well in advance so as to enable the refractory industry to utilise its capacity most gainfully and at the same time eliminate the risk of the steel industry having to import refractories which they are unable to get in the country at short notice. Even allowing for some inbuilt surplus in the capacity of the refractory industry, it is apparent from what I have said earlier that there can be no justification for any further expansions in the capacity of the refractory industry, for several years to come.

Special Types of Refractories

It is fortunate that your company has developed the manufacture of certain special types of refractories, such as, silica coke oven bricks, forsterite bricks, blast furnace bricks, burnt basic roof bricks, chemically bonded steel clad basic roof bricks, etc., which, to a great extent, were being imported hitherto. In this manner, we would not only be able to contribute to savings of foreign exchange but, would be able to equip ourselves better to meet the difficulties created by over-production in the industry.

Both the steel industry and the refractory industry would benefit if shapes and sizes of bricks are standardized as far as possible and common specifications are adopted for all the steel plants. This would not only facilitate manufacture but would enable supplies to be made at short notice. The adoption of the Indian Standard Specifications would also discourage any tendency to resort to imports of refractories according to certain foreign specifications. I am sure that the authorities concerned are fully alive to this problem and that they will continue to cut down still further whatever imports are taking place.

The difficulties in the procurement of the right type of raw materials for the industry, due to the mineral licensing policy and the manner of its implementation by certain States, continue to exist. I am happy to advise, however, that the importance of removing these difficulties is being given greater recognition by the Panel on Refractories. The tendency on the part of certain States to impose restrictions on the grant of mining leases for minerals to be used for industrial purposes outside their boundaries, also appears to be diminishing. There are, however, frequent delays in the disposal of mining lease and prospecting licence applications, but in view of the present emphasis on efficiency and economy in the country, we may hope that there will be more expeditious disposal of such cases.

The industry is grateful to the Geological Survey of India for the investigation which they have undertaken on finding new sources for the supply of important raw materials required by the industry, such as, high alumina plastic and non-plastic fireclays, chrome ores and bauxite.

At the Fourth Session of the Industrial Committee on cement held on 15th September, 1962, it was decided to appoint Tripartite Sub-Committee to consider in the light of the workload studies already carried out in the three cement factories, the question of undertaking similar workload studies in other cement factories and to recommend, interalia, the appropriate agency for carrying out such studies. The Sub-Committee has been constituted only recently after the lapse of nearly seven months and has yet to begin its labours. I would once again urge that these studies should be expedited so that the assessment of the workloads is completed well before the question of revision of the wage structure in the cement industry comes to be considered.

In the end, I would like to express on your behalf and on behalf of your directors our sincere appreciation of the services rendered by the workers, staff and officers of the company during the year under review.

RUBY GENERAL INSURANCE CO., LIMITED

CHAIRMAN, MR. B. M. BIRLA'S ADDRESS

The following Speech delivered by the Chairman, Mr. B. M. Birla at the Twenty-seventh Annual General Meeting held on Tuesday, the 30th July, 1963.

Gentlemen,

It gives me great pleasure to welcome you to the 27th Annual General Meeting of the Company. I hope you have noted with satisfaction the good results for the year under review.

The net premium has increased from Rs. 70,38,000/- in 1952 to Rs. 1,35,12,000/- in 1962 and the Capital and Funds from Rs. 76,83,000/- to Rs. 1,88,73,000/-.

Fire Department

The net premium income for the year amounts to Rs. 78,21,000/- as against Rs. 71,99,000/- during the year 1961. The Department has shown good increase in the premium income in spite of considerable reduction in rates from 1st July, 1962. The working has resulted in a profit of Rs. 16,43,000/-. The Reserve has increased from Rs. 35,99,000/- to Rs. 39,11,000/-.

Motor and Miscellaneous Department

The net premium income for the year is Rs. 93,07,000/- and shows a small reduction in comparison to the previous year due to the cautious underwriting policy followed by the Company, particularly in respect of Automobile business in foreign countries. The Department has shown a profit of Rs. 4,17,000/- and the Reserve now stands at Rs. 46,53,542/-.

I am glad that the Insurance Association has increased 'No Claim Bonus' to a maximum of 50% for a claim-free period of 5 years though the premium rates on Motor Cars had to be increased from 1st August, 1963 due to adverse claims experience.

Marine Department

The net premium income for the year is Rs. 13,84,000/- as against Rs. 15,78,000/- during the previous year. The reduction in premium income is in respect of business written outside India which mainly consisted of foreign Hull business where the results had not been good. The working for the year has resulted in a profit of Rs. 1,31,000/-. The Reserve amounts to Rs. 13,83,622/-.

General

The total premium income for the year amounts to Rs. 1,85,12,000/- as against Rs. 1,81,80,000/- in the previous year. The profit after reduction of tax at source and Provision for taxation amounts to Rs. 13,35,783/-. This has enabled your Directors to provide for additional reserves and recommend a Dividend of Rs. 1.25 nP. per share as against Rs. 1.05 nP. per share for the year 1961.

The Government has brought into force the Emergency Risks Insurance Acts for compulsory insurance of Factories and Goods during the period of emergency and has authorised only one General Insurance Company, which is the Subsidiary of the Life Insurance Corporation, to receive the application forms and to issue the Policies. It is regretted that the Government did not accept the offer of voluntary services by other General Insurers for the purpose. It would have been convenient for the insuring public and economical to the Government if all the General insurers were authorised to undertake this work.

The Government has introduced Super Profits Tax to meet the increased defence requirements. The Insurance Companies by the nature of their business should have been exempted from this tax. However, the Government should allow the reserves for unexpired risks to be treated as part of the Capital under the Super Profits Tax Act.

The voluntary measures by the executive Committee of the Insurance Association of India under the revised Code of Conduct for improving the working of the Insurance Industry are showing results but the success would depend on the extent of co-operation and support it would receive from the Insurance Companies themselves.

In concluding this review I wish to express our thanks to our Patrons for their continued support and to the Executives, Staff, Fieldworkers, Agents other representatives in India and abroad for their co-operation and devotion to duty which has enabled the Company to achieve these good results.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

New Delhi

INDIA UNLIKELY TO EXPLORE FOR OIL IN IRAN

(FROM OUR NEW DELHI CORRESPONDENT)

SINCE the former Central Minister for Mines and Fuel, Mr. K. D. Malaviya, announced that the Oil and Natural Gas Commission would prospect for oil abroad, there has been a great deal of loose talk about India applying for the Iranian offshore concessions. In April 1963, the National Iranian Oil Company announced that it would declare two offshore Persian Gulf areas open for bidding by about 1st July, 1964. It was made clear that only officially qualified applicants, who were willing to participate in a prior seismic survey and share the cost, would be eligible to make their bids for offshore concessions. Apart from giving a cartographic description of the two areas which it intended to declare open next year, the Company outlined the legal procedure to be followed by an applicant interested in carrying out operations under the Iranian Petroleum Act of 1957. The interested parties, it was stated, "must communicate directly and only with Mr. Abdollah Entezan, chairman of the National Iranian Oil Company or his authorised nominee within the Company."

The statement added that "there are no unofficial discussions permitted prior to bidding nor any agreement negotiated through intermediaries. As first step, any potentially interested party must apply for the questionnaire to be filled in and returned not later than 10th June, 1963, to enable the Company to ascertain an applicant's competence. An applicant will be notified not later than 30th June whether he qualifies and, if so, will be informed of relevant procedure and given detailed information. All applicants recognised by the Company as eligible must participate in the seismic survey, expenses of which will be divided among them, in order to be eligible for bidding on the acreage after it is declared open."

It is obvious that the bidding will be stiff if the results of the seismic survey are thought to be promising. A condition for participation with the Company is that a foreign partner may be expected to place the Company's share of production as well as its own in the world market. This, however, may not be much of a snag for India, which reuires increasing quantities of crude oil. But the main issue to consider is whether the Oil and Natural Gas Commission has adequate foreign exchange and technical skill to undertake the project. Judging from the nature of the search for oil in India, where the Commission has had to employ foreign technicians to undertake even seismic surveys, exploration of oil abroad will be difficult, if not impossible. Meanwhile, India faces a chronic shortage of foreign exchange.

A message from Iran issued on 15th July states that some 20 companies have been approved by the National Iranian Company as "potentially acceptable bidders for offshore acreage." The list includes Phillips of the U.S.A., Italy's State-owned E.N.I., a German consortium, including D.E.A. and Wintershall and the French State-controlled B.R.P. and R.A.P. The list does not, however, include India's Oil and Natural Gas Commission.

In this connection, the latest report of the World Bank makes some interesting observations. It says: "Total public investment in oil development and exploration during the second plan is now estimated at Rs. 57 crores, of which over half was in foreign exchange. The published version of the third plan was rather vague about the amount of investment to be undertaken in the further development of oil resources. Specific provision was made in the 'physical programme' (but not in all cases to the full amount in the 'financial programme') for exploration expenditures of Rs. 115 crores; for the completion of the Nunmati and Barauni oil refineries (Rs. 31.5 crores) and for the construction of the new refinery in Gujarat (Rs. 30 crores); for the completion of the Assam crude pipeline and construction of a product pipeline linking Barauni with Delhi and Calcutta, together with some additional expenditure on the crude pipeline (Rs. 49 crores); for additional Government investment in Oil India (Rs. 9.50 crores); and for the capitalisation of the Indian Oil Company (Rs. 10 crores).

"This added up to a total of about Rs. 245 crores, of which just over Rs. 90 crores was assumed to be in foreign exchange. The allocation for exploration and production has since been raised to Rs. 202 crores, but it is most unlikely that this will all be spent. In fact, expenditures under this head during the first two years of the plan are estimated at only about Rs. 36 crores. Public expenditures on refining and distributing, on the other hand, will almost certainly be much larger than the plan allowed for.

"The Government's oil policies are based on the 1956 Industrial Policy Resolution which, subject to certain qualifications, reserved to the public sector the establishment of new units in most basic industries. Whatever the merits of these policies, there is no doubt that they have contributed significantly in the short run to the drain on India's foreign exchange resources. On the credit side, the firm line taken by the Government in its dealings with the oil companies has helped in bringing down oil prices and has enabled India to take full advantage of the present worldwide surplus of oil. The energetic action taken by the Government in exploration for oil has also produced valuable results. Against this, however, must be reckoned the cost of delays in exploiting the oil discovered a decade ago in Assam. If private industry had been left free to develop these resources, a production of 2 million or 2½ million tons of crude oil could have been achieved at least five years ago, against India's present production of less than 1 million tons a year from all sources. The public-sector programme for exploration, production and refining has also required the Government to borrow abroad on a large scale, in addition to raising local funds. Finance for this programme has been provided out of loans and credits from Russia, Rumania, Italy (E.N.I.), France, the United Kingdom and the Burmah Oil Company. The E.N.I. offered a credit of up to $100 million, but only $45 million has been accepted by the Indian Government, and quite a small part of this has been firmly committed to projects."

India is one of the few developing countries which has spent scarce foreign exchange on oil exploration. Even a country like Iran has called for tenders from non-Iranian companies to spend their own money in discovering oil for Iran. As for the E.N.I. credit, a portion of it has to be paid on signing the contract and the balance in instalments carrying a stipulated rate of interest. As it is, it will be the U.S.A. and the U.K. who will have to finance India to repay the E.N.I. loan, which is comparatively a short-term credit.

If India decides to carry on oil exploration for Iran, apart from the supply of technical equipment and personnel, the main problem will hinge on foreign exchange. Firstly, India has to find foreign exchange to pay for her share of the seismic survey and, with everything going in her favour, to find foreign exchange to carry on the search for oil. Even if this hurdle is crossed and oil is struck, India will have to find foreign exchange to pay for royalty and for Iranian crude to be marketed at prices to be fixed by the Iran Government.

All this seems promising on the assumption that the Aid-India Club will continue to pour in adequate foreign exchange resources to help India undertake the project. It is, however, interesting to note that Iran has constantly refused to include crude oil or petroleum products in its trade plans with India.

SMALL INDUSTRIES

N. C. A. E. R. Survey

A study of small-scale industries in Mysore was recently undertaken by the National Council of Applied Economic Research, at the request of the Mysore Government. The most important small-scale industry of the State is textiles. Next in importance come agricultural, engineering, forest, chemicals and mineral products industries and village industries and handicrafts.

The study has indicated that there is much scope for setting up more small-scale units based on agriculture, livestock, fisheries and forest resources. More factories will be required for the increased production of rice, groundnuts and other oilseeds, coffee, sugarcane and cotton. To cope with the increased demand for replacements and maintenance, small-scale engineering establishments will also become necessary. The Council has suggested the creation of units for the processing of rice bran to produce oil, use of cotton waste, processing of cotton into surgical cotton, manufacture of mango cereal flakes, vegetable curd and cashew apple juice, and a co-ordinated programme of horticultural development and bonemeal production. Since the State is deficient in tanning facilities, the introduction of 20 to 25 tanneries in the small-scale sector has also been recommended. Possibilities for producing tanned leather, glue, wool grease, etcetera, have been indicated. The immediate establishment of one fish oil and fish meal factory and another unit making fish glue have been recommended. In the forest sector, two wood preservation units, one in Mysore and another in Hubli, have been recommended.

The Council has recommended that soap producing units be encouraged to manufacture only special varieties of soap having restricted demand. It has recommended the establishment of a factory with 100 lbs of capacity to manufacture fine chemicals and four factories making creosote emulsions and disinfectants. The extraction of lemon grass oil, manufacture of paints, industrial rubber goods such as belts, elastic couplings, components of transport vehicles, latex foam products, rubber sheetings, etcetera, and the manufacture of formaldehyde using methanol as a by-product in making charcoal in Bhadravati have been suggested. According to the Council, the scope for mineral-based small industries is not much.

A number of ancillary industrial units manufacturing spare parts of textile machinery and transformers, studs, bearing caps, oil trays, chain pulley blocks, etcetera, have come up in the State. Large organisations like the Hindustan Machine Tools have led to the growth of a number of such units in industrial estates that have sprung up around them. The Council has emphasised the necessity for the planned development of these ancillary units and for the establishment of training centres.

Meanwhle, the international perspective team on small industries has strongly criticised the Government's policy of promoting the expansion of small industries regardless of the fuller utilisation of their existing installed capacity and unmindful of the priority allocation of foreign exchange and other economic considerations like proper location. The team is of the opinion that foreign exchange available for India's decentralised sector should be used mainly for maintenance imports rather than for the creation of additional capacity.

Sponsored by the Ford Foundation at the instance of the erstwhile Central Ministry of Commerce and Industry in 1962, the team says that, in the context of under-utilisation of capacity, the acute shortages of foreign exchange and raw materials, new units should be allowed to be set up only "in a special situation" arising out of "national interest."

"Restrictive policies as adopted in the present production programmes due to segmented licensing in the large and small industry sectors," the team points out, "are neither successful nor conducive to the growth of the decentralised sector. More careful licensing of large firm capacities would give small firms more equal opportunity in the market. The team also believes that positive action in the form of technical assistance to small firms and giving them equal access to raw materials would be more effective."

Moreover, the team has suggested that present efforts of the Central and State Governments to set up new small units should be subordinated to technical assistance programmes designed to make the existing units more efficient and productive.

The team's 129-page report recommends a phased programme towards a single price-tax system for all commodities, supporting an allocation system which will provide priority schedules for high priority end-products. An added advantage of such a mechanism, it feels, would be that the Government would receive in taxes part of the difference between controlled and open prices, which now go to speculators.

As an important stop-gap measure, the team has recommended specific revisions in the present system of allocations which will redress some of the current inequities of allocations and distribution between large and small firms.

The team has suggested an immediate review of the basic policies governing imported and domestic machinery as well as the inequitable allocation system for scarce raw

materials and imported components. "This had resulted in part from the facts that due to the segmented Government allocation system, allocations to small units were generally lower in relation to total capacity than allocations to larger firms producing the same products."

Again the division of allocation among the States is not in any sense based on scientific judgments related to development goals and allocations to individual firms by the State Directors of Industries are not based on any uniformly applied logical system.

As a consequence, the team has contended, small units have to buy a large share of their requirements at high prices in the black market than do large units, and are, therefore, at a competitive disadvantage. Despatches to small firms are also more uncertain and erratic and less related to needs than those of their large-scale competitors.

These findings, according to the team, are contrary to the declared policy of the Government of India which emphasises equal, if not preferential, advantage to small producers. The team has also severely criticised the existing administrative machinery employed for the development of the decentralised sector.

JUTE

Report of Expert Body

The Jute Committee, set up by the Central Ministry of Commerce and Industry last year, has recommended the establishment of a high-powered Jute Development Board under the control of the Ministry of Food and Agriculture for facilitating the effective implementation of the development programmes and for increasing the jute yield. The Board, in which the major jute growing States are proposed to be represented by their Secretaries of Agriculture, should, it is suggested, also look into marketing of jute, stabilisation of prices and transport. The Board should be associated with the Buffer Stock Agency and also with measures for stabilising the prices of jute manufactured goods.

The report notes that the internal consumption of jute goods has been steadily rising, the average annual rate of increase during the first and second plan periods being 15,200 tons and 17,600 tons, respectively. The internal consumption is expected to increase by about 30,000 tons a year in the remainder of the third plan period, reaching the level of 400,000 tons in 1965-66. The production target of jute goods for the third plan is 1.3 million tons and for the fourth plan 1.7 million tons. So the committee suggests that for the expansion of the industry, necessary planning should be taken in hand without delay.

The committee thinks that in view of the achievement of self-sufficiency in raw material and the rising internal and external demand for jute goods, there is no need for continuing the working time agreement under which the Indian Jute Mills Association controls the installation of additional capacity and the level of production.

For expansion, the Committee suggests that the first priority should be for existing uneconomic units. Those units which, although economic, can achieve additional economies by expansion, should come second, and the establishment of new units may be taken up on the basis of regional needs provided raw materials and other facilities are available.

Referring to the power shortage, the report says it is necessary to ensure that the working of this vital export industry is not hampered by the dearth of power in the short term. If by the end of the fourth plan period, the production of jute goods is to rise by 400,000 tons over the third plan target, the additional power requirement will be about 40 megawatts. This should be kept in view while planning for the power requirement of the Calcutta area in the fourth plan.

The committee considers that the area under jute and mesta in the third and subsequent plans should be stabilised around 2 million acres and 800,000 acres, respectively. The fibre production targets should be achieved by rapidly raising the yield an acre of both jute and mesta and not by encroachment in the area under foodgrains.

The report says that it should be possible by the end of the third plan to increase the average yield to 3.3 bales an acre. "For this, a fresh programme of saturation of all the jute growing areas with the best available seed within a period of about three years should receive priority and should be executed by the end of the third plan." The grant of increased subsidy, seed multiplication by registered growers outside main jute growing areas and payment of fair price to them, are among the other recommendations. The allotment of fertilisers for jute and mesta cultivation, it is emphasised, should receive priority.

The committee is of the opinion that with an increase in the production of specialities, the requirements of high grade long jute will rise. So if the output of the best qualities of Indian jute is not adequate more long jute may have to be imported. The import of limited quantities of cuttings is also recommended by the committee under certain conditions.

Fluctuation in Prices

Referring to the fluctuation in prices which has affected the competitive position of Indian jute manufactures in world markets, the committee says that the Government should have full operational control over any agency which may be entrusted with buffer stock operations and price support arrangements. It is necessary to ensure that in the peak marketing period each season, the purchase of jute by the mills matches the quantity of jute on offer. The committee also recommends that derivative prices corresponding to the "floor" prices at the Calcutta market should be fixed at all secondary markets and supported by buffer stock operations.

High priority should be given by the State Governments for the establishment of a series of "regulated markets" in the jute growing areas so that no jute grower has to take his jute more than five miles to reach such a market. Furthermore, co-operative jute marketing and warehousing organisations should be developed on a much larger scale than has hitherto been possible. Co-operatives should make buffer stock purchases as much as possible.

To minimise fluctuations in the prices of jute goods due to seasonal or short-term changes, the committee recommends the creation of a jute goods buffer stock. The same buffer stock agency could handle both the raw jute and jute goods buffer stock. The latter should restrict the fluctuations in jute and jute goods prices to, say, 5 percent either way. The Jute Development Board, which has been recommended to be set up, should come into the picture in relation to the jute goods buffer stock.

As for exports, it has been suggested that further efforts should be made to study and develop markets abroad in a systematic manner and on a long-term basis. In this connection, the Jute Commissioner's office should create an effective system of market intelligence for all the consuming countries. The committee says that there should be consultations between the Governments of India, Russia and east European countries to determine the extent to which India's production of jute goods can be co-ordinated with the five or seven year plans of each of these countries.

The total trade of India with west European countries constituted 8.9 percent of India's total exports of jute goods. The committee suggests that the effect of quota restrictions in these countries on Indian jute goods exports should be studied in detail so that effective steps can be taken to negotiate with these countries to increase India's share of the market for jute goods. Stressing the need for diversification and product development, the committee has recommended the creation of a product development cell in the Jute Commissioner's organisation under the supervision of an experienced jute technologist.

As there is considerable scope for expanding the export of carpet-backing cloth to Australia and western Europe, a detailed study has been recommended for making a reasonable forecast of the future demand for wide hessian. The possibility of manufacturing tufted carpets for exports should also be considered.

The committee endorses the recommendations made by the *ad hoc* committee on quality control and preshipment survey that the I.S.I. standards for jute manufactures should be finalised without delay and that there should be a procedure for inspection within the mills at the stage of production in accordance with the I.S.I. certification marks scheme.

Although the extent of competition other than from Pakistan is not immediately significant, the growth of production in all the competing countries should be closely watched so that effective steps may be taken in time to prevent the loss of export markets. The report says that in negotiations with the E.C.M., the objective must be for a nil tariff or a very low tariff on the export of sacking to western Europe.

Among the steps to reduce costs, the committee suggests that when the production of additional jute goods becomes necessary, it should be achieved by working more looms on a double shift basis. The Government should give every assistance, including foreign exchange, to enable the industry to replace worn out and obsolete carding equipment and to install high-speed winding equipment and pre-beamers, which improve both quality and output. Arrangements for giving loans for modernisation should be made.

The committee says that as the jute industry is an important foreign exchange earner, its need of foreign exchange should be given priority, and within the industry itself the highest priority should be given to the machinery manufacturers' requirements of capital goods and components.

The committee has recommended that as an incentive to export, a scheme may be worked out for import entitlements in relation to essential jute machinery.

FERTILISER PROJECT

Parry to Raise Dollar Loan

The Government of India has approved the scheme of Parry and Co. Ltd of Madras to raise a $27 million loan from the U.S. Export-Import Bank to finance its Visakhapatnam fertiliser project. Parry and Company has two U.S. firms as its collaborators.

BALL AND ROLLER BEARINGS

Requirements Estimated

The Central Ministry of Heavy Industries had a meeting with the manufacturers of ball and roller bearings last week. It was agreed at the conference to rationalise production, as far as it was feasible and practicable. A committee was set up for examining the problem of phasing the production of railway and motor-car ball bearings. An advisory panel for the industry was also set up.

The break-down of the estimated annual requirements of ball and roller bearings at the end of the third five year plan is as follows:

Consuming industry	Ball bearings up to 2in. dia bore	Above 2in. dia bore	Roller bearings	Total
Electric fans	3,500,000	—	—	3,500,000
Electric motors	600,000	—	—	600,000
Passenger cars	300,000	120,000	420,000	840,000
Commercial vehicles	1,020,000	—	1,518,000	2,538,000
Jeeps and station wagons	30,000	—	220,000	250,000
Motor-cycles and scooters	400,000	158,000	—	558,000
Diesel engines	5,500	49,500	4,600	59,600
Power-driven pumps	247,500	45,000	34,500	327,000
Tractor and earth-moving equipment	44,000	341,000	88,000	473,000
Textile machinery	675,000	9,000	279,000	963,000
Sugar machinery	75,000	—	—	75,000
Heavy machine building plant	821,700	91,300	51,000	964,000
Railway wagons, including coaches and locos	—	—	150,660	150,660
Miscellaneous industries, including machine tools, H.E.P.	650,000	331,000	50,000	1,031,000
	8,368,700	1,144,800	2,815,760	12,329,260

In addition, the replacement requirements have been estimated at 2.7 million bearings by 1965.

The present installed capacity is 3,270,500 bearings a year divided between two enterprises, on a three shift basis. Production in 1961 was about 3,228,000 bearings. A third unit has recently come into production.

In order to reach the production target of 15 million bearings by 1965, 11 enterprises have received industrial licences from the Government of India to set up new units or expand the existing ones.

Some of these companies have secured foreign collaboration, approved by the Government of India for the total production of around 10 million bearings a year. Actual production of some of the additional units is expected to start in 1963-64.

Year	Imports Value in Rs. 000,000	($ million)
1957	33.60	7.06
1958	20.80	4.37
1959	20.15	4.23
1960-61	36.88	7.74
1961-62	46.98	9.86

In 1961, the effective domestic demand for original equipment as well as spares was placed at 6,300,000 bearings. As the production was 3,228,000 bearings, it appears that almost 50 percent of the consumption of ball bearings was covered by imports.

As for the supply of raw materials, high carbon chromium steel bars, tubes and wires are still being imported. These materials are expected to become available within the country in two or three years when the alloy and tool steel plants, which are being established, start production.

The other important raw materials, namely, mild steel bars, plates and tubes used for nuts and sleeves of adapter bearings, mild steel wire, bar strips and rods for rivets and cages, etcetera, are available within the country. In addition, production materials and tools, like emery lapping compound, grinding wheels of special types and sizes, machinery spares, special alloy and tool steel for tools and dies and some chemicals like heat treatment salts, are imported.

The industry, being a comparatively new one in India, is protected by an import duty of 95 percent *ad valorem*. The protection will continue at least till 31st December, 1965. In this sheltered market, the demand is likely to outstrip supply for a number of years to come.

FREIGHT RATES

Rise on West-bound Cargoes

The Government of India asked the Maritime Freights Commission to examine the demand of the India-Pakistan-U.K.-Continent Conference for a general increase in freights of 15 percent on export cargoes from India, with effect from 1st August, 1963. The Commission consisted of Mr. Y. N. Sukthankar, as the president, and Mr. D. S. Joshi, Special Secretary to the Department of International Trade, and Dr. Nagendra Singh, Additional Secretary and Director General of Shipping, Central Ministry of Transport and Communications, as members. It held discussions with the representatives of the Conference following the latter's discussions with trade interests, such as exporters, shippers, etcetera. The Commission submitted its report to the Government on 17th July.

After taking into consideration the points made by the Conference representatives and Indian shippers and the recommendations made by the Maritime Freights Commission, the Government has come to the conclusion that requirements of the situation will be met by a general increase of 7½ percent in the existing freight rates on India's west-bound cargoes. The increase of 7½ percent will, however, be subject to two provisos, namely, that no further general increase in freight rates will be made for a period of at least two years and that certain "sensitive commodities" should be exempted from such increase. The following are the "sensitive commodities": cotton piecegoods, cotton yarn, coir fibre, yarn and carpets, mats and mattings, oilcakes, vegetable oils, coffee, hides and skins (tanned and dressed), engineering goods, kyanite ore, magnesite and chrome ore and ferro-manganese.

PETROLEUM PIPELINES

New Contract Signed

A contract was signed here last week between the Indian Refineries Ltd and S.N.A.M., one of the State-owned E.N.I. companies of Italy, for the construction of two petroleum product pipelines in eastern India. The value of the total contract is about Rs. 11.33 crores. The foreign exchange cost of about Rs. 5.30 crores will be met out of the credit of $100 million which E.N.I. had offered to the Government of India in August 1961 for various oil projects.

The first line, 530 kilometre long, will start from Haldia and terminate at the Barauni refinery. The second line, 680-kilometre long, will start from the Barauni refinery, and end in Kanpur.

This is the fifth contract signed in accordance with the credit agreement. Two of the contracts are for drilling in the Ganga valley and Punjab, the third is for the construction of the Gauhati-Siliguri product pipeline and the fourth for the construction of oil gas pipelines in the Gujarat area.

U.S.A.

Aid for Promoting Exports

The U.S. Government has extended dollar and rupee grants totalling Rs. 25 lakhs to the Government of India for promoting exports. Under the project, a team of five industrial and commercial experts and a number of short-term specialists will be assigned to the Engineering Export Promotion Council. The specialists, whose services will be made available by the U.S. Agency for International Development, will undertake a demonstration study of modern techniques for improved sales by the engineering industry in all world markets.

In recent years, the Indian engineering industry has increased its exports. But it is felt that, with the adoption of the latest marketing techniques, it could make a higher contribution towards earning foreign exchange for India.

E.C.M.

Tea Duty Abolition

The agreement between Britain and the six European Common Market countries to abolish all tariffs on tea and tropical hardwoods from the end of this year was warmly welcomed in London. A U.K. Foreign Office spokesman described it as "an encouraging example" of co-operation between Britain and the "Six" in the interests of the less-developed nations. The agreement will initially run for two years—from 1st January, 1964 to 31st December, 1965. The spokesman said, however, that "we hope to see it turned into a permanent elimination of tariffs as a result of further negotiations in G.A.T.T.

The agreement was originally worked out during the Brussels negotiations for Britain's entry into the European Common Market. The fact that it has now been possible to pursue the matter and complete an agreement to cut tariffs in this way is regarded as most encouraging. Throughout the negotiations, the British Government kept in close touch with the Commonwealth countries most concerned with the export of tea and tropical hardwoods, and the agreement had received its strong support. The signing of the agreement, the Foreign Office spokesman said, will take place at a mutually convenient date to be fixed with the Community's concurrence.

MEDICAL RESEARCH

U.S. Grants Announced

The U.S. Government's Department of Health, Education and Welfare, has sanctioned four grants totalling Rs. 1,558,090 for medical research in India under P.L. 480. Grants go to the Indian Council of Medical Research (I.C.M.R.) in New Delhi (Rs. 600,000 for three years), the National Association for the Blind in Bombay (Rs. 500,000 for three years), Saugar University in Madhya Pradesh (Rs. 56,800 for one-and-a-half years) and the Madras Medical College (Rs. 401,290 for five years). Assistance to the I.C.M.R. is for planning, supervision and execution of the virus research programme at the Virus Research Centre, Poona. The National Association for the Blind will use its grant to conduct research aimed at expanding employment opportunities for the blind. A workshop established in Bombay will also help train the adult blind for specific vocations.

Sugar University will use its grant to study and assess Barpali village service operations in the light of India's community development programme. The Barpali Thana, in Orissa, has been engaged in the development work of 52 villages since 1952, when it was established by the American Friends Service Committee, a U.S. voluntary organisation, as a ten-year demonstration community development pilot project.

At Madras Medical College, Dental Wing, research workers will investigate causes or conditions which lead to oral calculus, an extraneous bony-like substance which attacks tooth. The study is aimed at developing either a cure or prophylaxis against this serious cause of tooth deterioration and loss.

FARM IMPLEMENTS

New Board Set Up

The Government of India has set up an Agricultural Machinery and Implements Board. It will keep under constant review the programme of indigenous manufacture, servicing and maintenance of tractors, power tillers and implements, plants protection equipment, forestry tools, etcetera. It will advise the Central Government on the import of agricultural machinery and euipment. It will devise measures for fair and equitable distribution of improved agricultural implements and spare parts at reasonable prices and ensure adequate and timely supply of raw materials for their manufacture.

GOA

Road Development Programme

The 1963-64 expenditure on roads in Goa is placed at Rs. 1 crore, against Rs. 42 lakhs in 1962-63. The road plan drawn up for Goa for the remaining period of the third plan largely aims at improving the existing roads by widening the carriageway, upgrading the surface, strengthening or reconstructing weak bridges and bridging some river crossings. Considerable progress has already been made in improving roads in the mining areas.

Ten major bridges and 30 minor bridges, destroyed or damaged by the Portuguese during the Goa operations have been restored or reconstructed at a total cost of Rs. 69 lakhs. Work on the construction of a bridge over the river Mondavi in Panjim at a total cost of about Rs. 86 lakhs is being started. The construction of bridges over the Damanganga and the creek in Tad are also being considered.

NEPAL

Talks on Transit Trade

At the invitation of the Government of India, a Nepalese delegation led by Mr. Yadu Nath Khanal, the Royal Nepalese Ambassador, visited Delhi from 26th July to 2nd August, 1963, and had talks with officials of the Government of India concerning transit facilities required by Nepal, and other matters connected with the latter's trade. These talks took place in an atmosphere of cordiality, friendship and mutual understanding.

The delegation stated that the Nepal Government would require transit facilities from Radhikapur the East Pakistan-India border and Wagah on the West Pakistan-India border. The Government of India would be willing, they were informed, to provide the necessary arrangements and facilities required by Nepal for the flow of its transit trade, within the framework of the Indo-Nepal Trade and Transit Treaty of 1960. The Nepal Government was requested to indicate the expected volume of trade, its wagon requirements and the points of destination, etectera, so as to enable the authorities in India to determine the character and quantum of facilities to be provided.

The bond system provided for in the Indo-Nepal treaty to regulate Nepal's transit trade was also discussed. The Nepalese delegation stated that as it stood in the way of the normal development of that country's transit trade, the bond system should be abolished. The Indian delegation assured its Nepalese counterpart that within the framework of the Indo-Nepal treaty, the Government of India would do everything possible to facilitate Nepal's trade and to remove any practical difficulties arising out of the operation of the bond system. The two delegations agreed to resume the discussion on the bond system in Kathmandu during the talks scheduled for October 1963.

The Indian delegation stated that some of the tariffs of the Nepal Government seemed to discriminate against India, and that the rates of import or export duties on some goods coming from or going to India had been increased by the Nepal Government contrary to what, in the view of the Government of India, was contemplated in the treaty. The Nepalese delegation contended that the Nepal Government had observed, and was, indeed, anxious to observe the provisions of the treaty and assured the Indian delegation that rectification, where necessary, would be promptly effected. It was agreed that there should be further exchange of information on this matter.

Nepal's needs of iron and steel goods, galvanised iron sheets, etcetera, and the ways and means of supplying the same from India were considered at some length. The Nepalese delegation was assured that India would continue to try to meet Nepal's requirements to the full, in spite of shortages in India and her own pressing requirements.

It was agreed that as envisaged in the Treaty of Trade and Transit between Nepal and India, periodic consultations should take place between the Nepal Government and the Government of India at regular intervals, and that delegations of the two countries should meet for this purpose, once every quarter, in Delhi or Kathmandu. The Indian delegation has accepted the Nepal Government's invitation to visit Kathmandu for the next series of talks in October 1963.

London

MOVE TO FORM SINGLE BODY FOR U.K. EMPLOYERS

(FROM OUR LONDON CORRESPONDENT)

THE lack of a single organisation capable of speaking with authority for the whole body of employers and the management side of industry, in the sense that the General Council of the Trades Union Congress can speak for the workers, has made itself increasingly felt as efforts to achieve national policies in the economic field have developed. Hitherto, employers have spoken with three voices—and not always to the same purpose—namely, through the Federation of British Industries, the British Employers Confederation and the National Association of British Manufacturers. For years there has been talk of amalgamation between these three bodies, but nothing has come of it. Now, however, a measure of agreement has been reached which might well result in providing this long-felt want.

The past decade or so has seen much development in the determination of the Government to control the national economy. In the context of a national incomes policy, this involves discussion—and may lead to action—simultaneously affecting wages and other forms of income, or prices. The present is a time of great change—in the pattern of world trade, the pace of technological development and the need to compete in the face of these changes, and the adoption of a policy of economic growth. The need for study of these great questions and the offer of wise leadership to all industry by a single strong organisation is now a constructive necessity.

It has now, therefore, been decided by the governing councils of the B.E.C. and the F.B.I., and by the regional chairmen of the N.A.B.M., to take steps to define the shape of a single new national industrial organisation to take the place of the three existing organisations whose existence would terminate on the formation of the new body. Their decision has been given this form in order to rise above the structural difficulties which might otherwise prove insuperable. It is, therefore, proposed not to ask any joint working party of the existing organisations to draft the constitution of the new body, but to commission for this purpose two distinguished professional personalities who would take evidence from the existing organisations and from other quarters. Mr. Henry Benson, and Sir Sam H. Brown have agreed to accept appointment as joint commissioners for the purpose of proposing the constitution of such an organisation. In order to give the commission as much freedom as possible, its terms of reference are to suggest how to create a new body having the following purposes:

(1) to provide for industry the means of formulating, making known and influencing general policy concerning economic, fiscal, commercial, labour, social and technical questions, and to act as a national point of reference for those seeking industry's views;

(2) to develop the contribution of industry to the national economy; and

(3) to encourage industry's efficiency and competitive power, and to provide advice, information and services to British industry to that end.

Governing Councils

The governing councils of the existing organisations will in due course be invited to study the recommendations of the commission, and if necessary to make such modifications as would make the proposals acceptable to them. Thereafter, they will be invited to appoint committees or individuals to prepare detailed plans for setting up the new organisation, and the winding up of the old organisations.

The employers, who have been much criticised in the past for not representing a single front to the trade unions, are in this case offering a lesson to the unions. They have recognised the "structural difficulties" of reorganising in any form other than one involving the complete submersion of their own identities as probably "insuperable," and have acted accordingly. The unions in their own current structural rethinking have so far shown themselves far less bold.

Almost all aspects of industry except labour relations are dealt with by the F.B.I. which represents 8,500 firms and 300 trade associations. Labour relations are the province of the B.E.C., most of whose members also belong to the Federation. The N.A.B.M. is perhaps the least known of the three organisations. It represents some 5,000 individual manufacturing firms, and tends to cater for the smaller companies, although it has some of the biggest firms in the country among its members. The N.A.B.M. will probably try to ensure that three particular policies become part of the scheme for the new organisation. These are: a strong regional emphasis, equality among members, and individual service to members (especially to small firms).

It is not thought likely that the Commission could report before the end of this year, or the fusion of the F.B.I., B.E.C. and N.A.B.M. result before the end of next year. It will, of course, be after the report is made that problems can be expected to arise. The individual organisations will have to thrash out their attitude to it, and decide whether to accept or reject its recommendations. None of the three organisations at present represents in any way the management side of nationalised industry. It will be up to the Commission to decide whether this deficiency should be made good in the new body.

It appears that the decision to press for the formation of the new body originated in talks between Sir Cyril Harrison, formerly president of the F.B.I., and Mr. John Hunter, president of the B.E.C., when they met at conferences of the National Economic Development Council at the beginning of this year. The only overt hints that talks were, or should be, going on came in a speech by the Minister of Labour, Mr. John Hare, earlier this year, and Sir Cyril Harrison's presidential address to the F.B.I. in April.

Agreement proved sufficiently easy, however, to reuire only two meetings between the B.E.C. and the F.B.I. for a paper, "a national industrial organisation," to be produced. The paper, setting out the need for the new unified body, was ratified by the councils of the B.E.C. and the F.B.I. on the same day, and by the regional chairmen of the N.A.B.M. on 3rd July. Three arguments which the F.B.I. council accepted at their meeting were the need for "a single voice," efficiency, and an "indivisible policy." Its members were told that for 45 years, they had been tackling labour, economic and commercial matters in separate rooms, whether in their own companies or in sectional or national organisations. It had finally become plain that this could not go on.

The basic reason for this was the policy of full employment, for no Government could stand aside from the social consequences of economic fluctuations. The interplay of wages, profits, prices, productivity, spending, exports, and investments was inevitable. It was nonsense to think they could any longer be kept in separate compartments. They had to be studied, debated, and if need be negotiated, together.

Mr. George Woodcock, general secretary of the T.U.C., congratulated the three organisations, saying: "It's a move of which I heartily approve." He thought it would very much improve the ability of employers to deal with modern problems. There are still hurdles to be surmounted, but the road has been opened to the establishment of a new force in national life. It will be a powerful force, able to influence directly the actions of the whole "ownership" side of private industry. The extent to which nationalised management may be drawn into it is, no doubt, one of the matters yet to be decided. If the new body can represent nationalised employers as well as private industry, it will be more powerful still.

The weight of such a body thrown on the side of a rational incomes policy, advising on the wise investment of national resources, on tax reform, and a host of other problems, could do incalculable good. But the extent to which it may work to the good of the whole community will depend on the sense of responsibility with which power is exercised. If the new body were to develop as a pressure group for sectional interests that are already powerful it might become extremely dangerous.

Dangers of Profit Control

The Federation of British Industries has just issued a carefully argued memorandum on the difficulty of bringing profits into a national incomes policy without doing damage to the economy as a whole. It announced that this had been submitted to the Government last December, as its comment on the terms of reference of the National Incomes Commission. At that time the Federation did not intend to publish it. Now, however, in view of the bearing of an incomes policy on profit trends and the topical importance given to the subject by the second N.I.C. report, it has decided to publish the memorandum.

The conclusion reads: "A national incomes policy must always be viewed in the light of the needs of general economic policy. The aim of general policy should be to promote economic growth on stable foundations. Keeping profits at all times in step with other incomes will thwart this aim. Keeping profits in step with other incomes in broad terms and over the long run may, on the other hand, be justifiable. But it will do damage to the economy if it is attempted by measures which do not take account of the nature of profits or of their functions in a progressive economy."

The Labour Party and the T.U.C. have hammered away at the Government on unemployment; Mr. Maudling has remorselessly showed the connection between the "stop-go" economics which cause unemployment and the lack of an incomes policy; the N.I.C. has argued, no doubt for its internal political reasons among others, the significance of profits in an incomes policy. Now the F.B.I. has decided that the positive case for profits must not go by default. It is a circular debate, but a fascinating one.

The F.B.I. complains of the ambiguity of the reference in the N.I.C. terms of reference to pricing, profit margins and dividends. It assumes that these policies are not to be "weighed in the balance" by the Commission except where it is necessary to satisfy other requirements in the terms of reference—that is, when considering a wage or salary increase. The F.B.I. is clearly determined that N.I.C. shall not turn into a court in which profits are the defendant.

The memorandum acknowledges that any effective national incomes policy must be concerned with all categories of income, and that profits and dividends must be included. But the purpose of an incomes policy are best served by a correct general economic and fiscal policy. The F.B.I. also expresses considerable doubt about the restriction "upon undue growth of aggregate profits resulting from restraint in earned incomes." It maintains that whether there is wage restraint or not, profits must be high enough to attract both domestic savings and overseas capital.

In conclusion, it sets out the disadvantages in all the most favoured methods of dealing with aggregate profits—price control, control of profit margins, manipulation of profits tax, or reduction of tariffs. From the general tone of this memorandum, it is clear that British industry intends to fight very hard against dealing with incomes in isolation; and that it thinks general economic policy—manpower, training and distribution of industry, one hopes, as well as fiscal and tariff policy—is much more important than any quasi-legalistic control of incomes on the N.I.C. model.

'ute

INDUSTRY URGED TO SCRAP WORKING TIME AGREEMENT

THE report of the Srivastava Committee, issued by the Government f India last week, covers a wide eld. It deals with most of the major roblems arising in the production nd marketing of raw jute and jute oods. The report is an important locument which seeks to make a areful diagnosis of the various facors that have affected the consolidaion of the industry. While some of he recommendations closely follow he suggestions of the mills and the rade, quite a few appear to be evolutionary and will be rather lifficult to implement. Jute circles re awaiting further details about hem.

The suggestion about setting up a igh-powered jute development oard does not appear novel, inasnuch as the operations of the board vould closely resemble those of the ndian Central Jute Committee which s already functioning under the Central Food and Agriculture Minisry. Instead of having a separate oard, it seems advisable to extend he scope of activities of the I.C.J.C. vhich has already done commendable vork in this sphere. The responsiility of looking after the marketing nd stabilisation of jute prices, and rranging transport facilities, could erhaps be given to the I.C.J.C. also.

Working Time Agreement

The industry is likely to oppose trongly the Committee's suggestion or abolishing the I.J.M.A. Working Time Agreement. The I.J.M.A. laims that the Agreement is a useful nstrument for regulating the produc ion of jute goods in accordance with lemand and the availability of fibre. he Agreement has in the past been riticised as resembling a cartel. But he industry claims that, without it, here would have been unseemly and ut-throat competition among mills or gunny orders as well as fibre purhases. That would have been detrinental to the interests of the indusry, and would have retarded its fforts towards consolidation and liversification. With an assured supply of fibre and an improvement in narket prospects, the restrictions nder the Agreement have been radually relaxed. For several nonths now, the mills have been vorking to full capacity. The indusry would, therefore, probably like to et the Working Time Agreement ontinue so that it can be used in ime of need.

The necessity for setting up a uffer stock of jute goods was keenly elt by the trade some time ago, vhen jute goods prices were subject o violent fluctuations due to the hen high price of raw jute. But ince 1962-63 the prices of both have een moving within narrower limits, o the creation of a jute goods buffer tock appears unnecessary at the noment. Besides, foreign purchasers f Indian jute goods may sharply educe their normal stocks if they earn that an Indian buffer stock is lready there to help them get the oods at reasonable prices.

Another argument against the buffer stock scheme is that heavy investment will be required to work it. With its resources concentrated on he more urgent modernisation and liversification drive, the industry loes not seem to possess the surplus unds required for such a scheme. Bank finance is unlikely to be available at a reasonable rate of interest it this juncture. Hence, not much significance is likely to oe attached to this suggestion.

Fibre Requirements

There will be general agreement with the Committee's suggestion about assessing fibre requirements well ahead of sowing operations and fixing the minimum price at a level which bears some relation to the price of paddy. The promotional efforts of the Indian Central Jute Committee and the Indian Jute Mills Association are expected to improve the quality and length of the fibre, and thus reduce the industry's dependence on imports. But the industry will not be able to do away completely with the import of cuttings, which are required for batching purposes in the manufacture of sacking.

The fixing of derivative prices for raw jute, corresponding to the floor price in Calcutta, at the secondary markets and organising price support there through buffer stock operations will be difficult. The setting up of regulated markets in the growing areas "so that no grower has to take his jute more than five miles to reach a market" is hardly feasible from the administrative and economic points of view. The proposals for the sale of fibre by open bids, checking of weights and elimination of unfair practices in the markets will be generally welcomed.

The Srivastava Committee has suggested that the area under jute and mesta should be pegged around 2 million acres and 800,000 acres, respectively. The maximum output should be derived from this land by rapidly raising the yield to 3.3 bales an acre. A fresh programme for saturating all jute-growing areas with improved seeds should be executed within the third plan period. The Committee has recommended priority in the allotment of fertilisers for jute and mesta and a review of the present arrangements for the distribution of fertilisers in various States. It has also advised that a fresh examination should be made of the feasibility of allowing concessions in the price of fertilisers to remote and inaccessible areas in Assam, north Bengal and north Bihar in view of the high transport charges. These ideas seem rather academic and will be difficult to work out in practice.

The Committee's suggestion for drastic restrictions on speculative activities in the raw jute and jute goods markets by the Forward Markets Commission will be welcomed. But if the futures markets are to serve the purpose for which they have been set up, proper facilities will have to be given to both the mills and the trade to operate smoothly. While unhealthy speculation should be checked, hedging facilities should be offered to manufacturers and traders so that they can get adequate cover for their *bona fide* transactions.

Consumption Trends

The Srivastava Committee seems to have made some facile assumptions in drawing up its estimates of consumption trends and the export potential. The maximum effort has been made by the industry to streamline its equipment and diversify the range of production. So exports have improved. But in view of the keen competition from Pakistan and the growth of jute-manufacturing capacity in some major consuming countries, it may be too much to expect jute goods exports to rise from the 1962-63 level of 858,500 tons to 1.04 million tons by 1970.

The Committee has suggested that the industry should explore the prospects of exporting carpet backing to western Europe and Australia and of tapping the potentialities of the Continental, Asian, African and Latin American markets. It should also carry on experiments for the production of tufted carpets, for which there is keen demand in the richer countries.

As for home demand, the Committee's estimate of an annual increase of 30,000 tons in gunny consumption during the next two years appears to be rather optimistic. Some improvement can no doubt be made when the expanding cement industry uses new gunny bags for packing and the sugar and fertiliser industries raise their annual output. But the targets of 400,000 tons at the end of the third plan and 600,000 tons in 1970-71 seem too difficult to attain.

On the question of reaching an agreement with the E.C.M. countries, the four objectives suggested by the Committee will be difficult to achieve. Those countries are unlikely to react favourably to any claim for nil or very low tariffs or for a larger inflow of jute goods from outside the Common Market at the expense of the relatively high-cost goods turned out by the member-countries themselves. But they may be prevailed upon to relax the existing quota restrictions or to desist from introducing new countrywise or Common Market quotas.

Uneconomic Units

The suggestion about allotting first priority for expansion to the existing uneconomic units also seems unworkable. These units are unlikely to have the resources for expanding their capacity. The idea of setting up jute mills on a regional basis cannot be supported in view of the fact that such decentralisation will ignore basic economic considerations and will create long-term problems. The suggestion about ensuring adequate power supply to the jute industry

a friend in a foreign land

that is what the Bank of Baroda will be to you when you want to transact business abroad. And a faithful friend at that. The Bank of Baroda through any of its foreign branches or its correspondents all over the world, is fully equipped to offer all the services needed in foreign trade and to handle every type of foreign exchange business—including the negotiation/collection of export bills, clean bills and cheques, issue of letters of credit and travellers cheques, foreign remittances, credit information, etc., and will be pleased to assist you in solving your problems concerning imports, exports, and foreign travel.

For your foreign business, make it a point to depend on...
THE BANK OF BARODA LIMITED
Estd. 1908
H.O.: Baroda

Branches in London, Nairobi, Mombasa, Moshi, Mbale, Mwanza, Jinja, Kampala, Kisumu, Dar-es-Salaam, Narainganj (E. Pakistan), Port Louis (Mauritius), Lautoka and Suva (Fiji Islands), and correspondent banks acting as agents in all the other principal cities of the world.

while planning for the development of power facilities in West Bengal will be readily endorsed.

The industry will welcome the suggestion for giving the highest priority in foreign exchange allocations to manufacturers of jute mill machinery and equipment for importing essential components and parts. Such manufacturers have been trying to raise the proportion of indigenous components in the machinery they make. The recommendation about working out a scheme for import entitlements for essential jute machinery might be a useful export incentive.

Not much importance will be attached to the idea of setting up a Product Development Cell in the office of the Jute Commissioner. In a large industry, cost economy accrues from bulk production. Hence it is not always possible for mills to manufacture non-standard items in small lots unless there are many such orders or the prospects for such non-standard items are good. The Indian Central Jute Committee and the Indian Jute Mills Association are engaged in developing new products and processes. They have already done some work in this sphere by introducing new lines of production. Besides, they have also devised methods of removing defects in cornsacks, woolpacks and the like. These organisations should be offered all facilities to look after these developmental aspects.

The Srivastava Committee seems to have side-tracked the problem of competition from Pakistan although it has admitted its significance. In the report just published, it has made no suggestion for countering this menace. Some academic recommendations have been made on the need for keeping a close watch on the trend of production in competing countries through a proposed market intelligence organisation. Not much significance is likely to be attached to the idea of adopting a uniform costing practice, "leading to a system of inter-firm comparison of operational data, cost of production and marketing and utilisation of services". The industry has already achieved a high level of collaboration through the I.J.M.A. forum.

New Jute Purchase Quota

Mr. G. C. L. Joneja, Jute Commissioner, said in Calcutta on Saturday that the Government of India has been implementing the price-support scheme from the commencement of the current jute year. Against a compulsory purchase quota of 440,000 bales for July, the mills have been asked to lift 650,000 bales of fibre from the market during the current month. Of this, the I.J.M.A. mills will have to buy 600,000 bales and those outside the I.J.M.A. will take 50,000 bales. It is intended to lay emphasis on regulating monthly purchases in accordance with the flow of fibre arrivals. Although the price of jute has not yet touched the official floor level of Rs. 30 a maund, basis Assam Bottoms, f.o.r., Calcutta, the prevailing price of around Rs. 29 is satisfactory in view of the fact that upcountry prices too are almost in parity with the latter level.

It is claimed that the price-support machinery has been improved in the light of the experience gained during the previous season. The proportion of better grade fibre, it is reported, will be higher this year, thus reducing the chances of the inferior grades tending to pull prices down. In order to reduce storage difficulties, more warehouses have been built. The I.J.M.A. has been allotted 14,000 tonnes of cement for providing extra storage space for 200,000 bales of jute. Further quotas are likely to be issued for the purpose. As for transport arrangements are being made with the railways for the prompt movement of fibre from the growing areas to Calcutta.

Meanwhile, it is learnt that the State Trading Corporation proposes to hand over the buffer stock of about 300,000 maunds of raw jute to the mills soon before embarking on the purchase of 2.5 million maunds during 1963-64. Official circles have admitted that the overall cost incurred by the S.T.C. from the farmers' godowns to the Calcutta market was around Rs. 30.35 a maund. The possibility of the S.T.C. making any profit on buffer stock operations is ruled out.

Jute Delegation to Moscow

A six-man trade delegation sponsored by the jute industry will leave Calcutta on Friday for Moscow and east European countries. Led by Mr. M. P. Birla, the delegation will include four representatives of the I.J.M.A., one shipper and a Government nominee. They are Mr. D. P. Goenka; Mr. N. L. Kanoria, Mr. R. H. Morrison, Mr. H. S. Singhania and Mr. A. G. V. Subramaniam. After visting Moscow, the team will tour Poland, Rumania, Yugoslavia, Hungary, Czechoslovakia, Bulgaria and East Germany. In course of its two or three-week visit, it will try to forge new trade contacts.

I.J.M.A. Jute Development Plan

The Indian Jute Mills Association has drawn up a plan for improving the yield and quality of jute. The idea is to supplement the efforts of the Indian Central Jute Committee and the State Governments. Research and pilot trials have proved that yields can be increased by 50 percent or 100 percent by better farming techniques. These include the use of improved seeds, the application of proper types and doses of fertilisers, better agricultural practices and plant protection measures. The scheme will be operated by the Jute Development Committee of the Association under the supervision of the Jute Development Adviser and other specially trained staff. It will be worked in collaboration with the jute and mesta development programmes in the various States.

In organising the work on the present pilot scale, the jute and mesta-growing areas in India have been divided into eight zones. These are Jalpaiguri and Cooch Behar districts, Nadia and Murshidabad districts, Howrah and Hooghly districts, Assam, Bihar and Orissa for jute; and Uttar Pradesh and Andhra Pradesh for mesta. Two or three compact blocks with a total area of 450 acres will be chosen for the intensive cultivation of jute in each of the first six zones. U.P. and Andhra will each have one intensive cultivation block of 150 acres. Efforts will also be made for multiplying and distributing improved seeds.

After the selection of the concentrated blocks, all the farmers within the area will be organised and guided to adopt improved techniques of cultivation for maximising the output and improving the quality of the fibre. An experienced cultivator will be appointed in each block on a consolidated pay and T.A. of Rs. 100 a month to give training and guidance to the farmers in the area. Seeds will be supplied at subsidised rates. Line-sowing will be introduced and each block will be given 30 seed drills and 20 wheel hoes on loan. A subsidy of Rs. 8 an acre will be paid for the application of manures, as recommended by the Government or the I.J.M.A. The Association will provide two hand sprayers or a power sprayer and the necessary pesticides for the control of sporadic plant pests and diseases in each block. In the event of an epidemic, cultivators will seek the assistance of the State Governments. The sprayers will also be useful for sprinkling urea solution as fertiliser.

The seed multiplication and distribution programme has been taken up on the suggestion of the Government of India. It aims to meet the requirements of each intensive cultivation block, and will supplement the efforts of the Bihar Government to saturate Purnea and Saharsa districts. Surplus seeds from these areas are purchased by jute cultivators in north Bengal and Assam. An improvement in the quality of the surplus seeds will help the jute development programme. Besides, the I.J.M.A. will supplement the seed requirements of deficit areas. Multiplication work is also proposed to be taken up in the drier regions of Uttar Pradesh, Bihar, West Bengal and Orissa. The sale of such improved seeds is subsidised by the Central Government.

Crop Prospects

Earlier hopes of a very large crop during the current season may not be realised, according to the *Jute Bulletin* of the Indian Central Jute Committee. Excessive showers have stunted the growth of the white (*Capsularis*) jute plants in the northern districts of West Bengal and the lower part of the Assam Valley. The lowland crop in parts of Purnea district in Bihar has been affected by floods. The plants in the Daissee districts of West Bengal are progressing satisfactorily, with alternate sunshine and rain. In Orissa, Tripura and U.P., the crop is thriving.

THE JUTE MARKETS

Manufactured Goods: Divergent trends were noticed in the jute goods market during the past week. Sacking was buoyant on reports of substantial due-date covering, followed by brisk purchases against overseas orders. The outlook brightened as the Sudan entered the market with an enquiry for 200,000 A Twills for delivery up to December. Another tender from the same country for 2,000 bales of heavy goods was to be finalised next week. Cuba was booked for heavy shipments from August to December. Burma took more than 2,000 bales. Very good business in cornsacks and woolpacks was done with Australia. Against a monthly sailing of two steamers, three vessels were arranged for August. Indonesia too placed a substantial order. All these orders lifted sacking, so mills became reserved after booking fair business at the higher levels. In the futures market, sacking for August delivery scored a substantial gain on heavy bear-covering. Hessian was dull as U.S. buyers did not want to replenish their stocks at the current levels. It was reported that about 4,000 bales were offered at "distress" prices in various American coastal ports. Small transactions of a routine nature were reported. These included some due date and shipper covering—which caused a minor rally during midweek. But the emergence of mills and holders as keen sellers for all positions disturbed sentiment and the closing prices showed small losses from the previous week's level. The spot market influenced the trend in hessian futures, where prices nosedived at times on tired long liquidation. But short-covering at the lower levels averted a sharp fall and the market closed with a marginal gain. Turnover was fair in sacking and moderate in hessian. The undertone was steady in the former and hesitant in the latter.

Wednesday's quotations were as follows:

	Aug	Sept.	Oct.-Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz	35.85	35.85	35.35	34.90	34.65
40in. 8oz.	38.35	—	—	—	—
40in. 10oz.	48.15	48.00	47.50	46.80	46.40
B Twills	112.10	112.10	112.00	111.40	111.00
Cornsacks	116.00	115.00	115.15	114.10	113.75
Heavy Cees					
(Plain)	111.75	111.75	111.75	111.25	111.00
A Twills	134.50	135.50	136.00	135.50	134.50
Liverpools	125.50	125.50	125.50	125.00	124.50

Raw Jute: Steady conditions prevailed in the Calcutta raw jute market throughout the past week. From the beginning, mills made brisk purchases of selected grade fibre for all positions in both Calcutta and the agency stations. The price was maintained around Rs. 29 a maund, basis new crop, Assam Bottoms, f.o.r., Calcutta, ready or near delivery. On Saturday, the Jute Commissioner announced the issue of a compulsory purchase quota of 650,000 bales for August—600,000 bales for the I.J.M.A. mills and 50,000 bales for others. Thereafter, prices rose to Rs. 29.50 for new crop Assam, Rs. 28.50 for Northern and Rs. 32 for Daissee, basis Bottoms. Turnover was fair and the undertone steady at the close. In the upcountry markets, good quality jute was arriving at the average rate of 50,000 maunds a day. The crop position was good in the Daissee areas, while scattered damage was reported from north Bengal and the lower Assam Valley. Mill agents were making sizable purchases against quotas and prices were firm, being slightly above Calcutta parity. About 350 wagons arrived in Cossipore during the week.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.
Assam-Agartala Jute	79.04	29.50	80.38	30.00
Northern Jute	77.70	29.00	79.04	29.50
Western Desal Jute	71.00	26.50	73.68	27.50
Selected Daissee	85.73	32.00	85.74	32.00

Bihar Dist.	62.95	23.50	66.98	25.00

THE PAKISTANI JUTE MARKETS

LITTLE ACTIVITY IN FIBRE

(FROM OUR DACCA CORRESPONDENT)

THERE was little activity in the market last week, when quotas were issued on the basis of the best performance ever for Pakistani shippers and the best performance of the last two years for non-nationals. Small shippers were given no quotas, but they may ship as much as they like.

There seemed to be no consistency in the system of issuing quotas, but the general picture which emerged was that for large British shippers, the quotas would be issued at between 80 percent and 84 percent of their best perfomance. Some other non-nationals received even more, and some Pakistanis received more than 100 percent.

The interesting thing, however, is that the quotas have been calculated for one year, and 60 percent of the quotas so calculated have been issued to 19 shippers for the period 1st July to 1st December, 1963. It is understood that if a shipper, even a non-national, wishes to exceed this quota, no difficulty will be placed in his way. On the other hand, if a shipper is unable to fulfil his quota by December, action will be taken against him.

With the local market below the minima and the overseas market well below the E.P.C., minimum, it was extremely difficult last week or balers to sell without infringing regulations. It would appear, however, that under the cover of a restricted quota, the authorities are, in fact, trying to force the big shippers to buy regularly so as to give some life to the dull market.

Commodity Markets

MADRAS PRODUCES MORE PLANTATION CROPS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Chief Minister of Madras, Mr. Kamaraj, exhorted the planters to produce more while inaugurating the tenth annual conference of the Association of Planters of the State of Madras held in Coonoor on 1st August. His Finance Minister, Mr. Bhaktavatsalam, referred to the Chinese aggression and said that the process of production should be geared to defence needs.

The chairman of the Association, Mr. J. R. Henshaw, said that in the new defence-oriented programme of growth and development in the country, the plantation industry was playing its part to the full and would continue to do so by earning foreign exchange and by achieving greater progress in production in spite of numerous handicaps. He said that the production of tea in Madras State topped 39 million kilograms in 1962, compared with 28 million kilograms in 1956 and this was an average annual increase of 4.75 percent over these years. In spite of adverse weather conditions, 8,185 tonnes of coffee were harvested in 1962-63, compared with only 7,762 tonnes in 1957-58, while the rubber crop in the State moved up to 2,568 tonnes in 1962. The export earnings from plantation products constituted 22.5 percent of the total in 1961-62, of which tea alone accounted for 18.5 percent.

Mr. Henshaw maintained that in terms of quantity, these notable gains in production showed the industry's awareness of the challenge of the times, but in real terms, the foreign exchange earnings had actually shown a downward trend. Export earnings from tea fell progressively from a peak of Rs. 148 crores in 1954-55 to Rs. 122 crores in 1961-62 in spite of a general increase in the quantity exported. Coffee exports fetched Rs. 7 crores in 1954-55 and Rs. 9 crores in 1961-62, while total earnings of the two crops fell from Rs. 160 crores in 1954-55 to Rs. 131 crores in 1961-62. "This trend certainly gives cause for concern, and, though circumstances have never been so propitious for exports as they are now, there is certainly no room for complacency", he added.

Referring to future growth prospects, he said that the recent G.A.T.T. arrangements under which the Six had agreed to waive import duty on tea gave India the same opportunities in these countries as if Britain had actually entered the European Common Market. It was possible that the situation might be further eased by the reduction or waiving of some of their local taxes which still made tea an expensive item in the countries concerned. The tea delegation which visited Australia, New Zealand and Singapore last year had found that those markets held out prospects for Indian tea, provided the Indian industry proceeded on certain lines. Mr. Henshaw felt that the abolition of export duty on tea by the Government of India this year was another positive factor.

World Coffee Pact

The signing of the International Coffee Agreement by India and the resultant prospects of increasing India's coffee exports to quota and non-quota countries was a hopeful and encouraging development, he said, and added that the demand for rubber in this country would hold out great opportunities for the rubber growers for some years to come.

Mr. Henshaw said that in spite of the encouraging export position, the planting community was fully alive to the fact that markets abroad were becoming more and more competitive, and that they could hold their own only if they met the demand for their teas at the desired standards of quality and at competitive prices. This was possible through economies in costs and efficiency in general working, and the progressive increase in production would show that the planters were fully conscious of this fact. The planting industry had been concentrating on research and new techniques in both field and factory and a considerable amount of work was being done on clonal selection and improved agricultural practices. "We are keen on improving the standards of quality in manufacture through technological research leading to the modernisation of our factories and we have put up a proposal to the U.P.A.S.I. for providing a nucleus for such research in their scientific station in the Anmallais when it starts functioning. This will require considerable financial assistance and I appeal to the Tea Board and to the Government of India for substantial aid to this project which is so vital to the future of south Indian tea", he added.

The chairman said that economies in costs must be achieved if the Indian products were to be competitive in the world markets and reasonable in price to the internal consumers. "The hard reality, however, is rising costs with prices more or less static, and we are naturally concerned over any fresh tax measure which takes away a sizable portion of the diminishig margin of profit. When there is no incentive for attracting fresh capital investment, the industry must rely on its own internal resources drawn from its rapidly diminishing returns", he said.

The first session of the International Coffee Council began in London on 29th July with 200 to 300 delegates and observers from some 50 Governments and international organisations of coffee-producing and consuming countries participating. The Council is the governing body of the new long-term International Coffee Agreement which came into force on 1st July, 1963. This pact embraces for the first time coffee producing countries as well as the consuming countries and replaces the Latin American-African Agreement which limited exports.

The main objectives of the new agreement which was negotiated by the United Nations Economic and Social Council are to achieve a reasonable balance between supply and demand, to alleviate hardship caused by burdensome surpluses and excessive price fluctuations of coffee and to assist in increasing the purchasing power of exporting countries by keeping prices at equitable levels and by increasing consumption.

Under this agreement, India has obtained an export quota of 21,360 tonnes for the period October 1962 to October 1963. The Chief Marketing Officer of the Indian Coffee Board has recently expressed his confidence that this quota will be fully used by India. The Coffee Board is now making an extensive propaganda for the popularisation of the Indian robusta coffee in Canada. The Coffee Board is still trying to obtain the services of a cup-taster from London for assessing and classifying the different grades of Indian coffee according to their quality. The cup-taster would taste different grades of coffee and award points on the basis of his assessment. Coffee of same tastes or same points would be bulked together, and exposed for sale. Present assessment is made by visual testing and this is considered to be an inperfect system.

Bonus for Workers

An *ad hoc* settlement has been reached in the matter of bonus for plantation workers in Madras State for 1962. The Association of Planters of the State of Madras has agreed to the suggestion of the Labour Minister. Mr. Bhaktavatsalam, that the bonus for tea estate workers should be on the basis of the bonus paid in previous years. The bonus for tea estates and mixed estates with 25 percent or more of tea had been fixed at 10 percent and for coffee estates of 150 acres and above, the bonus should be 4.5 percent, and below 150 acres 3.5 percent. Rubber estate workers are not covered by this agreement.

Rise in Synthetic Rubber

The Indian Rubber Industries Association has taken a very critical view of the "unexpected and abnormal rise" in the price of synthetic rubber produced in the country. According to the Association, the prices of the S.B.R. variety produced in India are double that of the imported material on the c.i.f. basis, and nearly 80 percent, including 22 percent duty, on the landed cost. The Association argues that it is strange that when the world prices of a similar product are declining the Indian prices are rising.

In a memorandum submitted to the Government of India, the Association has urged them to reduce the prices of locally made S.B.R. to the landed cost of the imported S.B.R. of a similar grade. In case it is found impossible, the industry would be willing to pay 10 percent more on the landed cost. The memorandum has urged the Government to examine the cost structure of the indigenous S.B.R. and said that if it was found that the cost of production is really high due to the higher prices of raw materials, the Government should devise ways and means to make available the raw materials at reasonable prices to the manufacturing unit. It has also suggested that synthetic rubber other than the styrene-butadiene type, as are not produced in India, should be allowed to be imported by the rubber products manufacturers. The memorandum points out that the rubber manufacturing industry in India today has a turnover of about Rs. 100 crores, with an outlay on raw materials of the order of about Rs. 40 to Rs. 45 crores and the raw rubber purchased is in the neighbourhood of about Rs. 20 crores. As a result of the high prices of the indigenous synthetic rubber, the industry will have to pay Rs. 1,850 more on every ton of Indian S.B.R. consumption.

Tea Consumption in U.K. Falls

(BY A SPECIAL CORRESPONDENT)

In spite of a useful reduction in stocks, consumption in the U.K. during 1962 was seriously below that of 1961. It fell from just over 10 lbs a head to 9½ lbs a head. Coffee and other beverages including beer made headway. Mr. Ronald Mann, chairman of the Tea Traders Association, London, speaking at the Association's annual dinner last month warned: "Statistics do not mean the same to everyone, but there seems wide agreement that young people are drinking less tea, and the combination of this with rising world production may be serious".

Mr. Mann added: "This age of speed, and automatic sales—and some dislike of disposing of tea leaves—may bring a change to instant tea, but for the present, I am sure that priority is to improve the quality of leaf tea simultaneously with a vigorous publicity campaign. All sections of the trade should co-operate in a publicity campaign which is surely an opportunity not to be missed". The campaign would not go forward unless it was expected to increase consumption here, he said. As the U.K. takes about half the world's export crops, the effect on their values should well repay the sterling exchange asked of any producer country as its share of the cost of the campaign.

"Some people question whether the excellent propaganda and advertising already done by certain interests leaves room for further profitable publicity of tea, but very large sums are spent on behalf of other national drinks. There seems to be some kind of 'snob value' in coffee."

Another point these young people emphasised was quality. What was particularly needed was to get rid of bad tea often served in public places, offices and works. He suggested a service of supervision. It seemed easier to make bad tea than bad instant coffee. "Producers also should be encouraged to make better tea and they should never be subject to a system of taxation which penalises quality and flavour: in the long-term, this must do harm to tea consumption, and I hope certain authorities will realise this."

Although reports from Mincing Lane indicate a rather better trend, auctions in India show that buyers anticipate ample supplies in the near future. Offering at Sale No. 9 held in Calcutta on 29th July met with a good general demand, but at a lower price level. Selected Assams, Dooars and B.O.P's were dearer, but most of the offerings were easier. C.T.C. came to a good market, but at easier rates, but flavoury Darjeelings were firm to dearer.

At the Colombo tea auction on the same date, there was a strong demand for good liquoring teas and plain to medium high-grown also sold better and only thin liquoring stalky teas were irregular.

It is reported that the Common Market Council of Ministers has approved an agreement with Britain, abolishing all duties on tea and tropical goods which will have duty-free entry into the "Six" by January 1964. The agreement will apply to all tea except in packets where there was a duty suspension up to 5 percent. The agreement will run for two years and may be renewable.

Last year, the U.S.A. imported a record quantity of tea, and it will be interesting to note how consumption shapes this year as June, July and August are the hottest months in the United States, and the Tea Council has launched a gigantic programme to attract Americans towards drinking more and more iced tea. The heads of the Tea Council refer to this programme as follows:

"In most countries of the world, consumer buying of tea shows little if any seasonal variation. Tea is considered a year-round beverage, all but a small portion of it is served as a hot drink and the patterns of consumption are quite similar month to month. Our U.S. Market differs sharply from this picture, and the reason, of course, is iced tea. According to recent estimates, iced tea now accounts for more than 40 percent of all tea consumed in this country, and the present growth trend can be accelerated even more in the future."

COMPANY AND PUBLIC NOTICES

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Forty-Sixth Ordinary General Meeting) of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry, Calcutta-1, at 3 p.m. on Tuesday, the 3rd September, 1963, for the following purposes :

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1963, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend for the year ended 31st March, 1963, on the Ordinary Share Capital. The dividend if sanctioned will be paid on or after the 4th September, 1963.
3. To appoint a Director in place of Mr. R. G. Edwards, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Mr. A. D. Ogilvie who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Dr. N. N. Law who retires by rotation and offers himself for re-appointment.

   In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956 has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting :—

   "That Dr. N. N. Law be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
6. To appoint Auditors and fix their remuneration.

Special Business

7. To consider and if thought fit to pass the following as a Special Resolution in clarification of the Special Resolution passed at the General Meeting of the Company held on the 11th December, 1962 : —

   "Resolved that the consent accorded pursuant to Section 314 of the Companies Act, 1956 to Mr. John McCracken, a Director of the Company, continuing to hold an office of Profit as General Manager of the Company's Works covered and was intended to cover the enjoyment by him of all such benefits as are or shall be admissible to all other overseas recruited staff of the Company of Non-Indian origin."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board.

MARTIN BURN LIMITED.
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office :
12, Mission Row,
Calcutta-1.
7th August, 1963.

Note : An Explanatory Statement is annexed to the convening notice issued to members of the Company.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

The Directors have today decided to recommend to the shareholders at the Annual General Meeting, to be held on 26th September 1963, the payment of a final dividend for the year ended 31st March 1963 of 3% (subject to tax) which, together with the two interim dividends of 2½% (subject to tax), makes a total of 8% for the year (1962 9%).

The net profit for the year is Rs. 1,80,23,592 (1962 Rs. 1,46,32,531) after deducting all charges and expenses and after providing for taxation amounting to Rs. 2,62,37,010 (1962 Rs. 1,75,62,296).

The Directors also intend to declare a first interim dividend of 2% (subject to tax) in respect of the year ending 31st March 1964 (1963 2½%).

The impact of the 1963 Budget on the Company's business has been severe and the Directors have considered it prudent to recommend a reduction in the final dividend and to declare a lower first interim dividend.

The final dividend, if approved, and the interim dividend will be payable on 30th September 1963 to the shareholders whose names appear on the register on 26th September 1963. The share transfer books of the Company will be closed from 9th to 26th September 1963, both days inclusive, and transfers received in order at the office of the Company's Registrars (Jardine Henderson Limited, 4 Clive Row, Calcutta-1) up to 7th September 1963 will be in time to be passed for payment of the dividends to the transferees.

By Order of the Board.

B. GRANGER PEARSON.
Secretary.

Virginia House.

FOREIGN AID COMES, BUT PLAN IN A SHAMBLES

INDIA has good reason to be satisfied with the results of the meeting of the Aid-India Club held in Washington last week. At the original meeting held in Paris early in June, the members of the consortium had promised to give this country $915 million of aid for 1963-64, the third year of the third plan. It was expected at the time that the aid commitment would be increased subsequently, following a further review, but it was considered unlikely that a total of more than $1,000 million would be promised in the end. In fact, however, last week's meeting has brought new pledges amounting to $137.2 million. Added to the $915 million promised earlier, the final total of aid expected via the Club now comes to $1,052 million. This is still far short of the $1,255 million that India had said she wanted for 1963-64. But it had in any case looked unlikely for a long time that the request would be fully met.

For one thing, there was a widespread suspicion among India's friends that her request had been deliberately inflated on the assumption that, whatever the figure, it would inevitably be trimmed. For another, it was known that, regardless of what New Delhi might say, the amount of economic aid offered to this country would be affected by the military aid she was getting; in other words, the latter was not going to be treated as separate and supplementary to the former, however much the Government would have liked it to be so. In any case, the "shortfall" of $203 million compared with the sum India wanted is less serious than it looks. In addition to the $1,052 million coming via the Club, it is expected that another $60 million or so will be provided by certain members of the Club under a separate arrangement, although not on quite the same liberal terms. The ultimate "shortfall", on this calculation, should be less than $150 million, which is far smaller than even the optimists had thought likely two months ago.

The main credit for reducing the shortfall goes to the United States and the World Bank. The former has increased its June commitment by $60 million, and the latter has offered $25 million more. The United States in particular deserves India's gratitude. Her decision comes at a time when she is extremely worried about her external payments deficit, and has taken extraordinary measures to reduce the strain on the dollar. The decision seems to indicate, furthermore, that she is not sticking rigorously to the "matching principle", under which she would offer no more than the other countries taken together. The aggregate of their pledges is $372 million, whereas the United States has promised $435 million. It is possible, however, that for the purposes of the "matching principle" calculations, the former figure is being increased by the $60 million promised on harder terms outside the Club arrangements.

Against this background, the comments heard from New Delhi during the past week, to the effect that the United States has been ungenerous since she has offered no more than she did last year, represent familiar ingratitude. It may be true that if she had given more, other countries would have had an incentive to be generous too. But India can hardly afford to forget that she has done little to endear herself to U.S. Congressmen, who have been becoming increasingly critical of foreign aid programmes ever since the controversies over the Clay report, Bokaro and the Voice of America transmitter deal.

In the final analysis, the total amount of aid offered by a particular country, or by the members of the Aid-India Club together, is perhaps not so important. What may be more important are the terms on which the aid is given; the purposes for which it is meant; and the speed with which it can be used. Considering that the servicing of foreign debts already incurred is steadily increasing the strain on the balance of payments, it is gratifying that the aid just promised is to come on fairly generous terms. Just over half the total of $1,052 million will be in the form of grants or long-term loans at nominal rates of interest. All but $150 million of the remainder is expected to be in the form of loans with substantial grace periods and repayments extending over 15 years or more. The United States and the World Bank, once again, deserve most of the credit for ensuring that in this way the servicing of foreign aid will not place an impossible burden on India's external payments position.

The decision to increase the proportion of non-project assistance in the total of foreign aid represents another major move in the right direction. It is stated that about two-fifths of the total aid just pledged will probably be in this form, and can therefore be used for financing imports "required for the general support and development of the economy"—in other words, for maintenance imports. A very large proportion of the aid given will presumably still be tied to purchases from the country giving the aid. Nevertheless, the fact that a substantial proportion of it will not be tied to specific Indian projects represents an important gain. Industries in this country have long been starved of imported raw materials, components and spare parts. A large, and growing, proportion of their installed capacity has, therefore, been rendered idle. If the foreign aid just pledged enables non-project imports to be promptly liberalised, it could make a bigger contribution to the growth of industrial production than any other single factor.

From this point of view, it is a little disappointing that non-project assistance will be only two-fifths of the total. Two-fifths of $1,052 million is $420 million, or about Rs. 200 crores. It is doubtful whether the latter sum can do enough to relieve the shortage of maintenance imports at a time when (1) defence mobilisation has increased the demand for them; (2) part of the country's current export earnings, which ought to be used for maintenance imports, continue to be diverted to project imports; (3) the export effort is lagging; and (4) a large backlog has to be cleared, in the sense that dangerously depleted raw material stocks in many industries need to

be promptly replenished. It is true that in many countries, as in India until not so long ago, there was a marked bias in favour of aid tied to specific projects. Such tying often enabled the countries in question to keep a closer check on how the aid they gave was being used. It also enabled them to get rid of capital goods which they might otherwise have found difficult to sell. As far as India is concerned, however, her interest has long been clear: it is to ensure that the maximum possible proportion of aid is available for supporting the balance of payments rather than for financing individual projects. The interest has often been ignored by individual ministries eager to launch grandiose projects in building their own little private empires. But this is a tendency which it is the duty of the Finance Ministry firmly to resist.

The decisive argument against project aid, and in favour of non-project aid, is that India already has too much of the former—or at least more than she can digest. The country has for years been struggling along in a pathetic display of financial brinkmanship, with hardly any external reserves worth talking about. It is an astonishing tribute to the incompetence of the Government that with the exchange reserves almost drained out, and ministers running round the world with begging bowls, over Rs. 1,163 crores of foreign aid (excluding P.L. 480 and P.L. 665 aid) offered in the past has been lying unused (as on 31st March, 1963). As the severity of the exchange crisis has grown, the total amount of aid lying idle has not decreased, but increased; in the year ended March 1963 alone, it rose by no less than Rs. 284 crores. The fountains of crocodile tears which erupt in New Delhi whenever the news comes that the Aid-India Club has not promised all it was asked for should, therefore, be subject to one qualification. The qualification is that if the Government really got all the foreign aid it wanted, in the present state of its efficiency it probably would not know what to do with it. Getting less, in fact, offers an advantage in that the total figure of unused aid outstanding tends to decrease, and to that extent the discredit suffered by the Government is less.

During the past week, moans and groans have been heard to the effect that since the Aid-India Club is not going to give the entire amount of assistance India had asked for, the third five year plan is going to be wrecked. The fact unfortunately is that, except in Mr. Gulzarilal Nanda's imagination, the plan is already in a shambles, and there is not the faintest hope that it will be completed in time. Instead of being presented with complaints about stinginess, therefore, the Club should be complimented on its gullibility in believing that the plan still exists. Long after everybody else has finished with his review of the plan, the Planning Commission has started on its mid-term appraisal. Preliminary reports suggest that the main result of the appraisal is that the planners are clipping several of the most important targets, in much the same way as Mr. Hardy of Laurel and Hardy fame one day sat down to clip blades of grass on a golfing green with a pair of nail scissors. The one "target" which quite certainly will not be clipped is that relating to India's foreign aid requirements. The result is that all the foreign aid the planners said they wanted for completing a "big" plan will now be required for one perhaps only two-thirds the size. The Aid-India Club's reportedly growing dismay over the quality of Indian economic planning can, in the circumstances, hardly be surprising. The dismay is breeding a cynicism which could be more damaging for the five year plans than the supposed shortfalls in aid commitments which New Delhi has been bellyaching about.

TOWARDS FEWER CONTROLS

IT is a matter of opinion whether last week's seminar in New Delhi on the problems of public and private sector undertakings made any great contribution to the sum total of human knowledge. But it nevertheless deserves to be noted for a remarkable address delivered at its opening by Mr. C. Subramaniam, Central Minister for Steel and Heavy Industry. In this, Mr. Subramaniam asked for serious rethinking on the degree and variety of controls to which the economy is now subject. Industrial managers, he said, were devoting more time to getting across or around controls than to their real managerial responsibilities. Deploring this "painful and inexorable" fact, the Minister pleaded for a fresh and completely open-minded approach to the problem of controls in order to reduce the multiplicity of points and levels at which they operate.

It is part of a politician's professional training to tailor his remarks to suit his audience. One cannot, however, dismiss the speech on this ground because Mr. Subramaniam has given indications of living up to his own advice. He has taken the initiative to free the steel industry of some of the rigid controls under which it operates today. When he made the move, it was interpreted as a device to get out of the difficulties he had landed himself in by his arbitrary price award of last year. Although that may have been one of the motivating factors, it is becoming clear that Mr. Subramaniam has undergone what may be described as a change of heart. Close associates think that his recent exposure to the Erhard miracle has something to do with this change, which may be the starting point of a new line of thinking in the highest counsels of the Government.

Being identified with neither the so-called right nor left schools of thought, Mr. Subramaniam's view has a better chance of gaining acceptance, even though it must be something of a political liability that the World Bank has been saying much the same thing in its annual reports on the Indian economy. Neither Mr. Subramaniam, nor presumably the World Bank, is taking an ideological stand against controls. As he said in his address, India's meagre resources have to be carefully husbanded to make the most of them. The discipline implies planning, and consequently the allocation of scarce resources and materials according to a well-conceived scheme of priorities. Most observers accept the need for controls deriving from such planning, as Professor Max Millikan of the Massachusetts Institute of Technology pointed out when he dealt with the same issue in his recent address in Calcutta. It is not, therefore, a question of scrapping controls because "freedom" is intrinsically superior, but only of deciding how much control is really necessary.

When one gets down to making a decision, the task is seen to be far more complicated than would appear from the manner in which the whole issue tends to be debated. An example is provided by steel, where cntrolled prices have obviously inhibited expansion and seriously distorted the pattern of production. As Sir Biren Mookerjee has said, Burnpur's production of tested steel has gone down from 80 percent to 60 percent last year to achieve a larger overall tonnage to suit the price award. But can price control be really done away with to the point of allowing producers and consumers complete freedom? Some uses of steel are more essential than others, but must all be forced to pay the price dictated by the free market? Should consumers obtain their requirements from a plant of their choice or from the one nearest to them which will reduce the strain on transport? While discussing this, one might legitimately raise the issue whether steel should be sold at uniform prices throughout the country under a freight equalisation scheme hitherto worked by the Iron and Steel Controller. These are difficult questions, and it is not surprising that one section of the privately-owned steel industry thinks that the time is not opportune for decontrol. A similar difference of opinion exists in the coal industry. Some producers—frankly sceptical about the Government's ability to fix adequately remunerative prices—would like controls to go. But others, producing the grades which are actually in surplus, want to see these retained and the present ceiling price for Grade II converted into a statutorily fixed price.

Restoring freedom to the economy is not an easy thing to do, especially after years of controls which have created or aggravated unbalances. The transition will have to be gradual even with controls that may deserve to be scrapped. As for the others which may be continued, very careful thought will have to be given to the procedural requirements. Here again, the choice will be difficult to make because latitude may widen the scope for abuse and expose the whole system to ridicule. The danger is best seen in the case of company law where growing rigidity has come under fire from entrepreneurs at the same time as Parliament and public opinion are vociferously demanding the plugging of loopholes to prevent the dubious practices which have recently been exposed.

In a developing country where everything, including personal and corporate standards, is in a state of flux, laws and regulations need to be more explicit than in others where conventions and traditions can be relied upon to do part of the job. In this sense, freedom and maturity are synonymous—a point to be kept firmly in mind when one proceeds beyond polemics to making actual decisions. Another limitation should also be fairly obvious. No rule can ever be framed to cover all possible special circumstances, and a measure of discretion vested in the administering authority is the essence of good rule-making. But then this presumes there are a sufficient number of well-trained administrators able to exercise discretionary powers in a proper and constructive way. This is certainly not the case today in India where the administrative machinery is overstrained. Some relief may come if controls are reduced but it is fair to assume that experienced manpower will still be substantially short of needs. This is a point which Mr. L. K. Jha, Central Finance Secretary, made at the seminar but it does not seem to have been taken much notice of. Mr. Subramaniam's statement notwithstanding, the first thing to do is to accept the need for reducing controls as a general principle guiding all Government policy-making. Once this has been done—preceded presumably by a debate in Parliament to educate public opinion—it will be necessary to concentrate on a few urgent, high-priority sectors of the economy. For each of these, careful consultations between the Government, industry and consumers will be necessary to decide on the precise phasing and degree of decontrol.

CHANGING TERMS OF TRADE

ALTHOUGH a few commodities, notably sugar and tin, have behaved erratically recently, the general trend of commodity prices has been rising long enough to establish a basic change of trend, after the decade-long decline that followed the Korean boom. Prices of manufactured goods are comparatively stable. The relation between prices in the two broad categories, primary and manufactured goods, has changed in favour of primary goods. The effects of the change on international payments may be profound. Countries whose external trade is more or less evenly balanced between primary and manufactured goods will, of course, be affected less than countries whose imports or exports are predominantly the one or the other. The U.S.A.'s external trade, for example, is more evenly balanced than the U.K.'s. A large proportion of the U.K.'s imports is primary products (though she is a considerable importer of manufactures), and a larger proportion of her exports is semi-finished or finished manufactures (though she has restored her exports of coal to a considerable size). The terms of trade have turned decidedly against such countries as Britain, and many observers believe that this adverse movement will continue.

London's bankers are discussing the likely effects of this development on Britain's financial position, and on sterling. They recognise that favourable terms of trade have helped Britain through a difficult period in her financial affairs. But they do not, generally, believe that the change of trend will cause financial difficulties. Sterling is based not only on the finance and trade of the U.K. but on the finance and trade of the whole sterling area. The change in the terms of trade in the past year is adverse to the U.K., but generally favourable to the sterling countries abroad. The latter export mainly primary goods (though their exports of manufactures are increasing) and import mainly manufactured goods (though they are deficient of certain primary goods).

A simple assessment of the U.K.'s position would be rather discouraging. In the decade preceding the upturn of primary prices (in 1962) the overage price level of her imports was reduced by about 5 percent, despite the depreciation of money, and the average price level of her exports was raised by about 15 percent. On the basis of exports and imports each valued at, approximately, £4,000 million in 1962, it can be calculated that if the price levels had been the same last year as they were ten years before, the U.K.'s balance of payments would have been about £600 million worse than it was, in fact, in that single year. That figure is more than half of the sterling area's published reserves of gold and convertible currencies after the benefits of favourable terms of trade had accrued. Without those benefits, in the intervening period the reserve would, notionally, have disappeared long before 1962.

This reasoning is abstract. It disregards the big element of supplies from the sterling area in the total of the U.K.'s imports of primary goods, and the depressing effect of low primary prices on the sterling area's income from trade with non-sterling countries. And it assumes that the volume and the composition of the U.K.'s trade last year would have been the same is it was if prices had remained at the levels of ten years earlier. But the conclusion, though statistically unrealistic, is not meaningless. In conditions as they were in 1952-62 the U.K.'s balance of payments would have deteriorated critically if the relation between her export and her import prices had been unfavourable. However, the recovery of primary prices in the past year has changed the situation. The change is not yet obvious in the statistics of international trade, but there is no reason to doubt that the increase in primary producers' incomes will gradually increase their purchases from the manufacturing countries. And the timing of this increase is particularly opportune for Britain, formally excluded from the European Economic Community.

Most of the growth of international trade in the decade of declining primary prices is attributable to continental Europe and Japan. This year the growth of the E.E.C.'s external trade has been checked, and the gradual elimination of the E.E.C.'s internal tariffs is making the U.K.'s exports less competitive in the Community. The U.K.'s exports to the E.E.C. have increased rapidly, and last year they represented about a fifth of the U.K.'s total exports. Her exports to the European Free Trade Association have increased too, and last year they represented about an eighth of the total. The gradual elimination of the E.F.T.A.'s internal tariffs ensures further growth of this trade, but if the U.K. cannot maintain the recent rate of increase in her sales in the Community she needs expanding markets in the primary-producing territories to enable her to achieve the required increase in her total exports. The development of trade with "the eastern area" (Russia, China, etcetera), which 20 eminent British industrialists have advocated recently, will be facilitated by the rise in primary prices, as most of the goods with which the countries of that area earn sterling are primary goods.

The required increase in the U.K.'s exports over the five-year period of the current "plan" is rather more than 5 percent annually, to sustain an economic growth rate of 4 percent annually. That increase can probably be achieved. But when the National Economic Development Council calculated the requirement it did not allow for an appreciable deterioration in the terms of trade. In a competitive world Britain must not raise her export prices, and if her import prices are rising she must increase the volume of her exports more than the volume of her imports. But a comparatively rich country should not wish to enjoy the privilege of cheap imports indefinitely.

Current News and Comment

Company Finances Surveyed

The study of the finances of Indian joint-stock companies for 1962, published in the June issue of the *Reserve Bank of India Bulletin*, contains some interesting information. Although the figures are not up-to-date, the trend seems to have continued since. The present review begins a third series which will be continued till 1965 to cover the third plan period. The survey is based on 1,333 companies for 1960-61. The finances of large and medium-sized public limited companies were reviewed in the *Bulletin* from 1951 on the basis of the annual accounts of a sample of companies having a paid-up capital of more than Rs. 5 lakhs. For 1950-55, the sample included 750 companies and for 1955-60 it was enlarged to cover 1,001 companies. Like the preceding surveys, the present one does not include banking, insurance, investment, Government and non-profit companies and associations and companies limited by guarantee.

The study shows a decline in the rate of growth in production, sales, profits and capital formation in 1961, compared with 1960. There was a slowdown in the rate of progress in the agricultural and industrial sectors. The rise in agricultural production during 1961-62 was much smaller than in 1960-61. As a result, there was a shortage of raw materials. This, combined with severe import restrictions, held down industrial growth. The creation of additional industrial capacity in 1961 was smaller than in 1960, but in spite of this, there was a considerable rise in the idle capacity in industry. This was due to shortages of coal, power and transport. During 1961-62, industrial production rose by only 8.9 percent, compared with 13.1 percent in 1960-61 This, combined with a slight price increase, led to a small improvement in the value of production by 8 percent, against 15 percent. Sales income rose by 10 percent while manufacturing and other expenses increased by 8 percent.

The rate of growth of profit was halved to 7.4 percent in 1961, compared with 1960, because of a smaller sales turnover, combined with a slight reduction in the profit margin. As a result of the increase in corporation tax from 45 percent to 50 percent, tax provision rose from 38 percent to 43 percent of the profits. So the distributable profits declined after a steady rise during the preceding three years. Total dividends, nevertheless, were up partly due to an increase in the total paid-up capital. The profits ploughed back in business, therefore, fell by 8.6 percent, compared with a rise of 13.6 percent.

Gross capital formation was generally slower in 1961 than in 1960. As for the sources of finance, internal sources provided a larger proportion than external ones. There was a setback in the profitability of companies in the majority of industries. The ratio of gross profits to sales for all industries declined from 10.2 percent in 1960 to 10 percent in 1961. The ratio of gross profits to total capital employed was somewhat smaller at 10 percent, against 10.1 percent. The return of the equity capital—as measured by the ratio of profits after tax to net worth—declined from 10.9 percent to 10 percent. The average rate of return to the shareholders was, however, smaller. The ratio of dividends to paid-up capital declined from 11 percent to 10.9 percent. The financial position of companies showed a fairly satisfactory balance between their own and borrowed funds. The improvement in the debt-equity ratio was brought about by a greater rise in equity than in borrowed funds. The equity of the 1,333 companies as a whole rose by Rs. 93 crores while their debt increased by only Rs. 14 crores. So the debt-equity ratio moved down from 1:3.38 in 1960 to 1:3.51 in 1961. The ratio of total debt to tangible net worth moved up from 1:0.99 to 1.0.97 indicating an increase in the external obligations of companies *vis-à-vis* the shareholders' interests. This was the result of an increase of Rs. 137 crores in total debts to which bank borrowings contributed Rs. 50 crores and trade dues and other current liabilities Rs. 42 crores. Tangible net worth rose by more than Rs. 100 crores, to which Rs. 63 crores was contributed by reserves, current and non-current provisions. The paid-up capital increased by Rs. 38 crores, of which one-sixth was through bonus

Increasing Farm Production

The Planning Commission has decided to provide an additional sum of Rs. 85.5 crores for increasing agricultural production in the remaining period of the third plan. In 1961-62, the State Governments diverted nearly Rs. 10 crores from agriculture to other development projects, although the Planning Commission has laid down that Central assistance specifically granted for agriculture should not be used elsewhere. The provision of an extra amount of Rs. 85½ crores—Rs. 72 crores for bringing an additional 1 million acres of land under minor irrigation and Rs. 13½ crores for increasing the soil conservation target from 11 million acres to 11.7 million acres—should help the States in their drive to increase farm output. But finance is not the main difficulty here; foodgrains production, which has remained stagnant at about 79 million tons during the first three years of the plan, against the third plan target of 100 million tons to be achieved by the end of the plan period, did not suffer only because of financial difficulties. The shortfall in food production was mainly due to defective organisation of the food departments in the States and the multiplicity of official workers at the field level.

In a recent speech, the Central Food Minister, Mr. S. K. Patil, pointed out that the separate functioning of the food and agriculture departments in the States was preventing a co-ordinated effort to raise farm output. Another important reason for the failure of the agricultural programme is that the State Governments have put incompetent men in charge of the food and agriculture departments. Consequently, the implementation of the projects has been unsatisfactory. In many cases, the progress achieved is only on paper, and even though expenditure targets have been reached, there has not been a corresponding increase in agricultural production.

In implementing the third plan farm programme, the village level worker has a pivotal rôle. But as Mr. S. K. Dey, Central Minister for Community Development, recently pointed out, the worker is burdened with too much paper work, form-filling and red tape. He does not, therefore, have enough time to advise and persuade the cultivator to use better seed, more manure and better methods of production. Often the advice given by the village level worker is contradicted by the field workers belonging to the co-operative, agriculture, irrigation and other departments. Thus due to the multiplicity of workers at the field level, work suffers. In some States, an effort at co-ordination has been made by putting all the field workers under block development officers and by making it the specific responsibility of the district planning officer to co-ordinate their operations. But this has

India's Resources
are Precious
WASTE NOT,
WANT NOT

proved inadequate. It is necessary to reduce the multiplicity of workers at the field level and increase the number of village level workers to get results.

Another important cause of low production is the inadequate supply of agricultural machinery, cement, steel, coal dust and other commodities to the cultivator. The Planning Commission has, therefore, rightly decided that in future, additional foreign exchange will be made available for importing plant protection equipment and drilling machines for minor irrigation schemes and that the supply of cement, steel, coal and other essential materials to agriculturists will be given high priority, next only to defence.

In the third plan, the target for the use of nitrogenous fertilisers was fixed at 1 million tons, but at the present rate of consumption, the target would not be reached. The Planning Commission has, therefore, reduced the target for the last year of the third plan to 750,000 tons. An important decision of the Commission is that nitrogenous fertilisers will be imported to augment existing supplies.

Progress of General Insurance

The general insurance business in India has taken the fullest advantage of economic progress. This is evident from the fact that since 1954, the gross premium written in India has been steadily increasing. In 1961, the gross premium was estimated at Rs. 43.91 crores, compared with Rs. 23.88 crores in 1951. Speaking at the annual general meeting of the Indian Insurance Companies Association in Calcutta last week, Mr. D. Das Gupta, president, said that a significant feature of the progress was the reversal of the trend of general insurance lagging behind industrial production. The index number of general insurance registered a rise of 21.4 points in 1961, against one of 11.5 points in industrial production. But it is disconcerting that during the last few years, the ratio of fire insurance to the total business has been steadily declining. The periodical reduction in fire rates, according to Mr. Das Gupta, is a matter for concern. He added that further cuts in fire insurance rates would not be conducive to the development of general insurance. Motor rates have been raised recently, but it is necessary to see that the claims ratio does not catch up with the increase in the rates. The ratio of miscellaneous insurance to the total business has gone up from 31 percent in 1956 to 46 percent in 1961. It is evident from this that general insurers are not entirely dependent on conventional lines of business such as fire, marine and motor, but they are developing on a faster scale new lines of business such as erection, contractors' all risks, performance bonds, bank guarantee and credit guarantee insurances.

Mr. Das Gupta said that management expenses had gone up due to the payment of increased emoluments and other benefits to employees, rise in the cost of printing and stationery, increased postal and telephone charges, etcetera. Insurers are, therefore, hard put to it to keep management expenses within the prescribed limits. The overall expenses limits, the president said, were fixed about 12 years ago, so it is necessary to prepare a realistic formula in the context of changed conditions. Insurers realise the need for eradicating the undesirable practices in the industry, but the fact remains that the Code of Conduct, which was evolved in 1952 after a good deal of deliberation, has not been a success except for the payment of premium. Last year, the Executive Committee came out again with a comprehensive scheme which it considered necessary to put the industry on a sound footing. It would appear that in spite of the tightening up of the administrative machinery, the diversion of business, the prevention of which was one of the main objects of the Code of Conduct, is still prevalent.

Dealing with the emergency risks insurance schemes, Mr. Das Gupta said that the Government had appointed only one insurer—a subsidiary of the Life Insurance Corporation—to handle business for both factories and goods, although all the general insurers operating in India offered their services for the purpose on a no-profit basis. During the second World War, all general insurers in India handled war risks insurance successfully and their experience could have been freely drawn upon by the Government.

Protecting Cotton Textile Machinery

The cotton textile machinery manufacturing industry in India is of recent origin. In spite of the fairly good progress which it has made under protection for over 13 years, the industry is still in its infancy. From Rs. 7.66 crores in 1958, the value of textile machinery produced in the country rose to Rs. 15.4 crores in 1962 and the industry hopes to be able to reach the target of Rs. 36 crores by 1965-66, provided the supply of requisite raw materials is assured. But the supply of indigenous machinery continues to be far short of the demand. The total production of textile machinery during the third plan period is estimated around Rs. 129 crores, whereas the total requirements are estimated around Rs. 308.5 crores, made up of Rs. 281.7 crores for the cotton textile industry, Rs. 14.3 crores for art silk and Rs. 12.9 crores for the woollen industry. Stepping up domestic production to meet the industry's vast requirements for modernisation and rehabilitation is by no means the machinery manufacturers' only problem. There is a real danger that if the manufacturers of indigenous textile machinery do not intensify their research activity in order to be able to make new advances and improve the quality of their products, the new machines might soon become out of date.

The chairman of the Tariff Commission, Mr. K. R. P. Aiyangar, did well to emphasise this in his speech at the opening of the recent public enquiry into the question of continuing protection to the cotton textile machinery industry beyond 31st December, 1963. That is perhaps the only way to strengthen the cotton textile industry's competitive position in overseas markets. Mr. Aiyangar also hinted at the export potential of the industry. A beginning in that direction has already been made. In 1962-63, India exported textile machinery worth Rs. 19.03 lakhs.

Reviewing the progress of the cotton textile machinery industry in the recent past, Mr. Aiyangar observed that while there were 13 units engaged in the manufacture of protected items of cotton textile machinery in 1960, there are now 20 units registered with the Textile Commissioner. Two more units have recently been recommended for the issue of industrial licences to manufacture spindles, spinning rings and fluted rollers. The capacity of the industry for the production of ring frames in 1960 was 1,320, of spindles 940,000, of spinning rings 1.21 million, of fluted rollers 13,896 lines and of automatic looms 1,560. The existing capacity for these items stands at 2,480 ring frames, 1.04 million spindles, 1.42 million spinning rings, 12,072 lines of fluted rollers and 4,300 automatic looms. When all the licensed units start production, the total capacity will be of the order of 3,856 ring frames, 1.04 million spindles, 1.42 million spinning rings, 24,072 lines of fluted rollers and 5,100 automatic looms. Between 1960 and 1962, the production of ring frames rose from 1,127 to 1,571, of spindles from 540,000 to 720,000 and of automatic looms from 374 to 496. Production of spinning rings, however, fell from 300,000 to 290,000, and the output of fluted rollers was also lower at 11,216 lines, against 12,649 lines.

The main raw materials required for the textile machinery industry include pig iron of superior grades, steel items like bright drawn sections and coke. Except for some improvement in the case of coke, the supply position of other items has not recorded any noticeable change since 1960. Producers have generally expressed dissatisfaction with the supply position, quality and prices of raw materials which according to them has affected the production, quality and prices of finished products. Most of the consumers are of the view that the prices charged for the indigenous products are high compared with the prices of imported textile machinery, that after-sales service is poor and that the delivery period is too long. The present scheme of protection covers spinning ring frames, spindles, spinning rings, fluted rollers and automatic looms. The Tariff Commission, it is stated, has not received any request for the modification of the scope of protection. The protected categories of cotton textile machinery are currently assessed to duty at 10 percent *ad valorem*. Spindle inserts used in the manufacture of ring frames and doubling frames are subject to duties of 10 percent and 20 percent respectively: the industry has pleaded for a uniform duty of 10 percent.

Raising Tea Exports

In his presidential address at the annual general meeting of the Tea Association of India last Tuesday, Mr. S. R. Daga referred to the various burdens borne by the tea industry as a result of which production costs have gone up. Tea, being a major foreign exchange earner, it is necessary to improve its competitive strength. The Indian tea delegation, which visited the U.S.A. and Canada last year, found that India had lost substantial ground in the sales of common and low medium teas because of their high prices. The excise duty, which has been made non-refundable at the time of export, has been reflected in the cost of production. The relief granted by the abolition of the export duty has been considerably offset by the surcharge on excise duty. To worsen matters, the Assam Government has decided further to raise the rates of agricultural income tax. Mr. Daga stated that the industry would not be able to find resources to undertake development work and expand production if the present burdens in the shape of taxes, higher wages as a result of the Wage Board's recommendations and statutory obligation relating to the provision of industrial housing continued.

As for stepping up tea output, Mr. Daga stated that it was necessarily a long-term project since tea is an agricultural produce. The Plantation Finance Scheme which the Government has introduced would yield results in terms of larger production only towards the end of the fourth plan. The Planning Commission will have to fix the target for tea well in advance of the plan period. As a short-term measure to raise output, he suggested the provision of better irrigation facilities. To reduce the dependence on rains, tube-wells need to be sunk in the gardens in drought areas. Since the industry is already burdened with other commitments, Mr. Daga suggested that the Assam Government should help the industry in sinking tube-wells.

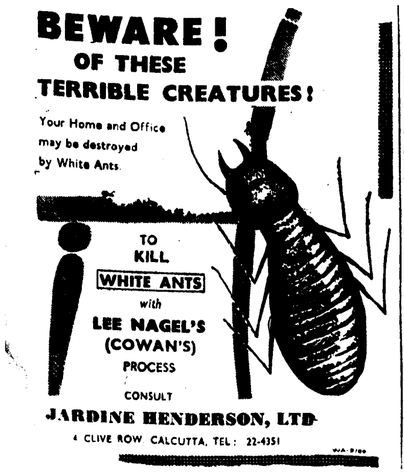
BAD TEA FROM U.S.A.

NOW that the Fiscal Policy is in everyone's mouth there is a great opportunity for the Indian Tea Association, as also the Tea Cess Committee, to press upon the Home Government the necessity for an Act to prevent the recurrence of what might be termed a crying scandal to all interested in the tea trade. Needless to say, we refer to the selling on the London market for tea rejected in America by the Customs authorities. We notice that a further shipment of these low class teas has been made from New York to London, and that the Ceylon Association has called the attention of the English Customs officials to the same, but they were powerless in the matter, and it behoves everyone connected with the industry to protest in the meantime, and afterwards insist upon an Act being passed to prevent the recurrence of such rejections finding their way into the British Household, bring the good name of the Indian and Ceylon tea into disrepute, for we have no doubt that, if this stuff is too bad to put into consumption as it is, it will be blended with a Ceylon or Indian to give it the taste of the fragrant herb of which it most probably is quite innocent. The Tea Cess Act was passed to secure means to push the sales of Indian tea and help it out of its present difficulties, but we think that the Committee might do worse than insist upon some Act being passed to stop rubbish being put on the market, which would make way for a better class of tea being supplied in the slums of London. We venture to believe that were this done the relief to the industry would eventuate in greater assistance than the amount already contemplated to be converted from blacks to greens.

FROM

CAPITAL

20th August, 1903



A Ditcher's Diary

COMING ALONG CHOWRINGHEE, ON FOOT, ON Wednesday morning, I was reminded, without needing to be, that another welcome Independence Day was round the corner. Also round the corner, this time literally, were three or four street urchins who insisted on pinning on me a national flag shoddily printed on paper. I hope I am not being unfair to them in saying that patriotic fervour perhaps played a lesser part in their activity than a certain greed for *baksheesh*. Being familiar with this sort of thing I did not take the matter seriously, although annoyed I was. A few minutes later a foreign tourist came out of a hotel: and he was similarly accosted. Fortunately, he got into a car fairly early; but I said to myself how disgusting the whole affair was. The foreigner might have been rude to the boys, who might then have promptly cried that he had insulted the Republic's flag. It would not have been difficult to collect a crowd in a matter of seconds: assault might have followed. I am not imagining things; I have seen such incidents in Calcutta. As I approached Esplanade, I saw a number of people selling national flags, this time in cloth, in various sizes. Some of them I found it difficult to recognise as the national flag. The wheel was out of place; the colours were weird. I must confess that these were distressing thoughts on the eve of Independence Day. It then occurred to me that here was an industry that could be usefully nationalised: the making of national flags should be a Government monopoly so that some standards could be maintained. Here, surely, is something in which individual creativity should not be allowed full play. These details apart, it was agreeable to see several ordinary people, obviously of modest means, buying the flags. What on earth, you may ask, were they celebrating? High prices? Chinese invasion? Corruption everywhere? I will not answer you. I will only say that there is something touching in common folk's capacity occasionally to feel for impersonal and unselfish things. Anyone who can think of Independence Day and forget for a while the million wholly justified complaints against his Government is a better man than you think. He has, for that moment, risen above himself; and I praise him. I feel likewise when I see a poor man buying a flower or helping the blind; he has then, as I was saying, risen above himself, something we all occasionally need to do and are better for it.

AN EXPERT ON CONTEMPORARY AMERICAN MORES tells me that the real boss in that great country no longer cares for the "yes-man": the man he wants around him is the "nodder", who silently conveys his consent to everything the Big Chief says. Mr. Kamaraj Nadar is anything but a "nodder"; but the "unique", "historic", "momentous" and what-have-you Kamaraj Plan is really a blank cheque for Mr. Nehru. I am not alarmed, though. As a "butcher" (Lord Attlee's term), Mr. Nehru is a poor performer; but I am convinced that, not for the first time, he has pulled off a superb political trick. To make it all appear otherwise, he will no doubt get rid of one or two innocents, known adherents of the Prime Minister, but the main ones to leave office will be those who would predictably have been sources of embarrassment to him during the parliamentary session that started on Tuesday. To remove Mr. Biju Patnaik, for instance, in the name of organisational work is to avert searching questions on him. It is too early to mention other names. What we will almost certainly not have is a homogeneous Cabinet at the Centre or in any State; and, again, it is difficult to accuse Mr. Nehru of inconsistency, for he has enunciated in advance a mish-mash philosophy of heterogeneity. As I write, I do not know which heads will fall. I am not, however, so naive as to believe that the whole exercise of the All India Congress Committee and the Congress Working Committee was in aid of the Congress Party which does indeed suffer from a variety of ailments but is still, electorally speaking, fairly strong. And what are political Parties for except to win elections? Yet the political manœuvre undoubtedly places upon the Prime Minister an impossible burden. I can well imagine the agonising moments he must be spending weighing the relative expendability of this colleague and that. After all, Mr. Nehru is an emotional man and by no means heartless. It was, however, good to be assured early on that his own application for *harakiri* had been rejected, as indeed it must be.

WHATEVER ELSE HE MAY OR MAY NOT BE MENTIONED in history for, former President Truman will always be remembered as the man who took the decision to drop the first atomic bomb. Whether he was right in doing so is something which has been the subject of speculation ever since, and it is not surprising that the eighteenth anniversary of Hiroshima has produced a fresh spate of it. In particular, it has brought the accusation that Mr. Truman acted against the advice of General Marshall, who favoured warning the Japanese first, and in ignorance of a petition signed by seven atomic scientists who had been working on the project. Why was he in such a hurry? He claims it was because he wanted to save the American lives which would undoubtedly have been lost in the invasion of Japan. In this I think he was fundamentally right. And I often wonder whether the world would be as keen as it is today to find some way of outlawing nuclear weapons if in fact it had never seen the effect of one actually used in war. This is not a flippant point; how much worse would it be today, when such weapons are so much more powerful than they were at Hiroshima, if some nation had a hankering after seeing just what one could do in the furtherance of its national ends? Personally, the thought dismays me far more than the memory of Hiroshima. Besides, are we not inclined to exaggerate just how much damage those first two atomic bombs caused? There was another eighteenth anniversary a few months ago: that of the bombing of Dresden. There, in the space of a day and a night, British heavy and American medium bombers killed over 130,000 people with conventional weapons using the terrible "fire-ball" technique, which causes a city to burn so fiercely that the air is denuded of oxygen and any person in the vicinity is quickly asphyxiated. A few months previous to that, again using conventional means, the R.A.F. had eliminated two-thirds of the huge city of Hamburg and killed over 300,000 people in three nights of raids. How does this compare with the damage done by the two atom bombs? Well, the deathroll at Hiroshima was about 70,000, just over half that of Dresden, and although I do not know what it was at Nagasaki, I doubt whether the two together came to half the Hamburg losses. So, for a comparatively small price in actual casualties compared with those due to bombing in Germany and, if I am right, in Tokyo too, the world was given a fright it has never forgotten. Grizzly arithmetic. But then, that is war.

THE AMOUNT OF ENERGY NEW DELHI EXPENDS ON the futile diplomatic exercise of assessing which Afro-Asian capital is, at a given moment, pro-Peking or pro-New Delhi must be fantastic. More useful it would be to enquire, in depth, the physical compulsions behind every country's foreign policy. Let it be said quite plainly that the complex issues involved in the Sino-Indian conflict are not as clearly understood elsewhere as they may be in Delhi; in Rangoon, Colombo and Djakarta it is simply not obvious that they must be on the side of the angel, which in New Delhi is identified as New Delhi. It is necessary to watch Rangoon in particular, for things are happening in Burma. General Ne Win may or may not be pink; he may or may not be turning red; I don't know. But both Rangoon and Colombo have good reasons to be on the right side of Peking, this apart from the understandable desire not to fall foul of a powerful neighbour. China buys the rice Burma must sell and then China sells that rice to Ceylon without which that island would starve. I am told by somebody who ought to know that there was once an opportunity for India to play that trading rôle with invaluable diplomatic dividends. India then,

I am told, took a wholly commercial view of Burma's offer and turned it down. An additional economic fact is that China buys from Ceylon the rubber the latter has to sell. Most countries now employ commercial attachés in their embassies abroad, something that would have been frowned upon in an earlier age of diplomacy. (Sir Harold Nicolson probably still disapproves of it.) But in the relations between one country and another there are so many factors that neglect of one may nullify the results obtained through other efforts. It is, for instance, important what kind of students you send to another country. India's External Affairs Ministry is young; it has some excellent people in the Foreign Service, including some experts. What it may be deficient in is the department of overall assessment and co-ordination, those anonymous desk men who read the reports and connect one with another. But then India has not had a full-time Foreign Minister yet. Whole-time Congressmen may be less urgently needed.

I HAVE LONG THOUGHT IT POSSIBLE THAT THE consequences of Britain's remaining outside the Common Market might be less serious than was at one time considered probable—at least by the pro-Market fanatics. British export trade statistics for the first half of 1963 seem to bear this out and in a special statement on the subject Sir William McFadzean, chairman of the U.K. Export Council for Europe, describes the results for the six months ended 30th June as "a great success story". It appears that exports to western Europe showed an increase of 12.4 percent compared with the same period in 1962 and now account for over 41 percent of all U.K. exports. The six Common Market countries are taking about 20 percent of all British exports, with West Germany in the rôle of Britain's best E.C.M. customer. Against this, the seven E.F.T.A. countries accounted for about 13 percent of Britain's world exports. Ironically enough, some of the improvement in Britain's position was achieved at the expense of France and in France itself rather than in third markets. Thus during the first five months of 1963, 50 percent more foreign motor-cars were sold in France, British manufacturers being particularly successful. France too has recently been very concerned about the trend of her exports and more and more economic studies are being devoted to her foreign trade which has been showing a declining net balance for some time past.

APART FROM PLAYING INTO RUSSIA'S HANDS BY laying herself open to a charge of insufferable hypocrisy, I cannot imagine what the United States thinks will be the result of her ban on arms to South Africa, however high-minded the motives. If she hopes thereby to make friends with and influence the "black" African countries, I suspect her subsequent experience there may be as disappointing as was India's when she was shopping around for moral support against the Chinese. Besides, it is not going to help the main problem of racialism in South Africa, the cause of which, I suspect, is quite simply fear. On the contrary, my guess is that the Government there will now go all out to manufacture its own small arms for internal suppression and, in its panic, neglect altogether to acquire the hardware necessary for defending the sea routes round the Cape, an omission which will benefit nobody in the free world, especially not India. I have always admitted quite frankly that I have no solution to suggest for the South African problem, unless it is to advocate greater virtue all round—and nothing could be more futile than that. I have an uneasy suspicion that South Africa will eventually dissolve in civil war, but I do not think an arms embargo will postpone the date or decisively affect the probable outcome. History has shown that such measures rarely achieve the results aimed at, and as often as not injure the party taking them or the one they are designed to benefit? If any proof were needed of this, there is no need to go further than the case of India's embargo on the export of jute goods to South Africa. What a wonderful boost that has been for the mills in Pakistan; and what a source of unemployment among the mill workers in Calcutta. And has it harmed South Africa? Well, has it?

THE DITCHER

Guide for Investors

DEPRESSING PROSPECTS FOR COAL INVESTORS

(BY A SPECIAL CORRESPONDENT)

COAL shares have been sluggish for a long time. The index for the shares has declined from 123.5 to 107.9 (base 1952-53 equals 100) in the course of the past year. At present, these shares are difficult to deal in, because buyers cannot be attracted even by discounting current prices. It has not been possible to judge the working of coal companies as they have been prohibited from publishing their balance-sheets because of the emergency, but the general belief is that the results have deteriorated. Notwithstanding increased output, the profitability in general has been held down by rising production costs. The paltry increases in the price of the commodity allowed from time to time, have been inadequate to cover the higher production costs.

