(i) The growers might resist the enforcement of the scheme of reservation. A Press message from Jullundar, Punjab, dated 23rd October, 1963, stated that a convention of 1,000 representatives of sugarcane growers in the State had unanimously decided to refuse to sell sugarcane to the mills at a rate of not less than Rs. 2 a maund. The convention has also accepted a proposal to defy, if necessary, the State Government's ban on *gur* making within a radius of ten miles of every sugar mill in the State.

(ii) In the reserved areas, a "specific portion" of the cane crop is to be delivered to the mills. What is the criterion to determine this "specific portion"? The entire purpose of creating the reserved areas might be well defeated through this loophole of "specific portion".

(iii) The growers might adopt an attitude that in accordance with Government orders, they would not divert their cane to *gur* and *khandsari* production, but are prepared to sell it to the sugar mills even at Rs. 1.75 a maund provided the mill authorities arrange for harvesting the crop. By adopting such an attitude, the growers might try to escape the arms of law, but at the same time, it would be physically impossible for the mills to arrange for themselves harvesting the crop in the reserved areas.

(iv) The most serious effect of this scheme of reservation might be that the cultivation of sugarcane will be restricted during the 1964-65 season.

The question would now, naturally, arise: what then is the solution? The Government thinks that by offering the incentives and also by retaining the present control on ex-mill prices of sugar and its distribution through Government channels, a target production of 3.3 million tons is quite

feasible during the 1963-64 season. The essence of the Government decision is "control". But control has failed in the past and it will never solve the present crisis of the industry.

The sugar industry was firmly established in India after the grant of protection in 1932. From 1932 to 1939-40, there was no control when the production had been gradually on the increase. During the second World War, the control was imposed in April 1942. Since 1942 and till 1963, the industry has been subjected to frequent controls and decontrols. During this period, the industry has "groaned" under control for a total period of 12 years. A close scrutiny of figures of production and consumption during the period of control would convince anybody that control has always inhibited production or consumption or both. Besides, the following are the evil effects of control and rationing:

(i) Under the present rules of rationing in West Bengal, a quantity of 300 grammes of sugar has been allotted a head a week irrespective of the income of the ration card holders. The result has been that a majority of the middle-income groups and the entirety of the low-income groups cannot lift their full quotas of sugar. Such unlifted quotas are, therefore, sold in the black market and the high-income groups buy it at exorbitant prices to balance their actual requirement of sugar.

(ii) Unscrupulous people draw their quotas through forged ration cards in addition to their usual quotas and such quantities are invariably diverted to the black market.

(iii) Control has always disrupted the permanent sale arrangements between the mills and the trade because after the imposition of the control, the mills are forced to sell their stocks through the nominees of the respective State Governments.

Raising Price through Controls

(iv) In the pre-control period, the traders have always lifted their sugar from the mills at the prevailing market rates and sold it to the consumers at a nominal profit. But after the imposition of control, a sum of Rs. 6 a quintal has been allowed by way of commission to the importers, wholesalers and the retailers. As a result, the price of Rs. 1.15 a kilogram—which prevailed during the pre-control period—has now been raised to Rs. 1.25 a kilogram in West Bengal. In fact, a majority of the mills located in the north-eastern part of the country are selling their sugar at losses while the midle men, namely, the importers and wholesalers, are making good profit out of the sale of sugar.

(v) Experiences have always proved that control has spread corruption among the Government employees entrusted with the task of enforcing the measures of control.

(vi) Frequent and irritating controls have brought the industry to the verge of collapse as would be evident from the following facts:

(a) A scrutiny of the balance-sheets of 22 well-established and well managed sugar mills in Bihar and U.P. would reveal the fact that as many as 15 of them have suffered losses in 1962 ranging from Rs. 7 lakhs to Rs. 47,000. Only seven mills have been able to earn some amount of profit.

(b) For every rupee worth of sugar produced, the industry has to incur the following expenses:

(i) Cane price	45nP
(ii) Government taxes	35nP
(iii) Manufacturing expenses	19nP
(iv) Profit subject to taxes	1nP

The imposition of control has caused severe hardships not only to the industry and trade, but to the consumers as well. In the remote villages and small towns, sugar is either not available or can be had only at exorbitant high prices. A recent publication in a trade journal observed as follows: "Control has worked havoc with another industry namely, sugar. The growth of this industry has been spectacular. But it would have developed much more vigorously if only it had not been subjected from time to time to irritating controls."

If the Government does not change the outlook concerning control, it is sure that the second largest industry in India will be completely wiped out very soon.

Absolute decontrol is necessary to maximise sugar production in the country. The beneficial effects of the policy of decontrol may be summarised as follows:

(i) The mills can offer equitable prices for the supply of sugarcane in competition with the *gur* and *khandsari* units.

(ii) If the growers receive high prices for the crop during the coming season, cultivation during the 1964-65 season will be automatically expanded.

(iii) Expansion of cane acreage and the diversion of more cane for sugar production will maximise sugar production to such an extent that after meeting the internal demand, the industry will be in a position to export substantial quantities to earn foreign exchange.

Against the policy of decontrol, the Government might raise the "bogey" of consumer interests. The Government may argue that if sugar is decontrolled, the price may shoot even to the tune of Rs. 1.80 a kilogram. All aspects of this "bogey" of consumer interest need to be analysed.

A microscopic percentage of India's populace can afford to buy sugar at the present control rate of Rs. 1.25 a kilogram. Sugar forms a very small portion of a family budget. Millions of India's population have no means to buy sugar. They are to depend on *gur*, *khandsari* and cheap sweetening materials. Only high and a very small portion of the middle-income groups take sugar as routine diet. So the retention of control might give relief to a very small fraction of India's populace. Let us admit for argument's sake that if sugar is decontrolled, the retail price will go even up to Rs. 1.80 a kilogram. It may be so, but only for a very brief period. Normal conditions in the market are bound to set in quickly after decontrol. Even then, it may be conceded that after decontrol, the price of sugar might increase up to Rs. 1.80 a kilogram. But in that eventuality, to what extent would the consumers be affected by buying sugar at Rs. 1.80 a kilogram?

Per Capita Consumption

The average *per capita* consumption of sugar in India 5.6 kilograms only. The price difference between the present control rate of Rs. 1.25 a kilogram, and the assumed decontrol rate of Rs. 1.80 a kilogram is only 55nP a kilogram. This means that the consumer might have to pay an extra amount of Rs. 3.08 a head a year, that is, 25nP a head a month provided, after decontrol, the retail price shoots to Rs. 1.80 a kilogram. Is that too much? The consumers will be glad to make this small sacrifice not only in the cause of stabilisation of an important industry but also to avoid the vagaries of conntrol by waiting in long queues to receive a doleful of sugar from the ration shops.

For the present high price of sugar, the entire blame has been thrown on the industry. But a close scrutiny of the cost structure of sugar would prove otherwise. The principal constituents of the cost of sugar are the price of cane, Government taxes and the manufacturing expenses. Cane accounts for 45 percent, Government taxes 35 percent and manufacturing expenses 20 percent. The industry has, therefore, no control over 80 percent of the cost because the minimum prices of sugarcane are fixed by the Government and the industry has to pay the prescribed taxes. Of the 20 percent manufacturing expenses, 18 percent accounts for salaries and wages (which have already been fixed by the Central Sugar Wage Board), repairs, renewals, interests, etcetera. Only 2 percent remains as gross profit to the industry subject to taxes.

It will thus be seen that it is absolutely useless to blame the industry for the high prices of sugar. Only by way of Government taxes, the industry is paying 35 percent of the ex-mill price of sugar. India pays the highest amount of production taxes on sugar in the world by way of Central excise duty, cane cess, etcetera. The rate of excise duty on sugar was 97nP a maund in 1934. The present levy is Rs. 10.70 a maund. This reflects an increase by 1,000 percent over that which prevailed in 1934. The industry has made endless representations to the Government for the reduction of excise duty, but they have had no effect.

Comparative Prices

The latest ex-mill prices of sugar (inclusive of taxes) in other sugar producing countries of the world are as follows:

Name of the country	Rate a maund ex-mills
	Rs.
(1) Indonesia	85.61
(2) The Philippines, Mexico and Egypt	78.40
(3) Japan	72.59
(4) Israel	67.07
(5) Pakistan	61.17
(6) West Germany	55.23
(7) Ceylon	51.29
(8) Sweden	48.41
(9) The U.S.A.	45.76
(10) India	41.50

It will appear that India's ex-mill price of sugar is lowest among some of the important sugar producing countries in the world.

It is admitted by all that the development of the sugar industry in India has been phenomenal. The industry has not only met the entire internal consumption requirement, but has also been able to build up a steady export market. The following figures of export, during the past three years, will speak for themselves:

Year	Quantity of sugar exported (In '00,000 tons)
1961	2.69
1962	3.73
1963	5.00 (approximately)

Export Earnings

In 1962, India earned foreign exchange worth Rs. 15 crores on export. This earning is expected to reach a peak figure of Rs. 30 crores in 1963. But most of the exports have been made on low world market rates varying between £20 to £22 a ton. The world market price of sugar shot up in April and May 1963. It attained the highest level of £101 a ton in the London market in May 1963. But during the period of soaring prices in the world market, India had no surplus stock for export. After a temporary fall in the world sugar market, the price is again shooting up. On the 28th October, 1963, the London daily price was quoted at £102 10s a ton c.i.f. It has broken the record of the last 42 years. Two months ago, this quotation was at £48 10s a ton. This unprecedented rise in sugar prices has been due to the damage of the Cuban crop by a hurricane.

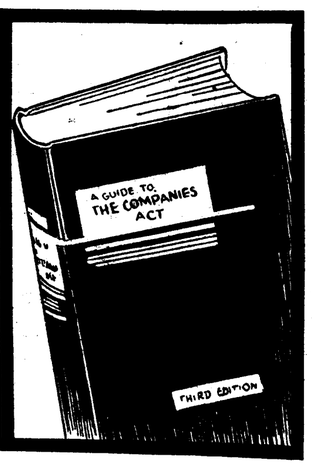
It has been estimated that this damage of the crop will cause a drop in the production of sugar by about 1 million tons. It will be extremely difficult to fill up this gap in production. A unique opportunity has, therefore, presented itself to export sugar at unprecedentedly high prices. But the present stock of sugar does not justify further commitments of export. If sugar is decontrolled, its price may go up a little higher than the present control rates. But this rise might reduce internal consumption which would then enable the Government to export larger quantities of sugar at the high prices which have been prevailing in the world market at present.

The industry really feels that the 1963-64 season is a very crucial one. If the industry fails to produce even 2.6 million tons of sugar—a contingency which should not be ruled out in the present context of *gur* and *khandsari* prices—in that case the country may have to import sugar to balance its own consumption not to speak of export. This serious situation can well be avoided if the Central Government takes a bold stand and introduces complete decontrol with immediate effect. This is the only solution through which the production of sugar in India during the coming season can reach the target of 3.3 million tons.

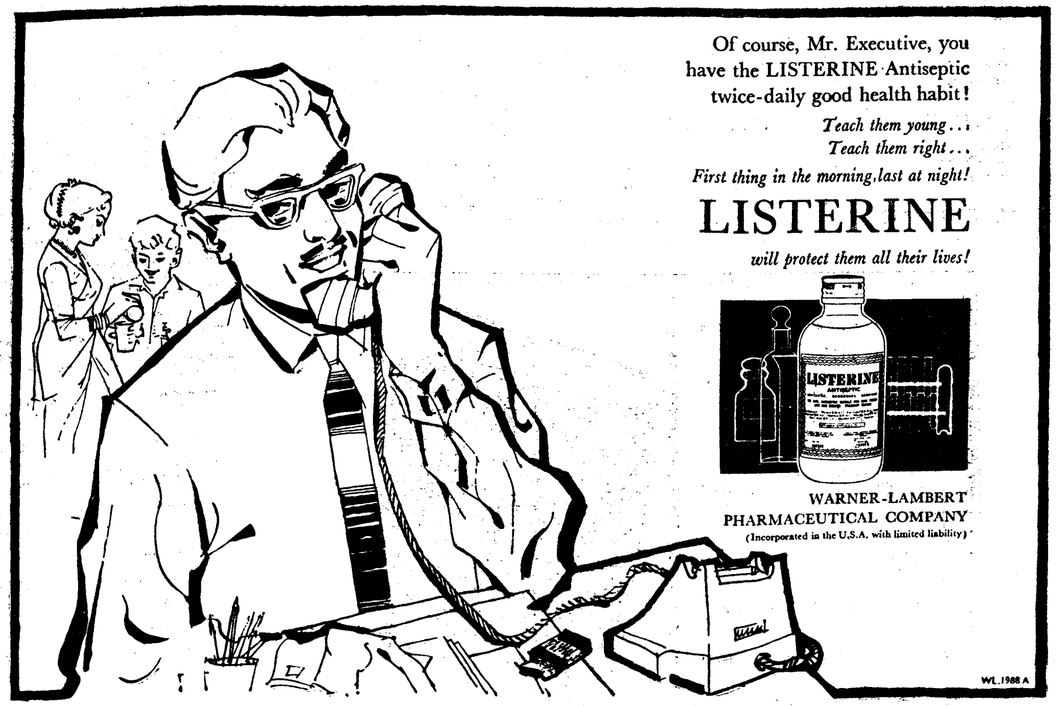
The writer, who is very closely associated with the industry, knows very well the reasons which impelled the Central Government to intorduce the present control from 17th April, 1963, all on a sudden. The reason was political, but not economic. Neither the interest of the industry nor that of the growers nor even that of the consumers weighed with the Government for the sudden imposition of the present control. This will be amply borne out from a very frank speech delivered by Mr. V. Shankar, the present Secretary of the Central Ministry of Food and Agriculture at the fifteenth meeting of the Development Council for the Sugar Industry held on 6th April, 1963, that is, just on the eve of the imposition of the control.

Policy Motivations

"You take the price of sugar to-day —more than 45 percent is the cost of cane, more than 30 percent is taxation and the balance is the manufacturing cost. If we raise the price of sugarcane, the cost goes up and the Government has to face rising criticisms. Statisticians never spare us and it has also to deal with agitation in Parliament. If we increase the cost, then again, the price rises and if the price rises, the situation is even more difficult than what it is when we increase the price of cane. At least, if we raise the price of cane, you can say it is to the advantage of millions. When you make an increase in the cost of manufacture, even though it is justified, it is seldom conceded that it is for the benefit of the economy as a whole. It is always taken to be for the benefit of the industry which is quite wrong, but the fact is there. You have to deal with the physical facts, you have to deal with psychology as well. I am frankly stating these things because I would like you to appreciate these basic facts because you cannot expect the Government to rise above normal level of its clientele beyond a certain limit".



It appears from the above speech that sugar policies are being framed not so much for the economic rehabilitation of the industry, but to meet the criticism in and outside Parliament. It is now an open secret that the former Central Minister for Food and Agriculture, Mr. S. K. Patil, did not support the imposition of the recent control on the ex-mill prices of sugar and its distribution. It was thrust on the industry by the Planning Commission.



The Government should remember that it has played much with the fortunes and misfortunes of the industry by resorting to frequent controls and decontrols. The Government probably feels that because the industry is well organised, controls can be easily clamped on it. Rice and wheat are the staple food of India's millions. These two items together form a very sizable portion of a family budget. In spite of an acute shortage of rice and wheat in the country, the Government has not thought it desirable to control and ration these two items of India's staple food. One wonders why of all the industries on the food front, the Central Government has singled out the sugar industry to make experiments by subjecting it to frequent controls and decontrols. Time has come when the Government should take a long view of the potentialities of this industry which is based on the utilisation of an important commercial crop in the country.

A word or two to the present executive of the Indian Sugar Mills Association. It is the only accredited and representative body of the industry. Times without number, the Association has shown good gestures to the Central Ministry of Food and Agriculture by acceding to the requests of the Ministry in many vital matters affecting the industry. But time has now come when the Association should take a very firm stand and persuade the Government to accept the most legitimate demands of the industry just to save it from total collapse.

Books

NATIONAL INCOME OF INDIA

National Income of India. (Published by the Indian Merchants Chamber Economic Research and Training Foundation, 76, Veer Nariman Road, Bombay 1. Price : Rs. 15, pages 271.)

Based on the available published data, the present study is concerned specifically with the examination of growth of national income in India between 1950-51 and 1960-61. Two aspects are covered, namely, the analysis of trends in the growth of national income and the changing pattern of the flows in its distribution. The first part gives the factual background relating to the characteristics of the Indian economy, the estimates of national income made from to time and the various problems connected with an estimate of national income, particularly relating to non-monetary sectors. Inferences have been drawn that the growth of national income during the period of the two plans as well as the growth in *per capita* income have not been progressive and steady but erratic. The analysis on income growth with reference to the population and price indicates an over-estimate in relation to the major sectors. Estimates in agriculture have limited use. Income from forestry suffers due to the lack of firm estimate, so does income from fisheries. There is an all-round over-estimate in the income from minerals and output from factory establishments. The estimates of income from commerce, transport and communications are extremely conjectural except in banking and insurance. The limitations of a comparison of the Indian national income with those of the industrially advanced countries as well as underdeveloped countries are pointed out in the book.

There has been a reduction in personal savings. Relating this to the pattern of shifts in income distribution within the income-tax range, it appears that the effect of redistribution is more in evidence than that of a rise in income. There is a shift in the number of assessees from the highest income groups to the middle and lower income groups. In the corporate sector, the position concerning retained profits and the trend of borrowings for expansion and development indicates a low rate of saving.

The analyses of the growth and distribution of national income pose some important questions in relation to both the basic data collected and the methodological approaches followed. It is suggested that there is a need for building up an organisation independent of the Government for continuous study and assessment of the changes in national income. This may appropriately be the function of the Reserve Bank of India since it has a direct knowledge of the income structure in the economy. In the alternative, the constitution of a National Income Commission as a statutory organisation may also be considered. The facts collected in the book are supported by 84 statistical tables.

TRADE MARKS LAW

The Law of Trade and Merchandise Marks. By S. Venkateswaran. (Published by Eastern Law House Private Ltd, 54, Ganesh Chander Avenue, Calcutta 13. Price: Rs. 50, pages 1,042.)

The first book on the law of trade marks in India was published by the author in 1936, when there was no legislation for trade marks in this country. As a result of the public interest in arousing in which the book had its share, the Trade Marks Act, 1040, was passed. The working of the Act showed the need for revising the statute so as to facilitate registration and provide for more effective protection of trade marks. Accordingly, trade marks registration was reviewed, first by a committee and then by an eminent judge and the result was the Trade and Merchandise Marks Act, 1958. The Act introduced many useful changes in the law, some are of substance and importance and others improvements in the matter of procedure. The Act also consolidated the civil and criminnal legislation relating to trade marks. Uncertainties which existed in the Act of 1940 were also removed. The amalgamation of the Patent Office with the Trade Marks Registry is a matter of administrative importance.

Apart from the Act and comments on it, all the Indian decisions have been collected and discussed in the present book. Important decisions in the United Kingdom have also been included. Reference has been made, where necessary, to the decisions of the Australian High Court. The book contains useful information on the practice of the registry, which has not been published so far. A properly conducted registry of trade marks and the institution of the right to bring a suit for infringement depend upon the fundamental conceptions which underlie the common law, but the remedy is made swifter and far less expensive. The explanation of the legal principles is admirably done. The book will prove useful to legal experts and administrative authorities who have something to do with the law of trade and merchandise marks.

OFFICIAL EFFORT

Indian and Foreign Review Vol. I. No. I. (Published by the Publications Division, Ministry of Information and Broadcasting, Government of India. Chief Editor: G. N. S. Raghavan. Price 50nP. Pages 34.)

The object of this fortnightly, judging from its contents, is apparently to interpret Afro-Asian affairs to the home audience and explain Indian developments to foreign readers. But the first issue provides a rather disappointing fare, in spite of contributions from writers like Dr. V. K. R. V. Rao and Mr. C. Von Furer Haimendorf. All topics connected with the western world have been generally excluded, but this does not quite fit in with the title of the journal. Writing is generally dull —too dull even for an official publication and this is not made up on the factual side. Since propaganda is also its object, a fair measure of vitality or vigour of expression could have been introduced while dealing with subjects like Kashmir or the Chinese aggression.

As for the contents, the article on Mahatma Gandhi is appropriate, considering that the journal makes its appearance in the month of Gandhiji's birth and the great respect in which he is held in the Afro-Asian world. Mr. C. Von Furer Haimendorf, who is Professor of Asian Anthropology, School of Oriental and African Studies, London University, makes an interesting anthropological study of the Nepalese people, He says they are a mixture of the north Indian and Mongolian elements and culturally belong partly to the Buddhist and partly to the Hindu tradition. The three principal elements of the population are the Newars, Parbatias and tribals but their common language is Gurkhali, or more currently, Nepali, which is a blend of the Aryan and Tibeto-Burman dialects.

Dr. Rao's article on Indonesia provides useful information on a subject which has aroused such passion and controversy in India—the national language problem. He writes: "The greatest achievement of the Indonesian freedom movement in the sphere of national integration is undoubtedly the fashioning and popularisation of the national language called Bhasa Indonesia." Contrary to what one might expect, it is not the language traditionally spoken by the people, and originates from what is called Malay, which was the means of communication among traders from different areas of the archipelago. The leaders popularised it through a mass literacy campaign. Dr. Rao pays a tribute to the far-sightedness of the Indonesian leaders who have discarded Dutch in favour of English as the more appropriate language of international communication.

APPELLATE TRIBUNAL

The Abolition of the Labour Appellate Tribunal. By B. S. Narula. (Published by the Indian Institute of Public Administration, Indraprastha Estate, Ring Road, New Delhi 1. Price Rs. 10, pages 390.)

The Indian Institute of Public Administration has done an excellent job by bringing out this volume which is a case study about three interrelated policy decisions of the Government of India, namely, the decision to set up the Labour Appellate Tribunal in 1950; the decision to abolish it in 1956 and the review and decision not to revive it. This case study attempts to examine how in a developing country with a parliamentary form of Government, committed to establish social justice, the formulation of public policies has to be continuously balanced against the conflicting interests of different groups of the community. The three policy decisions of the Government mentioned above are described in the book in the wider background of the Government's general policies concerning labour-management relations. The main interest in the study is the decision concerning the abolition of the Labour Appellate Tribunal and the developments leading to the decision not to revive it.

The then Central Labour Minister said that the consensus of opinion among the representatives of the State Governments and workers' organisations was against the revival of the Tribunal. As access to the Supreme Court under the Constitution could not be barred, the revival of the Tribunal, the Minister contended, would only "add one more stage to decisions on appeals." How far this contention of the Minister was tenable would be clear when one remembers that access to the Supreme Court under the Constitution existed at the time when the Government decided to establish the Tribunal!

The most important awards of the Tribunal have been mentioned in the main case narrative and some others in the appendices. The most controversial decision of the Tribunal on which attention was concentrated was the award of bonus to workers which led to its eventual abolition.

A careful reading of this book as well as the awards of the Tribunal would enable the reader to make his own judgment on how far it succeeded in its objective in achieving uniformity of basic principles to govern the adjudication of disputes concerning bonus, wages, etcetera.

DISCRIMINATION IN JOBS

Discrimination (Employment and Occupation). (Published by the International Labour Office, Geneva. Price: 6s 6d, pages 171-262.)

The book contains the general conclusions on the reports relating to the convention and recommendations concerning discrimination in employment and occupation. Equality of rights for all human beings, which is acknowledged as one of the fundamental principles of law in almost all countries, is also becoming a focal point of international interest. The Declaration of Philadelphia stated that all human beings, irrespective of race, creed or sex had the right to both their material well-being and their spiritual development in conditions of freedom and dignity, of economic security and equal opportunity. The growth of contacts between men of different origin and background, the repercussions of material changes on social, family and working life, the intermingling of peoples, increased political activity as well as other factors have posed some difficult problems. At the same time, there is an even stronger call for equality, not only in the eyes of the law but in everyday dealings between man and man.

In the crucial sphere of employment, respect for equality of opportunity and treatment has been one of the fundamental objectives of the I.L.O. The 1958 convention and recommendation were the first instruments adopted by the I.L.O. against discrimination in relation to employment and occupation. Thirtynine countries have ratified the convention and a few others have decided on ratification, but the Commonwealth countries have not yet ratified it. The present survey has been made from the information made available. The purpose of the survey is a revision of the various problems which are likely to arise out of the application of international standards concerning discrimination in relation to employment and occupation rather than giving a detailed picture of varying situations in individual countries. No attempt has been made to collect adverse data but an attempt has been made to assist Governments to appreciate the bearing of the international instruments in relation to the positive action they may take for the abolition of discrimination.

INCOME TAX JOURNAL

Income-tax Journal, Vol. 1, No. 1. Edited by V. Balasubrahmanyan. (Published by M. L. J. Press Private Ltd, Mylapore, Madras 4. Pages 92.)

It may be truly said that from the point of view of public finance, India has been in a state of emergency from 1951 when the first five year plan was launched. The introduction of estate duty, followed by wealth tax, expenditure tax, gift tax, the reintroduction of income tax on capital gains, are some which deserve mention. Many of the enactments relating to the levy and collection of taxes are framed in a language which is difficult to understand by a layman and sometimes even by an expert. The legislature has to close the loopholes in the law discovered by the administration, whose principal function seems to be to deal with manifest as well as lurking tendencies for the evasion of taxes. Although attempts are made from time to time to amend, consolidate and codify the law, the subject continues to present problems to the administrator, the practitioner and the assessee. *The Income Tax Journal* promises to provide its readers with reports of judgments of the Supreme Court and different High Courts on taxation, apart from publishing Acts, rules, notifications and circulars.

Jute

LARGE FIBRE PURCHASE QUOTA ISSUED FOR NOVEMBER

THE Jute Commissioner has issued a purchase quota of 1.05 million bales for November, against 920,000 bales for October. The I.J.M.A. mills will lift 970,000 bales and others 80,000 bales. With the November quota, the total of purchase quotas issued during this season comes to 3.96 million bales—3.52 million bales for I.J.M.A. members, 290,000 bales for other mills and 150,000 bales for the J.B.S.A. This accounts for about 55 percent of the season's estimated output of 7.2 million bales. The J.B.S.A. may be asked to lift a second quota around the middle of the month, should prices weaken meanwhile. The co-operatives too are actively operating in those secondary markets where prices have tended to sag. But their precise offtake so far is not available.

A report from New Delhi says that the State Trading Corporation proposes to open 400 purchasing centres in the jute-growing States and buy about 1.5 million bales of the fibre during the season. The report estimates the total supplies of raw jute around 11.1 million bales. Consumption, it is expected, will be only 7.9 million bales—7.2 million bales by I.J.M.A. mills, 500,000 bales by other mills and 200,000 bales for miscellaneous uses—leaving a carry-forward of over 3 million bales. Trade circles feel that this huge surplus, unless properly absorbed, will depress the price of jute. The co-operatives are likely to increase their offtake from 80,000 bales in 1962-63 to around 400,000 bales.

Purchases by Mills

According to reports from circles close to the I.J.M.A., the mills purchased 1.89 million bales of Indian jute during the first quarter of the current season, against a total quota of 1.84 million bales. During the same period of 1962, they lifted 1.63 million bales. Purchases from Pakistan have been 13,000 bales during July-September this year, against 111,000 bales in July-September 1962.

Announcing the November quota at a Press conference in Calcutta last Thursday, Mr. G. C. L. Joneja, Jute Commissioner, said that the price-support scheme had worked fairly satisfactorily so far. By the end of October about 40 percent of the season's estimated crop has been purchased by mills and the J.B.S.A. The price too has remained more or less stable around the official floor level in Calcutta and near about the derivative levels in the upcountry markets. He observed that instead of Calcutta prices determining the trend in the upcountry markets, which has usually been the case so far, the prices ruling in the mofussil markets were now governing the trend in Calcutta. He attributed the temporary weakness in the market during the second and third weeks of October to selling pressure among weak holders who needed money urgently for festival expenses. However, the fluctuations were narrow and the decline in prices nominal.

Asked whether the mills would experience any difficulty in lifting such a huge quota, he said that no difficulty should arise for they were generally used to purchasing jute on this scale during this time of year in order to be assured of adequate supplies. The warehousing capacity has been expanded to 3.7 million bales (mainly around Calcutta), which is slightly over six months' consumption by the mills. As for financing, he said that the mills should not have any difficulty for they could get bank accommodation of up to 75 percent against warehouse receipts. The J.B.S.A. gets loans equivalent to the full value of stocks from the State Bank of India—85 percent against warehouse receipts and 15 percent against Government guarantee.

Offgrade Jute

Asked whether the industry had complained about the predominance of offgrade jute in the lots offered for sale and whether he would consider its suggestion to allow a suitable reduction in the prices of such fibre, Mr. Joneja said that such requests had come off and on from the industry. About 10 percent to 15 percent of the total output was of the inferior grades. The Government was trying to tackle the problem of inferior grades in a constructive way by trying to introduce modern farming techniques in areas where bad quality jute was grown. Apart from this, no step could be taken to ensure a minimum price for off-quality jute, which naturally sold at rates the market could bear. A sum of Rs. 3 crores is proposed to be spent during the remaining two years of the current plan on measures to improve quality.

Mr. Joneja referred to the Rs. 3.8-crore export promotion fund started by the Central Government. The Jute industry is to be one of the beneficiaries under this scheme. It has been asked to set up a permanent exhibition of jute goods in Calcutta. Besides, it is preparing plans for export promotion, including the sending of trade delegations, overseas publicity, and other measures, to stimulate the demand for Indian jute products abroad. At home, steps are being taken for product development, standardisation, preshipment inspection and quality control. Mr. Joneja said that 50 percent to 75 percent of the expenses incurred on these measures would be met out of the export promotion fund.

Output Rises

Despite a decline in the production and offtake of sacking, the output and despatches of jute goods have improved substantially during the first nine months of 1963, compared with the corresponding period of 1962. Working at the maximum level for 1,842 hours from January to September this year, against 1,824 hours during the comparable months of 1962, the total output has risen from 890.300 tonnes to 928.900 tonnes. While hessian has increased from 351.800 tonnes to 394.900 tonnes and other goods (including carpet-backing cloth and coton bagging) from 121.600 tonnes to 154.000 tonnes. sacking production has declined from 416,900 tonnes to 380,000 tonnes.

The total offtake has kept pace with the rising output. It was 898.900 tonnes, against 845.500 tonnes. Hessian despatches have risen from 343,700 tonnes to 388.500 tonnes and miscellaneous goods from 113,800 tonnes to 143,100 tonnes. In sacking, the offtake has declined to 367,300 tonnes from 388 000 tonnes. Exports have increased from 623.200 tonnes to 658.400 tonnes in spite of a sharp decline in sacking, due to Pakistani competition, from 225,100 tonnes to 187,100 tonnes. Hessian offtake has improved from 311.200 tonnes to 353.300 tonnes and other goods from 86,900 tonnes to 118.000 tonnes. Internal consumption too has improved from 222.300 tonnes to 240.500 tonnes; sacking leads with 180.200 tonnes, against 162 900 tonnes. followed by hessian with 35,200 tonnes, against 32,500 tonnes. In miscellaneous goods, consumption has fallen slightly from 26.900 tonnes to 25,100 tonnes.

Turning Over of Buffer Stocks

In view of the risk of jute stocks deteriorating due to prolonged storage, the Jute Buffer Stock Association has decided to turn over 50 percent of its stocks of the previous season's fibre by the end of December, it is reported. The decision has been taken after consulting the State Bank of India and the Jute Commissioner. The bank, it is reported, has emphasised the need for replacing old stocks with new fibre by the end of the current season at the latest. At first, 40 percent of the holdings of mills on buffer stock account will be released on registration of replacement contracts for the current season's fibre, and the remaining 10 percent in December. The percentage of stocks already turned over will be taken into account while sanctioning the releases. To facilitate the operation, it has been agreed that the replacement purchases will be adjusted against the current compulsory purchase quotas of the mills. The turning over of the remaining 50 percent of the stocks will be arranged after delivery of the replaced fibre in the warehouses.

THE JUTE MARKETS

Manufactured Goods: Trading was dull during the past week. Operators were in a holiday mood. Besides, end-of-month and the forthcoming Diwali end-of-account considerations induced them not to extend their commitments. Except for the loading of heavy goods in a Cuba-bound vessel, shipping instructions were poor. Shippers held back awaiting a further decline in prices, while mills were reserved and not inclined to reduce prices further. The restrictions on the berthing of vessels in Calcutta port during the week due to heavy bore tides also discouraged activity. In the absence of overseas enquiries or business and Government tenders, lethargic conditions ruled in the market earlier in the week. After midweek, scattered covering for the Cuban steamer and against the Diwali book-closing brough about a mild reversal in the form of small gains over the previous week's levels. In forward deals, sentiment was governed by the trend in the spot market. After midweek, November sacking and hessian hardened on brisk bear-covering for the end-of-account. Sacking gained more after wide fluctuations, while hessian was steady in sympathy after moving within a narrow groove. Some conversion of November contracts into February ones was reported and the contango charges were higher than the differential. Turnover was small in the spot market and moderate in the futures section. The undertone was steady in both.

Wednesday's quotations were as follows:

	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7½oz.	35.35	35.45	35.50	35.50
40in. 8oz	37.85	—	—	—
40in. 10oz.	47.25	47.35	47.40	47.40
B Twills	113.55	113.90	114.20	114.10
Cornsacks	114.65	115.25	115.75	115.75
Heavy Cees (Plain)	113.50	—	—	—
A Twills	134.00	134.75	135.50	135.00
Liverpools	125.00	125.75	126.00	126.00

Raw Jute: Divergent trends prevailed during the past week. With the completion of the Puja festivities and the issue of the November purchase quota of 1.05 million bales, selling pressure eased in the spot market. But still there were some weak holders, although they declined to reduce prices below the operational minima. Arrivals in the agencies came down to around 150,000 maunds a day. Purchases were made against quotas by mills over the jetties and by their agents in upcountry stations. Co-operatives were buying in secondary markets where prices had tended to sag. In the forward market, sentiment suffered a mild setback due to scattered realising and the reluctance of bears to cover their short positions at the prevailing levels. Turnover was moderate. The undertone was steady in the spot market and hesitant in the futures section.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)			
	Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A. Qtl.	Rs. A Md.

peared, very little fresh has happened other meanwhile. If anything, the weakness has been accentuated. Loose jute imports continue unchanged. It becomes apparent that the quality of the northern area is very poor producing almost entirely S.M.R. and Export Hearts. The district areas and the Jessore area are only slightly better, but fortunately, there is an improvement in the Faridpur white jute. The jat areas, as reported earlier, are producing a lot of speck, but mainly in what is generally supposed to be the best jat area around Ashuganj. The area to the north, namely, around Mymensingh, is producing a more samla jute which is at least free from speck. The tossas follow more or less the same pattern.

In the pucca bale market, transactions in cuttings continue at unchanged or slightly reduced prices, the main buyers being the mills and nothing further has been heard about the report that India will issue licences. Unfortunately, both overseas buyers and local buyers seem to be keeping away from T.C. so that one may expect that this grade will soon be sold at a discount. After a few days of no wagon movement at all due to most stations refusing to accept bookings, this restriction has been lifted and large quantities of jute are flowing to the ports for export. It is scarcely necessary to add that Chalna is once again getting congested. Overseas markets continue very weak with free sellers at ridiculously discounted prices.

A new jute ordinance has been promulgated which permits the Jute Board to order any mill or baler to sell all or part of his stocks at prices to be fixed by the Government under certain circumstances. Similarly, the Jute Board is authorised to make any mill or baler purchase jute and stock it. It is understood that this new ordinance is aimed mainly at the jute mills rather than balers.

JUTE OVERCOATS FOR SHEEP

Research into possible new uses for jute textiles is nowadays considered a matter of urgency even though the Calcutta mills are working to full capacity. An interesting new use has recently been devised by a farmer in Cumberland, in the English Lake District, who has designed an overcoat made from jute fabric to keep his sheep warm in the winter. A correspondent in Britain writes that "there is nothing particularly ludicrous about jute keeping wool warm. It gets cold on those Lakeland fells when the wind blows, and whereas jute is very efficient protection against the icy blast, wool, for all its many other virtues, is not. So why should sheep not have jute overcoats, and cattle too for that matter? In fact, it does not take much imagination to realise that the whole thing has tremendous potentialities. If the world's farmers could be persuaded that jute overcoats are the answer to winter stock losses, and the idea could be fostered that here is a method of extending grazing grounds to higher altitudes and latitudes, then look what a field of opportunity would open up for the jute industry.

"There is just no telling where it could all end, because if man is to feed his rapidly increasing numbers he is going to have to use land which he has previously regarded as unusable. All of which would give the jute industry a growing stake in humanity's future on this planet. And why not eventually human clothing? There is an increasing demand in cold climates for lighter garments which keep the wearer warm mainly by protecting him from cold winds. Up to now plastic seems to be well favoured for this and the scope for jute cloth might be limited. But plastic has disadvantages, one of the most obvious being its lack of durability under conditions of hard wear, and in some ways jute might offer a satisfactory alternative. I am sure the keen brains of the industry in Calcutta already have such possibilities in mind."

THE U.K. JUTE MARKETS

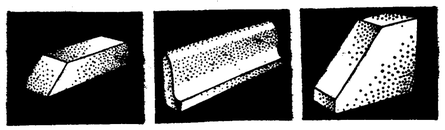
LESS BUYING OF FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was very quiet in Pakistan, and the tendency was for prices of the lower grades to decline. Sellers had been making offers of these qualities since the start of the season at under minimum export rates, but the discount in some cases increased to about £10 a ton. There still appeared to be some doubt concerning the size of the Pakistani crop, but it has been quite evident there will be sufficient fibre to meet all demands. The weakness in the raw jute market slowed down buying as there was nothing to indicate that the present trend would not continue. Dundee spinners have already secured about half of their annual needs from the present crop and they were in no hurry to add to their raw material stocks.

The current business in jute was confined to small quantities of selected marks at very low prices. Both Dundee and Continental spinners refused to come into the market for large quantities so that the present fall in prices might continue. Offers being made were very irregular with the lowest rates at £128 10s for Mill Firsts, at £109 10s for Mill Lightnings, at £94 for Mill Hearts and at £78 10s for Grade Hearts, c.i.f. the U.K. for November-December shipment. Grade Tossa-$\frac{3}{4}$ was offered at £124 10s and Grade Tossa-4 at £106 15s. Outport Tossa-$\frac{3}{4}$ was at £94 and Outport Tossa-4 at £83 5s November-December.

Cuttings were also quiet at £56 for S.N.C. and at £47 for N.C. There was not much change in mesta prices at £79 for A, at £73 for B, at £68 for C and at £42 for cuttings, c.i.f. U.K., November-December. The position in Thailand was now a little quieter with offers at £68 10s for grade A, at £63 10s for grade B and at £58 10s for grade C, delivered mill Dundee for November-December shipment.



Prices of Calcutta goods have became easier. To some extent, the quieter market was presumably due to the Puja holidays. Demand from the U.K. was not large, but there some movement was taking place Quotations were at 71s 10d for 40in. 10oz. and at 53s 9d for 7$\frac{1}{2}$oz. a 100 yards f.o.b. Calcutta for November shipment, at 72s and 53s 11d December and at 72s 5d and 53s 11d January-March. B Twills were at 173s 3d, 173s 3d and 175s 2d for the respective shipment periods.

Dundee spinners and manufacturers are very busy and have orders in hand for delivery over the first quarter of next year. This applies to all types of yarns and goods. A further substantial demand was shown for sackings last week. More skilled labour is required to keep deliveries up to date, and this is most noticeable in sewing departments.

Commodity Markets

NEW COFFEE MARKETING SYSTEM DEMANDED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

A POWERFUL section among the Indian coffee growers is now demanding some vital changes in the present coffee marketing system. The present system of pooled marketing is now 20 years old and it was introduced at a time when coffee was in distress, and India's production was only 17,000 to 18,000 tons. This system, which was introduced at the instance of the growers, served them fairly well in the sense that it helped to stabilise the market. At the same time, the pooled marketing system wiped away almost completely the individual initiative and desire to produce quality coffee. There was a time when certain individual estate marks had a reputation in the world market for quality. Whereas India's best coffees were 30s to 40s a cwt. above Kenya's best 30 years ago, today India's plantation A fetches 40s to 70s less in the world market. This is said to be an adverse effect of the pooled system of marketing which does not help in the promotion of quality grades because the identity of individual production is lost and the planter who takes some extra care for quality does not get any special reward.

One suggestion which has the backing of leading producers is that an estate which produces quality coffee should be allowed to export it under its own name. If any one does not wish to take the risk as many may not in the beginning, he can continue to hand over his crop into the pool in the usual way. Some of course fear that this may lead to disruption of the pooled marketing system. There is, however, a strong feeling that it is time that India made an all-out attempt to regain the prestige for her quality coffee abroad, and some encouragement should be given to those who take some special care for quality. Under the conditions of international quotas, it is believed that more will be gained through higher quality than by exporting a larger volume of inferior quality coffee. The campaign for stimulating coffee consumption has started showing results. The brightest aspect of the world coffee scene today is the growing demand for coffee in the producing countries and the steady increase in consumption in Europe and more particularly in east European countries. If India is to make headway in these markets it is the quality of her coffee that will have to do the job. The United Planters Association of Southern India put in a proposal some time ago for the consideration of the Coffee Board and the Central Government, and this, among other things contemplated optional exports as a means to encourage the establishment of individual estate marks. It is not known whether this proposal has found favour with the authorities.

Another aspect of the marketing policy about which this section of the growers feel unhappy is the abandoning of the open auction system after a brief period of trial and the reversion to the closed bid system. Mr. P. G. Gurjer, chairman of the Mysore State Planters Association while addressing the latest annual general meeting of his association recently said that a bad for export sales by closed tenders in the same way as Public Works Department contracts are tendered for is not in keeping with open commercial practices". In defence of his case for introducing open auctions for coffee marketing, he said that some 600 million lbs of tea were regularly brought to market each year through open auctions and it had been done with perfect protection for the producers, brokers and buyers for over a century. Why should it not work for coffee, he asked. Rubber and cardamom were auctioned at Cochin, copra and other produce in Calicut and other centres. Primary agricultural commodities were auctioned in terminal markets in most of the free market countries, and there was no reason why open auction was not permitted in coffee. The coffee marketing system was devised for the efficient marketing of the produce pooled by the producers of coffee and in this matter, the views of the producers should be accepted unless public interest was injured by the proposal, Mr. Gurjer asserted.

"The Government may well disregard our suggestion because it is not the producer of coffee who decides how his produce should be marketed, but the Government through its instrument, the Coffee Board. We do not say that open auctions are a panacea for our economic problems. But sale of a commodity of this kind is best done in the market place openly. The same applies to internal sales where the conduct of sales could be left to brokers as in the case of tea. Neither of the suggestion would imply that pooled marketing is abondoned. But it would mean an easier, less cumbersome and involved procedure", Mr. Gurjer added.

Referring to the need for replacement of the basic capital stock of the industry, Mr. Gurjer said that the U.P.A.S.I., the central association of the planting interests in south India, had submitted two carefully thought out notes, one to the Coffee Board and another, to a panel on plantation crop studies set up by the Board of Trade. These notes were considered and approved by the planters and they represented the industry's suggestions for the renovation of the old coffee, expansion of processing facilities and greater production and exports. The U.P.A.S.I. had recommended the replacement of 120,000 acres or 40 percent of the existing coffee area to be replanted with high-yielding material over a period of 12 years, so that India could have a stand of coffee giving an average yield of 8 cwts over the whole industry as against less than 4 cwts today. This was not an over-ambitious programme because yield of over 20 cwts had been obtained on a commercial scale by successful planters in India. There was also need for renovation and expansion of handling, processing, curing, transporting and warehousing facilities. The chairman said that the capital required for this purpose could not be found from within the industry. In 1961, several companies had to draw from their reserves to pay a minimum return to shareholders. Last year and this year, lending institutions were insisting on a bigger margin for hypothecation of crops. With rising costs and the increased appropriation of the proceeds of the industry by an "insatiable exchequer" the industry could not accumulate the resources required for such vast renovation and rehabilitation programme. "Without it all talk of increased production and export and larger supply to meet internal demand will be unreal", he added.

The chairman quoted certain figures to substantiate his case that the coffee planting companies were making lesser profits in spite of increased production. According to a recent survey, the average coffee company which realised Rs. 387 an acre from the sale of coffee in 1950 had raised it to Rs. 1,107 in 1960, but the profits after expenses during the same period increased from only Rs. 160 an acre to Rs. 265. In other words, the cost of production increased nearly four-fold to wipe out almost the whole advantage of increased production. Still there was an increase in profit before tax of Rs. 105 an acre, but the after-tax-profit left with the growers was Rs. 158 in 1950, against Rs. 90 in 1960. Taking the total gross realisation from the sale of the produce, the item which has made the most spectacular rise between 1950 and 1960 was taxation, he said. He pleaded for a co-ordination in the taxation policies of the Central and State Governments lest the concessions given by one Government should be siphoned off by the other. Referring to the system of subsidising exports, Mr. Gurjer said this was invariably a means to overcome the consequences of bad economic policies. The responsible planters would like to see the excise duty on their produce abolished, the *octroi* and sales tax removed or lightened, the weight of taxation directly or indirectly levied lowered to tolerable levels instead of receiving this subsidy, he said and added that if a subsidy was to be given, he would like to see that given to assist and stimulate replanting and modernisation because without depreciation being given the planters had been over-taxed.

CARDAMOM

Marketing Method

Explaining the objection of the organised section of the cardamom planters to the Government's proposal to make cardamom marketing a monopoly business of the Cardamom Board, the chairman of the Mysore State Planters Association said they were not quite convinced that this was wise or necessary or in the end beneficial to the producers. Indian production of cardamom is about 3,200 tons, a quantity too small for setting up a marketing board without costing the producers dearly in the matter of administration charges. Cardamom is easily perishable. Its quality is judged by the size and colour both of which might suffer in storage. So the original value given on pooling might not be realised by the time the sale takes place. The valuation and appeal processes through the Board would take place while the stored article is changing its colour and value. Coffee payments are stretched out to two years even on an overdraft of more than Rs. 10 crores. What is the tolerable waiting period for the cardamom growers? Will the owners' interest in quality persist if all the grades of cardamom fetch the same price? We are aware of opinions in favour of a pooling and marketing system. In a crop, the growers of which are in the majority small, scattered with no background of organised approach to their problems, a pooled marketing scheme can be painted as a highly successful, beneficial and desirable change. But the Government should critically approach such solutions. In these matters, the right course may not necessarily lie along with the one most noisily canvassed. If the Government were to choose the path of prudence in this matter, the first course obviously is to set up a board to organise research and publicity and study cardamom's economic and product problems and provide warehousing and organised sale facilities in different centres. By the time these various measures are introduced, there would appear the directions to lead from thereon, Mr. Gurjer said.

CASHEW

Kernel Export Rise

India's cashew kernel export made another welcome jump in September last. Exports during September 1963 amounting to 150,000 cases of 50 lbs each were 50 percent more than those in the same month last year. The total shipments during the first nine months of this year amounted to 1,76,000 cases, about 280,000 more than that of the same period last year. Cashew kernel exports fetched Rs. 16.50 crores during this period, against Rs. 13.68 crores during the corresponding period last year. Among the countries which enlarged their imports of Indian cashew kernels during the period were the U.S.A., Russia, Czechoslovakia and Australia. The U.S.A. took 959,000 cases during the first nine months of 1963, compared with 850,000 cases in the same period last year. Russian offtake amounted to 300 000 cases to against 200,000 cases at this time last year.

TEA

Production Recovers

(BY A SPECIAL CORRESPONDENT)

CLIMATIC conditions in Assam since October have become more favourable, tea output has also made a useful recovery and was last reported about 10 million lbs short.

An eighteenth century advertisement may give the Indian Tea Board some new ideas about tea advertisements: "This herb is prodigiously used and esteem'd and deserves great recommendation, it being admirably grateful to the smell and taste and carries an agreeable roughness along with it into the stomach; it is a very gentle astringent and very requisite to a good digestion; it is accounted one of the best, pleasantest and safest herbs that was ever introduced into food or medicine".

Professor R. D. Haworth, scientific consultant to the Indian Tea Association, London, after visiting several tea gardens in Assam and Darjeeling said that he had found that gardens in these areas favoured tea propogation by clones instead of by seeding. He added this method had its advantages, particularly where retention of flavour was concerned, although there was scope for experimenting by mixing green leaves plucked from different clones before manufacture instead of, as practised at present, blending manufactured tea. The last proposal is beyond the imagination of an old *qui hai*, but clones in place of tea seeds sounds common sence and the wonder is that so little progress appears to have been made with such a sensible proposition, for, under the old tea seed process one had: (1) to grow the seed one year (assuming tea seed gardens were available), (2) clear a nursery site, (3) germinate and plant seeds, (4) grow and keep young plants clean (these operations could take two years); and (5) plant out the extensions and wait another five years for the crop to yield.

Professor Haworth said that he was impressed with the general standard of research work in India. This expert has been investigating the colouring matter in tea.

He recently visited the Tocklai Experminental Station in Jorhat and tea estates in Assam and Darjeeling. He also visited Calcutta University and spoke at the School of Tropical Medicine, Calcutta. He suggests that those engaged in tea research should put emphasis on the breeding and chemical aspects of production.

COMPANY AND PUBLIC NOTICES

THE NATIONAL ROLLING & STEEL ROPES LIMITED

NOTICE

NOTICE is hereby given that the Twenty-first Annual General Meeting of the Members of The National Rolling & Steel Ropes Ltd., will be held at the Registered Office of the Company, NICCO HOUSE, Hare Street, Calcutta, on Monday the 9th December, 1963, at 4 P.M. to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit & Loss Account for the year ended 30th June, 1963.
2. To declare Dividend.
3. To appoint a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., who retires by rotation and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956 and to consider and, if thought fit, to pass the following Resolution of which a Special Notice as required under Section 281 of the Companies Act, 1956 has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., who has attained the age of 76 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors, prescribed under Section 280 of the said Act, shall not apply to him".
4. To appoint a Director in place of Shri R. K. Deb who retires by rotation and is eligible for re-appointment.
5. To appoint Auditors and fix their remuneration.
6. AS SPECIAL BUSINESS, to consider and, if thought fit, to pass the following Resolutions with or without modification, as Ordinary Resolutions:—

(a) "RESOLVED that the appointment of Messrs. Vijay Trading Co., Bombay, as the Sole Selling Agents, for the sale of Wire Ropes manufactured by the Company for the whole of Western India, comprising the States of Maharashtra, Gujarat, Madhya Pradesh, including the Union territories of Goa, Daman & Diu, for a period of three years as on and from 1st June, 1963, subject to termination by three calendar months' notice on either side upon the terms and conditions as recorded in the Agreement dated 9th August, 1963 made between the Company of the One Part and the said Sole Selling Agents of the Other Part, be and is hereby approved."

(b) "RESOLVED that the Books, Registers and other documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956, shall be kept open for inspection by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, as provided in the said Act at the Registered Office of the Company on any working day between the hours 11 A.M. and 1 P.M. except when the Registers and Books are closed under the provisions of the aforesaid Act, provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection by any Member in the time as aforesaid during the period prescribed under Clause (a) of Sub-Section (5) of Section 307 of the Act."

The Share Transfer Books of the Company will remain closed from 26th November to 9th December, 1963, both days inclusive.

By Order of the Board,

For THE NATIONAL ROLLING & STEEL ROPES LIMITED,

For ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.,

S. C ROY,

Director,

Managing Agents.

Registered Office:

Nicco House,

Hare Street,

Calcutta-1.

The 3rd October, 1963.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a Member.

The Dividend, if declared, will be paid to those Members whose names appear in the Register of the Company on 9th December, 1963 or their mandatees and the dividend warrants will be posted from 23rd December, 1963, onwards.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of Item Nos. 3, 6(a) and 6(b) has been appended to the Notice of the Meeting and forwarded to the Shareholders.

TO ALL SHAREHOLDERS:

And in particular to:

R. R. Bhandary Esq., M/s. Mahendra Prasad and Hrishikesh Prasad, Mr. Cali Shawakshaw Dinshaw & Mrs. Louise Cali Shawakshaw Dinshaw.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Drawing of 5% Rupee Debenture Stock, 1970 For Redemption

HOLDERS of 5% Debenture Stock (Indian Issue) are hereby advised that a Drawing will be held on Tuesday, the 3rd December, 1963, in London.

Notice is hereby given that the Indian Debenture Register and the relative Transfer Books will be closed for a period of 10 days from 24th November to 3rd December, 1963, both dates inclusive.

By Order of the Board,

D. P. M. KANGA,

Agent.

Victoria House,

Calcutta, 4th November, 1963.

THE MYSORE KIRLOSKAR LIMITED

YANTRAPUR P.O. HARIHAR.

NOTICE

NOTICE is hereby given that the Twenty-second Annual General Meeting of the Company will be held on Saturday the 23rd November, 1963 at 4-00 P.M. (I.S.T.) at the Registered Office of the Company at Harihar to transact the business, the details of which have been made known to the shareholders separately by notice sent along with the Balance Sheet and Profit and Loss account and Directors' Report.

The Share Transfer Books and Membership Register shall remain closed from the 9th November, 1963 to 23rd November, 1963 (both days inclusive).

By Order of the Board.

For THE MYSORE KIRLOSKAR LIMITED,

V. K. BODAS,

Asst. Secretary.

Dated: 21st September, 1963.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

Name of Company	Date	I.S.T. Hours
Rohtas Industries Ltd.	31-10-63	11 a.m.

DIVIDENDS DECLARED OR PROPOSED.—Nonsuch Tea Estates Ltd.—15 p.c. (f), subject to tax; Barnagore Jute Factory Co Ltd.—40 p.c. (o), less tax; Arthur Butler & Co (Mozufferpore) Ltd.—10 p.c. (o), subject to tax.

4¾ PER CENT

KERALA STATE ELECTRICITY BONDS, 1975

FOR Rs. 150 LAKHS

(Payment of interest and repayment of Principal, Guaranteed by the Government of Kerala)

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act. The bonds will also be eligible for the purpose of advances under Section 17 (4) (a) of the Reserve Bank of India Act, 1934.

ISSUE PRICE Rs. 99.50 PER CENT REDEEMABLE AT PAR

ON THE 11th NOVEMBER, 1975

Subscriptions will be received in cash or cheques from the 11th November, 1963. But the list will be closed without notice as soon as the total subscriptions amount to approximately Rs. 150 lakhs and in any case not later than the close of the business on the 18th November, 1963.

Applications will be received at the Offices of the State Bank of India at Bombay, Calcutta, Madras, New Delhi, Trivandrum, Madurai, Bangalore, Bangalore City, Coimbatore, Nagercoil, Thiruchirappally, Thirunelveli and at the local branches in Madras City and in Kerala State.

Copies of the Bond Prospectus announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all District Treasuries and Sub-Treasuries in the Kerala State and at all Division Offices of the Kerala State Electricity Board.

U. CHANDU NAIR,
CHAIRMAN,
KERALA STATE ELECTRICITY BOARD.

TRIVANDRUM,
1-11-1963.

N.D.C. MEETS: MORE SPEECHES BUT LESS FOOD

THE two-day session of the National Development Council held in New Delhi just before the week-end proved to be a singularly unfruitful affair. In a way, the fact was not altogether surprising. In spite of what distinguished American professors may think, it is some years since the Council began to live up to its reputation as the nation's most futile talking-shop, where great men from the Centre and the States foregather for oratory which reverberates off the walls of the auditorium but leaves the ear-drums of the distinguished assembly within unmoved. Many of the members attending last week's meeting suffered from one accidental handicap : freshly returned from the whining, dining and merry-making of the All-India Congress Committee's jamboree amidst the fading glories of princely Jaipur, it must have been hard indeed for them to concentrate on the grave and earthy realities of the country's economic problems. In the circumstances, it was perhaps understandable that the next best alternative was adopted. The customary quota of speeches was made. A kaleidoscopic variety of opinions was expressed. Criticism of others was leavened by praise of oneself. In the end, a resolution was produced because one had to be produced, its main feature being that it repeated the ancient exhortations and hoary platitudes that have dripped from Congress lips with unfailing regularity for more than 16 years.

The tone for the meeting was set in an opening speech from the Prime Minister, who earned the country's gratitude by meandering, not through the familiar if barren pastures of socialism or foreign affairs, but over a more homely problem—the shortage of food. The background to the speech was provided by the Government's discovery that, after a year of unrestrained jubilation over a supposed increase in foodgrain production during 1962-63, the final estimates just published showed the production to have actually *fallen*. Mr. Nehru did not find it necessary to refer to the fact in specific, statistical terms But he did mercifully concede that it was all "rather distressing", for agriculture "is the key and the base of all progress." The remedies he proposed, however, were familiar ones. One was that the State Governments should stop installing their champion duds as Agriculture Ministers. Another was that land reforms should be pushed through speedily, even though practical experience shows that they have often led to a decrease in farm output. A third was that everybody must work harder. A fourth was that everybody must co-operate with everybody else. A fifth was that, apart from everybody co-operating with everybody else, everybody along with everybody else must co-operate every time on everything everywhere.

And so, as the happy flow of exhortations continued, there emerged from the Prime Minister's speech only one slight shift of emphasis. This was contained in the plea that the State Governments, instead of continually haggling with one another to get large industrial projects located within their own territories, should spend a little more time worrying about their farms. However, the sincerity and effectiveness of even this plea was not immediately evident: the Prime Minister of Kashmir, for one, is reported as having risen soon afterwards to demand that his State be allocated at least one major project straightaway.

Apart from monopolising the pleasure of a speech from Mr. Nehru, the main achievement of the N.D.C. meeting seems to have been the decision to set up an Agricultural Production Board. The purpose of the Board, it is stated, is to ensure "an integrated approach in matters of agricultural policy on behalf of the Central Government" ; and the membership of the Board is to include Ministers and certain other busybodies concerned directly or indirectly with agriculture. One would have imagined that the Ministers and busybodies in question already met often enough to discuss agricultural policy, and to evolve the so-called "integrated approach". Unless, therefore, the implication is that these gentlemen do not so meet, or have not hitherto been on talking terms, the point in establishing the Board is by no means clear. The truth probably is that the Board is intended as a showpiece in support of the pretence that great things are going to be done to push agricultural programmes vigorously forward. In that case, the best that can be said of the Board is that, although useless, it may be less expensive than some of the other bogus schemes hatched in the recent past, such as those for co-operative farming, a village volunteer force or a defence labour bank. The reminder may still not be inappropriate that what the country needs is rice, wheat and pulses, along with cotton, oilseeds and other commercial crops —not the boards, committees, councils and teams that continue passionately to be spawned with frog-like fecundity.

While the agricultural failure was justifiably the N.D.C. meeting's main preoccupation last week, it is a strange commentary on the Council's sense of priorities that the problems of organised industry received almost no mention in the final resolution. The plea for accelerating the development of backward regions in various States received the customary airing ; so did the plea for providing more drinking water in rural areas and for clearing slums in urban areas. It apparently did not occur to any of the distinguished gentlemen present that these may not be among the most important problems facing a country rumoured to be in the midst of an emergency. *En passant*, the N.D.C. resolution referred to "the key importance of stabilising the growth of population"—forgetting that God alone can help a country which tries merely to "stabilise" the annual growth of its population at the 2.4 percent or perhaps the 2.8 percent that India is said to be enjoying.

To the extent that there was a reference to industry at all, it was confined to a moan about the raw material shortages that small industries and industrial estates are facing. It did not strike the N.D.C. luminaries that while these sectors of the economy are of some importance, the similar and no less acute shortages faced by the bigger organised industries are doing far more serious damage to the overall development programme which they themselves have endorsed. The excuse may be offered that the wording and the relative emphasis on various subjects in N.D.C. resolutions

are of no great significance, that the quality of the resolutions is apt to vary according to the personal predilections of the stenographers who happen to be available to draft them. The pity will remain nevertheless that what nominally at least is the country's economic leadership should emerge from two days of confabulations with almost nothing of importance said—and even less done.

STEEL IN DREAMLAND

CLOSE on the heels of the Planning Commission's mid-term appraisal disclosing that the third plan target for steel is not likely to be realised until 1968-69, there comes the fantastic proposal that India should set herself the goal of raising steel manufacturing capacity to 21 million tons by 1970-71. This is described as the minimum that must be installed to obtain 18 million tons of output in that year, implying that New Delhi has belatedly discovered that production at the full rating of the plants is not always achieved. This concession to realism will undoubtedly amuse those who recall that the Government insisted last year on assuming full capacity output for the purpose of fixing retention prices, after rejecting the advice of the Tariff Commission which had suggested taking 90 percent as the norm. Unfortunately for the country this is about the only realistic aspect of the proposed 21-million-ton steel target for the fourth plan, much of the rest being plain wishful thinking unredeemed by any attempt to relate the exercise to larger economic realities.

Few dispute the claim that India's natural resources justify building a sizeable steel industry to meet both home demand and to make a bid for a share of the world trade in the commodity. But before the endowment of natural resources can be translated into cheap and competitive steel, a major effort is necessary to ensure that the industry is developed on sound lines. With each advance in the size of the industry, however, the country seems to be moving in exactly the opposite direction because of planning fantasies in which the cost element is regularly ignored. If this were not so, the emphasis would shift from a preoccupation with installed capacity to the actual production achieved, with a corresponding concentration of effort on reducing the inordinate delays in construction and the slow and tedious build-up of output to rated capacity. The advantages in terms of lowest capital charges are obvious, but of greater importance is the acceleration of returns from investment to the benefit of both the plants and the country. The quicker the returns, the greater will be the accumulation of internal resources provided sensible pricing policies are adopted, and the surer will be the advance of the industry. It follows that the benefits of import substitution too will accrue sooner, making it possible to contemplate allocating the foreign exchange saved towards enlarging capacity. This need not mean slowing down the rate of advance but using steel as lever of growth which stimulates and strengthens the rest of the economy instead of pressing on it as deadweight.

How monstrous the deadweight can be, is evident from a quick look at the implications of the 21-million-ton target now hatched. The direct costs of creating the new steel capacity may, on the official admission, be as much as Rs. 1,650 crores. This figure may itself be an underestimate, as observers have been quick to point out. It assumes that the expansion of the existing plants will cost only Rs. 1,000 a ton of capacity, which is unrealistic considering that all the works but one will have reached the full potential built into their primary rolling facilities by the end of the current expansion programmes. Substantial expenditure will, therefore, be necessary to duplicate the rolling complexes, which makes nonsense of the calculations made by New Delhi. Even otherwise, the assumption of Rs. 1,000 a ton is phoney; the figures officially cited for Rourkela's current expansion, costing Rs. 110 crores for an addition of 800,000 tons, show that the cost a ton there is Rs. 1,375, even though the primary facilities already exist.