The apathy of the investors has increased due to some disturbing developments in recent months. Firstly, the growing accumulation of pithead stocks at the collieries has caused concern. Several coal mines have been compelled to restrain production. Secondly, reports that several import licences for machinery and equipment have been surrendered to the Government, have disturbed sentiment. The anxiety has grown due to the fact that the demand for the commodity has appreciably declined over the past few months. In the absence of fuller information it is not possible to have an idea of the size of the fall in demand, but there is little doubt that the offtake of the commodity has fallen off. The slowdown in industrial growth has greatly contributed to the decline.

A New Delhi Press report has hinted at the Planning Commission being concerned about the fall in the demand for coal. After reviewing the progress of the industry during the first two years of the third plan, it would not be surprising if the Commission revised the targets for output and demand downwards for the later years of the plan. In any case, the production target of 97 million tons a year is unlikely to be achieved. The private sector has so far fulfilled its share of increasing production, while the performance of the State collieries has been disappointing.

The official view seems to be that an output target of 90 million to 92 million tons a year will be sufficient to take care of the demand at the end of 1966, while private interests are inclined to place it lower at 80 or so million tons a year. Whatever might be the cut in the output target eventually, it would be unfortunate if the World Bank loan were not fully used. The Bank has already sanctioned a foreign exchange loan of about Rs. 17 crores for the modernisation and expansion of the industry. A fair part of this sum still remains unutilised, since several collieries have not found the matching rupee finance. Although efforts have been made by the Government to persuade commercial banks to supply the necessary credit, the latter have not done so because of procedural difficulties. Several collieries are unable to produce the security necessary for bank loans. The laws and rules governing mining leases have made it almost impossible for them to offer any sort of tangible security.

The reluctance of some collieries to use the import licences for new machinery and equipment is understandable. The declining trend in coal consumption is one of the main disincentives. The fact that the fall has taken place despite an improvement in transport has led to the apprehension that the decline might not be a passing phase. The slower industrial growth has arisen out of basic weaknesses. Despite the bigger requirements of development and defence, idle capacity in industry has increased. There have been severe shortages of raw materials, power, spare parts and components. The incentive to produce more has been discouraged by the Government's unrealistic pricing policy. The coal industry, in particular, has been starved of funds by heavier taxation. The super profits tax has made a big dent on after-tax earnings. It is feared that the demand for coal may not pick up in the near future. In the circumstances, the collieries have been obliged to take a cautious view of their expansion prospects, so they are chary of undertaking the risks of additional investment.

This does not mean that there is no scope for increasing coal production. There has been a decline in the demand for inferior coal, but the supply of good grades is still behind requirements. Not only has industrial production fallen due to the shortage of good coal, but the quality of production has also deteriorated. The steel and power industries, in particular, have greatly suffered because of the shortage of superior grades. Considering that the supply of washed coal will increase only slowly, the demand for superior coal will be difficult to satisfy unless vigorous measures are taken to raise their output. All accessible seams of good coal have almost been exhausted. Hence deep-mining is necessary for raising these grades. As deep mining is adopted, working conditions become difficult and production costs mount up. Although the Government has offered to subsidise the working of difficult mines, the subsidy has so far given only a marginal benefit. Not only has financial assistance been meagre in proportion to actual costs incurred, but the good effects have been whittled down greatly by the cumbrous procedures relating to the grant of subsidy.

The problem of increasing the raisings of superior coal, therefore, deserves the closest attention of the authorities and producers. To subsidise production will only touch the fringe of the problem. The answer lies in making the output economically rewarding for the producers. At the present price, the production of superior coal has not been sufficiently remunerative. Unless the price is adequately raised, the collieries will not feel encouraged to produce more. Since some leading coal companies have already undertaken development schemes involving substantial funds, steps should be promptly taken to render their production economically remunerative. The projected expansion has naturally been based on a certain amount of raisings in order to hold down the unit production cost.

The industry has found it difficult to raise funds from the market due to the unattractive return obtainable from the capital employed. In view of several years of unprofitable working, coal companies by and large have almost exhausted their reserves. If the industry is to be placed on a healthy basis, its earnings must be sufficient to plough back adequate funds into the business. The shareholders must also be assured of a fair return. Unlike other industries, coal is a wasting asset so the investors need to be duly compensated for it.

No Rights Now from T. E. L. C. O.

REFERRING to the withdrawal of a small sum of Rs. 6 lakhs from the general reserve for the maintenance of the dividend for 1962-63, the chairman of the Tata Engineering and Locomotive Company, Mr. J. R. D. Tata, had cautioned the shareholders in his annual statement against interpreting "such action as any kind of commitment in regard to next year's profits or dividend." This led to some misgivings about the dividend prospect for the current year. These misgivings have now been removed as the chairman has assured the shareholders at the last annual meeting that they "need not worry over the dividend prospects because profits were expected to be enough for its maintenance even on the increased capital".

Referring to the Company's expansion programme, the chairman said that the full production of 18,000 lorries visualised under the first stage of the programme would be reached by the end of next year and the production of 24,000 lorries would be reached by 1965-66. The total cost of the expansion scheme would be around Rs. 21 crores, of which Rs. 13 crores would be needed for the first phase and Rs. 8 crores for the second phase. Half of this amount would be in foreign exchange. The second stage of expansion would be implemented as early as possible, and a second application to the Agency for International Development would be made for a further loan to cover the foreign exchange requirements. The question of raising the rupee finance for the expansion programme is engaging the attention of the management, but no decision is likely to be taken this year. Mr. Tata ruled out the issue of debentures or rights shares for the time being. He assured the shareholders that new shares would be issued only when it could be done without adversely affecting the interests of the shareholders—that is, without disturbing the current yield on the shares.

The chairman informed the shareholders that the manufacture of press tools, dies and production devices would cost over Rs. 1 crore. It will be spread over two or three years and the cost will be met from the Company's own resources. The plant will be located in the Poona region. The chairman disclosed that the Company's production during the first few months of the current year had shown a small improvement over that in the corresponding period last year. He also stated that the delay of about five months in the grant of an increase in the lorry prices had cost the Company Rs. 35 lakhs. The Government has reduced the priority allocation for the Company's T.M.B. vehicles from 80 percent to 60 percent of the total output. The Life Insurance Corporation holds about 6.5 percent of T.E.L.C.O.'s capital, as against 23 percent held by the Tata group of Companies. The Company is likely to get the tax benefit under Section 84 on Rs. 15 lakhs to Rs. 20 lakhs next year, against Rs. 24 lakhs this year.

Larsen and Toubro Earns More

LARSEN and Toubro Ltd reports encouraging results for the year ended March 1963 with its gross turnover up by nearly 30 percent from Rs. 5.71 crores to Rs. 7.41 crores, and the gross profit rising by about 20 percent from Rs. 59.12 lakhs to Rs. 70.25 lakhs. The dividend has been maintained on the enlarged capital; the new 550,000 ordinary shares are entitled to a proportionate dividend of 70nP a share, whereas the old 1.1 million equity shares will receive Rs. 1.40 a share (the same as in the preceding year). The equity dividend absorbs Rs. 19.25 lakhs, against Rs. 15.40 lakhs. Appropriations include depreciation Rs. 14.64 lakhs (against Rs. 12.20 lakhs), taxation Rs. 24.40 lakhs (against Rs. 21 lakhs), development rebate reserve Rs. 3.23 lakhs (against (Rs. 2.96 lakhs), general reserve Rs. 4.06 lakhs (against Rs. 2.50 lakhs) and dividend equalisation reserve Rs. 1 lakh (the same). Preference and ordinary dividends absorb Rs. 20.23 lakhs (against Rs. 16.38 lakhs), leaving a sum of Rs. 11,973 to be carried forward, against Rs. 1.51 lakhs brought in. The proposed dividends are being paid out of dividend reserve.

The directors state that the performance of the Powai workshops during the year was satisfactory. The output of industrial plant and equipment as well as electrical motor starters and switchgears continues to rise steadily. Careful planning, additions to plant and equipment and investments in subsidiary and associated companies have contributed to the all-round

Grade-1

DAULAT
ALL GEARED LATHES

Armstrong Smith Ltd.
P-17, MISSION ROW EXTN. CALCUTTA-13

ajanta AJC-

improvement in the Company's performance. Net additions to fixed assets during the year amounted to Rs. 42.05 lakhs, bringing the total cost of fixed assets to Rs. 1.921 crores. During the year, further investment in new or additional shares at par of associated and subsidiary companies amounted to Rs. 36.65 lakhs, raising total investment in such shares to Rs. 1.07 crores. The Company earned Rs. 2.22 lakhs (against nil) by way of dividends from subsidiary companies.

In his statement to the shareholders released along with the directors' report, the chairman, Mr. H. Holck-Larsen, has held out the hope of still better results in the future. The Company's primary and immediate aim, he says, is to consolidate and develop its existing activities to the maximum extent. The chairman points out that additions to manufacturing facilities coupled with increasing efficiency, have enabled the Powai workshops to further augment output of high quality engineering products. Production at the workshops has been nearly doubled in two years and the chairman looks forward to a further increase of about 40 percent in production during 1963-64. The outlook for associated and subsidiary companies is considered to be satisfactory. The chairman has revealed that the accounts relating to the Madras Harbour extension contract are in the process of settlement and the resulting profits will be reflected in the Company's accounts for the current year.

In addition to various new contracts of smaller magnitude, the Company has secured a contract valued at Rs. 1.4 crores from the Madhya Pradesh State Electricity Board for the installation of the thermal station in Korba. The work, already taken in hand, is expected to be completed in 1966. The authorised capital of the Company is proposed to be increased from Rs. 2 crores to Rs. 3 crores by the creation of 1 million new equity shares of Rs. 10 each. This is being done in order to make possible the issue of fresh capital as and when required. As against its present authorised capital of Rs. 2 crores, the Company's issued and paid-up capital amounts to Rs. 1.8 crores, made up of Rs 15 lakhs in preference shares and Rs. 1.65 crores in equity shares.

Gwalior Rayon Earns Less, Pays the Same

THE Gwalior Rayon Silk Manufacturing (Wvg.) Co. Ltd has maintained the taxable ordinary dividend for the year ended March 1933 at Rs. 2.50 a share (Rs. 10-paid). The preliminary report on the working of the Company during the year shows a small setback in its results compared with those of the previous year. In spite of an increase of 8.3 percent in the sales from Rs. 12.07 crores to Rs. 13.08 crores, the Company's gross profit is down by about 6.7 percent from Rs. 4.18 crores to Rs. 3.9 crores. The provision for depreciation has been stepped up from Rs. 43.60 lakhs to Rs. 83.89 lakhs, and allocation to the development rebate has been raised from a mere Rs. 9.56 lakhs to Rs. 1.13 crores because of the commissioning of the Company's rayon grade pulp plant in Kerala. The provision for taxation is only Rs. 1.30 lakhs, against Rs. 15.15 lakhs in the preceding year.

In view of the heavy provisions for depreciation and development rebate, the Company is said to be exempted from taxation. The provision of Rs. 1.30 lakhs is for arrears of wealth tax concerning previous years. Allocation to the capital redemption reserve has been maintained at Rs. 15 lakhs, but donations are substantially higher at Rs. 21.44 lakhs, including Rs. 12.07 lakhs for the National Defence Fund, aginst Rs. 5.83 lakhs in 1961-62. No provision has been made for the dividend equalisation reserve which received Rs. 25 lakhs in the preceding year and allocation to the general reserve has been reduced from Rs. 2.70 crores to Rs. 1.72 crores. The preference dividend at 8.57 percent absorbs Rs. 12.92 lakhs (the same) and the equity dividend Rs. 62.50 lakhs (the same). The equity dividend is being paid out of the general reserve. After making all these appropriations, there remains a surplus of Rs. 3.547 to be carried forward, against Rs. 7.41 lakhs brought in. The Company's gross block increased during the year from Rs. 11.74 crores to Rs. 14.76 crores, and the net block at the end of March 1963 amounted to Rs. 8.98 crores. The Company's rayon grade pulp plant started trial production in January 1963. The daily capacity of this plant is of the order of 150 tons. The Rs. 10-paid share of the Company is currently quoted around Rs. 41.

Bengal Chemical Expanding

THE observations on the expansion schemes of the Bengal Chemical and Pharmaceutical Works Ltd made by Dr. B. N. Ghose, chairman, in his statement at the annual general meeting in Calcutta last Wednesday, have been the main point of interest for shareholders. (A fuller version is printed on a later page in this week's issue of *Capital.)* The alum plant in Panihati, West Bengal, has almost been completed, and production will soon begin. When the additional 50-ton-a-day capacity of the sulphuric acid plant is completed, it will be possible to achieve greater economy. The expansion of the caffeine plant at the Maniktala factory has been undertaken. The production of either has oeen hindered by the shortage of raw materials. The coal tar business has not done well because crude tar has largely been used by producers as fuel. The shortage of imported and domestic raw materials has also restricted output. The work of setting up the Durgapur Chemicals Ltd has made progress. Although Bengal Chemical has been a promotor of this new Company, it will be a West Bengal Government undertaking.

Bengal Chemical has produced satisfactory results for the year ended March 1963, in spite of various difficulties. Sales rose by more than Rs. 15 lakhs, although the profit was held down by rising production costs. The ordinary dividend has been maintained at 10 percent, taxable. Sales of pharmaceutical products have shown an appreciable rise. Exports of the Company's products have improved by more than 25 percent. The directors hope to produce better results during the current year.

Kesoram Industries Pays More

THE ordinary shares of the Kesoram Industries and Cotton Mills Ltd have been steady around Rs 21.06 because of satisfactory results produced during the year ended March 1963. The taxable ordinary dividend has been increased from 12 percent to 13 percent to absorb Rs. 25.99 lakhs. *Pro rata* dividends have been paid on the new shares. The yield amounts to 6.2 percent as the present price. The trading profit has risen from Rs. 1.83 crores for 1961-62 to Rs. 2.01 crores for 1962-63. Depreciation is allocated Rs. 62.49 lakhs (against Rs. 69.43 lakhs), taxation Rs. 8 lakhs (against Rs. 36 lakhs) and development rebate reserve Rs. 39.21 lakhs (against Rs. 13.38 lakhs). General reserve absorbs Rs. 22 lakhs (against Rs. 19.52 lakhs) and dividend reserve Rs 40 lakhs. The carry-forward is Rs 26,969, against Rs. 43,454 brought in. The bigger development rebate reserve points to the substantial capital expenditure which the Company has incurred for several projects.

Walford Transport Repeats

IN their report for the year ended December 1962, the directors of the Walford Transport Ltd say that the working results during the current year may not be as good as those of the preceding years. Due to emergency, supplies for vehicle lines have been substantially reduced. The main line is jeep but all production from the plant since the close of 1962, has been taken over by the army. The Company has, meanwhile, been developing the engineering side of its business. Air-conditioning agency for the Rootes Tempair machine has been acquired for the State of West Bengal. As for the expansion programme, the directors say that the Company has taken steps to develop its business in Gauhati, Durgapur and Agartala.

The profit has declined from Rs. 13.99 lakhs in 1961 to Rs. 11.32 lakhs in 1962, after providing Rs. 59,854 (against Rs. 67,336) for depreciation. A taxable ordinary dividend of 30 percent has been maintained. This is more than four times covered and offers a yield of 7.9 percent at the present price of Rs. 3.81 a share of Re. 1 each. General reserve is allocated Rs. 1.95 lakhs, capital reserve Rs. 1.35 lakhs (against Rs. 2.31 lakhs) and development rebate reserve Rs. 2,134 (against Rs. 5,054). Taxation absorbs Rs. 7 lakhs (against Rs. 8.74 lakhs) and the super profits tax about 6.4 percent of the profit, before tax.

New Standard Engineering Does Well

THE preliminary report on the working of New Standard Engineering Company for the year ended March 1963, released along with the announcement of the dividend, showed that the Company had done better than in the previous year, with its sales rising from Rs. 1.60 crores to Rs. 1.83 crores and gross profit increasing from Rs. 22.26 lakhs to Rs. 22.89 lakhs. The directors observe in their final report that the grey iron foundry in Goregaon has been in production since May 1963. The Company has had some teething troubles in the operation of this foundry especially on account of refractory material. A beginning has been made with the construction work for the new machine shop, but in view of the present adverse conditions in the money market, further progress on this project has been slowed down.

With the revised agreement with the Polish suppliers of machinery, the directors expect that the import licence for plant and machinery will be received shortly which will help increase and improve the foundry capacity. The Company has received the first instalment of Rs. 20 lakhs from the I.C.I.C.I. out of a loan of Rs. 40 lakhs sanctioned by it for the Goregaon project. The manufacture of blow-room lines for textile mills have shown continued progress. The Company has started the manufacture of E.O.T. cranes, electric furnaces, higher capacity power hammers and drop forges. Negotiations have been successfully concluded with Wheelabrator Corporation of the U.S.A. and Tilghman's Ltd of the U.K. for the manufacture of shot blasting equipment.

The Company received some defence orders towards the end of the year under review which will be executed during the current year. Apart from this, orders in general have been well maintained and the order book is said to be satisfactory. With the increased shift of operations in Goregaon, streamlining of production in self-contained departments, better and more extensive training programme for engineers and workers, etcetera, the Company's manufacturing facilities are now built for high production potential which can be realised fully provided there are no bottlenecks on account of raw material or transport and assuming that there are sufficient orders on hand.

Universal Electrics Factory Installed

THE Universal Electrics Ltd has shown a net loss of Rs. 25,840 for the year ended March 1963, after transferring Rs. 2.03 lakhs to expenses under "construction period account" and Rs. 15,230 for depreciation. The construction of the house service meters factory has been completed, and the rated capacity is likely to be achieved soon. The Company has secured some orders for these meters. Preference shares for Rs. 1.50 lakhs have been allotted to the foreign collaborators for consideration other than cash. The dividend has been passed.

Triton Insurance Pays the Same

THE Triton Insurance Co. Ltd shows a credit balance of Rs. 5.06 lakhs for the year ended December 1962, compared with a balance of Rs 3.77 lakhs in 1961, after transferring Rs. 5 lakhs (against Rs. 3.30 lakhs) to taxation, Rs. 77,906 (against Rs. 8,085) to depreciation on investments and Rs. 25,000 to the National Defence Fund and meeting other charges. Bringing in Rs. 1.96 lakhs, the distributable balance amounts to Rs. 7.01 lakhs. The taxable ordinary dividend of 50 percent has been maintained, absorbing Rs. 2.88 lakhs. The yield amounts to 10.1 percent at the present price of Rs. 124 a share of Rs. 100 each, of which only Rs. 25 has been paid-up. General reserve is allocated Rs. 4.14 lakhs (against Rs. 1 lakh). The net premium of the fire department has amounted to Rs. 27.87 lakhs while that of the marine department has totalled Rs. 9.75 lakhs. The net premium of the miscellaneous department has amounted to Rs. 4.07 lakhs.

Passimbing Tea Skips Dividend

THE Passimbing Tea Co. Ltd (a Darjeeling garden) has earned a profit of Rs. 1.04 lakhs for the year ended December 1962, against Rs. 46,762 in 1961, after providing Rs. 7,000 (against Rs. 5,000) for depreciation. The ordinary dividend has been passed, but the usual preference dividends have been paid. Taxation absorbs Rs. 20,000 and the reserve fund Rs. 7,500. Dividend equalisation reserve is allocated Rs 10,000, leaving a carry-forward of Rs. 6,852. A loss of Rs. 30,616 was brought in.

The crop amounted to 116,997 kilograms, against 119,154 kilograms. The average sale price rose from Rs. 5.62 to Rs. 5.95 a kilogram. The 1963 crop has been estimated at 126,000 kilograms at a cost of Rs. 6 lakhs. The crop amounted to 25,572 kilograms up to 14th May, 1963.

Ethelbari Tea Earns More

THE Ethelbari Tea Co. (1932) Ltd (a Duars garden) has made a profit of Rs. 93,085 for the year ended December 1962, against Rs. 50,789 for 1961, after transferring Rs. 40,816 (against Rs. 8,300) to depreciation. A taxable ordinary dividend of 7.5 percent has been declared to absorb Rs. 36,750 at the present price of Rs. 13.12 a share of Rs. 10 each. The yield amounts to 5.7 percent. Taxation is allocated Rs. 50,000 (against Rs. 20,000) and development rebate reserve Rs. 891 (against Rs. 2,515), leaving a carry-forward of Rs. 13,738, against Rs. 8,295 brought in. The crop amounted to 264,389 kilograms. The directors expect a bigger production in 1963 since the garden has produced about 56,000 kilograms up to 15th June, 1963.

Indian Dyestuff Disappoints

ALTHOUGH the chairman of Indian Dyestuff Industries had given a clear hint about the squeeze on the Company's profit margin at the last year's annual meeting, the working results of the Company for the year ended March 1963 are perhaps worse than the market's worst expectations. While sales are down by only 8 percent from Rs. 2.58 crores to Rs. 2.38 crores, the gross profit has declined sharply by about 33.5 percent from Rs. 78.52 lakhs to Rs. 52.18 lakhs. Shareholders, however, have the consolation that the dividend has been maintained at 7 percent and that, too, on the increased capital of Rs. 1.87 crores (against Rs. 1.57 crores). This has been done in spite of the fact that the Company has had to provide a substantially larger sum for development rebate following the big increase in the gross block from Rs. 60 lakhs to Rs. 2.55 crores. The Company has, however, had to draw Rs. 8 lakhs from the general reserve to provide for the payment of the proposed dividends which absorb Rs. 15.77 lakhs, against Rs. 13.39 lakhs.

The ordinary as well as the preference dividend is on the increased capital. Out of the year's gross profit of Rs. 52.18 lakhs, the directors have set aside Rs. 16.18 lakhs (against Rs. 4.91 lakhs) for depreciation, Rs. 20.62 lakhs (against Rs. 49,000) for development rebate and Rs. 4.30 lakhs (against Rs. 33.70 lakhs) for taxation. After providing for the payment of the proposed dividend, there remains a modest surplus of Rs. 3,006 to be carried forward, against Rs. 30,134 brought in. The Rs 100-paid share of Indian Dyestuff is quoted around Rs. 300. As against the Company's gross block of Rs. 2.55 crores, total depreciation provided up to 31st March. 1963, amounts to no more than Rs. 36.45 lakhs.

Minerva Mills Pays Less

LIKE several other cotton textile mills, Minerva Mills Ltd also did not fare well in 1962. Its sales dropped by nearly 15 percent from Rs. 2.01 crores to Rs. 1.7 crores, and its gross profit at Rs. 9.28 lakhs showed a fall of about 13 percent from the previous year's figure of Rs. 10.74 lakhs. On top of this, the Company has had to provide a substantial sum of Rs. 2.37 lakhs for payment of additional wages and dearness allowance to workers, under an agreement, for the period 1st July, 1960, to 31st December, 1962. It has also had to provide Rs. 78,333 (against Rs. 62,308) for compensation to workers under the rationalisation programme during 1962 and prior to that year. These additional burdens have been met by writing back excess provision for depreciation amounting to Rs. 2.66 lakhs.

The directors have also been obliged to reduce the dividend from Rs. 5 to Rs. 3.50 a share of Rs. 100 which absorbs Rs. 1.04 lakhs (against Rs. 1.48 lakhs). Appropriations of the year's profits include depreciation Rs. 4.45 lakhs (against Rs. 6.16 lakhs), development rebate reserve Rs. 1.36 lakhs (against Rs. 44,500) and gratuity reserve Rs. 1.15 lakhs (against Rs. 1.17 lakhs). No provision has been made for taxation in view of the losses carried forward and unabsorbed depreciation allowances of the previous years. The proposed dividends, ordinary and preference, absorb Rs. 1.35 lakhs (against Rs. 1.72 lakhs) leaving a small surplus of Rs. 8,714 to be carried forward, against Rs. 23,774 brought in.

During the year, the Company availed itself of over two-thirds of the loan of Rs. 45 lakhs sanctioned by the N.I.D.C., and this enabled the Company to finance the purchase of many new machines under its programme of renovation and modernisation. Out of the 144 new automatic looms acquired for replacement, 117 have been installed and worked during the current year and the balance will be commissioned shortly. The Government has recently sanctioned an expansion of spindleage by 6,000 to feed the increased production of the automatic looms working three shifts. The mill is equipped with 39,398 spindles and 704 looms. The Rs. 100-paid share of the Company is currently quoted around Rs. 58.

Raghuvanshi Mills Repeats

RAGHUVANSHI Mills Ltd has maintained the dividend for the year ended March 1963 at Rs. 12 a share, subject to tax. The preliminary report shows that the Company's performance during 1962-63 has been quite satisfactory. The gross profit at Rs. 28.65 lakhs is virtually unchanged as the previous year's figure was only fractionally higher at Rs. 28.78 lakhs. The directors state that the Company has been continuing its policy of progressive modernisation of the plant and machinery. Against the order for 40 new cards, 30 cards have been received and the balance is expected to be received during the current financial year. Additions to the fixed assets during the year amounted to Rs. 12.06 lakhs and commitments for machinery valued at Rs. 6.82 lakhs had been made as at the end of the financial year. The Company was able to fulfil its export obligations.

Under the export promotion scheme, Raghuvanshi Mills receives entitlements for the import of machinery which is being used for the import of machinery required for sewing thread winding, wrapping, etcetera. The working of the mill, it is expected, will show further improvement because of the facilities concerning imports.

Appropriations of the year's profits include depreciation Rs. 8.34 lakhs against (Rs. 7.42 lakhs), taxation Rs. 10.75 lakhs (against Rs. 9.16 lakhs), development rebate reserve Rs. 1.38 lakhs (against Rs. 1.86 lakhs), gratuity reserve Rs. 50,000 (against Rs. 1 lakh), general reserve Rs. 70,000 (against Rs. 4.29 lakhs) and dividend reserve Rs. 5.10 lakhs against (Rs. 4.80 lakhs). The proposed dividend is to be paid out of the dividend reserve. After making various appropriations, there remains a balance of Rs. 3,621 to be carried forward, against Rs. 4.142 brought in. The Rs. 100-paid share of the Company is quoted around Rs. 140, offering a gross return of about 8.6 percent.

Share Offer by Indo-Swedish Pipe

THE Indo-Swedish Pipe Manufacturers Ltd which proposes to set up a factory in Agra for the manufacture of cast iron soil pipes by the modern spinning process is offering 25,000 equity shares of Rs. 100 each at par for public subscription to raise funds for the project. The list will open on 19th August and close on 30th August or earlier, but not before 21st August. The Company has secured the technical collaboration of A. B. Akers Styckebruk of Sweden whose process has been adopted by even the highly industrialised countries like the U.S.A., the U.K., West Germany and Japan. The proposed factory, it is expected, will go into production by about the middle of next year. The licensed capacity of the plant will be 24,000 tons of pipes and fitting a year on a single shift basis. The production would be 10,000 tons in the first year, rising to 24,000 tons in the third year. When in full production, the Company will have an annual turnover of about Rs. 1 crore.

The promoters expect the project to yield about 37.5 percent on the block of the Company; the profit margin on the sale of pipes is estimated between 10 percent and 11 percent. The Company does not expect any difficulties in marketing its products. The capital outlay on the project is estimated at Rs. 55 lakhs, which is proposed to be met by the issue of share capital of Rs. 35 lakhs, foreign exchange loan from the I.C.I.C.I. amounting to Rs. 15 lakhs and an unsecured loan of Rs. 5 lakhs from the managing agents—Bharat Combines Private Ltd, New Delhi.

The authorised capital is Rs. 1 crore—all in equity shares of Rs. 100 each. The promoters and directors have already subscribed for Rs. 10 lakhs which includes Rs. 2,54,500 taken up by Mr. Ole J. Bach, technical representative of the Swedish firm and a director of the Indian Company. The present issue consists of Rs. 25 lakhs and it has been completely underwritten. A sum of Rs. 25 a share is payable on application and a like amount on allotment. The balance will be collected in two calls. The Company has given a guarantee to the Government that it will export cast iron spun pipes worth Rs. 54 lakhs within five years of importing the machinery. The board of directors includes Mr. Hansraj G. Gupta (chairman), Mr. P. L. Kirloskar, Mr. Ram Prasad Khandelwal, Mr. M. M. Muthiah, Mr. K. C. Sood, Mr. Y. L. Agarwal, Mr. Bisheswar Nath Gupta, Mr Baij Nath Gupta and Mr. Sarda Shumshere Jung Bahadur Rana.

Greaves Cotton Fares Well

GREAVES Cotton and Co. Ltd has maintained the dividend for the year ended March 1963 at Rs 12 a share less tax, and the preliminary figures relating to the Company's working results indicate that it has fared better than in the preceding year. The turnover is higher at Rs. 7.85 crores, against Rs. 7.53 crores, and the gross profit also shows a small improvement from Rs. 52.56 lakhs to Rs. 54.53 lakhs. With Rs. 12,583 brought in from the previous year and including Rs. 1.35 lakhs transferred from the retiring gratuity reserve, the amount available for appropriations comes to Rs. 55 lakhs. Allocation to the development rebate reserve has been raised from Rs. 25,090 to Rs. 80,000, and the amount set aside for doubtful debts reserve is also higher at Rs. 50,000, against Rs. 20,000. Taxation accounts for Rs. 23 lakhs, against Rs. 22.25 lakhs and the general reserve gets Rs. 11.50 lakhs, against Rs. 10.10 lakhs. A sum of Rs. 20 lakhs has been transferred to the dividend reserve, out of which the proposed dividend is to be paid. The carry-forward is Rs. 20,000. The Rs. 100-paid share of Greaves Cotton is currently quoted around Rs. 130.

Hind Rectifiers Pays Maiden

THE 5 percent maiden dividend by Hind Rectifiers Ltd for the year ended March 1963, is well justified by the Company's encouraging performance during the year. According to the preliminary report, the net sales of the Company have increased by about 87 percent from Rs. 16.42 lakhs to Rs. 26.06 lakhs, and the gross profit has almost doubled from Rs. 1.56 lakhs to Rs. 3.10 lakhs. Allocations include depreciation Rs. 1.03 lakhs (against Rs. 1.14 lakhs), taxation Rs. 55,000 (against nil), general reserve Rs 12,000 (against nil), development rebate reserve Rs. 14,861 (against Rs. 88,000) and dividend reserve Rs. 60,000 (against nil). The proposed dividend which will absorb Rs. 52,470 is to be paid out of the dividend reserve.

The directors state that the Company received in February 1963 plant and machinery valued at Rs. 3 lakhs from Westinghouse Brake and Signal Co. Ltd, U. K. for the manufacture of silicon diodes. The Company has allotted equity shares worth Rs. 3 lakhs to the British firm in payment of the cost of the machinery. The Company has started the manufacture of 150 amps. silicon diodes. There is increasing demand for other sizes of diodes and to meet this demand, the Company has made an application to the Government for permission to expand substantially the range of production. The Rs. 5-paid share of Hind Rectifiers is quoted nominally around Rs. 4.16.

Burmah Oil Prospects

THE directors of Burmah Oil, in support of their rejection of the British Petroleum-Shell Petroleum proposals for dismembering and swallowing the group, have made two conventional moves. In their letter to stockholders, they have given notice of a dividend of not less than 2s 9d tax-free, 133 percent a £1 share, against 2s 3d, 114 percent, for 1962—and forecast a rising trend of profits up to 1966 and beyond. Burmah last year had an income after tax from sources other than its shareholdings in B.P. and "Shell" Transport of £5.9 million. "Some improvement" is expected this year and the estimate for 1966 is £8 million. These figures in themselves are almost enough to justify the rejection of the take-over bid terms—for which, incidentally, Burmah stockholders have reason to be grateful. Had they been accepted, Burmah's trading assets would have been sold at a gross earnings yield of 11 per-

cent on the 1962 figures and 15 percent on estimated earnings in 1966.

Had Burmah been "knocked down" to the two big oil Companies, the bargain would have been better even than these percentages suggest, as part of the assets they would have got will not oe contributing to earnings until after 1966. But the most unrealistic part of the B.P.-Shell approach was the suggestion that Burmah should treat its 24½ percent stake in B.P. as worth no more than the market value of the shares. If B.P. is as acutely concerned as it made out with the existence of this powerful block vote, it should have been prepared to pay a good premium to have the shares dispersed. The Burmah letter emphasises that the B.P. holding is "an integral and vital part" of the Company's operations.

Burmah's holding in "Shell," amounting to 3½ percent of the "Shell" equity and worth currently about 7s a Burmah share, is in a different category, being regarded as a "marketable investment" for use either as a means of raising development capital or in extremity perhaps as a legitimate defensive weapon. Meantime, dividends and capital distributions from "Shell" and B.P. will be passed on to Burmah stockholders. They may be supplemented by capital distribution from other sources and with increasing contributions from Burmah's trading income.

C. D. F. C. Loan For Sankey Wheels

COMMONWEALTH Development Finance Co. Ltd has agreed to make a secured loan of £225,000 and to subscribe for rupee equity shares to the value of £75,000 in Sankey Wheels Ltd, of Durgapur, West Bengal. Sankey Wheels Ltd is a new Company formed to manufacture lorry, jeep, car, animal-drawn vehicle and other types of wheels in Durgapur. It will receive technical assistance from Joseph Sankey and Sons Ltd, England, who has assigned to the new Company the benefit of its know-how and trade connection in the manufacture and sale of wheels in India. Joseph Sankey and Sons Ltd and Guest, Keen, Williams, Ltd, India (both subsidiaries of Guest, Keen and Nettlefolds Ltd, England) have a substantial shareholding in the new concern. The balance of the equity capital is being provided by public and private subscription in India. The total estimated cost of the project is about £2 million. The production of truck wheels is planned to start in 1964.

Velimalai Rubber Raises Dividend

AS the net profit of the Velimalai Rubber Co. Ltd for the year ended 28th February, 1963 is better than in the previous year, the Company has raised the dividend to 7 percent from the previous year's 5 percent. The net profit for the year amounts to Rs. 1,62,702.54 after providing for depreciation and other charges. The previous year's net profit was Rs. 1,29,371. With the amount of Rs. 361.37 brought forward, the total comes to Rs. 1,63,063.91. Out of this, tax provision comes to Rs. 55,000 (against Rs. 43,500) and Rs. 40,000 is transferred to debenture redemption reserve (against Rs. 40,000). The dividend on preference shares at 7 percent, subject to tax, amounts to Rs. 17,500. The ordinary dividend at 7 percent will absorb Rs. 42,000. After transferring Rs. 2,138.60 to rubber replanting reserve, the balance of Rs. 6,425.31 is carried forward to the next year. The rubber crop during the year amounted to 2,15,817 kilograms, against 1,72,774 kilograms for the previous year. The tea crop for the year amounted to 20,667 kilograms, against 23,925 kilograms. The directors state that tea crops are on the decrease as the tea area has been mostly brought under rubber. The estimated rubber crop for 1963-64 is put at 197,000 kilograms, and the tea crop is estimated at 19,000 kilograms.

Tirupati Cotton Cuts Dividend

THE gross profit of Tirupati Cotton Mills Ltd for the year ended March 1963 amounts to Rs. 8.82 lakhs, which is nearly 33 percent less than the previous year's figure of Rs. 13.06 lakhs. The setback in profits is attributed to high cotton prices, unremunerative ceiling prices of yarn and increases in other manufacturing costs. The dividend has been reduced from 12 percent to 10 percent but since the dividend for 1962-63 is on the increased capital, the total distribution among the shareholders is higher at Rs. 1.89 lakhs, against Rs. 1.55 lakhs. After providing Rs. 4.49 lakhs (against Rs. 4.62 lakhs) for depreciation, Rs. 2.32 lakhs (against Rs. 38,000) for development rebate and Rs. 72,000 (against Rs. 2.75 lakhs) for taxation, there remains a surplus of Rs. 91.000, against Rs. 4.49 lakhs in the preceding year.

The directors have had to transfer Rs. 1.25 lakhs from the general reserve and Rs. 50,000 from the deferred taxation reserve in order to provide for the payment of the proposed dividend. Donations and contributions to the Andhra Pradesh Congress Committee claim Rs. 35,513 (against Rs. 11,358) and a sum of Rs. 5,234 has been set aside for share issue expenses. No provision has been made for mortgage loan redemption reserve and general reserve which received Rs. 1.20 lakhs and Rs. 1 lakh, respectively, in the preceding year. After making various appropriations, there remains a surplus of Rs. 3,693 to be carried forward, against Rs. 19,718 brought in. The directors expect to receive an import licence for 30 blanket looms very shortly. Machinery, to be imported from Japan, is likely to be installed before the end of the current financial year. Orders for 9,000 spindles for the Company's expansion have been placed, but these spindles are expected to be received and installed only during the latter half of 1964. The cotton waste spinning plant has been installed and commissioned.

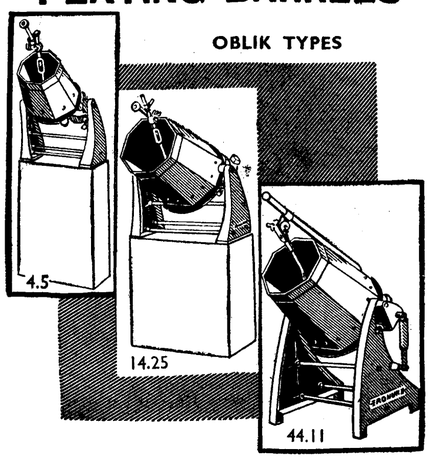
Mysore Paper Sales Up, Profit Down

DESPITE a small improvement in the sales from Rs. 1.20 crores to Rs. 1.23 crores, the gross profit of Mysore Paper Mills Ltd for the year ended March 1963 is down by about 8 percent from Rs. 20.04 lakhs to Rs. 18.41 lakhs. The dividend has been reduced from 15 percent to 12 percent, but this means no hardship to shareholders because the total distribution is larger as the dividend for 1962-63 is on the increased capital. Allocations include depreciation Rs. 6.04 lakhs (against Rs. 6.68 lakhs), development rebate Rs. 22,800 (against Rs. 50,200) and taxation Rs. 6 lakhs (the same). No provision has been made for gratuity reserve which received Rs. 50,000 in the preceding year. Instead, the directors have transferred Rs. 37,500 from the dividend equalisation reserve in order to provide for the payment of the dividend which absorbs Rs. 6.75 lakhs (against Rs. 5.47 lakhs). After all these appropriations, there remains a balance of Rs. 15,100 to be carried forward, against Rs. 38,432 brought in.

The directors point out that the pace of progress in the implementation of the expansion scheme to increase the production capacity to 18,000 tons a year is well maintained. The expenditure on development work till the end of the year amounted to Rs. 1.5 crores, against Rs. 60 lakhs at the end of the preceding year. The complete set of machinery for coal and oil fired boilers, soda recovery unit, evaporators and modern stock makers has been received and taken up for erection. About 30 percent of the paper-making machinery has been received at the site, and the remaining parts have been despatched. The Brown stock washing equipment and some parts of the pulp plant have also been received. The remaining parts are due for shipment shortly. The construction of the main factory buildings is progressing well in spite of some delay in securing adequate supplies of cement and the early start of monsoon. The directors hope that the bulk of the equipments will be erected, installed and taken to service by February 1964.

New Capital Issues

FIVE new capital issues have been authorised during the past week. One is a new company and one was established last year. Two companies are offering part of their capital to their foreign collaborators and one is raising capital to put part of it in the scrip of other companies. One company is issuing equity plus cumulative preference shares and the rest equities only. The consent for all is valid for 12 months. The following are the details:



Deepak Insulated Cable Corporation Ltd, Bangalore, a new company, has been given consent for the issue of capital of Rs. 30 lakhs in equity shares of Rs. 100 each for cash at par. Of this, shares of the value of Rs. 20 lakhs would be issued to the public by prospectus. The money will be utilised for the manufacture of enamelled copper wires and double and triple paper cover copper wires and strips.

S. M. S. Investment Corporation (P) Ltd, Delhi is raising Rs. 20 lakhs equity capital in shares of Rs. 100 each to be issued at par. Half the shares will be issued for cash and another half for consideration other than cash. The money will be spent on acquiring land and constructing buildings on it as well as for purchasing scrips of other companies as an Investment Company.

Capstan Meters (India) Ltd, registered last year in the Union Territory of Delhi, is to issue capital of Rs. 25 lakhs (inclusive of Rs. 10 lakhs already issued). This capital is divided into 200,000 equity shares of Rs. 10 each and 5,000 comulative preference shares of Rs. 100 each, carrying dividend at 9.5 percent a year. Out of this issue, equity shares of the value not exceeding Rs. 6,66,670 will be offered to the foreign collaborators against supply of technical know-how, jigs, tools and fixtures and import of plant and machinery, the balance will be issued in India for cash at par.

Kutch Salt and Allied Industries Ltd, Bombay, will issue capital of Rs. 12,50,000 divided into 125,000 equity shares of Rs. 10 each at par. The shares will be offered to the public by prospectus.

Union Carbon India Ltd, will issue Rs. 1,55,35,000 (in supersession of the previous consent dated March 23, 1963, for issue of Rs. 1,62,50,000) in equity shares of Rs. 100 each of which not exceeding 40 percent would be issued to United Carbon Company, Houston, Texas (USA) and the remaining 60 percent issued in India. The money will be used for the manufacture of carbon black.

The Stock Markets

BORDER NEWS CAUSES WIDE FLUCTUATIONS

Wednesday Evening.

THE Calcutta stock market has steadied after a week of wide fluctuations. Sentiment has been governed by political factors. Prices, especially of clearing shares, have fluctuated on alternate bouts of buying and selling due to the news about the northern border. The market seems to be getting used to hearing about Chinese troop concentrations along the border. If the Chinese do not attack, the trend may not deteriorate. Operators have consoled themselves with the thought that, in the event of an attack, India will be assisted by her friends. A good deal of uncertainty has, however, been caused by the prospect of changes in the Central and State Cabinets since it has been agreed that some leading ministers should resign from the Government in order to work for the Congress Party.

Lyons Range has been closely watching New Delhi's move to revitalise the capital market. From the scanty Press reports available so far, it does not look as if the measures will go far. The idea of encouraging financial institutions like the State Bank, the Life Insurance Corporation, the Industrial Finance Corporation and the Industrial Credit and Investment Corporation to provide more capital to industry has been welcomed. They have also been asked to take greater interest in underwriting new isssues. They seem to have been assured of bigger financial facilities if they have to hold the shares of new companies for a long period.

The principle of encouraging underwriting is sound, but it is doubtful whether institutional underwriting can restore confidence to the investment market. Although the observations about declining confidence made by Mr. B. K. Kaul, chairman of the Life Insurance Corporation, are based on wrong premises, there is no doubt that the progress of several new companies has been hampered by mismanagement and malpractices. The loss of confidence has emanated from some basic weaknesses. Investors have been discouraged by the poor prospects of dividend and growth. Since heavier taxation, including the super profits tax, has whittled down the distributable profits, companies have been unable to pay satisfactory dividends. The prospects of growth have suffered a serious setback because of various difficulties facing industry and trade.

The trend is not likely to change until the political and economic situation improves. Although the sanction of more foreign aid by the Aid-India Club last week has been welcomed, the slow-down in economic growth during recent months has been a major worry. Unless the shortages of power, transport and raw materials are relieved, foreign aid will not revitalise the economy.

Reports of intermittent purchases of ordinary shares by the Life Insurance Corporation have caused only temporary rallies. Considering the disillusionment of the Corporation about some new shares, its support for the stock market is likely to be more discriminating in future. The Corporation has no obligation to prevent booms and slumps in the stock market. Its duty is to serve the interests of the policy-holders. Hence it should buy and sell shares on purely economic considerations. Since support has been hesitant, there has been profit-taking at every bulge. Turnover has been largely confined to clearing shares and professional activity has been pronounced.

India Iron have been somewhat steadier, although the undertone has been hesitant. In the engineering section, attention has centred on Guest, Keen, Williams, Jessop, Texmaco and Burn. Britannia Engineering have been bought on hopes of expansion. Jute shares have generally been hesitant due to the sluggish overseas demand for gunny. Alliance have, nevertheless, been steady on influential buying. Birla have fluctuated narrowly as have Ganges. Business has been done in Champdany, Union, Lawrence, National, Howrah, and Kamarhatty. Coal shares have been subdued due to the growing accumulation of pithead stocks. Nominal business has been transacted in Burrakur, Amalgamated and Central India. Cotton mill shares have been offered freely. J. K. Rayon, in particular, have been weaker due to the passing of the dividend.

Turnover in the miscellaneous section has been confined largely to clearing shares. Active scrip have been Hindustan Motors, Indian Copper, Indian Aluminium, Indian Cable, Dunlop Rubber and Jaipur Udyog. Alkali Chemical and Union Carbide have been quiet. Among managing agency shares, Jardine Henderson have been steady on knowledgeable support. New shares have generally been weaker. Hindustan Aluminium and Isaac Holdens have been offered freely. Among paper shares, Orient have been active. There has been little interest in bank and electric company shares. Tea shares have been quiet due to the border news.

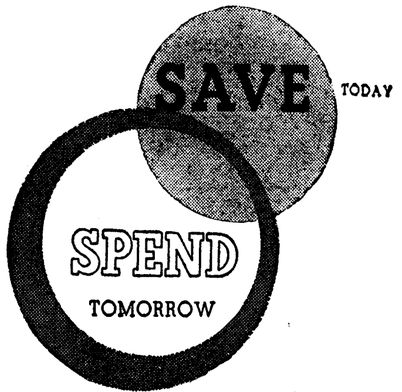
Government securities have been dull but quietly steady. Institutional support has been cautious and largely confined to short-dated stocks. The prices of selected State Government loans have been steadier due to the shortage of sellers.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during July 1963 was: iron 159,700 metric tons; steel ingots 158,700 metric tons and salable steel 127,100 metric tons.

Bombay

L. I. C. PURCHASES AID SENTIMENT



SELLING PRESSURE DECREASES

Wednesday Evening.

THE working of the Bombay stock market has been interrupted by holidays during the past week. Although share prices have closed on a steadier tone due to short-covering, the trend has been uncertain. Selling pressure has abated somewhat because of the absence of fresh news about the border situation and good corporate news. The decision of the Tata electric supply companies to pay higher dividends—1 percent more than in 1961-62—has created a good impression. Buyers have been cautious and they have generally tried to realise profit at every bulge. Whenever prices have risen, selling has been stimulated. There has been a general inclination to keep commitments light in view of various uncertainties. Political factors have contributed largely to the fluctuations. Operators are inclined to watch the border news closely. Purchases of ordinary shares by the Life Insurance Corporation have helped improve the prices of selected shares since the load of floating stocks has been reduced. Dalal Street seems to have been impressed by the move to provide additional financial facilities to industry through financial institutions like the Life Insurance Corporation, the Industrial Finance Corporation and the Industrial Credit and Investment Corporation.

Tata Steel ordinary have been steady around Rs. 139 due to satisfactory production in July. The prospect of expansion of Company's steel-making capacity has also produced a good effect. Among engineering shares, Tata Locomotive have been favoured following an encouraging statement by the chairman of the Company. Despite vari-

ous difficulties, the Company is expected to produce satisfactory results during the current year. Scattered interest has been taken in Mukand Iron, Premier Construction and Larsen and Toubro. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have improved on the news that the motor-vehicle manufacturers have been given additional foreign exchange to permit a more liberal import of equipment.

Short-covering, combined with replacement buying, have helped raise the prices of cotton mill shares. Century and Kohinoor, in particular, have recovered. Interest has also been taken in Bombay Dyeing, Swadeshi, Tata Mills and Morarjee. India United ordinary have attracted interim margins from the buyers because the price of the scrip has risen by more than 10 percent over the past clearing rate.

Business in miscellaneous shares has been limited and fluctuations have been narrow. In the sugar section, Belapur and Walchandnagar Industries have been bought on prospects of bigger production during the coming season. Steamship company shares have generally been quiet. Scindia Steam and Great Eastern Shipping have been sluggish. In the cement section, Associated Cement have turned steady on rumours of a further rise in the price of the commodity. Mining shares have been subdued and Shivrajpur Syndicate have been offered freely. Chemical shares have been steady and support has been extended to Tata Chemical on hopes of expansion. Indian Dyestuff have recovered on short-covering. Among rayon shares, National Rayon have been quietly steady, but Gwalior Rayon have improved on maintaining the ordinary taxable dividend. Bombay Burmah have been steady on replacement buying. Turnover in cash shares has been negligible.

Routine business has been transacted in bank shares Central Bank, Bank of Baroda and Bank of India have been dealt in. In the insurance group, New India Assurance have been steady. The declaration of higher dividends by the Tata electric supply companies have helped improve the prices of electric company shares. Tata Hydro have met with support. Ahmedabad and Bombay Suburban have been steady.

Government securities have been steady, and support has been extended to selected State Government loans. In the banking section, Canara have been bought up to Rs. 81.75 and Indian at Rs. 161. Scattered interest has been taken in selected electric company shares. Cochin have come to hand at Rs. 12.12 and Karaikkal at Rs. 9.55. Selected tea and rubber shares have been bought because of dividends. The crop reports of tea companies have been generally satisfactory. Blue Mountain have been taken at Rs. 2.48, but Cochin Malabar have been offered down to Rs. 5.90. Periakaramalai have been steady at Rs. 3.64 on declaring a final taxable ordinary dividend of 12.5 percent, making 15 percent for the year.

Consolidated Coffee have been done at Rs. 17.25 and Ouchterlony at Rs. 4.57. United Nilgiri have met with support up to Rs. 20.34 on declaring a taxable final ordinary dividend of 15 percent, making 22.5 percent for the year. Interest has been taken in Thamarapally at Rs. 16, in Highland at Rs. 13.65, in Kalasa at Rs 4.15 and in Kil Kotagiri at Rs. 5.88.

Textile shares have generally lacked interest. South India Viscose have been quiet at Rs. 125 and Travancore Rayon at Rs. 23. Madura have been offered at Rs. 31 and Lakshmi at Rs. 137. Sarvaraya have been quoted at Rs. 10 on paying a taxable ordinary dividend of 8 percent. Business has been done in Bangalore Woollen at Rs. 233 and in Buckingham at Rs. 264. Rajalakshmi have come to hand at Rs. 91 and Rajapalayam at Rs. 160.

Limited turnover has been seen in miscellaneous shares. Steady features include Dalmia Cement at Rs. 12.25 and India Cement at Rs. 5.50. Mettur Chemical have been quoted at Rs. 12.60 and Ashok Leyland at Rs. 7.30. Aluminium Industries have been done at Rs. 17.50. Madras Machine Tool have been quoted at Rs. 100 on declaring a taxable ordinary dividend of 5 percent. Mysore Electrical Industries have come to hand at Rs. 176 on paying a taxable ordinary dividend of 12 percent. Mysore Stoneware have been steady up to Rs. 12.45 on declaring a taxable ordinary dividend of 12.5 percent.

Parry's Confectionery have improved to Rs. 3.35 on declaring a final taxable ordinary dividend of 8 percent, making 16 percent for the year. T. Stanes have been wanted up to Rs. 29.05 on declaring a taxable ordinary dividend of 23.5 percent. Kirloskar Electric have reacted to Rs. 18.12 and Madras Rubber to Rs. 14. Seshasayee Paper have been weaker at Rs. 7.25, but Travancore Chemical Manufacturing have been bought up to Rs. 19.10, since the Company has issued 50,000 ordinary shares of Rs. 10 each, at par, to the existing shareholders in the proportion of one new share for every four shares held.

Madras

CAUTIOUS TRADING IN SHARES

GILT-EDGED REMAIN STEADY

Tuesday Evening.

THE Madras stock market has been dull during the past week. The earlier improvement has disappeared towards the close because of unfavourable news about the northern border. Easier advices from the Calcutta and Bombay stock markets have also induced caution. Turnover in clearing shares has declined to almost a trickle and prices have generally been marked down.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parantheses and will not be given where such a quotation is not available.]

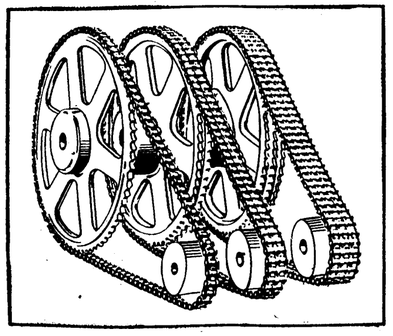
WIDESPREAD RISE IN PRICES

INDUSTRIALS GAIN ON BROAD FRONT

London, 14th August.



THE stock market gave an excellent account of itself during the past week. Although quieter and less confident conditions developed later, widespread gains were recorded, compared with previous levels. Rising optimism concerning the Government's election prospects was the main influence, but recent good company and economic news, the firmness of Wall Street and the improvement in East-West political relations also helped. The less confident conditions which developed later reflected some nervousness in front of the Startford by-election, profit-taking and a somewhat critical survey of Britain's Economic prospects by the Organisation for European Economic Co-operation and Development. The reaction, however, was very modest and gains were widespread, compared with previous levels. Gilt-edged were in demand and although below their best, recorded appreciable gains. War 3½ percent loan reached a new high. Industrials went ahead on a broad front and despite the reaction showed an extensive, and in places, appreciable rises. The leaders slipped back from their best levels, but were nearly higher on the week. Steels, properties and insurances particularly responded to the improvement in the Government's electoral prospects. Mining shares were subdued, and not greatly changed. Oils lost ground, on disappointment with the Royal Dutch Shell quarterly report. Rubbers and teas moved within narrow limits. Dollar stocks tended higher, but Canadian banks lost ground on the rise in the Canadian Bank rate.

NEW MEASURES TO ATTRACT DEPOSITS

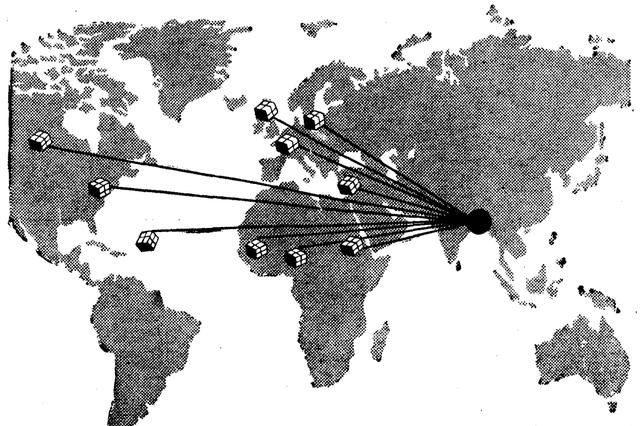
(BY A SPECIAL CORRESPONDENT)

THE downward trend in scheduled bank deposits has started once again. During the week ended 2nd August, scheduled bank deposits fell by Rs. 13 crores to Rs. 2,162 crores. This decline occurred after the preceding week's fall of Rs. 5 crores, bringing the total deposit contraction during the fortnight to Rs. 18 crores. Between 26th April, when the current slack season commenced, and 2nd August deposits went up by Rs. 76 crores, against a rise of Rs. 87 crores during the corresponding period of 1962. The credit contraction has been much more during the current slack period (Rs. 102 crores) than during the corresponding period of last year (Rs. 44 crores). The combined impact of the credit contraction and the rather poor response to the recent Government borrowing programme by the banking system is responsible for the comfortable conditions in the money market.

The poor growth of bank deposits is due to factors such as the inadequacy of the prevailing interest rate and the increased use of direct deposits by companies. Instead of taking the right step, banks have been concentrating on relatively unimportant measures such as publicity, employment of lady receptionists and construction of posh interiors to catch the eye of the public and quick disposal of work across the counters, which is appreciated by the public, has been relegated to the background in most banks, especially, those in the public sector.

A Novel Device

Last week, a novel device was introduced by a leading scheduled bank in Bombay. It started an all-ladies branch in the premises it once occupied. The bank claims that it is the second one in the country to introduce an all-ladies branch. But the idea was first experimented with by the Pandyan Bank in Madurai and was later used by the Syndicate Bank in Bangalore. Thus, the Bombay bank's is the third such experiment in the country. Several other Bombay banks are planning shortly to open all-ladies branches in certain localities in the city. The idea is attractive from a publicity angle. Long ago, the Central Bank of India introduced a special counter for lady customers, manned exclusively by women employees. The new all-ladies branch, however, is an all-purpose office, dealing with deposits, advances and other service facilities, and is open both to men and women.



It remains to be seen how much business such a branch will attract. While in small cities or towns ladies may be necessary to attract women clients, it is doubtful whether this is the case in big cities. Besides, there is a certain element of risk in an all-ladies bank. The protection against robbery afforded by the *darwan* cannot be quite adequate. If additional security staff are to be posted, it will push up the operating expenses. There is yet another risk. If ladies with a nodding acquaintance with bank procedures are appointed—which will inevitably be the case, to begin with—there will be chances of loss through over-payments. It is necessary in the interests of banking itself that all-ladies branches should, to start with, function under the guidance of experienced male agents until the staff are thoroughly trained.

Liberalising the Facilities

Another method used to attract customers is to liberalise the facilities for depositors. Some banks have raised the number of savings account withdrawals without notice and without any limit on the amount drawable at a time to 120 or 140 in a year. A couple of years ago, some banks increased the number of withdrawals to 100 and no restriction was placed on weekly withdrawals. Since there is no restriction on the number of withdrawals under the Inter-Bank Agreement on Interest Rates, banks are taking advantage of this method to attract deposits. In effect, such savings accounts have become disguised current accounts. However, there has been no adequate increase in the savings deposits of such banks.

The type of publicity now used by banks give the impression that some consumer product is being advertised. The advertisements do not befit the serious business of banking. After all, it is educated people who deal with banks. They know their banks well. Again, in this country linguistic considerations do play a part in the choice of a bank. Thus, little can be achieved by the present methods of publicity.

THE CALCUTTA MONEY MARKET

SLIGHT DECREASE IN ADVANCES

Wednesday, 14th August.

THE general level of advances has decreased slightly in the Calcutta money market during the past week. There has been a small decline in the credit given to the sugar mills and to the iron, steel and engineering industries. Advances to the cotton and jute mills and to the foodgrains and seeds trade remain unchanged. In the interbank market, conditions have become tighter and the call rate is quoted at 4 percent.

The exchange market has been fairly active, with a good supply of tea bills. Gunny bills have been offered in moderate quantities. The demand for remittance has been fair. Sterling has eased in relation to the currencies of the U.S.A., Canada, West Germany, the Netherlands and Sweden. It shows nominal gains against the other important European currencies.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 266.75 to Rs. 268.75, quoted today for ready delivery. There was no business in forward. The London and New York prices were 111¾d and 128.6 cents. Gold was not transacted.

DURING THE WEEK ENDED 9TH AUGUST, Government of India Treasury bills for Rs. 38.05 crores were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 12th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 19th August. Successful tenderers should make payment on 23rd August or on 22nd August where Friday is a holiday. Other conditions are as usual.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 13th August to the 17th August at Rs. 99.436 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 7th August to the 10th August amounted to Rs. 1.23 crores.

THERE WERE RISES OF Rs. 31.79 crores to Rs. 2,246.93 crores in active notes and of Rs. 23.78 crores to Rs. 2,257.77 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 9th August, 1963. The currency expansion was adjusted by increasing rupee securities by Rs. 27 crores to Rs. 1,931.32 crores and reducing foreign securities by Rs. 2 crores to Rs. 90.26 crores in the paper currency reserve. These changes were made by contra transfers of securities to and from the Banking Department. Hence investments fell by Rs. 52.62 crores to Rs. 274.49 crores, while balances held abroad were Rs. 89 lakhs smaller at Rs. 5.09 crores, despite transfer of securities from the Issue Department. Deposits of the Government of India declined by Rs. 19.72 crores to Rs. 101.44 crores and those of State Governments by Rs. 8.53 crores to Rs. 24.26 crores. Balances of scheduled banks were Rs. 3.59 crores larger at Rs. 84.25 crores. Their loans from the Reserve Bank rose from Rs. 2.08 crores to Rs. 3.17 crores, of which advances against usance bills were Rs. 2.10 crores (Rs. 59 lakhs). Ways and means advances stood at Rs. 9.65 crores, against Rs. 11.31 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 2nd August, 1963, shows a drop of Rs. 8.10 crores to Rs. 577.33 crores in total deposits. Investments in Government securities are down by Rs. 5 crores to Rs. 261.73 crores, while other authorised investments remain unchanged at Rs. 9.35 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 2.04 crores to Rs. 264.82 crores. Cash and balances are, in consequence, shown at Rs. 20.60 crores, or Rs. 4.10 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 2nd August, 1963, shows Demand and Time liabilities at Rs. 1,084.01 crores (Rs. 28.67 crores on account of borrowings from banks) and Rs. 1,288.11 crores (Rs. 19.37 crores), compared with Rs. 1,069.19 crores (Rs. 22.20 crores) and Rs. 1,313.09 crores (Rs. 22.43 crores), respectively, in the previous week. Cash has fallen by Rs. 1.83 crores to Rs. 49.62 crores, while balances with the Reserve Bank have increased by Rs. 2.15 crores to Rs. 81.48 crores. There is a rise of Rs. 4.84 crores to Rs. 692.01 crores in investments. Advances and bills discounted at Rs. 1,496.13 crores show an increase of Rs. 2.03 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.5 percent and 63.1 percent, against 5.5 percent and 62.7 percent.

BENGAL CHEMICAL & PHARMACEUTICAL WORKS LTD.

CHAIRMAN, DR. B. N. GHOSE'S ADDRESS

Speech of Dr. B. N. Ghose, Chairman of Bengal Chemical & Pharmaceutical Works Ld., at the 63rd Annual General Meeting of the Company on Wednesday, the 14th August, 1963 at India Exchange Building, Calcutta.

Gentlemen,

It gives me much pleasure to welcome you on behalf of your Board of Directors as well as on my own to the 63rd Annual General Meeting of your Company.

The Annual Report and Accounts for the year ended 31st March, 1963 have been in your hands for sometime past, and with your approval I propose to take them as read.

The latter half of the year under review was somewhat disturbed by the unprovoked attack on the borders of the country by the Chinese aggressors. The Government of India declared a state of emergency in the country and endeavoured to take adequate steps to prepare its people, both psychologically and materially, to resist the aggression. The people of the country also rose to the occasion in this national crisis and their determination to meet the serious challenge to their integrity and solidarity has been reflected in the ready response which came spontaneously from the rich and the poor alike by way of contributions to National Defence Fund and in various other ways. Your Company too contributed in cash and kind to the National Defence Fund. It is gratifying to report that the employees have also voluntarily contributed their mite by paying one day's salary and wages.

Working Results

The working results of the Company during the year under review present a better picture than those in the last year. The sales of the Company recorded an increase of over Rs. 15 lacs as compared to last year, but the margin of profit was not as much as it was expected. This is due to various factors, chief amongst which are rising costs of raw materials, transportation charges, and various other levies by way of Central Excise Duties, Emergency Risks Insurance, etc. In our sincere attempt to hold the 'Price Line' as far as practicable in this national emergency we had even to curtail our margin of profits on many items. This will also account for lesser profit than was expected. Nevertheless your directors feel that conditions improving in future, they will be in a position to achieve better results and earn a more rational profit out of the Company's total turnover.

The Special Resolutions passed at the Extraordinary General Meetings in March this year will enable the Preference Shareholders to receive approximately the same amount of dividend as before. Your Directors also recommend that dividend on all classes of Ordinary Shares be maintained @ 10% as in the previous year for which they had to transfer a sum of Rs. 1,55,000/- from General Reserve No. I in view of the inadequacy of distributable profits for payment of dividend. It will not be out of place to add that it must have attracted your notice that Development Rebate Reserve which used to be provided for in the Appropriation A/c so long has this year been charged to Profit & Loss Account thereby reducing the profit by Rs. 1,05,918/-. You will be glad to note that the huge reserves with which your Company has been carrying on its business have taken it away from the operation of Super Profits Tax imposed by the Government of India in its last budget.

The trading operations of your Company during the year under review, have on the whole been satisfactory, but much below our expectations. In spite of the various difficulties experienced by the Company sales of its pharmaceutical products have shown a steady increase due to wider publicity, strengthening of field staff and planned distribution. But for certain circumstances beyond our control the sales volume would have been much higher.

Spurious Drugs

The publicity accorded to the widespread manufacture of spurious drugs within the country has been a blessing in disguise to your Company. The consumers have been cautious in their purchases and the dealers have realised the necessity of stocking goods of standard quality only. This has led to a larger demand for our products, particularly our medicinal preparations.

The setting up of the Drugs Enquiry Commission by the Govt. of West Bengal is a step forward to deal with the unscrupulous traders in the Drugs Industry. In a recent press report it was observed that a medical practitioner had made sweeping remarks before the Drugs Enquiry Commission regarding the quality of Indian drugs, condemning in general terms all indigenous medicinal products as substandard. This clear manifestation of 'slave mentality' is unfortunate. The hasty and ill-considered statement that drugs manufactured in India are all sub-standard is not correct. This will be evident from the deposition of a reputed medical practitioner of Calcutta before the Commission, who is stated to be of opinion that drugs manufactured in India are of standard quality and can favourably compete with any foreign product. As a matter of fact only a few specialised drugs are imported from abroad, and the rest are manufactured within the country.

You will be interested to know that your Company has been exporting its products for a pretty long time. Consistent with the policy of the Government of India to earn more foreign exchange by increasing the volume of exports your Company too has made considerable progress in expanding its foreign business against severe competition from other countries and in many instances selling below cost. The export trade of the Company has risen by more than 25% during the year under review. The amendment of the object clause of the Memorandum of Association of the Company at the earlier meeting by incorporating therein a suitable clause for recognition of the Company as an Export House, will enable the Company to enjoy wider scope in utilising import entitlement much to our advantage.

Expansion Schemes

The expansion schemes at Panihati are progressing satisfactorily. The Alum Plant is nearing completion and will soon be put to commission provided, of course, the foreign equipment indented for are duly received. On completion of the erection of the additional 50 ton/day Sulphuric Acid Plant better economy in production is expected.

Although under the Industries (Development & Regulations) Act, 1951, a tailor made production just sufficient to meet requirements of the country is envisaged, in actual fact, higher production units sanctioned in connection with industries like steel, fertilizer, etc. are making it difficult for merchant plants of Sulphuric Acid to work profitably in competition. This side of the picture has been lost sight of by the Govt. while granting industrial licences.

The development work in some new lines or expansion work in some of the existing lines are in progress, expansion of Caffeine Plant at Maniktala Factory has been taken up in hand to meet the increased demand. It is interesting to note in this connection that Government of India has been reported to have given up the Phytochemical project under Russian collaboration which was scheduled to produce 50 tons of Caffeine from tea waste. Reason adduced is high cost of production. The estimated cost of production under this collaboration scheme worked out to be 4 times that of imported Synthetic Caffeine and double that of your Company's sale price. Many are found to accuse in season and out of season the private sector for high cost and high profit but in the case of your Company it is just the reverse. Your Company has already applied to the Ministry of Commerce & Industry, Government of India for granting licence for this substantial expansion under the Industries (Development and Regulations) Act, 1951.

Your Company was pioneer in starting manufacture of Ether in this country. The abnormal price of denatured spirit in West Bengal and scanty supply of the same by the West Bengal Distilleries has practically put a halt to the manufacture of Ether.

I reported to you last year that reduction of Import Licence of Tallow had adversely affected our production of Soap so much so that we could not meet our contractual obligations within the country, not to speak of any exports. Restrictions on the Import of Tallow and essential oils and levy of excise duties, etc. have greatly affected our production of Soap.

You will please recall my review of the last year with regard to the Company's business in Road Tar. The situation has not shown any sign of improvement since then in spite of our best efforts. The use of Crude Tar as fuel by the producers accounts for its non-availability for distillation. Unless conditions take a favourable turn I am afraid prospect of this line of production appears very gloomy. The set-backs suffered by the Company in the field of Road Tar have seriously told upon its total business.

Raw Material Imports

The licensing position with regard to essential raw materials has deteriorated further as a result of the state of emergency following the Chinese aggression on India. In particular, the licences granted to us for aromatic chemicals, natural essential oils, perfumery items and other items for our medicinal preparations were reduced by about two-thirds. We hope, during the current licensing period, the authorities will meet the requirements of actual users more liberally. There were also regrettable short-falls in the supplies of some crude drugs' extracts from the Kashmir Govt. Laboratory, and from November 1962 the supply of Rectified Spirit for our pharmaceutical industry has also been inadequate and is causing anxiety. The definition of Patent and proprietory medicines as altered by the Finance Act has complicated the procedural matters further and there has been considerable increase in paper work. Under this definition (as incorporated in the Indian Customs Tariff) drugs conforming to B.P., B.P.C. or any other recognised pharmacopoeas have been made chargeable to higher Customs Duty, if there be any trade-name or other mark, symbol or monogram, etc. on the goods or contain the higher rate is being applied even to bulk consignment of drugs which are used as raw materials in pharmaceutical industries. This is certainly a very unsatisfactory state of affairs and we hope that the Central Board of Revenue will revert to the definition laid down in the Drugs Act.

In my opinion (as I have deposed before the Drugs Enquiry Commission) taxes and duties on drugs and pharmaceutical products should be withdrawn.

To add to all these, difficulty in getting coal continued during the year due sometimes to inadequate supply of wagon and sometimes to scarcity of coal. Chemical industry consumes more coal than pharmaceutical industry and distribution arrangement for the latter industry through licenced dumps has to some extent ensured supply of quantity at the sacrifice of cost and quality.

Frequent Load-sheddings

Frequent load-sheddings by the Calcutta Electric Supply Corporation have caused not only serious loss of man hours but have adversely affected materials and plants also. In continuous chemical plants sudden interruptions in the supply of power shorten the normal life-span of the plants. This is more dangerous and harmful to the Company in as much as it is extremely difficult and expensive now-a-days to procure replacements. In the case of pharmaceutical manufacture load-shedding will cause total loss of materials under process which have mostly to be discarded in the event of any interruption due to power failure.

The sales in your Bombay and Kanpur Branches are looking up and attempts are being made to further increase the turn-over and to make them better productive units.

You will find from the Profit & Loss A/c that the rates and taxes have increased. This is on account of the increased demand of the Calcutta Corporation for the extended portion of your City Office Building. The increase in the expenditure under head Propaganda Advertisement is in accordance with our declared Policy, and your directors believe that our intensive efforts in this direction will pay in the shape of increased sales year after year.

I am glad to report that the preliminaries with regard to formation of Durgapur Chemicals Ltd. are almost complete and new Company will soon be incorporated with your Company as one of the Promoters. As I have already stated, the proposed Durgapur Chemicals Ltd will be a Govt. of West Bengal undertaking.

From a review of the Company's affairs during 1962-63 you will find that despite various handicaps we had to face in the course of the business your Company's trading results have been better. We expect that the Company will be in a position to make a further headway if other extraneous circumstances do not stand in the way.

In conclusion, I add that I shall be failing in my duty if I do not express my gratitude to my colleagues for their helpful advice and mature guidance. The unstinted co-operation I have received from the members of the staff also accounts for another successful year of operation of your Company. Labour and management relations have, on the whole, been satisfactory throughout the year. I also acknowledge with thanks the patronage of our customers, stockists and distributors.

N.B. This does not purport to be the actual proceedings of the Annual General Meeting.

A TRADE AGREEMENT WITH THE COMMON MARKET

By Malcolm Subhan

BRUSSELS:

PARADOXICAL as it may seem, one of the reasons why the Six countries of the European Common Market are unwilling to authorise the E.C.M. Commission to hold even exploratory talks with India for concluding a trade agreement is that they want to assure themselves beforehand of their success. Negotiations with Israel or Iran are one thing, with the largest non-communist country in Asia another. It is not simply a question of size, however. The rôle which India plays in international affairs is such that the Six fear that an agreement which was received by India with little enthusiasm would only harm the Community.

Hence the recent decision of the Council of Ministers to ask the Commission for more detailed information relataing to India's trade with not only the Community but other industrialised countries also, and even with developing countries. The studies which were made during the British negotiations were from the viewpoint of an enlarged Community. The aim of the transitional arrangements was not to expand India's exports to the enlarged Community, but to safeguard her exports to the U.K. when she was no longer able to maintain her trade preferences. The aim of the present studies is not simply to determine the nature of the exchanges between India and the Six, but to see how their volume can be increased. After all, it can be shown that the offer of a zero tariff on products such as chutney and cricket balls loses much of its significance now that Britain has been shut out of the Community.

Similarly, a zero tariff on tea, to take the most important of the duty concessions offered last August, was of far greater value to India when she was threatened with the loss of duty-free entry into the U.K., than it is now. Although sales of Indian tea to the Common Market may rise, it remains to be seen whether the increase will be substantial. It is not merely a question of the exorbitant internal duties which are levied on tea by some E.E.C. countries; after all, similar duties are also levied on coffee and tobacco. The fact is that Europeans prefer coffee to tea (during the war, coffee even served as a black market currency), and the price element is less important for the affluent European housewife of today.

From the point of view of the Six, therefore, the problem of just what tariff concessions would help India is a real one. It is made more difficult by the fact that India's exports to the Common Market are not as varied as those to the U.K. Moreover, in the case of tropical products, the Six's hands are largely tied by the Convention with the associated African States; duty-free entry for such products from Asian countries is out of the question as long as the Convention remains in force.

The position concerning the less sophisticated manufactured goods such as textiles, sewing machines and bicycles is no less complicated for the Six. Although the governments of all industrialised countries today recognise the need to encourage such imports from the developing countries, they cannot ignore the protests of domestic manufacturers who feel themselves threatened by a flood of cheap Asian goods.

Any concessions on textiles, for instance, appear remote. The provisional arrangements for these goods concluded during the British negotiations were bitterly criticised by the industry, even though the arrangements conceded nothing to Indian and Pakistani demands except an assurance that their exports would not be allowed to fall below a certain level. Even the long-term textile agreement provides only for the progressive liberalisation of quota restrictions; it is silent on tariffs, although it is clear that there can be no substantial increase in Indian textile exports to the Common Market as long as the tariff remains at its present high level.

But for the Six, the determined opposition of local manufacturers is not the only obstacle which has to be overcome. Officials in Brussels feel that concessions intended to help India expand her exports of manufactured goods may in fact have the opposite effect, in that they may prove of greater advantage to other countries. A reduction in the Common Market tariff on, say, sewing machines would not apply to India alone, but would be extended under the most-favoured-nation clause to all third countries enjoying this privilege. The final result could, therefore, be a sharp increase in imports of sewing machines from Japan and Hongkong rather than from India.

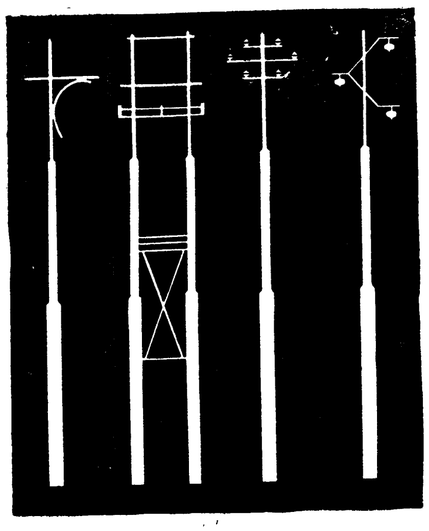
Quotas for Developing Countries

The Six have nevertheless decided to examine carefully the proposal for quotas at preferential tariffs for the developing countries. The idea was first put forward within the Community some three years ago, but was quickly discarded as contrary to the principle of non-discrimination enshrined in the General Agreement on Tariffs and Trade. The proposal was sponsored by the Belgian Minister of Foreign Trade, Mr. Brasseur, when he addressed the Ministerial session of G.A.T.T. last May. It was also mentioned by Mr. Manubhai Shah in Geneva, and India has since asked the Six to grant certain preferential tariff quotas which would be open to all the developing countries. The Community's trade experts are to examine these various proposals during the coming months. According to unconfirmed reports, the Belgian proposal has considerable backing among the Six, but as the technical problems which have to be resolved are numerous, progress is bound to be slow.

Although the Commission is of the view that the various problems raised by the Indian *aide-mémoire* could well be examined in exploratory talks with India, the commercial advisers to the permanent representatives of the Six have preferred to do it by themselves. Hence, on their advice, the Council referred the matter back to the Commission for further information. Consequently, although the latter's report on the Indian *aide-mémoire* of 23rd April and its request for a mandate to hold exploratory talks were both before the Council, discussion was confined to the procedural aspects of the problem only.

It appears that India was included on the Council's agenda primarily at her own request; Indian circles took the view that once the problem of the Community's relations with India was put on the Council's agenda, the latter would sooner or later have to take a decision on it. As matters stand at present, the Commission is to provide the six member-Governments in September with the information which they are seeking. The Council hopes to take a decision in October on the Commission's request for a mandate to hold exploratory talks, although, at France's suggestion, the Indian Government will be told that the Council hopes to take a decision this autumn.

Two Schools of Thought



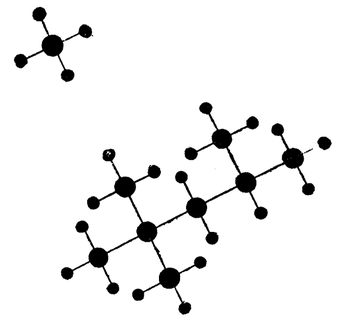
It is now a foregone conclusion that the decision will be a positive one. The fact is that there are two schools of thought within the Community on the advisability of acceding at this stage to the Indian request for commercial talks. The first, which is supported by the Commission, holds that a trade agreement with India could serve as the prototype, so to speak, of similar agreements with other developing countries. The second school argues that the Community should first establish the guiding principles of its policy *vis-à-vis* the developing countries, preferably within the framework of such multilateral negotiations as the forthcoming tariff and trade talks under the auspices of the U.N. and G.A.T.T. It is pointed out that failure to conclude an agreement satisfactory to the Indians could well harm the Community's relations with the developing countries generally.

These considerations have assumed undue importance largely because of the crisis through which the Community is passing. Since the abrupt termination last January of the negotiations with the British, the Six have found it virtually impossible to agree on the numerous problems which face them. A good deal of time and energy have in fact been spent on side issues, such as that of maintaining contacts as a Community with the British. At the same time, relatively minor problems, such as that of American poultry exports, have been given undue importance. Although the majority of the Six would be prepared to develop the Community's external relations until such time as they are able to agree among themselves on internal questions, the French oppose such a step. They claim that it would result in an unbalanced development of the Community.

Rôle of the Commission

Under these circumstances, the rôle of the Commission has grown more important. Although it has no decision-making powers (under the Rome Treaty the Commission proposes, the Council disposes) the Commission has redoubled its efforts to elaborate a community policy in every sector of economic activity. This is not to say that its proposals have been accepted by the Council—in a good many cases, the latter has simply postponed examining them.

This is the background against which the Commission's recent re-



commendations on the Indian *aide-mémoire* must be seen. The situation prevailing within the Community is largely responsible for their tentative nature. The proposals speak, in fact, of "exploratory talks" rather than negotiations, and of a "commercial arrangement" rather than a trade agreement. At the same time, the Commission points out that, while the Six are under no obligation to grant India the concessions agreed to in the negotiations with the British, the examination of India's request for these concessions could be useful. In any event, exploratory talks with India may help the Community to adopt a common policy governing its economic relations with the developing countries.

As for the three measures proposed by the Commission, although none of them was mentioned during the recent session of the Council, they would certainly be presented by the Six in any negotiations with India. The first relates to the establishment of a joint committee on trade. Both India and the Common Market would be represented on the committee, which would submit proposals for developing trade between India and the Six. The draft agreement between Iran and the E.C.M. provides for just such a committee, although one of the reasons why the Council has not yet approved the draft agreement is that the Six cannot agree among themselves as to who shall represent the Community on this committee—the Commission or representatives of the member-States.

Tariff Suspensions

The Commission has also proposed tariff suspensions and other measures under the common commercial policy for inclusion in the proposed trade agreement with India. The proposals seem to owe something to the discussions last year for a comprehensive trade agreement with India and Pakistan once Britain had entered the Community. India has asked that the tariff suspensions should cover not only the products listed in the provisional agreement with the U.K. but also such items as pepper, unmanufactured tobacco, leather goods and cotton textiles.

Any negotiations between India and the Common Market can be expected to be long and difficult. The Council's refusal to embark on them without detailed preparation is a measure of the importance which it attaches to such negotiations. On the Indian side, this delay is being put to good use, so that the negotiations may finish relatively quickly after all. Indeed, certain officials at the Commission's headquarters feel that the first stage could be finished by the end of this year.

CHAIN LANGUAGE

Petroleum consists almost entirely of hydrocarbons — compounds of the elements hydrogen and carbon. In picture form one atom of carbon can be shown as ● and one of hydrogen as ●, the arms linking them together being a measure of their power to combine chemically. A simple combination, or molecule, is *methane* (top picture) which is the main constituent of natural gas. A more complex molecular structure is *iso-octane* (lower picture), used in making aviation spirit.

Hydrocarbons are present in crude oil in a great variety of patterns, differing not only in the number of atoms in their molecules but also in the way in which the atoms are bound together. Through the application of petroleum chemistry, the rings and chains can be separated, reassembled or rearranged in different ways to obtain a widely varied assortment of petroleum products. The plant where the processes take place is the oil refinery — a chemical laboratory on a giant scale.

SHARING FINANCIAL RESOURCES IN A MIXED ECONOMY

By D. Bright Singh

The Government takes away too large a proportion of the community's savings, so private investment activity has been greatly hampered by the lack of financial resources.

IN a free enterprise economy which is planned and which functions within a democratic framework, it is important that the techniques adopted to mobilise and canalise savings conform to certain basic principles. Primarily in such an economy, in contrast to a centrally planned, authoritarian one, the strain of economic expansion on the community should be within limits. This is possible if (1) as between inflationary and non-inflationary methods of financing, as little reliance is placed on the former as possible; (2) there is provision for canalising proportionately larger resources out of the growing or expanding sectors of the economy: (3) there is a great element of spontaneity in the flow of resources into investment, and (4) the burden of savings and investment is distributed as equitably as possible among the different sectors.

Economic growth takes place because of the investment activity of mainly two parties—the Government or the public sector and private business. In order to finance investment, the Government raises its resources through taxation, deficit financing and borrowing. The first two methods involve direct or indirect restriction of consumption enforced through the authority of the State. The private business sector finances its investment from internal resources, that is, through reinvestment of profits and also by means of external borrowing and sale of securities, that is, by having recourse to the capital market. Here obviously, there is no element of compulsion.

The private sector, in other words, can invest only that part of the national savings which it can generate and which it can attract from the excess income earners. The extent to which reliance can be placed on internal financing depends on the efficiency of the business enterprise concerned, as well as on other circumstances which affect the size of profits. The availability of an organised capital market, the confidence of the community in the security of the business concerned, and its preparedness to invest its savings in risk ventures through the purchase of bonds and shares, all these affect the size of national savings which can be mobilised for investment by the private sector.

Ultimate Source

The ultimate source of investible resources for the Government as well as for private business is the aggregate savings of the community. Hence it is clear that normally, increased demand for national savings by one of these sectors should result in a contraction of the resources available for the other. So long as resources are limited in relation to the overall demand for investment, the two sectors have to be in competition with each other. The collection of larger real resources by the State through taxation, borrowing and deficit financing would not result in the curtailment of the resources available for investment in the private sector only if the State's economic activity brings about a proportionate increase in total national income. But if this is not possible, it is obvious that financing investment in the non-official sector would become increasingly difficult.

In India over the first two five year plan periods, the public sector outlay totalled Rs. 6,560 crores. This was financed to the extent of Rs. 5,282 crores, or 80 percent, out of internal resources—tax and non-tax revenues, borrowing and deficit financing. It is seen that with the progressive increase in the public sector outlay on economic development, greater reliance has been placed on the revenue resources of the State than on internal borrowings. Apart from development expenditure, the fact that the Centre and State Governments have come to rely increasingly on tax collections to meet their aggregate outlays, both development and non-developmental, is clear from the fact that the revenue collections of the States and the Centre together increased from Rs. 903 crores in 1951-52 to Rs. 1,999 crores in 1961-62, *i.e.*, by 121 percent which is more than double the rate of increase in national income.

In the context of a growing public sector, it is worthwhile to enquire how the private sector has fared in the matter of financing its programmes of expansion. It has been estimated that at current prices, the total investment in India during the first two five year plans was of the order of Rs. 10,110 crores—Rs. 5,210 crores in the public sector and Rs. 4,900 crores in the private sector. It should be remembered that although in the successive plans, the proportion of investment assigned to the private sector has been gradually reduced, yet in actual accomplishment, growth in this sector (if magnitude of investment is an indication of growth) has been more pronounced than was visualised in the plans. Investment in the private sector in the first plan period turned out to be Rs. 1,800, as against the expected Rs. 1,500 crores. Over the second plan, public sector investment (Rs. 3,650 crores) fell short of the estimate by about 4 percent while private sector investment (Rs. 3,100 crores) was higher than the estimate (Rs. 2,400 crores) by 29 percent.

Expansion of Activity

The financial aspect of investment in the private sector has to be examined now. Over the ten years covered by the first two five year plans, there was considerable expansion of activity in both the public and private sectors. According to the recent survey of savings in India conducted by the National Council of Applied Economic Research, New Delhi, the paid-up capital of all joint stock companies in the country increased from Rs. 628 crores to Rs. 1,300 crores between 1948-49 and 1957-58. But while the paid-up capital of non-Government companies increased from Rs. 613 crores to Rs. 1,036 crores that of Government registered companies showed a rise from Rs. 15.5 crores to Rs. 264 crores.

On the basis of data available for 1,001 large and medium-sized non-Government public limited companies and 333 private limited companies having paid-up capital of Rs. 5 lakhs and over, a recent Reserve Bank study[1] has made an estimate of capital formation for the entire corporate sector in the years 1956-60 as follows:

(Rs. crores)

	1956	1957	1958	1959	1960
Gross capital formation	355	346	227	206	352
Net capital formation	294	272	148	116	237

In the five years, gross capital formation in the corporate sector amounted to a little less than Rs. 1,500 crores, while net capital formation totalled something more than Rs. 1,000 crores. The Reserve Bank study shows that in the years under reference, the progress of the private limited companies was slightly better than that of the public limited companies. Production and sales of the former increased at an annual rate of 13 percent and 14 percent, while that of the latter increased at the rate of 12 percent and 11 percent, respectively. Profits before tax of the private limited sector rose at an annual average rate of 26 percent, while that of the public limited sector increased at the rate of 12 percent. However, because of the larger turnover of business, the expenditure-income ratio of the public limited companies was lower.

But the progress of the joint stock companies (non-Government) was maintained in these years only under great strain. The major adverse factors were increasing costs of production and taxation. In the case of the 1,001 public limited companies, the value of raw materials consumed and other manufacturing expenses, increased from Rs. 861.5 crores in 1955 to Rs. 1,310.7 crores; salaries and wages went up from Rs. 236.4 crores to Rs. 348.3 crores and employees welfare expenses from Rs. 18.0 crores to Rs. 32.2 crores. Payments on account of excise duty rose from Rs. 68.1 crores in 1955 to Rs. 180.7 crores in 1960; the aggregate tax provision was Rs. 50.4 crores in 1955 and Rs. 72.0 crores in 1960. Roughly, between 1955 and 1960, all these expenses went up by 50 percent. These studies also show that in recent years, there has been an increasing tendency on the part of both public limited as well as private limited companies to depend on external sources of finance, primarily, bank funds. Thus in the case of these 1,001 public limited companies, of the total external resources of Rs. 121 crores in 1960, borrowing from banks amounted to Rs. 58.4 crores and formed 21.0 percent of total sources of finance.

Pattern of Savings

As has been observed earlier, the ultimate source of funds for financing investment, whether it is in the Government sector or the private sector, is the same, namely, aggregate savings of the community. It is obvious that to the extent a larger and larger share of these savings is diverted to the public sector through internal borrowing and taxation, the resources available for the private sector will get restricted. Of the total savings in India, individuals' savings constitute about 81 percent or

82 percent, corporate savings amount to only a very small proportion (in contrast to developed countries) namely, 2 or 3 percent, while Government savings account for the balance of about 16 percent. In so far as private business has come to rely more and more on bank funds, it is clear that any obstruction to the free flow of private savings into the banking institutions would impose a serious limitation on the financial resources of private business.

It is a well-known fact that the resources of the banks are becoming inadequate to meet the growing demands of the economy. The implementation of the tax and compulsory savings and borrowing proposals of the Budget for 1963-64 is estimated to result in a diversion of resources to the extent of about Rs. 800 crores from the private sector. Between 1955-56 and 1961-62, total deposits of all scheduled banks in India increased from Rs. 1,043 crores to Rs. 1,917 crores, while total bank credit went up from Rs. 580 crores to Rs. 1,408 crores. The cash balances of these banks increased from Rs. 84.73 crores in 1955-56 to Rs. 105.04 crores in 1957-58, but have averaged only Rs. 121.15 crores in the five years 1957-58 to 1961-62. This has necessitated large borrowings from the Reserve Bank and also from the Refinance Corporation by the commercial banks. The continuing pressure on bank funds has resulted in the pushing up of their lending rate which, when recently Bank rate was raised to 4½ percent, went up to 6½ percent. The interest rate on deposits of commercial banks was maintained at 3 percent, but the State Bank's offer of 3½ percent is likely to raise the general rate on commercial bank deposits by ½ percent. All these reflect the growing strain on the financial resources of the economy as investment demand increases.

Fields for State Enterprise

Obviously, the great need for accelerating the rate of growth of the economy makes it imperative that the rate of investment in both the public and private sectors is stepped up. But in view of the limited resources available in an under-developed economy like India's, it is of the greatest importance to consider seriously the question whether the resources are used in such a manner that each unit of investment is made to go as far as possible in accelerating the overall growth of the economy. In a mixed economy, the spheres of investment normally assigned to the State, are those in which the initial financial commitments are too large and are beyond the means of the private sector, in which the gestation period is too long to be attractive to private enterprise, in which a great degree of uniformity in administration and pricing is necessary and also those lines of investment and production which are of strategic and national importance. It may be presumed that in these spheres of activity, public enterprise is superior to private enterprise and for that matter, the assumption of the entrepreneur's rôle by the State is justifiable. These are investments of the expansionary type which are necessary to build up the socio-economic infra-structure of the economy.

But in addition to these, there are other fields of investment which do not help so much in expanding the capital base of the economy as in augmenting current output and income. They are by and large productive enterprises which bring about increased output of mostly final goods. Under this category would come the production of cement, rubber, iron and steel, and fertilisers, etcetera. Where labour and capital resources are available, private enterprise could be as efficient as public enterprise in such lines of productive effort. Even here, public enterprise is sometimes justified on the ground that private entrepreneurs are scarce in underdeveloped countries and free enterprise will not be forthcoming unless the initiative is taken by the State and the way shown to the private business sector. But this argument is quite unconvincing in those countries where private enterprise is not so scarce a factor as capital resources.

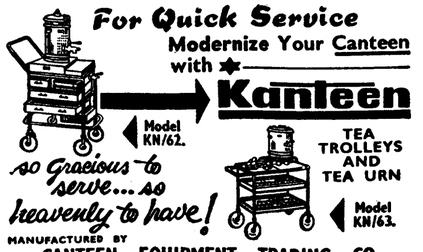
If in undertakings of this nature, private enterprise in normal circumstances can be expected to be quite efficient, there is need to examine whether it has ample scope to operate. The prime consideration in such investment schemes, it has to be remembered, is whether it contributes substantially to increased output. Commercial and business considerations which are irrelevant and perhaps even harmful for investments that aim at providing the basic overheads are of particular significance concerning those enterprises which are devoted to the production of final goods. Hence if it is found that overhead and administrative costs involved in similar enterprises in the two sectors are greater in the Government sector, or there is greater wastage of resources and time, or the quality of the final product is defective, then there is a strong case for transferring such enterprises to private hands. It is well known that public investments of an expansionary nature which aim at strengthening the capital base of the economy, have a large inflationary potential in so far as the gestation period is long and such investments in the short run release a large money income without proportionately increasing final output. But apart from this, even in the case of industrial or business enterprises, there is the possibility of inflationary consequences if the State's activity does not result in increased production to the extent that private enterprise could achieve.

Case for Private Enterprise

If for reasons of official delay, corruption, inefficiency or indifference on the part of officers in charge of executing such programmes, the outlays of the State are more than can be justified on commercial considerations, then the effect would be same as in the former case, because here also, the money incomes released would exceed the increase in real output. Wasteful expenditure would thus aggravate inflationary pressures because the increased money incomes would be immediately used for demanding final goods. In short, in the case of investments of this type, the cost-returns ratio is of particular significance as a means to guage the standards of efficiency and where it is clear that the ratio is higher in the public than in the private sector, there is sufficient reason to transfer it to the latter.

If then the State would make a strict delimitation of the area of its investment activity and restrict itself to those spheres where public enterprise has a decided advantage over the other, or where public enterprise alone is feasible, then the draft on the financial resources of the community by the State can also be correspondingly limited and larger financial resources can be made available to the non-Government sector. The burden of taxation can be eased and inflationary methods of financing can be considerably reduced or avoided altogether.

Since planning started in India, the problem of financing economic growth has been considered mainly in connection with the ways and means by which the State can mobilise enough resources to carry through its programmes of investment. But in view of the important rôle which the private sector plays in the productive effort of the economy, it is proper that in any scheme of financing economic growth, the problems and difficulties of the private sector should be as much taken into account as those of the public sector. It is important to find out whether by facilitating greater investment in the non-government sector, a more than proportionate increase in output cannot be secured. In this one has to be influenced more by practical economic considerations than by ideological ones. The primary question is whether this sector is contributing to national output as much as it can.



Apart from the various import and export restrictions, the difficulty of getting an adequate supply of raw materials, rapidly growing wage bill and the absence of a clear and unambiguious demarcation of the sphere of Government investment activity, the major deterrent to the expansion of the non-official sector is the scarcity of financial resources. Heavy taxation and the imposition of taxes of a vexatious nature have an obvious disincentive effect. Inflation and higher costs of production reduce internal resources available for investment. Any lowering of the dividend rates in order to maintain a high rate of reinvestment of profits would affect the attractiveness of investment in business for private individuals.

Inadequacy of Bank Finance

The narrowness of the savings margin of individuals, their lack of adequate information concerning investment opportunities and the absence of a well-developed capital market explain the timidity of private investors who are not prepared to invest their savings in industrial and business ventures. Lastly, commercial banks in India have been traditionally reluctant to advance funds for private enterprises and industrial undertakings. This attitude of commercial banks in turn has to be explained by the inadequacy of funds and their lack of confidence in the soundness of business enterprises. These deficiencies are characteristic of an under-developed economy and continue to exist because the economy continues to remain backward. They are the causes as well as the effect of economic underdevelopment. This vicious circle can be broken only if the State throws its weight into the task of building up the institutional and organisational structure necessary for economic growth.

Relaxation of the Government's investment activity would not mean any relaxation of the State's control over the economy. It only means shifting part of the State's attention and effort from the investment field to the earlier stage in capital formation, namely, organisation of the institutional framework and mobilisation and canalisation of savings. Many of the present means adopted to mobilise savings—such as extension of banking facilities to the villages, promotion of the insurance habit among all classes of income earners, popularising the small savings scheme, etcetera, can be further strengthened. Apart from these, new ways and means of enlarging individuals' saving have to be found. The State can regulate private investment activity by canalising the flow of national savings into desired channels through finance corporations and by controlling capital issues; it can enforce standards of quality and fix scales of output where necessary. Economic growth would then be a co-operative venture between the Government and the non-Government sectors each playing a distinctive rôle.

It has to be stressed that the problem of financing economic growth in a mixed economy relates to both the public and private sectors, and a sound scheme of financing would be the one which enables both the sectors to function efficiently and to contribute their maximum to the development of the national economy.

AMENDING THE PATENT ACT: BILL BEING DRAFTED

[FROM OUR NEW DELHI CORRESPONDENT]

THE Government of India, it is learnt, has decided to amend the Indian Patent Act of 1911. Legislation is being drafted and will be introduced in Parliament during the winter session. The amendments will seek to reduce the period of patent rights from 15 to ten years, exclude food industries, drugs and medicines from the eligibility for patent rights in the future and limit the actual amount of royalty to 3 percent. The question whether the *status quo* should be maintained for the existing patents for food products, drugs and medicines, and if not whether there should be any compensation for their abrogation, is still being discussed. An aggrieved party, it is proposed, will not be allowed to appeal to courts of law. But the former may appeal to the Government, whose decision shall be final.

For some years, the Government has been considering the question of amending the law. A Patents Enquiry Committee was appointed in 1948. On the basis of its report, a Bill was introduced in Parliament in 1953. It was allowed to lapse, since there were some serious objections against the Bill.

In 1957, Mr. Justice N. Rajagopala Ayyangar was asked to submit a report to the Government on the revision of the patent law in India. In his report, which was published in 1959, Justice Ayyangar said that a country must be technically advanced to work the new inventions. He added: "It is further obvious, however, that the system will not yield the same results when applied to under-developed countries. I entirely agree with the views of the Patents Enquiry Committee that 'the Indian patent system has failed in its main purpose, namely, to stimulate invention among Indians and to encourage the development and exploitation of new inventions for industrial purposes in the country so as to secure the benefits thereof to the largest section of the public.'"

This was the view of the earlier Patents Enquiry Committee. Since then, following the three five-year plans, the conservation of foreign exchange has become a matter of primary importance. Justice Ayyangar, therefore, made it clear that "unless the law provided for measures to be taken to compel the patentees to work the invention within the country, and these measures were effective to achieve their purpose, the social cost involved in the grant of the patent was not offset by any benefit to the community. As for the possible advantage which might result by disclosure, it should be noted that most of the inventions patented by foreigners in this country are also patented abroad, and the theory, therefore, that but for patent protection, the invention would have been worked in secret and that the public would have been deprived of the knowledge of the invention has no relevance in the case of the large majority of patents granted in India.

Rewarding Investors

"Having made this appraisal of the effect of the patent system in India, the next question is whether the system should be continued. With all the handicaps which the system involves in its applications to underdeveloped countries, there are no alternative methods for achieving better results. At present, there is no country in the world which does not adopt the patent system of rewarding inventors, whatever differences in detail there might be in the laws of various countries due to local conditions or historical reasons.

"Even in a country which has adopted a socialistic economic system such as Russia, the law makes provision for the grant of patents in the same manner as in the rest of Europe. I need only add that a patent system on the same lines as is found in western Europe also prevails in the other socialist countries of eastern Europe, like Czechoslovakia, Poland, Hungary as also in Yugoslavia.

"As for inventions relating to chemical products, or products produced by chemical processes, I am clearly of the view that the interests of the country would be best served by confining patentability to the processes by which the products are obtained and to deny patents to the products either *per se* or in the qualified manner suggested in the Bill.

History of Law

"The reasons for this recommendation are based on (1) the history of the law relating to patents on chemical inventions in Europe during the past nearly 100 years and the lessons to be derived therefrom; (2) the experience of other countries somewhat similarly situated like India; and (3) the disadvantages to an under-developed country of permitting product claims for such inventions. It is still the experience of these countries that a system which provides for the refusal of patents for chemical products while permitting the grant of patents for new processes of manufacturing such products, is the one which encourages research and facilitates invention.

"I have considered the matter with the utmost care and have reached the conclusion that the chemical and pharmaceutical industry of this country would be advanced and the tempo of research in that field would be promoted if the German system of permitting only process claims were adopted. In this connection, I will recall the remarks of Dr. Van Ing as to the effect of the adoption of the German patent law of 1877 on the German chemical industry. I would accordingly recommend that the relevant provision in clause 3 might run as follows: 'No patent shall, after the commencement of the Act, be granted for inventions claiming substances produced by chemical processes including alloys but excluding glass.'

"I consider that to maximise the benefit, inventions relating to articles of food and medicine—and in the last category I would include insecticides, fungicides, etcetera,—should not be patentable as such but that, as in the case of substances produced by chemical processes, claims for the processes for their production should alone be patentable if they satisfy the other tests for patentability."

Meanwhile, several issues, mainly relating to matters of procedure, are being discussed here. It is suggested that a patent should be revoked if it is not worked for five years. A number of suggestions have been offered to make compulsory licensing easier. Compulsory licensing, it is pointed out, is resorted to when a patent is not worked within the specified period. Under the present law, there is considerable scope for procedural delays which the Government proposes to reduce. The latter also proposes to grant licences of right to anyone to work a patent, subject to the licensees paying a royalty for patents. It is also proposed to import patented drugs from the cheapest sources. It is pointed out that such important articles of daily use as medicines or food, which were vital to the health of the community, should be made available to everyone at reasonable prices and that no monopoly should be granted in relation to such articles.

There are several other matters which require equal or even greater consideration. Firstly, the state of public opinion prevailing in the country and ineffectiveness of the Governmental machinery for checking large-scale adulteration at present. Spurious drugs, as is well known, are being manufactured in the heart of Old Delhi without let or hindrance. As long as the Governmental machinery remains ineffective or lax, it would be dangerous to destroy the only safeguard which is now available for securing pure and unadulterated drugs and medicines. This is much more important in the case of life-saving drugs. Medical practitioners would, therefore, like to make an exception to some 20 life-saving drugs from the operation of the Bill. Lastly, it is more important to introduce legislation for fixing minimum charges for medical treatment than to cheapen drugs. A doctor normally charges, say, Rs. 5 for a penicillin injection costing six annas.

Thus, the problem is not as simple as the draft Bill of 130 clauses will make the people believe.

APPRAISAL OF THIRD PLAN

THE Planning Commission is at present engaged in a mid-term appraisal of the third five year plan. In a number of fields, hopes of rapid economic progress have not been fulfilled. The worst feature is the absence of any increase in agricultural production between 1961 and 1963. This was primarily responsible for the slow growth of national income in 1961-62—at 2.1 percent only, just over half the annual average for the second plan period. The latest estimates suggest that India's population is increasing at the rate of 2.4 percent, rather than the 2 percent or 2.2 percent on which the Commission's earlier calculations were based. The need for an even greater emphasis on increasing agricultural production is, therefore, becoming widely recognised, but the structure of India's agricultural economy, with its small units, the shortage of fertiliser and equipment, lack of incentives to greater production and difficulties of communication, is such that progress is unlikely to be spectacular. The increase in industrial production of about 8 percent in each of the two years is more encouraging. This increase might well have been higher but for inadequate supplies of raw materials and the shortage of power, steel, coal and transport. As a result, the engineering industries, in particular, are suffering from the under-utilisation of capacity. The following is a review of some of the important commodities and sectors made by the Planning Commission:

Tea: Weather conditions for the new crop have so far been favourable. Early rain over the tea garden districts of Assam will help produce a good crop this year. However, there have been difficulties in getting fertilisers to the tea garden areas and the manuring programme for the 1963 season may have suffered. With the considerable replanting that has been carried out in recent years, the industry is hoping that the all-India crop for 1963 may reach 780 million lbs. Export auctions in Calcutta during recent weeks have been quite brisk. There are hopes that the impending abolition of the European Economic Community's tariff on tea will help sales of Indian tea in Europe; but competition from other tea-producing countries is likely to be strong.

Coffee: The outlook for the new coffee season, which began on 1st July, is quite promising. The chairman of the Coffee Board has predicted an aggregate yield of 60,000 tons (35,000 tons of Arabica and 25,000 tons of Robusta), against 53,000 tons in the season just concluded. The industry is, however, less optimistic about exports, where prices have declined and India faces strong competition from other producing countries whose coffee is often of a higher quality.

Coal: The coal position is considered to be comfortable. Production in 1966 is expected to reach 92 million tons, which is regarded as adequate to meet the demand for coal. Nearly one-third of the World Bank loan of $35 million for the modernisation of private-sector collieries remains unused because of the inability of many of the smaller collieries to raise rupee counterpart funds. The Government has taken a number of steps to improve rupee credit facilities, but the basic difficulty is the unwillingness of the banks to accept installed mining machinery as security. The official time limit for loan applications has now expired, but it seems probable that a number of last-minute requests will be accepted.

The increased taxation imposed in the latest Central Budget is likely to make it more difficult for private collieries to undertake essential capital investment. The industry should, however, benefit from certain concessions announced by the Central Finance Ministry. The development rebate has been increased from 20 percent to 35 percent for the next three years, and import duties on certain types of coal mining machinery have been reduced by 15 percent. Coal output during the first four months of 1963 amounted to 23 million tons—3 million tons higher than in January-April 1962. The price of coal was raised by 6nP a ton from 1st June to cover the annual increase in the wage bill.

Power, transport and communications: Non-avilability of power supplies and breakdowns in existing systems have continued to hamper industrial production. In the south,

the delayed arrival of the south-west monsoon and the critical storage position in hydro-electric reservoirs has brought about the imposition from 20th June of a 100-percent cut in supplies to all non-continuous process industries in Madras State. Essential services are not affected. Much the same situation obtains in Kerala and to a lesser degree in Andhra Pradesh and Mysore States. Load shedding, which affects industrial users in West Bengal to some extent all the year round, was for short periods during the quarter seriously aggravated by plant failures at the Calcutta Electricity Supply Corporation's power station and at the Damodar Valley Corporation's undertakings in Durgapur. In Delhi, there have been constant interruptions in supplies due to minor plant failures.

The third 50 megawatt unit in the Neyveli thermal power-station (Madras) was commissioned in June. Loans have been announced by the International Development Association of $20 million to cover half the cost of the 120-megawatt thermal station in Kothagudem (Andhra Pradesh) and by the U. S. Agency for International Development of $16 million to cover a third unit of 125 megawatts at Chandrapura, Bihar, where two similar units are already being installed with U.S. loan assistance. A further $6 million has been authorised by the World Bank for importing machinery and plant for the Beas dam (Punjab). The 30-megawatt steam turbine for the Nellore thermal station is being obtained from Japan; International General Electric of the United States is supplying generating and transmission equipment worth $6 million for the first stage of the Sharavathi hydel project in Mysore State; Bulgaria has received orders worth Rs. 2 crores from the Madras State Electricity Board for the supply of cables, insulators and meters.

The Central Water and Power Commission has announced a shortfall of 245 megawatts in the installation of power generating capacity during the first two years of the third plan. A number of important projects, notably in the south, are well behind schedule. The commissioning of two 75-megawatt sets at the Durgapur thermal station later this year and the installation of the additional 50-megawatt alternator belonging to the Calcutta Electric Supply Corporation are expected to ease Calcutta's immediate power problems to some extent.

Railways: Technical experts from the French Railways, who are advising the Indian railways on electrification, have recently visited India to investigate progress on the signalling system and to assess the help needed. A group of Japanese firms are to supply, under a Japanese credit, 45 electric locomotives of 25 KV. A.C. type for the Eastern and Northern Railways. Part of a recent I.D.A. loan of $67.5 million is being used by Hindustan Aircraft Ltd, Bangalore, to undertake the manufacture of rail-cars with technical collaboration from Rolls Royce; the production of the first 120 diesel cars is expected to begin later this year.

Ports: The proposals put forward by the Commissioners for the port of Calcutta to increase various port charges (including pilotage fees and charges for certain cargoes) have been approved by the Government and are being put into effect. They are expected to result in an increase of Rs. 73 lakhs (£547,500) in revenue during the financial year 1963-64. Following the state of emergency, the Indian Government is understood to have revised the priority for completing Haldia, the satellite port for Calcutta, which is now to be functioning by 1967 (a year or two earlier than previously planned). Haldia is some 50 miles downstream from Calcutta, and is to handle vessels carrying bulk cargoes of coal, ore, oil and wheat which have too deep a draft to come up to Calcutta.

The Orissa Government has announced that Rs. 1 crore was spent on the development of Paradip in 1962-63, and that Rs. 4.5 crores will be spent in each of the years 1963-64 and 1964-65. It is hoped that Paradip will eventually handle the export of 2 million tons of iron ore a year. Panambur, five miles north of Mangalore, has been selected by the Technical Experts Advisory Committee of the Central Ministry of Transport as a suitable location for the construction of an all-weather port in Mysore State. The total cost of the project is estimated at Rs. 15 crores (£11.3 million). Construction is expected to be completed by 1967.

Iron and steel: Total production of ingot steel during the 12 months ended March 1963 reached 5.3 million tons, against 4.3 million tons during 1961-62. The production target for the end of the third five year plan (1965-66) is 9.2 million tons a year, but the Central Steel Minister has said that this will not now be achieved until early in the fourth plan period. The long-term possibility of two large steel plants in south India—one in Salem and the other, in the Goa region—is being investigated. The Central Steel Minister has announced that India hopes to produce 18 million or 19 million tons of steel a year by the end of the fourth plan in 1970-71.

Fertilisers: Production at the two public-sector fertiliser factories in Sindri and Naya Nangal exceeded the 1962-63 target. However, the total fertiliser output at the end of the third plan period is expected to amount to only 475,000 tons, by comparison with the original target of 800,000 tons and the revised target of 650,000 tons. The shortfall can be attributed to delay in the building of other public-sector plants and to the inability of private firms to make use of their licences to build fertiliser factories when prices are not sufficiently remunerative to attract foreign collaboration.

Cotton textiles: In spite of export incentives and fixed targets for individual mills (12 percent of the cloth turnover and 3 percent of the yarn turnover), the value of cotton textile exports has continued to decline, although quantities have risen. In the first four months of 1963, exports earned Rs. 13.7 crores, against Rs. 14.2 crores in the corresponding period in 1962. Shipments rose from 169.6 million yards in January-April 1962 to 190.1 million yards in January-April 1963. This suggests that mills have cut their prices severely in order to meet export commitments.

F. I. C. C. I.

Discussion at the Seminar

The Federation of Indian Chambers of Commerce and Industry organised last week a three-day seminar on problems of private and public industrial undertakings. The Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, said in his inaugural speech: "I think the most important problem which industry faces in the country today can be summed up in one phrase 'controls in detail'. I believe that controls are necessary but where they interfere with efficient industrial management, they require a careful look. It is a painful but inexorable fact that today an industrial manager spends more time getting across or around controls than he does in the task of management. Many of these controls may have served useful purposes in the past but they have become too cumbersome and detailed for a developing industrial society such as ours. Let us remember that in the more mature societies with which we have to catch up, and maybe to compete, industrial managers operate with a greater degree of freedom. We have, therefore, to think seriously about altering our framework of detailed controls and reducing the multiplicity of points and levels at which they operate."

There were group discussions on the problems of finance, of management, of purchase and sales and of labour policy and corporate citizenship. The report of the steering committee on the problems of finance makes some interesting and valuable suggestions. It says:

"*Common problems:* Both the public and private-sector undertakings have to draw the resources from the same common pool. However, it will be wrong to assume that the resources are static and cannot be augmented, provided appropriate steps are taken in this direction. The financial resources available for industry depend on a number of factors, of which the most important one is the extent of savings in the hands of individuals and companies. Savings have to be increased. The pattern of use of these savings also influence the rate of industrial growth.

"By and large, the problems confronting the industrial undertakings in the two sectors are similar in that both have been unable to obtain the requisite finance for development. The solutions to these problems cannot always be identical. Even so, there are certain issues, such as the super profits tax, depreciation allowance, development rebate and the like which affect the capacity of undertakings in both the sectors as far as development is concerned. In this connection, mention may be made that the public-sector undertakings, although they do not seem to have difficulty in raising the initial capital which is provided by the Government, cannot go to the market to raise additional funds. The direct investment of savings of the public in Government undertakings raises a number of issues as also the important criterion of preference on the part of investor as between alternate investment. This matter requires further study.

Reviving the Capital Market

"*State of the capital market:* In the last few months, the capital market has continued to remain depressed and has discouraged flotation of new issues. A large number of companies have been hesitating to go to the market, even though all other arrangements have been finalised. Many of the good issues have not been fully subscribed, and industrial development measured in terms of investment has lost its pace. The depressed state of the capital market has been due to a variety of factors. The increase in taxation over the years, the decrease in the capacity and willingness to save, the frequent changes in Governmental policy, the hesitation in the mind of the investors to look upon the confidence in the future of their investments in industry, have all contributed to the present condition.

"A progressive capital market is an essential precondition to speed our programmes of industrial development. For this reason, it is essential to revive the health of the capital market. There are various ways of achieving the objective. It is possible to give a support to the market by investing funds of the financial institutions like the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India, the Life Insurance Corporation, etcetera, in good shares with high intrinsic value. This will generate a wider confidence in the shares of companies. The present trend indicates that the ratio of preference shares to equity capital has perceptibly increased showing a shift in public assessment of the relative profitability of equity shares. This trend has to be reversed, for otherwise it will upset the financial balance and entail additional costs to industry. The return on equity should be made more attractive. Also, it is essential that the Government should refrain from doing or saying anything which will create nervousness in the market. Rather, a more stable fiscal policy would improve the investment climate. Furthermore, the I.F.C., the I.C.I.C.I., etcetera, should underwrite shares in a greater measure than before and actively encourage new flotations. Their policy in this connection has to be more purposive in objective and more vigorously applied in practice.

"The other effective method suggested for reviving the capital market was to provide definite tax incentives like the restoration of initial depreciation allowance, the increase of development rebate to 25 percent, suspension of Section 23A of the Companies Act and the exemption of new shares from the wealth tax.

"*Controls on industrial financing:* There are other restrictive elements which have affected the source of finance to industry. The limitations imposed by the capital issues control relating to the debt-equity ratio, transferability of shares, premium on shares, etcetera, have reduced the ability of the companies to obtain finance in the present depressed conditions in the money market. These restrictions have to be reviewed.

"*Bank credit:* Although bank credit to industry has increased, it has not been commensurate with the needs. It is important that, in the first instance, deposits with banks are increased to enable them to play a more effective rôle to finance industry. This matter, it is felt, should receive the serious consideration of the banking authorities. At the same time, the quantum of bank deposits will ultimately depend upon the savings in the hands of the public.

Financing of Industry

"By and large, the financing of industry by the banking institutions is limited to short-term capital needs. It was suggested that the banks and other financial institutions should pool their resources to provide medium and long-term finance for industrial development.

"There are procedural delays involved in obtaining credit from banks experienced both by the public as well as private-sector industries. Banks have insisted on personal guarantees from private parties apart from the hypothecation of assets. In the case of public sector-undertakings, the guarantee of the Government is required, and these requirements create avoidable difficulties and delays.

"*Foreign capital:* Apart from the domestic resources, industry has to secure finance from foreign countries. This is necessary partly because the fructification of investment with the appropriate technique of production depends upon the availability of imported machinery and, sometimes, technicians for which finance has to be obtained from foreign investment. The rate of foreign collaboration has, however, in recent months perceptibly declined. This has been partly occasioned by the nature of taxation. But there are other factors like the procedural delays at Governmental level which inhibit initiative and generally discourage the foreign investor. For inducing foreign investors and technicians to take greater interest in India, it would be desirable to quicken the working of the control machinery and provide greater facilities to make investment in India more attractive.

"*Pricing policy:* Both in the public as well as in the private-sector industries, the present pricing policy has not been such as to generate adequate funds after providing for taxation, depreciation, etcetera, for further investment. The level of costs has increased while the regulated prices have not been such as to maintain the rate of profitability and the ability to accumulate reserves. The pricing policy has to be made more realistic and flexible to take account of changing conditions and developmental needs.

"*Inter-company investment:* Expansion of companies is a natural process of growth and for this purpose the companies accumulate capital by way of reserves which, at the same time, constitute a cushion against risk. Under the Companies Act and the Capital Issue Control, a company is restrained from diversifying its activities in other fields or making investment in other companies. This limitation makes the use of accumulated funds difficult, or sometimes impossible, and depresses the general rate of industrial growth.

"*Depreciation:* In the last 15 years or so, depreciation allowances have not been revised. The depreciation at present is based on the historic cost, and there is a vast difference between replacement cost and the accumulated depreciation reserves. It is necessary that this problem has to be reviewed and the industry enabled to find reserves to replace the obsolete capital goods. Also, it must be considered how the industry can get the depreciation benefit of working extra shift.

"*Suggested study:* The F.I.C.C.I. should undertake a study of the return on capital in developing countries and the level of savings to quicken the process of self-sustaining growth. In particular, a comparison should be made of the level of return on investment, the quantum of taxation, etcetera, and the consequent rate of growth achieved in different countries. This will help make an assesment of the factors which influence industrial progress, and also enable appropriate adjustments in India's monetary and taxation policies."

The Secretary to the Department of Economic Affairs, Central Ministry of Finance, Mr. L. K. Jha, made two speeches, explaining the Government's viewpoints. Mr. Jha felt that the current depression in the stock market was a temporary phenomenon and would disappear when the Government takes measures to revive the market. He hinted that credit institutions like the Industrial Finance Corporation, and the Industrial Credit and Investment Corporation of India, would enter the market in a bigger way to see to it that the depression did not retard industrial development.

Referring to the seminar's suggestion for relaxing the control on the debt-equity ratio in capital, Mr. Jha said that the ratio was determined by the Government as part of a long-term policy and should not, therefore, be altered to suit the exigencies of the present market conditions.

STOCK MARKET

Measures for Revival

The Government is taking active steps to revive the stock market and, in particular, give support to capital flotations. Governmental and semi-governmental financing agencies, such as the Industrial Finance Corporation, the Life Insurance Corporation and the Industrial Credit and Investment Corporation of India, have been advised not only to underwrite new issues but also to hold the shares until market conditions are stabilised. The L.I.C., as is well known, does not underwrite new issues but buy shares for investment. The State Bank of India, which has already been assisting small-scale industries, has likewise been advised to offer more active assistance to medium and large-scale industries even in financing their working expenses. The Reserve Bank will be looking afresh at the liquidity position before the busy season starts in October.

The present stagnation in the stock market is due to heavy taxation and the compulsory savings scheme introduced in the last Central Budget. Share values have slumped, making new flotations risky, if not impracticable. In fact, a number of new issues have proved unsuccessful, and underwriters have been unable to sell their holdings. The general confidence in investment in stocks and shares no longer exists. One view here is that although the speculative investor has disappeared, real investors preferring fixed returns through preference shares are not lacking. Another view is that high taxation, coupled with the compulsory savings scheme and the rising cost of living, hardly leaves any surplus with the people of the fixed income group to invest. All this has created an atmosphere of gloom in the stock market.

Side by side, the industrial system is short of working capital and the banking system is so overstrained as to have become ineffective, the only exception being the State Bank of India. This is the background to the remedial measures indicated earlier. The Government claims that its own expenditure will soon start greasing the wheels of the private sector, making money conditions easier. There have been reports that foreign investors have got over the original taxation scare and are beginning to renew their interest in India. It is claimed that no attempt will be made to nationalise industries by the "backdoor."

INDIAN INVESTMENT CENTRE

Reports of Expert Bodies

The Indian Investment Centre in New Delhi has announced that the two sub-committees of its Advisory Committee of Industrial Experts have finalised their reports. These include their recommendations on many engineering and chemical industries. The Centre will forward these reports to the Government for its consideration. As part of its service to Indian and foreign entrepreneurs, the Centre had, early in 1962, initiated a programme of industrial surveys and feasibility studies of specific industries enjoying high priority for development in the third five year plan. The main object of these studies is to locate specific areas where industrial development is now essential and feasible and where investment opportunities exist. The Central Minister for Economic and Defence Co-ordination, Mr. T. T. Krishnamachari, suggested that such a programme could profitably be linked with a study of those sectors in the industrial structure which are not developing according to schedule and that the Centre should seek the advice and guidance of such specialists and experts as have knowledge and experience in the fields in which they are now serving. Accordingly, the governing body of the Centre constituted an Advisory Committee of Industrial Experts and requested it (1) to undertake a study of the gaps in India's industrial structure; (2) examine why production in certain sectors was lagging behind and (3) indicate measures necessary to stimulate and increase production in order to achieve a more balanced industrial growth.

It was also suggested that a survey of different industries should be carried out specially with a view to selecting those products which were capable of being manufactured locally. This had a direct bearing on the development of medium and small-scale ancillary industries. The Advisory Committee had constituted two sub-committees: (1) The Committee on Raw Materials for Chemical and Process Industries; and (2) the Committee on Machinery and Machinery Parts. The former was to survey the field of the chemical industries and locate areas where production was lagging behind and also point out vital items of raw materials whose accelerated development was essential in the national interest. The Committee on Machinery and Machinery Parts concerned itself with the study of basic and raw materials, semi-processed materials, plant and machinery, and instruments as well as a number of other miscellaneous items. Both the sub-committees held meetings in Bombay and Delhi and submitted their final reports.

Both the committees have indicated a number of new opportunities for industrial development and investment. The Raw Materials Committee had examined in detail the scope for organising domestic production of raw materials, intermediates and ancillaries in important industries such as nitrogenous fertilisers; sulphur and pyrites, soda ash and caustic soda; viscose staple fibre supplementing cotton, newsprint, paper and paper board, paper pulp and dissolving grade pulp, non-ferrous metals, organic chemicals, synthetic dyes and drugs intermediates and anti-biotics and miscellaneous chemicals.

The Committee on Machinery and Machinery Parts had examined several metallurgical and chemical industries and has pointed out the opportunity for investment and technical assistance in a number of engineering industries such as machine tools, steel castings, steel forgings, stainless steels of different qualities, tool and alloy steels of selected qualities, printing and textile machinery, material handling equipment, ball and roller bearings, compressors, blowers, furnaces, foundry equipment, wood working machinery, industrial process control instruments, optical instruments, electro-magnets for lifting purposes and so on.

The Advisory Committee of Technical Experts included several senior officers of the Technical Development Directorate of the Central Ministry of Economic and Defence Co-ordination, as well as top executives of industries in India. The chairman of the Committee was Dr. A. Nagaraja Rao of the Heavy Engineering Corporation, Ranchi.

The Centre would release the findings and recommendations of the sub-committees as soon as they are finalised after discussion with the Government of India.

INDUSTRIAL UNITS

Fair Price Shops

The first meeting of the Standing Committee on Industrial Truce Resolution was held here under the chairmanship of Mr. Gulzarilal Nanda, Central Minister of Labour, Employment and Planning. Addressing the meeting, Mr. Nanda said that efforts would be made to set up about 1,500 fair price shops in all industrial units where more than 300 workers were employed. This would be done within about four weeks. The fair price shops would be eventually converted into industrial workers' stores. The representatives of employers agreed that these would be financed by employers. The meeting felt that this step would go a long way in holding the price line.

The Minister informed the committee that about 500 co-operative

stores had either been set up or were in the process of being set up exclusively for the benefit of industrial workers. Efforts would be made to ensure that construction workers also benefited from these. He also indicated that firm deterrent action would be taken against the profiteers under the Defence of India Rules. The meeting recommended that *ad hoc* State-level tripartite bodies should be set up in all States with the respective State Labour Ministers as the chairmen, on the lines of the Central Standing Committee on Industrial Truce Resolution.

The committee considered the constitution of tripartite arbitration councils at the Centre and State level to promote and propagate the principle of voluntary arbitration for the settlement of industrial disputes The main function of such councils would be to review periodically the extent of acceptance of voluntary arbitration by employers and workers. The committee decided to consider this matter further at its next meeting.

COMPANY LAW

Payments to Directors

According to a Press note, some cases have come to the notice of the Department of Company Law Administration where public limited companies have allowed certain monetary benefits purporting to be for past services rendered, such as gratuity, salary in lieu of leave, etcetera, to their retired managing or wholetime directors or managers, which they were not apparently entitled to receive according to their service contracts. The Department is of the view that such payments are not in conformity with the provisions of the Companies Act. If any public company or a private company, which is the subsidiary of a public company, proposes to make such payments, it would be well advised to seek the prior approval of the Central Government as if these payments amounted to an increase in the remuneration of the directors under Section 310 of the Companies Act, 1956.

AID PROJECTS

Checks on Results

According to an advice received here from West Germany, members of Parliament of industrial nations are pressing their Governments to demonstrate the success of development aid projects to taxpayers. West Germany has already introduced a system of checks of the success or failure of foreign aid projects. Government officials who are also development aid experts are making on-the-spot checks of the economic, social and technical success of individual projects. They have also to report to the Government if something has gone wrong and what problems have to be considered in future planning.

Mr. Walter Scheel, West German Minister for Economic Co-operation, has already discussed the problem with his U.S., French and British colleagues. Mr. Robert Carr, the U.K. Secretary for Technical Co-operation, who recently spent two days in Bonn, showed special interest in the German system of foreign aid checks. Britain, too, intends to use the results of such checks in future planning.

TELECOMMUNICATIONS

Allocations under Plans

The unrealistic approach of the Planning Commission to the development of tele-communication facilities is evident from the plan allocations. The first plan provided Rs. 40 crores, the second plan Rs. 53 crores and the third Rs. 63.5 crores for this purpose. Due to the rise in prices over the period, the allocations should be regarded as the same for the three plans. Against this, the trunk telephone traffic has been increasing by 2 percent a year and has been doubling itself in every three years. In local excanges, there is a growing waiting list.

TELEPRINTERS

Raising Factory Capacity

The Government has decided to double the capacity of its teleprinter factory from 1,200 pieces a year to 2,500 pieces a year. Meanwhile, Telex services are catching up. There are already over 600 on the waiting list in Delhi, Bombay and Calcutta. The number of units used a day are over 80.

COTTON TEXTILES

Talks on Dumping

The annual industry-to-industry negotiations of the cotton textile industry are due to commence in London in the middle of September. Mr. N. Wadia will lead the Indian delegation. The negotiations will largely relate to the "dumping" of certain categories of textiles, as alleged by Lancashire. From India's point of view, the "price war" has reduced the foreign excrange earnings from cotton piecegoods.

HEAVY DUTY VEHICLES

Demand Estimated

The Development Wing of the Central Ministry of Economic and Defence Co-ordination has placed the demand for heavy duty vehicles at 2,700 a year. Ashok Leyland is being permitted to raise its output to 2,000 vehicles a year.

BELGIUM

Plans for Using Credit

Belgian credit, it is expected, will be used in purchasing electric locomotives and three ships of 10,000 tons' capacity. The ships have been ordered by a private sector company. British shipping firms, it is reported, have also offered to supply ships to India on the usual long-term credit terms.

PLANS FOR TRADE EXPANSION IN COMMONWEALTH

(FROM OUR LONDON CORRESPONDENT)

THE pattern of the Commonwealth is one of growth; growth in population and potential growth in standards of living. In the long run, the developing countries, with their vast populations, offer great scope and encouraging prospects for mutual trade expansion—prospects which will continue to improve as they move up the economic scale and the steady growth of their purchasing power gathers momentum. The very breadth of the gap between living standards in developed and developing countries is the measure of their market potential. One means of aiding this movement is for there to be frequent meetings between Commonwealth peoples at all levels. It is particularly important that business men from all parts of the Commonwealth should meet from time to time to discuss their problems and to refresh the ties of friendship.

Two bodies which hold these views, the Federation of Commonwealth Chambers of Commerce and the Royal Commonwealth Society, propose to work closely together within their powers to further trade links, and as a first step, they have worked out an agreement for joint membership. Since the joint membership scheme was launched, industrial firms trading with the Commonwealth have been invited to pay £100 a year subscription (for five years in the first instance) to join both the Federation and the Society. More than 40 firms have joined so far.

The sponsors of the association between the Federation and the Society hope to raise an additional £100,000 a year to finance economic research projects, commercial centres in Commonwealth countries, and the encouragement of conferences and personal contacts at all levels. "The interest which has been shown in the scheme has been very great," said Mr. Walter Drysdale, director of the Trade and Industry Committee of the Royal Commonwealth Society. "And it has not merely been confined to the City. Many industrial firms from the North and Midlands have agreed to come in on this."

There are certain things that cannot be done either by Governments for political reasons or by individual firms or organisations. Many of the functions of the Federation and the Royal Commonwealth Society fill this gap. Commonwealth business men should meet and discuss their mutual problems frequently. U.K. and Canadian business men have done so regularly for years. The Federation, in its new constitution, provides for representative committees in all Commonwealth countries to foster such bilateral discussions in which associate members will be invited to co-operate. Every two years, a major Congress is held by the Federation in the Commonwealth. The last was in London in May 1962. The next one will be in Trinidad in 1964.

The Federation has a worldwide network of chambers of commerce embracing in their membership all forms of business activity. An imaginative plan for the promotion of Commonwealth trade and investment can do much through this network to keep the Commonwealth a living force. Trade promotion will take many forms; following up proposals initiated by bilateral discussions; organising "Buy Commonwealth" campaigns; providing an advisory service on trade fairs and exhibitions; interchanging trade missions. The Federation's headquarters in London will provide a clearing house for information and investment opportunities for the benefit of members.

Research into Trade

Regular intra-Commonwealth representative committee discussions and specific business problems will call for research. This will be conducted by the Federation and the results will be available to members. Commercial education has always played a significant part in the Federation's work, while the Royal Commonwealth Society plays an important rôle in providing general education on Commonwealth affairs. The present need of the developing countries for technical and commercial training to provide skilled personnel for their expanding economies presents a special problem which the Federation, through its network of business and professional contacts, is well qualified to meet. The benefits of participation in this type of assistance are immediately apparent. The Federation can act as a co-ordinating organisation in promoting training facilities and this side of its work is being expanded as a service to developing countries, complementary to the assistance given by Commonwealth Governments.

The Federation is also engaged in the development of a scheme to provide certificates, recognised throughout the Commonwealth, of proficiency in commercial subjects. Every month a conference is held at the Royal Commonwealth Society headquarters. At these conferences, overseas representatives give up-to-date political and economic appraisals or the country concerned. The Federation proposes to work closely with the International Chamber of Commerce on the international plane, and will also co-operate with existing organisations for promoting international trade and assistance. The Royal Commonwealth Society has close connections with all Government departments concerned with the Commonwealth and, in particular, the High Commission offices.

The word "Commonwealth" has been repeated rather frequently in this article. No apology is offered for this. The Commonwealth, from the business standpoint, has a rewarding future. We cannot ignore the fact that the Commonwealth is a great power for good in the world, providing an example of how different races and creeds can work together for peace and the raising of standards of living. It is well to remember that the representatives sent overseas by British firms do more than sell goods. They are also ambassadors for Britain and do a great service in building respect and regard for this country.

Important Development

Since the original approach to commerce and industry to support the intensified activities of the Federation of Commonwealth Chambers of Commerce and the Royal Commonwealth Society in promoting Commonwealth trade, there has been a new and important development. The Federation of British Industries has agreed to join forces with the United Kingdom Committee of the Federation, which will be reshaped so as to link the two bodies closely and enable the Federation of British Industries to participate actively in its work. The reconstituted committee will now be the springboard from which to launch effective and co-ordinated initiative in building up Britain's trade with the Commonwealth.

The sponsors have been most encouraged by the interest shown in this venture and the support which it is receiving. However, reactions to the initial approach have disclosed a little uncertainty as to the aims of the new association. This new development emphasises that the primary purpose in seeking new financial support is to enable the Federation of Commonwealth Chambers of Commerce to play a more cogent rôle in trade promotion. The objects for which the United Kingdom Committee of the Federation needs this additional revenue are:

(a) the extension of trade promotional activities, particularly in the recently independent Commonwealth countries;

(b) the training of business personnel for the developing Commonwealth countries;

(c) specific projects in the field of economic research not covered by existing bodies;

(d) the encouragement of bilateral talks and conferences and personal contacts at all levels.

The extent to which these objects can be achieved must necessarily depend on the support which the present approach receives. An F.B.I. spokesman said: "We have been supporting the Federation in a number of ways in the past, but this closer association will enable us to support it more fully, and to take more interest in its activities". The proposed merger of the F.B.I. with other employers' organisations is not likely to have any effect on this association.

Training Overseas Officials

In a white paper of five crisply-worded pages, admirably combining brevity and enalightenment, the Department of Technical Co-operation has set out a sweeping programme for helping under-developed countries with the training of public servants. The scheme is the outcome of the Bridges report (published in March) which contained 16 specific recommendations.

The Minister in charge of the Department, Mr. Robert Carr, accepts all 16 points in principle. He reserves action pending further enquiry on some of them, but comes out strongly in favour of immediate, positive action of five of them. He proposes there should be:

(1) a "top level" British institution of public administration;

(2) a documentation centre in London;

(3) a training course in Britain for instructors from developing countries;

(4) a secondment programme for staffs of universities, government and nationalised industries here;

(5) compilation of a register of volunteers among British puolic servants willing to go overseas.

The white paper fairly radiates the determination of Mr. Carr and his Dirctor-General, Sir Andrew Cohen, together with the staff of the D.T.C. to swing into action. Phrases like "effective action" and "enthusiastic co-operation" set the pattern. Paragraph 10 contains the sentence: "This will be done"—surely a new high for directness and commitment in a Government white paper.

Referring to the report of the committee headed by Lord Bridges, and its 16 main proposals, Mr. Carr states that the British Government is "determined to give effect to them in the most practical way, with a full sense of urgency." He notes candidly, that it is not possible at this point to forecast the costs which will be involved, particularly as Whitehall must first enlist the co-operation of a host of outside bodies, beginning with local government and the universities. One specific expenditure that will have to be budgeted for is the proposal that when the D.T.C. brings over a number of civil servants to take a course in public administration, there should be a system whereby the British Government would underwrite the organising institution here against financial loss.

The white paper proposes two ways in which training might be offered to recipient countries on the spot, oy the despatch of experts from Britain. Public servants here would volunteer their names for a national register of those willing to do a tour of duty overseas; this would include experts in nationalised industry and local government. It will be British Government policy to see to it that heads of departments make such secondment feasible, and that a tour of duty is regarded as "a valuable part of a career in the public service." There is to be a preparatory course for such British instructors.

The second form of outward flow should be from the universities, it is stated. There is to be expansion of existing staffs in the field of public administration "as a matter of urgency," the cost being borne by the Exchequer, so that the universities in turn will be more readily able to offer memoers of staff on secondment to overseas governments.

'BEHAR' the dependable name in
FIRECLAY & SILICA Refractories
For nearly half a century BIHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.

Commodity Markets

RISE EXPECTED IN RAW RUBBER OUTPUT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

NATURAL rubber imports this year will be less than those of last year as domestic production has increased. The Rubber Board has recommended an import of only 20,000 tons, compared with 24,000 tons last year. The total requirement of the manufacturing industry this year is estimated at 80,000 tons including synthetic and reclaimed rubber. Home production of natural rubber will touch 35,000 tons in 1963, the Rubber Board estimates. Last year's production was to the tune of 32,000 tons. Although monsoon this year is below average and unfavourable for most tropical crops, rubber, it is said, has benefited. According to a Rubber Board estimate, a 20 percent increase in production can be expected if weather continues to be as favourable as it has been so far. The intermittent rains in the rubber growing belt of the south provide enough moisture in the soil for the rubber tree, and no tapping days have been lost as the rains have not been heavy and continuous.

With a view to helping the small growers in getting the statutory price for their rubber, the Rubber Board has decided to encourage the co-operative system of marketing. To begin with, six marketing societies will be established. The Board will provide them with a loan of Rs. 30,000 each. It is simultaneously taking measures to improve the quality of the small grower's rubber by opening smoke houses at important production centres. The Board will meet 50 percent of the cost of setting up these smoke houses, which are likely to cost Rs. 10,000 each. The first of these Rubber Board-sponsored smoke houses was formally inaugurated in Cheruvally in the Kottayam district last June. The small growers in the area can get their rubber sheets dried here. The Cheruvally smoke house is producing quality sheets. Four more smoke houses of a similar standard are being set up in other areas. The target set by the Rubber Board is 20.

The Rubber Board chairman, Dr. Rama Varma, told this correspondent that the Board had now no idea of entering the rubber market directly. Some time ago, when there was some difficulty for the small growers to sell their rubber at the statutory price, there was demand from a section of the growers that the Rubber Board should open its depôts at various production centres and purchase rubber at the controlled price. This was not acceptable for the Board in view of certain practical difficulties. The chairman and some others mentioned monopoly purchase by the Rubber Board as a more effective alternative. Ultimately, it was decided that the Board need not enter the market directly and it need only encourage co-operative marketing to help the small grower who alone had some difficulty in selling his produce. It may be recalled that the proposal to introduce the pool system of marketing or monopoly purchase by the Rubber Board met with stout opposition from the trade the manufacturers and a section of the growers. Some of these interests are even sceptical of the proposed co-operative marketing in view of the scandalous record of the co-operative movement in Kerala.

Rubber prices are falling in the world market. Singapore rates for natural rubber at present are said to be the lowest in nine years with No. 1 R.S.S. quoted below 70 Malayan cents a lb. The fall is attributed to a lessening of the political tension in the area and the larger quantities of forward deliveries offered from terminal markets. Buyers are said to be reluctant to enter the market with its weak appearance. In London, too, rubber prices have touched the lowest point for several years following the selling wave in Singapore. Despite the marking down, no selling pressure is reported.

Support for Coffee Pact

Reports from London say of growing support to the new long-term international coffee agreement. India has intimated her willingness to ratify this agreement. All coffee exporting countries have either ratified or expressed their willingness to ratify it. Most of the coffee-consuming countries, too, have extended their support to this agreement, which seeks to establish a machinery for stabilising coffee prices. Coffee, after oil, is the most important commodity in the world trade. It accounts for nearly 20 percent of the foreign exchange earnings of Latin America.

Last year, a five-year International Coffee Agreement was approved by the executive committee of the United Nations Coffee Conference. Some 54 countries have signed the agreement and 47 have ratified it or said they intended to. The agreement sets up a quota system for exports and stabilises a floor price designated at the average of prices in 1962. Delegates from more than 50 coffee exporting and consuming countries are now meeting in London, to work out permanent arrangements for running the agreement. This coffee conference which is the first of its kind, is expected to last until 24th August. Many procedural matters have to be ironed out including the appointment of the permanent staff and the executive director.

Coffee, like some other commodities, is in a big surplus position, and this has depressed prices for years. The present surplus is estimated at 73,000,000 bags of 132 lbs each. This compares with total imports of last year amounting to 46,750,000 bags, of which the United States took more than half. Prices last year averaged the lowest since 1949. For a key grade, Brazil Santos 4, the average New York spot price was 3.96 cents a lb. In 1954, when weather conditions drastically curbed production, the price averaged 74.71 cents a lb. In 1954, the average retail price in the United States was $1.11 a lb. By 1962, this had slipped to 63.9 cents a lb.

North Indian Tea Crop still Running Low

(BY A SPECIAL CORRESPONDENT)

THE latest figures for north India show that 195.372 million lbs have been produced up to end of July, compared with 205.6 million lbs on the same date last year. If weather favours growth, August and September may see a record output, but it seems unlikely that the 1962 crop figure will be exceeded. The last year's total crop was 261 million kilograms, compared with 1961's 272.2 million kilograms. North India looks unlikely to show progress as planned from 1961 to 1963, but favourable conditions may yet cause surprising results if the ground work has been completed. The authorities, it is said, are somewhat distressed that the tea crop figures so far remain disappointing.

Tea sold in Calcutta up to 30th July, 1963, was 10.526 million kilograms at the rate of Rs. 6.36 a kilogram, compared with 11.520 million kilograms at the rate of Rs. 5.99 a kilogram on the same date last year. Assam teas have fetched Rs. 7.06 a kilogram, against Rs. 6.58 a kilogram last year. Darjeelings have secured Rs. 8.37 a kilogram, against Rs. 8.25 a kilogram. Cachars have been better by 58nP compared with the rate at the corresponding period last year. Dusts have fetched Rs. 5.20 a kilogram, against Rs. 4.86 a kilogram last year.

Weather reports for July show that conditions in upper Assam are about normal, and useful rain has fallen. Weather in lower Assam is also favourable, but in the central area, it was abnormally wet and outturn much below normal. In north Cachar, it was wet and cold, but south Cachar had a good month and in central Dooars, rainfall is below normal. In eastern Dooars, output was about normal, but in the western section, wet and cold conditions restricted manufacture. Conditions in Darjeeling were wet with results about normal, but Terai reports a fall in production.

There was no auction in London on 5th August due to August bank holiday. Stocks in the U.K. warehouses as on 8th August were given as 133.3 million lbs, much the same as the week before. Deliveries were 8.4 million lbs, with landings only 6.2 million lbs. About 31 million lbs were reported afloat, of which only 9.3 million lbs was from Calcutta and practically nil from Pakistan.

Ceylon's Finance Minister, it is reported, has threatened to nationalise British owned tea estates, if Britain refuses to buy Ceylon tea. There seems to be some misunderstanding here. At the beginning of this century, this correspondent was expecting Ceylon tea imports to the U.K. in sundry London warehouses, and as it has recently been noted in these columns, Ceylon is making inroads into what was once almost a monopoly market for Indian teas. The threat to ship more to Russia and other communist countries will depend on price. One would have supposed that Ceylon would gain more from continuing amicable trade relations with Britain and one must wait and hope for sound judgment.

Australia is going ahead with its experimental tea production, and a small invoice has been shipped to London for sale. Experimental developments are taking place on the highlands of Papua. It is not expected that any serious increase to the world's supply will come from these areas and one must await further news as to quality. The teas were grown at an elevation round 2,500 feet to 2,000 feet, but climatic conditions are, it is thought, congenial up to about 6,000 feet. Plucking costs are reported to be high, so unless quality can be manufactured, world producers will not need to worry about overproduction from this part of the world.

The Central Ministry of Food and Agriculture today appears to be faced with the difficult question of whether to concentrate on making the rich districts much richer or to expend its resources on the large number of areas relatively less developed, and be satisfied with limited gains. After much hard thinking, expert opinion in the Ministry has lately been veering round to the view that if agriculture is to be pulled out of its present morass, efforts must be concentrated on the highly productive part of the country, roughly one-fourth of the total area, even if it entails a certain amount of neglect of the rest of it.

The experts' opinon is based on the hard fact that 80 out of 325 districts in India yield 75 percent of the country's total agricultural produce. It is these districts which are most responsive to improved methods of cultivation, and it is here, and not in the low production areas, that plans for doubling and trebling farm output must be applied.

Jute

EXCISE DUTY PROCEDURE PROVES TROUBLESOME

JUTE mills and shippers have been experiencing numerous difficulties over the collection and refund of the excise duty on jute goods. Since the introduction of the duty more than a year ago, many problems have arisen. Mills are facing difficulty in clearing non-hessian manufactures such as jute carpets, matting and webbing, yarn, twine or twist and jute felt reinforced with scrim, unless a higher rate of duty is paid. Mills say that they do not yet know the precise basis on which the duty is charged on these products.

Excise duty is also levied on selvedge yarn, paper cores and polythene sheets which are used in the production of some special purpose jute goods. It is claimed that these raw materials should be exempted from the impost since duty is paid on the weight of the finished product. Mills have also complained against the inequitable manner in which duty is levied on rot-proof, laminated and other processed products on the basis of the weight of the finished goods irrespective of their jute-content. It is contended that this practice places mills which have their own processing arrangements at a disadvantage in comparison with small unlicensed factories which procure jute goods from the market or from mills for processing in their establishments. So it has been suggested that duty should be levied on the jute-cloth content and not on the entire finished product.

Delay in Clearance from Bond

Due to the delays in issuing orders for clearance by the excise department, goods for export or for internal consumption are not promptly cleared. Any delay in the shipment of goods for due date steamers exposes them to the risk of being shut out from the vessels, and causes embarrassment to overseas customers. The I.J.M.A., it is understood, has urged the excise authorities to arrange for quick clearance of such goods from bond.

The present formalities relating to the export of samples are considered unsatisfactory. Permission to send such samples is given only after proving that the export has been made. Sometimes mills send the samples to shippers in India who transmit them to prospective foreign buyers. The samples thus despatched within India are not exempted from excise duty. It has been suggested that mills should be allowed to despatch samples of jute goods free of duty to shippers within and outside India on receiving merely an intimation that they are being exported.

The prevalent practice of recrediting the exporter's bond account once the goods are released and releasing the bond when it has expired creates difficulties for shippers. Long delays occur in complying with the complicated procedure. Meanwhile, the shipper has to keep paying commission at 1 percent a year on the amount of the bond countersigned by the bank. This means that the shipper, instead of paying bank commission on the value of the original bond, has to pay commission on that bond, and also on the second and subsequent bonds, until such time as they are released by the excise authorities. The Calcutta Jute Fabrics Shippers Association has suggested adopting the formalities in vogue in Bombay, according to which a bank guarantee for only a quarter of the face value of the bond concerning excisable commodities is accepted by the excise authorities. Separate representations, it is reported, have been made by the I.J.M.A. and the Calcutta Jute Fabrics Shippers Association to remove these difficulties.

Relieving Port Congestion

Gunny circles are concerned over the continued congestion in Calcutta port. The I.J.M.A. and the Calcutta Jute Fabrics Shippers Association have taken up the matter with the shipping conference and associations of overseas buyers. The shipping lines had suggested that cargoes should be registered with two steamers outside the docks on an experimental basis. But the C.J.F.S.A. maintained that the proposed system could give rise to even greater delays in that the lighters would still have to enter the docks after they had been registered, thus reducing the time available to the steamer for loading. It has written to the associations of overseas buyers to ascertain whether or not they would be willing to accept such registration at points to be nominated by the Commissioners for the Port of Calcutta as performance of the contract for two vessels on an experimental basis and whether they would agree to an amendment of the terms of the contract accordingly.

A second suggestion indicates that shippers in Calcutta should receive shipping instructions against end-month contracts from overseas buyers by the 15th of the month and for mid-month contracts by the end of the previous month. The C.J.F.S.A. has suggested a period of 12 clear working days between the receipt of instructions and the actual shipment of goods. The acceptance of this arrangement will relieve shippers and overseas buyers of a lot of inconvenience. As for Government cargo, the C.J.F.S.A. has requested the Director-General of Supplies and Disposals to agree to their movement by mid-month vessels. It has also suggested to the Bank line that the Argentine loader should be berthed during the mid-month.

Rise in Gunny Stocks

A sharp rise in gunny stocks from 96,200 tonnes at the end of June to 104,000 tonnes at the end of July is reported in a statement issued by the I.J.M.A. Last year also the stocks at the end of July rose to 86,300 tonnes from 80,300 tonnes at the end of June. The statement shows that hessian stocks have increased by only 100 tonnes to 32,500 tonnes, while sacking has risen by 5,700 tonnes to 52,900 tonnes and miscellaneous goods by 2,000 tonnes to 18,600 tonnes. At the end of July 1962, hessian stocks were much lower at 26,100 tonnes, sacking at 46,100 tonnes and others at 14,100 tonnes.

The increase reflects a lower offtake of jute goods during July which is considered a lean month. So the higher carryover did not have any bearish effect on prices. Sentiment was stimulated by the brisk demand for sacking and the hope that the U.S.A. would soon enter the market to replenish its hessian inventories.

Pakistan Eliminates Indian Traders

Indian traders seem to have been eliminated from Pakistan's internal jute trade. The licences of about 300 Indian traders have not been renewed this year by the Pakistan Jute Board. It is intended to replace them with Pakistanis. Addressing a Press conference in Narayanganj over the week-end, the vice-chairman of the Pakistan Jute Board said that about 40 percent of the country's jute export trade was still handled by Indian shippers. He said that about 600,000 bales of jute was smuggled to India. A high-powered committee has been set up to suggest measures to stop smuggling.

The Jute Board official stated that the market was dull at present because of the lack of foreign interest, which he attributed to the closure of the Dundee market for about a fortnight. Fibre stocks had accumulated with manufacturers. He expected the situation to improve by November. Pakistan's new jute policy, according to him, is aimed at ending the concentration of jute business in the hands of a few individuals and at helping small shippers to get a bigger share of the export trade. Under the policy, 19 big shippers have been allotted an export quota of 1.8 million bales for the next six months. If their purchases are bigger, they will be allotted extra quotas.

With about 1.41 million acres under jute, Pakistan's crop prospects are bright this season. Last year India imported about 200,000 bales of better quality fibre. If smuggling was stopped, the official said, India would have to import more from Pakistan. Speaking in Dacca, Mr. Waheeduzzaman, Pakistan's Commerce Minister, said that he proposed further to restrict jute cultivation during the next season in order to stabilise prices. According to him, effective steps have been taken to ensure a reasonable price to growers and the present position is quite comfortable.

THE JUTE MARKETS

Manufactured Goods: Buoyant conditions prevailed in the gunny market during the past week despite a sharp increase in the closing stocks at the end of July. Little fresh overseas booking for jute goods was intimated from the freight market. New business done during the period included a woolpack deal with Australia for November-December delivery, a Government tender for 2,000 bales of B Twills for ready and near positions and scattered U.S. business in hessian. Sentiment was stimulated by brisk covering by shorts and shippers against the large deal with Cuba for August-December positions and a spillover order for about 15,000 bales of cornsacks from Australia for August-September delivery. August shipments include

about 15,000 bales for Cuba alone. Representatives of Polcargo, who carry out inspections on behalf of Cubatex, were in Calcutta. The group of mills entrusted with this order were busy turning out only heavy Cees. From the position of bookings, trade circles feared a shortage of B Twills at the end of August and September and the trend was expected to be firm. The U.S.A., the U.K. and the Continent were virtually out of the market. Barring scattered business in hessian, of a covering nature from the U.S.A., the higher levels discouraged buyers. But sentiment did not sag because of anticipation that despite the prevailing levels, overseas buyers would soon enter the market to replenish their stocks. Firmer fibre rates were yet another pointer that gunny prices might rise. As for the outlook, operators said that Pakistan being sold to capacity, a substantial number of overseas tenders now being negotiated were likely to come to India. They included fresh orders for cornsacks and woolpacks for August 1963 to March 1964 shipment to Australia, about 11,000 bales of grain sacks and 9,000 bales of cotton packs for Port Sudan, a tender for 10,000 bales of heavy Cees for Cambodia on a barter basis and some B Twills for October-November delivery for Egypt. Besides, an Indian Government tender for 10 000 bales of B Twills for August was also in the offing. In the futures market, sentiment continued firm in sacking due to brisk covering, punctuated by realising on a large scale at higher levels. Hessian ruled about steady in sympathy with the trend in heavy goods. Sacking spot and futures closed with a comfortable margin after wide fluctuations. Hessian was marked just a shade higher after minor price variations.

Wednesday's quotations were as follows:

Raw Jute: A steady trend prevailed in the raw jute market in Calcutta and the agency stations during the past week following brisk buying by mills and mill agents against the August quota of 650,000 bales. Transactions took place mainly in selected grades for all positions at hardening prices. By midweek prices firmed up to the official floor level in Bottoms grade, where they hovered till the close. Better fibre was in good demand even at a premium. The State Trading Corporation and the jute co-operatives were out of the market. In the upcountry markets, daily average arrivals increased to around 60,000 maunds and the offtake to about 50,000 maunds. Arrivals may increase when the rural roads, now covered with slime, become cartable in about a fortnight. Harvesting in the low-lying, early-sown areas was completed. Farmers were in great need of money for transplanting paddy seedlings. But in view of the brisk offtake, there was no evidence of selling pressure. No difficulty was experienced in moving fibre from the agency stations to the Cossipore market. About 400 wagons, mostly containing selected grade new crop fibre, arrived in Cossipore during the week. The offtake was more than 350 wagons. Enough storage facilities were available in the area.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices Rs. A Qtl.	Rs. A Md.	T.S.D. Minimum Prices Rs. A Qtl.	Rs. A Md.

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the production of jute goods in July as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
8,126 tonnes	(7,998 tons)
2,42,02 thousand metres	(2,64.7 lakh yds.)
1,86.7 lakh nos.	
(b) Sacking	
41,804 tonnes	(41,143 tons)
8,93,60 thousand metres	(9,79.4 lakh yds.)
4,36.3 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
37,656 tonnes	(37,061 tons)
12,78.42 thousand metres	(13,96.1 lakh yds.)
(b) Sacking	
1,219 tonnes	(1,200 tons)
27,12 thousand metres	(29.6 lakh yds.)
3. Other Manufactures	
20,140 tonnes	(19,822 tons)
4. Total Production	
(All kinds)	
1,48,945 tonnes	(1,07,224 tons)

Summary

	(000 metres and (0,000 yds.) July '63	June '63	July '62
Hessian	15,20.44 (16,63)	13,70.72 (14,99)	13,45.19 (14,71)
Sacking	9,22,72 (10,09)	8,67.22 (9,48)	10,26.08 (11,22)
	(000 tonnes and tons)		
	July '63	June '63	July '62
Hessian	45.8 (45,1)	41.5 (40,9)	41.2 (40,5)
Sacking	43.0 (42,3)	40.0 (39,3)	47.7 (47,0)
Others	20.1 (19,8)	18.8 (18,5)	14.6 (14,3)
Grand Total	1,08.9 (1,07.2)	1,00.3 (98,7)	1,03.5 (1,01.8)
Hours Worked	216.0	192.0	208.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE U.K. JUTE MARKETS

FIBRE REMAINS WEAK

(FROM OUR DUNDEE CORRESPONDENT)

DURING the past three weeks, various alterations were made in the Pakistani raw jute prices. The minimum export prices of most grades were raised by £1 to £2 a ton, and shippers were put on a quota system. As from 1st August, freight rates between Pakistan and the U.K.-Continent were raised by 12½ percent, which is equal to an increase of £1 6s 9d a ton. However, this has made very little difference to the U.K. market, and sellers are still offering at well under Pakistani minimum export price levels.

Both buyers and sellers realise that a large crop of jute has to be marketed, and no matter what regulations the authorities bring into force, the law of supply and demand will have the last say. Some shippers are asking the official prices, and this is making the position here very irregular and a wide range of prices is quoted. However, the lowest quoted rates are not attracting spinners to any extent, and the business passing in raw jute for this time of year is very small. Most spinners are only securing their essential requirements and refuse to add to their stocks at present, because it is felt there is more chance of a price fall than a rise.

The lowest offers are at £122 10s for Mill Firsts, at £107 for Mill Lightnings, at £92 for Mill Hearts and at £78 10s for Grade Hearts, c.i.f. U.K., for August-September shipment. Grade Tossa-2/3 is available at £166 10s and Grade Tossa-4 at £105 10s. Outport Tossa-2/3 ranges from £95 10s and Outport Tossa-4 from £85 10s, September-October. Cuttings are steady at £56 for S.N.C. and at £47 for N.C. The Siam jute market has been quiet, but shippers are refusing to accept less than their quoted rates. Business in this type of fibre is limited. Grade A is named at £70 10s and grade B at £66 10s, delivered mill Dundee for November-December shipment

The Calcutta goods market became easier last week, after the recent firmer position. There was not much buying interest shown here at present and the position was quiet. Quotations were at 73s for 40in. 10oz. and at 54s 6d for 7½oz. a 100 yards f.o.b. Calcutta for August shipment, at 72s 9d and 54s 3d September and at 72s and 53s 6d October-December. B Twills were at 171s 6d for all shipment periods.

No final decision has been announced concerning the future of the mark-up on imported jute goods into the U.K., but it now appears that the new policy which has been decided at Cabinet level will be more favourable to the Dundee jute industry than was at first expected. Until full details are known, a certain amount of anxiety will exist in the trade.

THE PAKISTANI JUTE MARKETS

FIBRE OFFERED AT HEAVY DISCOUNTS

(FROM OUR DACCA CORRESPONDENT)

DURING the second fortnight of July, overseas buyers purchased 125,669 bales. The U.K. was the largest with 32,549 bales. Japan, always a cheap buyer, bought 11,604 bales. Spain bought 10,920 bales and Portugal 10,728 bales. The U.S.A. bought 9,825 bales which was mostly cuttings as was Argentina's purchase of 3,860 bales. France bought 8,075 bales and West Germany 6,452 bales. Belgium bought 6,425 bales and Holland 4,810 bales. The total figure is fairly large, but it would appear that this is deceptive. Reports indicate that most of the U.K.'s purchases are merely registrations of much earlier sales, and the figures for West Germany and Belgium represent the rate of buying more accurately.

Probably because of lack of interest overseas and fairly cheap prices here, sellers in Pakistan were reported to be offering at very heavily discounted prices. Export Lightnings were quoted at £77 f.o.b. sight. In the local market, there was some activity in cuttings, but very little else. As far as balers are concerned, the new quota system has not had any appreciable effect, and, in fact, in those areas, where one or two balers are buying freely, the reaction is one of surprise.

On the other hand, the authorities have asked the mills to support the market by maintaining a stock of 50 bales a loom throughout the season. This works out to approximately three months' stocks, and although mills do not always carry such heavy stocks, it will be no hardship for them to do so in the present weak market.

The loose jute market was rather confused. The absence of the non-Pakistani dealers has created rather distress conditions in the growing areas, but in the baling centres, this resulted in a shortage of imports which hardened prices somewhat. In other areas near the border, prices were stronger than they should be presumably because of smuggling. Generally, however, the loose jute sector was weak for want of buyers, but the growers appeared to have some holding power since imports from time to time fall off. One must assume that overseas buyers are slowly using up their stocks, and will have to show some interest sooner or later.

Although the condition of the crop gives no cause for complaint, the quality in most areas has been disappointing, and shows no signs of improvement. Shortly, the tossa crop may arrive.

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July 1963 as follows:

Description	31st July, 1963 000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	30th June, 1963 000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	Increase over (+) or decrease from (—) last month 000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	31st July, 1962 000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)
Hessian cloth and bag	10,51.76 (11.50)	32.5 (32.0)	10,31.73 (11.28)	32.4 (31.8)	+20.03 (+22)	+0.1 (+0.2)	8,37.23 (9.16)	26.1 (25.7)
Sacking cloth and bag	11,66.72 (12.76)	52.9 (52.1)	10,36.10 (11.33)	47.2 (46.5)	+1,30.62 (+1,43)	+5.7 (+5.6)	10,01.16 (10.95)	46.1 (45.3)
Others		18.6 (18.3)		16.6 (16.4)		+2.0 (+1.9)		14.1 (13.9)
Grand Total		1,04.0		96.2		+7.8		86.3
(000 Metric Tons/Tons)		(1,02.4)		(94.7)		(+7.7)		(84.9)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

Books

ECONOMICS OF SUGAR INDUSTRY

Marketing in an Underdeveloped Economy—the North Indian Sugar Industry. By Leon V. Hirsch. (Published by Prentice Hall Inc., Englewood, Cliffs, N.J., U.S.A. Pages 392.)

As a Ford Foundation scholar, Mr. Hirsch visited India to study and investigate the problems connected with the marketing of industrial products and concentrated his attention on the sugar industry. He visited different sugar mills in north India, and held discussions with millowners, leading wholesale dealers and retailers to find out details for his thesis.

The protection afforded by Indian Tariff Board in the 'thirties gave inducement to the expansion of the industry and the total consumption of sugar since then has shown a continuous rise, although with every upward fluctuation in price, there is a definite shift in consumers' preference for the less expensive *khandsari* and *gur*. The consumption of sugar in 1958-59 amounted to 2.1 million tons and the corresponding figures for *gur* and *khandsari* were 2.9 million tons and 300,000 tons. *Per capita* consumption of sugar doubled between 1933-34 and 1957-58, but it is still one of the lowest in the world.

The author maintains that contrary to general public opinion, which is misled by the price of sugar in export trade where it is frequently subsidised, the internal price of sugar in India is reasonable when compared with other domestic prices in the world. The sucrose content of the cane grown in this country is, however, very low, but the recovery rate of Indian sugar mills (80.4 percent in 1951) compares favourably with other countries.

A close study of production, price and Government interference in the postwar years shows that the industry is markedly responsive to economic stimuli (such as subsidy, reduction in excise duties or partial decontrol of prices). Complete price control, which restricts the profit margin immediately, leads to a reduction in output and a switchover to the production of *gur* or indigenous sugar which is usually left unaffected by State interference. A correct policy should suggest the regulation of price by building up a buffer stock and by curtailing speculative hoarding (through credit restrictions, etcetera), but sufficient incentive should be given to the producers to increase output.

The relationship between sugar mills and the selling agents and the activities of the sugar brokers have been discussed with factual evidence. The author has presented the subject lucidly The book rarely introduces economic jargon, and makes pleasant reading.

THE COMMUNIST ECONOMY

Communist Economy under Change. (Published for the Institute of Economic Affairs by Andre Deutsche Ltd. 105 Great Russell Street London W.C.1. Price 25s, pages 272).

This is a timely publication on the working of the socialist system in Russia, Poland and Yugoslavia. Dr. Margaret Miller who is an authority on the Russian economy, shows how the shadow of private enterprise prevails under Soviet centralised planning. An unofficial network of inter-enterprise relationship has been evolved by managers of individual plants with a view to assisting each other through personal influences. Such unofficial method of obtaining supply is often frowned upon and sometimes penalised, but it has not been possible to eradicate it altogether. It is strange but true that a considerable proportion of the supply of food and vegetables is still maintained by the private sector in Russia.

Russian economists like Professor Liberman of Kharkov University have criticised the undue emphasis given by Soviet planners on quantitative targets. They have stressed the need for measures to restore flexibility and individual incentive in the economy. The new regime has accepted these proposals to some extent.

In her article, Miss Piotrowicz shows how the imposition of the Russian type of centralised planning in Poland caused hardship, and distorted production and supply, and in Yugoslavia, the Russian system failed to work. Both countries later adopted varying degrees of decentralisation and abandoned attempts at forced collectivisation. In Yugoslavia, a decentralised socialist economy enjoys the official support of the Government. In Poland, however, a pragmatic approach has replaced dogmatism, and collectivisation, etcetera, are regarded as ultimate aims to be gradually realised in the long run. The book ends with an essay by Henry Smith on the deficiencies of the Marxist theory.

SMALL INDUSTRIES

Small Scale Industries of Mysore. (Published by the National Council of Applied Economic Research, New Delhi. Pages 215; price Rs. 12.50.)

The book embodies the report of the study conducted by the National Council of Applied Economic Research at the instance of the Government of Mysore on the small industries in the State. A mass of statistical data has been collected and analysed, and there are several tables and charts giving useful information. The book also gives valuable guidance. But one is struck by the lack of specialist approach to several problems facing small industries in Mysore and many things it says are rather commonplace. As for developing these industries, the study recommends an investment of Rs. 10.47 crores for the period 1961-71, which, according to its calculations, will result in an appreciable increase in employment opportunities. The study tends to get far too academic and is, therefore, of little practical value when it suggests production norms for various industries. For example, it is said that a unit producing screws should make at least 50.000 pieces a year for its operations to be economic. But the market for screws in the State is unlikely to absorb

FOR EVERY ESTABLISHMENT

LIFCO'S

BUSINESS, COMMERCE, INDUSTRY & OFFICE MANUAL

A practical guide to working of shops, offices, mills, factories, etc. of the public and private sectors

INTRODUCTION — OFFICE STRUCTURE — OFFICE EMPLOYEES — OFFICE SERVICES — OFFICE EQUIPMENT — LETTER-WRITER — OFFICE NOTE & PRECIS-WRITING — LETTERS OF COUNSEL — ENACTMENTS CONCERNING MANAGEMENTS AND LABOUR — HINTS ON STYLE, SPELLING, USAGE & PRONUNCIATION — READY RECKONER TABLES — CONVERSION TABLES — HINTS ON CENTRAL SALES TAX, INCOME-TAX & EXCISE DUTY — JUDICIAL DECISIONS — INDEX — ETC., ETC.

To every employer and employee the book will prove a mine of extraordinary information intelligently presented.

NALIN

Amsterdam, gateway to Europe—so easy to reach by KLM

Read why so many experienced travellers and shippers choose reliable KLM jet routes to Rome, Zurich, Frankfurt and Amsterdam with connecting flights to London, Glasgow, Paris, Hamburg, Brussels and 35 other cities in Europe

They know that KLM was the first European airline to fly to the Far East. They know that 'Golden Circle Service' is offered on KLM flights from the Far East to Europe via the South Asian routes and over the Pole. They know that KLM has had longer than any other airline to perfect its reliability—43 years. Read more KLM facts...

1. A KLM DC-8 jet leaves for Europe on Friday night from Calcutta, on Tuesday night from Delhi, and on Mondays, Wednesdays, Thursdays, Saturdays and Sundays from Karachi.

2. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay *any day of the week*, by providing connections at Karachi, Cairo, Beirut or Teheran (depending on the day of travel), with KLM flights to Europe.

3. KLM has its own fully air-conditioned resthouse at Karachi airport called 'Midway House'. It has spacious, comfortable rooms with shower baths and provides many facilities e.g. a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

4. After every 3000 hours in the air, a DC-8 jet is completely stripped. Even the seats come out. They go to the carpenters and upholsterers, the precision instruments to the electrical and radio workshop, and the engines to the testing tunnel.

5. Every KLM intercontinental flight carries a travel information case full of tourist information. Amongst other things, it contains a set of Tourist Information leaflets, covering more than 100 countries. These leaflets are also available at all KLM offices.

Service for young and old

6. Every KLM DC-8 jet has a luxuriously appointed lounge, located in First Class. It is a perfect place to meet your fellow travellers over free drinks.*

7. KLM prepares special food for passengers who request it as they book their seats KLM pursers are always briefed on these special diets before passengers come aboard.

8. KLM pampers babies—and their mothers. KLM supplies comfortable cribs that hook firmly to the overhead racks, leaving mother's lap free.

Higher discount for students

9. KLM offers registered students between *12 and 30 years*, travelling between India and Europe, a *discount of 30%* on the normal one way or round trip adult fares. Ask your travel agent or KLM for further details.

Amsterdam—offering so much for so little!

10. On your next trip to Europe, take advantage of 'Hilton Special'—a stay of two days and a night in the Hilton Hotel, Amsterdam; plus sightseeing tours covering a canal boat trip, visits to the Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond cutting factory and other places of tourist interest. And all this for just £ 6.1 sh.

11. When you route your journey via Amsterdam, you have the advantage of going in for tax-free shopping at the airport (including ShipSide cars), and availing of Holland Minitours at a cost of £ 1.8 sh. 7d. per person.

KLM serves 44 cities in Europe

12. KLM's network of services in Europe alone covers 44 key cities. London, Paris, Geneva, Hamburg, Munich, Vienna, Copenhagen, Stockholm and many other important business centres in Europe are served *daily* by KLM from Amsterdam.

13. Your Travel Agent will tell you more about the advantages of flying KLM via Amsterdam. Get in touch with him or contact the nearest KLM office. 7 Chowringhee Road, Calcutta; 9A Connaught Place, Delhi; Taj Mahal Hotel, Bombay.

more than one-fifth of that output. Where else would the unit concerned sell its surplus production?

U. N. STATISTICAL GUIDE

Statistical Yearbook, 1962. (Compiled by the Statistical Office of the United Nations and published by the United Nations, New York, U.S.A. Price $(U.S.) 10, pages 687.)

The *Statistical Yearbook* compiled by the United Nations enjoys an old reputation as an excellent work of reference. The latest edition incorporates many changes and improvements which greatly increase its value. The tables on balance of payments have been revised completely. Furthermore, those on private consumption expenditure and gross domestic capital formation have been replaced by new ones on expenditure of gross national product and the distribution of national income. It is the aim of the *Yearbook* tables, the compilers say, to present for various countries time series which are as nearly comparable internationally as the available statistics permit. Any lack of comparability in the data is indicated in notes appended to various sections. Over 160 countries or territories submitted statistics on the various sectors of their economies, such as on agriculture, forestry, mining and quarrying and industry. Much of these data have been intelligently processed and presented in tabular form. With the co-operation of various Governments, the statistical coverage of the *Yearbook* has been improved and its territorial scope widened.

SUGAR ANNUAL

Indian Sugar Annual Number 1963. Edited by J. S. Mehta. (Published by the Indian Sugar Mills Association, Calcutta. Price Rs. 3, pages 192.)

The *Indian Sugar Annual*, published on behalf of the Indian Sugar Mills Association, provides much authentic data and information relating to this important industry. Several contributions deal with the problems of cane development and the technological aspects of sugar production. The usual statistical section provides data relating to the production, consumption and export of sugar in India and abroad. The first article, which is adapted from the presidential address of Mr. M. N. Pittle at the last annual general meeting of the Indian Sugar Mills Association, makes the extraordinary point that popular impression to the contrary notwithstanding, India is one of the cheapest sugar producers in the world. The impression that Indian sugar is costly, he explains, results from the fact that the country's sugar exports have to be subsidised. This is not due to the high cost of Indian sugar, but because of the extremely low prices which prevail in the world's free markets. Most countries exporting sugar have to do the same, and Mr. Pittie furnishes some statistical information in support of his case.

ECONOMIC WEEKLY

The Economic Weekly Special Number. Edited by Sachin Chaudhuri. (Published by Asian New Age Publishers, Bombay. Price Rs. 3, pages 210.)

This special number, which conforms to the usual high standards of the *Economic Weekly*, aims at focussing public attention on the failure of the third five year plan now half way through its course. The first article points out the numerous structural defects in the plan which would have made a reordering of the priorities and programmes necessary anyhow; the conditions of the emergency following the Chinese attack last October have now made it inevitable. Yet defence and development have to proceed hand in hand if the country's inner strength is to be preserved, without which no defence effort will be really effective. There are several articles on other aspects of development also—on the rôle of incentives in industrialisation, the rate of saving in India, the production of nuclear power, and strategic shortfalls in industry. Some contributions discuss foreign trade strategy in the take-off period, rupee payment arrangements and the lack of a proper plan for promoting cotton textile exports.

A whole section is devoted to the political setting in which the Government is compelled to make many conflicting decisions on political and economic matters, and the test to which the democratic principle of civilian control over the armed forces has been put. A contributor interestingly narrates the manner in which India's external relations are being carried on, and explains the reason why India is not popular with some of her neighbours despite all the good intentions of her neutralist foreign policy. Good fare on the whole for the students of Indian affairs.

INCOME DIFFERENCES

Inter-District and Inter-State Income Differentials—1955-1956 (Occasional papers No. 6) (Published by the National Council of Applied Economic Research, New Delhi. Pages 33, price Rs. 3.)

The object of this paper is to present the findings emerging out of the study of district incomes for the year 1955-56. The main discovery is that there is considerable inequality in income distribution by districts and that backward districts, although present in every State, are concentrated by and large in three or four States. The value of such a study lies in identifying not only the districts which are relatively backward, but also in indicating the proportions in which the different sectors of the economy contribute to the national income.

JOB SECURITY

Job Security of Industrial Workers in India. (Monograph No. 6) (Published by the Employers Federation of India, Army and Navy Buildings, 148, Mahatma Gandhi Road, Bombay 1. Pages 48, price Rs. 2.)

In the present monograph, an attempt has been made to prove with the help of facts and figures that the factory worker in India is not liable to lose his job on the slightest pretext, but by comparison with his fellow workers in the more advanced countries, he much enjoys a higher degree of security. The legal provisions concerned are well documented and the case-law is also produced, making it a reliable and useful publication.

SOCIAL WELFARE

Plans and Prospects of Social Welfare in India. 1951-61. (Issued on behalf of the Planning Commission. Published by the Publications Division, Government of India, Delhi 6. Pages 254, price Rs. 6.50.)

This is a companion piece to the two earlier publications, *Social Welfare in India* and *Social Legislation*, issued on behalf of the Planning Commission. The book reviews the progress of social welfare programmes during the first decade of planning in the country, and indicates the direction in which these programmes are to be carried forward during the third plan. It gives a basic insight into the welfare needs of the Indian society, discusses the relevant problems faced by official and non-official agencies and provides suggestions for dealing with those problems on the basis of actual experience. A proper evaluation of the progress achieved with the large amount of funds spent on these programmes would have made this publication more useful.

ECONOMIC YEARBOOK

Indian Economics Year Book. 1963. By Raj Narayan Gupta. (Published by Kitab Mahal (Wholesale Division) Private Ltd, 28, Faiz Bazar, Delhi. Pages 356, price Rs. 3.)

Mr. Gupta has given a mass of information on every aspect of the Indian economy, but a critical approach is lacking. It is not discussed whether a certain programme (family planning or aid to small industry) has yielded the desired results, and what was lacking in obtaining the ends. The recital of important subjects like foreign aid and the functioning of the Life Insurance Corporation is pedestrian.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES

Notice to Shareholders

NOTICE is hereby given that the next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Friday, the 27th September, 1963, at 4 P.M. for the following purposes :—

1. To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1963.
2. To declare dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following :—

(a) **As Ordinary Resolution**

"Resolved that Rai Bahadur Moongtulal Tapuriah, a Director of the Company, retiring by rotation, whose age is over sixty-five years, be and is hereby reappointed a Director of the Company and that the age limit prescribed under section 280 of the Companies Act 1956 shall not apply to him."

(b) **As Special Resolution :**

Resolved that the Memorandum of Association of the Company be amended by adding the following clause as clause 7 (a) after clause (7) of the object Clause 7 (a)

To carry on, in all its branches the business of manufacturers, importers and exporters of and dealers in Caustic Soda, Chlorine Gas and other Chemicals including heavy chemicals and all products analogues to or connected therewith and to purchase and vend all materials raw, processed or otherwise and all articles in any way connected with the aforesaid business.

Dividends, if declared, will be paid to Registered Shareholders only.

The Share Transfer Register of the Company will be closed from the 16th September, 1963 to 27th September, 1963, both days inclusive.

By Order of the Board,

RAMDUTT RAMKISSENDASS.
Managing Agents.

9, Brabourne Road,
Calcutta,
The 8th August, 1963.

A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member.

Explanatory Statements in connection with the special business will be sent to the individual shareholders.

INDIAN ALUMINIUM COMPANY, LIMITED

31, CHOWRINGHEE ROAD,
CALCUTTA-16.

REVIVING THE CAPITAL MARKET CORPSE

THE capital market in India has been in poor shape ever since the Chinese attack in October last year. The outbreak of armed hostilities started the slump. But although the fighting ended not long afterwards, the market was hit by the stiff Central Budget for 1963-64 before it had time to recover. The super profits tax, in particular, shook investment confidence although the later amendments softened its adverse effects a little. The combined effect of all these factors is shown by the fact that the index for ordinary shares has declined from 186.7 to 160.0 (base year 1952-53 equals 100) over the past year. Rather late in the day, New Delhi has begun to show signs that it is getting worried about the decline. Until recently, it took the complacent view that the fall was due only to speculation.

At the F.I.C.C.I. seminar on the problem of private and public-sector undertakings, held in New Delhi recently, the decline in investment confidence was debated at great length. Although Government spokesmen and representatives of trade and industry analysed the causes of the slump differently, they did generally agree that speedy action to restore confidence was necessary. The response to new issues has been poor in recent months. In fact, large proportions of several new issues have been left in the hands of the underwriters. It is noteworthy that for the greater part of 1962-63, the new issue market showed a fair measure of buoyancy. This is indicated by the fact that the August issue of *Company News and Notes*, published by the Department of Company Law Administration, draws several encouraging conclusions from a study of capital issues based on the prospectuses issued by companies during 1962-63. Firstly, entrepreneurs continued to favour raising capital through ordinary rather than preference shares. Secondly, subscriptions to shares by foreign collaborators rose sharply in 1962-63 compared with 1961-62, although the loans they gave were smaller. Thirdly, although the share subscriptions of domestic financial institutions declined, the decline was partly offset by an increase in the financial assistance given in the form of long-term loans to industry. Fourthly, the share capital covered a substantial part of all project costs. Fifthly, there was a steady fall in the incidence of underwriting commission and brokerage in relation to the cost of financing the projects; this was because several issues were not underwritten at all, in view of the strength of the capital market.

The question arises: why have these encouraging trends suddenly vanished after the 1963-64 Budget? There is no doubt that the progress of some new companies has been hindered by mismanagement and malpractices, as was recently pointed out by Mr. B. K. Kaul, chairman of the Life Insurance Corporation. His observations, however, might have been taken more seriously if he had indicated broadly which companies he had in mind. The number of such cases has not been exceptionally large, so mismanagement and malpractices cannot constitute an adequate explanation for the stagnation in the capital market. The stagnation is nevertheless extremely disturbing, considering that the lack of confidence in new shares has affected the prospects for foreign collaboration. Botanium Ltd has just had to abandon its project for manufacturing titanium dioxide because the foreign collaborator backed out of the scheme due to the levy of the super profits tax. In its latest report, the Indian Investment Centre has pointed to the decline in the number of foreign collaboration arrangements in recent months.

The Government's effort to revitalise the new issue market has made little impression, since New Delhi is reluctant to face up to the real cause of the deterioration in confidence. To begin with, the preoccupation with the new issue market alone is unrealistic, since the health of new shares is closely interlinked with the health of the stock market as a whole. The Government has suggested that financing institutions like the Life Insurance Corporation, the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India should take greater interest in underwriting new issues. It would, however, be wrong to push the Life Insurance Corporation into buying or selling shares; the interests of its policyholders first have to be fully safeguarded, which means that the investment policy cannot be guided by criteria other than those of security, yield and growth prospects. The impression that the L.I.C. has already blocked substantial sums in new projects, which have failed to progress according to schedule, reinforces the need for caution. In the case of the I.F.C. and the I.C.I.C.I. too, it seems that money cannot be "turned over" fast enough because it is blocked in new shares, so they have been assured of additional financial facilities from the Government. But more liberal underwriting will do little to restore confidence. Perhaps the best way the financial institutions can help industry now is by providing bigger loans rather than risk capital.

If the problems of the capital market are to be tackled seriously, the first thing to realise is that new shares and old shares always tend to move together. It is not possible to create a demand for new shares while the old ones continue to stagnate. Confidence in both has suffered for the same reasons—heavier taxation, especially the super profits tax, combined with a mood of economic despair. Investors realise that the Government requires more money for development and defence. But they are convinced that fiscal policy can be adjusted in such a way that it does the economy less harm. It is, for instance, evident now that to raise the corporation tax would have been much better than to impose the super profits tax. There is no justification for the falsehood that foreign investors have reconciled themselves to the super profits tax in its present form; they are under no obligation to invest funds in this country and it is unlikely that they will do so on any large scale.

Investors are not interested in buying shares because the outlook for corporate profits and dividends is discouraging. The latest reports of leading companies show that, in spite of bigger turnover and greater operational efficiency, after-tax profits have dropped sharply due to heavier taxation. As a result, most companies have found it difficult even to maintain their ordinary dividends.

Although present prices are low, the dividend yields of several blue chips are unattractive. In many cases, ordinary shares have begun to yield less than other types of investments. In fact, market rates of interest have risen above average rates of dividends. Yet, in the midst of a slump like the present one, the importance of dividend yields is much greater than it is normally, since investors may be compelled to hold the shares for a long time. The growth prospects of equity shares have suffered, not only because growth value is influenced by the dividend outlook but also because the arbitrary control over the issue of rights and bonus shares has weakened investors' morale. In the circumstances, confidence will not revive unless the fiscal and economic policies of the Government are modified so as to make equity investment in general more attractive.

STEEL AMBITIONS

THERE can be no doubt that India will need far more steel by the end of the fourth plan period in 1970-71 than the capacity now existing or in construction can provide. Two estimates of demand were already available, both of which indicated that the aggregate requirements in 1970-71 would be around 18 million ingot tons. A third set of estimates has now been prepared by the National Council of Applied Economic Research, which does little more than to ditto the earlier findings. One is, in fact, tempted to ask whether this further exercise was at all necessary. It must have been obvious from the start that it is impossible to forecast the demand for any basic commodity in India except by working backwards from investment and industrial targets prescribed by the planners. If the studies are based on the same set of targets, the broad conclusions cannot but be the same, which makes even corroboration (if that was, indeed, the purpose of calling upon the N.C.A.E.R. to carry out a reappraisal of demand) of doubtful value.

Although all three studies agree on the figure of 18 million tons as the effective demand in 1970-71, the forecast is nothing more than a working hypothesis. It is an approximation based on the premise that industrial and investment targets assumed for purposes of calculation will in fact be attained. This hope is belied by the current shortfalls in important steel-consuming sectors. Since further industrial growth during the fourth plan depends very largely on the achievements at the end of the third plan, blithe assumptions of an increase of 100 percent in industrial production between 1966 and 1971 are unrealistic, to say the least. After all, one can build only on a base which actually exists and not on paper targets that remain unrealised. The relevance of this point is readily illustrated by reference to a scarce resource like foreign exchange. Unless steel is actually available from domestic production in the quantities promised by the third plan targets, the gap in demand will result in a curtailment of construction and manufacturing, which will delay the realisation of the levels of output and economic activity being assumed for the fourth plan.

The alternative of imports is unlikely to offer a way out because neither export prospects nor the outlook for foreign aid warrant assuming any substantial relief from balance of payments difficulties. A large fourth plan must, therefore, have a proportionately smaller import content than the present. If so, the progress actually achieved in import substitution will be the crucial factor determining the rate of progress beyond 1965-66. Any rate of growth the planners may dream up will have no practical relevance in the face of this constraint. It follows, therefore, that an exercise in "looking ahead" (the N.C.A.E.R.'s favourite *cliché* of the moment) must start with an evaluation of the economy's physical potential for growth in terms of resources, rather than the quite pointless rehashing of data which it is passing off as an independent reappraisal of demand.

Planning from the demand end is by itself quite unrewarding, a point which the steering group on steel seems to have missed in proposing a capacity target of 21 million tons to yield an actual production of 18 million tons by the end of the fourth plan. Whatever the theoretical demand estimate, the relevant consideration must be the resources that can be set aside for steel development. At the meeting held two weeks ago in New Delhi, the investment required for steel development was estimated at over Rs. 2,200 crores, which works out to about one-eighth of the total investment—public and private—visualised for the fourth plan. This will constitute a far higher proportion than in the second plan, and of course much more than in the third. If that is not sufficiently daunting, one has only to take a look at the foreign exchange component of this investment—something of the order of Rs. 900 crores to Rs. 1,000 crores—to realise the absurdity of the programme proposed by the steering group.

The Minister for Steel and Heavy Industry, Mr. C. Subramaniam, has admitted that foreign aid or even commerical credits are unlikely to be available on anything like this scale. As he delicately put it in his address at the inauguration of Rourkela's expansion programme, he would not wish to throw such a large burden on friendly nations. He emphasised the need, therefore, to explore every possibility of reducing import needs for steel development. The possibilities have to be explored in any case, whatever the rate of growth adopted. Experience on Bokaro has shown that vague hopes of aid provide an insecure basis for launching development projects since the competitive urge to endow India with steel plants has all but disappeared. In concrete terms, the task is to assess how much can be done within the country and how soon. Here again it will be necessary to take a long, hard look at what may really be expected from projects like the Ranchi engineering complex rather than the promises based on paper plans.

Mr. Subramaniam has also talked of enlisting the help of private industry for equipment manufacture. The idea, at first sight, seems sound because there is no doubt that considerable fabricating capacity now exists in Indian heavy engineering units. But the installed capacity of the units is of little relevance while there are serious difficulties in using it fully due to the shortage of foreign exchange for importing components and raw materials. In many instances, domestic manufacture will suffer from the same import constraint that is forcing Mr. Subramaniam to rely upon it for his steel development programme. It is, of course, possible to argue that the available foreign exchange will be so used that the domestic manufacture of steel plant equipment will proceed unhindered. But to make any such assumption is to fly in the face of facts. In recent years, the Indian economy has had to put up with a larger import bill than was really necessary if domestic capacity could be more fully worked, but which in turn depended on the availability of either "free" foreign exchange or non-project aid.

India's Resources
are Precious
WASTE NOT,
WANT NOT

THE STRENGTH OF STERLING

THE gold and currency reserve of the sterling area increased by £7 million in July, to £976 million. As the increase was small, and as the reserve would have increased more in each of the three preceding months if special items were excluded, the movement in July may seem unworthy of comment. But the announcement during the month of the measures to strengthen the dollar might have weakened sterling and reduced the reserve; and normally around mid-year sterling enters a period of seasonal weakness. In the third quarter of this year, exceptionally, the attention of the financial world is focussed not on sterling but on the dollar. London is confident that the stability of sterling, which has been an unobtrusive but significant feature of the exchange markets in recent weeks, will be maintained through the difficult season. This confidence is the more remarkable as Britain's economic expansion, which sceptics believed a few months ago would weaken sterling, is now gaining momentum.

In international finance troubles seldom come singly. If economic expansion caused deterioration of the U.K.'s balance of payments, the pound would suffer not only from this cause but also from withdrawal of foreign funds invested in Britain. Alternatively, foreign confidence might be shaken by a change of Government in Britain. A recent assertion from the Conservative benches in the House of Commons that a socialist Government would inevitably devalue the pound was both inaccurate and foolish, and it was, of course, unequivocally denied by Mr. James Callaghan, who would presumably be Chancellor of the Exchequer in a socialist Government. Nevertheless, politics will not be entirely excluded from the world's assesment of sterling. Britons must blame themselves, mainly, for the talk of devaluation that caused serious weakness in the pound in the first quarter of this year. Their uninhibited discussion of the probable need to devalue the currency to achieve the increase in exports that the programme of economic expansion would require was naturally noticed abroad. Talk of this kind has subsided, although some people whisper that the wide gap between exports and imports that resulted from the last hapless venture in expansion developed mainly in the second year and that a similar pattern of events would indicate trouble next year. But the pattern is evidently not similar: the upsurge of consumer demand that characterised the expansion of 1958-60 has not been repeated in the present period, and there is a basic vitality in Britain's export trade now that was lacking in the former period

Information on the trade of the overseas sterling countries is collected more slowly, and the figures published by the U.K. Board of Trade in August relate to the first quarter of this year; but it is known that the favourable trend that developed then continued in the second quarter. The value of exports from these countries, which increased only slightly last year, was approximately 5 percent higher in the first quarter of this year than in the first quarter of last year. A comparable increase in imports of approximately 6½ percent (attributed principally to Australia) seems at first sight to indicate that the balance of payments of the overseas sterling area deteriorated. But in fact the strong upward trend of the area's imports in the second half of last year was checked, and slightly reversed, on a seasonally adjusted basis, in the first quarter of this year. The trade of these countries is a very important factor in the position of sterling, and it seems to be a decidedly favourable factor this year.

A potentially more important external influence (external from the U.K.'s point of view) is the policy of the United States. There is an evident discrepancy between American and non-American estimates of the effects of the new policy. American estimates that the rise in short-term money rates, the tax on foreign securities and the reductions in spending abroad, will reduce the U.S. external deficit from approximately $3,000 million to approximately $1,000 million, annual rate, within 18 months imply a much more violent upheaval in international finance than the foreign exchange markets have yet anticipated. The report of the Brookings Institution has made Americans aware of the risks involved, but there is no assurance that these risks will be averted in the comparatively short time available for fundamental changes in the world's financial structure.

The suggestion in the Brookings report that the dollar area and the sterling area might be, in effect, merged into a single *bloc* should be considered against this sombre background. London, it must be said, regards it with suspicion. Postwar American thinking has been generally hostile to the sterling area, and highly-placed Americans have said publicly that the pound is intrinsically inferior to the dollar. London believes that a merged *bloc* would be American-dominated and would gradually become an extended dollar *bloc*. By economising reserves and reducing external liabilities, it would stabilise both currencies, and with Scandinavian and Asian and other areas adhering, it could achieve monetary stability over a large part of the world. But it would arouse in millions of minds the suspicion of attempted "Anglo-Saxon dominance" that is associated particularly with President de Gaulle. Surely, if the spirit is willing, the International Monetary Fund can achieve more extensive stability with much less political risk. This monetary super-*bloc* will probably never be established. But close collaboration between the United States and the U.K. in monetary affairs is already developing—primarily, it seems, because neither country feels fully competent to manage a reserve currency without the co-operation of the other.

Current News and Comment

Rôle of Indian Investment Centre

The flow of foreign private capital depends as much on the conditions in capital-exporting countries as on the investment climate in capital-receiving countries. The Indian Investment Centre, which is still in its infancy, has been doing useful work in bringing about a better understanding among foreign investors of the investment opportunities in India. The chairman of the Centre, Mr. G. L. Mehta, points out in his latest annual statement that of the total number of enquiries assisted by the I.I.C. in the first two years of its operations (March 1961 to March 1963), 147 proposals by Indian and foreign entrepreneurs for collaboration in joint industrial ventures in India, have either been concluded or are being negotiated. Of these, 36 concluded agreements have received the Government of India's approval; 18 others have been concluded and submitted for approval, and 93 are at present in various stages of negotiation between the Indian and foreign parties. In the 36 joint ventures which have been concluded, 15 are from firms in the U.S.A., six from the U.K., five from Japan, three each from France and West Germany, two from Canada and one each from Belgium and Switzerland. The total capital outlay required for setting up these projects is estimated at Rs. 35.5 crores ($74.5 million) including local and foreign exchange requirements. Foreign equity investment amounts to about Rs. 2.5 crores ($5.3 million). The comparable estimates for the 18 projects for which agreements are awaiting the Government's approval are Rs. 7.11 crores ($15 million) for capital outlay and Rs. 93 lakhs ($2 million) for foreign equity investment.

During 1962-63, the Centre received 1,050 enquiries of various kinds from Indian and foreign entrepreneurs, compared with about 1,300 received in the preceding year. Enquiries from Indian entrepreneurs declined from 1,100 to 650, while those from foreigners increased from 170 to 400. Mr. Mehta attributed the fall in the number of enquiries to the unfavourable investment climate as a result of the uncertainties created by the Chinese aggression and the super profits tax. Besides, with the target capacity for various industries scheduled for development in the third plan almost fully licensed, the number of new licences issued during the year was fewer. The Centre received during the year 50 project proposals from firms which had obtained industrial licences. Of these, 28 project proposals were processed and sent to the Centre's New York office and representatives of the Centre in other capital exporting countries, who will seek collaborators for these projects covering a wide range of products.

Mr. Mehta's observations concerning the general attitude of foreign investors are significant. Foreign investors, he says, appreciate the need for planning in countries where resources are scarce. They realise that joint ventures based on continuing partnership between them and the nationals of the developing country are the most constructive form of new enterprise, so that they get equal treatment and earn the goodwill of the people whom they wish to serve. Foreign investors also recognise that they should impart modern technology and skills to the technical and managerial personnel in the developing countries to ensure the success of the new enterprises. Moreover, the governments of some capital-exporting countries have taken positive steps to reorient the attitude of investors in their countries and have offered fiscal incentives to encourage private investment in developing countries.

The U.K. has, for historical reasons, the largest percentage of foreign business investments in India and the interest of British entrepreneurs in the Indian market remains well sustained. British investors seem to think that the vast and expanding Indian market cannot be held by exports, but can only be cultivated through appropriate investments. The U.S.A. has been showing increasing awareness of the importance of India as a growing potential market. The U.S. Government has been actively promoting American private investment in developing countries. Some of the American firms, says Mr. Mehta, are critical of the Indian Government's fiscal policy, dilatory procedures and policies concerning licensing, capital structure and payment of royalties. The super profits tax is stated to have caused considerable concern among American investors.

In West Germany, the Government has set up a corporation for economic co-operation to assist medium and small entrepreneurs to invest in developing countries. The Government is also considering the question of an "investment guarantee" agreement between West Germany and India. Until recently, German industrial firms were inclined more to offer technical collaboration than to make investments. But they are now showing more interest in the latter proposition. French firms prefer to offer technical collaboration rather than to participate financially in joint ventures in India. This is because they like to invest in their own country, and only a few French firms have so far shown interest in Indian joint ventures. In other countries of western Europe, interest in India is relatively small which is due partly to lack of sufficient knowledge of conditions in this country.

Having regard to the fact that over 1,300 collaboration agreements during the past decade have received Government approval and hundreds of joint ventures are successfully operating and earning reasonably handsome profits, India has proved to be a good business risk for foreign investment. But the climate for international investment is sensitive and is influenced by a variety of factors. The chairman of the Investment Centre has rightly emphasised that the climate in the capital receiving countries should be made suitable for attracting private capital and techniques from abroad. As it is, the Indian capital market is virtually paralysed.

The political uncertainty following the Chinese aggression and the massive build-up of the country's troops along the northern borders of India and the Government's fiscal policy, especially the super profits tax, have led to a crisis of confidence and shares of many first-rate new companies are quoted around or below par. Indications are not lacking that the Government is seized of the situation and that it is anxious to tone up the investment market. But it seems unlikely that the market will be able to improve materially until India and China agree to settle the border dispute through peaceful means. It is difficult to assess quantitatively the Investment Centre's rôle by the number of joint ventures actually brought into being. The main function of the Centre is to generate interest among foreign firms and corporations on the basis of specific investment opportunities in India. It plays a significant rôle by providing authentic and up-to-date information to foreign firms on various aspects bearing on investment in this country. The Centre's programme of industrial surveys and feasibility studies on specific industries also should yield good results.

Law to Enforce Textile Standards

The Textiles Committee Bill, unanimously passed by the Lok Sabha recently, marks the beginning of a systematic effort to create quality consciousness in the textile industry and among consumers in the country. The need for quality control has long been recognised, but measures taken in the past were of a halting nature and had only limited effect. The new Law provides for the setting up of a textile committee with large statutory powers to ensure the production of standard qualities of textile goods—whether made wholly or partly of cotton, wool, silk, artificial silk or fibre—for internal marketing and export. The committee will evolve standard varieties of textiles and have them registered under suitable marks according to the Trade and Merchandise Marks Act, 1958. The Act also provides for the inspection of textiles and textile machinery at any stage of manufacture and also while in use at mill heads. It will undertake, assist and encourage scientific, technical and economic research in textile and textile machinery manufacturing industries.

Research and design would be an integral part of the activities of the committee which will be a high-powered body comprising representatives of the industry and labour as also technologists and economists. The Act empowers the Government to prohibit export or sale of any textiles or textile machinery which does not conform to the standards laid down by the committee. Any person contravening the order is punishable with imprisonment or fine or both. The committee's head office will be in Bombay with a chairman appointed by the Central Government. The Textile Commissioner will be the vice-chairman. The committee will operate a fund to be called the Textile Fund and will have financial assistance from the centre.

Replying to the debate on the Textiles Committee Bill, the Minister for International Trade, Mr. Manubhai Shah, stressed the all-too-obvious need to modernise and rehabilitate the industry which is essential for the production of quality fabrics. He urged the industry to give up its prejudices against the use of indigenous textile machinery which will now be subjected to stringent quality control. He also asked the industry not to concentrate on the production of grey cloth, but to try to sell bleached and finished cloth abroad. He saw a considerable scope for the sale of finished cloth to the rapidly developing ready-made garments industry abroad. The Minister for International Trade, however, conceded that previous export projections ranging between 800 million yards and 1,000 million yards were impracticable in the conditions now obtaining in the international market and that 500 million to 600 million yards was perhaps about all that India could hope to export.

The legislation for ensuring quality of textiles and textile machinery is welcome. The mill industry, however, is sceptical about the utility and the success of the Textiles Committee Act, unless production in the expanding decentralised sector is also brought under proper control. The mill industry also argues that the production of quality fabrics depends on its rehabilitation and modernisation which involves an investment far beyond the capacity of the mills. Oddly enough, the industry is seeking an upward revision of cloth prices when the need is to hold the price-line and strengthen the industry's competitive position in overseas markets. Considering that cloth prices have been pegged down at levels which prevailed in January 1961 whereas there has been an all-round increase in manufacturing costs since then, the industry's case for revision of cloth prices seems unassailable. But the view is widely shared that the system of voluntary price stamping has

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices

Need facts about importing from Australia?

Alert, progressive importers have much to gain from Australia's rapidly expanding export potential. The Bank of New South Wales, Australia's first and largest commercial bank, is uniquely equipped to provide vital up-to-date information on importing from or investment in this fast-developing Continent.

E. L. Carthew, Chief Manager.

been reduced to a mere farce and that the industry has in effect been obtaining higher prices through minor alterations in the texture of fabrics.

Exporting to Japan

The World Trade Department of the Indian Chamber of Commerce has recently published an informative booklet on export promotion in Japan entitled *Opportunities in Japan*. Apart from discussing the official policy on export promotion, it surveys the export prospects of major Indian commodities which are usually bought by Japan. During 1953-61, Japan attained the biggest rate of growth in both industrial production and exports—243 percent in the former and 262 percent in the latter. The country's remarkable success in export promotion, the booklet says, is due to a combination of several factors. Apart from hard work and the determined efforts made by Japanese business men, various incentives, both direct and indirect, have been given to them to promote exports. Among the incentives, the more important are income tax relief, accelerated depreciation, long and short-term credit facilities, concessional rates of interest, export risks insurance, market research, inspection facilities, supply of raw materials from abroad with negligible import duty, concessions in railway freight, low shipping freight rates and the absence of export duty. The remission of income tax on export earnings, the booklet points out, has been a powerful incentive. Trading and manufacturing companies are allowed to deduct from their taxable income 1 percent and 3 percent of the proceeds from export and sale contracts, respectively, and the maximum amount deductible in either case is not to exceed 80 percent of the income arising from exports. A deduction of up to 50 percent of the proceeds is also allowed on the export of know-how. The Import and Export Policy Committee, it will be recalled, recommended somewhat similar incentives for exporters in India.

The Export-Import Bank in Japan plays a vital rôle by offering loans for the export of machinery and technical know-how, for the import of essential raw materials and for investment in overseas enterprises and joint ventures. It also gives credits on specific exports or imports or overseas investments supported by specific contracts between the Japanese and foreign interests concerned. Furthermore, the Japan External Trade Organisation, J.E.T.R.O., actively promotes exports in a number of ways. It is an official body working under the Ministry of International Trade, but enjoys a god deal of autonomy in carrying out its activities. J.E.T.R.O. maintains branches in Japan and research centres in other parts of the world; conducts intensive market research; collects commodity samples; assists in commercial transactions; explores new markets; promotes the export of new products; gives wide publicity to Japanese goods through films and other media; and advises small manufacturers and dealers to enter the export trade. The improvement in the quality of manufactures, the booklet argues, has mainly led to the rise in exports. American and European industrialists are reported to be fully satisfied with Japanese products and skill.

India should, therefore, emulate the Japanese example in increasing exports of her products. There is great scope for raising sales of Indian commodities to that country, the booklet says. Japan's total annual imports are of the order of Rs. 2,800 crores, but India's share is only about Rs 50 crores or nearly 2 percent. The study points out that, apart from traditional items like raw cotton and minerals, an attempt must be made to increase exports of Indian tea to Japan.

Investing U.K. Funds in Commonwealth

The current issue of *Barclays Bank D.C.O. Overseas Review* stresses in its editorial that, apart from any strictly materialistic considerations, there is the overwhelmingly important point that Britain is inevitably faced with the duty of playing a leading part in the development of the Commonwealth. Most members of the Commonwealth, it goes on, must be classed as underdeveloped and even the more developed, such as Australia, are still not able to generate a high enough level of domestic capital formation to achieve the maximum rate of economic growth.

Only Britain is a net exporter of long-term capital within the Commonwealth. But she cannot meet all the investment needs; neither is she capable of meeting more than a fraction of the requirements of the underdeveloped Commonwealth countries of grants and loans in the Government sector. The editorial draws the conclusion that investment and aid from other sources should be encouraged. But for the private sector, the U. K. share of investment in the less developed countries is likely to remain preponderant. The reason, thinks the *Review*, is that the private investor tends to shun the unknown, but is always alert for opportunities with which he already has economic and political links. Only the British investor is likely to be interested in direct investment in many of the underdeveloped parts of the Commonwealth; even in the larger and more advanced countries, he starts with advantages over others, of which the greatest is likely to be that he has a much wider knowledge and longer experience of the economic background. Many of the industrial schemes in Commonwealth countries are initiated by, or in co-operation with, British companies already established in those countries, as they reinvest a large share of their profits by expanding their business or embarking on new ventures. Investment in this way brings with it not only technical skill, but also a realistic approach.

All the underdeveloped Commonwealth countries, adds the *Overseas Review*, are anxious to attract foreign investment; the new Capital Investments Bill in Ghana, for instance, shows that country to be no exception. Nearly all offer tax incentives, and various reassurances for the future. There seems to be a strong case, thinks the *Overseas Review*, for a general Commonwealth agreement introducing greater uniformity on this question. The safeguards for the investor would be further strengthened by the mere fact that they were part of a general agreement, and the flow of British investment capital would be in this way stimulated. On the other hand, it would also be of benefit, particularly to the recipient countries, if competition in the offering of incentives ceased; there is often a danger that these may be too far-reaching, and divert investment to uneconomic schemes.

Categories for U.K. Cotton Imports

The President of the U.K. Board of Trade has agreed that a "reasonable measure of categorisation" is desirable for low-priced cotton imports into Britain. When this was disclosed in a written reply to a question in the House of Commons, it was welcomed by Lancashire members as a modest response to pressure from the industry and from them. The division of imports into separate categories will, for example, mean that the British market cannot in any one year be faced with a flood of cheap shirts from Hongkong, making up the whole of the Hongkong quota. The quota from each overseas country will have to be divided in reasonable proportions for each category. But the answer of the President of the Board of Trade suggests that the latter has still not accepted the idea of complete control. He has not mentioned any specific action to be taken by the Board, but has welcomed "the expressed intention of the Indian cotton textile industry to enter into early discussions with their British opposite numbers about the categorisation of imports." Officials from both Governments are expected to be present at these talks.

World Bank Loans

World Bank loans during the year ended June 1963 totalled $448.7 million, compared with $882.3 million in the previous year. These went to 19 countries including India, and brought the gross total of the Bank's loan commitments up to 30th June, 1963, to $7,121.5 million. Disbursements during the year amounted to $620.4 million, compared with $485.4 million in the preceding year. Cumulative disbursements up to 30th June, 1963, were $5,425.5 million. These figures show that the World Bank has become a major source of international capital for developing countries.

The Bank's gross income during the year ended 30th June, 1963, was $203.9 million excluding loan

CARBORUNDUM UNIVERSAL ABRASIVES

a change in marketing arrangements

The Carborundum Universal Branch Office at Calcutta is now functioning for the direct marketing of their well-known range of Coated and Bonded Abrasives.

All Inquiries (both Trade and Consumer) may please be addressed to:

Carborundum Universal Ltd.,
Armenian College Building (Second Floor),
56-D, Free School Street, Calcutta-16
Telegrams: "CUMICAL, CALCUTTA"

Territories Covered:

For Grinding Wheels and other Bonded Abrasives: West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Eastern half of Madhya Pradesh.

For Coated Abrasives: West Bengal, Bihar, Assam Orissa, and Part of Madhya Pradesh.

Carborundum Universal are grateful to M/s. William Jacks & Co., Ltd., Calcutta, for their valuable services all these years in the distribution of their abrasive products.

CARBORUNDUM UNIVERSAL LTD.
Head Office: 52/53, Jehangir Street, Madras-1
Telephone: 29141 (8 lines)

Permanent Representative Available at Bombay, Bangalore, Asansol.

J. D. JONES & CO. LTD.

PACKINGS: Suitable for Steam Boilers, Glands, Pumps, Hydraulic etc. made from genuine Jute, Hemp, Flax, Cotton, Asbestos and Metallic Wire.
'Special Acid and Alkali Resisting Packing Manufactured to Individual Requirement'.

GRAPHITE: Suitable for Paint, Lubrication, Battery Manufacturers, Foundries etc., Range upto 96.98% carbon guaranteed, flakes.

FOUNDRY REQUISITES: Black Lead, Plumbago/Graphite, Graphite Flake, Moulders Blacking, Casting Powder, Fire Clay, Bentonite, Core Oil, Core Gum, Indian Ganister, Soapstone, Case Hardening Compound, Carburising Salts, Iron Cement, Lime-stone Lumps, Foundry Nails, Chaplets, Coal Powder etc.

INSULATIONS: Guaranteed 'BLUECROSS' 85% Magnesia Asbestos Boiler Covering, Hard Setting Priming, Insulation Cork Boards, Tubular Steam Pipe Lagging, etc., etc.
'Lagging Jobs Also Undertaken'

MINERALS: Ready stock of Barytes Powder, Limestone Powder, Dolomite Powder, Slate Powder, Whiting Powder, Red & Yellow Ochres, Red Oxide, China Clay Powder, Gypsum Powder etc.
Outside Grinding Jobs also undertaken

ASBESTOS: Packings, Jointings, Mill Boards, Long and Short Fibres, Asbestos Indurated Cock Fibres, Powder and Fluff etc., etc.

PRO JDJ-8

Formed in 1937, S&L are today the leading fabricators of steel tubes in India. Industry all over the country recognises S&L's ability to supply pipework installations for all types of conditions, from the initial design stages to erection and commissioning.

S&L were the pioneers in India of the standard pre-fabricated tubular roofing structure, and are still the major producers of these economical buildings, which are in great demand for use as offices, stores, workshops, schools, hospitals etc. etc..

S&L **STEWARTS AND LLOYDS OF INDIA, PRIVATE LIMITED**

commissions, compared with $188.3 million in the previous year. Expenses which included $103.7 million for interest on bank borowings and other financial expenses totalled $121.2 million, compared with $118 million in the previous year. The Bank added $114 million—$82.7 million of net earnings and $31.3 million of loan commissions—to its reserves during the year ended 30th June, 1963. On that date, its supplemental reserve totalled $558.7 million and special reserve $254.9 million.

CORRESPONDENCE

SHORTAGE OF P. V. C. COMPOSITION

(To The Editor of "Capital")

Sir,

The paucity of P.V.C. composition is a problem created by the Government because of the ban on imports. The indigenous producer of P.V.C. meets only 10 percent of the domestic requirements. The quality of the indigenous P.V.C. does not compare well with the imported variety. The price is substantially more than the international rate. The productive efficiency is 30 percent less than the foreign manufacture. Delivery schedules are not kept. Complaints and grievances are not promptly attended to.

This anomalous and sorry situation has hit the industries which use P.V.C. composition. Cable manufacturers are one of them. Correspondence and personal calls have not produced any material benefit from the Government. It is, therefore, necessary that P.V.C. cable manufacturers, big and small, must unite and raise their voice in protest. To achieve this object, formation of an association is essential. Would the manufacturers, through their public relation officers or managers, send in their grievances or contact the undersigned at Thermo-Plastic Industries, 78, Kalachowki Road, Lalbaug, Bombay, to help in the formation of an association?

Yours etcetera,
Y. T. Parwatay

Bombay, 9th August.

BURMAH OIL ACTIVITIES

The Burmah Oil Co. during the past few years have been making enormous developments and extensions, and is now rapidly becoming one of the largest oil producers in the world. Up till a few years ago, it supplied only a small portion of the requirements of burning oil of Burmah. Now it supplies practically the whole of that country, its imports to Calcutta having exceeded, in the past two or three months, the total imports of all foreign oils. it is shipping oil largely to Madras, Bombay, Karrachee, and other Indian coast ports, and also to the Straits where it is competing with Sumatra oil. As against the total estimated consumption in India of about 120,000,000 gallons, it is now producing about 45,000,000 gallons, annually, and before long it will be in a position to supply all the requirements of this country, if not to export to Europe, as developments and extensions are still going on at a rapid pace. The Company have three tank steamers built to their own designs constantly running between Rangoon and Calcutta, and a fourth one of a capacity of about 4,500 tons, to be employed in the Bombay trade, is just approaching completion. In addition to these they employ a number of other vessels for carrying their tinned oil to other ports. They have also just begun the construction of a pipe line between their wells and Rangoon—a distance of about 400 miles—the cost of which is estimated at nearly £500,000. Their bulk oil installation at Budge Budge is now the largest in India, their tinning factory there gives a daily output of 20,000 tins which figure will, in 3 months' time, be increased to 30,000 tins, and they have now, either erected or in course of erection, over 70 tanks at different up-country stations on the eastern side of India. A similar installation at Bombay with a corresponding network of up-country tanks and depots, is now being arranged for to meet the requirements of the Western Presidency. So far the Company have only produced a cheap quality of oil as the crude they have been working has been of too high a specific gravity to permit of producing a superior oil, but some of the crude now being pumped is of a quality which gives hope of their being able before long to produce oils equal to any now in the market.

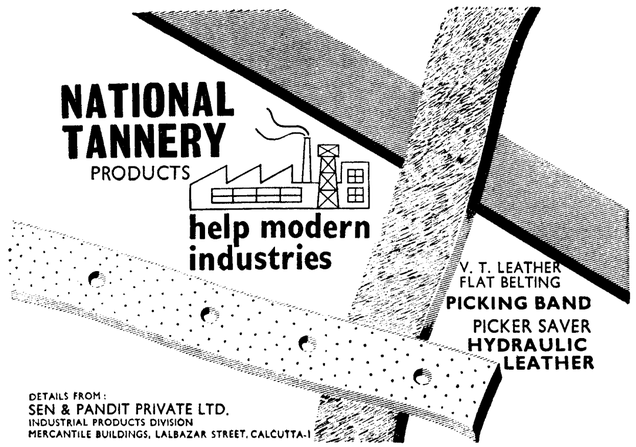
A Ditcher's Diary

The *Gita* is quite firm and clear on the point: Yours is only the right to labour; it is not for you to think of the fruits thereof. Something of this spirit must have moved the 72 sponsors of the Lok Sabha's first-ever motion of no confidence against the only Government it has known, the Nehru Government. As I write, the debate grinds on, bringing little new and affecting the ultimate voting not at all. Yet there has been evident a new confidence in the Opposition, woefully divided and motley though it is. The Communists were in a quandary; in not wanting Mr. Nehru to go they probably represented the country's feeling in general. Their attack on Messrs Morarji Desai and S. K. Patil may also have echoed popular sentiment. But the obvious ambivalence towards the Government as a whole took away something from the Communists' criticism. In Acharya Kripalani's opening volley there was, I thought, a little too much of the "I-told-you-so" sort of spirit; but he was nowhere unparliamentary. Mr. Minoo Masani's reference to Djilas's *New Class* seemed rather beside the point. All in all, however, the no-confidence motion may have done no harm. It is always good for the Opposition to be able to let off steam. If the Government complains that, because of the motion, the "image" of the Government in general and Mr. Nehru in particular has been tarnished, as it doubtless has been, the Government has only itself to thank for it; the Opposition motion has only brought to the surface what has long been known. Whatever the inner feelings of Congressmen, they certainly put up a brave front in the Lok Sabha. Typical of this nonchalance was Mr. S. K. Patil, who has lately been criticised by the Prime Minister himself. There was, I thought, something theatrical about Mr. Patil's performance on Tuesday; the House may have been amused but it was not convinced. It is the Congress's imperviousness to criticism which I find irritating and dangerous. It does not betoken courage but a certain callousness and insensitivity, the two vices Mr. Nehru himself has never suffered from. His Party does; and this is not good either for itself or for the country's democracy.

I do not mind confessing that there are days when the morning papers are so destitute of news, as distinct from "wind", that I turn to All India Radio—in case something has happened since the papers were put to bed. I did so on Friday, Independence Day, at 8 a.m. And what do you think I heard? Mr. Nehru's speech at the Red Fort. Could the news be on other wave-lengths? It was not; nor any announcement at the time. The news came at 9 a.m., or so I gathered from a Bengali bulletin, also not on time that morning. As far as I know, the English bulletin is common between the domestic service and the external services. All India Radio claims a fairly large number of overseas listeners. What can they have thought when the news was not on at the usual hour? I know what I would have thought, knowing India only through All India Radio. The vision of a totalitarian country, with not one man daring to switch off the Prime Minister or delay his speech, would have been irresistible. Nothing could, of course, be less true. In spite of the emergency and a lot of other silly constraints, this country is still among the freest in the world; and most of the prevailing liberalism flows directly from the person of Mr. Nehru. All some A.I.R. official had to do was to submit it to the Prime Minister that news bulletins are something sacred, that a news bulletin takes precedence over every other kind of programme in any broadcasting house, and that it is very easy to lose overseas listeners by deviating from news schedules; and I have not the slightest doubt that the P.M. would have agreed to altered timings for the Red Fort ceremony. This is what is wrong with All India Radio. It has never shown any guts—either *vis-à-vis* the Government which strangles it or the public which ignores it. Many of the decisions in the Fielden or Bokhari era I did not agree with; but those were independent decisions. I cannot think of a single bold experiment in all the years since. Bad Information Ministers alone will not explain the failure of A.I.R.



On a recent visit to London, it seemed to me that the annual tourist season there is not quite what it used to be. One minor reason may be that few Indians can now make the trip, so the city lacks the colour which all those gorgeous *saris* once gave it; the few Pakistani women one still sees are not numerous enough to make up for the loss. The weather, of course, is just as bad as ever; but in recent seasons there have been growing complaints about factors which are not quite so far beyond human control. For instance, London is now one of the most expensive cities in Europe, whereas a few years ago it was among the cheapest. Food is still reasonable enough in price, although English cooking has not improved, but the recent changes in the licensing laws seem to have made little real difference to the frustrations a thirsty tourist is prone to when he wants a drink at an odd hour, say, 3-30 in the afternoon. He is more apt to be cheated, too, than he was. In a recent survey made by some members of the staff of the B.B.C. it was found that only two taxi-drivers in five are reasonable about the tip demanded, and that the amount of short-changing that goes on in shops and restaurants is something which can only be avoided by those who are as familiar with Britain's medieval coinage as they are with the English language. Most of the hotels have nowadays adopted the invidious Continental system of putting a fixed percentage on the bill for service. This always in effect amounts to a surcharge, because not for a moment is the idea encouraged that tips are no longer necessary. Hotel prices are now so high that even the Americans are grumbling. Against all this, it is still a fact that London has the best public transport system in the world—although not now by any means the cheapest—and that makes sightseeing so much easier than in, say, Rome or Paris. And then there are the shows. There is a good crop this year, and one heard several people declare that a visit to London was worth while for the sake of these alone. I wonder, by the way, what is happening to the Americans these days? Apart from the usual breathtaking array of photographic equipment and the inevitable crew-cut, they are becoming practically indistinguishable from any other nationality. Gone are the hand-painted Hawaiian shirts and the bathing-beauty ties. It is all rather a pity; the colour might have helped make up for the absence of all those beautiful *saris*.

The proposal that India and Ceylon should co-operate in their propaganda to encourage tea consumption in Britain seemed a sound one to me. But Ceylon turned it down, or so I believe, because her share of the British market was already expanding at India's expense and in any case she had a head start in her own publicity activities. As good a reason as any, I suppose, although it may prove short-sighted in the long run. I say this because from figures I have just been studying, it is clear that Britain's *per capita* consumption of tea is not increasing in step with her standard of living. It was 9.3 lbs a head before the war, and it was standing at exactly the same figure in 1960. It was higher in 1961, at 9.9 lbs, but this might have been an exception, because it was down, on the basis of provisional figures, to 9.5 lbs in 1962. During the same period, the *per capita* consumption of coffee increased from the pre-war 0.7 lbs to a provisional 2.7 lbs in 1962. Now coffee is a more expensive drink than tea, and one would naturally expect its consumption to increase as living standards improve. But the impression I got from a recent market survey

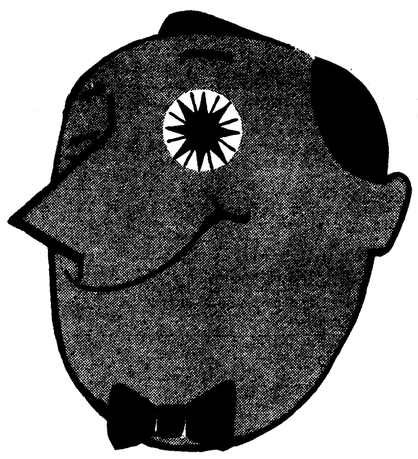
was that it is becoming more fashionable as a drink, and certainly an improvement of something like four-fold in consumption outpaces the rise which has taken place in Britain's living standards since the war. It also struck me that tea is beginning to acquire a rather outdated image. It is coming to be considered as primarily the drink of the labouring classes—who are diminishing rapidly in numbers—and the old-age pensioners—who are not increasing in wealth—and not of the young, "way out" set. At least outside the home, it also has a past of cracked cups, slopped table-tops and stewed-up brews to live down. Publicity could certainly help change all this, and no matter how well she feels she may be doing at the moment, Ceylon would surely gain from any joint arrangement. But I often wonder whether a little more aggressive and imaginative salesmanship would not help too. For instance, it is a fact that automatic vending machines have greatly increased the consumption of milk in Britain in recent years, and I know there are already some which dispense tea. But why not more of them; and why is there not a greater variety? Indeed, the question of variety and novelty could hold the key to the market. It is significant that the traditional beverages, tea and cocoa, show the least improvement in popularity since the war, whereas the newer ones, coffee and patent drinks, show the most.



I WAS SADDENED TO READ THE OTHER DAY THAT SIR Harold Nicolson had retired from reviewing books for the *Observer*; he is going to be 77 in November. A man is certainly entitled to sign off at that age; but the feeling remains that nobody is quite going to fill his place. I was upbraided by friends when I appeared to back him, against W. H. Auden, for professorship of poetry at Oxford; somehow, I do not think the Georgian or Elizabethan period has produced an equal to this unashamed Edwardian. Discipline is not the first attribute one associates with King Edward VII and his reign; that, yet, is what I thought of when I saw one of those reviews by Harold Nicolson. His *Marginal Comment* in the *Spectator* had been just as gracious; and the going was graceful. Born in Persia, if I remember aright, Sir Harold remained curiously English; and he was accused of urbanity, as though it were a crime, mainly because his frame of reference was not exclusively English. As far as I know, he speaks and reads several foreign languages and does not consider them all inferior to English. Son of a diplomatist, he was one himself; hence a man of affairs and an M.P. for some time. He lost elections later; and nobody has written of electoral defeats more charmingly. With all this he combined a love of reading and writing, which may or may not have been the undoing of his career in the Foreign Service. (Is it possible that his dispatches were too learned?) What I am getting at is that his writing, be it an essay or a book review, gained immensely from his experience in the non-literary spheres of life. Writing is a full-time occupation all right; but what does one write about if one has not lived one's life or observed it elsewhere? The *Observer* and the *Spectator* were the papers for Sir Harold; he was, I think, ever the onlooker. But what an outsider! To his life and his writing he brought a degree of poise and balance that many would be better with. To write of Verlaine and Curzon with equal enthusiasm is not given to many; and I am sure Sir Harold has found ample things of interest for his years of ostensible retirement.

BUSINESS CONCERNS WITH IMPRESSIVE, EASY-TO remember names are pretty rare these days. The following, I am told, is a literal translation of the title of one of Formosa's finest institutions:

The Chinese, Surveillant of Compliance, In Approved Fashion, Within Its Sphere of Jurisdiction, With the Appointing Authorities' Requirements, In Whatever Case, Central Incorporated Dominions' Provisions of Statutory Control (Financial Regulations Sections) Enforcement Orders Execution Bank.

THE DITCHER

BRIGHT OUTLOOK

A dirty door knob, a grubby paper-weight, a dull name-plate or tarnished brass rails may be taken by prospective clients as signs of dull business.

Keep your office attractive always... give the brass articles and fittings in it a bright look with Brasso. A regular shine with Brasso is what you need to make your office reflect your efficiency. Brasso, available in large tins, is easy to use and economical too.

Guide for Investors

REVIVING CONFIDENCE IN THE INVESTMENT MARKET

(BY A SPECIAL CORRESPONDENT)

THE dull trend in the capital market, after the show of buoyancy in July, has created anxiety in official circles. The market was in fact shaping fairly well, trying to emerge from the earlier despondency. But the renewed Chinese threat on India's borders has created fresh misgivings. The bad days started roughly from the time of Chinese aggression last October, although activity had been subdued even before. The heavy tax burden introduced in the 1963-64 Central Budget, reflecting the strains of development and defence, affected sentiment. Although normalcy later appeared to have been restored, following the relaxation of the restrictions placed by the Stock Exchange authorities and the Government, price movements showed a lack of vigour which was essential for attracting fresh risk capital. Dear money, high taxation and the Chinese threat on the border have virtually created stagnation, from which the market is yet to recover. While official circles attribute the dull trend to political uncertainty arising out of the Chinese threat, industrialists as well as operators continue to blame high corporate taxation for the sluggishness.

The Government is obviously aware of the trend in share prices, since it is now thinking of ways and means to stimulate activity. New Delhi, it is reported, will ask the Industrial Finance Corporation and Industrial Credit and Investment Corporation of India to play a more liberal rôle in underwriting new issues. This could imply that the Government has completely ruled out any fiscal relief in the meanwhile. As long as the current emergency lasts, higher taxation will be inevitable, irrespective of its consequences on the tempo of development. In fact, the Government's present efforts in stimulating the capital market through larger underwriting and financial accommodation by quasi-government institutions imply that the authorities are prepared to do everything possible to stimulate the market, except through fiscal concessions. No doubt, the need for financial resources is obvious. Due to the sad experience of underwriters in recent issues and the growing reluctance of the average investor to take up new shares, the burden is to be shifted to stronger shoulders, such as those of the I.F.C. and the I.C.I.C.I. Meanwhile, if industrial units obtain adequate funds for either expansion or working needs, and if new companies are enabled to enter the market depending on the underwriting assistance of the I.F.C. and the I.C.I.C.I., it may be possible to maintain the tempo of industrial production to some extent. But it is doubtful whether this will help increase the flow of fresh equity capital from the investing public, as the average investor, unlike the underwriting institutions, is attracted only by adequacy of return and scope for capital appreciation.

The slackening tempo of economic growth, the lower profit margin for industry, the higher corporate taxation and the growing strain on the economy caused by defence and development have had an adverse effect on share prices. While some relaxation in monetary restrictions and other indirect measures will no doubt be useful and will indicate the possibility of ultimate action in the fiscal field, the near-term outlook for share prices is unlikely to be changed materially in the foreseeable future by half-hearted official measures.

Botanium Abandons Project for Titanium Dioxide

BOTANIUM Ltd, which had been sponsored by Nowrosjee Wadia and Sons (Private) Ltd, for undertaking the manufacture of titanium dioxide in collaboration with Laporte Industries Ltd, London, has decided to abandon the project after pushing it almost half way through. The directors state in their report for the year ended March 1963 that the project has been given up because the Company's plans have been seriously affected by the circumstances beyond their control. As a result of new taxation measures announced by the Central Government, such as the super profits tax, increased excise and import duties on certain items, it is estimated that the taxation burden on the Company even after first seven years of full production, will be considerably more than anticipated by the promoters. Careful calculations, it is stated, have shown that it would not be possible to pay reasonable dividends and plough back retained earnings to the same extent, as visualised, to undertake necessary expansion in order to attain the economic level of production. In view of the present depressed state of the capital market, it is considered impossible to place a proposal, such as this, before the public. The Company's foreign collaborators are also stated to be against going ahead with the project as the prospects of earning a reasonable return on the investment are no longer considered attractive.

In order to mitigate the hardship caused to those who have already invested their funds in the venture, the directors have decided to return the greater part of the paid-up capital or buy back the shares from those who wish to surrender them after the scheme of capital reduction has been put through. Laporte Industries of London has agreed to take back the "know-how" which had been transferred in consideration of the allotment to it of 300,000 equity shares of the face value of Rs. 30 lakhs as fully-paid shares. The Company's solicitors have advised that on these shares being returned to the Company, they should be cancelled with a consequent reduction of the authorised capital of the Company from Rs. 5 crores to Rs. 4.70 crores. At the same time, for the 760,100 shares of the face value of Rs. 10 each, which have been issued to the directors, their friends and associates and on each of which a sum of Rs. 5 has been paid-up, it is recommended by the directors that a sum of Rs. 4 a share should be returned to shareholders without, however, extinguishing or reducing liability on any of these shares. This will reduce the issued and subscribed capital of the Company to 760,100 equity shares of Rs. 10 each, on which only Re. 1 a share would be paid-up. The relevant resolutions will be placed before the members for their approval at the forthcoming annual general meeting.

The directors add that it is impossible to make any definite statement about the future of the Company. It will have as its assets the land which has been purchased. It has also done a great deal of preliminary work, and is well equipped to start a project of the kind at present contemplated, subject to a proper climate being created for carrying on its activities. While it may not be unreasonable to assume that the Company will resume working of the one or the other of the objects for which it was formed, yet when it would be possible to do so cannot be foreseen and no assurance can be given; nor can even a guess be made. All the agreements at present entered into will have to be re-negotiated.

The directors further add that if any of the shareholders are desirous of having their moneys repaid, the Company's managing agents—Nowrosjee Wadia and Sons (Private) Ltd—would be willing to purchase or cause to be purchased the shares of all the shareholders at the paid-up value of the shares, that is, at Re. 1 a share, after the scheme of capital reduction has been implemented. If the shareholders agree to sell their shares to the managing agents, they will not be called upon to share in the losses incurred by the Company during the last two years. Botanium Ltd has incurred a loss of Rs. 61,499 for the year ended March 1963, against Rs. 25,250 in the preceding year after providing Rs. 5,753 (against Rs. 1,319) for depreciation and Rs. 83,943 (against Rs. 32,765) for taxation. A debit balance of Rs. 86,749 is being carried forward.

Kumardhubi Engineering to Issue Bonus, Rights

THE ordinary shares of the Kumardhubi Engineering Works Ltd have improved to Rs. 8.25 a share of Rs. 3 each on good corporate news. The Company has decided to issue bonus shares in the proportion of two bonus shares for every three held by capitalising the share premium account and part of the reserves which amount to more than Rs. 53.03 lakhs, against an ordinary share capital of Rs. 27.65 lakhs. It has also decided to issue rights ordinary shares immediately after issuing bonus shares in the proportion of one new share for every two held. It is also proposed to increase the rate of interest on the existing Rs. 10 lakhs bearer debentures from 4 percent to 7 percent and to issue a fresh series of debentures up to Rs. 40 lakhs carrying an interest of 7 percent. The necessary applications will be made to the Government for its sanction.

The funds are being raised to finance the output capacity of the foundry and the structural shop. During the year ended November 1962, the Company showed excellent results in spite of the fact that the structural shop could not be fully used due to the shortage of steel. The Company's order-book has been satisfactory. The profit earned for 1961-62 amounted to Rs. 21.99 lakhs. The ordinary dividend at 15 percent absorbed only Rs. 4.15 lakhs. The ordinary share capital will rise to Rs. 69.14 lakhs when capital reorganisation is completed. Judging by the performance and the adequate dividend cover for 1961-62, the Company should have no difficulty in servicing the increased share capital.

Share Offer by Sankey Wheels

SANKEY Wheels Ltd which proposes to undertake the manufacture of wheels for commercial vehicles such as lorries, passenger buses, tractors and the like and of wheels for passenger cars, jeeps and animal-drawn vehicles, is offering 600,000 equity shares of Rs. 10 each at par for public subscription. The project is estimated to cost Rs. 2.52 crores, of which Rs. 1.30 crores will be spent on plant and equipment, Rs. 73 lakhs on land and buildings and Rs. 25 lakhs will be needed for working capital. The cost is to be met by the issue of share capital of Rs. 1.70 crores and loans from Commonwealth Development Finance Company and banks amounting to Rs. 82 lakhs.

Joseph Sankey and Sons Ltd of the U.K. which is one of the largest manufacturers of wheels in Europe, is collaborating in the venture. The manufacture of lorries is being undertaken with new plant largely being imported for the purpose, the foreign exchange for which is being provided by Commonwealth Development Finance Company Ltd of London, and Joseph Sankey. The factory will be located in Durgapur. The construction of the factory buildings, railway siding and other facilities is already under way, and it is expected, barring unforeseen contingencies, to start production of lorry wheels in 1964. The manufacture of car wheels will be carried on with plant transferred by Guest, Keen, Williams of Calcutta to the Company on 1st June, 1963. It is proposed to move this plant to Durgapur soon after the commencement of production of lorry wheels as more economic production can be achieved if both types of wheels are manufactured under one roof. But pending this, the plant has been hired to G.K.W. which firm has agreed to continue manufacture and to sell to the Company its entire production of wheels in accordance with the arrangements concluded. Apart from the demand for wheels by automotive manufacturers as original equipment in motor-cars, jeeps, lorries, buses, trailers, tractors and other such vehicles, the Company also expects to cater for the demand for replacement wheels, mainly for lorries.

When in full production by about the end of 1966, the Company is likely to have a turnover of about Rs. 7 crores. It has been licensed to manufacture 100,000 wheels for lorries and 50,000 wheels for motor-cars a year on a single shift basis. The promoters are optimistic about declaring a dividend within a few years of the Company going into production. The authorised capital of the Company is Rs. 2.50 crores—all in equity shares of Rs. 10 each. Shares worth Rs. 38.50 lakhs have been taken up by Joseph Sankey and Sons, Rs. 38.20 lakhs by Guest, Keen, Williams, Calcutta, Rs. 10 lakhs by Commonwealth Development Finance Company, Rs. 21.60 lakhs by Mr. Sant Singh Sahney and his sons and Rs. 1.70 lakhs by directors and their friends, making a total of Rs. 1.10 crores. Shares of the value of Rs. 60 lakhs are now being offered for public subscription. The board of directors includes Mr. Harry Ferguson Hodgson, Mr. C. C. Desai, Mr. K. C. Maitra, Mr. Ray-

mond Percival Brookes, Mr. William Morrice, Mr. Sant Singh Sahney and Mr. James Horatio Witton.

India Paper Pulp Does Well

THE improved results of the India Paper Pulp Co. Ltd. for the year ended March 1963, have largely been due to increased production of paper combined with a reduction in manufacturing costs. The output of finished paper has been 2,460 tons larger at 15,641 tons. This has been possible due to a rise in the production of pulp as a result of the installation of the forced circulation equipment in the digester plant. The directors have referred to high production costs. The royalty rates for bamboos in particular have increased sharply. Although high production costs have so far been partially offset by cuts in manufacturing expenses following the increased production of pulp and paper, the trend may not continue in future years. The sale of the mill's by-product, celex, has substantially contributed to the profit. Celex is being used by the refractory, cement, metallurgical, building and chemical industries in place of the imported sulphite lyes. The Company has received licences for importing equipment required for the expansion of the jute stick pulp factory. The project will be financed partly by a credit of Rs. 20 lakhs from the Industrial Credit and Investment Corporation of India and partly by the Company's own funds. In view of the need to raise the production of paper by a higher output from the existing units, the Company has been examining proposals for modification and adjustment to the existing equipment. The directors hope for a substantial rise in the paper output.

The profit has improved from Rs. 23.47 lakhs in 1961-62 to Rs. 40.65 lakhs in 1962-63, after transferring Rs. 13.87 lakhs (against Rs. 12.56 lakhs) to depreciation. The taxable ordinary dividend has been raised from 12 percent to 15 percent, including an interim of 5 percent. It is covered more than thrice and offers a yield of 8.8 percent at the present price of Rs. 17 a share of Rs. 10 each. Taxation, including Rs. 2.50 lakhs for the super profits tax, absorbs Rs. 22 lakhs (against Rs. 11.55 lakhs). Development rebate reserve is allocated R. 2.85 lakhs (against Rs. 76,858) and general reserve Rs. 2.75 lakhs (against Rs. 75,000), leaving a carry-forward of Rs. 28,615, against Rs. 46,493 brought in.