Going for the present by the Rs. 1,650-crore figure, one fails to understand why the steel plan should not take into account the related investment needed in ore mines, collieries, and limestone and dolomite quarries without which the new capacity cannot function. These costs will be very substantial, as is evident from the fact that Jamshedpur's case to the Tariff Commission gave a figure of over Rs. 40 crores for developing its existing coal and ore mining facilities to make itself self-sufficient. Such costs should rightly be included in the steel programmes, and there is no excuse at all for ignoring them in the proposition the country is being asked to consider. Was it that the planners' own credulity was so strained by the time they arrived at the Rs. 1,650-crore figure that they left the ancillaries out on some specious plea or the other? Once these costs are added to Rs. 1,650 crores, the bill may well be over Rs. 2,000 crores—or several hundred crores more than the total investment on all organised industries and mineral development during the third plan.

Steel is undoubtedly important, but even steel enthusiasts will agree that it cannot by itself be of much benefit to the economy. Before the commodity can be used to good purpose, the "matching" requirements have to be provided for. There is, for instance, cement without which the use of steel in construction is inconceivable. This is exactly the trouble at present: supplies of bars, rods and lighter structurals are relatively plentiful, but cement is short, so a temporary surplus of steel has developed. Ostensibly, the planners profess to take such interdependence into account in their exercises, but can they honestly claim to have gone beyond the more obvious requirements of consistency? The current shortage of welding electrodes is a striking example of how economic battles can be lost for want of a shoe-nail. Unless the electrodes are made available, fabrication cannot proceed, no matter how much steel or fabricating capacity may exist. The unbalances that have developed even with the present low level of steel output should serve as a salutary warning against letting steel appropriate an inordinately large share of the funds available for industry.

If the size of the fourth plan steel programme is absurd in relation to the resources likely to be available, it is more than absurd when considered in the light of its foreign exchange requiremets. The official assessment places the import content of the Rs. 1,650-crore programme at over Rs. 800 crores, a very sizable chunk of any conceivable total of foreign exchange budget for the fourth plan. In the current plan period roughly one-eighth of the foreign exchange budgeted for all capital goods imports was earmarked for the steel programme, but giving even this modest share meant cutting down on other important sectors. How much greater would be the deprivation if anything like Rs. 800 crores had to be set aside for only the steel programme. The budgeting apart, the likely reaction of aiding countries has also to be considered. None of them, not even Russia, would be willing to commit further funds to the steel programme until the investment already made begins to show results. If the production targets proposed for 1965-66 are not going to be realised until 1968-69, the aid-givers can hardly be expected to come forward with further credits much in advance. The delays over the negotiations with Britain and West Germany for the current plan point to the unreality of making optimistic assumptions. There is the further difficulty that countries giving aid cannot let one industry take away too large a share of aid funds because the benefits, in the shape of orders, will then flow back to just one sector of their own economies, provoking protests from those deprived. This is all the more reason why steel equipment should not be too large an item in India's shopping list; it is necessary to keep the foreign exchange requirements of the industry down to no more than an acceptable proportion of the total.

There cannot be much doubt that the 21-million-ton target for steel is a dream. Unlike in the past, opposition to fantasies is building up inside the Planning Commission itself where those responsible for other sectors of the economy are frankly aghast at the irresponsibility of steel staking such a disproportionate claim on the nation's resources. The point to emphasise is that the rejection of the target must come quickly before further damage is done. The longer the programme—even though it is described as tentative—is left in place, the greater will be the doubts that arise among friends abroad about India's sense of purpose and her ability to formulate well-conceived development programmes.

L.I.C. AS GENERAL INSURER

THE statement that the Life Insurance Corporation will start to do general insurance business as an insurer in a big way has caused consternation among general insurers in the private sector. The report that the Government of India has already come to a decision on the subject has been differently received by different people, including Mr. E. Kolet, chairman of the executive committee of the General Insurance Council. The Life Insurance Corporation Act, 1956, permits the L.I.C. to transact other forms of business. There is, therefore, no bar, in law, against the L.I.C. extending the field of its operations. But the report which has been circulated through various newspapers—that a Bill will be introduced during the winter session of the Lok Sabha specifically for this purpose—lends colour to the view that precise and significant decisions have been taken. The purpose of the L.I.C. entering general insurance as an insurer has been explained with a verbose facade. The Corporation, it is said, will operate not so much for the sake of getting the business or the premium income, which inevitably will be big; it will act primarily as a preceptor and a moral force acting on orthodox and traditional lines to eliminate the malpractices alleged to prevail in general insurance.

A reduction of premium rates is the device that will be adopted by the L.I.C. to eliminate these malpractices. Since insurers in the private sector will have to survive in open competition with the Corporation, they will be forced to offer the same rates if they are to continue in business. Tariff insurers will have to obtain a special dispensation for tariff business, since the L.I.C. by all indications is likely to function as a non-tariff company like Lloyds of London. Competition with the L.I.C. will be a struggle. Private sector companies will find their income depleted as a result of business being lost to the L.I.C. Their premiums from retained business will also be reduced. In this way, the argument runs, they will have no funds to pay rebates or offer illicit inducements; the L.I.C. will thus act as a stabilising force checking the current uncertainty about market payments and will be a powerful instrument to put private insurers in a moral straitjacket.

These are the grand pillars of the new policy reportedly decided upon by the Government of India. The top-dressing cannot, however, blind one to the other consequences of the decision. The L.I.C., with its vast resources of manpower, branches, offices and above all investments in every sector of business, can by pressure tactics take away part—maybe a very large part—of the business now on the books of the private companies. For them, the entry of the L.I.C. could mark the beginning of the end. It would in effect amount to nationalisation of a new variety, inasmuch as the business would be absorbed, but not the companies or their staff. The move would, in a sense, be a revised edition of the tactics adopted by the Government of Ceylon. Although the reassurance has been offered that the intention is not to edge the private companies out of existence, the latter need have no illusions. It would be plainly impossible for the companies to survive in competition with a colossus whose limitless funds can be used to manœuvre private sector business on to its own books, apart from the Government-financed business which will come to it automatically.

The rôle of the L.I.C. in insurance has been compared to that of the State Bank of India in the banking industry. Since the former is ostensibly entering the market to eliminate malpractices through the pressure of competition, Mr. Kolet can now wind up his administrative machinery and inspecting staff. He has spent a vast amount of the insurers' money in locating the channels for the outgo of funds, with or without success. Insurers can hardly afford his expenses—Rs. 30 lakhs to begin with—if they know that the L.I.C. is now to enter the market as a "stabiliser", the surest impact of which will be a large loss of revenue. The L.I.C. is taking over the functions of Mr. Kolet. In self-defence, it seems that Mr. Kolet is now asserting after his chairmanship of the executive committee meeting in Madras that malpractices in general insurance have decreased considerably and that the advent of the L.I.C. in general insurance is not yet a fact. These statements are of tactical interest in the crosscurrents of the insurance world.

It looks as if the strategist in Mr. Kolet is endeavouring to run down the reported decision of the Government. As a last resort, he is asserting that the moral fibre of the companies has improved considerably. If that be so, the usefulness of his machinery—always doubtful—should have ended, particularly with the advent of the L.I.C. Mr. Kolet boasted flamboyantly, when he took over as chairman of the executive committee, that there would be no more reductions in premium rates—the panacea devised by the Controller of Insurance for the ills of general insurance. The same idea of rate reduction in another form has now been bowled at Mr. Kolet. He has no alternative but to withdraw; and if the executive committee sheepishly sides with him and endorses the continuance of the expenses of the administrative machinery, insurers as a whole can voluntarily withdraw the undertakings they had voluntarily given. They do not need two sets of authorities. And for them to be shunted from one end to the other according to the conflicting pulls inside the Government of India is to say the least a nauseating experience.

Insurance is in a sense a commodity for sale, and its terms have to be decided by the laws of demand and supply. The fact is often ignored that its price, which is statutorily fixed at a given rate, differs considerably from the marginal price determined by the laws of economics. If the L.I.C. reduces the premium rates in general assurance so as to sustain the statutory price, it will be as guilty of parting with funds as the insurers are accused of having done through devious means. The only virtue, if it can be so called, would be that the L.I.C.'s outgo would be revealed in the books of account as a straightforward deal, whereas the companies, not having the power to reduce tariff rates or to go against the Act, have reportedly no other way but to dress up the outgo. Some feel that the correct course would be to delete the commission payment clause from the Act altogether. Each payment would then be determined by the profitability of the account and would be made openly. And since the Government itself admits that there is legitimate scope for conceding the outgo of funds other than the commission, at least by rate reduction, there can be no objection to this.

Current News and Comment

Modernising Woollen Industry

The Indian woollen industry is badly in need of modernisation and rehabilitation. The chairman of the Indian Woollen Mills Federation, Mr. R. K. Birla, was only restating the case when he pointed out recently that "we are many years behind in newness of equipment and productive capacity, and are positively losing the race in the production of good and finer materials because our machinery has become absolutely outdated and outmoded." But his account of what he saw in his recent tour abroad, more particularly at the Hanover Fair, considerably reinforces the plea that the replacement of the old machinery is a must if the Indian woollen industry is to survive. From the drawing to spinning stage for worsted fabrics, the conventional system prevalent in India requires about nine machines to prepare medium counts, whereas in foreign countries the same work is done by four to six-machines of better quality. This saves space, power and labour.

The spinning capacity of the new machines is one and a half times more than that of the conventional machines. Warp and weft winding capacity of the new machines is almost doubled compared with that in India. The productive capacity of modern looms is about 25 percent more because of higher speed. The capacity in finishing, blowing, shearing, tendering and other similar processes in the new machines is at least 50 percent more. The new woollen cards can also produce at twice the rate of old machines in India. The same applies to the woollen ring spinning frames. The textile machinery manufacturing industry has no doubt progressed considerably in recent years, but indigenous production is still inadequate. It also does not compare well with foreign machinery. Mr. Birla has emphasised the need for allowing certain import of machinery so as to keep abreast of the developments in advanced countries.

It is comforting to hear that Mr. Birla's proposal to the International Wool Secretariat for getting raw material supplies from Australia of the value of Rs. 3.5 crores on deferred payment with reasonable rates of interest has been well-received. Raw material in adequate quantity and of requisite quality is the industry's major problem. Indian wool is well suited for the production of carpets, coarse blankets, etcetera, but not for the manufacture of finer varieties of fabrics, hosiery goods, knitting yarn and other similar goods. Of the 72 million lbs of wool which the country is producing annually at present, hardly 13 million lbs are of finer variety.

The question of modernising and rehabilitating the woollen industry has been engaging the attention of the authorities for some years. The industry has now assumed great significance because of the defence demand for woollen goods. The Working Group for the Rehabilitation and Modernisation of the Woollen Industry, 1960, estimated the industry's financial requirements at Rs. 11.25 crores, of which the foreign exchange element was assessed at Rs. 9.25 crores. Because of the subsequent increase in the prices of machinery, the cost has been revised higher at Rs. 15 crores. The industry is being asked to earn the necessary foreign exchange through fabric exports. But it is finding it extremely difficult to boost its exports, liberal incentives notwithstanding, precisely because of the outmoded and outdated machinery.

Sponsored by the International Wool Secretariat, a five-man expert team, headed by Mr. J. F. Hopkins, is now in India touring various wool-growing and manufacturing centres to assess the industry's requirements for its vast renovation programme embracing sheep breeding, manufacturing and marketing of wool products. An interim report, it is expected, will be submitted by the beginning of next month, and the final report would be ready by the end of January. The five-year programme of modernisation and rehabilitation which the expert body is to chalk out is expected to help the industry stand "alongside other countries and place this country's wool in a completely competitive situation both at home and in world market." Mr. Hopkins recently said that the cost of the renovation programme would be borne by a consortium of nations. He added, however, that no details were yet available. The renovation programme will give special attention to the introduction of quality control and providing technical service to the industry. Proper attention would be paid to the possibility of mechanising appropriate sections of the industry. The present modernisation programme is a joint effort of the U. N. Special Fund, Australia and New Zealand under the Colombo Plan and the International Wool Secretariat.

Working of Cloth Price Stamping Scheme

The Government of India's decision to appoint a representative ten-member committee to review the working of the existing price stamping system for cotton textiles has been welcomed by the industry and trade circles. Opinion about the efficacy of the price stamping scheme is sharply divided. The primary object of price stamping is to ensure that the consumer pays fair price for his cloth. This is possible only when the mills honestly observe the self-imposed code of discipline for keeping prices pegged at the agreed level. Price stamping becomes meaningless if mills do not stamp the correct price and this is precisely what seems to have been happening on a large scale. Mills are known to have been circumventing voluntary price control by introducing hundreds of new varieties with only slight changes in the construction of cloth and charging higher prices for these fabrics. There have also been numerous instances of mills charging premiums, unofficially of course, on the stamped prices for the more popular varieties in many dubious ways.

The terms of reference of the proposed enquiry are not known, but investigation by a committee representing conflicting interests should help a better appreciation of the various issues involved in the working of the price stamping system. Of course that cannot, by itself, rid the system of various abuses which have crept into it. The success of any control measure depends on how honestly and efficiently it is administered. That the price stamping system is being widely abused is common knowledge. But it does not follow that the scheme should be discarded. Stamping of prices is perhaps about the only way of creating some price-consciousness among consumers. If mills cannot be obliged to stamp correct prices, it will be all the more difficult to make them observe voluntary price control properly if prices are not stamped at all. The truth is that the rise in cloth prices cannot be checked if the supply of cloth does not keep pace with demand both in quantity and quality. It is time the Government made known its decision on the Tariff Commission's report on fair prices of cloth. The inordinate delay in official decision suggests that the Tariff Commission's recommendations have not found favour with the authorities. Uncertainty about cloth prices must be ended soon.

Machine Tool Output and Demand

Inaugurating the third Hindustan Machine Tools factory in Pinjore near Chandigarh recently, the Prime Minister observed that it represented a step nearer to the "stage of self-generation". The different types of machine tools are needed not only for India's development, but also for her defence. It is creditable for Hindustan Machine Tools that its third factory, which went into production on 1st October, has been set up mostly from its own financial and technical resources. The management proposes to set up two more machine tool units before the end of the third plan. In spite of all this activity, however, the total internal production of machine tools in India by 1965-66 would not exceed Rs. 25 crores in value, compared with the third plan target of Rs. 30 crores and the estimated Indian demand worth Rs. 60 crores. India does not as yet possess capacity for producing broaching machines, gear-cutting machines, lapping machines and the like. It is expected that by the end of the fourth plan, the annual demand for machine tools would increase to Rs. 100 crores; besides still more complicated machine tools would be needed to sustain a higher level of industrial development in the future. It is, therefore, necessary that the Government should pay adequate attention to the development of the machine tools industry in the private sector.

At present, the private sector machine tool units depend on foreign help for designs, technical knowledge and machinery. It is possible that in due course, the H.M.T. would be able to set up an engineering and consultancy organisation which would not only design new machine tools, but also help the private sector units in drawing up plans, designs and specifications. Meanwhile, it is necessary to afford all possible facilities to the private sector units to get adequate foreign collaboration. The private machine tools manufacturers should be allowed to import the required machinery in spite of the persistent foreign exchange difficulty. It is unfortunate that the Gov-

ernment has not yet accepted the suggestion of the Machine Tools Industries Association that the rate of royalty for foreign collaborators should be fixed at 7½ percent and the period of time for which it is available should be ten years in order to be attractive to foreign parties. Taking a long-term point of view, it is imprudent for the country to insist that the royalty rate should not exceed 5 percent.

Moratorium on Metropolitan Bank

A correspondent writes: The moratorium imposed by the Reserve Bank on the Metropolitan Bank Ltd has caused a good deal of surprise in West Bengal business circles as the latter has rendered useful service to small and medium-sized industrial units in the State. The Reserve Bank's move was considered to be ill-timed. It came just on the eve of the Puja holidays, causing serious hardship to the numerous depositors, not to mention the many industrial units which depend on the Metropolitan Bank for financing their Puja requirements. The constituents have felt bewildered by the central bankers' unexpected action, but they have shown no excessive anxiety on a longer view; the widespread belief is that the moratorium imposed under Section 45 of the Banking Companies Act implies that the Metropolitan Bank will be either reconstructed or amalgamated with certain other banks. This Section is intended to deal with banks which are not meant to be wound up.

Since the Reserve Bank has decided in principle to strengthen small banks because of their usefulness to the economy, it is rumoured that it wishes to bring about an amalgamation of four or five small banks operating in West Bengal. The idea, of course, is commendable. An amalgamated bank would be a more viable unit and would, therefore, be better suited to serve the requirements of the increasing number of medium and small industrial units in this territory. But events following the moratorium have led to the anxiety that the action of the Reserve Bank might not help the cause of small banks.

It is reliably learnt that as an interim measure, the Reserve Bank has been investigating the possibility of amalgamating the Metropolitan Bank with another small bank for the time being, since the idea of creating a bigger unit by including a number of small banks at once cannot be implemented immediately due to legal difficulties. The idea of the Reserve Bank fails to carry conviction. If legal difficulties were expected, it is hard to understand why the Reserve Bank proceeded to impose the moratorium on the Metropolitan Bank in a hurry. Considering that it has ample powers to supervise the working of a scheduled bank, the Metropolitan Bank should not have been stopped from functioning in the normal way as long as the central bankers were not sure of the steps they wished to take.

There are two criticisms against amalgamating the Metropolitan Bank with the other small bank. First, the principle of imposing a moratorium on a scheduled bank like the Metropolitan Bank in order to amalgamate it with a non-scheduled bank is not a good one. Secondly, the procedure for amalgamation under Section 45 as adopted by the Reserve Bank is unlikely to enhance public confidence. It is believed that under the scheme for amalgamating the Metropolitan Bank with the other bank, the depositors of the former having amounts in excess of the insurance limit of Rs. 1,500 an account will receive immediate credit in the books of the latter in proportion to the value of readily realisable assets and rateably with the Deposit Insurance Corporation. The Corporation will have to pay fully up to Rs. 1,500 an account to all depositors. Subsequent payments to the depositors of the Metropolitan Bank will depend on the actual realisation of its remaining assets. This method of paying the depositors is the same as in the case of a winding up. There is no logic in paying the depositors in this manner as long as the total realisable assets of the Metropolitan Bank are sufficient to pay the constituents up to the full amount of their deposits.

It is said that the Reserve Bank might stick to the above procedure for amalgamating the two banks on the ground that this method of ascertaining deposits to be paid on demand has been insisted upon in previous cases. It is not a convincing argument. A system which has been found faulty should not be continued merely because it has been followed previously. A more rational procedure is called for. The depositors should be offered full payment on demand in case of amalgamation whenever the total realisable assets of a bank are adequate to meet all the demands.

Holman Climax Manufacturing

A party of journalists was shown round the factory of Holman Climax Manufacturing Ltd in Titaghur last Monday. This factory manufactures a wide range of equipment, such as rock drills, portable and stationary air compressors, industrial pneumatic tools and air hoists. Founded in 1958 as a result of collaboration between Holman Brothers of Camborne, Cornwall, and the Bird-Heilgers group, it started production at the close of 1959 with 70 percent of imported and 30 percent of indigenous components. The components are now almost 100 percent indigenous, the main item still imported being alloy steel. Mr. D. L. V. Rowe, chairman of the Company, stated that the factory now manufactured equipment worth Rs. 75 lakhs to Rs. 80 lakhs, and that next year the output would reach Rs. 1.5 crores. He said that in course of time the Company also hoped to export its products. Its products are widely used in mines, quarries, and hydro-electric and irrigation projects, and for defence work.

Foundries Hit by Iron Shortage

At the annual general meeting of the Indian Foundry Association in Calcutta on Wednesday, the chairman, Mr. K. Agarwalla, called attention to the acute shortage of pig iron, as a result of which most of the commercial foundries are on the verge of closure. As against a requirement of 2.5 million tons—the Government's estimate is 2 million tons—supplies of pig iron are only 1.1 million tons. Of this, as much as 804,000 tons has been earmarked for special requirements such as for steel works maintenance, railway sleepers, the spun pipe industry, defence units, export promotion quotas, castings needed by the Director-General of Supplies and Disposals and railway maintenance. The commercial foundries are getting supplies equal to just 10 percent or 12 percent of their capacity. To improve this position, Mr. Agarwalla suggested the urgent import of 1 million tons of pig iron and a reassessment of the special requirements with a view to finding out whether more could not be supplied to commercial foundries. Since the expected supplies of 350,000 tons of pig iron from Bokaro will not materialise for some years, he urged that the Government should encourage the setting up of low-shaft blast furnaces in the private sector and also take steps to establish hot blast furnaces.

As he emphasised, the foundry industry is basic to the economy, since on its supplies depends the working of many other industries, including machinery manufacturing units. The capacity that will be created during the third plan in both the private and public sectors will total 153,500 tons of grey iron castings, 83,200 tons of steel castings and 76,700 tons of steel forgings. There seems to be a good market for Indian foundry products not only in Asia and Africa, but also in the industrialised western countries. The exports of the industry have steadily risen from Rs. 12.30 lakhs in 1959 to Rs. 36.72 lakhs in 1962, and during the eight months of 1963 they have been Rs. 23.96 lakhs. Mr. Agarwalla emphasised that a proper check should be maintained on the quality of castings in order to expand the overseas market. Facilities should be afforded by the Government for preshipment inspection whenever buyers require it.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1963 Fund:

Rs. 160
Managing directors and directors of Bird and Co. (P) Ltd, and F. W. Heilgers and Co. (P) Ltd.

Rs. 100 each
William Jacks and Co. Ltd, the E. C. Benthall Charitable Trust, B. M. Khaitan.

Rs. 50
Indian Copper Corporation.

Rs. 25
Dhanuka Industries Ltd.

Rs. 21
Shri Ramchandra Singhi.

Rs. 20 each
Anonymous, A. M. Sookias, J.H.H.R., G.W.M., G. W. Hogg, J. M. Cochrane-Barnett.

COINING ILLICIT RUPEES

"Max" writes from London:

"JUST a few weeks ago, the Commissioner of Police in Calcutta sent to me a letter calling attention to a statement in "Current Coin" alleging that the coining of illicit rupees was a very large and profitable business, and asking to be supplied with the information on which I based my statements. I replied that I would ask permission from my informant to put him in communication with the Commissioner. My informant declined, and declared that if he was to put the Commissioner in possession of one-tenth part of what he knew, he (my informant) would be hauled up for defamation within a week. I sent Mr. Bignell an excerpt from the letter for his information. Mr. Bignell was evidently nettled at this and allowed himself to write a reply in terms which it is charitable to hope he regrets today. He advised me not to make sweeping assertions which were apparently unsupported by facts. In my reply after calling his attention to the unworthy insinuation he evidently meant to convey in his utterly gratuitous piece of advice, I repeated that the statement I had originally made regarding the existence of illegal mints was based on trustworthy information in my possession which I was under no obligation to pass on to him or to anyone else. There was something more in my letter to which I need not refer, but there the correspondence ended."

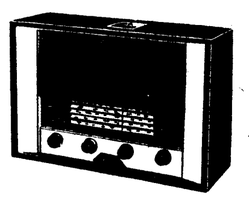
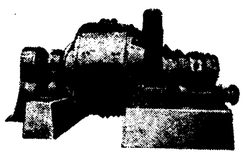
A Ditcher's Diary



CALCUTTA DID NOT FAIL TO REMEMBER YESTERDAY that, on 13th November half a century ago, news reached this country that an obscure versifier called Rabindranath Tagore, writing in some unknown language called Bengali, had been awarded the Nobel Prize for literature. No Asian language, incidentally, has had the honour since. Even then Tagore was by no means obscure in Bengal; but on a sudden something happened. It was later left to an American philosopher to observe that the fact that Tagore was an Indian was enough reason why India should be free. As I was thinking of it all yesterday it occurred to me that Tagore died a good sixteen years before freedom came. I also remembered what it is not fashionable to remember these days—that Tagore had significant differences with Gandhi, whom he was the first to style the Mahatma. Not as though the evolution of free India conforms much to Gandhian ideas but, except for speeches at centenary celebrations, Tagore's ideas seem to me to have been forgotten even more thoroughly. Tagore never forgot to emphasise that his "memorial" was his poetry: more than once he narrowed the field even further and said that he would be remembered mainly for his lyrics. Yet the amount of time and thought he devoted to national questions, taking time off his poetic preoccupations, seems still amazing. Time and again he declared that he had nothing to do with politics; time and again he found himself in the middle of it all. Even in his penultimate and highly pessimistic last testament bewailing a crisis in civilisation he did not omit to mention his abiding faith in mankind; and, a universal man though he certainly was, India in general and Bengal in particular meant more to him in a hundred ways than can be realised by present-day champions of what I call "unity by committee". It is unthinkable that, if alive today, Tagore would have joined Dr. Lohia in wholesale condemnation of all that has happened since 15th August, 1947. Much of it, I am constrained to say, would have saddened him deeply. And even as he did not hesitate to criticise Gandhi at the height of the latter's popularity, he would not have been silent today. He is. So is Gandhi. Gandhians and Tagoreans must be unspeakably grateful. Alas, they speak only too often. I prefer the silence.



I AM NOT SO CYNICAL AS TO BELIEVE THAT THE nearly thirty Indian diplomatists in Afro-Asia who met in Delhi recently came hither only for holiday, although several are known to have made elaborate arrangements to make sure that the conference did not take all their time in India. Mr. Rajeshwar Dayal, Special Secretary (which can mean anything) in the External Affairs Ministry, is said to have inspired the conference, following the one some months ago of Indian heads of mission in south-east Asia. I do not grudge our ambassadors an occasional spot of vacation back home; if these conferences cost the tax-payer a lot of money, well, he has got used to worse waste. What I cannot understand is the basis of blocking these embassies. It is conceivable that the Indian Ambassador in Tokyo or Rangoon has much to profit from a discussion with Delhi; administrative problems apart, our man in Tokyo can have but little in common with his counterpart in Rangoon. The one lesson we should surely have learnt by now is the irrelevance of geographical "togetherness"; Asia is no more one than Europe, and Mr. Nehru's well-meant efforts to evolve an Asian entity have been no more successful than Dr. Nkrumah's to forge an African personality. Now Delhi now knows that Baghdad, Cairo and Colombo have to be wooed at different levels with different approaches. If this is true, as I believe it is, I cannot see how the Indian Ambassador in Kabul is going to get much from exchanging notes with the Indian Commissioner in Nairobi. Yet both were there in Delhi for the conference. That Mr. Rajeshwar Dayal presides over the desk ruling this empire of embassies is the only thing they have in common; but, surely, this is a matter of detail alone and of no material significance to what is called Afro-Asia. I am, however, glad that so many Indian envoys should have been in Delhi at the same time; and I hope that discussions took place less on policy—there can't be one and must be many—than on administrative problems. In a decade or so of its existence, the Indian Foreign Service had generated greater hatred among its lesser-breed colleagues than the I.C.S. had managed to do in a hundred years or more. Rightly or wrongly, most non-I.F.S. chaps in Indian missions abroad feel they are treated as non-*brahmins*. Only the *brahmins* met in Delhi.

THERE ARE PEOPLE I KNOW WHO READ "MOOMIN" before anything else in their *Statesman*. There are others I have heard confess they read nothing else. As for myself, after some initial resistance I have always taken Moomin with my *chota hazri* since the day a friend stimulated my curiosity by remarking that first thing in the morning Moomin looks exactly how he feels. Needless to say, there have been occasions when I have understood exactly what he was getting at. But Moomin has his fans elsewhere than just in Calcutta. He appears in the London *Evening News*, and I read in that paper the other day that Moomin has now been accorded diplomatic honours. The Finnish Ambassador in Britain, Mr. Leo Olavi Tuominen, recently attended a Moominland reception at the Tivoli Shop in London's Knightsbridge, where admirers of this unique character and his improbable family and associates can view the whole tribe in three dimensions. Apparently somebody has got the idea of making toy Moomins out of leather and fur in some Helsinki workshop and exporting them for sale abroad. I daresay foreign exchange considerations will prevent any large-scale invasion of India by the Moomin dolls, but I have no doubt some will eventually find their way here if they have to do so through the agency of the diplomatic bag. Although Moomin is, of course, the brain-child of Tove Jansson, Finnish artist and writer of children's books, the drawings are now done by her brother, Lars Jansson. It is officially Moomin "troll", which is a Scandinavian word meaning, roughly, fairy. Why, then, should he have such a following among adults? I have often pondered this question. I suppose the sheer impracticability of the character is intriguing in itself. But I suspect it is really the situations in which he finds himself that capture the imagination, and of course the entirely human reactions he reveals to them. I just do not know; and I wonder if it is not better to avoid enquiring too deeply. If some fleeting pleasure can be derived from following his ridiculous adventures before turning to the horrors of the day's news, perhaps we should simply be thankful for it. It is rather like smoking, really, I suppose—a bad habit, but one difficult to give up. Anyway, if somebody is kind enough to send me a Moomin doll for Christmas I shall be most happy to donate it to *Capital*'s Christmas Toy Fund.

EVEN FOR THE SCIENTIFICALLY ILLITERATE LIKE ME, it was fascinating to read how the fraternity of space travellers felt when they were weightless: for some odd reason, Messrs Gagarin and Titov were more forthcoming than their American comrades. Technicians can, I suppose, create in laboratories a pretty good simulation of the condition of weightlessness; but we earth-bound mortals, slaves of the law of gravitation, can scarcely imagine the condition. My mind being the grasshopper it is, I thought of space flight the other day and then thought of the Kamaraj plan and its innocent victims. The matter no doubt has its financial angles too; but if I were looking after another kind of newspaper, I would have invited Messrs Morarji Desai, Jagjivan Ram, Patil and Kamaraj to write me a series of articles on political weightlessness. In space the sensation, we have been told, is curious, not altogether uncomfortable. But then in space there is no one around to tell you that you are weightless. In politics your total environment is there, as before; only you have suddenly become weightless. For all their aura of the glory of sacrifice, no, I do not envy the Kamaraj martyrs. The late Lloyd George wrote touchingly on how it feels to cease to be a Prime Minister. The thing you miss most, according to Lloyd George, is the daily despatch-box contain-

ing the State secrets. On a sudden, you feel left out; you no longer know what is happening; nobody wants your opinion or advice any more; and you have a feeling that you are useless now to mankind whom only yesterday you had been saving from unspecified perils with your marvellous decisions.

THE LARGEST CITY IN THE WORLD, OF COURSE, IS Tokyo; that is something we have known for some time, but I was under the impression that London came next, and not very far behind at that. Apparently not so according to the U.N. *Demographic Yearbook*; London is not even in the running. In fact, it ranked as number 11 on the list in mid-1961, which anybody who knows London must realise is absurd. Paris, big, sprawling and hopelessly congested though it is, does not even receive a mention in the top bracket. Nor, surprisingly enough, does Calcutta, which to me has always seemed larger than Bombay and certainly dwarfs Cairo. The reason for these rather silly results is, of course, the basis of calculation : it is a question of what population is under a single administration. In London's case the numbers in the London County Council area only are included. I do not know exactly what that covers, but I imagine it excludes the City of London, which does not have many residents anyway, the City of Westminster, which probably does not have many more, and the huge, densely-populated spread of what is known loosely as Greater London, which most certainly does. Taken as a unit I have heard a figure of 12 million mentioned, although this seems to me to be on the high side. But when the L.C.C. is replaced by the Greater London Council next year, the 100 councillors it will elect will each represent 80,000 people, so that will put the figure at 8 million at least. In spite of the occasional statistical nonsense, the *Yearbook* offers some curious titbits. Where, for example, do you think the highest divorce rate was? Hollywood? Las Vegas? Apparently not. It was in the Virgin Islands, of all places.

JUST BECAUSE THE INDIAN AIRLINES CORPORATION has a virtual monopoly on internal routes it should not be allowed to get away with everything. It is trying hard to. The manner in which requests for reservations are treated makes one feel that one is not a customer buying a service but a supplicant for undeserved favours. A friend trying to get a seat on the plane to Calcutta from Delhi tried to behave like an ordinary honest citizen. He went to the I.A.C. office and requested a booking. He was told, after a telephone call to somewhere, that there was nothing doing for a week or more. So he went into action as everyone must if he wants to get anything done in Delhi : he got somebody to talk to somebody. The first "somebody", who was most helpful, regretted that a certain astrologer was away in Nepal and so could not be "contacted"; "he can get anything he wants anywhere in Delhi, including Rashtrapati Bhawan". Less influential contacts worked; and my friend got a booking, while another, who had asked for a seat to Jammu ten days in advance, gave up and bought a railway ticket instead. (This too needed "pull".) When my friend presented himself at Palam he found—without so much as by your leave—that he would be flying not in a *Viscount*, for which he had paid, but in a *Skymaster*. I am sure there is something in the small print on the back of the I.A.C. ticket which says that, for reasons it is under no obligation to adduce, the airline can do just what it pleases and that the passenger has no right to complain; but, surely, there must be a limit to this kind of arbitrariness. Is my friend entitled to a rebate for having been forced to fly in a *Skymaster* instead of what he had paid for? He has yet to hear to it. The point he has to make is that an ordinary citizen in India today cannot get even what he is prepared to pay for unless he knows "somebody". My friend, eventually a beneficiary of the "old boy" network which operates by telephone, is naturally reluctant to expose the evil in greater detail. I have, still, taken the liberty of writing this piece because I think it should be widely known that the ordinary man, which my friend tried to be, has no future at all nor any rights—despite the Constitution. He must operate through "somebody" without whom he is nobody.

THE DITCHER

Guide for Investors

BUYING SPREE IN MOTOR SHARES ON WORLD BANK LOAN REPORT

(BY A SPECIAL CORRESPONDENT)

MOTOR-VEHICLE shares have risen on strong support during the past fortnight. The buying spree has been caused by the decision of the World Bank to offer a loan of about $30 million to the industry for development and expansion. In addition, the Government of India has allocated a substantial amount of foreign exchange to the industry. Although this has improved the immediate outlook for the industry, a cautious view is being taken about its long-term prospects. The erstwhile prosperity of the industry has to be attributed to the fact that the domestic prices of motor-cars and lorries have been artificially high. Although the industry enjoys a protected market, it has done little so far to improve its production and efficiency. Not only has the price of motor-vehicles been high, but the quality has also been far from satisfactory. Apart from the poor after-sales service, the prices of spares have been exorbitant.

It is true that in a heavy industry like motor-vehicles, it is difficult to hold down production costs unless the scale of production is increased to an optimum size. The factories in India, by and large, have been too small to enjoy the advantages of large-scale production. Although their expansion has been hindered by the foreign exchange shortage, combined with the Government's unrealistic policy, especially in the past, producers are also to blame since they have made little effort to improve their operational efficiency. Quality has, therefore, suffered due to defects in manufacture. The industry has sold its products without the least difficulty, so there has virtually been no incentive to improve efficiency. The Government has pursued a short-sighted policy in relation to motor-vehicles. Instead of promoting expansion to obtain greater economies in production, it has urged the industry to raise the indigenous content of motor-vehicles to 90 percent by the end of 1964. The average indigenous content now constitutes about 65 percent. Since the Government is determined to ensure a further rise in the indigenous content before considering expansion, manufacturers find it difficult to reduce production costs. In the past, the industry was unable to increase the indigenous content because it was not allocated sufficient foreign exchange to import the necessary equipment.

The progress towards self-sufficiency depends greatly on the development of the ancillary industries. The official policy on these industries has been half-hearted; so their development has been lopsided. There has been a mushroom growth of these units in some lines while the production of several important components has fallen short of requirements. The unbalanced growth of the ancillary industries is evident from the existing uneconomic units. These industries have also been handicapped by the foreign exchange shortage. They have also represented to the World Bank for a loan, and the outcome is awaited with interest. If the production of quality components is to be promoted, it is necessary to develop the ancillary industries on sound lines by sanctioning them sufficient foreign exchange and eliminating the uneconomic units through a process of amalgamation.

Under the circumstances, it is not surprising that the production of motor-vehicles has been disappointing. The output has amounted to only 56,967 vehicles in 1962. In view of the slow rate of growth, it is unlikely that the industry will succeed in meeting the rising demand. The latter, it is estimated, may be for more than 100,000 vehicles by 1966. Meanwhile, the prices of motor-vehicle shares look sufficiently high considering their current dividend yields and the near-term growth prospects. Producers henceforth may have to plough back more funds than before if the foreign exchange to be made available is to be fully used. So investors should not expect better dividends on these shares in the near future.

Rights Issue by Central Bank

THE Central Bank of India has at last decided to raise additional capital by issuing 634,625 new equity shares. These shares are to be offered to existing shareholders in the ratio of one new ordinary share for every two held—ordinary and/or ordinary A. The rights shares are being issued at a premium of Rs. 5 a share. The sanction of the Controller of Capital Issues has already been obtained, and the shareholders' approval is being sought through an extraordinary general meeting which will be convened on 16th December. It might be recalled that the bank had secured the Government's consent for the rights issue in October 1962, but it did not proceed with it partly because of the unfavourable conditions in the capital market following the Chinese aggression, and partly because the premium of Rs. 10 a share which the Government had insisted upon, was considered to be high.

The Government's decision allowing the bank to offer rights shares at a premium of Rs. 5 a share indicates a welcome change in the official attitude. Besides, there has been a considerable improvement in the market conditions over the past few months, and this has encouraged the management to revive the rights offer. The proposed issue will raise the paid-up capital of the bank from Rs. 3.15 crores to Rs 4.74 crores and reserves from Rs. 5.10 crores to Rs 5.42 crores, bringing the total capital fund to Rs. 10.16 crores. The authorised capital of the bank, it is proposed, will be raised to Rs. 10 crores by the creation of 737,928 new ordinary shares out of which 634,625 shares, it is proposed, will be issued to shareholders on a date to be specified by the board. The quotation for Central Bank shares has risen from around Rs 55 to Rs. 63 over the past few months.

A.C.C. Puts Off Bonus Issue

ASSOCIATED Cement Companies' shares which had touched a high of Rs. 160.50—a record high for a long time—on 6th November were sold down to Rs. 155 on 9th November. The selling that produced this setback was not induced by technical considerations; it reflected mainly the market's disappointment over the Company's announcement that it did not propose to issue any bonus share for the time being. In reply to the representation made by the Bombay Shareholders Association, the managing agents of the Associated Cement Companies have stated that after careful thought, the board has come to the view that the proposal for capitalising the premium on shares cannot be favourably considered, keeping in mind the present earning capacity of the Company which has necessitated withdrawals of large amounts to maintain the dividend of 12 percent during the last four years. If the bonus shares are issued, the drain on the reserves would increase and the capital base on which the "standard deduction" is allowed would diminish.

The Company says that the Shareholders' Association's contention that "the amount of bonus tax is allowed as deduction for arriving at capital basis for the purpose of super profits tax" is not strictly correct. It is, however, conceded that the deduction of the bonus tax from the assessable profits would decrease the incidence of super profits tax for the accounting year in which the bonus shares are issued, provided, of course, there are super profits which would exceed the amount of the bonus tax. How the Company has fared in 1962-63 is not yet known, but the management's reference to the "present earning capacity" and the "withdrawals from reserves" gives the impression that the working results might not come up to the market's best expectations.

Bright Prospects for Tata Chemicals

THE preliminary report on the working of Tata Chemicals released along with the announcement of the dividend showed that the Company had done exceedingly well during the year ended June 1963 with sales, profit and dividend settlements to record. The chairman's statement circulated with the directors' report holds out the promise of still better results for 1963-64. The Company says that it has by now reached the state of self-sustaining growth and barring unforeseen circumstances, beyond the Company's control, shareholders may look forward to the continuing enjoyment of the fruits of their investment and faith in the Company. The greatly improved results for 1962-63 were due primarily to the successful completion of the expansion programme which has enabled the production of soda ash to increase from 57,000 tonnes in 1957 to 128,000 tonnes last year, revenues from Rs. 2.73 crores to Rs. 7.26 crores; profits before tax from Rs. 25 lakhs to Rs. 90 lakhs. During this period, the Company's gross block increased by 132 percent, revenues rose by 166 percent and profits by 261 percent.

The successful completion of the expansion programme is not about all. Hitherto, the Company's working results have considerably depended on the unpredictable behaviour of the monsoon which determined the supply of fresh water and salt. Now that the task of completing the 400 tonnes programme and bringing up the production of the plant to the rated capacity has been achieved, the management is concentrating its efforts on finding lasting solutions to the two major problems, namely, the supply of salt and fresh water. Shareholders will be pleased to know that means have been found of substituting, to a considerable extent, suitably treated sea water for fresh water in the operation of the plant without a serious loss of production and efficiency. Although the new process adopted still requires experimentation and refinement, the Company will from now on be less vulnerable to drought conditions than in the past. Tata Chemicals has at the same time taken initial steps to increase the production of salt beyond its normal requirements so that excessive rains in any one year do not unduly affect the operations of the plant or compel the Company, as in the past two years, to purchase large quantities of salt at heavy cost.

The chairman says that it would now be possible to undertake a substantially larger expansion than visualised earlier in view of the Company's reduced dependence on fresh water supplies for its technical operations, and the steps being taken to bring about a substantial increase in salt production. Both of these were in the past seriously limiting factors in any expansion plan. The management is now engaged in a careful study and appraisal of the technical, economic and financial aspects of further expansion schemes. Approval has already been secured from the Government for doubling the present capacity of 30,000 tonnes a year. Mr. Tata says that while this will improve the Company's profitability, it will not increase the overall output as heavy ash is made by the mechanical compression of light ash. The chairman says that it is too early to give an indication at this stage of the magnitude of cost and likely profitability of the further expansion in Mithapur. But he has assured the shareholders that the management will see to it that such a programme will not adversely affect current

THEY KEEP ROLLING LONGER AT LESS COST ON TIMKEN BEARINGS

The reason so many railroads and private car owners in the United States are switching to Timken tapered roller bearings on freight car axles is this: Low-cost and high performance!

Timken bearings average over 100,000,000 miles between car setouts because of overheated bearings. Their tapered design lets them roll the load and they practically eliminate friction. Terminal bearing inspection time is cut way down and so is lubricant cost. Timken bearings are precision-made of steel that's high in nickel content. They're precise yet rugged.

Whether you are about to build or buy a freight car, build or buy a machine tool, or design a Space Age product, be sure to look into the many advantages of Timken tapered roller bearings . . . a product of the world's largest manufacturer of tapered bearings.

The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable address: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

operations and profit or involve a reduction in the amount distributed as dividends.

The directors point out in their report that the production of soda ash during 1962-63 increased by about 25 percent at 128,100 tonnes. The production of refined sodium bicarbonate was up by 6 percent, but the plant worked much below its capacity because of insufficient sales. There was a drop of 33 percent in the total caustic soda produced during the year due to the closing down of the uneconomic chemical caustic soda plant. The production of caustic soda by the electrolytic process, however, increased by 18 percent during the year. A second batch of Hooker Cells was commissioned and the installed capacity increased to 7,000 tonnes a year. Bromine production increased by 114 percent while that of magnesium chloride fell by 25 percent due to the poor quality of bitterns.

The Company has a capital of Rs. 3.63 crores and its reserves and surplus amount to Rs. 1.44 crores. Its gross block of Rs. 9.38 crores has been written down to Rs. 6.33 crores. The ratio of net block to share capital works out to 1.7 to 1, and the debt equity ratio is 0.8 to 1. The percentage of net profit to sales and capital employed is 11.1 (3.2 in 1961-62) and 8.9 (2 in 1961-62), respectively.

Delhi Cloth to Raise Capital Again

IN spite of an increase of about 9 percent in the sales from Rs. 38.42 crores to Rs. 41.77 crores, the gross profit of the Delhi Cloth and General Mills for the year ended June 1963, is down by nearly 20 percent from Rs. 4.29 crores to Rs. 3.59 crores. The profit margin is said to have been squeezed by the increase in raw material and labour costs and the enhanced tax burden. The dividend has been maintained at 13 percent, but the total distribution is higher because of the increased capital. Besides, the net dividend for 1962-63 will be higher than in the preceding year because 34 percent of the dividend is said to be exempt from tax under Section 15 of the Indian Income Tax Act.

Appropriations of the year's gross profit include depreciation Rs. 1.11 crores (against Rs. 90.85 lakhs), development rebate reserve Rs. 33 lakhs (against Rs. 9.60 lakhs), taxation Rs. 1.05 crores (against Rs. 1.70 crores), general reserve Rs. 21.99 lakhs (against Rs 5.70 lakhs) and renewal reserve Rs. 9.56 lakhs (against nil). No provision has been made for development reserve and reserve for fall in prices, which had received Rs. 40 lakhs each in the preceding year. The proposed ordinary dividend absorbs Rs. 49.82 lakhs (against Rs. 44.12 lakhs) and preference dividend accounts for Rs. 5.36 lakhs (against Rs. 4.27 lakhs). After making these allocations and a few other adjustments, there remains a surplus of Rs. 1.47 lakhs to be carried forward, against Rs. 4.03 lakhs brought in.

The directors state in their report that the Company's export performance during the year was satisfactory. It has now been decided to create a separate subsidiary company which will devote itself entirely to the promotion of exports and eventually handle not only the D.C.M. products, but also those of other companies. The initial investment in the shares of the new Company will be Rs. 1 lakh. The Company's caustic soda plant under the P.V.C. project has been commissioned. The entire P.V.C. plant is expected to start production by the end of the year. The construction work for the rayon tyre chord project is in full swing. Major orders for the plant and machinery have been placed. An agreement has been reached with the I.C.I.C.I. for a loan of 945,000 deutschemarks (equivalent to about Rs. 11.25 lakhs) for the purchase of plant and equipment for the stable bleaching powder project.

The Company proposes to raise additional capital of Rs. 1 crore for financing the new projects The fresh capital issue consists of 200,000 equity shares of Rs. 25 each and 200,000 9 percent redeemable cumulative preference shares of Rs. 25 each. The equity shares, it is proposed, will be issued at a premium of Rs. 5 a share or such premium as the Controller of Capital Issues may fix. While the equity shares will be offered as rights, preference capital will be issued to the public. It might be recalled that during 1962-63, the Company had offered 200,000 9 percent redeemable cumulative preference shares of Rs. 25 each at par which were oversubscribed.

Modernisation of Central Jute Mills

THE ordinary shares of New Central Jute Mills Co. Ltd have improved to Rs. 14.69 on hopes of improved results. The investor confidence has been justified by the publication of the interim results for the year ended March 1963. The output of the jute mills and Sahu Chemicals and Fertilisers has risen. The jute mills have produced 48,078 tons of goods with a complement of 2,021 looms. A further 104 broad looms have been put into operation. With the installation of another 71 looms, the total broad loomage amounts to 327, out of which 108 have been fabricated by the Company itself. It is proposed to install further broad looms to reach the full licensed capacity of 350 looms. Two single-beam dressing machines have been installed for producing better quality carpet-backing cloth preferred by U.S. buyers. The Company has entered into a callaboration agreement with a Thai Company for supplying technical know-how to put up a jute mill in that country. The latter has also agreed to buy jute mill machinery equipment from India through New Central Jute.

The profit has amounted to Rs. 1.32 crores, after providing Rs. 53.56 lakhs (against Rs. 47.46 lakhs) for depreciation. The Company incurred a loss in 1961-62. A taxable ordinary dividend of 15 percent, including an interim of 5 percent, has been declared. The ordinary share capital has meanwhile been raised from Rs. 1.71 crores to Rs. 2.56 crores. The dividend will be paid out of the dividend reserve. At the present price, the yield amounts to 10.2 percent. Development rebate reserve is allocated Rs. 27.15 lakhs (against nil), general reserve Rs. 61.75 lakhs (against nil) and dividend reserve Rs. 28.60 lakhs. A balance of Rs. 13,603 has been carried forward, against Rs. 15,513 brought in Total reserves have been strengthened by further Rs 88.9 lakhs. The net block amounts to Rs. 9.27 crores.

Shaw Wallace Group Tea Crop Results

THE crop results of the Shaw Wallace group of tea Companies up to 30th September, 1963, have been published. The Tezpore Tea Co. Ltd has produced a crop of 825,549 kilograms, against 735,400 kilograms for the corresponding period of 1962. Sales have improved from 268,233 kilograms to 294,031 kilograms, but the average sale price has declined from Rs. 5.85 to Rs. 5.66 a kilogram. The crop of the New Samanbagh Tea Co. Ltd has amounted to 9,613 maunds, against 9,731 maunds. Sales have fallen from 6,083 maunds to 5,285 maunds and the average sale price has fallen from Rs. 3.14 to Rs. 2.17 a lb.

Barnagore Jute Pays More

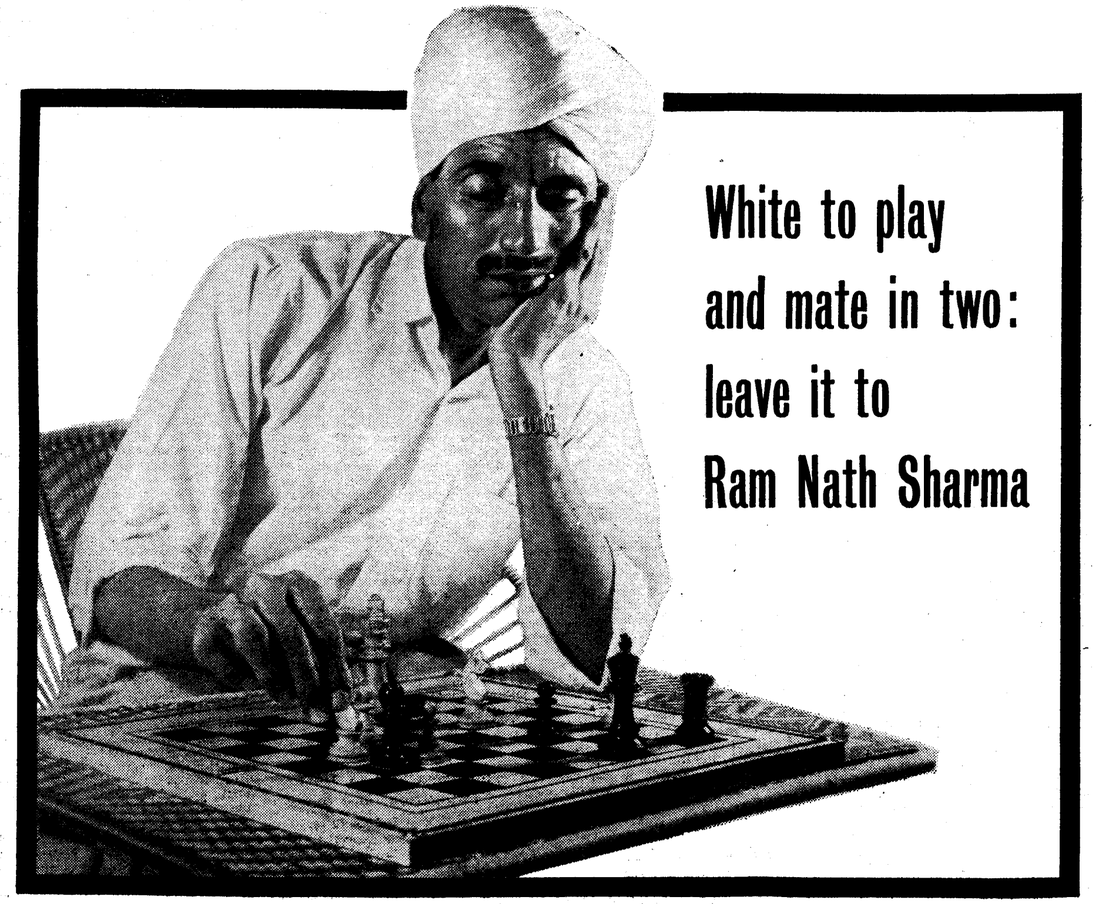
DISCUSSING the satisfactory results of the Barnagore Jute Factory Co. Ltd for the year ended March 1963, the directors have taken a cautious view of the current prospects in their report. They think that the prosperity during 1962-63 was exceptional. Although the current working has been profitable, the previous level of profit is unlikely to be maintained. The prices of jute goods have tended to fall in 1963 and the competitive position of sacking has caused a great deal of concern. Along with other mills, Barnagore Jute has transferred as many looms as possible from sacking to hessian production. They think that the demand for high-quality jute will ensure remunerative prices for these grades, but the unduly large proportion of inferior fibre has imposed a strain on the mills.

The profit has amounted to £510,306, compared with a loss of £89,216 for 1961-62, after transferring £53,333 (against £55,808) to depreciation. The taxable ordinary dividend has been increased from 10 percent to 40 percent to absorb £67,375. The yield works out to 12 percent at the present price of Rs. 220 a share of £5 each. Taxation absorbs £290,000, general reserve £14,507 and development rebate reserve £14,507. The carry-forward is £1,341, against £1,042 brought in.

A Satisfactory Year for National Rolling

THE National Rolling and Steel Ropes Ltd has produced satisfactory results for the year ended June 1963. The directors have pointed to the all-round improvement made in the output of all departments. Although the demand for M.S. wires has declined, it has been more than offset by the increased production of H.T. wires. The supply of billets has been irregular, but the directors hope that the Government will take steps to increase the supply of billets. The capacity of the wire mill is likely to be increased substantially when the balancing plant, which has been shipped, is installed. The Company is exploring the possibility of exporting wire rods abroad.

Sales rose from Rs. 1.24 crores for 1961-62 to Rs. 1.54 crores for 1962-63 and the trading profit has increased from Rs. 24.06 lakhs to Rs. 33.08 lakhs. The taxable ordinary dividend of 15 percent has been maintained. The yield works out to 7.1 percent at the present price of Rs. 21.19 a share of Rs. 10 each. Depreciation has been allocated Rs. 3.07 lakhs (against Rs. 3.43 lakhs) while tax provision has been increased from Rs. 11.65 lakhs to Rs. 21.70 lakhs. Out of this, the super profits tax absorbs Rs. 2.04 lakhs for 1961-62 and Rs. 4.21 lakhs for 1962-63.



Deccan Sugar to Expand Capacity

THOUGH the dividend has been maintained at 18 percent, the working results of the Deccan Sugar and Abkhari Company Ltd for the year ended May 1963, show an appreciable improvement over those of the previous year. Sales are up by about 20 percent from Rs. 3.58 crores to Rs. 4.29 crores, and the gross profit has risen by 40 percent from Rs. 28.29 lakhs to Rs. 39.62 lakhs. The impressive increase in profit, it is said, has been brought about largely by the higher sugar selling prices —the control on sugar was imposed only towards the end of the Company's financial year—larger releases for sale in the internal market and slightly higher prices realised for export. After providing Rs. 7.71 lakhs (against Rs. 6.81 lakhs) for depreciation and Rs. 16.83 lakhs (against Rs. 10.33 lakhs) for taxation and deducting other prior charges, provision for taxation in 1962-63 includes Rs. 2.55 lakhs for super profits tax for the current year and Rs. 95,000 for the earlier year, the net profit for 1962-63 amounts to Rs. 12.18 lakhs, against Rs. 8.88 lakhs in the preceding year. Out of this, the directors have set aside Rs. 5.30 lakhs (against Rs. 1.53 lakhs) for various reserves. The proposed dividends, preference and ordinary, absorb Rs. 7.81 lakhs, leaving a sum of Rs. 9,587 to be carried forward, against Rs. 1.03 lakhs brought in.

The Company crushed during the 1962-63 season a total quantity of 275,632 tonnes of sugarcane producing 29,294 tonnes of sugar, compared with 311,043 tonnes of cane and 32,268 tonnes of sugar in the previous season. The production of sugar in Pugalur was 17,537 tonnes, compared with 20,596 tonnes in the previous year. It would have been perhaps 10 percent more than what it was had it not been for the restriction on production imposed by the Government during the sugar year ended October 1962. The sugar recovery in the special season increased from 9.19 percent to 9.39 percent, but in the main season it fell from 10.92 percent to 10.55 percent due to climatic conditions. The production of sugar at the Samalkot factory was slightly higher at 11,757 tonnes, against 11,672 tonnes, and the sugar recovery from 10.39 percent to 11.03 percent. The entire raw sugar production at this factory was for the first time reserved for export.

In his statement to shareholders, the chairman, Mr. H. V. R. Iengar, says that subject to there being no diversion of cane for making jaggery, the normal level of production is likely to be achieved in the coming season for which the omens so far are propitious. (A fuller version appears on a later page in this week's issue of *Capital*.) It is likely that the Samalkot factory will again be called upon to make raw sugar in the forthcoming season as the country has a definite commitment to export 300,000 tonnes in 1964. It is stated that the additional three-roller mill for Samalkot will be erected by the end of 1964. A bigger boiler and 1000 kW power generator will be installed early in 1965, and with these, the factory can be deemed to have attained a high degree of modernisation. Nearly all the machinery ordered for the expansion of the Pugalur factory from 1,000 to 1,250 tonnes has arrived, and erection is making good progress. The expansion is likely to be completed by the end of April 1964. The rehabilitation and expansion programme undertaken three years ago may thus be said to have been nearly completed.

The Company has applied to the Government for permission to expand the capacity of the Samalkot factory from 800 to 1,000 tonnes and that of Pugalur from 1,250 to 1,500 tonnes. The chairman says that the tendency in the industry today is to look upon a capacity of 2,000 tonnes as the minimum for economic working, and if adequate supply of cane can be assured there is no reason why the Pugalur factory should not

White to play and mate in two: leave it to Ram Nath Sharma

The Black King stands aloof and defiant. He is guarded by a Pawn, a squat, menacing Castle and a scheming Bishop. Dark and determined, they surround him in a defensive phalanx. But White is attacking with two crafty Knights, a disdainful Queen and a spearhead of Pawns...Ram Nath Sharma masterminds the strategy. Two moves, and the Black King is checkmated: Sharma, chess player and tank lorry driver at Shakurbasti Depot, Delhi, smiles. Careful strategy has won the day!

A LORRYLOAD OF POWER

Sharma has been driving cars, tank lorries and trucks for Burmah-Shell for twenty years. He delivers motor spirit and high speed diesel oil to dealers, aviation fuels to aviation depots and packed lubricating oils to customers...the correct quantity and grade against each order. He must drive with infinite care, unload with every precaution, keep his presence of mind. Over two decades of performance, he has never been known to panic.

TODAY, AS EVER, PEOPLE LIKE SHARMA ARE WORKING FOR YOU

'I have 125 shares in the Society,' says Sharma. A prominent member of the company's Co-op. Credit and Thrift Society, Sharma is proud of his work in Burmah-Shell. It has meant a fuller, satisfying life for him and his family.

Sharma and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work, working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People

be expanded to an annual crushing capacity of 2,000 tonnes in the not distant future. Mr. Iengar has defended the directors' decision to maintain the dividend at 18 percent in spite of substantially better results on the plea that the Company needs large funds for further expansion and for the replacement of machinery. Besides, the future of the industry is beset with uncertainty in view of the changing policy of the Government on sugarcane prices.

Karam Chand Thapar Earns Less

KARAM Chand Thapar and Sons Ltd has made a profit of Rs. 3.24 lakhs for the year ended June 1963, compared with Rs. 4.72 lakhs for 1961-62. A taxable ordinary dividend of 8 percent has been declared, absorbing Rs. 1.92 lakhs. Taxation is allocated Rs. 1.20 lakhs (against Rs. 2.95 lakhs), leaving a carry-forward of Rs. 21,990, against Rs. 13,391 brought in.

Bharat Bijlee Results Impress

BHARAT Bijlee Ltd reports highly encouraging results for the year ended June 1963. Sales have risen by 33.6 percent from Rs. 81.36 lakhs to Rs. 1.09 crores, and the gross profit has gone up by 46.5 percent from Rs. 9.72 lakhs to Rs. 14.21 lakhs. The dividend, however, has been maintained at 8 percent, but the total distribution is higher at Rs. 1.90 lakhs, against Rs. 1.60 lakhs because of the increased capital, the new shares being entitled to a proportionate dividend of Rs. 3 a share as against Rs. 8 on the old shares. In spite of the impressive increase in the gross profit, the net profit shows only a modest increase because of the substantially larger provision for taxation which has been stepped up from Rs. 3.50 lakhs to Rs. 6.92 lakhs. The amount set aside for depreciation is also higher at Rs. 2.91 lakhs, against Rs. 2.60 lakhs. The provision for statutory development rebate amounts to Rs. 45,286, against Rs. 48,195. After making these allocations, the net profit amounts to Rs. 3.93 lakhs, against Rs. 3.14 lakhs in the preceding year.

After writing back excess provisions and writing off capital issue expenses, the directors have provided Rs. 66,000 for taxation for the previous year and transferred Rs. 3.45 lakhs to the dividend reserve out of which the proposed dividend for 1962-63 is to be paid. The Company's order position, it is reported, is satisfactory, but it is experiencing some difficulties in securing certain raw materials. It has plans for further expansion and it has applied to the Maharashtra Industrial Development Corporation for allotment of a large area of land on long-term lease at Kalwa industrial estate.

The Company proposes to issue further capital of Rs. 60 lakhs in 30,000 equity shares of Rs. 100 each and 30,000 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The shares will be offered to the existing shareholders as rights. The issue is subject to the sanction of the Controller of Capital Issues. The additional finance is required for implementing the expansion programme which the Company has on hand. It is stated that an agreement has been reached with a bank for a long-term loan of Rs. 50 lakhs. Arrangements are being made with Siemens Schuckertwerke A.G., West Germany, and Siemens Engineering and Manufacturing Company of India Ltd for foreign exchange requirements.

Kirloskar Electric Fares Well

KIRLOSKAR Electric Company Ltd, Bangalore, reports satisfactory results for the year ended June 1963, with the gross profit showing an impressive rise of 50 percent from Rs. 48.79 lakhs to Rs. 72.94 lakhs. The dividend, however, has been reduced from 12 percent to 10 percent. It is not merely that the dividend for 1962-63 is on the increased capital following the bonus issue, but the net profit itself is lower because of the substantially larger provision for taxation which is in part due to the bonus issue. The provision for income tax and super profits tax has been raised from Rs. 24 lakhs to Rs. 31.25 lakhs, and the directors have had to provide, in addition, a sum of Rs. 16.15 lakhs for super profits tax for 1962-63 and 1961-62.

After allowing for the income tax liability and providing Rs. 13.85 lakhs (against Rs. 9.43 lakhs) for depreciation, the net profit for 1962-63 amounts to Rs. 11.59 lakhs, against Rs. 15.36 lakhs in the preceding year. Allocation to the general reserve has been reduced from Rs. 6.88 lakhs to Rs. 4.25 lakhs, but the provision for rehabilitation and modernisation reserve has been raised from Rs. 1.25 lakhs to Rs. 2 lakhs. Allocation to the loan redemption reserve has been maintained at Rs. 1 lakh, but no provision has been made for dividend equalisation reserve and deferred taxation reserve which received Rs. 1 lakh and Rs. 50,000, respectively, in the preceding year. After transferring Rs. 1.78 lakhs from provisions no longer required, the directors have transferred Rs. 6.14 lakhs to the dividend reserve out of which is to be paid the proposed 10 percent dividend. After making various appropriations, there remains a modest sum of Rs 578 to be carried forward, against Rs. 2,192 brought in.