Macneill and Barry Jute Group Does Well

THE results of the Macneill and Barry group of jute mills for the year ended March 1963 have been satisfactory, since the prices of jute goods have been remunerative in relation to those of fibre. The Gourepore Company has operated with 110 broad-looms for producing carpet-backing cloth. The mill has been licensed to install 140 of these looms. The Company has made arrangements to obtain the necessary spare parts and replacements for the two pilot units of weaving equipment which have been installed. It has made adequate provision to cover the anticipated capital loss on the sale of the Gourepore Electric Supply Company undertaking to the Government of West Bengal. The directors have assessed the current prospects fairly optimistically, although they think that the profit will be smaller than in 1962-63 in view of the decline in jute goods prices.

The profit has risen from Rs. 12.24 lakhs for 1961-62 to Rs. 73.49 lakhs for 1962-63, after increasing depreciation from Rs. 11.91 lakhs to Rs. 14.75 lakhs. The taxable ordinary dividend of 20 percent has been maintained. This is covered more than seven times and offers a yield of 7.9 percent at the present price of Rs. 25.25 a share of Rs. 10 each. Taxation, including Rs. 9.30 lakhs for the super profits tax, absorbs Rs. 47.10 lakhs (against Rs. 4 lakhs). Development rebate reserve is allocated Rs. 4.83 lakhs (against Rs 2.70 lakhs), doubtful debts reserve Rs. 10,063, general reserve Rs. 6 lakhs and investment depreciation reserve Rs. 4.50 lakhs. The carry-forward is Rs. 29,659, against Rs. 49,518. Gunny sales rose from Rs. 5.55 crores to Rs. 6.19 crores.

The Nuddea Mills Co. Ltd has doubled the taxable ordinary dividend to 10 percent to absorb Rs. 6.68 lakhs. The yield amounts to 8.8 percent at the present price of Rs. 57 a share of Rs. 50 each. The profit has increased from Rs. 3.53 lakhs to Rs. 39.25 lakhs, after transferring Rs. 8.49 lakhs (against Rs. 8.71 lakhs) to depreciation. Taxation, including Rs. 45,000 for the super profits tax, absorbs Rs. 17.90 lakhs (against nil). A sum of Rs. 3.65 lakhs has been transferred from development rebate reserve. Building replacement reserve is allocated Rs. 6.73 lakhs, development rebate reserve Rs. 4.93 lakhs (against Rs. 47,122), investment depreciation reserve Rs. 50,000 and general reserve Rs. 7.25 lakhs. The carry-forward is Rs. 13,111, against Rs. 65,041 brought in.

Gunny sales amounted to Rs. 3.48 crores, against Rs. 3.40 crores. The Company has been licensed to install up to 40 wide looms. An application has been made to increase the number to 80 looms, and plans have been made to install 40 looms shortly. Production on these looms, which are to be installed in the south mill, will begin early next year. The Company has transferred Rs. 50,000 to investment depreciation reserve in order to cover the anticipated capital loss on the sale of the Gourepore Electric Supply Company undertaking to the State Electricity Board of West Bengal.

Mukand Iron and Steel Expanding

THE Mukand Iron and Steel Works Ltd did well during the year ended March 1963, with its sales rising from Rs. 4.73 crores to Rs. 6.46 crores, and the gross profit moving up from Rs. 61.43 lakhs to Rs. 67 lakhs. The directors' report and the chairman's statement to the shareholders hold out the promise of better results in the current and coming years because of the satisfactory progress of the expansion schemes. The directors state that the production at the Company's Kurla steel foundry rose from 6,280 tonnes in 1961-62 to 7,624 tonnes in 1962-63. The figure for the current year, it is expected, will reach 9,000 tonnes and 10,000 tonnes thereafter. The Kalwe unit, it is expected, will go into production in 1965-66. The construction of the factory on the 125-acre site has already started. Import licence amounting to Rs. 1.59 crores for plant and machinery is expected shortly. Final orders have been placed for the billet re-heating furnace and 20-tonne arc furnace and orders for the continuous casting plant and the mechanical part of the wire rod mill are at an advanced stage of finalisation. Quotations for the remaining equipment are in various stages of processing. The expansion of the cast iron foundry will be planned in conjunction with development of the Kalwe project.

The Company has made arrangements for the finance needed for its new plans. The Industrial Finance Corporation of India has sanctioned, in principle, a loan of Rs. 88 lakhs for expansion in Kurla. The Company's import licence applications for Rs. 37.42 lakhs have been cleared by the authorities. The I.C.I.C.I. has granted a foreign exchange loan equivalent to $1,680,000 in various foreign currencies. The Company has agreed to issue further equity shares worth Rs. 30 lakhs if and when the I.C.I.C.I. advises. Heads of terms have been signed with Commonwealth Development Finance Co. Ltd for a loan of £600,000, and a detailed agreement is at an advanced stage of finalisation.

The Company's subsidiary—Batala Engineering—has made good progress in the manufacture of machine tools. Three technical collaboration agreements have been signed with foreign manufacturers—two Italian and one Austrian. With a view to conserving resources, Batala Engineering has not declared any dividend for 1962-63.

The chairman, Mr. Kamalnayan Bajaj, points out in his statement to the shareholders that although billet supplies during 1962-63 were better at 60,841 tonnes, against 42,580 tonnes in 1961-62, the overall position is still far from satisfactory. The prospective availability of billets for the current year is not likely to be better than in the preceding year. He complains that the main producers are using greater quantities of billets without giving a fair share to the rerollers. Mr. Bajaj says that it would be a national waste to allow the main producers to increase their capacity while there was a good deal of unutilised capacity in the rerolling industry. The chairman feels that the decontrol of steel might inflate the prices of raw materials. He, therefore, suggests that billet prices should not be decontrolled until adequate supplies are assured. Mr. Bajaj says that the Company has received numerous enquiries for steel castings from abroad, but the prices offered are below cost. He has complained that while main producers of iron and steel receive a cash export subsidy, rerollers are denied a similar facility.

Hindoostan Mills Pays the Same

DESPITE a small increase of a little over 5 percent in the sales from Rs. 3.17 crores to Rs. 3.34 crores —an all-time record figure—the gross profit of the Hindoostan Spinning and Weaving Mills for the year ended March 1963, is down by about 25 percent from Rs. 51.03 lakhs to Rs. 38.22 lakhs. The profit margin, says the chairman, Mr. K. M. D. Thackersey, in his statement to the shareholders, has been squeezed between the rigidly fixed prices and the rising costs of manufacture. Emergency insurance risks premiums, additional imposts of excise and import duties on items of stores, raw materials and machinery, etcetera, have added to manufacturing costs.

After providing Rs. 12.14 lakhs (against Rs. 9.78 lakhs) for depreciation, Rs. 7.85 lakhs (against Rs. 1.37 lakhs) for development rebate and Rs. 8.50 lakhs (against Rs. 23,000) for taxation and deducting other prior charges, the net profit amounts to Rs. 7.72 lakhs, against Rs. 16.88 lakhs in 1961-62. Credit has been taken for a sum of Rs. 3 lakhs, being provisions no longer required. A sum of Rs. 3.44 lakhs has been transferred to general reserve No. 1, against Rs. 5 lakhs in the preceding year. Dividend reserve absorbs Rs. 5.18 lakhs (against Rs. 5 lakhs). The dividend has been maintained at Rs. 64 a share on 9,600 equity shares made up of Rs. 24 interim and Rs. 40 final. In the preceding year, the Company had paid an interim dividend of Rs. 48 a share on 4,800 shares and a final dividend of Rs. 40 a share on 9,600 shares. The interim dividend absorbed Rs. 2.30 lakhs and the proposed preference and ordinary dividends amounting to Rs. 4.68 lakhs are to be paid out of the dividend reserve. After making various appropriations, there remains a balance of Rs. 15,203 to be carried forward, against Rs. 35,161 brought in.

The directors state in their report that machinery worth Rs. 42.89 lakhs was received during the year, and most of it was erected during 1962-63. The Company has replaced 44 plain looms by 48 automatic looms. It has received further 27 automatic looms for replacement of 24 plain looms, against an undertaking to export 359,991 yards of cloth a year for a period of five years. Moreover, it has also replaced 19 old automatic looms by 21 automatic looms. Most of these looms have started working. The mills now have 1,129 looms, all automatic. The Company's mills worked three shifts throughout the year under report. The Company has given a guarantee of Rs. 2.50 lakhs a year for three years, and Rs. 36,000 a year for five years to the Government concerning exports to be effected against new machinery in addition to the amount of Rs. 8 lakhs mentioned in the previous year's report.

The Company exported cloth worth Rs. 99.29 lakhs during 1962-63, against Rs. 77.89 lakhs in the preceding year. This, says the chairman, is "a creditable performance when viewed against the background of the declining trend in the country's exports." Referring to the Indian Cotton Mills Federation's plea for flexible control of cloth prices which would make it possible to raise or lower prices as circumstances warrant, Mr. K. M. D. Thackersey has expressed the hope that the Government will take such decisions as will be conducive to the healthy growth of the industry. The Company paid a sum of Rs. 15.09 lakhs as bonus to its workers for 1959, 1960 and 1961. The Rs. 250-paid share of Hindoostan Spinning is quoted nominally around Rs. 855.

Western India Mills Pays Less

THE Western India Spinning and Manufacturing Co. Ltd—another mill belonging to the Thackersey group—has fared badly during the year ended March 1963. Despite an increase of about 6.6 percent in the sales from Rs 3.17 crores to Rs. 3.38 crores, the gross profit is down by nearly 25.6 percent from Rs. 30.55 lakhs to Rs. 22.74 lakhs. The directors have recommended a final dividend of Rs. 40 a share, making a total of Rs. 64 a share on 9,600 shares. In the preceding year, the Company paid an interim dividend of Rs. 48 a share on 4,800 shares, and a final dividend of Rs. 40 a share on 9,600 shares. Appropriations of the year's profit include depreciation Rs. 10.80 lakhs (against Rs. 9.66 lakhs), development rebate reserve Rs. 2.52 lakhs (against Rs. 1.44 lakhs), taxation Rs. 4.25 lakhs (against Rs. 12.50 lakhs), general reserve No. 1 Rs. 5,311 (against nil) and dividend reserve Rs. 2.08 lakhs (against nil). The interim dividend absorbed Rs. 2.30 lakhs. The proposed preference and final ordinary dividends amounting to Rs. 4.68 lakhs, are to be paid out of the dividend reserve.

After making various appropriations there remains a balance of Rs. 15,046 to be carried forward, against Rs. 34,813 brought in. The directors state that machinery of the value of Rs. 7.93 lakhs was received and that most of it was erected during the year. The Company has received permission to install 48 automatic looms in replacement of 46 plain looms, against an undertaking to export 639,984 yards of cloth a year for a period of five years. The Company's cloth exports during the year were valued at Rs. 65.64 lakhs, against Rs. 68.57 lakhs in the preceding year. The Company has paid Rs. 16.05 lakhs by way of bonus for 1959, 1960 and 1961.

Indian Manufacturing Disappoints

THE Indian Manufacturing Co Ltd. belonging to the Thackersey group of mills, reports disappointing results for the year ended March 1963. While sales are up by about 13.3 percent from Rs. 2.64 crores to Rs. 2.99 crores, the gross profit is down by nearly 30 percent from Rs. 38.74 lakhs to Rs. 27.45 lakhs. The mills worked two shifts throughout the year and the sales were a new all-time record. But the profit margin declined as a result of the marked increase in manufacturing costs.

Allocations of the year's profit include depreciation Rs. 7.91 lakhs (against Rs. 6.44 lakhs), development rebate reserve Rs. 3.09 lakhs (against Rs. 6,797), taxation Rs. 7.50 lakhs (against Rs. 17 lakhs), general reserve Rs. 10,000 (against Rs. 4.94 lakhs) and dividend reserve Rs. 4.97 lakhs (against Rs. 4.25 lakhs). The Company has declared a final dividend of Rs. 40 a share, which, together with the interim dividend of Rs. 24 a share, makes a total of Rs. 64 a share on 9,600 shares. The interim dividend in the preceding year had been paid on 7,200 equity shares. Although the dividend has been maintained, the total distribution is Rs. 6.14 lakhs, against Rs. 5.57 lakhs. Dividends, preference and ordinary, are to be paid out of the dividend reserve.

After various appropriations, there remains a balance of 9,350 to be carried forward, against Rs. 10,899 brought in. The Company's cloth exports during the year were valued at Rs. 90.37 lakhs, compared with Rs. 72.43 lakhs in the preceding year. It paid bonus amounting to Rs. 17.81 lakhs for the years 1959, 1960 and 1961. Machinery worth Rs. 4.36 lakhs was erected during the year. The Company has executed a bond in favour of the Government of India for Rs. 3.20 lakhs in consideration of the permission to install 48 automatic looms in replacement of 45 existing plain looms by which the Company has agreed to export 639,984 yards of cloth annually for five years. Taxation up to March 1962 has been paid by the Company. The Rs. 250-paid share of Indian Manufacturing is quoted nominally around Rs. 760.

Swadeshi Cotton Mills Skips Dividend

IN spite of an increase of about 20 percent in the sales from Rs. 9.65 crores to Rs. 11.62 crores, the gross profit of Swadeshi Cotton Mills Co. Ltd, Kanpur, for 1962 is down by a little over 11 percent from Rs. 92.32 lakhs to Rs. 81.84 lakhs. A substantial fall in the net profit as a result of the higher provision for depreciation has obliged the directors to skip the dividend for the second year in succession. The Company had declared a dividend of 5 percent in 1960. The provision for depreciation has been stepped up from Rs. 32.41 lakhs to Rs. 50.51 lakhs, which includes Rs. 9.15 lakhs provided in deference to the views of the Company Law Administration, on written down value for the amounts added on revaluation of the fixed assets in the past. The provision for development rebate amounts to Rs. 6.60 lakhs, against Rs. 12.45 lakhs, and taxation accounts for Rs. 19 lakhs, against Rs. 23 lakhs. Credit has been taken for a sum of Rs. 4.15 lakhs (against Rs. 46,244), being provisions made in the previous years but now no longer required. After providing for the preference dividend and making a few minor adjustments, there remains a surplus of Rs. 9.16 lakhs to be carried forward, against Rs. 13.99 lakhs brought in.

The directors state in their report that the trading conditions of the textile industry, particularly of mills producing coarse and medium cloth, were not favourable during the year. Like most other mills, the profit margin was squeezed by the all-round increase in manufacturing costs without any increase in cloth prices. The licence for the installation of 25,000 spindles in Maunath Bhanjan has been transferred at the Company's request to the Naini mills. The licence had to be transferred as the Company was unable to persuade the authorities for the grant of permanent exemption from the payment of *octroi* duty on the import of raw materials. The building for housing 13,200 spindles is nearing completion. Delivery of machinery has started and the spindles are likely to be commissioned early next year. There were prolonged labour troubles at the Company's Udaipur mills and it was only in the last quarter of the year that relations became normal. Against a licence for 3,040 spindles, 2,640 spindles have been installed and the present installed capacity of this unit is 17,600 spindles, against the licensed capacity of 18,040. The working results of this unit have been satisfactory both concerning production and efficiency.

The Rajasthan Government has recommended the grant of a licence for further 6,000 spindles. The results of the Pondicherry Mills were not up to expectations, mainly on account of the depressed trading conditions prevailing during the year. The Company has been modernising and renovating the plant and machinery of its Kanpur and Pondicherry mills and this has enabled the mills to introduce new varieties of cloth yielding better realisation. Additional machinery has also been installed in Naini and Udaipur. Additions to fixed assets of the Company of the total value of Rs. 57.05 lakhs were made during 1962-63.

Laxmiratan Engineering Does Better

PRESIDING over the latest annual meeting of Laxmiratan Engineering Works Ltd last week, the director, Mr. G. D. Puri, assured shareholders that barring some unforeseen circumstances, the board was hopeful of declaring a maiden dividend soon. The Company's working results for the current year, which ends on 30th September, are expected to improve considerably over the previous year's performance. The Company's sales for the first ten months of the current year are placed at Rs. 1.32 crores and the turnover for the full year is expected to be around Rs. 1.70 crores, compared with Rs. 93.15 lakhs in 1961-62. The Company's products have been well received due to their standard quality and the Company's order books were full.

The Kanpur factory is now turning out 25 ring frames and 50 looms a month. This factory's sales are likely to exceed Rs. 40 lakhs this year, against Rs. 13 lakhs in the preceding year. The factory is booked for one year of its production of ring frames and more orders are pouring in. The Company's Faridabad factory is now manufacturing about 325 diesel engines a month, against only 90 some months ago. Sales of diesel engines which had suffered a setback last year are reported to be picking up. Full production of 12 horse power engines has been started. The factory is booked up to June 1964. From October next, it will start manufacturing 400 diesel engines a month. The Company intends to complete the manufacturing programme concerning 16 to 48 horse-power engines which have a big market as stationary and marine engines. Production of ancillary items for the Company's products is being increased in range and value.

Its Bombay unit is also said to be progressing satisfactorily. Production of sealed compressors has been established, and trial units have been sent to manufacturers of air-conditioners and their reports are awaited. The manufacture of Kubota petrol engines is well on hand. These engines, it is expected, will be put on the market by January 1964. Production of spindles and high draft units has been stepped up. The Bombay unit, it is expected, will have a sales turnover of about Rs. 77 lakhs during the current year, compared with Rs. 37.64 lakhs in 1961-62. The Company has fully provided for depreciation to-date. Arrears of preference dividend amount to Rs. 3.60 lakhs. The Rs. 10-paid share of Laxmiratan Engineering is quoted around Rs. 5.36.

Rampur Distillery Fares Well

THE Rampur Distillery and Chemical Co. Ltd reports encouraging results for the year ended March 1963, and this has enabled the directors to recommend a dividend of 5 percent, that is, 50nP a share, subject to tax. The Company had skipped the dividend in 1961-62 and had paid 4 percent in 1960-61 and 3 percent in 1959-60. Sales have risen by about 35 percent from Rs. 19 lakhs to Rs. 25.61 lakhs, while the gross profit has shot up by as much as 150 percent from Rs. 1.83 lakhs to Rs. 4.54 lakhs. The directors attribute the improved results to higher production and better yield from molasses. The distillery ran for 261 days and processed 623,266 maunds of molasses producing 1,235,121 gallons of rectified spirit. The daily average production was higher at 4,732 gallons, against 3,660 gallons in the preceding year. The average yield of alcohol improved from 1.87 gallons to 1.98 gallons a maund of molasses.

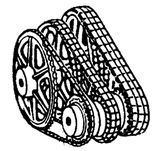
Allocations of the year's profit include depreciation Rs. 1.05 lakhs (against Rs. 95,619), development rebate Rs. 14,500 (against Rs. 19,500), taxation Rs. 1.30 lakhs (against Rs. 29,600), general reserve Rs. 50,000 (against nil) and bad and doubtful debts Rs. 40,000 (against nil). After providing for the proposed dividend which absorbs Rs. 1 lakh (against nil), there remains a modest surplus of Rs. 419 to be carried forward, against Rs. 19,930 brought in.

The directors point out in their report that the power alcohol section worked at a loss which, however, was lower than in the preceding year. The loss in the denatured spirit section was also lower. The bonded warehouses section worked satisfactorily. The Company has placed order for a new oil-fired boiler. Firm orders for plant and machinery have been placed for the expansion of the distillery which is expected to be completed during 1964-65. The Company has applied to the U.P. Financial Corporation and to the State Bank of India for loans to finance the expansion scheme. The Rs. 10-paid share of Rampur Distillery is quoted nominally around Rs. 5.

Indian Steel Rolling Earns More, Pays Less

INDIAN Steel Rolling Mills Ltd reports satisfactory results for the year ended March 1963 although the dividend has been reduced from 10 percent to 9 percent. Sales are up by about 32 percent from Rs. 1.63 crores to Rs. 2.15 crores, and the gross profit has increased by 8.3 percent from Rs. 11.99 lakhs to Rs. 13.02 lakhs. Production, both in the rolling mills and in the wire mills, was satisfactory because of the satisfactory supply position of raw materials and improved transport of billets from the producing centres. Appropriations of the year's profits include depreciation Rs. 2.61 lakhs (against Rs. 2.40 lakhs), development rebate reserve Rs. 43,000 (against Rs. 55,000), taxation Rs. 5.20 lakhs (against Rs. 4.30 lakhs) and remuneration for technical assistance Rs. 1 lakh (against Rs. 1.01 lakhs). The proposed ordinary dividend absorbs Rs. 4.39 lakhs (against Rs. 4.88 lakhs) and preference dividend takes another Rs. 36,000 (the same). After making these allocations and a few minor adjustments, there remains a surplus of Rs. 19,483 to be carried forward, against Rs. 9,761 brought in.

The directors state that the erection of the new reheating furnace has been completed and it has been commissioned. It is expected that with better heating facilities, production will improve. The Company is also expected to benefit from the recent revision of "section extras" for light section rods in the range of 5 millimetre to 12 millimetre. The Government has released sufficient foreign exchange for the import of replacement equipments and orders have been placed with Demag A.G. of West Germany at a total cost of Rs. 10 lakhs which will be met from available resources. The I.C.I.C.I. has agreed to grant a loan of Rs. 25 lakhs partly in foreign exchange and partly in rupees for setting up a new four-stand continuous wire rod finishing mill for the production of wire rods and hoops. As soon as the import licences are received, orders will be placed with the suppliers for the various equipments connected with the project. The Rs. 10-paid share of Indian Steel Rolling is currently quoted around Rs. 11 cum-dividend.

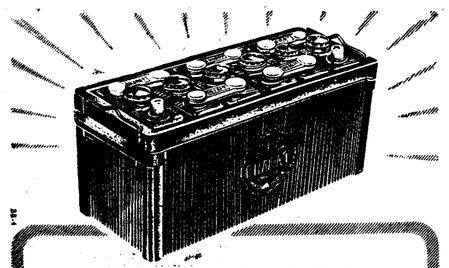


Satisfactory Progress by Globe Auto

THE Rs. 100-paid share of Globe Auto Electricals Ltd is quoted around Rs. 92. This discount reflects the depressed state of the investment market rather than the outlook for the Company which is making satisfactory progress. The managing director, Mr. Ratilal Zatakia, has stated that if all goes well, the Company will be able to declare a dividend for the financial year ending September 1964, the second year of its service. The annual turnover during this period is expected to reach Rs. 50 lakhs. The production of Marelli items will then be in full swing and about half the capacity for the projected Prestolite items will be brought into operation.

The Company has started the production of ignition coil, windshield wiper, ignition distributor and voltage regulators. It has entered into a number of annual contracts with the Defence Ministry and vehicle manufacturers. The Company's project for the manufacture of alter-

nator, starter motor and generators is going ahead according to schedule. The buildings are ready and the machinery from the foreign collaborators—Prestolite International Corporation of U.S.A.—as part of their equity participation has arrived in due time. The trial production of alternator has already started. The alternator pioneered by Prestolite is the first application of electronics in the field of the automobile electrical system and has many advantages such as light and compact design, longer battery life and low maintenance cost.



The current monthly output of ignition coils is placed at 1,500 numbers valued at Rs. 37,500, 1,500 windshield wipers valued at Rs. 90,000, 750 units of ignitions distributors valued at Rs. 37,500 and 750 units of voltage regulators worth Rs. 37,500. The indigenous percentage in Marelli items is expected to increase from 40 to 50 by the year-end. About one quarter of the total production of the Company is stated to be earmarked for defence. The percentage is expected to reach 40 next year and about 50 thereafter. The Government has been approached for sanctioning an additional capacity which would double the output of Marelli items within a year. Mr. Zatakia has said that when this expansion is completed, the capital outlay will go up from Rs. 80 lakhs to Rs. 1 crore. It is proposed to meet the additional outlay partly by way of share capital and partly by borrowings.

Coimbatore Kamala Mills Earns Less

IN spite of an increase in the sale of finished goods for the year ended December 1962, Coimbatore Kamala Mills Ltd reports a marked decline in the profit, compared with that of the previous year. Sales of finished goods amounted to Rs. 62.81 lakhs, compared with Rs. 57.62 lakhs. The profit amounts to Rs. 4.74 lakhs, after providing Rs. 88,343 for depreciation. The previous year's net profit was Rs. 8.63 lakhs, after providing Rs. 78,322 for depreciation. With Rs. 17,735 brought forward and Rs. 5,633 being the refund of tax on dividends, the total surplus available for appropriation amounts to Rs. 4.98 lakhs. Out of this, provision for taxation gets Rs. 1.53 lakhs (against Rs. 3.55 lakhs). Development rebate reserve accounts for Rs. 15,915 (against Rs. 13,853). The interim dividend on preference shares absorbed Rs. 17,691. The final dividend on preference shares amounts to Rs. 17,691. The ordinary dividend has been substantially cut, since only a dividend of 6 percent has been declared (against 19 percent), absorbing Rs. 36,729. A sum of Rs. 63,000 (against Rs. 1 lakh) is transferred to general reserve. The balance of Rs. 1,036 is carried forward.

The directors state in their report that the prices of cotton during the year were rising while the ceiling prices of yarn did not undergo any change till the revision was announced to come into effect from 6th February, 1963. Working expenses also increased due to the imposition of a tax on electric energy and the rise in wages. These factors have contributed to the lower profit of the Company. The construction of weaving extension for accommodating 268 looms and improvement of the spinning machinery are progressing well. The report says that for the Company's expansion programme as well as for the modernisation of the unit, all required auxiliary machinery have been purchased. One unit of Tokai combing machinery has been received from Japan and has been installed in the mills. The directors hope to produce quality combed yarn with this machinery.

Kailas Rubber Maintains Dividend

THE Kailas Rubber Company Ltd reports satisfactory results for the year ended February 1963, and the total dividend has been maintained at 30 percent, subject to tax. The gross profit is slightly higher at Rs. 7.77 lakhs, against Rs. 7.45 lakhs in the preceding year. After providing Rs. 54,148 (against Rs. 57,284) for depreciation and Rs. 2.90 lakhs (against Rs. 2.75 lakhs) for taxation and deducting other prior charges, the net profit amounts to Rs. 3.60 lakhs, against Rs. 3.43 lakhs in 1961-62. The proposed 30 percent dividend absorbs Rs. 3.56 lakhs, leaving Rs. 22,903 to be carried forward, against Rs. 18,927 brought in. The rubber crop secured during the year was 426,265 kilograms at an estate cost of 174.75nP a kilogram, against an estimate of 402,000 kilograms at a cost of 181.70nP a kilogram. The sale price of rubber averaged Rs. 3.72 a kilogram. The rubber crop estimated for 1963-64 is 389,000 kilograms at an estate cost of 195.28nP a kilogram. The Rs. 2-paid share of Kailas Rubber is currently quoted around Rs. 5.65.

Fairbairn Lawson in India

THE chairman of Fairbairn Lawson Coombe, Barbour, Mr. W. Walker, says that the Company has a satisfactory textile machinery order-book, and that production at full capacity in this section is assured for a good time ahead. Because of stringent import conditions, however, the board has arranged for a well-known Indian company to manufacture certain textile machines in that country. Mr. Walker points out that a very high percentage of the Company's textile sales go to export markets where long credit terms are demanded. This naturally throws a considerable burden on the group's resources. Commenting on gearing and general engineering, he says that the gradual improvement anticipated last year was not forthcoming. He adds that it is difficult at this stage to forecast the future pattern. "Some improvement is indicated in the gearing order book, but general engineering continues at low sales." The Company's name is to be changed to Fairbairn Lawson.

Madras Motor and General Insurance

THE Madras Motor and General Insurance Co. Ltd. shows a balance of Rs. 10.95 lakhs for the year ended December 1962, compared with Rs. 10.24 lakhs for 1961, after allocating Rs. 9.60 lakhs (against Rs. 8 lakhs) for taxation and providing for other expenses. A dividend of 18.5 percent, subject to tax, has been declared to absorb Rs. 5.55 lakhs. General reserve is allocated Rs. 4.50 lakhs (against Rs. 3.25 lakhs), leaving a carry-forward of Rs. 37,630, against Rs. 35,487 brought in. The miscellaneous department has earned a premium income of Rs. 71.39 lakhs (against Rs. 59.28 lakhs). It has earned a revenue surplus of Rs. 12.20 lakhs. The net premium of the fire department has amounted to Rs. 5.97 lakhs (against Rs. 2.78 lakhs) and it has shown a surplus of Rs. 3.47 lakhs. The marine department has disclosed a loss of Rs. 6,896. The net premium has amounted to Rs. 2.17 lakhs (against Rs. 1.31 lakhs). The directors are now investing funds in ordinary and preference shares having growth potential and dividend pospects with a view to building up the investment income of the Company.

New Capital Issues

FOUR companies, of which two are new, have been authorised to issue capital aggregating Rs. 1.68 crores. All are issuing equity shares. Three companies will offer their shares for public subscription by prospectus. One company will issue part of its shares to its foreign collaborator. The consent is valid for 12 months in all cases. The following are the details:

Sri Ramakrishna Steel Industries Ltd, Coimbatore, a new company incorporated in Madras State, has been given consent to issue capital of Rs. 50 lakhs. It is divided into 50,000 equity shares of Rs. 100 each, to be issued for cash at par. (This is inclusive of 1,172 shares already subscribed by the signatories to the memorandum of association.) Out of these, such number of shares as would enable the Company's scrip to be listed on a recognised stock exchange, will be offered for public subscription by prospectus. The money will be used for establishing a new undertaking to be located in and around Coimbatore for the manufacture of 4,800 tons of steel casting a year.

Borax Morarji Ltd, Bombay, a new company, will issue capital of Rs. 30 lakhs divided into 60,000 equity shares of Rs. 50 each for cash at par. Out of this, shares of the value of Rs. 13.50 lakhs will be offered for subscription to Borax (Holdings) Ltd, London, and Rs. 7.50 lakhs to Dharamsi Chemical Company Ltd. The balance of Rs. 9 lakhs is to be issued to the public by prospectus. The capital will be used for the manufacture of borax and boric acid

Simon Carves India Ltd, Calcutta, (a subsidiary company of Simon Carves Limited, U.K.), is to issue capital of Rs. 60 lakhs divided into 600,000 shares of Rs. 10 each. Of this shares of the value of at least Rs. 24 lakhs will be offered for public subscription by prospectus at par. The balance of Rs. 36 lakhs will be issued to the foreign collaborator partly for cash and partly for consideration other than cash. The capital will be used for taking over a part of the assets of the Indian branch of the British Company.

Bajaj Electricals Ltd will issue additional capital of Rs. 27.50 lakhs in equity shares of Rs. 100 each to be issued for cash at par. The money will be used in providing working capital for the company and also in vesting in Matchwell Electricals Ltd

The Stock Markets

LISTLESS CONDITIONS PREVAIL IN CALCUTTA

Wednesday Evening.

THE stock market has been extremely dull during the past week. Holidays apart, activity has declined to almost a trickle. The trading ring has lacked the usual liveliness and brokers' books have been almost empty. Whatever business has been transacted has largely been confined to selected clearing shares. Fluctuations have been narrow, although any small offer has tended to reduce prices out of proportion in the absence of support. The fact that trading in Dalal Street was interrupted by holidays and the strike of the municipal workers, has been an additional deterrent. Activity has also been restrained by settlement considerations. The clearing on Wednesday passed off uneventfully. The carry-forward charges have been by and large, almost the same as in the previous settlement.

The stagnation has been due to the absence of fresh developments. The domestic political situation is considered fluid. Operators are inclined to wait and watch how many ministers' resignations are accepted. Although the no-confidence motion in the Lok Sabha has generated more heat than light, there is no doubt that the economic situation has deteriorated sharply. Lyons Range fears that labour unrest might be aggravated by the rise in living costs.

A disturbing factor is that even good corporate news has made little impression. The decision of the Kumardhubi Engineering Works to issue bonus and rights shares, for instance, has given rise to little enthusiasm. The prospect of a bonus issue by Anglo-India Jute has been virtually ignored. Support is restrained mainly by two factors. Firstly, the outlook for profits and dividends has been far from encouraging. Secondly, the shortage of funds has been felt. It is interesting to observe that the middle-income groups, which showed much interest in equities some time ago, have virtually disappeared from the investment scene. Not only have they suffered substantial capital losses on their holdings, but their resources have also been squeezed by heavier taxation, the Compulsory Deposit Scheme and rising commodity prices.

Indian Iron have been sluggish and have moved within a narrow groove. Except for Kumardhubi Engineering, which have met with scattered support, the prices of engineering shares have drifted lower in the absence of interest. Guest, Keen, Williams, Texmaco, Burn and Braithwaite have been transacted.

Turnover in miscellaneous shares has shrunk considerably. Business has largely been confined to clearing scrip. Towards the close, the prices have reacted due to absence of support. Hindustan Motors, Indian Aluminium, Indian Cable and Indian Copper have been barely steady. Alkali Chemical, Union Carbide, Goodyear India and Associated Battery have lost on balance. Among managing agency shares, Jardine Henderson have been active, although the price has declined towards the close due to profit-taking. New shares have been freely offered without attracting interest. Hindustan Aluminium, Isaac Holdens and Phillips Carbon have been quoted lower, but scattered interest has been shown in Asiatic Oxygen. In the paper section, Orient have been fairly active, although the closing price has been lower. Titaghur and Sirpur have been idle. The declaration of a higher dividend by India Paper Pulp has had little effect. Among cotton mill shares, J. K. Rayon have been subdued on producing disappointing results. The investors in cotton mill shares have been disturbed by the decline in the production of cloth and its exports. Sugar shares have been difficult to deal in, in the absence of buyers. Bank shares have been neglected. Electric and steamship company shares have been easier on predominance of sellers.

Although turnover in jute shares has been small, the prices have been fairly resilient due to an optimistic assessment of the prospect. Reports of bigger exports of jute goods during July have been interpreted bullishly. Hence the decision of the I.J.M.A. to continue the maximum level of production for the time being, has been calmly received by the investors.

Coal shares have been subdued in view of the decline in the demand for the commodity, combined with the growing accumulation of pithead stocks at collieries. Stray business has been done in tea shares and prices have tended to decline. Government securities have been dull but steady. Scattered support has been extended to short-dated stocks, but turnover has been small due to the absence of sellers. Interest has been taken in selected State Government loans.

Bombay

EQUITIES FLUCTUATE NARROWLY

L.I.C. PURCHASES HAVE LIMITED EFFECT

Wednesday Evening.

THE working of the Bombay stock market has been interrupted by holidays during the past week. It has also been affected by the strike of the municipal workers. Dalal Street has been perturbed by the labour unrest caused by the rising prices of commodities and the Compulsory Deposit Scheme. It is feared that unless steps are taken to settle the strike soon, it might affect industry elsewhere.

Turnover has been meagre and share prices have fluctuated narrowly. Bulls and bears have preferred to keep their commitments light in view of various uncertainties. The prospect of reshuffling the Central and State Cabinets is being watched closely. The purchases of selected ordinary shares by the Life Insurance Corporation had only temporary effects. The statement of Mr. B. K. Kaul, chairman of the Life Insurance Corporation, at the Ahmedabad Stock Exchange that the Corporation would take more interest in ordinary shares

CALCUTTA

has helped to steady sentiment somewhat towards the close. Selling pressure has been restrained by the imposition of margins on sales.

Tata Steel ordinary have moved narrowly and closed around Rs. 137.75. Indian Iron have been sluggish around 22.32. Among engineering shares, Tata Locomotive have been steady on hopes of better working during the current year. Mukand Iron have been taken by knowledgeable quarters. Premier Construction and Alcock Ashdown have met with scattered buying. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have lost on balance despite the news that the motor-vehicle manufacturers have been allocated more foreign exchange for expansion.

Cotton mill shares have on the whole been dull. Century and Kohinoor have met with stray support. Investors have been disappointed over the decline in the output of cloth during the first half of 1963. Bombay Dyeing, Simplex, Svadeshi, Tata Mills and Standard have lost somewhat.

Miscellaneous shares have been idle and turnover has declined. In the cement section, Associated Cement have been barely steady. Among sugar shares, Belapur and Walchandnagar Industries have been taken on hopes of bigger production during the next season. Mining shares have been subdued, and Shivrajpur Syndicate have been freely offered. Steamship company shares have been active, and Scindia Steam have gained on short-covering induced by reports of good working during the current year. Chemical shares have been quietly steady. Tata Chemical have been maintained, while Indian Dyestuff have reacted on profit-taking. Bombay Burmah have been idle. National Rayon have been quiet, but Gwalior Rayon have been steady on maintaining the dividend. Business in cash shares has been negligible.

Routine business has been transacted in bank shares. Bank of India and Central Bank have been dealt in. Electric company shares have been steadier due to the fact that the Tata group of companies have increased the dividend by 1 percent. Ahmedabad Electric, Bombay Suburban and Tata Hydro have improved slightly.

Madras

QUIET CONDITIONS IN SHARE MARKET

SELECTIVE SUPPORT FOR STATE LOANS

Tuesday Evening.

THE Madras stock market has been quiet during the past week because of easier advices from Dalal Street. Since outside interest has been lacking, operators have been disappointed. Business in clearing shares has been negligible. Investors are inclined to await further developments along the northern border.

In Government securities, support has been extended to selected State Government loans. Among banks, Indian have been transacted at Rs. 161 and State Bank of Mysore at Rs. 141. In electric supply company shares, Vellore have been steady at Rs. 15 and West Coast at Rs. 17.35. Except for Deccan which have improved to Rs. 9.80, sugar shares have on the whole been weaker. E.I.D. have reacted to Rs. 38.15 and Mysore to Rs. 47.75.

Turnover in planting shares has shrunk although there has been no selling pressure. Ossoor have been steady at Rs. 3.30 on prospects of a bonus issue in the proportion of one for every two shares held. The Company has also declared a final taxable ordinary dividend of 10 percent, making 15 percent for the year. Blue Mountain have hardened to Rs. 2.51, but Cochin Malabar have been available at Rs. 5.80. Consolidated Coffee have changed hands at Rs. 17.35 and Periakaramalai at Rs. 3.62. Midland have been transacted at Rs. 11.30 on declaring a taxable ordinary dividend of 10 percent. Amalgamated Coffee have been done at Rs. 10.36 on paying a taxable ordinary dividend of 5 percent. Lingapur have been taken at Rs. 4.90 on declaring a taxable ordinary dividend of 10 percent making 15 percent for the year. Woodland have been dealt in at Rs. 7.85 on declaring a taxable ordinary dividend of 5 percent. Wartyhully have changed hands at Rs. 2.80 on declaring a taxable ordinary dividend of 7 percent, making 12 percent for the year.

Textile shares have been listless and prices have fluctuated narrowly. South India Viscose have been idle at Rs. 125 and Travancore Rayon have slipped back to Rs. 23. Lakshmi have been done at Rs. 137 and Madura at Rs. 31.25. Business has passed in Ramakrishna at Rs. 217.80 and in Sarada at Rs. 96. Anglo-French have been bought at Rs. 138 and Balarama Varma at Rs. 107.75.

Miscellaneous shares have been dull. Among cement shares, Dalmia have been transacted at Rs. 12.25 and India Cement at Rs. 5.60. Among chemical shares, Mettur have changed hands at Rs. 12.40 on maintaining a taxable ordinary dividend of 12.5 percent, including a final of 6.25 percent. Standard Motors have been done at Rs. 11.62 on declaring a taxable ordinary dividend of 6 percent. Business has passed in Central Scientific at Rs. 6.30 on the payment of a taxable ordinary dividend of 12 percent.

Forest Industries have come to hand at Rs. 2.20 on declaring a taxable ordinary dividend of 12 percent. General Paper have been dealt in at Rs. 10.75 on paying a taxable ordinary dividend of 12.5 percent. Mysore Tobacco have been taken at Rs. 9.85 on declaring a taxable ordinary dividend of 10 percent. Kirloskar Electric have reacted to Rs. 18.12, but Madras Rubber have been steady up to Rs. 14.50. Seshasayee Paper have declined to Rs. 7.12, while Textool have been steady up to Rs. 156. Interest has been taken in Spencer at Rs 20.15. Aluminium Industries have been dull at Rs. 17.50, so have been Ashok Leyland at Rs. 7.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parantheses and will not be given where such a quotation is not available.]

London

BUSINESS REMAINS AT LOW LEVEL

INDUSTRIALS UNSETTLED

London, 21st August.

QUIET, rather unsettled conditions prevailed in the stock market during the past week. Business remained at a low level throughout, and prices mostly fluctuated within narrow limits. The recent enthusiasm was dampened by the Government's poor showing in Stratford by-election, disappointing July trade figures, strike in the building industry and fall in sterling. Gilt-edged securities made fresh headway at one time, but prices turned easier when recent buying dried up and on balance, prices were only slightly better. Recently issued corporation stocks fell back on appearance of yet another large issue. A feature of foreign bonds was the start of dealings in new Japanese 6 percent bonds at a good premium. Dollar stocks made a mixed showing, while insurance, banking and property shares moved irregularly. A number of good features appeared in industrial equities, but generally, conditions were unsettled. Interest in leaders was small, and prices fluctuated narrowly, Unilever being an exception and a good feature after the Company's interim statement. Gold shares developed a distinctly firm trend on small buying which reflected currency fears while base metals were often better. Activity in Burmah was the main feature of oils, but the price was below the best. Teas attracted a little support, but rubbers were idle.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours
Karanpura Collieries Ltd. ..	29-8-63	11 a.m.
Dehri Rohtas Light Railway Co. Ltd. ..	30-8-63	11-30 a.m.

DEPOSITING BANK FUNDS WITH BUSINESS HOUSES

(BY A SPECIAL CORRESPONDENT)

THERE was a surprising development in banking circles in Bombay in recent weeks. Certain big banks placed three days' notice money with some well-known business houses. The deposits were given at an interest of 4.50 percent, against the inter-bank call rate of 2½ percent and the prevailing Treasury bill rate of 2.3 percent. Bank credit has contracted sharply (by over Rs. 100 crores) since 26th April, and the increase in deposits during the current slack season so far, is also sizable at Rs. 75 crores. The rise in demand deposits has been considerable (Rs. 48 crores), so the banks concerned probably thought that the present arrangement was advantageous in the context of slackness in the demand for credit.

The proposition was financially attractive to the business houses also. The minimum rate at which they could borrow from banks was 2 percent above Bank rate or 6½ percent. Industrial houses are currently paying between 5 percent and 7 percent for direct deposits from the public, and such deposits are returnable within less than one year. The notice deposits are, technically speaking, recallable on demand after the stipulated period, but they are renewed again and again just as the banks do it among themselves. The estimate of such deposits, while not very accurate, is mentioned around Rs. 100 crores, or 5 percent of the total deposits with scheduled banks. It is considered by banks as not a significant factor to offer competition in their drive for deposits.

Since the prohibition of *budla* investment by scheduled banks under a Reserve Bank directive, the banks are left with no attractive short-term investment for their surplus funds, expecting Treasury bills. They should have normally invested such funds in Government securities, but this has proved unattractive in view of the restrictions on borrowing from the Reserve Bank against gilt-edged. The banks want to build a cushion with industrial houses. On the face of it, the arrangement is rather harmless.

Controversy over Deposits

Nevertheless, it has given rise to a controversy in banking circles. One section of bankers considers such deposits as call money and not advances, and, therefore, feels that the placing of idle balances as three days' notice money with business houses is in order. Another section does not agree with this interpretation. The latter considers it as advances "under the counter", and hence a clear violation of the inter-bank agreement on advances.

The inter-bank agreement on advances is, however, silent on the matter. The bankers probably never foresaw such a development as the agreement was discussed in the busy season when the demand for credit is heaviest. The bankers concerned themselves only with the lending of funds by banks to the public, and not with violations of the agreement among themselves.

What is the actual position of these advances or deposits? According to the balance-sheet interpretation, such advances or deposits are short-term investments and as such have to figure under "other investments" on the assets side of the balance-sheet. They do not constitute, as the agreement stands at present, any violation of the rules, and the bankers opposing the arrangement are, therefore, not on firm ground.

Avoiding Investment in Gilt-edged

While the arrangement cannot be questioned on constitutional grounds, it is not a desirable development, for it is helping banks to avoid investment in Government securities. It also contradicts the claim of banks that deposits are not gathering momentum and that demand for credit in the next busy season will pose special problems for them. On the other hand, it strengthens the hands of the Reserve Bank *vis-à-vis* the banking system, because the present development vindicates the stand taken by the Bank that the resources of the banking system are likely to grow more rapidly with the passage of time.

81/2/63

THE CALCUTTA MONEY MARKET

SMALL DECREASE IN ADVANCES

Wednesday, 21st August.

THE general level of advances has decreased a little in the Calcutta money market during the past week. The credit requirements of the sugar mills are down, but the accommodation given to the cotton mills, and to the foodgrains and seeds trade, remains unchanged. Advances to the jute industry, and to the iron, steel and engineering units, are slightly larger. In the interbank market, conditions have been easy, and the call rate is quoted at 1½ percent.

The exchange market has been active, with a large number of tea bills and a moderate supply of gunny bills. The demand for remittance has been fairly good. Sterling has weakened significantly in relation to the U.S. dollar, and fractionally in relation to the other important currencies.

SILVER WAS QUIETLY STEADY IN Calcutta during the past week. The price rose slightly from the previous week's level of Rs. 268.75 to Rs. 269.25, quoted today for ready delivery. The London and New York prices were 111⅛d and 128.6 cents. The price of gold of 14 carats was quoted at Rs. 65 a 10 grams, but no business was transacted.

DURING THE WEEK ENDED 16TH August, Government of India Treasury bills for Rs. 24,19,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 20th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 26th August.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 21st August to 24th August at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 13th August to 17th August amounted to Rs. 1,43,25,000.

ACTIVE NOTES FELL BY Rs. 10.50 crores to Rs. 2,236.43 crores and the total note issue by Rs. 9.06 crores to Rs. 2,248.71 crores, according to the return of the Reserve Bank of India for the week ended 16th August, 1963. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 10 crores to Rs. 1,921.32 crores. In the Banking Department, deposits of the Central Government fell by Rs. 44.08 crores to Rs. 57.36 crores and those of State Governments by Rs. 7.71 crores to Rs. 16.55 crores. Deposits of scheduled banks were Rs. 2.54 crores larger at Rs. 86.79 crores. Balances held abroad again declined by Rs. 81 lakhs to Rs. 4.28 crores, as did investments by Rs. 20.08 crores to Rs. 254.41 crores. Loans given to scheduled banks fell from Rs. 3.17 crores to Rs. 31.80 lakhs of which advances against usance bills amounted to nil (Rs. 2.10 crores). Ways and means advances stood at Rs. 13 crores, against Rs. 9.65 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 9th August, 1963, shows a drop of Rs. 4 crores to Rs. 573.33 crores in total deposits. Investments in Government securities are up by Rs. 23.27 crores to Rs. 285 crores, while other authorised investments are down by Rs. 10 lakhs to Rs. 9.25 crores. Advances, including loans, cash credits, overdrafts and bills discounted have declined by Rs. 58 lakhs to Rs. 264.24 crores. Cash and balances are, in consequence, shown at Rs. 21.75 crores or Rs. 1.15 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 9th August, 1963, shows Demand and Time liabilities at Rs. 1,086.35 crores (Rs. 26.89 crores on account of borrowings from banks) and Rs. 1,283.63 crores (Rs. 18.09 crores), compared with Rs. 1,084.41 crores (Rs. 28.67 crores) and Rs. 1,288.11 crores (Rs. 19.37 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.88 crores and Rs. 5.95 crores to Rs. 51.50 crores and Rs. 87.43 crores, respectively. There is a rise of Rs. 24.12 crores to Rs. 716.13 crores in investments. Advances and bills discounted at Rs. 1,496.64 crores show a rise of Rs. 51 lakhs. The ratio to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 63.1 percent, against 5.5 percent and 63.1 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 23-8-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
23-8-63	26-11-63	2,00,00	Rs. 2.320%

NEED TO RAISE TEA OUTPUT STRESSED

(BY A SPECIAL CORRESPONDENT)

THE president of the Tea Association of India, Mr. S. R. Daga, speaking at the annual meeting in Calcutta recently, said the country's tea production had not increased in recent years, but internal consumption had been going up, and exports showed a satisfactory trend. Therefore, every effort should be made to step up production. Mr. Daga, it is reported, has said that it is only towards the end of the fourth plan that more production can be expected, but one of the ways to get increased yields immediately is by effective irrigation of the tea areas. Mr. Daga recommended the sinking of tube wells but admitted that the cost would be beyond the capacity of many estates.

In contrast with the somewhat pessimistic forecasts made by this correspondent, it was cheerful to read that Mr. A. K. Roy, deputy chairman, Indian Trade Board said at the same meeting that not only he expected north Indian gardens to catch up with the deficit, but that India will go ahead near to the 1961 crop record, namely, 372 million kilograms. As pointed out previously, this would have been possible if good groundwork had been done in the past few years, but if record output levels could be reached this month as well as in September and October, then part of the deficit may be made up.

The last output figures from the major producing countries of the world showed the 1963 crop at 470 million lbs, against 473.8 million lbs in 1962, and 462.0 million lbs in 1961. During July, north India picked up to some extent, and by the middle of August, the crop, it was thought, was only 5 million lbs of last year's level. Pakistan is running ahead of last year by 2.2 million lbs, but Ceylon is still reported short by 7 million to 10 million lbs. The worrying feature is the large proportion of common tea now being manufactured throughout the world.

U.K. Tea Stocks and Prices

U.K. tea stocks remain about steady and for the week ended 9th August were reported just under 134 million lbs, against 133.3 million lbs a week earlier. Deliveries during the week were given as 7.555 million lbs with landings at 8.189 million lbs. Of the 23.845 million lbs afloat, about 750,000 lbs was from Calcutta. South India sent about 3¼ million lbs and Ceylon topped the list with 11.753 million lbs. It may be noted from these figures that some of the recent comments from Colombo about the U.K. and imports of Ceylon teas appear to be without substance.

Prices in London are reasonably satisfactory. Average prices last week were given as 48.14d a lb, compared with 46.65d a lb in the previous week and 46.02d a lb a year ago.

This correspondent has often referred to the effect of water on brewing tea. Recently, the *Assam Review and Tea News* published a study on the influence of water. It said: "The influence of nature of water on the extraction of different constituents has been studied by a few workers. The studies are by no means complete and the subject deserves further consideration. A method in which tea is brewed in boiling water for 30 minutes using a ratio of 1: 100 was found to be better for flavour evaluation as compared with the normal method. The differences in the taste of brew made by using just boiling water and water boiled to different times have been studied by us. Brew made with overboiled water is more astringent and stronger as compared to brew made with just boiled water.

"The influence of the salts in water, used for brewing, on the cup taste has been studied in detail. Based on these studies, a synthetic water containing 81 mg. CaCo 37.2 mg. Mg(HCo) 25.6 mg. NaHCO and 82.2 mg. NaCl a litre, has been recommended for cup-testing Threshold limits for the salts have also been ascertained. Similar studies have also been carried out in the laboratories. The maximum threshold limits for the different salts were found to be as follows: bicarbonate 50 p.p.m.; carbonate 30 p.p.m.; Calcium 50 p.p.m.; Mg +200 and Cl=300.

These studies are of interest in showing the time spent by the scientists employed by the trade on trying to produce the best for the consumer but today the emphasis is on instant teas, and to boil a brew for 30 minutes hardly suggests practical experiments.

Cotton Production in Burma

COTTON growing has played an important part in Burma's agriculture for many years, but its crop, which averaged over 100,000 bales in the last few seasons before the war, has not followed the general trend towards expansion. In 1957-58, production was only 58,000 bales, but there has been a fairly steady recovery since then, and for export. Domestic consumption, however, must be expected to increase in view of the projected expansion of textile capacity.

Textile imports into Burma are now at annual rates of 32,000,000 lbs of cotton yarn, 3 million lbs of rayon yarn, 132 million yards of cotton cloth, and 15 million yards of man-made fibre cloth. Domestic production provides the remainder of the requirements and amounts to some 15 million yards. Imports come mainly from Japan, India and China, but increasing quantities have come in from east European countries in the last year or two. Goods from these sources are usually cheaper than those from Japan and India, although dearer than those from China.

It is estimated that Burma needs 500,000 more spindles and 9,000 more looms, working two shifts, to produce all its requirements of cloth so that it can dispense with imports. Weaving, largely on handlooms, is well established, but growth on the spinning side has been slow. The immediate plans of the Industrial Development Corporation visualise the erection of four mills in Upper Burma with a total of 80,000 spindles and 2,000 looms to produce 10 million lbs of cotton yarn and 24 million yards of cloth a year by 1965. In addition Multitex, a subsidiary of the Corporation, has separate schemes to increase textile capacity. Two spinning and weaving mills, with 60,000 spindles and 800 looms between them, are to be established with the co-operation of China and West Germany, respectively.

New Delhi

NEW FORMULA FOR ASSESSING INDUSTRIAL CAPACITY

(FROM OUR NEW DELHI CORRESPONDENT)

THERE is often a good deal of idle controversy on the question of "capacity" in a particular unit of industry. The Central Ministry of Industries, the Planning Commission and the Directorate-General of Technical Development assess the "capacity" of an industry differently. The Ministry sometimes contends that additional capacity has to be created to reach the plan target, while the Planning Commission may hold a contrary view. In fact, both may be right, because one may be talking in terms of single-shift working, and the other in terms of double or triple shifts.

The Central Ministry of Industries has, therefore, suggested a working formula to streamline the basis of calculating capacity on a uniform basis. Industrial capacities, it is explained, are at present estimated on a varying basis—sometimes on single or double-shift working and sometimes on the basis of continuous operation. In the case of units whose capacity is at present indicated on a single-shift basis, it does not necessarily follow that the capacity on the basis of the maximum use of plant and machinery will be three times the single-shift capacity because, in practice, it is not always possible to work the whole plant in three shifts. In many cases, only a few sections of a plant can be so worked. Under the circumstances, the estimate of industrial capacity on a shift basis is likely to give a misleading picture. It has, therefore, been decided that industrial capacity should normally be expressed only on the basis of the maximum use of plant and machinery on an annual basis.

Two Categories

For this purpose, industries may be broadly divided into two categories: (i) the "continuous process" industries, which work continuously (whether on the basis of 330 or 300 working days a year or, as in the sugar industry, on a seasonal basis), and (2) the remaining industries. Considering the conditions obtaining in India, it has been decided that in the case of industries falling in category (2), capacity on the basis of maximum use will normally be deemed to be that assessed on the basis of double-shift operation.

While the assessment of capacity on a double-shift basis in other than "continuous process" industries will be the normal rule, it may be that some of these units are generally run on a three-shift basis or are capable of being so run. For such industries, a "no-objection-to-capacity" certificate will be required.

To give effect to these instructions, the following action is suggested:

(a) *For licences already issued*: the appropriate authority may examine each industrial licence so far issued and, in cases where capacity has been expressed on a shift basis, review the position in order to express the capacity of all units on an annual basis. The appropriate authority will also arrange for a random check of some of the licences already issued even on the basis of annual capacity with a view to ascertaining that the capacities licensed are appropriate.

Need for Physical Check

Subject to the limitations of staff, it is considered desirable to have a physical check or verification of at least an important cross-section of cases by technical officers of the appropriate authority. In order to keep this work within manageable limits, verification may be confined to some of the larger units in important industries only. There may be cases where it is found that the capacity actually installed is substantially in excess, say, by more than 10 percent, of the capacity licensed. Such cases should be reported to the Licensing Committee before they are regularised.

Before the revised capacities as assessed above are communicated to the parties or published, it is proposed that the result of the factual survey of the existing capacity in different industries should be discussed at an inter-ministerial meeting, including the Planning Commission.

(b) *For licences to be issued in future*: In the case of all industrial licences to be issued hereafter, the capacity will be specified on an annual basis only, without any reference to shifts. In some industries where there are more than one major processes or end-products, capacities are required to be stated separately, as for instance for pig iron, steel ingots and rolled products in the iron and steel industry. In such cases, the appropriate authority should recommend the fixing of capacity separately for the major processes or end-products.

ALUMINIUM

Steps to Replace Copper

The Government of India is taking steps to encourage the use of aluminium as a substitute for copper. In electrical apparatus, for example, aluminium has already replaced copper in the manufacture of conductors. Barring switchboard and flexible cables, it is now proposed to replace copper by aluminium for making cables also. It is proposed to train an adequate number of people for this changeover and, in particular, for the purpose of jointing cables.

Meanwhile, the Government is reconsidering the export commitments of new industries in general and of the aluminium industry in particular. It would be unwise to insist on the export of items which are now being imported. As for aluminium, it is already in short supply and with few exceptions, the units licensed have not made any noticeable progress. With the proposed switchover from copper to aluminium, the demand for the latter will increase further. So in the larger interests of the country, the industry should not be encouraged to export.

NEWSPRINT

Removing Shortage

India continues to face a newsprint shortage in spite of the rosy picture painted in the third plan. According to the Planning Commission, the demand for newsprint was of the order of 80,000 tons in 1955-56 and 98,000 tons (in spite of the restrictions) in 1960-61, against 120,000 tons envisaged in the second plan. On the basis of the 10-percent increase in the consumption of newsprint every year, the Planning Commission had placed the 1966 demand at 150,000 tons. This estimate was endorsed by the Panel for Paper and Pulp Industries. Since the new schemes are in their preliminary stages and may not reach full production by the end of the third plan period, the production target has been placed at 120,000 tons by 1966. The following schemes had been approved for the production of newsprint:

(1) Rohtas Industries was licensed to produce 30,000 tons of newsprint in Maharashtra.

(2) Birla Gwalior (Private) Ltd was licensed to manufacture 30,000 tons of newsprint from imported pulp.

(3) Shree Gopal Paper Mills was licensed to produce 30,000 tons of newsprint in Kangra, Punjab.

(4) It was also decided, in principle, to expand the capacity of Nepa Mills from 30,000 tons to 60,000 tons.

There is no sign yet of any new units being set up to increase the output of newsprint. Actual production of Nepa Mills is placed at 23,000 tons and imports at 90,000 tons, leaving a gap of 10,000 tons to meet the demand of newspapers at the 1961-62 level. This is calculated at the 1957 page level with 10 percent cut on the circulation and pages of newspapers. It is learnt that the United States Agency for International Development had offered 10,000 tons of quality newsprint from North American mills. The Government was not, however, willing to divert the aid for financing the import of newsprint.

GOLD CONTROL

Policy Defended

Mr. Morarji Desai, Central Finance Minister, vigorously defended his gold policy last week while replying to questions on the rehabilitation of goldsmiths, rendered jobless by the Gold Control Order. Both the Prime Minister and the Central Minister for Labour, Mr. Gulzarilal Nanda, were in their seats when the question together with its supplementaries, were asked by some Congress and communist members. The members narrated the misery the Gold Control Order had brought for hereditary craftsmen. While crores of rupees are being spent on propagating *khadi*, Mr. Desai did not contradict the allegation made by Mrs. Renu Chakravarty that a rehabilitation benefit of Rs. 4 a month was being paid to jobless goldsmiths in West Bengal. Nor did the Finance Minister challenge the figures of suicides committed by some of the latter. Mr. Desai, amidst laughter, claimed that the smuggling of gold had been checked, but could not furnish any data on the unhoarding of gold or the reduction in price of the metal in India.

BHAKRA

Expansion of Power-station

The Bhakra right bank power-station, which is being erected with Russian economic and technical assistance, is being further expanded by the installation of a fifth 120-megawatt hydro-electric unit. This will raise the total installed capacity of the hydro-electric station to 600 megawatts and will be one of the biggest hydro-electric power-stations in India. The foreign exchange cost of the project is being met out of the 112.5 million rouble credit (Rs. 59.53 crores) granted to India in February 1961.

The first 120 megawatt hydro-electric unit will start arriving from Russia in a few months. The fifth unit is expected to be made available in 1965. Work on the construction of the power-station is going ahead. It will be equipped with the latest types of Russian machinery. A number of Indian engineers have already visited Russia where some of them have participated in drawing up the project report. Some others have attended model tests of hydro-electric units at the Russian manufacturing plants. Russian engineers will help in the construction, erection and commissioning of the power-station.

PIG IRON

Project for New Plant

The Government of India has approved in principle the scheme of the Punjab Government for setting up a pig iron plant with a capacity of 100,000 tons a year in the public sector in the State. The plant will use iron ore deposits in Mahendragarh. The letter of intent will be issued in due course. The plant is likely to be situated on the Hissar-Delhi Road, near Satroda village, because of the water and power supply and transport facilities available at the site.

SPECIAL STEEL

Developing Bhadravati Plant

One of the leading Austrian special steel works recently signed a ten-year contract with the Government of India for providing technical advice for developing the Bhadravati special steel plant of the Mysore Iron and Steel Corporation Ltd. The Austrian concern will provide for instruction of a number of Indian technicians in modern methods of special steel production. Courses for this purpose will be held in the manufacturing plants of the concern in the province of Styria. Furthermore, experts of the concern will be delegated directly to Bhadravati to serve as local advisers.

CEMENT

Licence for New Factory

The Government of India has issued a licence for setting up a cement factory in Madhya Pradesh. Messrs Associated Cement Companies Ltd has received the licence for setting up a slag cement factory in Jamul, near Bhilai. The factory is expected to be commissioned by the middle of 1964. A letter of intent has been granted to Mr. P. V. Krishna Reddy, Gudur, for setting up a cement factory in Yerraguntla with a capacity of 200,000 tons a year.

BANANAS

Exploring Markets

A five-member delegation left for west Asia and Europe on 19th August to explore the markets there for Indian bananas. Among the places the delegation will visit during its four-week tour will be Teheran, Baghdad, Basra, Damascus, Beirut, Brussels, Frankfurt, Hamburg, London, Stockholm, Paris, Zürich and Rome. Arrangements are being made to send a sample quantity of fresh banana fruits at each place the delegation visits. It will be flown from Madras, for distribution to the prospective consumers.

The West German quota of duty-free imports of bananas from countries outside the European Economic Community in 1963 will be increased

from 347,000 tons to 443,000 tons shortly. This has recently been agreed upon between West Germany and the other E.E.C. members. Earlier estimates have put West Germany's banana consumption at 477,000 tons this year. The possible difference between the estimate and the newly fixed tariff-free import quota could either be covered by duty-free imports from other E.E.C. members or associated overseas territories, or by imports from countries outside the E.E.C. for which, however, an import duty of 6 percent would have to be paid.

IRON ORE

Japanese Import Plans

Japan will import 2.54 million tons of iron ore in 1963-64. In 1964-65, sales will be 2.775 million tons. In addition, 30,000 tons of iron ore will be sold at the buyer's option. Sales will be in cash in foreign exchange. The overall sale proceeds are estimated to be about Rs. 13 crores. The State Trading Corporation has also agreed to import Rs. 2.11 crores worth of steel in 1963-64 and Rs. 2.47 crores worth in 1964-65 from Japanese steel mills.

FUEL

Economy in Use

Some time ago, the Government of India commissioned two foreign experts to study the scope for economy in the use of fuel in Indian industry and suggest measures for economy in the consumption of fuel (mainly coal) and a better use of generated energy (mainly steam). After considering the recommendations made by experts, the Government has decided to set up a fuel efficiency service. The organisation of this service and its operation have been entrusted to the National Productivity Council.

The main objective of the service will be to advise industry on the efficient utilisation of fuel. While the service may ultimately cover all aspects of economic utilisation of coal and other fuels including such aspects as substitute fuels, fuel handling and transport, and the use of generated heat energy, to begin with it will concentrate on the effective use of coal through adoption of, what may be called, "first-aid measures", "instrumentation", etcetera.

It has been decided that to begin with, the fuel efficiency service should operate in the Greater Bombay industrial area. It is proposed to charge fees from industry for the services rendered. This is expected to cover at least a part of the expenditure on the service.

TEA

Setting Up New Centres

As a first step towards the setting up of tea centres in Europe, the Tea Board has appointed a senior officer with headquarters in Brussels to determine suitable locations for the centres and to arrange their establishment.

SYNTHETIC RUBBER

Price Being Examined

The landed cost of synthetic rubber of the S.B.R. type is of the order of Rs. 2,900 a ton, inclusive of an import duty of 22 percent *ad valorem*. The Indian producer has proposed to sell this product at Rs. 4,400 a ton. The Government is examining the reasonableness of this price.

ZINC

New Smelter

The Metal Corporation of India, a private limited Company, has been licensed to set up a new zinc smelter in Udaipur and also to expand its existing lead smelter in Tundoo, Bihar, for refining the lead and zinc ores mined by the Corporation from its mines in Zawar, near Udaipur. The Corporation will also manufacture cadmium and sulphuric acid for the making of superphosphates as by-products from its zinc smelter.

RAILWAYS

Constructing Broad-gauge Line

It has been decided to construct a new broad-gauge line from near Siliguri to Jogighopa in Assam. The work involves (i) the conversion of the existing metre-gauge line from Siliguri to Haldibari; and (ii) the construction of a new broad-gauge line from Raninagar (on the Siliguri-Haldibari branch) to Jogighopa in Assam.

For technical reasons, it has been decided that the alignment of the proposed broad-gauge line between Siliguri and Jogighopa should be as follows: (i) from Siliguri to Cooch-Behar *via* Domohani and Falakata; (ii) from Cooch Behar turn north to Alipurduar; (iii) between Alipurduar and Bongaigaon alongside the existing metre-gauge alignment, to the south of it; and (iv) then turn south to Jogighopa.

This alignment will not only be cheaper but will also be more stable than other alignments *via* the towns mentioned and can be constructed earlier.

TOUGH CASING
it will take more retreads and add to your profits

In these days of high running costs (and high taxes!) every operator seeks economy. Tyres are valuable items and choice of the right tyre will mean more profits in the long run. For example, a tyre must be able to take several retreads.

The casings of Dunlop tyres are made in such a way that they will give you the maximum number of retreads. The casings will stand up to the shocks from bad roads and will remain good inspite of very heavy loads on long, fast hauls. One more reason why Dunlop tyres will help run your truck or bus at the lowest cost per mile.

London

ECONOMISTS VISUALISE STEADY GROWTH IN U.K. ECONOMY

(FROM OUR LONDON CORRESPONDENT)

A STEADY expansion of the national output is forecast by the National Institute of Economic and Social Research in its *Economic Review* for August. It considers that recovery since the fourth quarter of last year has been between 2 percent and 2½ percent, equivalent to 4 to 5 percent a year. "On present policies", this rate of rise may continue up to mid-1964, the *Review* suggests. The evidence on which this is based is no firmer than the varying items of official statistics in the last few weeks. The Institute economists say frankly that it is their "appraisal" that the recovery will continue with an annual rate of growth of 4 to 5 percent over the next 12 months. So far the recovery has been based on a modest rise in consumer expenditure and a rapid rise in exports.

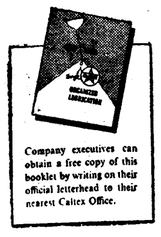
In the second half of the year, output, it is expected, will rise slightly faster than in the first half-year. The forecast goes on: "The risk of the recovery petering out in the second half of this year, as it did last year, seems very slight. The prospects are different now. Manufacturing investment can hardly go on falling fast as it was doing then. There seem better reasons now than a year ago for expecting the export increase to continue, although more slowly than in the first half-year. Finally, consumer expenditure has the stimulus of the income tax reductions: in addition, a rising trend in employment and hours should carry it up." So the industrial production index in the fourth quarter of 1963 is expected to be 122-123 (seasonally adjusted), compared with 115 a year earlier and 118 in May.

Consumer spending on durables may rise more slowly in the next 12 months, but spending on non-durables should more than offset this. In the investment sector, public expenditure should rise rapidly and the *Review* suggests that the forward indicators are beginning to turn up for manufacturing industries' investment, suggesting a recovery at the beginning of next year. Stock building should recover further.

Payments Surplus

No sterling trouble is seen ahead. The current payment surplus may have been running in the first half-year at £200 million a year more—much more if the balancing item is included. The surplus may be reduced somewhat from now on if imports rise faster than exports, but there is little risk of serious balance of payments trouble." Finally, the outlook for world production and trade is regarded as more cheerful than it was three months ago. In the United States, output should go on rising well into next year and in continental western Europe, production has recovered strongly. The primary producing countries are also better off as product prices have risen.

All this sounds optimistic, but the Institute economists point out that even if British expansion continued at the present rate up to 1966, output would still be some way short of the "Neddy" target for that year. The warning is timely, but the Institute economists are not alone in being optimistic. A similar approach to the economic outlook comes from merchants engaged in foreign trade.



These U.K. merchants are more optimistic than they were four months ago, says the Association of British Chambers of Commerce in a report on its latest enquiry into merchanting trends. While most export merchants expect orders, deliveries and prices to continue at about the current rates, more expect a rise than a fall in the rate of orders received and in the rate of deliveries. The small number who expect delivery dates to lengthen is matched by the number who expect them to shorten. This, the A.B.C.C. says, is true of all trade groups.

More import merchants expect a rise rather than a fall in new import orders placed, but import arrivals over the next four months are not thought likely to increase very much. The product groups in which some increase in arrivals is expected, are metals and clothing and finished textiles. The survey is based on replies from 300 merchants whose estimated annual turnover is about £435 million. These account for nearly 30 percent of total exports of clothing and textiles, but only about 5 percent of engineering products (including vehicles) and 3½ percent of manufactured chemicals. Similarly, on the import side, merchants handle some 20 percent of textile materials, but less than 0.5 percent of machinery and less than 3 percent of timber imports. As far as investment prospects are concerned, there also appears to be justification for some optimism. The decline in private industry's investment expenditure since the middle of 1961 now appears to be coming to an end and it seems likely that investment may soon begin to rise, says the Board of Trade.

The results of the Board's latest survey of investment intentions suggest that capital expenditure by private industry will increase by something less than 5 percent in 1964 compared with this year. Total investment this year is expected to be about 5 percent less than in 1962. Giving these figures, the Board of Trade emphasises the uncertainties involved in interpreting companies'

Cut down your lubricants
Cut out your paper-work

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

Help your Purchase Officer to eliminate the stacks of paper that collect in his office...the unnecessary flood of Purchase Orders. When each department in a plant specifies a lubricant without reference to the purchases of other departments, there is bound to be duplication and waste.

The Caltex "Stop-Loss" programme can do away with this lubrication waste...can cut a great deal of Purchase Order paper-work.

Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

It will be worth your while to find out specifically how Caltex "Stop-Loss" can help to ease the problems in your plant.

Help your operation to greater profit with the Caltex "Stop-Loss" programme.

SAVE FOR SECURITY

forecasts. This uncertainty, it says, is "perhaps greater at a time when the expenditure cycle is changing from a downturn to an upturn—as now seems to be the case."

Forecasts for 1964, it says, have been provided well before the period of expenditure, and past experience has shown that they may be substantially revised upwards or downwards as time passes. Forecasts received during the summer indicate that manufacturing investment during 1963 is now expected to be some 10 percent lower than in 1962. This represents a slight upward revision of the previous estimate of a fall of 14 percent, based on forecasts made by contributors towards the end of last year.

A substantial part of the expected fall in expenditure in 1963, compared with 1962, continues to be accounted for by the forecasts of much reduced expenditure made by companies in the iron and steel industry, but most companies in other industries also continue to show a downward trend in their forecasts. The main change in the amounts expected to be spent, since the forecasts provided at the end of last year, has occurred in companies in the food, drink and tobacco and the paper and printing groups of industries, both of which now expect to invest more in 1963 than in 1962.

Capital Expenditure

The latest forecasts of capital expenditure in the distributive and service industries indicate that the fall in spending between 1962 and 1963 in this sector will be only about 2 percent. This estimate, like that for manufacturing industry, reflects some upward revision of the figures provided by companies at the end of last year—when the expected decline in capital expenditure in this sector was thought likely to be about 6 percent.

Within the total for the distributive and service industries, the capital expenditure of the shipping industry is still expected to fall heavily between 1962 and 1963, with the remaining industries in this group taken together showing a very slight increase between 1962 and 1963. The preliminary forecasts of expected expenditure during 1964 suggest that the total expenditure of manufacturing, distributive and service industries considered together will increase slightly between 1963 and 1964. The expected rise is one of rather less than 5 percent from the level now expected for 1963, with expenditure by manufacturing industry showing no great change and that of the distributive and service industries rising by about 5 percent.

Within manufacturing industry, the metal manufacturing group (primarily the iron and steel industry) is expected to show a further decline in 1964, but all the other industries taken together show an expected rise of modest proportions (about 5 percent), suggesting strongly that, in manufacturing industry outside the metal manufacturing group, some recovery in investment will take place next year. Mr. Maudling must be feeling rather pleased with himself. The National Institute of Economic and Social Research—which has not always seen eye to eye with the Chancellor—has now come round to sharing his optimistic view of the immediate economic prospects. In addition, the Organisation for Economic Co-operation and Development, in the latest of its series of annual surveys of the British economy, also reports favourably on the short-term outlook for expansion and awards high marks to the Chancellor for his "prudent" handling of economic policy over the course of the past year.

Reinflation of Demand

The O.E.C.D. thinks that Mr. Maudling was right to proceed cautiously in reinflating demand. The task of diagnosing which way the economy was going to move was "more than usually difficult" at the time when he took over in the Treasury in the summer of 1962, so that it was better to "hasten slowly" rather than risk another round of "stop-go" policies.

The O.E.C.D. also approves of the deliberate pace at which expansion is now going ahead though this means that "the return to a fuller utilisation of capital and labour" will not be completed "until sometime in 1964." A stimulus of the size needed to restore full capacity working this year would, it believes, be almost certain to set in train processes which would lead to excessive demand in later years. Investment demand, it points out, tends to receive its stimulus fairly late in the cumulative process and so would be particularly liable to be squeezed out by an excessive stimulus to consumer spending in 1963. Moreover, "it is obviously important to ensure that capacity to meet reviving export demand is not pre-empted." For these reasons, the O.E.C.D. finds it "difficult to quarrel with the judgement of the United Kingdom authorities."

But while the O.E.C.D. economists are reasonably encouraging in the view they take for the rest of this year and for 1964, they are less certain about the chances of maintaining the 4 percent rate of growth desired by "Neddy" in later years. Not surprisingly, these doubts centre on exports. While the resources available in support of sterling are adequate to cope with temporary external deficits they will not, the O.E.C.D. points out, allow us to run a continuing deficit.

The "breakthrough" in exports necessary if the U.K. is to maintain a strong foreign balance "will not be easy to achieve." The O.E.C.D. thinks it "very doubtful" if world trade will expand significantly faster in the middle 1960's than it has done in recent years. It also suspects that Britain's problem may be made more difficult by developments within the Common Market. On the other hand, Britain's cause is not a hopeless one. She now has the available capacity in manpower and plant to supply additional exports, the O.E.C.D. points out. Given "a proper relation between output and incomes," it thinks, British exports should be able to benefit progressively from the faster rise in productivity which ought to accompany a smoother rate of economic growth. In other words, incomes policy is the key.

Jute

GOOD WEATHER IMPROVES CROP PROSPECTS

THE standing jute crop is thriving, with alternate rainfall and sunshine in the late-sown highland areas of Gangetic West Bengal, Tripura, northern Bengal, Cooch Behar, lower Assam valley, northern Bihar and in the deltaic areas of Orissa and Andhra Pradesh. Export for scattered flood damage in isolated pockets of northern Bihar, northern Bengal, lower Assam valley and Tripura, no loss has been reported so far. There has also been no pest damage because of the congenial weather and the timely use of pesticides. According to information received by jute circles in Calcutta, the crop already harvested from the early-sown low-lying lands is satisfactory and its average quality better this year. The crop improvement measures sponsored by the State Governments in collaboration with the Indian Central Jute Committee seem to have yielded good results. Preliminary estimates made by trade circles place the rise in acreage under jute at around 10 percent and the crop at 8 million bales.

The brisk purchases being made by the mills on their own initiative and on the Jute Commissioner's orders have helped the prices of Assam Bottoms to firm up to the official floor level. The prices of selected grades have risen much higher. In view of a better average grade of fibre output and easier farming conditions due to the timely sunshine and rainfall, growers may get an attractive return for their produce. However, their holding capacity is likely to be affected by the high prices that have to be paid for foodgrains and essential consumer goods. Furthermore, the need for funds to finance the sowing of *aman* paddy is being keenly felt by farmers. In the circumstances, it is doubtful if they will be able to hold the jute crop for some time in expectation of a better price. So selling pressure may develop soon after the harvesting of the standing crop. It will be difficult for the mills to absorb the offers in a short time all over the growing areas, for they have their own problems of finance, warehousing and movement of the fibre from outstation markets to Calcutta or zonal godowns. The State Trading Corporation's plan to lift about 600,000 maunds of jute this season is likely to have only a marginal effect.

Maximum Output to Continue

In spite of the sharp increase of 7,800 tonnes to 104,000 tonnes in stocks of jute goods during July, and a rise of 8,600 tonnes to 108,900 tonnes in output, the I.J.M.A. has decided to continue maximum production for the time being, according to reliable sources. The decision has been taken after an optimistic assessment of the outlook following satisfactory exports during recent months. In July, exports rose by 5,700 tonnes to 81,000 tonnes. Pakistan being sold to capacity, market circles believe that a large number of foreign consumers, who had deferred their purchases anticipating an easier price trend, may soon enter the market to replenish their depleted stocks. Some of them have already invited substantial tenders from their agents in India.

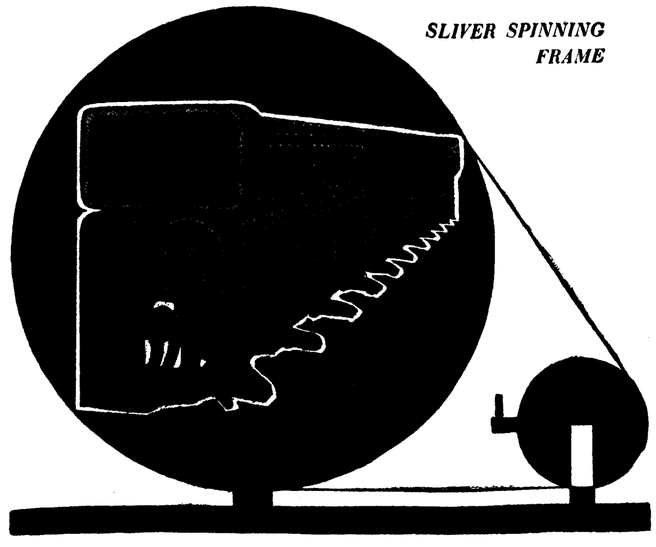
Although there has been a small decline in U.S. burlap consumption during the last two months, the monthly average of around 75.94 million yards up to July this year compares favourably with 72.57 million yards for the corresponding period of 1962. It is hoped that the U.S.A. will soon increase her purchases. There has been an appreciable increase in consumption by the east European countries and their offtake is expected to improve. Market circles are awaiting the results of the present east European tour of the I.J.M.A. jute delegation.

Production and Offtake

Working at the maximum level for 216 hours in July, against 192 hours in the previous month, the mills reporting to the I.J.M.A. have produced 108,900 tonnes of jute goods, against 100,300 tonnes in June. Hessian output has risen by 4,300 tonnes to 45,800 tonnes, sacking by 3,000 tonnes to 43,000 tonnes and miscellaneous goods by 1,300 tonnes to 20,100 tonnes. In July 1962, the mills worked for 208 hours, producing 103,500 tonnes. Of this, 41,200 tonnes were hessian, 47,700 tonnes sacking and 14,600 tonnes other goods.

Jute goods despatches have risen from 99,000 tonnes in June to 100,500 tonnes in July. Of this, the increase in hessian is from 41,800 tonnes to 45,900 tonnes; but sacking has declined from 37,900 tonnes to 36,800 tonnes and miscellaneous goods from 19,300 tonnes to 17,800 tonnes. Total exports have gone up by 5,700 tonnes to 81,000 tonnes; hessian has increased by 3,600 tonnes to 42,700 tonnes and sacking by 3,100 tonnes to 22,600 tonnes, but other goods are 1,000 tonnes lower at 15,700 tonnes. July being a comparatively lean month, domestic offtake has declined by 3,200 tonnes to 19,500 tonnes; sacking has fallen by 4,200 tonnes to 14,200 tonnes and other goods by 500 tonnes to 2,100 tonnes. But offtake of hessian has registered a small increase of 500 tonnes at 3,200 tonnes.

In July 1962, total despatches were 96,700 tonnes—40,000 tonnes of hessian, 40,700 tonnes of sacking and 16,000 tonnes of miscellaneous goods. Exports absorbed a total of 76,700 tonnes—hessian 37,300 tonnes, sacking 26,000 tonnes and other varieties 13,400 tonnes. Internal offtake totalled 20,000 tonnes—2,700 tonnes of hessian, 14,700 tones of sacking and 2,600 tonnes of miscellaneous goods.



U.S. Burlap Consumption

A small setback is reported in U.S. burlap consumption, which has declined from 68.8 million yards in June to 67.9 million yards in July. The July figure compares favourably with the 63.4 million yards consumed during the corresponding month last year. The January-July total is 531.6 million yards this year, against 508 million yards for the corresponding period of 1962. U.S. stocks at the end of July have declined by 700,000 yards to 296.6 million yards. Of these, 175.7 million yards were afloat (against 175.5 million yards at the end of June), while spot stocks amounted to 120.9 million yards (against 120.4 million yards). At the end of July 1962, the stocks were 237 million yards—129 million yards afloat and 108 million yards spot. At the rate of consumption during July 1963, the stocks will last for 4.35 months. At this time last year, the stock duration was 3.7 months on the same basis.

Quality Control Scheme

The I.J.M.A. is taking energetic steps to implement its quality control and inspection scheme, according to well-informed sources. A fund will be raised to help the I.J.M.A. meet the capital and recurring expenditure during the first year of its operation. A compulsory levy on all member-mills at the rate of

Rs. 5.33 a loom has been fixed for the purpose. All mills have offered their co-operation, it is reported.

Purchase of S.T.C. Jute

Representatives of the I.J.M.A. had detailed discussions with Mr. D. S. Joshi, Joint Secretary to the Central Ministry of Commerce and Industry, when he visited Calcutta some time ago. The rôle of the State Trading Corporation in raw jute marketing was a major item on the agenda. Detailed discussions on the subject have been postponed until the return of the I.J.M.A. delegation from the east European countries.

Meanwhile, I.J.M.A. representatives, it is reported, have agreed to take over the last season's stocks lying with the S.T.C., subject to the usual terms and conditions of trade. They have made it clear that this acceptance will not imply a commitment on the I.J.M.A.'s future policy concerning such purchases and will not be treated as a precedent. The question of allocating the jute now with the S.T.C. will be taken up later by an *ad hoc* committee set up for the purpose by the I.J.M.A.

Apprised of the mills' difficulties in stepping up fibre purchases during the peak season, Mr. Joshi, it is believed, has assured the I.J.M.A. of his full support to its request to the State Bank of India for extending 100 percent accommodation against raw jute stocks held by member-mills.

THE JUTE MARKETS

Manufactured Goods: Trading was interrupted by holidays during the past week. The increase in output and stocks during July induced caution. The higher export figures for the month tended to revive interest, but did not have any appreciable effect early in the week. Later, the announcement of an Argentine loader for September, a Sudanese tender for about 21,000 bales of cornsacks, cottonpacks and hessian for October-December and a Government tender for 3,000 bales of B Twills helped sentiment. Sacking prices closed with small losses on balance for August-September and with comfortable gains for October-March. Hessian was sluggish throughout due to a lack of interest. Mills emerged as keen sellers for near positions, depressing prices appreciably. Long positions also closed with marginal losses. The futures market moved in sympathy with the spot market. Sacking was steadier, while hessian was depressed. Many conversions from August contracts to November contracts took place during the period. Satta charges were lower around 5nP in hessian, but higher around 60nP in sacking.

Wednesday's quotations were as follows:

	Aug.	Sept.	Oct.-Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	35.45	35.55	35.50	35.00	34.89
40in. 8oz.	38.00	—	—	—	—
40in. 10oz.	47.80	47.95	47.90	47.00	46.60
B Twills	114.50	114.00	114.00	113.25	112.00
Cornsacks	118.00	117.00	116.50	115.70	115.25
Heavy Cees					
(Plain)	113.00	113.25	113.50	113.25	112.00
A Twills	135.00	135.50	136.25	136.00	135.00
Liverpools	126.00	126.50	126.50	126.50	125.50

Raw Jute: After ruling steady for the greater part of the week in Calcutta, the raw jute market became inactive towards the close. Mills had already made considerable purchases against the August quota, mainly in selected grades for all positions. In the upcountry centres, daily arrivals increased to around 75,000 maunds and offtake to around 65,000 maunds. Mill agents, it was reported, were making brisk purchases of better grade fibre for all positions, as a result of which prices firmed up to around Re. 1 or Rs. 1.50 above Calcutta parity. Satisfactory progress was maintained in moving jute from agency stations to Calcutta and zonal mill godowns. Daily arrivals in Cossipore were around 40 wagons and offtake around 35 wagons. In the futures market, interest in Upper Assam White Bottoms for September abated. As a result, the price reacted to the floor level at the close after routine transactions.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

U.K. ALTERS SYSTEM OF GUNNY IMPORTS

MARK-UP ON HESSIANS REDUCED

CHANGES in the arrangements for the import of jute goods from India and Pakistan into Britain were recently announced by the U.K. Board of Trade. They include a reduction in the mark-up on common hessians from 20 percent to 10 percent, and the return of imports of heavy bags and sacking to private trade. The following is the full text of the statement issued by the Board of Trade:

"The Minister of State, Board of Trade, Mr. Alan Green, recently met representatives of the employers and employees of the jute industry at the Board of Trade to inform them of the Government's decision on the future arrangements for the import of jute goods following the recent review of policy, and to discuss with them certain technical details arising from the Government's decision.

"Following consultations with the industry, the Government has now decided that certain changes should be made in the protection given to it; this protection is given in the interest of employment in Dundee and elsewhere. These changes will continue to give a very substantial measure of protection which, for a year, will be very similar to that at present available for the vast bulk of goods which the industry produces.

"The table below gives the present and future arrangements, by broad categories, for imports from India and Pakistan. As for imports from other countries (apart from the Irish Republic and the Eastern area to which special considerations apply), the existing restriction on the types of cloth and bags which may be imported will be removed, and imports from these countries, which are on private account, will become subject to a quota. The size of this quota and the arrangements for its allocation will be announced later. Discussions on technical points arising from these changes will continue, as necessary, with interested parties.

The Equated Goods

"At the request of the industry, it has been agreed that in relation to the 'equated' goods, the replacement of the present system of protection (whereby imported goods are resold by Jute Control at prices similar to those of like British products) by a uniform percentage mark-up should be deferred for an interim period of a year, and that an enquiry should be set up to advise the Government on possible alternatives to a uniform percentage mark-up. If this enquiry does not produce satisfactory alternative proposals, a uniform percentage mark-up will be introduced in a year's time for the 'equated' and 'excluded' categories of goods. A further announcement about the enquiry will be made at a later date.

"It will be seen from the table that from 16th August, the mark-up on common hessians will be reduced to 10 percent. On the currently equated goods, the Jute Controller will be issuing a new price list effective from 23rd August. It is expected that, on the basis of current costs, the prices of certain of these cloths will be slightly higher.

JUTE GOODS IMPORTS FROM INDIA AND PAKISTAN

"Category: cloth and bags: (1) heavy bags, common sacking and woolpacks, *Present treatment;* imported by Jute Control and sold without mark-up. *New arrangements:* being returned to private trade.

"(2) Common hessian cloth, mainly used for bag-making. *Present treatment:* sold by Jute Control with 20 percent mark-up. *New arrangements:* the mark-up will be reduced to 10 percent with effect from 16th August, 1963.

"(3) 'Equated' goods: *Present treatment:* sold by Jute Control at 'Dundee price' (i.e., based on prices charged for similar goods by the Dundee industry under the uniform price agreements now terminated). *New arrangements:* Jute Control to import and continue to sell with a variable mark-up for one year pending the outcome of the enquiry. If the enquiry produces no satisfactory alternative proposals after a year, a uniform percentage mark-up will be introduced.

"(4) 'Excluded' goods: *Present treatment:* not imported. *New arrangements:* cloth to be imported by Jute Control, against specific orders, and sold for one year at a 50 percent mark-up or the Dundee price, whichever is lower; the treatment of bags is one of the technical matters still subject to discussion. If the enquiry produces no satisfactory alternative proposal after a year, a uniform percentage mark-up will be introduced.

"Yarn: *Present treatment:* Jute Control does not hold stocks, but imports against specific orders; no mark-up applied. *New arrangements:* as at present".

Unique Arrangement

At the present time, the U.K. jute industry, in the interest of employment in Dundee, is protected, not by the more usual methods of tariffs or quotas, but by a unique arrangement under which the U.K. Board of Trade Jute Control is the sole importer of jute goods from India and Pakistan, the greater part of which it resells at enhanced prices. Jute Control imports only certain specifications of jute goods, and the import of other specifications from India and Pakistan is prohibited. As a complement to these arrangements, imports of jute goods from other countries are subject to import licensing control and for the most part are restricted to those types of goods which Jute Control does not import from India and Pakistan.

There has been no change in the system of the jute industry's protection since January 1960, when the mark-up on the common hessian cloths used mainly for bag-making was reduced from 30 percent to 20 percent.

The recent review of policy was made in the light of various developments, including the breakdown of the negotiations for Britain's entry into the European Economic Community (under which certain arrangements for jute goods had been determined); the judgment of the Restrictive Practices Court, which found against the jute industry's uniform price agreements; and representations from the Government of India and other interests. It is not possible to forecast what effect, if any, these arrangements will have on employment, as this must be dependent on a number of factors none of which can be accurately determined.

Dundee is in a development district and is eligible for the substantial new help which was announced in the Budget. The Board of Trade will continue to do its utmost to encourage the introduction and expansion of alternative industry in the Dundee area, and will welcome applications from firms already in the development district interested in going there for assistance under the Local Employment Act.

THE U.K. JUTE MARKETS

MARK-UP CHANGES ANNOUNCED

(FROM OUR DUNDEE CORRESPONDENT)

THERE will be no major change in protection of the Dundee jute industry for at least a year. This was the main item in the announcement made by the U.K. Board of Trade last week. Certain alterations have taken place and the 20 percent mark-up on hessians used mainly for bag-making purposes has been reduced to 10 percent from 16th August. There is no change for the wider range of goods which are subject to competition from India and Pakistan, but an enquiry will take place during the next year concerning the method to be adopted in the future.

The Government wants to replace the present system of equation with a fixed mark-up. However, it has been agreed at the request of the U.K. jute industry to try to find an alternative to a uniform mark-up.

At present, there are restrictions on types of cloth and bags which can be imported from the Continent. These are to be removed and a quota system to be introduced. The size of the quota and arrangements for its allocation will be announced later after discussions have taken place. It is understood that the 20 percent duty on these goods will remain.

More buying interest has been shown in yarns and cloth since the above announcement was made. On the other hand, output has been reduced of circular loom cloth in some instances. Demand for carpet yarns has remained steady, as has that for wide cloth for the tufted carpet industry. A substantial business has taken place in sackings, and producers have orders in hand for delivery to nearly the end of the year.

THE PAKISTANI JUTE MARKETS

FIBRE FIRMS UP

(FROM OUR DACCA CORRESPONDENT)

IN spite of the fact that the overseas market continued to remain dull and inactive with competitive offering as much as £10 below the minimum, the local market last week firmed up. The full weight of arrivals was not felt in the market as yet and since prices locally were generally below the minima, many balers probably felt that now was the time to buy. In the case of non-Pakistanis an added incentive to buy was probably the fear of what would happen if they did not fulfil their quotas.

There have been various reports that the authorities might reduce the local minima. It would be foolish of them to do so when the market trend is upward, and in the present political situation in the country, the Government is unlikely to take any such measure. Similarly, although there appears to be no indication that the overseas buyers will eventually follow the local market, the authorities cannot afford to lose face by reducing the overseas minima when they have frequently said that they will not do so. Moreover, they have increased the minima only recently.

COMPANY AND PUBLIC NOTICES

THE INDIAN STEEL & WIRE PRODUCTS LIMITED

NOTICE

NOTICE is hereby given that the Twenty-eighth Annual General Meeting of the Shareholders of THE INDIAN STEEL & WIRE PRODUCTS LIMITED will be held at its Registered Office, No. 7, Wellesley Place, Calcutta-1, on Monday, the 30th September, 1963, at 11-30 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Accounts and Balance Sheet of the Company for the year ended 31st March, 1963.
2. To declare dividend.
3. To appoint a Director in place of Mr. P. C. Mustafi, who retires by rotation and is eligible for re-election. In this connection to consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company stating therein that he has attained the age of 72 years and is hereby given to the members:—

   "RESOLVED that pursuant to Section 281 of the Companies Act, 1956, Mr. P. C. Mustafi, who has attained the age of 72 years and retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act, shall not apply to him".

4. To appoint a Director in place of Mr. B. S. Bugga, who holds office upto the date of this Annual General Meeting pursuant to the provisions of Section 260 of the Companies Act, 1956. Notice under Section 257 of the said Act has been received by the Company from a shareholder of his intention to propose Mr. Bugga as a candidate for directorship and to move the following resolution:—

   "RESOLVED that Mr. B. S. Bugga be and is hereby appointed a director of the Company".

5. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

6. To consider and, if thought fit, to pass the following resolution which will be proposed as a special resolution:—

   "RESOLVED that the Articles of Association of the Company be altered in the manner following:

   For Article 42 substitute the following Article—

   42. The instrument of transfer of any share shall be in writing in the following Form or as near thereto as circumstances will admit or in such other Form as shall from time to time be approved by the Board".

The Transfer Books of the Company will be closed from 9th September, 1963 to 30th September, 1963, both days inclusive.

The Truth about Man-Made Fibres...III

How Man-Made Fibres Will Help CLOTHE 117 MILLION EXTRA PEOPLE In The Next 10 Years

AN ALARMING population explosion! India's population is estimated to spiral upward to 555 million in the next decade. Already the demand for textiles far exceeds the country's production. How then, will *117 million extra people* be clothed? Improved standards of living make this problem even more acute as more people will be requiring better fabrics every year.

The Problem With Natural Fibres

If these extra textile requirements are to be met by cotton alone, 2000 million more yards of cotton fabrics will have to be produced! This creates an impossible dilemma...for by increasing its production of cotton the country will have to sacrifice arable land, desperately needed for growing more food. Alternatively, we will have to forfeit valuable foreign exchange to buy fibres from abroad. Today we are already in the grip of an acute fibre shortage. A decade from now our planners may be confronted with critical problem.

Man-Made Fibres The Answer

Man-made fibres like rayon and nylon are both a substitute and a blend for cotton. The raw materials required for them comes from petro-chemicals, coal, oil and trees on mountain slopes—not from land needed for food crops. Man-made fibres can thus meet the country's textile requirements without affecting the nation's food production.

Compared to other fibres very little foreign exchange will be needed for the production of man-made fibres. India has already imported cotton and other fibres worth nearly 250 crores in the past three years. A fifth of the sum will exceed the capital costs needed by the man-made fibre industry to expand and fulfil India's entire textile needs. The recurring costs will also be nominal, declining with India's increasing self-sufficiency in wood pulp, sulphur and chemicals.

Food and clothing are both basic needs and one cannot be sacrificed to achieve self-sufficiency in the other. By increasing the production of rayon and allied man-made fibres the problem can be satisfactorily solved—and valuable foreign exchange conserved. What is now needed is an objective and far-sighted policy by the Government to encourage more production of man-made fibres.

Man-Made Fibres Serve India's Vital Needs

IWT-AMMFI. 1162

BETTER CHANCES OF WORLD PAYMENTS REFORM

THIS year's International-Monetary-Fund-World-Bank meeting, which is due to begin in Washington at the end of next month, promises to be one of the most interesting on record. It could, indeed, mark a clear watershed in the post-war history of international monetary payments. But this is probably attaching too much importance to the fact that it is going to be the first such meeting at which the United States is openly in favour of reforming the existing structure. At least this will be so in principle. On the question of detail, American views are likely to prove exasperatingly vague, if only because no clear ideas have yet been accepted by the U.S. authorities as to exactly what changes are required. But the open, if half-hearted, admission that all is not in fact for the best in this best of all possible monetary worlds is in itself of first-rate importance. It does mean that helpful proposals of the kind put forward at last year's meeting by Britain's Chancellor of the Exchequer, Mr. Reginald Maudling, will not in future be turned down with something approaching outraged horror. And it could lead to a directive being given to the International Monetary Fund to devise some kind of scheme for improving the present unsatisfactory state of world liquidity, a move which should bear fruit in the coming years if not in this one. The only discouraging feature in fact, apart from the Americans not appearing to know precisely what they want, is that any suggestions for change are just as likely to be opposed by the west European representatives, particularly the French, as they were last time. These countries are still unconvinced of the necessity for reforms, a fact which is only explained in terms of the future benefits they hope will accrue to themselves from leaving things more or less as they are.

This, of course, is what has prevented the Americans from seeing the advantages of radical change until now. Several times within the last year President Kennedy has rejected all suggestions that the dollar might require the extra support such as might be available from a reformed system of international liquidity. Fairly recently he ruled out any question of changes until such time as the U.S. balance of payments is back to normal. Why, then, this sudden change of mind? It can be said right away that it is not due to any doubts that the balance of payments problem will not eventually be solved. What seems much more likely is that the suspicion has at last dawned that in order to bring about the improvements planned, U.S. actions might so affect the international situation as to damage the interests of her allies, denude the free world of a fair proportion of its already inadequate liquidity, and one way or another defeat her own long-term political and economic purposes. It is hardly surprising that President Kennedy should have at last reacted to the possibility.

That the international liquidity problem should not be tackled until the U.S. balance-of-payments deficit has been eliminated is still, for some unaccountable reason, the official view of the U.S. Treasury. But the President himself is now showing signs of being prepared to abandon this extreme position provided a satisfactory alternative can be found. A possible one has recently been put forward in a report by the Brookings Institute, a non-partisan research organisation in Washington. The report was commissioned by the U.S. Treasury, the Council of Economic Advisers and the Bureau of the Budget, and in view of such sponsorship must be regarded as a very revolutionary document indeed. Briefly, it supports the official view that the balance of payments problem can be solved by a combination of increased efficiency in the U.S. economy and the short-term measures which have already been taken to check the dollar drain. But it points out that unless the process is accompanied by changes in the international payments system, the subsequent loss to the world at present represented by the flow of dollars and gold from the United States could check economic growth both externally and internally. This is a sound view. So much of the prosperity of western Europe, for example, has been based on the extra liquidity gained as a result of the U.S. external payments deficit. If the growth of the free world's liquid resources were to be halted due to the United States' own efforts to retain the reserves she is at present losing, then world trade would probably contract and widespread deflation become the order of the day. As this would inevitably affect the chances of expanding U.S. trade, on which much of President Kennedy's long-term plans for rehabilitating the dollar are based, it is not a prospect to be faced without misgiving.

To avoid it, the Brookings report proposes two quite revolutionary ideas. The first is that the United States should restrict the international use of the dollar by insisting that all reserves be transferred to the I.M.F. or some other similar institution, thus creating a body which in effect would resemble the old European Payments Union, or, more controversial still, the world central bank originally proposed by Lord Keynes. But the second idea is even more startling: it is that in the highly-likely event of the west European governments refusing to agree with the first proposal, the dollar and the pound should be combined into a single currency bloc with a fixed rate of exchange between them, and that this common exchange rate should be allowed to fluctuate freely against that of the European bloc. Perhaps the most interesting implication of the view is that it involves some measure of relaxation of the present rigid U.S. attitude towards maintaining the current price of gold.

This is not the only argument against such a reform, although it is likely to be the one to weigh most heavily with the U.S. Government. Another is that it would bypass the world's central banks, so it is not surprising that opposition has already been voiced from this quarter—which has given the world yet another plan of reform, this time taking its name from Mr. C. A. Coombs, of the Federal Reserve Bank of New York. Along with his opposite numbers of the Swiss, German and Italian central banks—but not the French—he has put forward a plan which acknowledges the existence of the liquidity problem, in itself a step in the right direction, but rejects the view that radical reform of the present system of international

payments is required to cope with it. Instead, it is proposed to enlarge and develop the existing network of central banker arrangements and agreements, and to make more use of the facilities of the I.M.F. The great attraction of such a scheme, or so its sponsors maintain, is that it would permit each country to continue dealing with its own economy in its own way. The supply of temporary credit, such as might be required to correct a short-term deterioration in a national economy, would be automatic, but the question of long-term funds would remain a matter for negotiations between the I.M.F. and the country concerned.

The plan has some obvious advantages. The first is that it is easy to understand and its effects would be predictable. There is something slightly bizarre about the Brookings proposals which make them difficult for even an economist to stomach; for treasuries and central banks they must be very indigestible indeed. This is not to say that they should not be given every consideration. But it has to be faced that the chances of their being accepted are very slight, at least at this stage of the world's monetary maturity. The Coombs plan has all the appeal of the safe professional approach about it, and the fact that it would probably not have appeared at all if something more startling had not been in the offing does not have to detract from its virtues. It can be argued that in this highly tricky field of international currency reform, the unspectacular can often achieve more positive results than the revolutionary.

It can be safely predicted that this is going to be the view of most of the experts assembled at this year's Fund-Bank meeting. Indeed, unless some unforeseen catastrophe occurs in the world economic situation, it is likely to be the view for some years to come. Certainly a fraternity which has already rejected the Triffin plan for reform is unlikely to accept that of the Brookings Institute unless circumstances force it to do so. This is not necessarily a tragedy; the important fact is that the need for reform has at last been accepted and it is this on which attention must be concentrated. Its significance for all except a few highly self-satisfied and throughly self-righteous west European countries, is too obvious to need comment. To the underdeveloped countries it could mean a more satisfactory flow of foreign aid, although it does not perhaps offer the advantages contained in the proposals recently put forward by Mr. Maxwell Stamp, a prominent figure in the City of London These provide for an international body resembling a central bank which would issue certificates against the debts of individual nations, such documents being placed at the disposal of underdeveloped countries to supplement their aid requirements. The scheme is not as improbable as it sounds, but there seems little likelihood of its ever being seriously discussed in international circles.

The advantages for sterling of a scheme to supplement world liquidity go without saying. At a time when it appears that the optimistic forecasts which have recently been made about the future of the pound might have been somewhat premature, the British representatives are bound to press for general reform, if not exactly for what Mr. Maudling proposed last year. With the Americans at last in favour of the idea, if only vaguely, the few remaining dissenting voices are likely to be those of the Common Market countries, in particular West Germany and France. Again the World will have the opportunity of assessing the willingness of the new trading *bloc* to follow policies which are liberal and expansionary in relation to the rest of the world. There is a possibility, then, that the Fund-Bank meeting will become polarised in much the same way that other conferences have done lately, notably the Brussels negotiations and the "Kennedy round" in Geneva. It is not exactly a promising prospect for those countries who identify their future economic prosperity with a rapid expansion in world trade.

BANKS WAIT FOR DEPOSITS

THE slow growth of bank deposits since the emergency was proclaimed has been an outstanding weakness of the Indian economy. Although the currency in circulation has risen by Rs. 172.64 crores to Rs. 2,236.43 crores since November 1962, deposits have moved up by only Rs. 155.08 crores to Rs. 2,369.98 crores. The slowdown has occurred at a time when large funds have been pumped into the economy as Government expenditure on development and defence programmes has increased. Some diversion of funds from the banking system during an emergency is understandable. The public is inclined to hold more cash in a period of insecurity. The liquidity preference among business men too increases due to two factors. Firstly, more business transactions begin to be conducted under the counter as the market prices of various commodities rise above the controlled prices. Secondly, in India recently, cash transactions have been encouraged by stiff taxation since it is easier to evade taxes if a transaction is not recorded in a bank account. Even so, the slow growth of deposits is disturbing; monetary controls cannot be effective if large sums of money remain outside the banking system.

Against this background, considerable interest attaches to an article on "The Problem of Deposit Mobilisation" published in the July issue of the Bank of India Bulletin. There the need is emphasised for banks to be more dynamic in attracting and conserving funds Business houses have recently emerged as keen competitors for deposits from the public. They have not hesitated to pay as high a rate of interest on these deposits as banks charge on advances. Hence the eagerness to attract funds cannot be attributed to a desire to save on interest charges. Business houses have been forced to rely on deposits from the public since the supply of bank credit is short. It is difficult to get an accurate estimate of the size of these deposits, but they are believed to total more than Rs. 125 crores. The competition for deposits from other financial institutions has also risen. Some State Financial Corporations have started accepting deposits by paying a high rate of interest. Co-operative banks and co-operative societies have begun collecting deposits in a bigger way. Stock-broking firms, hire-purchase houses and building societies have also attracted larger funds. The small savings campaigns of the Government may or may not succeed, but the compulsory deposit scheme will mop up large sums of money. Deposits in the savings bank accounts run by commercial banks in particular are likely to suffer in the process.

The problem facing bankers is to devise measures for promoting the growth of deposits. In order to do so, it is necessary first to streamline the deposit interest rate structure and to offer a wider range of banking services. Although the offer of high rates of interest has diverted funds away from the banking system, the fact remains that a substantial proportion of bank deposits are not influenced by interest rates. Most deposits are kept because banks provide more facilities to customers than do other competing institutions. The security of bank deposits has meanwhile been reinforced by the deposit insurance scheme. While these facts are admitted, bankers still need to take effective steps to attract those funds which are sensitive to interest rates. The types of deposits most attracted by a higher interest rate are generally fixed deposits kept for a year or more. Under the interbank agreement, deposits for one year may be paid interest of up to 4 percent and term deposits for three days can be paid interest of up to 3 percent. It would be useful to examine whether these interest rates should be modified.

Bankers are reluctant to raise deposit rates as that would raise their operational costs. If an increase in the deposit rate could be neutralised by a corresponding rise in the lending rate, there would be no cause for worry. But, under the present circumstances, a further increase in the lending rate would not be justified. So bankers should consider revising the deposit rate structure in such a way that a moderate rise in the interest on long-term deposits is neutralised by a corresponding cut in the interest on short-term deposits. In fact, several depositors have taken advantage of the present system in earning interest on their demand deposits by converting them into deposits at three days' notice. As for savings bank accounts, the competition from other institutions could be effectively met by offering to holders of such accounts the same facilities as those enjoyed by other customers.

An effective way of attracting deposits is to offer a wide range of ancillary services to customers. Few banks have done anything to improve their services although the scope for improvement is great. It is unfortunate that whenever some banks have offered additional services, they have been criticised by other banks. There has even been idle talk of regulating such services under an interbank agreement. Any move of this sort would be deplorable since banking services can never improve unless competition is encouraged. Some banks have introduced limited credit transfer facilities, but there is still great scope for extending them. Customers have to waste far too much time while cashing their cheques at the counters. The long time taken by banks to encash upcountry cheques is another inexcusable feature. Bankers have yet to realise that if they were to pay more attention to these things, and if they improved their services, customers would bother less about deposit rates.

In the sphere of branch banking, commendable progress has been made in recent years. The achievements of the State Bank have been particularly notable thanks to the subsidy it gets from the Government for opening and running new branches. It is good that commercial banks are thinking of launching a vigorous branch expansion programme on a planned basis. Since a new branch takes five years or so to become profitable, commercial banks have to be discriminating in extending their activity. Much fuss has been made about opening branches only in the so-called "unbanked" areas. Although it is necessary to extend banking facilities to areas hitherto not served by any bank, there should be no objection to opening branches in territories which enjoy banking facilities provided the scope for such branches exists. The recent move to encourage the growth of small banks is a step in the right direction. Such banks are particularly suited to serve the needs of small commercial and industrial units, so their economic importance cannot be ignored. But it is necessary to make them more viable by streamlining their organisation and management.

FINANCING TEA EXPANSION

THE tea industry's central problem is the pressure which rising costs are exerting on its slender profit margins. The prices realised at the auctions make little allowance, if any, for cost increases which the grower must absorb if he is to sell his common tea in the face of severe competition. His only hope lies, therefore, in improving productivity to offset the higher costs. But this improvement cannot be achieved overnight in a plantation industry where it takes eight or ten years to bring new, better-yielding varieties of tea plants into full production. In any case, before a garden can think of laying out new tea, it has to find the resources to meet the considerable capital expenditure involved. As things stand today, most gardens can ill-afford to expand unless they are assured of better profitability than is now in prospect. In the circumstances, any substantial expansion of the industry is unlikely, no matter how much Mr. Manubhai Shah and his Ministry of International Trade may plead for a bold approach.

Some weeks ago, while opening the new tea auction room in Calcutta, Mr. Shah as a matter of habit assured the industry that he would be willing to give it "all help" if it made a genuine all-out effort to expand output. The assurance left many of his hearers cold because they knew how little the Minister could do even if he wished to. The tax structure each year is diverting more and more resources from the industry to the Government, a matter in which the Ministry of International Trade seems to be as helpless as the victims. This remains true even though Mr. Morarji Desai's last Budget offered a tax concession to exporters—a gesture so feeble as to be quite futile. In the specific case of tea, the abolition of the export duty was indeed a step in the right direction. Mr. Desai could hardly have persisted with the duty when the fact that it was at all there made nonsense of India's claim to be doing everything in her power to improve her international viability. But the withdrawal of the export duty was again no more than a token gesture because Mr. Desai decided to enhance the excise duty. The effect has been a further increase in costs which will make Indian tea dearer in the world market than it need be. Added to the direct incidence of the excise duty on tea is the burden thrown on growers by the inflationary pressures which the last Budget has generated. Many items of garden stores have gone up in price, having attracted new or enhanced levies in the Finance Ministry's search for additional revenue. These impositions provide a contrast to the widely publicised effort that Mr. Shah is supposed to be making to strengthen the competitive position of Indian exports in world markets.

Central taxes are only one part of the story. As a plantation industry liable to agricultural income tax, tea never fails to attract the attention of State Governments whenever their Budgets threaten to produce a deficit. In Assam, the tax take was enhanced quite substantially in April 1962 but that did not prevent the State Government from raising the rates still further in 1963. even though it knew that gardens were under severe pressure because of additional expenses such as war risks insurance directly arising out of border uncertainties. There is no denying that State Governments like Assam's are in difficulty themselves, but that is only because they lack the political courage to make use of the other opportunities open to them to add to their revenue. Following the line of least resistance, they have little compunction in imposing new burdens on trade and industry in the knowledge that the Centre will inevitably intervene if serious economic consequences follow. This divorce of authority from responsibility accounts for the complete lack of concern at the State level about the fortunes of even important export industries. Mr. Manubhai Shah can at best ask State Governments to take a more realistic view but can do little else.

Powerless in relation to the tax-gatherers at the Centre and in the States, the Ministry of International Trade is equally helpless in the matter of wages—easily the most important constituent of costs in many export industries. The Wage Board for the tea industry has already given an interim increase, and may decide to confer further benefits on labour. The approach of the Boards to the issue of wage levels has shown an unfortunate preoccupation with welfare concepts regardless of economic realities. The fact that an industry's long-term prosperity may be jeopardised is considered unimportant. In consequence, the need to keep wages in line with productivity is obscured to the detriment of industry's competitive ability. It would be politically naïve to imagine that the Ministry of International Trade can restrain the welfare enthusiasts in New Delhi or in the States. But the fact remains that all this is tending to raise labour costs in India to a level far above that of equally underdeveloped competitors.

Mr. Shah's Ministry is not unaware of these facts, even though it can hardly be expected to admit them publicly. The most it can do is to offer limited help to the industry in the shape of loans to meet specific requirements, such as replanting or the purchase of irrigation equipment. But the gardens are unlikely to assume additional commitments unless they have reasonable hope of being able to make increased profits out of which the loan capital may be serviced. In a period like the present, when costs are steadily rising, the decision cannot be easy to take in view of the growing competition from overseas producers. With world supply and demand already approaching balance and the possibility of overproduction not too remote, further pressure on prices cannot be ruled out. By itself, the availability of loans is unlikely, therefore, to make growers expansion-minded even if the procedural difficulties standing in the way of utilisation of the loans are for the moment left out of account. If Mr. Shah is seriously interested in the fulfilment of the high third plan target, he will have to find other positive ways of encouraging growth. As things stand, he can hardly avoid recommending tax incentives for new investment in tea on a par with what entrepreneurs in other industries are already receiving. If the acquisition of plant and machinery is eligible for a development rebate, there is no reason why capital expenditure on increasing a tea garden's production potential should not enjoy the same benefit.

Current News and Comment

Protection against Robbery

The first men arrested as suspects in what has come to be known as The Great Mail-train Robbery were charged with "being concerned in the theft of £2,631,784 from the Royal Mail". As much as £1,064,000 of that sum was the property of one bank, the National Provincial; two others, Barclays and Midland, had each lost £500,000, and a fourth, National Commercial Bank of Scotland, £320,000. But these and the other banks involved, excepting the Midland, were insured against loss of cash "on the premises and in transit". The most anxious observers of the vast and detailed search for the stolen money were insurance companies. The insured loss was more than £2 million, and before any of the money was found the British Insurance Association stated that it would represent "the largest pay-out after a robbery ever made on British insurance".

Britain's most spectacular robbery of this century has made the authorities and the public fully aware of a hazard with which insurance companies were already too familiar. Losses from forced entry into factories, warehouses and offices, and from thefts of goods from vehicles, aggregate many million of pounds a year; and these losses increase each year. Opportunities for honest employment at comparatively high wages are, apparently, irrelevant; in some people, at least, the affluent society has aroused feelings of avarice, not content.

This growing risk, like most other risks, can be insured. Like the risk of fire, it can be reduced by co-operation between insurer and insured, to provide the maximum practicable precautions—the cost of insurance being adjusted accordingly. But crime is not an ordinary hazard. It concerns the authorities directly; for they, not individuals and firms, are responsible for maintaining law and order, and the postal or railway services are responsible for protecting valuables entrusted to their care. The Great Mail-train Robbery provoked extensive criticism of the whole national system of security in relation to property. As there are many countries with a higher crime-rate than Britain's, this is evidently a world-scale problem.

There are now more than 40 privately-operated security companies in Britain: companies whose function is to transport valuables, particularly money, with aids such as armoured vehicles and guards skilled in combat. If the principle of private protection were taken to its logical conclusion every company that moved valuables outside its premises—including the weekly wages collected from its bank—would employ a kind of private police force. The actual problem is a steady increase in the cost of private security, by employment of protective services and by insurance.

The commercial banks are aware, of course, that they could reduce the cost of insuring notes in transit if old notes due to be withdrawn and pulped could be made invalid before transit (nearly all the notes involved in The Great Robbery had finished their term of service and were being withdrawn). The Postmaster-General, replying to criticisms, implied that the banks had failed in their duty by not defacing the notes before consigning them from the provinces to London. Post office engineers have, in fact, devised, and the Bank of England has tested, a machine for dyeing notes to make them invalid. But no method of defacement had been agreed between the Bank of England and the commercial banks; the latter were, therefore inclined to blame the Bank of England for the obvious inadequacy of precautions against the criminal community.

Technical problems of security are involved in invalidating notes outside the direct jurisdiction of the issuing authority. For instance, provincial bankers may be less expert than the central authority in detecting forgeries, and forgeries may be more difficult to detect after notes have been defaced. It is arguably easier to strengthen the security of valid notes in transit; for instance, by using heavy steel containers which, although certainly not proof against modern safe-breaking techniques, would cause inconvenience and delay, in robberies in which speed was an essential factor. Only a moderate proportion (although in Britain it is estimated at approximately a third) of notes normally in transit is *en route* to the pulping machines, and a big risk will remain unless criminals can be more effectively controlled or—an alternative that appeals to bankers—the physical movement of money is reduced by more extensive use of banking services and of other methods of transferring credit (the giro system is much less developed in Britain than in continental Europe).

Meanwhile, the undercover war between the criminal community on the one side and the police and its allies on the other, will certainly be intensified. Each side tries to gain, and to retain, a slight advantage over the other. The skill and the equipment of modern industry are available to the "best" criminals (some of whom were trained as *saboteurs* in the last World War), but makers of strong rooms, safes, armoured vehicles and alarm systems, claim that their techniques are a little more advanced than the enemy's. The question remains whether private individuals and firms, rather than public authorities, should be responsible for protecting property. Some people feel that a small addition to taxes, sufficient to build a police force that could overwhelm the anti-social minority, would be the most economical "insurance premium" to cover risks of robbery and theft.

Less Strain on External Payments

The strain on India's balance of payments position has eased during 1962-63, according to an article in the July issue of the *Reserve Bank of India Bulletin*. The relief is due to larger receipts from official loans and donations, inflow of banking capital, rise in exports and fall in private imports. Official loans have gone up to about Rs. 384 crores from Rs. 281 crores in 1961-62. Donations have risen because of larger shipments from the U.S.A. under the P.L. 480 programme. The third factor which has reduced the pressure on the payments position is the net inflow of Rs. 16 crores of banking capital, against a net outflow of Rs. 13

India's Resources
are Precious
WASTE NOT,
WANT NOT

crores during the previous year. The influx was mainly from the U.K. due to interest rate differentials.

Exports have gone up by about Rs. 15 crores to Rs. 682 crores, according to the Reserve Bank (the figure compiled by the Director-General of Commercial Intelligence and Statistics differs from this). The improvement has resulted solely from the annexation of the former Portuguese colonies. But for the Rs. 16 crores earned by these colonies, earnings would actually have fallen by Rs. 2 crores from the 1961-62 level. Another noteworthy point is that even with this fortuitous addition to export earnings, they fall far short of the target of Rs. 720 crores set by the Board of Trade. Compared with the average annual target of Rs. 740 crores visualised in the plan, the performance is even more unsatisfactory. In view of the shortfalls in the first two years, exports will have to average over Rs. 733 crores in the remainder of the plan period if the overall target is to be achieved. India's exports of manufactured products, barring jute goods, have declined in spite of export promotion schemes and the labours of the Board of Trade. The principal foreign exchange earners continue to be jute goods and tea, both of which have fetched more than before. Earnings from the former have gone up from Rs. 143 crores in 1961-62 to Rs. 152 crores and the latter from Rs. 125 crores to Rs. 128 crores. The improvement in earnings from jute goods is due both to an increase in the quantity exported and in price. Tea has suffered a setback in its traditional markets like the U.K., but a larger offtake by Russia has brought about the improvement in total earnings. There have also been larger earnings from exports of oilcakes, metallic ores and vegetable oils, which have risen by Rs. 14 crores, Rs. 7 crores and Rs. 6 crores, respectively. The share of commodities which are "wholly or mainly manufactured" in the total exports has shown no improvement. Exports of cotton manufactures have declined to Rs. 61 crores from Rs. 62 crores in 1961-62. This fall, though small, is disturbing.

On the import side, the total outlay has been Rs. 1,089 crores—an increase of Rs. 88 crores compared with 1961-62, in which year imports had fallen by Rs. 104 crores. The bigger outgo is explained wholly by imports on Government account, which have increased by over Rs. 100 crores; private imports have fallen by about Rs. 12 crores. The invisible items disclose the mounting pressure of payments, on both Government and private accounts, for foreign capital. From Rs. 24 crores in 1956-57, the cost of servicing external loans and investments has gone up steadily to Rs. 90 crores in 1962-63.

Attracting Foreign Capital

The developing countries all over the world usually depend on foreign capital for their economic progress. The economic recovery of Japan and West Germany after the second World War was made possible due to the large inflow of foreign capital into these countries. But the market for foreign capital is highly competitive, and it is bound to flow into those countries which offer better growth prospects. Speaking at the quaterly general meeting of the Indian Chamber of Commerce in Calcutta last week, Mr. K. K. Birla, president, referred to high corporate taxation in India. The rates of company taxation in several countries which are on the look out for foreign capital are between 30 percent and 35 percent, against 50 percent in India. Moreover, they do not have the super profits tax. While private foreign investment of the United States increased from Rs. 1,435 crores in 1956 to Rs. 1,845 crores in 1960, the percentage that represented its inflow into India was only 0.5 in 1956 and 0.3 in 1960.

This only shows, Mr. Birla said, that India had been unable to develop a favourable climate to attract a larger inflow of foreign capital. India's administrative set-up and her highly controlled economy retard the flow of foreign capital to this country. Due to these as well as various other reasons, there has been a fall in the number of foreign collaborations during recent months. Mr. Birla's statement is confirmed by the latest report of the Indian Investment Centre which has pointed to the fall in foreign collaboration arrangements in recent months. Meanwhile, it is the general feeling in industry that the lack of availability of finance, inadequate return on capital, restrictions resulting from controls, and high taxation are some of the main obstacles in the way of industrial growth. As for the latter, the president could have cited the example of Botanium Ltd which has had to abandon its project for manufacturing titanium dioxide because the foreign collaborator decided to withdraw its offer due to the super profits tax.

Delay due to red tape, Mr. Birla rightly said, is another discouraging factor. An entrepreneur waiting to set up an industry with foreign collaboration has first to obtain an industrial licence, negotiate the collaboration agreement and get it approved by the Government and then obtain the import licence and so on. Each stage takes a pretty long time so that it is not less than four or five years before the proposed plant can go into production. Unless such difficulties are removed and a suitable climate created to make investment in India more attractive and unnecessary controls in the economy are removed and procedural delays eliminated, it will become increasingly difficult for Indian industries to grow and for more foreign capital to come in. In progressive countries, Mr. Birla said, it is now recognised that a high rate of tax positively retards economic growth. So they are thinking in terms of reducing the tax burden both on individuals and companies. The rates of tax on personal incomes in India, Mr. Birla said, are even higher than in the United States. The Kennedy administration in the U.S.A. feels that even the prevailing rates are high, so proposals have been made to reduce them further.

Raising Defence Production

In reply to a question in the Lok Sabha last week, the Central Defence Minister, Mr. Y. B. Chavan, stated that plans had been drawn up to set up six new factories, under the first phase of the defence programme, to manufacture arms and equipment. The total output of defence equipment in the ordnance factories, it is expected, will be worth Rs. 100 crores in 1963-64—more than double the output in 1961-62. The ordnance factories are, no doubt, doing a good job. But it is necessary to step up defence production at a much faster rate. This calls for the use of the existing production capacity in the private sector, including the small-scale units. The Government of India lacks a proper programme for co-ordinating the working of the public and private sectors. The Defence Ministry does not appear to be quite clear about the defence items which can be produced in the private sector. In the course of the Lok Sabha debate the only information which the Defence Minister could supply was that up to the end of July 1963 some 15 contracts had been placed with 12 firms in the private sector for supplying components of arms and ammunition. He stated that the exact number of manufacturing units now engaged in producing arms and ammunition outside the defence establishments was not known to the Government.

It has been unofficially estimated that the engineering industry is capable of producing defence equipment worth Rs. 125 crores a year and, in addition, the small-scale sector can supply a sizeable quantity of components. But to be able to do so the engineering industry will need certain imported raw materials and machinery; the small-scale units will require help in matters relating to designs, drawings and specifications. The former will, no doubt, cost the country some foreign exchange, but if the defence items are imported, they will cost even more. So all possible steps should be taken to use the existing idle capacity in the engineering industry for producing defence goods. The Government will have to draw up a comprehensive programme to co-ordinate the working of the private and public sectors in relation to defence production. The Defence Ministry will have to make up its mind about the quantity of each type of defence material that would be needed and then decide about the most economical source from which it could be obtained.

Cloth Prices Unremunerative

At its last meeting in New Delhi, the price subcommittee of the Congress Parliamentary Party viewed with great concern the textile industry's demand for a rise in cloth prices and advised the Government to avoid any hasty decision in view of the fact that the price level has been continuously rising in recent months. The expenditure on clothes, no doubt, constitutes an important element in living costs, especially of the poorer people. But at the same time, it is necessary that cloth prices should allow for the recent increases in the costs of production. The prices have remained pegged at the present levels since 1961, although there has been a marked increase in production costs because of the higher prices of raw materials, chemicals and machinery. Other factors which have pushed up costs are the Wage Board's award, Emergency Risks Insurance, and increases in Customs duties on imported raw materials and components, electricity duty, and excise duty on a number of materials used by the textile industry. So it is only fair that some increase should be allowed in cloth prices to offset the rise in production costs. The Government has not yet published the Tariff Commission's report on cloth prices nor has it announced what it proposes to do in the matter.

The impression has gained ground in official circles that the cotton textile industry has already secured a rise in prices by multiplying the types and designs of cloth and selling these varieties at higher rates. The industry has denied this charge. If the industry is really using such underhand methods to circumvent price controls, the Government should use other methods to make the controls effective. But merely on this account there is no justification for not allowing a rise in cloth prices. It has also been suggested that the cotton textile industry should try to meet the higher costs of production by introducing rationalisation and improving productivity rather than by raising the prices of cloth. But rationalisation and renovation of machinery call for large capital expenses, and the textile industry does not have sufficient resources for the purpose.

THE CALCUTTA PORT

SOME twenty odd years ago, the Port Commissioners were much concerned to develop the resources of the Port. They had as their Vice-Chairman a singularly clever and pushing engineer the late Mr. Duff Bruce, and he was not slow to take advantage of the trend of public opinion to embark the Commissioners on works of a gigantic nature. The Grain and Oilseed trade of Bengal had shown signs of a very rapid increase. The East Indian Railway were constructing a bridge at Hooghly, and Sir Bradford Leslie, who was then the Agent of that Company, expressed the opinion that when it was completed the main line would be pouring in country produce, excluding coal, at the rate of at least 1,250,000 tons per annum. As a result, a Committee was formed who, in 1883, reported very strongly in favour of constructing the Docks at Kidderpore, which Mr Duff Bruce assured them could be built for 239 lakhs, but which, as we all know, have cost over 100 lakhs more than this, quite apart from the frightful loss on their working since they were opened. Before work on these Docks was commenced, the Editor of this paper in a series of articles to the *Pioneer* endeavoured to show that the Wheat and Oilseed trade in India, as it developed, would tend more towards the western than the eastern side of India, and that the exports from Calcutta were more likely in future to decrease than to expand. For the year 1883-84, India exported 868,186 tons of Oilseeds, of which Bengal contributed 306,105 tons, but in the year 1902-03, though India shipped 1,109,764 tons, Bengal only contributed 279,622 tons. Similarly, the export of Wheat from India in 1883-84 rose to the large figure of 1,048,070 tons, of which Bengal supplied 380,376 tons. Last year the exports of all India, though above the average of the last few years, were 550,842 tons, but Bengal only supplied 56,091 tons. So that taking Oilseeds and Wheat together, there is a shrinkage in the exports from Bengal of 350,000 tons in the shipments last year as compared with 1883-84; yet it was upon the assumption that the trade in these commodities would so very largely expand that the white elephant of Calcutta, namely, the docks at Kidderpore, were sanctioned.

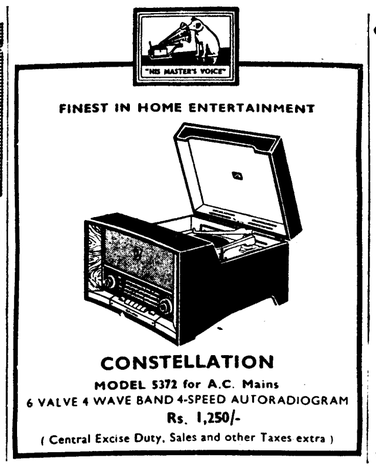
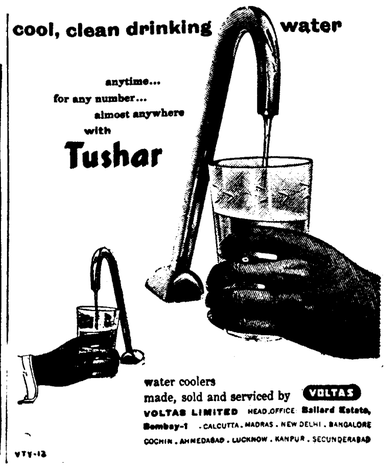
A Ditcher's Diary



I AM FULLY CONSCIOUS OF THE GREAT PART PLAYED by the Indian National Congress before independence and since; I am still not convinced that its usefulness is exhausted. Yet I find it awfully hard to take the current goings and the coming comings (entirely unintended play upon words) very seriously. I first thought of calling it Mr. Nehru's non-violent butchery, not quite tearless even if bloodless. Then I thought that a practical joke may have been taken too far. It seemed as though they were all engaged in a harmless game of musical chairs; then Mr. Nehru suddenly stopped strumming on the untuned piano of the Congress and, lo and behold, as many as a dozen vintage V.I.P.s find themselves without chairs to sit on! The whole thing is too funny for words—except, of course, for the chairless. Having resigned in haste, each had to choose between loss of office and loss of face; and I am still not sure that some may not yet prefer office to face. I find a Delhi paper already referring to "the six" at the Centre and, again, "the six" in the States. I will call each "the outer six": and I must add that it all is rather hard on them all. After all, one gets used to a certain way of life: and, over the years, the gap has so widened between a Minister's life and that of the average Congressman that adjustment will be by no means easy. Why I find the entire Kamaraj idea so mystifying is that I had never accepted the original hypothesis that the Congress Party needed an overhaul; three snap by-election defeats don't mean a thing for such a monster of a Party. Secondly, I cannot see the resigners being much use to the Party; if anything, they may add to current dissensions. Whether the Government will be strengthened we will know only when Mr. Nehru has announced his new nominees. Should I say something about the "boldness" of the plan? I would if I were certain that all the decisions would be strictly adhered to and promptly executed. I see signs of hesitancy already; and I am not surprised.



THE MORE ONE THINKS OF IT, THE LESS DOES IT ADD up. It is perhaps as well that West Bengal has been left alone, although not everyone may agree with Mr. P. C. Sen that all members of his sizable team are "indispensable". Much as I want to discern nobility in the twelve Congressmen's act of sacrifice, I have before me the vision of twelve unbottled djinn, soon to be up to incalculable mischief. Here were twelve men with abundant energies, doing a full day in the secretariat, meeting umpteen people and signing umpteen files, then keeping in touch with the constituency and still time left for intrigue. Now all this occupation is gone; or, perhaps all but one: intrigue. No more files to sign. Few, they will soon discover, want to see much of ex-Ministers. As M.P.s, they will still have to spend months in New Delhi; so the touch with constituencies will inevitably tend to be tenuous. What then is left? Intrigue; and nought else. All this may seem very unkind; but I am seriously suggesting to Mr. Nehru that, whether or not he has done himself much good by accepting these resignations (which must have been one of the inspirations), he may have done the Congress Party some harm by letting loose so many Congressmen. It cannot be seriously supposed that Mr. Morarji Desai will be much use to the Gujarat Congress where Dr. Jivaraj Mehta and Mr. Balwantrai Mehta have been fighting each other merrily; the latter has Mr. Desai's support. Can anyone believe that Mr. C. B. Gupta, who as Chief Minister has had ample leisure to split the Uttar Pradesh Congress good and proper will, now as a full-time Congressman, unite the Party? One reason why the Centre's authority has steadily declined over the years is that the Centre contains a large number of "rejects" from the States; to send them back to the States is hardly to strengthen the Party. Has Mr. Kamaraj, the shrewdest of politicians, then done something foolish? I don't know. The aftermath of the resignations is going to be full of interest and surprises. I can hardly wait.

THE PLIGHT OF CEYLON'S TAMILS HAS ALWAYS evoked my sympathy. To be Stateless is bad enough, but when that unhappy condition is rendered more or less irremediable by the unwillingness of the Ceylonese to adopt them on the one hand, and the reluctance of India to make a tricky situation more difficult by interfering in their favour on the other, then it must be even worse. The other day it looked as if salvation was at hand, and from rather an unexpected quarter. A Tamil leader announced that Ceylon's half million Tamils were British citizens. The claim was based on the fact that the fathers of most of them were born in Ceylon, and under the terms of the British Nationality Act of 1948 this would entitle them to citizenship. The Queen had been duly petitioned. The idea behind the move was that under Ceylon's laws British citizens are liable to a tax of Rs. 400 a year each, in default of which they can be deported or imprisoned. But because it would be both administratively impracticable to treat half a million Tamils in this way, if indeed the economy of Ceylon could survive the loss, and it would certainly be impossible to tax them on such a scale, then the Ceylonese Government would be forced to make its own offer of citizenship. An ingenious scheme, and I am only sorry that it does not appear to have come off. The Tamils have had it pointed out to them that the few who might qualify under existing British law are those whose fathers were born in one of India's princely States. The remainder, or so it appears, can in fact claim to be "British subjects", but this does not in itself confer citizenship. And Britain is certainly not going to damage her relations with Ceylon by claiming half a million disgruntled orphans as her own. All very disappointing for the Tamils, I suppose, although I fear they are not going to be the only Indians to suffer from nationality problems in future. When Kenya becomes entirely independent, for instance, what will happen to the Indians there? At the moment the problem seems to be the complete opposite of that which has arisen in Ceylon—Kenyan citizenship may be forced on them as a condition of being allowed to stay. Indeed, this seems to be already the case in Tanganyika. I wish I could see a satisfactory end to the trouble that nationalism has brought into the lives of so many innocent people. To me the idea that a person should be made to confine his residence to within the political boundaries of what fate alone may have decided is his own country is deplorable. But to plead for sanity and tolerance in these matters nowadays is like crying for the moon.

NOTHING, ABSOLUTELY NOTHING, I HAD THOUGHT, could be worse than the Oriental Gas Company in its days of private ownership; the gas supply was fitful and inferior, the billing often arbitrary, the employees slow and discourteous. With considerable regret, I am compelled to admit now that I was wrong; nationalisation, having corrected none of these faults, has added one more—corruption among the staff. In a case I know, almost two months have gone since the first complaint was lodged about leakage of gas from geysers in a certain flat; despite several reminders, to this day nothing has been done. Practice, it appears, has brought the Oriental Gas routine to perfection. You make a complaint; not long afterwards a mechanic from the undertaking appears. Your cooker or geyser is given a quick check, following which perhaps a spare part is declared broken or missing. The mechanic then offers you your choice: the repairs, he says, are the responsibility of "another department", not his, but he would be prepared to do them "privately" for an appropriate tip. If you be rash enough to decline the latter offer, you will regret your decision. You may repeat your official complaints to the undertaking as often as you may wish, but the spare parts required will not arrive. In response to the reminders, there will arrive instead a succession of other mechanics, all of whom will make the same offer for the same tip. Those who have had

a similar experience recently tell me that to complain is futile, for the corruption is organised. In the gas undertaking, mechanics do not retain all the "tips" they get; they seem to share them with certain gentlemen in more senior layers of the hierarchy just to make sure that there is little you can do. The idea of relatively senior officials not only accepting bribes, but securing them through lowly workers, sounds revolting. But I suppose they think it is one way of compensating themselves for being underpaid. The Oriental Gas undertaking appears to be among those happy organisations which allow many of their staff to determine their own incomes; the salary is but pocket-money.

It does not seem likely that the British War Office will be accused of colour prejudice because it has decided not to accept Commonwealth recruits for Scottish regiments. I cannot agree that black or brown knees might look slightly ridiculous under tartan kilts; Gurkha bands often wear them and it has never struck me as being incongruous. But I do admit that a *mixture* of white and coloured knees might give the whole turnout more of a theatrical than a military air, and anyway recruitment to Scottish regiments has always been restricted to those who could claim rather more Scotch blood than can normally be obtained through mere absorption. The Guards, too, are to stay white, I see, although I cannot find much justification for this unless it is that exclusiveness has always been their prerogative. I was told once that the reason Mr. Manley, the former Prime Minister of Jamaica, was so anti-British during his period of office was that he was once turned down for the Guards. He need not have been so concerned; all but a very small proportion of Englishmen would meet with a similar fate. But apart from those two sections, and the Military Police (but who in his right mind would want to join them?), the British Army has now become multi-racial, and I have been reading that so far the experiment is turning out rather well. No doubt this integration business is all very modern and creditable, but I cannot see the traditional sergeant-major being too happy about it. For a creature whose heart bleeds to see two different stages of hair growth on two separate men, the sight of several colours of face in the same line must be painful beyond belief. Besides, how can one tell at a glance whether a coal-black West African really has had a shave that morning? Or whether he has dirt under his fingernails? Or indeed is guilty or any of those heinous personal crimes which account for the sergeant-majors' own particular colouring of turkey-cock red becomingly flecked with purple?

Good to know that not *every* piece of effrontery from our politicians goes unchallenged. If I had not seen it in cold print I would hardly have believed that the Punjab Pradesh Congress Committee was proposing to charter eight special trains to take from different districts to New Delhi a hundred thousand people to form a procession to Parliament in support of the Prime Minister. Mr. Kairon was to have led the procession. The Northern Railway has turned the request down on the ground of the emergency. (I can see pliant officials arguing, if so directed, that the emergency made it necessary that there should be a demonstration of confidence in the Prime Minister. There's nothing they cannot do in the name of the emergency.) Writing recently in the *Daily Herald*, whose end is certainly in sight, Mr. James Cameron said that "the end is in sight for Nehru". This, apparently, is how the no-confidence motion has been interpreted abroad. And, as the overwhelming defeat of the motion is almost certain to have been played down in the foreign Press, the notion about Mr Nehru's future may well persist. The Prime Minister's almost inexhaustible capacity for political survival is still underestimated by many, including, perhaps, the sponsors of the lakh-strong procession idea. When, oh when, will the morbid, pathetic, faith in public meetings and massive demonstrations go? I can understand the Opposition's craze for such things; it has nothing better to do. But rallies by the ruling Party seem totally irrelevant Whoever killed the Kairon idea deserves to be congratulated.

THE DITCHER

Guide for Investors

INDIAN COPPER TO ISSUE BONUS SHARES

THE Indian Copper Corporation Ltd has convened an extraordinary general meeting of the Company on 25th September, 1963, to seek the approval of the stockholders for an increase in its capital and for the issue of bonus shares by capitalising reserves. Its capital will be raised from £2,000,000 to £2,100,000 by creating 1,000,000 new shares of 2s each.

The directors consider that the present issued capital does not really represent the actual capital position of the Company, so they consider it desirable to increase the issued capital. Hence 6,856,500 bonus shares of 2s each will be distributed to the existing shareholders in the proportion of one new share for every two held.

If the shareholders approve of the resolution to issue bonus shares, the register of members will be closed from 6th to 13th November, 1963, for the purpose of allotting the new shares. It is not intended to issue allotment letters, but the certificates for the stock units into which the new shares will be converted on allotment will be issued immediately after allotment on 13th November, 1963.

Good Prospects for Polychem

IN his speech at the annual meeting of Polychem Ltd, the chairman, Mr. Ramdas Kilachand, has held out the hope of much better results for the current year. Sales during the first four months have been rising rapidly and if the trend continues, the chairman expects the turnover for the current year to show an increase of about 40 percent over 1962-63. Besides, the two new plants, the styrene monomer plant in Chembur and the alcohol plant in Nira, which are now under trial production, may reach their rated capacity within a few weeks. The styrene monomer plant has a licensed capacity of 15 million lbs a year but sufficient provision has been made for expanding it at a later stage when additional licences are received. The chairman assured the shareholders that in spite of the increase in the cost of the styrene monomer and alcohol plants from Rs. 2.40 crores to Rs. 2.55 crores, the Company had no intention of issuing rights shares at pesent. The directors propose to plough back as much as possible from its profits.

Replying to shareholders' queries, Mr. Kilachand said that the directors hoped to be able to maintain the dividend on the increased capital. The Company, he said, would not have any tax liability for the current year and that the benefit of Section 84 of the Income Tax Act would be available to it for the next five years. Out of the tax provision of Rs. 17 lakhs for 1962-63, the super profits tax accounted for Rs. 2 lakhs. The chairman assured the shareholders that the Company's products were being well received in the market.

Phoenix Mills Repeats

THE Phoenix Mills Ltd has maintained the dividend for the year ended March 1963 at 20 percent—Rs. 20 a share—subject to tax. Sales have been more or less maintained around the previous year's level of Rs. 3.48 crores, against Rs. 3.49 crores. But the gross profit is lower by about 13.3 percent from Rs. 41.40 lakhs to Rs. 35.87 lakhs. The provision for depreciation has been raised from Rs. 8.06 lakhs to Rs. 11.68 lakhs and that for development rebate reserve from Rs. 3.41 lakhs to Rs. 5.72 lakhs. The amount set aside for taxation is substantially lower at Rs. 6.50 lakhs, against Rs. 16 lakhs. A sum of Rs. 5.88 lakhs has been set aside for bonus to workers relating to earlier years. After providing for the proposed dividend, which absorbs Rs. 9.60 lakhs, there remains a modest surplus of Rs. 35,000 to be carried forward, against Rs. 3.85 lakhs brought in.

Dawn Mills Results Disappoint

ALTHOUGH the dividend has been maintained at 30 percent, that is, Rs. 15 a share of Rs. 50, subject to tax, the working results of the Dawn Mills Ltd for the year ended March 1963 are disappointing. Despite a modest increase in the sales from Rs. 2.06 crores to Rs. 2.10 crores, the gross profit at Rs. 28.72 lakhs is nearly 25 percent less than the previous year's figure of Rs. 37.23 lakhs. Appropriations include managing agents' commission Rs. 2.39 lakhs (against Rs. 3.08 lakhs), depreciation Rs. 4.59 lakhs (against Rs. 4.39 lakhs), development rebate Rs. 1.89 lakhs (against Rs. 47,000), taxation Rs. 14.50 lakhs (against Rs. 17 lakhs) and general reserve Rs. 3 lakhs (against Rs. 5.36 lakhs). After providing for the proposed dividend, which absorbs Rs. 8.40 lakhs, there remains a small surplus of Rs 7,000 to be carried forward, against Rs. 3.68 lakhs brought in.

Indian Organic Reports Fair Progress

THE third annual report of the Indian Organic Chemicals Ltd for the year ended March 1963 holds out the promise of encouraging results in coming years. The erection of its plant for the manufacture of acetic acid glacial was completed in July 1962 and the Company was able to put on the market its acetic acid in September. Sales for the eight-month period amounted to Rs. 19.87 lakhs on which it earned a gross profit of Rs. 7.58 lakhs, representing a profit margin of nearly 38 percent. After providing Rs. 10.30 lakhs for depreciation and capitalising expenses amounting to Rs. 1.60 lakhs, the net result is a loss of Rs. 2.72 lakhs, which, together with the previous loss of Rs. 53,399, is being carried forward.

The directors state that the Company has had to face a number of difficulties in running the acetic acid plant. It has taken up the matter with the Swedish suppliers of machinery and, meanwhile, measures have been taken to ensure the continuous running of the plant. The Company is trying to push the sales of acetic acid in the export market and small quantities have already been despatched. The directors are hopeful that with proper encouragement from the Government the Company will be able to export quite a substantial quantity in future. Its plant for manufacturing polyethylene carbons, which was set up in Thana for trial runs, has been shifted to Khopoli. The erection of the plant in Khopoli has been completed and it is said to be working satisfactorily. The benefit of the working of this plant will be reflected in the current year's results. The Rs. 100-paid share of Indian Organic Chemicals is quoted unofficially around Rs. 95.

Poor Showing by J. K. Rayon

THE J. K. Cotton Spinning and Weaving Mills Co. Ltd, popularly known as J. K. Rayon, has reported disappointing results for the year 1962. As against a decline of 6.5 percent in the sales from Rs. 5.17 crores to Rs. 4.83 crores, the gross profit is down by as much as 60 percent from Rs. 73.39 lakhs to Rs. 28.94 lakhs. After providing Rs. 28.24 lakhs (against Rs. 32.30 lakhs) for depreciation, there remains a balance of only Rs. 69,748, which is not sufficient even for paying the preference dividends, which absorb Rs. 1.38 lakhs. The ordinary dividend has, therefore, been skipped. In 1961, the Company had paid a dividend of 12.5 percent. No provision has been made for development rebate, which absorbed Rs. 16 lakhs in 1961. The development rebate on the new plant and machinery installed during the year works out to Rs. 4.23 lakhs, but no provision has been made as the Company will not get any benefit of development rebate in the income tax assessment relating to this year. After providing for the payment of preference dividends there remains a surplus of Rs. 19,944 to be carried forward, against Rs. 88,180 brought in.

The directors state in their report that the Company's working results were adversely affected by the prolonged illegal strike by workers in the rayon unit, which lasted for about three months. The Company also suffered heavily because of the import of raw materials for the rayon unit under the export promotion scheme. Besides, there was an increase in the cost of production due to rise in prices of raw materials, stores, dyes and chemicals, wages, coal, etcetera. The work in the cotton textile unit was dislocated due to fire in the spinning department in November 1962. Trading conditions were also generally unsettled following the Chinese aggression. The directors add that efforts are being made to produce new varieties of cloth to suit the consumers' taste and requirements. Modernisation of the plant and machinery in the cotton textile unit is being done slowly but steadily. The Company installed six additional combing machines, one Calico Manzle curing machine and water softening plant during 1962.

Referring to the working of the rayon unit, the directors point out that the Company experienced difficulties in obtaining supplies of imported pulp as well as caustic soda and, under the export promotion scheme, the Company had to sell a part of its production of rayon yarn at prices below cost. The prices of rayon yarn were kept at the 1957 level, while production costs recorded a further rise. The present selling prices of rayon yarn, it is stated, are wholly uneconomic, specially for a 5-ton capacity plant. The Company has represented to the Textile Commissioner for higher prices. The sodium sulphate plant which was installed towards the close of the previous year is working satisfactorily. The Company has been permitted to increase the capacity of the rayon plant from 5 tons to 10 tons and the necessary import licence is awaited.

Chembra Peak Earns Less, Pays Same

ALTHOUGH the dividend for the year ended March 1963 has been maintained at 20 percent, less tax, the gross profit of Chambra Peak Estates Ltd is down by about 12.6 percent from Rs. 9 lakhs to Rs. 7.87 lakhs. The setback in profit is due to a smaller coffee crop and lower prices realised from the sale of tea. The coffee crop harvested amounted to 172,569 kilograms, against 206,843 kilograms in 1961-62. But the tea crop was substantially higher at 836,263 kilograms, against 758,097 kilograms. The average price realised, however, was lower at Rs. 4.07 a kilogram, against Rs. 4.19 a kilogram in the preceding year. The tea crop for 1963-64 is estimated at 840,000 kilograms and the coffee crop at around 175,000 kilograms.

After providing Rs. 50,813 (against Rs. 58,048) for managing agents' commission, Rs. 1.30 lakhs (against Rs. 1.26 lakhs) for depreciation and making other allocations, the net profit amounts to Rs. 2.91 lakhs, against Rs. 3.60 lakhs in 1961-62. With the amount of Rs. 25,157 brought forward and including Rs. 699 being the refund of income tax relating to previous years, the disposable surplus amounts to Rs. 3.17 lakhs. Out of this, the directors have set aside Rs. 14,000 (against Rs. 3,048) for gratuity and the proposed dividend absorbs Rs. 2.80 lakhs, leaving a sum of Rs. 22,758 to be carried forward.

The directors state in their report that the sale price of tea for 1963-64 so far shows an improvement over 1962-63. At the end of June 1963, the price realised amounted to Rs. 3.68 a kilogram, against Rs. 3.08 a kilogram for the corresponding period

UNIVERSAL
RADIAL DRILLING MACHINES

Armstrong Smith Ltd.
P-17, MISSION ROW EXTN., CALCUTTA-13

of the previous year. In his statement to the sharcholders circulated with the directors' report, the chairman says that it is difficult to express an opinion on the prospects for the current year because of numerous imponderables. The Company is awaiting the final recommendations of the wage board constituted in 1961 to investigate wage rates on the estates. Another board has been set up by the Government to examine the question of bonus payments. In addition, there is always the uncertainty regarding future tea prices. The Company produces common teas which are generally the hardest hit in a falling market. The chairman has, however, assured the shareholders that the management will continue to watch the affairs of the Company with the greatest care and that, provided no great difficulties arise, the future should be reasonably bright. The Rs. 2-paid share of Chembra Peak is quoted around Rs. 4.33 *cum* dividend.

Higher Dividend from W. I. Plywoods

THE Western India Plywoods Ltd reports encouraging results for the year ended March 1963. Sales are up by about 45 percent from Rs. 70.04 lakhs to Rs. 101.68 lakhs; the gross profit has risen by nearly 23 percent from Rs. 24.53 lakhs to Rs. 30.15 lakhs and the dividend has been stepped up from 14 percent to 15 percent. After providing Rs. 97,000 (against Rs. 1.08 lakhs) for managing agents' commission, Rs. 8.28 lakhs (against Rs. 8.64 lakhs) for depreciation and Rs. 12.51 lakhs (against Rs 6 lakhs) for taxation, the net profit amounts to Rs. 8.39 lakhs, against Rs. 8.81 lakhs for 1961-62. The directors have set aside Rs. 2.50 lakhs (against the same) for reserve for the repayment of the I.F.C. loan Rs. 50,000 (against Rs. 69,750) for general reserve and Rs. 20,000 (against the same) for rehabilitation reserve. No provision has been made for dividend equalisation reserve, which received Rs. 50,000 in the preceding year. The preference dividend absorbs Rs. 48,000 and ordinary dividend accounts for Rs. 4.71 lakhs, against Rs. 4.40 lakhs.

The directors attribute the Company's encouraging results to the satisfactory working of both plywood and hardboard sections. Steps are being taken to double the output of the hardboard section. An amount of Rs. 5 lakhs was spent in 1962-63 for acquiring new fixed assets. The required investment on plant and machinery for increasing the Company's production facilities is proposed to be met mainly from its existing resources. Its paid-up capital consists of Rs. 37 lakhs, made up of Rs. 31 lakhs in equity shares and Rs. 6 lakhs in preference shares. Its reserves and surplus add up to Rs. 37 lakhs. The gross block of Rs. 113 lakhs has been written down to around Rs. 60 lakhs. The Rs. 100 paid share of W.I. Plywoods is quoted around Rs. 200.

Progress of Hindusthan Twyfords

IN their report for the year ended March 1963, the directors of Hindusthan Twyfords Ltd refer to the progress made in setting up the factory. The first phase of the project was in operation in July 1962. The second phase started with the firing of the small tunnel kiln, which is now operating to capacity. The third phase meant for bulk production will begin when the large tunnel kiln starts operating towards the end of the current year. It is hoped that full production will be achieved by March 1964. In view of the power shortage, the Company has installed its own diesel generating set. The Company's products have met with a good response in the market. The quality compares favourably with that of imported goods. The working has resulted in a loss of Rs. 12.14 lakhs, after providing Rs. 6.41 lakhs for depreciation. Taxation absorbs Rs. 1.03 lakhs. The dividend has again been passed. Sales amounted to Rs. 3.89 lakhs.

Rampur Distillery to Raise Output

IN their report for the year ended March 1963, the directors of the Rampur Distillery and Chemical Co. Ltd have pointed out that steps have been taken to expand the output of the distillery. Firm orders for plant and machinery have been placed and the project should be completed by 1965. As a result of smaller sugar production, the supply of molasses to the distillery has been reduced. The distillery is, therefore, likely to remain idle for some months during the current year. The Company has done better in 1962-63 than in 1961-62 because of higher production and turnover. The output of spirit amounted to 1.2 million bulk gallons. The power alcohol section has been running at a loss, but henceforth the Company will supply industrial alcohol to the synthetic rubber factory set up in Bareilly by the Synthetics and Chemicals Ltd. The working of the liquor department has been satisfactory.

The profit has amounted to Rs 3 lakhs (against Rs. 48.185) after providing Rs. 1.05 lakhs (against Rs. 95,619) for depreciation and Rs. 14,500 (against Rs. 19,500) for development rebate reserve. A taxable ordinary dividend of 5 percent has been declared to absorb Rs. 1 lakh. There was no dividend for 1961-62. Taxation absorbs Rs. 1.30 lakhs (against Rs. 29,500) general reserve Rs. 50,000 and bad debts reserve Rs. 40,000. The carry-forward is Rs. 419, against Rs. 19,930 brought in.

Share Offer by Mopeds India

MOPEDS India Ltd, which proposes to set up a factory near Tirupathi (Andhra Pradesh) for manufacturing mopeds auto-cycles, is offering 200,000 equity shares of Rs. 10 each at par for public subscription to raise a part of the funds required for the project. The Company has been licensed to produce 7,500 mopeds a year on a single-shift basis. The project, it is estimated, will cost Rs. 57.5 lakhs, of which Rs. 28.96 lakhs will be spent on machinery and equipment and Rs. 15.53 lakhs retained as working capital. Machinery worth Rs. 21.63 lakhs will have to be imported. The cost of the project will be met by the share capital of Rs. 35 lakhs, an I.C.I.C.I. loan of Rs. 15 lakhs, bank loans of Rs. 5 lakhs and advances amounting to Rs. 2.50 lakhs.

The Company has received licences for importing machinery valued at Rs. 8.93 lakhs and the technical collaborators, Motobecane of France, will be supplying machinery worth Rs. 2 lakhs for which also an import licence has been received. The I.C.I.C.I. has granted a loan of Rs. 15 lakhs, of which Rs. 10.70 lakhs is in foreign currency. Orders have already been placed for purchasing indigenous and rupee payment machinery worth Rs. 7.12 lakhs; machinery worth Rs. 1.85 lakhs has already been received at the site and the balance is expected to be received soon.

The building layout has been finalised with Motobecane and the construction of building is progressing. Atelier De la Motobecane, Pantin, France, which is collaborating in the venture, is one of the leading manufacturers of mopeds. The French firm has granted an exclusive right to Mopeds India to manufacture and sell mopeds in India and also to export them to Pakistan, Ceylon, Afghanistan and Nepal. Most of the components and raw materials are available indigenously but a few proprietory items and some raw materials will have to be imported. The authorised capital of the Company is Rs. 50 lakhs, made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 7½ percent cumulative preference shares of Rs. 10 each. The issued capital is Rs. 35 lakhs—all in equity shares. Of this, shares worth Rs. 35,000 have been subscribed for by the signatories to the memorandum of association; shares of the value of Rs. 12.65 lakhs have been taken by the directors and their friends and shares of the value of Rs. 2 lakhs have been reserved for allotment to the foreign collaborators against supply of machinery. Shares of the value of Rs. 20 lakhs will soon be offered for public subscription.

Madhavnagar Cotton Cuts Dividend

THE Madhavnagar Cotton Mills Ltd has reduced the dividend for the year ended March 1953 from 12 percent to 9 percent, less tax. The Company's working results have, no doubt, suffered a setback but the performance is not so bad as to warrant a dividend cut. Realisations from the sale of yarn are down by Rs. 8.96 lakhs at Rs. 92.1 lakhs, but the income from processing is higher at Rs. 10.80 lakhs (against Rs. 7.64 lakhs). Total sales are, therefore, down by only Rs. 5.80 lakhs. The gross profit also shows only a modest decline from Rs. 11.29 lakhs to Rs. 10.66 lakhs. After providing Rs. 69,499 (against Rs. 75,292) for managing agents' commission, Rs. 3.56 lakhs (against Rs. 3.58 lakhs) for depreciation, Rs. 70,267 (against Rs. 55,198) for development rebate and Rs. 4.28 lakhs (against Rs. 3.06 lakhs) for taxation, the net profit amounts to Rs. 1.43 lakhs, against Rs. 3.35 lakhs for the preceding year. With the sum of Rs. 6.79 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 8.22 lakhs. Out of this the directors have set aside Rs. 23,725 (against nil) for gratuity reserve and Rs. 5.05 lakhs (against nil) for general reserve.

The taxation liability of Rs. 4.28 lakhs is being met out of the taxation reserve to which has been credited a sum of Rs. 4.50 lakhs and a special reserve has been created with Rs. 2.65 lakhs. The proposed dividend of 9 percent is being paid out of the special reserve. After making various appropriations, there remains a nominal balance of Rs. 5,942 to be carried forward. The Company plans to install an additional 11,300 spindles, raising the total to 25,000 spindles. Nearly half of the ring frames and other machinery have been received and are being installed. These are expected to go into production by the end of this year. The expansion programme, it is stated, has been delayed by about six months on account of the late delivery of machinery and shortage of building materials.

Window Glass to Start Production Shortly

THE directors of Window Glass Ltd state in their second annual report for the year ended March 1963 that the civil construction work on the Company's project is being carried out expeditiously. The major portion of imported and indigenous machinery and equipment has already been received and is being installed under the supervision of the foreign collaborators. There has been some delay in commencing production due to circumstances beyond the Company's control. The factory is now expected to go into production by October 1963. Major raw materials have been obtained. The estimates of the capital cost of the project have had to be revised because of certain additions and modifications in the machinery and buildings, enhancement of import duty and general rise in the prices of indigenous equipment and materials.

The Company proposes to meet the extra cost by additional loans for which necessary steps are being taken. The Industrial Finance Corporation of India has sanctioned a loan of Rs. 25 lakhs, against which the Company had received Rs. 10 lakhs up to 31st March, 1963 and a further sum of Rs. 12 lakhs was received in June. The balance is expected to be received shortly. The Company's accounts for 1962-63 show a nominal profit of Rs. 4,627, which, together with the previous year's surplus of Rs. 1,530, is being carried forward. The Rs. 10-paid share of Window Glass is quoted nominally around Rs. 7.12.

Same from Birla Cotton

THE Birla Cotton Spinning and Weaving Mills Ltd has maintained the taxable ordinary dividend at 20 percent for the year ended March 1963 absorbing Rs. 7.99 lakhs. At the present price of Rs. 30.25 a share of Rs. 10 each the yield amounts to 6.6 percent. The trading profit has declined from Rs. 47.1 lakhs for 1961-62 to Rs 48.39 lakhs for 1962-63. Depreciation absorbs Rs 9.19 lakhs (against Rs 7.33 lakhs), development rebate reserve Rs. 2.44 lakhs (against Rs. 2.45 lakhs), general reserve Rs. 11.75 lakhs (against Rs. 6 lakhs) and taxation reserve Rs. 12.5 lakhs (against Rs. 23 lakhs). The carry-forward is Rs. 1.19 lakhs, against Rs. 1.67 lakhs brought in. A sum of Rs. 12.97 lakhs has been transferred after making adjustments for excess depreciation or value of assets written off previously.

Krishnabehari Tea Pays More

THE Krishnabehari Tea Co Ltd (an Assam garden) has increased its profit from Rs. 94,422 for 1961 to Rs. 1.14 lakhs for the year ended December 1962, after providing Rs. 67,075 (against Rs. 47,084) for depreciation. Bringing in Rs. 3,822, there is an available balance of Rs. 1.18 lakhs. A taxable ordinary dividend of 10 percent (against 8 percent) has been declared to absorb Rs. 50,000. General reserve is allocated Rs. 20,000 and taxation Rs. 45,000. The carry-forward is Rs. 2,721. The crop amounted to 166,356 kilograms, against 173,581 kilograms but the average sale price rose from Rs. 5.29 to Rs. 6.02 a kilogram. The 1963 crop has been estimated at 180,000 kilograms. The average price for the 1963 teas has so far been higher than in the previous season.

Gillapukri Tea Pays Less

THE Gillapukri Tea and Seed Co. Ltd (an Assam garden) has cut the taxable ordinary dividend from 20 percent to 15 percent for the year ended December 1962. At the present price of Rs. 27.56 a share of Rs. 10, the yield amounts to 5.4 percent. The profit has declined from Rs. 1.95 lakhs to Rs. 49,047, after transferring Rs. 72,083 (against Rs. 54,976) to depreciation. Development rebate reserve absorbs Rs. 1,572 (against Rs. 1,240) and taxation Rs. 20,000 (against Rs. 91,000). There is a carry-forward of Rs. 4,482, against Rs. 13,755 brought in. The crop declined from 358,797 kilograms to 319,932 kilograms. The 1963 crop has been estimated at 400,000 kilograms; the crop totalled 64,227 kilograms up to 7th July, 1963.

Manabarrie Tea Makes Profit

THE Manabarrie Tea Co. Ltd (a Dooars garden) has made a profit of Rs. 88,005 for the year ended December 1962, against a loss of Rs. 63,173 for 1961, after providing Rs. 53,373 (against Rs. 26,707) for depreciation. The taxable ordinary dividend has been increased from 6 percent to 10 percent to absorb Rs. 20,000. The yield works out to 1.7 percent at the present price of Rs. 59.50 a share of Rs. 10. Development rebate reserve is allocated Rs. 15,456, taxation Rs. 32,500 and general reserve Rs. 15,000. The carry-forward is Rs. 8,107, against Rs. 3,059 brought in. The crop amounted to 253,887 kilograms, against 247,991 kilograms. The directors have taken steps to manufacture C.T.C. teas. The output in 1963 is expected to be the same as in 1962. The new planting programme of the Company has made progress.

Good Progress by Engel India

THE Engel India Machines and Tools Ltd has made satisfactory progress in setting up its factory at Taratala Road, near Calcutta, for the manufacture of standard equipment required for processing plastic raw materials. It will also manufacture standard-size machine tools. A fairly big tool room for making moulds for the industry is being installed. The production of moulds is expected to begin by the middle of 1964. It is proposed to manufacture injection moulding machines.

The Union Carbide India Ltd has been appointed the sole agents of the Company for India. The Industrial Finance Corporation has underwritten a substantial part of the equity shares besides granting a loan of Rs. 25 lakhs to the Company. The Life Insurance Corporation has agreed to underwrite and subscribe for the equity shares. The West Bengal Financial Corporation will also underwrite a part of the equity shares. Engel India will soon offer shares for public subscription.

New Capital Issues

TWELVE companies, including one Central Government enterprise, have been authorised to raise fresh capital amounting to Rs. 5.28 crores. Five companies are issuing bonus capital, two cumulative plus preference shares, one preference shares and the rest equities. Four companies are offering their issues for public subscription, one is offering part of the capital to its own employees and four companies are offering part of the capital to their foreign collaborators. The consent is valid for 12 months in all cases. The following are the details:

Hindustan Cement Corporation Ltd, Delhi, is to issue capital of Rs. 1.50 crores divided into 125,000 equity and 25,000 9.3 percent cumulative redeemable preference shares of Rs. 100 each, for cash at par. Out of this, equity shares of the value of Rs. 1.05 crores and the entire preference shares of Rs. 25 lakhs will be issued to the public by prospectus. The proceeds of the issue are required for financing the manufacture of portland blast furnace slag cement.

The Aryan Brush Co. Ltd, Bombay, is raising further capital of Rs. 5 lakhs, divided into 5,000 equity shares of Rs. 100 each. On capitalisation of the company's reserves to a like extent, it will be issued as fully paid-up bonus shares to the Company's existing shareholders.

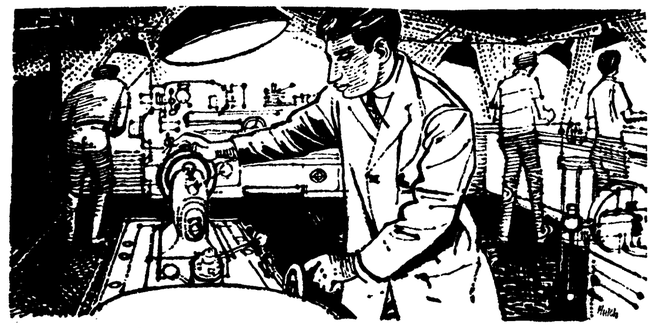
D. Macropolo and Co. Ltd. Bombay, is issuing capital of Rs. 3,15,300 divided into 3,153 equity shares of Rs. 100 each, as bonus shares by capitalisation of the company's reserves to a like extent.

Blundell Eomite Paints Ltd. Bombay, is to issue capital of Rs. 48 lakhs consisting of (i) Rs. 14 lakhs in equity shares of Rs. 10 each on capitalisation of the Company's reserves to a like extent; (ii) Rs. 21 lakhs in equity shares of Rs. 10 each for cash at par to be issued to the existing shareholders and (iii) Rs. 13 lakhs in equity shares of Rs. 10 each for cash at a premium of Rs. 11 a share to be issued to the Indian public.

Wheels India Ltd, Madras, is raising Rs. 60 lakhs, divided into 60,000 equity shares of Rs. 100 each, to be issued privately for cash at par. Of this, not more than 27,000 shares will be issued to the Dunlop Rubber Co. Ltd, the foreign collaborators, against the supply of plant and equipment. The money will be spent on the manufacture of wheels and top rollers for tanks.

Kesar Chemicals Ltd is raising capital of Rs. 80 lakhs in equity shares of Rs. 10 each to be issued for cash at par. Of this amount, shares of the value of Rs. 20 lakhs will be issued to Associated Chemical Company (Mfg.) Ltd, England. The money will be used for the establishment of a plant in Baheri, for the manufacture of sodium phosphate and allied chemicals.

Vibgyor Ltd, Bombay, is to issue further capital of Rs. 23,82,000 in equity shares of Rs. 100 each for cash at par. Out of this, shares of the value of Rs. 15 lakhs would be issued to the public. The capital is required for the construction of civil works, like dams, bridges, reservoirs, tunnels, etcetera.



Nandlal Bhandari Mills Ltd, Indore, is issuing further capital of Rs. 12.50 lakhs divided into 5,000 shares of Rs. 250 each as bonus shares on capitalisation of the Company's general reserve to a like extent.

Citric India Ltd, Bombay, is issuing Rs. 30 lakhs capital (inclusive of Rs. 10 lakhs equity already issued). The balance of Rs. 20 lakhs will be in 9.3 percent preference shares of Rs. 100 each, to be issued for cash at par. The capital will be used for completing the project for the manufacture of citric acid and citrates.

Ahmedabad Manufacturing and Calico Printing Co. Ltd, Ahmedabad, is to issue bonus capital of Rs. 6.25 lakhs in 5,000 equity shares of Rs. 125 each to be offered to the Company's existing equity shareholders in the ratio of one for 34 shares held, on capitalisation of general reserves.

Everest Refrigerants Ltd, Bombay, is raising capital of Rs. 60 lakhs for cash at par divided into Rs. 48 lakhs in equity shares of Rs. 10 each and Rs. 12 lakhs in cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.3 percent. Out of this, equity shares worth Rs. 10 lakhs will be offered for subscription to the foreign collaborators, Technical Enterprises Inc., New York, and equity shares of Rs. 19 lakhs and preference shares of Rs. 6 lakhs to the public by prospectus. The proceeds of the issue will be used for the manufacture of fluoro chloro methane gases and its intermediary chemicals.

Indian Oil Co. Ltd, a Government of India undertaking, has been accorded consent to issue a further capital of Rs. 49,55,000 divided into 4,955 equity shares of Rs. 1,000 each to be issued privately for cash at par. The capital will be used for constructing oil installations, depot, etcetera.

In Factories, Hospitals, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In factories sudden darkness can cause injury and damage to machinery. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for factories, hospitals, schools, banks and public places.

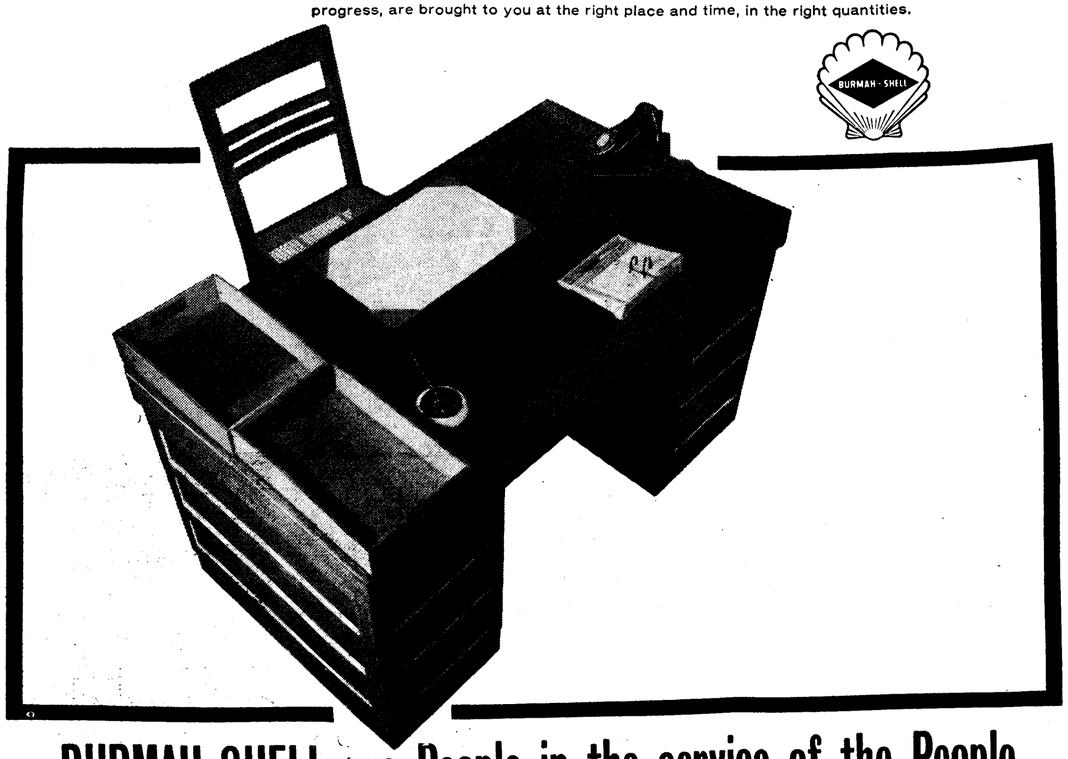
An empty desk—
yet District Sales Representative Konery is on the job!



Take one part efficiency, two parts drive, a good dollop of common sense. Mix with a base of sincerity. Season with an infectious smile. Top off with travel. For good measure, add a desk (rarely occupied), and you have W.B. Konery, Burmah-Shell District Sales Representative at Hubli.

A COMBINATION OF TALENTS

Konery is 47 years old and has spent 19 of them with Burmah-Shell. He's invariably on the move. His sales area comprises hundreds of square miles and he knows all of it well. His duties may be summed up in a sentence: Konery must meet the diverse needs of his many customers. His job demands that he keep a cool head in a crisis and he always does. When dealing with Agents Dealers and customers, Konery combines the talents of Counseller, Adviser an Constructive Listener. Above all, he is regarded as a man who keeps his word. Konery has made scores of friends in his job. To them, he is Burmah-Shell.

TODAY, AS EVER, PEOPLE LIKE KONERY ARE WORKING FOR YOU

Konery is a fine example of a man at peace with himself. Married, with three children—two boys and a girl—he admits wryly to a partiality for his 12 year old daughter. 'She commands,' he says, eyes twinkling, 'and I obey.' He plans a future for her in medicine. Konery and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People

The Stock Markets

GOOD CORPORATE NEWS AND L.I.C. PURCHASES HELP SENTIMENT

Wednesday Evening.

THE Calcutta stock market has been steady during the past week. The prices of selected shares have recovered due to short-covering, combined with replacement purchases. The selling pressure has abated because of good corporate news. The declaration of excellent dividends by the Bird-Heilgers group of jute companies has been a stimulating factor. The Indian Copper Corporation has called an extraordinary general meeting to approve the issue of bonus shares in the proportion of one new share for every two held.

The purchase of some ordinary shares by the Life Insurance Corporation in Lyons Range has helped to improve the tone of the market. Reports that a meeting of the Investment Committee of the Corporation will be held in Calcutta this afternoon have also given rise to optimism, since it is believed that the Corporation may soon buy more shares. Although its support will discourage short-selling, it will not, by itself, inspire private investors to buy shares. They may not take interest in equities until the outlook for corporate profits and dividends improves.

Turnover has been restrained because operators are confused by domestic political developments. The resignation of some Central Ministers has created a great deal of uncertainty. The market is particularly interested in the news of Mr. Morarji Desai's resignation. Speculation on the choice of his successor has dominated market gossip. There is a general inclination not to extend commitments until Mr. Desai's successor is named.

Attention has, meanwhile, been diverted to new issues. The offer of shares by Sankey Wheels has attracted some attention. Although money conditions have become easier, there is no sign yet that the stock market has benefited from the increased supply of funds. The easier money supply is considered temporary, and banks are keen on conserving funds. So there may be no tangible benefit even if the margin requirements for advancing money against shares are liberalised.

Jute shares have been about the most cheerful, following the announcement of good dividends. The outlook for the industry has improved. Shipments of jute goods during July have been satisfactory and the industry has been able to sell most of its production so far. Some foreign countries have bought slowly during recent weeks, but it is hoped that there may be brisk buying in the near future. Attention has been concentrated on Union, Lawrence, Empire, Ganges, Kamarhatty, Birla and Northbrook. Anglo-India have been steady on the prospect of a bonus issue.

Indian Iron have fluctuated narrowly. The trend is likely to be maintained in view of the fact that its quotation will become ex-dividend during the next few days. Among engineering shares, Guest, Keen, Williams, Texmaco and Jessop have recovered. Interest has been taken in Kumardhubi Engineering on prospects of bonus and rights issues. Scattered support has been extended to Jay Engineering.

In the miscellaneous section, attention has centred on clearing shares. Indian Copper, Indian Aluminium, Hindustan Motors, Indian Cable and Dunlop Rubber have been prominent. India Steamship have been a smart feature and have met with influential buying. Among new shares, Dr. Paul Lohmann have improved on the news that the Company has made good progress in installing its factory. Union Carbide, Indian Oxygen, Goodyear India and British Paints have been steady. Angelo Brothers have hardened on investment support. Hindusthan Twyfords have eased on showing a loss. Orient Paper have been active in the paper section. Titaghur, India Paper Pulp and Sirpur have been sluggish. Sugar shares have been neglected. There has been little interest in bank shares. Among electric companies, Calcutta Electric have changed hands.

Coal shares have been quiet. There has been a small turnover in Burrakur, Amalgamated and Central India. Cotton mill shares have been subdued and J. K. Rayon have been offered freely. Tea shares have met with scattered support, which has largely been confined to selected Assam and Dooars gardens.

Government securities have been firm. The 3-percent Conversion loan 1986 has gained at Rs. 64.45. Support has, nevertheless, been restricted to short- and medium-dated securities, but sellers have been reserved. Some long-dated loans are slightly easier on balance. Selected State Government loans have been steady due to institutional buying.

Tata Steel ordinary have recovered smartly to Rs. 141.50 towards the close. Investors have been impressed by the prospect of expansion in the output capacity of the Company. Among engineering shares, Tata Locomotive have been prominent on hopes that the current working will show an improvement over that of 1962-63. Larsen and Toubro. Mukand Iron and Premier Construction have been steady. Among motor-vehicle shares, Hindustan Motors have been active while Premier Automobiles have been sluggish.

Except for Kohinoor and Century, which have been steady mainly due to technical considerations, cotton mill shares have been dealt in cautiously. Routine turnover has been transacted in Svadeshi, Morarji, Standard and Simplex. India United ordinary have fluctuated narrowly.

Business has been small in miscellaneous shares. Among cement shares, Associated Cement and Digvijay have changed hands almost around previous rates. In steamship company shares, Scindia Steam have been steady due to replacement buying. Mining shares have been easier, and Shivrajpur Syndicate have been offered freely. Prospects that the Government may give incentives to produce more during the 1963-64 season have made selected sugar shares steady. Belapur, Walchandnagar Industries and Phalton have been bought.

Chemical shares have been quietly steady. Tata Chemical have been steady, but Indian Dyestuff have been easier on pressure. Rayon shares have shown mixed trends. National Rayon have been quiet, but Gwalior Rayon have been steady. Bombay Burmah have shown little change. Scattered support has been extended to Voltas. Turnover in new shares has been negligible and the trend has generally been downwards. Synthetics and Chemicals have lost on profit-taking.

In bank shares, business has passed in Bank of Baroda, Dena and Central Bank. Electricity company shares have been steady. Tata

Bombay

PRICES IMPROVE ON SHORT-COVERING

SMART RECOVERY IN TATA STEEL

Wednesday Evening.

THE Bombay stock market has shown mixed trends during the past week. The earlier fall was caused by nervousness about the domestic political situation. The strike by municipal workers also affected sentiment. Towards the close, share prices have recovered smartly mainly due to short-covering. The bears were compelled to cover their positions as soon as the strike was called off. Dalal Street has been worried by the resignations of Mr. Morarji Desai, Central Minister for Finance, and Mr. S. K. Patil, Central Minister for Food and Agriculture, and operators are inclined not to take a constructive view until their successors are appointed.

The purchases of ordinary shares by the Life Insurance Corporation have helped to reduce the selling pressure. The address of Mr. B. K. Kaul, chairman of the Life Insurance Corporation, at the Ahmedabad Stock Exchange that the Corporation would try to extend support to the smaller stock exchanges, has been welcomed. The advent of easier money conditions has created some cheerfulness. Operators hope that the Government will soon take steps to relax the margin requirements for share advances.

Madras

POOR BUSINESS IN CLEARING SHARES

INTEREST CONFINED TO PLANTINGS

Tuesday Evening.

LISTLESS conditions have prevailed in the Madras stock market during the past week. Because of the lack of interest from outside centres, business in clearing shares has declined to almost a trickle. Investors and operators have been worried by the prospect of changes in the Central and State Cabinets. The stock market has also faced a shortage of funds.

Interest has largely been confined to selected planting shares. Good tea and coffee shares have been taken due to satisfactory dividends. Blue Mountain have been transacted at Rs. 2.48 and Cochin Malabar at Rs. 5.86. Business has passed in Consolidated Coffee at Rs. 17.35 and in Periakaramalai at Rs. 3.58. Midland have been done at Rs. 11.10 on declaring a taxable ordinary dividend of 10 percent. Malankara have changed hands at Rs. 16 on paying a taxable ordinary dividend of 14 percent Alageswar have been dealt in at Rs. 2.91 on declaring a taxable ordinary dividend of 10 percent. Ossoor have been steady at Rs. 3.38 on issuing bonus shares in the ratio of one share for every two held. Kumergode have been steady at Rs. 3.70 on issuing bonus shares in the proportion of one new share for every two held.

Bank shares have generally been quiet, and Pandyan have declined to Rs. 37. In electric company shares, Cochin have been steady at Rs. 12.30 on paying a taxable ordinary dividend of 12.5 percent. West Coast have been taken up to Rs. 17.35. Sugar shares have been easier, and E.I.D. have reacted to Rs. 38.50. Deccan have been offered down to Rs. 9.90.

Turnover in cotton mill shares has been small. South India Viscose have been quiet at Rs. 124.50 and Travancore Rayon at Rs. 22.75. Lakshmi have reacted to Rs. 130.50 and Madura to Rs. 31.25. Sarvaraya have been quoted at Rs. 10 on issuing rights ordinary shares at par, in the proportion of 56 new shares for every 100 held. Business has passed in Sarda at Rs. 96 and in Premier at Rs. 286. Buckingham have been quoted at Rs. 261 and Bangalore Woollen at Rs. 231.

Among miscellaneous shares, Aluminium Industries have been quiet at Rs. 16.95 and Ashok Leyland at Rs. 7.25. In cement shares, Dalmia have been steady at Rs. 12.25 and India at Rs. 5.55. Mettur Chemical have been done at Rs. 12.75. Mysore Chemical Fertilisers have changed hands at Rs. 7.75 on a proposal to issue rights ordinary shares at par for Rs. 1 crore. Seshasayee Paper have been quiet at Rs. 7.12, but Mysore Paper have been steady at Rs. 13.85. Standard Motors have been done at Rs. 11.62 and Tube Investment at Rs. 208. Madras Rubber have been steady at Rs. 14.50, but Kirloskar Electric have lost at Rs. 18.12. Parry's Confectionery have been bought up to Rs. 3.25 and Spencer have been quoted at Rs. 20.20. Business has passed in Textool at Rs. 154 and in Tube Suppliers at Rs. 10.

THE WEEK'S TRANSACTIONS

London

WIDESPREAD RISE IN EQUITIES

INDUSTRIAL NEWS HELPS SENTIMENT

London, 28th August.

ALTHOUGH quieter now while awaiting a fresh incentive, the London stock market gave a good performance over the past week. In the case of equities, many stocks established peak prices for the past two years. Encouraging industrial news and statements from individual companies influenced sentiment to a large extent, although the advance was slowed down by the trade figures which disclosed a wider gap due to record imports. The would-be buyers found stocks in short supply and jobbers quickly hoisted prices, so that gains were sometimes out of proportion to the business transacted. The persistent firmness of Wall Street helped sentiment and dollar stocks moved up in line with the higher transatlantic levels. The gilt-edged securities were overshadowed by new issues and for most of the time were without a definite trend but support was forthcoming later. There was small speculative buying of Greek bonds at one time on debt settlement hopes. Gold shares were wanted at times but the buying was small and then mostly on foreign account. It was suggested at one time that U.S. buying was going on in spite of the securities tax penalty. Coppers weakened on the latest labour development in the copper belt. Oils were wanted but there was no revival of the Royal Dutch share split rumour. Teas gained some ground but rubbers remained idle.

THE HIGH COST OF COLLECTING COMPULSORY DEPOSITS

(BY A SPECIAL CORRESPONDENT)

WHEN eight banks in the private sector, apart from the State Bank of India in the public sector, were entrusted with the collection of compulsory deposits under a Government-sponsored scheme, the participating banks felt happy while the neglected ones were unhappy. The Reserve Bank had to announce immediately thereafter that when selecting the banks as agents for collecting compulsory deposits, it kept in view the stature of the bank and the convenience of depositors. This clarification was necessary in order to allay the suspicion of banks which were left out. The scheme was to be worked on a "no-profit, no-loss" basis, but the general impression which prevailed when it was started was that the participating banks would enjoy the advantage of holding Government deposits. Such deposits, it was argued, could be used by them for purposes of liquidity or for offering advances, especially in the busy season, although for only a short period. The decision of the Government of India and the Reserve Bank to appoint commercial banks as agents for the first time was hailed as the beginning of an enlightened policy reflecting a change in the official attitude.

Banks Disillusioned

The sense of optimism yielded place to pessimism within a month of the working of the scheme. Private commercial banks were disillusioned when the Government of India announced the rules governing the collection of deposits. The Government has informed the participating banks that these deposits constitute a separate category and, therefore, do not form part of public deposits. After collection, the compulsory deposits are to be transferred every Friday, before closing the books each week, to the nearest branch of the Reserve Bank or the State Bank.

The banks have been instructed always to keep their ledger-books ready for inspection by the Auditor-General. The ledgers are to be maintained in two categories—one covering the depositors paying income tax and another for those not paying income tax. These facilities are to be provided by the operating bank at each branch or office. The banks have prepared their own detailed instructions for the guidance of the special staff appointed for the purpose. Several big banks have had to open separate departments, at least at the headquarters, with a large staff to look after the working of the scheme.

The actual working of the scheme has shown that it is both costly and unwieldy. One big bank's experience is that collection of a couple of lakhs of rupees is spread over nearly 200 branches and over 15,000 accounts. The task of adding the collections in a large number of small accounts, not to speak of maintaining these accounts in order, for negligible balances each week and communicating them to the head office is stupendous. The problem is particularly difficult for banks with new branches or offices which function with minimum staff. The number of forms to be filled by the depositor and the duplicate and triplicate sets of statements to be prepared for transmission to the head office and the Government is a burden. The latter is prepared to reimburse the average expenditure incurred by banks in collecting deposits. But it is difficult to calculate the average expenditure.

For instance, in calculating the cost of collection, the banks are asked to charge the overtime paid to usual staff for the work, the cost of stationery, including the expenses for sending telegrams for collecting statistics on deposits and salaries, on a part basis, if some of the permanent staff are employed for work under the compulsory deposit scheme. Banking is a joint service and it is difficult to introduce any precise cost differentiation. Again, some banks use superior stationery items and others inferior ones. The average cost an account, bankers contend, is computed in such a way that it does not take into account the individual items of costs of different banks, so they want the reimbursement of actual expenditure in connection with the scheme.

Recruiting Emergency Staff

Yet another difficulty is that the banks have had to recruit emergency staff, but since the scheme is of a temporary duration, the staff has had to be appointed on a temporary basis. Besides, experienced personnel in the permanent service of banks have had to be diverted for supervision. The banks are required to pay gratuity and provident fund to permanent staff engaged on the work and retrenchment compensation to temporary staff in case their services are terminated. The reimbursement to be provided by the Government covers only incidental costs connected with the administration of the scheme and not the compensation, gratuity and provident fund liability to temporary employees.

The banks are naturally worried. They feel that they have been cornered rather badly because of their initial enthusiasm. Some place the cost of collection at 5 percent, besides the actual payment of interest to depositors. Such cost would hardly cover the salary and allowances of the senior officer employed by banks to administer the scheme at the headquarters, and all the work has to be done necessarily free by the banks. If all the legitimate expenses, including the bonus paid to staff, incurred by banks in connection with the scheme are borne by the Government of India on a "no-loss" basis, the cost of administering the scheme would come to nearly twice the actual interest paid to depositors. In other words, the Government would be paying an uneconomic rate of about 13 or 14 percent for collecting compulsory deposits, inclusive of the interest of 14 percent paid to the depositor. This is in contrast to the 4½ percent rate which the Government pays normally on gilt-edged securities.

Fixing the Collection Cost

While the banks are demanding the reimbursement of actual costs of collection incurred by each individual bank, the Government of India, on the advice of the Reserve Bank, appears to be thinking of fixing the cost of collection on a percentage basis, say, 3 or 4 percent of the amount collected. This decision is bound to affect the participating banks adversely. The Government of India's view seems to be that the scheme, although uneconomic from the point of view of individual banks, is in the national interest and as such it requires to be administered even in the face of some individual inconvenience. The banks, on the other hand seem to feel that it is advisable to replace the deposit scheme with deposit certificates, on the model of National Defence Bonds, etcetera, to minimise the costs of collection.

You just have to put the telephone receiver on the Teledek and you can talk and work at the same time—because you have your hands free for work. An amazing transistorised instrument, Teledek saves your valuable time and is a must for every busy executive, secretary, telephone-operator etc.

Teledek has now been improved to serve as an amplifier for microphones and record players. You can address a small meeting with its help or use it on your record player. Its new features include among others an easy-to-refill battery container, a push-pull switch to facilitate trunk telephone conversation, and stream-lining while an earplug ensures listening by one person, if so desired. You can also use an external speaker for louder reproduction.

All these at no extra cost!

Built on printed circuit and available in two colours.

Price (ex-dealer) Rs. 225/-. Local taxes extra. Guaranteed for one year.

GKCP-2-65

Treasury bills will be sold from 28th August to 31st August at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 21st August to 24th August, amounted to Rs. 7,19,00,000.

THERE WERE DECLINES OF Rs. 27.69 crores to Rs. 2,208.74 crores in active notes and of Rs. 12.53 crores to Rs. 2,236.17 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 23rd August, 1963. The currency contraction was adjusted by reducing foreign securities by Rs. 80 lakhs to Rs. 89.46 crores and rupee securities by Rs. 14.20 crores to Rs. 1,907.12 crores in the paper currency reserve. Deposits of the Government of India rose by Rs. 7.68 crores to Rs. 65.04 crores while those of State Governments fell by Rs. 1.36 crores to Rs. 15.19 crores. Balances of scheduled banks at Rs. 99.75 crores showed a rise of Rs. 12.96 crores. Their loans from the Reserve Bank increased from Rs. 31.80 lakhs to Rs. 37.45 lakhs but there was again no advance against usance bills. Balances held abroad rose by Rs. 4.07 crores to Rs. 8.35 crores. The investment portfolio was Rs. 31.10 crores smaller at Rs. 223.31 crores. Ways and means advances stood at Rs. 17.86 crores, against Rs. 13 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 16th August, 1963, shows a rise of Rs. 7.37 crores to Rs. 580.70 crores in total deposits. Investments in Government securities are up by Rs. 11.39 crores to Rs. 296.39 crores, while other authorised investments are down by Rs. 30 lakhs to Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 2.36 lakhs to Rs. 261.88 crores. Cash and balances are, in consequence, shown at Rs. 22.43 crores or Rs. 68 lakhs higher.

THE DIRECTORS OF THE NATIONAL AND Grindlays Bank Ltd have declared an interim dividend for the current year of 7 percent, less income tax at 7s 9d in the £ payable on 4th October, 1963.

THE CALCUTTA MONEY MARKET

MODERATE DECREASE IN ADVANCES

Wednesday, 28th August.

THE general level of advances has shown a fair decrease in the Calcutta money market during the past week. Most of the decline is accounted for by the jute mills and the sugar factories. The credit given to the cotton mills, the iron, steel and engineering industries, and the foodgrains and seeds trade is almost unchanged. In the interbank market, conditions remain easy and the call rate has dropped to ½ percent.

The exchange market has been very active The supply of both tea and gunny bills has been excellent. The demand for remittance has continued on a fair scale. The weakness of sterling has persisted, although it shows a minor recovery in relation to some of the more important currencies.

SILVER WAS QUIET IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 269.25 to Rs. 268.25, quoted today for ready delivery. The London and New York prices were 111¾d and 128.6 cents. The price of gold of 14 ct. was the same at Rs. 65 a 10 grams but there was no business.

DURING THE WEEK ENDED 23RD August, 1963, Government of India Treasury bills for Rs. 22,98,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 27th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India

TEST-BAN TREATY: CONDITIONS FOR SUCCESS

By Robert W. Brock

(Editor of "Capital" from 1928 to 1932)

IF the new test-ban agreement with Russia depended for its significance and survival exclusively on the document signed, it would rest on a foundation too fragile to merit political endorsement or public confidence. In reality, its foundation is far more solid and endurable than has been disclosed, or, in most cases, realised. Russia's policy has been adapted to safeguard her interests, including, on a long-term view, her territorial integrity. After 18 years of fruitless negotiation, the western Powers had no new proposals to submit. On this occasion, the initiative came from Moscow and the incentive to Moscow came from Peking. In this context, the fear of some Americans that Russian technologists have achieved triumphs which the Kremlin is manoeuvring to conceal is of minor import.

The overall, "built-in" guarantee against Russia initiating nuclear warfare is that—as Russian leaders (although understandably reticent) are acutely conscious—immediately the first retaliatory bombs fell on Moscow and other leading cities, China, uninhibited and unopposed, would occupy Siberia (as large as China and India combined and with immense untapped economic resources) and thereafter would emerge—rapidly and ruthlessly—as the dominant world Power. The "Yellow Peril"—a political fantasy at the beginning of the century—is now crystallising, and could rapidly mature, as a grim and growing reality.

Russo-Chinese Clash

Communism, like other "isms", can cover a multitude of aims. The Russo-Chinese clash has, for some years past, ceased to be solely ideological, and become increasingly racial and territorial. Erupting in 1960 when Russia withdrew all her technicians and tore up all her "aid" agreements with China, all subsequent efforts to secure reconciliation have failed, and the "break" is now fundamental and final. As the only great Power likely to benefit from a Russo-American nuclear war, China hoped to achieve the political palm without the nuclear dust. Her disappointment now that this cynical but characteristic calculation has probably been permanently frustrated is correspondingly acute and is reflected in China's increasingly embittered attacks on Russian policy.

Western diplomacy will fall tragically short of its opportunities unless it now mobilises all its resources and expertise in perpetuating and consolidating the fundamental advance thus secured. To limit discussions to Europe would be to enter a diplomatic *cul-de-sac* leading directly, almost inevitably, to new dissensions and disappointments which it would be politic to evade. If the new *détente* is to yield its full "potential", it must be made world-wide in scope. If racial apartheid, in Africa or America itself, is deleterious, political and economic apartheid, initiated and sustained by Washington's adolescent diplomacy, is disastrous, politically and commercially, and its abandonment, completely and spontaneously, should be the first major sequel to the Moscow agreement.

Joint Reaffirmation

In Europe, at this stage, a joint reaffirmation by the N.A.T.O. and Warsaw blocs of the U.N. non-aggression commitment might perhaps ease the transfer to wider discussions, and if Russian politicians and propagandists "ballooned" the significance of such a retroflected formula, their action would constitute "inflation without expansion" and western commitments and interests would remain unaffected.

Military disarmament, whatever the form or scale contemplated, will not begin unless tariff disarmament, on a far wider basis than now projected, is inaugurated as the essential prerequisite. Politicians are apt to "prescribe" for symptoms, without probing for "causes". The cancer of international antagonism will not be cured until its primary stimuli are not only identified but also eliminated.

The unequal distribution of wealth, between western and eastern nations, is undoubtedly the major source not only of East-West tensions but of communism itself. Universal and stable peace can emerge and rest securely only on the dual foundation of universal economic welfare and universal self-government—two targets still almost equally remote.

The Kennedy so-called lower tariff "round", which has not made a happy start in Europe, at best exclude one-third of the world's population wholly and automatically. The American "economic boycott" of all communist or semi-communist countries, although motivated by commendable political aims, defeats its own overriding purpose—to eliminate communism—by limiting economic growth and expansion to the richer nations, delaying and circumscribing the establishment of higher standards of production and consumption in the have-not nations, of which China is the most populous. A more reliable technique for perpetuating, even extending, communism could not be devised.

Communism can be exorcised only by exorcising poverty. Capital resources and technological progress have made the worldwide elimination of poverty feasible; but the American programme of political and economic apartheid, so long as it remains enforced, renders it unattainable. According to the U.N. economic classification, the only "developed country in Asia is Japan (thanks largely to American aid), South Africa occupying the same unique status in Africa. Both continents will remain favourable breeding grounds for communism as long as that level of economic backwardation persists, despite western "economic aid", most of which is misdirected and infructuous because it does not conform to any coherent or co-ordinated programme, either to eliminate hunger or any other handicap.

Freedom from Hunger

At the recent World Food Congress, President Kennedy stressed that, in the West, farm production has undergone a scientific revolution which may rival the industrial revolution in its social consequences. He omitted to emphasise the fundamental fact that, in the West, the industrial revolution preceded the agricultural revolution and that this sequence could not have been reversed. Nor can it be reversed in the three undeveloped continents—Asia, Africa and South America.

Whereas, as the first outcome of the industrial revolution, Britain became the "workshop of the world", today "freedom from hunger", which western Powers are pledged to promote, will not materialise until the whole world becomes industrialised to the limit of each country's natural and human resources. In this context, western food surpluses have no abiding relevance to eastern food deficiencies. If the underfed countries cannot afford to import food, except as emergency rations, still less can they afford to modernise and expand their own food production by importing the expensive mechanical and chemical aids essential to maximum productivity. As a major example, India will be able to maximise her food output only when her steel and engineering industries combine to manufacture the millions of mini-tractors, and auxiliary equipment, required to facilitate the co-operative cultivation of its millions of mini-farms. Consequently, western "economic aid" to the undeveloped countries will become fully fruitful only when it is focussed on endowing all of them—some individually, some collectively—with the industrial capacity to maximise their food outputs by their own organised efforts.

Palpably, the Kennedy tariff "round" will become effective only when it encircles the globe, eliminating the political-cum-economic apartheid established under the disastrous Dulles dictatorship as a policy always wholly mischievous, and now, on any reasoned calculation, wholly obsolete. Today China could be admitted to the U.N.O. with little risk of as complete domination by a monolithic Communist bloc as hitherto apprehended. Political, military and tariff disarmament could then proceed, concurrently and conjointly, stage by stage, under the aegis of a U.N.O. for the first time fully representative of all the countries whose willing collaboration is essential to progress in each sector.

Isolating Communist China

To isolate China is to risk Asia finally emerging as a communist continent, with "Asia for the Asiatics" as its basic programme, and an Asiatic U.N. as its international organ, with many African States as possible adherents. These are possible—by no means inconceivable—developments which it would be wiser to avert than to await.

The time has arrived for the U.K. to justify its possession of an independent nuclear deterrent by initiating a foreign policy giving interdependence—at present merely a Washington synonym for U. S. domination—a wider and more fruitful interpretation than it has yet achieved. If peace is indivisible, so is prosperity, which must be global before humanity can escape finally from the scourge of war.

The fact that the European Common Market has "gone sour", internally and externally, offers still another opportunity for a U.K. initiative. Writing prior to the fortunate failure of the attempt to rocket Britain into Europe from an American launching-pad, I suggested in the January issue of *New Commonwealth*:

> "If finally the Brussels negotiations lead only to a *cul-de-sac*, there remains the possibility of a complementary development to the Common Market, perhaps politically more congenial to the U.K. and Commonwealth units, and economically more fruitful. Probably the nearest approximation to those two attributed would be achieved by the progressive evolution of an Economic Confederation encompassing all the English-speaking countries: the U.S.A., Britain, all Commonwealth members, plus (as Confederation members) Ireland and South Africa for good measure. . .
>
> "No political barriers hinder the line of economic collaboration, I have suggested. No written constitution binds the Commonwealth. No irrevocable fiscal agreements, no sacrifice of immature industries, would be needed to inaugurate and sustain an economic confederation linking five continents and fostering economic growth and political stability in countries containing five times the population of the Common Market. . When the Prime Minister claims that the choice is not between Europe and the Commonwealth his diagnosis is correct. In the ultimate analysis, the choice is between the Commonwealth and communism."

That choice remains unchanged.

New Delhi

SIGNIFICANCE OF THE CENTRAL CABINET CHANGES

(FROM OUR NEW DELHI CORRESPONDENT)

OPTIMISTS in New Delhi say that the Prime Minister, Mr. Nehru, has for the first time shown the determination to perform a major surgical operation on his Cabinet. He has been goaded into action because the alternative before him was the disintegration of the Congress Party which, in his view, might have led to the undermining of India's parliamentary democracy. Following the offer of the Madras Chief Minister, Mr. Kamaraj Nadar, to step down from office to do Party work, there were many offers of resignation from the Central and State Cabinets. It will be recalled that the last session of the All India Congress Committee, which was held earlier this month, gave Mr. Nehru the sole authority to select those who should be pulled out from the administration for doing Party work.

The Congress Working Committee, which concluded its two-day meeting last week, approved Mr. Nehru's scheme and accepted the resignations of six State Chief Ministers and six Central Ministers. Among the Chief Ministers are Mr. Kamaraj Nadar of Madras; Mr. B. Patnaik of Orissa; Mr. Binodanand Jha of Bihar; Mr. C. B. Gupta of Uttar Pradesh; Mr. B. A. Mandloi of Madhya Pradesh; and Bakshi Ghulam Mohammed of Kashmir. The Central Ministers whose resignations have been accepted are the Finance Minister, Mr. Morarji Desai, the Food and Agriculture Minister, Mr. S. K. Patil, the Home Minister, Mr. Lal Bahadur Shastri, the Information Minister, Mr. Gopala Reddy, the Education Minister, Mr. K. L. Shrimali, and the Transport Minister, Mr. Jagjivan Ram. As far as the States are concerned, Mr. Nehru has relieved only such Chief Ministers as have ready-made successors, such as in Madras and Bihar; or where Party dissension was so acute as to lead to a breakdown of the administration, as in U.P. and Madhya Pradesh; or where there had been charges of corruption or highhandedness, as in Orissa and Kashmir. Two controversial Chief Ministers, those of Kerala and Punjab, have been left out, the former because of the communist threat to the State and the latter because it is a border State of West Pakistan. As far as the changes in the Central Cabinet are concerned, the communists and their associates are jubilant that "reactionaries" and "Rightists" have been ousted. Efforts have been made to create a division between "progressives and reactionaries", the latter allegedly including Messrs Desai and Patil.

Mr. Nehru's decision is dictated largely by the need to strengthen the Congress Party in and outside the legislature. The new Central Cabinet will, by and large, be a homogeneous unit with no strong left or right leanings. Some say that since all of Mr. Nehru's strong but silent critics have been eliminated, the new Cabinet will work like a team. Mr. Nehru, it is believed, plans to reduce the size of his Cabinet to 11. On this basis, he will have to appoint three more Central Ministers. The present Congress president, Mr. Sanjivayya, may replace Mr. Jagjivan Ram as the representative of the scheduled castes. The names of two others will be announced shortly.

The resignation of six Central Ministers will lead to a major Cabinet reshuffle. Mr. Nehru, it is expected, will take advantage of the opportunity to reconstitute the Ministries dealing with economic affairs. His major task, however, will be to select the successors to Mr. Morarji Desai, Mr. Lal Bahadur Shastri and Mr. S. K. Patil, all of whom are now holding key portfolios. Persons close to the Prime Minister claim that the Minister for Economic and Defence Co-ordination, Mr. T. T. Krishnamachari, is tipped to succeed Mr. Desai as Central Finance Minister; the Planning Minister, Mr. G. L. Nanda, may succeed Mr. Lal Bahadur Shastri as Home Minister, the Railway Minister, Mr. Swaran Singh, may become Food and Agriculture Minister; and the Law Minister, Mr. A. K. Sen, may become Railway Minister.

If these forecasts prove correct, Mr Nehru will have to appoint Ministers for Education and Law. Alternatively, he may downgrade these Ministries, leaving them as before in the charge of two Ministers of State. Meanwhile, the Ministers who have resigned will retain their seats in Parliament. This could mean that Messrs Desai and Patil would be critics of the Prime Minister on matters concerning which there has been no opposition within the Congress Party so far. Mr. Nanda's exit from the Planning Commission, it is expected, will be followed by its overhaul. All these changes are expected to be announced by 1st September. By that date, Mr. Morarji Desai has asked Mr. Nehru to relieve him of his responsibilities as the Central Finance Minister.

ADMINISTRATION

New Committee Planned

The Central Government is likely to set up a high-powered commission, on the pattern of the Hoover Commission in the U.S.A., to suggest administrative reforms. The proposed commission will consist of non-officials and officials. It will examine the working of India's administrative machinery and recommend steps to streamline it and to cut red-tape and procedural delays in order to meet the needs of the developing economy.

The Hoover Commission submitted its report in 1949. It presented to the American people a blueprint for good Government. The report promised cash savings which had been estimated at more than $3,000 million a year. For the people of the U.S.A., the report had greater significance than any price tag could impart. "As a people, we have reached the point at which the size and cost of government can easily impair the effectiveness of our economy, lower our standards of living, and weaken our effort to lead the free peoples of the world to safety from the encroachment of totalitarianism."

The report had a good Press. As far as its implementation is concerned, there has been little progress, and the U.S. administration has expanded beyond the dreams of the Hoover Commission. So there has been no saving in expenditure.

In India, a committee under the chairmanship of Mr. Kasturbhai Lalbhai was set up soon after independence. But its report is being preserved unread in the national archives of India. Later, an "economy cell" was created, which also made valuable recommendations. But they are yet to be implemented.

During the last three years, the Prime Minister, Mr. Nehru, occasionally laid statements before Parliament, showing how large sums of money were saved through economy measures. And yet, year by year, the civil non-developmental expenditure has been steadily mounting.

The Planning Commission appointed Mr. A. D. Gorwala to submit his report on public administration which he did in 1951. Thereafter, Mr. Paul H. Appleby paid two visits to India and submitted his report on public administration. This led to the creation of the Organisation and Methods Division, adding to the demand for office space in New Delhi. Lastly, Sir Gopalaswami Ayyangar submitted his report on public administration.

Some pertinent questions might be raised in this context. Firstly, is the Government prepared to open for non-official examination various rules of procedure, such as those governing the relations between a Minister and his Secretary. Can a committee of officials and non-officials be allowed to examine, for example, the papers relating to the signing of the "Voice of America" transmitter agreement? The futility of such an exercise should be evident from the report submitted by Major-General Henderson-Brooks on the N.E.F.A. reverses, which is proposed to be kept secret. Secondly, who will implement the recommendations of the proposed commission? It is futile to imagine that any report which recommends a reduction in staff will ever be implemented by a vote-catching democracy. Leaving this long-range problem of the implementation of the report of the proposed commission, was there any thought given when a well-tried Ministry of Commerce and Industry was destroyed overnight to suit some politicians?

Then again, the recruitment to the third division secretariat service is no longer done through competitive examinations of the Union Public Service Commission. It is done through employment exchanges, with disastrous results to the efficiency of administration. This system is proposed to be extended to the recruitment of school teachers. Here it is not so much the qualifications of a person as his position on the list of an employment exchange which will receive greater consideration from the authorities.

It is well known that in India, committees are only substitutes for action. For example, the valuable and instructive reports of the productivity teams have always a set formula. After stating how productivity is increased, say, in Japan and West Germany, the reports often make a solemn declaration that "those conditions do not apply to India." The same procedure is followed in seminars too.

To protect the administration from the growing encroachment of politicians is the hard core of the problem. Parliamentary democracies everywhere are prone to lobbies and pressure groups, and India is no exception. In short, there is great scope for improving the administration. What is needed is the implementation of old recommendations without fear or favour.

PRICE POLICY

Debate in Parliament

During the debate on the no-confidence motion against the Government, it was claimed that the rise in prices had been marginal and seasonal in nature. This claim is based on the index of wholesale prices which, according to the Government, had risen by 3.5 percent during the last 12 months and 7.6 percent since the last Central Budget was presented to Parliament. But an average man does not buy his requirements at wholesale prices. Meanwhile, even the Planning Minister, Mr. Gulzarilal Nanda has given up his pre-Budget effort to hold the price-line. The statistical exercises made by the Perspective Planning Division of the Planning Commission will not, however, convince an average housewife, who finds it increasingly difficult to make both ends meet.

The case of motor-spirit could illustrate the point. Due to enhanced taxes, the price has gone up. This, in turn, has enhanced the transport bill of an average person. The members of the central cabinet can summarily dismiss the complaint, for the simple reason that their transport bill has not gone up, since they mostly use staff cars maintained at tax-payers' expense.

There is a story of a man with a fairly large family, who had gone on a pilgrimage. In one place, the party had to cross a river. There was only one ferry, which charged four annas a head for the river crossing. This was too much for the party. The headman of the party thereupon used the ferry for the purpose of measuring the depth of the river at various places and by working out averages, reached the conclusion that the average depth of the river was only knee deep. He thereupon directed the party to cross the river on foot. He got very angry, when some members of the party started getting drowned. In the same manner, the Finance Minister and the Planning Minister refused to be convinced that the rising tide of prices was literally "drowning" many a person. For Mr. Gulzarilal Nanda, the third five year plan and industrial truce were more vital than human welfare. It is wondered what would have been the result of a division on the no-confidence motion had there been the freedom of vote for the Congress Party on the specific issue of the rise in prices following the last Central Budget.

EXPORTS

Official Probe in U.K., India

A controversy is going on in Britain about the decline in her exports in recent years. One school of thought has attributed the fall to comparatively high prices of British goods. The other school lays the blame on Britain's refusal to modernise designs, particularly of industrial products. A study of this controversy will prove interesting

since India is currently engaged in raising her exports.

In May 1962, the British Government appointed a committee under the chairmanship of Mr. G. B. R. Fielden, Group Technical Director of Davy Ashmore Ltd, to consider the present position of mechanical engineering design in relation to the U.K. engineering industry and practices overseas and to recommend any changes which are likely to result in improved engineering design of British products, including in particular, changes in education and training. The committee submitted its report last June, and it is now available here.

The report says that "Britain's share of international trade in engineering goods has been declining. In spite of some notable successes, too many British products are being outclassed in performance, reliability and sales appeal. Imports of machinery have been increasing.

"Engineering goods are sold on the merits of their performance, reliability, appearance, delivery, and price. Design determines most and affects all of these factors and is, therefore, of paramount importance. Every industry is dependent upon engineering for capital plant and equipment; the quality of engineering design is, therefore, a major factor affecting costs and productivity in all industries, including the engineering industries themselves.

"There is evidence that the importance of design is not sufficiently appreciated by the managements of engineering businesses. The engineering profession has a lower social and economic status in Britain than in other highly industrialised countries. Technology attracts a lower proportion of the ablest school-leavers than science and, of these who take engineering degrees and enter the engineering industry, most are attracted by research and management appointments; very few take up design as a career.

"Where the importance of design is appreciated and the design team is adequately staffed and given its proper status, British products are outstanding. The effects of the shortage of qualified and talented designers are, however, shown in the inadequate use made of new engineering knowledge in the design of some of the traditional products of the British engineering industry. There is also disturbing evidence of failures resulting from a lack of attention to detail in almost all fields of mechanical engineering design. As rapid technological progress makes the task of the designer more complex, these weaknesses could become more serious. To remedy the situation, the committee recommends that the following steps be taken:

"(1) to impress upon the managements of engineering businesses the vital importance of the design function in engineering activity and the need to encourage more talented engineers to make their careers in design;

"(2) to use all available means, especially television, to draw attention to the great importance of engineering in the national economy and to the urgent need for more able people to train as professional engineers and to make their careers as designers;

"(3) to increase the prestige of design and the status of designers within the engineering profession and, where necessary, to amend the membership requirements of the professional institutions to give more prominence to design qualifications;

"(4) to encourage and co-ordinate experiments in methods of teaching design at under-graduate and post-graduate levels in universities and colleges and in industry;

"(5) to reorganise the practical training of professional engineers to give more emphasis on modern production methods, works organisation, costs and the influence of design; and to bring about a closer integration of the practical and academic elements of education;

"(6) to use development contracts to encourage the creation of design teams of high quality;

"(7) to use Government and public authority purchasing procedures to insist upon the highest possible standards of engineering design in the supplies and equipment produced for use in the armed services, civil establishments and the public sector of industry;

"(8) to encourage the professional institutions by means of grants from public funds to prepare and issue design manuals or 'data sheets' similar to those already prepared by the Royal Aeronautical Society;

"(9) to ensure that British standards always encourage and never inhibit good design practice."

Detailed Investigation

In a signed article recently published in *The Times*, Professor T. Barna supported the view that the lack of innovations had led to the rapid decline in exports. He said: "Whenever a more detailed investigation is made, the conclusion that the United States is the technological leader of the world and that Britain follows some way behind the United States and Germany is brought out more forcefully than by crude statistical analysis. The most advanced types of office machinery are almost always imported from America. In heavy and complex types of construction machinery or tractors, the United States is the dominant exporter. American firms operate in most of the advanced industries of the U.K., while many British firms produce under licence from abroad.

"There is nothing new in this position; it was known to exist a generation ago. Manufactures which have grown fastest in world trade between 1913 and 1929 accounted for 29 percent of U.S. exports in 1929 but for only 4 percent of British exports. Taking the advanced products of the first quarter of the century—electrical machinery and apparatus, road-vehicles, rayon and hosiery, chemicals and scientific instruments—British imports exceeded exports until 1929. Subsequently, the great depression and the protective measures of the sterling area, the war, the dollar shortage and the temporary absence from the world markets of countries defeated in the war, may have drawn attention away from the structural defects of British industry; but now these must be seriously considered.

"The common elements of the advanced industries of this century are that they are based on science rather than on craftsmanship, that they market their products rather than sell them to merchants, and that they are managed by professionally qualified teams rather than by amateurs. The long-term problem is how to make Britain catch up with the best practices of other countries."

As against the controversy in Britain, India has congratulated herself that her handspun, hand-woven *khadi* is being exported to the United States. The question of improved design has not still attracted the attention of the authorities in India. It is probably too much to expect when there are no adequate provisions for servicing and replacement of components in countries importing Indian engineering goods. Meanwhile, money is being allotted from the Consolidated Fund to give incentives to exporters. But, at the same time, taxes are levied in the name of defence and development, which have had the effect of raising the cost of production.

MAHARASHTRA

The N. C. A. E. R. Survey

In its techno-economic survey of Maharashtra, the National Council of Applied Economic Research has suggested a programme involving a total fixed investment of Rs. 780 crores over the period 1956-75. Of this, the State Government's share will be approximately Rs. 515 crores. Of this amount, it is estimated that Rs. 45 crores would have been invested in the second plan. Tentatively, it is proposed that Rs. 115 crores be invested in the third plan, Rs. 165 crores in the fourth and Rs. 190 crores in the fifth. The above programme is expected to result in an increase in the foodgrains output from 5.7 million tons to 12 million tons, of sugarcane by about 250 percent, that of cotton by 75 percent and of groundnut by 60 percent. The gross value of agricultural production is estimated to increase from Rs. 350 crores in 1956 to Rs. 710 crores in 1975.

The progress of afforestation has so far been quite slow. Tentatively, it is suggested that 450,000 acres of additional area from Government and private wastelands should be brought under forests in the next 15 years. In addition, an area of 25,000 acres may be brought under the farm forest programmes.

Maharashtra has a fairly long sea coast where excellent fishing possibilities exist. To exploit these resources fully, a programme for the mechanisation of fishing craft, extension of offshore fishing and the supply of improved fishing requisites is recommended. To get the maximum benefits, integrated fisheries development centres should be established along the coastline. Accordingly, a widely dispersed network of 17 centres of this type has been recommended for development in the four coastal districts.

In contrast to States like Orissa and Madhya Pradesh, indigenous raw material resources in Maharashtra are not sufficiently large to provide the main basis for industrial development of the State. The most promising regions for large-scale industrial development are: (a) the eastern half of the Nagpur division which not only has large concentrations of minerals and forests, but is also very favourably placed in relation to both power resources and of transport facilities; (b) the Poona division, which is situated in the main sugarcane area, and has besides excellent transport facilities and easy access to power from Koyna and (c) the northern half of the Bombay division whose main advantages are proximity to forests and sugarcane areas and good transport facilities.

Industrial Development Prospects

The prospects for industrial development in Konkan and Marathwada are, at least for some time to come, limited on account of the lack of the basic overheads, raw materials and industrial experience.

The development programme in the productive sector outlined in the report would need an investment of the order of Rs. 1,756 crores. The realisation of the output goals will, however, need supporting measures in the fields of power, transport, technical education, health and housing. Improvements in education, health and housing are justifiable on welfare grounds. The Council has proposed an investment of Rs. 1,789 crores for strengthening the social and economic overhead facilities. The power generating capacity will have to be increased to 4,120 megawatts from its 1960-61 level of 789 megawatts.

The State, taken as a whole, has ample resources, both of thermal and hydro-electric energy, to meet this demand. However, since most of the unexploited energy resources are concentrated in the eastern region, there is a distinct prospect of power shortage developing in western Maharashtra by the end of the fourth plan. To meet this eventuality, it is necessary for the State to initiate, in the near future, discussions with the neighbouring States of Madhya Pradesh and Mysore to arrange for bulk supplies of power and also to explore the possibilities of developing some of the hydel sites (particularly Punasa and Kalinadi) as inter-State projects.

Additional roads to the extent of 24,100 miles will have to be constructed by 1975 to meet the goals set under the Chief Engineers' Plan. For relieving the pressure on Bombay and for opening new areas, railway lines—especially in the Konkan region—have to be constructed. "Besides, a few missing links, especially the Latur-Parli line on the Central Railways, will have to be made good."

By far the largest investment under social overheads will be for housing. Housing conditions in the State seem to be appalling. To ensure a minimum standard for the increase in population alone will cost Rs. 990 crores. There is, moreover, a very large backlog of substandard housing, especially in urban areas, which needs urgent attention. But it does not appear likely that the volume of resources available for housing will be commensurate to meet these requirements. Unless there is conscious regulation of the types of houses to be constructed, so that a large proportion of the available meagre resources are diverted to low income housing, it is well-nigh impossible to avert further deterioration in urban housing. An investment of Rs. 400 crores is proposed for this purpose.

FERTILISERS

New Working Group

At the instance of the Planning Commission, the various Ministries have set up working groups to prepare basic material for the fourth plan. A working group for the fertiliser industry, for example, has been set up in the Central Ministry of Heavy Industries. It includes the representatives of the Food and Agriculture Ministry, the Fertiliser Corporation of India, and the Planning Commission. The working group, in its turn, has set up a technical committee, with Dr. Kane as its chairman. Side by side, the Ministry of Agriculture has prepared a fertiliser map of India, indicating what kind and quantity of fertilisers are required for a particular soil.

The working group for the machine-building industry has some problems of its own. The working group on the fertiliser industry, for example, will recommend the quantity of fertiliser required by 1971 and also various measures to meet the demand. In the nature of things, it will state how many fertiliser plants are needed by 1971. The working group on the machine-building industry will have to work upwards from this report, recommending how to create the engineering capacity for the manufacture of a fertiliser plant. But the machinery required for the latter may be common for other industrial units. This should indicate the complexity of the problem.

FREIGHT RATES

Inter-ministerial Talks

An inter-Ministerial meeting on shipping freights has urged the Government to consider chartering ships in a big way in order to counteract effectively the recent decision of the U.K.-Continent Conference lines to increase the freight rates by 12½ percent. The Government has also been urged to encourage non-Conference lines.

ELECTRONICS

Expert Body Set Up

The Government has set up an electronics committee. Its terms of reference will be as follows:

(a) to assess the total requirements of the country in relation to various items of electronic components and equipment;

(b) to survey the existing and potential sources of supply and recommend how best these sources can be tapped and capacity expanded; and

(c) to recommend measures for the planned development of electronics, so that the country as a whole may become self-sufficient in this field in the shortest possible time and in the most economical manner.

L. I. C.

Subscribing Debentures

The Life Insurance Corporation of India has agreed to subscribe for 30 percent of the debentures floated by each land mortgage bank during the remaining three years of the third plan, subject to a maximum of Rs. 6 crores in each year for all the land mortgage banks together, on the following terms and conditions:

(i) the Reserve Bank of India should subscribe for 20 percent of the issue, the State Bank of India 10 percent. The co-operatives and other sources should contribute the balance of 40 percent;

(ii) on the basis of the existing Bank rate continuing at 4½ percent, the rate of interest on the debentures should be 4¾ percent;

(iii) the debentures should not be for longer than 15 years' duration with the issue price at Rs. 98; and

(iv) the L.I.C. should be allowed an underwriting commission of ¼ percent.

DIESEL LOCOMOTIVES

Production Plan

The diesel locomotive works, it is reported, has a production target in the first instance of 150 main line broad-gauge diesel electric locomotives a year, with scope for future expansion to 250. The output of the works is anticipated as follows:

1963-64	—Part manufacture of three locomotives.	
1963-64 1965-66	—Assembly of 12 diesel locomotives imported in a knocked-down condition and the manufacture of 26 locomotives.	
1964-65	—54	
Total during the third plan		95
1966-67		108

COAL

French Aid for N.C.D.C.

Under a project agreement, the National Coal Development Corporation will carry out the working of the thick highly inclined Sirka seam at Gidi-A colliery in Karanpura by adopting the French long-wall mining method with caving and false roofing on an experimental basis. The French Government will place at the N. C. D. C.'s disposal a French engineer and technicians for acting as instructors and operators at the site, and also supply special equipment. The French authorities will bear the engineering fees covering technical and managerial services to be provided by them and also a fixed provision for depreciation of the specific equipment to be imported from France. The precise value of the equipment to be supplied by the French Government will be known only after the complete data are available and the list of equipment is drawn up. The other expenses will be borne by the N. C. D. C. The latter will become the full owners of the equipment after the departure of the French team.

JAPAN

Use of Yen Credit

The Japanese credit, it is reported, carries an interest of 6 percent a year and is repayable in 15 years. The sum of 5,400 million yen (Rs. 7.14 crores) has been made available for the first two years of the third plan in addition to the second yen credit of 28,800 million yen (Rs. 38.09 crores). The total allocation of 34,200 million yen (Rs. 45.23 crores) has been used mainly for the import of equipment and machinery from Japan required for the projects connected with power, industry, railways, transport and communications. Among the important projects covered by the credit are the Gorakhpur fertiliser project, Durgapur special and alloy steel plant, Kosi hydro-electric project and the Durgapur power-station.

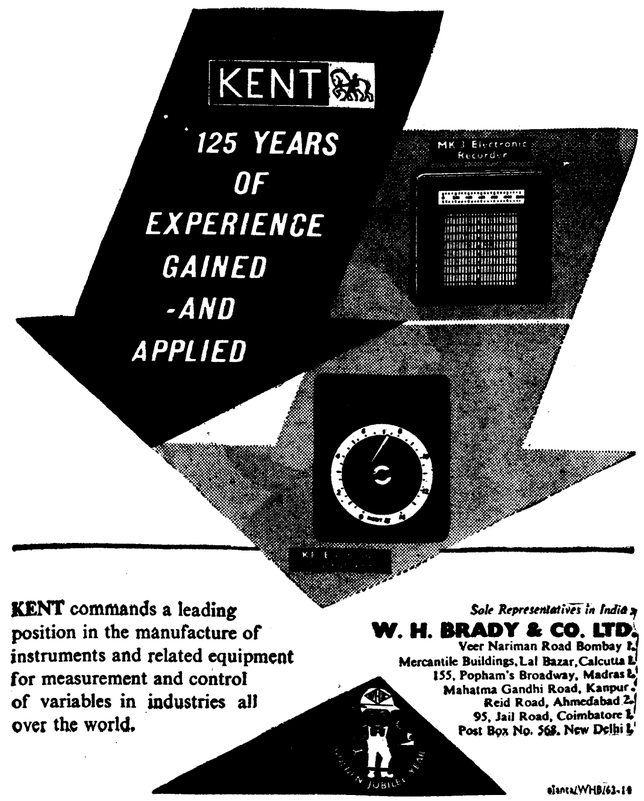
MINERALS

New Export Body

A new Corporation, to be known as Minerals and Metals Trading Corporation of India Ltd, is expected to start functioning from October 1963. The Corporation will handle the export of iron and manganese ores as well as other mineral ores and the import of non-ferrous and other metals as may be decided upon by the Government from time to time. According to present estimates the export of iron ore alone is to reach a target of about 25 million tons by 1970-71.

MOTOR-VEHICLES

Reducing Production Costs



The production target for motor-cycles, scooters, mopeds, etcetera, by the end of the third plan period is 60,000 numbers a year. This capacity is fully covered by licences issued to eight firms. Five firms are already in production. Their combined production during 1962 and 1963 (January to June) was 25,040 numbers and 11,947 numbers, respectively. Two more licensed units are expected to go into production during this year or early next year.

The main factors responsible for the high cost of production are (1) the small output of vehicles and (2) the relatively higher cost of raw materials and finished components, both indigenous and imported. The prices can be brought down by an increase in production. This is, however, conditioned by the limited availability of foreign exchange. Until the indigenous content of the vehicles is substantially increased, it is not possible to increase production significantly. Manufacturers have, therefore, been given necessary facilities for the import of capital goods so as to increase the indigenous content. When the latter is increased to about 90 percent, it will be possible to raise the output and reduce production costs and selling prices.

CEMENT

New Factory Planned

The Government has granted a letter of intent to the Andhra Pradesh Mining Corporation Ltd, Hyderabad, approving its scheme for setting up a cement factory, near Ronakalu,

KENT commands a leading position in the manufacture of instruments and related equipment for measurement and control of variables in industries all over the world.

with an annual capacity of 200,000 tons. Limestone for the proposed factory will be drawn from the Jaggayyapeta area of Krishna district.

Two new licences have so far been issued for establishing cement factories in Madras State. One of the licences has been issued to Messrs India Cements Ltd, Madras, to set up a cement factory, near Sankaridrug in Salem district, with a capacity of 200,000 tons a year. The other licence has been issued to Messrs Chettinad Cement Corporation Ltd, Madras, to set up a cement factory, near Karur in Tiruchirapalli district, with a capacity of 400,000 tons a year.

The existing installed capacity of the Kymore cement factory is about 582,000 tons a year and that of the Satna cement factory about 251,000 tons a year. The expansion schemes at Kymore aim at producing about 25,020 tons of white cement a year and about 180,000 tons of portland cement a year. The expansion scheme at Satna will have a capacity of 330,000 tons a year.

POWER

New Schemes under Third Plan

In order to have an adequate installed capacity available in the early years of the fourth plan to meet the anticipated demands, the Government has considered it necessary to sanction certain schemes for advance action during the third plan period. Five such schemes have so far been authorised as follows:

Dhuvaran thermal station extension	Gujarat	2×125 MW
Harduaganj thermal station extension	U.P.	2×60 MW
Kodayar hydro-electric station	Madras	75 MW
Durgapur coke oven thermal station extension	West Bengal	1×150 MW
Kothagudam thermal station extension	Andhra Pradesh	2.60 MW

TEXTILE MACHINERY

New Venture in Indore

A licence under the Industries (Development and Regulation) Act, 1951, has been granted to a private firm for establishing a new undertaking in Indore for manufacturing the following items of textile machinery:

	(Numbers a year)
Drawing frames	100
Speed frames	150
Ring frames	600
High-speed winding machines	50
Singh spindle pirn winders	50

The third plan production target for textile machinery is Rs. 20 crores a year. Against this, the present output is of the order of Rs. 14.5 crores. Meanwhile, textile machinery worth about Rs. 20 crores is being imported.

PIG IRON

Unit in Bhadravati

The Government of India proposes to set up a new unit in Bhadravati for producing pig iron with a capacity of 120,000 tons a year. Feasibility studies are being conducted for setting up a new steel plant in the Goa-Hospet region during the fourth plan period.

RECLAIMED RUBBER

Factory in Kerala Planned

The Government of India has informed Jai Hind Agencies, Cochin, that it would be prepared to grant it an industrial licence to set up a factory in Kerala in collaboration with an American firm for manufacturing reclaimed rubber, subject to its being able to arrange the import of plant and machinery on terms and conditions acceptable to the Government.

The factory is expected to go into production in about two years' time after the issue of the industrial licence.

AIRCRAFT

New State-owned Enterprise

The Government of India has floated an entirely State-owned limited company in the public sector, the Aeronautics India Ltd, with an authorised capital of Rs. 25 crores. It will manufacture *M.I.G.* supersonic and other types of aircraft. The Company will manage and control the affairs of the complex of factories to be set up for the manufacture of the airframes, aero-engines, undercarriages and other components of aircraft.

POLAND

India to Buy Power Plants

The Government has recently decided to buy two 50 megawatt units from Poland out of the Polish credit. The question of making further purchases from Poland is being examined. The Polish offer is to provide thermal power units, which may use coal middlings.

ROAD

U.S. Technical Aid

The U.S. Government has shown interest in developing the road from Srinagar to Leh. It has offered assistance in the form of expert technical advice and the supply of machinery, equipment and vehicles required for the work. The extent of assistance and other related matters are being discussed.

FRANCE

New Trade Delegation

A high-powered trade delegation from France is expected to visit India in the near future.

Be Tsukiko's guest on your next flight abroad

to Cairo, Rome, London

...and the Far East as well! All the way you can now enjoy the world famous hospitality of Japan Air Lines. Kimono-clad hostesses like Tsukiko Yamazaki serve you like a guest in a Japanese home... pamper you with traditional Japanese hospitality, courtesy and personal service.

Whether your travels take you to Europe or the Middle East—the Far East or the U.S.A.—don't miss this travel experience unique in all the world. Fly the smooth, dependable Jet Couriers of JAL to your destination, direct from Calcutta or by connection at Karachi.

T.U.C. DISCUSSES ECONOMIC DEVELOPMENT IN U.K.

(FROM OUR LONDON CORRESPONDENT)

A FIRST attempt to define the objectives and priorities of British trade unionism is made in a special report entitled *Economic Development and Planning*, published by the Trades Union Congress in preparation for its ninety-fifth meeting in Brighton next month. The document—the most thoughtful produced by the T.U.C. for years—could galvanise union thinking on the changes in industry and society, provided the General Council takes it seriously. The report only claims to "draw attention" to the implications for trade unionists of planning and change, but it urges affiliated unions and the General Council to study them in detail in the next few years. The implications fall into three groups. The first arise from changes in the structure of industry, such as automation and increased imports of manufactured goods from developing countries. The report says that this will probably mean less employment in British manufacturing and extractive industries, probably not compensated for in the service industries, where workers may be displaced in offices, transport, and shops.

The unions should do some serious research on recruiting and the services they give their members, as citizens as well as employees. They should also decide how to deal with redundancy in each case. The report doubts whether traditional defensive barriers are suited to a rapidly changing economy, and calls for a more flexible approach, a reappraisal of inter-union demarcation, and an abandonment of restrictive practices which had their origin in economic stagnation always provided, of course, that prosperity comes.

Collective Bargaining

The second group is headed "scope of collective bargaining," and here the report considers how trade unionists should seek to benefit from the fruits of expansion. Should they change their methods of bargaining? Should local tactical action be integrated into general strategy for wage and other improvements, and how should the strike weapon be used? The issue of priorities is also raised: higher basic wages, shorter working week, longer holidays, or earlier retirement? The controversial issue of restraint comes in here, as it does at several other points in the report:

"Can the collective bargaining machinery be used to secure a more just and equitable distribution of personal income, which would involve trade unionists in taking account of the effects of their actions on fellow trade unionists in other industries? ....

"Any agreement, within the framework of economic planning, on a wage strategy which involved unions in modifying their bargaining objectives could only be reached within the context of more general agreement on national economic and social priorities."

The third group is one which has received increasing attention from Congress House in recent months, and which will form the main subject of the General Council's visit to Yugoslavia in October. It is the issue of "industrial democracy." One of the purposes of trade unionism is to protect and enlarge the freedom and dignity of the individual worker. Larger industrial organisations, public or private, threaten them (though the increase in size may be economically desirable). Unions must find means to influence business and Government decisions which affect their members' lives.

Union Indifference

The report acknowledges failure in the past, blaming it partly on union indifference, partly on the limits set by employers and Government to union participation in decisions. It argues that unions must now re-examine what trade union solidarity means in the new conditions, and how a balance can best be struck between the responsiveness of the union to its members, and the accountability of a union to other sections of the trade union movement, which derives from their growing inter-dependence in a highly organised industrial economy. Quietly but with determination, the unions are pushed face to face with planning. Greatly daring, the authors in their final paragaph have adapted Mr. Cousin's statement that in a free-for-all economy, the unions are "part of the 'all'."

"Trade unions grow and develop by reacting to the circumstances in which they operate, but developments must be informed by a sense of the purpose of trade unionism, and improvisation is too often the enemy of reappraisal. Trade unionists insist that in a free-for-all they are part of the all. They are still part of the all in the more dynamic conditions that economic planning can create, and their horizons cannot be bounded by the industries in which they work or even by the frontiers of the country where they live.

"If, as they must, trade unions claim on behalf of their members higher living standards, new functions, and more extensive authority within the community, they will not be able to avoid making the changes in their own attitudes and methods that the changing situation requires of them."

The report lists the economic objectives of the unions as: (1) full employment; (2) good wages and conditions of work; (3) a fairer distribution of wealth; and (4) a voice in the nation's economic future. However, it acknowledges that these are bound to conflict with the interests of other groups in the commodity, and defines the task of planning as "to question some of the principles or dogmas" that different groups hold. Are agreements between the Government and representatives of industry incompatible with the preservation of parliamentary supremacy, the report asks, going to the root of the National Economic Development Council's dilemma? Will employers be able to insist that the private enterprise system is sacrosanct? Will trade unionists be able to assert that everything else can be planned except wages? (Rhetorical questions all obviously expecting the answer "no.")