Bharat Steel Tubes to Raise Capital

BHARAT Steel Tubes Ltd which proposes to set up a tube mill in Ganaur (Punjab) in technical and financial collaboration with Abbey Etna Machine Company, Ohio, U.S.A., will soon be in the market to raise through public subscription Rs. 72.90 lakhs made up of Rs. 42.90 lakhs in equity shares of Rs. 10 each and Rs. 30 lakhs in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The proposed tube mill will have an installed annual capacity of 36,000 tons of steel tubes and pipes of varying sizes—1.5 inches to 6 inches diameter—on a single shift basis. The factory is already under construction and if all goes well, it is likely to go into production during the third quarter of 1964.

The project, it is estimated, will cost about Rs. 3 crores which will be met partly by the share capital of Rs. 1.50 crores and long-term loans from well-known financial institutions. The Company, it is said, has secured a long-term loan of Rs. 1.30 crores from the Industrial Finance Corporation of India and Rs. 25 lakhs from the Agency for International Development, U.S.A. The Company has been licensed to import capital goods worth Rs. 1.41 crores. The issued capital of the Company consists of Rs. 1.20 crores in equity shares and Rs. 30 lakhs in preference shares. Out of the equity capital, shares worth Rs. 30 lakhs are being taken up by the promoters, directors and their friends. The U.S. firm which is collaborating in the venture is taking up equity shares of the value of Rs. 47.10 lakhs. The remaining equity shares worth Rs. 42.90 lakhs and preference shares worth Rs. 30 lakhs, it is proposed, will be offered for public subscription. The entire public issue has been underwritten.

Cauvery Sugars Pays the Same

THE working of the Cauvery Sugars and Chemicals for the year ended June 1963, shows a small setback in the gross profit from Rs. 11.18 lakhs to Rs. 10.55 lakhs. The dividend has been maintained at 6 percent. The provision for taxation including allocation to the taxation equalisation reserve, is substantially lower at Rs. 1.31 lakhs, against Rs. 6.35 lakhs, but the amount set aside for development rebate is higher at Rs. 1.27 lakhs, against Rs. 14,000. Preliminary expenses written off amount to Rs. 3 lakhs, against Rs. 1 lakh. General reserve gets Rs. 1 lakh, against nil in the preceding year. Preference dividend absorbs Rs. 1.56 lakhs (the same) and equity dividend accounts for Rs. 2.40 lakhs (the same). After making various appropriations, there remains a sum of Rs. 3,114 to be carried forward.

Prestolite Factory to Start Production Soon

PRESTOLITE of India's factory in Faridabad, it is expected, will go into production in January 1964. The building has already been completed, and most of the machinery and equipment have been installed. The Company proposes to manufacture a wide range of automotive electrical equipment such as condensers, regulators, horn relays, solenoids, S.P. cleaners, rotors, contact points, ignition cables, ignition coils, horns, lamps, governors, windscreen wiper assembly, etcetera. The indigenous content of these products which will be about 50 percent in the initial stages would gradually increase to about 75 percent within two years.

The production will be supervised and directed by engineers trained at the plant of Electric Autolite Company of the U.S.A. which is one of the largest manufacturers of electric automotive products in the world. Prestolite has received additional industrial licence for the manufacture of 50,000 pieces each of distributors and windscreen wipers. Production of these two items, which is expected to start towards the end of 1964, is likely to result in a saving of about Rs. 1 crore in foreign exchange a year. For its expansion programme, the Company has already secured a loan of Rs. 10 lakhs from the Punjab Financial Corporation, and hopes to receive another loan of Rs. 10 lakhs from the same source.

New Savan Sugar Passes Dividend

THE New Savan Sugar and Gur Refining Co. Ltd has passed the dividend for the year ended May 1963, since it has earned a small net profit. The net profit amounts to only Rs. 9,317, against Rs. 1.06 lakhs for 1961-62, after providing Rs. 1.09 lakhs (against Rs. 1.31 lakhs) for depreciation. Taxation absorbs Rs. 6,800 (against Rs. 66,000) and development rebate reserve Rs. 5,670 (against Rs. 4,500). The carry-forward is Rs. 321, against Rs. 3,474 brought in.

The sugar output declined from from 101,291 quintals to 50,522 quintals. There was a shortage of cane, since a large part of it was diverted to the production of *gur* and *khandsari*. The directors consider the prospects for 1963-64 not encouraging. The production incentive in the form of a rebate in the excise duty is not likely to be helpful. But the condition of the current crop is satisfactory. The area under cane cultivation has increased by about 10 percent. The Company has applied to the Government for expanding the capacity to 1,500 tons a day. The Company has also requested the Government to help it in relation to rehabilitation, expansion and modernisation.

Bengal Rolling Mills Earns More

THE profit of the Bengal Rolling Mills Ltd has increased from Rs. 2.71 lakhs for 1961-62 to Rs. 3.51 lakhs for the year ended April 1963, after transferring Rs. 2.27 lakhs (against Rs. 1.61 lakhs) to depreciation and Rs. 9,164 (against Rs. 1.17 lakhs) to development rebate reserve. A taxable ordinary dividend of 18 percent has been paid, absorbing Rs. 91,350. Contingencies reserve is allocated Rs. 1.70 lakhs, out of which the tax liability for 1962-63 will be met. A sum of Rs. 1.85 lakhs (against Rs. 60,000) has been transferred to general reserve, leaving a carry-forward of Rs. 37,474, against Rs. 7,434 brought in. The directors say in their report that the full capacity has not been used because of the shortage of steel billets. The Company proposes to install a wire rod mill. The licence for importing equipment has been obtained and the new venture may be completed next year.

W. S. Insulators of India

THE foundation-stone for the factory of W. S. Insulators of India Ltd has been laid near Madras city. It is proposed to manufacture electro-porcelain articles for electrical transmission and distribution systems in collaboration with Westinghouse of the U.S.A. Since insulators have largely been imported so far,

the production of the Company will help save foreign exchange. The factory will have its own grinding plant. It is proposed to build a high tension testing station at a cost of about Rs. 25 lakhs. The Company has recently offered its shares for public subscription.

Asher Textiles Earns More but Pays Less

IN spite of an increase of about 12 percent in the gross profit from Rs. 11.75 lakhs to Rs. 13.16 lakhs, the directors of Asher Textiles Ltd have reduced the dividend for the year ended June 1963 from 15 percent to 12½ percent. This seems to be due mainly to the larger provision for taxation. After providing Rs. 3.67 lakhs (against Rs. 3.56 lakhs) for depreciation and Rs. 5.55 lakhs, including Rs. 1.70 lakhs for super profits tax (against Rs. 3 lakhs) for taxation, the net profit for 1962-63 amounts to Rs. 3.15 lakhs, against Rs. 4.39 lakhs in the preceding year. The provision for development rebate reserve has been reduced from Rs. 93,000 to Rs. 60,000 for general reserve from Rs. 75,000 to Rs. 30,000 and that for gratuity reserve from Rs 50,000 to Rs. 20,000. The directors have provided Rs. 23,703 for donations and charity and Rs. 42,368 for bonus relating to earlier years. The proposed dividend absorbs Rs. 1.50 lakhs, against Rs. 1.80 lakhs, leaving a sum of Rs. 9,861 to be carried forward against Rs. 21,462 brought in. The directors state in their report that the Company's working results during the year were affected by high cost of cotton, stores, lubricants, etcetera. Rationalisation has been introduced in the spinning department and the modernisation and expansion of the existing power house of the mills is expected to be completed shortly. The Company exported yarn to the tune of Rs. 10.89 lakhs during 1962-63. It undertook obligations of other mills to the extent of Rs. 6.55 lakhs, against the receipt of premium of Rs. 67,327 from such mills.

Waterfall Estates Maintains

THE directors of Waterfall Estates Ltd have maintained the dividend at 10 percent for the year ended June 1963. Shareholders will be disappointed because the Company has not announced even a token rise in the dividend following a higher profit for the year, compared with that of the previous year. Out of the profit, a sum of Rs. 2.50 lakhs has been transferred to general reserve. According to the preliminary figures, the net profit amounts to Rs. 7.22 lakhs, after providing Rs. 8 lakhs for taxation, Rs. 24,800 for development rebate and Rs. 2.58 lakhs for depreciation. The previous year's net profit was Rs. 5.26 lakhs, after providing Rs. 5,08,550 for taxation Rs. 49,908 for development rebate and Rs. 2.20 lakhs for depreciation.

New Cement Venture in Maharashtra

PLANS are well under way for setting up a cement plant in Yeotmal. This will be the first cement unit to come up in the Maharashtra State. The plant will have an annual capacity of 400,000 tonnes and it is estimated to cost about Rs. 6 crores. The project has been sponsored by the State Government in collaboration with the Maharashtra Industrial Development Corporation, the Cement Agencies Ltd, which are the managing agents of the Associated Cement Companies, and M. L. Dhanukar and Co. A new company is being floated to implement this project. The company will have an authorised capital of Rs. 10 crores. The issued capital will be Rs. 6 crores and subscribed capital Rs. 3 crores

The Company will raise Rs. 1.50 crores by way of public subscription. Of the remaining Rs. 1.50 crores, 26 percent will be taken up by the Maharashtra Industrial Development Corporation and 24 percent is likely to be provided by Cement Agencies and Dhanukar. The remaining Rs. 3 crores of the capital outlay is to be secured through loans from the Industrial Finance Corporation, I.C.I.C.I. and the Life Insurance Corporation. The M.I.D.C. will assist the company in getting land, water and power Technical assistance will be provided by the A.C.C. The initial geological survey work will be taken up immediately and the production of cement will start in 1966-67.

Blue Mountain Estates Repeats

THE directors of the Blue Mountain Estates and Industries Ltd have maintained the dividend at 10 percent for the year ended June 1963. The dividend was in keeping with the market's expectations, although the diversification of the Company's interest in the fertiliser manufacture led some market men to expect a slightly higher dividend.

The striking feature of the working figures of the year and the appropriations is the larger provision for depreciation and taxation. This has resulted in a substantially lower net profit for the year, compared with the previous year. The directors have maintained the dividend at 10 percent in spite of lower profit by transferring Rs. 2.50 lakhs from dividend equalisation reserve. According to the preliminary figures, the net profit of the Company amounts to Rs. 5.79 lakhs, after providing Rs. 9.03 lakhs for depreciation, Rs. 6.50 lakhs for taxation and Rs. 1.53 lakhs for development rebate. The previous year's net profit was Rs. 8.19 lakhs, after providing Rs. 2.03 lakhs for depreciation, Rs. 4.24 lakhs for taxation and Rs. 2.30 lakhs for development rebate.

Somasundaram Paper to Enter Market

A NEW Company under the name of Somasundaram Paper Mills Ltd, with its registered office in Madras, is expected to enter the market shortly with a capital issue. It has been granted a licence by the Government to establish a new industrial undertaking with an installed capacity of 10 tons a day of writing and printing paper. The main object of the Company is to carry on the business of manufacture of paper and cardboard of all kinds from any suitable material as also paper pulp, wood pulp, straw pulp, bamboo pulp and all fibrous pulps. The factory is proposed to be set up in Pattukottai Taluk, Tanjore district, Madras State.

The factory's basic raw material is rice straw, and plentiful supplies of straw are assured as rice is cultivated intensively and extensively throughout the district of Tanjore. The annual capacity of the plant will be 3,000 tons of paper and pulp. The capital outlay of the project is placed at Rs. 40 lakhs.

Out of this, Rs. 25 lakhs will be met through the issue of capital and the balance will be raised through borrowings. The board of directors consists of industrialists and business men, already connected with various industrial enterprises in the south. The authorised capital of the Company is Rs. 50 lakhs, of which Rs. 35 lakhs is in the form of equity shares of Rs. 10 each and Rs 15 lakhs in the form of 9.5 percent preference shares (subject to deduction of tax). The issued capital is Rs. 25 lakhs, Rs. 20 lakhs in equity capital and Rs. 5 lakhs in preference shares. The subscribed and paid-up capital is Rs. 66,430. The present issue is for Rs. 19,33,570 in equity shares and Rs. 500,000 in preference shares. Excluding Rs 7,33,570 which the directors propose to subscribe in equity shares, the public issue will be for Rs. 17 lakhs, at par, consisting of Rs. 12 lakhs in equity shares and Rs. 5 lakhs in preference shares.

An Uncommon Wealth of experience in PAINT

JENSON & NICHOLSON (INDIA) LIMITED

JENN6

Rajesh Textiles Cuts Dividend

THE Rajesh Textiles Ltd has reduced the dividend for the year ended June 1963 from 14 percent to 9 percent. The cut appears to have been necessitated by the fall in the net profit following larger provisions for depreciation and taxation. The gross profit is only slightly lower at Rs. 40.25 lakhs, against Rs. 41.76 lakhs in 1961-62. After providing Rs. 11.01 lakhs (agains Rs. 9.90 lakhs) for depreciation and Rs. 15.37 lakhs (against Rs. 13.54 lakhs) for taxation, the net profit amounts to Rs. 11.47 lakhs, against Rs. 16.72 lakhs in the preceding year. Provision for development rebate has been reduced from Rs. 3.90 lakhs to Rs. 3.47 lakhs and the allocation to general reserve is also lower at Rs. 3.50 lakhs, against Rs. 5.50 lakhs. The proposed dividend absorbs Rs. 4.46 lakhs (against Rs. 6.94 lakhs), leaving a sum of Rs. 41,527 to be carried forward, against Rs. 37,726 brought in.

Polyester Fibre from Indian Produce Export

THE Indian Produce Export Corporation of Madras proposes to set up a plant in Ponneri (Madras) for the manufacture of polyester fibre. The reputed U.S. firm of Von Kohorn Universal Corporation is collaborating in the venture; it will provide the technical know-how and also participate in the capital of the Indian firm. The proposed plant will have an annual capacity of 2 million kilograms of polyester fibre and the project is esiimated to cost about Rs. 3.5 crores. The factory, it is claimed, will be the first of its kind in the country. Polyester fibres are made from compounds derived from petroleum. The raw materials required for the manufacture of polyester fibre are ethylene glycol and and dimethyl terephthalate and these will have to be imported from abroad until such time as they are produced by the refineries in India. The project will provide the basis for long-range industrial development in other petro-chemicals, especially those utilising methanol and also auxiliary industries based on the polyester industry. Polyester fibre has been popularised in India by the Imperial Chemical Industries under the trade mark "terylene".

Nonsuch Tea Estates Pays the Same

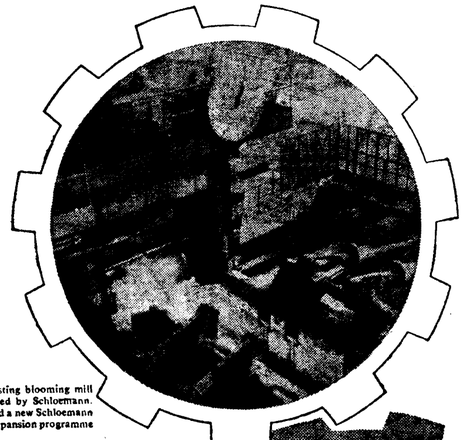
IMPROVED crops and lower production costs have combined to produce higher gross earnings, despite lower price realisation, for the Nonsuch Tea Estates Ltd for the year ended June 1963. But the net profit after taxation is lower, when compared with that of the previous year, as the total provision for taxation including the provision for super profits tax is higher than that of the previous year by about Rs. 2.4 lakhs. The total dividend for the year is maintained at 20 percent (the same).

The net profit for the year amounts to Rs. 7,84,932, after providing for depreciation and all other expenses and also after providing Rs. 8,77,600 for taxation which includes a provision of Rs. 1,10,600 for super profits tax This compares with the previous year's net profit of Rs 7,85,474, after providing Rs. 6,38,000 for taxation. With the amount of Rs. 44,424 brought forward and with Rs. 5,600 being provision for sales tax no longer required, the total surplus available for appropriation comes to Rs. 8,34,956. Out of this, a sum of Rs. 100,000 is transferred to development reserve (against Rs. 100,000). Development rebate accounts for Rs. 14,438 (against Rs. 10,826). Contingency reserve gets Rs. 1,25,000 (against Rs. 1,75,000). Provision for super profits tax for the year ended June 1962 amounts to Rs. 88,000. Taxation relating to previous years amounted to Rs. 13,605. The balance bonus for 1961-62 amounted to Rs. 3,476. The interim dividend of 5 percent has absorbed Rs. 1,15,500. The proposed final dividend of 15 percent will absorb Rs. 3,46,500. A sum of Rs. 28,437 is carried forward.

The total tea crop for the year amounted to 729,106 kilograms, compared with 621,193 kilograms for the previous year. The cost of production a kilogram amounted to Rs. 2.68 a kilogram, against Rs. 2.97 a kilogram. The net price realised amounted to Rs. 2.92 a kilogram, against Rs. 3.01 a kilogram. The estimated tea crop for 1963-64 is put at 570,000 kilograms at a cost of Rs. 3.37 a kilogram. The capital expenditure during the year amounted to Rs. 1,86,474. The proposed capital expenditure for 1963-64 is Rs. 1,71,400.

Mysore Tobacco Maintains Dividend

THE working of the Mysore Tobacco Co. Ltd for the year ended March 1963, has resulted in a net profit of Rs. 2,39,756, after providing Rs. 84,382 for depreciation and Rs. 2,42,000 for taxation. The previous year's net profit was Rs. 1,09,192, after providing Rs. 81,454 for depreciation and Rs. 1,11,000 for taxation. With the amount of Rs. 20,645 brought forward, the total available for appropriation comes to Rs. 2,60,401. Out of this, provision for super profits tax comes to Rs. 58,000. A sum of Rs. 36,000 is transferred to reserve for employees retiring gratuity (against nil). A sum of Rs. 65,000 is transferred to dividend equalisation reserve (against nil). The dividend of 10 percent (the same) absorbs Rs. 100,000. The balance of Rs. 1,401 is carried forward.



The Company acquired 6,844,477 kilograms of green leaf from a planted area of 3,970 acres, compared with 3,351,418 kilograms obtained from 3,718 acres in the previous year. The quantity of cured leaf acquired was 354,579 kilograms, against 360,953 kilograms in the previous year. The Company exported 161,870 kilograms of tobacco, against 136,729 kilograms in the previous year.

Arthur Butler Fares Well

ARTHUR Butler and Co. (Mozufferpore) Ltd has produced satisfactory results for the year ended December 1962. The profit has improved from Rs. 35,972 to Rs. 8.31 lakhs, after transferring Rs. 2.45 lakhs (against Rs. 1.83 lakhs) to depreciation and Rs. 52,140 (against Rs. 49,640) to development rebate reserve. The directors have declared

LOCAL STOCKISTS AND AGENTS THROUGHOUT INDIA.

a taxable ordinary dividend of 10 percent to absorb Rs. 60,000. The yield amounts to 6.7 percent at the present price of Rs. 14.94 a share of Rs. 10 each. The dividend was passed for 1961. General reserve absorbs Rs. 3 lakhs (against Rs. 65,429) and taxation Rs. 2.75 lakhs. Income tax for earlier years has been allocated Rs. 38,676. The carry-forward is Rs. 4.14 lakhs, against Rs. 3.78 lakhs brought in.

The Company has produced several new types of petrol tank wagons, but the directors have mentioned that the working has been adversely affected by heavier electric and gas charges. Transport costs for bringing raw materials to the factory have been considerable. They also think that the prospect for the current year may not be as satisfactory as it was in 1962.

Kalpetta Estates Earns More

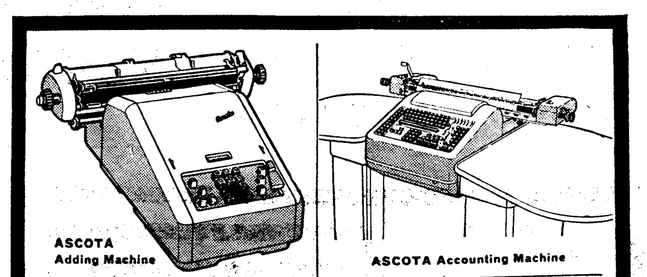
A RISE in the profit and a dividend of 11¼ percent on the increased capital necessitating a slightly higher outlay on the dividend, feature the working results of the Kalpetta Estates Ltd for the year ended April 1963. The profit for the year, before taxation, amounts to Rs. 3,55,698.72, compared with the previous year's profit of Rs. 1,78,053. With the amount of Rs. 1,965.42 brought forward, the total available for appropriation comes to Rs. 3,57,664.14. Out of this, provision for taxation is higher at Rs. 1,75,000 (against Rs 80,000). A sum of Rs. 2,500 is transferred to reserve for development rebate (against nil). Rubber replanting reserve gets Rs. 10,000 (against nil). A sum of Rs. 30,000 is transferred to dividend equalisation reserve (against nil).

The equity dividend of 11¼ percent on the increased capital (against 12½ percent on the old capital), amounts to Rs. 1,35,000 (against Rs. 100,000). The balance of Rs. 5,164.14 is carried forward. The tea crop for the year amounted to 180,858 kilograms, against 161,000 kilograms. The yield per acre amounted to 619 kilograms, against 551 kilograms. The cost of production was lower at Rs. 2.89 a kilogram, against Rs. 3.26 a kilogram. But the average price realised was lower at Rs. 4.07 a kilogram, against Rs. 4.38 a kilogram. The rubber crop amounted to 218,091 kilograms, against 154,112 kilograms. The tea crop for 1963-64 is estimated at 170,000 kilograms at a cost of Rs. 3.06 a kilogram. The rubber crop is estimated at 200,000 kilograms. The cardamom crop for the year amounted to 12,523 kilograms, against 7,829 kilograms. The estimated cardamom crop for 1963-64 is put at 13,000 kilograms. The production of tea and rubber during the current year has been satisfactory, it is stated. Prices that are being obtained in the current season are also better. The directors say that new planting in both rubber and cardamom is going forward according to programme.

New Capital Issues

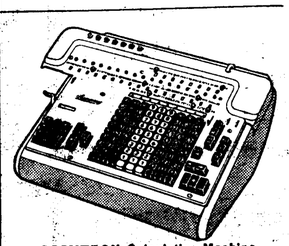
SIX companies have been authorised to raise capital totalling Rs. 16.80 crores. They include two Central Government undertakings and one private in which both the Centre and a State have shares. Two companies are issuing preference shares plus equities, three are issuing equities and one debentures. One company is offering part of its shares for public subscription. One of the companies is a daily newspaper. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Madras Tube Company Ltd, Madras, has been given consent to issue capital of Rs. 25 crores, divided into 949,300 equity shares of Rs. 10 each and 30,000 preference shares of Rs. 100 each, to be issued for cash at par. Of these, shares of the value of not less than Rs. 61.25 lakhs will be offered for public subscription. The proceeds will be used for setting up a new undertaking for the manufacture of welded steel tubes.



Hindustan Times Ltd, New Delhi, is to issue capital of Rs. 1.20 crores in debentures of Rs. 1,000 each carrying an interest not exceeding 7½ percent. This is in supersession of an earlier issue. The proceeds of the issue will be used for the construction of its own building.

Usha Spinning and Weaving Mills Ltd, Delhi, is raising further capital of Rs. 35 lakhs divided into preference shares of the value of Rs. 13 lakhs and equity shares of the value of Rs 22 lakhs. The capital is required for the installation of additional 13,000 spindles at the Company's spinning mill in Badarpur (Punjab).



Indian Drug and Pharmaceuticals Ltd, Delhi, a Central Government undertaking, is to issue further capital of Rs. 3 crores divided into 30,000 equity shares of Rs. 1,000 each for cash at par. The money will be used for establishing drugs and surgical plants.

National Coal Development Corporation Ltd, Ranchi, a Central Government undertaking, is to issue further capital of Rs. 10 crores divided into 100,000 equity shares of Rs. 1,000 each to be issued for cash at par. The new capital will be used for increasing the Corporation's production.

The Singareni Collieries Company Ltd Hyderabad, a Government company, is issuing capital of Rs. 1 crore divided into 1 million equity shares of Rs. 10 each to be subscribed privately at par. The money will be used for financing the expansion programme of the Company.

BRING NEW EFFICIENCY TO YOUR ACCOUNTING WITH GERMAN BUSINESS MACHINES

Let these upto-date, reliable machines take over the tedious lengthy calculations of your business. It means greater accuracy combined with substantial savings in time and manpower.

ASCOTA ACCOUNTING MACHINES
For automatic handling of complete accounting procedures.

CELLATRON, SOEMTRON, ASCOTA CALCULATING & ADDING MACHINES
For arithmetical and statistical calculations. Various models available to suit practically every type of calculation.

The Stock Markets

PRICES REACT: BANKING BILL INDUCES CAUTION

Wednesday Evening.

THE modest reaction in the Calcutta stock market towards the close of the past week has been welcomed as a corrective to the sharp rise which had taken place earlier. Operators have been inclined to lighten their commitments and take their profit before the Lok Sabha opens for its winter session next Monday.

Considering that the falls have been much less than the earlier rises, the trend is likely to be softer. Lyons Range is inclined to take a cautious view of the Banking Companies Amendment Bill, which is likely to be introduced in the coming session of the Lok Sabha. There is no doubt that more stringent measures will be taken to regulate the working of banks in the private sector. Investors might well be advised to wait until the details of the amendments become available.

An important factor contributing to the caution is the prospect that the Life Insurance Corporation may undertake general insurance business. Apart from the fact that it will automatically get a large part of the general insurance business, particularly from public-sector and Government-controlled enterprises, there may be intense competition if the premium rates are cut. The recent meeting of the National Development Council in New Delhi has been a big disappointment in that its deliberations have been fruitless. Except for issuing empty exhortations and platitudes, it has shown no keenness to deal with economic problems in a realistic way. Rumours that the banking community has been seriously discussing measures to prevent commercial houses from taking public deposits, have called for caution. If the flow of funds into industries is interrupted, the benefits of a more liberal credit policy announced by the Reserve Bank for the 1963-64 busy season may be offset to a great extent.

The earlier buoyancy resulted largely from the decision of some leading companies to issue bonus shares by capitalising reserves. Since the bonus share tax will be considered as a deduction for computing the super profits tax, the tendency may continue.

Indian Iron have retreated on profit-taking. Among engineering shares, Guest, Keen, Williams, Burn, Jessop and Texmaco have been in the limelight, although they have closed below their best levels. In cotton mills, Elgin, Dunbar, Bowreah and Jay Shree Textiles have attracted attention. The move to allow the mill sector to expand production by increasing spindles and looms has had a good effect. The prospect of an abundant supply of raw cotton during the current year has also helped the steadiness. J. K. Rayon have, nevertheless, reacted on profit-taking. Coal shares have been sluggish and stray business in Burrakur, Equitable, Amalgamated and Central India has been transacted.

Turnover in miscellaneous shares has increased appreciably and prices have improved all-round. Profit-taking has pared top prices towards the close. All clearing scrip have been in the fore. Indian Cable in particular have risen smartly on hopes of a bonus share issue. Associated Battery have gained considerably due to the shortage of sellers. Interest has been taken in Indian Oxygen. Electric company shares have been neglected and stray business in Calcutta Electric has been done. In bank shares, United Commercial have been active. Among managing agency shares, Martin Burn have been fully steady. In insurance companies, Ruby General have gained. Paper shares have generally been supported on hopes of a rise in the price of the commodity. Orient, Sirpur, Titaghur, Seshasayee, Bengal and Indian Paper Pulp have gained. Among sugar shares, Dyer Meakin Breweries have met with support.

Despite support for selected jute shares, investors have been cautious due to the slow offtake of jute goods by foreign countries. There has also been a decline in the prices of gunnies, while the fibre prices have shown an upward trend. Birla, Barnagore, Union, Northbrook, Howrah and Kamarhatty have been transacted. New Central have gained on producing good results. Scattered support has been extended to selected Assam and Dooars tea gardens. The increase in the north Indian crop in October has been welcomed. Jaibirpara, Betjan, Tezpore and Hasimara have been prominent.

Government securities have been quietly steady but turnover has been limited. The prices of short- and medium-dated stocks have been steady, although institutional support has declined. The 3 percent Conversion loan 1986 has closed around Rs. 65.60.

Bombay

GENERAL FALL IN SHARE PRICES

L.I.C. SALES AFFECT SENTIMENT

Wednesday Evening.

THE Bombay stock market has shown an easier trend during the past week. Except for one or two selected scrip which have hardened on influential support, share prices have generally weakened on a broad front on long liquidation. Rumours that the Life Insurance Corporation also sold some shares were considered an additional factor. Operators have generally been inclined to take profits at the present high prices. They have considered it expedient to lighten their commitments in view of the Lok Sabha session which opens next Monday. Pressure has also stemmed from weak holders. There has nevertheless been no great selling pressure, and all offerings have been absorbed without difficulty. Although the delivery of shares has increased at the past settlement, the technical position is believed to be fairly healthy.

Dalal Street has been somewhat upset by reports that commercial

banks may soon take steps to discourage business houses from taking public deposits. It is claimed by the banking community that such deposits have largely contributed to the sharp decline in bank advances during the 1963 slack season, and, as a result, the profitability of banks has suffered. Although the decision to allow the mill sector to expand production by increasing their spindles and looms has been welcomed, the industry has been disturbed by the possibility that there will be no increase in cloth prices in the present circumstances.

Tata Steel ordinary have closed at Rs. 148.25. Among engineering shares, Tata Locomotive have been steady. Cooper Engineering have been maintained on increasing the taxable ordinary dividend. Larsen and Toubro, Alcock Ashdown and Mukand Iron have met with support. In motor-vehicle shares, Hindustan Motors have been active, while Premier Automobiles have been sluggish.

Century have been an outstanding feature in the cotton mill section, although the price of the scrip has reacted somewhat towards the close. Interest has been taken in Bombay Dyeing, Khatau, Morarjee, Standard and Kohinoor. India United ordinary and Simplex have been steady. Sugar shares have been prominent in the miscellaneous section. Investors have been inspired by the prospect of higher production during the current season. Belapur, Phalton and Walchandnagar Industries have gained.

In cement shares, Associated have reacted, after an earlier improvement, due to the reiteration by the Company that it would not issue any bonus shares for the time being. Digvijay Cement have been steady. Mining shares have been neglected, and Shivrajpur Syndicate have been freely sold. Steamship company shares have been buoyant on prospects of improved freight earnings. Scindia have gained. Great Eastern Shipping have been bought due to the issue of bonus shares in the proportion of one new share for every two held.

Chemical shares have been steady. Tata Chemical have met with support on hopes of further expansion. Among rayon shares, National Rayon have gained smartly. Gwalior Rayon have been steady. Business in cash shares has declined considerably.

In banks, Central Bank have improved due to the decision to issue rights shares. Among insurance shares, New India Assurance have fallen on the prospect that the Life Insurance Corporation might enter the field of general insurance. Electric company shares have been steady, and scattered business has passed in Ahmedabad and Tata Hydro.

Madras

POOR BUSINESS IN CLEARING SCRIP

SELECTIVE SUPPORT FOR STATE LOANS

Tuesday Evening.

THE Madras stock market has reacted during the past week due to easier advices from Dalal Street. Support from outside sources has declined, so business in clearing scrip has been negligible. Investors have turned cautious on reports that the Banking Companies Amendment Bill will be introduced during the winter session of the Lok Sabha. It has been rumoured that banks would be subjected to greater controls by the Reserve Bank.

Government securities have been steady and turnover has centred on selected State Government loans. In electric companies, Tinnevelley-Tuticorin have been transacted around Rs. 14. Sugar shares have generally been steady on prospects of bigger production during the current season. Deccan have been prominent at Rs. 12.55. Business has passed in E.I.D. at Rs. 37.95. Scattered support has been extended to Mysore and Kothari.

Turnover in planting shares has declined considerably, although prices have been more or less maintained. Blue Mountain have been transacted at Rs. 2.67 and Cochin Malabar at Rs. 6.20. Consolidated Coffee have come to hand at Rs. 21.85 and Ouchterlony at Rs. 4.65. Business has passed in Periakaramalai at Rs. 3.44 and in Be Be Rubber at Rs. 2.27. Bababudin have declared a taxable ordinary dividend of 6 percent and Cowcoody a taxable ordinary dividend of 17.5 percent.

Cotton mill shares have been dull and the trend has been softer. South India Viscose have slipped back to Rs. 147.25 and Travancore Rayon to Rs. 27.60. Lakshmi have been transacted at Rs. 135.50 and Madura at Rs. 34. Buckingham have been taken at Rs. 273 and Rajalakshmi at Rs. 96.50.

Among miscellaneous industries, Aluminium Industries have been steady up to Rs 19.75, while Ashok Leyland have been available down to Rs. 7.4. Cement shares have generally been steady. Dalmia Cement have been transacted at Rs. 13.10 and India Cement at Rs. 5.70. Mettur Chemical have been bought up to Rs. 13.30, but F.A.C.T. have been sold down to Rs 6.43 Seshasayee Paper have hardened to Rs. 8.10 and Parry's Confectionery to Rs. 3.37. Radio and Electrical have been active and quoted at Rs. 3.82. Business in Textool have been done at Rs. 147 and in W. I. Plywoods at Rs. 235. Indian Steel Rolling have been available at Rs. 10.35 and Tube Investment at Rs. 213.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. London

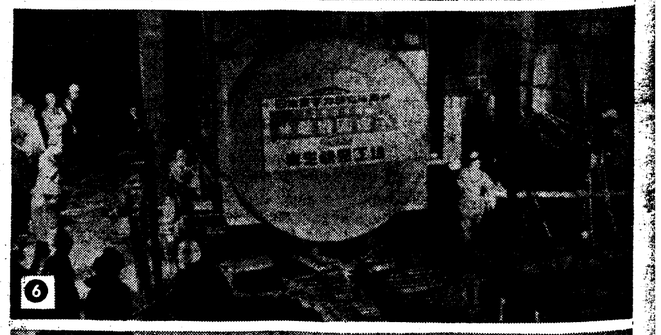
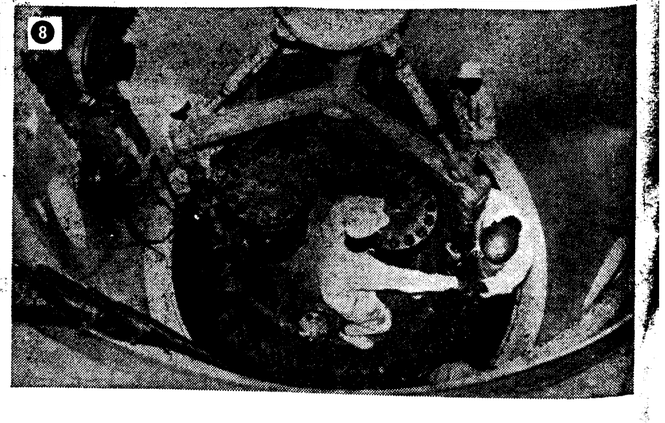
POLITICAL FACTORS CHECK RISE

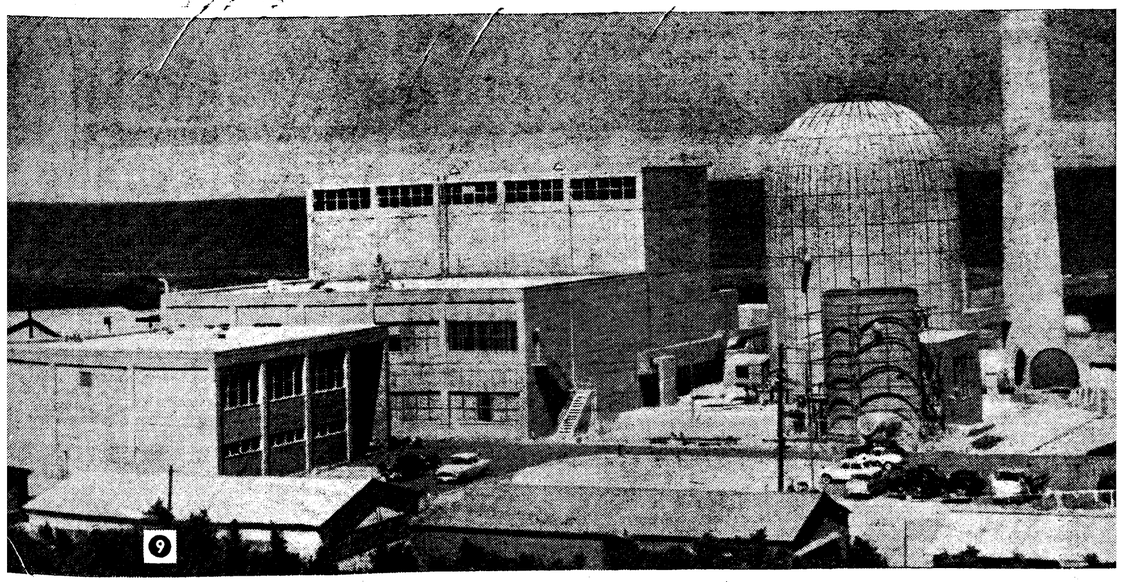
GILT-EDGED DOWN ON BANK RATE FEARS



London, 13th November.



THE past week was another very active week in the stock market, but with the buying fairly evenly matched by sale, prices moved irregularly. Good company statements were a stimulating influence, but for most of the time, these were offset by political uncertainties which increased when the Conservatives lost an important by-election. The position was, however, largely restored when the Prime Minister was elected to Parliament by a large majority. It was a bad week for gilt-edged where there was persistent small selling which was stimulated by fears concerning Bank rate due to the steady upward movement in U.S. interest rates. Losses ranged to well over a point. Dollar stocks, as usual, followed Wall Street which was in good heart in the past few days. In equities, the profit statements from the British Motor Corporation and Tube Investments were well received, and both stocks responded, particularly Tubes, where something rather worse had been anticipated. Rank Organisation were an active market, but there was some reaction from the top. The recent flow of takeover bids for the smaller textile companies which have usually come from Courtaulds, attracted buyers and prices moved up quite sharply. City Centre remained a dull spot in property shares. Gold shares were quiet, but there was a strong revival of interest in coppers and persistent London investment buying brought sharp gains. Tins moved narrowly. Oils continued quiet, but Shell were wanted after a good quarterly profit statement, although Royal Dutch eased slightly. Rubbers attracted selective buying at times.



G-E power reactor at Tokai-mura sustains chain reaction

On August 22, at 3 hours, 40 minutes Greenwich Mean Time, the first nuclear power plant in the Far East produced its first nuclear reaction. The plant is the Japan Power Demonstration Reactor (JPDR), owned by the Japan Atomic Energy Research Institute (JAERI). Its 12,500-kwe boiling water reactor was built by General Electric Japan, Ltd., a wholly owned subsidiary of the General Electric Company, U.S.A.

The plant is at the Tokai-mura Research Establishment, 75 miles northeast of Tokyo, a nuclear development centre that already has several research reactors. It will be used by JAERI for nuclear research and development as well as for power production.

The G-E reactor is a direct-cycle type with natural-circulation cooling. It uses slightly enriched uranium dioxide fuel in the form of nuclear fuel-element assemblies fabricated by General Electric.

To prepare to operate JPDR, 16 members of JAERI visited the California atomic headquarters of General Electric for nine weeks. After returning to Japan, they continued their training at the JPDR site, under the supervision of G-E personnel.

General Electric can provide *you* with a BWR plant to suit your system requirement, incorporating the optimum combination of current plant features, such as pressure-suppression containment and internal steam separation. For the facts—and information on G-E atomic products and services—contact **International General Electric Company (India) Pvt. Ltd., Thackersey House, Graham Road, Ballard Estate, Bombay-1.** or write ***International General Electric Company, Dept. 30-33CP, 159, Madison Avenue, New York, NY 10016, U.S.A.***

The Japan Power Demonstration Reactor (JPDR: 12,500 kwe) at Tokai-mura Research Establishment, 75 miles northeast of Tokyo. Owner: Japan Atomic Energy Research Institute (JAERI).

Prime contractor: General Electric Japan, Ltd., a subsidiary of General Electric Co., U.S.A. Architect-engineer: Ebasco Services, Inc. Design and construction of the nuclear steam supply system and reactor, and fabrication of nuclear fuel: Atomic Power Equipment Department of G.E. Many components and services: Hitachi, Ltd.; Kajima Construction; Nippon Atomic Industry Group of which Toshiba and Ishikawajima-Harima Heavy Industries Co. Ltd., are member companies.

❶ **September, 1961.** Completed foundation and first course of plates for steel cylinder that will contain the direct-cycle BWR with natural-circulation cooling.

❷ **December, 1961.** Guy derrick hoists steel subassembly into position in top hemisphere of domed reactor enclosure.

❸ **June, 1962.** Japan Atomic Power Co. (JAPC) engineered and placed the intake pipe. Here, workers guide portion of pipe out into supply canal.

❹ **July, 1962.** Reactor pressure vessel in position for unloading and movement into reactor enclosure.

❺ **October, 1962.** Inside Light Water Critical Assembly (LWCA), near JPDR. Built for JAERI by G.E., started up in August, 1962. Operated up to 200 watts (thermal) to gain fuel data for JPDR.

❻ **November, 1962.** Inside turbine building. Generator being lowered onto sole plates.

❼ **December, 1962.** Main control room.

❽ **June, 1963.** Inside reactor enclosure, looking down on reactor pressure vessel.

❾ **August, 1963.** Construction complete. Administration building in left foreground, turbine hall behind it.

Progress Is Our Most Important Product

ADVANCE RATES MAY NOT FALL DESPITE LIBERAL CREDIT

(BY A SPECIAL CORRESPONDENT)

Although the Reserve Bank has liberalised its credit policy for the busy season, there is little prospect that commercial banks will be in a position to pass on the benefit of lower cost of credit to their constituents. Due to the rise in operational costs, bankers argue, it may not be possible to reduce the interest rates now charged to customers.

ON 30th October, the Reserve Bank announced its new credit policy for the 1963-64 busy season. The policy is liberal, since it abolishes the penal tier (6½ percent) and increases the credit quota for banks at each of the two tiers (4½ percent and 6 percent) by 25 percent to 75 percent. This will make accommodation from the Reserve Bank somewhat cheaper than before. The minimum margin prescribed on shares (40 percent) is no longer considered necessary. The new credit policy has been interpreted in various ways. While some bankers feel that it contains nothing worth while, the sharebroking fraternity thinks that the relaxations will help the investment market. The relaxation of the margin on bank advances against shares is considered favourable, since it is thought that the banks will henceforth offer advances at nominal margins. Since the Reserve Bank's initial circular left much room for conjecture, the Bank has come forward with further clarifications of its new credit policy.

Second Circular

The Bank issued its second circular on 7th November. It informed the scheduled banks that it expects them to make suitable amendments in the pattern of lending rates—especially in the higher ranges. In the earlier circular, it will be recalled, the Reserve Bank expressed the hope that banks would pass on the benefit of the lower cost of credit to customers. But it did not specify to which categories of customers the banks are expected to pass on the concession.

Big customers of commercial banks, the export sector and small-scale industries, already enjoy relatively cheap credit facilities, compared with the average rate charged to general constituents. The average borrowing rate from big banks is 6½ percent to 7½ percent for the general clientele, against 6 to 6½ percent for preferred categories. There is little scope for further reduction. In some cases, depending on the creditworthiness of the party, some banks, of course, charge 8 percent to 9 percent. This is especially the case with medium and small banks. There is some scope for reducing the rates, especially in the higher ranges, charged by medium banks. Whether or not banks will reduce the rate will, however, be governed by the supply and demand conditions for credit in the next busy season. Since the banks are operating in a sellers' market, the general impression is that they are unlikely to lower the cost of accommodation to their clients.

The main argument advanced by bankers is that there has been a trend towards rising interest rates in the past six months or so; Bank rate was raised to 4½ percent in January last, heralding the dearer money policy. The Government loans were also floated subsequently at higher rates of interest than before. This apart, bankers are of the view that operational costs are going up with the branch expansion programme. So they may not be able to reduce the prevailing rates of interest charged to customers. It is, therefore, likely that the Reserve Bank's appeal to bankers to pass on the benefit of cheaper credit to customers in the higher ranges will go unheeded.

Advances against Shares

The Reserve Bank has advised the banks to exercise caution in giving advances against shares and to maintain the normal margins they consider necessary on the basis of past experience. This directive more or less cancels the hopes entertained by sharebrokers that banks would provide them with more funds for their day-to-day activity. Meanwhile, banks continue to exercise caution in granting advances against shares, and many banks are even now maintaining a 40 percent margin. This is considered necessary to guard against sharp fluctuations in the share market. It has, however, surprised informed circles that the Reserve Bank should follow its credit liberalisation policy as far as the stock market is concerned by a rider which in effect neutralises its earlier directive.

The Reserve Bank has cautioned the banks against unrestrained credit expansion in the next busy season. The object can be achieved—according to the Reserve Bank—in two ways: first, by doing away with unutilised limits and, secondly, by ensuring that the total of the limits sanctioned by banks bears a realistic relationship to their resources. In other words, scheduled banks are advised to balance their credit with resources and avoid relying heavily on accommodation from the Reserve Bank. A cut in unutilised limits will enable scheduled banks to have more realistic limits of accommodation from the Reserve Bank under the bill market scheme.

A word about the unsecured limits is appropriate in this context. It is the practice of commercial banks to give customers limits in excess of their requirements. Customers also prefer higher limits as a safeguard against any sudden demands. The constituents of Indian banks generally show a tendency to seek credit limits far in excess of their requirements. The embarrassment to the banking system in the event of credit stringency from what is called "open liability" is really great. Last year, when there was unusual credit stringency, several banks had to approach the Reserve Bank for special accommodation for meeting the threat of the activisation of unutilised credit limits. The "open liability" of commercial banks in India is estimated at several hundred crores. If the "open liability" of customers is taken into account, banks may be lending too much. The Reserve Bank has done well to draw the attention of banks to this danger.

Accommodation from Reserve Bank

As for the suggestion that banks should avoid relying heavily on accommodation from the Reserve Bank in the busy season, banking circles feel that the caution is redundant. This is because the credit demands which are likely to rise during the busy season can be met from the resources which accrued to the banking system during the slack season of the current year. Resources of scheduled banks are estimated to have increased by about Rs. 270 crores in the slack season, against the estimated possible credit needs of Rs. 230 crores to Rs. 240 crores. The Reserve Bank has, however, done the right thing by cautioning banks. This comfortable position notwithstanding, some banks are, it is gathered, inclined to apply for higher limits than last year as a safety measure under the bill market scheme. The Reserve Bank will, however, do well to prune the limits of such banks under the bill market scheme to realistic levels and make it a condition that they should bring down their "open liability" to more realistic levels.

THE CALCUTTA MONEY MARKET

SLIGHT FALL IN ADVANCES

Wednesday, 13th November.

THE aggregate level of advances has decreased slightly in the Calcutta money market during the past week. This is because money has been returning from the sugar mills and from the iron, steel and engineering industries. The credit given to the cotton and jute mills, and to the foodgrains and seeds trade, is unchanged. In the inter-bank market, conditions are easy and the call rate is 1½ percent.

The exchange market has been active, with a good supply of tea bills and a moderate number of gunny bills. But the demand for remittances has been poor. In the London market, sterling has shown a mixed trend in the course of narrow fluctuations.

SILVER WAS QUIET IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 230.50 to Rs. 230, quoted today for ready. The London and New York prices were shown at 111⅛d and 129.3 cents. Gold was also quiet. The price of 14-carat fell from Rs. 61.50 to Rs. 61.

DURING THE WEEK ENDED 8TH NOVEMBER, Government of India Treasury bills for Rs. 49,66,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 12th November. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.425 percent were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.300 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th November.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 13th November to 16th November at Rs. 99.441 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 6th November to 9th November amounted to Rs. 45 lakhs.

THERE WERE RISES OF RS. 35.77 crores to Rs. 2,279.69 crores in active notes and of Rs. 22.64 crores to Rs. 2,293.12 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 8th November, 1963. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 25 crores to Rs. 1,964.31 crores. Deposits of the Government of India rose by Rs. 71 lakhs to Rs. 49.39 crores and those of State Governments by Rs. 6.98 crores to Rs. 14.35 crores. Balances of scheduled banks at Rs. 77.44 crores showed a decline of Rs. 21.29 crores. Balances held abroad were Rs. 64 lakhs larger at Rs. 7.95 crores. Investments fell by Rs. 10.87 crores to Rs. 219.23 crores. Loans to scheduled banks declined from Rs. 2.04 crores to Rs. 50.90 lakhs of which there was again no advance against usance bills. Ways and means advances stood at Rs. 40.04 crores, against Rs. 37.14 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 1st November, 1963, shows a rise of Rs. 7.97 crores to Rs. 609.63 crores in total deposits. Investments in Government securities are up by Rs. 11.27 crores to Rs. 319.87 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts, bills discounted and purchased have increased by Rs. 3.21 crores to Rs. 253.74 crores. Cash and balances are, in consequence, shown at Rs. 26.63 crores or Rs. 16.07 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 1st November, 1963, shows Demand and Time liabilities at Rs. 1,123.91 crores (Rs. 22.27 crores on account of borrowings from banks) and Rs. 1,322.74 crores (Rs. 21.01 crores), compared with Rs. 1,111.05 crores (Rs. 18.93 crores) and Rs. 1,328.20 crores (Rs. 25.07 crores), respectively. Cash has increased by Rs. 11 lakhs to Rs. 56.57 crores, while balances with the Reserve Bank have fallen by Rs. 15.98 crores to Rs. 97.79 crores. There is a rise of Rs. 17.41 crores to Rs. 776.75 crores in investments. Advances and bills discounted at Rs. 1,480.44 crores show a drop of Rs. 1.60 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.3 percent and 60.5 percent, against 7 percent and 60.8 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 14-11-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
14-11-63	17-2-64	2,00,00	Rs. 2.300%

THE DECCAN SUGAR AND ABKHARI COMPANY LIMITED

STATEMENT BY THE CHAIRMAN, MR. H. V. R. IENGAR

The following statement has been circulated to Shareholders of The Deccan Sugar & Abkhari Company Limited by the Chairman, Mr. H. V. R. Iengar.

In my speech last year, I referred to the retirement from the Board of Sir T. S. Venkataraman for reasons of health. I am sorry to say that he passed away on 18th January, 1963. His contribution to sugarcane breeding was outstanding, and his work has brought prosperity to millions of people.

Production

The production of sugar at Pugalur was 17,537 tonnes compared with 20,596 tonnes in the previous year. It would have been perhaps 10% more than what it was, had it not been for the restriction on production in the sugar year ending 31st October, 1962. This, in anticipation of a similar cut in the following year, resulted in reduced planting of cane. In retrospect, it was an unfortunate decision of Government to have restricted sugar production at a time when the world was actually on the eve of a reduction of output and a spectacular rise in prices. It is hoped to regain the normal level of production in the coming season, subject to there being no diversion of cane for making jaggery. The special season will start early in November. So far, the omens are propitious.

In Samalkot the entire cane crop was converted into raw sugar for export. The production of 11,800 tonnes was part of the 2.5 lakh tonnes which the Government of India called upon the industry to manufacture for export, mainly to Japan and U.S.A. This was the first time that raw sugar was being made in any appreciable quantity in the country, and it is a tribute to the technical skill of the Samalkot factory staff that the raw sugar made without any special equipment stood up to the rigid specification of the foreign buyers. It is likely that the Samalkot factory will be called upon to make raw sugar again in the forthcoming season, as the country has a definite commitment to export 3 lakh tonnes in 1964.

The production of our two factories may now be set against all-India figures. Contrary to all expectations, the all-India production of sugar for the 1962-63 season was only 21.6 lakh tonnes against 27.2 lakh tonnes in 1961-62. This was due to the large-scale diversion of cane for the manufacture of gur and khandsari, particularly in U.P. and Bihar. The carry over of a million tonnes on 31st October, 1962 therefore came in handy to fill the gap in internal consumption and export commitments. Even so, control over distribution of sugar became inevitable when factories in the North closed earlier than usual in the 1962-63 season. Control was, in fact, imposed with effect from 17th April, 1963. The price fixed was Rs. 110.70 per quintal against Rs. 112 which Pugalur was realising in previous months. At the time this speech is being written, the Government of India have announced a further increase in sugarcane prices, but there is no indication as to what increase will be allowed in sugar prices.

Profit and a Basis for Dividend Policy

The net profit after taxation for the year amounts to Rs. 12.18 lakhs as against Rs. 8.88 lakhs in the previous year. This has been brought about largely by the higher sugar selling prices,—the control on sugar was imposed only towards the end of the Company's financial year—larger releases for sale in the internal market, and slightly higher prices realised for export.

In the ordinary course, I am sure shareholders would have desired that the dividend which was reduced last year to 18% should be restored to the previous year's level of 21%. The Directors have given careful consideration to the adoption of such a course, but have decided against a dividend beyond 18% for a variety of reasons. In the first place, the future of the industry is beset with uncertainty in view of the changing policy of the Government of India regarding sugarcane prices. Secondly, your Directors feel that provision should be made out of profits for a further expansion programme and for the replacement of machinery to an extent that cannot be met from normal depreciation.

Rehabilitation Programme

In my speech last year, I referred to the rehabilitation programme then in progress at Samalkot and Pugalur, and stated that further equipment at a total cost of about Rs. 13 lakhs would be necessary. All this equipment has been ordered. The additional 3-roller mill for Samalkot will be erected by the end of 1964. A bigger boiler and 1000KW power generator will be installed early in 1965 and with these the factory can be deemed to have attained a high degree of modernisation. Nearly all the machinery ordered for the expansion of the Pugalur factory from 1000 to 1250 tonnes has arrived, and erection is making good progress. The expansion is likely to be completed by the end of April, 1964. The rehabilitation and expansion programme undertaken three years ago may thus be said to have been nearly completed.

The Board feels however that it would be a shortsighted policy to stop at this point. It takes the view, having regard to the difficulties facing the sugar industry, that still further expansion is essential to bring down the cost of production. The Government of India's policy in this connection is to allow expansion of existing units and to give preference to the co-operative sector for establishing new units. Accordingly, your Company has applied to Government for permission to expand Samalkot from 800 to 1000 tonnes and Pugalur from 1250 to 1500 tonnes. The tendency in the industry today is to look upon a capacity of 2000 tonnes as the minimum for economic working. If adequate supply of cane can be assured, there is no reason why the Pugalur factory should not be expanded to 2000 tonnes in the not distant future.

As shareholders are aware, in the Accounts we only provide depreciation on the basis of historical cost. In an era of steadily rising prices, the depreciation reserve proves inadequate for carrying out replacements arising out of normal wear and tear. The Board considers that it would be sound policy to provide an additional sum, from time to time, so that the actual cost of replacements might be met from out of the reserves.

It is in the light of these considerations that your Directors recommend a final dividend of not more than 11.5% on the ordinary share capital to bring the total dividend to 18% for the year, which is the same as for the previous year and also a specific appropriation of Rs. 2½ lakhs for a rehabilitation reserve.

Miscellaneous

In accordance with your Company's agreement with Seshasayee Paper & Boards Ltd., it is expected that delivery of bagasse in exchange for oil will commence early in 1964. The bagasse handling equipment and oil-fired boilers will be ready for commissioning by then.

The calculation of the additional price for cane under the Government of India's 'Price Linking Formula' has been taken a step further by the appointment of the Sugar Cane (Addl.) Price Fixation Authority. The Authority has been furnished with all the particulars required and an announcement can be expected in the near future.

Our staff and labour relations have been cordial and are no little responsible for what, I am sure, you will regard as a successful year for the Company.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on the 29th November, 1963.

New Delhi

IRAN AND KUWAIT TO SEND OIL TEAMS TO INDIA FOR TALKS

(FROM OUR NEW DELHI CORRESPONDENT)

FOLLOWING the visit of the vice-chairman of the Oil and Natural Gas Commission to Iran and Kuwait last month, the Governments of the two countries have decided to send separate delegations to India within the next few weeks for further discussion on the proposal for a joint oil exploration programme. The discussions may cover the question of importing into India crude and petroleum products on a long-term basis on special concessional terms.

Meanwhile, there has been some loose talk on the proposals of the three oil companies to replace their refinery agreements by industrial licences. The three western oil companies in India, it is explained, have dual organisations—one being the rupee companies owning and managing their oil refineries and the other being the older organisations based on sterling or dollar capital which own and manage the distribution and marketing of petroleum products. The three oil refineries in the private sector are almost wholly owned by the western oil companies, outsiders holding only some preference shares. The distribution companies are, however, wholly non-Indian.

Two of the oil companies, namely, Esso and Caltex, have put forth proposals to the Government to merge their two organisations into one. In the event of their agreement with the Government, the dollar-based distribution companies will cease to exist and will be merged with the rupee refinery companies.

Meanwhile, the demand for petroleum products is placed at 17.25 million tons by 1966. While the Government is confident of reaching the production target by 1966, the oil companies—or at least some of them—have expressed their doubts whether the expansion of the public-sector oil refineries can be completed in time. On this basis, the private-sector oil refineries have pointed to the necessity of allowing them to expand their refining capacity. The basic issue, however, relates to the question of attaining self-sufficiency in oil products. Apart from creating extra refining capacity, there is the problem of the lack of balance in the production of the refineries. The creation of more refining capacity will necessarily mean the production of more motor spirit, the surplus production of which will have to be exported. One question which could be asked is whether the creation of 17.25 million tons oil capacity will help meet India's demand for such products as kerosene, diesel and furnace oils.

Furthermore, the issue of creating further refining capacity should be based on economic rather than political considerations. India is already paying heavily for an uneconomic public-sector refinery in Nunmati in Assam. Lastly, the State Governments are vying with one another to have oil refineries within their own territories, so some formula should be evolved to safeguard their profitability. One way to solve the problem is to make the State Governments the shareholders in public-sector refineries.

STATE FINANCE MINISTERS

Conference Discusses Issues

The State Finance Ministers met here last week to discuss measures for accelerating economic growth and development. The conference, which was convened by the Central Finance Minister, Mr. T. T. Krishnamachari, was attended by the Finance Ministers from all the States.

Discussions at the conference covered a wide range of topics, including measures to accelerate economic growth, problems connected with sales tax, agricultural income tax, urban property values, and the importance of getting a better return on the investment in irrigation and power projects. In the light of the discussions, specific proposals will be formulated both by the Central and State Governments.

In his opening address, the Central Finance Minister, Mr. T. T. Krishnamachari, stressed the need to go ahead with the "joint venture" of the economic development of the country. The Finance Ministers today have not only to see that public monies are well spent, but also to work for accelerating the development and growth of the economy. For some reason—not wholly within the control of the Central and Sate Governments—the economy has been running low. Part of it is due to the shortfall in agricultural production. But generally, whether in the public or in the private sector, there does not seem to be a sense of doing something really well and getting full satisfaction out of it. Reference is sometimes made to making the economy more dynamic, but it seems to have lost most of its practical significance. To him, the Finance Minister said, dynamism means that there should be a quickening in the tempo of action and in the pace of progress so that the results from all these extra efforts are realised much sooner.

Dealing with small savings, Mr. Krishnamachari said that the Centre and the States were at present sharing the net collections in the ratio of 1 : 2. But after the declaration of the emergency last year, a ceiling was put on the amount of the States' share. Small savings collections are gathering momentum, particularly after the withdrawal of the compulsory deposit scheme. In order that this momentum might be kept up, Mr. Krishnamachari announced that the ceiling would no longer be applicable, and the States would now get two-thirds of the net collections in their respective areas without any effort. The announcement was welcomed by all the State Finance Ministers.

Social Security

Speaking about social security measures, the Central Finance Minister said that the need was to drive fear from the minds of the people and create the feeling that they or their families would be looked after when they were disabled or when they were no longer there. He said that he did not think that social security measures could be introduced in a day, not even in the third plan nor perhaps even in the fourth and the fifth plan periods. They have to be processed by stages. A beginning has to be made now and it is necessary both for the Centre and the States to find out what action has to be taken to deal with the fringe of the problem. Perhaps, the Government could first deal with its own employees and then take up particular sectors of society. A beginning can be made now or the next year. It will be possible to solve the entire problem within the next decade or so.

Mr. Krishnamachari next spoke about tourism. The Finance Ministers know, he said, that part of the difficulties in the development effort is the lack of foreign exchange. The Government of India is going all over the world seeking help and is being helped. Even so, there is a considerable gap and the needs of the country cannot be met adequately. Tourism is one of the ways in which the foreign exchange resources can, to some extent, be augmented. It is a common endeavour, and any result that will come from it will also accrue to the States to some extent. The Centre wants to get the help of the States in the matter of construction of hotels, buildings, the acquisition of land, etcetera, and also in improving tourist centres.

Mr. Krishnamachari also made a reference to the agricultural income tax legislation which, he said, needed rationalisation for purposes of securing some measure of uniformity for the country as a whole.

During discussions in the conference, the State Finance Ministers were unanimous that the rate of economic growth was disappointing and that immediate measures should be adopted to accelerate the tempo of development. They, however, did not agree to the proposal to extend the scheme of replacing sales tax by additional excise to more commodities. They argued that sales tax was the only item which provided flexibility in State taxation. Its merger with excise duty will create serious revenue problems for them.

The conference is understood to have decided that the States and the Centre should float loans separately. This means that the experiment of joint borrowing by the Centre to cover its requirements and those of the States will be given up. The States, it is understood, have agreed to set up a sinking fund to facilitate prompt debt repayments. Two or three States have already created such funds.

Mr. Krishnamachari's proposal that the States should also bear a substantial part of the burden of the proposed security schemes was generally endorsed.

MATERIALS MANAGEMENT

Seminar Opened

While inaugurating an all-India seminar on the buyer-seller relations organised by the National Association of Purchasing Executives, the Rotary Club of Delhi and the *Eastern Purchasing Journal*, in New Delhi last week, Mr. A. K. Roy, Comptroller and Auditor-General of India, stressed the need for buyers and sellers to evolve mutually acceptable procedures in the field of purchasing and materials management. This, he said, could make a major contribution towards holding the price line. Mr. Roy emphasised that proper procedures for purchasing and selling could save the country vast sums of money while at the same time helping to improve quality. The Directorate-General of Supplies and Disposals—the largest buyer in India—is hamstrung by Government procedures which permit little discretion. In normal practice, there is no appeal against these procedures and private-sector units which sell to the Government also face great difficulties.

The seminar came to the conclusion that a steering committee should implement its findings and that all efforts should be made to bring into being an Institute for Materials Management similar to the one in Japan.

TELEPHONE PROJECT

I.T.T. Wins Tender

The Government of India has accepted the tender of the International Telephone and Telegraph Corporation of the U.S.A. for setting up a telephone switching factory in India. Late in 1962, the World Bank granted a loan of $42 million to India for purchasing equipment from abroad to expand and improve telecommunications facilities. The loan was intended to finance the microwave equipment, telephone switching and cable projects. Under the loan, new telephone exchanges were planned for Delhi, Bombay and Madras for which equipment was to be imported. For developing telecommunications facilities, the Government decided to set up a telephone switching factory with financial and technical collaboration from a successful tenderer which is now the I.T.T. of the U.S.A.