Congress House has offered its own philosophy of planning for the education of its adherents even more than for the edification of the country at large: "The issue will be what price we are collectively and severally prepared to pay for economic expansion. There are, of course, some prices that cannot and should not be paid... One of the continuing aims of the Government in a democratic society should be to create the circumstances in which voluntary associations such as trade unions can co-exist, if only because some things are much better done by trade unions and some by trade unions and employers together than by central Government authorities. There are other things that can only be done by the Government."

The development of this theme in detail amounts to a fairly devastating, although gently written, critique of the conservatism of trade unions and of British society generally—"our refusal as a community to come to terms with the need for radical economic and industrial reforms." The criticism is distributed with an even hand. For example, when examining the general tendency to prefer private affluence to socially provided services like education, public transport, the road system, public rented housing, and urban renewal, it acknowledges the materialism of trade unionists: "... British workpeople judging by the hours they actually work rather than by the hours embodied in agreements, prefer on the whole to take their share in money rather than in leisure."

Although the report says that it is "still uncertain" how far planning requirements are likely to be met by N.E.D.C., its enthusiasm for the early effects of the council's thinking on the Budget and Government action generally is not concealed. It pledges the General Council to continue to try to make N.E.D.C. "an effective instrument of planning." By implication, the report warns off any attempt by a Labour Government to reduce the status of N.E.D.C. The T.U.C. did not join it to "exchange economic banalities" or to transmit the Government's economic views to the workers. The establishment of a body outside the Government machine whose job is to secure specific agreements on economic policy is a shift in the centre of responsibility, but one entirely in keeping with the British democratic practice of encouraging voluntary groups to take part in decisions which affect them.

Indicative Forecasting

So far, the report says, N.E.D.C. has only been engaged in "an exercise in indicative forecasting." It points the way forward to specific targets for each industry, and underlines the T.U.C.'s belief in the importance of the industrial commissions (over which it recently criticised the N.E.D.C. office for delay). Similar machinery on a regional basis may be necessary later. The report makes it clear that, in the T.U.C. view, planning must include action to "bring into line industries or firms which are failing to meet the plan's requirement."

However, it is when it turns to the unions' own part that the report shows its teeth. Both the employers and unions on the industrial commissions must be able to enter into agreements on policies affecting their members. Unions will have to have both technical resources and better communication to do this. The T.U.C. members and staff have already felt the strain of N.E.D.C. work. The union case must not be allowed to go by default at any level of planning.

If the unions are to make any impact on planning, they must have the power to speak their minds quickly and to enter into commitments that will give working people a real share. The report says bluntly that to do this will require structural changes in British trade unionism. It is not so tactless as to mention industrial unionism—so recently pushed aside by the General Council's structural enquiry—but says that the industrial commissions will "force on some groups of unions the need for operational and even organisational unity."

Prices and Incomes

The section on "prices and incomes" is notable less for anything dramatically new than for the skilful way in which it pulls together all the things that Congress House has ever been permitted to say on this sensitive subject: that money incomes must rise less rapidly than in the past; that during "a take-off to faster growth", it might be necessary to limit increases in personal incomes to allow more resources for investment and exports (this is the old "deferred benefits" idea of two years ago); that no group of trade unionists is entitled to pursue its own interests with complete disregard of others' interests.

The T.U.C. sees the proper approach to the difficult problems of incomes as being the maintenance of a high level of demand, growth of real incomes, an assurance that restraint by one section of the community does not result in gain by others, a consideration of the distribution of national wealth (which N.E.D.C. has only touched on inferentially so far), and a study of the use of manpower.

In a section on "implications for trade unionists," the report acknowledges that the "irresolution and lack of decision about Britain's economic future" which it has noted in others is also to be seen in the unions. It suggests that there is at least something in the impression of trade unionism centred on static membership, hesitancy, and immobility, and a preference for dealing with issues as they arise, "rather than by reference to abiding principles and constructive purposes."

Commodity Markets

JOINT CAMPAIGN NEEDED TO RAISE TEA SALES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

SOUTH Indian teas are losing their hold on the London market largely due to competition from Ceylon and east Africa. Ceylon teas are getting a premium over south Indian teas. Mr. J. L. H. Williams, chairman of the South Indian Association in London, gave an explanation for this while addressing the recent annual general meeting of the Association. He listed the following two factors contributing to this state of affairs: the different grades and qualities sent to the London sales and the climatic conditions at the time of production. As for climatic conditions, south India is at a great disadvantage with its heavy rush seasons concentrated in two periods of the year of about two months each. There is also the fact that the percentage increase in the total south Indian crop in the past two years has been much higher than the rise in that of Ceylon over the same period. It is possible that factory accommodation and machinery have not, in some cases, been expanded sufficiently to deal with this increase.

Much of the teas produced in south India is from comparatively low elevations and comes into the medium and common groups of teas. In the past, these had some special value as they were available when production had ceased in north India. They now have to face competition from similar teas from east Africa and other comparatively recent newcomers to the London market. But there are still a considerable number of high elevation estates which produce quality teas. These teas, Mr. Williams said, seem to find a better market in Cochin than they do in London. "It may well be that these estates sell their best grades elsewhere than in London", he added. There is, however, no means of telling this as the London market report only gives the sale averages without stating grades. Nevertheless, the chairman referred to cases where high elevation B.O.P.s and B.O.P.F.s have been sold at the London market at disappointing prices.

Mr. Williams made a strong plea in favour of joint propaganda for tea in the United Kingdom. Joint campaigns have been successful in America and Canada. "We cannot rely on tradition and there is a very real need now for such a campaign to compete with the vigorous promotion of drinks, such as beer, milk, coffee and a host of others as soft drinks", he said. Ceylon and India are now engaged in a rival campaign in the United Kingdom which means a waste of effort and money. According to Mr. Williams, the only really effective way to get results and to increase the consumption of tea is for India, Ceylon, east Africa and Indonesia and all other large producers to join hands in a single campaign to promote tea sales. The tea trade in the U.K. too has indicated its willingness to co-operate in such a joint campaign.

Issuing Import Licences

Mr. Williams suggested the liberal issue of import licences for new machinery and spare parts which were not readily and quickly available in India. This is necessary in order to help the efficient production of larger crops. Another valuable suggestion made by him in this context is the removal of discouragements against the return of trained Indian tea estate labour now working in Ceylon. This might perhaps help south Indian tea estates who are now facing the problem of labour shortage. The new power projects and industrial undertakings coming up now are competing with the plantation industry in the labour market. So the industry is at a disadvantage on account of its inability to outbid its new rivals in the matter of wages.

New Markets for Cashewnuts

The two-man trade delegation sent out to western Europe by the Cashew Export Promotion Council has returned with the impression that for the cashew trade "western Europe is the market of future" For the cashew trade—now heavily dependent on the United States—the time is overdue to find new and rewarding areas to provide it with greater balance. Western Europe perhaps gives the answer but the promise may not be realised without the unstinted efforts and co-operation of the trade and the Government, the delegation says in its report. Publicity, more than any other factor, will play the crucial rôle in realising the promise that Europe holds out for the cashew trade. Individual efforts at best will only touch the fringe of the problem. What is called for is an organised, concerted and expertly directed campaign designed to reach buyers at all levels, including the actual consumer. Publicity programmes should be thought out and implemented in a big way in order to make an effective impact, the delegation says.

Cashew kernel exports from India in July touched a new high at 250,000 cases of 50 lbs each. With this record shipment in July, the total for the first seven months of 1963 had exceeded 1.3 million cases. Exports to the U.S.A.—India's principal market—came to 698,000 cases during the seven-month period, against 630,000 cases in the same period of last year. Russia, the next important buyer took 254,000 cases, compared with 198,000 cases during the same period of last year. Exports to the east European countries showed a 33-percent increase over those of the corresponding period of 1962.

Trading in Coconut Oil

Futures trading in coconut oil at Alleppey and Cochin was suspended from 22nd August, following the closure of the markets ordered by the presidents of the respective old trade associations under emergency powers in view of the heavy fluctuations in coconut oil prices. The fluctuations were attributed to the recent announcement of the Central Government banning the import of copra by actual users during the current import policy period. The official explanation given for the Government's decision is that import licences for copra were being used under the export incentive scheme and such licences of the value of Rs. 12 crores would still be available. It is said that when these imports arrive, the prices of coconut oil may go down. The upcountry dealers are of the view that the recent rise in coconut oil prices at Alleppey and Cochin was mainly of a speculative character based on Onam and Dussera demands. Millers who had so far monopolised the import of copra have started purchasing it on a large scale since the Government announcement and have raised the oil prices, it is said. This is also the time when local production of copra is low.

Rise in Lemongrass Oil

Lemongrass oil prices have improved further to Rs. 140 a 10 kilograms on the Cochin market. This is the welcome result of the Government's intervention. The State Trading Corporation, which entered the market recently on instructions from the Government and started buying oil at the floor price fixed by the latter, has entrusted its 12 lemongrass oil collection depôts in Kerala to the three leading erstwhile exporters with a view to streamlining the collection. The Corporation authorities hope that this step will help the S.T.C. to enlist the co-operation of the people who had been in the line for a long time. The three firms mentioned above accounted for 90 percent of the export of lemongrass oil from India in the past.

Lemongrass oil production may decline this year due to the failure of monsoon in Kerala and the difficulties experienced by growers to sell the oil in the early part of the season. Last year's production was around 1,250 tons.

North Indian Tea Crop Prospects

(BY A SPECIAL CORRESPONDENT)

THE Indian tea trade is worried about the 1963 crop prospects. With production down by 10 million lbs in north India by the middle of August, the prospect of the current crop exceeding last year's is small. This year's crop, one must also conclude, must be below the 1961 record, since the monthly crop outturn for the remainder of the season cannot top the 1961 figures. The following are the statistics on outturn in September, October, November and December of the last two years.

	In million kilograms).	
	1961	1962
September	48.3	45.5
October	45.0	41.8
November	27.2	26.7
December	4.5	5.8

The all-time record monthly output was achieved in August 1961 when north India produced 50.2 million kilograms of tea. With the Assam and Bihar rivers again in spate, the immediate outlook for manufacture and despatches is not very bright. From Tezpur to Gauhati, the Brahmaputra is reported to be above the danger mark.

From time to time, reference is made in these columns to sundry aspects of scientific developments to improve the quality of tea. Soil, of course, remains one of the most important factors relating to all agricultural products. Meanwhile, in addition to the Tockloi research station, there has been a laboratory in Jorhat for some time past. It is now reported from Shillong that the Ford Foundation will provide assistance for forming another soil testing laboratory in Silchar. The Government of India is said to have approved the project and the construction work is expected to begin shortly.

The laboratory will prove useful to planters in Cachar where soil and climatic conditions vary considerably from those ruling in Assam. Although the weather is generally hotter and more steamy, production an acre in Cachar usually falls far short of the average yield from Assam gardens. So if the new laboratory can raise production by 1 maund an acre each year, valuable results will have been accomplished. The area under tea in Cachar was estimated around 74,000 acres in 1960 and 30,000 hectares in 1961.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices by groups, have now been brought up to July 1963. As compared with June, the July index for Food reveals a rise of 5 points, while those for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 602 and 317 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 3 points during July 1963.

GUNNY OFFTAKE RISES DURING FIRST HALF OF YEAR

THE trade is impressed by the trend of gunny offtake during the first half of 1963. Figures relating to hessian shipments from India show that U.S. imports amount to 235,000 bales, against 210,000 bales during the corresponding period of 1962. Shipments to European ports have been 95,000 bales, against 73,000 bales, and Black Sea ports, *i.e.*, Russia, 55,000 bales, against 29,000 bales. It is hoped that demand will continue to be good during the second half of 1963. As for sacking, shipments to the Middle East have risen from 83,000 bales to 135,000 bales. But this increase has been offset by the decline in the offtake of east and west Africa, Burma, Indonesia and Australia. Perhaps these countries have imported their requirements from Pakistan.

The present lull in U.S. demand is reported to be due to the pressure of ready goods and the anxiety of bag manufacturers to reduce their stocks. The U.S.A. has shown little interest in booking for forward positions. Market circles believe that the lull may continue for a couple of months.

Export Business Concluded

Among the overseas deals concluded during the past fortnight has been the confirmation of a 12,000-bale quota for August and a 5,000-bale quota for September by Argentina. The latter quota, it is expected, will be increased to 12,000 bales. Interest from the U.K. has been poor even after the announcement of the cut in the 20-percent mark-up by the U.K. Jute Control on hessian imports. Trade circles hope that the reduction of the mark-up, although of a marginal nature, will improve the position of Indian and Pakistani fabrics against Dundee-made hessian. In sacking, the U.K. has announced free imports from 16th August.

Despite the meagre spot offtake, European markets have shown keen interest in forward positions in hessian. Australia has made small purchases in the ready position. In cornsacks, she has bought a sizable part of the quota for August-September shipment. By the end of August, she may take about 8,000 bales for September delivery. The woolpack committees have taken about 5,000 bales for all positions up to June 1964. The committees, it is expected, will enter the market in a big way for their 1964 requirements. After the purchase of 10,000 bales of B Twills for August, the Government of India, it is expected, will be in the market to complete its purchases for August-October. So trade circles hope that the demand for both sacking and hessian will keep pace with production in spite of the I.J.M.A.'s decision to continue production at the maximum level.

Cost of Pre-shipment Inspection

A leading association of jute fabric shippers has expressed concern over the likely impact of the cost of quality control and pre-shipment inspection on the prices of jute goods. In view of the fact that Indian jute goods, especially sacking, are facing stiff competition from substitutes and Pakistani products, the association fears that even a fractional increase in the prices of gunnies will affect the position of Indian goods in overseas markets. It says that except in a few isolated cases accounting for a small fraction of the total exports, foreign consumers are generally satisfied with Indian jute goods.

In reply to a questionnaire issued by the Committee on Commercial Arbitration, shippers and jute goods exporters have referred to the difficulties experienced in enforcing arbitration awards in disputes concerning contracts made with buyers in the Middle East, eastern Europe, and other countries where jute goods are imported by Government agencies. Except in the case of these countries, contracts are generally made on the standard forms provided by the Calcutta Jute Fabrics Shippers Association. In the absence of a reciprocal agreement with them for enforcing foreign arbitration awards, difficulty is felt in implementing such awards even in cases where business is transacted on the C.J.F.S.A. standard terms of contract. The Gunny Traders Association has requested the Government to take up these issues through diplomatic channels and urge buyers to agree to settle disputes through the Tribunal of Arbitration of the Bengal Chamber of Commerce and Industry. Considering the export turnover in jute goods, the number of disputes is not large. Of the total, 50 percent relate to the quality of goods supplied and 25 percent to differences in prices.

Rise in Pakistani Output

The Pakistan Jute Mills Association has reported an increase in the production of jute goods from 271,081 tons in 1961-62 to 298,161 tons in 1962-63 (July to June). Sacking shows an increase from 186,372 tons to 203,873 tons and hessian from 72,607 tons to 84,540 tons; other goods have declined from 12,102 tons to 9,748 tons. Compared with the figures for the previous month, the output of jute goods in June 1963 fell slightly from 25,236 tons to 24,761 tons. Of this, the decline in hessian has been from 7,230 tons to 7,044 tons and in sacking from 17,088 tons to 16,772 tons. The production of other goods has risen from 918 tons to 945 tons.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the gunny market during the past week. Earlier, sentiment suffered a setback due to the absence of any worthwhile overseas enquiry or business. Expectations of a Government tender did not materialise. Mills emerged as keen sellers for all positions, concluding substantial business for forward positions, which depressed the prices. End-of-account considerations also caused selling pressure in both spot and futures markets and by mid-week, prices dipped sharply for the ready and near positions; the far forward positions also softened. In the futures market, the August contracts in sacking and hessian were closed during the week. Most of the outstanding transactions were converted into November contracts. Towards the close, the trend was reversed following scattered enquiries in hessian from the U.S.A. and part of the week's losses was recovered. Sacking also hardened in sympathy and on reports of enquiries for a Government tender. The lower levels attracted brisk covering by shorts. Turnover was moderate and the undertone steady at the close.

Wednesday's quotations were as follows:

Raw Jute: Subdued conditions prevailed in the market during the past week. Mills had already completed their August purchase quota in the Calcutta and upcountry markets, so they showed little interest in fresh purchases. But heavy arrivals in the agency stations and reports about the completion of harvesting induced weak holders to transact business even at a discount from the previous week's levels. In the upcountry markets, daily arrivals were around 100,000 maunds and the offtake about 35,000 maunds to 40,000 maunds. Warehouses were virtually packed to capacity. In the Cossipore market, daily arrivals were about 40 wagons and offtake 35 wagons, mostly against already completed contracts. The State Trading Corporation has not yet entered the market. Operators are keenly awaiting the issue of the September purchase quota. Turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.
Assam-Agartala Jute	79.04	29.70	80.38	30.00
Northern Jute	77.70	29.00	79.04	29.50
Western Desal Jute	71.00	26.50	73.68	27.50

THE U.K. JUTE MARKETS

EASIER TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

ALTHOUGH the loose jute market in Pakistan was reported to be firm, offers made here were easier during the past week with shippers anxious for business. Some of the larger shippers who were lately quoting minimum export rates have reduced their prices. But this has

BROAD—LOOMS.

not attracted spinners to any extent. So less buying interest was shown last week and business was confined to small parcels of selected marks. Spinners at present are not adding to their raw material stocks but are only purchasing sufficient to cover their weekly consumption. There is a feeling that prices will weaken when the full weight of the raw jute crop is felt in the market.

Offers of single marks are being made at £125 for Mill Firsts, at £106 10s for Mill Lightnings, at £93 for Mill Hearts and at £80 10s for Grade Hearts, c.i.f. U.K., for August-September shipment. Grade Tossa-2/3 was quoted at £117 and Grade Tossa-4 at £106 10s. Outport Tossa-2/3 was offered at £95 10s and Outport Tossa-4 at £85 10s, September-October. Groups were available in many instances at 10s a ton below these prices. Cuttings were steady at £56 for S.N.G. and at £45 15s for N.C.

The Siamese jute market is easier and prices are still tending lower. Little buying interest is being shown in this type of raw material. Grade A is quoted at £69 and grade B at £65, delivered mill Dundee for November-December shipment.

The Calcutta goods market is irregular, but there is a tendency for prices to decline. Little buying interest is being shown in imported goods in the U.K. Quotations are at 72s for 40in. 10oz. and at 54s for 7½oz. a 100 yards, f.o.b. Calcutta, for August shipment, at 72s 6d and 54s September and at 72s 6d and 53s 9d October-December. B Twills are at 174s 6d, 174s and 173s 9d for the respective shipment periods.

The demand for yarns and cloth at Dundee was substantial during the past week. Supplies of the former are difficult to obtain and, in many instances, new business has to be for delivery three to four months ahead. The heavy end of the trade is also busy with sacking manufacturers fully booked up to December. Prices are firm and they show a tendency to become dearer.

Industrial output in the U.K. is improving steadily, and this is being reflected in the increased demand for all types of jute goods and yarns. There are buyers, in fact, who have placed contracts for jute yarns for delivery over the next 12 months.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES WEAKEN

(FROM OUR DACCA CORRESPONDENT)

SOME small business at lower levels has been reported from the overseas markets, and some outports, such as Rumania and Czechoslovakia, have bought. Despite this, however, the market in all sectors is quite lifeless. The Conference ships find no jute to lift and the Inland Water Transport Company reports the smallest cargo for years. This unfortunate position is no doubt caused by the fact that there has been a crop which, by itself, is more than sufficient for meeting the world demand. Added to this is the fact that there is a considerable carryover in Pakistan from the last season and the most bearish factor of all—heavy stocks in Europe. Even under such conditions, one would have expected a more active market than what exists at present. The last straw, however, which has broken the market's back is the complication and frustration caused by the new jute policy and the quota system.

The last attempt to bolster the market is the Jute Board's regulation that balers must open one agency for every 20,000 bales of their quota in places other than Dacca, Narayanganj, Chittagong, Khulna and Daulatpur. Similarly, the mills must open an agency for every 250 looms they have, once again in areas other than those mentioned above. As for balers, if they do not comply with the regulation, their quota will be proportionately reduced. In the case of mills presumably nothing will be done.

Several balers who ship as much as 100,000 bales a year have agencies only in Narayanganj, Dacca and Daulatpur. These agencies are certainly not buying to the full limit this year. Even with the generous quotas given to Pakistanis, they will have no difficulty in fulfilling their quotas only in these agencies. Nevertheless, under the new regulation they must open five or six new agencies, which will simply increase the cost of their operation. This does not help the grower or the small shipper and, to say the least, is unfair to the baler. Every week new measures are taken apparently to bolster the market which only succeed in harrassing balers further. Meanwhile, since the market remains at much lower levels than in India, smuggling continues to the detriment of the Pakistani economy.

Other countries such as Siam and India with little or no Government interference are increasing their crops since they find it easy to compete with Pakistan where the baler has to face complications created by the Government and has little or no time to think of world competition. The trade is slowly being strangled and even if partial nationalisation is achieved by putting the major part of the business in the hands of the J.M.C., this will probably only be achieved when world buyers will only be interested in something like 10 percent of the Pakistani crop. Meanwhile, one of Pakistan's biggest markets—the Argentine—has turned to Brazil for a large proportion of her imports.

While there is no doubt that the country's economy must be protected by export price control, the idea of internal minima, quota system and forcing balers to buy in certain areas and at certain limits, can do nothing but harm to the trade. If all internal restrictions are lifted, there will at least be a market locally; and where there is a proper market, trading must of necessity be healthy. Above all, the lack of local control will cut down a large part of selling below minima since it will make it much more difficult for balers when buying to accumulate blackmarket rupees. The fact that there is a local minimum price which must be shown on the bill, combined with the fact that the market in many areas is below the minimum price, makes it easy for unscrupulous balers to accumulate the wherewithal to pay the difference between the sale price and the minimum price to overseas buyers.

As a result of all these controls, the very evil which the Jute Board claims to be fighting is creeping into the trade. Two grades with old names but which are, in fact, new, have made their appearance. One is the genuine Dundee Mill Heart. This is an Export Lightning made of pure jat jute, clean cut and considerably higher than the standard of Export Lightnings. This is, in fact, the equivalent of the Export Firsts of a few years ago. In the present market conditions, the difference in standard between this and the ordinary Export Lightning is such that it can be sold at the minimum price whereas Export Lightnings have a value of as much as £8 or £9 below the minimum

The other new grade is the special Export Heart, which once again is pure jat and clean cut and is the equivalent of the Export Lightning of a few years ago.

These two can be sold at the minimum prices. It will be seen from this that interference in the trade has created higher standards of the two lower grades, which is exactly what the authorities have been preaching against for years and which undoubtedly is harmful to the grower. The present position is that only the unscrupulous baler profits and the respectable baler as well as the small shipper and the grower stand to lose. If some means could be found for removing local control without losing face, it will be in the interests of the trade and the country.

The upward trend in the local prices has been arrested. This trend was noticeable mainly in jat jute and only appeared in northern and district jute in areas where jat jute is also available and where, therefore, it can be mixed by unscrupulous balers into the jat standards.

Buying or registrations continue in spite of the dull market. During the first half of August, 96,734 bales were registered, which is quite a respectable quantity. The United Kingdom bought 30,375 bales, Japan 10,375, Belgium 9,125, Burma 8,300, the U.S.A. 8,175, Manila 4,500, Italy 3,675, Spain 2,872, Canada 2,850 and France 2,650 bales. India bought 2,500 bales —all long jute. The last figure is particularly interesting, since it reflects the trend of Indian mills to buy only better quality jute from Pakistan and to secure the lower quality jute and cuttings from local sources, much of which is, however, smuggled from that country.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in July was 900,000 yards less than in June 1963 but was 4,500,000 yards more than in July 1962. The average monthly consumption during the first seven months was 2 million yards a month more than in the comparable period of 1962. Bag cut-up in July was 48.4 million yards and piecegoods deliveries 19.5 million yards, compared with 45.8 million yards and 17.6 million yards, respectively, in 1962. U.S. spot stocks and afloats increased slightly by 700,000 yards. At 296.6 million yards, 175.7 million yards were spots and 120.9 million yards were afloats. Both spots and afloat stocks increased slightly. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

ECONOMIC QUESTION-MARKS WITH A NEW CABINET

LONG and drastic though the series of changes during the past few days has been, no clear picture has yet emerged of the sort of Ministry Mr. Nehru wishes to bestow on the baffled nation he himself fortunately continues to lead. Critics have been heard to say that the Prime Minister himself is not quite sure of the kind of Ministry that is possible, feasible or even desirable; hence the piecemeal fashion in which the changes are being announced. Normally the reshuffling of a Cabinet or a Ministry would be completed at one fell swoop. This time, however, so neat an operation has not been possible because some of the departing Ministers have declined to await the convenience of a Prime Minister who delivered them the shock of accepting resignations they had never really meant to be taken seriously. Their sudden departure, in mood of undisguised sulking that will be a standing inspiration to the nation's cartoonists, has necessitated the hasty but important changes of the past week-end. So Mr. G. L. Nanda has taken over the Home Ministry from Mr. Lal Bahadur Shastri, who will probably find himself a comfortable if relatively ineffective perch at a respectable distance above the snake-pits of the Congress Party. Mr. T. T. Krishnamachari takes over the Finance Ministry (and much else besides) from Mr. Morarji Desai, who to his undying credit managed a smile for Press photographers at the parting ceremony before his departure for oblivion among the *khadi*-draped warriors of Gujarati politics. Sardar Swaran Singh has taken over the Food and Agriculture Ministry from the bluff and ebullient Mr. S. K. Patil—so inconsolable, the wags say, that in his last days he forsook even food in epitomic memory of his tenure at the Food Ministry.

In a week of horrors when the luminous stars of the Cabinet firmament have been falling, the passing of lesser, jaded glow-worms in the persons of Mr. Jagjivan Ram, Mr. Gopala Reddy and Dr. K. L. Shrimali has virtually escaped notice. What is worse, the question remains unanswered: what great purpose is this ceremonial of slashing, bashing and teeth-gnashing meant to serve? With the possible exception of Mr. Kamaraj Nadar, few seriously believe that it is intended to revitalise the Congress by returning talent from Government to Party. Mr. Nehru knows that the Congress is too far gone along the road to decay to be rescued by flamboyant gestures. Except perhaps for Mr. Shastri and Mr. Kamaraj Nadar (possibly also Mr. Jagjivan Ram), the remaining nine worthies chosen for the first phase of resignations have all in the recent past been battle-scarred heroes of Congress faction-fights, so it cannot be to men such as these that the task of reconstructing the shattered unity of the Party will be entrusted. That being the case, some say, the real purpose of the Kamaraj plan is to bestow with honour and glory the kiss of political death on those who have demonstrated their unpopularity or uselessness; in other words, to hack away with maximum convenience and minimum embarrassment some of the dead wood from Cabinets that have long been groaning under the weight of such lumber. Others say the purpose is to restore horizontality to the Cabinet's ideological see-saw: Messrs Krishna Menon and K. D. Malaviya having been bumped off the Left, the time had come to ease Messrs Desai and Patil off the Right. Yet others have even gone to the ridiculous length of suggesting that all these are but preliminaries to the settlement of the succession; in the true spirit of non-alignment, India may soon be on the way to becoming not quite a republic, nor quite a monarchy, but a monarchical republic where the rise to high political office would be determined by the rules normally applicable to royal succession.

While the political implications of the Cabinet changes thus remain confusing and beyond comprehension, the economic implications are not much clearer either. Over the past few days, Mr. Nehru has in various speeches delivered himself of remarks on economic policy that remain indistinguishable from those made by him with untiring consistency for almost thirty years. The Government's chief new spokesman on economic affairs, Mr. T. T. Krishnamachari, has also established a record for reticence that would have been almost inconceivable five-and-a-half years ago, when the Mundhra scandal precipitated his departure from the Finance Ministry. Among the few public pronouncements he has made since his return to the Cabinet last year, perhaps the one that is remembered best is where he vigorously denounced his colleagues for not helping him to co-ordinate whatever it was that he was trying to co-ordinate. Strong rumours started circulating thereafter that the only job in which Mr. Krishnamachari had felt happy was that of Finance Minister, and he would therefore like to get back to it. From episodes such as these, deductions are now being drawn that Mr. Krishnamachari liked neither Mr. Desai nor his fiscal policies. Having disposed of the former—the argument runs—he will dispose of the latter too, especially since that would be a neat way of reciprocating the compliment Mr. Desai paid when he promptly set about demolishing the semi-Kaldorian tax structure Mr. Krishnamachari had started to build in May 1957. Those with long memories recall that Mr. Krishnamachari's two main contributions to the world's fiscal wisdom were the wealth tax on companies and the expenditure tax. Mr. Desai shot both down in flames soon after he arrived in the Finance Ministry. Now Mr. Desai's main contribution in the sphere of economic novelties consists of the super profits tax, the compulsory deposits scheme and the gold control rules. In turn, therefore, Mr. Krishnamachari will shoot the limbs off all three.

The expectation might have seemed reasonable and comforting, except that some have judged it to contain a large element of wishful thinking. Early in 1958, they say, Mr. Krishnamachari left the Cabinet and made a speech about "man-eaters", which was understood to refer not to tigers (who ignored it) but to certain Indian business men (who were proud to receive the epithet). A little over a year-and-a-half ago, when Mr. Krishnamachari filed his candidacy for Parliament, and was elected unopposed, a tremor of nervousness went through some members of the business community, who mysteriously decided that the former Finance Minister had in his post-Mundhra retirement be-

come a vengeful leftist. In an interview to the Press not long afterwards, Mr. Krishnamachari managed to give the impression that he was nothing of the sort, so the business men saw reason to be reassured. Subsequently, as Minister for Economic and Defence Co-ordination, Mr. Krishnamachari has spoken in general terms about getting the private sector to contribute more to defence production. The result is that, as far as the stock markets and a certain section of business men are concerned, his ideological rehabilitation is complete: he is now widely assumed to be a "rightist".

On the basis of such flimsy evidence, obviously no firm prediction is possible about what the new Finance Minister might or might not do. The pity, however, is that a wide variety of rumours have started circulating on the subject. Many of these rumours are inspired by industrialists who operate heavily in the share market, and the result is a boomlet induced by interested buying. The first service that Mr. Krishnamachari could render in the circumstances is to announce to a wider public, even if only in very general terms, what his ideas on economic and fiscal policy are. Nobody expects that within a few days of taking charge, he will say categorically and in detail what he is going to do—although that should not be impossible for one who on his erstwhile assignment was supposed to have been closely associated with top-level economic policy-making. It is, however, fair to hope that he will put an end to the present phase of uncertainty and rumour-mongering as soon as he can. This is necessary not in the interests of the stock markets or of foolish speculators who might burn their fingers there; it is necessary in the interests of an economy which has been enervated by more than six months of drift, indecision and despair.

At one stage of his earlier tenure at the Finance Ministry, Mr. Krishnamachari once declared with an air of defiant bravado that he would not hesitate to introduce two, three or more Budgets each year if he considered them necessary. Nobody can say for certain whether he thinks the same now. What one can say for certain is that if he intends to get the economy on the move again, he will have to start thinking in terms, if not of a big Budget, then at least of a little one soon. The fiscal legacy which Mr. Desai has left Mr. Krishnamachari is even more bitter than the one which, five-and-a-half years ago, Mr. Krishnamachari left Mr. Desai. Mr. Desai scrapped part of that legacy with a promptness that was entirely justified by the subsequent recovery of the economy. Mr. Krishnamachari has the opportunity to do the same now and produce equally encouraging results. Even if details have to be left to a later stage, many hope it will be possible for him to give a broad indication of his fiscal intentions before he leaves for the I.M.F.-World Bank meetings in Washington later this month. To rescue an economy suffocated by an unfortunate Budget and by the wreckage of the third five year plan, courage alone is not enough; speed will also be necessary.

IMPORTS MAY BE LIBERALISED

THE joint meeting of the Import Advisory Council and the Export Promotion Advisory Council in New Delhi this week provided an opportunity for the Government to review the country's exports and imports up to June 1963 and indicate the likely changes in its policies for the next period. To emphasise the close inter-relationship between exports and imports, the two separate Advisory Councils will soon be merged into one Advisory Council for Foreign Trade. The reorganisation, it is considered, will enable representatives of both importers and exporters to discuss their problems in a more "comprehensive and concrete manner". The Central Minister for International Trade, Mr. Manubhai Shah, pointed out that substantially larger amounts of foreign exchange would be needed not only for importing capital goods and industrial raw materials, but also for obtaining defence equipment. According to Mr. Shah, compared with 1961-62 imports fell during 1962-63 by Rs. 26 crores to Rs. 1,081 crores. But during the four months from April to July 1963, imports have risen slightly to Rs. 365.5 crores. Two speakers at the meeting, Messrs K. K. Srivastava and G. V. Puranik suggested that greater emphasis should be placed on maintenance imports. There is a considerable volume of idle capacity in many industries due to the shortage of raw materials. The suggestion of Mr. Bharat Ram, president of the Federation of Indian Chambers of Commerce and Industry, that certain important raw materials like non-ferrous metals should be stockpiled deserves consideration. But this will involve a considerable outlay, both in terms of foreign exchange for the purchases and in terms of rupees for providing storage facilities. The composition of imports shows that industrial raw materials already account for 65 percent of the total imports, while capital goods constitute 16 percent, foodgrains 10.5 percent and other consumer goods 8.5 percent. Thus the emphasis is already on raw materials and their imports can be stepped up, not by reallocating priorities, but by increasing the total outlay.

The president of the Associated Chambers of Commerce Mr. A. R. Foster, rightly stressed that the requirements of industry such as machinery, spare parts and components, should be the primary charge on the import budget. Together with raw materials, these are vital for keeping the industrial sector going. In view of the improvement in exports and the increase in the amount of untied aid, Mr. Manubhai Shah has indicated that imports of raw materials, components and spare parts will be liberalised in the next licensing period. He has also stated that a sub-committee on imports and import substitution has been set up in the Planning Commission to keep a close watch on reduction or abolition of such items of imports as are indigenously produced or for which substitutes could be found.

Dealing with exports, Mr. Manubhai Shah stated that the total earnings during 1962-63 rose by about Rs. 33 crores to Rs. 710 crores. This improvement has been maintained during April-July 1963, the earnings being Rs. 240 crores, against Rs. 208 crores in the corresponding period of 1962. While the increase in export earnings has been brought about by a large number of commodities, jute goods and tea continue to be the major earners. However, both are subject to peculiar disabilities in that they are farm-based and are facing stiff competition from rival sources. Mr. Foster did well to caution against any "indiscriminate rush" to enforce quality control schemes; he said that they should be applied only to the sectors where they were necessary. He also stressed that there should not be excessive documentation in such schemes. Gunny shippers, for instance, fear that the cost of these schemes will put them at a disadvantage, particularly in a highly competitive item like sacking in which India has been losing markets to Pakistan. As for tea, the relief in export duty given in the last Central Budget has been largely neutralised by the surcharge on excise duty. Cost of labour welfare measures, higher wages and rise in agricultural income tax (in Assam) are some of the industry's other worries. These burdens are not calculated to strengthen its competitive position. Mr. Shah stated that the fundamental problem before the industry was to increase production, particularly through a quicker replantation programme. But with rising costs and slender profit margins, it is not known how the industry will get the wherewithal to finance the huge capital investment involved.

Among the other items which are expected to fetch more foreign exchange are iron ore, oilcakes, sugar and textiles. In spite of the recession in world steel production, the sights are set on an export target of 10.5 million tons for iron ore—6 million tons from Goa and about 4.5 million tons from the rest of the country. Fortunately, there is an assured market in Japan for a substantial portion of this tonnage, thanks to the agreements concluded with that country. In oilcakes, there has been a substantial jump in exports, from Rs. 17 crores in 1961-62 to Rs. 32 crores in 1962-63. The rise has been sustained during April-June 1963, the earnings being Rs. 8 crores. As for textiles, exports of which have declined in 1962-63, there has been a slight improvement in recent months. Mr. Shah feels that exports of cotton fabrics will not be more than 500 million to 600 million yards. But including other fabrics, yarn and ready-made goods, exports could reach Rs. 75 crores, as against Rs. 60 crores at present. Handloom exports have fared well, the offtake by the U.S.A. alone being Rs. 3.3 crores in 1962-63, against Rs. 62 lakhs in 1961-62.

THE PRICE OF GOLD

THE U.S. claim at last year's meeting of the International Monetary Fund that the dollar was as good as—or better than—gold was not afterwards substantiated, and in the weeks before this year's meeting, foreign (particularly Swiss) speculators have bought considerable quantities of gold. They do not, presumably, imagine that the Fund will decide this year that the price of gold must be raised. But they have observed that the debate on the international monetary system is being resumed in full force, and they are convinced that the price of gold cannot be indefinitely excluded from this debate. The report by the Brookings Institution, on which this year's I.M.F. meeting will be focussed, does not even hint that revaluation of gold may be either necessary or desirable. If its main recommendation, that the I.M.F. should be converted into an effective international central bank, were accepted, it might indeed be permanently unnecessary to increase the world's liquid resources by increasing the value of stocks and of new supplies of gold. Similarly, if the U.S. Administration's latest plans to reduce the nation's payments deficit were fully effective, the pressure that tends to raise the price of gold would be removed. But it is thought unlikely that the Fund will accept either of the proposals of the Brookings report (the other envisages the two currency *blocs*, pound-dollar and European, with flexible exchange rates between them); and the world is not yet convinced that the U.S. balance of payments can be properly adjusted by methods that Congress will approve.

Speculative buying of gold, London dealers believe, has been motivated by the idea that the U.S. deficit will continue on a large (though reduced) scale, that the U.S. gold reserve will dwindle until the authorities are forced to stop exports of gold, that it will be impossible in that situation to hold down the price of gold (in terms of the dollar and of other currencies) in the world markets, and that gold will then be revalued formally. Speculators do not imagine that this sequence of events will be completed within the next few months, but as the prospective appreciation of gold in terms of currencies is of the order of 50 percent to 100 percent, they can afford to wait. Recent activity in the London market has reflected this attitude of mind. The price of gold has moved only slightly for the Bank of England regulates it effectively, with the aid of a buffer stock provided by a group of central banks. (When the London market price was breaking away from the official price in 1961 the market price was held down by indirect sales from the U.S. stock; it was arranged that the U.K. authorities would sell gold from their stock and that the currency so acquired would be exchanged for U.S. gold.) The London market is criticised for providing facilities for speculative buying of gold, sometimes at prices artificially favourable to buyers.

India's Resources
are Precious
WASTE NOT,
WANT NOT

But it would be virtually impossible to prevent private buying, and the U.S. authorities, who lead the forces opposing revaluation of gold, acknowledge that a broadly-based and efficiently-regulated market is an essential element in the scheme of world finance.

Short-term profits are severely limited by the regulation of the price, and the authorities hope that, as holdings of gold are inconvenient and yield no income, their repeated demonstration of resolve to hold the price will discourage speculators. The Union Corporation has estimated that in the last five years speculative buying in the West has grown much more than traditional hoarding in the East and has withdrawn from potential monetary use approximately as much gold as is held by the International Monetary Fund—about $2,000 million. Speculation and hoarding and "legitimate" consumption by industry absorb virtually all the gold produced outside Russia. So the stock of monetary gold is static, while the value of international transactions is expanding. Raising the price of gold would not only increase the value of the stock of monetary gold; it would also, by removing the incentive to buy gold speculatively in anticipation of a rise in its price, allow a slow but steady increase in the quantity of monetary gold. This familiar argument in favour of revaluation is logical but not conclusive. An effective increase in liquid reserves can be achieved by other means, such as the Brookings Institution has sugested. Indeed, it has already been achieved, on a moderate scale, through the medium of the I.M.F. and by such devices as the mutual exchange of currencies between the U.S. and other countries. But the continuing deficit in the U.S. balance of payments has changed the situation. A problem that seemed long-term a few years ago is urgent now.

The new reasoning in favour of revaluation of gold, the reasoning that has recently stimulated interest in the gold market, is that the U.S. payments deficit cannot be corrected by orthodox means which would be politically acceptable and which would not aggravate the general problem of liquidity by drastically reducing the supply of dollars outside the U.S.A. Even American economists (as a study prepared for the Joint Economic Committee of Congress has revealed) are now willing to concede that it may be necessary to consider adjusting the value of the dollar in relation to gold; and revaluation of gold in terms of the dollar would certainly imply revaluation of gold in terms of all currencies. Significantly, New York stockbrokers are advising their clients to invest a proportion of their capital in gold-mining shares. One of the strongest arguments against revaluation of gold, that it would benefit Russia, as the second-ranking gold-producer after South Africa, has lost some of its force since the *détente* between the Soviet Union and the West; and a gap of some $10,000 million between the U.S. gold stock and foreign short-term dollar holdings is a stark reality.

Current News and Comment

Shortfall in Fertilisers

As in many other vital sectors of the third plan, there is a big shortfall in India's fertiliser production programme. The Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, stated in the Rajya Sabha last week that it would not be possible to achieve the plan target for fertiliser output. The progress has been very slow particularly in the private sector which has been licensed a total capacity of 570,000 tons in terms of nitrogen; some of the parties have surrendered their licences. Of the eight factories licensed in the private sector, only the projects in Kothagudem, Visakhapatnam and Gujarat have made some progress.

The reasons for the slow progress of private sector projects are not far to seek. Mr. Subramaniam himself furnished the answer when he said that some licensees might have felt that investment in other industries was more profitable. Fertiliser plants are capital-intensive, calling for an investment of Rs. 25 crores to Rs. 30 crores for a capacity of 80,000 tons to 100,000 tons of nitrogen. The Government's fiscal measures have pushed up capital costs. In the present state of the capital market, it is not easy to raise resources of this order for an undertaking whose profitability is very limited. It has thus been difficult to attract foreign collaboration for fertiliser projects. The one in Madhya Pradesh had, in fact, to be abandoned because the licensee could not find a foreign collaborator. Again, the Mangalore project has been delayed since its Dutch collaborators have backed out. The factory proposed in Durgapur too has been stalled for this reason. Another deterrent is that fertiliser manufacturers do not have much say in the distribution of their products, since this is exclusively handled by the Government and the co-operative societies. The U.N. Fertiliser Survey Mission had suggested that the manufacturers themselves should be allowed to decide how to distribute their output. All these factors have made fertiliser projects unattractive for the private producer. The result is, as Mr. Subramaniam said, the projects will have to be taken over by the public sector. But even under State sponsorship, the progress has been poor.

Adequate supply of fertilisers is vital for the success of agricultural production schemes. A substantial portion of the total increase in food production is to be achieved by the use of fertilisers. It has been estimated that the use of a unit of fertilisers increases production by seven or eight times. The consumption of fertilisers in India is very low, averaging hardly 2.5 lbs of plant nutrients an acre of cultivated area, as against 66 lbs in the U.K. and 254 lbs in Japan. The third plan target of one million tons of nitrogen and 400,000 tons of phosphatic fertilisers is quite modest in relation to the area under cultivation. The U.S.A., with a smaller cultivated area, uses more than five million tons of nitrogen. So it is unfortunate that there should be a big shortfall in India's targeted capacity. According to present estimates, the total installed capacity by the end of the third plan may be only about 640,000 tons, while actual production in terms of nitrogen may be about 500,000 tons. Almost as important as stepping up production is the need to popularise the use of fertilisers. They are expensive since their production involves huge costs and imports of raw materials such as sulphur and rock phosphate. The levy of excise duty on intermediate raw materials like ammonia, chlorine and acids has further increased the cost of production. There are physical difficulties relating to storage and distribution of fertilisers. If they are to be used on the scale planned, it will be necessary to cut down their costs by more efficient production and offer them to the farmers at low prices. Cheap credit has to be proivded to enable the cultivators to buy fertilisers.

Checking Rise in Prices

The private Bill, which Mr. Tariq recently introduced in the Rajya Sabha for compelling shopkeepers to affix price tags on all the commodities they sell, provided an opportunity for discussing the problem of rising prices. The Central Deputy Minister of Finance, Mr. B. R. Bhagat, had earlier told the Lok Sabha that the level of wholesale prices in the country during the week ended 3rd August, 1963, was 7.6 percent higher than that obtaining before the 1963-64 Central Budget. A noteworthy point is that most of the increase in prices is on account of basic food articles like rice, pulses, sugar and *gur*. Although the prices of manufactured goods have increased much less than those of food articles, the rise is not confined only to a few items, as in the past, but is widespread. The prices are continuing to rise, and unless some definite measures are adopted to check the advance, consumers will suffer severe hardship.

The assumption underlying Mr. Tariq's Bill, which was later withdrawn, and the Government's policy to open more fair price shops and co-operative stores, is that traders and the business community are taking advantage of the present situation to push up the price level. But the facts may not bear out this assumption. The stability in prices following the national emergency and the further fact that the prices of manufactured goods have risen proportionately much less than those of food articles and even less than those of industrial raw materials should show that the main causes lie elsewhere. Traders and middle men do not appear to have a hand in the present rise in prices, and therefore merely the opening of more fair price shops and consumers co-operatives may not provide a solution. The recent price increase has been due primarily to higher taxation of commodities. There is no factual basis for Mr. Gulzarilal Nanda's recent statement that fresh taxation has not been responsible for more than 1 percent of the rise in prices. In fact, it would be nearer the truth to say that, on average, higher taxation has so far accounted for nearly 2½ percent of the rise in the price level. It may not be possible to reduce the overall burden of taxation very much as the Government needs revenues for development and defence. But it should certainly be possible to avoid, to a considerable extent, the incidence of taxes on industrial raw materials and power if the Central excise duties, inter-State sales taxes, sales taxes levied by various State Governments, the electricity duty and such other taxes are suitably modified. Unless the tax burden on these basic factors of industrial production is lightened, it may not be possible to keep the rising prices in check. Another measure to stabilise prices, especially of food articles, is to improve the distribution of supplies to different markets so that local shortages are not created. In the ultimate analysis, of course, the most effective step to keep prices low is to increase sufficiently the production of agricultural and industrial commodities.

Raising Sugar Production

The Central Deputy Minister for Food and Agriculture, Mr. A. M. Thomas, recently told the Rajya Sabha that the Government was contemplating an increase in the purchase tax on sugarcane and the levy of a Central excise duty on sugar produced by the *gur* and *khandsari* units during the 1963-64 crushing season, in order to help the sugar industry to increase its output to 3.3 million tons. An orderly development of both the factory industry and the *gur* and *khandsari* units is necessary and the one should not flourish at the cost of the other. In order to prevent the diversion of cane supplies from sugar factories, to *gur* and *khandsari* units, it may be advisable to restrict the latter's daily working period; further, they may be asked to purchase their cane requirements from co-operative societies. These restrictions will prevent the payment of high prices by them for the cane they buy, and regulate their output without materially increasing their production costs.

To increase the output of factory sugar in the 1963-64 season to 3.3 million tons it would not suffice merely to impose restrictions on *gur* and *khandsari* producers. Some positive steps will have to be taken to give adequate incentives to sugar factories. Mr. Thomas told the Rajya Sabha that in 1960-61, when the installed capacity of the sugar industry was 2.41 million tons, the actual production amounted to a little over 3 million tons. Similarly, although the installed capacity in 1963-64 will be only 2.61 million tons, it should be possible to produce 3.3 million tons of sugar, against 2.11 million tons manufactured in 1962-63. Since the crushing season will have to be advanced to enable the sugar mills to increase their total output, it is proposed to give a rebate in excise duty of 19nP a maund of sugarcane crushed during the early and late periods, but this rebate may not be adequate. The Government has now decided to increase the minimum price of cane for the 1963-64 season by 13nP to Rs. 1.75 a maund, wherever the industry faces competition from *khandsari* producers. Although the higher price would not affect the area under cane cultivation in 1963-64 as the crop has already been sown, it will check the diversion of cane to *gur* and *khandsari* units. The higher prices may also

lead to an increase in sugarcane cultivation in the future.

Raw Goatskin Export Muddle

The Government of India's recent announcement lifting the six-week-old ban on the export of raw goatskins of 36 inches and above has come not a day too soon. The ban had been criticised not only by exporters of raw goatskins who had been hit the hardest, but it had also evoked protests from overseas buyers. A section of the tanning industry has also questioned the wisdom of banning the export of large-size skins. If maintained for long, the ban would have done irreparable damage to India's export trade in raw goatskins without in any way helping the export of tanned skins. The imposition of the export ban betrayed ignorance of the elementary facts about the demand and supply position of the commodity and of the nature and importance of the raw skin export business. The annual production of goatskins is generally estimated around 45 million pieces. Out of this, some 16 million pieces are exported in a raw condition, of which 70 percent is in sizes of 36 inches and above. The tanning industry's requirements are placed around 18 million pieces, of which about 16 million pieces are exported. The home market's requirements of raw and tanned goatskins are estimated between 3 million and 5 million pieces, thus leaving a large surplus of 8 million to 10 million pieces.

The ban on the export of raw skins of 36 inches and above cannot be defended on the plea that adequate supplies have to be ensured for the development of the indigenous tanning industry, for tanners are not known to have experienced any difficulty at any time in securing raw skins. There has always existed a sizeable surplus of raw skins, and it has not been possible for the tanning industry to make use of the surplus profitably. The claim made by a section of the goatskin leather industry that it can absorb all the available supplies of large-size skins cannot be substantiated with factual data. Tnere is also no substance in the plea that he export ban of large sizes can help promote exports of tanned skins. The industry's export performance over the past four years, during which the export quota for raw goatskins has been progressively reduced from 100 percent to 60 percent of the best year's performance, has been far from encouraging. In spite of the liberal incentive under which exporters of tanned goatskins are allowed to import chemicals and other scarce commodities up to 75 percent of their export earnings, exports of tanned goatskins between 1959-60 and 1962-63 have not registered any improvement and have fluctuated between Rs. 9.5 crores and Rs. 8 crores a year. Against this, earnings from raw goatskin exports have been fairly well maintained in spite of the substantial reduction in the export quota. The figure for 1962-63 around Rs. 8.62 crores shows a fair improvement over the 1961-62 figure of Rs. 7.72 crores and the 1958-59 figure of Rs. 7.80 crores. That earnings from raw skin exports should have been well maintained in spite of the quota reductions shows that the overseas buyers have been paying progressively higher prices for Indian raw goatskins.

It is commonsense that a country can hope to retain its customers only if it supplies what people want and not what it thinks they ought to. That the foreign buyers are not interested in smaller sizes of raw goatskins has been common knowledge. The U.S.A. and Russia, the main importers of goatskins, together lift more than 85 percent of India's exports. They are primarily interested in raw and wet-salted skins, and their requirements are confined almost exclusively to large-size skins measuring 36 inches and above. They like smaller sizes only as part of package deals. The ban on large-size skins had forced the U.S. tanners to divert their purchases to certain countries from where they had never made any purchases before.

Fortunately, the mistake has been rectified at an early date. The Central Minister for International Trade, Mr. Manubhai Shah, should ask the Leather Export Promotion Council the reasons for recommending the ban on large-size raw skins. But the Government cannot escape the blame for accepting the Council's recommendation in haste, thereby causing a considerable avoidable loss of valuable foreign exchange to the country. Few will perhaps question the need for developing the local tanning and finishing industry for goatskins, but the country's need for earning foreign exchange is no less urgent. Restrictions on exports should be based on an objective assessment of the availability of raw goatskins, the differences in their qualities and the actual requirements of the tanning industry and its capacity to absorb additional supplies. Meanwhile, the report of the six-member *ad hoc* committee appointed by the Development Council for Leather and Leather Goods, under the chairmanship of Mr. M. L. Khaitan, to enquire into the various aspects of the goatskin industry will be awaited with interest.

Cloth Output and Stocks Up

The output of cloth by Indian mills in July is provisionally placed at 417 million yards, compared with 396 million yards in June and 432 million yards in July last year. The July figure—the highest for the current year—raises the total for the first seven months of 1963 to 2,806 million yards, against 2,935 million yards in the same period of 1962. Yarn production in July, placed at 166 million lbs, is substantially higher than the revised June figure of 140 million lbs, and compares well with the July 1962 figure of 158 million lbs. The output of yarn in the first seven months of the current year at 1,099 million lbs, shows only a nominal fall of 4 million lbs over the January-July 1962 figure of 1,103 million lbs. Unless the July improvement in the output of cloth and yarn, especially cloth, is maintained during the rest of the year, production this year will be less than in 1962 which is to be greatly deplored in view of the comfortable supply position of cotton, more particularly when the mills have been carrying normal stocks with them. It appears that the mill industry may not make any determined effort to step up its production until its success in persuading the Government to raise cloth prices for which it has long been agitating. The Government will do well to end the uncertainty about cloth prices at the earliest.

Stocks of cloth with the mills at the end of July totalled 314,800 bales (of 1,500 yards each), showing an increase of 3,600 bales over the June-end figure. Unsold stocks fell from 150,800 bales to 146,600 bales—the lowest figure for over a year—while there was an increase of 7,800 bales from 160,400 bales to 168,200 bales under "sold but delivery not taken". Stocks of yarn with the mills fell further from 73,200 bales (of 400 lbs each) to 70,900 bales and unsold stocks at 32,100 bales were the lowest since November 1962.

Bengal Deshi Export Quota

The Government of India has released for export 200,000 bales of Bengal Deshi cotton, of which 10,000 bales are earmarked for exports through co-operative societies in areas growing such cotton. The balance will be licensed, as usual, on a first-come-first-served basis, subject to a maximum of 5 percent of the total quantity available for export. The shipment period will be from 11th September, 1963 to 31st August, 1964. No cotton out of this quota will be allowed to be exported under rupee payment arrangements. The announcement of the quota is both timely and welcome. It is not that the immediate outlook for exports is very promising, but the release of an export quota at the beginning of the season makes it possible for exporters to keep their business going and exploit potential demand to their advantage. The overseas buyers are also assured of supplies and they can plan their purchases to suit their requirements. Prospects of putting through large business in the immediate future do not seem very encouraging.

The prices offered by the Japanese buyers—Japan is India's main customer—are considerably below the sellers' ideas based on the prevailing prices of Deshi cotton which have increased by about Rs. 20 a candy over the past week or so. The carryover from the previous season is small, but the outlook for the new crop is considered to be fairly good. The new crop will start moving in another week or two, and export business can be expected to develop once the overseas buyers are able to form a reasonably good idea of the market conditions in India which will be possible only when the Deshi crop starts moving into the market in a big way and a clear picture emerges of the main cotton crop. The Government has done well in reducing the share of the co-operative societies from 20 percent for the last export quota of 75,000 bales to 5 percent because their export performance has continued to be unsatisfactory. Export quota reserved for these societies had to be reallocated among shippers.

CORRESPONDENCE

REVIVING THE CAPITAL MARKET

(To The Editor of "Capital")

Sir,

I was pleased to read your editorial captioned "Reviving the Capital Market Corpse" in your issue of 22nd August, 1963. You have very cogently analysed the causes of the recent collapse of the capital market. While undoubtedly the Chinese aggression gave a momentum to the downward trend in the capital market, by and large, the taxation imposed on the corporate sector by the Central Finance Minister in the Budget of 1963-64 is largely responsible for the collapse. Belated efforts made by the Government to revive the market through the activities of the L.I.C. and other financial institutions can only act as palliatives rather than a cure. The confidence of the investor in the capital market has been rudely shaken and while there is hardly any question of new investors being attracted, even those who are used to making investment have shied off. What is required is an imaginative fiscal policy calculated to generate confidence in the mind of the investor. The recent changes in the Central Cabinet have imparted a measure of confidence in the stock exchanges and, therefore, this is a propitious time for the Government to introduce the necessary changes. Will it do so or will it allow the ideological considerations to befog the main issue?

Yours etcetera,
J. J. Asher

Bombay, 30th August, 1963.

MUNICIPAL REFORMS

We see it stated in the public press that a complete change will shortly be effected in the headship of the Calcutta Municipal executive, and that Lord Curzon is interesting himself strongly in the matter. *The Indian Daily News* boldly asserts that the new Chairman will be none other than Sir Walter Lawrence; and it will be within the recollection of our readers that at the Chamber of Commerce dinner early in the year, Lord Curzon announced that the height of his ambition was to be the Chairman of the Calcutta Municipality with a free hand to effect a radical change in the city, so as indeed to make her in every sense the Queen of the gorgeous East. Lord Curzon, however, is not able to come here himself; and it is not therefore altogether unfitting that, if we cannot have Elijah, we should have Elisha to reign in his stead. We have on the *tapis* the great Calcutta Improvement Scheme, which is to make this city a thing of beauty and a joy for ever, and there is no doubt that we require for the administrative head of the city a man of tact and firmness with very considerable experience of men and things. Such a man we have not had for some time and such a man we are hopeful that Sir Walter Lawrence would be. We have had far too much playing at local self-government, we have had far too many irresponsible administrators: the hour has arrived, and we trust that the man will be there. The state of Calcutta is not creditable to anyone concerned. It is all very well to lay down the streets round Government House with Patent stone and to attempt to impart an air of respectability by the judicious application of eye wash, but there are certain parts in the native quarter of the town which should call the blush of shame to the cheeks of those who are responsible for them. We sincerely trust that the rumour regarding the advent of Sir Walter Lawrence may prove correct, but our information from an undeniable source unfortunately is that it is a "pure invention."

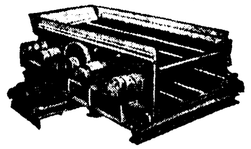
A Ditcher's Diary

At the Centre the "kill" was impressive: whatever one might think of the "goats" chosen, the public certainly had a run for its money. In West Bengal, where Mr. P. C. Sen has decided to ask his Deputy Ministers to go home, it almost looks like a slaughter of innocents. But I have often felt that the borrowed British habit of feeling for the underdog may have gone too far in this country. It may or may not be true that Mr. Prafulla Sen and Mr. Atulya Ghosh failed to agree which Cabinet Ministers were expendable and which were not: what I heard on the subject may well be no more than a rumour: but the decision to get rid of Deputy Ministers and such like hardly conforms to the Kamaraj plan. We don't know what the whole thing is in aid of: we hope Mr. Nehru and Mr. Kamaraj do; but the outgoing Deputy Ministers will hardly be missed by many, except perhaps themselves. Let us, however, remind ourselves of the published idea of the Kamaraj plan. We were told that leading Ministers were to leave office to serve the organisation. Why then sack the Deputy Ministers who will be no more effective in the Party than they were in the Government? It is possible that the taxpayers of West Bengal have been diddled on both occasions but it seems to me a pertinent question to ask whether they were once paying for too many Ministers or are now making-do with too few. And now is the time when the Government has more to do than ever before. I saw some stuff the other day about work study. Has anybody ever worked out how much work a Minister or a Deputy Minister puts in? How much it is worth? It was said in the West Bengal legislature recently that a Deputy Minister had run up a fantastic bill for his telephone calls: there has since been an explanation, not a very satisfactory one. A similar look into the travelling bills of Ministers may reveal startling truths. (I overheard someone the other day saying that a month in which he could not live on his T.A. bills he considered really bad.) Deputy Ministers remain a fascinating subject. I know of one who wanted to see a file: the I.C.S. Secretary declined; and the Chief Minister upheld, alas, the Secretary.



The truth is that we haven't been told the whole truth; and security may be only a small part of the reason. Yet what Mr. Chavan said on Monday was damning enough: Mr. Nehru's statement on the following day clearly smacked of evasion. We will probably never know what really went wrong in N.E.F.A. last autumn, for make no mistake. India has her own home-spun version of the Orwellian machinery for turning facts into unfacts and persons into unpersons. One good thing to come out of Mr. Chavan's version of the Henderson-Brooks report is that the Indian army didn't do badly at all in several sectors; this should be known more widely before too many people, here and abroad, succumb to the nonsense that the N.E.F.A. reverses, shocking as they were, proved that the Indian armed forces were incompetent. Having said that I am entitled to record that, as I read the Chavan statement together with the Prime Minister's a day later, I could not altogether resist a feeling that I was reading a work of detective fiction from which the last chapter had been torn away by some interested party. We know, roughly, what mistakes were committed; we do not know, or we have not been told, who the persons responsible were and how they have been dealt with, if they have at all been dealt with. Recrimination is ever an unpleasant undertaking; but if the Government is permitted to blame it all on Chinese perfidy there is a real danger that it will repeat its unadmitted errors. I do not normally bring ethics into political questions; nor will I now. It should, however, be known in this country that, abroad, India has widely been accused of pursuing what is called a "forward policy". Again, I have nothing against such a policy. Where the Government is indictable is that it followed a policy it had not prepared its armed forces for, not adequately anyway. Then there's the question of military intelligence; it is only a slight exaggeration to say that there wasn't any; and corrective measures in this direction may not yet have gone far enough.

It was remarked to me the other day that the achievements of U.S. foreign policy since the war have usually been the precise opposite of what was intended. The sponsorship of the Kuomintang gave rise to conditions of chaos and corruption which made it easy for the communists to take over China; the deliberate frustration of British imperial policy in the Middle East opened the way to Russian influence; the attempt to destroy a communist North Korea has meant that country will remain permanently under Chinese protection; and economic assistance to Cuba has made the Cuban people hate their benefactor. There is a lot of truth in all this, and nowhere does it appear to be more so than in the case of south-east Asia, the original habitat of the "ugly American". These were the thoughts which ran through my mind when I read that the lorries in which Saigon's Buddhist students were so unceremoniously carted away from the scene of their wholly justified demonstration the other day were marked on the side with the clasped-hands emblem of U.S. economic aid. I cannot help but feel sorry for the Americans, although there is surely no excuse after all these years for failing to understand that not all people are as single-minded in their opposition to communism as they are. I strongly suspect that is what has been at the root of U.S. failures, that and the uncanny knack of always finding the wrong non-communist horse to back. But whatever the reasons behind it, I can only hope that America's new Ambassador to South Vietnam, Mr. Cabot Lodge, can sort out the trouble there in double quick time. Not even the rights and wrongs of the situation make much difference to the fact that if the only alternative to President Ngo Dinh Diem is a Chinese-dominated communist government—and I refuse to believe that it is—then this is a matter of vital importance to India. So, for that matter, is the recent modest *rapprochement* between Russia and the United States. I agree that the main motive for this so far as the Russians are concerned is the need to secure their European frontiers and leave themselves freer to cope with Chinese encroachments into their Asian empire; they probably learned that little trick from Hitler. And there is no doubt that anything which holds back the Chinese is in the interests of India. But if past experience is anything to go by, any American move which helps Russia to hold on to her Asian colonies will eventually result in China getting the lot. That is what is worrying me; it would be a serious matter for India if she ever did.

I weep for Guy Burgess—he is dead! It might seem odd that one should be sorry for the death of a self-confessed traitor; but "traitor" is not a word I use lightly, even if there's a war on. (In the Indian emergency it has been used dangerously liberally, with no good done to anybody.) My connection with Burgess is remote. I have a friend who was at Eton with Burgess. He tells me that Burgess was a brilliant boy, though somewhat eccentric even then. He could do interesting, irreverent cartoons. It is not necessary to recall how he got into the Foreign Office and then how he decamped to Russia with Maclean; far too much has been written on these things already. But the progress of traitors has always fascinated me; Rebecca West has dealt with the subject only from one side of the fence. It is clear that Burgess didn't do it for money; neither can sex be a fully convincing explanation. What then? I am almost certain that an intelligent man like Burgess could do it only because he thought it was the right thing to do. His abhorrence of bourgeois society must have been complete; then, at what must have

seemed to him the "moment of truth", he decided to write off his entire past and leap into the unknown world of communist society. This was twelve years ago. The courage needed to make a decision of that kind need not be denied just because one happens to disapprove of what he did; and I am too conscious of the imperfections of our society to condemn its active critics outright. What happened in the twelve years he spent in the Soviet Union? His usefulness as a spy must have been exhausted fairly early on. Was he then shelved by his hosts? I don't know; but, not being the callous kind, he may also have become aware of the imperfections of the communist world. It is said that he started drinking rather hard. I shouldn't be surprised. What happened to such inspired communists as Mayakovsky or Fadeyev? Is it possible that, towards the end, he thought of England, the country of his birth? Again, I shouldn't be surprised. Even those who live, almost completely, in the world of ideas cannot quite sever the terrestrial connection, that small piece of earth on which one was, quite by accident, born.

THE BRITISH HAVE ALWAYS BEEN FOND OF GAMBLING, although for obvious reasons it has been the upper classes who have traditionally set the pace. Now it would appear that the habit pervades all levels of society: how else would it be possible to spend £1,500 million a year on the nation's "flutter"? That is only slightly less than the annual bill for defence, and is considerably more than is at present being invested in education. Luckily, it may be an over-estimate, which would not be altogether surprising considering its source. It comes from an enquiry made on behalf of the New York State Government, whose object is to find if Britain's experience can help with its own problem of whether or not to legalise off-course betting. But correct or otherwise—and it surely cannot be all that wide of the mark—it remains an astonishing comment on life in an affluent welfare State. Probably the affluence has less to do with it than the welfare, because such expenditure would mean the British are even greater gamblers than the Americans, who on average are at least twice as wealthy. A likely reason would, I suppose, be that to the British gambling provides some substitute for the risks of life which the welfare State nowadays takes care of. No doubt there is an unconscious yearning in all of us to live dangerously, but I would be surprised if this is the entire explanation. For instance, it may be no coincidence that Britons are taxed much more heavily than Americans, and for that reason do not feel they have the same chances of making big money in an individual lifetime. Hence a desire to get rich quickly by the only practical method. That might account for the popularity of football pools, where a fortune can be won in one throw, but I doubt if it explains why two-thirds of the total spent on gambling goes on horse-racing, where big wins are rare when the stakes are only small ones. Nor does it throw much light on the recent "bingo" craze, from which Britain is only just emerging. Eventually, I suppose, the motives for gambling are as numerous as the people who indulge in it. But I should like to find some broad explanation, if only because it might be of some help in avoiding the same sort of development in India. One question which has always interested me is why the British Government has all along been so reluctant to tax such a lucrative source of revenue. As in this country, the preference there still seems to be for throwing the major burdens on hard work and enterprise.

SLOWLY THE CAR CAME TO A HALT OUT IN THE country.

"Out of petrol?" she asked sarcastically.

"Nope."

"Then why did you stop?"

"Thought you might like a discussion on the Hereafter."

"Well, that's a new one," she said. "What exactly do you mean?"

"Well", he replied, "if you're not here after what I'm here after, then we're wasting each other's time."

THE DITCHER

Guide for Investors

FALLING TREND IN PROFITS WORRIES TEA INVESTORS

(BY A SPECIAL CORRESPONDENT)

THE turnover in tea shares has become very thin since the Chinese attack last November. The investors have been worried by the border developments, so they have been disinclined to invest further in these shares. Consequently, even small selling has tended to reduce the prices of these shares out of proportion. The index for the tea scrip has fallen from 146.2 to 132.4 (base 1952-53 equals 100) over the past year.

The political uncertainty apart, the economic outlook for the industry has been far from encouraging. The results of the tea companies for 1962 have by and large not been satisfactory; the profits, except in a few cases, have been downwards. As for the prospects for the current year, there is little sign of an improvement. The north Indian crop so far has fallen behind the 1962 figure. Up to July 1963, it amounted to 195.4 million lbs, showing a shortfall of 10.2 million lbs, compared with the corresponding period of 1962. There is no doubt that during July itself, tea production was appreciably higher than in the same month of 1962, and indications are that the August crop, too, will also show a considerable gain over that of August 1962. Yet the crop at the end of 1963 is not expected to be any bigger than that of 1962. The slight rise in the average price of the commodity realised so far should not, therefore, encourage undue optimism.

The average price of leaf tea has risen from Rs. 5.93 a kilogram to Rs. 6.32 a kilogram, and that of dust teas from Rs. 4.64 a kilogram to Rs. 5.13 a kilogram. The shortfall in the output has been reflected in smaller arrivals in the port of Calcutta and in exports. Exports of north Indian teas have fallen from 37.33 million lbs to 34.04 million lbs from 1st July to 7th August, 1963, compared with those of the corresponding period of 1962. Arrivals of the commodity in the port of Calcutta have fallen from 873,902 chests to 734,853 chests.

Assuming that by the end of 1963 the shortfall in production is made up and the total crop turns out to be nearly the same as that of 1962, the investors need to assess the profit trend carefully. The increase in the average price by itself will not lead to a corresponding improvement in the profit since the production costs have, meanwhile, risen. The prices of various raw materials, stores and fuel have moved up. The freight charges have risen. Besides, the decline in the production during the early months of the current season has been harmful considering that the best teas are generally manufactured during this period. The quality begins to deteriorate with the arrival of the monsoon. The slightly softer trend at the past two auctions in Calcutta, has largely been due to the fall in quality. Hence the trade thinks that the trend might henceforth be slightly downward rather than upward. The overall marketing outlook is nevertheless considered fair, in that the statistical position has been reasonably healthy. During 1962, supply and demand were in close balance. Up to date, the world production of tea has been estimated at 619.4 million lbs, compared with 620 million lbs for the corresponding period of 1962. In view of a rise in consumption, especially in the producing countries, there is hardly any threat of an excessive supply. The Indian industry, in particular, is well assured of the rising domestic consumption. The improvement in the price of dust has largely been due to strong buying from domestic blenders. They are expected to continue their purchases in the coming months in view of the slender stocks they have been carrying.

Despite a fair marketing outlook of the commodity, the investors have good reasons for taking a cautious view of the profit trend. Even if the profit for 1963 were to be slightly better than that of 1962, the after-tax profit will be cut by the super profits tax. This apart, the tea gardens will have to plough back into the business larger funds in order to finance modernisation and expansion. The dividend outlook is, therefore, considered less favourable than before. In fact, there is a great deal of concern over whether the industry will succeed in achieving the higher output target as has been set by the third plan. Most of the tea estates have been financially strained by rising production costs, heavier taxation and expenses such as the emergency risks insurance premia. They do not have the resources to finance the modernisation and expansion schemes they have been urged to undertake. Although the Government has arranged to provide the industry with finance in the form of loans to be routed through the Tea Board, the benefit is likely to be only marginal. The industry is also not particularly keen on financing expansion and modernisation by borrowing in a big way due to two factors. For one thing, the present cost of credit is too high. Secondly, the future outlook is uncertain.

Although export prospects for the current year are considered fair, the industry will find it difficult to make much headway in foreign markets in the long run, unless its competitive power is raised. Indian tea has been priced out of foreign markets because it is more expensive than that supplied by Ceylon and Africa. Hence it is urgent that the domestic cost of production is reduced by a suitable modification of the existing fiscal levies. The industry has, in particular, been embarrassed by multiple taxation in the form of Central and State imposts. A simplication of the tax structure for the industry will go a long way towards giving tangible reliefs.

It is also relevant to point out that on a long-term view, the domestic market should be encouraged rather than discouraged. The rising internal consumption provides about the best cushion for encouraging modernisation and expansion. The official apprehension that rising domestic consumption hinders exports has been exaggerated. Since the domestic consumers are largely used to teas which do not sell easily in foreign markets, there is no reason why rising internal consumption will not advance alongside bigger exports.

Bonus from Anglo-India Jute

THE Anglo-India Jute Mills Co. Ltd has produced satisfactory results for the year ended March 1963, so the directors have taken advantage of the favourable conditions to continue the process of modernising the mills and diversifying the lines of production. Considerable expenditure has been incurred for the carpet-backing cloth project. Although profitable working has so far been possible, the prospects for the current year are being viewed with caution. The fibre supply should be abundant. But the mill industry may be forced to buy raw jute much in excess of its requirements at artificially high prices, and the cost of financing the fibre purchases may affect the competitive position of the industry.

They also do not think that the export prospect for sacking is encouraging in view of the keen competition from Pakistan. The restrictions on the supply of electric power will restrain a further increase in production. The Company has, nevertheless, installed its own diesel generators to supplement the power supply. It is also feared that the recommendation of the Wage Board which is expected shortly may lead to a further rise in the cost of production. Referring to the results of Isaac Holdens (India) Ltd in which Anglo-India Jute jute has a substantial shareholding, the directors point out that the prospect of the former Company is encouraging since it has decided to double its installed capacity. It will also issue new shares a part of which will be subscribed by Anglo-India Jute in exchange for a part of its Jagatdal property. They have also been considering further diversification of the Company's interests. They have pointed to the heavy incidence of the super profits tax which will absorb about 10 percent of the taxable income of the Company.

The profit has risen from Rs. 20.64 lakhs for 1961-62 to Rs. 73.58 lakhs for 1962-63, after increasing depreciation from Rs. 12.17 lakhs to Rs. 15.13 lakhs. The taxable ordinary dividend has been increased from 10 percent to 12 percent. It is covered more than ten times and works out to a yield of 5.2 percent at the present price of Rs. 233 a share of Rs. 100 each. Taxation reserve is allocated Rs. 38.14 lakhs, including a sum of Rs. 6.36 lakhs for super profits tax. The tax provision amounted to Rs. 9.03 lakhs for 1961-62. Development rebate reserve absorbs Rs. 6.40 lakhs (against Rs. 2.04 lakhs), dividend reserve Rs. 9.54 lakhs (out of which the dividends declared for 1962-63 will be paid), investment reserve Rs. 5.50 lakhs (against 1.50 lakhs), contingency reserve Rs. 3 lakhs, revenue reserve Rs. 9.84 lakhs and dividend equalisation account Rs. 3 lakhs. The carry-forward is Rs. 90,773, against Rs. 2.75 lakhs brought in.

Gunny sales rose from Rs. 7.63 crores to Rs. 8.69 crores, while stocks of finished goods fell from Rs. 50.77 lakhs to Rs. 44.75 lakhs. The other income of the Company amounted to Rs. 8.54 lakhs, against Rs. 4.54 lakhs. The directors have decided to issue ordinary bonus shares in the proportion of one new share for every five shares held by capitalising reserves. Hence it is proposed to double the authorised capital to Rs. 2 crores by creating further 50,000 each of preference and ordinary shares.

No Early Capital Issue by Tata Steel

THE annual meeting of the Tata Iron and Steel Company held on 29th August lacked the usual excitement, which, however, was not the least surprising. The shareholders seemed well-satisfied with the Company's performance in 1962-63, which had enabled the directors to step up the dividend. What is more, the chairman's statement circulated with the directors' report had held out the promise of better results in the current year. Mr. J. R. D. Tata had assured that every effort would continue to be made to run the plant to its full capacity of which over 90 percent had been achieved in 1962-63. Shareholders' questions at the meeting related mostly to the proposed expansion scheme, more particularly the related problem of finance, and the future of control over steel prices.

Replying to these enquiries, the chairman stated that the question of further expansion was still in the stage of investigation and it was not possible to make any commitment about the finance required for the expansion programme right now. Capital cost will vary in accordance with the nature of the finished product. If the Company were to set up a strip mill with a million-ton capacity, the cost would be around Rs. 185 crores and the cost would be much lower around Rs. 160 crores in the case of a billet plant. Half of this expenditure would have to be in foreign currency. Of the balance, a part would have to be

PRECISE
TAPPING MACHINES
Armstrong Smith Ltd.
P-17 MISSION ROW EXTN. CALCUTTA-13

found from internal resources and from borrowings in the country. The chairman assured the shareholders that the Company had no intention of issuing any additional capital in the near future to provide a part of the funds required for expanding the capacity from 2 million tons to 3 million tons. He also ruled out the possibility of issuing capital for the purpose of repaying the loan from the Government as the repayment of this loan would be made from the special element in the retention price. Mr. Tata did not approve of the suggestion made by some shareholders for a bonus issue. He said that there was no point in a bonus issue unless the Company was in a position to maintain the dividend on the increased capital.

As for steel prices, Mr. Tata stated that the Government was actively considering decontrol of steel and that the question was now in a stage of delicate negotiations. The industry, he added, favoured decontrol of both distribution and prices. The Government had asked steel producers to submit joint proposals and they would soon be meeting the Government for a second round of talks. While appreciating the shareholders' disappointment over the Government's decision to take the alloy steel project into the public sector, Mr. Tata advised them not to be carried away by the impression that there was something wonderful about the project which the Company had lost. He asked them to bear in mind that the management had been unable to secure the necessary foreign collaboration for the project. Referring to the current year's prospects, the chairman said that in spite of the blowing out of one of the furnaces for relining, production during the current year was likely to be higher around 1.45 million tons, against 1.41 million tons in 1962-63. The Company will not be liable to super profits tax during the 1963-64. It had paid Rs. 57 lakhs in 1962-63 for emergency risk insurance and spent Rs. 1.27 crores on labour welfare. Out of the issued capital of Rs. 6.6 crores of Indian Tube, Tata Steel is holding shares worth Rs. 3 crores. The Life Insurance Corporation is holding 403,700 equity shares of Tata Steel. The coal from public sector collieries is costing Rs. 15 a tonne more than that from the Company's own mines.

Orient Paper Earns More

IN their report for the year ended March 1963, the directors of the Orient Paper Mills Ltd point to the rising production costs due to higher prices of raw materials, chemicals, power and fuel, combined with the rises in excise and import duties and other taxes. A part of these increased costs has been absorbed by bigger production and improved efficiency. The output of paper and board rose from 62,000 tons in 1961-62 to 65,000 tons in 1962-63. The Amlai paper mill project has made satisfactory progress. The plant and machinery has arrived at the site. The directors think that production will begin before the end of 1964. The cost of the project has moved up due to the steep increase in import duties, higher freight charges and rising prices of domestic equipment. The labour union of Brajrajnagar has raised certain disputes, including the question of the bonus, but these disputes have been referred to the Industrial Tribunal.

The trading profit has improved from Rs. 1.98 crores to Rs. 2.01 crores. A taxable ordinary dividend of 20 percent has been declared on the increased capital and *pro rata* dividends have been paid on the new shares. The yield amounts to 5 8 percent at the present price of Rs. 34.60 a share of Rs. 10 each. The dividend was 22.5 percent, subject to tax, for 1961-62. Depreciation has been increased from Rs. 56.94 lakhs to Rs. 60.45 lakhs. Deferred taxation reserve in allocated Rs. 70 lakhs while the tax provision amounted to Rs. 65 lakhs for 1961-62. Development rebate reserve has been reduced from Rs. 7.50 lakhs to Rs. 2.50 lakhs. General reserve receives a sum of Rs. 15 lakhs (against Rs. 20 lakhs). Contingencies reserve is allocated Rs. 3 lakhs (against nil). The carry-forward is Rs. 93,457, against Rs. 2.26 lakhs brought in. Sales rose from Rs. 10.04 crores to Rs. 11.16 crores.

Kesoram Industries Modernises

IN their report for the year ended March 1963, the directors of the Kesoram Industries and Cotton Mills Ltd are fairly optimistic about the outlook. Although the emergency has created a great deal of uncertainty, the Company's diversified activities have helped improve its earnings. The new projects undertaken by the Company are likely to increase earnings further. The profit of the textile unit has been held down by the rising production costs. Prices of raw cotton, other raw materials and stores have risen, but those of cloth and yarn have virtually been stationary. Steps have been taken to modernise the equipment, and a sum of Rs. 36 lakhs has been spent for this purpose. But the directors have now decided to rephase the modernisation programme in view of various difficulties. The second rayon section has reached full production capacity. The sodium sulphate recovery plant and the third carbon-di-sulphide unit has started working. The viscose transparent paper plant has not worked to full capacity because the products have suffered in competition with similar goods manufactured under different processes and enjoying a lower excise duty. But additional equipment has been installed, so the plant's operational efficiency should improve. The Company has not yet received the import licence for setting up a steel-tube factory. Meanwhile, the construction of the spunpipe factory has begun. The Industrial Credit and Investment Corporation of India and the World Bank have sanctioned loans for the project. Production may begin by the end of next year. The Company has been given a permission to issue debentures for Rs. 1.75 crores for financing the expansion schemes.

The profit has risen from Rs. 1.01 crores for 1961-62 to Rs. 1.07 crores, after providing Rs. 82.49 lakhs (against Rs. 69.43 lakhs) for depreciation. The taxable ordinary dividend has been increased from 12 percent to 13 percent on the increased share capital. At the present price of Rs. 23.31 a share, the yield amounts to 5.6 percent. Taxation absorbs Rs. 8 lakhs (against Rs. 36 lakhs), development rebate reserve Rs. 39.21 lakhs (against Rs. 13.38 lakhs), general reserve Rs. 22 lakhs (against Rs. 30.90 lakhs) and dividend reserve Rs. 40 lakhs. The dividends declared will be paid out of the latter reserve. The carry-forward is Rs. 26,969, against Rs. 43,454 brought in.

Imperial Tobacco Cuts Dividend

ALTHOUGH the Imperial Tobacco Co. Ltd has made a bigger profit of Rs. 4.46 crores for the year ended March 1963, against Rs. 3.23 crores for 1961-62, the taxable ordinary dividend has been cut from 9 percent to 8 percent including a final of 3 percent. The dividend absorbs Rs. 1.21 crores and offers a yield of 7.7 percent at the present price of Rs. 10.37 a share of Rs. 10 each. Taxation is allocated Rs. 2.66 crores (against Rs. 1.77 crores) and reserves Rs. 80.22 lakhs (against Rs. 12.29 lakhs). The carry-forward is 3.29 lakhs, against Rs. 24.56 lakhs brought in. Sales rose from Rs. 45.91 crores to Rs. 50.03 crores. A sum of Rs. 48.16 lakhs (against Rs. 46.76 lakhs) has been provided for depreciation before arriving at the profit figure. Commenting on the bigger profit, the directors point to the severe impact of the 1963 Budget levying heavier taxation.

Hukumchand Jute Diversifying

THE Hukumchand Jute Mills Co. Ltd has been operating 43 out of the 75 broad looms it has been licensed to install. It has also obtained an industrial licence to set up a caustic soda and chlorine plant in Amlai, Madhya Pradesh, with a capacity of 30 tons each of caustic soda and chlorine a day. The foreign exchange for the project has been allocated out of the yen credit received by the Government from Japan. Agrements for the supply of necessary plant and machinery have been finalised with Japanese manufacturers. The shipment of the equipment will begin early in 1964 and production may start by the end of next year.

The Company has increased its profit from Rs. 27.19 lakhs in 1961-62 to Rs. 87.89 lakhs for the year ended March 1963, after providing Rs. 11.43 lakhs (against Rs. 10.39 lakhs) for depreciation. The taxable ordinary dividend of 26¼ percent has been maintained to absorb Rs. 14 lakhs. It is covered more than six times and works out to a yield of 9.8 percent at the present price of Rs. 20.37 a share of Rs. 7.50 each. Development rebate reserve is allocated Rs. 3.06 lakhs (against Rs. 1.56 lakhs), taxation reserve Rs. 2.73 lakhs (against Rs. 9 lakhs), contingency reserve Rs. 57 lakhs and general reserve Rs. 26.05 lakhs. The carry-forward is Rs. 5,058, against Rs. 57,366 brought in. Sales rose from Rs. 6.15 crores to Rs. 6.44 crores and stocks of jute goods from Rs. 45.89 lakhs to Rs. 65.97 lakhs.

Hindustan Wire Pays Maiden

THE Hindustan Wire Products Ltd has declared a maiden taxable ordinary dividend of 10 percent for the year ended March 1963. It is covered more than three-and-a-half times. The profit has amounted to Rs. 4.53 lakhs (against Rs. 4.56 lakhs), after providing Rs. 6.22 lakhs including a sum of Rs. 4.26 lakhs relating to previous years for depreciation. Development rebate absorbs Rs. 20,000 (against Rs. 1.21 lakh), taxation Rs. 70,000 and general reserve Rs. 1.75 lakhs. The carry-forward is Rs. 2,736. The Company showed a loss of Rs. 59,938 for 1961-62. Sales increased from Rs. 39.75 lakhs to Rs. 60.18 lakhs. The Company has completed the expansion scheme for doubling the output capacity. The working has been interrupted by the shortage of copper, but steps have been taken to obtain sufficient quotas of the metal.

Better Results from Jaipur Udyog

THE Jaipur Udyog Ltd has produced satisfactory results for the year ended March 1963. The net profit has risen from Rs. 65.02 lakhs for 1961-62 to Rs. 87.12 lakhs for 1962-63 due to the bigger output of cement which increased from 742,298 tons to 823,238 tons. The plant's operational efficiency has also improved following the modifications made in it. The ordinary dividend has been raised from 8.36 percent to 10 percent, subject to tax, but a substantial part of the dividend declared will be exempted from income tax and super tax due to special circumstances. As a result, the shareholders will receive a net payment of 86.52 nP a share.

Commenting on the slow development of the industry in his chairman's address at the recent annual general meeting of the Company in Sawaimadhopur, Mr S. P. Jain said that the expansion had been hindered mainly by the unrealistic price policy of the Government. (A fuller version is printed on a later page in this week's issue of *Capital.*) The last increase in the price of the commodity took place in June 1963, but it was insufficient to cover the rising production costs. In the absence of an automatic escalation to cover the increases under fuel, power, transport, etcetera, arising out of Governmental action, an increase has fallen short of the rising production costs whenever it has been sanctioned by the Government. As a result of the unremunerative price, the return for the industry has become uneconomic. So the latter has not been able to pay either good dividends or plough back sufficient funds into the business for expansion. The shortage of resources has hampered the progress of various expansion schemes. Although the third five year plan has set the production target at 15 million tons a year, there is little possibility of it being achieved. Several licensed schemes have not been implemented in view of the discouraging return for the industry.

Mr. Jain hoped that the Government would adopt a more realistic price policy in order to encourage expansion and modernisation. He also stated that the present system of fixing packing charges had placed a heavy financial burden on the industry. The Government has insisted on cement producers using 50 percent old bags and fixing their packing charges on the basis of the prices of old bags. So they have suffered losses in the process because the price of old bags has risen sharply during recent months. Mr. Jain referred to the high transport cost on bringing limestone from quarries to the factory site. The Company has taken steps to mechanise the quarries and install handling and other equipment at the works. It has also applied for licences for importing balancing equipment. These licences, it is hoped, will soon be granted to the Company.

Hindusthan Gas Repeats

THE trading profit of the Hindusthan Gas and Industries Ltd has fallen from Rs. 16.80 lakhs to Rs. 15.39 lakhs for the year ended March 1963, compared with 1961-62, although turnover rose from Rs. 70.38 lakhs to Rs. 94.72 lakhs. The fall is largely due to the unfavourable conditions in the potatoe market. A taxable ordinary dividend of 20 percent has been maintained. Depreciation is allocated Rs. 5.71 lakhs (against Rs. 4.47 lakhs) and development rebate reserve Rs. 4.89 lakhs (against Rs. 1.28 lakhs). No provision has been made for taxation which absorbed Rs. 6.50 lakhs for 1961-62. The allocation to general reserve has been raised from Rs. 1 lakh to Rs. 1.75 lakhs.

The directors mention that the erection of the oxygen and acetylene plant has been completed and the output of carbon dioxide has risen. The production of steel files has begun. The Company has entered into a technical collaboration agreement with Daido Steel Company of Japan for producing furnaces. The Government has approved the expansion of the oxygen and acetylene plant. The proposal to set up a textile mill in Bihar has been abandoned, but the scheme to build the spinning plant in Orissa is being considered.

Mettur Chemical Cuts Dividend

A SUBSTANTIAL rise in profit and sales features the trading results of Mettur Chemical and Industrial Corporation Ltd for the year ended March 1963. The net profit before taxation amounts to Rs. 29,82,180 after providing Rs. 16,32,651 for depreciation, compared with Rs. 19,71,130 after providing Rs. 12,82,765 for depreciation. With the amount of Rs 11,275 brought forward from the previous year, the total surplus comes to Rs. 29,93,455. Out of this, provision for taxation amounts to Rs. 7,50,000 (against Rs. 2,85,000). Development rebate reserve gets Rs. 2,50,000 (against Rs. 10,00,000). Donations accounted for Rs. 45,226, while share issue expenses amounted to Rs. 9,314. The balance of bonus for the previous year amounted to Rs. 71,530.

The interim dividend at 3 percent tax free on preference shares amounted to Rs. 78,000, while the interim dividend of 6¼ percent on ordinary shares has absorbed Rs. 6,66,666. The proposed final dividend at 3 percent on preference shares will absorb Rs. 78,000. The directors have now recommended a final dividend of 6¼ percent on ordinary shares, making a total of 12½ percent on the increased capital (against a total of 13⅓ percent last year on old capital). The final ordinary dividend will absorb Rs. 8,73,088. A sum of Rs. 1,60,000 is transferred to general reserve (against nil). The balance of Rs. 11,631 is carried forward.

As for the Rs. 60 lakh capital issue made during the previous financial year, the directors state that the shareholders who paid the entire share money at the time of allotment will be entitled to interest until 14th July, 1962, and to dividend thereafter. To the shareholders who have paid advance call moneys after 15th July, 1962, dividend will be paid instead of interest. Interest already paid would be adjusted against the dividend.

In the sphere of sales, the directors say that sales of caustic soda and liquid chlorine were brisk throughout the year. With the coming into commission of the new Seshasayee Paper factory, there was considerable increase in the demand for liquid chlorine. As for the pilot plant scale production of certain new chemicals like anhydrous ferric chloride and anhydrous calcium chloride, commissioned during the previous year, the directors have decided to step up the production of these items in view of the commercial possibilities for these new chemicals. The production and sales of *vanaspati* and soap continued to be fairly satisfactory throughout the year. With the coming into effect of the Vanaspati Price Control with effect from 1st March, 1963, sales were adversely affected. As for the representations made to the Government in this connection, it is hoped that the selling prices for *vanaspati* will eventually be fixed on a more economic basis.

The directors say that the Company's plan for expansion of caustic soda capacity from 40 tons to 100 tons a day and for the manufacture of organic chemicals, has made progress. The Industrial Finance Corporation of India has sanctioned a foreign exchange loan equivalent to Rs. 97.30 lakhs and a rupee loan of Rs. 42.70 lakhs to cover this expansion. Work is also well in hand for creating a further 20-ton caustic soda capacity in the existing factory premises, in addition to the installation of caustic soda capacity in the new No. 2 plant site. With a total investment of less than Rs. 25 lakhs, this extra 20-ton capacity will be created, and this extra capacity, it is expected, will be commissioned before the end of this financial year. The Company has received sanction from the Controller of Capital Issues for issuing the balance of capital (Rs. 60 lakhs worth of equity shares at par as well as Rs. 30 lakhs worth of preference capital) before March 1964. The directors also propose to make a further issue of capital early in 1964. Good progress has been made in the establishment of a new salt factory in Vedaranyam to meet the increased demand for salt on account of the expansion.

India Cements Pays Less

ALTHOUGH sales improved over the previous year, the profit of India Cements for the year ended March 1963 is lower. The rate of ordinary dividend is reduced to 9 percent from the previous year's 12 percent, because of the increased capital. But the total outlay on ordinary dividend is only a little less than that of the previous year, in spite of the dividend covering the increased capital. Sales were at Rs. 3,95,06,397 (against Rs. 3,90,17,470). Net profit before taxation amounts to Rs. 48,83,281 after providing Rs. 37,00,993 for depreciation, compared with the previous year's profit of Rs. 51,28,679 after providing Rs. 40,32,858 for depreciation. With the amount of Rs. 1,38,608 brought forward from the previous year, Rs. 1,31,100 transferred from rehabilitation, modernisation and development reserve and with a transfer of Rs. 10,00,000 from general reserve, in addition to some refunds, the total available for appropriation amounts to Rs. 62,74,968.

Out of this, provision for taxes comes to Rs. 24,00,000 (against Rs. 23,50,000). An amount of Rs. 35,000 is transferred to development rebate reserve (against Rs. 87,400). Rehabilitation, research, modernisation and development reserve gets Rs. 4,49,629 (against Rs. 2,06,746). Donations amounted to Rs. 3,46,750 including Rs. 2,00,000 to the National Defence Fund (against Rs. 1,17,000). The preference dividend at Rs. 6.66 a share amounts to Rs. 2,22,111. The proposed 9 percent dividend on ordinary shares in proportion to the capital paid-up and in terms of the circular offering the new issue of equity shares, will absorb Rs. 26,74,835 (against Rs. 26,93,370 last year). The balance of Rs. 1,46,643 is carried forward.

In their report, the directors refer to certain adverse factors which retarded output and led to heavy expenditure. The production of clinker and cement has been below the rated capacity. It is also said that major repairs had to be undertaken to one of the kilns (kiln No. 1) during the year, resulting in the stoppage of the kiln for 54 days. In addition, kiln No. 3 of 750 tonnes capacity had also to be frequently stopped for repairs and lining, necessitating heavy expenditure. But the more encouraging feature of working during the current year so far is the satisfactory trend of production.

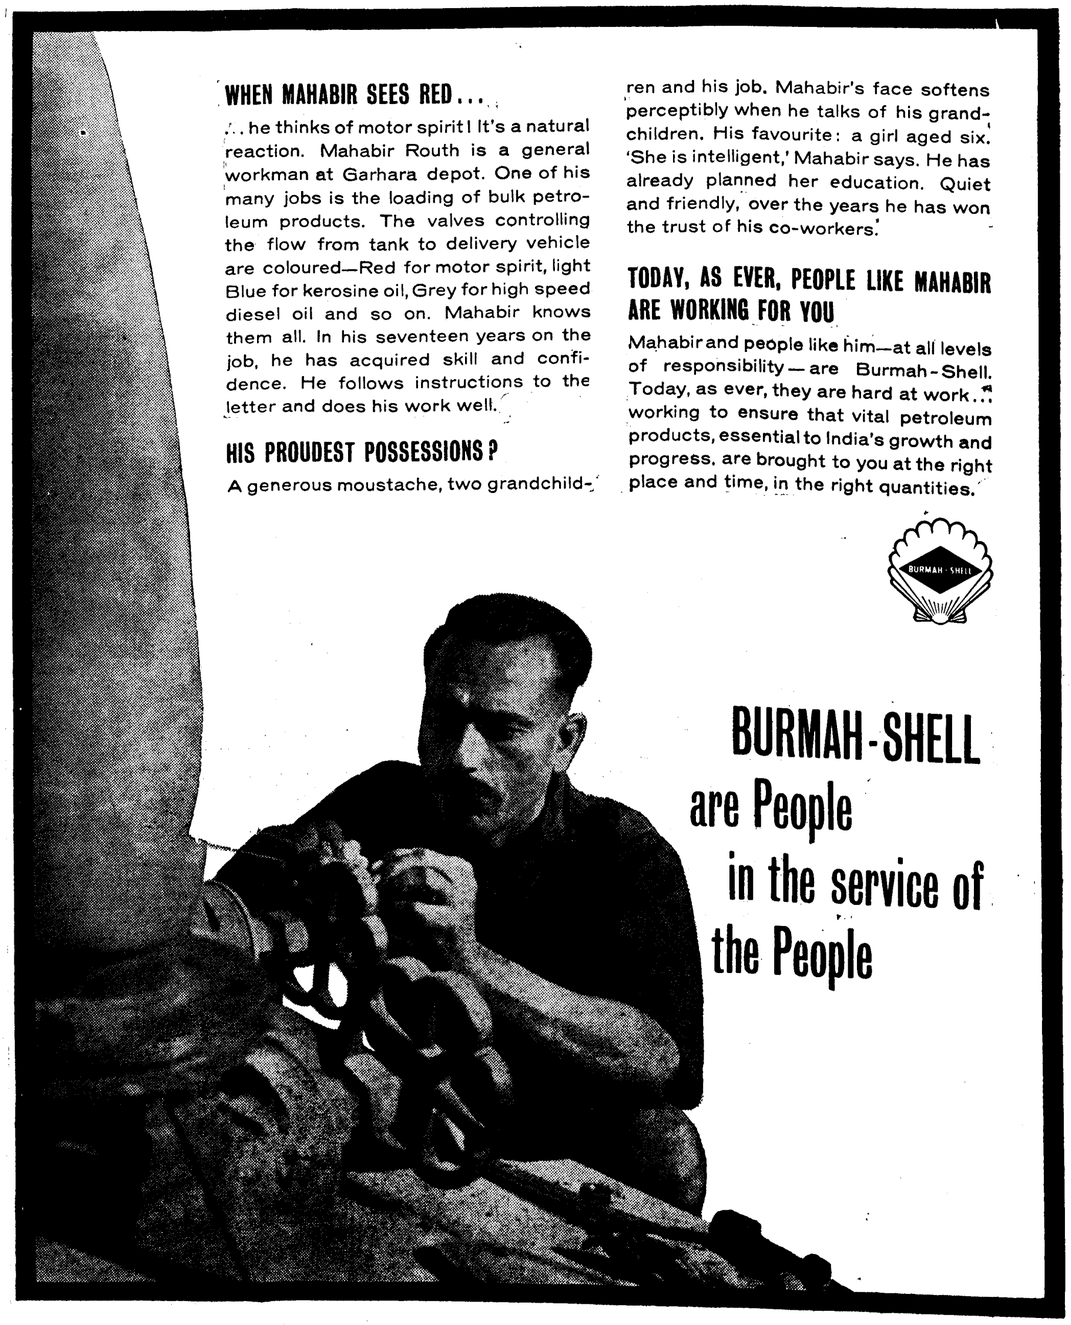
The directors have stressed how the inadequate rise in the retention price of cement and increases in freight, the price of coal and power, have contributed to a substantial rise in the cost of production. As the increase now given in the retention price of cement does not fully cover the actual increase in the Company's costs, and as the increase is effective from only 1st June, 1963, the working results have been affected by the higher costs. It is also pointed out that the coal subsidy scheme has not worked very satisfactorily and there has been great delay in settling bills.

The erection of the new plant in Sankaridrug is about to be completed, and it is expected to go into production by the end of September 1963. With the installation of the Sankaridrug plant, the Company's rated capacity will be about 700,000 tonnes a year. Having regard to the availability of limestone in Sankaridrug, and in view of the urgency to maximise the production of cement, the directors have decided to take up the expansion in Sankaridrug immediately. The Company has been granted a project licence for expanding the Sankaridrug unit by another 200,000 tonnes a year. The Andhra scheme for a 200,000-ton unit, it is proposed, will be taken up in 1965.

Good Prospects for Greaves Cotton

THE preliminary report on the working of Greaves Cotton and Company during the year ended March 1963, released along with the announcement of the dividend, which has been maintained at 12 percent, showed that the Company had fared better than in the preceding year. Sales had increased from Rs. 7.53 crores to Rs. 7.85 crores, and the gross profit improved from Rs. 52.86 lakhs to Rs. 54.53 lakhs. The directors' final report holds out the promise of better results in the current year. Although trading during the current year continues to be influenced by the uncertain position of the national economy, the directors expect a substantial expansion in turnover which, even after allowing for lower margins, is likely to result in some improvement in the profit position.

The working results for 1962-63 showed an improvement in spite of difficult trading conditions. This became possible because of the large contributions made by the new manufacturing units. The range and volume of production of the Company's cone and tube plants showed a considerable improvement in 1962-63 resulting in a sizeable increase in the profit of the mill store department. The working of these plants, it is stated, is showing further progress in the current year.



The production of diamond drilling bits was hampered last year only by the restricted import of industrial diamonds. The production of this unit is showing a steady improvement and the directors expect a further increase in the turnover and profits of the Company's mechanical engineering department during the current year. The Company's investments in subsidiary and associated companies which increased by Rs. 19.61 lakhs during 1962-63 are expected to record a further increase of Rs. 12.04 lakhs during the current year, and this increase is being met entirely from the Company's own resources.

Prospects for Minerva Mills

LIKE several other cotton textile mills, Minerva Mills also did not do well in 1962. From what the chairman, Mr. N. D. Sirur, has stated in his annual speech, the Company's performance during the current year is unlikely to be any better—it could even be worse—but the chairman has assured the shareholders that they can look to the future with a fair degree of confidence. His optimism is based on the successful implementation of the modernisation programme which has made it possible for the mills to switch over to new varieties of cloth. The Company, says Mr. Sirur, is likely to suffer a setback in the current year due to circumstances beyond its control. The burden of completing the installation of the new machinery, commencing trial runs and placing the machinery into working order, has fallen on the first half of the current year. Since this involved replacement of a large number of spindles as well as looms, there has been considerable dislocation of working in the current year. Moreover, the reduced availability of Egyptian and Sudan cotton has forced the Company to change over one of the two Egyptian preparations to American cotton of which the Company had little previous experience.

On top of these, the Company has had to pay higher prices for cotton without compensation for this factor in the price of cloth. The chairman, however, seems confident that things will soon settle down and the benefit of the entire programme of modernisation will be felt from 1964 onwards. He has also expressed the hope that a reasonable formula for relating cloth prices to cotton prices will soon come into effect, replacing the present inequitable voluntary cloth pricing system. The mills are trying to follow a policy of changing over the production of cloth to varie-

Red...Blue...Grey—colours play an important part in Mahabir's life!

WHEN MAHABIR SEES RED...

...he thinks of motor spirit! It's a natural reaction. Mahabir Routh is a general workman at Garhara depot. One of his many jobs is the loading of bulk petroleum products. The valves controlling the flow from tank to delivery vehicle are coloured—Red for motor spirit, light Blue for kerosine oil, Grey for high speed diesel oil and so on. Mahabir knows them all. In his seventeen years on the job, he has acquired skill and confidence. He follows instructions to the letter and does his work well.

HIS PROUDEST POSSESSIONS?

A generous moustache, two grandchildren and his job. Mahabir's face softens perceptibly when he talks of his grandchildren. His favourite: a girl aged six. 'She is intelligent,' Mahabir says. He has already planned her education. Quiet and friendly, over the years he has won the trust of his co-workers.

TODAY, AS EVER, PEOPLE LIKE MAHABIR ARE WORKING FOR YOU

Mahabir and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People

ties more in line with the production pattern in the spinning department. More and more looms are being put on fine and superfine yarn produced in the mills.

The chairman has revealed that the Sirur group of mills proposes to change gradually its emphasis from cotton textiles to man-made fibres. This plan requires large foreign investment and loans which are now in the final stages of negotiation in so far as the acetate rayon project already licensed by the Government is concerned. The group has also been licensed to manufacture cuprammonium rayon yarn, but after very careful investigation and further consideration, the management has decided to give up the manufacture of cuprammonium rayon yarn and take up instead the manufacture of high wet modulus viscose staple fibre in Harihar and an application has been made to the Government of India for the necessary industrial licence. A preliminary agreement for technical and financial collaboration has been signed with a well-known overseas manufacturer of this new and commercially proven fibre. This project is, however, still in its early stages, unlike the acetate rayon project which is far advanced.

Bombay Cycle and Motor Agency Disappoints

THE Bombay Cycle and Motor Agency Ltd reports disappointing results for the year ended March 1963. Although sales have suffered only a moderate setback from Rs. 2.34 crores to Rs. 2.10 crores, the gross profit has been almost halved from Rs. 6.09 lakhs to Rs. 3.40 lakhs. The dividend has been reduced from 12.5 percent to 6.25 percent. The sharp setback in the profit is attributed to the increase in the Company's establishment expenses and decline in the supply of Fiat cars along with the reduced profit margin which is controlled by the Government.

Appropriations of the year's profit include depreciation Rs. 1.32 lakhs (against Rs. 96,862), development rebate Rs. 12,376 (against Rs. 9,500) and taxation Rs. 1.10 lakhs (against Rs. 2.50 lakhs). After providing for the payment of the proposed dividend which will absorb Rs. 1 lakh (against Rs. 2 lakhs), there remains a balance of Rs. 30,964 to be carried forward, against Rs. 64,314 brought in. The company's "Airtemp" room airconditioners are stated to have been well-received in the market and the Company has set up a new service station. It is also proposed to set up a motor-vehicle workshop, the results of which may be expected in the next few years.

D. C. M. Preference Share Offer

THE offer of 200,000 redeemable cumulative preference shares of Rs. 25 each by the Delhi Cloth and General Mills Co. Ltd for Rs. 50 lakhs, is expected to attract investors. The shares carry a fixed dividend of 9 percent. They are being offered for subscription at par. The list opens next Monday. (Fuller details appear on a later page in this issue of *Capital*.) Judging by current market standards, the yield is attractive. The Company has diversified its activities, and its performance during recent years has been impressive. The profit trend shows that it will have sufficient funds to service the dividends on the preference shares offered.

The Company's interests have been confined to the manufacture of cloth, yarn, linen, silk, rayon, sugar, chemicals, fertilisers, vegetable products, etcetera. It proposes to build two new factories in Kotah, Rajasthan. A poly vinyl chloride (p.v.c.) plant with a capacity of 20 tons a day will be set up. Alongside the ancillary units for producing calcium carbide, chlorine and caustic soda plants will be installed. It will also build a rayon tyre cord plant with a capacity of 4 million kilograms a year. Both these factories will enjoy the advantage of working in collaboration with reputed foreign manufacturers. Sums of Rs. 10 and of Rs. 5 a share are to be paid on application and allotment, respectively. The remaining balance of Rs. 10 will have to be paid on two calls to be made in due course.

Citric India Project Cost Soars

THE third annual report of Citric India Ltd for the year ended March 1963, shows a very substantial increase in the project cost compared with original estimate, the increase being of the order of Rs. 55 lakhs. It is proposed to meet the deficit by the issue of additional share capital and by bank borrowings. The Company has already issued additional capital of Rs. 30 lakhs consisting of Rs. 10 lakhs in equity shares and Rs. 20 lakhs in 9.3 percent redeemable cumulative preference shares. Two of the directors, Mr. G. D. Somani and Maharajkumar Prithviraj, have jointly and severally undertaken to take up the unsubscribed capital of the equity issue made on 5th June. Negotiations are in progress for securing medium-term loans from banks. Not only has the original estimate about the project cost proved to be wide of the mark, but the Company has also been unable to adhere to its schedule of production.

The Company's plant which was expected to go into production in 1962 is now likely to be commissioned early next year, which again is subject to unforeseen circumstances. The construction work of the factory building has been resumed and the foreign machinery has arrived. Part of the ancillary machinery and equipment which were originally intended to be purchased within the country are now proposed to be imported. The I.C.I.C.I. has sanctioned a further foreign exchange loan of Rs. 6.40 lakhs to cover the cost of imported equipment. The pilot plant has been put in operation and the results so far obtained are highly satisfactory. The laboratory of the Company is equipped with the most modern type of equipment to facilitate control of the process and quality. The working results for 1962-63 show a loss of Rs 71,769 (against Rs. 35,538) after providing Rs. 12,732 (against Rs. 6,836) for depreciation and Rs. 27,800 (against Rs. 45,000) for taxation. After adjusting the credit balance of Rs. 13,039 brought forward and including excess provision of tax and other expenditure amounting to Rs. 6,716, the balance of Rs. 52,014 is carried forward.

Seshasayee Paper and Boards Shows Loss

THE report of Seshasayee Paper and Boards Ltd for the year ended March 1963, says that the working results since the commencement of trial runs showed a turnover of Rs. 37.47 lakhs for a short period of four months. After providing for proportionate interest charges on borrowings the trading results show a loss of Rs. 4.5 lakhs. This does not include proportionate depreciation which, if it is provided, will amount to about Rs. 23 lakhs. The higher prices paid for imported wood pulp used during trial operations, the losses inevitable during the period of stabilisation, the small output and the resultant heavy overhead account for the loss during the year. The directors say that the trading results for the succeeding year are bound to show a marked improvement since all sections of the mill are expected to be commissioned shortly, and the Company's own pulp will be used for production.

Commercial production using imported pulp was started in December 1962, and the erection of the rest of the equipment proceeded ahead of schedule. After the commencement of trial production in December 1962, the Company manufactured about 2,900 tonnes of writing and printing paper by the end of March 1963 and sold 2,500 tonnes for Rs. 37.47 lakhs. The paper manufactured by the Company met with keen demand. During the year, the Government of Madras through its Forest Department, delivered 23,000 tonnes of air-dry bamboo to the Company. Arrangements have also been concluded to meet the Company's full requirements for the ensuing year. As for bagasse, the two oil-fired boilers ordered for installation in the sugar mill premises in Pugalur belonging to the Deccan Sugar and Abkhari Co. Ltd were shipped towards the close of the year. Erection, testing and commissioning of the boilers and other connected equipment, it is expected, will be completed by September and the supplies of bagasse will be available by October 1963.

Rights, Bonus from Mysore Sugar

THE Mysore Sugar Company Ltd, Bangalore, is raising additional funds through a rights issue to finance its rehabilitation, modernisation and expansion scheme. The rights shares are proposed to be issued in the proportion of two shares for each one held at par, which will raise the Company's paid-up capital from Rs. 21.79 lakhs to Rs. 65.38 lakhs. This is to be followed by a bonus issue in the proportion of one share for every three held by capitalising a sum of Rs. 21.79 lakhs from the general reserve. The rights and bonus issues, which are subject to the consent of the Controller of Capital Issues, will raise the Company's equity capital from the present Rs. 21.79 lakhs to Rs. 87.17 lakhs.

The expansion scheme consists of an increase in the cane crushing of

Need facts about importing from Australia?

Alert, progressive importers have much to gain from Australia's rapidly expanding export potential. The Bank of New South Wales, Australia's first and largest commercial bank, is uniquely equipped to provide vital up-to-date information on importing from or investment in this fast-developing Continent.

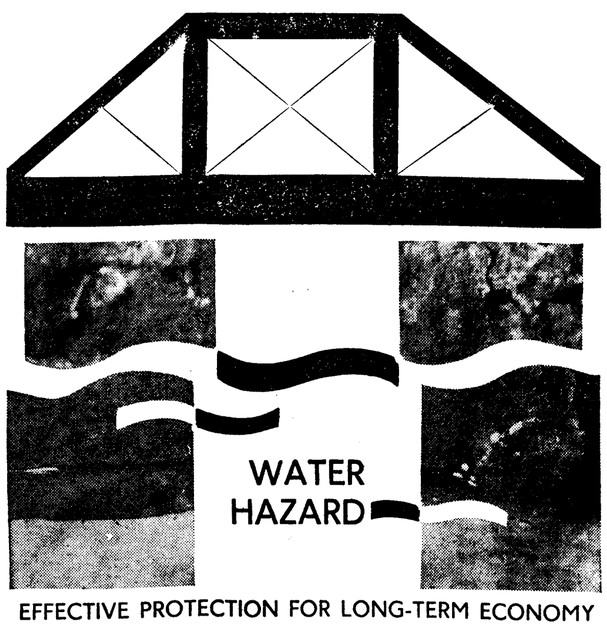
B. L. Carthew, Chief Manager.

the Mandya factory from the present 1,400 tons to 3,000 tons a day, and the addition of a new production unit to the existing distillery for manufacturing acetic acid, acetic anhydride from alcohol which is being produced in the distillery. The Company is also seeking the shareholders' consent for investing Rs. 30 lakhs in the share capital of Mysore Acetate Chemicals Co. Ltd, which is being sponsored by Mysore Sugar in collaboration with Vonkohorn Universal Corporation of the U.S.A., Aktieholaget Chematur of Sweden and Geveart Photo Production of Belgium. This new Company will have an authorised capital of Rs. 5 crores, of which it is proposed to issue Rs. 2.25 crores in the beginning. The scheme is for the manufacture of cellulose triacetate flakes and secondary acetate moulding powders.



New Standard Engineering Expansion Plans

NEW Standard Engineering Company has been growing from strength to strength. During the 21 years preceding its establishment as a pubic limited company four years ago, its progress had been striking, and its annual growth rate over the past few years has been estimated at 20 percent. How the Company has come to acquire its present strong position has been brought out in Mr. R. G. Saraiya's annual address to the shareholders. (A full text of the speech is printed on a later page in this week's issue of *Capital*).

In his chairman's speech, which has the Company's expansion and development policy as its main theme, Mr. Saraiya says that the growth is secured on a well-established foundation, and that the management is fully aware of the need for consolidation to ensure successful implementation of the expansion and development programme, which is said to be based on a definite pattern of growth. The Company, he says, would like to work, in the long run, towards a scheme of development under which New Standard Engineering will emerge mainly as an engineering company with a nucleus of basic facilities for casting, structural and fabrication work, undertaking production of only a few select complete items. These basic facilities will be adequately supported by suitable technical and administrative services such as central toolroom, research and development. This nucleus will be connected with a number of separate independent units, specialising in the design, testing, production, sale and servicing of a variety of complete machine tools or industrial equipment. According to the current climate of political thinking in the country, such a scheme of diversification and growth, visualising a group of companies may not be welcome and may run into difficulties raised by the Indian Company Law and taxation measures. But Mr. Saraiya thinks that the general functional approach underlying the establishment of a group of companies is sound, and it is in line with practice in advanced economies.

Mr. Saraiya has expressed the fear that the present investment climate and money market conditions might disturb the tempo of the Company's next phase of development. The current ebb in economic activity, if continued, may also affect the markets and sales for the Company's newly established projects.

The chairman has indicated in his speech that the proposed factory for the manufacture of shot blasting equipment is expected to go into production early in 1964. This project is being implemented by a new company—Indabrator Ltd—which has been set up by New Standard Engineering in association with Wheelabrator Corporation of the U.S.A. and Tilghman's Ltd of the U.K. The new Company will have an issued capital of Rs. 12.50 lakhs, of which shares worth Rs. 3,06,250 will be issued to each of the foreign collaborators. New Standard Engineering will take up shares worth Rs. 3.25 lakhs and shares of the value of Rs. 3,12,500 will be offered for public subscription. The U.S. and the U.K. firms will be issued "free" shares of Rs. 50,000 each for the supply of technical know-how out of their total shareholding. Plant and machinery worth about Rs. 2.34 lakhs is proposed to be imported from England against which Tilghman's will be issued shares of equivalent value. The balance of the contributions by Tilghman's and Wheelabrator will be made in cash in pound sterling or dollars as the case may be. Indabrator, it is claimed, will be the first company to manufacture shot blasting equipment in India. The project will, therefore, prove very beneficial to the Company.

EFFECTIVE PROTECTION FOR LONG-TERM ECONOMY

Almost every surface is vulnerable to the destructive effects of water. Before wood decays, paint flakes off damp walls, rust and corrosion eat into metal, it is imperative to protect the surface effectively.

Coal Tar Coatings and Bitumen Emulsions are manufactured to varying specifications. Surfaces treated with SHALIMAR TAR products stay safely shielded for years.

New Capital Issues

SEVEN companies have been authorised to issue fresh capital amounting to Rs. 18.84 crores. Two are issuing bonus shares, one is issuing cumulative preference shares and the rest equities. Two companies are offering part of their shares to foreign companies, one of which is issuing part of its capital to the International Finance Corporation, Washington. Two companies are throwing open part of their shares for public subscription by prospectus. The consent in all cases is valid for 12 months. The following are the details:

In supersession of an earlier consent, *Fort Gloster Industries Ltd*, Calcutta, is to issue a total capital of Rs. 78,85,000. This comprises 41,500 equity shares of Rs. 100 each at a premium of Rs. 90 a share. Out of this, 31,500 shares will be issued to existing shareholders and 10,000 shares will be issued to the International Finance Corporation, Washington. The money is to be used for expansion in the manufacture of cables of various types.

National Sugar Mills Ltd, Calcutta, will issue Rs. 16 lakhs in equity shares of Rs. 10 each. This capital will be used for the expansion of factory premises.

Firth Sterling Steel Company of India Ltd, Bombay, will issue capital of Rs. 50 lakhs in equity shares of Rs. 10 each. Of this amount, shares of the value of Rs. 13 lakhs will be allotted to Firth Sterling Inc. of Pittsburgh, U.S.A., Rs. 10 lakhs for cash at par and the balance of Rs. 3 lakhs for consideration other than cash. The balance of Rs. 37 lakhs share capital would be issued for cash at par. Out of this amount, shares of the value of Rs. 20 lakhs will be offered to the public by prospectus. The money is to be used in the manufacture of high speed steels and high alloy constructional steels.

The African Trading Company Private Ltd, Bombay, has been granted consent to issue Rs. 20,000 bonus capital in shares of Rs. 100 each. The shares will be allotted in the proportion of one bonus share for every 15 shares held.

Oldham and Son (India) Ltd, Madras, is to issue equity shares of the value of Rs. 250,000 as bonus shares in the proportion of one bonus share for every five shares held by the existing shareholders.

Shree Saraswathi Mills Ltd, Madurai, is to issue capital of Rs. 15,88,520. This will be divided into 109,402 equity shares of Rs. 10 each and 4.945—9.5 percent (free of company's tax but subject to deduction of taxes at source at the prescribed rates) and redeemable cumulative preference shares of Rs. 100 each to be issued for cash at par. Of these, 29,402 equity shares and 445 preference shares would be subscribed privately and the balance shares would be offered for public subscription by prospectus. The money is required for setting up a new spinning mill in Tiruttani.

The Canara Bank Ltd is issuing capital of Rs. 25 lakhs. It will be divided into 50,000 equity shares of Rs. 50 each, at a premium of Rs. 15 a share.

The Stock Markets

APPOINTMENT OF T.T.K. CHEERS LYONS RANGE

Wednesday Evening.

THERE has been an appreciable improvement in the stock market during the past week. Share prices have risen on a broad front due to brisk short-covering, combined with replacement purchases. The earlier selling pressure has almost vanished and bears have hastened to cover their open positions. Contrary to expectations, the appointment of Mr. T. T. Krishnamachari as the Central Finance Minister has inspired operators to take a bullish view. Whatever it may be worth, the argument in Lyons Range is as follows: When Mr. Desai took over the Finance portfolio from Mr. Krishnamachari five-and-a-half years ago, he dismantled the tax structure devised by the latter in order to revitalise the economy. Mr. Desai has now implemented novel measures like the super profits tax, the compulsory deposit scheme and the Gold Control Order. These innovations have caused stagnation in the economy. So Mr. Krishnamachari will remove or at least modify them in order to restore confidence.

The economic news has, meanwhile, been favourable. The prospect of bigger imports of raw materials and spare parts during the next licensing period (October 1963-March 1964) has given rise to cheerfulness. Mr. Manubhai Shah, Central Minister for International Trade, has stated in his address at the joint meeting of the Import Advisory Council and the Export Promotion Advisory Council held this week in New Delhi that it has become possible to liberalise import restrictions because of the grant of bigger untied aid by the Aid-India Club. Some companies have also decided to issue bonus shares by capitalising reserves. Operators are particularly impressed by the announcement of good dividends by some jute companies.

However, the improvement is largely due to technical factors. Previously a substantial short position was created, so bears have now begun to cover in right earnest. Support is still largely speculative. Although selling pressure has abated, investors have not ventured to make purchases on any worthwhile scale. In view of the sharp rise in prices during the past few days, the future trend will depend on whether the gains already made can be consolidated. The clearing on Wednesday passed off smoothly. The carry-forward charges are about the same as in the previous settlement.

Indian Iron have gained appreciably, although there has been a modest reaction towards the close on profit-taking. The Company has produced 115,800 tons of pig iron in August 1963, compared with 113,540 tons in July. The output of steel ingots has risen from 83,553 tons to 90,125 tons, while that of salable steel has fallen from 74,124 tons to 70,905 tons. Despatches have declined from 73,838 tons to 69,808 tons. Among engineering shares, support has largely been confined to Guest, Keen, Williams, Texmaco, Jessop, Indian Standard Wagon and Kumardhubi. Jay Engineering have met with scattered buying.

The prices of selected miscellaneous shares have hardened, although the closing levels are somewhat lower following profit-taking. Indian Aluminium, Indian Copper, Indian Cable, Hindustan Motors, Rohtas and Dunlop Rubber have been active. Jaipur Udyog have been supported on prospects of expansion. India Steamship are steady. Among new shares, Hindustan Aluminium have recovered. Electric company shares have been quiet and stray business in Calcutta Electric has been transacted. Bank shares have lacked interest. Sugar shares have been difficult to deal in, in the absence of buyers. Dyer Meakin Breweries have, nevertheless, met with scattered support due to the maintenance of the ordinary dividend. In paper shares, Orient have improved on balance. Sirpur, Titaghur and India Paper Pulp have also been transacted.

Selected jute shares have met with support at rising prices. Anglo-India and Khardah have been taken on prospects of bonus shares. Nuddea and Megna have improved on paying higher dividends. Interest has been taken in Birla, Union, Lawrence and Northbrook. A small turnover has passed in coal shares. Burrakur, Amalgamated, Bengal and Central India have been done. Raneegunge Coal have been steady on the proposal to issue rights ordinary shares in the proportion of one new share for every four shares held at par. In the cotton mill group, Jay Shree Textiles have improved on knowledgeable buying. J. K. Rayon have been sold freely. Tea shares have met with stray buying and attention has centred on good Assam and Dooars gardens.

Government securities have been steady and prices, especially of short- and medium-dated stocks, have hardened in the face of good institutional demand, but sellers have been reserved. The 3 Percent Conversion Loan 1986 has moved up to Rs. 64.65. State Government loans have been steady.

Bombay

MIXED TRENDS IN DALAL STREET

L.I.C. PURCHASES HELP SENTIMENT

Wednesday Evening.

THE Bombay stock market has shown mixed trends during the past week. The earlier rise was due to hectic support, combined with nervous short-covering following the reshuffle of the Central Cabinet. The news that Mr. T. T. Krishnamachari took over the Finance portfolio from Mr. Morarji Desai touched off a buying spree in the belief that the former would remove or modify the novel measures, such as the super profits tax, the compulsory deposit scheme and the gold control order, introduced by Mr. Morarji Desai. Sentiment was also boosted by some other favourable developments. The purchases of ordinary shares by the Life Insurance Corporation helped to relieve the load of floating stocks. The advent of easier money conditions has been considered a stimulating factor.

Towards the close, there has been a mild reaction due to profit-taking at higher levels. Although selling pressure has been conspicuous by its absence, the bulls have turned cautious pending further developments along the northern border. Bears have, meanwhile, thought it wise to cover their open positions, since a considerable part of the idle industrial capacity may be used in view of the possibility of bigger imports of raw materials and spare parts during the October 1963-March 1964 licensing period. Turnover has also been restrained due to the intervening holidays.

Tata Steel ordinary have closed around Rs. 143.75 on bigger production by the Company during August. Among engineering shares, Tata Locomotive and Mukand Iron have been steady. In motor-vehicle shares, Hindustan Motors have been active, but Premer Automobiles have been sluggish. Selected cotton mill shares have improved, mainly due to short-covering. Prominent scrip have been Century, Bombay Dyeing, Kohinoor, Svadeshi and India United ordinary. Standard have reacted on replacement buying. Morarjee, Simplex and Gokak have been steady.

Selected miscellaneous shares have moved up in sympathy with the general trend. In the cement section, Associated Cement and Digvijay have risen. Among sugar shares, Belapur and Phalton have gained on hopes of production incentives to be given by the Government during the next crushing season. In mining shares, Shivrajpur Syndicate have been about steady.

In steamship company shares, Scindia Steam have recovered on short-covering inspired by prospects of an increase in the coastal freight rate. Chemical shares have recover-

ed. Tata Chemical and Polychem have gained, but Indian Dyestuff have shown little change. Bombay Burmah have been higher. Among rayon shares, National Rayon have gained, as have Gwalior Rayon. Turnover in cash shares has been small. Synthetics and Chemicals have improved somewhat.

Bank shares have generally been neglected. Central Bank and Dena Bank have been transacted. Among insurance shares, New India Assurance have changed hands. Electric company shares have been steady. Tata Power and Tata Hydro have met with support. Ahmedabad Electric have been maintained.

Madras

SELECTIVE SUPPORT FOR PLANTINGS

GILT-EDGED REMAIN STEADY

Tuesday Evening.

THE undertone of the Madras stock market has improved during the past week in response to higher advices from the Calcutta and Bombay stock markets. Turnover has, nevertheless, been restrained in view of various uncertainties. The changes in the Central and State Cabinets are being watched closely. Despite the bigger return of funds to the banking system, the market faces a shortage of finance. Attention has centred on selected planting shares. Business in clearing shares has been limited.

Government securities have been steady and support has been extended to selected State Government loans. Among banks, Canara have been steady at Rs. 81.75 on the news that it will soon issue rights shares in the proportion of two new shares for every five held, at a premium of Rs. 15 a share. Pandyan has weakened to Rs 37 with sellers over. In electric companies, Karaikkal have been bought on declaring a taxable ordinary dividend of 10 percent. Vellore have been steady at Rs. 15 on paying a taxable ordinary dividend of 14.29 percent.

In the planting section, Blue Mountain have hardened to Rs. 2.65 and Cochin Malabar to Rs. 5.86. Business has passed in Consolidated Coffee at Rs. 18.40 and in Periakaramalai at Rs. 3.50. Manimala have been transacted at Rs. 8.75 since the Company has decided to buy the Bangalore factory owned by Ruby Rubber Works for Rs. 3.41 lakhs. Teekoy have been transacted at Rs. 6.60 on declaring a taxable ordinary dividend of 6 percent. Cottanad have changed hands at Rs. 9.31 on paying a taxable ordinary dividend of 10 percent. Nilgiri have been dealt in at Rs. 9.55 on declaring a taxable ordinary dividend of 5 percent. Badra have come to hand at Rs. 3.04 on paying a taxable ordinary dividend of 10 percent. Balmadies have been steady at Rs. 1 65 on paying a taxable ordinary dividend of 5 percent.

In the textile section, South India Viscose have hardened to Rs. 130 and Travancore Rayon to Rs. 23. Lakshmi have been bought up to Rs. 132 and Madura have been done at Rs. 31. Buckingham have come to hand at Rs. 264 on declaring an interim taxable dividend of 6 percent. Om Parasakthi have been quoted at Rs. 93.70 on paying a taxable ordinary dividend of 10 percent. Ramakrishna have been wanted at Rs. 217.80 and Rajapalayam at Rs. 160. Vijayakumar have been sold down to Rs. 115 on passing the dividend.

Among miscellaneous shares, interest has centred on cement scrip. Dalmia have been transacted at Rs. 12.25 and India at Rs. 5.70. Aluminium Industries have reacted to Rs. 16.85, but Ashok Leyland have been steady up to Rs. 7.15. Mettur Chemical have met with support at Rs. 13.42. Binny have been bought at Rs. 297 on declaring an interim taxable ordinary dividend of 8 percent. Machinetool have been quoted at Rs. 100 on paying a taxable ordinary dividend of 5 percent. Marikar have been steady at Rs. 76.50 on declaring a taxable ordinary dividend of 20 percent. Rane (Madras) have been quoted up to Rs. 7.25 on declaring a taxable ordinary dividend of 15 percent.

In the sugar section, Mysore have come to hand at Rs. 47.75. The Company proposes to issue rights shares in the proportion of two new ones for every share held. After issuing these shares, it will issue bonus shares by capitalising reserves in the proportion of one share for every three held. Deccan have been steady at Rs. 9.95, but E.I.D. have been easier at Rs. 37.08.

THE WEEK'S TRANSACTIONS

London

TURNOVER POOR, BUT TONE FIRM

SELECTIVE RISE IN INDUSTRIALS

London, 4th September.

A FIRM tone was maintained in the stock market during the past week, but the volume of business was rather disappointing. Good company and economic news enabled the market to maintain its firm tone. While renewed buying was on a modest scale, sellers were few and far between. Interest centred mainly on industrial equities and many leading issues reached new peaks for the year. Bowater featured following their encouraging interim statement, while I.C.I. moved up in response to good news from other chemical companies which raised hopes of a good interim statement from I.C.I. towards the end of the month. Numerous firm features developed among the second rank stocks. Gilt-edged attracted a modest demand with medium-dated stocks providing the best section. H.-P. finance shares fell back steadily on news that Ford Motor is setting up an H.-P. company. Banks, insurances and properties attracted little attention. Gold shares inclined higher on a small but persistent demand in a thin market. Coppers moved erratically and other mining sections were quiet. Oils were supported in front of the interim dividend season. Rubbers and teas remained neglected. Dollar stocks moved up in the wake of Wall Street which reached a new 1963 peak.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours

NO ADVANTAGES IN BANK NATIONALISATION

(BY A SPECIAL CORRESPONDENT)

THE former Central Minister for Food and Agriculture, Mr. S. K. Patil, declared, while inaugurating an office of the Indian Bank in north Bombay recently, that he did not support the move to nationalise the banking industry. The banks were effectively controlled by the Reserve Bank and, in spite of controls, were playing a useful rôle in providing finance for trade and industry and promoting capital formation. Dr. M. A. Muthiah Chettiar, chairman of the Indian Bank, endorsed Mr. Patil's ideas on the subject and expressed the view that banks could not be run like Government offices. It was dangerous to advocate the nationalisation of banks. The suspicion is that Mr. Patil publicly aired his views against nationalisation of banking because the move is gathering support. The replacement of Mr. Morarji Desai as the Finance Minister has lent credence to such rumours. Financial circles are anxiously waiting for a clue from the new Finance Minister, Mr. T. T. Krishnamachari.

It will be recalled that Mrs. Subhadra Joshi, a Congress M.P., introduced a private resolution in the last session of the Lok Sabha demanding the nationalisation of banks. The argument she advanced was that the gain to the Exchequer would be enormous. According to her, banks in the private sector showed an annual profit of Rs. 35 crores, whereas the cost of nationalisation would not come to more than Rs. 60 crores. If the substantial accumulated reserves of the banking system are taken into account, the cost to the Exchequer would be negligible. The then Finance Minister questioned her assumptions by pointing out that nationalisation of banks would cost around Rs. 100 crores and the Government simply does not have the resources to pay this amount in compensation.

Among the other points made by some M.P.s was one that the banking industry in India had become the principal instrument for channelling finance to big business. Although the balance-sheets disclosed the direct liability of directors' companies—this was about a fifth of the resources employed in advances by the banking industry—the actual amounts advanced were much bigger. The indirect interest of directors in banking companies which was through third party loans was not usually reflected in balance-sheets. Again, banks deliberately over-estimated the creditworthiness of their directors and gave loans at cheaper rates than those charged to others. They also kept depositors' money as call deposits with directors' firms. It was when the big business loosened its grip on the banking system that the smaller industrialist and trader would have a chance to borrow on fair terms. The Government would be able to direct banking resources to nationally more desirable channels and prevent speculation and other undesirable evils such as had been disclosed through the Bose Commission's Report.

Educating Public Opinion

The motion of nationalisation has been pressed once again in the current session of the Lok Sabha in spite of the defeat of Mrs. Joshi's resolution in the last session and Mr. Morarji Desai's strong defence of the *status quo*. It is surprising that no banker or industrialist connected with banks, or even the Indian Banks Association, has come forward with a well-reasoned case against nationalisation of banking. It is not too late even now for the Indian Banks Association and other interested parties to launch a campaign to educate public opinion as to why nationalisation of commercial banks is not in the national interest.

Why is nationalisation of banking not in the national interest at this juncture? It is necessary to recall that nearly a third of the banking system passed into public ownership when the State Bank was nationalised nearly seven years ago. The commercial banking structure has been controlled in every single phase of its operations by the Reserve Bank during the last 15 years, and if banks are now nationalised, it would amount to censuring the Reserve Bank for its ineffective control. When with all the sweeping powers that the Reserve Bank has exercised over the banking system, the abuses could not be checked, is it not too much to expect that they will vanish overnight by the magic wand of public ownership? On the other hand, the addition of bureaucratic evils to the prevailing shortcomings may grind the banking industry to a halt.

Recent Trends

The recent trends in the industrial policy of the Government give some hope that it may not rush in with new experiments now. Especially after the departure of Messrs Krishna Menon and K. D. Malaviya from the Government, the industrial policy has been interpreted more liberally. The private sector has been allowed to enter the defence field. The share of foreign participation in the shipping industry is being stepped up. There are indications that the oil policy may be modified to allow greater scope for the private enterprise. The new experiments like super profits tax, the compulsory deposit scheme and the gold policy have brought the economy to a virtual state of stagnation. It is, therefore, likely that the new Finance Minister may try to undo the damage.

India's dependence on friendly nations has further increased with the growing Chinese threat. There are a large number of foreign banks operating in India and some more banks have programmes to start offices here. The confidence of foreigners in this country will be rudely shaken if the banking industry is nationalised. India cannot afford to alienate sensitive public opinion abroad by revolutionary measures, especially at a critical time in her history.

No Real Gain

The Government is not likely to be the gainer if it takes over banking. This is because it cannot suddenly change the pattern of credit. Banks have been investing about 30 percent of their resources at an uneconomic rate in Government securities to support public-sector activity. It is a sacrifice they are making to enjoy the present limited freedom within the rigid rules laid down by the Reserve Bank. Of the remaining 70 percent, 65 percent is lent even in the slack season to finance the genuine requirements of private trade and industry. It is possible that the small margin of 5 percent is absorbed by the busy season requirements of credit. It will be difficult to disturb the present pattern of credit arrangements unless a clear-cut alternative is found.

There is another point. Even though the State Bank is Government-owned, its advances to public-sector undertakings are hardly 2 to 3 percent of the total, that is, after seven years of nationalisation. The Government has not borrowed from the State Bank on a sizable scale for two reasons. Firstly, it was not found feasible to reduce advances of the bank to the private sector. Secondly, it was found uneconomic to borrow from the State Bank because its minimum lending rate is 6 percent while the Government can raise the requisite resources at Bank rate of 4.5 percent. That is the reason why most Government undertakings are run as departmental wings. Even if they are run as independent undertakings, the Government can place cheap money at their disposal. The banking industry's rate is related to its borrowing rate from the public and, whether it is in the private or the public sector, there is no scope for bringing down the lending rate. The supposed advantage of nationalising the banking system would thus appear to be illusory.

THE CALCUTTA MONEY MARKET

FAIR DECREASE IN ADVANCES

Wednesday, 4th September.

THE general level of advances has shown a fair decrease in the Calcutta money market during the past week, primarily because funds have been returning from the sugar industry. The credit given to the jute mills, and to the foodgrains and seeds trade, is unchanged. But the requirements of the textile mills, and of the iron, steel and engineering units, are nominally higher. In the interbank market, money is tight and the call rate has jumped up to 3½ percent.

The exchange market has been active, with the excellent supply of tea and gunny bills continuing. The demand for remittance is fair. The general trend in sterling has been weaker, although it has scored nominal gains in relation to the West German, Dutch, Norwegian and Swedish currencies.

SILVER WAS STEADY IN CALCUTTA during the past week. The price was quoted at Rs. 229 for ready. Gold, 14 carat, fetched Rs. 65 a 10 grammes. The price of silver was quoted at 111¼d in London and at 129 cents in New York.

DURING THE WEEK ENDED 30TH August, Government of India Treasury bills for Rs. 22,29,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 3rd September. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.425 percent were accepted in full and those at Rs. 99.420 percent were allotted 47 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.318 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 9th September.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 4th September to 7th September at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 28th August to 31st August amounted to Rs. 7 crores.

THE RESERVE BANK'S STATEMENT FOR the week ended 30th August, 1963, shows declines of Rs. 17.67 crores to Rs. 2,191.07 crores in active notes and of Rs. 13.05 crores to Rs. 2,223.12 crores in the total note issue. The currency contraction was covered by increasing rupee securities of the paper currency reserve by Rs. 14.91 crores to Rs. 1,892.21 crores. Deposits of the Government of India rose by Rs. 8.86 crores to Rs. 73.90 crores while those of State Governments fell by Rs. 4.97 crores to Rs. 10.22 crores. Balances of scheduled banks at Rs. 86.95 crores showed a decline of Rs. 13.20 crores. Balances held abroad fell by Rs. 3.29 crores to Rs. 5.06 crores. The investment portfolio was Rs. 1.03 crores smaller at Rs. 222.28 crores. Loans to scheduled banks rose from Rs. 37.45 lakhs to Rs. 81.45 lakhs, but there was again no advances against usance bills. Ways and means advances were shown at Rs. 18.23 crores, against Rs. 17.86 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 23rd August, 1963, shows a rise of Rs. 6.93 crores to Rs. 587.63 crores in total deposits. Investments in Government securities are up by Rs. 9.93 crores to Rs. 306.32 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 5.48 crores to Rs. 256.40 crores. Cash and balances are, in consequence, shown at Rs. 28.81 crores or Rs. 6.38 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 23rd August, 1963, shows Demand and Time liabilities at Rs. 1,101.12 crores (Rs. 23.81 crores on account of borrowings from banks) and Rs. 1,300.50 crores (Rs. 19.84 crores), compared with Rs. 1,107.14 crores (Rs. 28.47 crores) and Rs. 1,284.18 crores (Rs. 16.75 crores), respectively, in the previous week. Cash has fallen by Rs. 5.13 crores to Rs. 53.95 crores, while balances with the Reserve Bank have increased by Rs. 10.46 crores to Rs. 95.03 crores. There is a rise of Rs. 15.36 crores to Rs. 745.84 crores in investments. Advances and bills discounted at Rs. 1,478.72 crores show a fall of Rs. 12.54 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 61.6 percent, against 6 percent and 62.4 percent.

CHAIRMAN, MR. R. G. SARAIYA'S REVIEW

Extracts from the Speech delivered by the Chairman, Mr. R. G. Saraiya, at the Annual General Meeting of the Company held in Bombay on Thursday, 29th August, 1963.

Gentlemen :

On behalf of my colleagues on the Board, and myself, I have great pleasure in extending you all a cordial welcome to our Annual General Meeting.

Statements of accounts, this year, have been presented somewhat differently than last year. This new mode of presentation has been adopted, in consultation with our Auditors, so as to give you a more compact and convenient view of the Company's finances. The Directors' Report gives detailed account of the finances and activities of your Company during the last year. It is supplemented by a few charts and tables, giving an analysis of the Company's progress. This, therefore, leaves little for me to add usefully by way of information or analysis.

Expansion and Development—Policy and Record

I should like to take this opportunity of placing before you some thoughts of your Board and Management on the Company's expansion and development policy. I trust this will help you to look at our programme of expansion and development in its right perspective. I have selected this theme of Company's expansion and development policy, as I know many a friend and associate has been asking with some concern—Is NSE over-expanding ? This question may also have been in your mind. This is an appropriate occasion to deal with this question, as we have just completed 4 years as a Public Limited Company, and will soon enter 25th year of continued existence as a manufacturing unit. It may be recalled that NSE was established as a proprietory concern in 1939 by your Managing Director, Mr. J. V. Patel, with limited manufacturing facilities in rented premises.

With the growth in the nature and volume of operations, the corporate form of the Company has also undergone change. Our growth is fully secured on a well-established foundation. During the 21st years preceeding NSE's establishment as a Public Company, it has grown phenomenally, thanks to the vision and drive of its founder, Mr. J. V. Patel. While external opportunities have nurtured the Company's early growth, it is in no small measure due to the optimism, courage and risk-taking temperament of its founder.

Measured in terms of accepted indices of increase in total block and assets, gross or net, our annual growth rate over the past few years is generally around 20%. Considering that part of this increase is on account of replacement or modernisation of machinery, this rate cannot certainly be considered as extravagant or excessive, especially when judged against corresponding rates in the engineering industry, or industry in general.

Design for Development

An organisation must move forward or slide backward—it cannot stand still. However, corporate growth cannot be a uniformly continuous process—there must be pause and respite. While programme of modernisation may perhaps be continuing, expansion and development cannot be continuous over a long stretch of time. Your Directors are fully aware of the need for consolidation to ensure successful implementation of our expansion and development programme. We have been continually asking ourselves the questions—Are we expanding too rapidly ? Is our growth healthy and balanced ? Are we developing in the right direction ? Is our programme well within our present and foreseeable capacities ? Are the returns timely and adequate ? These and other questions have to be asked and answered, as growth should not be allowed to degenerate into a magic catchword or incantation. Without any sophistication, but with a degree of discrimination, your Board has sought to base the company's expansion and development programme on some definite pattern of growth. While we have not worked out any mathematical models of growth, I can claim that we are following a broad design for development. The main features in this design are (a) rate of growth, (b) timing and phasing, (c) quality and direction, (d) costs and returns, (e) preparation, and (f) review. Apart from internal factors, which are largely within our own control, we have also to take into account the opportunities and limitations, presented by external forces. Some of the important external factors are Government policy and regulations, trade union practices, worker attitudes, bottlenecks in the economy, shifting markets, foreign exchange shortage, money market tightness, etc. It would be useful to illustrate the working of some of these important elements, as they affect the course of our current expansion and development programme.

Unlike chemical and other continuous-process industries, nature of manufacturing operations in our industry permits a Structural Workshop or Foundry to be commissioned partially, without waiting for the installation of complete plant and machinery. Your Management has sought to use this advantage, with a view to reducing the usual long, lean waiting period, before returns start to come in. Sequence of our development programme, starting with the establishment of Structural Workshop, proceeding to Foundry and ending with Machine Shop, is also based on consideration of overall economy and returns. It may be added here that full realisation of economy and returns, arising out of timely implementation, depends very much on external factors —availability of construction material such as steel and cement ; receipt of Government approvals and import licences in time ; uncertainty of acquisition proceedings, etc. We have had of late our share of difficulties on this account, which have, to some extent, delayed the implementation of our current phase of development programme, according to schedule, thereby also increasing its cost.

Group of Companies—Long-term Goal

We should like to work, in the long run, towards a scheme of development under which NSE will emerge mainly as an engineering company with a nucleus of basic facilities for casting, structural and fabrication work, machining and sheet metal work, undertaking production of only a few select complete items. These basic facilities will be adequately supported by suitable technical and administrative services such as central tool-room, research and development, etc. This nucleus will be connected with a number of separate independent units, specialising in the design, testing, production, sale and servicing of a variety of complete machine tools or industrial equipment. According to the current climate of political thinking in the country, such a scheme of diversification and growth, visualizing a group of companies, may not be welcome, and run into difficulties raised by Indian Company Law and taxation measures. Nonetheless I think the general functional approach underlying the establishment of a group of companies is sound, and is in line with practice in advanced economies.

It is in the context of this outlook that we have been selective in our approach while considering and approving collaboration proposals. We have been receiving a number of enquiries both technical and financial collaboration, thanks to the general economic upsurge in the country and also, if I may add without immodesty, thanks to the prestige enjoyed by your Management. Only those proposals are selected, which fit into the framework of the company's manufacturing facilities and our over-all scheme of development.

Financial planning

We also realise that growth must be both economic and efficient. It has been the constant endeavour of your Management to reduce the costs of construction and, for this purpose, most of the civil, structural and general site-development work is now undertaken departmentally. Any sound scheme of development should take proper account of the available resources, both material and human. I must confess that while we have done our very best to plan and prepare for both money and men, it is possible that our efforts may not succeed to an extent required by the tasks in hand, through no fault of our own. If I have struck here a somewhat diffident note, this is due to the present investment climate and money market conditions. As already indicated in your Directors' Report, it is likely to disturb the tempo of our next phase of development. The current ebb in economic activity, if continued, may also affect the markets and sales for our newly established projects. I trust this will be a passing phenomenon, which will not really mar the projected growth of our Company. This situation underlines the important fact that the ultimate success of any scheme of corporate development rests on general economic growth.

Your Management has tried to anticipate financial requirements, as far ahead as possible, and to explore all available sources for funds. While seeking financial assistance, we have not neglected to maintain proper debt-equity ratio by raising further capital. May I express here your Board's appreciation of your response to our recent rights issue, even in unsettled money market conditions. I take this as an encouraging sign of your confidence in the Management of the Company. In this connection, I should like to express our grateful thanks to both ICICI and Dena Bank for their financial help. The smooth and even course of our development programme so far, is in no small measure due to their timely assistance. At the beginning of our present development programme, ICICI invested in our Preference Shares, apart from underwriting the issue of Equity Shares. They have now given us further loan assistance. Dena Bank have not only increased our Overdraft limits from year to year, but also made available to us other facilities, such as discounting of bills, even in tight money market conditions. We look forward to their continued co-operation in the years ahead. Thanks are also due to NIDC for their financial assistance in connection with our machine tool programme.

Indabrator Limited

Reference has been made in your Directors' Report to the establishment of a new company for manufacture of Short Blasting Equipment in financial participation with M/s. Wheelabrator Corporation U.S.A., and M/s. Tilghman's Limited, U.K. Your approval for this project is being sought in the Extraordinary General Meeting to be held soon after this Meeting. Out of total issued capital of Rs. 12,50,000/-, shares of the value of Rs. 3,06,250/- will be issued to each of the Overseas companies. The proposed investment on the part of your Company is Rs. 3,25,000/- which is 26% of the issued capital, leaving Rs. 3,12,500/- for offer to the general public. Both Wheelabrator and Tilghmans will be issued 'free' shares of Rs. 50,000/- each for supply of technical 'know-how' out of their total shareholding, mentioned above. Plant and machinery of the approximate value of Rs. 2,33,884/- is proposed to be imported from England, against which Tilghmans will be issued shares of equivalent value. Balance of Tilghmans and Wheelabrator contribution will be made in cash in Pounds Sterling, or Dollars, as the case may be. The demand for Shot Blasting Equipment is already high and is expected to increase with the development of metal-using industries in the country. We will be the first Company to manufacture this item in India. Our partners and collaborators are well-known throughout the world for their high standards of quality. I am glad to announce here that our proposed name for the company, i.e., INDABRATOR LIMITED, has now been approved. The scheme has been cleared from the capacity angle and terms of collaboration have also been approved. The new company expects to go into production early in 1964.

Your Directors' Report has also referred to streamlining of production facilities in self-contained Departments at Goregaon. This is only an evidence of the functional approach in our strategy for development, to which I have referred earlier. As stated above, there are two main obstacles in the realisation of this objective. **Firstly**, such corporate growth with diversification has to reckon with the burden of double taxation on inter-company profits. **Secondly**, it has also to grapple with the administrative and legal complications, arising out of Company Law provisions on inter-corporate investments and dealings. The present policy of the Government in this connection needs to be revised in the interest of stimulating capital formation. Its rigid application also militates against basic principles of specialisation, efficiency and inter-dependance. A group of companies, serving and supporting each other, helps to blend the better elements of centralisation and delegation. I trust Government's earlier decision to reduce the burden of inter-company taxation will soon be carried still further, leading to substantial relief, if not its complete abolition.

Management Training

We have instituted various training schemes for skilled workers, Engineers and other personnel, necessary for the proper working of our new facilities. Training is a slow and difficult process. Your Management is fully aware of the gaps in our training programmes, especially in the areas of quality control, sales and general administration. More than physical facilities, growth is accounted by spirit of innovation, timely decisions, alertness and flexibility in face of opportunities and obstacles, improvement of methods, etc. all of which are conveniently described as better management. Training for this purpose is as arduous as it is important.

In his "Theory of Economic Development", J. A. Schumpeter stated that "growth does not spring primarily from capital investment. Although the slow and continuous increase of national supply of productive means and savings is obviously important, development springs overwhelmingly from employing existing resources in a new way irrespective of whether or not those resources increased." He estimated that 13% of the growth in U.S.A. was due to economic resources but 87% was due to changes in technological reforms and social improvements. This analysis is supported by the study of some factories in Calcutta recently conducted by Morris Solomon. He reports that while, on the one hand, there is a chronic shortage of capital investment, on the other, machines and equipment available in factories are not being fully and properly utilised. This situation calls for management training of the highest order. It also calls for streamlining of administrative procedures, which will help to reduce delay and speed up development. The framework of detailed controls calling for numerous and frequent references to Government in almost all matters of corporate growth, needs to be reviewed on a policy basis. What is required is indicative and not imperative planning, as stated by a shrewd French observer of our economic scene. While the neeessity of controls in a planned economy is admitted, their multiplicity and faulty operation tend to retard the rate of growth. Change is also required in not only Government's labour policies, but also current trade union practices and worker attitudes, which impede labour productivity and increase manufacturing costs. However, assuming favourable markets, availability of physical facilities and raw materials, the main problem is to extract the utmost out of the given investment, with due consideration for maintenance and morale. Physical facilities should be matched by technical progress and managerial abilities. It is this approach to efficient and economic realisation of growth, which we should now like to see increasingly supplied in our Company.

I am sure you would like to join me in thanking our staff and workers for their sustained efforts and good performance.

This does not purport to be the proceedings of the Annual General Meeting of the Company.

All for one, one for all!

"A solemn and public pledge," *said Tata-Fison.*

"To create!" *said Ralli, thinking of fertilizers.* "To grow healthy crops—ensure bumper harvests—feed India's millions."

"To destroy!" *thundered Tata-Fison thinking of pesticides.*
"We'll exterminate scurvy pests, villainous insects and strangling weeds."

"In short," *they said together,* "a public pledge to cover the field!"

Tata-Fison and Rallis have combined their separate marketing organisations into a single, unified service. For the future, all Tata-Fison products will be marketed by Rallis' Fertilizer and Pesticides Division. The merger will prove of immense benefit to the Indian farmer. For the first time, one integrated service will provide advice and products covering both crop growth and crop protection throughout the country...a notable contribution to the cause of agricultural progress.

TATA-FISON AND RALLIS COVER THE FIELD!

TATA-FISON RALLIS

THE JAIPUR UDYOG LIMITED

CHAIRMAN, MR. S. P. JAIN'S ADDRESS

The following Speech delivered by Mr. S. P. Jain, Chairman, The Jaipur Udyog Limited, at the Annual General Meeting of the shareholders of the Company at 12 noon on 21st August, 1963, at Sawaimadhopur.

Gentlemen,

It gives me great pleasure to extend to you all a cordial welcome to the Annual General Meeting of the Company. The Directors' Report and Statement of Accounts for the year ended 31st March, 1963 have been duly circulated and you must have noted the details of the working results with satisfaction.

As stated in the Directors' Report, production during the working year registered a substantial rise and has made an all time record for your Company. Productoin of clinker has risen from 6,69,675 tonnes to 7,67,250 tonnes and that of cement from 7,42,298 tonnes to 8,23,238 tonnes. Modifications and improvements made in sections of the plant such as feeding device and cooler system for the kilns have been large contributory factors to this striking rise in production. Some additional quantity of power made available by the State Electricity Board was also helpful. In regard to despatches, as a consequence of improvement in the transport position mentioned by me in the last speech, substantial increase has been achieved making an all time record of 8,20,778 tonnes for the year from 7,34,139 tonnes in 1961-62.

Better Financial Results

The financial results also showed substantial improvement and the gross profit after providing for bonus to employees reached Rs. 1,30,76,745/- the highest level so far attained by the Company. The net profit after depreciation stood at Rs. 87,11,985 as against Rs. 65,02,100. The better financial results were largely due to the substantial increase in production. Although the price increase was applicable for the whole year, it was more than off-set by the heavy increases in costs mainly arising out of governmental action beyond the control of the industry.

The better working results have encouraged your Directors to propose an increased dividend at 10% against 8.36% in the previous year besides strengthening the finances of the Company by transfer of over Rs. 64 lakhs to Reserves. In view of profits determined by the Income-tax Officer as exempt from tax under Sections 84 and 101 of the Income-tax Act 1961 and Rule 20 of the Income-tax Rules 1962, Income-tax and Super-tax are not payable by the shareholders under Sections 85 and 101 (2) of the Income-tax Act on the said dividends to the extent of Rs. 15,92,030. The proposed dividend of 10% on ordinary shares would amount to net payment of 87.52 nP. per ordinary share after deduction of Income-tax under Section 194 of the Income-tax Act 1961 on 4.16% dividend, the balance 5.84% dividend being exempt from Tax. On this basis the shareholders would get a net dividend of 87.52 nP. per ordinary share.

In spite of the fact that there is general recognition of the importance and basic necessity of the development of the cement industry, the Government policy and action continued to be characterised by the same complacency as in the previous years. Individual cement manufacturers and the industry as a whole have been representing to the Government from time to time about their difficulties and the continuing rise in costs mainly arising out of governmental action. But no tangible change in the governmental policy towards the industry has been witnessed. It is a matter for regret that the common objective of increasing production of an essential commodity like cement is not being fulfilled only for lack of a developmental price policy.

Production and Despatches

I can say with pride that the industry is pulling all its weight to improve production and despatches within its means. The impediments to expansion are no longer the foreign exchange scarcity and non-availability of plant and equipment because indigenous machinery manufacturers are promising delivery of complete plants by 1964 and 1965 provided firm commitments are given now. Orders are not forthcoming from licencees because of low profitability and dearth of capital. It is only the non-availability of resources with the industry due to the price and tax policies of the Government that forms the impediment to development at present.

According to a Reserve Bank study, the cement industry could retain only 11.18% of the profits after tax against an average of 36.4% for industry as a whole in 1961-62. In spite of distributing 88.2% of the profits after tax, gross dividends worked out to only 6.9% of net worth. This situation is a matter entirely in the hands of the Government. If the production of cement is not going apace the requirements accordnig to the anticipated targets, the blame should fall squarely on the Government policies affecting the industry.

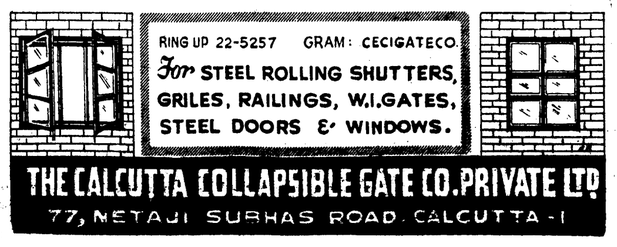
The cement industry is a strategic one and it has to be helped to develop at an accelerated speed. Unless the Government follows an appropriate price policy that encourages expansion, the development of the industry cannot take place and the country will be faced with continuing scarcity in respect of an essential basic material as cement. In our developing economy and particularly with the emergency the demand for cement will steadily mount. But the development of the industry is by no means showing any trend towards sufficiency to meet the need. Again the targeted capacity of 15 million tonnes the fulfilment of the existing proposals in different stages of execution will only lead to an attainment of 12.5 million tonnes capacity leaving a short-fall of nearly 3 million tonnes in the targeted capacity itself. Therefore, it is imperative that all the licensed schemes at present should be put into execution immediately if the Plan target is to be achieved within the Plan period as it takes about 3 years for a plant to go into productoin.

Cancelling Licences

The Heavy Industries Minister Sri C. Subramaniam has announced a policy of cancelling licences on which no effective steps have been taken. It is desirable to have a clear idea as to the implementation of the schemes. But has the Minister gone deeply and carefully into the reasons for the non-implementation of these licences? Sufficient appreciation of these basic reasons would have probably reflected a change in the Govermental attitude and policy in this respect. This fundamental problem has, therefore, to receive more earnest consideration at the hands of the Government leading to effective and prompt action.

In this light, the last price fixation has been disheartening. It reflected neither promptness nor perspective thinking. The increase granted with effect from 1st June, 1963 gave your Company Rs. 2.75 nP. per tonne. This price increase is totally inadequate in view of the heavy rise in costs that took place after the previous price fixation due to governmental action. Further rises in costs have also not been checked by any means. Unless a system of automatic escalation to cover the increases under the major heads like fuel, power, transport, etc., arising out of governmental action is introduced by the Government, the industry will continue to face this problem of rising costs without adequate timely cover for same in the prices. Even after holding out definite assurance of providing for rise in costs due to their own action, Government failed to take timely action and when action was taken after considerable delay, the compensation was not sufficient and it was also not given retrospective effect with the result that the entire burden of enhanced costs due to governmental action had to be borne by the industry.

Another factor on which also the Government is not taking a realistic decision is in regard to the quartely packing charges. The scheme of price fixation does not include any element to cover packing charges as the Government has been following a policy of fixing packing charges quarterly on a certain formula based on actual costs. Since October, 1962 the Government formula envisages 50% use of old bags and the prices of old bags have been taken at 65% of the price of new bags. This 50% use of old bags is impossible as it requires 100% return of new bags. In spite of the best efforts of the industry, the average for 1962 has only been 34% use of the old bags. In view of the short supply of packing bags and consequent competition in the market the actual price of old bags has been as much as 85% of the price of new bags. There has thus been a considerable loss to the industry on account of packing charges also. This will continue till the Government adopts a realistic policy in this matter.



Transport Costs on Limestone

I would also like to point out here that transport costs on limestone from the quarries to your factory are increasing year by year due to the continuous increase in railway freight. As stated in the Directors' Report the railway freight has increased 70% since 1954. Cement factories like yours which are situated at a distance from the quarry site are at a disadvantage as the cost of transportation of raw materials from the quarry site to the factory is to be borne by the industry while the outward freight of cement is pooled. As long as individual prices were fixed on the basis of individual costs, this factor was immaterial. But when prices are fixed on the basis of average costs as is being done now, this becomes a burden on the units concerned. While locational disadvantages or advantages to the industry are nullified by the pooling of freight on cement, there should be a similar adjustment in the matter of freight on raw materials. In the case of your Works, the freight per tonne of limestone works out to Rs. 4.40 nP. This freight for a distance of 15 miles is exhorbitant and inequitable especially in view of the bulk movement in block rakes of a raw material. Your Company had also a definite agreement with the then State Government at the time of the establishment of the factory that concessional railway rates would be made available for the movement of the raw material and no terminal or short distance charges would be levied. This matter is still under correspondence with the Railway authorities and it is hoped that the unfair and unjust situation would be remedied. The incidence of this freight on the cost of cement is Rs. 7/- per tonne, which is an additional burden on your Company as compared to units at quarry site.

As I mentioned in my last speech, steps were taken for mechanisation of your quarries and installation of handling and other equipments at the Works. These should further contribute to efficiency and improve production. Your Company's application for import licence for balancing equipments is still pending with the Government for sanction. I had mentioned in my last speech that the grant of permission for such imports should be expeditiously given as the foreign exchange expenditure incurred would be more than compensated by the increase in the production of cement. Here again, a more practical approach on the part of the Government is warranted. May I express the hope that the experience, skill and the willingness of the industry to develop and make full utilisation of the capacity to satisfy the national demand for cement will meet with encouragement from the Government by appropriate policy and timely action.

I would, in conclusion, like to thank you all and on your behalf the workers and members of the staff at all levels for their continued co-operation.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THIS IS ONLY AN ANNOUNCEMENT, AND NOT A PROSPECTUS

THE DELHI CLOTH & GENERAL MILLS CO., LTD.

Registered Office: Bara Hindu Rao, Delhi.

Issue of 2 lakhs 9% Fifth Redeemable Cumulative Preference Shares of Rs. 25/- each at par of the total value of Rs. 50 lakhs.

DATE OF OPENING OF SUBSCRIPTION LIST; 9th September, 1963.

The list will open on the 9th September, 1963, and will close at the close of banking hours on the 16th September, 1963 or earlier at the discretion of the Directors, but in no case earlier than the close of banking hours on the 11th September, 1963.

SHARE CAPITAL AS ON 30-6-1963

PRESENT ISSUE

2,00,000 9% Fifth Redeemable Cumulative Preference Shares of Rs. 25/- each at par of the total value of Rs. 50 lacs. These shares are redeemable after 30-6-1975 and before 30-6-1980.

TERMS OF PAYMENT

With application	Rs. 10/- per share
On allotment	Rs. 5/- per share

The balance amount of Rs. 10/- per share will be payable in two calls of Rs. 5/- each provided that there shall be an interval of at least one month between the date fixed for the payment of the allotment money and the date fixed for the payment of the First Call and between the dates fixed for the payments of the First Call and the Second Call respectively.

APPLICATION AND ALLOTMENT OF SHARES:

Application for the shares must be for a minimum of 10 shares or multiples thereof, and be accompanied by a remittance of the amount payable on application. Application should be made in the prescribed form accompanying the prospectus and must be lodged, duly completed in accordance with the directions contained therein, with the Company at its Registered Office at Bara Hindu Rao, Delhi, or with any one of such branches of the National and Grindlays Bank Ltd., as are mentioned on the reverse of the application form, on or before the close of the subscription list.

EXISTING ACTIVITIES

The Company was registered in 1889 with its Registered Office at Delhi. The objects for which the Company is established are set out in the Memorandum of Association of the Company. At present, the Company is engaged in the manufacture of yarn, linen, cloth and other goods and fabrics made from cotton, silk, rayon and other fibrous materials, sugar and sugar products, acids, alkalis and chemicals, industrial and other preparations and articles, compounds and chemical materials, fertilisers phosphates, alumnic products, vegetable ghee, refined oils and other vegetable products, soaps, spirits, mechanical and chemical engineering plant and equipment, etc.

The Company has the following units in India:—

1. Delhi Cloth Mills (No. 1, 2 and 3), Delhi.
2. Swatantra Bharat Mills, Delhi.
3. D. C. M. Silk Mills, Delhi.
4. Hissar Textile Mills, Hissar.
5. D. C. M. Chemical Works, Delhi, including—
   (a) D. C. M. Vanaspati Manufacturing Works.
   (b) D. C. M. Tin Container Works.
6. Daurala Sugar Works, Daurala, U.P. (including Daurala Distillery and Daurala Confectionery).
7. Mawana Sugar Works, Mawana.

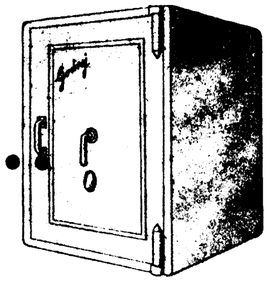
The Company has also a cotton Mill at Lyallpur in Pakistan. Besides, the Company has a chain of retail stores and/or selling agencies throughout India for the sale of its products.

PROPOSED ACTIVITIES

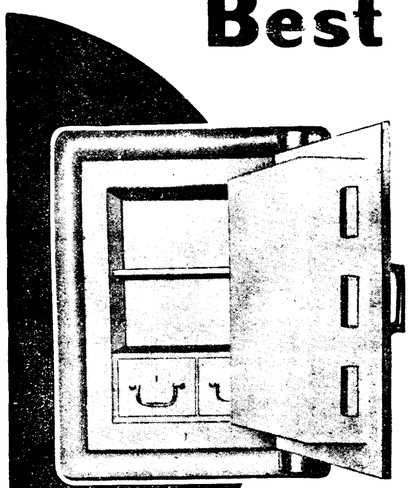
The Company has taken up installation of the following two new plants, licences for which have been granted to the Company by the Government of India:—

(1) Poly-vinyl Chloride (P.V.C.) Plant of 20 tons per day capacity together with ancillary units for Calcium Carbide and Chlorine/Caustic Soda. For this project, Technical Collaboration Agreements have been entered into by the Company with Shin-Etsu Chemical Industry Co. Ltd., Japan and Mitsui Co. Ltd., Japan.

(2) Rayon Tyre Cord Plant of 4 million Kgs. per annum capacity for the manufacture of high tenacity Rayon Tyre Cord Yarn and Rayon Tyre Cord Fabrics. In respect of this project, the Company has entered into Technical Collaboration Agreements with Chemtex Inc., U.S.A. and Beaunit Mills Inc., U.S.A.



The Government of India have approved of the agreements entered into with the said collaborators.



LOCATION OF THE INDUSTRY

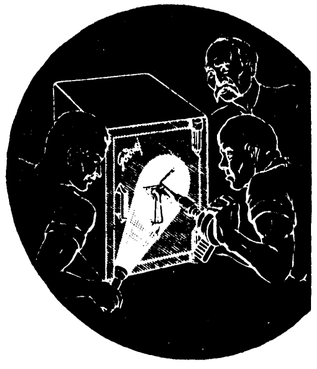
The above undertakings are to be located at Kotah in the State of Rajasthan.

Application forms and copies of the prospectus can be obtained from the Registered Office of the Company or from the Brokers, Underwriters and Bankers to the issue.

Best buy in 1900...

The unequalled superiority of Godrej Safes has been established, as was evident from the fact that in 1912 the Government of India ordered 472 Godrej Safes for the Indian Posts and Telegraph Departments, after subjecting both Indian and well-known foreign-made safes to a severe FIRE-TEST. Godrej have kept abreast of the latest technological developments, and continue to introduce innovations to suit the requirements of the modern age.

...Better than ever today



FIRE AND FALL-RESISTANT

The historic Film Fires in Calcutta, the Cotton Fires in Bombay and elsewhere and many others proved conclusively that Godrej Safes are not only fire-resisting but can also sustain battering falls and keep their contents in good condition. The culmination of the *real ordeal* came during the wartime AMMUNITION Explosions in the Bombay Docks – "worse than the horrors of bombing" – when fires were raging for days together. It was found that *contents of only the Godrej Safes were intact.*

BURGLAR-RESISTANT

During civil commotions and riots – *notably at the time of the partition of our country* – and during many daring dacoities, when Godrej Safes were at the mercy of determined safe-breakers for days together in the remotest areas, the burglars could not succeed!

Innumerable letters of gratitude have been received testifying how Godrej Safes have been responsible for saving the fortunes of countless people. For keeping *your* important documents, currency, jewellery and heirlooms, there is nothing better than a Godrej Safe. Invest in a Godrej Safe today and feel secure for life!

Available in different types and sizes. For further particulars, please write for the illustrated folder to any one of the following addresses :-

New Delhi

CABINET CHANGES: WIDER POWERS FOR FOOD MINISTER

(FROM OUR NEW DELHI CORRESPONDENT)

THE first impression left by the reshuffling of the Central Cabinet is that the ministerial set-up dealing with agricultural production is being completely overhauled. The Presidential order issued on Sunday places Irrigation and Power, and Community Development, under the overall supervision of the Central Minister for Food and Agriculture. This follows severe criticism that agricultural production has stagnated because too many independent authorities have dealt with agriculture. So far, Irrigation and Power, as well as Community Development, were under independent ministries over which the Central Minister for Food and Agriculture had no control. Posts and telegraphs has been carved out into a separate department. The remaining subjects under the Central Ministry of Communications, such as civil aviation, have been merged with the Central Ministry of Transport. In other words, the Ministry of Communications has been abolished; so has the Ministry of Economic and Defence Co-ordination. Following the abolition of the latter, the Supply Department and the Directorate of Technical Development, which so far formed part of it, now constitute two separate departments.

Pending the permanent assignment of portfolios, makeshift arrangements have been made for administrative continuity. The new Central Home Minister, Mr. G. L. Nanda, will remain responsible for Planning and Labour for the time being, and the new Food and Agriculture Minister, Mr. Swaran Singh, will similarly continue to look after the Railways. The Central Law Minister, Mr. A. K. Sen, has been asked to take charge of the Posts and Telegraphs Department in addition to his own portfolio. The Minister for Parliamentary Affairs, Mr. Satyanarain Sinha, has been temporarily allocated the additional portfolio of Information and Broadcasting. The Minister of Shipping, Mr. Raj Bahadur, whose portfolio has been included in the Central Ministry of Transport, will be responsible for the whole Ministry of Transport. The Minister of State in the Central Ministry of Economic and Defence Co-ordination, Mr. J. L. Hathi, has been temporarily allocated the Department of Supply and the Department of Technical Development. Professor Humayun Kabir, meanwhile, will be temporarily in charge of the Ministry of Education in addition to the Ministry of Scientific Research and Cultural Affairs.

IMPORTS

Scope of Liberalisation

Addressing the two-day joint meeting of the Import Advisory Council and the Export Promotion Advisory Council in New Delhi on Sunday, the Central Minister of International Trade, Mr. Manubhai Shah, could not offer hope of any substantial liberalisation of imports in the foreseeable future. He, however, felt that with the increase in non-project aid and the rise in exports, "some improvement may be possible." Nevertheless, he cautioned that defence requirements would get first priority in the allocation of foreign exchange, and any relief that could be given for imports of raw materials and spare parts must necessarily be confined to high-priority industries or export promotion. In this context, it is necessary to remember that the U.K. Government signed an agreement with the Government of India to earmark £4 million out of the £30-million credit for the import of raw materials and spare parts by British-owned or aided undertakings in India. A similar provision has been made by the West German Government out of its credit to India.

NEW PUBLIC-SECTOR PROJECTS

Intermediates, Vessel Plates

The Government of India, it is reported, is trying to revive two still-born projects. The West German Ambassador in India, who is now on leave, may hold discussions with Bayers in Germany for reviving the latter's interest in setting up a plant for the manufacture of intermediates for the dyestuff industry. A State-owned Company, called Hindustan Organic Chemicals Ltd. was incorporated some years ago to undertake the manufacture of the intermediates. At the same time, the Government issued licences to a number of units in the private sector to manufacture several intermediates with the result that the West German collaborators in Hindustan Organic Chemicals Ltd lost interest in the proposed undertaking. The Government is now reported to be making every endeavour to revive the project. Meanwhile, the licensing of new units in the private sector for some of the items proposed to be produced by the State-owned undertaking has been postponed.

The heavy structural and vessel-plate project, proposed to be located in Wardha, has similarly been lying in cold storage due to the foreign exchange shortage. Originally, two units were proposed to be set up, one manufacturing heavy structurals and the other vessel plates. Davy Ashmore Ltd of the U.K. had prepared project reports for the two units. Subsequently, it was decided to have one unit for the combined production of heavy structurals and vessel plates for which another project report, again by Davy Ashmore, was prepared. This was also shelved for want of foreign exchange. Second thoughts favour two units of which the vessel plates project is proposed to be commissioned in two stages. Davy Ashmore has now prepared a third project report for making vessel plates. In its view, the unit will not be an economic one in the first stage, so it has suggested that the whole project should be taken up simultaneously.

This view does not find much favour with the authorities here. Again, the basic problem is that of finance, and the project could go through if sufficient foreign exchange was made available for it.

As far as the making of heavy structurals is concerned, official circles like to approach the Austrian firm of V.O.S.T. which, it is believed, may be persuaded to participate financially in the project. Fresh developments are expected.

PER CAPITA INCOME

The Growing Controversy

Dr. Rammanohar Lohia started a controversy in Parliament the other day by asserting that the average income of 60 percent of the people in India was 3 annas a day. Refuting the allegation, the Central Planning Minister, Mr. Gulzarilal Nanda cited the findings of the National Sample Survey, which indicated that the poorest 10 percent of the population had a monthly *per capita* average expenditure of Rs. 8 in rural areas and Rs. 10 in urban areas or a daily *per capita* expenditure of 4.3 annas in rural areas and 5.3 annas in urban areas. As was pointed out in the Lok Sabha, Dr. Lohia was talking in terms of income and Mr. Nanda in terms of expenditure. Even so, the difference between the two estimates is 1.3 annas a day in rural areas and 2.3 annas a day in urban areas.

The Federation of Indian Chambers of Commerce and Industry later issued a statement, claiming that the figures about the distribution of incomes were "at best conjectures" and those for consumption were more reliable ones. After quoting figures, among other things, on the growth of population, school-going children and hospital beds, the Federation stated that "since the consumption of richer classes of goods and services is not likely to have increased, it follows that there has been an improvement in the quality of living among a wider section of the public."

The distribution of income, meanwhile, is the subject of an enquiry by the Mahalanobis Committee. That some people are eating better food than they did before cannot also be denied. Figures apart, what Dr. Lohia was emphasising was the extent of poverty still existing in India. In a report on the socio-economic conditions of primitive tribes in Madhya Pradesh, an independent body like the National Council of Applied Economic Research has pointed out that "the *per capita* income of the tribal population in the eastern zone was Rs. 171 a year, in the western zone Rs. 162, and in the southern, north-eastern and central zones Rs. 134, Rs. 112 and Rs. 104, respectively. In terms of the *per capita* daily income, the most prosperous zone had an average of 50nP and the worst-off zone 29nP. There was, however, considerable variation in the income level within each zone. The highest *per capita* daily income was found in Bilaspur east—62nP, and the lowest in Raigarh and Betul about 19nP. In contrast, the State's daily average *per capita* income was 71nP. It speaks much for the backwardness of the tribal communities that their best was considerably below the average for the State." Tribal people in Madhya Pradesh, it may be added here, are much better off than those in Orissa or other parts of India.

FERTILISER

Setting up New Plants

The Sindri Fertiliser Corporation has set up a planning and development section. Recently, the latter successfully competed with global tenderers for some units of the Rourkela fertiliser plant. It secured a contract worth Rs. 8 crores. It was able to commission the project in time and effect a saving of Rs. 1 crore in total costs of installing the plant. So the Government has decided to strengthen the organisation with a view to enabling it to design and commission two fertiliser plants a year during the fourth plan period.

The organisation will have to purchase a number of patents and designs from abroad. It will not be a manufacturing unit and will have to buy plant and equipment from manufacturers in India and abroad. In order to encourage their manufacture in India, the organisation has published an exhaustive list of drawings and standardised specifications. There are alternative specifications depending on the type of raw materials used, say, coal or naphtha.

Similar standardised specifications have been prepared for the sugar and cement industries. They are being circulated to the machine-building units and, in particular, to the heavy machine-building factory in Ranchi.

The following fertiliser projects in the private sector have been licensed or approved for their establishment at the following places: (1) Visakhapatnam, (2) Kothagudem, (3) Madhya Pradesh, (4) Hanumangarh, (5) Tuticorin, (6) Mangalore, (7) Durgapur, and (8) Gujarat.

Of these, those at Kothagudem, Visakhapatnam and Gujarat have made some progress. The licensees of the projects at Hanumangarh, Tuticorin and Mangalore have not yet submitted their final proposals on their projects.

The licensee for the Madhya Pradesh project was not able to implement it and has surrendered the licence. The West Bengal Government, in whose name the licence for the Durgapur project was issued, had recently intimated that it was not able to implement the project due to the raw material shortage and difficulties in securing foreign collaboration.

The question of the Government of India taking over any project which is given up by the private sector does not arise, it is explained here. The Government of India has, however, decided to establish a fertiliser project in Madhya Pradesh and has entrusted the work to the Fertiliser Corporation of India. The Government is also examining the question of establishing a project for meeting the fertiliser requirements of West Bengal.

It was agreed between the Japanese and Indian Governments that the foreign exchange cost of the Gorakhpur fertiliser project be financed out of the yen credits made available to India by Japan. Accordingly, the Fertiliser Corporation of India, which is in charge of the project, has recently awarded a contract to a consortium of Japanese manufacturers for the supply of plant and equipment.

SHIPPING

U.K. Shows Interest

Britain is showing increased interest in Indian shipping. Ship Building Exports is a commercial organisation designed to promote the export of ships. One of its directors is due to meet the Director-General of Indian Shipping, Mr Nagendra Singh, next week when the latter visits Brussels.

Meanwhile, Fairfield-Rowan is one of the tenderers for the marine engine project which is to be commissioned in Visakhapatnam.

WEST GERMANY

Investment Guarantee Pact

India's Ambassador to the European Common Market countries, Mr. K. B. Lall, is at present discussing

the investment guarantee agreement with West Germany in Bonn. The agreement is intended to attract West German investment to India.

U.K.

Loan Pact Signed

An agreement for a U.K. loan of £10 million (Rs. 13.33 crores) to the Government of India was signed here last week by Mr. L. K. Jha, Secretary to the Department of Economic Affairs, Central Ministry of Finance, and Mr. R. H. Belcher, Acting British High Commissioner. The loan is part of the offer made by the U.K. Government at the recent meetings of the Aid-India Club amounting to £30 million (Rs. 40 crores) to be committed in 1963-64 as part of its contribution towards the foreign exchange cost of development projects under the third five year plan.

The loan will be used to finance the purchase of a wide range of goods manufactured in Britain. Since it will be disbursed within the next few months, it will be of immediate benefit to India's balance of payments.

INCOME TAX ACT

New Section

The Finance Act, 1963, has introduced a new section, 141A, in the Income Tax Act, 1961, under which assessees who file their returns of income and pay their tax dues before the 1st day of January of the relevant assessment year are entitled to a discount of 1 percent of the tax paid by them. The discount is admissible even in a case where no provisional or regular assessment to income tax is made before the 1st day of January, if the assessee files his return voluntarily before the aforesaid date. Instructions have been issued to the Income Tax Department for rendering necessary assistance to assessees on their request in calculating the amount of the tax due on the basis of their returns of income.

On the other hand, if an assessee does not file the return of his income before the 1st day of January of the relevant assessment year, he will be liable—under the new Section 141A—to pay interest calculated at the rate of 2 percent a year on the amount of tax payable by him for the period from the 1st day of January of the relevant assessment year up to the date of the completion of the provisional or regular assessment of his income, as the case may be. An assessee, who having filed his return of income before the 1st day of January of the relevant assessment year, does not voluntarily pay tax due on the basis of that return before the said date will also be liable to pay interest calculated in the aforesaid manner.

COMPULSORY DEPOSIT

Scope of the Scheme

The Compulsory Deposit Scheme Act, 1963, it is said, applies to the following categories of persons:

(i) persons liable for payment of income tax;

(ii) employees of:

(a) the Central and State Governments, (b) local authorities, (c) companies, (d) corporations (including co-operative societies), and (e) individuals or associations of persons or bodies of individuals liable to payment of income tax and entitled to deduct the salary paid to their employees for purposes of computing their income drawing an annual salary of Rs. 1,500 or above but who are not subject to income tax;

(iii) persons liable for the payment of land revenue;

(iv) persons liable for the payment of sales tax who have an annual turnover of Rs. 15,000 or more but who are not subject to incame tax; and

(v) holders of immoveable properties in urban areas who are not subject to income tax.

The schemes relating to income tax payers and employees have already been brought into force with effect from 1st August, 1963. The other schemes are being considered in consultation with the State Governments and are expected to be introduced shortly.

Except in the case of the scheme relating to employees who are not subject to income tax, all the other schemes are intended to be enforced, as far as possible, through the authorities responsible for the collection of taxes concerned. The scheme for employees will, however, be operated through the employers who are under a legal obligation to make the deduction from the salaries paid by them to their employees.

FOODGRAINS

Building Buffer Stock

The buffer stock of foodgrains is proposed to be built partly out of imports and partly from internal procurement. In the next few years, rice is likely to be imported from the United States, the United Arab Republic, Burma and other south-east Asian countries where prices may be favourable and the quality acceptable. The prices at which rice will be actually imported will have to be negotiated at the time the purchase contract is signed. Internal procurement will be made at the procurement prices for different varieties of rice fixed from time to time.

WOOL

Meeting Defence Needs

Under the state of emergency, the entire woollen industry was geared for defence production. Whatever stocks of wool tops were available were used to meet defence requirements. It was not possible to sanction any yarn quota for civilian production. The woollen mills have since been permitted to use a part of their capacity for meeting civilian requirements and licences for importing raw wool and wool tops have been issued to them.

The requirements of wool for reaching the third plan targets are as follows:

	(In million lbs)
Wool tops ...	32
Raw wool ...	33.7
Rags ...	14

The following additional quantities of wool will be required for defence purposes at the present rate of demand.

	(In million lbs)
Wool tops ...	13
Raw wool ...	18.5
Shoddy yarn ...	16

ALLOY STEEL

Production Target

The sterling group has recommended a production target of 18 million tons of mild steel, 3 million to 4 million tons of pig iron and 1 million tons of tool, alloy and special steels for the fourth five year plan. As for mild steel, the production target is to be achieved by expanding the existing plants and by setting up two new plants, besides Bokaro. The share of the private sector in the expansion will be 2 million tons.

The Government has licensed a capacity of about 600,000 tons of alloy tools, special and stainless steels in the public and private sectors. The present output is about 53,000 tons a year consisting mainly of 29,000 tons of spring steels by six units and 24,000 tons of electrical sheets which are being produced by T.I.S.C.O. An *ad hoc* committee has been set up to explore ways and means of starting the production of low alloy steels in the existing units with minimum further investment in foreign exchange. The conversion of the Mysore Iron and Steel Ltd into an alloy steel plant has also been approved and the terms of technical collaboration have been settled. The conversion programme is expected to commence by the first quarter of 1964 and the ultimate capacity of 77,000 tons of finished alloy steels is likely to be reached by 1966-67.

The contract for the alloy steel plant in Durgapur in the public sector is likely to be signed shortly with a Japanese consortium. Other units in the private sector are also likely to go into production by 1966-67. The Government has so far approved technical collaboration for nine such units licensed for the manufacture of alloy and special steels besides the technical collaboration for the Central alloy steel plant of Durgapur. No technical collaboration is envisaged for five units licensed for the manufacture of spring steels and alloy steel casting as the manufacture of these items does not require the application of technical skills not available in the country.

URANIUM

New Unit Being Set Up

A uranium mill with a capacity of 1,000 metric tons of throughput of ore a day is being set up near the uranium mines in Jaduguda, Bihar State, at an estimated cost of Rs. 4.34 crores. The foreign exchange requirements of the project will be about Rs. 1.20 crores.

TYRES

Plea for Higher Prices

The rubber tyre manufacturers have represented to the Government for an upward revision of prices of their products. The increase has been demanded on the ground of the additional burden of Customs and excise duties, freight and transport charges, Central sales tax, emergency risks insurance, bank interest to cover additional excise financing, etcetera.

SINGARENI COLLIERIES

Share in Equity Capital

The Government of India and the Government of Andhra Pradesh have decided that the existing pattern of participation between the Centre and the State, as far as the Singareni Collieries Company is concerned, in the ratio of 40:60 in the equity capital of the Company, should continue. The authorised capital of the Company is to be raised from the existing Rs. 4 crores to Rs. 9 crores in the third plan in view of the Company's expansion programme. The Central Government has agreed to advance a loan of Rs. 3 crores during 1964-65 and 1965-66 to the State Government to enable it to subscribe for its share of the additional equity capital.

COMMONWEALTH

Finance Ministers to Meet

The Commonwealth Economic Consultative Council will meet in London on 24th September. The meeting, which will be held at Marlborough House, will be attended by the Commonwealth Finance Ministers, who will exchange views on economic matters of common concern, with particular reference to finance and development.

SEWING MACHINES

Raising Exports

An Indian firm has entered into a contract with a West German firm for exporting sewing machines to West Germany at the rate of 1,500 machines a month or 18,000 machines annually during 1963-64; 2,000 machines a month or 24,000 machines a year during 1964-65; and 2,500 machines a month or 30,000 machines a year during 1965-66. Thus the total supply during the three-year contract will be 72,000 sewing machines.

SUGARCANE

Cost of Research

The following table will show the amount of sugarcane cess and purchase tax collected and the amount spent for the development of sugarcane during 1962-63 in various States:

State	Sugarcane cess and purchase tax collected	(In Rs. lakhs) Amount spent for developinent and research on sugarcane
Uttar Pradesh	660.83	126.29
Bihar	124.48	30.87
Punjab	12.00	8.59
Maharashtra	160.76	30.56
Madhya Pradesh	0.59	3.07
Andhra Pradesh	130.18	40.27
Madras	20.92	14.36
Mysore	—	—

It will thus be seen that the sugarcane cess, originally intended to improve the quality and yield of sugarcane, is being largely used to finance the ways and means expenditure. It is the Centre which is called upon to foot the bill for sugarcane research.

CHROME

Export Prospects

In the chrome market, India had been facing competition from the Philippines, Turkey and Rhodesia. Russia is also emerging as a new competitor. In fact, the demand from overseas is selective for high-grade chrome ore.

KYANITE

Export Promotion

The export of kyanite continues to be decontrolled as a measure of export promotion. The overseas demand is mainly for Lapse Baru kyanite, the main producers of which are Messrs Indian Copper Corporation, Calcutta, and Messrs Kharswan Mineral, who export their entire production. Even the foreign market for Lapse Baru kyanite is in danger of being lost as a cheaper substitute called Mullite, which is a synthetic kyanite is increasingly being developed in the U.S.A. Another factor which is responsible in restricting the demand for Indian kyanite is the high freight rates. South Africa and Kenya—India's competitors in this item—enjoy some advantages over this country.

E.R.I.C.

Progress Achieved

During the short span of its existence, the Export Risks Insurance Corporation has prepared a wide range of policies to suit the varying requirements of exporters and to provide for differing patterns of trade. These are the following:

(i) *shipments (comprehensive risks-political risks) policy*, and (ii) *contracts (comprehensive risks-political risks) policy*:

The first set of policies covers the risks of the insured from the date of shipment, whereas the second category of policies protects his interests from the date of the contract. In either case, the exporter may seek a cover for "commercial" as well as "political" risks. But he has also the option to secure himself only against "political risks" if he so chooses. Ordinarily, the Export Risks Insurance Corporation does not indemnify the exporter for losses incurred on account of "quality" disputes. However, in view of the difficulties experienced by Indian exporters—specially the small exporters—the Corporation has undertaken to cover non-acceptances" risks, provided the goods have been subject to preshipment inspection.

(iii) *Packing credit policy*: This is a relatively new policy. It is designed to help the exporter to secure a line of credit from banks for the purpose of buying, processing and packing goods destined for the export market. Often, exporters have firm orders in hand for the finance of which they need credit which is in excess of the bank's normal rating of their capacity. In such an event, the Corporation is ready to step into the breach and, for a nominal premium, share the risk equally with the lending banks.

(iv) *Manufacturers' credit insurance policy and (v) exporters' credit insurance policy*: Quite frequently, exporters have to supply their goods to overseas buyers on credit terms. In order to replenish their resources, the exporters have to have recourse to their own suppliers for similar credits. Conversely, exporters may have to finance the supplier to produce the goods due to be exported. In either event, credit risks would be involved which, however, the Corporation is able to underwrite.

(vi) *Market development policy*: The Corporation has also introduced a policy to assist Indian exporters to survey new markets, conduct advertising and sales promotion campaigns. If the expenses of the survey, etcetera, are not recouped by the exporter, in accordance with the findings of the survey, within a given period, the Corporation would share the loss with the exporter on a 50:50 basis.

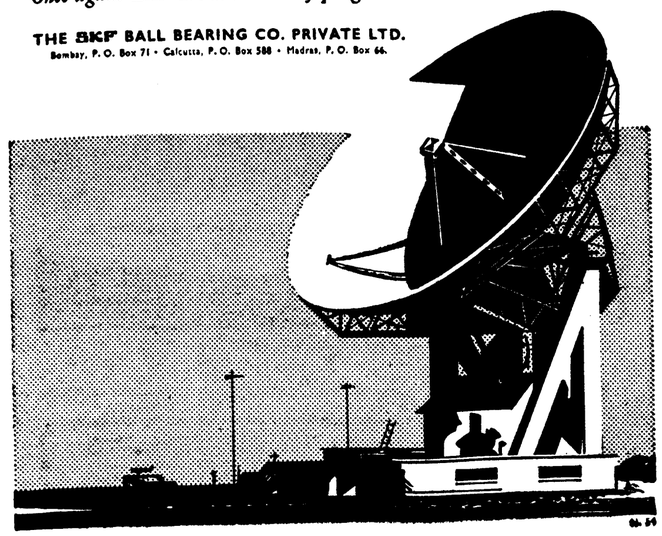
In spite of the many facilities offered, export risks insurance is still in its infancy in India; and it suffers from the same prejudices which have inhibited the growth of other forms of insurance in the early stages of their development. The value of the risks covered during the course of 1962 was of the order of Rs. 20.70 crores, which corresponds roughly to about 3 percent of India's exports. But nearly 50 percent of India's export trade is in the "traditional" items, in relation to which Indian exporters have well-established connections and, therefore, do not feel the need of credit insurance so keenly. A great bulk of India's export trade is also done against letters of credit or is between "associates". If due allowance is made for these transactions, then it could be said that the Corporation covers some 8 percent of the normal insurable risks. From this standpoint, its performance compares well with that of its counterparts.

L.I.C.

Rise in Business

The Life Insurance Corporation of India has entered into the eighth year of its operation on 1st September, 1963. To mark the occasion, Mr. B. K. Kaul, chairman of the L.I.C., has invited members of Parliament to a special exhibition and film show depicting the rôle of life insurance in the life of the individual and the family as well as in the economy.

The Corporation which started with 200 offices in 1956 has now over 700 branches, sub-branches and development centres dotted all over the country servicing over 9 million policyholders. It wrote new business worth Rs. 745 crores in 1962-63, covering an additional 1.7 million policyholders.



In rural areas, the Corporation has in 1962-63 succeeded in getting over 38 percent of new business from these parts. Following the census definition (rural areas being those places which have a population of 5,000 or less), the L.I.C. has succeeded in making more progress in creating insurance-consciousness and building up a favourable image of life insurance as an essential protection for the family.

Transatlantic television and SKF

The successful reception and transmission of transatlantic television by the G.P.O. radio telescope at Goonhilly Downs (England) is dependent on the precision tracking of the 'Telstar' satellite. The telescope is rotated on rollers which incorporate 108 SKF spherical roller bearings and is centred on a fixed vertical post by two spherical roller bearings. SKF bearings are also fitted to the gearboxes.

Once again SKF *are at the hub of progress*

London

IMPLICATIONS OF SHIFT WORK IN INDUSTRY

(FROM OUR LONDON CORRESPONDENT)

DURING the last couple of years, the study groups which were set up to carry on the work initiated by the Duke of Edinburgh's Study Conference held in Oxford in 1956, have been examining the social and industrial implications of shift work. As a result, proposals have now been put forward on how the life of the shift worker can be made more pleasant. In a survey of the question, recently published by the Industrial Welfare Society, a summary is available of the often conflicting views of the study groups. On a matter of such intimate concern to a man and his family as the hours during which he works, it was to be expected that the expression of individual preferences would lead to differences of opinion. It is obvious, however, that shift work is a subject of lively and personal interest to a large and increasing number of people in industry, and that the social effects flowing from it should be a matter of concern to the whole community.

The eight-hour day in daylight hours as the normal pattern of work is largely an invention of the industrial revolution. In the eighteenth century, many people worked all sorts of hours—in agriculture, in personal service, and in cottage industry. To some degree, the regulation of hours which was once absolutely necessary to prevent exploitation of labour, has straitjacketed society into a pattern of work which maximises transport and recreational peaks and also makes life difficult for the minority who work different hours. This minority is now, perhaps, growing again, partly from shift work, partly from the growth of services concerned with recreation—not only seaside resorts, but radio and television staff, the Press, air transport. Will this tendency continue? Will it be possible to let people choose more freely when to open their shops or run their transport? What are the present reasons for and effects of shift work, and should society endeavour to oppose it as a social evil, adapt to it as a necessity, or favour it as a "good thing?"

According to the Ministry of Labour statistics for 1960, there were then approximately 2 million workers in Britain working on a shift system. The majority of the reports agree that shift work has increased over the last ten years and is likely to increase still more in future. One Group, however, discerns a tendency for shift work to decrease as companies obtain greater floor space to enable more work to be transferred to day shifts. Two immediately obvious reasons are given for the increase in shift work:

(a) the growth of continuous process industries whose very nature demands a continuous shift system;

(b) the heavy increases in expenditure on capital equipment which have shifted the balance between the cost of labour and of capital equipment and made the maximum utilisation of equipment essential.

In some cases, the shift pattern is a traditional one; in other cases a factory moving into an area would adopt the shift pattern already being used in similar industries in the area. In general, production needs decide the type of shift working to be used, and the wishes of labour decide the details. Where it is decided to introduce shift work into a factory previously working days only, or to change an already existing shift system, there will almost invariably be joint consultation with the labour force *via* the trade unions or works councils. There is little evidence of formal consultation with management staff, although it is likely that in most cases, this takes place on an informal basis.

The overwhelming majority of workers prefer day work and can only be induced to accept shift work with its disruption of social life if they receive adequate compensation in terms of an increase in wages. Generally speaking, the introduction and maintenance of a shift system is not regarded as a major cause of difficulty in human relations. Much will depend on the sort of case which management has for introducing it in the first place. When once he is used to working a particular shift system an individual tends to be very conservative and to resist change. He does not like the idea of changing his pattern of life.

Human Relations

Once shift work has been established, various problems may arise in the sphere of human relations. Absenteeism and sickness, particularly on the night shift, may disorganise shift crews and it may be difficult to find replacements. Perhaps the major problem which arises for management in operating a shift system is that of communication. First, there is the problem of passing on clear instructions from one shift to another, and of communication between shift management generally and the management working normal hours. Poor communication between shift supervisors can be a frequent cause of misunderstandings leading to production hold-ups. Those whose duty it is to pass on information or instructions must, therefore, be trained to do so fully and clearly. The second problem which arises is that of communication between management and the operatives themselves. Failure to establish good communication creates discontent; those on shift work feel that they are not being kept in the picture and that they are regarded as relatively unimportant.

No clear answer emerges from the reports as to whether or not there is a difference in productivity between day and night shifts. In highly automated continuous process plants, the human factor is reduced and during normal running there will be no difference; if, however, serious operating troubles occur there is a difference. Fatigue makes it harder for the night shift to assimilate a series of facts, and come to a clear decision. The temptation is to let things drift in the hope that nothing will go wrong until the maintenance team arrives in the morning.

Effect on Health

A number of groups investigated the effect of shift work on health. A works doctor expressed the opinion that it had no effect on the average man though certain people who already had weaknesses, such as gastric trouble, found that these complaints were aggravated. Nevertheless, it is clear that there are a number of side effects which bear on a worker's efficiency. This problem of adjustment is a vary real one both for the individual shift worker and for management. Failure to adjust properly can result in absence, poor work, frequent accidents, constant fatigue and labour disputes.

In spite of the difficulties over sleeping and eating, it appears from the reports that many, perhaps the majority, of workers adjust themselves to the changing pattern of shift work without too much difficulty. They are, however, more susceptible to fatigue than day workers, and this was thought by some groups to increase the risk of accidents. Incidentally, there is general support for the view that industrial fatigue is due to the type of work; people get more tired with little work to do or with a monotonous job than if they are reasonably busy on shifts. As a steel worker puts it—"The boredom entailed makes Dante's Inferno look like a holiday camp."

Opinion is unanimous that if day work of comparable interest and of similar pay to shift work is available it is far more popular. It is thus necessary to pay shift workers at a significantly higher rate in order to attract them. Many people are prepared to accept lower earnings in order to get day work. The reasons most commonly given for dislike of shift work are:

(a) the dislocation caused to family and social life;

(b) the difficulty of sleeping by day;

(c) the effect on health;

(d) the fact that many landladies will not take boarders on shift work.

The changeover from days to shifts does generally cause a loss of labour. The amount will depend to a large extent on the circumstances existing in the area at the time of the change, *e.g.*, on the alternative day work available and the amount of overtime. It is generally felt, however, that provided the differential is sufficient, the changeover goes smoothly and if the reasons have been carefully explained beforehand, the loss of labour need not be significant.

Preference for Work

The overwhelming majority of workers questioned expressed a preference for day work as opposed to shifts. It was quite clear that they regarded shift work as an abnormal way of life and it appears that the habit of the eight-hour working day in daylight hours has become so ingrained in the national character that it has become difficult for many people to accept as natural as any other way of working. The statement that day work is a normal way of life occurs time and again. Most of the wives are, if anything, more strongly opposed to shift work than their husbands.

While there is general agreement that the variation of hours week by week upsets the family pattern, it is clear from the reports that many, probably the majority of shift workers and their families, manage to adapt themselves satisfactorily. As one report says, "It is amazing to what lengths families will go to combat their difficulties." The opinion was widely expressed that while there were obvious domestic disadvantages to shift work, many of these were also shared by the day worker on overtime, and the shift worker received a number of compensating advantages.

It is important to realise that shift work is by no means a new development. There is a long tradition of shift working in certain industries, and what has happened recently is no more than an extension of shift work to a large number of other industries. Secondly, it has come to stay, and probably on an increasing scale. This increase will bring with it various ancillary advantages to the community—reducing traffic peaks at the beginning and end of the working day, spreading of the load on services, reducing the congestion on the roads at week-ends.

Various obstacles exist to the extension of shift work which can only be removed by legislation, but there are a number of problems which must be dealt with by managements when considering the introduction of shift work. Above all, management must realise that the change from day work to shift work is a major undertaking and successful introduction, therefore, takes considerable time and much patient preparation.

When shift workers were in a minority it was perhaps natural that they should feel that their special circumstances were left out of account by the community. From current evidence it is clear that a positive and realistic approach to meet the human needs of the shift worker and his family is now required. It is not possible here to do more than indicate briefly some of the matters to which thought needs to be given, but more will be required than the provision of entertainment, facilities for social life, or transport at times of day suitable for shift workers.

In new housing in industrial areas, part of the house should be insulated as far as possible from etxraneous noises so that night shift workers can sleep in daytime. This also makes even more necessary the provision of a larger number of safe play areas and nurseries for young children so that they can be got away from the house or the street outside. Abatement of noise assumes an added importance.

Jute

D.I.R. OF LITTLE HELP FOR SUPPORTING FIBRE PRICES

ADDRESSING the Congress Parliamentary Party's standing committee on Food and Agriculture in New Delhi last week, Mr. Manubhai Shah, Central Minister for International Trade, said that the Government "will not hesitate to invoke the provisions of the Defence of India Rules against middlemen attempting to corner raw jute at lower than prescribed rates." The Government seems to expect that this threat will have a salutary effect on the market.

Against compulsory stocks equivalent to 20 weeks' consumption, mills have now been asked to hold at least seven months' stocks. The State Trading Corporation will buy 1 million bales to 1.5 million bales during the current season from 400 purchase centres. Besides, its peripatetic representatives will be posted in the interior areas to study the difficulties of jute growers. It is planned to ensure a minimum cash price of Rs. 23 to Rs. 24 a maund to the cultivators.

Jute circles in Calcutta do not see how the Government can effectively use the provisions of the D.I.R. to ensure a fair price to the grower. Those acquainted with the trade know that about 75 percent of the total crop is sold by growers at their door to *farias, beparis* and peripatetic middlemen engaged in the trade either on their own account or on behalf of stockists, balers, mills and mill agents in the secondary markets upcountry. Sellers at the primary level include about 400,000 jute and mesta growing families.

The village middlemen constitute the first link in the long chain of marketing. They do not maintain any record. No Government machinery can be devised to keep an effective check on the transactions done by them or by the growers. Besides, the supply of and demand for jute, as also the holders' sustaining capacity at a particular time, and a host of other unforeseeable factors determine the price at which a transaction takes place. Balers, stockists or mill agents functioning in the secondary markets can easily inflate their purchase accounts by manipulating receipts and vouchers, which are too numerous to be verified. There are also chances of malpractices in the Calcutta markets. It is felt that the use of the D.I.R. would be futile. It would encourage manipulations and corruption in the trade and among officials.

Purchase Quota for September

A purchase quota of 750,000 bales has been fixed for September by the Jute Commissioner. Of this, members of the I.J.M.A. will lift 700,000 bales and others 50,000 bales. With this quota, the total for this season comes to 1.84 million bales, out of an officially estimated jute and mesta crop of 7 million to 7.2 million bales. Some 1.7 million bales will go to the I.J.M.A. mills and 140,000 bales to the others. With the issue of the September quota, prices, which tended to sag during the last week of August, have looked up. Sellers seem to have been reassured and even weak holders have realised a higher price—around the minimum level. Considering that there will be heavier arrivals from this month onwards, it remains to be seen how long the mills can continue to sustain prices. Besides mills stocks, the Jute Buffer Stock Association has a carryover of 750,000 bales of the old crop. If the J.B.S.A. is to operate in the market during the current season, this carryover has to be disposed of at an early date.

Apart from the monthly quotas, small purchases have been made by jute co-operatives in the rural areas. There are 32 such co-operatives in West Bengal, 17 in Bihar, nine each in Assam, Tripura and Orissa and five in Uttar Pradesh. They are expected to lift more than 300,000 bales this season, against 80,000 bales bought during 1962-63. Although the total offtake is only a small fraction of the entire crop, it is claimed by the Government that, by operating in a sagging market in the interior, the co-operatives have helped tone up the trend.

Harvesting has been practically completed in some areas and daily arrivals in Calcutta have increased to 150,000 maunds. Rural jute co-operatives have not yet entered the market, but the machinery is being geared for work. The S.T.C. too is out of the picture.

Higher Wages Recommended

The Wage Board for the Jute Industry, it is reported, has recommended higher wages for workers and clerical staff, which will cost the industry an additional Rs. 3 crores or so a year. The Board has recommended proportionately larger benefits, amounting to about Rs. 130 a year, to the lowest paid employees. Other recommendations include the linking of dearness allowance with the cost of living index and the grant of an annual bonus. The first bonus, amounting to half a month's pay for clerical staff and two weeks' wages for workers, may be paid before Pujas. The Board has also suggested that the percentage of permanent employees to the total staff should be raised from the present level of 65 to 80 and that piece-rate workers should be assured a minimum earning. The report was signed on Saturday and submitted to the Central Labour Ministry early this week. Subject to ratification by the Government, the recommendations will be operative all over India. It may be recalled that the Board was set up in 1960 with representatives of employers and employees and two independent persons as members. Mr. L. P. Dave was its chairman.

Pakistani Jute for Indian Coal

Pakistan has agreed to supply raw jute, jute cuttings and raw cotton to India according to her requirements under a new trade agreement between the two countries signed in Karachi last Sunday. In exchange, India will supply 1.56 million tons of coal and 50,000 tons of stone boulders a year. The agreement, which replaces the 1960 trade pact, is tenable for two years initially. It may be extended for another year unless either party gives notice of termination three months before the date of expiry. A joint *communiqué* issued by the delegations of the two countries says that an expansion of trade envisaged under the agreement is reflected in the large number of goods included in the schedules of exportable commodities from either country.

Package Development Programme

It is reported that the Government is thinking of drawing up a package development programme for jute. So far, U.S.A.I.D. assistance, and also technical guidance by a pool of T.C.M. and Ford Foundation experts, has been used for the intensive development of important food crops in selected districts. A fair percentage of the Rs. 4-crore Special Jute Development Fund, recently set up by the Central Government, may be earmarked for financing the package programme.

A tentative plan has been drawn up by the authorities. It is likely to be discussed soon at a high-level conference of Central and State Government representatives. The total area for intensive development under the programme will cover about 30 percent of the all-India acreage. The plan envisages intensive development of five or six jute-growing districts all over India. In selecting the districts, special attention will be given to such factors as the concentration of jute cultivation, the yield resulting from evenly distributed rainfall and fertility of soil, natural facilities for retting, etcetera. The programme will include the provision of facilities, equipment, quality seeds and fertilisers to farmers in the selected zones.

THE JUTE MARKETS

Manufactured Goods: In spite of overseas enquiries and business being poor, gunny prices showed a hardening trend in Calcutta during the past week. In the spot market, sentiment was helped by the anxiety of shorts and shippers over the rising trend in the fibre market. So mills could transact moderate local business right up to June 1964 at higher prices. Reports of freight bookings indicated smaller shipments during the first half of September. The overseas business done during the week included the sale of moderate lots of woolpacks and cornsacks to Australia and small lots of hessian to the U.S.A. and the Argentine. Turnover was moderate and the undertone firm at the close. In the futures market, all due-date transactions passed off smoothly. Hessian and sacking for November delivery enjoyed brisk support on speculative buying. Opening with a small loss, on profit-taking, sacking picked up momentum on bear-covering and closed with a fair gain after fluctuating between wide limits. Hessian followed suit and closed firm with a sizable gain over the previous week's level. Turnover was fair and the undertone steady at the close.

Wednesday's quotations were as follows:

	Sept.	Oct.-Dec.	Jan.-Mar.	Apr.-June
40in 7½oz.	36.05	36.15	35.65	35.45
40in 8oz.	38.80	—	—	—
40in 10oz.	49.40	48.65	47.70	47.50
B Twills	112.60	113.55	113.10	112.60
Cornsacks	115.75	116.25	115.70	115.00
Heavy Cees (Plain)	112.60	113.25	113.00	112.60
A Twills	134.50	136.00	135.75	135.00
Liverpools	126.50	126.50	126.50	126.00

Raw Jute: Opening on a subdued note because of the increasing arrivals of the new crop in the upcountry centres, the fibre market firmed up on the announcement by the Central Minister for International Trade that the Government would not hesitate to use its powers under the Defence of India Rules to support jute prices. When the Jute Commissioner issued the purchase quota for September, sellers turned reserved and prices rose to around the minimum levels. Scattered transactions took place with weak holders in small lots of selected fibre. Mills did not commence their purchases against the September quota. But ready stocks of selected fibre commanded a small premium. In the futures markets, Upper Assam White Bottoms for September moved within the narrow limits of Rs. 30.20 and the minimum level of Rs. 30, closing at the latter level after a small turnover. A firm trend in the spot market stimulated interest in December contracts. Opening at Rs. 30.70 they moved up to Rs. 30.88 after fluctuating between Rs. 31.20 and Rs. 30.70. Turnover was moderate and the undertone steady at the close. All due-date transactions passed off uneventfully.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md
Assam-Agartala Jute	80.38	30.00	80.38	30.00
Northern Jute	79.04	29.50	79.04	29.50
Western Desal Jute	73.68	27.50	73.68	27.50
Selected Daissee	88.41	33.00	85.74	32.00

Bihar Dist.	61.62	24.00	66.98	25.00

THE U.K. JUTE MARKETS

ACTIVITY IN FIBRE RESTRICTED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan remained quiet during the past week with little buying interest shown. As far as Dundee spinners were concerned, their business in raw material was confined to small quantities. There was every indication that this type of buying would continue until the full weight of the crop came on the market. Most grades of the fibre were available at under minimum export rates, although there were one or two shippers refusing to break the official prices.

Most of the business which took place in raw jute was on bids from spinners. The prices paid were generally at less than the sellers' quoted rates and this made the position here very irregular. Dundee spinners were not interested in groups, but they were obtaining good single marks at low prices.

Offers were made at £125 for Mill Firsts, at £107 for Mill Lightnings, at £93 for Mill Hearts and at £80 for Grade Hearts, c.i.f. U.K., for August-September shipment. Grade Tossa-$\frac{3}{4}$ was named at £117 and Grade Tossa-$\frac{4}{4}$ at £106 10s. Dacca Tossa-5 ranged from £118 and Dacca Tossa-6 from £108. There were still sellers of Outport Tossa-$\frac{3}{4}$ at £95 10s and of Outport Tossa-4 at £85 10s. September-October. Cuttings remained quiet at £56 for S.N.C. and at £46 10d for N.C.

The Siam jute market was quiet as no buying interest was shown in this class of fibre. Grade A was offered at £69 and grade B at £65, delivered mill Dundee for November-December shipment.

The Calcutta goods market remained steady during the past few days. Little or no buying interest was shown in the U.K., although prices appeared attractive, especially for early shipment. Quotations were at 72s 3d for 40in. 10oz. and at 53s 9d for 7½oz. a 100 yards f.o.b. Calcutta

for August shipment, at 72s 6d and 53s 9d September and at 73s and 54s October-December. B Twills were at 169s 3d, 170s 6d and 172s 3d for the respective shipment periods.

Prices of Dundee yarns and cloth were very firm and it was expected that certain descriptions would become dearer. Spinners and manufacturers were very busy and had nothing to sell for reasonably early delivery. Some substantial orders were received for carpet yarns and there were instances where contracts had been placed for delivery one year ahead. The wide cloth for the carpet industry was also very busy. Orders for light weight hessian were received for forward delivery.

The heavy end of the trade was well placed with manufacturers of sackings and tarpaulins more or less fully booked for the remainder of this year. At present, the Dundee jute industry was very busy, and there was every reason that this satisfactory position should continue into 1964.

THE PAKISTANI JUTE MARKETS

ARRIVALS INCREASE

(FROM OUR DACCA CORRESPONDENT)

THE rate of arrivals of loose jute at most centres increased last week, but the peak had certainly not been reached. Probably because of this, reports were appearing to the effect that the size of the crop is too small to satisfy demand. When one considers a carryover of about 1 million bales, not to mention large stocks in Europe, this theory is hard to believe. The market remained extremely irregular. The quality has been fair to poor and condition good. Prices, however, have varied tremendously. There are areas where jute is being sold above the minima. This is particularly true of tossa probably because not all areas have harvested the tossa crop yet.

In other areas, white jute is being disposed of at what can only be called distressed prices. The tossa crop coming in at present consists unfortunately once again of as much as 50 percent Outport Tossa 2/3. If the early arrivals have so much, then this could be another season with high standards of Outport Tossa 2/3s. In the Sirajgang-Sarisabari area, the rivers have risen unusually and some premises are flooded. At this time of year, however, this should not affect the crop.

In the pucca bale market transactions on a limited scale continued at unchanged levels. There was a fair demand for genuine jat Mill Hearts at higher prices.

In the overseas market there was a little more activity in the lower levels. Perhaps the smaller balers have been finding it difficult to find the means to bridge the gap between the E.P.C. minima and the market. Otherwise, prices remained more or less unchanged and most balers appeared to have decided that there would be no more change in the jute policy this season and they must make the best of the rather difficult conditions.

With everybody selling so far below the minima, it is possible that the unexpected will happen, namely, that taking everything into consideration, some balers will find themselves with no profits on their books this season. Strengthening this opinion is the fact that there is reason to believe that at least, locally if not overseas, the prices of better quality jute will rise, especially of white.

INDIAN PLANS: PROGRESS ACHIEVED

Indian Plans: A Generalist Approach. By K. N. Bhattacharyya. (Published by Asia Publishing House, Calicut Street, Ballard Estate, Bombay. Price Rs. 15, pages 195.)

Professor Bhattacharyya introduces to the reader the basis of planning in India, its aims and purpose, the method of implementation and the financial implications of the successive five year plans. Unlike planning in totalitarian countries, planning in India leaves scope for private initiative and enterprise, but controversy on the dividing line between the two sectors still persists. Each five year plan is to be examined against the long-term objective of increasing the *per capita* income by 100 percent within 25 years, *i.e.*, by 1977. The author regrets that this is often overlooked by critics. "In India, planning with a long-range perspective is yet to become a familiar notion. The accent is very much on, and leans heavily towards, the attainment of short-term results. This obscures the main issue that economic development is essentially a long-term problem, and planning for a short period is to be viewed in the perspective of results to be attained over long periods ahead."

The author admits that there are shortfalls and drawbacks in the implementation of the plans, but he appears to believe that on the whole, the progress has been satisfactory. The food problem, in the face of the rising population at a rate exceeding 2 percent a year, is still serious. Unless this is solved, a sound structure for the economy cannot be laid.

The book is intended for general readers but useful statistical materials are given in the appendix. One, however, feels that the author's treatment of the plan in the context of the Chinese aggression is rather inadequate.

COMPANY NEWS

Company News and Notes, Volume 1. No. 19. (Published by the Research and Statistics Division, Department of Company Law Administration. Price Rs. 3.)

This publication incorporates all the circulars and interpretations of the Department of Company Law Administration issued during the period 1st October, 1962 to 16th June, 1963. Previously, the Department used to bring out a cyclostyled bulletin for the purpose, which could not fully satisfy the demand, and many subscribers had often to go without their bulletins. The printed version is meant to remove that complaint.

THE CUSTOMS LAW

The Customs Law—Valuation Provisions. By W. Kraft and A. F. Meyer. (Published by the authors and available from principal booksellers. Price Rs. 5, pages 52.)

Books written by legal practitioners in India on various aspects of the local law are generally welcome for two reasons. Firstly, since a lot of the legislation as well as the amendments have been enacted only recently, the literature on them, if it exists at all, is scanty. Secondly, the books are often down-to-earth and practical; they are not usually overburdened by the case law of foreign countries. The brochure on the valuation provisions of the Customs law, written by Messrs Kraft and Meyer, has both these merits, apart from being a competent and scholarly analysis. It is divided in two parts. The first part incorporates the historical background to the development of *ad valorem* duties in the Indian Customs law while the second part contains an analysis of the valuation provisions of the Customs Act, 1962. The valuation provisions of the Act, which replace those of the Act of 1878, are intended to implement the provisions of the General Agreement on Tariffs and Trade. But this has been done in a manner rather different from that adopted in the Brussels Convention of 1950. The brochure contains a useful appendix embodying Section 14 (1) of the Customs Act, 1962, as well as the Customs Valuation Rules, 1963.

MANAGEMENT TRAINING

Management Development—A Survey of Practices in Calcutta. By Mary Cushing Niles. (Published by the Calcutta Management Association, 9 Syed Amir Ali Avenue, Calcutta 17. Price Rs. 5, pages 33.)

Developing a Personnel Policy. (Issued by the Calcutta Management Association, 9 Syed Amir Ali Avenue, Calcutta 17. Price Rs. 5, pages 34.)

The shortage of trained managers is one of the crucial problems facing India. The Calcutta Management Association and some educational and training institutions have made some contribution to increasing the supply, but a solution of the problem will admittedly require greater efforts. The Association asked Mrs. Niles to make a survey of management development in a cross-section of Calcutta companies. Her findings are included in this well-written pamphlet which discusses, among other things, what management development is and how it is carried on. The other pamphlet discusses an equally important subject, namely, various considerations in developing a personnel policy which were discussed in a two-day "workshop" in September last year. Both the pamphlets cover many interesting aspects of management education in India.

U.K. FIRM COMPLAINS AGAINST CUSTOMS

(BY A SPECIAL CORRESPONDENT)

A STRONG complaint against the Indian Customs authorities has recently been made by a U.K. firm which shipped a consignment of wool rags to India. The firm says that the order with India was for a certain range of material, comprising one standard quality. In this particular instance, when the Customs authorities refused to allow 5 tons through, the consignment concerned was part of a large quantity. The Indian Customs officials stated that they had taken a test of the sample and found that it comprised 75 percent cotton and 25 percent wool. The firm requested that two other tests should be carried out, but the Customs made only one more, saying that results were still the same.

At the time the goods were despatched from Britain, a sample was submitted to the Bradford Conditioning House and the test there showed a content of 2.8 percent cotton and 97.2 percent wool. To cover themselves, the Customs officials in Bombay then alleged that the seal of the Bradford Conditioning House certificates had broken in two, and that the firm had probably transferred another sample in place of the original sent to the Bradford Conditioning House. This sample, together with the invoices, came by airmail. The conclusion is that the seal, which is rather large, became cracked during postage. But even then it would have been impossible for the sample to have been taken out, unless the seal was completely smashed. The Customs officials, for an unknown reason, were determined to cause bother.

The firm's representatives asked if these goods could not possibly be let through, because of the expense of the freight, but met with an adamant refusal. Meanwhile, a new law had been passed whereby the cotton content (of imported goods) was not so severe, and, in the firm's opinion, the goods could have been admitted. In the light of this new situation a further request was made, but it again met with a refusal.

The firm says that as far as the wool content was concerned, it was right in every respect, but it still had to get the goods transported back to England at considerable expense, as the freight costs to India had already been paid. The total cost amounted to 3d a lb each way. In addition, the Indian Customs levied a fine, which the firm had to pay in order to get the consignment back.

When the goods arrived in the U.K., two directors of the firm went to Liverpool personally to draw a sample, which they submitted to the Bradford Conditioning House for a further test. Again it showed a content of 97.2 percent wool and 2.8 percent cotton. Moreover, on arrival of the goods in Batley, they were again tested and the result was the same. These were then carbonised and the total loss was under 10 percent. (This included any dried-in weight of natural moisture, which exists in all materials.) The firm is prepared to stake its reputation that anyone in Yorkshire, or anywhere else in the world for that matter, would have passed the goods as super material.

This matter has been reported to the National Wool Textile Export Corporation, which has done everything it could to see what redress the firm could get in the matter. In addition, the firm has taken the matter up with the Indian High Commissioner in London, but to-date has received no reply. The matter has also been reported to the Board of Trade.

The only conclusion the firm says it can draw is that anyone exporting in that direction (of India) must be very careful about the way he handles orders.

Tax Burden on Tea Increasing

(BY A SPECIAL CORRESPONDENT)

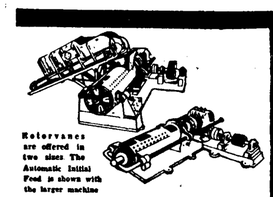
THE Indian Tea Association (London) held its annual meeting at the end of July. The proceedings of that meeting have been well publicised. Tea investors will find some interesting points in the chairman, Mr. H. N. Thomas's address. Mr. Thomas said that higher costs gave them the utmost concern. The last Budget had imposed fresh and heavy burdens and the inflationary effects must inevitably increase their costs and the cost of living.

This matter of costs has been repeated frequently during the past year, but unfortunately, it remains a matter on which this valuable industry and employer of labour may sink or swim. It will be something of a shock to shareholders in tea companies working in Assam to learn that in addition to the super profit tax, the past year has witnessed increased costs for producers under the following heads: (1) the Emergency Risks Insurance Scheme, (2) subscriptions to the National Defence Fund, (3) the Assam Passenger and Goods Taxation Act, 1962, (4) a substantial increase in Assam Agricultural Income Tax under the 1963-64 Assam Budget, (5) a worsening of the rice supply position; (6) under the Labour Plantation Act, the Assam Government has recently announced a further substantial improvement in the standard specification of labourers' houses estimated to cost 50 percent more, (7) the Wage Board is having sessions and final recommendation may be expected before the end of 1963.

On top of all these, comes bonus provisions which have been agreed for a three year period. But bonus for 1962 will be payable next year. Add to above the higher trend in the cost of all supplies due to the import shortage and inflation, and it will not surprise anyone to learn that tea producers are exercised about increasing demand for the commodity so as to maintain a profitable price level.

Negotiations to renew crop restrictions have had negative results to date and climatic conditions cannot be counted on indefinitely to keep production from increasing.

Commonwealth Output of Metals Rising



THE Commonwealth has increased its proportionate contributions to world mine production of aluminium and copper since 1949, and has fairly well maintained its shares of output of the other three chief non-ferrous metals, so that it now mines over a third of the world's bauxite and tin, more than a quarter of the copper and over a fifth of the lead and zinc. These are among the points made in *Non-Ferrous Metals* published recently by the Commonwealth Economic Committee. This addition to the Committee's established commodity series of volumes is the second of a new range of reviews which are being prepared in response to the desire of Commonwealth Governments that the Committee shoud keep under survey the significant trends and developments since their 37th report, *A Review of Commonwealth Raw Materials.*

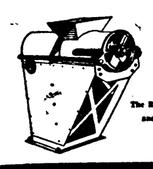
The new publication shows that recently completed and planned projects will ensure that the Commonwealth remains in the forefront of non-ferrous metal development. For example, Commonwealth aluminium capacity will expand greatly during the next few years on completion of new plants in Australia, Ghana, Canada and India. A new copper mine is being opened up in Northern Rhodesia and further expansion of the Mount Isa copper field in Australia is due to take place within the next two years. New lead-zinc smelters of the advanced British I.V.F. type have come into operation since 1960 in the United Kingdom, Australia and Rhodesia, and another is planned for Canada. The first two Nigerian tin smelters, capable of dealing with the country's entire mine output, began to operate in 1962 and a third tin smelter is planned in Malaya.

Non-Ferrous Metals says that world mine production of the five metals has risen at widely varying rates since 1949, reflecting differences in the pace at which commercial demand has expanded and to some extent the amount and timing of strategic stockpiling. By far the steepest increase has been in aluminium, the rate of increase in world bauxite output between 1949 and 1961 averaging some 12 percent a year, compared with rates of 3 to 5 percent for lead, zinc and copper and less than 1 percent for tin. After the recession of 1958 mine output of bauxite, copper, lead and zinc went on to reach record totals in 1962 but by that year, because of technical difficulties in some countries and depletion of reserves in others, production of tin had only partially recovered. In 1962, aluminium production was below capacity in North America and certain European countries and smelter output of copper, lead and zinc was being restricted by major producers. By the end of the year, however, the statistical position of lead and zinc looked much stronger and no restrictions were expected to be applied in 1963. Tin metal, apart from the surplus strategic stocks held by the United States Government, continued to be in potentially tight supply.

The steepest rise in non-communist consumption of the five metals since 1949 has been in aluminium while the slowest growth has been in lead and tin. Aluminium has benefited particularly from the rapid post-war growth of the durable consumer goods industry and from the development of new outlets, while lead has suffered from the competition of substitute materials and the slow growth of new uses. Tin has also been displaced to some extent by substitutes but consumption has been slowed down chiefly by economies made possible by new techniques of tinplate manufacture. In all cases, United States consumption has risen relatively slowly since 1949 while growth in the European Economic Community and Japan has been exceptionally fast. In the U.K. and Canada, the rise in consumption has also been slower than average, but in the rest of the Commonwealth, notably in Australia and

Rotorvanes
GIVE YOU
A POWERFUL
MECHANIZED
GRIP ON tea

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine



Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.

The Rotorvane will help you make good tea.

The Portable intermediate feed conveys leaf to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

PORT ENGINEERING WORKS LTD.

India, it has been generally faster than average.

World trade in unwrought metal broadly reflected the upward trends in smelter production from 1949 and record export totals were reached in 1961 or 1962 for all five metals except tin. Commonwealth shares in these exports in 1960-61 amounted to over three-fifths in the case of tin, around two-fifths in aluminium and refined copper, a third in lead and over a quarter in zinc. Some Commonwealth countries are highly dependent economically on the production and export of one or other of the metals, namely, Jamaica and British Guiana on bauxite and alumina, Rhodesia and Nyasaland and Cyprus on copper, Malaya on tin.

The review shows that while U.K. prices of copper, lead and zinc have fluctuated widely since 1954 those of aluminium and tin have been relatively much more stable. In the case of aluminium, this reflected the influence of a dominant supplier while in that of tin it resulted from the operation of the International Tin Agreement. Since late 1961, copper prices also have become more stable as a result of buying by leading producers in order to support the market. *Non-Ferrous Metals* reviews development in its field up to 1962, with detailed statistics up to 1961, and provides much information on current and future plans. In addition to many statistical tables the volume includes a number of illustrative charts.

India Fulfils Coffee Export Quota

(BY A SOUTH INDIAN CORRESPONDENT)

INDIA has been able to fulfil her export quota of 21,350 tonnes of coffee allowed for the current year under the International Coffee Agreement, which recently came into force, in spite of the fact that the total harvest of the season was hardly sufficient to meet this and the home demand. The 1962-63 crop receipts into the Coffee Board's pool up to the middle of July amounted to only 54,801 tonnes made up of 33,401 tonnes of Arabica and 21,400 tonnes of Robusta. If the internal market is fed as liberally as was done in the past, anything between 34,000 and 36,000 tonnes would be required for this purpose. But it appears that the Coffee Board is following a policy of tightening the belt on the home market this year. Releases from the Board's pool for home consumption are at present running behind last year's. Internal releases for the first seven months of 1963 amounted to only 19,133 tonnes, compared with 20,011 tonnes during the same period last year. This policy of starving the home market for the sake of increasing exports is in keeping with the present policy of maximising exports with a view to earning more foreign exchange, but the wisdom behind it is questioned by a section of the coffee interests in the country, who believe that the future stability of the industry depends on a growing internal market.

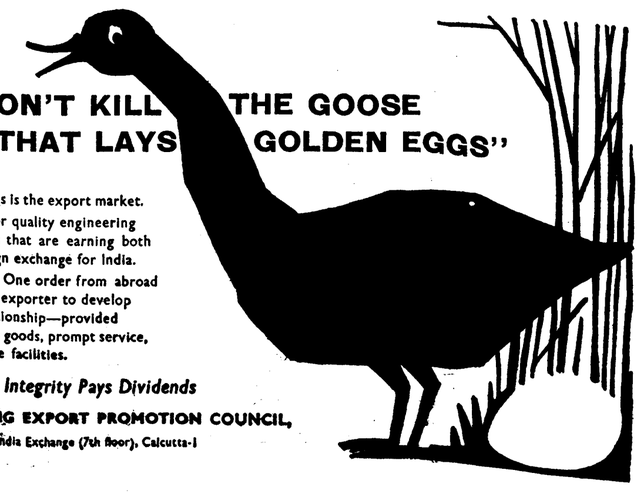
The chairman of the Coffee Board, Mr. H. Sitarama Reddy said recently that India would pursue the effort for a higher export quota for her under the International Coffee Agreement. India had already ratified the agreement and she has been elected as one of its three vice-chairmen by the International Coffee Council, which manages this long-term agreement.

India's exports to the quota countries amounted to 14,118 tonnes in the nine months ended 30th June, 1963. A notable feature of India's coffee exports during this period was an appreciable rise in the import of Indian coffee by some east European non-quota countries such as Russia and Poland. The export prices of Robusta registered a slight improvement this year and larger quantities of this variety of coffee were released for export. To some extent this became possible because the 1962-63 Robusta crop exceeded the earlier estimates.

The Coffee Board chairman said that various incentives to stimulate coffee exports in various forms were provided. On the export of raw coffee, the trade has been granted a drawback of excise duty. On the export of roasted and ground, French and instant coffees, the trade has been granted drawback of excise duty, drawback of Customs duty on imported raw materials used in the manufacture of coffee exported and rebate on the Robusta content of the manufactured coffee exported.

The blossom estimate of the Coffee Board places the 1963-64 crop at 57,000 tonnes (33,000 tonnes of Arabica and 24,000 tonnes of Robusta). This is an improvement on the 1962-63 crop, which according to present estimates, will come to 55,000 tonnes.

The International Coffee Council session in London is making some permanent arrangements for the implementation of the new International Coffee Agreement. The object of this agreement is to stabilise world coffee prices by seeing to it that they do not drop below the 1962 levels, the lowest since 1949. Dr. Joao Oliveira Santos, executive director of the Council, told a news conference in London that for the first time coffee producing nations had agreed to "realistic" production quotas based on what the world would actually drink. According to him, the quotas established under the previous less far-reaching agreements were invariably in excess of the demand for coffee.



This resulted in rising surpluses which depressed prices. The current surplus is estimated at 73 million bags of 132 lbs each. This compares with total imports of coffee last year of 46.75 million bags, of which the United States took more than half. For the next coffee year which begins from October basic exportable production quotas are unchanged from the current year even though demand is expected to increase by 3.3 percent. Dr. Santo has said that the Council, whose membership is made up of both coffee exporting and importing countries, has agreed that the export quota for the new coffee year would be 45.7 million bags. Brazil as the biggest producer has a quota of nearly 18 million bags, compared with Columbia's 6 million bags. In the apportionment among the remaining producers some are pressing for revisions. The executive board is studying individual cases and will make recommendations before a special session of the Council scheduled to meet in November. Quotas will be policed through the use of certificates of origin which will indicate that a shipment is legal under the terms of the agreement. Importing countries have agreed to accept no shipments without such certificates. Dr. Santos has said that unlike an international agreement in tin there would be no attempts made apart from the quota system, to control market price movements in coffee. The Coffee Agreement leaves room for judgment of buyers and sellers. It does not involve price rigging. Buyers by playing the market can hedge. It is a healty thing to have fluctuations in prices, he added.

The Coffee Council meeting started on 29th July. For the first three weeks, it wrangled over the election of an executive director. Then Dr. Santos, a Brazilian, was elected to this key post. African delegates who objected to this post going to Brazil, the largest producer, were won over in a compromise. They got a "first deputy executive director".

Among the future objectives of the Council, which will have its headquarters in London, will be to promote wider consumption and to work towards the easing of taxes and tariffs on coffee. The next meeting of the Coffee Council will be held in the first week of March next year, and it is said that a principal subject for its consideration will be the Common Market levy on coffee.

A scheme for the grant of short-term loans towards working capital was initiated last year by the Coffee Board. Under this scheme, 35 growers received over Rs. 1 lakh on their 1962-63 crop. The scheme had met with better response this year; 50 growers received Rs. 1,79,000 on their 1963-64 crops. The Coffee Board chairman announced recently that it was proposed to extend this scheme to growers falling in 50-100 acre group next year. Only growers within the 50-50 acre group were getting this benefit so far. The Coffee Board is now considering a scheme put up by the U.P.A.S.I. under which coffee growers, irrespective of their size would receive loan assistance to take up a systematic programme for replanting and replacement of equipbuted so far Rs. 36.90 lakhs to 565 growers in the five to 50-acre group as long-term loan assistance under its development plan launched in October 1956.

The Central Minister for International Trade, Mr. Manubhai Shah, will inaugurate the 70th Annual Conference of the United Planters Association of Southern India at its headquarters in Coonoor on 9th September. The U.P.A.S.I. Conference consists of a series of events over a two-week period covering business meetings, scientific conference, sports, and social events. To the planning community in south India, this is more than the annual general meeting of the association. It is an occasion to get together with one another from distant districts and renew the spirit of unity among them. The conference will be addressed this year by the chairmen of the Tea, Coffee and Rubber Boards and also by the chairman of the Indian Tea Association in Calcutta. There is no exhibition this year in view of the national emergency.

ASP/EEPC-/63

The goose that lays golden eggs is the export market.

There is a growing demand for quality engineering goods made in India—goods that are earning both reputation and valuable foreign exchange for India.

It is not a very easy market. One order from abroad is a great opportunity for an exporter to develop into a long-term business relationship—provided he continues to supply quality goods, prompt service, competitive prices and service facilities.

Integrity Pays Dividends

India Exchange (7th floor), Calcutta-1

COMPANY AND PUBLIC NOTICES

THE INDIA JUTE COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Members of The India Jute Company, Limited will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Friday, the 27th day of September, 1963, at 4 o'clock in the afternoon for the following purposes:

AGENDA

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1963, the Balance Sheet as at that date and the Report of the Directors and Auditors.
2. To declare a dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolution:—

5. **As a Special Resolution:**

Resolved that the Articles of Association of the Company be altered in the manner following:

(i) After Article 55 the following Article be inserted numbered 55A.

"55A. Notwithstanding anything contained in these Articles so long as any money remains due by the Company under or by virtue of any Deed of Mortgage or charge executed by the Company in favour of The National Industrial Development Corporation Ltd., no change shall be made in the capital structure of the Company save with the previous consent in writing of the said Corporation".

(ii) After Article 60 the following Article be inserted numbered 60A.

"60A. So long as any money remains due by the Company as mentioned in Article 55A the Directors shall not without previous written consent of The National Industrial Development Corporation Ltd., create or allow or permit to be created any charge mortgage or other encumbrances of any kind whatsoever on the properties mortgaged and charged in favour of the said Corporation or any part thereof."

(iii) The following paragraph be added to Article 90(b) of the Articles of Association of the Company—

"Such appointment or removal shall be by notice in writing to the Company. The provisions of Clause (a), (f), & (k) of Article 98(1) and Articles 103, 104, 105, 106, 107, 108 and 109 shall not apply to the Director appointed by the Corporation."

(iv) After Article 130 the following Article be inserted numbered 130A.

"130A. Notwithstanding anything contained in these Articles and so long as any money remains due by the Company to The National Industrial Development Corporation Ltd., the Company will not pay out of its earnings or profits any dividend to any Shareholder for any half year or any interest or principal or any part of the principal or interest which may be secured or payable under any encumbrances subsequent to the encumbrances executed in favour of the said Corporation or any interest on any sums which may have been paid to the Company by any Shareholder under the Articles of Association of the Company or allocate any amount out of such earnings or profits to any reserve other than reserve for normal depreciation until the Company shall have first paid or made proper provision for payment of any interest then due and payable or to become due and payable in that year to the said Corporation and also made proper provisions for payment of the instalment of principal payable to the said Corporation in that year."

The Share Transfer Books of the Company will be closed from 20th September, 1963 to 27th September, 1963, both days inclusive.

By Order of the Board,
A. MUKHERJEE,
Secretary.

16, Strand Road,
Calcutta, 30th August, 1963.