In the final selection, the I.T.T., Nippon Electric Company of Japan and Messrs L. N. Ericsson of Sweden were the main competitors. The three-man technical committee which was appointed by the Government was divided in its opinions. The former Secretary to the Central Ministry of Communications, Mr. M. M. Phillips, who examined the report of the technical committee, recommended the acceptance of the tender of the I.T.T. for the purchase of equipment and for collaboration in setting up the telephone switching factory. The Government has accepted the recommendation. It will be recalled that the Government decided to adopt the Continental switching system. The latter is based on the use of crossbar switches with the indirect switching technique. The I.T.T. tender was submitted through its Belgian organisation. Its acceptance should enable the Government to use Belgian credit for financing the factory project.

TRACTORS

New Panel Suggested

The Development Council for the Automobile Industry has recommended to the Government to set up a separate panel to look after the progress of the agricultural tractor, tractor-drawn agricultural implements and earthmoving equipment manufacturing industries. At present, four firms with a combined capacity of 11,000 numbers of agricultural tractors have been licensed, and production has just started. Production achieved in 1962 was 1,627 numbers and up to September 1963 1,032 numbers. The production target set for the industry is 10,000 numbers a year by 1965-66.

Earthmoving equipment consists of the following major items : (1) Crawler tractors and their attachments, (2) motorised scrapers, (3) motorised dumpers, (4) bulldozers, and (5) shovels and draglines.

The Crawler tractors are presently being manufactured by the Central

Ministry of Defence in the ordnance factories and shovels by two establishments in the private sector, namely, the Tata Engineering and Locomotive Co. Ltd and Hindustan Motors Ltd. The latter is also licensed to manufacture tractor attachments. Due to the long gestation period required, the industry has yet to establish itself to make a significant contribution in this field. Furthermore, the industry's progress is retarded due to continued imports to meet the domestic demand. Simultaneously, the domestic demand is of such a nature that unless the industry is able to meet it completely, imports cannot be stopped. Meanwhile, the industry has to be developed further to meet the ever-growing demands for tractors and earthmoving equipment for irrigation projects, mining and other construction projects.

The following are the firms manufacturing agricultural tractors and their capacities :

Name of the firm	Capacity licensed	Name of foreign collaborator
Eicher Tractor Corporation India Ltd. Faridabad	1,000 Nos.	Gebr Eicher Traktoren Fabrik, West Germany
Tractor and Bulldozers Pvt. Ltd. Bombay	1,000 Nos.	Czechoslovakia 1. Technoexport 2. Motokon, Prague
Tractors and Farm Equipment Ltd. Madras	3,000 Nos. 500 Nos.	Massey Ferguson, U.K.
International Tractor Co. of India Ltd, Bombay	3,500 Nos.	International Harvester, U.S.A.
Ghaziabad Engineering Co., Ghaziabad	3,500 Nos.	Renault, France
Tillers (agricultural implements)		
East Asiatic Co. (I) Ltd. Bombay	24,000 Nos.	Landmaster Ltd, U.K.
Indian Landsberg Implements Corporation (P) Ltd, Faridabad	500/3,500 Nos.	Bajerecsge Pflugfabric G.m.b.h., Landsber, Germany
Krishi Engines, Hyderabad	53,000 Nos.	M/s. Akito of Japan
Escorts Ltd. New Delhi	9,000 Nos.	Nil
Marshal Sons and Co. (I) Ltd. Calcutta	200 Nos. 400 Nos.	1. Rubbery Ocean and Co. Ltd. U.K. 2. E. V. Twose Ltd. U.K. 3. John Wilders. U.K.
Agricultural Discs. Ltd, Bombay (L. R. Patel)	100,000 Nos.	W. A. Tyzaele and Co. Ltd. U.K.
The Housing and General Finance Ltd, Delhi	40,000 Nos.	None
Heavy earthmoving equipment		
Hindustan Motors Ltd. Calcutta	Not assessed	Caterpillar Tractor Co., Ohio. U.S.A.
Tata Engineering and Locomotive Co. Ltd, Jamshedpur	100 Nos.	Harnischfoger Corpn., U.S.A.
Tractor and Bulldozers Pvt. Ltd. Bombay	60 units	Vickers Armstrong Ltd, U.K.
Tractor Engineers Pvt. Ltd. Bombay	For 2,000 sets of tractors	Tractors Spares Private Ltd, U.K.
Trackparts of India, Kanpur	For 400 sets of tractors	Track Parts Ltd, U.K.
Automobile and Agriculture Industries Corporation, Bombay	Not assessed	None
Heavy Engineering Corporation Ltd. Ranchi (Bihar)	30 Nos. (4,950 tons)	None

CZECHOSLOVAKIA

Trade Pact Signed

The Czech Minister of Foreign Trade, who recently led a trade delegation to India, offered to India on behalf of his Government, a new line of credit for $50 million for financing projects included in the third and fourth plans. He also signed—on behalf of his Government—a three-year trade and payments agreement. The agreement, which replaces the existing three-year trade and payments agreement, will be valid for five years from 1st January, 1964.

During his visit to Prague in June this year, the Central Minister for International Trade, Mr. Manubhai Shah, had had discussions with the Czech Minister, Mr. F. Hamouz, on trade and allied matters. As a result of these talks, a high level delegation of officials led by Mr. Rudolf, Chief of the Department in the Czechoslovak Ministry of Foreign Trade, came to India last month and conducted negotiations with an Indian team led by Mr. S. Vohra, Joint Secretary to the Ministry of International Trade.

The agreement signed recently provides for the exchange of goods between India and Czechoslovakia to the tune of Rs. 19.50 crores each way in 1964. Rs. 23.50 crones each way in 1965 and Rs. 24.50 crores each way in 1966.

Exports of manufactured industrial products from India are expected to increase substantially. So also of iron ore. India will also export other traditional items such as jute products, textiles, tea, H.P.S. groundnuts, cashew kernels and coffee. Imports from Czechoslovakia will consist mainly of machine tools, heavy machinery and equipment for power projects and other heavy industries such as tractors. Czechoslovakia will also supply increasing quantities of tools, alloy and special steel and rolled steel products, chemicals, dye-intermediates and other raw materials and components for Indian industries.

After the signing ceremony, Mr. Manubhai Shah said that the happy feature of the agreement was that Indian manufactured goods worth Rs. 2.5 crores to Rs. 3 crores would enter the Czech market every year. He hoped that other industrialised countries would follow the example of Czechoslovakia and buy manufactured goods from developing countries like India and help them to expand their trade. Another important point, he said, was that every year 10 percent of the trade between the two countries would consist of non-traditional items. Trade would be on a balanced basis between the two countries. Mr. Shah expressed the hope that in the years to come the Indo-Czech trade would grow considerably and the international division of labour which had been recognised in the pact would be accepted by other countries also.

The Czech Minister, Mr. Hamouz, said that while the volume of trade in 1960 was about Rs. 13 crores, the turnover in 1962 reached a level of Rs. 30 crores. He advised India to use Indian shipping for her trade with his country and, in particular, for exporting iron ore.

ENGINES AND PUMPS

Estimating Demand

The Central Minister of Steel and Heavy Industries, Mr. C. Subramaniam, last week asked engine and pump manufacturers to make a proper assessment of the demand for their goods "in the context of the massive programme of industrialisation we have taken on ourselves in the coming decade." It is necessary, he said, to spell out the demand by types and categories so that it may be possible to chalk out suitable plans for either the expansion of existing units or for installing new ones.

The Minister said this while inaugurating the Development Council for Internal Combustion Engines and Power-driven Pumps. He pointed out that in original estimates, nearly 60 percent of the demand for engines had been set apart for agricultural and irrigation facilities. It should be examined whether the actual demand has increased in the manner visualised. Furthermore, the engines produced should be able to meet the special requirements of farmers at prices they can afford and the problems posed by irrigation needs of different regions. The production of marine diesel engines should also be increased for the development of fisheries.

Mr. Subramaniam said that heavy-duty pumps and special-purpose pumps were still not manufactured in the country to meet the demands of India's chemicals, fertilisers, refining and other sophisticated industries. The Government, he added, has asked for a detailed project report from Russia for setting up a heavy compressor and pump project. "I am hoping that further progress in the implementation of the scheme will be made fairly quickly, so that our dependence on imports in this area will be reduced", he said.

E.R.I.C.

Indemnity to Banks

The Export Risks Insurance Corporation has raised its indemnity to banks under its packing credit policy from 50 percent to 66⅔ percent. It will be recalled that the study group on export finance, headed by Mr. K. P. Mathrani, had recommended that the Corporation should augment its guarantee to banks under the policy to 65⅔ percent. This recommendation has been accepted by the Government and implemented by the Corporation without enhancing its premium rates.

The Corporation's packing credit policy is designed to help exporters to secure a line of credit from banks for the purpose of buying, processing and packing goods destined for the export market. Often, exporters have firm orders in hand for financing which they need credit which may be in excess of the bank's normal rating of their capacity. In such an event, the Corporation is ready to come to the aid of the exporter and to share the risk with the lending bank. Thus the exporter is able to find a measure of finance which helps him to enlarge his business without unduly deploying or straining his financial resources.

Under the scheme, the Corporation formerly co-shared the risk of loss with the lending banks in the ratio of 1:1 whereas under its revised policy, it will bear the bulk of the risk and cover the banks in the ratio of 2:1. The step will enable the banks to liberalise their lending policies *vis-à-vis* exporters and make a larger amount of finance available to them.

The packing credit policy, which was introduced towards the end of 1960, is becoming increasingly popular with exporters and banks. The value of advances secured by exporters under the Corporation's packing credit policy stood at Rs. 54 lakhs in 1961, but rose sharply to Rs. 2.5 crores in 1962 and is likely to be of the order of Rs. 5 crores at the end of the current year.

HUNGARY

Trade Team in Capital

A trade delegation from Hungary led by Dr. L. Ujhazy, Director General of the Ministry of Foreign Trade, is now in New Delhi to negotiate a long-term trade and payments agreement between India and Hungary and also to fix the amount of trade for the next three years.

The Hungarian Minister for Foreign Trade, Mr. J. Incze, will be arriving here soon when he will sign the trade agreement on behalf of his Government. From the Indian side, Mr. Manubhai Shah, Central Minister for International Trade, will sign the agreement.

As a result of the current negotiations, it is hoped that the volume of Indo-Hungarian trade, which is now of the order of Rs. 8.83 crores each way, will be doubled towards the end of 1966.

WEST GERMANY

Minister to Visit India

Mr. Walter Scheel, West German Minister for Economic Co-operation, will arrive in New Delhi on 23rd November, 1963, on a fortnight's visit to this country at the invitation of the Government of India. He will be accompanied by a team of senior officials. Mr. Scheel is expected to tour some parts of the country visiting some industrial plants, including the steel plant and the fertiliser factory in Rourkela as well as some German-aided industrial establishments. He will also visit the Prototype Technical Centre, Okhla, and the agriculture project in Mandi, Punjab. Mr Scheel will leave for West Germany on 8th December.

F.B.I.

Official to Tour India

Mr. A. St. John Shuttleworth, who was in charge of the Bombay office of the Federation of British Industries from 1952 to 1958, will arrive in Bombay on 22nd November at the start of an intensive four-week tour of India. He will go on to Madras arriving there on 1st December, Calcutta from 6th December, and Delhi from 14th December. This will be the first of the regular twice-yearly visits which will be paid to India by F.B.I. officials now that the organisation has no office in the country.

Interviewed in London, Mr. Shuttleworth said that during his visit to India, he would find out means "to keep alive" F.B.I. interests, and also study the current economic problems and "how British industry can co-operate further". He will also study what opportunities exist for "investment and participation."

"I want to find out, too," said Mr. Shuttleworth, "how the Kipping loan of £4 million is working out in practice."

PARLIAMENT

New Bills for Next Session

Eighteen new Bills, including one to provide for more effective control of banking companies and certain other financial institutions, are to be introduced during the winter session of Parliament, beginning on 18th November.

The Preventive Detention Act, which expires on 31st December is proposed to be continued by a Bill.

The other major Bills are those relating to gold control, the setting up of a unit trust, changes in company law, establishment of a new Press Council, amendments to the Industrial Disputes Act and the tightening up of the Prevention of Food Adulteration Act.

The Gold Control Bill, which is intended to replace the existing rules relating to gold control promulgated under the Defence of India Act, is likely to be referred to a joint committee of Parliament. The Unit Investment Bill is expected to go before a select committee of the Lok Sabha, while amendments to make the Prevention of Food Adulteration Act more stringent would be referred to another joint committee.

A principal amendment to the company law proposed is the setting up of a tribunal to enquire into the misconduct of managerial personnel of companies. This and other amendments are being proposed in the light of the Vivian Bose Commission's report on a group of Dalmia-Jain concerns.

Besides the 18 new Bills, Parliament is expected to have before it the report of the joint committee on the Constitution (17th amendment) Bill. Supplementary demands for grants for 1963-64, both for the Union and the railways, will be presented.

Both Houses will also discuss during the five-week session the motion for constitution of a committee on public undertakings and the progress of the third plan based on the mid-term appraisal.

Among the new Bills are the one to amend the Indian Railways Act to make the unauthorised transfer of railway tickets and berth reservation illegal, another to extend the life of the requisitioning and acquisition of Immovable Property Act to six years, and a Bill to provide for the administration of estates of rulers in certain contingencies.

The raising of the age of retirement of High Court judges from 60 to 62 is being covered by another Bill. It is also proposed to enable, through a Bill, the Judicial Commissioner's court in Goa, Daman and Diu to function as a High Court.

The Indian Tariff Act is being amended to continue or discontinue protection granted to certain industries. An amending Bill to extend the Indian Medical Council Act to Jammu and Kashmir, a Bill to prosecute persons who solicit or receive *nazar* or offerings at the Durgah Khwaja Saheb, Ajmere, in an unauthorised manner, a Bill to provide for the delegation of appellate and revisionary powers of the Chief Commissioner, Delhi, to certain other authorities and another to enable the Coir Board to receive more funds to set up a factory for manufacturing coir goods are also expected to be introduced.

Besides the 18 Bills, seven Bills are pending in the Lok Sabha, including some already passed by the Rajya Sabha.

Here is a Dunlop test car testing tyres on a highly abrasive road—a rigorous examination the Dunlop Gold Seal car tyre has had to pass.

The Dunlop Gold Seal has been widely and very successfully tested on a variety of roads, from hot, rough tracks to wet, winding hill roads in our country. It has been tested—*and proved*, assuring you greater durability, high trouble-free mileage and top road safety.

MOVE TO METRIC HAS WIDE SUPPORT IN U.K. INDUSTRY

(FROM OUR LONDON CORRESPONDENT)

AN early decision on the adoption by British industry of metric weights and measures is called for in a short report just issued by the British Standards Institution. Based on discussions over the past year within B.S.I. committees which are responsible for standards policy in 50 major industries, it shows that there is now strong support for a move to the metric system. "There emerges", says the report, "a substantial majority view that changes are inevitable and that they should be directed towards the introduction of the metric system as the primary system of weights and measures in the U.K. within the shortest practicable period."

Over a year ago, in view of the growing volume of opinion which advocated the adoption of the metric system, the B.S.I. issued a pamphlet, *Change to the Metric System?* reviewing the considerations involved for industry, the action which would have to be taken if it were decided to go metric, and suggesting a phased programme for the change. This was discussed in this feature at the time. Since then, committees in B.S.I., representatives of manufacturers and other interested bodies in a wide range of industries, have considered this review and the main questions which emerged from it—whether particular industries wished to change to the metric system, how long it would take, and whether it should be dependent on a parallel move by the United States or the Commonwealth, as well as detailed questions on the metric standards to be used. The positive view now reported is, with only a few exceptions, not conditional on similar action by the United States or the Commonwealth. The B.S.I.'s high-level Export Panel favours a change to metric because of the increasing use of the metric system in the more rapidly-expanding world markets, and in view of Britain's growing trade with Europe.

The report recognises that the time required to make a change will vary from industry to industry and that certain of them—notably, petroleum equipment, aircraft and motor-vehicles—must remain basically on the inch-lb system of standards until a change is made in the parallel industries of the United States. In some other parts of the engineering industry, a move would inevitably be protracted, with dual production—to inch and metric standards—to cater for special customers and for spares and replacements over a considerable period. Close co-ordination between industries using one another's products would be required.

The B.S.I., as Britain's national standards organisation, has to look at the question of a change primarily in terms of the dimensional standards which provide industry with its basic production and purchasing pattern, and the report indicates the general lines on which B.S.I.'s work would have to proceed. Although many other aspects of a change to metric are important, the dimensional standards of the engineering industries are unquestionably the key factor and it is changes in them that would be the major cause of the heavy costs which a change to the metric system would involve.

Industrial Standards

Changes made to industrial standards (which in the main are voluntary in Britain) could be quickly reflected—even without Government action—in trade and commerce and in daily life. Use of the metric system is permitted by law in Britain, except for sale of a limited number of goods in specific weights. Clearly, however, a Government pronouncement would decisively influence the pace of any change and the effectiveness of action throughout the economy. The report underlines the need for systematic education in the metric system. The introduction of decimal coinage, although this is an entirely separate issue, would be a move towards the same decimal thinking inherent in the metric system. The views expressed in the report may be summarised as follows:

(a) Although recognising the size and complexity of the task, the great majority of industries accept that a change is inevitable. A few already work substantially on metric standards, examples being the scientific and laboratory apparatus and photographic industries. Others are positive in advocating a change and see no major difficulties in making it if it is planned over a reasonable period; leading examples in this group are the chemical industry and the electrical industry. Others—the iron and steel industry, for example —are ready to do what their customers require. Others again, numerically the large majority, are prepared to face the change and the difficulties which are involved if it is accepted and planned on a national basis.

(b) The nationalised industries, which in the main have no direct interest in manufactured exports, have little urge to change, but they would be prepared to follow if it were agreed to be in the national interest for the change to be made.

(c) There are, however, certain industries which could only contemplate a move if it were to be made concurrently by the corresponding industries in the United States. The most important of these are the motor-vehicle, aircraft and petroleum equipment industries, sectors where American practices have long set the pattern and where it is considered essential to maintain interchangeability with American equipment. In most industries, however, contrary to the general feeling expressed a few years ago and recorded in the joint report of the Committees of the British Association and the Association of British Chambers of Commerce, the view now taken is that U.K. action should not be dependent on parallel action by the United States or the Commonwealth.

Advantage for Exports

(d) The Export Panel of the B.S.I. is confident that, from the point of view of exports, there would be a definite advantage in making the change. The numercial superiority of countries using the metric system, progressively being intensified, the expansion of trade with Europe—irrespective of membership of the Common Market—and the fact that the repidly expanding markets of the future will be predominantly metric are the factors which influence the Panel in favour of this view.

(e) There is a widely-held opinion that some drastic changes in the existing Imperial system of weights and measures (including adoption of the U.S. gallon, short ton, etcetera) would be imperative if it is to remain the primary system. Decimal increments of the inch and pound would, in many instances, have to replace fractions, all of which would mean such formidable changes in the engineering industries that the direct step to adoption of the full metric system is to be preferred.

(f) A notional period of 20 years for the change as a whole—suggested in B.S.I.'s earlier statement—is generally regarded as realistic, although in some sections of industry the changeover could be carried through in a much shorter period. There are, of course, large variations in the period estimated to be required by different sections and many uncertainties because of the dependence of industries on one another internally and internationally. Almost all, however, would favour proceeding as quickly as possible once it is decided what changes are to be made and once it is clear that they have the backing of the country as a whole.

It has, of course, always been open to particular industries or firms to work to metric standards either for their entire production or to satisfy the requirements of export markets. In some cases, metric and inch-lb standards, often based on an international recommendation, are substantially the same and only the presentation of the dimensions needs to differ in the two systems. But in any extensive move to the metric system by industries in this country, it cannot be left to individual industries to plan a change in isolation, since each industry must be dependent on acceptance of metric standards by its customers and suppliers. There must be a co-ordinated move in major sectors—so that manufacturers of materials and components can estimate the demand for those based on metric standards and the users can be confident of obtaining what they need, in order, in turn, to modify their own designs and standards.

Move in Education

There must be a major move in education, both general and technical, to teach the metric system in a systematic way. Action by the B.S.I. itself will be concerned with providing national standards in the metric system as they are required. For use in industry and in teaching the metric system, an up-to-date publication embodying the fundamental quantities and units in the metric system as established by international agreement should be made available. Such a publication is already in preparation and is based on the relevant recommendations of the International Organisation for Standardisation (I.S.O.). In addition, the B.S.I. has already issued extensive publications dealing with conversion factors and tables.

As the new metric standards are introduced, the interests concerned will have to determine, through B.S.I. Committee discussion, their policy on a phased withdrawal of the British Standards in the inch-lb system, bearing in mind the need for replacement and the requirements of non-metric markets. In some sectors of industry, the existence of two standards will be inevitable for a considerable period. In consequence of the continuing use of the inch-lb system, it will be desirable to eliminate obsolescent units in the system and rationalise it as far as possible—the extent to which such rationalisation will be economic will depend on the rate of change to metric and on the needs of those sections of industry using the inch-lb system for a protracted period.

In spite of a large number of indefinite, and sometimes, divided views which the B.S.I. statement *Change to the Metric System?* has elicited from U.K. inudstries, there emerges a substantial majority view that changes are inevitable and that they should be directed towards the introduction of the metric system as the primary system of weights and measures in the U.K. within the shortest practicable period. The timing of the change must clearly vary from industry to industry and must be left to individual industries to work out. In general, however, it is accepted that the longer a move is delayed, the more costly and complicated the operation will be. There is an almost unanimous desire for a decision one way or the other. Indecision is undoubtedly acting as a curb to industrial progress; it is also a serious obstacle to the further development of national standards which are themselves an essential part of an efficient and expanding national economy.

'BEHAR' the dependable name in

FIRECLAY & SILICA Refractories

For nearly half a century BIHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRE CEMENT • STOPPERS • SLEEVES • NOZZLES • TUYERS, ETC.

Jute

EXPORTS OF MAJOR GUNNY PRODUCERS RISING

EXPORTS of jute goods by six of the world's major manufacturing countries—India, Pakistan, France, Belgium, the United Kingdom and West Germany—during the second quarter of 1963 have totalled 300,000 tons, a rise of 4 percent over the corresponding figures for the preceding quarter, says the latest *Fibres Supplement* of the Commonwealth Economic Committee. The figures have been compiled in the absence of complete returns from Pakistan, Belgium and France. The total output of jute cloth in the six countries has been 440,000 tons during the quarter, which is an increase of 3 percent over the figures for the previous quarter, and 6 percent over those for the corresponding quarter of 1962.

Reviewing Pakistan's jute policy, the C.E.C. report says that in July, the Government raised the minimum export prices for most grades for the 1963-64 season by £2 a ton. However, small shippers and the Jute Marketing Corporation have been allowed to sell at £2 a ton below the minimum price in order to be able to compete with the larger shippers. Pakistan has also introduced an export quota system for raw jute to prevent the concentration of trade in the hands of a few large shippers. Export duties remain unchanged and the system of statutory prices for growers continues.

In order to help maintain minimum export prices, the Pakistan buffer stock, introduced in September 1962, continues to buy jute at prices 10 percent below the minimum, and the size of the 1964-65 crop will be regulated to prevent surplus production. First estimates of the area under jute in Pakistan for the 1963-64 season are put at 1,412,000 acres, compared with 1,723,000 acres in the previous season, the decrease being due to continued low prices and the ban on cultivation within five miles of the Indian border. The first estimate, however, is usually somewhat conservative, and the final figures may well approach the last season's acreage.

Pakistani Consumption May Rise

Jute loomage in the Pakistani industry is to be increased from 8,000 to 11,000 by the end of 1963, which could result in Pakistan consuming up to 40 percent of her annual output of fibre. This increased capacity is designed to secure for Pakistan a larger part of the world's sacking demand and will not, therefore, directly affect the Indian hessian industry, the report says.

Despite the sharp rise in U.K. cloth production this year, a number of uncertainties are now affecting the Dundee industry. These include not only the findings of the Restrictive Trade Practices Court on the minimum price issue, but also the recent announcement of the U.K. Government's new policy on imports of jute goods. The new policy will not, however, come fully into effect for another year, which should give time for readjustment.

The C.E.C. report states that Pakistani goods are making headway in a number of important sacking markets, particularly Australia and New Zealand. These countries are purchasing larger quantities of higher quality material for woolpacks, since raw wool often becomes contaminated by the loose fibres in packs made of poor quality jute cloth. Australia is Pakistan's most important customer for sacking, and other markets include south, west and east Africa and the United States.

Small Increase in Gunny Stocks

Jute goods stocks with mills reporting to the I.J.M.A. have risen by 700 tonnes to 103,100 tonnes in October. Sacking stocks declined by 3,000 tonnes to 52,100 tonnes, due to clearance of sizable lots against the previous months' shipping instructions. But hessian stocks rose by 1,600 tonnes to 34,400 tonnes, and miscellaneous goods by 2,100 tonnes to 21,600 tonnes. In October last year, closing stocks stood at 90,300 tonnes.

The clearance figures issued by the various shipping companies indicated that the total quantity shipped on September vessels which sailed between 7th October and 14th October for the U.S.A., Canada and the Pacific and Atlantic ports, was more than 46,000 bales. Exporters felt that shipments during the month have been better than expected, absorbing the carryover of shipping instructions from September, particularly in sacking. This probably explains why a large surplus of goods was feared but did not materialise at the end of October.

Sharp Fall in October Output

Working at maximum capacity for 200 hours in October, the mills reporting to the I.J.M.A. produced 96,200 tonnes of jute goods last month, against 100,900 tonnes in September. Hessian output declined by 2,400 tonnes to 41,800 tonnes, sacking by 1,000 tonnes to 40,500 tonnes and other goods by 1,300 tonnes to 13,900 tonnes. The bigger fall in hessian output is attributed to poor enquiries and business, due to which some mills have diverted a number of hessian looms to sacking production. In spite of the working hours remaining the same, production has been affected to some extent due to absenteeism on account of the Puja festivities. In October 1962, mills worked for 192 hours, producing 90,900 tonnes of goods. Of these 39,600 tonnes were hessian, 42,900 tonnes sacking and 8,400 tonnes other goods.

Study Team for Europe

A four-man delegation, led by Mr. G. C. L. Joneja, Jute Commissioner, is leaving soon on a four-week study tour of the E.C.M. countries, Denmark, Sweden and the U.K., it is reported. The delegation will include representatives of the Indian Jute Mills Association and the Calcutta Jute Fabrics Shippers Association. It will make an on-the-spot study of these markets in an effort to assess their import potential. The team will also study the manufacturing techniques for jute-mixed fabrics, which are gradually gaining popularity in these markets.

Export Finance Liberalised

Along with other exporters gunny circles have expressed satisfaction over the liberalisation of the packing credit policy by the Export Risks Insurance Corporation. In order to stimulate exports, the Corporation has decided to indemnify banks for up to two-thirds of the export finance advanced by them under the packing credit policy. It will help bankers further to liberalise their lending policies for exporters. Now exporters with firm orders will be able to obtain a line of credit from banks for buying, processing and packing goods meant for the overseas market.

Under the policy, introduced in 1950, the Corporation had been covering bank risks only up to 50 percent. The liberalisation has been made on the recommendation of the official study group on finance. According to the E.R.I.C., the packing credit policy has been increasing in popularity. From Rs. 54 lakhs advanced to exporters in 1961, the figure rose to Rs. 2.5 crores in 1962. During the current year, the accommodation may go up to Rs. 5 crores.

Code of Conduct for Exporters

A code of conduct to guide exporters and manufacturers of goods for export has been formulated by the Central Ministry of International Trade. According to the code, exporters should conform to high ethical standards in business, strictly fulfil all contractual obligations, improve and maintain the quality of goods and adhere to the time of delivery. It is also proposed that all exporting firms, including manufacturer-exporters, should sign a pledge to this effect.

I.S.I. Standard for Gunny Packaging

The Indian Standards Institution has published specifications for seaworthy packaging of jute products (I.S. 2433-1963). It prescribes the requirements of packaging jute products, namely, hessian, sacking, jute bags and jute yarn, intended for overseas markets.

THE JUTE MARKETS

Manufactured Goods: Divergent trends marked trading during the past week. There was no overseas business, nor any Government tenders. The recent series of bore tides corresponding with the usual end-month heavy arrivals of vessels resulted in delays to ships using Calcutta port. So there was an appreciable fall in the demand for ready shipment cargo. The earlier weak trend induced shippers to defer their purchases on expectations of a further fall in prices. But towards midweek, sentiment changed following the publication of the I.J.M.A. gunny stock figures, showing a sharp decline in sacking. Hopes that the Indian Government would enter the market soon for its November-December purchases of heavy goods, and shipper-covering against forthcoming shipments to Cuba and the Argentine, combined with the hardening tendency in fibre prices, reinforced sentiment in sacking—spot and futures. Mill's were not inclined to do much business in heavy goods in view of their good order-book position. Despite the attractive level of hessian prices, overseas buyers were sitting on the fence. Small transactions of a routine nature were reported around the previous rates. In spite of an increase in October stocks, mills were unwilling to discount prices further and the buoyancy in sacking helped stem the drift in the prices. The spot market governed the trend in the futures market. Operators were inclined to keep down their commitments in view of the forthcoming Diwali end-of-account. But hectic covering in sacking helped prices to close with a sizable gain over the previous week's levels. Hessian escaped with a nominal loss. Turnover was fair in sacking and small in hessian. The undertone was firm in the former and easy in the latter.

Wednesday's quotations were as follows:

	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7lbs/z.	35.50	35.60	35.65	35.65
40in. 8oz.	38.10	—	—	—
40in. 10oz.	47.15	47.25	47.35	47.40
B Twills	114.55	114.65	114.85	114.85
Cornsacks	116.00	116.25	116.50	116.50

A Twills	134.50	135.50	135.50	135.75
Liverpools	126.10	126.50	127.00	127.00

Raw Jute: Steady conditions prevailed during the past week. A gradual decline in daily arrivals in the upcountry stations and routine purchases by mills and mill agents against the big November quota contributed to the firm trend. The co-operatives were actively operating in the remote secondary markets. With the end on the Puja season, and

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October 1963 as follows:

Description	31st October, 1963		30th September, 1963		Increase over (+) or decrease from (-) last month		31st October, 1962	
	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)
Hessian cloth and bag	11,15.70 (12.20)	34.4 (33.9)	10,31.61 (11.28)	32.8 (32.3)	+ 84.09 (+ 92)	+ 1.6 (+ 1.6)	8,07.33 (8.83)	24.6 (24.2)
Sacking cloth and bag	11,48.96 (12.57)	52.1 (51.2)	12,37.59 (13.53)	55.1 (54.2)	− 88.63 (- 96)	− 3.0 (- 3.0)	11,65.15 (12.74)	54.1 (53.3)
Others		21.6 (21.3)		19.5 (19 2)		+ 2.1 (+ 2.1)		12.1 (11.9)
Grand Total		108.1 (106.4)		107.4 (105.7)		+ 0.7 (+ 0.7)		90.8 (89.4)

a fall in foodgrains prices due to the prospect of a bumper *aman* paddy crop, holders were not inclined to dispose of their stocks even at the operational minimum levels. Circles close to the fibre trade doubted whether the Government's price-support scheme had succeeded in ensuring a fair price to the grower. It was said that very large quantities of jute had passed from the hands of the cultivators to the middleman during the festive month of October. Higher advices from the agencies influenced the trend in the Calcutta market. Brisk covering by shorts and regular offtake by mills hardened the prices of all grades. Some mills were purchasing fibre against the current month's quota for turning over the buffer stocks in their custody. In the futures market, sentiment was governed by the trend in the spot market. Fluctuations were narrow and the price closed with a small gain, on balance, over the previous week's level. Turnover was moderate and the undertone firm at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)			
	Current Prices		T.S.D. Minimum Prices

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the production of jute goods in October as follows :

Descriptions	Quantity
1. Gunny Bags	
(a) Hessian	
5,986 tonnes	(5,891 tons)
1,81,26 thousand metres	(1,98.2 lakh yds.)
1,39.8 lakh nos.	
(b) Sacking	
39,769 tonnes	(39,141 tons)
8,64,33 thousand metres	(9,45.2 lakh yds.)
4,28.7 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
35,794 tonnes	(35,229 tons)
12,23.51 thousand metres	(13,38.1 lakh yds.)
(b) Sacking	
744 tonnes	(732 tons)
16,97 thousand metres	(18.6 lakh yds.)
3. Other Manufactures	
13,929 tonnes	(13,709 tons)
4. Total Production (All kinds)	
96,222 tonnes	(94,702 tons)

Summary

(00) metres and 00,000 yds.)

	Oct '63	Sept. '63	Oct. '62
Hessian	14,04.77 (15.36)	14,56.12 (15.92)	13,33,.83 (14.59)
Sacking	8,81.30 (9.64)	9,04.13 (9.89)	9,30.21 (10,17)
	(0'0 tonnes and tons)		
	Oct. '63	Sept. '63	Oct. '62
Hessian	41.8 (41.1)	44.2 (43.5)	39.6 (39.0)
Sacking	40.5 (39.9)	41.5 (40.8)	42.9 (42.2)
Others	3.9 (13.7)	15.2 (15.0)	8.4 (8.3)
Grand Total	96.2 (94.7)	1,00.9 (99.3)	90.9 (89.5)
Hours worked	200.0	200.0	192.0

THE U.K. JUTE MARKETS

FIBRE EASIER

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was reported to be steady in Pakistan, but the position in the U.K. remained weak with many sellers willing to accept lower prices than previously. However, the lowest quoted rates were not attracting spinners to any extent, and business was still confined to small quantities. Although the Pakistani Government promulgated an Ordinance with far-reaching influence in connection with the selling of raw jute, this made no difference to prices quoted for export. In fact, when the contents of this Ordinance were known, the raw jute market in the U.K. became easier.

Some very cheap offers were made here, and the lower grades of jute could be obtained at up to £10 a ton below the minimum export rates. As some sellers were still asking official prices, this made the position very irregular. Offers were lowest at £130 for Mill Firsts, at £107 for Mill Lightnings, at £93 for Mill Hearts and at £78 for Grade Hearts, c.i.f. U.K. for November-December shipment. Grade Tossa-$\frac{3}{4}$ was named at £125 and Grade Tossa-4 at £105 5s. Outport Tossa-$\frac{3}{4}$ was quoted at £93 and Outport Tossa-4 at £83, November-December.

Cuttings were also quieter at £54 for S.N.C. and at £46 15s for N.C. Little change could be seen in mesta prices at £ 78 for A, at £73 for B, at £68 for C and at £42 for cuttings for November-December shipment. The jute market in Thailand was firm with offers lowest at £68 10s for Grade A, at £63 10s for grade B and at £58 10s for grade C, delivered mill Dundee for November-December shipment.

The Calcutta goods market became a little firmer. Buying in Dundee of imported jute goods was fairly steady, but quantities were not large. Quotations were at 71s 6d for 40in. 10oz. and at 53s 11d for 7½oz. a 100 yards f.o.b. Calcutta for November shipment, at 71s 6d and 53s 11d December and at 71s 1d and 53s 11d January-March. B Twills were at 172s 5d, 173s 3d and 173s 10d for the respective shipment periods.

Although the raw jute market tended to be easier of late, there was no change in yarn and cloth prices in Dundee. Spinners and manufacturers have been very busy, and have orders in hand for delivery over the next four to six months. Supplies of both yarn and cloth are only available in the forward position. The carpet trade continues to take regular deliveries and there is every indication that this will continue for some time.

HIDES AND SKINS

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 5th November and 11th November, 1963)

Cowhides: Wet salted (Ord.) 3,000 pcs. on the basis of Rs. 8 to Rs. 12.50; Wet salted (Slaughtered) 39,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50; Wet salted (Ord.) 1,000 pcs. on the basis of Re. 1 a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 49,500 pcs. on the basis of Rs. 260 to Rs. 270, Rs. 350 to Rs. 375 and Rs. 430 to Rs. 440; Wet salted (he killed) on the basis of Rs. 4.63 and (she-killed) on the basis of Rs. 4.37 a piece; Assam 48,500 pcs. on the basis of Rs. 240 to Rs. 260, Rs. 300 to Rs. 310 and Rs. 350 to Rs. 375; Purneah-Kissenganj 42,500 pcs. on the basis of Rs. 300 to Rs. 350; Muzafferpore 5,500 pcs. on the basis of Rs. 330; Purneah 500 pcs. on the basis of Rs. 450.

Bazaar Stocks

(11th November, 1963)

Cowhides: Wet salted 71,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia Killed) 42,000 pcs. Assam-Dinajpur 80,000 pcs.; Muzafferpore-Patna - Purneah-Kissenganj 139,500 pcs.

PHIL A BLACK

Fast Extrusion Furnace Black

For excellent extrusion and calendering use Philblack A in your recipes. Philblack A rates A-1 for smooth, glossy surface...and for delightfully easy processing! Philblack A stocks are also noted for their smooth, easy extrusion characteristics and true-to-the-die accuracy. To impart a soft, satiny finish and pleasant, rubbery 'feel' to your moulded products...use Philblack A.

PHILBLACK A is now made at our Durgapur Plant.

Let any or all the types of Philblack work for you.

Commodity Markets

NO KERALA LAND CEILING FOR PLANTATIONS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE new Land Reforms Bill now being considered by the Kerala Legislature provides for total exemption to plantations from the ceiling on landholdings. This Bill is to replace the former communist Ministry's controversial Agrarian Relations Act which stands suspended since the annulment of some of its important provisions by the State High Court and the Supreme Court some time ago. Under the new legislation, a plantation is defined as "any land used principally for the cultivation of tea, coffee, cocoa, rubber, cardamom or cinnamon including the land used for any purpose ancilliary to the cultivation of plantation crops, or for the preparation of the same for the market and land contiguous to, or in the vicinity of, or within the boundaries of, the area cultivated with plantation crops, not exceeding 20 percent of the area so cultivated and reserved by the said person and fit for the expansion of such cultivation." Agricultural lands interspersed with the boundaries of the area cultivated by the said person with plantation crops not exceeding such extent that may be determined by the Land Board as necessary for the protection and efficient management of such cultivation are exempted. Lands used for the construction of office buildings, godowns, factories, quarters for workmen, hospitals, schools and playgrounds are also treated as "plantation." This definition was voted by the State Legislature last week.

Besides the plantation lands listed above, cashew estates existing at the commencement of this Act, and having a contiguous extent of ten acres or more, pure pepper gardens and pure arecanut gardens existing at the commencement of this Act and having a continuous extent of five acres and more, also get the benefit of exemption from the ceiling. In the Communist Ministry's legislation, only plantations of tea, coffee, rubber and cardamom were exempted from the ceiling.

Some members of the Legislature made a bid to get coconut plantations also included in the exempted list. They said that at present the country imported Rs. 15 crores worth of copra every year. The majority of coconut trees in Kerala where 80 percent of the copra was produced were at present more than 50 years old. Normally a coconut tree bore fruit only till its 60th year. So in ten years' time, there would be a steep fall in the production of coconut and India might have to import double the quantity of copra if immediate steps were not taken to plant coconut seedlings in lakhs. Thousand of people are employed in the manufacture of coir made from coconut trees, and their employment requirements also demanded encouragement to coconut cultivation. They further argued that the Planning Commission also had suggested that crops which needed large investment and took a long time to produce should be exempted from the ceiling.

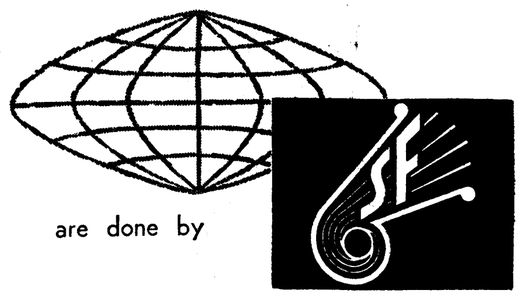
The Home Minister, Mr. P. T. Chacko, who pilots this Bill, rejected this plea on the ground that in Kerala as much as 1.238 million acres were under coconut cultivation, and this was larger than all other plantations put together, and if such a big chunk were to be exempted from ceiling, there would be very little surplus land left and the main purpose of the legislation would thus be defeated. Also, he said, unlike other plantation crops, coconut could be cultivated economically and efficiently even in small plots. This view of the Minister was shared by the majority in the House.

Defending the inclusion of other crops like tea and rubber in the category of lands excluded from the purview of the ceiling clause, the Minister said that the idea to exclude plantation crops from the ceiling originated from the Planning Commission. They were treated on a different footing because plantations had an important rôle to play in the economy, and it would be detrimental to the national interest to fragment plantation holdings and thus stifle the growth of this industry. Some 90 percent of India's rubber was grown in Kerala, and 40 percent of it was produced by smallholders. Unable to cope with the demand for this strategically important commodity, the Government of India was opening up synthetic rubber factories in this country. Unless they in Kerala encouraged rubber production, their economy would be in jeopardy, the Minister warned.

Cocoa and Cinnamon

Referring to the inclusion of cocoa and cinnamon in the list of plantations, the Minister said that the Indian Council of Agricultural Research, as a result of experiments, had come to the conclusion that these crops could be profitably grown on a plantation scale in Kerala. The I.C.A.R. had recommended some special encouragement to the growers of these crops; hence their exclusion from the purview of the ceiling clause. While the total area under cocoa cultivation in Kerala was at present less than 50 acres, there was only one cinnamon plantation in the whole of Kerala covering an extent of 237 acres. By excluding these crops no sizable extent of land was left out of the ceiling, he pointed out. Pure pepper and arecanut gardens of more than five acres were existing only in the northern most part of Kerala, and their owners had made heavy investment to make them what they were today. Fragmentation would only spoil their high productive efficiency. There was also some observations in the Supreme Court judgment compelling the State Government to give them exemption, the Minister added. Lands held by industrial and commercial undertakings at the commencement of this Act and set apart for use for industrial or commercial purposes are also given the benefit of exemption from the ceiling.

The State Government is vested with the power to exempt any land required *bona fide* for the purpose of conversion into plantation or for the expansion or preservation of the existing plantations. The House has not yet come to these provisions of the Bill, so one cannot be absolutely sure at this stage whether all these benefits given to the plantations and lands put to industrial and commercial purposes would be retained as they are when the Bill takes its final shape.



COFFEE

Export Prospect for India

There are fairly reliable reports that Brazil's old stock holdings of coffee are grossly exaggerated and that the blows dealt by drought last season and frost and fire this season were hard and that recovery will be slow. The present indications are that the overall position of coffee is encouraging, especially for those who can produce quality coffee. Those who can offer Robusta have a special advantage now because that grade which in the ordinary course is considered inferior, has at present a very good demand in the world market. Its prices are at present very attrac-

In Ceramic, Lime, Chemical and Metallurgical Industries...

DUST COLLECTION AND PURIFICATION OF AIR

are done by

Prevention of air pollution by dust and purification of air for providing healthy working conditions in factories is done by SF equipment. SF Electrostatic Precipitators recover valuable material in cement and other factories. In one of the largest cement factories in Europe, as much as 60 tons of clinker dust is collected from flue gas in 24 hours. SF wet separators have purified as much as 24,00,000 cubic metres of gas per hour, in certain factories.

1788
THE E.I.D.-PARRY GROUP
1963

INDIAN SUGAR FOR CANADA

"The State Trading Corporation has concluded a contract for the supply of one lakh tons of sugar to Canada, during 1963. Half of the estimated sale proceeds of Rupees Four Crores will be utilised for importing fertilisers, newsprint and wood pulp. The other half will be a nett foreign exchange saving."

—News Item

The five sugar factories of the E.I.D.—Parry Group, located at Nellikuppam, Pugalur, Pettaivaythalai, Samalkot and Tiruvalla, produce 90,000 tons of sugar every year—the largest production from a single group in South India, representing one-fifth of the annual consumption in South India. In addition, 3,000 tons of confectionery are also produced.

Both sugar and confectionery are exported, earning foreign exchange for the country.

The E.I.D.—Parry Group is also concerned with the production and distribution of substantial quantities of fertilisers and in 1963 the Group expects to supply about 200,000 tons.

This significant contribution is expected to be further increased when expansion programmes are realised.

Other manufactures of the Group include sanitaryware, light railway equipment, acids, chemicals, carbonic acid gas and industrial and potable alcohol.

Started as a small trading concern in 1788, the Group today comprises nine companies of substance, offering employment to more than 10,000 people, and keeps on expanding its activities in pace with the nation's march to economic independence.

THE E.I.D.—PARRY GROUP, MADRAS

PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

tive. India is one of the countries producing Robusta coffee which constitutes almost 50 percent of her production.

TEA

South Indian Output Up

South Indian tea production shows a 2 million lb gain over last year's as on 30th September. The south Indian crop to the end of September amounted to 138 million lbs, compared with north India's 398 million lbs. The total Indian production thus amounted to 536 million lbs. 14 million lbs short of the production during the same period last year. Ceylon's output is better by 27 million lbs and accounts for the 13 million-lb increase in world supply over 1962.

Drop in North Indian Output

A special correspondent writes: North India's crop figures to the end of October are reported at 497,254,571 million lbs, compared with 509,317,321 million lbs up to the same date in 1962, thus showing a shortfall of 12,062,850 million lbs. With only six weeks of plucking time left, the season must again show a lower crop from this area. This deduction is supported by the fact that the monthly output for November and December in 1962 were 26.7 million kilograms and 5.8 million kilograms, compared with 27.2 million kilograms and 5.4 million kilograms in the same months of 1961.

Demand was restricted at the London Sales on 6th November. In Calcutta, at the latest sale, was there a fairly general enquiry at about recent levels. Mediums were in less demand and some of the Assam C.T.C.'s went at lower rates. Other offerings were somewhat irregular.

The season should show fair profits and gardens producing good teas can be expected to maintain last dividends, but it is not easy to foresee 1964 results as there seems to be a danger of too much tea coming on offer, while the question of offtake remains uncertain.

TAXATION

U.P.A.S.I. Seeks Relief

The United Planters Association of South India is a very progressive body. Not satisfied with recommending various adjustments and improvements in agricultural and fiscal matters at its latest general meeting, it is now reported that the Association has presented a complete review of the tax structure on plantation industries to the Central Finance Minister. The deputation which was received in New Delhi on 6th November, consisted of Mr. J. R Henshaw, president, General K. S. Thimayya, deputy president and P. S. Subramaniam, secretary and adviser.

They pointed out to the Finance Minister that apart from indirect taxation of various types such as excise and export duties, export cess, sales tax, etcetera, their companies were subject to direct taxation by both the Central and State Governments, and the lack of co-ordination between the Centre and States had made the industry vulnerable to excessive taxation.

The need to assist plantation industries, especially tea, to export and earn foreign exchange was again emphasised, as it is obvious if Indian products (tea and coffee) are to be sold in world markets in quantity and at reasonable prices, costs must be made competitive. The current taxation policy makes it impossible to set aside sufficient funds to allow for expansion or improvement. All the points in favour of sensible adjustments were listed and some further suggestions developed. For example, the question of price index was taken up.

It was noted that most industries working under increasing "costs" have been compensated by way of increased prices, but although during the period 1950-52, the production index had moved up from 100 to 240 (in south India), the price of plantation products had advanced only from 100 to 101.9.

No depreciation is allowed for the most important fixed asset, namely, the revenue-earning tea bushes, driving power, drivers, rollers and other machinery which all has to be renewed at times, and the replacement of such items must be allowed under revenue account.

To rationalise the list of impositions, the U.P.A.S.I. has suggested a Central Agricultural Income Tax Act to be implemented by the States at rates fixed by the Central Government each year, but not exceeding the rates payable by tea companies under the Indian Income Tax Act. A drawback of excise duty on exported tea was also urged.

PLASTICS

Seminar on Celcon

Marketing and technical representatives of the Amcel Co., an export sales affiliate of the Celanese Corporation of America, held a technical seminar in Calcutta on Monday to discuss Celcon acetal co-polymer, one of the world's newest engineering plastics. Representatives of Duncan Bros. and Co. Ltd., Amcel's agents in India, attended the session. Celcon is claimed to be a high-strength plastic which is replacing metals and other plastics in such industries as appliances, industrial equipment, containers, hardware, motor-vehicle parts and business machine housings. The material is then suited for a broad range of applications in some of the new areas for plastics.

The plastic itself, classified chemically as an acetal co-polymer, is made by a new chemical process, which involves the co-polymerisation of trioxane, a derivative of formaldehyde. It is stated that Celcon is not a substitute material but a new design material which, because of its strength and durability, enables engineers to predict its performance in end-uses. It offers new end-uses for plastic moulders and fabricators, making possible many new applications as well as new decorative effects on old applications.

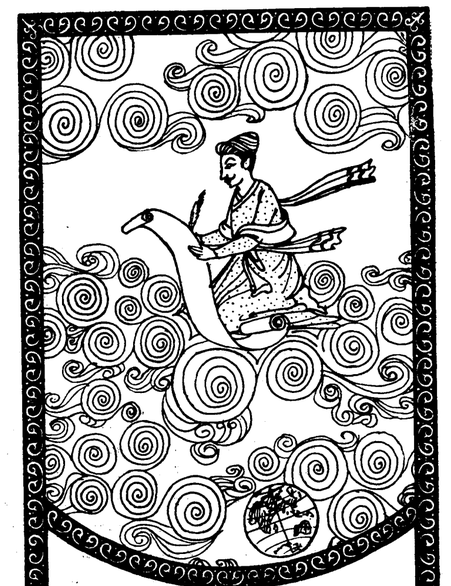
COMPANY AND PUBLIC NOTICES

BRITISH PAINTS (INDIA) LIMITED,
32, Chowringhee Road,
Calcutta-16.



NOTICE is hereby given that:—

(a) The Board of Directors has today declared an Interim Dividend of 7½% (subject to deduction of Income Tax) on the Ordinary Shares of the Company in respect of the current year. The Dividend shall be payable on or after the 2nd day of December, 1963 to those Members whose names are borne by the Register of Members of the Company on that date.

(b) The Register of Members of the Company will be closed from the 22nd November, 1963 to 30th November, 1963, both days inclusive.

By Order of the Board,
S. R. ROY,
Director Secretary.

Dated at Calcutta the
14th November, 1963.

HOW TO GET YOUR BANKING WORK DONE
70 MILES ABOVE THE EARTH

When you order the Union Bank to transact business abroad, they do things in double-quick time, using Telex. Telex transmits the message in radio waves to the ionosphere seventy miles above the earth, from where they bounce back and are picked up abroad, at the required station. The Union Bank is one of the few banks in India subscribing to Telex. Open an account with us to ensure that you get prompt banking service in keeping with space-age speed. The Union bank has correspondents in 50 countries, with 24,007 offices!

Union Bank Helps People

THE UNION BANK OF INDIA LTD

66/80 Apollo Street, Fort, Bombay • Branches all over India.
Telex contact with countries all over the world

HUNDRED YEARS OF BANKING IN ASIA AND AFRICA

A HUNDRED years ago last Saturday, the Calcutta City Banking Corporation started business with a mixed bag of British and Indian directors, an authorised capital of Rs. 1 crore, and a subscribed capital of Rs. 50 lakhs, not all of which was easily raised. Within a few months, in response to the breezy optimism of the times, the horizons of the promoters began to widen from the scale of the metropolis to that of the country at large. The name of the Corporation was changed to National Bank of India; after a fierce controversy the head office was shifted from Calcutta to London in an effort to secure access to what was then the world's biggest capital market; and fresh pastures for banking business began to be explored. Following several ups and downs in its early years, and a few amalgamations and mergers in the later ones, the institution today stands as National and Grindlays Bank, one of the great financial links between Britain, Asia and Africa. The original subscribed capital of Rs 50 lakhs (equivalent to a mere £500,000 at the rate of exchange prevailing at the time) has grown to a formidable paid-up capital of over £5.7 million. From the single office at 1/1 Mission Row, Calcutta, not far from where these words are written, there has proliferated a network of branches in territories spanning the northern extremities of the Indian Ocean. The total assets at the end of the first year, 1864, were £328,736; by 1962 they had risen to the far grander total of almost £287 million.

These are the bare bones of a story into which Geoffrey Tyson, editor of *Capital* for twenty eventful years down to 1952, has breathed life in a fascinating volume entitled *100 Years of Banking in Asia and Africa* just published in commemoration of the National and Grindlays centenary. The bones, however, do poor justice to the body to which they belong. For Geoffrey Tyson's story is not just a record of titular transformations and marriages in the banking world, of the ups and downs of business, or of the comings and goings of great men and small. It is much more than all these landmarks if noted in the fulness of their detail could ever be, for the progress of the institutions which merged into National and Grindlays Bank is surveyed against the background of a wider canvas of events and personalities which shaped their fortunes over the years. Most of the narrative is concerned inevitably with the National Bank of India and its activities in this country. The information on its formative years of childhood and adolescence was strikingly meagre. But painstaking research and an erudite understanding of Anglo-Asian history have served to re-create the long-forgotten episodes of yesteryear in a fascinating panorama of vivid reality. Not only do events and controversies come to life in these pages: the people do, too, in an eloquent exposition of the Tysonian philosophy that institutions are only as great as the men who make them. The grace and elegance of the writing are as remarkable as the facts they embody; the whole book is illuminated by flashes of wit and wisdom which spring from an astute but kindly mind that older readers of this newspaper will readily recognise.

No summary can do justice to the book, so none will be attempted here. At best, only a few brief impressions can be recorded, the choice of which is necessarily arbitrary, and of these the outstanding one relates to the courage and shrewdness of the men who have guided the destinies of National and Grindlays since the earliest years. The Calcutta City Banking Corporation, and its successor National Bank, were in some degree the progeny of a boom inspired by the American Civil War, when the textile manufacturers of Lancashire were obliged to turn from Virginia to Bombay for the cotton they had to have. The boom, following tradition, proved short-lived. As the defeat of the Confederate forces drew near, cotton prices in India dropped, the inevitable depression set in, and a host of trading and financial institutions were obliterated in the business earthquake which followed. Among the locally-promoted banks, the National Bank was almost the only survivor; it did not escape unhurt, and its problems were later accentuated by the failure of the London finance house of Overend and Gurney as well as by a costly venture in the China trade. But the important feature is that the lessons of these episodes were well learnt; a period of consolidation followed. Not until the early 1880s was a relatively ambitious programme of branch extension launched, which before long took the Bank as far as Mombasa and Aden in the west, and Rangoon in the east.

In the National Bank, the consolidation was achieved in a number of ways which are by no means irrelevant to modern experience. Originally, the Bank seemed likely to concentrate rather heavily on the then relatively new field of providing advances against securities. After the slump of the late 1860s the emphasis, fortunately, was quickly dropped. Over the years, instead, there was a distinct move into the expanding sectors of trade and industry—first into jute, indigo and tea, and later into bullion, power and other fields. Simultaneously, the bonds with the London capital market were strengthened through alliances and understandings which stood the Bank in good stead in times of uncertainty. In recent years, the process of consolidation has taken more obvious forms, as represented by National's marriage to Grindlays in 1948 and the taking over of the business and management of Lloyds Bank's eastern branches in 1961. But most remarkable of all the phases of consolidation, perhaps, is the fact that barely had the fires of the first slump of the 1860s subsided when a code of rules was drawn up for the guidance of local managers—a code of rules the basic principles of which today, more than 90 years later, are much the same as when it was first drafted, although the amounts and details may have changed. There can be few greater tributes to the wisdom and foresight of the founders of the Bank.

Another striking impression left by Geoffrey Tyson's history is the closeness with which the

progress of the Bank has followed the growth of trade and industry. In 1869, the Suez Canal was opened; it drastically reduced the time for travel between Britain and India. Two years later, a telegraph link was established. By the 1880s, India began to nourish within herself what Geoffrey Tyson succinctly terms the "embryo of a modern economy." As new trading links were forged between Britain, Asia and Africa, the horizons of the Bank widened and the network of offices and representation was expanded.

Not all the areas in which the Bank operated were then, or have been since, models of political stability or rapid economic progress. But the impressive advance the institution has made remains nevertheless as a monument to the adaptability and acumen of the men who have led it. These qualities are as much in evidence today as they were at any other time in the Bank's long and fascinating history. Many of the countries in which it operates have achieved independence. Within the next few years, many more will. The original faith of the founders in being able to cope with the challenges and anxieties of the future, however, continues undiminished. As Geoffrey Tyson puts it, "the confident assertion that trade follows the flag is not always, nor entirely, true; but there are not a few examples to prove that trade survives and grows long after the flag has been honourably hauled down." His own stimulating book provides a faithful reflection of the confidence with which National and Grindlays moves into its second century, one that promises to be no less exciting an era of challenge and opportunity than the first.

REFINANCE FOR THE FARMS

A MAJOR reason for the growing disappointment over the Government's agricultural policy is that although several institutions have been set up to provide farm credit, production in this sector has been stagnating. The Agricultural Refinance Corporation inaugurated on 1st July, 1963, is a young body created to ensure a regular flow of funds for agricultural activities; but like the other institutions it may become ineffective unless certain measures are taken to strengthen the basis of its operations. An article entitled "Commercial Banks and Agricultural Finance", published in the September issue of the *Bank of India Bulletin*, discusses some of the measures which need to be taken for the successful working of the Corporation. The article deserves study.

Agricultural development in this country has been hindered by the fact that no practical measure has yet been devised to ensure an adequate supply of finance to farmrs at a reasonable rate of interest. Most agriculturists even now have to rely on moneylenders and pay an exorbitant rate of interest. Although a network of co-operative credit institutions has been set up in the countryside, it has only touched the fringe of the problem. The societies lack the proper administrative talent and institutional set-up. The setting up of the Agricultural Refinance Corporation in order to increase the flow of credit to agriculture through the medium of banks is, therefore, a step in the right direction, since banks have the institutional set-up and the experience to handle credit. What seems to be a pity is that non-scheduled banks have been excluded from the scope of the Corporation's operations. Some of them have adequate financial resources and have been operating fairly efficiently. They also have some experience in financing agriculture. Under the guarantee scheme for industry, non-member banks have been indirectly associated through member-banks. A similar arrangement in the case of agriculture would prove very useful.

Yet the task of associating commercial banks with agricultural credit more closely is not going to be easy. The refinancing scheme will merely give an additional incentive to them to lend, but it is not certain that the farmer will readily agree to borrow from this source. It is officially estimated that the demand for agricultural credit may amount to about Rs. 150 crores during the next two or three years. But agriculturists might hesitate to take advantage of the new credit facility from banks as they would in that case have to submit income statements. The reliance of farmers on moneylenders, combined with their reluctance to resort to institutional credit, has been a worldwide phenomenon. In States where agricultural income tax has been levied, the reluctance of the farmers is likely to be even more. Hence it is necessary to persuade agriculturists about the benefits of the new institutional credit facility.

The difficulties of commercial banks in providing long-term agricultural credit need to be stressed. They do not have qualified personnel to assess the value of land which would serve as security. The assessment of crop yields requires deep technical knowledge. It has been suggested that the Indian Banks Association and the Agricultural Refinance Corporation should explore the possibility of organising a pool of experts from foreign countries. Land is usually the chief security which agriculturists can offer for a loan, but there are several legal complications in taking land as security for advances. Hence it is necessary to evolve a simpler and less expensive legal arrangement in the case of mortgages under the refinance scheme. This apart, commercial banks will be attracted to agricultural financing only when the projects for which they lend are profitable. Most agricultural operations are carried on for bare existence but banks can finance only commercially feasible schemes.

The Agricultural Refinance Corporation Act gives agriculture a wide connotation and includes animal husbandry, dairy farming, pisciculture and poultry farming. But there must be some organisation to promote schemes allied to agriculture. For example, the rearing of pigs, sheep and goats may increase food output more quickly than the cultivation of crops in some areas. But the supply of these products will not be augmented until marketing facilities are developed through the provision of refrigeration and transport. The Corporation could take a hand in these activities. It could also arrange for foreign exchange to import special breeds of animals and processing equipment for the agricultural industries.

The Agricultural Refinance Corporation Act stipulates that no accommodation will be granted to an eligible institution unless it is fully and unconditionally guaranteed as to the repayment of principal and payment of interest by the Government. Since State Governments are interested in promoting agriculture, they may furnish the guarantee for schemes undertaken within their boundaries. But only the Corporation will be protected by the guarantee, not scheduled banks, who will have to bear the ultimate risk when a borrower defaults. It is worth considering whether the banks' risks can be reduced by some sort of a State Government guarantee to lending banks, as has been done in the case of industrial financing. Finally, the Government has guaranteed a dividend of 4½ percent on the shares of the Corporation. It is, therefore, thought that commercial banks might get refinance from the Corporation at an interest of 5½ percent. If scheduled banks keep a margin of at least 2 percent, the ultimate borrowers may have to pay interest of up to 7½ percent, which will be high in view of the smaller interest charged by co-operative credit societies. Considering the importance of agriculture, it is necessary to take steps for keeping the interest rate down, otherwise agriculturists will not be attracted by the new credit facility.

India's Resources
are Precious
WASTE NOT,
WANT NOT

THE EUROPEAN CAPITAL MARKET

THE suggestion that Europe's international capital market could be and should be developed as an alternative to that of the United States arose—in the United States itself—some time before President Kennedy proposed the interest equalisation tax, and the proposal virtually closed the U.S. capital market against foreign borrowers. But it was not easy to visualise the European market as an effective alternative, as it could not offer a financial centre comparable with New York. The requisite financial facilities and skill in using them are available in London, Amsterdam and Zürich, but these centres have not enough resources for the purpose. Paris and Frankfurt have (at present) more resources, but they lack the requisite facilities and skill. However, the European capital market has lost no time in responding to the change in American policy. It is revealing itself as a flexible instrument which, used with unusually complex techniques, can take full advantage of available resources that are, in the aggregate, substantial. The main centre of the new-style operations is London, but the resources used are multinational. The newly-developed facilities are being used primarily by European borrowers, but European lenders will certainly expand their intercontinental business.

The list of European borrowers who have recently borrowed, or started negotiations to borrow, in the Europeon market includes Italy, Austria, Denmark and Norway. The loan of 60 million Swiss francs raised through London for the City of Copenhagen attracted particular interest in London because it was the first loan in a non-sterling European currency in this centre in the postwar era. Unfortunately, it attracted attention for another reason: the Swiss authorities resented it —and made their objections known throughout Europe. The subsequent loan to Austria, a less complicated issue of £6 million in sterling, was made in London not only because the New York market was virtually inaccessible but also because the dispute between Austria and Switzerland concerning Austria's treatment of some goods imported from Switzerland had temporarily closed the Swiss capital market against Austria. The loan of 18 million "European units of account" to Cassa per il Mezzogiorno (Southern Italy Development Fund) was more cosmopolitan; and the principal of the syndicate of banks that arranged it was not British but Belgian—the Banque Lambert.

The London market has been used in the post-war era mainly by countries of the sterling area, but its recent operations show that it is equally accessible to countries of the European Free Trade Association. At the annual Lord Mayor's dinner at the Mansion House in mid-October, both the U.K. Chancellor of the Exchequer, Mr. Reginald Maudling, and the Governor of the Bank of England, Lord Cromer, indicated that the authorities were interested in the restoration of London as an international capital market and were willing to facilitate the process. (They have already turned their attention to such technicalities as deduction of U.K. income tax at source, which is strongly resented by foreign holders of bonds.) It is regrettable that the first loan representing the more liberal attitude towards E.F.T.A borrowers aroused ill feeling between Britain and another E.F.T.A. country, Switzerland.

In this loan to Copenhagen, London was used as an entrepôt centre; London can provide the facilities, but not yet the local resources for such loans. The Copenhagen bonds were devised for continental European investors, and from the viewpoint of British investors they are "foreign", obtainable only with investment dollars, which are quoted at a considerable premium. The designation of the loan in Swiss currency reflects its "foreign" character. A considerable quantity of non-resident Swiss capital is available for

subscription to such an issue; but the borrower's requirements of Swiss currency are small, and it is assumed that most of the loan will be converted. Although no Swiss banks were included in the issuing syndicate, the Swiss authorities foresaw a risk that their balance of payments would suffer from such transactions, and they resented such use of their currency without their authorisation. A loan whose principal and interest are payable in Swiss francs in foreign centres is not, indeed, very different from a genuine Swiss loan; and the Swiss capital market itself is tightly controlled. The Swiss authorities' objections are appreciated in London, and it is doubtful that this experiment will be repeated.

The "European units of account" adopted for the loan to Italy have the same characteristic—convenient or objectionable according to the viewpoint—that they are outside the range of monetary control of individual countries. Each unit is equivalent to a U.S. dollar at the present official gold price. It represents any of the currencies of the 17 countries that were members of the defunct European Payments Union, and so long as any one of these currencies maintains its value in terms of gold a holder of these units holds the equivalent of an unchanged weight of gold. (However, this provision is not equivalent to a "gold clause", for devaluation of currencies in terms of gold would almost certainly involve all the 17.) Whether Europe is yet ready for such unregulated internationalism is debatable. A less controversial form of financial internationalism was proposed by eminent German bankers, Herr Hermann Abs, chairman of the Deutsche Bank, and Herr Alwin Münchmeier, partner of Bankhaus Müuchmeier and Co., at the recent bankers' conference in Munich. The Germans have conceived the idea of a consortium of private banks that, drawing on the resources of their particular territories, would co-ordinate the two basic factors in the capital market, lending and borrowing. Such financial machinery cannot overcome a basic deficiency of capital, but it can enable the market to use the available resources efficiently.

Current News and Comment

Free Export Zone in Haldia

A scheme for establishing a "free export zone" in Haldia with a view to stepping up exports of engineering goods and other manufactures was outlined by Mr. C. E. Cargin, chairman of the Indian Engineering Association, at a Press conference in Calcutta on Tuesday. He said that exports of engineering goods constituted just 1½ percent of India's total exports. In spite of all incentives, the country's competitive strength is limited since production costs are high because of heavy direct and indirect taxation, and idle capacity resulting from shortages of raw materials, fuel, power, transport, electrodes, spare parts and components, and other items. A free export zone in Haldia with a substantial measure of economic freedom and tax relief will facilitate the establishment of export-orientated industries and also attract foreign enterprise. All units in the Haldia zone, according to the scheme, would be free to import either from India or from foreign countries, any items required for production and they would all be duty-free.

The essentials of the scheme are: (a) The zone would be outside the Indian home market, and any goods which are manufactured or assembled there would be freely exported to all countries. To the extent that the goods are "exported" to India, they must face the same restrictions, duties, etcetera, as are applied to goods imported from any other foreign country. (b) Foreign as well as Indian firms would be permitted, with the minimum of restrictions, to set up factories and assembly plants in Haldia. (c) Imports of capital equipment, spare parts, components and raw materials required for production would be freely permitted and would be free of any duty or tax. Such imports could be from India or from any other country with whom India has trade relations. (d) Employers in the zone would be free to recruit men either from India or from abroad. (e) All supplies (materials, components, electric power, etcetera) from the Indian hinterland to the zone would be regarded as exports, and would qualify for all export concessions, including special export prices and duty drawback. (f) There would be a substantial measure of relief, or exemption, from direct and indirect taxation within the zone. However, profits repatriated from the zone to India or to any other country would be subject to taxation at the rates prevailing in the respective countries. The general tax structure should not be less attractive than similar areas elsewhere in the world (Hongkong might be taken as a model), and the tax concessions should apply equally to Indian and foreign persons or firms operating within the zone.

The establishment of such a free export zone would bring several benefits. Indian firms would be given the opportunity to show, in fair competition with foreign firms, what they can do to make their products competitive once free access is given to raw materials, components and other items at world prices, and conditions are provided for full capacity working. The advantages of operating in Haldia would induce more firms to enter the export business and existing exporters to expand their operations. The conditions of economic freedom combined with a liberal licensing policy would attract foreign firms to Haldia. Most of the requirements of these new units such as structural work, materials, components and electric power would be supplied by India, thus giving the country an export market right on its door-step and a useful source of foreign exchange. "Invisible exports" to the zone like banking, insurance and similar services would also earn foreign exchange.

Besides, foreign manufacturers would be encouraged to stock within the zone a large range of items which they hope to export to India. This would help the established and actual user importers in India, who would not only be able to inspect the goods before placing orders but would also be able to secure early delivery. Prompt supply of imported spare parts and components would be of great help to industry within the country and there would be other economies in that firms would no longer need to carry large stocks of spares and components. The intending exporters to India may also find it worth while to set up units in Haldia for assembly, partial manufacture or finishing of the items which they hope to export to India. Packing materials used would also be Indian. Thus the items imported into India would have some indigenous content.

Mr. Cargin stated that the Indian Engineering Association had already submitted the scheme to the Central Minister for International Trade, and would meet Mr. P. C. Sen, Chief Minister of West Bengal, on Saturday to discuss the proposals. It is understood that assistance from the World Bank will be forthcoming for the development of Haldia as a port and for developing communications with the hinterland.

Export Promotion Bottlenecks

On the basis of the figures for the first six months, it is expected that India's exports in 1963 would total Rs. 720 crores, compared with Rs. 674 crores in 1962, and Rs. 660 crores in 1961. But the exports during the current year would be still below the target of Rs. 745 crores set for 1963. At this rate of increase, it is not likely that the third plan target of Rs. 3,700 crores will be realised. It is, therefore, necessary to intensify the export drive. Furthermore, the traditional markets will have to be maintained. India's exports to Britain, for example, have declined from nearly 24¾ percent of the total in 1961 to 23¼ percent of the total in 1962, and are expected to be less than 20¼ percent of the total in 1963.

The three-day meeting of the chairmen of export promotion councils in New Delhi last week emphasised the fact that one of the causes for the slow growth in Indian exports—and for that matter, in the exports of all the developing countries of the world—was that the G.A.T.T. did not make any sincere efforts at enabling the poorer countries to expand their export trade. While high tariff walls were not being lowered by the developed countries, any efforts made by the developing countries to subsidise their exports to make their prices competitive were frowned upon. It was rightly emphasised that as long as the developing countries did not evolve a common policy for the export of primary commodities, in which they hold a near-monopoly, it would be difficult to bring realism to the trade policies now being followed by some industrialised countries.

For India individually, it would be necessary to make more concerted efforts at export promotion. A more effective implementation of the export promotion and quality control schemes will have to be answered. One of the main difficulties which has hampered the working of export promotion councils in India is inadequate finance. While the code of grants-in-aid has provided for meeting the expenses on trade delegations, study teams sent abroad, export publicity and opening of foreign offices, it has not provided for expenses incurred on quality control and inspection, and trade fairs held abroad. It is gratifying that the code of grants-in-aid will be changed to make a provision for these items of expenditure also. It is also a wise decision that in future, the Government will not insist on the export promotion councils to provide matching funds for grants given on market surveys, but will meet the entire expenses incurred on these projects, at least in the current financial year.

In order to increase exports, India's trade representatives abroad should be able to provide market information to exporters at nominal charges. Unfortunately at present, Indian trade representatives are more concerned with political and diplomatic work. There is also too much delay in granting licences for importing raw materials and machinery for the manufacture of products contracted for exports. The quality of export goods is not always according to specifications in spite of quality control schemes. The manufacturers are not in all cases aware of consumer tastes in foreign countries. All these defects will have to be removed to give a real fillip to Indian exports.

The Economy of Northern Region

The regional conference organised last week in Kanpur by the Federation of Indian Chambers of Commerce and Industry highlighted the fact that the northern region consisting of Delhi, Punjab, Rajasthan and Uttar Pradesh is backward compared with the other three regions of India. The former has nearly 25 percent of the country's population, but it has only 13¾ percent of the factory-employed workers—a little more than 500,000 out of 4 million—and a little more than 14¼ percent of the total industrial units, that is, 7,313 out of a total of 51,000. Another important fact which the conference emphasised was that even inside the northern region, there have been disparities of industrial and economic development. While Punjab and Delhi, and to a certain extent Rajasthan, have made much headway in the field of industry, Uttar Pradesh has not made any worthwhile progress. Mr. Padampat Singhania, president of the Marchants' Chamber of U.P., in his welcome address pointed out that whereas the *per capita* income in other parts of the country had increased by 17.8 percent over the past ten years, it had not risen appreciably in U.P. Another disquieting fact, according to Mr. Singhania, is that whereas the *per capita* output of industrial and agricultural commodities in other parts of the country has increased by 40 percent to 150 percent, it has risen over the same period in U.P. only by 3 percent to 10 percent.

What is the cause of this relative backwardness of this region and how could it be overcome? The conference tried to answer the important question. According to the F.I.C.C.I., one of the causes is the long distance from the centres of coal and steel supply and the ports. The Federation has decided

to make an expert study of the feasibility of equalising freight on the movement of raw materials into this region and of manufactured articles to the ports of export. This study will show ways and means of removing the handicap of the northern region.

Another important cause of the industrial backwardness of this region is that industries suffer from certain peculiar handicaps. The sugar industry in the northern region, for example, is affected by the low sucrose content of sugarcane. The cotton textile industry is suffering, because it produces mostly medium and coarse quality cloth in which profit margins are low and raw cotton has to be obtained from distant places; furthermore, the machinery in most units is in immediate need of replacement and renovation. The F.I.C.C.I. conference did not emphasise this fact, but another cause of slow progress of the northern region, especially of U.P., is that the State Governments have not taken much interest in industrialisation. There is also political instability, especially in the Punjab and U.P., where the leaders are more occupied with intrigues and internal fights than with industrial development. This has slowed down industrial progress.

Checking Tax Evasion

The Central Finance Minister, Mr. T. T. Krishnamachari, told the conference of Income Tax Commissioners in New Delhi recently that the present system of tax collection had led people "to adopt doubtful methods". No reliable estimate of tax evasion in India is available, but it might be anything between Rs. 30 crores and Rs. 100 crores, or even more. It is not only some big business men but also a large section of the community in the lower income groups like shopkeepers and petty traders who escape the tax net. It is to some extent true that the adoption of a human approach by the tax officials to their unpopular task will improve matters, and there might be some reduction in tax evasion. It is also true, as Mr. Krishnamachari emphasised, that a simplification of the income tax law would help matters. But one of the main reasons for evasion is excessive taxation. What is, therefore, necessary is a rationalisation of the fiscal system so as to make the incidence of taxation more fair and equitable.

Another factor, which Mr. Krishnamachari did not touch, is that income tax offices are generally understaffed. The number of assessees is increasing at the rate of 50,000 to 100,000 a year, and the work of income tax officers, inspectors and others at lower levels has been increasing. But their number has not correspondingly gone up. Mr. Krishnamachari's advice to income tax officers that they should go round their localities more frequently may not help in preventing tax evasion, even if they are given more powers, unless the number of officers, inspectors and other staff is adequately raised.

Labour Discipline on Assam Gardens

In his address from the chair at the annual general meeting of the Assam Branch India Tea Association, held recently in Dibrugarh, Mr. J. P. Hannay, expressed satisfaction that industrial relations had improved in the tea gardens and only eight minor strikes were reported by the members last year. There were, however, 11 cases of assault on management and staff and three threatened cases of assault, which marred an otherwise happy picture. These latter incidents were deplorable as well as disgraceful. A committee has been appointed to enquire into lawlessness on tea estates, and he hoped that it would give full weight to the industry's contention that the estates should be rid of people dismissed for serious offences; otherwise the danger of lawlessness would persist. The industry is always willing to listen to workers' legitimate grievances provided they are represented in a lawful and constitutional manner. The Government has been forcing heavy burdens on the industry in the name of labour welfare. The industry itself is keen to promote the welfare of its labour, but a point may soon arrive when it will be outside its capacity to bear any more burdens. In this connection, Mr. Hannay referred to the housing programme for tea estate labour. As it is, the housing programme is very expensive. Yet the Assam Government has prescribed new specifications which would cost the member gardens as big a sum as Rs. 3,005 an acre of registered area under tea, and would, therefore, be well beyond their capacity. Mr. Hannay pointed out that the Central Government's recently appointed working group has already completed its investigation on the question of tea labour housing, although the findings remain to be published. The Assam Government should have awaited the publication of the report instead of rushing with its own specifications in complete disregard of the financial consequences for the industry.

Mr. Hannay had some good things to say about the activities of the Tea Board. It has been doing "truly excellent work" in assisting in the education of the children of staff and labour. At the moment, a total of over 5,000 educational stipends are being paid and approximately 1,800 children from Assam tea estates are benefiting. In some tea areas, great progress has been made in organising scouting on estates, an activity in which the Tea Board is also keenly interested. Mr. Hannay praised the Assam Tea Plantations Employees Provident Fund as a "most worthwhile piece of labour welfare legislation." The amount now invested out of this fund by the Assam Government on behalf of all tea estates staff and labour amounts to over Rs. 25 crores.

Automation in Ships

The availability of monitoring and control equipment is encouraging shipowners and ship designers to include such equipment in new installations concerned with propulsion, auxiliary services, cargo care (including refrigeration) and cargo handling. The principal reasons for this comparatively new line of thought in the marine field are economy or safety, or both. The Lloyd's Register of Shipping in a memorandum entitled *Automation in Ships*, issued to shipowners and others, draws attention to certain features of centralised and automatic control systems, and underlines the basic requirements which are necessary in the interests of reliability and efficiency.

This memorandum, it is believed, is the first to be issued by a classification society dealing with the problems facing the shipowner in deciding whether or not to fit such control systems. The first part offers him guidance by discussing the factors which might influence his decision in such matters as: first cost of the ship, length of route, profitability of the trade, possibility of maintenance in ports visited, normal turnround time in port compared with the time necessary for maintenance, relative cost of maintenance by ship's staff or by shoreside staff, and statutory regulations on manning scales. Each of these matters influences the others and all of them are relevant to the efficiency and cost of operation, and maintenance of ships. The maintenance task is increased in a ship with centralised controls since, in addition to the normal maintenance of the machinery, there is the added task of looking after the monitoring and control equipment. There is no clear-cut answer to this problem which can be applied to all types of ship. Each ship must be considered as an individual case, but it is clear that there are some ships where the fitting of such control systems would not be appropriate. For those ships in which centralised control systems are installed the first priorities are: (a) reliability in main plant items, (b) reliability in control and monitoring equipment, (c) careful planning of the whole installation as an integrated system and (d) adequate emergency means for bringing the ship home on hand control.

The second part of the memorandum contains a number of recommendations which, it is considered, should be observed in the construction and installation of monitoring and control equipment. As experience of the behaviour of these systems is obtained it will be possible for Lloyd's Register of Shipping to formulate classification rules, but in the meantime, it is hoped that the recommendations in the memorandum will serve as a useful guide. The Lloyd's rules governing the survey of machinery during construction have, however, been amended to require that descriptions of schemes be submitted for approval "in order that the effect of the arrangements on the safety of the ship and machinery and the preservation of the cargo may be assessed".

"CAPITAL CHRISTMAS" TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1963 Fund:

Rs. 20
Dr. S. Radhakrishnan, President of India.

Rs. 250
The Imperial Tobacco Co. of India Ltd.

Rs. 80
Office Staff, Burmah-Shell, Ahmedabad.

Rs. 50
National & Grindlays Bank Ltd, 19 Netaji Subhas Road, Calcutta.

Rs. 25 each
Mr. & Mrs. Maneklal Premchand, G. L. Co., Richardson & Cruddas Ltd, Bombay.

Rs. 20
D. T. Eldred

Rs. 11

CRUELTY TO DOGS

"WE are certainly spared the horrible street scenes of only a few years ago, when the Commissioner sent abroad his servants armed with clubs, to kill, at their discretion, all stray dogs they happened to meet, but the present system carried out under cover of darkness is also a highly objectionable and dangerous one. The club has been discarded and poison substituted. The servants or emissaries of the Commissioner march out at night fully furnished with pieces of poisoned meat, and woe betide any poor dog, however respectable, who falls a victim to the seductive gift of the irresponsible poisoner. Some years ago, I lost a dog friend for whose character I had a greater respect than for that of many a man I know, through either the wilful act or the culpable stupidity of the Government poisoner. There have been many similar instances. Only the other day, a gentleman in Clive Street, lost his pet dog by it being offered, and unsuspectedly taking the Commissioner's poisoned meat. Of course, the present Commissioner of Police did not originate the present stupid method. He is simply carrying out in a perfunctory manner the methods of his immediate predecessors. But surely the time has come for abandoning that dangerous game, and for adopting the more excellent and humane system in working order elsewhere. And towards this end, the S.P.C.A. could work in hand with the police authorities if we had a Dogs' Home established in Calcutta, with trained expert servants for catching the apparently ownerless animals: conveying them to the Home: keeping them there for a short specified time to give owners the opportunity of recovering their lost dogs, and then afterwards selling the unclaimed worthy animals, and allowing the unworthy to scrape through the lethal chamber to happier hunting grounds than those afforded by the streets and lanes of Calcutta. Let us recognise that dogs have their rights, in matters of life and death, as well as Commissioners of Police and other of God's creatures, and that the present system of poisoning is a brutal and inhuman practice, as well as a highly dangerous one to others than dogs. I will be glad if Mr. Lees can now see his way to proceed with his schemes. The Madras people will be able to give him copies of all their plans and specifications and estimates. I understand he knows where to obtain a suitable site".

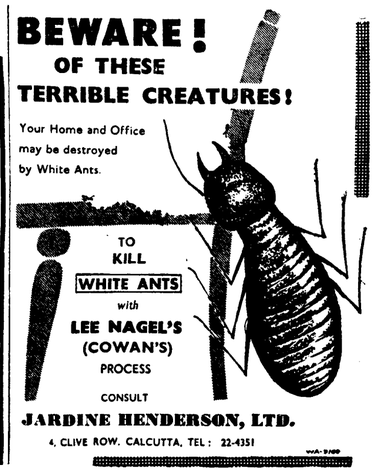
A Ditcher's Diary

I DISCERN SOME DISAPPOINTMENT HERE AND THERE that the first two days of the Lok Sabha's current session failed to produce the fireworks almost everyone had taken for granted. I enjoy the cut and thrust of animated debate as much as anyone else; the embarrassment on Tuesday of Messrs Nanda and Bahadur did them no harm at all. Mr. Nath Pai's crack about the Sadhu Samaj keeping track of Mr. Daniel Walcott and his Piper was entirely parliamentary; the manner in which the Home Minister sought to dismiss the unexplained escape was wholly unconvincing. That the debate took place at all was to the Lok Sabha's credit rather than the Government's. If the Walcott affair was Parliament's chief present to start with, others will no doubt follow. I shall be surprised if Dr. Lohia has not a sensation or two up his sleeve. But, I suspect, there is something not quite right in judging a parliamentary session by the number of stunts or clashes it produces. The country's supreme legislature is meant for serious discussion on serious subjects at a serious level. This does not, of course, mean sustained dullness; humour, alas, is seldom in the House. It seems to me that parliamentary correspondents in particular and journalists in general tend to assess Ministers mainly as performing fleas. Mr. S. K. Patil, for instance, gets more space even if he has said little of substance, just because he has, at a certain level, amused the House. I like a good parliamentarian; but there is danger, as literary critics know, in concentrating too much on form at the expense of content. There is a view that the standard of debate in Indian legislatures would improve if members did not have to struggle with the English language. I wonder. But all too often praise goes to the man who is easier with English than some others. Dr. Lohia's memorable three-anna performance was in Hindi; in Madras, I am told, some D.M.K. members speak excellent Tamil. But only English, I suggest, has parliamentary norms that are recognised in India.



WHEN THE PRIME MINISTER SPOKE SOME TIME AGO in justification of his erstwhile very heterogeneous Government, I wonder if he knew that, some years ago, a young British poet had devised an appropriate name for his aimless mixed polity. I myself discovered it recently; the word is "fascidemoshevism". The inventor was Roy Campbell. The German-looking word, it is hardly necessary to explain, contains bits of fascism, democracy and bolshevism; and I suggest in India today we have a little of all three. Long before Pakistan's Mr. Bhutto saw fascism in India, Mr. Nehru spoke of its incipient existence when he was irritated in Parliament by some Swatantra criticism; it must be slightly difficult for him now to contradict Mr. Bhutto, although I personally do not think that fascism is of any importance here. Of the world's largest democracy we have, of course, heard all we need to and more. Mr. Rajagopalachari at any rate sees nothing but unmitigated bolshevism in the mildest piece of economic planning. To keep moral judgment out of the debate, I believe that up to a point and individually each of the three systems can work reasonably efficiently. An amalgam of all three? Well, in theory, the three cannot possibly co-exist; fascism or bolshevism is surely a negation of democracy. In the world of realities, however, we all know, contradictions do co-exist—leading, as in India, to what phrasemaker Galbraith called "the greatest living example of functioning anarchy". (Perhaps I haven't got the words right but the sense is correct.) I will now surprise you by saying that I rather like it this way. I am rather scared of a society that is too earnest, too purposeful. How about a full democracy? As a Dickens character said about something else, "there ain't no sich thing".

WHENEVER MY OPINION HAS BEEN ASKED ABOUT THE best way to preserve a newspaper's editorial independence I have always advised the formation of a trust. This is the device which has been adopted widely in Europe and the United States to eliminate proprietorial interference, and not the least of the virtues I have always ascribed to it is the irrevocable public proof it provides that the character of the paper is not subject to the whims of any one individual, be he either employer or employee. Now I am not so sure. Not after the way in which Mr. Ian Gilmour, the owner of that adornment of British journalism, the *Spectator*, has been able to sack its editor and promise an end to the paper's political independence by appointing Mr. Iain Macleod, M.P., in his place. The circumstances of Mr. Iain Hamilton's dismissal—he learned about it first when it was reported in another newspaper—were, as Mr. Gilmour admitted, unspeakable, and it is impossible to find words to express the contempt one must feel for whoever was responsible. And the two-faced behaviour of Mr. Macleod—who had only a few days previously declined an invitation from Mr. Hamilton to contribute to the paper on the plea that he did not think he was ready—must destroy for ever the suspicion that he might have made a good Prime Minister. But what astonishes me is the complete impotence of the *Spectator's* trust to block the move, although one of them, Mr. Brian Inglis, himself a former editor who has resigned from the board of directors in protest, and another, Mr. Victor Mishcon, a one-time chairman of the L.C.C., have both expressed themselves very strongly in public, the latter claiming that he would never have approved of Mr. Gilmour becoming owner in 1954 if he had suspected anything like this could have happened. It would appear in fact that the *Spectator's* trust has the power merely to decide who shall *not* own the paper; once a new proprietor has taken over there is nothing to prevent him doing what he wants with editorial policy or with the editor. And what is even more startling, this is apparently true of most of the other newspaper trusts in Britain, including perhaps the most famous of them all, *The Times'*. But not, I am glad to learn, the *Economist's*. That one is able genuinely to preserve the independence of the editor, and in future when I am asked for my opinion I shall point it out as the best possible answer. Or, alternatively, I shall go further and suggest that ownership itself should be vested in the trust. That way there can be no *chalakki*.

BY NOW EVERYBODY IS ACCUSTOMED TO THE FACT that Mr. Khrushchev is an incorrigible boaster. The trouble is that so far every one of the extravagant claims he has made for his country and its prowess has turned out to be true when put to the test. That is why I am prepared to believe him when he says the Russians now have an anti-missile missile which will hit a fly in space. But I still have my doubts about his statement that Russia will be "the first country in the world by 1970". Apart from admiring the nerve it takes to imply any such thing in a year when the persistent failure of Soviet agricultural policy has at last been revealed for everybody to see, I find it impossible to accept the view that Russia can catch up with the United States before 1970, or even within this century. I know there is a discrepancy in populations of about 50 million or so in Russia's favour, but even then it would mean that *per capita* income there would have to be raised to about 75 percent of the U.S. level from its approximate 25 percent, to put the U.S.S.R. ahead in national wealth. Assuming that the U.S. *per capita* income goes no higher than it is now, such an increase is clearly out of the question for the Russians by 1970. Indeed, I doubt whether even the current rate of Soviet industrial progress can be maintained much longer, leave alone the agricultural. I say this because, presumably, even a communist power is not going to base its national income calculations on the output of goods nobody wants, and to produce the other kind will require sweeping changes in the structure of Russian industry. The pace at which decentralisation and diversification has been going on in the Soviet Union, and the rate of expansion of the commercial function which is indispensable if modern consumer goods are to be efficiently distributed, have both been singularly slow compared with elsewhere. So I must reject Mr. Khrushchev's "first country" claim. I know he has never been proved wrong

NALIN

yet. But then, when it comes to judgments about the Soviet economy, neither so far have I.

ONLY THE INCORRIGIBLY INNOCENT OR THE DESIGNEDly stupid can have gone genuinely hysterical over recent Indo-Pakistani exchanges about espionage in this country and that. I am quite certain the Government of India is right in saying that Pakistan has a large army of spies in India and that some of them may well be in the Pakistan High Commission in Delhi. Let me add, with my usual disregard of discretion, that, I hope, there are, at least, as many Indian agents in Pakistan. Espionage seems still the unowned mistress in every foreign mission's harem, for the obvious reason that a harem loses a great deal of its charm and efficacy by being made obvious: the half-concealing, half-revealing veil is the harem's appropriate uniform. I once asked a military attaché in an Indian mission abroad what, roughly, his functions might be. He was rightly, as vague as he could be. It was, I now know, unfair to single out the military attaché but I did, at the time, toy with the idea of a recognised Intelligence Attaché, *alias* spy, in every foreign mission. Why not? That is the world the way it is. More significant, I suggest, are the exchanges of spies, alleged or otherwise. When Shri A is swapped for Janab B, as has happened, or Mr. C for Comrade D, you know that the international network of intelligence is working all right. Disclosures take place only when somebody has not played the game according to its unwritten rules and, more important, got caught. All secret services are lucky if they have no more than two percent of their agents working as double agents and if they can make sense of .005 percent of the reports pouring into their trays. International espionage is a sort of puppetry in which the puppets must be taken as living figures. I don't mind; but, when a string gives way, the conditioned audience must not go berserk. The choice, we should remember, is between correctitude and ineptitude. India, I am glad to be able to report, is pretty good in her intelligence in some countries.

WHEN ON MONDAY MR. J. R D. TATA PRESENTED to Mr. Raj Bahadur a cheque for Rs. 66.69 lakhs, Air-India's dividend for 1962-63, both giver and receiver were all smiles. A happy event it undoubtedly was, for few are the country's nationalised units that are not in the red. For Mr. Tata A.-I.'s record is something of a personal triumph; he makes bigger profits elsewhere in his empire but it is in Air-India that he has a sizable part of his heart. But how did Mr. Raj Bahadur feel on the occasion? For the Government the dividend was, in the strictest sense of the term, "unearned profit". Although it is possible to congratulate the Government for granting the Corporation a considerable degree of autonomy, Parliament has frequently been ignorantly and stubbornly critical of Air-India, especially its highly intelligent advertising campaign. On the same day, Monday, members of the Lok Sabha demanded wider powers for the proposed parliamentary Committee on Public Undertakings. The latter include Air-India; and it seems to me more than likely that, in a few years' time, Mr. Tata, or his successor, will be handing over a very much smaller cheque to Mr. Raj Bahadur, or his successor. Many of India's public corporations have shown that they need a "watchdog" and more; Air-India, let us remember, is an exception. In a service like Air-India's, too much official control can very easily have a stifling effect; and in the highly competitive business of international civil aviation officiousness simply will not do. One has only to compare Air-India with the Indian Airlines Corporation to see the difference. What makes the difference, when both are publicly owned? This is where, I suggest, the personal equation takes precedence over the system, any system. But for the stamp of Mr. Tata's individual personality, Air-India would have been a very different kettle of fish. I know I will be told that it is unhealthy for an organisation to be excessively dependent upon personalities; but an organisation is not healthy either if it does not use such unusual personalities as it may be lucky enough to possess. The Parliament of the Republic may well be wise to leave this one Maharaja alone.

THE DITCHER

Guide for Investors

JOINT-STOCK COMPANIES REDUCE GILT-EDGED HOLDINGS

(BY A SPECIAL CORRESPONDENT)

GOVERNMENT securities have been dull but steady in recent weeks. There has been an adequate supply of funds in the inter-bank market, but banks are unlikely to take much interest in securities due to the approach of the busy season. They are also believed to have invested heavily in recent issues of State electricity boards and co-operative land mortgage banks. The support from the Life Insurance Corporation has decreased as it seems to be keen on diverting funds to the underwriting of new issues. So the resumption of sales of the two new Central loans—4 percent 1969 and 4½ percent 1986—by the Reserve Bank has had no appreciable effect.

The steadiness in gilt-edged securities over the past year or so cannot give rise to complacency. It is due largely to the support of the Reserve Bank, combined with institutional buying. Excluding the former, the largest buyers have been banks, provident funds and insurance companies which are statutorily required to invest substantial funds in securities. As far as private individuals are concerned, they have shown virtually no interest. Although the success of the Government borrowing programmes in recent years has been ensured by support from Government and semi-Government bodies, banks, provident funds and insurance companies, there has been no serious attempt to make securities popular among private investors.

Two important factors have contributed to the apathy of private investors. First, the interest on securities is much less attractive than the return available on other investments. Secondly, inflation leading to an erosion in the purchasing power of the rupee has posed the threat of a depreciation in the value of Government securities.

The latest annual survey, fourth in number, of the ownership pattern of the rupee debt of the Central and State Governments in 1961-62, made by the Economic Department of the Reserve Bank, corroborates these conclusions. The total marketable rupee debt of the Central and State Governments has risen from Rs. 2,784 crores in 1960-61 to Rs. 2,977 crores in the year ended March 1962. It constitutes nearly 38.2 percent of the total public debt of these Government as on 31st March, 1962.

The net absorption of securities by the public since 1952-53 was reversed in 1960-61, when there was a disinvestment of about Rs. 64 crores, although the net market borrowings of Governments amounted to Rs. 134 crores in that year. But in 1961-62 and 1962-63, there was again a net absorption of securities by the public. Of the net market borrowings by the Government amounting to Rs. 137 crores during 1961-62, only Rs. 36 crores was absorbed by the public. The net public absorption of the securities rose sharply to Rs. 89 crores during 1962-63 due to the higher yield offered on the new loans floated by the Central and State Governments.

As for the ownership pattern of the total Government debt, the Reserve Bank has emerged as the principal holder in 1961-62 as in 1960-61. Its share in the total debt has advanced from 25.4 percent at the end of March 1961 to 28.4 percent in March 1962. The holdings of the Central and State Governments have declined from 9.6 percent to 9.1 percent. Those of commercial and co-operative banks, which had risen from 24 percent in December 1957 to 28.4 percent in March 1960, have fallen to 20.2 percent in March 1962. Holdings of insurance companies (the Life Insurance Corporation accounting for the bulk) have risen from 13.9 percent in March 1961 to 14.1 percent in March 1962. Provident funds' holdings have advanced from 5.5 percent in December 1958 to 8.8 percent in March 1962. The holdings of financial corporations, of the Reserve Bank on account of "others" and of non-residents, have been insignificant.

The investment portfolio of the residul category "others", which accounted for 13.9 percent of the total debt at the end of March 1962, shows a decline of Rs. 25 crores to Rs. 502 crores over the year. Other categories like joint-stock companies, local authorities and individuals, have reduced their holdings over the years. Joint-stock companies have been liquidating their investments since 1960 as they have used the funds for modernisation, expansion and diversification. The upward trend in market interest rates, combined with the rising cost of borrowings, has contributed to the liquidation of Government securities.

Larger Interim from British Paints

THE ordinary shares of British Paints (India) Ltd have been steady around Rs. 22.50 on payment of a higher interim ordinary dividend of 7.5 percent, taxable, for 1963, compared with a taxable interim dividend of 6.25 percent for 1962. The total dividend for 1962 amounted to 10 percent. The rise in the interim distribution is in pursuance of the Company's undertaking given last year that the question of paying more to shareholders would be considered at the time of paying the interim dividend for 1963.

When the super profits tax was imposed, the Company had provided a sum of Rs. 4.70 lakhs for it in the 1962 account, but the liability on this account went down substantially to only Rs. 11,000 due to the modification of the levy. In view of the fact that the resin factory has been working profitably and that the Company has taken steps to extend this factory and install modern equipment, hopes have been raised of a higher total dividend for 1963.

Jay Engineering Cuts Dividend

THE profit of the Jay Engineering Works Ltd has declined from Rs. 58.79 lakhs for 1961-62 to Rs. 41.25 lakhs for the year ended March 1963, after transferring Rs. 32.51 lakhs (against Rs. 31.47 lakhs) to depreciation. Despite bigger sales at Rs. 10.44 crores (against Rs. 9.16 crores), the profit has fallen because of rises in production costs. The prices of raw materials have been pushed up by higher excise and import duties, and increases in railway freight. The loss incurred by the Hyderabad factory has also been a contributory factor. Furthermore, the working of Jay Engineering has been interrupted by power shedding. The taxable ordinary dividend has, therefore, been cut from 15 percent to 10 percent and absorbs Rs. 15.19 lakhs. The yield works out to 4.6 percent at the present price of Rs. 21.87 a share of Rs. 10 each. Taxation absorbs Rs. 15.20 lakhs (against Rs. 26 lakhs) and development rebate reserve Rs. 5.40 lakhs (against Rs. 2 lakhs). General reserve is allocated Rs. 50,000 (against Rs. 3 lakhs), leaving a carry-forward of Rs. 4,896, against Rs. 9,036 brought in.

The directors mention that the Hyderabad factory has not yet become profitable. The Industrial Credit and Investment Corporation has sanctioned a loan of Rs. 60 lakhs against a charge on the Hyderabad assets. An interim sum of Rs. 30 lakhs has been drawn from the loan, but the entire loan could not be drawn due to difficulties in transferring the title to land. Usha Industries Ltd, a subsidiary Company in Ceylon, has started assembly operations. The working of this subsidiary should be favourable for the current year. Exports of the Company's products have risen by 20 percent to Rs. 1.1 crores. The recent revision in the export incentive scheme, which permits exporters to sell a part of their import entitlements, has helped to reduce the loss on exports.

Gammon India to Raise Capital

THE managing director of Gammon India Ltd, Mr. James Bates, informed the shareholders' annual meeting on 14th November that the Company proposed to raise additional capital of Rs. 73 lakhs made up of Rs. 23 lakhs in equity shares and Rs. 50 lakhs in 9.3 percent redeemable cumulative preference shares in order to finance the Company's growing business. The value of contracts completed had been increasing year after year. It was Rs. 3.22 crores in 1960-61, Rs. 4.32 crores in 1961-62 and Rs. 5.25 crores in 1962-63. The turnover for the first seven months of the current year is placed at Rs. 3.40 crores. The total value of work now on hand to be completed in the next three years is stated to be around Rs. 28 crores. Mr. Bates said that the Company's activities were expanding so rapidly that bank borrowings could not be relied on to meet all the financial needs. Equity shares worth Rs. 23 lakhs are proposed to be offered to existing shareholders in the proportion of one new share for every five held, for which the Company has already made an application to the Government. The rights shares might have to be offered at a small premium if the Controller of Capital Issues insisted on it. The proposed issue will raise the Company's equity capital from Rs. 1.15 crores to Rs. 1.38 crores. The preference capital of Rs. 50 lakhs is to be offered for public subscription.

Cooper Engineering Results Impress

COOPER Engineering Co. Ltd reports highly encouraging results for the year ended June 1963. Sales are up by about 35 percent from Rs. 1.94 crores to Rs. 2.62 crores and the gross profit has more than doubled from Rs. 11.05 lakhs to Rs. 22.97 lakhs. After providing Rs. 18.69 lakhs (against Rs. 15.49 lakhs) for depreciation and Rs. 3.92 lakhs (against Rs. 4.40 lakhs) for development rebate reserve and deducting other prior charges, the year's working shows a net profit of Rs. 11,375, against a loss of Rs. 9.09 lakhs in 1961-62. Even though the net profit is negligible, the directors have stepped up the dividend from 7 percent to 8 percent which absorbs Rs. 7.23 lakhs, against Rs. 6.28 lakhs. The dividend for 1962-63 is to be paid out of general reserve; in the preceding year, the Company has had to withdraw as much as Rs. 14.62 lakhs from the reserves to provide for the payment of the dividend.

The impressive improvement in the Company's performance in 1962-63 is due to the rise in the sales of diesel engines since September 1962 in contrast to the recession in business in the preceding year. The introduction of a new vertical high-speed engine and the considerable progress made in the manufacture of machine tools also helped to swell the Company's turnover. Sales of diesel engines rose to a record high as a result of Government grant of *taccavi* loans to farmers for the purchase of such engines. The vertical high-speed engines have also been included in the approved list for *taccavi* loans and the management is hopeful of a further improvement in the sales of these engines during the current year. The production of shaping machines is said to be nearing the licensed capacity of 400 machines a year, and in view of the continuing high demand, the Company has secured Government permission to raise the capacity by 50 percent to 600 machines a year. Considerable progress, it is stated, has been achieved in solving some of the initial problems connected with the manufacture of planing and slotting machines, the production of which is

being stepped up to meet the existing high demand.

It is hoped that Government approval will be received shortly for the manufacture of gear hobbling machines in collaboration with a reputed West German firm. The I.C.I.C.I. has sanctioned a loan of Rs. 18.5 lakhs in free foreign exchange to implement the scheme for the production of vertical turret lathes in collaboration with a West German firm. The disappointing feature of the year's activity was the setback in sales of powerlooms due to official policy of suspending further issue of permission to the prospective consumers of ordinary powerlooms which obliged the Company to stop production of these looms from March 1963. It is trying to establish the manufacture of automatic looms in collaboration with Draper Corporation of the U.S.A. Diesel engine exports suffered a setback during the year due to the change in the import policy of the United Arab Republic —the main market for the Company's products. There was, however, an encouraging increase in the demand for machine tools from foreign countries, including some of the technically advanced European countries. The Company has received permission to raise additional capital of Rs. 45.20 lakhs in equity shares of Rs. 100 each at par. These shares are being offered to the existing shareholders in the ratio of one new share for every two held. The I.C.I.C.I. has agreed to underwrite equity issue worth Rs. 20 lakhs.

Smith, Stanistreet Cuts Dividend

THE ordinary shares of Smith, Stanistreet and Co. Ltd have been sluggish around Rs. 12.31 due to the cut from 25 percent to 22.5 percent made in the ordinary dividend, subject to tax, for the year ended June 1963. The yield works out to 9.1 percent at the present share price of Rs. 5 each. Although the profit has risen from Rs. 11.60 lakhs for 1961-62 to Rs. 13.17 lakhs for 1962-63 after providing Rs. 1.41 lakhs, against Rs. 1.39 lakhs for depreciation, tax provision has been higher at Rs. 7.16 lakhs, against Rs. 5.50 lakhs.

Sales rose from Rs. 1.80 crores to Rs. 2.22 crores. The improvement in turnover has largely been due to various health schemes promoted by the Government. The different preparations of the Company have been well received. It has adopted vigorous sales promotion measures. It is proposed to introduce a wide range of cosmetics to take advantage of the rising demand. The caffeine plant could not work fully due to the shortage of equipment and raw materials, but the rated capacity is likely to be worked in the current year. The collaboration with Philips India has been terminated since the latter Company has started its own manufacture. The capacity thus rendered surplus will be used to raise the production of the brands owned by Smith Stanistreet. Active support is being received from other principals. The ordinary share capital of Rs. 20 lakhs is supported by reserves of more than Rs. 17.86 lakhs. The net block amounts to Rs. 13.61 lakhs.

Tube Investments of India Maintains

THE directors of Tube Investments of India Ltd have maintained the dividend at 10 percent for the year ended July 1963. While the gross profit, after providing for depreciation but before making provision for development rebate reserve and taxation, has declined by about Rs. 10 lakhs from the previous year's level, the net profit is higher due to the substantial reduction in the provision for development rebate reserve, compared with that of the previous year. A fall in production, a substantial increase in the cost of raw materials, a severe cut in the value of import licences issued to the Company and the shortage of indigenous raw materials, coupled with the supplies not being of the requisite quality and specifications, were some of the problems facing the Company during the year.

The Company's net profit amounts to Rs. 4.08 lakhs, after providing Rs. 40.43 lakhs (against Rs. 37.11 lakhs) for depreciation, Rs. 3.22 lakhs (against Rs. 20.76 lakhs) for development rebate reserve and Rs. 45.25 lakhs (against Rs. 40.60 lakhs) for taxation. With Rs. 4 lakhs brought forward from the previous year, the total available for appropriation comes to Rs. 44.08 lakhs. Out of this, the directors have provided Rs. 3.58 lakhs towards additional provision for prior tax liability. A sum of Rs. 13 lakhs (against Rs. 15 lakhs) is transferred to general reserve. A sum of Rs. 2 lakhs (the same) is transferred to dividend equalisation reserve. The proposed dividend of 10 percent will absorb Rs. 25 lakhs. The balance of Rs. 50,510 is carried forward.

The total sales for the year amounted to Rs. 5.96 crores (against Rs. 6.19 crores). The purchase of materials for production increased to Rs. 2.69 crores from Rs. 2.55 crores.

Referring to the working of T. I. Cycles of India, the directors' report says that production declined by about 10 percent during the year, compared with the previous year. The fall in production is attributed to many causes. There was a serious raw material shortage, particularly of steel skelp and strips. The import of essential consumable stores—mostly chemicals—was restricted due to the severe import cut. There was also a power cut. The directors have referred to the difficulties experienced in using indigenous raw materials as they are not of the requisite quality. Although it is clear that reliance has to be placed on indigenous supplies in an increasing measure in future, the directors expect that the position of the supplies—both in quality and quantity—will improve during the coming year.

Referring to Tube Products of India, the directors say that the factory did its best by making use of steel obtained from the Rourkela steel plant. But the supplies not being of the requisite quality, production suffered quite often from serious manufacturing defects. In many cases, the defects became manifest only after the steel had been processed, and this affected both efficiency and productivity, resulting in considerable financial loss. The directors point out that the output of the factory can be raised by employing more labour to meet the increasing demand, but until a regular and adequate supply of raw materials of the right quality is assured, it will not be possible to undertake the additional investment involved.

The cold rolling mill has produced good results in its first complete year of operation, in spite of the difficulties which had to be overcome chiefly on account of the shortage of raw materials. The large variety of products to be processed has limited the output of the annealing section to less than 80 percent of its rated capacity. But this difficulty is expected to be overcome when the plans for doubling the factory's capacity materialise. In the Bundy tubing section (copper-coated tubing), there has been some progress, and an industrial licence has been issued by the Government.

As for T. I. Diamond Chain Ltd, this was the first financial year when the factory was working in its new location in Ambattur. The factory achieved a production of about 75 percent of the installed capacity because of the shortage of raw materials. There was delay in receiving raw materials, so the production of industrial chain had to be postponed until the end of the year. An encouraging feature was the execution of an order from Messrs Raleigh Industries Ltd of the U.K. Referring to T. I. Miller Ltd, the report says that the construction of the main factory has been completed and most of the plant and machinery has been installed. Production is expected to start early in 1964.

In view of the handicaps and difficulties mentioned above, the directors consider the year's working results as fairly satisfactory.

Consolidated Coffee Raises Dividend

A SUBSTANTIAL rise in the crop, better financial results and a higher ordinary dividend of 20 percent (against 15 percent) provide the bright spots of the working of Consolidated Coffee Estates Ltd during the year ended June 1963. The net profit of the Company for the year amounts to Rs. 18,19,961, after providing Rs. 24,45,000 for taxation, which includes a provision of Rs. 10,000 for super profits tax. The net profit for the previous year amounted to Rs. 13,50,234, after providing Rs. 13,70,000 for taxation. With the amount of Rs. 1,86,053 brought forward from the previous year and with a sum of Rs. 1,25,000 being provision for taxation for previous years written back, the total available for appropriation comes to Rs. 21,31,014. Out of this, the directors have transferred Rs. 300,000 to general reserve (against Rs. 200,000). A sum of Rs. 2,70,000 is transferred to dividend equalisation reserve (against nil). Development rebate reserve gets Rs. 1,407, while the provision for super profits tax for the previous year amounts to Rs. 10,000. The preference dividend at 6.24 percent amounts to Rs. 1,17,000. The proposed ordinary dividend at 20 percent will absorb Rs. 14,31,000, leaving a balance of Rs. 1,607 to be carried forward.

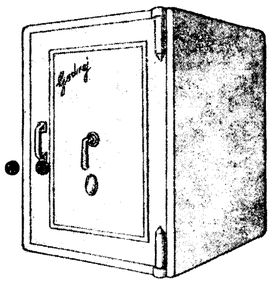
The total coffee crop for the year amounted to 3,043 tonnes, against 2,059 tonnes in the previous year. The output of Arabica coffee an acre was higher at 421 kilograms, against 310 kilograms in the previous year. The output of Robusta coffee an acre amounted to 406 kilograms (against 234 kilograms). The earning on ordinary capital has risen to 23.8 percent from the previous year's level of 17.24 percent. The estimated coffee crop for 1963-64 is placed at 3,000 tonnes.

Sheveroy Estates Repeats

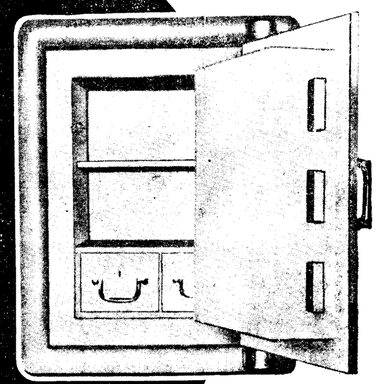
A better crop, higher profits and maintenance of the dividend at 6¼ percent feature the trading results of Sheveroy Estates Ltd for the year ended June 1963. The net profit for the year amounts to Rs. 1,80,879, compared with Rs. 60,747 for the previous year. With the amount of Rs. 1,226 brought forward and with the excess tax provision of Rs. 8,229, the total available surplus comes to Rs. 1,90,334. Out of this, provision for taxation amounts to Rs. 77,000 (against Rs. 36,000). A sum of Rs. 25,000 is transferred to dividend equalisation reserve (against nil). The proposed dividend of 6¼ percent will absorb Rs. 84,375. The balance of Rs. 3,959 is carried forward.

The coffee crop for the year amounted to 1,89,728 kilograms (against 155,673 kilograms). The yield from each acre is higher at 4.37 cwts, against 3.58 cwts. For the 1961-62 season's coffee, 29,623 bonus points were received resulting in a realisation of Rs. 66,948. The estimated crop for 1963-64 is put at 205 tonnes.

Dilaram Tea Skips Dividend



THE Dilaram Tea Co. Ltd has passed the dividend for the year ended December 1962. The dividend amounted to 4 percent for 1961. The Company has incurred a loss of Rs. 91,000, against a profit of Rs. 22,000. The Potong estate's crop rose to 135,000 kilograms while the crop of Dilaram fell to 71,455 kilograms. The former garden is expected to produce 145,000 kilograms at a cost of Rs. 4.9 lakhs and the latter a crop of 75,000 kilograms at a cost of Rs. 2.43 lakhs for 1963.

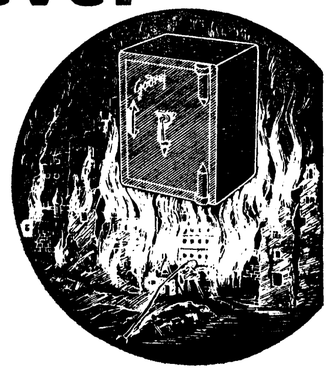


Good Outlook for Sirpur Paper

THE impressive rise in the quotation for Sirpur Paper Mills shares from around Rs. 12.88 to Rs. 15.40—the latest quotation is lower around Rs. 14.72—in spite of the sizable cut in the dividend for the year ended June 1963 from 85nP to 50nP a share (Rs. 10-paid) and equally disappointing results for 1962-63 is based on the promise of an interim dividend towards the end of November and on an optimistic reckoning of the outlook for the current year. The working results for 1962-63 have indeed been very disappointing, which, however, was not altogether unexpected. The factory had been closed for more than three months due to an "illegal" strike and this resulted in a substantial setback in production from 31,700 tonnes to 24,000 tonnes. Besides, the profit margin was also squeezed by the increase in costs of bamboos, chemicals and stores and enhanced fiscal burdens without any corresponding increase in the selling prices of paper. As against a fall of about 26 percent in the sales from Rs. 4.6 crores to Rs. 3.40 crores, the Company's gross profit for 1962-63 is down by about 125 percent from Rs. 86.63 lakhs to Rs. 38.52 lakhs. Even for the payment of the reduced dividend, the directors have had to draw heavily on the reserves. After providing Rs. 32.46 lakhs (against Rs. 39.05 lakhs) for depreciation and Rs. 3 lakhs (against Rs. 7 lakhs) for development rebate reserve and deducting all other necessary charges, the net profit amounts to Rs. 2.94 lakhs, against Rs. 37.87 lakhs. Including a sum of Rs. 1.25 lakhs brought forward from the previous year and writing back Rs. 9,353 being excess provision for taxation, the disposable surplus amounts to Rs. 4.28 lakhs which is inadequate for the payment of the reduced dividend of 50nP a share. The directors have, therefore, transferred Rs. 5 lakhs from contingency reserve and Rs. 11 lakhs from general reserve and created a dividend reserve of Rs. 19.19 lakhs. The preference dividend amounting to Rs. 5.53 lakhs and ordinary dividend amounting to Rs. 13.66 lakhs are to be paid out of dividend reserve.

The outlook for the current year is considered to be quite promising. The Company's working so far is said to be satisfactory and all the pending labour disputes have been settled and a five-year agreement reached between the management and the labour union. Plans for the modernisation and expansion of the mills are in progress in technical and financial collaboration with the U. S.

Best buy in 1900..



The unequalled superiority of Godrej Safes has been established, as was evident from the fact that in 1912 the Government of India ordered 472 Godrej Safes for the Indian Posts and Telegraph Departments, after subjecting both Indian and well-known foreign-made safes to a severe FIRE-TEST. Godrej have kept abreast of the latest technological developments, and continue to introduce innovations to suit the requirements of the modern age.

...Better than ever today

FIRE AND FALL-RESISTANT

The historic Film Fires in Calcutta, the Cotton Fires in Bombay and elsewhere and many others proved conclusively that Godrej Safes are not only fire-resisting but can also sustain battering falls and keep their contents in good condition. The culmination of the *real ordeal* came during the wartime AMMUNITION Explosions in the Bombay Docks – "worse than the horrors of bombing" – when fires were raging for days together. It was found that *contents of only the Godrej Safes were intact.*

BURGLAR-RESISTANT

During civil commotions and riots – *notably at the time of the partition of our country* – and during many daring dacoities, when Godrej Safes were at the mercy of determined safe-breakers for days together in the remotest areas, the burglars could not succeed!

Innumerable letters of gratitude have been received testifying how Godrej Safes have been responsible for saving the fortunes of countless people. For keeping *your* important documents, currency, jewellery and heirlooms, there is nothing better than a Godrej Safe. Invest in a Godrej Safe today and feel secure for life!

Available in different types and sizes. For further particulars, please write for the illustrated folder to any one of the following addresses :-

firm of Kimberley Clark Corporation, Wisconsin. Arrangements are being made to procure the necessary foreign exchange for the import of plant and machinery.

Indian Hume Pipe Pays the Same

IN spite of a small increase in its sales from Rs. 2.94 crores to Rs. 2.997 crores, the gross profit of Indian Hume Pipe Co. Ltd for the year ended June 1963, is down by about 37 percent from Rs. 66.56 lakhs to Rs. 48.44 lakhs. The dividend, however, has been maintained at 14 percent. After providing Rs. 12.09 lakhs (against Rs. 11.93 lakhs) for depreciation, Rs. 2.40 lakhs (against Rs. 2.05 lakhs) for development rebate reserve and Rs. 17.50 lakhs, including Rs. 2 lakhs for super profits tax for the previous year (against Rs. 28.75 lakhs) and deducting other necessary charges, the net profit for 1962-63 works out to Rs. 13.38 lakhs, compared with Rs. 19.65 lakhs in the preceding year. After writing back excess provisions amounting to Rs. 2.79 lakhs, the disposable surplus amounts to Rs. 16.17 lakhs. The directors have set aside Rs. 1.47 lakhs (against Rs. 8 lakhs) for rehabilitation reserve and Rs. 4 lakhs (against nil) for general reserve. No provision has been made for contingency reserve which received Rs. 1 lakh in the preceding year. A sum of Rs. 11 lakhs has been transferred to the dividend equalisation reserve out of which are to be paid preference dividend of Rs. 2.50 lakhs and equity dividend of Rs. 8.40 lakhs—the same as in the previous year.

The directors state that the prestressed concrete pipe division of the Company is making good progress, and recently, the Company secured a large contract for supply and laying of prestressed concrete pipeline for the Tatipudi water supply scheme for Vishakhapatnam. The Company is setting up a special factory for this purpose. The prestressed concrete pipe factory in Pattancheru is now making steady progress although it has not yet been able to attain full production due to shortage of high tensile steel wire. The Company has recently secured an order of 11,000 prestressed concrete poles from the Mysore Government, and a factory is being established in Bagalkot for this purpose. The penstock division of the Company is also said to be making satisfactory progress. It has received orders for penstocks from the Governments of Maharashtra and Mysore for the second stages of Koyna and Sharavathi hydro-electric projects, respectively. The Company has also been entrusted with another order for the supply of penstocks to the Trishuli Hydro-Electric project in Nepal. It is negotiating with both the Indian and Libyan Governments for their permission to establish a R.C.C. pipe factory in Libya. The Company will shortly be acquiring the patent rights in India for the manufacture of continuous concrete pipeline from No-Joint Concrete Pipe Co. of the U.S.A. The U.S. firm will provide technical assistance for ten years.

Jayant Paper to Expand

THE third annual report of the Jayant Paper Mills Ltd for the year ended June 1963, shews that the Company is making satisfactory progress. It was in October 1962 that the paper plant was commissioned and the sales during the year amounted to Rs. 36.19 lakhs on which it has earned a gross profit of Rs. 7.13 lakhs, compared with a loss of Rs. 54,872 after transferring Rs. 1.15 lakhs as expenditure to capital account in the previous year. Out of this, the directors have provided Rs. 3.57 lakhs (against Rs. 4.473) for depreciation and Rs. 3.42 lakhs (against nil) for development rebate, leaving a balance of Rs. 14,645. The directors have transferred Rs. 55,800 from provision for taxation account and have provided Rs. 56,227 for payment of income tax for 1960-61. The balance has been held to reduce the loss brought forward from Rs. 27,714 to Rs. 8,497.

The directors state that the Company has made an application to the Government of India for permission to increase the production capacity to 30 tons a day. It is negotiating with sugar mills for the purchase of bagasse to be used as additional raw material. The existing plant has already reached full production capacity. The installation work of ground wood pulping plant will be started shortly. When this plant goes into full production, it will supply about 5 tons of ground wood pulp a day for the use of paper mill and will increase the production capacity of the pulp section of the mill. The funds required for the expansion programme will be raised through borrowing and the borrowing limit is being raised to Rs. 30 lakhs. The Rs. 10-lakh loan granted by the Gujarat State Financial Corporation has been fully used. The Rs. 100-paid share of Jayant Paper is currently quoted around Rs. 92.

Investment Corporation Cuts Dividend

THE preliminary report on the working of the Investment Corporation of India Ltd for the year ended June 1963, shows that it has fared very badly with the result that the directors have been obliged to reduce the dividend from Rs. 9.50 (inclusive of silver jubilee bonus of Re. 1) to Rs. 7.50 a share. The net dividend earned on shares and interest on securities is appreciably lower at Rs. 22.69 lakhs, against Rs. 29.45 lakhs in the preceding year. The profit before taxation has shrunk from Rs. 23.75 lakhs to Rs. 13.69 lakhs. No provision has been made for taxation and general reserve which had been allocated Rs. 1.75 lakhs and Rs. 5 lakhs, respectively, in 1961-62. A sum of Rs. 15 lakhs has been allocated to the dividend reserve out of which are to paid the preference and ordinary dividends absorbing Rs. 14.84 lakhs (against Rs. 19.38 lakhs). After making various appropriations, there remains a balance of Rs. 1.228 to be carried forward, against Rs. 1.32 lakhs brought in. The Rs. 100-paid share of Investment Corporation is currently quoted around Rs. 106.

Tensile Steel Plant Goes on Stream

THE Rs. 1.20-crore project of Tensile Steel Ltd which will manufacture high tensile steel wires for prestressed concrete went on stream on 12th November. The plant has a rated capacity of 10,000 tons of prestressed concrete wires a year and is located in Baroda. The project, claimed to be the first of its kind in the country, has been sponsored by Shah Construction Ltd in collaboration with three Japanese firms—C. Itoh and Company, Kobe Steel Works and Shinko Wire Company. The wire-drawing plant is said to be highly automatic and most modern. The project is said to mark the beginning of the wire-drawing processes the Company has undertaken. It has a promising future as the demand for high tensile steel wires is estimated to go up to 30,000 tons by the end of the third plan, against the present installed capacity of about 15,000 tons.

The Company proposes to expand its capacity from 10,000 tons to 15,000 tons a year in order to take up the manufacture of a number of special steel wires. The necessary application for the proposed expansion is likely to be made to the Government shortly. It is stated that he Company has obtained about 1,000 tons of high carbon steel wire rods, the most important raw material, and it hopes to secure additional supplies under the U.K. credit. In order to ensure permanent supplies, the Company proposes to enter into a barter deal for the import of wire rods, against manganese ore exports. When in full production, the Company is likely to have an annual turnover of about Rs. 2 crores. In addition to the fully integrated imported wire-drawing plant, the Company owns a well-equipped workshop, testing house and laboratory.

Parkside Estate Pays Less

ALTHOUGH Parkside Estate Co. Ltd again produced a record crop, the net profit has fallen because of lower tea sale prices and the impact of the super profits tax. The total dividend for the year is lower at 25 percent, compared with 27½ percent for the previous year. The profit for the year before taxation amounts to Rs. 7,70,117, compared with Rs. 9,73,496 in the previous year. Out of this, the provision for income tax amounts to Rs. 3,68,000, and the provision for super profits tax amounts to Rs. 43,000 (against a tax provision of Rs. 4,55,000 in the previous year). This leaves a net profit of Rs. 3,59,117 (against Rs. 5,18,496). With the amount of Rs. 48,876 brought forward and with Rs. 62,000 transferred from general reserve and with some provisions written back, the total surplus available for appropriation comes to Rs. 4,83,546.

Out of the surplus, a sum of Rs. 3,129 is transferred to development rebate reserve. The provision for super profits tax for the previous year amounts to Rs. 62,000. The interim dividend of 7½ percent has absorbed Rs. 1,11,672. The proposed final dividend of 17½ percent will absorb Rs. 2,60,568. The balance of Rs. 46,177 is carried forward.

Hindustan Sugar Repeats

ALTHOUGH the dividend has been maintained at 14 percent, including a bonus of 4 percent, the preliminary report on the working of Hindustan Sugar Mills for the year ended June 1963, shows a substantial setback in the Company's gross profit from Rs. 91.08 lakhs to Rs. 70.48 lakhs. The provision for depreciation is lower at Rs. 15.28 lakhs, against Rs. 16.85 lakhs, and taxation accounts for Rs. 32.28 lakhs, against Rs. 38.59 lakhs. Allocation to the rehabilitation reserve has been drastically reduced from Rs. 22 lakhs to Rs. 8.50 lakhs and the development rebate reserve gets Rs. 59,807, against Rs. 2.25 lakhs in the preceding year. The preference dividend of Rs. 35,715 and ordinary dividend amounting to Rs. 16.80 lakhs (the same as in the previous year) are to be paid out of the dividend reserve to which has been transferred a sum of Rs. 17.25 lakhs. The various appropriations suggest that the directors have had to transfer about Rs. 3 lakhs from the reserves in order to provide for the payment of dividends. In 1961-62, a sum of Rs. 6 lakhs had been transferred from the dividend equalisation reserve. The Rs. 100-paid share of Hindustan Sugar is currently quoted around Rs. 200.

Jagatjit Distilling Earns Profit

THE working results of Jagatjit Distilling and Allied Industries for the year 1962 show that the Company has done fairly well. As against a loss of Rs. 1.54 lakhs in 1961, the Company has made a gross profit of Rs. 2.61 lakhs in 1962. What is more, this has been achieved in spite of a sizable setback in the sales from Rs. 33.66 lakhs to Rs. 25.67 lakhs. After providing Rs. 7,212 (against nil) for development rebate, the directors have transferred the balance of Rs. 2.19 lakhs to the reserves and surplus which now stand at Rs. 17.84 lakhs.

The Company's factory for the manufacture of malt has gone into production from mid-August 1963 and that for the manufacture of malt-extract is being commissioned in November. The Company proposes to set up a new factory for the manufacture of malted milk products for which the necessary industrial licence has already been obtained. The working is expected to improve appreciably after the completion of the expansion schemes.