Note: (1) A Member of the Company who is entitled to attend and vote at the meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(2). The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all the Shareholders along with the Notice convening the Meeting.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

NOTICE is hereby given that the Fifty-second Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at VIRGINIA HOUSE, 37 CHOWRINGHEE, CALCUTTA, on Thursday 26th September, 1963 at 3-30 p.m. for the transaction of the following business:—

To receive and adopt the Accounts for the year ended 31st March, 1963 and the Reports of the Directors and Auditors thereon.

To declare a dividend.

To re-elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from 9th to 26th September, 1963, both days inclusive, and transfers received in order at the Office of the Company's Registrars (Jardine Henderson Limited, 4 Clive Row, Calcutta 1) by 7th September, 1963 will be in time to be passed for payment of the dividend, if approved, to the transferees.

The dividend, if approved, will be paid on 30th September, 1963 to the Shareholders whose names appear on the Company's Register on 26th September, 1963, or to their mandatees.

By Order of the Board,
B. GRANGER PEARSON,
Secretary.

1st August, 1963,
Virginia House,
37 Chowringhee,
Calcutta.

NOTE: A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

THE NATIONAL INSULATED CABLE CO. OF INDIA LIMITED

NOTICE

NOTICE is hereby given that the Twenty-first Annual General Meeting of the Members of The National Insulated Cable Co. of India Ltd., will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Monday the 30th September, 1963 at 11 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit & Loss Account for the year ended 31st March, 1963.
2. To declare Dividend.
3. To appoint a Director in place of Shri B. P. Khaitan, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Lt. Genl. Shura Shum Shere J. B. R. who retires by rotation and is eligible for re-appointment.
5. To appoint Auditors of the Company and Branch Auditors for Delhi Office and fix their remuneration.
6. AS SPECIAL BUSINESS, to consider and if thought fit to pass the following Resolutions with or without modification as Ordinary Resolutions:—

(a) RESOLVED that the appointment of Messrs. Keshav Agencies, Calcutta, as Sole Selling Agents for the sale of the Company's products within the State of Assam for the period commencing from 1st February, 1963 to 31st March, 1966, subject to termination by three calendar months' notice on either side upon the terms and conditions as recorded in the Agreement dated 26th March, 1963, made between the Company of the One Part and the said Sole Selling Agents of the Other Part be and is hereby approved.

(b) RESOLVED that the appointment of Messrs. R. K. Varma & Co., Calcutta, as the Sole Selling Agents of the Company for the sale of the Company's products within the State of Bihar for the period commencing from 1st July, 1963 to 31st March, 1966 subject to termination by three calendar months' notice on either side upon the terms and conditions as recorded in the draft Agreement placed at this Meeting and for purposes of identification signed by the Chairman thereof be and is hereby approved.

FURTHER RESOLVED that the Board of Directors of the Company be and are hereby authorised to enter into and execute the Agreement in terms of the above draft and to affix the Company's Seal thereon.

(c) RESOLVED that the Books, Registers and other documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956, shall be kept open for inspection by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, as provided in the said Act at the Registered Office of the Company on any working day between the hours 11 A.M. and 1 P.M. except when the Registers and Books are closed under the provisions of the aforesaid Act, provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection by any Member in the time as aforesaid during the period prescribed under Clause (a) of Sub-Section (5) of Section 307 of the Act.

The Share Transfer Books of the Company will remain closed from 17th September, 1963 to 30th September, 1963, both days inclusive.

By Order of the Board,
For THE NATIONAL INSULATED CABLE CO. OF INDIA LTD.,
For ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.,
S. C. ROY,
Director,
Managing Agents.

Registered Office:
Nicco House,
Hare Street,
Calcutta-1,
The 9th August, 1963.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a Member.

The Dividend, if declared, will be paid to those Members whose names appear in the Register of the Company on 30th September, 1963 or their mandatees and the Dividend Warrants will be posted from 15th October, 1963 onwards.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of Item Nos. 6 (a), 6 (b) and 6 (c) has been appended to the Notice of the Meeting and forwarded to the Members.

TO ALL MEMBERS:

And in particular to:

Sri Raja Ram, H. H. Princess Abida Sultan, Sm. Allu F. Dastur, Sri P. R. Kavasji, Sm. Banoobai Framroze Pavri, Sri B. K. Nehru, Sri Rattu P. Mehta, Brigadier C. R. Mangat Rai, Sri Thomas Radley, Sri K. F. Sanjana & Sm. M. K. Sanjana, Mr. Arthur Winfield Lilley, Sri B. P. Yadav, Maj. Genl. P. S. Chowdhury, Sri Fali B. Jilla, Miss. Shirin Minocher Kotwal & Sri Jahanbux Rustom Mehta and Sm. Pervin Firoze Cowasji & Sri Firoze Minocher Cowasji.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE OF THE ANNUAL GENERAL MEETING

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta-1, on Monday, the 30th day of September, 1963, at 3-30 p.m. for the following purposes:—

1. To consider and adopt the Profit and Loss Account of the Company for the year ended 31st March, 1963, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
2. To declare dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS.

4 (a). To appoint a Director in the place of Sir Asoka K. Roy, who retires by rotation, and, being 76 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution, of which Special Notice as required by Section 281 (2) of the Companies Act, 1956, has been received by the Company from a shareholder and the relative Explanatory Statement concerning which, as required by Section 173 of the said Act, is appended.

To be proposed as an Ordinary Resolution.

"THAT Sir Asoka K. Roy who has attained the age of 76 years and who retires from the Board by rotation be and is hereby reappointed a Director of the Company, whose period of office would be liable to determination by retirement of Directors by rotation, and it is specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

4 (b). To appoint a Director in the place of Mr. L. G. Smeathman who retires, and in this connection to consider and, if thought fit, to pass with or without modification the following resolution of which a Notice has been received by the Company from a member under Section 257 of the Companies Act, 1956, which will be proposed as an Ordinary Resolution.

"THAT Mr. L. G. Smeathman be and is hereby appointed a Director of the Company, whose period of office will be liable to determination by retirement of Directors by rotation".

The Share Transfer Register of the Company will be closed from the 9th to 30th September, 1963, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta-1.
28th August, 1963.

NOTES:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The dividends, if declared, will be paid on or after the 28th October, 1963, to those shareholders so entitled whose names appear in the Company's books on the 30th September, 1963, or to their mandatees.

No application for Dividend Warrants will be necessary.

Explanatory statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all Members.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

THE Directors of The Calcutta Tramways Company Limited announce that subject to final audit, the result of the working for the year ended 31st December, 1962 was as follows:—

The Revenue for the year after transferring £100,000 to Renewals and Replacements Account was		£164,183
Against this has been debited:		
Provision for Indian Income Tax	£ 86,000	
Debenture Interest	19,405	105,405
Leaving a balance of		£ 58,778
In accordance with the Agreement dated 30th August, 1951, between the Governor of the State of West Bengal and the Company, the above balance has been credited to Shareholders' Account		£ 58,778
Out of which is payable:		
1st Debenture Stock Redemption	£ 5,449	
2nd Debenture Stock Redemption	9,113	
Preference Dividend, less tax	7,656	
Proposed Ordinary Dividend at 5% free of tax ...	35,000	57,217
Leaving to be added to the amount carried forward on Shareholders' Account		£ 1,561

The Annual General Meeting will be held in London at twelve o'clock noon on Tuesday, the 15th October, 1963, on which day warrants for the Ordinary Dividend, if sanctioned, will be posted.

The Ordinary Share Transfer Books will be closed from the 2nd to the 15th October, 1963, inclusive.

By Order of the Board,
R. W. TURNBULL,
Agent.

P.4 Mission Row Extension,
Calcutta—August 30th, 1963.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given to the members of the above named Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 11-00 A.M. on Monday, the 30th September, 1963 for the following purposes:—

1. To adopt the Profit and Loss Account of the Company for the year ended 31st March, 1963, and the Balance Sheet as at that date together with the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 23rd September, 1963 to the 30th September, 1963, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

Registered Office:
Chartered Bank Buildings,
Calcutta, the 3rd September, 1963.

Notes:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 15th October, 1963, to those Shareholders so entitled whose names appear in the Company's books on the 30th September, 1963, or to their mandatees. No application for Dividend Warrants will be necessary.

THE RANEEGUNGE COAL ASSOCIATION, LIMITED

NOTICE

NOTICE is hereby given that the Hundred and Sixteenth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 8, Lyons Range (Ground Floor), Calcutta, on Saturday, the 28th September, 1963 at 12-30 P.M.

The Share Transfer Books of the Company will be closed from 21st September, 1963 to 28th September, 1953, both days inclusive.

The Directors have decided to issue 83,932 New Right Equity Shares of Rs. 10/- each, at par, ranking pari passu with the existing Equity Shares and to offer the same for subscription to those Equity Shareholders whose names are registered with the Company as on 28th September, 1963 in proportion of 1 new Share to every 4 shares held by them.

For THE RANEEGUNGE COAL ASSOCIATION, LIMITED,
S. K. SARAOGI,
Director.

THE EAST INDIAN COAL COMPANY, LIMITED

(Incorporated in England with Limited Liability).

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the one hundred and eleventh annual general meeting of the members will be held at the Head Office of the Company, No. 4, Clive Row, Calcutta-1, on Friday, the twenty-seventh day of September, 1963 at 12-00 noon for the following purposes:—

1. To receive and consider the audited accounts for the year ended 30th April, 1963, the balance sheet as at that date and the reports of the Board of Directors and the Auditors thereon.
2. To declare a dividend.
3. To appoint a Director in place of the one retiring.
4. To fix the Auditors' remuneration.

Notice is also given that the share transfer books of the Company will be closed from the 20th September to the 27th September, 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself on a poll and a proxy need not be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents & Secretaries.
4, Cive Row,
Calcutta-1.
30th August, 1963.

Notes: (1) The dividend, if approved, will be payable on and after 15th October, 1963, to those members whose names are registered in the books of the Company on 27th September, 1963.

(2) Attention of the members and debenture-stockholders has been drawn to the application of the Defence of of India Rules to colliery undertakings. The provisions of Rule 52 of these Rules prohibit the publication to members and debenture-stockholders of the annual accounts of the Company as at 30th April, 1963 or any report or other documents which disclose any information contained in any such accounts or any statistical or any other information relating to the progress of the undertaking. It has, therefore, not been possible to circulate the Directors' report and the audited statements of account for the year ended 30th April, 1963. All members and the debenture-stockholders are, however, entitled on giving not less than 7 days' prior notice to inspect at the offices of the Company the Directors' report and these audited accounts and they have been advised of this entitlement.

THE DALHOUSIE JUTE COMPANY, LIMITED

NOTICE

NOTICE is hereby given that an Annual General Meeting of THE DALHOUSIE JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings Calcutta at 10-00 A.M. on Saturday, the 28th day of September, 1963, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1963, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

As Special Business.

5. To consider and if thought fit to pass with or without modification the following resolutions of which notices have been received from members under Section 257 of the Companies Act, 1956, which will be proposed as ordinary resolutions:

(a) "That Mr. L. G. Smeathman be and is hereby appointed a Director of the Company".

(b) "That Mr. R. G. Edwards be and is hereby appointed a Director of the Company".

GOLD CONTROL, C.D.S. SLASHED BUT MAIN TASK REMAINS

WHEN Mr. T. T. Krishnamachari took over as Central Finance Minister four weeks ago, it was widely predicted that he would soon get down to the job of lopping off the tallest poppies in the fiscal-economic garden inherited from Mr. Morarji Desai. The argument was that just over six years ago Mr. Krishnamachari had produced a thumping Budget distinguished by his own private hybrid of Kaldorian poppies, a Budget which sent the economy headlong towards ruin. The fortuitous intervention of Mr. Mundhra apart, it fell to Mr. Desai's lot to lop the poppies off—by abolishing the expenditure tax and the wealth tax on companies, and by cutting the bonus issue tax. To celebrate his return to the Finance Ministry, the soothsayers said, Mr. Krishnamachari would reciprocate the compliment by running his scythe through the gold control rules, the compulsory deposit scheme and the super profits tax. Having relieved himself of one or two formal tributes to "my distinguished predecessor", this in fact is just what Mr. Krishnamachari has now done, or begun to do. His statement in Parliament last Saturday leaves the super profits tax intact—one hopes only for the time being. But the gold control rules have been amended in such a way as to bestow the kiss of legislative sanction on what had hitherto been the most popular form of evasion. As a fiscal measure, the compulsory deposits scheme becomes a faint ghost of its former self; certainly the original objectives of the scheme have been jettisoned in a manner that must bring grief to the already wounded heart of Mr. Desai.

The changes in the gold control rules are mainly two. Superficially, both look reasonable and innocuous. They are seemingly designed only to help goldsmiths left with no work to do. But their main effect may be to legalise India's second favourite pastime—the making and remaking of gold ornaments in cheerful disregard of the gold control rules (the first favourite among pastimes will be discussed in a future article on the growth of population). The more important change specifies that, on certain conditions, self-employed goldsmiths will be allowed to convert existing ornaments containing gold of a purity of more than 14 carats into other ornaments containing gold of the same purity. Hitherto, the rule was that if existing ornaments were converted into new ones, the gold content of the new ornaments would have to be reduced to 14 carats or less. The second change is that out-workers (goldsmiths working on gold in their own houses in order to execute orders received from licensed dealers) will be allowed to handle limited stocks of primary gold of a purity of up to 14 carats. Mr. Krishnamachari has said that the Gold Control Board is being abolished; most of its functions are being taken over by the Gold Control Administrator just appointed in the Department of Revenue. Furthermore, instead of being an insecure appendage to the Defence of India Rules, the gold control rules are to be blessed with a measure of permanence by being embodied in a formal Bill which, when presented to Parliament, will outline the short-term and long-term objectives of the Government's policy.

In considering the changes, the preliminary point to make is that any Finance Minister would be in an unenviable dilemma if faced with the gold control rules, since he would have to reconcile three conflicting factors. The first is that, in principle, the purpose of the rules is basically sound—to reduce the demand for gold, and thus discourage smuggling and the leakage of foreign exchange. The second is that, by attacking old social customs, the rules have proved to be extremely unpopular politically; from no quarter has the opposition been more ferocious than from the gold-hoarding money-bags who support the Congress Party. The third factor is that evasion of the rules has been flagrant and widespread, as a result of which an ass has been made not only of the law but also of the law-enforcers. It is significant, for instance, that a few days before Mr. Krishnamachari was due to make his statement, huge quantities of smuggled gold arrived in India in the hope that prices would rise when the Finance Minister announced the expected liberalisation. No more revealing commentary could be found on how effective the vigilance of the Customs and excise authorities is. So greaf, in fact, has the inflow been that the black market value of the rupee has slumped to a level not often seen before.

Mr. Desai, fresh from the delights of self-delusion in prohibitionist Bombay, could indulge his addiction to the same delights while ruminating over the supposed effectiveness of the gold control rules. But the choice before Mr. Krishnamachari was different. He was obliged either to advance or to retreat—either advance, that is, by imposing rigid controls over gold ornaments, accompanied by ruthless penalties, or retreat by relaxing the gold control rules. Freshly returned to the political arena, it is not surprising that he has chosen the latter, more popular, course. The greatest of men would be forgiven if four years in the political wilderness, and one-and-a-half in the shifting sands of nebulous Cabinet portfolios, left them feeling the desperate need to paint up their Party image. Congress members of Parliament are reportedly delighted that Mr. Krishnamachari has carried bundles of work back to self-employed goldsmiths who had supposedly been deprived of their income. Smugglers too are said to be delighted—on the ground that the transformation of bars into crude ornaments and then into finer ones will now be easier, and disposal problems will therefore be fewer. Many are hoping that the promised Bill will carry the newborn pragmatism about gold control a stage further: it may reaffirm the Government's unshakeable determination to proceed with gold control, maintain the rules intact, impose more drastic penalties—but then offer a minor concession by providing that the law will apply only to gold of more than 101 percent purity.

If political opportunism has determined the changes in the gold control rules, the same noble

quality has played an even more prominent rôle in determining the changes in the compulsory deposits scheme. Stories had been current for some months that whoever first thought the scheme up (and rumour has it that it was not Mr Desai) hadn't the foggiest idea what he was talking about. The main effect of Mr. Krishnamachari's statement now is to confirm that the stories were correct. A fuller version of the statement is reported by our New Delhi correspondent on page 465, but the gist of it can be given here. By implication, it seems to say that the scheme cannot apply to land-revenue payers, although the last Finance Minister in his ignorance thought it could. Nor can it apply to sales-tax payers or urban property holders, about whose assessment procedures too the last Finance Minister was rather ignorant. To collect compulsory deposits from those who earn over Rs. 1,500 a year but are not subject to income tax is an awful nuisance, which also the last Finance Minister happened not to know. Mr. Krishnamachari has, therefore, now decided that the several million people belonging to these four categories will have to be exempted, in addition to the several million already exempted by Mr. Desai shortly after he recovered from his transports of joy at having presented such a devilishly clever Budget. The only category to which the compulsory deposits scheme will now apply consists of income tax payers; Mr. Krishnamachari has informed them that it is a divine blessing, since they would have to pay the full Union surcharge on after-tax incomes if they did not pay compulsory deposits (as if the former could not have been amended suitably).

In the process of chopping and changing, the whole purpose of the compulsory deposits scheme has been completely and conveniently forgotten. One purpose was to compel the relatively poorer classes, who may not be saving much voluntarily, to save at least something; in this sense, it was an alternative to broadening the direct tax base by lowering the exemption limit for tax purposes. A second purpose was to put more money into the coffers of the State Governments, since they had not themselves found the courage to raise more resources through land revenue. The third purpose was to ensure that apart from the Rs. 35-odd crores going to the States, the neat little sum of Rs. 25 crores would come to the Centre. Now the Rs. 35 crores which would have gone to the States has vanished, since the States have spat in the Centre's eye and declared that they will not implement the scheme. A fair proportion of the Rs. 25 crores which was to have come to the Centre has also vanished, although Mr. Krishnamachari did not care to say how much. The relatively small total that will be coming will come from income tax payers—a category of people who already by and large save on a substantial scale voluntarily. The net result of the C.D.S. changes, therefore, is cheerfully to allow non-saving among non-savers, while subjecting voluntary savers to forced saving. A fiscal system based on such premises may not strike everybody as the finest showpiece of the Indian intelligence.

The point, surely, is this: from a purely administrative point of view, the compulsory deposits scheme was unworkable from the start. But it is the height of foolishness to pass a law, and then run round like decapitated chickens wondering how it is to be worked. Mr. Krishnamachari may one day be obliged to tell Parliament about the fortune wasted on such folly: the post offices, the State Bank and some commercial banks have spent large sums of money, a very substantial proportion of which will now go down the drain with the amputation of the compulsory deposits scheme. The mistake having been made, if the scheme really is unworkable for *all* the categories of people now exempted, Mr. Krishnamachari has done the right thing by scrapping it. But it is simply not fair or equitable to maintain it for the minority of people for whom it was originally not meant at all. Admittedly, simply to abolish the scheme, and leave the Union surcharge on after-tax incomes unchanged, would be to compound an already serious injustice. There is no reason, however, why the compulsory deposits scheme could not have been scrapped in its entirety, and the Union surcharge adjusted downwards to a corresponding extent.

As it is, the inconvenience and bother of collecting compulsory deposits will continue to be very considerable, and will be suffered mainly by employers. If the scheme is to be retained at all, the thing to do is to keep it only as an alternative to voluntary saving. Those contributing adequately to life insurance, provident funds, small savings or other media can be given complete exemption from compulsory deposits, provided they produce evidence of the former contributions being made each year when they go for tax assessment. The responsibility for producing the evidence and claiming the exemption would then rest on the individual rather than the employer Only in this way might there be some faint hope of the bother being reduced, and of the receipts from small savings compensating for the money lost through the amputation of the scheme.

Political expediency has made it necessary for Mr. Krishnamachari to attend first to the gold control rules, and then to the compulsory deposits scheme. The changes in both have been welcomed in the stock market, but in the short run they are of no direct significance for equity prices or for the main task ahead—to get the economy moving on a wave of confidence again. If people can make and remake gold ornaments with an easier conscience than they used to do, that is no reason why Indian Iron shares should go up. Nor is there any reason for the shares rising merely because a motley gang of farmers, petty traders, house-owners and *chowkidars* are not going to pay compulsory deposits. If equity prices have risen nevertheless, the main reason is that the speculators now parading up and down Lyons Range (as well as Dalal Street) feel that last Saturday's changes show the new Mr. Krishnamachari to be a man of sweet reasonableness, flexibility and pragmatism. From this (especially if your broking business recently has been poor) the presumption runs smoothly that he will be as sweetly reasonable, as flexible and as pragmatic about the super profits tax as he has been about the gold control rules and the compulsory deposits scheme. In other words, if certain gentlemen in Lyons Range are to be believed, one would think that the new Finance Minister's only remaining ambition in life is to fire a howitzer into the S.P.T.

Experience suggests that reality does not always correspond to the dreams of the gamblers. Some newspapers have reported Mr. Krishnamachari as telling the Congress Parliamentary Party that he does not intend to make any tax changes until the next Budget. Others recall him as saying only a few days ago that he would not make any big changes in the compulsory deposits scheme, whereas it now transpires that only those armed with specially curvaceous concave lenses could consider the changes actually made to be small. Yet others say that the new Finance Minister, a patriot to the last, is keeping a night-long watch for the man-eater who will help him chew up the S.P.T. at the very first opportunity.

From the vague indications available so far, however, it seems unlikely that any important tax changes can be announced before the next session of the Lok Sabha in November. The possibility is that Mr. Krishnamachari may meanwhile try to improve the economic mood as reflected in the stock market by first easing the stiff credit restrictions now in operation—restrictions of which he seems to be a less ardent admirer than the Reserve Bank. The easing, as such, would be justified, but it can hardly do lasting good to a market depressed by more powerful influences. Mr. Krishnamachari could, if he wished, delay the jettisoning of the super profits tax until February next year. But it would be unfortunate if he decided to do so, for each day's delay would mean the postponement of the economic recovery which it is within his power to stimulate.

WORKING THE CREDIT PUMP

In a bid to revive the Indian economy which has been stagnating for two years now, Mr. T. T. Krishnamachari, the Central Finance Minister, has lost no time in trying to locate the weaknesses. One of the first things which has attracted his attention is the Government's monetary policy. In order to ensure economic stability by checking inflation, the Reserve Bank has so far enforced a restrictionist credit policy. The effort has unfortunately produced several adverse results without fulfilling its main objective. Inflationary pressures have, in fact, been aggravated since the increase in the supply of goods has fallen short of the increase in the total money supply. Industrial growth and agricultural production have been hampered by the shortage of funds. Not only has the credit supply been short in relation to requirements; its cost has also increased substantially. The recent talks between the Finance Minister and the Governor of the Reserve Bank indicate that a move is afoot to liberalise credit. Press reports from Bombay suggest that during the next busy season, the Reserve Bank might decide to substitute the present three-slab lending system by a single-slab one, under which the Reserve Bank would lend to the scheduled banks at Bank rate. The amount of credit given would be equivalent to their balances with the Reserve Bank. Further credit would be extended at the discretion of the Reserve Bank at an interest rate somewhat higher than the Bank rate of 4½ percent. Such a move, if introduced, would certainly make borrowing cheaper. But whether it would automatically lead to an expansion of credit depends on the discretion of the Reserve Bank itself.

The importance of liberalising credit under the present circumstances cannot be exaggerated, considering that the working of trade and industry has been harmed by the shortage of funds. There is no point in restricting credit in such a way that the legitimate requirements of the economy cannot be met. The Reserve Bank has extensive powers to enforce its selective credit control policy and to inspect all bank advances freely, so there is no reason why the credit supply should be misused. In recent months, there has been hardly any evidence to show that bank credit has been used for speculation or hoarding. One of the disturbing consequences of the restrictionist policy is that a large part of the money supply has moved outside the banking system.

The attempt of commercial firms to solicit public deposits is largely attributable to the fact that they have found it difficult to obtain their full requirements from the banking system. The high cost of bank finance has also discouraged borrowing from banks. No monetary policy, even if it can be meticulously enforced, can ever achieve the desired results while a large part of the credit supply circulates outside the banking system. Until indigenous bankers can be brought within the control of the Reserve Bank, it will be difficult to enforce the official credit policy effectively. Several attempts to bring the indigenous bankers within the control of the organised monetary sector have proved abortive in the past. But it is hoped that the new Finance Minister will seriously endeavour to consolidate and unify the credit structure by linking the constituents of the unorganised monetary sector with the Reserve Bank.

Although the credit liberalisation move would be welcomed in principle, financial circles think that the banks might not require very large funds from the lender of last resort. Trends during the current slack season have turned out to be contrary to earlier expectations. The contraction of credit so far has been Rs. 124.60 crores, which is much larger than in the corresponding period of the 1962 slack season, when it was Rs. 34.77 crores. Deposits of scheduled banks have risen by Rs. 118.83 crores compared with a rise of only Rs. 55.10 crores in the corresponding period of 1962. It is thought, therefore, that the banks will have sufficient resources of their own to meet the requirements during the coming busy season. This apart, investments in Government securities have risen by Rs. 132.75 crores, compared with an increase of Rs. 69.52 crores in the corresponding period of 1962.

But the banks will not be able to rely heavily on securities for raising additional cash to meet credit requirements, since they have been asked to increase their investments in relation to deposits.

The credit liberalisation move nevertheless implies that cheaper credit from the Reserve Bank will lead to a general softening of interest rates. Although a higher interest rate is considered by some to be an anti-inflationary weapon, the time has come to examine whether the present market rates of interest have not bcome prohibitive in some cases. Because they are high, production costs in industry have been inflated. The adverse effects have been far more harmful in the case of new companies. Several of them have been seriously embarrassed since project costs have risen far above the original estimates. At the same time, companies have been compelled to borrow more since it has been extremly difficult to raise funds from the open market due to the lack of investment confidence. If factories are set up with costlier funds, new companies will take a long time to break even.

The success of the exercise in credit liberalisation will depend on how the policy is implemented. Since official thinking has been concentrated on the resources of Government financial institutions, it is feared that the question of adding to the funds of the banking system may not receive the attention it deserves. It should be remembered that banks constitute the best organisation through which credit can be channelled for productive purposes. Government financing institutions have played an important rôle in industrial financing, but their scope has been restricted by the elaborate procedures they have to follow. Experience shows that the disbursement of funds by the Industrial Finance Corporation and State Financial Corporations has lagged far behind commitments largely because of the elaborate procedures and formalities. These institutions are able to raise funds from the open market more easily than private institutions since they enjoy the credit of the Government.

The cheerfulness of the stock market on hopes of credit liberalisation is difficult to understand. If bank credit is to be expanded, it is doubtful whether it will be diverted into stocks and shares. The banks have several ways of employing the new funds profitably; they are also chary of investing more in stocks and shares. Excessive importance seems to have been attached to the idea that more liberal bank advances against shares will help the revival of confidence in the stock market. It is doubtful whether under the present circumstances, investors would be inclined to use bank funds for buying shares. First, the borrowing cost is too large. Secondly, the prices of several shares are rather high in relation to the dividend yields. Thirdly, the prospect of wide fluctuations in the stock market cannot be ruled out considering that it is very sensitive to political developments.

If credit is to be liberalised, it is necessary to divert a large part of it to industries. Although more than 50 percent of bank advances go for industrial financing, there is still scope for extending credit in this sphere. Short-term credit requirements have been fairly adequately met, but industry has found it difficult to get medium-term credit. The demand for term loans has risen in recent years with the expansion and diversification of activities. The banks should, therefore, be encouraged to increase their medium-term industrial financing—which they can do if steps are taken to simplify the procedures under which the Refinance Corporation is permitted to extend credit facilities.

AID FROM BRITAIN

THE White Paper on *Aid to Developing Countries* published last week by the British Government highlights the major trends in Britain's external assistance. Firstly, the economic aid given by the U.K. to the developing countries has doubled from £81 million in 1957-58 to £160 million in 1961-62. It may exceed £180 million during 1963-64. The aid outlay has, in fact, risen faster than any other item of Government expenditure during the period. The assistance has gone mostly to Commonwealth countries, which together accounted for about 85 percent of the total last year. Secondly, British private investment abroad too has been high, the annual rate being about £300 million. Although about half of this has flowed to the developing countries, the major portion of the investment has taken the shape of reinvested profits. New private capital has generally sought areas offering a favourable investment climate, like the U.S.A., Canada, Europe and Australia.

Mr. Reginald Maudling, Chancellor of the Exchequer, told a Press conference in London last week that aid from public and private sources amounted to about 1¼ percent of the gross national product. The larger outflow of aid funds indicates that Britain recognises its responsibilities to the developing countries, particularly those which were under its tutelage until recently. The amount of aid given depends primarily on Britain's balance of payments position. If it is "tied" to products in which Britain has surplus capacity, the volume of assistance could be more since it imposes less strain on the balance of payments. Mr. Maudling referred to steel, ships and railway equipment as instances of aid from surplus capacity. To the developing countries, which are starved of industrial raw materials and capital goods, aid "tied" in this sense should be quite welcome, provided prices are competitive; unfortunately, this has often not been the case.

As for future trends, Mr. Maudling visualises a steady increase in the volume of aid. He has also offered easier terms for loans, such as postponement of repayments and waiver of interest during the first seven years in certain cases. These concessions would mean reducing the effective interest rate over the entire period from 5½ percent to less than 3 percent. These liberalisation has no doubt been prompted by the acute balance of payments difficulties of the aid-receiving countries, which are already bearing heavy burdens in terms of interest charges and loan repayments. In fact, some of them are using a portion of the new loans to meet their old obligations.

The effective interest rate of less than 3 percent offered by Britain compares favourably with the World Bank's rate of 5¼ percent and the U.S. Export-Import Bank's rate of 5¾ percent at which India has been borrowing funds. In fact, British credits during the second plan period carried interest at the rate of 6¾ percent. So the liberalisation should be welcome. West Germany too has lowered the interest on part of its loans to India to 3 percent, although interest on some of the credits is 5½ percent and on others 5¾ percent. But India has been offered the most attractive terms by the U.S. Agency for International Development, whose credits bear an interest of only ¾ percent. The *Financial Times* of London has gone so far as to suggest that the really generous gesture for Britain would be to "give much more through the I.D.A., which lends for 50 years at no rate of interest." As that paper observes, the U.K., with the U.S.A., has no doubt given a lead in canalising aid through the I.D.A., "but the amounts pledged are still far below those that are required".

Since the beginning of the third plan, Britain's loan commitments to India amount to £125 million, exclusive of defence aid. The contribution for the current year will be £30 million, of which agreements have already been signed for a general purpose loan of £10 million and another loan of £3.5 million for importing steel plates and other steel products. Among the ten member-countries of the Aid-India Club, Britain is the second largest contributor, the U.S.A. being the first with commitments amounting to $435 million. The largest amount of British aid has so far gone to the Durgapur steel plant, which was set up by a consortium of British companies. The entire contract cost £100 million, of which half was used to import machinery from Britain, and the rest was spent in rupees in India. The Durgapur plant has been allotted £22 million for expanding its capacity to 1.6 million tons out of the £95 million lent for the first two years of the third plan. Other major projects financed out of British credits are the Heavy Electricals plant in Bhopal, two fertiliser plants and the expansion of a power station.

The White Paper concedes that India's foreign exchange position "calls for an increasingly large proportion of British aid to be made available in a form which can be quickly disbursed". The use of credits tied to specific projects depends on the progress of the projects and also on the manufacture and delivery of the machinery and equipment. This introduces an element of uncertainty and delay, factors which have been responsible for the painfully slow use of tied loans by India. Lately, there has been a swing away—moderate though it may be—from project loans. The Aid-India Club's pledges for the current year have left about 38 percent (over $400 million) of the total aid in non-project form. The largest contributor, the U.S.A., has pledged half of its assistance in the form of non-project loans. But the tendency to tie credits to purchases in the donor countries continues. Considering the idle industrial capacity in the aid-giving countries, this is understandable; but it may not be very helpful for aid-receiving countries which would prefer to have the freedom to use aid funds for purchases from the cheapest source.

RUNNING STATE ENTERPRISES

TWO developments last week once again brought to the fore the urgent need for basic changes in the structure and organisation of public enterprises. Of these, the announcement made by the Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, was the more dramatic because it promised immediate reforms to reinforce autonomy in two enterprises—the Durgapur steel plant and the Sindri fertiliser factory—as an experiment which may later be extended to others. The other development was the long-delayed move to constitute a standing committee of Parliament to watch over public undertakings, the first step towards removing day-to-day operations from the ambit of Parliamentary scrutiny.

The implications of either development cannot be understood without looking into the nature of the problem by the somewhat conflicting requirements of public accountability and autonomy. The two concepts are not easy to reconcile in any country, but the difficulties are greater in India because parliamentary conventions have not yet developed to limit the scope of legislative probing in the affairs of State-owned undertakings. This is obvious from the instance furnished by the Lok Sabha last week when it interested itself in the matter of a single advertisement that Air India published in a few of overseas publications. Clearly no issue of principle was involved but only a matter of decision whether the text of the advertisement, captioned somewhat provocatively, was in poor taste. Anyone who has read the advertisement, which has incidentally never appeared in India, will be at a loss to understand what made some members of the Lok Sabha take offence. The only possible explanation is that they may have

India's Resources
are Precious
WASTE NOT,
WANT NOT

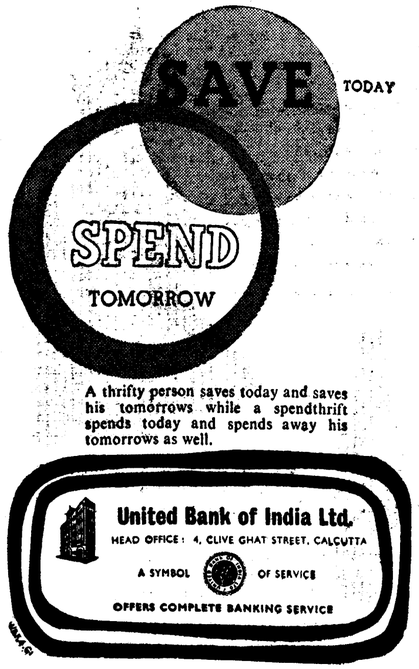
been placed at a disadvantage because of unfamiliarity with the kind of humour that Air India indulged in, and so dubbed as bad and objectionable what they surely failed to understand.

The fate of this advertisement is unimportant. But the point is important that if every action of a public undertaking is liable to come up for Parliamentary scrutiny, Ministers cannot be blamed for deciding personally every detail of their operations, which of course makes nonsense of autonomy. This applies especially to the Finance Ministry which, as the custodian of public funds, has the responsibility to guard against their misuse. Looking over the Finance Ministry's shoulder is the Auditor-General who must satisfy himself that every naya paisa is properly and fully accounted for. This is indeed the duty vested in him by the Constitution, whose authors prized the idea of independent scrutiny over Government spending highly. It follows that no matter whether an enterprise is constituted as a statutory corporation (such as Air India, the L.I.C., or the D.V.C.,) or as a Government company (such as Hindustan Steel, the N.C.D.C or the Heavy Engineering Corporation), it is never beyond the reach of the Auditor-General.

The Constitution prescribed for audit, and as a corollary, for book-keeping. But it does not say anything about the spirit which should inform either activity. That both are almost invariably conducted in a peculiarly pettifogging manner is highly unfortunate, especially because of the inhibiting influence this has on initiative in public undertakings. But then it is not the individuals who are to blame, but the system which refuses to take anything or anyone on trust. Even more damaging is the fact that both accountants and auditors now functioning in public sector enterprises have never before in their lives have had anything to do with any industry, let alone the particular branch in which they work. This lack of experience understandably makes them nervous and apprehensive of being hoodwinked by the operating management, and they are, therefore, all the more demanding. There is, for instance, the story of a Finance Director who at a cocktail party heard about continuous casting, a revolutionary development which might some day render the blooming mill of a steel plant obsolete. The next morning he was on the telephone demanding to know why a project then being considered should have provided in its design for a blooming mill installation.

The delays and frustrations which arise in public enterprises because of the need to satisfy the financial watchdogs at every step are well-known. It is now widely thought that excessive financial scrutiny is one of the major reasons for their poor performance, accounting for the delays in the completion of projects and for unsatisfactory results subsequently. If every purchase, every sale and every appointment must meet the procedural requirements established by time-honoured conventions of financial propriety, there is not much hope of accelerated development. This is the crux of the problem, and no solution is possible except by persuading Parliament to curb its curiosity. It is unlikely that a sovereign legislature will agree to any such limitation unless an alternative form of supervision is available. In Britain, this has taken the form of a select committee of the House of Commons, a compact body similar in conception to the public accounts or estimates committees that already exist in India. It was hoped that the committee concerning itself with public sector enterprises would develop the knowledge and insight that the House of Commons as a whole obviously lacked. Its existence would serve as a salutary check on the executive and the bureaucracy. In fact, a similar body might already have been functioning in India by now, had its formation not been blocked by a dispute between the Rajya Sabha and the Lok Sabha. The dispute having apparently been resolved, the Government came forward last week with a resolution proposing the formation of the committee, which will now be taken up at the next session.

The reforms that Mr. Subramaniam has proposed are designed basically to strengthen the authority of plant management *vis-à-vis* the financial watch dogs. He hopes to wean plant managements away from the tradition of seeking prior financial concurrence before doing anything at all. To this end, he has specially authorised the general managers concerned to disregard any financial advice they find unacceptable. But, as the Minister himself disclosed, the power to go it alone has been vested in the general managers of steel plants since July 1962. Yet if some have been reluctant to do so, it is perhaps because they are not too keen to shoulder the responsibility. This is not surprising because most general managers of public enterprises are non-technical people drawn from an administrative background who can hardly be expected to strike out on their own in a complex industry. It is unlikely, therefore, that the reiteration of the primacy of general managers in the plant hierarchy, which Mr. Subramaniam attempted last Friday, will take us very far. Autonomy is important, but the ability to use the autonomy to advantage is more important still.



Current News and Comment

Introducing Incentive Bonus Schemes

One of the most effective ways of increasing productivity are incentive bonus schemes based on work measurement. These are already being tried in India on a limited scale, and the results so far have been satisfactory A brochure just published by the Associated Chambers of Commerce of India—the third in a series of publications to promote productivity-consciousness in the country—discusses how some of the incentive schemes which have been implemented successfully in the economically more progressive countries can be realistically applied in India. The group of schemes recommended are essentially concerned with increasing "the effectiveness of the effort of industrial workers"; in other words, schemes that are based on a systematic measurement of human work, without which it is not possible to implement incentive bonus schemes fairly and equitably. Generally any scheme based on financial incentives often leads to such undesirable results as deterioration in the quality of output or an increase in rejects and scrap. This can be checked only by proper work specifications.

The brochure recommends three principal types of incentive bonus schemes with appropriate models to explain the basic concepts. These schemes are based on (a) operator performance; (b) overall performance. and (c) on various factors, in addition to the quantity of work, which are affected by the way the employee uses his discretion; in other words, multi-factor schemes. An enterprise would find it advisable to use all the three types, choosing a particular scheme to suit the conditions in which it is to be operated and the type of work involved. The schemes cover a wide range of work and are applicable to any department, from unskilled labour up to and including first-line supervision. For employees above this level incentives are best provided by salary increments and opportunities for promotion based on properly conducted assessments of performance and potential, such staff, therefore, cannot be covered by the incentive bonus schemes.

The brochure emphasises the obvious point that co-operation of both management and workers is essential for the success of the schemes. Workers, as individuals. must be satisfied that the scheme is fair. They must be shown that work measurement has been done properly and honestly, although the work measurement data should never be made a matter for bargaining. The management too should have full confidence in the schemes, as no half-hearted effort will be successful. The preparation and operation of schemes based on work measurement, which are applicable to the efforts of individuals or small teams, are much more demanding on managements' time than the more usual production bonuses. By introducing an incentive bonus scheme, management presents itself with a challenge. The scheme usually brings about a radical change in the employer-worker relationship. The men no longer need to be driven to work better or harder; rather they ask for more work. This, however, is not an unmixed blessing. The men want to work more because they are eager to earn more. The brochure advises that incentive payments should be not more than 25 percent to 50 percent of normal earnings. When

the fluctuating part of a worker's earnings is too high, unrest is caused. So the supervisory staff have a very important part to play. They must plan the work carefully so that the flow is steady and reasonable. and satisfies all workers. Poor quality work should not count as work done.

Methods of Financing Companies

The staff paper on the "Cost of Alternative Methods of Financing of Companies 1955-60" by Mr. N. D. Joshi, research officer, Department of Company Law Administration, published in a recent issue of *Company News and Notes*, contains some interesting suggestions as to how company finances might be reformed, although his conclusions, by and large, appear illogical. Attention has been rightly drawn to the fact that the balance-sheet should be presented in a more comprehensive form to show correctly the true worth of a company. The fixed assets should be valued on replacement cost basis since depreciation provided on the historical basis gives a wrong view about the real rate of return earned by a company. The investments and inventories should be valued at market prices. The profit and loss account should be divided into (a) manufacturing account, (b) trading account, (c) capital transactions account and (d) banking and investment account. The surplus arising out of revaluation of assets, sale of assets and revaluation of inventories, should be credited to the capital transaction account. Any loss of capital should be also debited to this account. After deducting the tax on capital income, the balance in this account should be transferred to capital reserve.

If the balance-sheet of a company is presented in a detailed form it will facilitate a better appreciation of its financial efficiency. The author thinks that the financial efficiency of a company should be judged by the following criteria: (a) whether the costs of funds raised by a company are in proportion to the risks undertaken should be carefully examined; (b) the return on equity net worth should be at least equal to the return on tangible assets; (c) the cost of non-equity funds should be kept below the rate of return on tangible assets and (d) the equity capital should be extended in proportion to the growth of business risks. These are ideal conditions which more often than not cannot be fulfilled in practice since they have to be adjusted to changes in the capital market. The survey has ignored the limitations of these principles in practice. so it comes to the wrong conclusion that several big companies have failed to satisfy some of the conditions of efficient financial management.

There is no doubt that the growth of equity capital has not been sufficiently large in relation to the development of business activity. There has consequently been reliance on bank borrowings. It should, however, be borne in mind that if companies have not succeeded in attracting equity capital it is because the dividends are not attractive, which is due to the fact that the after-tax profits have been trimmed by heavier taxation. Since the tendency to plough back funds into the business for financing expansion and modernisation has increased during recent years, the amount of disposable profits with which to pay dividends, has been generally held down.

Raising Exports

In his speech at the second quarterly meeting of the Indian Merchants Chamber in Bombay last Saturday, Mr. Manubhai Shah, Central Minister for International Trade, stated that the Government would be introducing certain price stabilisation measures to improve the competitive position of Indian products abroad. If by this he means stabilising prices at lower levels, his statement would be understandable. But he has said that the measures also include price support programmes for traditional export items. While price support may help stimulate production, it is difficult to see how it will strengthen the competitive position of Indian goods. On the contrary, price support may adversely affect the exports of a highly competitive product by pegging its raw material costs at a high level. In the case of jute goods, for instance, the mills have been handicapped because three of the principal ingredients of production costs, namely, raw jute prices, wages and taxes, have been fixed on independent and extraneous considerations.

In the ultimate analysis, Indian exports can be stepped up only if manufacturing costs are lowered. A major reason why industrial costs are high is the existence of substantial idle capacity caused by shortages of raw materials, power and transport. Mr. G. D. Somani, president of the Indian Merchants Chamber, made a valid point when he said that fiscal incentives were necessary for export promotion. The tax burden at present is so heavy and widespread that it has raised production costs substantially. All the three major export items, jute goods, tea and textiles are handicapped by high manufacturing costs. Mr. Manubhai Shah stated that Indian goods did not have a reputation abroad for quality and emphasised that exporters should become quality-conscious. The Government is introducing compulsory quality control and pre-shipment inspection for several export items. While the Government's concern for quality control is understandable, it is essential that the measures should impose the least possible strain and expense on industry. Or else, they will further push up the prices of Indian goods.

Export Prospects for Tea

The July issue of the *Indian Overseas Bank Review* contains a discussion on the export prospects of Indian tea. In spite of the pressimistic view, the article has brought to light several points which should provoke fresh thinking on the subject. Although India is still the largest producer and exporter of tea in the world, her competitive position has deteriorated due to the lack of proper promotional measures. There has been no appreciable rise in exports during the past decade. The level of exports has largely been maintained due to the momentum gained in earlier years. Furthermore, conscious efforts have not been made to increase exports. High-grade Indian teas have enjoyed assured markets abroad. The closer relationship between the British-owned and managed tea companies in India and blenders and packers in Britain has helped the Indian commodity. Special trading arrangements have also contributed to sales. A large part of the increase in production during recent years, the article points out, has been absorbed by the domestic market since the growth of internal consumption has been rapid. The vast scope of the domestic market is probably the best guarantee for the future of the industry.

The review is doubtful whether the export target of 277 million kilograms to be achieved by 1966 is realistic. Accepting the U.N. Food and Agriculture Organisation's projections of total demand in importing countries for 1971 and assuming that India's share in the world tea trade will remain at the 1951 level of 37 percent. tea exports are not expected to rise to more than 210 million to 230 million kilograms by 1970. In view of small exports to eastern Europe during recent years, no great improvement in exports to this region is visualised in the near future, in spite of the prospect that the European Common Market countries will impose no duty on imports from the beginning of 1964. Exports to Russia at present range between 10 million and 12 million kilograms. Even if sales to that country were to be doubled. India might not export more than 235 million to 255 million kilograms by 1971. So big efforts will have to be made if exports are to reach as high a target as has been set in the third plan. Meantime, the other producing countries, such as Ceylon and east Africa. will take steps to sell their increased output in the world markets. So Indian tea will face intense competition in the years ahead. The survey also doubts whether an increase in exports will, by itself, lead to a rise in foreign exchange earnings. Since the demand for the commodity in the principal world markets is largely inelastic, the price is likely to fall sharply due to excessive supplies in the absence of an international agreement to regulate them.

Paper Output, Quality and Prices

In his presidential address at the annual general meeting of the West Bengal Paper Merchants Association in Calcutta on Thursday, Mr. A. K. Sur took an upsympathetic view of the difficulties of paper mills. There has been a serious deterioration. Mr. Sur said, in the quality

of paper manufactured by some Indian mills, necessitating rejections to the extent of 10 percent to 20 percent of the output. He regretted that good quality art paper was not available in abundance, and that the indigenously produced packing and wrapping paper did not have the strength for packing and wrapping food articles. In other words, Mr. Sur's complaint against the mills boils down to the fact that they are producing inferior paper compared with foreign manufactures. Producers, he said, were living in the "blissful world of a sellers' market." He, therefore urged the Government to set up a quality control board to examine each lot of paper before it is released to the market.

Although consumers may congratulate Mr. Sur on taking up their case, the mills will feel that he has taken a one-sided view. If some mills are unable to increase production and improve quality, the reason may be that the existing prices do not compensate them for the sharp rise in production costs. The latter are estimated to have increased by 16nP a kilogram between 1958 and March 1962, and subsequently by a further 10nP a kilogram. But the Government granted only a small increase of 6nP a kilogram in 1962 following vigorous representations from producers against the Tariff Commission's recommendations on prices. One need not point out elaborately how the prices of various materials, such as coal, sodium sulphate and rosin, have risen steadily in recent years while paper prices have been pegged at an unrealistic level without providing any incentive to the producer. Mr. Sur, however, did not say a word about all this and criticised the mills for deterioration in quality. But he was prompt in pointing out that a substantial rise in the cost had made it necessary to raise the dealers' margin.

Unfortunately, there cannot be one rule of logic for paper mills and another for the merchants. It it is true that the dealers' margin has to be raised because of the increase in transport, establishment and borrowing charges, it is even more necessary to raise ex-factory prices either to increase production or to improve quality. In the face of these facts, Mr. Sur regretted, quoting a lot of facts and figures, that the progress in paper production during the past two years has been "positively disappointing in the context of the targets fixed by the Planning Commission for the third five year plan period." He said, however, that the large gap between the targets and actual production was attributable to the fact that some new units, for which licences were issued by the Government, had not yet been established. The apathy of investors is obviously due to the low paper prices as well as unrealistic returns. Meanwhile, the *per capita* consumption of paper in India continues to be one of the lowest in the world in spite of tall claims about the growth of literacy and industrial development.

Stifling Managing Agents

In an article entitled "the Impact of the Companies Act on the Managing Agency System" in the 2nd September, 1963 issue of *Company News and Notes*, Dr. Raj K. Nigam, director of Research and Statistics in the Department of Company Law Administration, has expressed satisfaction that "the twin processes of 'mending and ending' the managing agency system have worked hand in hand in rather an imperceptible manner during the last seven years" due to the working of the Companies Act, 1956. Dr. Nigam has produced statistics to show that the number of managing agents has decreased from 3,944, who looked after 5,055 companies before the Companies Act, 1956, came into force, to 1,044 who managed only 1,440 companies at the end of 1962-63. Of total number of companies, exclusive of banking, insurance and Government undertakings, at work before the new Companies Act came into operation, nearly 18 percent were under managing agents. At the end of 1962-63, of the 24,598 companies at work (excluding the above categories) only 5.8 percent were looked after by managing agents.

Not only has the number of managing agents gone down, they are now managing a smaller number of companies, and the average number of concerns under each managing agent has also fallen. As against 17 managing agents which had ten or more companies under their charge in 1954-55, there were in 1962-63 not more than seven which managed more than 10 companies each. According to Dr. Nigam's calculations, "an overwhelming number of managing agents continued to have one company under their management, the proportion of such managing agents having marginally come down to 86 percent in 1962-63 from 89 percent in 1954-55". But this is a far from happy development, because managing agents who have one company each under them could not pass on the benefit of common pool services and group management which result in economy in overhead expenditure for the managed concern.

The managing agents have rendered great service in the development of new industries and in nursing the enterprises which they helped to promote. The restrictions imposed on the system and on inter-company investments now under the Companies Act, 1956, have done positive harm to the economy. The division of groups of managed companies has added to overhead costs, and no longer the same economy in the flotation of new companies is possible. While there is every justification for preventing malpractices in company management and for protecting the interests of shareholders and others, there is no justification for stifling the managing agency system which did so much good in the past.

New Central Loan for States

The food, irrigation and power projects of State Governments have not been making satisfactory progress due to lack of finance. There has also been dearth of materials, and planning is bad, but it is believed that with more money, it would be possible to achieve better results. The expert team which visited different States to study the causes of stagnation in foodgrains production has recommended that the States should be given an additional loan of Rs. 19.3 crores by the Centre during the current year to accelerate their production programmes. But since some of them would be able to raise their own resources, it is considered adequate to grant a loan of only Rs. 15 crores. Some States which were not considered by the expert team will need nearly Rs. 4 crores. In this way, out of the additional loan of Rs. 50 crores which the Central Government has sanctioned to the States for 1963-64, Rs. 20 crores will be used for food programmes and Rs. 30 crores for expediting power projects. This additional grant of Rs. 50 crores brings the Centre's assistance to the States to Rs. 1,217 crores out of the total plan provision of Rs. 2,375 crores.

There is a reasonable hope that State Governments would be able to make proper use of the new Central loan, since they are themselves making concerted efforts to raise resources for the plan projects. A noteworthy fact is that all the States, which had taken unauthorised overdrafts from the Reserve Bank, have returned them. The State Governments have also agreed not to divert plan funds to others. Although all of them have not succeeded in keeping down their non-plan outlay and much waste in public expenditure continues, it is to be hoped that as the third plan proceeds, they will be able to show better results.

Industrial Award Set Aside

In allowing a writ petition filed by the Muir Mills Co. Ltd, Kanpur, against the award of Mr. K. N. Singh, sitting as industrial tribunal (textiles) in Allahabad, Mr. Justice S. N. Dwivedi of Allahabad High Court observed that the finding of the tribunal had no support of evidence and was based on surmise and conjecture. It was also vitiated by a manifest error of law. The presiding officer of the tribunal was swayed by considerations of fairness in the abstract, or by his own notions of industrial law. Since there was no evidence whatsoever to this effect, the tribunal could not record a finding that the labourers should be paid full wages for half the working days between 1st June, 1956 and 30th March, 1957. The importance of the High Court judgment stems from the fact that industrial tribunals usually show a sympathetic attitude towards labour, the latter to be the weaker of the two parties. But as the judgment of the High Court clearly lays down, the duty of industrial tribunals is to be guided solely by evidence and by the industrial law of the land.

The facts of the case are that a number of workers of the Muir Mills Co. Ltd of Kanpur, had claimed in the court of the industrial tribunal (textiles), Allahabad, that they were not paid wages for several days during the period from 1st June, 1956 and 30th March, 1957, as the employers had not allotted them any work on the days in question, with the object of depriving the workers of the right to become permanent employees of the Company. The tribunal had come to the conclusion that on some of the days during the period the employees were provided with work, on others, they were shown to be absent and on the remaining days, they were sent back as there was no work for them. Although there is no such provision in industrial law, the tribunal came to the conclusion that the employers should pay full wages for half the period in question since it was not possible to come to any definite conclusion about the number of days on which the workmen went to the mills and were not provided with work. Mr. Justice Dwivedi observed in his judgment that there was no evidence to show whether the employees had actually reported for work in the mills during the disputed period. It was said in general terms that they had been reporting every day, but no evidence was produced on behalf of the employees in support of the claim. Further, there was no evidence to show whether the employees were sent back on the plea that no work was available. In the absence of this evidence, the tribunal was not justified, according to the High Court, in deciding that the employees should be paid full wages for 50 percent of the working days from 1st June, 1956 to 30th March, 1957.

A BUILDING DISASTER

THE prosecution in Bombay over what is generally known as the "Sitaram Building Disaster," has resulted in a verdict of "not guilty"; and Bombay is very indignant at the result. The fact, however, seems to be that people may build houses in Bombay as insecurely and as unscientifically as they like, and whether such buildings fall down or stand up, whether they bury people beneath their ruins or not is, at present, a matter of the supremest indifference to the Law. The Law, we have been told, "is a Hass;" and no doubt it fails to provide for a good many contingencies. In the Sitaram Case the Jury added the following note to their verdict:—"Government might be asked to take such steps as will ensure a better method of supervision by the Municipality and the Improvement Trust bodies, etc., with particular reference to the strength and quality of timber and other materials used as support in buildings. Further to specially rule as to whether the erection of large buildings or dwelling houses, such as the Sitaram Buildings, should not be constructed under the responsible supervision of persons more competent than ordinary experienced mistries, one of the Jurors added the following rider: "That buildings of such importance should be carried out under the supervision of duly qualified Architect or Engineer." We are of opinion that barring earthquakes, subsidence of the soil, tidal waves, cyclones, etc., etc., the owner of house property ought to be individually responsible for its safe construction. Supervision by Municipal and other officials will tend towards bribery and corruption, as it always does in this country. If a house owner is determined that his property shall be properly built, he can attain this end, by employing the best firms whose reputations are quite above scamped and inferior work and unsound construction. Every house owner should be responsible that his property is not a menace to the public If he is not prepared to accept this responsibility he has no business to own house property. The mere fact of a house falling down, as was the case with the Sitaram Building, should have been quite sufficient to prove gross culpability on the part of those immediately interested in its construction. Three persons were injured and four were killed over the disaster But nobody is responsible. Plainly we need a stronger law as we need stronger built houses.

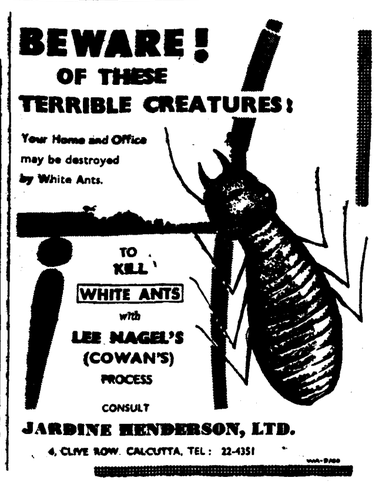
A Ditcher's Diary

THERE IS NOTHING LIKE TAKING PARLIAMENT INTO confidence; and a review of the session just concluded clearly shows that, for all his shortcomings, Mr. Chavan earned at once the respect and the sympathy of both Houses with his humility and candour. His penultimate statement that there had been no civil interference with military decisions can be ignored; he had said enough earlier to prove that there had been. While Mr. Chavan's relative frankness is in pleasant contrast to Mr. Menon's insolent refusal to tell Parliament and the people anything about defence, I cannot altogether shake off the unworthy suspicion that when a politician speaks openly on something, he does so with motives that are far from open. When Mr. Nanda, for instance, berated the Food and Agriculture Ministry, he had a political purpose: to do poor Mr. Patil down. It seems to me good and proper that Mr. Chavan in his first statement on the N.E.F.A. reverses exposed Mr. Menon and General Kaul, within the bounds of parliamentary and political propriety. Mr. Nehru's performance was below his best, especially when he had to bear the cross of Kairon. Looking back on the session as a whole, Mr. Chavan and Dr. Lohia seem to me to have made Parliament most meaningful. The latter's statistics may or may not have been entirely accurate; the Government's were not either; he certainly brought the fact of Indian poverty home as had never been done before. Mr. Nanda was right to complain that the progress made had been altogether ignored. Well, it is hardly the Opposition's business to do that; and it cannot be said that the Government did that for itself brilliantly. All in all, however, the session did show that the Government is now less insensitive to parliamentary debates than it used to be; and that is a considerable advance. If the Opposition takes its home-work more seriously, as I am told Mr. Pai and Dr Lohia are doing, parliamentary democracy may yet redeem itself in this country.



BELIEVE I DO THAT MINISTERS AND AT LEAST THE higher officials should be absolutely meticulous in their observance of the rules devised by themselves—if only to set the right example, if only to prevent real offenders from offering the plea that some of the high and mighty have done no less. Yet it seems to me doubtful wisdom that members of the Lok Sabha should have raised last week the question of Mr. Nehru's account with a foreign bank which, the Finance Minister declared, now had no more than £50 at its credit, mainly to receive royalties on his books published and sold abroad. The rest is remitted to India with the knowledge of the Reserve Bank. I am as conscious of Mr. Nehru's faults as at least of his virtues; I hope I appreciate what the French might call the defects of his virtues. It had, however, never occurred to me that he might need to hold a foreign exchange reserve of his own. Whether he once tried to build up a rouble balance in terms of international prestige is another matter. Which is not to say that no head of Government warrants similar vigilance. For obvious reasons, I can name no names; in any event, such things are almost impossible to prove; and Sardar Partap Singh Kairon has only recently told us what, in his opinion, should befall those who cannot prove their allegations before a tribunal. (How can a layman or an M.P. prove something? He has only *prima facie* evidence. It is the business of the police to secure and produce complete evidence, for only they have the machinery and the resources.) It is said that many men in power in Africa and west Asia, unsure of their future, have numbered accounts in Swiss banks. As far as I can see, Indian politicians have not yet started thinking in terms of fleeing the country. What happens when trivial charges are made against prominent politicians is that the really guilty men, officials or business men, not only get a psychological satisfaction that they are no worse than others but also get actual protection, for enforcement authorities are scared that they may be implicating V.I.P.s. The Opposition would be wise to concentrate its fire on men and issues that are substantial: to smear men in high places for smearing's sake is the most barren exercise.

BRITAIN'S POLICEMEN, I SUSPECT, NO LONGER LOOK quite as wonderful as they did—at least not since the great train robbery. Although more than a dozen people have already been arrested in connection with that remarkable crime, the ringleaders are still at large and the proportion of the stolen money so far recovered is just about enough to cover the rewards offered. No great achievement, I should think. Nor is it to be wondered at when, or so the hateful rumour goes, the only qualification considered in choosing a policeman is the size of the applicant's feet. What this means, of course, is that insufficient attention is being given to the potential recruits' powers of intelligence. The neglect is serious enough at a time when criminals the world over are becoming increasingly organised and scientific in their approach. It is worse when crime is booming; to parody Mr. Macmillan, the criminals never had it so good. According to the statistics, indictable crimes in Britain have increased more than fourfold since prewar days. That is considerably more than the growth of the population and even more than the cost of living. What are the police—admittedly understaffed—doing? If some critics are to be believed, they are far too busy persecuting the private motorist to do anything at all. But others claim that the police are a fine body of men who have fallen on bad times. Their pay, for instance, is rather less than can be earned by an 18-year-old labourer on a building site. Their hours are long, their working lives short, their chances of promotion small and the standards demanded of them high. All of which adds up to an unattractive proposition in a prosperous welfare State. Improvement may be on the way: pay is increasing, promotions are being accelerated and there is a general movement towards attracting better brains into the force from which all concerned, except perhaps the criminals, should benefit. But in a world where it is becoming increasingly obvious that crime does pay, the policeman's lot, in Gilbert's immortal words, "is not a happy one". Indeed it cannot be; not if the policeman is honest, conscientious, hardworking and compassionate. Yes, compassionate; one of the ways in which the police are accused of working off their frustrations is by using strong-arm tactics on their victims. There may be a lesson for India in this.

I THOUGHT IT WAS PERHAPS INSINCERELY GENEROUS of Mr. S. K. Patil to tell a Calcutta audience the other day that the Kamaraj plan was being worked properly "at the highest level"; only lower down had it sometimes been misused or misunderstood. The "highest level" presumably being Mr. Nehru, I hope a suitably large number among the audience were charmed by Mr. Patil's magnanimity in implying that the Prime Minister had done the right thing by using the plan to throw his former Food and Agriculture Minister out. The rest of Mr. Patil's speech, however, was far from magnanimous—perhaps understandably so, coming as it did from one so new to the ranks of the Congress Party's embittered rejects. I cannot say I easily understand why Congressmen continue to feign surprise at the way the Kamaraj plan is unfolding. It is several days since Mr. Nehru gave a perfectly fair indication of his determination to cleanse the Congress of unworthy elements—by deciding to keep Sardar Partap Singh Kairon in Chandigarh; the wags say the acme of political cleanliness now would be to work out a Kamaraj plan for Supreme Court judges. The dog-fights for the succession in the States cannot be described as wholly unexpected either; my only surprise would be if, in view of what has been going on in some States, the use of the term dog-fights did not move the canine population to charge me with defamation. Mr. Patil is no novice in the political game: he must know as well as anyone else that if the Kamaraj plan were implemented in the form advertised, the Congress Party itself would be in danger of becoming extinct since, its narcissism

notwithstanding, it is not exactly overflowing with the saints whose existence the plan presupposes. The Party is sometimes alleged to have a left wing and a right wing; in fact the better known division within it has generally been between those who have power and patronage and those who do not. In development parlance, it is fashionable to say that the conflict between the "haves" and the "have-nots" might one day prove to be the ruin of the world. In the Congress, the conflict between the haves and the have-nots is already proving to be the ruin of the country.

PROTESTING AGAINST MY CYNICISM ABOUT MALAYSIA expressed last week, a correspondent writes: "Now that Malaysia is a reality I am wondering whether India is going to seize her obvious opportunities. Here is the most stable political unit in south-east Asia. And the one most single-mindedly anti-communist, a fact which, in my opinion, has been responsible for most of the fuss which has accompanied its birth. Added to this, it possesses the traditional naval citadel of Asia, the great fortress base of Singapore, still nominally under British tenancy, but, or so I should imagine, open for the use of any other friendly navy prepared to accept Malaysia's struggle against Chinese communist encroachments as its own." My correspondent refers to the view I expressed in this diary some weeks ago that the frontiers of India's immediate strategic interests should in future be visualised as stretching over the whole periphery of the Indian Ocean as well as along the line of the Himalayas. Singapore is strategically the gateway to that Ocean from the Pacific. I admit that if it were ever to pass into unfriendly or unstable hands, India's vital interests would inevitably be affected: the flank of her sea defences would have been turned. The British realised this long ago when they first fortified Singapore's mud flats and imported Chinese labour to do the dirty work. The first conception has stood justified throughout the whole period of imperial influence in the area, although the second one has threatened disaster several times. But, my correspondent adds, now that the island and its population are safely incorporated into Malaysia, the future of the base would seem to be reasonably assured if the new unit remains united politically and free from the active interference of its neighbours. Both these are large assumptions. I also cannot agree that India should attempt to establish some guarantee of Malaysia's continued independence: with the strength we have available that would be as futile as the one given by Britain and France to Poland in 1939.

"BY GAD, SIR, THE MAN IS DEAD AT LAST", ONE CAN almost hear Colonel Blimp scream so with supreme satisfaction and profound relief. Sir David Low's last cartoons for the *Guardian* were not his best: a cartoonist, it seems to me, can be too young or too old for effective satire. But David Low has already immortalised himself with his contribution to the English dictionary: "Blimp" is now to be found in the C.O.D. Sir Harold Nicolson once suggested during the war years that Low might do well to drop the character, for he had gone out of date. I wonder It calls for an effort—doesn't it?—to remember that there never lived anyone called Colonel Blimp any more than someone called Sherlock Holmes. There is a pub in London where one can see the pipe. One day—who knows?—there may be a museum for Blimp; there will be the moustache and there will be the riding kit and a model of that insensitive face with that unthinking head. Low's best days were in the thirties when unemployment reigned and the Tories in Britain were flirting with the Fascists and the Nazis and the Third Republic in France was getting a new Government every five minutes or so. Low was then angry and his anger was not less real because it expressed itself in cartoons that were highly amusing. In that best-selling wartime Penguin *Blackmail or War*, Madame Tabouis included some of Low's most telling cartoons; and the real character of fascism in Europe became vivid to us in distant India. Low had a very acute social conscience and that is why his cartoons had a bite that efforts like *Private Eye* can never hope to attain It is not an exaggeration to say that what Chaplin is to the cinema, Low was to the cartoon.

THE DITCHER

Guide for Investors

PRICE AND EXPORT HOPES RAISE PLANTING SHARES

(BY A SPECIAL CORRESPONDENT)

THERE has been a rising trend in plantation shares in the Madras stock market during the past few weeks. Steady advance has been made by some tea, coffee and rubber shares, and there is little indication of a reaction. What is it due to? Is the rise in prices backed by genuine investment support or is it due to technical causes? For some time past, there has been talk of interested buying of some plantation shares by upcountry parties. No doubt, the support for these shares from outside stations has recently increased. This has raised the price of many of these shares much against normal expectations. Another important factor leading to the rise in prices is the scarcity of offerings.

Since there has practically been little jobbing interest in these shares —particularly in the cash section— one may conclude that holders of these scrip are somewhat reluctant to part with them at the moment. This unwillingness to liquidate holdings, coupled with the renewed support from investors from upcountry areas, has left its impact on the prices of plantation shares. As for the outlook for the latter, the investor is encouraged by the improved price realisation during the year and the possibility of better exports of plantation commodities. One noteworthy feature is the return of coffee shares to their old favoured position. This is due to the almost complete disappearance of pessimism concerning the outlook for coffee, which was widely entertained only a few years ago.

Apart from the improvement that has taken place in the general outlook for plantation shares, the higher yield of many of these shares, compared with that of industrial equities, has been responsible for greater investment support for these shares. Furthermore, investors have been disillusioned as many new shares have not shown any capital appreciation. Meanwhile, the proportion of non-yielding stocks has increased with investors. It is understandable why the average investor is anxious to buy shares which have the prospect of capital appreciation. The scrip of many well-established plantation companies with a good record are, therefore, preferred to the many uncertainties that are now associated with the operation of an industrial unit due to such adverse factors as the foreign exchange shortage, high cost of raw materials and restricted imports of spares and components.

As for taxation, the impact of the super profits tax on industrial profits and on those of plantation companies (the latter, incidentally, attract the tax only to the small extent of their liability to Central income tax, since their income is largely agricultural) is now better understood and appreciated by investors, particulary after the publication of balance-sheets in recent months. In contrast to the mild buoyancy in planting scrip in the Madras stock market, industrial equities have remained quiet without recording any sympathetic rise, barring, of course, a few selected shares. Investors' discrimination for plantation shares has, meanwhile, surprised many who wonder whether there is any solid reason behind this greater investment support. Viewed in the context of what has been said above, and in conjunction with the fact that the plantation shares failed to participate in the last equity boom, the recent price movement in this section appears to be justified on technical as well as investment grounds. As for the question whether the present tempo in this section will be kept up, indications are that some of these shares will show a modest rise especially when there are signs of an improved sentiment in the market.

Gillanders Tea Group

THE production figures of the Gillanders and Arbuthnot group of tea companies up to the end of July 1963, should be of interest considering that selected tea scrip have begun to attract support. The Anandabag Tea Co. Ltd has produced a crop of 101,964 kilograms up to the end of July 1963, compared with one of 97,956 kilograms for the corresponding period of 1932. Sales amounted to 714 kilograms, against 4,002 kilograms, and the average sale price rose from Rs. 6.73 a kilogram to Rs. 37.10 a kilogram. The entire quantity was sold for exports which amounted to 2,532 kilograms for the corresponding period of 1962.

The crop of the Betjan Tea Co. Ltd fell from 143,492 kilograms to 127,279 kilograms. Sales amounted to 7,015 kilograms, against 13,200 kilograms, but the average sale price improved from Rs. 7.84 to Rs. 13.15 a kilogram. The entire quantity was exported while exports for the corresponding period of 1962 were 11,310 kilograms.

The Gairkhata Tea Co. Ltd produced 154,511 kilograms, against 176,687 kilograms. Sales fell from 44,735 kilograms to 30,434 kilograms while the average sale price rose from Rs. 5.48 to Rs. 5.61 a kilogram. Exports were lower at 24,809 kilograms, compared with 170,567 kilograms. Internal sales also fell from 19,926 kilograms to 12,867 kilograms.

The crop of the Jutlibari Tea Co. Ltd fell from 191,338 kilograms to 158,020 kilograms. Sales were down from 31,670 kilograms to 8,943 kilograms, although the average sale price improved from Rs. 6.94 to Rs. 8.66 a kilogram. Exports fell from 27,860 kilograms to 7,773 kilograms and internal sales from 3,810 kilograms to 1,170 kilograms. The Tengpani Tea Co. Ltd produced a crop of 104,074 kilograms, against 107,383 kilograms. There was no sale up to the end of July 1963, while total sales amounted to 9,292 kilograms for the corresponding period of 1962. Except for Gairkhata Tea which is a Dooars garden, all other estates are situated in Assam.

Impressive Profits for Air India

A MAIDEN dividend of 5 percent after working for ten years as a nationalised institution is not something of an achievement, but Air India can justifiably feel proud of the spectacular increase in its operating profit from a mere Rs. 77 lakhs in 1961-62 to a record Rs. 3.45 crores. This has come about mainly as a result of the sharp rise in operating revenue from Rs. 21.57 crores to Rs. 24.53 crores, and the relatively small increase in operating expenses (excluding interest on loans) from Rs. 20.80 crores to Rs. 21.07 crores. The picture presented by the vice chairman and general manager, Mr. B. R. Patel, of Air India's past and current performance and the prospects ahead is very bright.

Air India, says Mr. Patel, earns the highest return today on gross revenue among the airlines in the world, in spite of the fact that its costs are either the same or higher than those of other airlines. The Corporation's financial success is due to a standardised fleet, high aircraft utilisation and the significant reduction in unit cost of production. The traffic carried by Air India during the last ten years has not kept pace with the increased capacity, resulting in a drop in the overall load factor from 59 percent in 1954-55 to 45.3 percent in 1962-63. But the unit production costs have been steadily falling and the load factor for breaking even has been reduced to 40 percent, which is probably about the lowest in the world. This is indeed a very creditable performance. The operating cost an available tonne kilometer, which is the unit of production, has come down from Rs. 1.2 in 1954-55 and Rs. 1.33 in 1959-60 to 84nP in 1962-63. And during the same period, productivity in available tonne kilometers an employee has risen from 17,800 to 43,000.

The intensive sales promotion programme undertaken by the Corporation in the past two years has begun paying rich dividend. In spite of some adverse factors such as Government restriction on travel, Chinese aggression on Indian borders, introduction of the U.K. Immigration Act and the U.S. Government's "Fly American" policy, which inhibited the traffic growth, Air India carried 165,700 revenue passengers in 1962-63 on scheduled services and chartered flights, compared with 156,500 in 1961-62. The revenue freight carried was, however, slightly lower at 5,118 tonnes, against 5,431 tonnes. The Corporation is now said to be strong enough to face international competition and absorb the impact of any lowering of air fares. In fact, Air India has always been in favour of lower fares in order to attract more traffic. The Corporation's ability to secure its legitimate share of the growing market will depend on the continuous expansion of its fleet in consonance with the growth of traffic on its existing routes and the extension of its operations to new routes. Air India is contemplating the extension of its service to the South Pacific and operating a flight from Delhi to Moscow. These proposals are, however, still in the formative stage. Finance for expanding the fleet is unlikely to present any big problem to the Corporation. As pointed out by Mr. Patel, the Corporation has now reached the "take-off stage" meaning thereby that the capital required for expansion over the next seven years or so can be obtained from the Corporation's own internal resources. The Corporation is also unlikely to experience any difficulty in finding the foreign exchange as its net foreign exchange earnings are expected to be more than sufficient to pay for the additional aircraft. The Corporation has already repaid $10.320 million out of the loans of $20.430 million borrowed from the U.S. commercial banks and the World Bank, and it expects to repay another $10.110 million by October 1966.

Khatau Mill Fares Well

THE directors of the Khatau Makanji Spinning and Weaving Co. Ltd have recommended a dividend of 8 percent for the year ended June 1963, against 16 percent in the preceding year. The shareholders have little cause for feeling dissatisfied with the cut in the rate of the dividend as the total distribution remains the same, the dividend for 1962-63 being on the increased capital following the one-for-one bonus issue. Besides, the shareholders had been told at the time of the bonus issue that "it may not be possible to step up the amount that is at present set aside for dividend distribution in the near future in order to meet the requirements of the Company for renovation and expansion."

While the total distribution by way of dividend is the same, the preliminary report on the Company's working during 1962-63 shows a marked improvement over the previous year's performance. Sales are up by about 11 percent from Rs. 5.83 crores to Rs. 6.48 crores and the gross profit has gone up by 26.6 percent from Rs. 74.02 lakhs to Rs. 93.72 lakhs, which is in pleasant contrast to the general performance of the cotton mill industry during 1962-63. The net profit, however, is lower due to the substantially larger provision for taxation which amounts to Rs. 45.95 lakhs, against Rs. 23.50 lakhs. This includes Rs. 7.50 lakhs by way of tax on bonus shares and Rs. 4 lakhs by way of super profits tax.

After providing Rs. 19.51 lakhs (against Rs. 17.40 lakhs) for depreciation and Rs. 2.84 lakhs (against Rs. 3 lakhs) for development rebate, the net profit amounts to Rs. 18.04 lakhs, compared with Rs. 24.49 lakhs in 1961-62. The directors have created a special reserve under the provisions of the Super Profits Tax Act with an

IMPERIAL

COMPRESSORS, HOISTS

TROLLEY JACKS, CAR WASHERS

Armstrong Smith Ltd.

P-17, MISSION ROW EXTN., CALCUTTA-13

allocation of Rs. 7 lakhs. A sum of Rs. 11.25 lakhs (against Rs. 14 lakhs) has been set aside for general reserve out of which is to be paid the proposed dividends. The preference dividend absorbs Rs. 1.56 lakhs, and ordinary dividend Rs. 9.58 lakhs, leaving a surplus of Rs. 13.249 to be carried forward, against Rs. 33,980 brought in. The Company's spindleage increased during the year from 103,840 to 108,504.

Prospects for Indian Dyestuff

INDIAN Dyestuff Industries made a disappointing show in 1962-63. As against a fall of 8 percent in the sales from Rs. 2.58 crores to Rs. 2.38 crores, the Company's gross profit declined by about 33.5 percent from Rs. 78.52 lakhs to Rs. 52.18 lakhs. And from what the chairman, Mr. Arvind Mafatlal, stated at the shareholders' annual meeting on 20th September, the Company is unlikely to do any better in the current year. Production during the first four months, April to July, is less than in the corresponding period of the previous year. The working results are likely to be further hit by the 12 percent reduction in prices made by the Company on account of the unhealthy competition created by the smuggling of goods from Pakistan. The chairman has, however, expressed the view that prices have stabilised at the lower levels. He has assured the shareholders that the dividend will be maintained.

While the current year is unlikely to show any improvement over the previous year, Mr. Mafatalal has struck a note of optimism about the long-term outlook for the Company. Once the initial difficulties have been overcome and the expansion programme has been completed, the Company will be able to do well as it will be producing a whole range of vat dyestuff and intermediates at competitive prices. The factory building for the expansion is ready and machinery is under erection. It is hoped that the Company will be able to start production of some of the new colours and intermediates by the end of the current year.

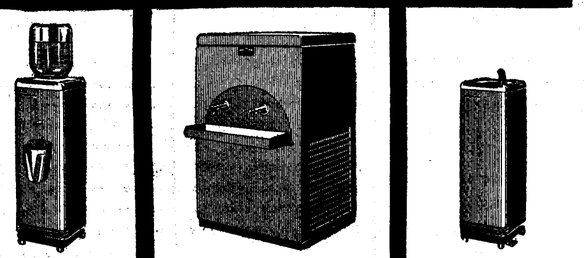
The total cost of expansion is estimated around Rs. 5½ crores and this is being financed by borrowings and internal resources. The management has no intention to issue fresh capital. When the expansion is complete, the Company will have a turnover of about Rs. 6 crores, against the present level of Rs. 2.50 crores. The chairman stated that the delay in setting up the sulphuric acid plan was due to reasons beyond the Company's control. However, orders for machinery had been placed and the plant had started arriving. If all goes well, this plant is likely to go into production by about the middle of next year. Replying to shareholders' enquiries, the chairman stated that the Life Insurance Corporation had no equity shares of Indian Dyestuff and that it only held 250 preference shares. Mr. Mafatlal informed the shareholders that the Company had been exploring possibilities for export and it had already concluded selling arrangements in Viet-nam and Thailand. Negotiations for the export of the Company's products to the Middle East and African countries are in progress.

Assam Bengal Cement Pays Nil

THE Assam Bengal Cement Co. Ltd has passed the dividend for the year ended March 1963, although the profit has substantially improved. The directors have not been able to pay the dividend since it has not been possible to transfer the funds from Pakistan. Sales rose from Rs. 86.67 lakhs in 1961-62 to Rs. 1.17 crores in 1962-63, and the trading profit has risen from Rs. 21.53 lakhs to Rs. 33.46 lakhs. Depreciation is allocated Rs. 4.98 lakhs (against Rs. 5.66 lakhs), taxation Rs. 15.06 lakhs (against Rs. 7.10 lakhs) and super profits tax Rs. 93,039. A balance of Rs. 9.20 lakhs has been carried forward, against Rs. 4.36 lakhs brought in. The Company has been negotiating with the East Pakistan Industrial Development Corporation to sell its cement factory in Chhatak.

Good Outlook for Mukand Iron

THE Mukand Iron and Steel Works Ltd did well in the year ended March 1963, with its sales rising from Rs. 4.73 crores to Rs. 6.64 crores and the gross profit moving up from Rs. 61.43 lakhs to Rs. 67 lakhs. The outlook for the current year seems to be even more promising. The chairman, Mr. Kamalnayan Bajaj, informed the shareholders' annual meeting that the Company's working during the first five months of the current year has been good, and that in spite of the not-so-very-satisfactory supply position of billets, the gross profit for 1963-64 is expected to show an improvement over the previous year. Up to 15th September, the Company had received 15,000 tonnes of billets and it expects to receive during the current year 53,000 tonnes, against 60,841 tonnes in 1962-63. The Company's various expansion schemes are making satisfactory progress and after the present expansion programme is completed by 1965-66, the gross block will have risen to Rs. 6.62 crores and the annual sales will be around Rs. 8.41 lakhs.



The chairman assured the shareholders that the expansion policy was in their best interests. While the shareholders seemed well satisfied with the Company's performance and future prospects, they spoke very bitterly about the continued existence of deferred shares. They reiterated their oft-repeated demand that the deferred shares be soon converted into ordinary shares. As usual, the chairman said that the liquidation of deferred shares would attract a huge tax liability, but he added that the management would welcome suggestions from the shareholders for converting deferred shares into ordinary shares. The chairman informed the shareholders that the first call on the new shares might not be made until the beginning of the next financial year provided the Company received the interim loan from the I.F.C. Otherwise, the money might be called some time in December. Referring to the proposed decontrol of steel, Mr. Bajaj said that the profit margin of rerollers would be squeezed if billet prices were decontrolled. But the Government might not do this, he added.

Sundaram-Clayton Factory Opened

THE factory of Sundaram-Clayton Ltd, a new concern started by T. V. Sundaram Iyengar and Sons Private Ltd of Madras in collaboration with Messrs Clayton Dewandre Co. Ltd of the U.K. for making air-assist equipment for automotive brakes, was inaugurated last week by the Madras Minister for Industries, Mr. R. Venkataraman. The factory is located in Padri near Madras city. It is claimed that the plant is the first of its kind in India and is designed and equipped to meet the entire demand of the commercial vehicle manufacturers for such equipment. Even in the initial stages, more than 85 percent of the components will be manufactured from the raw material stage.

Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, who presided over the inauguration ceremony, said that the Government wanted to avoid multiplicity of units in the manufacture of motor-vehicle components and ancillary equipment. Units producing particular components or ancilliary equipment would be exported to serve the entire motor-vehicle industry, he said.

Mahindra and Mahindra Wins Contracts

MAHINDRA and Mahindra Ltd has secured orders from the Railway Board for importing steel to the tune of 51,600 tons valued at $(U.S.) 4.9 million during August 1963. The tonnage booked represents about 59 percent of the total quantity covered by the relevant Railway Board tenders. The categories which are in short supply in India, such as spring steel billets, plates, Class III, IV and other special qualities of rounds are to be imported against these contracts from the U.S.A., Japan, Sweden and Germany. In recent months Mahindra and Mahindra has also secured orders to the extent of 39,300 tons valued at $(U.S.) 7.12 million from other Government departments. This includes an order from the Sharavati valley project for 9,719 tons worth $ (U.S.) 2.92 million for T.I. structional steel. T.I. steel has been patented by the U.S. Steel Export Corporation and is suitable for manufacturing penstocks for hydro-electric projects.

Higher Dividend from Ganges Manufacturing

THE Ganges Manufacturing Co. Ltd has produced satisfactory results for the year ended March 1963. The taxable ordinary dividend has been increased from 15 percent to 20 percent which is covered more than one-and-a-half times and works out to a yield of 12.6 percent at the present price of Rs. 15.87 a share of Rs. 10 each. The profit has improved from Rs. 41.38 lakhs for 1961-62 to Rs. 84.23 lakhs, after increasing depreciation from Rs. 5.62 lakhs to Rs. 6.61 lakhs. Taxation, including a sum of Rs. 13 lakhs for super profits tax, absorbs Rs. 51 lakhs (against Rs. 15 lakhs). A sum of Rs. 2.08 lakhs has been written back.

The working was interrupted by cuts in power supply, so turnover declined from Rs. 6.67 crores to Rs. 5.27 crores. Nearly 90 percent of the entire output was despatched. A licence to install 165 broad looms has been obtained, of which 72 broad looms are working and the remaining ones should be installed by the middle of 1964. Orders for plant and preparatory machines have already been placed. The directors take a cautious view of the outlook due to changes in trading conditions.

Electric Construction and Equipment Share Offer

THE Electric Construction and Equipment Co. Ltd is offering 12,497 redeemable cumulative preference shares of Rs. 100 each at par for public subscription. (Fuller details appear on a later page in this week's issue of *Capital*). The shares carry a fixed dividend of 9.3 percent, free of company tax, but subject to the usual tax deduction at source. Sums of Rs. 50 is to be paid on application and allotment each. The entire issue has been underwritten. An application has been made to the Calcutta Stock Exchange for listing the shares. The subscribed and paid-up capital of the Company consists of Rs. 3 lakhs in preference shares and Rs. 60.93 lakhs in ordinary shares. The list opens on 7th October, 1963.

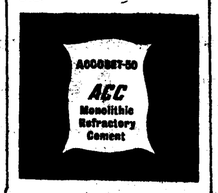
The Company manufactures power and distribution transformers, switchgears, electric motors and starters in its factories. It also produces lifts. The proceeds will be used to finance the factory in Visakhapatnam for manufacturing transformers and switchgears.

Badra Coffee Raises Dividend

THANKS to higher profits for the year ended May 1963, the directors of the Badra Coffee Estates Ltd have stepped up the ordinary dividend to 10 percent from the previous year's 7½ percent. The net profit for the year amounts to Rs. 96,254.82, compared with the previous year's figure of Rs. 4,506.99. With the amount of Rs. 4,680.76 brought forward from the previous year, the total comes to Rs. 100,935.58. A sum of Rs. 20,000 is transferred to dividend equalisation reserve (against nil), and Rs. 25,000 is transferred to general reserve (against nil). The dividend at 7½ percent on preference shares grossed plus arrears of Rs. 900, accounts for Rs. 12,375. The dividend of 10 percent on ordinary shares amounts to Rs. 42,500. The balance of Rs. 1,060.58 is carried forward. The coffee crop for the year was higher at 234.910 tonnes, compared with the previous year's crop of 197.803 tonnes. The stock of coffee has been valued at Rs. 2 a point, the same as in the previous year. The estimated crop for 1963-64 is 273 tonnes.

Associated Industrial and Engineering Pays More

DUE to a satisfactory increase in profits and turnover for the year ended March 1963, the directors of Associated Industrial and Engineering Corporation Ltd, Madras, have slightly raised the dividend to 8 percent from 7 percent in the previous year. The profit before taxation for the year amounts to Rs. 3,50,804.28 after providng Rs. 42,669.58 for depreciation and Rs. 11,500 for development rebate reserve. This compares with the previous year's profit of Rs. 2,83,081, after providing Rs. 38,059 for depreciation and Rs. 8,350 for development rebate reserve. With the amount of Rs. 28,701.01 brought forward from the previous year and with Rs. 7,047.77 being refund of income tax, the available surplus comes to Rs. 3,86,553.07. Out of this, the provision for taxation amounts to Rs. 1,80,000 (against Rs. 1,45,719). The dividend of 8 percent accounts for Rs. 1,99,610. The balance of Rs. 6,943.07 is carried forward. The turnover during the year was Rs. 64.8 lakhs which is considerably higher than that of the previous year.



The directors' report says that the aggregate value of contract works now on hand is Rs. 2.5 crores, against Rs. 1.6 crores of the corresponding period of the previous year. They add that the programme of work in Nagarjunasagar and Sileru has been kept up. The performance at the tunnel work in Daroji has been good and this work will be completed during the ensuing year. The Company has now received orders awarding the contracts for the construction of two more major aqueducts in Nagarjunasagar in Musi and Chinnapaleru, costing together about Rs. 95 lakhs. Orders awarding the Company con-

Best buy in 1900..

...Better than ever today

The unequalled superiority of Godrej Safes has been established, as was evident from the fact that in 1912 the Government of India ordered 472 Godrej Safes for the Indian Posts and Telegraph Departments, after subjecting both Indian and well-known foreign-made safes to a severe FIRE-TEST. Godrej have kept abreast of the latest technological developments, and continue to introduce innovations to suit the requirements of the modern age.

FIRE AND FALL-RESISTANT

The historic Film Fires in Calcutta, the Cotton Fires in Bombay and elsewhere and many others proved conclusively that Godrej Safes are not only fire-resisting but can also sustain battering falls and keep their contents in good condition. The culmination of the *real ordeal* came during the wartime AMMUNITION Explosions in the Bombay Docks – "worse than the horrors of bombing" – when fires were raging for days together. It was found that *contents of only the Godrej Safes were intact.*

BURGLAR-RESISTANT

During civil commotions and riots – *notably at the time of the partition of our country* – and during many daring dacoities, when Godrej Safes were at the mercy of determined safe-breakers for days together in the remotest areas, the burglars could not succeed!

Innumerable letters of gratitude have been received testifying how Godrej Safes have been responsible for saving the fortunes of countless people. For keeping your important documents, currency, jewellery and heirlooms, there is nothing better than a Godrej Safe. Invest in a Godrej Safe today and feel secure for life!

Available in different types and sizes. For further particulars, please write for the illustrated folder to any one of the following addresses :-

tracts for two tunnels in the Nilgiris costing about Rs. 32 lakhs have also been received.

The report says that the agency wing of the Company has suffered a setback due to the stringent import policy, restriction on the availability of foreign exchange, steetera. The directors take an optimistic view of the outlook for the current working year.

United Industries Pays More

THE United Industries (Cochin) Ltd which had been paying a 10 percent dividend for the past six years, has raised it to 15 percent for the year ended March 1963. The increase in the dividend follows the Company's improved performance during the year. In spite of a fall of about 15 percent in the sales from Rs. 32.25 lakhs to Rs. 27.39 lakhs, the gross profit has gone up by nearly 60 percent from Rs. 83,484 to Rs. 1,22,344. After providing Rs. 5,582 (against Rs. 4,480) for depreciation and Rs. 59,000 (against Rs. 40,000) for taxation, the net profit amounts to Rs. 57,762, against Rs. 39,004 in 1961-62.

After bringing in the previous year's surplus and writing back sundry credits, the amount available for appropriations comes to Rs. 59,218. A sum of Rs. 17,500 has been transferred to permanent reserve fund. The proposed dividend absorbs Rs. 40,734, leaving Rs. 984 to be carried forward. The Company has a paid-up capital of Rs. 2,71,760 and its reserve fund amounts to Rs. 2 lakhs. The directors point out that in view of the import restrictions in Burma, prospects of exporting dry prawns and timber, mostly rosewood, to Burma are not encouraging. The Company proposes to install a shrimp freezing unit with necessary ice plant and other equipment. The application for importing the machinery has been submitted. With the completion of this plant, the directors expect a sizable increase in the export of marine products.

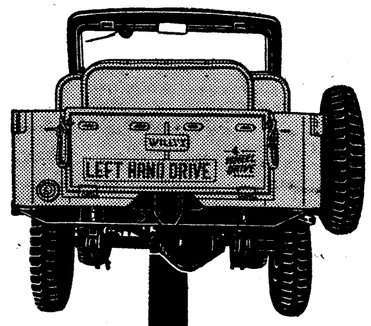
Britannia Building and Iron Skips

THE Britannia Building and Iron Co. Ltd has again skipped the dividend for the year ended March 1963. The profit has amounted to Rs. 1.05 lakhs, against Rs. 1.80 lakhs for 1961-62, after transferring Rs. 15,080 (against Rs. 18,811) to depreciation. Transferring a sum of Rs. 5 lakhs from general reserve, a debit balance of Rs. 8,321 has been carried forward. Development rebate amounting to Rs. 61,950 has not been provided for as the profit is small. The activity of the workshop has been interrupted by the shortage of raw materials and electrodes. But the directors have mentioned that the working has now improved since new equipment has been installed. The Company has drawn a sum of Rs. 15 lakhs from the Industrial Finance Corporation in the form of a loan.

Deccan Co-operative Mills Fares Well

THE second annual report of the Deccan Co-operative Spinning Mills in Ichalkaranji for the year ended June 1963 makes an encouraging showing. The mill went into production in November 1962 and during eight months of the year 1962-63 it produced 50,855 kilograms of yarn of 80 counts and 56,652 kilograms of 60 counts. Its gross profit for the year is placed at Rs. 3.22 lakhs. After providing Rs. 5.74 lakhs for development rebate and Rs. 3.73 lakhs for depreciation, the year's working shows a loss of Rs. 6.25 lakhs. Provision for full development rebate on the investment of plant and machinery has been made in the very first year of the working of the mills, though this is not necessary under the existing regulations. But the mill's working is not to be judged merely by the profit it makes. For the member operators of powerlooms and handlooms have been able to obtain their supplies of quality yarn at prices much cheaper than the prevailing market rates.

According to the report, savings, in comparison with market rates, made by members in prices charged by the mill for yarn of 80s was of the order of 3.9 percent in January—the first month of sales—and 11.5 percent in April. In May and June, the mill produced only yarn of 60 counts and the margin of saving was 6 percent in May and over 10 percent in June. The Company has received the Government's permission to install an additional 12,000 spindles. The directors are not in favour of raising the additional capital necessary for the expansion programme by increasing the membership because, even to meet the full requirements of the existing members, the Company will require an additional 24,000 spindles. The share capital of the Company is Rs. 20 lakhs, of which Rs. 10 lakhs have been contributed by the Maharashtra Government. The directors think that since they cannot expect further large sums from the Government, the Company will have to depend largely on resources of members for implementing the proposed expansion scheme.



Kalimpong Ropeway Disappoints

THE Kalimpong Ropeway Co. Ltd has produced disappointing results for the year ended March 1933. It has incurred a loss of Rs. 46,478, before providing for depreciation. Bringing in a debit balance of Rs. 2.33 lakhs, a total debit balance of Rs. 2.80 lakhs has been carried forward. The dividend has been passed. Traffic earnings fell from Rs. 1.21 lakhs to Rs. 78,365.

Kerry Jost Tools Share Offer

KERRY Jost Tools Ltd which proposes to undertake the manufacture of drilling machines and other machine tools in Ambattur (Madras) is offering 6,860 equity shares of Rs. 100 each at par for public subscription. The list will open on 30th September, and will close on 7th October or earlier, but not before 3rd October. The entire public issue has been underwritten by a prominent stockbroking firm. The well-known British firm of Kerry's Ltd is collaborating in the venture; it will provide the technical know-how and also participate in the capital of the Company. Most of the raw materials required for the manufacture of drilling machines and machine tools are available from indigenous sources.

At the beginning, the Company will need to import certain raw materials to the extent of 5 percent of the cost of machines for special steels. The factory is expected to go into production by March 1964, and the plant is likely to reach the production capacity of 1,200 machine tools by March 1965. When in full production, the Company will have an annual turnover of about Rs. 25 lakhs. The project is estimated to cost Rs. 20 lakhs which is being met by the issue of equity capital. The Company has an authorised capital of Rs. 20 lakhs, out of which shares worth Rs. 3 lakhs have been allotted to Jost's Engineering Co. Ltd, Bombay, one of the promoters who has agreed to take up further shares of the value of Rs. 4.13 lakhs. Shares worth Rs. 6 lakhs, to be credited as fully-paid shares, have been reserved for Kerry's (Great Britain) Ltd, London, for the supply of machinery and equipment. The balance of

PARTICULAR SERVICING FOR PARTICULAR PEOPLE

It means more life, more mileage if your Jeep is serviced by Jeep Dealers. It is oiled, cleaned, tuned and adjusted by people who know each nut and bolt of the Jeep. They have been trained to give you factory specialised servicing. There are over a 100 dealers spread throughout the country with a complete range of equipment.

Trust your Jeep to a JEEP DEALER for reliable, efficient servicing.

Kurchermala Plantations Passes Again

THE directors of the Kurchermala Plantations Ltd have not recommended any dividend on the ordinary shares for the year ended March 1963. The Company has thus skipped the dividend for the second year in succession. The net profit for the year amounts to Rs. 56,754.30, after providing for depreciation and providing Rs. 34,171.75 for taxation. This net profit compares with the previous year's Rs. 61,211, after providing for depreciation and Rs. 34,813 for taxation. With the amount of Rs. 1,689.53 brought forward from the previous year, the total surplus comes to Rs. 58,443.83. Out of this, a sum of Rs. 48,000 is transferred to reserve for capital expenses (against Rs. 51,000). The dividend on 6½ percent tax-free preference shares amounts to Rs. 8 586.90. The balance of Rs. 1,856.93 is carried forward.

The total tea crop for the year amounted to 121,534 kilograms, compared with 129,701 kilograms. The cardamom crop amounted to 1,380 kilograms, against 1,786 kilograms. The coffee crop was higher at 60,125 kilograms, compared with 32,443 kilograms.

Vayitri Plantations Resumes Dividend

DUE to improved profits for the year ended March 1963, the directors of the Vayitri Plantations Ltd have recommended a dividend of 6 percent on the ordinary shares (against nil). The net profit for the year, after meeting all expenses and after providing for depreciation, amounts to Rs. 48,912, against Rs. 21,407. With the amount of Rs. 21,588 brought forward from the previous year, the total surplus comes to Rs. 70,500. Out of this, a sum of Rs. 10,000 is transferred to dividend equalisation reserve (against nil). The provision for taxation amounts to Rs. 25,000 (against nil). The proposed dividend of 6 percent will absorb Rs. 24,000. The balance of Rs. 11.500 is carried forward. The tea crop for the year amounted to 38,002 kilograms, against 35,922 kilograms. The cardamom crop amounted to 1,198 kilograms, against 1,340 kilograms. The coffee crop amountd to 33 tonnes, against 14 tonnes. The pepper crop amounted to 186 kilograms, against 516.5 kilograms. The estimated tea crop for the year 1963-64 is 40,000 kilograms. The coffee crop is estimated at 25 tonnes, that of cardamom at 1,500 kilograms and of pepper at 200 kilograms.

Nil from Sangameshwar Coffee

THE directors of Sangameshwar Coffee Estates Ltd have not declared any dividend on preference and equity shares for the year ended March 1963. as the year's profit is adjusted against the brought forward loss, still leaving a net loss which is carried forward to the next year. The net profit for the year amounts to Rs. 36,518. compared with the previous year's loss of Rs. 1,48,376. The net loss brought forward from the previous year is Rs. 1,44,301 to which is added the additional provision for taxation relating to previous years amounting to Rs 36 060. Hence the total loss comes to Rs. 1,80,361. After adjusting the year's profit of Rs. 36.518 against the above loss, there is a balance of loss of Rs. 1,43,843, which is carried forward.

The coffee crop for the year amounted to 263,637 tonnes, against 136,719 tonnes in the previous year. The estimated crop for the 1963-64 is 230 tonnes. Production an acre during the year amounted to 4.46 cwts., compared with 2.21 cwts. an acre in the previous year.

Om Parasakthi Mills Pays More

SALES and profits of Om Parasakthi Mills Ltd for the year ended March 1963, have recorded a marked improvement over the previous year. The ordinary dividend is slightly stepped up to 10 percent from 9 percent in the previous year. The sales of finished goods improved to Rs. 23,67,335 from the previous year's Rs. 19,51,622. The net profit for the year before taxation amounts to Rs. 2,42,483, after providing Rs. 1,11,668 for depreciation, compared with the previous year's profit of Rs. 1,48,927 after providing Rs. 86,073 for depreciation. The profit for the year is appropriated as follows: development rebate reserve Rs. 7,000 (against Rs. 80,000), reserve for taxes Rs. 1,35,351 (against Rs. 4,440); contingency reserve Rs. 25,000 (against nil). The dividend at 8.45 percent on preference shares (subject to tax) amounts to Rs. 1,699. The ordinary dividend of 10 percent amounts to Rs. 73.433. These appropriations have absorbed the entire profit of the year. During the year, the cost of production increased due to the upward trend in prices of raw materials. Three ring frames, five carding engines, two draw frames and two Canfed inter frames were purchased. These are expected to be commissioned before October 1963.

Sholapoor Mill Incurs Heavy Loss

THE Sholapoor Spinning and Weaving Co. Ltd reports extremely disappointing results for the year ended March 1963. The sales are down from Rs. 2.75 crores to Rs. 1.81 crores and the Company has incurred a heavy loss of Rs. 35.79 lakhs, against Rs. 87,693 in the previous year without providing for any depreciation. The loss is attributed to high prices of cotton, increase in wages and other raw materials and rise in import duties. The compulsory export scheme and accumulation of stocks on account of the emergency also adversely affected the Company's working results. After making adjustments concerning sales cancellations, difference in rate and other items amounting to Rs. 7 81 lakhs. the accumulated loss at the end of the year amounts to Rs. 1 5 crores. The total accumulated arrears of depreciation amount to Rs 53.69 lakhs. Arrears of preference dividend add up to Rs. 13.92 lakhs. The directors state that they are very anxious to trace the results of the recommendations of the Investigation Committee concerning the acceptance of the schemes submitted by the management with or without modifications which should improve the working so as to be economical. Otherwise they would like to take some decision in view of the circumstances.

Notes forming part of the accounts covered by Schedule "G" have disclosed that the employees' provident fund amounting to Rs 16.14 lakhs has not been paid to the Government. The directors have explained that the payment could not be made due to lack of funds. It is further pointed out that no entry has been passed to give effect to the decision of the Supreme Court declaring as void the call made on preference shares. Schedule "G" further discloses that no provisions have been made for Rs. 6.11 lakhs, being accrued gratuities to staff at Sholapur against which there is a provision of Rs. 1.60 lakhs.

New Capital Issues

FIFTEEN companies including two new ones and two State Government undertakings have been authorised to raise fresh capital of Rs. 22.14 crores. Three companies are issuing bonus shares, three preference shares and one cumulative redeemable preference shares. One firm will issue debentures repayable after ten to 12 years for cash at par. The rest are issuing equity shares. One of the firms will have part of its capital subscribed by non-resident Indians in Kenya in sterling and the amount will be used for importing plant and machinery. A Swedish firm is to subscribe 60 percent of the capital required by a firm, while a new steel company of Bombay offers part of its shares to a firm in France and part of it to the International Finance Corporation, Washington. For expansion of electrical products, a firm is to collaborate with an American one. The consent in all cases is valid for 12 months. The following are the details:

Sidhpur Mills Company Ltd, Gujarat, is to issue bonus shares of the value of Rs 10 lakhs. These will be allotted to the existing equity shareholders of the Company in the ratio of one bonus share for every two equity shares held.

Hindusthan National Glass Manufacturing Co. Ltd, Calcutta, is to issue bonus shares of the value of Rs. 8,30,000 on capitalisation of its reserves. The bonus shares will be issued in the ratio of one bonus share for every five shares held.

Anglo India Jute Mills Co. Ltd will also issue bonus shares of the value of Rs. 9,84.200 on capitalisation of its reserves. They will be issued in the ratio of one bonus share for every five held.

Orissa Mining Corporation, Bhubaneswar, an undertaking of the Government of Orissa, is to raise capital of Rs. 50 lakhs in 50,000 equity shares of Rs. 100 each. The shares will be entirely subscribed by the Government of Orissa. The capital will be used for implementing the Daitari mining scheme.

Durgapur Projects Ltd, a Government of West Bengal undertaking, is to issue capital of Rs. 15 crores divided into 150,000 equity shares of Rs. 1,000 each to be subscribed entirely by the Government of West Bengal. Excepting one share, which will be issued for cash, all the other shares will be issued against transfer of assets to the Company.

Isaac Holdens (India) Ltd, Calcutta, will raise capital of Rs. 30 lakhs in equity shares of Rs. 10 at par. The capital is required for expansion of the present installed capacity in the manufacture of wool tops.

Pressed Steel Tank Company of India Ltd, a new company incorporated in West Bengal, is to raise capital of Rs. 1.10 crores divided into equity shares of the value of Rs. 80 lakhs and preference shares of the value of Rs 30 lakhs. The capital is required for the setting up of a factory in Faridabad for the manufacture of cylinders, both high and low pressure type.

Bhaskar Textile Mills Ltd Calcutta, is to raise further capital of Rs. 5 lakhs in 50,000 equity shares of Rs. 10 each for cash at par. The capital is required to meet working capital requirements for its textile mill in Jharsuguda (Orissa).

Shah Melleable Castings Ltd, Bombay, will issue capital of Rs. 30 lakhs. These will be in equity shares of Rs. 10 each to be issued for cash at par. Of these shares, Rs. 14 lakhs will be subscribed by non-resident Indians in Kenya in sterling and the amount used for the import of plant and machinery. Shares of the value of Rs. 11 lakhs will be offered to the public by prospectus. The proceeds of the issue will be used in the establishment of a factory in Thana (Maharashtra) for the manufacture of malleable iron castings required for textile machinery, motor-vehicle machinery, etcetera.

Sylvania and Laxman Co. Ltd, New Delhi, will issue capital of Rs. 80 lakhs. These will be divided into 800,000 equity shares of Rs. 10 each to be issued for cash at par. Out of these, 360,000 equity shares of the value of Rs. 36 lakhs would be offered to the American collaborators, Sylvania Electric Products, and/or their nominees for cash at par. Shares of the value of Rs. 24 lakhs would be offered to public for cash at par by prospectus. The proceeds will be used to set up a factory for the manufacture of fluorescent tubes, lamps, mercury vapour, photo flash lamps, glass tubes, glass shells for lamps and other related items.

Saurashtra Ceramics Ltd, will raise capital of Rs. 30 lakhs—Rs. 25 lakhs equity and Rs. 5 lakhs preference—in supersession of the previous consent for Rs. 20 lakhs dated 4th February, 1963. Of these, the entire preference shares and equity shares of the value of Rs. 14 lakhs will be offered to the public. All the shares will be issued for cash at par, and the proceeds will be used in the establishment of a factory for the manufacture of ceramics and sanitaryware, etcetera.

S. F. Products India Ltd, Calcutta, is to raise capital of Rs. 12 lakhs in 12,000 equity shares of Rs. 100 each. The capital is required for the manufacture of fans and blowers in collaboration with a Swedish firm who would subscribe to 60 percent of the capital.

Mahindra Ugine Steel Co. Ltd, Bombay, a new company, will raise capital of Rs. 3 crores at par. This will be divided into Rs. 2.5 crores in equity shares of Rs. 10 each and Rs. 50 lakhs in cumulative preference shares of Rs. 100 each. They will carry a dividend of 9.3 percent, free of company's tax, but subject to deduction of taxes at source at the prescribed rates. Out of this, equity shares of the value of Rs. 41.50 lakhs will be offered to Messrs Ugine, France, Rs. 40 lakhs to International Finance Corporation, Washington, Rs. 1.07 crores and the entire preference shares of Rs. 50 lakhs will be offered to the public by prospectus. The capital is required for the manufacture of alloy constructional steel and case hardening steel.

Sree Valliappa Textiles Ltd, Salem, will raise capital of Rs. 25 lakhs. This will be divided into 19,000 equity shares of Rs. 100 each and 6.000 cumulative redeemable preference shares of Rs. 100 each, carrying a dividend of 9.3 percent free of company's income tax but subject to deduction of tax at source. All the shares are to be issued for cash at par. Of the above, equity shares of the value of Rs. 10 lakhs and preference shares of the value of Rs. 5 lakhs will be offered to the public by prospectus.

The Ganesh Flour Mills Company Ltd Delhi, a public company, will issue debentures of the value of Rs. 14 lakhs bearing interest at 7 percent a year and repayable after ten to 12 years, for cash at par. The proceeds are to be used for establishing the Company's solvent extraction plant in Bombay.

The Stock Markets

CHANGES IN C.D.S. AND GOLD CONTROL HELP SENTIMENT

Wednesday Evening.

THE Calcutta stock market has been buoyant during the past week. After an earlier dip following the news of Pakistani firing across the Assam border, share prices have recovered smartly on a renewed buying spree, combined with brisk short-covering. The cheerfulness is due to the modifications in the Compulsory Deposits Scheme and the Gold Control Order. Although the stock market is not likely to benefit directly from these measures, operators have been inspired by the thought that the new Central Finance Minister, Mr. T. T. Krishnamachari, will show similar pragmatism and scrap the super profits tax at an early date. However, since the Government is pressed for resources, it may be too optimistic to conclude that the Finance Minister will hasten to modify the fiscal system now. But the prospect of some relief is likely as he is keen on stimulating economic activity. There is no doubt that economic development has been hampered by the super profits tax. Unless some assurance is given about reducing this burden, investment confidence will not revive.

A disturbing factor is that so far the support has been largely speculative. Therefore, the prices of clearing shares, in particular, have risen. It is wondered whether the sharp increase, which has taken place during the past fortnight, has not been overdone. It is to be hoped that the authorities will concentrate attention on consolidating the gains already achieved.

Meanwhile, investors have rightly chosen to be more discriminating in their purchases. The likely amendment of the Companies Act should attract more attention. It is rumoured that the blank transfer system may be restricted. There is no doubt that monetary conditions have become easier for the time being. But they are likely to become tight as the busy season draws nearer. In any case, the chances of the stock market getting more bank credit are rather remote, considering that funds are likely to be employed more profitably elsewhere.

Indian Iron have improved considerably. Among engineering shares, Guest, Keen, Williams, Jessop, Texmaco, Burn, Kumardhubi and Indian Standard Wagon have been prominent. Coal shares have been generally subdued due to the uncertain outlook. Small business has been transacted in Burrakur, Bengal, East Indian and Central India. Raneegunge have met with scattered interest on prospects of a rights issue.

Jute shares have been selectively higher although the investors have been cautious. Discussion has centred on whether the increased production of jute goods will be absorbed easily in the coming months. Birla have gone ahead on prospects of expansion. Support has been extended to Fort Gloster, Gourepore, Anglo-India Union, Northbrook, Kamarhatty, Champdany and Howrah. In the cotton mill section, J. K. Rayon have recovered on short-covering. Jay Shree Textiles, Elgin and Dunbar have been taken.

The prices of clearing miscellaneous shares have gained in the absence of pressure. Indian Copper, Indian Aluminium, Hindustan Motors, Indian Cable, Kesoram Industries and Rohtas have hardened. Alkali Chemicals, Metal Box, Goodyear India and Indian Oxygen have been bought. Among new shares, Hindustan Aluminium have gained on replacement buying. Electric company shares have been neglected, but stray business in Calcutta Electric has been transacted. Bank shares have met with virtually no interest. In paper shares, Orient and Sirpur have been active. Selected Assam and Dooars gardens have improved on rising support. Betjan, Tyroon, Hasimara, Tezpore and Bishnauth have been prominent.

Government securities have been firm due to rising institutional support following easier money conditions. Despite strong interest in short- and medium-dated stocks, turnover has been restrained by the shortage of sellers. The prices of selected State Government loans have been steadier on fair institutional buying. The 3 percent Conversion loan 1986 has closed around Rs. 64.90.

Bombay

TAX RELIEFS MAY NOT COME SOON

OPERATORS CAUTIOUS AT THE CLOSE

Wednesday Evening.

THERE has been a mild reaction in the Bombay stock market towards the close after an earlier steady spell during the past week. At first, prices of selected shares hardened on fresh support, combined with nervous short-covering due to optimism concerning tax reliefs. The optimism was based on the fact that since Mr. T. T. Krishnamachari, the Central Finance Minister has modified the Compulsory Deposit Scheme and the Gold Control Order, he will not hesitate to scrap the super profits tax which has damaged investment confidence. The improvement in Wall Street and in the London stock market has been an additional stimulant. The lessening of the international tension and the growing rift between Russia and China have also been bullishly interpreted. Towards the close, operators have turned cautious on doubts whether the Government's fiscal system would be modified before the next Budget, which will be presented only in February 1964.

Tata Steel ordinary have closed around Rs. 139.50. Among engineering shares, support has been forthcoming for Tata Locomotive. Mukand Iron and Premier Construction. In motor-vehicle shares, Hindustan Motors have been active on support from Lyons Range. Premier Automobiles have been sluggish.

In the cotton mill group, Century, Kohinoor and Standard have shot up appreciably on renewed support, combined with short-covering. Bombay Dyeing, Tata Mills, Gokak and Morarjee have been steady. India United ordinary have been sluggish, but Simplex have met with scattered support.

In the miscellaneous section, sugar shares have been selectively bought in the hope that the production incentives announced by the Government should help in raising the output. Belapur and Walchandnagar Industries have been steady. In steamship company shares, Scindia Steam gained considerably on hopes of increased freight earnings. In mining shares, Shivrajpur Syndicate have recovered on short-covering. Among cement shares, Associated Cement have met with support. In chemical shares, Tata Chemical have been steady. Colour-Chem have gained substantially. In the rayon section, National Rayon have recovered on short-covering. Gwalior Rayon have been steady on prospects of expansion. Bombay Burmah have improved. Voltas have met with strong buying. Synthetics and Chemicals have reacted on pressure.

In bank shares, Bank of India and Dena Bank have been taken. New India Assurance have been steady in the insurance group. Selected electric company shares have met with scattered support. Ahmedabad Electric, Tata Hydro and Bombay Suburban have gained fractionally.

considerably earlier on renewed buying due to higher advices from Calcutta and Bombay. Operators were encouraged by the prospect of changes in the Government's fiscal system, since the new Central Finance Minister has been keen on stimulating economic activity by giving fresh incentives. Towards the close, there has been a mild reaction and operators have been inclined to restrict their commitments until a clearer picture of the likely fiscal changes emerges. Support has been largely confined to selected planting and clearing shares.

Government securities have been steady and support has been forthcoming for selected State Government loans. Stray business has been done in bank shares. State Bank of Mysore have been transacted at Rs. 141 on payment of an interim taxable ordinary dividend of 4.5 percent. Canara have come to hand at Rs. 81.75. In electric companies, Ellore have changed hands at Rs. 22 and West Coast at Rs. 17.35. Sugar shares have been selectively bought. Deccan have hardened to Rs. 10.41 and Mysore to Rs. 46.75. E.I.D. have improved fractionally to Rs. 36.70.

In the planting section, Blue Mountain have been taken at Rs. 2.63 and Cochin Malabar at Rs. 6.10. Consolidated Coffee have changed hands at Rs. 18.75 and Ouchterlony at Rs. 4.35. Periakaramalai have been taken at Rs. 3.65 on paying a final taxable ordinary dividend of 12.5 percent, making 15 percent for the year. Peermade have met with support up to Rs. 20.90 on declaring an interim taxable ordinary dividend of 5 percent. Thamarapally have been steady at Rs. 16 and Nelliampathy at Rs. 3.58. Nilgiri have been transacted at Rs. 8.65 and Kumergode at Rs. 3.70.

In the textile group, South India Viscose have improved to Rs. 132.25 and Travancore Rayon to Rs. 23.75. Lakshmi have gained at Rs. 133.50 and Madura at Rs. 32.60. Modi Spinning have been done at Rs. 10 on the prospect of declaring a taxable ordinary dividend of 9 percent, subject to the sanction of the Industrial Finance Corporation. Bangalore Woollen have been steady at Rs. 231 and Buckingham at Rs. 269. Ramakrishna have been wanted at Rs. 217.80 and Radhakrishna at Rs. 27. Mettur have changed hands at Rs. 272 and Loyal at Rs. 41.10.

Among miscellaneous shares, Aluminium Industries have been quoted at Rs. 17.30 and Ashok Leyland at Rs. 7.60. In cement shares, Dalmia have been steady at Rs. 12.40 and India at Rs. 5.73. Mettur Chemical have been bought up to Rs. 13.65, but F.A.C.T. have been quiet at Rs. 6.40. Seshasayee Paper have met with support at Rs. 7.25 and Tube Investment at Rs. 213. Canara Workshop have gained at Rs. 30.50 on paying a taxable ordinary dividend of 20 percent. Madras Rubber have been quoted at Rs. 14.75 and Kirloskar Electric at Rs. 18.12. Parry's Confectionery have changed hands at Rs. 3.35 and Spencer at Rs. 20.12. Business has passed in Textool at Rs. 153 and in Mysore Stoneware at Rs. 12.45.

DOES YOUR CHILD WORRY ABOUT TAXES?

No he doesn't. When it comes to matters of money your family leaves things to you. They know you will do what is best for them.

This year you have watched your take-home income shrink due to higher taxes and the Compulsory Deposit Scheme. But as a responsible provider you know that one item which you cannot cut down on is Life Insurance. As a policy-holder you will do all you can to keep paying those premiums. But if you do not have Life Insurance you will surely take a policy now.

Remember that if you find it difficult to make ends meet on your present income, how much more difficult will it be for your family if they are suddenly deprived of your income!

There is no substitute for LIFE INSURANCE