Madhusudan Mills Clears Preference Dividends

SHAREHOLDERS of Shree Madhusudan Mills Ltd will not perhaps have to wait for long for their investment to bear fruit. The equity dividend for the year ended June 1933 has again been skipped, but the Company has cleared all arrears of preference dividends. In the previous year (1961-62), the Company had paid arrears of preference dividend for six-and-a-quarter years ended June 1957 amounting to Rs. 10.97 lakhs. In 1962-63, it has cleared the remaining arrears for six years ended June 1963 amounting to Rs. 10.53 lakhs. The Company's working results for 1962-63 have, however, suffered a setback with the gross profit down from Rs. 54.54 lakhs to Rs. 48.93 lakhs. This is due mainly to the decline in the profit of the textile mill in Bombay from Rs. 35.17 lakhs to Rs. 23.25 lakhs on account of adverse trading conditions, rise in production costs and the premium that had to be paid for non-fulfilment of the export obligation. The profit of Hall and Anderson, Calcutta, was higher at Rs. 25.71 lakhs, against Rs. 19.37 lakhs. Out of the year's profit of Rs. 48.96 lakhs, the directors have provided Rs. 20.52 lakhs (against Rs. 18.54 lakhs) for depreciation and Rs. 18 lakhs (against nil) for development rebate. Accumulated preference dividends todate absorb Rs. 10.53 lakhs.

The directors attribute the higher profits of Hall and Anderson to the improvement in turnover and increased rent realisation from the Calcutta properties of the Company. In view of the progress made concerning modernisation and renovation, the working of the Company's textile unit in Bombay is expected to show fair improvement in course of time. Additions of plant and machinery during 1962-63 amounted to Rs. 26 lakhs. The Company has placed orders for one set of Japanese combing machinery and has taken steps to implement the installation of 20,000 additional spindles for balancing purpose. It has received a sizable loan from the National Industrial Development Corporation for financing its modernisation and rehabilitation programme. The Company has changed its pattern of production from grey to processed sorts and from coarse to finer varieties. The Rs. 10-paid share of Madhusudan

Mills is currently quoted around Rs. 12.

Arlabs Pays Dividend

THE directors of Arlabs Ltd have recommended a dividend of 5 percent for the year ended June 1963 on the increased capital as raised by the issue of 20,000 equity shares of Rs. 100 each at a premium of Rs. 50 a share, following the conversion of the Company from private to public limited. In 1961-62, it had to skip the dividend because of poor results on account of certain special adverse circumstances. The brief preliminary report on the Company's working shows an appreciable improvement over the previous year's performance. In 1961-62, it had incurred a loss of Rs. 10.73 lakhs, but in 1962-63, the Company has made a profit of Rs. 4.91 lakhs after providing for full depreciation amounting to Rs. 3.49 lakhs. Sales have shot up by about 92 percent from Rs. 51 lakhs to Rs. 98 lakhs. The new shares of Arlabs on which a sum of Rs. 75 has been paid are currently quoted around Rs. 120.

New Capital Issues

FOUR companies have been authorised to raise capital totalling Rs. 2.83 crores. One company will issue bonus shares, two equities and one equities plus redeemable preference shares. One of the companies is offering part of its issue to non-resident Indians in Africa. This is a new company. In the case of three companies, the consent of the Controller of Capital Issues is valid for 12 months while for the fourth it is valid only up to 26th February, 1964. The following are the details:

Guest, Keen, Williams, Ltd. Calcutta, is issuing bonus shares of the value of Rs. 2,10,72,910 on capitalisation out of its share premium account. The proposed issue will be made in the ratio of one bonus share for every two held

The Southern Gas Ltd, Bombay, is to issue capital of Rs. 22,50,000 divided into 22,500 equity shares of Rs. 100 each for cash at par. The money will be used for setting up a factory for the manufacture, compressing and filling of both oxygen and acetylene gases.

Eastern Ceramics Ltd, Bombay, a new company, is to issue capital of Rs. 25 lakhs for cash at par consisting of Rs. 20 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 100 each. Out of this, equity shares of the value of Rs. 13.75 lakhs will be offered for subscription to non-resident Indians in Africa and the remaining shares will be issued privately in India. The proceeds of the issue will be used for the manufacture of sanitary ware and glazed tiles. This is in supersession of an earlier issue. The consent is valid up to 25th February, 1964.

India Pistons Ltd, Madras, is to issue capital of Rs. 25 lakhs divided into 250,000 equity shares of Rs. 10 each to be issued privately at a premium of Rs. 15 a share. Of this, 108,750 shares will be offered to Associated Engineering Ltd, U.K., against the supply of plant and machinery and the balance for cash. The remaining shares will be allotted to Simpson and Company for cash.

DETECTIVE STORY

The search for oil's hiding places goes on. The prospector first needs a map of the region he is to explore in. Mapping done from the air is quickest, and the pictures produced by aerial photography, when examined in pairs under a stereoscope, help to provide clues to what lies beneath the surface of the earth. Then the geologist searches a promising area for outcrops of rock strata exposed by erosion. He examines samples of rock for fossils which may give clues to deeper beds. In these and other ways he begins to piece together data which will enable him to make a three-dimensional map of the underground formations.

Geology, the science of the earth's rocks; photogeology, the study of aerial photographs; and palaeontology, the study of fossils, are only a few of the sciences applied in the initial stages of oil exploration.

The Stock Markets

BANK BILL RUMOURS STILL WORRYING INVESTORS

Wednesday Evening

THE Calcutta stock market has shown an easier trend during the past week. Share prices have declined partly due to long liquidation and partly because of short-selling. The decline should cause no regret since it serves as a corrective to the sharp rise which had taken place earlier. Trading has been cautious in view of the settlement on Wednesday. The carry-forward charges, combined with the rising volume of deliveries, suggest a rather over-bought position. The courage of the bulls has meanwhile diminished and they have begun to lighten their commitments. Forecasts about the Banking Companies Amendment Bill have been bearishly interpreted since it is feared that some stringent new restrictions on banks may interfere with their normal working. If the dividend on bank shares is restricted, confidence in the capital market will suffer.

The bears have been cautious because they are waiting for Mr. T. T. Krishnamachari, Finance Minister, to make his statement on the economic situation in the Lok Sabha. There is no doubt that he is keen to end the economic stagnation. Not only has the Reserve Bank liberalised its credit policy for the current busy season; the Government is expected to go ahead with its plans for setting up a unit investment trust to promote saving and investment. The Life Insurance Corporation is expected to take greater interest in underwriting new issues. The Government has decided to pump more funds into the Industrial Finance Corporation and the Industrial Credit and Investment Corporation so as to help finance the long-term capital requirements of industry. Judging by present indications, it is reasonable to hope that the Government will modify fiscal and pricing policies to promote economic development.

In the circumstances, many feel that there is no reason to take a bearish view of the outlook. If the present reaction helps to improve the technical position of the market, a steadier trend should emerge. There have been several favourable developments. Food production during the current year is expected to show an improvement. The arrival of the new paddy crop will help hold the price of foodgrains down. The shortage of coal has been relieved, and a bigger supply of electric power is expected. Railway transport has improved a great deal. The prospect for more liberal imports of raw materials and components is indicated by the bigger non-project aid sanctioned by the Aid-India Club.

Indian Iron have reacted. Engineering shares have declined. Interest has been confined largely to Guest, Keen, Williams, Jessop, Texmaco and Burn. Britannia Engineering and Jay Engineering have met with scattered support. The latter Company has reduced the taxable ordinary dividend from 15 percent to 10 percent.

Miscellaneous shares have moved down in sympathy with the general trend. Prices, particularly of clearing scrip, have weakened appreciably on profit-taking in the absence of support. British Paints have been steady on paying an interim dividend. Indian Oxygen, Union Carbide, Goodyear India and Associated Battery have been quietly steady. Among managing agency shares, interest has centred on Martin Burn. Electric company shares have been neglected and stray business in Calcutta Electric has been transacted.

Bank shares have become hesitant on fears of a restriction on dividends. In paper shares, Orient have reacted on profit-taking. Sirpur, India Paper Pulp and Seshasayee Paper are quoted lower. Except for Dyer Meakin Breweries, which have been steady, sugar shares have been freely offered without attracting support. J. K. Rayon have declined in the cotton mill section. Elgin and Jay Shree Textiles have lost fractionally but Dunbar are maintained.

Investors in jute shares are worried about the absence of overseas demand for jute goods. Prices of gunnies have fallen in spite of the encouraging U.S. burlap consumption figure for October. Birla, Howrah and Barnagore are quoted lower. New Central and Fort Gloster have been quietly steady. Stray business has been done in coal shares and prices have generally slipped back. Burrakur, Central India and Equitable have been transacted.

Selected Assam and Dooars tea gardens have met with scattered support. In the Dooars group, Hasimara and Jaybirpara have been prominent. Among Assam scrip, interest has been concentrated on Betjan, Tyroon and Tezpore. Margaret's Hope, among Darjeeling gardens, have been bought.

Government securities have been dull. Although the prices of short and medium-dated stocks have been maintained, the support from banks has declined due to the onset of the busy season. The 3 percent Conversion loan 1986 is quoted around Rs. 65.85. Selected State Government loans are steady but turnover has been small.

Bombay

APPRECIABLE FALL IN PRICES

L.I.C. SALES WEAKEN SENTIMENT

Wednesday Evening.

THE Bombay stock market has been quiet during the past week. There has been an appreciable decline in prices due to nervous bull liquidation. The higher *badla* charges at the last settlement have been considered an additional deterrent. The bulls have been unnerved by various uncertainties. Dalal Street has taken a bearish view of the coming Banking Companies Amendment Bill which may propose fresh restrictions on the working of banks.

Rumours that the Government might take steps to regulate the circulation of "unaccounted money" have caused a great deal of concern. The move of the Life Insurance Corporation to undertake general insurance business in a big way has induced pressure, particularly in insurance scrip. Substantial selling of ordinary shares by the L.I.C. has weakened sentiment. Operators have tried to cut their commitments in view of the fact that the Central Finance Minister will soon make a statement on the economic situation in the Lok Sabha.

Tata Steel ordinary have declined to Rs. 145.25. Engineering shares have moved down all round. Tata Locomotive, Mukand Iron, Larsen and Toubro and Premier Construction have weakened. Among motor-vehicle shares, Hindustan Motors have reacted on profit-taking, while Premier Automobiles have been sluggish. Century have fallen after an earlier sharp rise in the cotton mill section. Except for scattered support in Kohinoor, Shree Niwas and Standard, cotton mill shares have been easier. Simplex, Svadeshi, Tata and India United ordinary have been quoted lower. Central India have declined on producing disappointing results.

Turnover in miscellaneous shares has declined. In cement shares, Associated Cement and Dalmia have reacted after an earlier improvement. Among sugar shares, Belapur have been fairly steady, while Walchandnagar Industries have declined. Mining shares have been subdued. B B. Petrol in particular have weakened on reports that the prospect of the Company venturing into new enterprises is remote for the time being.

In steamship company shares, Scindia Steam gained appreciably earlier on influential support, but the scrip have shown considerable losses towards the close. Rayon shares have been quiet, and National Ravon have fallen. Among chemical shares,

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

Then said another with a long-drawn sigh,
"My clay with long oblivion is gone dry:
But, fill me with the Gold Coin Apple Juice
Methinks I might recover by-and-bye"
...with apologies to Omar Khayyam

Gold Coin
Real APPLE JUICE
This fruit-ful drink is delicious, refreshing and nourishing. Really good for health and beauty.
A DYER MEAKIN PRODUCT
DMB-NP-556

Tata Chemical have been barely steady, while Indian Dyestuff have declined. Permanent Magnets and T. Maneklal have been smart features among new shares.

Bank shares have turned hesitant on fears of cut in dividends. Central Bank have been quietly steady due to the prospect of a rights issue in the proportion of one new share for every two held, at a premium of Rs. 5 a share. Insurance shares have been quiet, and New India Assurance have lost appreciably. Electric company shares have been easier, and Ahmedabad have reacted. Tata Power have been steady.

Madras

BUSINESS DECLINES FURTHER

SELECTIVE SUPPORT FOR STATE LOANS

Tuesday Evening.

THE Madras stock market has been quiet during the past week. Weaker advices from Dalal Street, combined with the absence of support from outside centres, have weakened sentiment. Turnover has declined to almost a trickle. Business in clearing shares has been very small. Turnover even in planting shares has declined considerably. Investors prefer to wait until the economic debate in the Lok Sabha takes place.

Government securities have been steady, but turnover has been restricted. Support has largely been confined to selected State Government loans. Bank shares have been fairly steady. Indian Overseas have been transacted at Rs. 148 and Pandyan at Rs. 37, although the latter Bank will soon be amalgamated with the Canara Bank.

Scattered support has been seen for selected electric company shares. South Madras has been quoted at Rs. 10.97 on paying a taxable interim ordinary dividend of 5 percent. Kumbakonam have changed hands at Rs. 11.75 and Negapatam at Rs. 10.70. Sugar shares have been sold freely in spite of the prospects of an increase in the price of the commodity. Deccan have been done at Rs. 12.37 and E.I.D. at Rs. 37.95. Cauvery have been taken at Rs. 112 on paying a taxable ordinary dividend of 6 percent. Madura have been quoted at Rs. 10 on declaring a taxable ordinary dividend of 8 percent. Kothari have been easier at Rs. 7 and Kirlampudi at Rs. 81.

The prices of planting shares have generally weakened. Blue Mountain have been available at Rs. 2.67 and Cochin Malabar at Rs. 6.20. Consolidated Coffee have, nevertheless, been steady at Rs. 21.55 on paying a taxable ordinary dividend of 20 percent. Coffee Lands have been weaker at Rs. 15.62, although the Company has declared a taxable ordinary dividend of 9 percent. Scattered support has been extended to Kumergode at Rs. 2.56 and to Kalepetta at Rs. 11.50, but Kalasa have been sold freely down to Rs. 4.25. Rajagiri have been transacted at Rs. 21.10 on declaring a final taxable ordinary dividend of 11.25 percent, making 21.25 percent for the year. Nelliampathy have paid a taxable ordinary dividend of 15 percent and the scrip have been quoted at Rs. 3.65. Parkside have been steady at Rs. 27.50 on declaring a final taxable ordinary dividend of 17.5 percent, making 25 percent for the year. Ouchterlony have been weaker at Rs. 4.65 and Periakaramalai at Rs. 3.43.

Business in textile shares has been small. South India Viscose have reacted to Rs. 146, but Travancore Rayon have been steady at Rs. 27.50. Business has passed in Buckingham at Rs. 281.50 on rumours of a bonus issue. Vijayeswari have been wanted up to Rs. 107, but Loyal have been sold down to Rs. 42.50. Mettur have been steady at Rs. 289, but Modi Spinning have been weaker at Rs. 10. Kannapiran have been offered at Rs. 11.24, but Bangalore Woollen have been taken at Rs. 233.50. Lakshmi have fetched Rs. 135.50 and Madura Rs. 37.90.

Miscellaneous shares have been generally easier. Aluminium Industries have been sluggish around Rs. 19.75 and Ashok Leyland at Rs. 7.37. Dalmia Cement have weakened to Rs. 13.05 and India Cement to Rs. 5.65. Mettur Chemical have been done at Rs. 13.20. F.A.C.T. have been sold freely at Rs. 6.43. Seshasayee Paper have been steady at Rs. 8.20, but Tube Investments have been easier at Rs. 228. Scattered support has been extended to Rane (Madras) at Rs. 8.75 and to Spencer at Rs. 20.50. Kirloskar Electric have been bought at Rs. 18.87, but Madras Rubber have been sold down to Rs. 15.12.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

AMENDING BANKING COMPANIES ACT TO CHECK IRREGULARITIES

(BY A SPECIAL CORRESPONDENT)

The Central Finance Minister, Mr. T. T. Krishnamachari, recently said that the Banking Companies Act would be amended to check alleged irregularities in the banking system. The Reserve Bank, it is reported, will take powers to approve the appointment of directors and their removal from the boards of banking companies, apart from imposing numerous other restrictions. But the Reserve Bank should consider whether it can efficiently discharge all these responsibilities before acquiring further powers.

WHEN the debate on bank nationalisation was going on in the Lok Sabha, Dr. R. K. Nigam of the Department of Company Law Administration came out with an analysis to show that the concentration of corporate power was increasing in the hands of directors of banking companies. He made a frequency distribution study of big companies, banking and marketing companies and came to the above conclusion through statistical comparisons. The study added to public misconceptions about the directors of banking companies. Mr. T. T. Krishnamachari, Central Finance Minister, therefore, said recently that the Banking Companies Act would be tightened to check irregularities in the banking system. Now it has been announced that a Bill will be moved to amend the Banking Companies Act during the current session of the Lok Sabha. On 7th November, the Reserve Bank directed the banks to submit, by 15th November, data on ownership of their shares by joint-stock companies and other corporate bodies, including statutory corporations. The data, according to the Reserve Bank circular, should show details of share ownership by general insurance companies, the L.I.C. and industrial and other companies.

Collecting Information

Although the object of the circular is to collect information for the Central Finance Minister on the concentration of ownership of bank shares so that he can give a broad picture of the situation during the ensuing Lok Sabha debate and also to verify the conclusions reached in Dr. Nigam's article, it has made banking circles extremely uneasy about the future. Rumours are going around that the Reserve Bank's control on the day-to-day activities of banks will be tightened further. The Reserve Bank, it is reported, will take powers for approving appointments and removing directors of banking companies. It is relevant to note here that even now the Reserve Bank—under the Banking Companies Act—can veto the appointment of directors of banking companies. It is possible that the Reserve Bank may appoint a certain number of directors to the boards of banks by virtue of the shares held by the Life Insurance Corporation. It is also possible that the Bank may slash the voting power of large shareholders of banking companies. The voting power of a single shareholder is now pegged at 5 percent of the total voting rights of all shareholders. This is to be reduced to 1 percent.

Other amendments mentioned include the fixing of the retirement age for directors and senior officers of banks, a specific credit-deposit ratio to be adhered to by the banking system, prohibition on keeping bank deposits with directors' companies, ceiling on expenditure in connection with the opening of individual branches and prescription of a ratio between total advances and limits sanctioned to reduce the dangers of "open liability" during the busy season. Some even do not rule out the possibility of dividend limitation on bank shares. While the various amendments hinted appear possible in view of the weaknesses revealed in the working of the Banking Companies Act, 1949, the main questions are whether these are necessary and desirable and whether the assumption of powers by the Reserve Bank would check the irregularities, if any.

Before answering these questions it is essential to note two aspects of the issue. In the first place, the Reserve Bank has not taken the banking community into confidence in proposing the amendment. It is, therefore, certain that they would amount to unilateral imposition. Secondly, the sweeping nature of the amendments may create an adverse situation which the Government and the Reserve Bank would like to avoid. The slow recovery in investor confidence, which is evident now, may receive a setback. There is also the possibility of the economy sliding back into stagnation.

Indifference of Banks

The most intriguing aspect of the entire situation is that no prominent banker nor the Indian Banks Association has come forward with facts on the directorships of banks. They have left the task to the Press once again. Bankers do not lack resources. They also have access to public media for discussing their viewpoints. What has made them indifferent to their own fate is, therefore, a mystery. Banks will do well at least to inform members of Parliament about their true position. What they have done so far, namely, the publication of a small brochure on the banking industry, is obviously not adequate.

It is true that the directors of banks are connected with a large number of other companies. This is, however, a natural phenomenon. The directors are men of eminence. Banks have gained immensely by the association and their efficiency has increased due to intelligent guidance given from the top. It is also relevant to remember that the Companies Act fixed the number of directorships which could be held by an individual at 20. The Banking Companies Act prohibits a bank director from becoming director of another bank. These restrictions were placed after prolonged deliberations. The directors of banking companies, by and large, have a high sense of responsibility. To fetter their freedom in the day-to-day work and reduce the banks to a state of Government offices may tell on the efficiency of the industry itself.

Case of the State Bank

If any restrictions are placed on the directors of banking companies, they have naturally to apply to the directors of the State Bank also. Several industrialists are associated with the latter and it is evident that restriction will dislocate the banking mechanism. Loans given to directors by the State Bank constitute as much as 27 percent of total advances whereas the general average in the case of private commercial banks comes to 13 percent. Obviously, it is the State Bank which will be affected more than commercial banks in the private sector, if any legislation rigidly lays down restrictions. Whatever the object of the legislation, it is difficult to secure a realignment of credit flows or introduce revolutionary changes since this will dislocate the economy beyond repair. In other words, whether or not the present individuals continue as directors, bank finance to companies cannot be withheld. It is not understood what is going to be the immediate gain by further tightening the screw except to convince the general public that the Government is determined to fetter the growth of the industry.

This apart, there is the question of the Reserve Bank's ability to exercise the powers for the general welfare of the banking system. However efficient the Reserve Bank tries to be, it will be difficult to maintain a complete check. The circumstances which led to the Palai Central Bank and Laxmi Bank crashes are enough to convince any intelligent observer that the assumption of more powers by the Reserve Bank is unlikely to cure the irregularities in the banking system. The Reserve Bank will only open itself to further public criticism by taking over powers which it cannot exercise properly. There are enough powers within the framework of the Banking Companies Act.

So it is clear that the amendments to the Banking Companies Act will harm the banking industry in India. The Government will, therefore, do well to consider the various points before rushing in with the legislation. It is essential to preserve the incentive to save and invest. Moreover, when 90 percent of industry and trade is in private hands, it is undesirable to place meaningless restrictions on the channels of finance which keep the economy moving.

enjoy unique JAL service on your next flight to LONDON and other gay cities of Europe

Leave Calcutta Sunday or Thursday evening (2220 hours) aboard a luxurious JAL DC-8 Jet. (Also by connection at Karachi.) Arrive in Rome for breakfast; London for lunch. Visit Cairo and Frankfurt along the way. Or, fly JAL's morning service east through Bangkok and Hong Kong to Tokyo, where JAL's trans-Pacific jets leave daily for the U.S.A. Either way, JAL's wonderful hospitality will make your flight truly enjoyable.

JAL Hostess Shoko Yamamoto.

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Wednesday, 20th November.

THERE has been a fair increase in the general level of advances in the Calcutta money market during the past week. The increase has been shared by the jute mills and the iron, steel and engineering industries. Credit given to the cotton and sugar mills has decreased moderately. There is no change in the advances for the storage of foodgrains and seeds. In the interbank market, conditions have been easy and the call rate quotes 1½ percent.

The exchange market has been moderately active, with a good supply of tea and gunny bills. The demand for remittances, however, has been poor. In the London market, sterling has been generally steady, the losses and gains against major currencies being fractional.

SILVER WAS QUIET IN CALCUTTA during the past week. The upcountry buyers showed little interest. The price declined from the previous week's level of Rs. 230.25 to Rs. 230, quoted today for ready. The London and New York prices were shown at 111⅛d and 129.3 cents. Gold was steady and the price of 14 carat rose from Rs. 61.25 to Rs. 62.

DURING THE WEEK ENDED 15TH November, Government of India Treasury bills for Rs. 85,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 19th November. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent and above were accepted in full. The total amount accepted was Rs. 2 crores only, the average rate of acceptance being Rs. 2.318 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 25th November.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills will be sold from 20th November to 23rd November at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 13th November to 16th November amounted to Rs. 2,63,50,000.

ACTIVE NOTES ROSE BY RS. 42.62 crores to Rs. 2,286.54 crores and the total note issue by Rs. 27.40 crores to Rs. 2,297.88 crores, according to the return of the Reserve Bank of India for the week ended 15th November, 1963. The currency expansion was covered by raising rupee securities by Rs. 30 crores to Rs. 1,969.31 crores. Deposits of the Government of India increased by Rs. 1.36 crores to Rs. 50.75 crores and those of State Governments by Rs. 6.20 crores to Rs. 20.55 crores. Balances of scheduled banks at Rs. 95.17 crores showed a rise of Rs 17.73 crores. Balances held abroad improved by Rs. 1.33 crores to Rs. 9.28 crores. The investment portfolio at Rs. 263.53 crores showed a gain of Rs. 44.30 crores. Loans to scheduled banks increased from Rs. 50.90 lakhs to Rs. 2.44 crores, of which advances against usance bills amounted to Rs. 17 lakhs (nil). Ways and means advances stood at Rs. 27.47 crores, against Rs. 40.04 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 8th November, 1963, shows a fall of Rs. 11.06 crores to Rs. 598.57 crores in total deposits. Investments in Government securities are down by Rs. 3.86 crores to Rs. 316.01 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts, bills discounted and purchased, have increased by Rs. 16 lakhs to Rs. 253.90 crores. Cash and balances are, in consequence, shown at Rs. 16.63 crores or Rs. 10 crores less.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 22-11-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
22-11-63	25-2-64	2,00.00	Rs. 2.318%

25-10-63	.....	1,35.75

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 8th November, 1963, shows Demand and Time liabilities at Rs. 1,118.58 crores (Rs. 25.15 crores on account of borrowings from banks) and Rs. 1,320.10 crores (Rs. 19.93 crores), compared with Rs. 1,123.91 crores (Rs. 22.27 crores) and Rs. 1,322.74 crores (Rs. 21.01 crores), respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 53 lakhs and Rs. 17.15 crores to Rs. 56.04 crores and Rs. 80.64 crores, respectively. There is a drop of Rs. 3.38 crores to Rs. 773.37 crores in investments. Advances and bills discounted at Rs. 1,488.82 crores show a rise of Rs. 8.38 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 61.1 percent, against 6.3 percent and 60.5 percent.

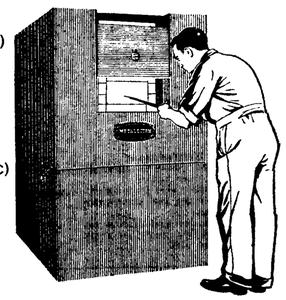
Commodity Markets

COMPETITION THREAT TO CASHEW INDUSTRY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE cashew processing interests in Kerala are worried about the possibility of East Africa becoming a rival to India in the world market for cashew kernel. The Indian cashew factories get almost two-thirds of their raw materials from Africa at present. There are reports that cashew processing has been started in Tanganyika with the establishment of a fully mechanised factory which has a processing capacity of 90,000 tons of raw nuts a year. The Tanganyikan Cashew Corporation has set up this factory with the co-operation of an Italian company. It was the shortage of labour that stood primarily in the way of African cashew-growing countries taking up cashew processing so far. If mechanisation could be successfully introduced labour shortage would no more stand in the way of a cashew processing industry developing in Africa. Once processing starts on a large scale, India cannot expect regular and large supplies of raw nuts from Africa. If the raw nut supply from that source is interrupted, the cashew processing industry in this country which has developed into a major foreign exchange earning industry will be in the doldrums. The local availability of raw cashew nuts is very limitted; something around 60,000 tonnes a year and this is hard-working for four months. The need for raising indigenous supply of cashew nuts is, therefore, urgent.



Raw nut stocks in India are at present low and market circles say that prices which are already ruling high at over Rs. 700 a ton are showing a tendency to harden further. One of the factors contributing to higher prices is the report that Portuguese East Africa has raised the export duty on cashew nuts. There are also reports that the new crops of Portuguese East Africa and Tanganyika are smaller than the previous season's.

Export activity in cashew kernels has been subdued of late due to lack of buying interest on the part of the largest buyer, the United States of America It is said that the American buyers are interested only in immediate shipment position which will reach there before Christmas and that too only at 54½ cents a lb. Their offer for January-June shipments are about 47½ cents. The reports are that although most users in America have not covered their requirements for January onwards, they consider that the present Indian price levels are too dangerous to make purchase on a speculative basis. Exporters are not inclined to cut prices because of the firmness in raw nut prices and the anticipated enlarged demand from abroad.

Cashew kernel exports have been showing an upward trend this year. According to official figures, 1,776,000 cases of 50 lbs each were shipped from India during the first nine months of this year, representing an increase of 260,000 cases over the exports during the same period in 1962 The money value of cashew kernel exports during this period is put at Rs. 16.50 crores, compared with Rs. 13.68 crores during the corresponding period last year.

WELLMAN INCANDESCENT STANDARD ELECTRIC FURNACES

* Made In India by Wellman Incandescent India Ltd in collaboration with Metalectric Furnaces of the U.K.
* For heat treatment operations like hardening, tempering,. annealing, normalising etc.
* Available in standard sizes or tailored to customers' requirements.
* Box type furnaces upto (1000°C)
* High temperature furnaces upto (1350°C)
* Forced air circulation furnaces and
* Electrode salt bath furnaces upto (1000°C)

WELLMAN INCANDESCENT INDIA LTD.

COFFEE

Export Trends

According to a Coffee Board handout, 20,392 tonnes of coffee has been sold for export out of the 1962-63 season's crop, including the sale on 7th November, 1963. This comprised 10,814 tonnes of Plantation, 4,084 tonnes of Arabica Cherry and 5,492 tonnes of Robusta. Tenders have been invited for another 1,356 tonnes and the sale is due on 27th November. Under the International Coffee Agreement, India can export 21,600 tonnes a year to the countries covered by this agreement. India is moving the International Coffee Council for a larger quota, preferably 50,000 tonnes a year.

A larger export will be advantageous to this country in view of the present world market trend in coffee. For instance, in London, coffee prices have been rising at a very fast rate for some time now. In the course of the past one month, second position coffees had made a gain of 37½s a cwt. to 236s 3d The hope that a larger export quota might be allowed to African Robusta and Brazilian coffee at the forthcoming meeting of the International Coffee Council has, however, weakened the forward position, although chances are considered slender. India's request for a larger export quota also is expected to come up for consideration at this meeting.

PEPPER

Brighter Outlook

The consensus of opinion in market circles about the prospects for Indian pepper in the season that has just begun, is that there need be no anxiety, and India would be able to maintain her sales at favourable prices The new crop is currently estimated by certain traders at 27,000 to 28,000 tons which is about the same as last year, but in view of the possible fall in world supplies, it is likely that India will be able to get a good price. Although a fair proportion of the Indonesian crop has been already sold out, it is not very certain whether the balance could be put on the world market, particularly in view of the strained relations between Indonesia and Malaysia Indonesians are trying to market their pepper themselves, but it is doubtful whether they would succeed in view of their lack of experience Americans and other buyers of pepper may have to look towards India for their requirements until normalcy is restored in the Far East supply line U.S buyers are currently quoting 32½ to 33 cents a lb. against Indian selling ideas of 33¼ cents a lb. The gap is narrow, and this can be bridged without much difficulty, according to exporters.

TEA

Larger World Supply in Prospect

(BY A SPECIAL CORRESPONDENT)

HOW difficult is the job of forecasting is shown by the following: In April 1961 under the heading "The Coming Season", one of Calcutta's leading tea brokers commented: "It must be remembered that 1960 was an exceptional year in north India and Pakistan and that production in these two areas fell by no less than 49 million lbs. Opinions vary as to whether the whole of this shortfall can be made up in 1961, but should this prove to be the case and should crops in south India, Ceylon and Africa continue to forge ahead, there is a distinct possibility that the trend of tea prices, particularly for the plainer descriptions, may turn downwards in mid-season. Should such a situation develop, producers in India are better placed than many of their competitors as it would appear that consumption in this country may have risen a further 10 million lbs in 1960 and is now estimated at 265 million lbs a year. It seems very likely, therefore, that the price of plain teas on the Calcutta market will continue to rule higher than in other centres. This trend will undoubtedly be further accentuated should orders from Egypt be of the same magnitude as in 1959 and 1960, but we understand that this country has completed arrangements to obtain some of its requirements in the coming season from Ceylon."

In trying to assess the supply of tea from north India next year it may be important to remember that the bumper yields in 1961 followed a serious drop in output during 1960. After two successive seasons with short crops, it seems reasonable to expect a recovery in 1964.

A year later, the same valuable source wrote: "As always, the big questionmark in any attempt to delve into the future is the likely size of the crop. The 1961 outturn was a record and we do not anticipate an increase of such magnitude in 1962. Much effort and capital, however, are being put into increasing production to achieve India's third five year plan target of 900 million lbs in 1965, and unless nature is particularly unkind we do not doubt that a further rise will be recorded in the coming season. But so far, the programme has actually fallen back in output.

"The industry in Ceylon has its problems and difficulties, but somehow always manages to improve its output. Perhaps 1962 will be an exception. In fact, Ceylon and south India keep going ahead.

"Tea drinking can safely be relied upon to show steady progress in the coming season, particularly in the Middle East, India and Pakistan, while the U.K.'s possible entry into the European Common Market offers prospects of spreading the tea habit in that region. Indeed, we think the race between production and consumption is likely to be close and we wonder whether the gloomy forecast of a large surplus of tea by 1965 made by the Food and Agricultural Organisation of the United Nations may not need revision. The overall statistical position of tea is we think fairly satisfactory, but within this framework, we detect a growing imbalance."

Since the above was written, world production has gone ahead in all places excepting north India, Pakistan and Indonesia Due to a fall for two years running from north India, the gloomy forecast of a large surplus of tea has been stayed. The situation now developing clearly points to a larger supply next year and more still by 1965.

New Delhi

KANE REPORT ON BY-PRODUCTS OF COAL CARBONISATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE report of the Kane Committee on the by-products of coal carbonisation is now available. It will prove to be of considerable value in the discussion, now in progress, on preparing plans for the petro-chemical industry in India. The by-products of coal carbonisation are basic raw materials for the heavy organic chemicals industry, the foundation of which was laid in India during the second plan period. The intermediates produced by the industry form the basis for pharmaceuticals, plastics, paints, dyestuffs, insecticides, industrial explosives, synthetic detergents, etcetera. An adequate and continuous supply of basic organic chemicals at economic prices to these consuming industries cannot be ensured unless the by-products of coal carbonisation are recovered in larger quantities and their prices are brought down substantially. It is equally important to ensure a fair price for the by-products to provide an incentive for their recovery to the maximum extent possible.

In this matter, the interests of the two sections of the industry seem to be conflicting. In fact, such a conflict did arise in 1959 when Sindri Fertilisers and Chemicals Ltd complained that the price offered for its coal tar was unremunerative and suggested pooling the price of coal tar and Government control over prices. The Development Wing made a preliminary examination of the different aspects of the matter and urged the Government to appoint a committee to go into the entire question of assessing the availability of by-products, their optimum use and the fair selling prices at which important basic organic chemicals like benzene, toluene, xylene and naphthalene should be made available to the consuming industries.

Terms of Reference

The Central Ministry of Commerce and Industry accepted the recommendation and constituted a Committee on By-products of Coal Carbonisation with the following terms of reference:

(i) To assess the potential availability of the principal by-products of coal carbonisation in the third plan;

(ii) To recommend the steps that should be taken to ensure the increased use of these by-products;

(iii) To examine, where necessary, the production costs and recommend fair selling prices, particularly, for benzene, toluene, xylene and naphthalene; and

(iv) To make any other recommendation that the Committee may deem appropriate, considering the objective of increasing the use of by-products of coal carbonisation.

In a brief note on the history of coal carbonisation, the Committee says: Coal carbonisation was introduced in India about a 100 years ago when two coal-gas companies were established—one each in Bombay and Calcutta. The first unit for the production of metallurgical coke was set up in 1909 by the then East Indian Railway. Several other coke producing units were established by 1924. The coke-ovens of the Sindri Fertilisers and Chemicals Ltd came into operation in 1954 and more recently the steel works in Rourkela, Durgapur and Bhilai have established their own coke-oven batteries for metallurgical coke to be used in the steel works. Mention should also be made of the large plant for producing coke and coal-gas set up by the Government of West Bengal in Durgapur. The plant has an expansion programme and a scheme for supplying coal gas to the city of Calcutta. A by-products recovery plant which is being put up by the Neyveli Lignite Corporation, is also scheduled to go into production this year.

Although coke-ovens were installed in India many years ago, the recovery of by-products has been rather neglected. Coal is carbonised mainly for producing coke or coal gas. The operating conditions of ovens or retorts are, therefore, so adjusted as to give the maximum yield of coke or coal gas of the desired specifications. Crude coal tar, which is one of the by-products of coal carbonisation, is an important source of organic chemicals like naphthalene, tar acids and creosote oil.

Recovery of Toluene

During the second World War, the need to recover toluene from coke-oven gases to meet the increasing defence requirements became very urgent and plants for the recovery and rectification of toluene were put up in Jamshedpur in 1941 and in Burnpur in 1943. A plant for the recovery of crude benzol was also set up in Kulti in 1944. This crude benzol from Kulti used to be transported to Burnpur for further rectification and purification. All these plants were put up at Government cost mainly for the production of toluene, under agreements entered into by the Government of India with the Tata Iron and Steel Co. Ltd, Jamshedpur, and the Indian Iron and Steel Co. Ltd, Burnpur. The agreements provided for the taking over of these plants by the firms, if they so desired, at the written-down value after a period of 15 years. Tata Steel exercised this option and took over the plant in Jamshedpur in 1956. The plant in Burnpur was similarly taken over by Indian Iron in 1961. The recovery plant in Kulti ceased to function in 1958 when Indian Iron closed its coke-ovens at that place. The coke-ovens established during the last decade by Sindri Fertilisers, the Rourkela, Bhilai and Durgapur steel works and the Durgapur coke-ovens of the West Bengal Government, also have benzol recovery plants.

The yield of crude tar varies with the nature of the coal and with the type of carbonising plant and the operating conditions. The crude tar on distillation and further processing yields products like naphthalene, tar acids, creosote oil, pitch, and road tar. The first plant for the distillation of crude coal tar was established in India by Shalimar Tar Products Ltd in 1921. Two more plants—one of the Bararee Coke Company and the other of Bengal Chemical and Pharmaceuticals Ltd followed soon. Modern tar distillation units exist alongside the coke-oven batteries of the three public-sector steel plants.

The question of promoting the recovery of by-products of coal carbonisation has been engaging the attention of Central Government Departments for a long time. A panel on fine chemicals, drugs and pharmaceuticals appointed by the then Department of Planning and Development, recommended in 1946 that the recovery of by-products should be developed to the maximum extent possible and placed on a sound footing so that the manufacture of intermediates for dyes, drugs, etcetera, could be based on indigenous raw materials.

With the installation of a large number of coke-ovens in the country in recent years, the position in relation to the production of by-products of coal carbonisation has changed for the better. Nevertheless, with the rapid expansion of the organic chemicals industry in general, and the proposed manufacturing programme for organic intermediates of about 25,000 tons a year in the public sector in particular, the need to make available to these industries adequate quantities of benzene, toluene, naphthalene, etcetera, of required specifications at reasonable prices has become very urgent.

Main Conclusions

The Committee's main conclusions and recommendations are as follows:

"The requirements of benzene and naphthalene for meeting the targets set for the consuming industries in the third plan are estimated at around 90 million litres and 20,000 tons a year, respectively. Projected to 1970, these requirements are placed at 185 million litres of benzene and 40,000 tons of naphthalene a year. The Committee recommends that Hindustan Steel should take measures for the installation of recovery and rectification systems for coal carbonisation in the third plan. Although theoretically, with these expansions the production of benzene and naphthalene ought to approximate with the third plan requirements of the consuming industries, the Committee considers that in practice maximum production may not reach more than 85 percent of these figures. It is also difficult to predict the new uses that may develop for these aromatic raw materials. The Committee, therefore, feels that there will be a shortfall even in relation to the third plan requirements, and that the gap between demand for benzene and naphthalene and indigenous supplies will widen in the early years of the fourth plan period. The Committee is, therefore, of the opinion that other sources, for the production of aromatics such as benzene and o-and p-xylenes, will have to be explored to satisfy the long-term requirements of the consuming industries. In advanced countries such as the U.S.A., the petro-chemical industry is the major alternative source.

"The Committee notices that crude benzol recovery at T.I.S.C.O. is hardly 50 percent of the recovery that should be possible involving a loss of 14 million litres a year. It emphasises that T.I.S.C.O. should make immediate efforts to improve its processes and step up recovery of benzol so as to bring the plant in line with other recovery units.

"The Committee notes with concern that three batteries of I.I.S.C.O., Burnpur, are not connected to the benzol recovery system, leading to a waste of about 19 million litres of crude benzol a year. It understands that the transfer of the Government B/T plant to I.I.S.C.O. has been completed. It considers it of utmost importance that I.I.S.C.O. should immediately equip itself for maximum production of crude benzol together with corresponding purification and rectification units.

"The Committee observes that the amount of production of motor benzol in the different rectification units varies from negligible proportion to 30 percent of crude benzol and feels that special steps should be taken by the units concerned to reduce motor benzol to a maximum of 6 percent of crude benzol.

In view of the diminishing domestic demand for motor benzol, the Committee recommends its use as fuel, (a) for carburetting the coke-oven gas and (b) if possible, in admixture with pitch, creosote fuel for steel melting.

Percentage Recoveries

"The Committee finds that there is considerable divergence in the percentage recovery of the principal coke-oven by-products in different units. Variations in crude benzol are from 6 litres to 11.5 litres a ton of coal carbonised; benzene from 29 percent to 75 percent on crude benzol. The Committee is of the opinion that all the coke oven by-product plants should aim at recovery of at least 10 litres of crude benzol a ton of coal carbonised; 60 percent of benzene on crude benzol processed and 4 percent of hot pressed naphthalene on coal tar distilled. It feels that all the units in which the performance is not up to the mark, should take steps to attain these figures.

"T.I.S.C.O. and I.I.S.C.O. are now burning 125,000 tons of tar a year. The Committee considers that of this quantity, it would be practicable to save at least 50,000 tons of crude tar for distillation and thus recover 2,000 tons of naphthalene every year. There is a good export demand for naphthalene; and this production will fetch at least Rs. 12 lakhs in foreign exchange. The Committee appreciates that there are reasons for the current practice of burning crude tar for steel melting, such as the shortage of coke-oven gas and the greater efficiency of heat transfer obtained with a fuel which burns with a luminous flame. This will make it difficult to replace coal tar completely by alternate fuels such as fuel oil and pitch—creosote mixture. The Committee understands that to some extent crude tar is burnt as fuel in steel melting in other countries as well. It is of the view that the shortage of gaseous fuel should be remedied by the steel companies by expanding their coke-ovens so as to obtain additional quantities of coke and gas, thereby reducing to the minimum the amount of crude tar burnt as fuel in the steel-melting shops. Whatever crude tar is saved by this means, should be distilled to recover naphthalene.

"The present consumption of benzene and naphthalene in the country is not large. However, this is expected to grow substantially by the middle of 1963. For the next two years, therefore, the major outlet for indigenous production can be exported. Unless benzene and naphthalene are marketed at prices comparable to levels obtaining elsewhere, exports will not take place, nor will the establishment of industries based on them be possible. The Committee was unable to obtain from Hindusthan Steel data on the actual or estimated cost of production. Presumably, this was because its plants have not been in operation for a sufficient length of time. The pricing of both benzene and naphthalene is important from the point of view of setting up industries for the production of basic organic chemicals. For this purpose, the Committee suggests that Hindusthan Steel and entrepreneurs organising industries where benzene and naphthalene are primary raw materials, should come to long-term supply and price arrangements. The Government should assist where the parties cannot agree to a

reasonable price formula. Such long-term arrangements will obviate the necessity of inviting tenders every year for the sale of benzene and naphthalene. The Committee feels that this practice is detrimental to industrial development in the country.

"Many of the consuming industries, such as synthetic rubber, polystyrene and organic intermediates specify benzene of very low sulphur content which can be produced by the hydro-refining process. The demand from these will account for at least 70 percent of the total requirements. The Committee, therefore, recommends the adoption of the hydro-refining process for crude benzol, as at Rourkela, to all other units.

Recovery of Tar Acids

"The Committee has noticed that arrangements for recovery, purification and rectification of tar acids have been provided at the Rourkela steel plant and that the recovered tar acid from the Bhilai steel plant would be processed also at Rourkela. It suggests that the Durgapur steel project should similarly investigate the possibility of recovering tar acids. If, for any reason, the project authorities are unable to undertake themselves the purification and rectification of tar acids, the crude product may be made available either to Rourkela or to the West Bengal Government's Durgapur coke-oven plant, because such facilities are included in the plans of the latter plants.

"None of the coke-oven plant in the country have made any provision for the recovery of tar bases, such as picolines, pyridines and quinoline. The Committee, however, notes that the Rourkela steel plant is investigating the possibilities of recovery and separation of tar bases. It considers it necessary and desirable that all the coke-oven plants recover crude tar bases. These should be collected at one central place for further separation and purification.

"The Committee recommends the use of crude anthracene (containing carbazole and phenanthrene) in the manufacture of carbon black, if necessary in admixture with other fractions of coal tar distillation, as the potential availability of crude anthracene would be as much as 22,000 tons a year.

"In view of the large potential supplies of pitch to the extent of about 100,000 tons and its limited demand in the country and also the acute shortage of low ash coke experienced by the aluminium, ferro-manganese and calcium carbide industries, the Committee is of the view that a plant for conversion of pitch to low ash coke be set up in conjunction with one of the public-sector coke-ovens. Bhilai would be a suitable location for this purpose, because of its central location.

"For the next two years, there will be considerable surplus of benzene, toluene, naphthalene and pitch in the country. The Committee notes that Hindusthan Steel has achieved some success in the export of these products. It feels that these efforts may continue, although it is necessary to keep a watch on the situation to ensure the availability of these essential raw materials to industries within the country.

"A vital factor adversely affecting the disposal of and consequently the continuous production of by-products, is the difficult supply of wagons, particularly so when the storage space provided in the works is limited. The Committee recommends that an additional storage capacity to the extent of three months' production for all items be provided at all the coke-oven plants.

"The Committee also recommends that it is necessary to provide adequate tank wagons for the movement of various liquid products. This might be brought to the notice of the Railway Board as a most urgent problem.

"The Committee recommends that an inter-Ministerial working group be constituted to (1) secure co-ordination between the different units engaged in coal carbonisation and the recovery of coke-oven by-products, (ii) suggest special steps to be taken to implement the recommendations made by the Committee and (iii) maximise the production of benzene and naphthalene in all units and assist them to fulfil their rôle in achieving the plan for establishing basic organic chemical industries in the country".

Contract for West German Firm

Under Hindusthan Steel's Rourkela expansion scheme, the Koppers Export G.m.b.H. of Essen, West Germany, has recently been awarded the contract for increasing the capacity of the existing by-products recovery plant. The present plant capacity of 1,680,000 Nm³ a day coke-oven gas will be increased to purify 2,520,000 Nm³ a day and to recover the various by-products.

The following units will be extended: the gas primary cooling units, the gas conveying units, the electrostatic gas detarrer, the gas final cooling unit, the benzole washing and distillation unit, the hydrogen sulphide absorption unit and the plant for obtaining sulphuric acid by the wet catalysis method. Furthermore, a plant for the recovery of ammonium sulphide for the coke-oven gas capacity is to be newly installed.

The Koppers' installation in Rourkela was commissioned in 1959. The expansion of the plant is scheduled to be completed by October 1965.

SOCIALISM

Distribution of Wealth, Income

Two interesting views on socialism were expressed last week. An English rendering of the Prime Minister's recent speech in Ranchi rightly laid stress on the minimum necessities of the people, such as food, clothing and shelter, which were to be secured within a specified period. Socialism, he said, will come after these needs are met.

The Central Home Minister, Mr. Guljarilal Nanda, said in Patna that a frustrated mass of people in an impatient upsurge might radically change the present set-up of society if the Congress failed to implement its programme of democratic socialism within a reasonable period of time. Mr. Nanda has been closely associated with planning almost since the inception of the Planning Commission. He has also been intimately connected with organised labour. A question could legitimately be asked whether planning, for which he was responsible for a number of years, has narrowed down the disparities of wealth in the country.

In spite of more than a decade of planning, there is hardly any competition in any field of activity. Side by side, there is an unsatisfied but protected home market. These are some of the factors which have created opportunities for accumulating wealth and particularly the black money which Mr. Krishnamachari recently described as "unaccounted money."

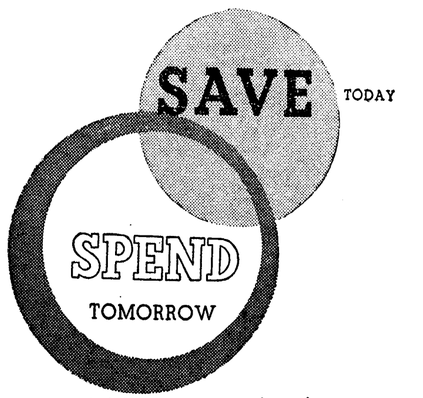
It is necessary to consider the background against which the second plan was prepared. In its formulation, there was a conflict between the so-called progressives, headed by Professor P. C. Mahalanobis, and others in the Planning Commission, whose spokesman was Mr. K. C. Neogy. The size of the plan was ultimately increased, as was demanded by the progressives. Mr. Neogy wanted to append a note of dissent to the plan. At this stage, the then vice-chairman of the Planning Commission, Mr. V. T. Krishnamachari came out with his "master-stroke". He said that the plan could be implemented if agricultural production were raised, which would lead to a fall in prices.

Stagnation in Agriculture

Events have shown that Mr. Neogy was right, since agriculture has been stagnating. The foreign exchange crisis led to the drastic curtailment of imports, creating greater and growing disparities in wealth. The second plan made India heavily dependent on foreign aid. It looks as if this dependence will continue for many years.

The "progressives" are now in charge of the country's planning. They have evolved a new strategy of fixing the rate of growth and letting the whole plan hang on this peg. Critics are silenced by a counter-question: are you opposed to "X" percent rate of growth? A similar exercise is at present in progress in preparing the fourth plan. A rate of growth is being fixed, which will determine the size of the plan. This is being done in spite of the unsatisfactory achievements of the third plan.

The Chinese have made this country realise what the planners should have realised, say, in 1947 that funds should be set aside for national security even during peacetime. This is more prudent than making huge and sudden increases in military production and manpower immediately before or after the outbreak of a war. This long neglected aspect may now alter the fundamentals of India's development. It is not socialism but the country's security that is at stake.



Instead of pointing to the possibility of a mass upsurge, the Central Home Minister, who is mainly responsible for the maintenance of law and order, should tell this country how and to what extent the second and third plans have reduced the disparities in wealth and have thereby brought this country nearer the cherished goal of socialism. It is not so much the Planning Commission but the Central Finance Minister that has managed to reduce the earnings of salaried peolpe as is evident from the following two tables on taxation as a percentage of earned income.

SALARY INCOME IN INDIA COMPARED WITH OTHER COUNTRIES
(Tax on a married individual with two children)

Income Rs.	India %	U.K. %	West Germany %	France %	U.S.A. %	Malaya %	Japan %	Canada %

To illustrate the position more clearly, the results of the table on page 760 have been worked out to show the net amounts after tax which an individual in the income range of Rs. 40,000 to Rs. 80,000 will receive in India, the United Kingdom, West Germany, France, the U.S.A. and Canada.

ATOMIC POWER

New Pacts with Canada

Representatives of the Governments of India and Canada recently concluded in Ottawa two agreements on generating atomic energy. They are of far-reaching significance to both countries. The agreements will be formally signed in New Delhi shortly.

One of these agreements is between the atomic energy authorities of the two countries. The authorities will freely exchange scientific and technical information which has already been obtained, or may be obtained during the period of the agreement, concerning the development of heavy water moderated reactor systems. Either party will, if requested by the other, furnish information and detailed design data, including plans and working drawings for the design and construction of nuclear power-stations of the heavy water type. Initially, Atomic Energy of Canada Ltd will supply to the Indian Atomic Energy Department detailed design data, including working drawings, related to the Candu reactor and the Douglas Point nuclear generating station now under construction in Canada.

The agreement will initially run for a period of eight years and may be extended by mutual agreement. During the early years of the agreement, valuable information already developed as a result of Canada's special experience in the heavy water system will be transferred to the Government of India for full commercial use in India. This information, which has been valued by the Government of India at $5 million, is to be transferred without cost to India and without deduction from Colombo Plan or other assistance.

Under another agreement between the two Governments, Canada and India will co-operate in the construction of a nuclear power-station of the Candu type with a net electrical output of 200 megawatts. It will be located in Rana Pratap Sagar, Rajasthan State. The Indian Department of Atomic Energy will act as prime contractors and be responsible for the erection of the station. Canada will provide the design with detailed working drawings and specifications of the station up to the steam raising equipment while India will provide the design for the rest of the station.

Half of the initial charge of uranium fuel will be procured from Canada. The latter will also supply such additional fuel for the station as may be required by India from time to time, provided the Canadian fuel is not more expensive than other foreign fuel.

The Government of Canada will provide, under the Export Credits Insurance Act, credit facilities for the purchase of services, material and equipment supplied by Canada which is estimated to cost about $35 million; the total cost of the project is about $70 million. This station will make a valuable contribution to the power needs of a vital region in India.

Canada and India have agreed to exchange information on the operation of this station and its counterpart, the Douglas Point nuclear generating station, now under construction in Canada. They have also agreed that the two stations should be used only for peaceful purposes and the agreement includes appropriate provisions to this end. A unique feature of the agreement is that these provisions are completely reciprocal, conferring on India and Canada identical facilities for assuring themselves that both stations are being used.

It is explained that the Candu (Canadian Deuterium Uranium) nuclear power-station burns natural uranium and is both cooled and moderated by heavy water. It will have a net electrical output of 200,000 kilowatts. The Candu reactor was developed by Atomic Energy of Canada Ltd from the 20,000-kilowatt prototype N.P.D. (Nuclear Power Demonstration) reactor in Rolphton, Ontario, which went into operation in 1962.

The construction of the Douglas Point nuclear power-station began in 1960. The early construction phase, which included most of the rock excavation, massive concrete construction of the circulating coolant water channels, and the erection of the reactor building shield has been completed. The reactor building's internal construction has now largely been completed.

The Douglas Point station consists of three buildings and an administration wing. The reactor building is a culinder, 130 feet in diameter, with a 4-foot thick concrete walls, with a hemispherical steel dame. The reactor consists of a calandria, end shields and cooling assemblies. The calandria is a stainless steel vessel—22 feet in diameter and 17 feet long. It weighs 60 tons. It has 306 zirconium steel alloy tubes which are 4½ inches in diameter. The end shields are made of steel and are water cooled. In addition to shielding the fuelling machine from the reactor, the shields locate and support the reactor's cooling assemblies. The shields are more than 3½ feet thick.

The fuel for the Candu reactor is natural uranium fuel fabricated into a 19 element fuel bundle which is 19½ inches long. The weight of the bundle is 36 lbs, of which 33 lbs is uranium dioxide. Four thousand bundles will be required for the first stage. When the fuel is taken out of the reactor, it is stored permanently under water. Fuelling machines designed for the reactor permit refuelling at the rate of about five bundles a day while the reactor is in operation.

The Douglas Plant nuclear power-station has a guaranteed turbine cycle efficiency of 33 percent which, because of the high thermal efficiency of nuclear steam generator, results in an overall net station efficiency of 29 percent.

The Cost Estimate

The original estimate of the cost of the Douglas Point plant was $81,507,000. The cost experience during construction has been favourable; costs have actually fallen slightly below estimates. The Douglas Point station is scheduled to be completed in 1964 and should be in operational service the following year.

The plant will be owned by Atomic Energy of Canada Ltd and will deliver energy to Canada's largest electricity utility, the Hydro-Electric Power Commission of Ontario. The Commission will operate the station for Atomic Energy of Canada Ltd and will purchase the energy delivered. The Commission will eventually purchase the entire plant from Atomic Energy of Canada Ltd. Earlier this year, the Commission decided to build several other Candu power-stations during the next few years.

The successful construction of the Douglas Point nuclear power-station represents a significant achievement on the part of Canadian scientists and engineers. In addition to the unique design and testing work done by Atomic Energy of Canada Ltd, significant contributions were made by Canadian industry. The Canadian General Electric Company is producing the first charge of fuel; the Montreal works of the Dominion Bridge Company is building the reactor calandria; the Montreal Locomotive Works is fabricating boiler units and heat exchangers; Byron Jackson Ltd is constructing the coolant pumps.

Although the initial capital costs of a Candu nuclear power-station is relatively high, the simplified fuel cycles and the use of natural uranium results in a net cost of electrical energy competitive with coal or oil-burning thermal units. Additional savings are realised by the high burn-up of fuel characteristic of the Candu system which results in minimum quantity of radioactive waste and simplified waste disposal problems.

AUSTERITY

Precept and Practice

On 21st November, 1962, the then Central Home Minister, Mr. Lal Bahadur Shastri, laid down that austerity at official levels should include "no lavish banquets and parties, no holding of conferences at cool heights in summer, no delegations abroad, minimum use of transport and of stationery and cutting out of verbosity from official correspondence." Mr. Shastri added that "austerity should become our badge in all walks of life. Austerity admits of no compromises."

In February this year, the then Central Finance Minister, Mr. Morarji Desai, had bled the country white through taxation. And the Prime Minister silenced the critics by pointing to the concentration of Chinese troops in Tibet.

New Delhi is now having a Youth Festival as well as drama and music festivals. The Central Minister for Steel has hardly been in town. He has been constantly on tour, attending seminars and inaugurating conferences. The Prime Minister also inaugurated a machine tool factory in Punjab, the heavy machine-building plant in Ranchi and the coal mining machinery plant in Durgapur. As usual, the foreign dignitaries in sizable number are scheduled to visit India this year. Side by side, poor people of Delhi had not had even *gur* to celebrate their *Deewali*. Even Mr. Nanda does no longer talk of holding the price line.

This is how austerity which is supposed to know no comprise, is being observed here. This should also show how the poor taxpayer's money is being spent.

FOREIGN INVESTMENT

New Advisory Body Formed

The Government of India has set up a small high powered standing committee consisting of Mr. S. Ranganathan, Secretary to the Ministry of Industries, Mr. L. K. Jha, Secretary to the Department of Economic Affairs, Central Ministry of Finance and a representative of the Planning Commission. The committee will have a permanent secretary. It will coopt the Secretary of a Ministry whose subject may come up for discussion before it.

The committee will give prompt and clear-cut advice to foreign entrepreneurs, seeking fields of investment in India, on the scope for investment in a particular field, whether foreign participation will be permissible and if so in what ratio. The committee, it is expected, will lay down broad principles which should be explained to a foreign entrepreneur by the secretary of the committee, who may seek advice of the latter on issues not covered by the rules. The committee will start functioning at an early date.

BOARD OF REVENUE

Plans for Reorganisation

The Central Board of Revenue, it is reported, is being reorganised. It will be bifurcated into a board for direct taxes with Mr. J. P. Singh as its chairman and for indirect taxes, with Mr. B. N. Banerji as its chairman. The chairman of the Central Board of Revenue has already been posted as an Additional Secretary for Expenditure. There will be a third board for company law which has been transferred to the Central Ministry of Finance.

TEXTILE MILLS

U.K. Loan for Modernisation

Platt Brothers of the U. K. has arranged a loan of £7.5 million from British banks to finance the modernisation of such cotton textile units in India which need rehabilitation. The firm's representative along with that of the U.K. Export Credit Guarantee Department is here to discuss the details and select units which need to be modernised. The Export Credit Guarantee Department has lately raised the period of loan from seven to ten years. Platt Brothers of the U.K. manufactures textile machinery.

FERTILISERS

A.I.D. Loan for India

The Government of India has arranged a loan from the U.S. Agency for International Development for the purchase of fertilisers. Tenders from U.S. firms have been invited for 80,000 tons of various types of fertilisers.

FORD FOUNDATION

New Grant for C.M.P.O.

A grant of $1,987,000 to the Government of West Bengal to assist it in development planning for the Calcutta metropolitan area was announced by the Ford Foundation in New York last week. The funds provide for the services of an internationally-known group of consultants in urban planning and for training and research activities of the Calcutta Metropolitan Planning Organisation. The grant covers specified costs up to 30th September, 1965.

With this grant, a total of $2,562,000 has been provided by the Ford Foundation for the Calcutta metropolitan planning project since its inception in June 1961. The original grant in mid-1961 was for $800,000. That was supplemented by a second grant of $675,000 in 1962. The current grant is the latest in this series.

As in previous grants, the funds allotted will provide for a team of long-term and short-term advisers and consultants, foreign training fellowships for Indian staff members of the C.M.P.O., administrative costs of the planning programme, and certain necessary books, equipment, and supplies.

AGRICULTURE

Raising Output

The Agricultural Production Board held its first meeting here last week. The Board, the constitution of which was announced at the meeting of the

National Development Council earlier this month, has been set up to effect co-ordination between the concerned Ministries of the Central Government in matters relating to the improvement of agricultural production.

There was a general discussion on the steps that were necessary to effect an immediate increase in agricultural production. The utilisation of irrigation potential created by projects that have already been completed, adequate supplies of cement and iron and steel for agricultural purposes and the provision of adequate number of tractors and other agricultural equipment and fertilisers were among the subjects discussed in this connection.

Attention was drawn to the need for adequate follow-up schemes for increasing agricultural production. The Central Minister for Irrigation and Power, Dr. K. L. Rao, informed the Board that 1 million acres of land, irrigation facilities for which already existed due to the completion of irrigation projects in the States of Gujarat, Uttar Pradesh, West Bengal and Mysore, could be harnessed for an immediate increase in food production. The chairman of the Board said that he would take up the matter personally with the Chief Ministers of the States to ensure immediate action.

TERYLENE

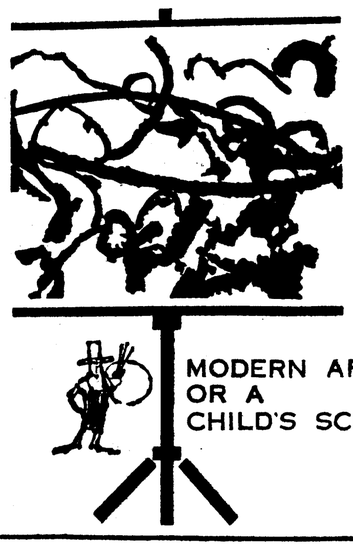
New Plant in Bombay

A chemical and processing plant for producing 2,000 tons of "Terylene" polyester fibre a year is now being constructed by Chemicals and Fibres of India Ltd on its new 225-acre site in Thana, Bombay. The cost of the plant now being erected in Thana will be Rs. 3.5 crores, but plans are already being prepared for a phased, five-fold increase in the production capacity with simultaneous diversification to include filament yarn in addition to staple fibre in the range of products. Similar spectacular growths in output have already been achieved in other countries, especially Japan, where production has commenced only in comparatively recent years. Polyester fibre is sold as "Terylene" in the U.K., as "Dacron" in the U.S.A., as "Trivera" in Germany, and as "Tetoron" in Japan. The trade name "Terene" has been registered for its use in India.

The basic raw materials for manufacturing polyester fibre are derived from petroleum, and it is envisaged that indigenous sources of supply of these materials will become available in the next five or ten years, with further large savings in foreign exchange. Even at the outset, there will be substantial foreign exchange savings at present incurred in importing wool tops and long-staple cotton.

COCHIN SHIPYARD

Japanese Collaboration



A delegation from the Mitsubishi group of industries, Japan, led by Mr. I Matsushita, vice-president of th Mitsubishi Shipbuilding and Engineering Company has had discussions with the Government on the Cochin shipyard. The Mitsubishi group has submitted detailed and concrete proposals for collaboration in the project, which are now being considered by the Government. After these proposals have been examined, further negotiations with the Mitsubishi group will be carried on in Tokyo as desired by the Japanese delegation

NEITHER. THE ILLUSTRATION SHOWS FINE METAL CHIPS (MAGNIFIED MANY TIMES) PRODUCED BY A GRINDING WHEEL THAT IS CUTTING CORRECTLY!

FOR PRECISION GRINDING AND FINISHING, CARBORUNDUM UNIVERSAL BONDED AND COATED ABRASIVES ARE UNRIVALLED. THEY ENSURE FASTER STOCK REMOVAL, COOLER CUTTING AND GREATER ACCURACY - AND THUS HELP MANY INDUSTRIES MANUFACTURE BETTER PRODUCTS, WHILE REDUCING PRODUCTION COSTS AND TIME.

CARBORUNDUM UNIVERSAL USE THE LATEST EQUIPMENT AND PRODUCTION TECHNIQUES TO ENSURE THAT PRODUCT QUALITY IS CONSISTENTLY HIGH (POSITIVE DUPLICATION EVERY TIME!). PLANS ARE ALREADY UNDER WAY FOR INSTALLING ADDITIONAL KILN AND PLANT CAPACITY, TO MEET THE INCREASING DEMAND FOR ABRASIVES. AND REMEMBER, TODAY, MORE THAN EVER, CARBORUNDUM UNIVERSAL OFFER THE MOST COMPREHENSIVE TECHNICAL AND ADVISORY SERVICE TO HELP YOU CHOOSE THE RIGHT ABRASIVE FOR THE RIGHT JOB—AND TO USE IT TO YOUR BEST ADVANTAGE.

London

LOOKING AHEAD TO LONG PERIOD OF GROWTH IN BRITAIN

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Chancellor of the Exchequer, Mr. Maudling, had a busy day last Wednesday, when he was responsible for making two important speeches. The first was at a luncheon given by the American Chamber of Commerce, the second in the House of Commons during the debate on the Queen's speech. In both, the Chancellor made the most optimistic forecast for the British economy he had yet risked. "We are either at the beginning, or in the course of, a phase of substantial expansion," he said at lunch time. With relatively stable prices and a strong position of sterling he was now confident that the currency could be protected throughout a long period of expansion—as long as costs and prices remained competitive. In world trade, prospects for next year were extremely good.

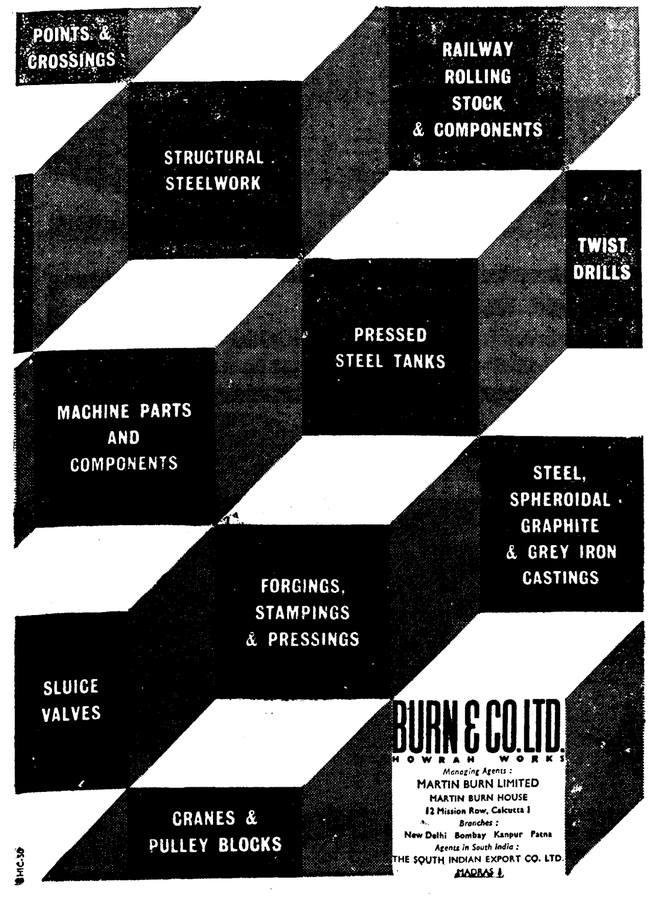
Obviously, this serene picture could be spoilt if wages started to run away or if, for other reasons, the balance of the economy was upset. Mr. Maudling made that point plainly enough in the House of Commons. What had held us back in the past, he said, was the exposed position of sterling and the tendency of incomes to rise faster than productivity. This time, the resources available to support the pound against temporary fluctuations were very much stronger than they had been. But a rational incomes policy to ensure that real incomes rise no faster than the economy could bear was a basic condition of growth.

In fact, the sterling problem is closely linked with the wages problem. A new bout of wage inflation would quickly reduce the resources available to protect sterling. It will be spring or summer before this danger can be judged. For the moment there is much ground for optimism. Even the F.B.I., in a comment published on its October enquiry, says that the present expansionary phase should last until the end of 1964 and possibly until 1965—"other things being equal."

Interpreting the trends brought out by the enquiry, the F.B.I. says it would be wrong to believe that the economy was already moving forward in top gear. It was better to say that it was still accelerating. Naturally, the general election will be a factor. Its approach is probably a factor even now in delaying some industrial investment decisions. But unless politics become really disruptive the underlying factors of expansion ought to work themselves out whatever Government results from the poll.

Britain also emerges well from the latest review of economic prospects carried out by the Economic Commission for Europe. For once the differences between the trends in the United Kingdom and in the rest of western Europe appear to be almost all in Britain's favour. The most important of these differences concerns the movement of relative costs. The E.C.E. notes that in Europe as a whole industrial earnings are still rising faster than productivity, so that wage costs a unit of output have continued to climb. Britain alone, according to E.C.E., has been able to keep its rise in earnings in line with productivity and thus to hold its wage costs steady.

Success in Export Field



This has plainly been a major element in the U.K.'s success this year in enlarging exports, notably to western Europe. But the country cannot take it for granted that it will continue to enjoy the competitive advantage that the more favourable movement in labour costs has given it recently. According to the E.C.E., the rise in European wage costs has been much more moderate this year than it was in 1962. Except in France and Italy, the upward pressure on prices has weakened appreciably. This means that in future Britain cannot simply rely on other countries pushing up their costs faster than our own in order to maintain the competitive position. The trend in wages and earnings will have to be watched more closely to see that it does not run too far ahead of productivity. The key question here is how quickly the expansion of output that is now under way will lead to a renewed tightness in the labour market. The E.C.E. takes a highly optimistic view of the prospective supply of labour to meet in demand in the United Kingdom. Taking together the fall in civilian employment of 180,000 recorded in the year to the end of June and an assumed rise of 170,000 in the potential labour supply arising from the increase in population of working age, it arrives at the conclusion that total reserves of unused labour may have grown by as much as 350,000, or nearly 1¼ percent of the employed population.

Unfortunately, the basis of this calculation has already been weakened by the revision of its previous estimates of mid-year employment announced by the Ministry of Labour. The Ministry now believes that the total number in civil employment at the end of June may

STERLING and RUPEE CONTRACTS available

in fact have been about 0.7 percent greater than it had originally thought. In that case, it was probably not much different from the year before. Moreover, on the latest count (in mid-September) employment was up by 119,000 from June. Hence, it seems unwise to assume that large reserves of labour are available over the country as a whole. The U.K.'s chances of getting through next year without overloading parts of the economy will depend very much on Mr. Heath's success in steering work to the underemployed regions. In his speech to the annual conference of the Institute of Directors recently, Mr. Heath outlined the steps he is taking to set up new machinery for regional development: but he has not been left much time to get the machinery working.

European Economic Trends

In other ways, the E.C.E. does not expect to see any radical departure from present trends in the European economy in the near future. "No patently recessionary forces are at work," it says, "nor is a renewed boom in prospect." Outside the United Kingdom, it expects the rate of growth to continue at around 3 to 4 percent a year with the European economy as a whole operating at below its capacity. Although it detects some signs of quickening of exports, it does not believe that the rise in demand from other countries will be sufficient to give a major stimulus to production in Europe. In the E.C.E's view, the present relative slackness in Europe is the consequence of the deliberate policies of Governments and central banks. "Individual Governments", it says, "are at present waiting for others to pursue a more rapid expansion, but are not willing to pioneer in this direction at the risk of being left with too high domestic price and costs levels, rising imports and reduced competitiveness in export markets." Another point made by Mr. Maudling in his Commons speech, namely, that a 4 percent expansion, as visualised by the Government's announced plans, can in fact be maintained, comes in for independent support from members of the National Productivity Year Council.

Industrial Growth

Given the right conditions, the 4 percent increase in industrial growth sought by N.E.D.C. was now "well within our grasp", said Lord Netherthorpe, its chairman, speaking at a London Press conference held as a prelude to the National Productivity Year conference in Eastbourne from 26th to 28th November. The N.P.Y. had helped one firm in every four to make changes leading to higher efficiency, said Lord Netherthorpe. This represented 13,000 firms in manufacturing industry alone. He continued: "Of these, many firms will in any case have been working at a high level of productivity; their experience in N.P.Y. shows that even the best can be better. Of the remainder, some will, of their own accord have been making, and will continue to make, the maximum possible use of all the latest techniques; they may not have needed the stimulus that N.P.Y. could give.

The survey had been carried out among employers, managers, and trade unionists, and information and opinions had been obtained from 783 managements and 131 trade unionists. They had had a high response rate of 39 percent and 38 percent, respectively. Responses to questions addressed to both sides of industry showed that 42 percent of those engaged in manufacturing considered that N.P.Y. had been helpful to industry as a whole, and 43 percent said it had helped to improve management worker relationships. Of managements who said that N.P.Y. had helped their firms, and who listed ways in which this help had been most obvious, 54 percent had specified production methods, 42 percent general cost reduction, 33 percent training schemes, 27 percent quality and reliability control, 26 percent suggestion schemes, and 24 percent office methods.

Lord Netherthorpe said that there were obviously some firms which could have benefited but, for one reason or another, did not do so. "To reach these firms is the aim of all our future work," he said.

Thirty-nine national bodies have taken part in the organisation of the conference, which will cover production, marketing, distribution, research and development, and training and education. The conference will emphasise the interconnection of these subjects. Its aim is to point clearly to everyone concerned their directions during the next five years.

IMMEDIATE DELIVERY

BIRD'S SILLIMANITE BRICKS AND BLOCKS

Standard Sillimanite Bricks are now available ex-stock. Sillimanite Wedges, Arches and Blocks (including cement kiln blocks) within 4 to 6 weeks.

KFS is but one of the many progressive divisions of the Bird-Heilgers Group. The Group, with its varied industrial activities, plays a significant role in the country's economy.

Jute

BIG FIBRE PURCHASE QUOTA ISSUED FOR DECEMBER

THE Jute Commissioner has issued a raw jute purchase quota of 1 million bales for December, against 1.05 million bales for the current month. The I.J.M.A. mills will lift 925,000 bales and the others 75,000 bales. With this allocation, the total of the purchase quotas issued so far comes to 4.96 million bales—4,445,000 bales for I.J.M.A. members, 365,000 bales for other mills and 150,000 bales for the J.B.S.A. This accounts for about 68.8 percent of the season's officially estimated output of 7.2 million bales.

Announcing the quota at a Press conference in Calcutta on Tuesday on the eve of his departure for the E.C.M. countries as the leader of a trade delegation, Mr. G. C. L. Joneja, Jute Commissioner, said that the firm trend continued in the raw jute market. The minimum operational prices are well maintained and prices have tended to be harder in the secondary markets, which indirectly govern the trend in Calcutta. The co-operatives have been buying fibre only at the derivative levels, basis Rs. 30 a maund for Assam Bottoms, ready f.o.r. Calcutta. They could buy only 11,000 bales in Bihar, which is considered one of the weakest spots. This shows, according to Mr. Joneja, that growers are getting better prices in the open market.

The Jute Commissioner said that usually fibre arrivals increased from October onwards, reaching the peak in December. So the quota has been fixed at a higher level to prevent any possible decline due to selling pressure. He felt that the mills would not experience any difficulty in lifting this quota as December was a five-week month.

Estimate of Fibre Supplies

The total supplies of fibre, including unofficial arrivals from Pakistan, are estimated at 7.5 million bales this season, against 8 million bales in 1962-63, and the total Indian crop, including mesta, is estimated at between 7.2 million and 7.5 million bales, against 7 million bales. The shrinkage in supplies is due to the rigorous measures taken by the Governments of India and Pakistan to check smuggling across the border. Mr. Joneja felt that in spite of the high level of foodgrain prices, the outlook for jute should become better when the Rs. 3.8-crore project for the improvement of fibre supplies is implemented.

Mills are worried over the continuing slackness in the offtake of jute goods during the past few months, although they have been producing at the maximum level, expecting an early reversal of the trend. With Pakistani capacity well-booked for far forward positions, it was hoped that further orders from foreign countries would flow to India. But despite the gradually declining price levels, fresh overseas business has been small. Foreign consumers seem to be waiting for a further fall in prices.

The virtual absence of the U.S.A. from the market and her gradual consumption of spot stocks call for caution. In fact, U.S burlap prices have softened over the weeks. Argentina has been purchasing cornsacks rather sparingly. Australia has not yet completed her woolpack purchases for the 1964 fleecing season. A representative of the Australian Jute Goods Association is in Calcutta. Trade circles believe that he will iron out disputes between the A.J.G.A. and the I.J.M.A. over the gunnies exported from India. Some business in woolpacks and cornsacks may materialise as a result of the talks. Many are hoping for Indian Government tenders for heavy goods for the ready and near positions in large quantities.

Meanwhile, production costs have risen due to the impact of the Wage Board award and the increase in fibre rates. Mills are concerned about the fall in the quality of the new jute. It is stated that due to early harvesting and a shortage of retting water in August and September, the fibre processed then is more tough and lacks lustre and strength. Of course, the crop harvested in late September and October has yielded better fibre. But it has not yet been offered for sale in the markets.

India has already suffered a substantial loss of export markets in Australia, Burma, Cuba, Peru and a number of African countries due to keen competition. Unable to retain its sacking markets, the Indian industry has concentrated on producing hessian and carpet-backing cloth. The pioneering units which entered the carpet-backing market earlier fared well for some time. But now the prices of this material too have tended to sag, although the demand is still unsatisfied. With further expansion of broad-loom capacity in India, this lucrative line is likely to lose much of its appeal.

Higher Prices for Lower Grade Fibre

The State Trading Corporation is working out the details of a scheme to raise the minimum prices of a few lower varieties of jute under its price-support scheme, it is reported. The minimum prices for Bihar district jute and Chakia and Lakhimpur are to be raised to Rs. 25.50 a maund from the beginning of the current season. The corresponding prices during the 1962-63 season were Rs. 25, Rs. 24 and Rs. 23.50, respectively. But the minimum price of Assam Bottoms will remain unchanged at Rs. 30 a maund, f.o.r., Calcutta, ready delivery.

S.T.C. Buffer Stock Operations

Since its buffer stock operations started about a month ago, the State Trading Corporation, it is reported, has purchased about 50,000 maunds of jute. Sometimes the market rates have been higher than those offered by the S.T.C. This season the Corporation proposes to buy 500,000 bales initially. But it may go up to 1 million bales, if the situation so demands. The Corporation has already strengthened its procurement machinery and is reported to be active in remote pockets where prices may sag.

U.S. Burlap Consumption Down

U.S burlap consumption has decreased from 79.7 million yards in September to 79 million yards in October. The latter figure, however, compares favourably with the offtake of 75 million yards in October 1962. The January-October total this year, at 760.3 million yards, is also higher than the 727 million yards consumed during the comparable period of last year. The average monthly consumption so far comes to 76 million yards, against 72.7 million yards in the previous year.

U.S. stocks at the end of October declined by 11 million yards to 278 million yards, indicating that consumers there are not replenishing their inventories. Of the total, 124 million yards were afloat, against 127 million yards at the end of September. Spot stocks declined by 8 million yards to 154 million yards. At the end of October 1962, the stocks were 249 million yards—117 million yards spot and 132 million yards afloat. At the rate of consumption during October 1963, the stocks will last for 3.5 months. The corresponding stock duration was 3.3 months on this basis at this time in 1962.

West Pakistan to Grow Jute

West Pakistan has in hand a scheme to cultivate jute in the zone irrigated by the Ghulam Mohammed Dam. After a successful experiment on about 1,000 acres of land in this zone, the West Pakistan Agricultural Development Corporation has prepared a two-phased plan for acquiring land and preparing it for jute-farming. The Corporation also plans to set up a jute research centre in the area for developing better seeds. It is estimated that the Badin zone in the western wing would produce about 25,000 maunds of improved seeds for use in both the wings East Pakistan may later be able to multiply these seeds.

Scope for Private Importers in U.K.

Importers of jute goods in the U.K. have been notified by the Board of Trade about certain changes in the import arrangements for heavy bags, common sacking and woolpacks. Jute goods of these categories hitherto imported by the Jute Control from India and Pakistan, are now to be returned to the private trade. The notice says that licences to import these goods from any source outside the Eastern Area for arrival in the U.K. on or after 15th December, 1963, will be issued to applicants, who provide evidence of purchase. The Eastern Area comprises Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, North Korea, North Vietnam, Outer Mongolia, China, Poland, Rumania and Russia.

Appeal to Indian Exporters

The jute industry in West Germany has appealed to Indian exporters to exercise some restraint in exporting jute goods to West Germany. This request has been made because the quota system for jute goods in West Germany is to be abolished from 1964 and it is feared that Indian goods may come in too large quantities. In 1962-63, India exported to West Germany 4,533 tonnes of hessian cloth, 385 tonnes of sacking bags and 2,744 tonnes of hessian bags, against 7,710 tonnes, 952 tonnes and 2,774 tonnes, respectively, in 1961-62.

THE JUTE MARKETS

Manufactured Goods: Barring a short-lived flutter of activity induced by "lucky day" trading on account of Diwali, dull conditions prevailed in the Calcutta gunny market during the past week. A holiday spirit pervaded the scene. Overseas enquiries and business were of a routine nature. Demand in the spot market was poor. In the futures market,

operators were preoccupied in squaring up their November contracts. Most of the outstanding ones were converted into February ones and conversion charges tended to soar higher and higher. This activity occasionally propped up the drooping sentiment in the spot market but failed to stabilise prices. On Tuesday, reports of satisfactory consumption of burlap in the U.S.A. during October, and a further decline in U.S. stocks, were hailed by the market. But in the absence of fresh enquiries or business from that country, the news failed to impart any favourable reaction. Although mills were keen to get orders, they were not inclined to discount prices any further in view of the upward trend in production costs. In the freight market, too, there were few fresh bookings for cargo space. So shipper covering turned out to be of a routine nature. The entire list was dotted with losses, sacking suffering more than hessian. The turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Nov.	Dec.	Jan.-Mar.	Apr.-June
30in. 7oz.	35·15	35.10	35.20	35.20
40in. 10oz.	37.65	-	-	-
40in. 10oz.	46.40	46.50	46.80	46.85
B Twills	112.60	113.00	113.80	113.65
Cornsacks	113.75	114.50	114.25	115.25
Heavy Cops (Plain)	113.60	112.05	113.51	113.70
A Twills	132.50	133.60	134.50	134.00
Liver. cords	123.50	124.50	125.70	125.50

Raw Jute: Steady conditions prevailed in the raw jute market during the past week. Despite increasing arrivals in the upcountry markets, sellers were not inclined to discount prices from the existing levels which were ruling above the derivative prices. In fact, in some secondary markets upcountry which were deemed rather weak spots in Bihar, the co-operatives could buy only nominal quantities around the prescribed minimum rates. The farmers there could get much higher rates in the open market. Mills were buying around the prevailing levels against their November quotas in the Calcutta and upcountry markets. With the issue of a purchase quota of 1 million bales for December, prices might tend to harden further. In the futures market operators had started squaring up their outstandings against the December contract. Business in March contracts commenced from Tuesday. There was a lot of conversion of the former to the latter and contango charges tended to be higher. Turnover was fair in the spot market and moderate in the futures market. The undertone was steady in the former and slightly easy in the latter.

THE U.K. JUTE MARKETS

FIBRE WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE markets in Pakistan were reported to be steadier for white jute last week, but this was not reflected in the position here. Arrivals of loose jute from upcountry were again smaller and quality was said to have fallen away. However, this was not reflected in the position in Dundee and some sellers were willing to accept less than previously for the lower grades.

Dundee spinners were not showing much buying interest and business was confined to small quantities. Sellers who were not willing to discount the minimum export prices were finding it impossible to transact business in the fibre.

As a result of this, prices quoted were very irregular, and covered a wide range. The lowest rates were at £132 for Mill Firsts, at £107 for Mill Lightnings, at £93 for Mill Hearts and at £77 for Grade Hearts, c.i.f. U.K. for November-December shipment. Grade Tossa-2/3 was named at £127 and Grade Tossa-4 at £106 10s. Outport Tossa-2/3 was at £93 and Outport Tossa-4 at £82, November-December.

Cuttings were little steadier due to a certain amount of business taking place to some Continental countries. However, there were still sellers of S.N.C. at £54 and of N.C. at £46 15s, c.i.f. U.K., for November-December shipment.

There was little change in the prices of Siam jute. Sellers were now offering on the basis of c.i.f. Dundee and not delivered mill as previously as two steamers would be loading for this port. Grade A was at £68, grade B at £62 and grade C at £57, for December-January shipment.

The Calcutta goods market was quiet, but steady with a small business taking place to the U.K. Quotations were at 71s 1d for 40in. 10oz. and at 53s 10d for 7½oz. a 100 yards f.o.b. Calcutta for November shipment, at 71s 4d and 53s 10d December and at 72s and 54s 2d January-March. B Twills were at 173s 10d, 174s 2d and 174s 7d for the respective shipment periods.

Yarns and cloth were quieter in Dundee and the higher prices which were being asked by most spinners were reduced to their former level. This was mainly due to the recent easier trend in raw material values and not to lack of orders. Most producers have orders in hand for delivery into the first quarter of next year, but the quieter market has slowed down business for forward delivery.

THE PAKISTANI JUTE MARKETS

FIBRE DULL

(FROM OUR DACCA CORRESPONDENT)

THE tossa market has been so weak both overseas and locally that it will take more than a bumper rice crop to affect prices at which it has been offered overseas. There is, however, already a suggestion that white jute imports are falling off and that in spite of the low quality, the amount of white jute available will not be sufficient to meet the demand, especially if the mills buy as the Jute Board wishes them to. Although there has been a lot of talk about excessive low quality jute, this will not be such a plague on the market as one has been led to believe.

The Export Hearts and Outport Tossa 4s of this season are mostly clean-cut and with modern machinery, there is no reason why the European mills should not use these grades in a far greater quantity than they did in the past. It is simply a matter of time before sufficient quantities of these grades reach Europe and buyers realise that they must change their batch. When they do so, it is almost certain that the demand of the lower grades will increase considerably.

It was hoped that the quality of white jute in the better jat areas would improve again and that the large amount of speck was only a temporary evil. So far this has not proved to be the case. It is almost impossible to make genuine Dundee Mill Hearts today because the better quality jute which would normally produce this, is full of speck. Overseas buyers continue to hold off the market, and apparently find it quite easy to buy most grades at a fantastic discount.

HIDES AND SKINS FIRM

The market in skins was firm and prices showed an upward tendency, while that in hides was steady. Stocks were higher than in the previous week.

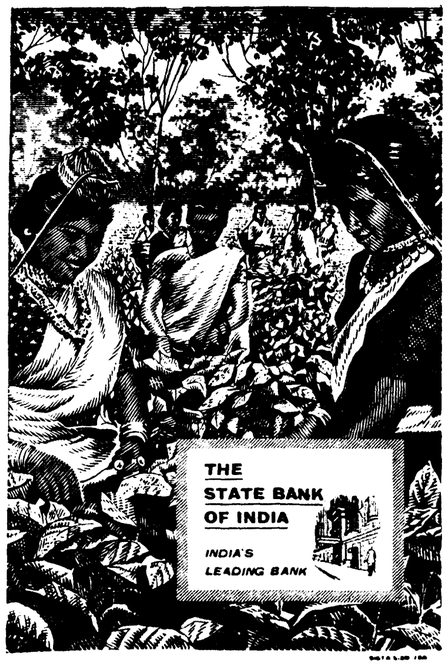
Bazaar Sales

(Between 12th November and 18th November, 1963)

Cowhides: Wet salted (Ord) 8,000 pcs. on the basis of Rs. 8 to Rs. 12.50; Wet salted (Slaughtered) 36,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19 to Rs. 28; Wet salted (Ord.) 1,000 pcs. on the basis of Re. 1 a lb.

Goatskins: Wet salted (Patna, Daisee, Kustia) 45,400 pcs. on the basis of Rs. 325 to Rs. 340, Rs. 370 to Rs. 390 and Rs. 465 to Rs. 470; Wet salted (he-killed) on the basis of Rs. 4.62 and (she-killed) on the basis of Rs. 4.37 a piece; Assam-Dinajpur 15,500 pcs. on the basis of Rs. 280 to Rs. 350; Purneah-Kissenganj 21,800 pcs. on the basis of Rs. 330 to Rs. 350; Patna-Mozafferpore 1,900 pcs. on the basis of Rs. 300 to Rs. 320; Korbani 1,500 pcs. on the basis of Rs. 450.

Bazaar Stocks



(18th November, 1963)

Cowhides: Wet salted 73,500 pcs.

Goatskins: Wet salted 55,500 pcs.; Assam-Dinajpur 1,13,500 pcs.; Mozafferpore-Patna-Pakur-Purneah-Kissenganj 1,65,500 pcs.

A TASK FOR FLYING FINGERS

In the cool, clean, mountain air, the tea gardens of Assam spread out like vast, green carpets. With lightning speed, the cheerful tea pickers pluck the tender tea-tips as soon as they grow. Only young leaves will do for processing. People like these busy workers are the real people of the country — industrious, happy, with faith in the progress of new India... a progress in which we at the **State Bank of India** are proud to play our part, by serving the nation through our network of branches throughout the land.

COMPANY AND PUBLIC NOTICES

THE CENTRAL BANK OF INDIA LIMITED

Registered Office: Mahatma Gandhi Road, Fort, Bombay-1.

NOTICE

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of the Shareholders of The Central Bank of India, Ltd., will be held at the Registered Office of the Company at Central Bank Building, Mahatma Gandhi Road, Fort, Bombay-1, on Monday, the 16th day of December, 1963, at 4-00 p.m., to consider and, if thought fit, to pass, with or without modification, the following Resolutions as Special Resolutions:—

I. RESOLVED that the Authorised Capital of the Company be increased to Rs. 10,00,00,000/- (Rupees Ten Crores), by the creation of 7,37,928 new Ordinary Shares of Rs. 50/- each and that the conditions of the Memorandum of Association of the Company be altered accordingly.

II. RESOLVED FURTHER that out of the 7,37,928 new Ordinary Shares so created, 6,34,625 new Ordinary Shares be issued, in the first instance, upon the following terms and conditions:—

(a) Such 6,34,625 new Ordinary Shares shall be issued and offered at a premium of Rs. 5/- per share, to the shareholders of the Company on its Register of Members on the 14th day of January, 1964, or such other date as may be fixed by the Directors, (hereinafter referred to as "the specified date"), including former shareholders of The Jodhpur Commercial Bank Ltd., who are deemed to have become the shareholders of the Company pursuant to the Scheme of Amalgamation of the two Banks, in the proportion of one new Ordinary Share for every two existing Ordinary and/or Ordinary "A" Shares held by such shareholders and/or be deemed to have been held by the former shareholders of The Jodhpur Commercial Bank Ltd. (all of whom are hereinafter referred to as shareholders) on the specified date, the fraction of a share if any issuable on this basis, being dealt with as hereinafter provided. Such offer to non-resident shareholders shall be subject to the sanction of the Reserve Bank of India.

(b) Rs. 30/- per each new Ordinary Share (made up of Rs. 5/- on premium account and Rs. 25/- on capital account) shall be payable to the Company on application for such new Ordinary Shares as aforesaid.

(c) The new Ordinary Shares shall not confer on the holders thereof the right to participate in any dividend relating to any period prior to 1st May, 1964. In all other respects, the new Ordinary Shares shall rank *pari passu* with the existing Ordinary Shares.

(d) Such offer be made by letter as hereinafter mentioned, Each shareholder receiving such offer shall be entitled either to take up, by paying therefor, all or any of the new Ordinary Shares so offered to him, or to renounce (upon signing a renunciation in such form as shall be prescribed by the Board of Directors) his right to all or any of such new Ordinary Shares in favour of a nominee or nominees, provided that, such nominee or nominees shall be a shareholder or shareholders of the Company, or be approved of by the Board of Directors and that, such nominee or nominees shall sign an acceptance of the shares so renounced in the said form of renunciation, and that, any such renunciation by a shareholder and acceptance by such nominee or nominees shall be effective only if made upon forms to be supplied by the Company and lodged duly completed with the Company, within the time specified, together with the sum of Rs. 30/- per share (made up of Rs. 5/- on premium account and Rs. 25/- on capital account).

(e) The said offer be made to the shareholders by a letter, specifying the number of new Ordinary Shares to which each such shareholder is entitled on the specified date, and having forms annexed to such letter, for acceptance by such shareholder, in case such shareholder accepts the new Ordinary Shares offered to him (whether wholly or in part), and for renunciation in case such shareholder renounces (whether wholly or in part), the new Ordinary Shares offered to him in favour of such nominee or nominees and for acceptance by such nominee or nominees of any shares so renounced, and limiting a time within which the offer, if not accepted by payment of the said sum of Rs. 30/- per each new Ordinary Share (made up of Rs. 5/- on premium account and Rs. 25/- on capital account), will be deemed to have been declined, with liberty to the Directors from time to time to extend the time for acceptance as aforesaid either generally or in respect of any particular shareholder or holders.

(f) The letter making the offer to the shareholders shall also invite offers from the shareholders for additional shares, and forms of application for such additional shares shall be annexed to the letter making the offer, so that, any shares not taken up by any of the shareholders pursuant to the offer made in sub-clause (e) above, may be allotted to shareholders applying for additional shares, on an equitable basis with reference to the shares already held by them, provided that shareholders who renounce their rights wholly or partly, shall not be entitled to apply for additional shares, save and except Banking Companies and Executor and Trustee Companies, provided such Companies give the names of the beneficial owners for whom they act as nominees.

(g) In the case of those shareholders who hold odd number of shares on the specified date, no coupon be issued to such shareholders in respect of the fraction of a share to which they are entitled. The fractions of shares remaining, after the offer of complete new Ordinary Shares as aforesaid, shall be consolidated and allotted as the Board of Directors deem fit to any person or persons including any one or more of themselves or any one or more of the employees of the Company, for the purpose of being sold, and the proceeds realised by sale, less Rs. 30/- per share (made up of Rs. 5/- on premium account and Rs. 25/- on capital account), and also less expenses of and incidental to such sale, be divided *pro rata* amongst the shareholders who would otherwise have been entitled to a fraction of such new Ordinary Shares.

(h) The Board of Directors shall have the right in their absolute discretion to reject any application for new Ordinary Shares and to refuse allotment to any person or persons (not being a shareholder) not approved of by them without assigning any reason.

(i) The Board of Directors be and are hereby empowered to allot or in the alternative to dispose of, such of the new Ordinary Shares as are not taken up in response to the offer made as aforesaid, at the ruling market price or at the issue price consented to by the Controller of Capital Issues, namely Rs. 30/- per share, whichever is higher. Where the above procedure is not practicable for any reason, the said shares shall be disposed of by the Directors in a manner previously approved of by the Controller of Capital Issues.

(j) If any new Ordinary Shares applied for are not allotted, the Company shall refund the amount paid on application without interest, in due course.

(k) Letters of Allotment shall not be issued but only the Certificates in respect of the new Ordinary Shares shall be issued, which shall be completed and ready for

FIRST TO GET THE ISI CERTIFICATION MARK

Alind was among the first few industrial establishments in the country to apply for a licence under the ISI certification Mark Scheme ... and the very first to get it!

Bare aluminium conductors produced at Kundara bear this mark ISI while those made at Hirakud bear ISI Now, Alind's covered (insulated) aluminium conductors too carry certification marks ISI for ALIND AL-VINYL and ISI for ALIND KER-AL-LITE!

ALIND where quality first is an article of faith!

THE ALUMINIUM INDUSTRIES LIMITED

India's largest manufacturers of aluminium conductors and accessories.

Registered Office: Kundara (Kerala)

Works at: Kundara o Hirakud o Hyderabad

Managing Agents: SESHASAYEE BROS. (TRAV.) PRIVATE LIMITED

AL/62/V

TRANSLATED FROM THE FRENCH LANGUAGE

ACTION FOR INFRINGEMENT OF PATENTS CONCERNING VARIOUS DEVICES FOR CIRCULAR LOOMS

COURT OF APPEAL OF PARIS

(4th Chamber)

Extracted from the "Arret" (Judgment of the Court of Appeal) delivered on 12th March, 1962.

In the Matter:

(1) "Société Anonyme" SOCIETE D'APPLICATIONS GENERALES D'ELECTRICITE ET DE MECANIQUE, called S.A.G.E.M., with Registered Office situated at No. 6 Avenue d'Iéna, PARIS,

(2) "Société" TURBOLOOM-CORPORATION, of 21 rue Rembrandt (Tangier-Morocco)

(3) Armand BES, of 198 Rue Robelia—SAO PAULO (Brazil)

Versus:

"Société Anonyme" SAINT FRERES, with Registered Office situated at 34 rue du Louvre, PARIS I.

Upon these grounds:

and those non-contrary of the first judges, which the Court adopts,

Does admit, as to the form, the "Société Anonyme" Société d'Application Générales d'Electricité et de Mécanique, called SAGEM, the "Société" Turboloom-Corporation and Armand Bès, in their principal appeals, but does declare them therein as groundless,

Does admit the "Société Anonyme" SAINT FRERES in its incidental appeal and does declare it therein as well grounded,

Does confirm the provisions of the judgment appealed against, which have declared that the "Société" SAGEM has infringed the devices protected by the French Patents Nos. 843,658 and 861,173 belonging to the "Société SAINT FRERES,

Reversing the contested judgment,

Does declare and adjudge that the "Société" SAGEM has also infringed the French Patents Nos. 860,203, 961,657 and 975,127 likewise belonging to the "Société" SAINT FRERES.

Does confirm the provision of the contested judgment which has declared that the "Société" SAGEM has illicitly imitated the devices forming the subject matter of the application for the Patent registered under No. 495,781, which was to become the Patent No. 994,782, —which imitation was effected before the notification served to SAGEM before the application for a Patent; and does declare and adjudge that on account of the circumstances under which the said imitation has been effected, such doing from the "Société" SAGEM has constituted an act of unfair competition to the prejudice of the "Société" SAINT FRERES,

Does confirm the provision of the judgment appealed against, which has forbidden to the "Société" SAGEM, to the "Société" Turboloom and in case of need to Bès, to infringe in the future the devices protected by the French Patents Nos. 843.658, 861,196 and 994,782, but as to the last Patent, only as far as the first type of roller used by SAGEM is concerned; does extend the said forbidding to the devices protected by the Patents Nos. 860.203, 961,657 and 975,127,

Does order the confiscation and the delivery to the "Société" SAINT FRERES of all objects infringing the Patents Nos. 843,658, 861,176, 860,203, 961,657 and 975.127,

Does confirm the provision of the contested judgment, which has ordered that an expert's report be made to supply the Tribunal of Great Instance of the Seine with elements of valuation of the whole of the prejudice suffered by the "Société" SAINT FRERES, *both on account of the infringement* and of the unfair competition,

Does sentence jointly and severally the "Société" SAGEM, the "Société" Turboloom Corporation and Bès to pay to "Société" SAINT FRERES the sum of 150,000 NF. as advance out of the damages not yet assessed,

Does confirm the provisions of the contested judgment referring to the measures of publicity of the judgment, but does declare that they will apply to this "Arrêt" (Judgment of Court of Appeal),

Does confirm the provisions of the judgment appealed against, which have dismissed the 'Société" SAGEM, the "Société" Turboloom and Bès for their counterclaims for damages as well as those relating to the costs,

Does sentence jointly and severally the "Société" SAGEM, the "Société" Turboloom Corporation and Bès to the full costs of appeal, both principal and incidental ones, and does order the payment thereof for the benefit of Me. Narrat, "Avoué" (Solicitor), who has required it under his legal affirmations.

delivery within nine months from the last allotment of such new Ordinary Shares.

(l) For the purpose of giving effect to this Resolution, the Directors be and are hereby authorised to prescribe the forms of application and renunciation and other documents in respect of such new Ordinary Shares and to give such directions as they think fit, including directions for settling any questions or difficulties that may arise in regard to the issue and allotment of the new Ordinary Shares, inclusive of such difficulties as may arise with regard to the offer and allotment of the new Ordinary Shares to be allotted to the former shareholders of The Jodhpur Commercial Bank Ltd.

III. RESOLVED that the sum of Rs. 25/- per share, remaining uncalled in respect of each of the said 6,34,625 new Ordinary Shares to be issued by the Company, shall not be capable of being called up except in the event of and for the purpose of the winding up of the Company.

IV. RESOLVED that in accordance with the provisions of Section 314 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby accords its consent to the appointment of Mr. J. J. Khambata, being a relative of Mr. S. S. Khambata, a Director of the Company, as Deputy Manager of the Company (being an office or place of profit under the Company) with effect from such date as the Board of Directors may fix (not being earlier than the date of passing this resolution) on a salary of Rs. 2,650/- per month, with the free use of the Company's car and a car allowance of Rs. 300/- per month and the usual benefits of service according to the Rules of the Company including Provident Fund, Bonus, Gratuity, etc.

Note:—(a) The Relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the businesses set out above have been forwarded to the Shareholders of the Company.

(b) **A Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a shareholder.**

(c) The Transfer Books of the Company will be closed from the 8th day of January, 1964, to the 14th day of January, 1964, both days inclusive.

By Order of the Board,
F. C. COOPER,
General Manager.

STERLING IN THE COMING MONTHS

THE year 1963 has been a good one for sterling. This is partly because Britain's exports have enjoyed a period of almost uninterrupted growth over the past 18 months or so; taking the year as a whole, they seem likely to show an increase of between 7 percent and 10 percent. It is also due in no small measure to the inflow of short-term funds seeking greater security than either the U.S. dollar or the more prominent Continental currencies have recently been able to offer. With Britain's imports lagging behind, her balance of payments has been able to show a fairly useful surplus throughout the year, and the sterling area's gold and dollar reserves are now back above the £1,000-million mark. For the time being at least, they may stay there. But the prospects for the coming months are not particularly promising.

Among the many factors which have been responsible for Britain's export performance, the only one which now appears likely to persist for any length of time is the inflation of costs among her competitors on the Continent and in the United States. Although this should help to preserve the attractions of the pound for the short-term international speculator, it may not make a great deal of difference to the balance of payments when almost all the other factors are relatively unfavourable. For instance, internal costs, although still relatively stable, may at any time begin to overtake those abroad, despite the fact that there still remains considerable slack in the British economy itself. Now, there is the added complication of a new Government at Westminster with a host of vote-catching ideas which are bound to cost money, and every incentive to abandon the 3½ percent a year maximum for wage increases laid down by Mr. Maudling last spring.

Britain's new Prime Minister, Sir Alec Douglas-Home, is in a difficult position. Not only has the Conservative Party a great deal to live down with the electorate during the coming months before *the next general election, but he himself has an* image of languid aristocracy which he seems determined to dispel by sponsoring vigorous progress. The promises he has made so far he no doubt hopes to pay for by improving Britain's economic growth rate from the 2½-precent average of the last decade, to 4 percent. He might do it, if the dreams he has expressed about the modernisation of the economy and the reduction of trade barriers prove in any way practicable. But it seems more likely at the moment that he might *have misjudged* just how long all this will take, and that in an effort to win the coming election he might let the British economy slip back into inflation. The Opposition in Parliament has already drawn *attention to the risk.*

The deciding factor will, of course, be the health of the British economy itself. At the moment it is growing steadily with considerable reserves of excess capacity still in hand. On the face of it there is no reason why costs should begin to rise significantly until all resources, including labour, are more fully *stretched than they* are now. Only then would further growth depend upon the extent to which British industry has become converted during the past few years to the philosophy of steady and rapid modernisation. This, at least, is the apparent position. But it is complicated by the fact that most of the under-employed resources which were such a problem a year ago were concentrated in particular depressed areas. The remainder of the country did not suffer unduly from the slump, and now that prosperity has returned it is those regions which remained relatively prosperous that are feeling the first effects of strained capacity. Thus, in some industries, notably motor-cars, building and transport, wages are already rising or threatening to. During any period of growing prosperity it would be extremely difficult for a British Government to prevent costs from outpacing productivity; but just before a general election it *may* prove impossible.

Added to the pressure for higher wages and salaries, the inflationary *effects of a vastly* increased programme of capital spending cannot be ignored. The decision to increase public expenditure during the financial year 1963-64 by 20 percent has been justified by Mr. Maudling on the ground that it is necessary to make up the gap caused by the fall in planned private investment; and indeed the programme for next year shows a jump of only 7 percent because by then private industry will have increased its own spending. But the promises Sir Alec Douglas-Home has *made to the House of Commons* appear to involve considerable expenditure commitments over and above those already made. The new Prime Minister has described his Government's policy as "growth without inflation", but as Mr. Wilson has been quick to point out, no changes are forecast in the management of the British economy which might promise that this can be attained now when it has so clearly not been achieved in past years. In this connection, there is little point in Sir Alec indicating the National Economic Development Council and the National Incomes Commission because the first is a planning body only—it has no control over wages and costs—while the second is as likely to encourage fresh wage claims as to discourage them. What Mr. Wilson may have been trying to do is to trap the Government into admitting that it will not be possible to keep inflation in check without controls, thus acknowledging the validity of Labour's own policies. But so far he has not succeeded. Controls do, however, remain as a possible alternative to a runaway inflation if only a Conservative Government could bring itself to use them.

Internal costs are only one factor to be taken into account in assessing Britain's export prospects. Another is the continued buoyancy of the main markets. During the past few years, the Commonwealth has reduced its imports of British goods from about 40 percent of the total to just over 30 percent. In the same period, the Common Market has increased its share of Britain's exports by about the same proportion. There is little prospect of the decline in Commonwealth demand being reversed unless Britain can see its way to increasing its foreign aid programme, and

there seems little chance of this when the favourable balance of payments is so precarious. It remains for the Common Market to account for the major part of any improvement in Britain's exports during a period when the United States is anxiously trying to balance its own external account. But trade with the E.E.C. may be hampered by the efforts of the member-countries to deal with their own internal inflationary problems; and soon the Common Market tariff will begin to rise against Britain. The new Government of Sir Alec Douglas-Home has already acknowledged that the task of increasing Britain's exports is likely to be a long-term one by pledging its efforts to securing greater world trade liberalisation through G.A.T.T., by giving its blessing to next year's U.N. conference on trade expansion, and by affirming its hopes in greater world payments liberalisation. But not even on the most optimistic reckoning are these expressions of attitude likely to affect Britain's balance of payments in the foreseeable future.

The chief hope for sterling, then, lies not so much in a rapid expansion of trade, although this would be extremely useful if it materialised, but in the various methods which have been devised during recent years to cushion the reserves of any country in balance of payments difficulties. These admirable examples of international financial co-operation have marked up some success in the past, although they have still to be adequately tested. Fortunately, such is the opposition in international financial circles to any arrangement of a more formal nature, that considerable efforts will probably be made to ensure that the system, if such it can be called, works tolerably well. Then, of course, there is the I.M.F. So the pound is not without some reasonable guarantee of support if its fortunes deteriorate during the coming months, although resort on any scale to these expedients would be bound to have the added disadvantage that sterling would lose the popularity it has enjoyed in the recent past simply because it is the currency which appears to be under least immediate pressure. But it would mean the end of low interest rates in Britain, even under the current dual system, and it could be the beginning of another phase of the "stop-go" cycle which has done so much to damage business confidence in the recent past.

The question of business confidence is of special significance to the long-term health of sterling. The principle has been accepted in Britain, at least in theory, that manufacturing costs are likely to be at their lowest when capacity is more or less fully employed. As an economic axiom, this could be argued indefinitely, but what must be accepted is that the best way of keeping costs down is to maintain a high level of labour-saving investment. The achievement of both these desiderata requires that business confidence should not again sink to the level it did a year ago, and in turn this depends on the extent to which British business men take their Government seriously when it claims to have renounced once for all its "stop-go" policies. There can be no serious doubt about the British Government's intentions; there is no electoral dividend in holding back economic expansion these days. But it is a different matter when it comes to what can be achieved in fact, and it is here the doubts arise. In a nutshell, the question is: can any British Government, of no matter which Party, maintain steady expansion in conditions of rapidly growing public investment without resorting to the equally damaging expedients of either overall restrictions or selective control? It is on the answer to this that the long-term future of the pound now depends. And at least one of Britain's major Parties, Labour, by admitting its acceptance of physical controls in principle, has acknowledged that it cannot be done.

There seems little doubt, therefore, that sterling faces a difficult year ahead. Unless the economy reveals a wholly unexpected potential for rapid modernisation—the only possible factor which can reconcile a high rate of investment spending with price stability—the health of the pound will be determined by what happens outside Britain. This is not a particularly encouraging prospect for users of sterling. The main consolation is that at the moment difficulties seem unlikely to begin to accumulate before the middle of next year, although this prediction could prove seriously wrong. But six months of reasonably favourable conditions for a currency may be about the maximum which can reasonably be expected in this era of rapid change.

India's Resources

are Precious

WASTE NOT,

WANT NOT

IRON ORE EXPORT HOPES

THE grand design that the Central Minister for International Trade, Mr. Manubhai Shah, unfolded to Parliament last week for raising iron ore exports to something like 30 million tons a year by 1970-71 is based on the assumption that the markets can be found. But one wonders if the assumption is warranted by present trends. There is already a strong tendency for supply to run ahead of demand, resulting in a decline in prices all over the world. The trend reflects the emergence of new sources of supply in Latin America and Africa, where deposits are being developed through joint ventures with steel producers, almost as captive mines. As a recent appraisal noted, a large proportion of the iron ore mined in the world is owned wholly or partly by the consuming companies. In the U.S.A., this applies to 80 percent of the ore used in the steel industry, and in Britain to the bulk of her consumption. Only a relatively small share is left to the "untied" producer and is usually sold under long-term contracts ranging from five years to 25 years, as negotiated by India with Japan.

There will undoubtedly be a considerable growth in steel output in coming years, even if the expectations of a 70-percent rise by 1972-75 fall to materialise because of the perceptible slowing down of steel expansion in the western world. But this growth is less relevant than the share of the iron ore trade likely to accrue to "untied" producers. Here the great need of newly independent countries for capital and technical know-how may well lead to an increase in joint mining ventures, as in the case of Japan getting together with Peru. Not that captive ore is necessarily cheaper to the consumer, but an assurance of supplies goes with it which the steel companies find more valuable than a few cents off the price. This is a factor which may come in the way of Mr. Shah's ambitions, no matter what he does to lure new business.

Mr. Shah's hope of raising Indian exports to 30 million tons by 1970 rests primarily on Japan, which is expected to lift 15 million tons. The balance, it is assumed, will be taken up by Europe, east and west. But before proceeding any further with the assumptions, several facts have to be noted. First, Japan's steel expansion has slowed down and her demand in 1970 may be much less than was indicated by earlier hopes that imports would exceed 30 million tons, against the current figure of 20 million tons. Secondly, the Japanese industry is understandably reluctant to put all its eggs in one basket, and a rule-of-thumb formula is that imports from any single source should not exceed 20 percent of the total. Thirdly, Indian ore prices are uncompetitive, and no amount of rhetoric from the State Trading Corporation about high quality can affect the Japanese buyers' determination to get value for money.

Even at the lower price of approximately Rs. 50 a ton f.o.b. negotiated by the S.T.C. for supplies over the next two years, Indian ore landed in Japan costs 26 U.S. cents a unit of ferrous content, against the average of 22 cents or 23 cents for all imports of lump ore. This average is declining from year to year as four old high-priced contracts expire and are replaced by more competitive arrangements. Mr. Shah may think that Indian f.o.b. prices being low as they are, all that he has to do is to organise more economic ocean transport by bulk carriers to offset the disparity in price. This would certainly do much to make India competitive in the world trade, but the question remains whether, Mr. Shah's talk notwithstanding, it can be done in time. A port development programme launched as far back as 1958 to put Visakhapatnam in a position to handle ore-carriers of up to 25,000 tons capacity is still incomplete, and bulk shipments, contracted to commence in April 1964, may have to be deferred until the end of next year. In the context of this failure, the Japanese industry is understandably reluctant even to discuss any further arrangements, as an Indian ore mission to Tokyo has just discovered.

The plan that Mr. Shah outlined to the Lok Sabha calls for the simultaneous development of ore handling facilities at as many as six different ports from Haldia to Marmagao. It involves not only constructing access channels, berths, storage yards and mechanical loading facilities but also building new transport links from the ore mines to the ports which do not exist at all at present in the cases of Paradip and Haldia while the situation vis-à-vis Madras and Mangalore is about the same because existing links are unsuitable for handling the volume of traffic contemplated. While the long-term logic of building new port capacity is incontestable, is it really necessary to start on all six for the relatively short-term programme up to 1970? It may well be that Mr. Shah, like several other of his colleagues, is yielding here to political expediency instead of economic sense. The point to note is the large foreign exchange requirement for port development which has been met so far by the assistance provided mainly by the World Bank and the I.D.A. These agencies will, no doubt, continue to take an interest in this field but whether they can really be expected to increase aid substantially to accommodate Mr. Shah's ambitious plans is quite another matter. Alternative sources of foreign credits may, of course, be explored—as in the case of the multilateral assistance obtained for Kiriburu—but that will involve the prior negotiation of long-term export contracts. In this sense, it is somewhat premature to set a target of 25 million, or 30 million tons for exports without making at least an initial effort to explore the marketing possibilities.

Mr. Shah may claim that he has been doing just this on his recent visit to east European countries, and can point to the inclusion of iron ore in some recent trade agreements as an earnest of the future. But this line of reasoning is without substance since the relevant clauses are permissive rather than a firm declaration of intent. The Czechs made their position perfectly clear when they said that they were willing to buy more ore from India but not unless deliveries and prices were satisfactory. With Brazil already able to place her ores at North Sea ports at prices which the very much nearer Swedish mines are finding hard to match, it would be foolish to minimise the challenge posed by growing competition. Mr. Shah and some others fondly imagine that India has a trump card in her hands in her ability to take equivalent imports from the countries she sells iron ore to. But is Brazil's importing capacity any less? Again, the tying of steel imports with ore exports—attempted recently in the case of Japan—may not always work because ore contracts will usually have to be for much longer periods than the import commitments India may be willing to accept.

Finally, Mr. Shah seems to be overlooking the definite trend away from imports of raw ore towards beneficiated and prepared ores. This applies particularly in the case of Japan where the shortage of land discourages the steel industry from building facilities locally for such processing. A marked preference is thus growing for buying pelletised ore—the reason prompting the Goa venture to set up a pelletising plant. The implications for Mr. Shah's export programme are obvious—a large increase in the capital investment, including a sizable foreign exchange component, for creating these facilities. That is not all; even before the planning of the facilities can begin, India has to do her homework on developing suitable methods of pelletising to suit the local ore characteristics. This will take time; it is already five years or more since the Indian steel industry started to search in the same general direction for an adequate sintering technique but is still nowhere near the goal. An enthusiastic Minister like Mr. Shah may think nothing of the many hurdles, not at least in public, but common sense would require approaching the problem with greater circumspection. Above all, it is necessary to co-ordinate the efforts required in so many directions at once, and Mr. Shah may be well advised to work out some means of achieving this to avoid failures like the one suffered at Visakhapatnam.

TRENDS IN FOREIGN AID

AT a meeting last week in Paris, the Organisation for Economic Co-operation and Development decided to offer loans of up to $50 million on easy terms to the developing countries. The new aid programme will be effective from the fiscal year 1964-65. The "soft" loans decision is the result of an awareness in aid-giving countries of the growing burden of servicing debts on developing countries. In fact, the Development Assistance Committee of the O.E.C.D. has called attention to this point in its review of *Development Assistance Efforts and Policies* for 1962. Among the three recent developments in aid programmes it has listed is the increased awareness in the donor countries of long-term problems, especially the need to consider the rising debt burden resulting from the present terms and conditions of aid. Many of the developing countries are, in fact, obliged to use aid funds for repaying and servicing old loans. The amortisation receipts by aid-giving countries amounted to as much as $389 million for 1962. An idea of the growing burden of servicing foreign loans and investments can be had from the fact that India's liability, on both Government and private accounts, has risen from Rs. 24 crores in 1956-57 to Rs. 79 crores in 1961-62 and to Rs. 90 crores in 1962-63. The D.A.C. members are agreed that greater efforts must be made to increase the flow of resources to the less-developed countries to use the resources more effectively. This is particularly important because the impact of aid has in many cases been small. While some of the aid-receiving countries are progressing, others are barely offsetting the effects of population growth.

The other two developments in O.E.C.D. aid noted by the D.A.C.'s review are (1) the effort of aid-giving countries to bring better order and rationality to their assistance programmes, and (2) wider interest and participation by more donor countries, both geographically and functionally, leading to complicated problems of aid allocation. The participants in the D.A.C.'s work are Belgium, Canada, Denmark, France, Italy, Japan, the Netherlands, Norway, Portugal, the U.K., the U.S.A., West Germany, and the Commission of the European Economic Community. The total flow of aid to the developing countries and multilateral agencies during 1962 has been about $6,000 million, or nearly the same as in 1961. Of this amount, bilateral contributions accounted for $5,300 million and contributions to multilateral agencies for $700 million. Bilateral contributions included $2,673 million in grants (of which payments for reparations and indemnification were $157 million), $435 million in loans repayable in recipients' currencies, and $871 million in sales of agricultural surpluses for local currencies.

The largest donor is the U.S.A. ($3,606 million), which also accounts for the major portion of the rise of $2,751 million in the net official flow of long-term funds over the period from 1956 to 1962. On present indications, the U.S.A. will continue to be the biggest supplier of aid to developing countries in the coming years in spite of her balance of payments difficulties. The second biggest aid-giver in 1962 has been France with a net official outflow of $996 million, followed by West Germany ($427 million) and Britain ($417 million). The D.A.C chairman's report says "it is clear that the capital needs of less-developed countries are far from being met. No amount of austerity on their part can provide enough purchasing power for the foreign goods and services which they must have for development purposes. It is important to ensure that the level, the terms and the nature of capital flows come closer to meeting their demonstrated needs" Some countries like West Germany, whose foreign exchange reserves are large, can contribute much more. The developing countries have provided markets for the industrial products of west European countries, and have reason to expect greater liberality. While most of the aid will continue to be on a bilateral basis, the donor countries should try to canalise more aid through multilateral agencies like the International Development Association, as suggested by the D.A.C.

The Ministers of the O.E.C.D., who met in Paris, have noted the fall in the movement of private capital from the developed to the developing countries, and have asked the Organisation to consider measures to increase the outflow. The private capital outflow has declined to $2,443 million in 1962 from $2,630 million in 1961. The biggest share of long-term private capital has gone to countries which have oil and other important mineral resources. The reasons for the decline in private capital movement are many, chief among them being political uncertainties in some of the less-developed countries, fears of nationalisation or blocked exchange, high production costs and heavy taxation. The O.E.C.D. is studying how far fiscal incentives can stimulate private capital outflows. The U.S.A., West Germany and Japan have unilateral investment guarantee schemes, and most of the D.A.C. members provide some form of insurance for export credits. Possibilities of a multilateral investment insurance scheme are being studied. The World Bank too is considering a scheme for arbitration and conciliation of investment disputes.

The D.A.C. chairman has recommended that joint efforts should be made to reverse the trend towards the tying of aid. The tying of aid to specific projects has been largely responsible for the delay in the use of credits. Latterly, the tendency has been towards tying aid to purchases in the aid-giving country. Although almost all the D.A.C. countries have tied their aid to purchases from themselves, the proportion is particularly high in the case of Japan, the U.S.A. and Canada. Almost two-thirds of the aid is subject to such procurement restrictions. The D.A.C. members agreed to move towards untied aid under the Bonn agreement of July 1960, but so far little progress has been made. The chief reasons are balance of payments difficulties and idle resources in donor countries, their desire to promote exports and also to be identified with the projects which they have financed. A complete untying of aid is obviously not likely. But it is to be hoped that at least some measure of liberalisation will be introduced. For instance, the donor countries can grant waivers, either *ad hoc* in cases where tying causes hardship or on a systematic basis, where offers by suppliers in other countries are distinctly more advantageous. Secondly, some method such as competitive bidding within the donor country or systematic checks on the price and quality of goods supplied can be used to ensure that tied purchases are not disadvantageous to the importers. Thirdly, at least part of the tied assistance may be provided in a form which leaves the recipient a wide choice of goods. Lastly, contributions to multilateral agencies may be left untied.

Since no country can depend for ever on aid, it is necessary that the developing countries should be helped to increase their foreign exchange earnings through exports. The Paris meeting was well aware of this aspect and recommended that O.E.C.D. countries should co-operate in efforts to improve market conditions for the primary products of developing countries. The O.E.C.D. is now studying measures to stabilise and increase export earnings from primary commodities. It is also necessary for the developed countries to liberalise their imports of semi-manufactured and manufactured goods from the developing countries. The D.A.C. chairman, Mr. Willard Thorp, has made a strong plea for "adopting and maintaining as liberal standards as possible for imports from developing countries." This will entail scrapping, or at least lowering, some of the many trade barriers still existing in western Europe. As Mr. Thorp rightly emphasises, it makes little sense to provide aid to a country if, at the same time, it is denied the chance of selling its exportable goods by restrictionist import policies in the donor countries. Aid can at best be only a temporary substitute for trade.

Current News and Comment

Self-deception in Heavy Engineering

With machinery accounting for 28 percent of the import bill and transport equipment for another 5 percent, the validity of efforts at import substitution admits of no dispute. India starts in this sphere with the advantage—underlined among others by Professor I. M. D. Little in his searching scrutiny of the country's long-term prospects—that "it would be surprising if it did not turn out to be economical to produce something of almost everything" in a market of this size and with such a wide complement of natural resources. India is different from the other developing nations because most of them cannot hope to absorb the large-scale production of many engineering goods, either now or in the foreseeable future.

The general strategy of import substitution is one thing, but its detailed implementation quite another. In theory, India's growing needs of power, metals, chemicals and fertilisers do justify starting the corresponding equipment manufacturing programmes here and now, but the actual priorities will still have to be defined because only a small portion of the total task can be immediately attempted. Capital requirements for equipment manufacture are very high, as much as Rs. 8,000 to Rs. 15,000 a ton of annual capacity, and so also is the related foreign exchange component. Apart from the difficulty of mobilising resources of this order, it needs to be considered whether the country's immediate requirements will provide enough work for some very expensive specialised equipment which will have to be installed if complete self-sufficiency in the whole range of capital goods is aimed at at this early stage of growth. A case in point is provided by the 6,000-ton forge press proposed to be installed at the Ranchi foundry to handle individual forgings of over 30 tons, which is the maximum that the plant is at present designed to produce. Is the investment on this single forge—of the order of Rs. 1 crore or more—worth making when the country's total demand for such extra-heavy forgings is quite limited? Some day when demand has grown sufficiently such a press may well be needed, but must the immediate effort at import substitution go this far when the same outlay in less ambitious fields may yield greater foreign exchange savings? There are no ideological issues involved here but only a simple and straight-forward cost-accounting comparison. One hopes that this has been done, but can one really be sure that the matter has not been left to be decided by the view that the management of one particular project may take of national priorities? The individual decision in respect of this press may be of small consequence, but the principle involved here merits very careful and serious consideration by those whose responsibility it is to husband the nation's scarcest resources—capital and foreign exchange.

The optimistic claims for indigenous equipment manufacture, made in the context of the targets being dreamed up for the fourth plan, seem to overlook the time it must take to build up production from installed capacity. Satisfactory rates of output cannot be achieved, as New Delhi must know, until the requisite human skills have been built up. To an extent the difficulties can be lessened by importing experts and technicians and send-

ing out Indian engineers and craftsmen abroad for training, but the basic problem will remain. This is so in every science-based industry and much more so in heavy engineering where many items going through the shops will each be of special design to meet specific customer requirements.

Efficiency in such jobbing work is far more difficult to achieve than in repetitive production, and must consequently take longer time. Operating skills apart, there is also the equally formidable problem of developing design capabilities, even at the elementary level of preparing jigs and fixtures for the wide range of production that multi-purpose heavy engineering units will necessarily have to undertake. These handicaps are not unknown to New Delhi, yet absurd production targets are prescribed for units where even construction is still incomplete—less than half in the case of the Ranchi machine-building complex. One does not need great perspicacity to see that such targets are part of a large fabric of deception being woven to make the country acquiesce in equally fantastic goals being set for industrial development in the fourth plan.

Technical Aid for Population Control

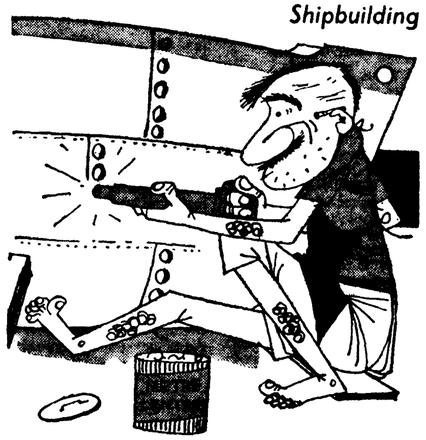
In money terms, the technical aid which Britain is giving to India and the other developing countries is small. But money alone is a poor measure of the usefulness of such aid at a time when the shortage of managers, technicians and training facilities in all these countries is acute. Mr. Robert Carr, Britain's Secretary for Technical Co-operation, indicated in Calcutta last Saturday that the U.K.'s total aid expenditure was increasing; having already doubled in five years, it is expected to rise from about £150 million last year to nearly £200 million this year. Of this, 90 percent goes to the Commonwealth, and India gets more than any other country. Technical aid, of course, constitutes a relatively small part of the total, but Mr. Carr gave the impression that it would increase in the future; the process would be helped if the countries seeking such aid could develop a clearer sense of priorities concerning the form in which they want it.

At the moment, India is getting technical assistance in three main ways. One is that Indians—4,300 of them—are attending full-time courses in the U.K.; the 4,300 are part of a total of 65,000 overseas students, who in turn represent 10 percent of all students engaged in further education in that country. The second way is that Britain arranges to send experts temporarily to India for training Indians; the emphasis here is on ensuring that the experts need to stay the shortest possible time, so that they may be able to hand over charge to Indians as soon as the training is complete. The third way is by providing equipment which India may not be able to buy from her own meagre foreign exchange resources. Among the more interesting points to emerge from Mr. Carr's talk was the indication that Britain would, if asked, be prepared to offer technical aid for checking the growth of population in the developing countries. The Indian Government should put the offer to the test; Mr. Carr may find that religious and political objections in his own country to the granting of aid for this purpose is stronger than he judges it to be.

Protection for Textile Machinery

The Central Government has accepted the Tariff Commission's recommendation to continue protection for the cotton textile machinery (spinning ring frames, spindles, spinning rings, fluted rollers and automatic looms) industry for a further period of three years, that is, up to December 1966, at the existing rate of protective duty of 10 percent *ad valorem*. Although the industry has made considerable progress in recent years, indigenous production is still far short of the country's requirements. Estimates of demand for cotton textile machinery vary widely. The Tariff Commission has calculated the annual domestic demand for different protected items at 3,025 spinning ring frames, 1.6 million spindles, 3.2 million spinning rings, 22,500 lines of fluted rollers and 9,950 automatic looms. As against this, actual production in 1962 was 1,571 spinning ring frames, 719,958 spindles, 620,193 spinning rings, 11,216 lines of fluted rollers and 496 automatic looms. Production in 1963, it is expected, will be better than in the previous year.

There is considerable idle capacity in the industry, the percentage varying from 82 percent in the case of automatic looms to 37 percent for spinning ring frames. While the under-utilisation is, to some extent, due to the newly licensed capacity not coming into full production, the main reason for idle capacity is that the existing production capacity has not been fully pressed into service. In view of the complaints of consumers against long delivery periods, the persistence of under-utilisation of capacity is anomalous. The manufacturers attribute it to the shortage of basic raw materials such as special steel, coke and pig iron and the difficulty in obtaining the import licence for essential components. Manufacturers contend that they can reach the rated capacity if they are relieved of these handicaps. Apart from the raw material scarcity, the shortfall in the output of automatic looms is attributed to the restrictions imposed by the Government on the installation of such looms by the industry. Mills usually fight shy of purchasing automatic looms because of the export obligation attached to it. The Tariff Commission's report points out that manufacturers prefer to make non-protected items because of the larger profit margin available on these items. In view of the concessions allowed to the industry for meeting obligations concerning the manufacture of protected items, the Commission thinks it is against the interests of the country if the concessions are abused and the manufacturers pursue more profitable lines of business. It has, therefore, urged the authorities to exercise stricter surveillance. The industry too must co-operate to avoid such a possibility.



With a view to encouraging the production and use of automatic looms, the Commission has suggested that instead of allocating imported looms exclusively to those mills which make it a condition to undertake the production of textile fabrics for export, it would be desirable to permit a generalised absorption of imported and indigenous looms, the imported item being allowed only to the extent it is necessary for meeting the shortfall in indigenous production. The Commission has rightly emphasised the need for making a physical assessment of the future raw material requirements and the supplies which may be forthcoming.

The cotton textile machinery industry in India is still very young in comparison with long-established units in countries like West Germany, the U. K., Switzerland and Japan whose products pose a serious threat in view of the automatic machinery used and the higher labour productivity in these countries The industry's future production plans can succeed only in an atmosphere free from uncertainties and fear of serious foreign competition. Facilities for design and research for the development of the industry are still to be created. Even possibilities of importing automatic looms at very low prices are not altogether ruled out. The cost of production of the indigenous machinery is still high compared with that of the imported ones since the industry has to buy import entitlements of the exporting cotton mills at a premium of 30 percent for meeting part of its import requirements of components and raw materials, and there is need to import raw materials and components in sizable quantities in spite of indigenous capacity for these latter being being licensed for the purpose.

The need for further tariff protection for the industry is, therefore, obvious. But protection against foreign competition alone cannot lead to the desired development. The industry will need to be assured of abundant supplies of its raw materials at reasonable prices, especially if it is to compete in international markets. Exports of protected items of cotton textile machinery are still negligible, but the Engineering Export Promotion Council thinks that there is considerable scope of selling Indian machinery in the Middle East and Far Eastern countries provided prices are made competitive. The protected industry on its part must strive hard to maintain quality standards and keep abreast of technological developments. The development of the Indian cotton textile industry is closely linked with the progress of the textile machinery manufacturing industry. In order to overcome complaints about the supply of machinery in an incomplete condition and poor after-sales service, the Tariff Commission has rightly suggested that the producers of machinery should be made to carry a full range of spare parts for customers' maintenance requirements.

HOW SHALIMAR WORKS?...No.2

Shipbuilding

Shipbuilding as is well known started with the dumb barge "Noah's Ark". Since then Naval Architects have been invented and they in their turn have invented things like Metre centres and G.M.'s* which are now supplied to all ships from stock. (It is unknown how ships managed before these vital things were invented.)

Making More and Cheaper Motor-cars

In the course of a discussion in the Rajya Sabha last week on the annual report of the Development Council for motor-vehicle, motor-vehicle ancillary and transport vehicle industries for 1961-62, Mr. C. Subramaniam, the Central Minister for Steel, Mines and Heavy Engineering, observed that motor-car prices in India, which were at present high, could be reduced if production were concentrated in one manufacturing unit to the extent of at least 50,000 motor-cars a year, instead of the three manufacturers making less than 20,000 cars each as now. This would be one of the possible solutions, but this would remove the element of competitiveness in the industry without which it would not be possible to ensure the production of cheap but efficient and durable motor-cars of good design in the country. Moreover, it is likely that in course of time, the Indian car manufacturers would be called upon not only to supply for a greatly expanded internal market but to cater to some demand overseas. Taking a long-term view it would be in the industry's best interests if a number of producers acquired the necessary experience from now.

As Mr Subramaniam further explained, motor-car prices in India are also high because the components and parts indigenously manufactured cost a lot more than those produced outside. Since the proportion of indigenous parts and components in Indian motor-cars has been increasing the prices of locally-manufactured cars have inevitably risen. If Mr. Subramaniam had analysed the problem further, he would have found that the main cause of high prices of parts and components produced in the country is that nearly 50 percent of the productive capacity of the ancillary industries is lying idle due to lack of imported raw materials and machinery. The most obvious step for reducing the prices of motor-cars, therefore, is to allot more foreign exchange to the ancillary units so that they could work at full capacity and thus reduce their production costs and sell their products cheaper.

The Minister rightly refuted the suggestion of some Rajya Sabha members that Indian motor-car prices were high because the manufacturers and dealers were making disproportionately high profits. The fact of the matter, however, is that, in spite of the increase in the production costs, the Indian motor-car manufacturers have not been allowed any increase in prices since 1958-59, whereas the dealer's margin has actually been cut from 17 percent to 10 percent as recommended by the Tariff Commission. It is true that Premier Automobiles and Standard Motor were recently allowed price increases of Rs. 200 each for their motor-cars, but earlier, these producers had voluntarily reduced their motor-car prices, so the latest increase only compensates them for the earlier voluntary reduction. The unduly high incidence of Customs and excise duties on production costs has also pushed up motor-car prices. Buses and lorries, scooters, and other vehicles used for the country's defence could not possibly be considered "luxury" goods and thus taxed higher. It is necessary not only to rationalise the level of taxation but to reduce its overall incidence on industrial costs in order to enable the motor-car manufacturers to reduce their prices.

It is unfortunate that more than 45,000 lorries cannot be manufactured annually by the end of the plan period, against the third plan target of 60,000 vehicles. In the case of scooters and motor-cycles the shortfall, by the end of the plan period, is expected to be 10,000 to 15,000 and in the case of motor-cars, about 10,000. Vigorous efforts will have to be made, especially by way of providing more foreign exchange to the motor-vehicle and ancilliary industries and by reducing the existing level of taxation, to help the industry to raise output and reduce costs.

Parliamentary Control over State Concerns

The Lok Sabha has adopted the Government's motion for setting up a joint parliamentary committee for public sector undertakings. The committee would examine the reports and accounts of State concerns, the reports of the Comptroller and Auditor-General on them, and ensure that the affairs of these undertakings are being managed "in accordance with sound business principles and prudent commercial practices". The Krishna Menon Committee emphasised that a separate committee of Parliament is necessary for looking carefully into the affairs of State enterprises as the Estimates Committee and the Public Accounts Committee of Parliament are too preoccupied with other matters and are not able to give due attention to the large number of State corporations and undertakings. Nearly 50 annual reports of such concerns are placed before Parliament every year, and the number is bound to increase in the future. The proposed joint parliamentary committee would keep a sharp eye on these undertakings, and would help Parliament to know the necessary facts about their working, without reducing their "autonomy" and freedom of management.

The original proposal that the members of the joint parliamentary committee would be elected for a five-year period, with one-fifth retiring every year by rotation, was more sound. It would have enabled the committee to acquire the necessary experience and to be independent of the whims and fancies of politicians. But the provision that each successive Lok Sabha would hold fresh elections, although the committee would be permanent, might remove some of these advantages. It is, however, a good thing that membership of the committee is confined to only 15. The suggestion for increasing the number to 30 or more, if accepted, would have made the joint parliamentary committee too unwieldy for efficient working.

Unfortunately, the scope of the committee's work has been reduced by not placing all public sector enterprises under its purview, and by excluding matters of day-to-day administration and the Government's policy from its enquiry. In order to get a comprehensive picture of the working of public enterprises it would be necessary for the committee to examine all the matters concerning them. There is no reason to believe that the autonomy of public enterprises and the full freedom of the managements in day-to-day administration would be impaired if the parliamentary body were given power to examine all their affairs. After all, its only interest would be to place the necessary facts before Parliament and to prevent the adoption of dishonest practices and wrong methods by public-sector enterprises.

The Farm Package Programme

The shortage of foodgrains in some parts of the country and the slow progress of agriculture have received a fair share of the planners' attention in recent weeks. The last meeting of the National Development Council highlighted the failure of agriculture in many spheres and recommended—as in previous years—that greater priority should be given to farm development programmes. The Prime Minister himself stressed the need for appointing an expert committee to watch the progress of land reform programmes in various States and to provide more incentives to the man behind the plough. The Council, however, pointed to the bleak prospect for the production of foodgrains, cotton and oilseeds; the output of these commodities, it said, might fall short of the third plan targets, with inevitable repercussions on all sectors of the economy. The President, Dr. S. Radhakrishnan, also recently referred to the lack of leadership in agriculture and openly criticised many aspects of farm development programmes in the country. There has been a lot of bungling and mismanagement which is evident even from official reports. The one on the farm package programme in the seven districts, where it was introduced between 1960-61 and 1961-62, presents none too happy a picture, but complacently points out that "agricultural development is comparatively a complicated and slow process."

Although the committee makes an attempt in its bulky report to cover up its failure by pointing to various adverse circumstances, the stark reality is that during the first two years of its initiation, the programme could cover only 30 percent of the 117 blocks in the districts. The limited coverage is attributed to the "weakness of institutions, particularly the co-operatives, handling a programme of this order involving the outlay of large resources and their efficient use in production". The programme also suffered from the lack of research data and of understanding of farm planning processes—by both the field extension staff and cultivators—and the limited experience of credit institutions in extending loans on the basis of production plans. These difficulties are not new; they are inherent in India's traditional system of agriculture. One may feel inclined to tell the committee that if these difficulties could not be removed from the seven districts in which the package programme was in operation, it would be futile to launch ambitious programmes for agricultural development and improvement covering the whole country. The committee also refers to such obvious facts as the willingness of cultivators to use fertilisers and adopt plant protection measures, as if they are something peculiar to the package districts alone.

There are innumerable instances in the report where the shortfall in results is sought to be covered up by platitudinous statements. Here is an example: "Although the crop-cutting experiments do not show startling increases in production, the trends, on the whole, appear to be developing satisfactorily." Yet when the committee looks desperately for something favourable to say about the programme, it concludes that the period of operation has been too short to attempt an evaluation in terms of objectives. It is to be noted that the programme has run for an average period of two-and-a-half years and is to run over a five-year period. True, most projects have their gestation periods and teething troubles. But for a short-term scheme, as the farm package programme is undoubtedly intended to be, it looks as if the gestation period will continue for the full five-year term when the project will officially end. The stark reality remains that the method of implementing the programme in the seven districts leaves much to be desired.

International Marketing

In his inaugural address at the seminar on international marketing held in Bombay last week under the auspices of the Bombay Management Association and the Bombay Productivity Council, Mr. G. L. Mehta pointed out that the emergence of regional groupings had given rise to many trade barriers, some psychological and others physical. The European Economic Community, the most important of the groupings, has offered a larger market to producers in member-countries, but has restricted the outlet for the products of other countries. West Germany, for instance, has a quota of only 20 for sewing machine imports from India. European producers, he said, were afraid of being "Manchesterised", but he did not think the products of the developing countries were going to affect the established manufactures of the developed nations. While West European countries have been generous in offering aid to India, they should also adopt an "outward-looking policy" in their trade with the developing countries. Mr. Mehta said that India would have to study the trends of demand in the western countries and adopt an "aggressive salesmanship" based on commercial intelligence, initiative and imagination. India's development efforts, he felt, were too much geared to domestic requirements. Unlike the sheltered market within, Indian products will have to face stiff competition abroad. Besides, people's tastes and requirements vary from country to country and even in the same country they change from time to time. The products have to suit the requirements. Success in international marketing depends ultimately on efficient home production and the adaptability of the producer to changing market conditions.

Limitation Period under Income Tax Law

Allowing a writ petition by Messrs Bilas Kedarnath, a dissolved firm of Kanpur, Mr. Justice Manchanda of the Allahabad High Court pronounced an important judgment clarifying the powers of the income tax officers to extend the period of limitation beyond four years under the Income Tax Act. Section 34(3) of the Act provides that the normal period of four years for completing assessment would apply in all cases except when the order of assessment is made under Section 23 to which clause (c) of sub-section (1) of Section 28 applies. Although the Legislature provided for an unlimited period for completing assessment proceedings in a special case, it could not possibly have been its intention to permit income tax officers to extend the period of limitation beyond four years at their pleasure and thus leave the assessees for all the time to come in a state of uncertainty

on the offchance that some concealment of information about inaccurate particulars might come to light some day.

If such were the intention of the Legislature, there could have been no sense in providing for a specific period of four years for the completion of assessments and to allow an unlimited period only in a special case. The law as interpreted by Mr. Justice Manchanda gives the income tax officers the discretion to extend the period of limitation beyond four years only if there appears to be a *prima facie* case, before the ordinary period of four years of limitation is over, that some information would be available to make Section 28(1)(c) of the Act applicable. If such a *prima facie* case did not exist the income tax officer could not extend the period of limitation whenever he so desired.

The facts of the case are quite interesting. The firm concerned was given an assessment notice under Section 34(1)(a) of the Act, but the assessees questioned it on the ground that for the years 1953-54 and 1954-55, they had already submitted voluntary income tax returns on 20th December, 1955, and 21st February, 1956, respectively. The proceedings which had been initiated against the firm earlier before notice under Section 34(1)(a), were quashed by the High Court by its order dated 13th December, 1961. The four-year period of limitation in the two assessments expired on 31st March, 1958, and 31st March, 1959, respectively.

The assessee firm tendered an affidavit in the High Court that the income tax officer was adopting an attitude of harassment and was pursuing penalty and assessment proceedings without jurisdiction. (The income tax officer gave a notice to the assessees on 6th April, 1963, requiring them to appear at his office in Kanpur to show cause why penalty should not be imposed on them under Sections 271 and 273 of the Income Tax Act.) No counter-affidavit was filed by the Income Tax Officer questioning these allegations. Moreover, at no stage of the proceedings before the Income Tax Officer or in the correspondence which subsequently followed it was ever suggested or hinted that the officer intended to apply the provisions of Section 28(1)(c) of the Act to get an unlimited period of assessment. It was, therefore, not within his competence to extend the period of limitation beyond four years after this period had already expired.

Ferrous Scrap Export Policy

Except for the withdrawl of the export ban on No. 1 sheet cutting scrap, the ferrous scrap export policy for the six-month period—October to March—introduces no other change. Exports of No. 2 and 3 bundles and turnings and borings will continue to be freely licensed, as hitherto, subject to an overall ceiling. The lifting of the ban on No. 1 sheet cutting scrap is welcome. The trade had long been pleading for it. This is the grade which is in good demand abroad, and there exists a substantial exportable surplus here which is at present being wasted. Annual arisings of this scrap are estimated by the trade around 150,000 tons, and its collection is bound to be encouraged greatly by the removal of restriction on export. The trade is not happy over the overall export ceiling which simply obstructs the fuller utilisation of the scrap surplus. Restrictions go ill with the efforts which are being made to boost exports anyhow. The trade is particularly disappointed over the official policy not to allow the export of heavy melting scrap "under any circumstances".

The trade has always maintained that after fully meeting domestic requirements, there remains an exportable surplus of as much as 200,000 tons of heavy melting scrap. It is understood that a representation seeking the removal of export ban on heavy melting scrap as well as the ceiling restriction on export is being submitted to the Government. Of course, this will not be the first such representation to be made. The Central Minister for International Trade, Mr. Manubhai Shah, had recently assured the trade at the inauguration of the Iron and Steel Scrap Association of India that he would see to it that the utilisation of scrap is not affected by export curbs. This had raised hopes that the Government would lift the ban on exports of No. 1 bundles and heavy melting scrap. The export policy for the October-March period only partially meets the trade's long standing demand. Exports of scrap during the first ten months of the year, inclusive of skull shipments, total 284,507 metric tons, compared with 121,111 tonnes shipped during the same period of 1962 and 337,765 tonnes during January-October 1961. The trade expects scrap exports in 1963 to reach 325,000 tonnes, against 135,000 tonnes in 1962.

"CAPITAL" CHRISTMAS TOY FUND

Grand Total Rs. 2,359.25

LOSS FROM PROTECTION

WHILE certain industries are clamouring for protection at home against competition elsewhere, it may be well to note in the passing what protection has done for some industries in those very heavily protected countries of Russia and Germany. To take the case of jute manufacturing for instance, in the countries referred to. One would have thought that in Germany where the raw material is welcomed on easy terms, and a heavy tariff wall raised against the manufactured article entering into the country, that all the jute mills in that country had nothing else to do but keep their wheels running in order to grind out sure and continuous profits. During the past two years the German jute manufacturing industry has been limping along in a crippled condition, without much profit in any case, and with much loss in others and all throughout with about from 15 to 25 percent of machinery standing idle. Things have lately taken a turn for the better, but advocates for protection should ask themselves the question why should it be necessary for a heavily protected industry ever to work at a loss in a country like Germany? Russia has just given us another illustration of the powerlessness of protection to make jute manufacturing pay, when other conditions are absent. The Imperial Russian Cotton and Jute Factory Company (we think their work is in Odessa) ought to have paid their way and have given a fair return to their shareholders under the heavy aid they have received from a protective tariff tending to keep out foreign competition. But what has happened? This: the Company have already lost £80,000 out of their capital of £200,000, and have called a meeting to consider a proposal for reducing their share capital to a sum which will more nearly represent the value of the assets on hand.

A Ditcher's Diary

"OH NO", CRIED JACQUELINE KENNEDY AS AN assassin's bullet struck down her husband, John F. Kennedy, the 35th President of the United States of America. In such monosyllables do the lips speak when something has happened that the heart cannot bear. "Oh no" is what most people must have said everywhere in the world on that sad Saturday morning as the papers brought the terrible news. For those, like me, charged with the slightly inhuman task of reacting to such tragedies publicly and wordily, "oh no" had soon to be converted into "oh yes". Oh yes, there is in American life a streak of violence without which, once, there would have been no American nation and, with which, American leadership today is less than what it should be. Such is the irony of the human situation that a man who could have destroyed the earth and all mankind with a brief order of his lay, in the final analysis, at the mercy of the trigger of a mail-order gun possessed by an obscure fellow whose word meant nothing even to his next-door neighbour. As one watched the spontaneous international emotional upsurge over the frightful event, it called for an effort to remember that the 46-year-old Kennedy had been President only for two years and ten months, that during this period he represented promise rather than fulfilment. In the intense worldwide grief over the death in Dallas is to be seen mankind's undying hope for a better, peaceful, future for which Kennedy spoke with incandescent sincerity and worked with youthful yet wise and cautious earnestness. To this effort in particular and to the White House in general John Kennedy brought something rare in American life; and this I can sum up in only one word—style. This, highly personal, came not only from an inner optimism, which is part of the American character, but also from a deep and very personal yet humble awareness that if a concatenation of historical circumstances had placed in American hands the supreme power for good as well as evil it was for him to convert the office of President for that almost superhuman rôle. Thus he had made himself a part of history even before sudden death came to him on Friday and we had to fall back upon such time-soiled phrases as "a martyr's death". Such, alas, is the price of serving mankind on the political plane. What other plane, I wonder, have we left in 1963?

IN *Ape and Essence* THE NARRATOR SPEAKS OF "Keats dying of Fanny Brawne, Harriet dying of Shelley". Last week Aldous Huxley died of—cancer. Such, so prosaic, are the facts of—death. In another novel, *The Genius and the Goddess*, Huxley described a fatal car crash in which one survived; he was reserved for another kind of death in Korea, Huxley added in that infuriatingly cool, unsentimental manner of his which long residence in Los Angeles, Calif., did nothing to cure. (I thought of this, in reverse, as I read of the death of five gallant and very senior officers of the Indian Armed Forces in a helicopter crash; why, even I could have died that way.) Think of Philip Quarles in *Point Counter Point*; there you have Huxley seen by Huxley. Life seen through the opaque pages of the *Encyclopædia Britannica*, Eleventh Edition? Here Huxley was less than fair to himself. But then he made it quite clear in *Vulgarity in Literature*, with instances from Dickens, that he considered any public demonstration of emotion as "vulgar", as distinct from obscene. His early irreverence to the Establishment, as seen in *Crome Yellow* or *Antic Hay*, attracted a whole generation of intellectuals; when the attitude was extended to the pompous British Empire, as in *Jesting Pilate*, he won many hearts in India too. With *After Many a Summer* and *Time Must Have a Stop*, fictionally, he seemed to find intellection inadequate. That he turned to the Vedanta says nothing final either about Huxley or about the Vedanta, despite some local satisfaction, perhaps permissible. Koestler too has written of the "oceanic feeling". I find such things too deep for me. I like to think, instead, of the ceaseless restlessness of the European spirit which Huxley represented in his tireless search for he knew not what through agnostic satire, *Gita*, and, finally, mescalin. Finally? The wrong word, for life, since the Renaissance, has known no finality in Europe. Only death is final; that's what came to Aldous Huxley last as it must, one day, come to us all. What a week of deaths this has been!

FOR INSTITUTIONS, AS FOR MEN, TO REACH THE GREY eminence of a hundred years is a rare achievement. But, if rare, it is apt also sometimes to be unexciting except for those immediately concerned. No one would, however, say this of Andrew Yule and Co. Ltd, which after a century of vigorous and purposeful endeavour stands today as one of the finest monuments to the managing agency system as well as to Indo-British industrial enterprise. If memory serves, it was Pope who once wrote "Who lasts a century can have no flaw, I hold that wit a classic, good in law". Hyperboles sanctioned by poetic licence notwithstanding, such indeed were the words which, although written in a wholly different context, might sincerely have reflected the sentiments of the thousand or so of Andrew Yule's old faithfuls and new who gathered for the commemoration of the Company's centenary at Mahajati Sadan on Monday. Andrew Yule started business in a modest way in 1863, as a partnership with agencies for three British insurance companies and Horrocks longcloth. Yet the extensive nature of the interests the Company acquired over the years—in traditional industries like coal, jute and tea, as well as in younger ones like paper, engineering, power and inland water transport—remain as testimony to its lively participation in India's economic growth. No business organisation in this country, I venture to believe, can claim the double distinction of having been led in its early years by one who became president of the Indian National Congress (George Yule), and in its later years by another who rose to be Governor of the Bank of England (Lord Catto). Institutions shape men no less than men shape the institutions they serve; and it is often in symbols such as these—of a warm and liberal humanism on the one hand, and of rare financial wisdom on the other—that the spirit of a fraternity is epitomised. Even in our egalitarian age, I suspect, not many industrialists would have thought of commemorating a centenary by setting aside part of their dividend income for scholarships to the children of their less affluent staff. Yet this is what the major preference shareholders of Andrew Yule propose to do, in positive demonstration of support for an idea that is wholly in keeping with the spirit of the times. *Capital*, from its relative youth of seventy-five years, offers Andrew Yule its best wishes for a second century of faith, confidence and expansion that lies ahead.

WHAT, I HAVE BEEN WONDERING, IS GOING TO happen to Britain's House of Lords? The new Prime Minister, Sir Alec Douglas-Home, has forecast "an interesting session" for the House of Commons, and under the circumstances that would not amaze me. But the Lords: where do they fit into the British parliamentary system now that any member with truly political aspirations can renounce his peerage and seek election to the Commons? Frankly I cannot imagine, unless the Upper House, like the monarchy before it, is now about to succumb completely to a fate which has threatened for decades—that of being consigned to a purely "constitutional" rôle. Such is the fondness for this kind of solution in Britain that I should not be surprised to find the majority of peers being content to retain their seats on the principle that what is good for the sovereign is certainly good enough for them. But that would leave the country without a second parliamentary chamber of even limited effectiveness, something which is quite irreconcilable, one would imagine, with the precepts of representative government which Britain has so successfully been spreading abroad since the war. Which is what makes me feel that the House of Lords might be a candidate for more radical reform in the not-too-distant future, although not perhaps under a Conservative Government. Under a Labour one, there will undoubtedly be an added incentive for action because the Lords is at present so heavily weighted in favour of the Right. This is interesting, because it was a Labour Government, that of Mr. Attlee, which made the last legislative on-

A SAVING ON EACH TROLLEY LOAD

WITH

DUNLOP

CUSHION

TYRES

In factories, railyards or docks, wherever trolleys are used, Dunlop cushion tyre equipment will smooth the way for your loads. These tyres are specially designed to reduce vibration so as to give greater protection to your products. They reduce tractive effort and so permit speedier work. They are silent and help to eliminate costly repairs in the maintenance of flooring and pathways.

THE DUNLOP RUBBER CO. (INDIA) LTD.

DRTC:1A

slaught on the Lords, and, by limiting its objectives too strictly, was responsible for the present unsatisfactory state of affairs. It would be one of those interesting historical paradoxes in which Britain seems to specialise if the next Labour Government, by abolishing the hereditary principle and restoring some real power to those of their Lordships that remained, was eventually effective in rehabilitating a truly reformed House of Lords within the framework of British parliamentary democracy.

NOBODY HAS EVER BEEN LEFT IN DOUBT ABOUT MY views on the stuff broadcast by All-India Radio. So when I say of a particular B.B.C. programme that it could never have happened in India, I would be paying it about the best compliment of which I am capable. The trouble is, apparently, that it is not going to happen in Britain any more either. I refer, of course, to the television programme, "That Was The Week That Was", or "TW3", which satirised, lampooned and generally poked fun at everything from the monarchy to the Communist Party. Nothing that was pompous, or humbug-ridden, escaped its comments. But now it has to go, and the reason the B.B.C. has given—that 1964 is an election year—is so pitiful that Mr. Wilson has thought it necessary to declare that to the Labour Party at least the political criticism the programme indulges in is welcome. Whatever the reason for the death of TW3, it is clearly not the one given, and a correspondent writes that in fact it goes much deeper, right down to the very roots of the Conservative character. He points out that the ability to take criticism, on which British politicians pride themselves, is really something of a myth. Admittedly you can say things in Britain which you would be put in prison for in almost any other country in the world. But that is only because the British have a surer way of dealing with critics: they listen to them for a while and then snub them into silence. What has happened to TW3 is that it has been snuffed out because it is no longer accepted as being quite respectable. My correspondent says that he for one is sorry. On the few occasions he saw the programme, he acknowledged its faults while admitting that nowhere else in the world could one expect to see anything quite like it.

AS KILLERS AND KEELERS DOMINATE THE NEWS, perhaps it calls for an effort to remind ourselves that there is a world beyond and above them—a world in which most of us live most of the time, quietly, without drama, a world in which a man loves a woman and nothing more need be said. Their effortless co-existence then seeks fulfilment in a furtherance of their own lives, in an extension of their own beings; and a child is born. No literature in the world has adequately described a parent's love for his child. Alas, in many instances the parent is withdrawn from the eternal pattern; and then you have the child without his toy at Christmas. With him in mind somebody started the *Capital* Christmas Toy Fund many years ago; ever since the Fund has distributed every year thousands of toys to children who, without the Fund, would not get one. The Fund, which has next to no administrative cost, depends entirely on your generosity. Many have already contributed; and I thank them on behalf of the children they have made happy. Many others, I am sure, need only this reminder before they send their cheques, cash or toys. Some have never contributed before but may be glad to do so this year if they are told of the Fund; and I beseech donors to pass the word; this will be an additional gift. Christmas is only the occasion; toys are distributed to as many children as possible irrespective of religion, caste or any such consideration. But what an occasion Christmas is! One thousand nine hundred and sixty three years after the event, one has only to think of the life of that one man to know how beautiful life could be. There are not many weeks left in which we have to buy the toys, pack them and then despatch them to a large number of waiting institutions. Please send your contribution, big or small, to the *Capital* Christmas Toy Fund, 5 Mission Row, Calcutta 1; and send it early. A child belongs to its parents; an orphan to the entire community.

THE DITCHER

Guide for Investors

JUTE SHARES REACT: INVESTORS UNCERTAIN ABOUT PROSPECTS

(BY A SPECIAL CORRESPONDENT)

JUTE shares have reacted along with the rest of the stock market, but the striking feature has been an appreciable decline in turnover. Although the industry's statistical position has so far been fairly encouraging, investors have become cautious due to the uncertain outlook. During the first seven months of the current financial year, jute goods exports have increased, compared with the corresponding period of 1962-63. The domestic offtake has also improved due to the rise in industrial production, combined with purchases made by the Government. So jute goods stocks with mills have not yet accumulated greatly. For example, they stood at 108.100 tons at the end of October 1963, against the monthly output of 96,200 tons.

In spite of the satisfactory statistical position, the growing anxiety of investors is understandable. During recent months, the price of hessian has declined steadily while that of fibre has been held at the high operational minima fixed early in the current season. Mills, in fact, have often had to pay more than the operational minima for superior jute, since its supply has lagged behind demand. The demand for quality fibre has risen because the industry has worked as many looms as possible for producing hessian rather than sacking. Mills require quality fibre for manufacturing this fabric, including carpet-backing cloth. Although the price of sacking has been steadier during recent months, its manufacture has yielded little profit to mills. Under the circumstances, the profits during the current financial year are unlikely to be as big as those for 1962-63. This besides, the profits have been squeezed by the rise in production costs. The emoluments of workers have increased due to the Wage Board's award. Charges for electric power, coal and transport have risen. Furthermore, the mills will have to contribute to the cost of administering quality control which is likely to be enforced soon.

Meanwhile, the price support scheme for fibre has strained the mills' finances. Raw jute stocks with mills at present amount to more than six months' consumption. Although the large stocks have given greater confidence to manufacturers the additional costs incurred by them on this account, should not be overlooked. Due to the heavy raw jute purchases under the quotas issued by the Jute Commissioner, the mills have also suffered because of the deterioration in the quality of fibre after storage. In view of the shortage of storing capacity, a large quantity of fibre has had to be kept in the open. So there has been a considerable loss of raw jute.

As far as the marketing outlook for jute goods is concerned, there is no ground for taking a complacent view. Overseas countries have slowed down their purchases for some time. The trend is unlikely to change unless political developments take a serious turn. Foreign countries are expected to take only their barest requirements under the present circumstances. There is, however, no doubt that the supply of jute goods will be abundant during the current season. India and Pakistan have produced bumper crops. Since the Government of India is determined to support the price of fibre, it is likely that the industry will have to continue the maximum level of production in order to absorb the increased fibre supply. Pakistan has steadily increased her production of jute goods, so competition will increase in the future.

The production of carpet-backing cloth and other specialities contributed greatly to the profits of mills for 1962-63. There has been a considerable increase in the production capacity of this cloth. In fact, it is thought that the output of carpet-backing cloth may soon be in excess of demand, so its price may not easily recover in the near future.

Under the circumstances, investors would be lucky if they get the same dividend as the companies paid for 1962-63. The dividend policy may, in fact, be more conservative in the light of fresh developments. Taxation has increased. The impact of the super profits tax, in particular, should be considerable. This apart, the need for ploughing back profits has increased since the industry will have to modernise plant and equipment to meet the keen competition from substitutes. Although the industry's spinning section has largely been modernised, the need for increasing the capacity of this section has grown. Meanwhile, the modernisation of the weaving section cannot be deferred for long if the competitive power of the industry is not to suffer. The modernisation of the industry is necessary to hold production costs down to make jute goods more competitive in relation to substitutes. Furthermore, the industry will have to spend large sums of money on research to explore new uses for jute goods. Promotional measures to expand the market for Indian jute goods should also be launched. The decision of the U.K. Jute Control to return the import of some jute goods to the private trade and the prospect of the European Common Market reducing the tariff on jute goods have widened the scope for marketing. But the improvements cannot be effected without considerable investments.

Investors have been discriminating in buying jute shares. They have favoured such companies as Birla, Anglo-India, Fort Gloster, Fort William, Ganges, India, Kinnison and New Central which have diversified their ativities. As long as new profitable lines of manufacture are undertaken, they should help improve the overall profitability of mills. The decline in their profit margin during the current financial year may be partly offset by the increase in output.

Improved Prospects for Scindia Steam

THE preliminary report on the working of the Scindia Steam Navigation Company for the year ended June 1963, showed that the Company had done very well, with the gross income up from Rs. 17.01 crores to Rs. 18.22 crores, gross profit higher at Rs. 3.31 crores, against Rs. 2.46 crores, and the dividend stepped up from 60nP to Re. 1 a share. The chairman, Mr. Dharamsey M. Khatau's statement to the shareholders accompanying the directors report, holds out the promise of a better future. Improved results in 1962-63 are attributed to the Company's improved performance and the upward revision of freight rates coupled with such rationalisation of its fleet and services as it could achieve in the overseas trades having due regard to its essentially liner nature.

Mr. Khatau says that the recent spurt in international freight markets is expected to have a steadying influence on the general level of liner rates. With the Government of India recognising the need to ensure economic freights for Indian shipping and by proper planning both in coastal and international spheres, the industry, says the chairman, can confidently look forward to a period of steady and planned progress.

The Company has acquired two second-hand motor vessels on deferred payment basis, one of 12,800 d.w.t. and another of 11.700 d.w.t., both built in 1938, having a speed of about 14 knots. The Company is negotiating for the purchase of one more motor vessel for overseas trade and making efforts to acquire suitable second-hand ships to replace some of the older units running on the west coast of India and on the wider coast. Out of the three 17-knot fast motor vessels ordered, the first vessel is expected to be delivered by about the middle of 1964. The second vessel is scheduled to be launched shortly and will be ready some time in 1965. The keel of the third vessel was laid on 26th April, 1963. Two *Liberty* vessels were disposed of for scrapping as they were uneconomical to run.

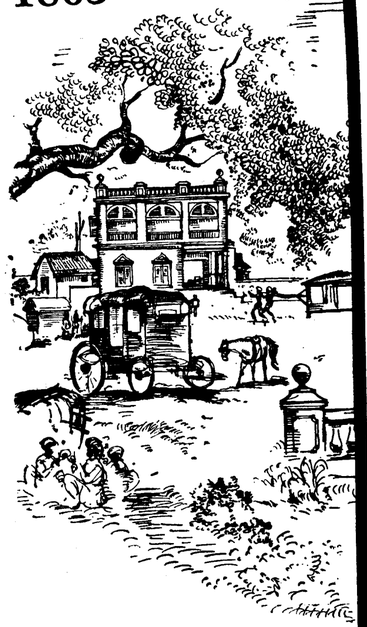
In his statement to the shareholders of the Scindia Steam Company, Mr. Khatau has made certain observations which have a significant bearing on the healthy developmnt of the shipping industry and, therefore, deserve careful study by the authorities concerned. The tramp sector of Indian shipping continues to be weak and confronted with knotty problems. Mr. Khatau says that development of tramp shipping requires acquisition and/or building of ships of appropriate size if these are to run economically. These ships should be about 30,000 d.w.t. The employment of 10,000 to 12,000 d.w.t. ships for carriage of cargoes which are at present being carried by liner vessels would lead to wasteful competition.

Mr. Khatau has urged the Government to bear this in mind and also to see that no parallel service is established by tramp interests, as such a step would merely give a setback to what Indian shipping has already achieved in international field. Coastal shipping, says Mr. Khatau, is looking up a little, but it is still not on a proper economic footing. He has made a plea for the restoration of the 5 percent cut in freight rates on coal from Calcutta to ports up to Cochin. This question is already being examined by the one-man commission.

Mr. Khatau's plea for setting up an appropriate machinery like Tariff Commission to evaluate the rise in operating costs with a view to suitable compensation in freight rates deserves sympathetic consideration. Other transport undertakings such as the railways, airlines and road transport are able to revise their rates upwards as soon as any items go up in costs and affect their economic working. The same principle should be observed for coastal shipping. The chairman of Scindia Steam has also emphasised the need for having a stable policy in the matter of coal cargo allocation. If coastal shipping is to be encouraged it is only proper that coastal operators should not be starved of cargo for the increased tonnage.

C.D.F.C. Loan for Hindustan Motors

THE Commonwealth Development Finance Co. Ltd (C.D.F.C.) is to make a sterling loan of £450,000 to Hindustan Motors Ltd as a contribution towards the total estimated cost of £10.5 million required for the expansion of the Company's factory in Uttarpara, near Calcutta. The proposed expansion is intended to increase the indigenously manufactured components of the Hindusthan Ambassador and the Bedford lorry to about 90 percent in each case. The Company at present manufactures Hindusthan Ambassador cars and Bedford lorries in technical collaboration with the British Motor Corporation Ltd and Vauxhall Motors Ltd, respectively.



Wellman Incandeecent Expanding Activities

THE ordinary shares of Wellman Incandescent India Ltd have quoted Rs. 8.19 a share of Rs. 10 each on which a sum of Rs. 5 has been paid-up, due to the optimistic assessment of the prospects by the chairman of the Company in his statement at the recent annual general meeting. The Company has been actively considering several proposals for expanding its activities. Although the working of the Howrah works, was interrupted by power shortage, it has produced satisfactory results. It is hoped that the West Bengal Government will provide more power in the future. It is proposed to expand the works in view of the increased demand for the products of the Company. An order of more than Rs. 80 lakhs has been obtained by the Company for the alloy and special steels project of Hindustan Steel Ltd., Durgapur. The order covers the supply of annealing and heat treatment furnaces.

The Company also expects to receive the Indian portion of the 1.6-million-ton steel plant extension contract of Hindustan Steel Ltd, Durgapur, which has been given to the Company's foreign collaborators. It is expected that the order may amount to about Rs. 56 lakhs. The Indian portion of the coke oven machinery for the same project may also be supplied by Wellman Incandescent India through its collaborators. Orders for various types of industrial furnaces and low temperature ovens valued at more than Rs. 50 lakhs have been received from the public and private sectors.

It has been pointed out that the future of the furnace industry depends greatly on whether the manufacturing unit attains an economic size. Hence the Company hopes that the Government will allocate to each producing unit sufficient import licences for bringing components and raw materials. The chairman also suggested that the industrial furnace industry should be properly represented in the Machine Tools Development Council. It would be better if

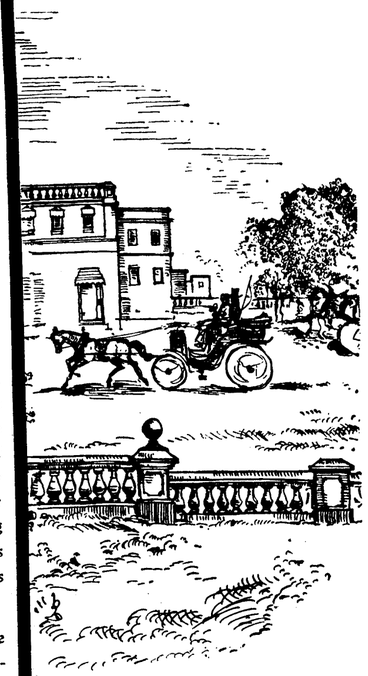
1963



100

YEARS OF INDO-BRITISH CO-OPERATION

Speaking at the fourth session of the Indian National Congress held at Allahabad in 1888, its President, George Yule, made a forceful plea for the adoption of measures by the Government of the day which "would unite England and India not by hard and brittle bonds which may snap at any moment, but by the flexible and more enduring ligaments of common interests promoted, and common duties discharged."

The Firm which George Yule and his brother Andrew established in 1863 celebrates its Centenary this year—a hundred years in which it has played a significant part in the development of many of India's vital industries.

AYC-3

a separate Council was set up for industrial furnaces and allied equipment.

British Burmah Petroleum Passes Dividend

THE British Burmah Petroleum Co Ltd has passed the dividend for the year ended March 1963. The Company has incurred a loss of £36,637. The Government of Burma has acquired all shares in the B.O.C. 1954 Ltd. As a result, B. B. Petroleum has been entitled to receive for the 21,422 shares held by it a sum of £72,136. The Burmese Government has agreed to pay this sum within 31st March, 1964, in two instalments, and later with interest thereon at 3½ percent a year till full payment.

The Company received a sum of Rs. 4.80 lakhs equivalent to £35,996, on 2nd February, 1963. This involved the Company in a loss of £25,157. The settlement with the British Burma Petroleum Co. (S.A. Proprietory) Ltd has resulted in a loss of £16,425. The total loss of £41,572 has been shown in the profit and loss account. The appeal filed by the representatives of the U.K. Government against B.O.C. (Burma Trading) Ltd and others against the judgment dated 14th August, 1962, in the Scottish Court was allowed and the action dismissed. The B.O.C. (Burma Trading) Ltd and others have appealed to the House of Lords against the said judgment. The appeal is pending. Suits filed by B. B. Petroleum and other Companies similarly situated have been stayed.

West Coast Paper Plans Shelved

THE West Coast Paper Mills Ltd did very well during the year ended June 1963. Production reached a new peak of 27,252 tonnes, against 25,604 tonnes in 1961-62, due to improvements effected in the day-to-day operations of the Company's mills and general efficiency. Despatches of paper increased from 25,447 tonnes to 27,115 tonnes and the net turnover was higher at Rs. 4 crores, against Rs. 3.6 crores. Despite all-round increases in costs of various items of chemicals, stores, spare parts and imported articles, the Company was able to earn a higher gross profit of Rs. 1.10 crores, compared with Rs. 92.27 lakhs in the preceding year. The directors attribute the improved financial results, which have enabled them to step up the dividend for the third successive year to 11 percent, to higher production and increase in paper prices with effect from 21st June, 1962, the benefit of which has been received by the Company during the whole year.

The directors, however, state that the increase of Rs. 60 a ton is not at all inadequate and have urged the Government to revise prices in order to allow a reasonable margin which will enable development and expansion of the industry. The Company has repaid Rs. 18 lakhs to the Industrial Finance Corporation of India, thereby reducing the outstanding amount to Rs. 1.32 crores. The directors have assured the shareholders that the Company is exploring all possible avenues to solve the raw material problem. The Mysore Government has agreed to give additional areas of forest ranges, but insists on a substantial increase in the royalty. The Company is trying to augment the raw material resources by lops and tops of hardwoods, which may obviate difficulties and obstacles experienced in the normal production process by the gregarious flowering of bamboos in the forest areas. The Company has already started intensive efforts to plant not only bamboo species, but also certain fast-growing varieties of tropical woods like eucalyptus, hybrids, paper mulberry, etcetera, in addition to species of bamboo not usually grown in Dandeli forests.

But because of the unfortunate conditions arising out of the Chinese aggression and unfavourable market conditions, the expansion of the paper plant has had to be delayed. Due to this delay, the Company's foreign collaborators—Rayoniers—have withdrawn from the scheme. This means that the project for the manufacture of rayon grade pulp and other specialities will have to be held in abeyance until another suitable collaboration agreement is concluded. Besides, the caustic soda scheme which the Company was considering has also had to be shelved for the reason that the Government would not permit its implementation independent of the entire expansion of the mills.

General Tyres to Issue Rights

THE General Tyres Ltd has been sanctioned by the Controller of Capital Issues to issue rights ordinary shares for Rs. 80 lakhs at par. The present ordinary share capital amounts to Rs. 80 lakhs divided into shares of Rs. 10 each. The funds will be used to finance expansion schemes. The Company has been given industrial licences to increase the installed capacity for producing a further 120,000 tyres and tubes each and 600,000 kilograms of camel back retreading materials. When these expansion schemes are completed, 300,000 kilograms of camel back and 300,000 tyres and tubes each will be produced a year. The Industrial Finance Corporation has also been approached for a further loan.

In its third annual report for the year ended June 1963, the directors mention that trial production at the Kankinara factory, near Calcutta, has begun. Commercial sales of tyres and tubes are likely to start before the end of the current year. The Company has incurred a loss of Rs. 1.83 lakhs, after providing Rs. 8,892 (against Rs. 3,747) for depreciation and Rs. 3,000 (against Rs. 2,000) for taxation. The dividend has been passed.

Hindustan Construction Fares Well

THE Hindustan Construction Co. Ltd reports satisfacory results for the year ended August 1963. Despite a small setback in the work bills from Rs. 14.38 crores to Rs. 13.82 crores, the gross profit is slightly higher at Rs. 183.38 lakhs, against Rs. 181.28 lakhs in the preceding year. The dividend has been maintained at 20 percent, but it absorbs a larger sum of Rs. 14.40 lakhs, against Rs. 9.88 lakhs, because the bonus shares issued in the previous year are entitled to the full 20 percent dividend, compared with 7.45 percent in 1961-62. After providing Rs. 43.18 lakhs (against Rs. 39.03 lakhs) for depreciation, Rs. 16.24 lakhs (against Rs. 4.97 lakhs) for development rebate and Rs. 85.50 lakhs (against Rs. 69 lakhs) for taxation and deducting other prior charges, the net profit is substantially down from Rs. 59.68 lakhs to Rs. 30.86 lakhs.

With Rs 1.65 lakhs brought forward from the previous year, adding Rs. 51.00 lakhs being excess provisions no longer required, and Rs. 1.26 lakhs transferred from development rebate reserve, the disposable surplus amounts to Rs. 84.86 lakhs. Out of this, the directors have provided Rs. 16.50 lakhs (against Rs. 2 lakhs) for dividend equalisation reserve, Rs. 43 lakhs (against Rs. 10 lakhs) for general reserve and Rs. 25.25 lakhs (against Rs. 5 lakhs) for additional provision for taxation for the previous year. No provision has been made for special initial depreciation and obsolescence reserve, rehabilitation reserve and contingency reserve which had received Rs. 5 lakhs, Rs. 7 lakhs and Rs. 5 lakhs, respectively, in the preceding year.

Dividends, equity and preference, absorb Rs. 15.95 lakhs (against Rs. 11.38 lakhs) and these are being paid out of the dividend equalisation reserve. After making various appropriations, there remains a small sum of Rs. 9,938 to be carried forward, against Rs. 1.65 lakhs brought in. The directors state that during the year the Company secured major works amounting to Rs. 3.82 crores and after the close of the year, it has secured further orders worth Rs. 7.42 crores. The Company has promoted a joint venture with Morrison-Knudsen of Asia Inc., U.S.A., and Patel Engineering Company, Bombay, for the Yamuna Hydel-Scheme, stage II and the tender has been submitted. The total value of the work is about Rs. 29 crores.

Substantial New Business for L.I.C.

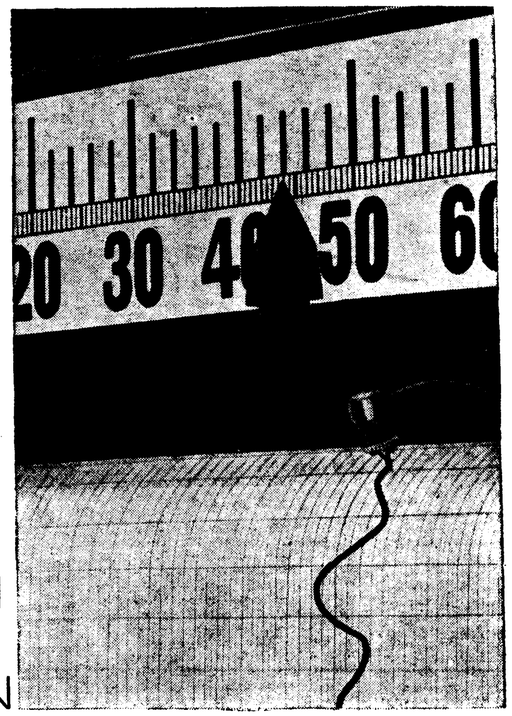
THE Life Insurance Corporation of India has produced satisfactory results for the period from 1st January, 1962, to 31st March, 1963. New business has amounted to Rs 746 crores. A portion of the new business has come from persons who insured their lives for the first time. This shows how the insurance habit has spread among the people. In his chairman's address at the annual meeting of the Corporation held in Bombay last Monday, Mr. B. K. Kaul described the measures which have been taken to promote insurance. (A full text of the speech is printed on a later page in this week's *Capital*.) Although the scheme to spread the insurance habit in rural areas has made progress, it has been difficult to arrange the collection of premiums. Postal offices have been used as the collecting medium. Due to the shortage of medical examiners, life policies have been introduced which require no medical examination in certain cases. The foreign business of the Corporation has been well maintained.

The total business in force has amounted to Rs. 3,168 crores at the end of March 1963. A disturbing factor has been a rise in the net lapse ratio, but steps have been taken to bring down the ratio as soon as possible. The fourth valuation of the Corporation's business as at 31st March, 1963, is in progress, and the results should be available early in 1964. It is proposed to construct a life table on the basis of the mortality experience about assured lives during 1961-64. Indications suggest a considerable improvement in mortality. Commenting on the demand for a cut in the premium rates due to the favourable mortality experience, Mr. Kaul mentioned that it was not possible to reduce the premiums unless the low rates of mortality had been stabilised. This apart, the current inflation did not justify a cut in the premium rates, at least for the time being. Judging by the experience of other countries; it looked as if the benefit of a favourable mortality experience should be passed in the form of bonuses to the policyholders rather than reduction in premiums. This might help curb inflation.

The life fund of the Corporation has amounted to Rs. 720.70 crores at the end of March 1963. Of the total Indian investments amounting to Rs. 623.64 crores, the public sector accounts for 76.8 percent and the private sector 23.2 percent. The rise in the expense ratio has largely been due to the increased emoluments to the staff. The scheme for granting loans on the mortage of immovable properties has been extended. The revised scheme for granting loans to policyholders for constructing houses is likely to help relieve the housing problem of the middle-income group.

Jeypore Sugar Pays the Same

THE Jeypore Sugar Co. Ltd reports satisfactory results for the year ended June 1963. The gross profit is up by about 9.6 percent from Rs. 34.06 lakhs to Rs. 37.33 lakhs. After providing Rs. 14.03 lakhs (against Rs. 15.62 lakhs) for depreciation and 6.35 lakhs (against Rs. 4.75 lakhs) for taxation and deducting other prior charges, the net profit amounts to Rs. 14.99 lakhs, against Rs. 11.93 lakhs in 1961-62. The dividend has been maintained at 15 percent. With Rs. 30,812 brought forward from the previous year, writing back Rs. 8.652 from provisions made in previous years no longer required and adding Rs. 1.45 lakhs, representing the refund of selling expenses charged by the State Trading Corporation during the previous year, the disposable surplus amounts to Rs. 16.83 lakhs.



Appropriations include development rebate reserve Rs. 44,000 (against Rs. 1.65 lakhs), general reserve Rs. 2 lakhs (against Rs. 3 lakhs), expenses not relating to the year Rs. 3.62 lakhs (against Rs. 62 515), donations Rs. 28,407 (against Rs. 22,100), goodwill written off Rs. 1.11 lakhs (against Rs. 41,219), dividend equalisation reserve Rs. 2.25 lakhs (against nil) and dividend reserve Rs. 7.10 lakhs (against Rs. 5.90 lakhs). Preference dividends absorb Rs. 1.03 lakhs and equity dividend Rs. 6.06 lakhs. The proposed dividends are to be paid out of dividend reserve. After making various appropriations, there remains a small surplus of Rs. 2,296 to be carried forward, against Rs. 30,812 brought in. Some 60 percent of the dividend for 1962-63 is said to be exempt from income tax and super tax.

The directors state that the Company's sugar factory in Chagalu worked 95 days and produced 7,024 tonnes of raw sugar and the factory in Rayaghada worked 112 days and produced 3,532 tons of white sugar. About 5,593 tons of sugarcane was produced on the Company's own farm in Rayaghada which was wholly supplied to the Company's factory. The Rs. 10-paid share of Jeypore Sugar is quoted around Rs. 16.

Central India Spinning Disappoints

THE Central India Spinning, Weaving and Manufacturing Company reports disappointing results for the year ended June 1963. Although production was well maintained and the turnover recorded a small improvement from Rs. 5.99 crores to Rs. 6.14 crores, the Company's profit has shrunk heavily from Rs. 39.42 lakhs to Rs. 17.88 lakhs. After providing Rs. 14.29 lakhs (against Rs. 13 55 lakhs) for depreciation all that remains is a small sum of Rs. 3.59 lakhs, compared with Rs. 25.87 lakhs in the preceding year. This has been adjusted against the past accumulated losses, leaving a deficit of Rs. 54.27 lakhs. In view of the accumulated losses carried forward and the arrears of depreciation, the directors have decided not to recommend any

BLUE STAR'S SERVICE TO INDUSTRY—3

INDIA'S MODERN INDUSTRY DEPENDS ON ADVANCED INSTRUMENTATION

With new times come new ways. India's rapid industrial growth has created new and varied industries, requiring modern methods of automatic process control. Industries like steel and metals, petroleum and petro-chemicals, fertilizers and heavy chemicals, textiles and synthetic fibres, glass and ceramics, sugar and paper are dependent for process control on Honeywell instrumentation. ■ All over the country, in a great many industries, Blue Star-engineered Honeywell instrumentation is helping to step up production, reduce waste, improve quality and increase efficiency. ■ This is one of the many ways Blue Star serves Indian industry.

THIS IS BLUE STAR

BS-1-G 1-62

dividend on preference shares for the year ended June 1963.

This is the eighth year in succession that the ordinary shareholders have had to go without a dividend and it appears that they will have still to wait for some more years before their investment begins to bear any fruit. In addition to the accumulated loss of Rs. 54.27 lakhs, the Company has to clear arrears of depreciation amounting to Rs. 48.69 lakhs and arrears of preference dividends—1956-57 to 1962-63—amounting to Rs. 22.75 lakhs. The quotation for Central India shares has been marked down from Rs. 120 to Rs. 105 in a matter of a few days, reflecting the market's keen disappointment over the Company's working for 1962-63.

K.C.P. Profit Higher, but Dividend Same

THE working results of K. C. P. Ltd for the year ended June 1963, show an increase of about 10 percent in the gross profit from Rs. 96.53 lakhs to Rs. 1.06 crores. The dividend has been maintained at 15 percent. The net profit is substantially lower at Rs. 30.82 lakhs, against Rs. 52.12 lakhs as the provision for depreciation has been stepped up from Rs. 26.41 lakhs to Rs. 49.10 lakhs, and taxation accounts for Rs. 26.08 lakhs, against Rs. 18 lakhs in 1961-62. Including Rs. 14,859 brought forward from the previous year, Rs. 65,487, being transfer from rehabilitation reserve, Rs. 10 lakhs, being excess provision for taxation, Rs. 6.88 lakhs being other excess provisions and Rs. 1.05 lakhs, being refund of sugarcane purchase tax on sugar exported in 1962-63, the total disposable surplus amounts to Rs. 49.64 lakhs. Out of this, the directors have set aside Rs. 13.78 lakhs (against Rs. 6.32 lakhs) for provision for bonus to cane growers, Rs. 9.39 lakhs (against Rs. 8.38 lakhs) for rehabilitation reserve, Rs. 5 lakhs (against Rs. 27.50 lakhs) for development rebate reserve and Rs. 5 lakhs (against Rs. 1.85 lakhs) for general reserve. The proposed dividends—ordinary and preference—absorb Rs. 14.14 lakhs (the same), leaving a sum of Rs. 12.750 to be carried forward. The Rs. 10-paid share of K.C.P. is currently quoted around Rs. 23.90.

Modella Woollens to Expand

SHAREHOLDERS of Modella Woollens have every reason to feel satisfied with the Company's performance during the year ended June 1963, when sales increased from Rs. 20.18 lakhs to Rs. 68.94 lakhs, and the gross profit increased from Rs. 7.24 lakhs to Rs. 18.10 lakhs. The dividend of 6 percent has been declared on a capital of Rs. 51.49 lakhs, against Rs. 30.83 lakhs in the preceding year. The outlook for the current year appears to be even more promising. The wool top unit in Chandigarh started production on 19th February, 1963. Teething troubles have been overcome and the unit has started working three shifts since the beginning of the current financial year. The plant's production performance is said to be satisfactory.

The quality of wool tops produced from Indian wool is said to be one of the best and has been favourably received in the market. The directors state that steps are being taken to install dyeing and printing plant and it is hoped that this department will start functioning shortly, and the Company will be able to offer dyed tops in the market. The grease extracting unit has been ordered and is expected some time in the first quarter of 1964. The Company's shoddy spinning unit worked three shifts throughout 1962-63. Production was satisfactory and sales amounted to Rs. 49.82 lakhs, against Rs. 18.44 lakhs in the eight months of the preceding year. Production has been geared to meet defence requirements especially production of yarn suitable for the manufacture of barrack blankets.

The Company has received permission for the installation of a third carding set and a shoddy washing machine of the total c.i.f. value of Rs. 3.87 lakhs. Orders for the requisite machinery are expected to be placed shortly. The Company has received Government permission for the expansion of its combing mills and the licensed annual capacity has been raised to 2.27 millllion kilograms (about 5 million lbs). Machinery to be imported for this purpose will be financed from the foreign exchange available by the issue of equity shares to the Company's foreign collaborators. The directors state that a French combing unit has already been ordered in consultation with the foreign collaborators. The factory building had already been planned to take in the expansion and except for minor adjustments, further capital expenditure on buildings and warehouses will not be needed. The Rs. 10-paid share of the Company is currently quoted around Rs. 15.24.

Sapoi Tea Cuts Dividend

THE Sapoi Tea Co. Ltd (an Assam garden) has made a profit of Rs 1.41 lakhs for the year ended December, 1962, compared with Rs. 2.98 lakhs for 1961, after transferring Rs. 1.84 lakhs (against Rs. 1.46 lakhs) to depreciation. The taxable ordinary dividend has been halved to 10 percent to absorb Rs. 1.40 lakhs. The yield amounts to 5.6 percent at the present price of Rs. 17.75 a share of Rs. 10 each. Taxation is allocated Rs. 62,000 (against Rs. 1.46 lakhs) and development rebate reserve Rs. 7,000 (against Rs. 10,782). The carry-forward is Rs. 7,858, against Rs. 15,994 brought in. The dividend will be paid out of divided reserve which has been allocated a sum of Rs. 1.40 lakhs. The crop declined from 632,808 kilograms to 604,795 kilograms. The 1963 crop is likely to be about the same as that for 1962 and production has amounted to 486,750 kilograms up to 31st October, 1963.

The decline in output has been partly due to the Chinese aggression which caused a panic among labourers. Production costs have risen due to increased wages, combined with higher prices of raw materials and stores. Taxation has also been heavier. But the directors hope to pay better dividends in the near future since the production of tea on new land acquired by the Company, has started.

Nelliampathy Tea and Produce Repeats

A smaller crop and higher cost of production have led to a decline in profit of the Nelliampathy Tea and Produce Co. Ltd for the year ended June 1963. But the ordinary dividend has been maintained at 15 percent. The net profit for the year amounts to Rs. 6.43 lakhs, compared with the previous year's Rs. 7.64 lakhs, before taxation. Together with Rs. 7,339 brought forward from the previous year, the total comes to Rs. 6.50 lakhs Provision for taxation amounts to Rs. 3.20 lakhs (against Rs. 4 lakhs). The preference dividend at 6.69 percent gross accounts for Rs. 30,105. The proposed ordinary dividend will absorb Rs 1.80 lakhs. A sum of Rs. 1.10 lakhs (against Rs 1.40 lakhs) is transferred to dividend equalisation reserve. The balance of Rs. 9,931 is carried forward.

The total tea crop for the year amounted to 444,812 kilograms, against 469,185 kilograms. The cost of production was higher at Rs. 3.16 a kilogram, against Rs. 2.69 a kilogram. The average price realised was, however, higher at Rs. 4.33 a kilogram, against Rs. 4.22 a kilogram. The cardamom crop amounted to 51,420 kilograms, against 47,323 kilograms. The coffee crop amounted to 29,125 kilograms, against 41,613 kilograms. The estimated tea crop for 1963-64 is put at 460,000 kilograms. The cardamom estimate is placed at 50,000 kilograms and the coffee estimate at 35,000 kilograms.

Rajagiri Rubber and Pays More

THE Rajagiri Rubber and Produce Co. Ltd reports a higher net after tax profit for the year ended June 1963. The directors have stepped up the total dividend for the year to 21½ percent from the previous year's 20 percent. The Company has been steadily maintaining the dividend of 20 percent for the last several years. Although the profit before taxation is lower than that of the previous year due to a sharp rise in the cost of production coupled with a fall in the average price realised, a higher net profit after taxation is possible because of a reduction in the provision for taxation out of the year's profit. This lower provision for taxation is again due to an adjustment of the excess provision for taxation made in the previous year. In other words, despite a lower profit for the year under review, the directors have been able to declare a higher dividend by utilising the excess provision made in the previous year.

The net profit before taxation for the year amounts to Rs. 8,05,161.59, against Rs. 10,69,649. With the balance of Rs. 4,971.62 brought forward, the total comes to Rs. 8,10,133.21. Out of this, provision for taxation amounts to Rs. 2,80,000. The provision in the previous year was Rs. 6,60,000. The interim dividend of 10 percent on the ordinary shares absorbed Rs. 1,35,000. The proposed final dividend of 11½ percent on ordinary shares will absorb Rs. 1,51,875. The preference dividend at 6.08 percent gross accounts for Rs. 1,37,408. A sum of Rs. 85,000 is transferred to dividend equalisation reserve (against nil). The balance of Rs. 20,850.21 is carried forward.

The estate cost of production for the year was Rs. 1.90 a kilogram, against Rs. 1.68 a kilogram. The increase in production costs has been due to the general rise in labour and materials costs and also on account of the additional expenditure in spraying a larger area. The average sale price was Rs. 3.16 a kilogram, against Rs. 3.23 a kilogram for the previous year. The estimated crop for 1963-64 is put at 875,000 kilograms.

Coffee Lands and Industries (Mysore) Maintains

THE audited accounts of Coffee Lands and Industries (Mysore) Ltd for the year ended June 1963 shows a lower net profit of Rs. 5,28,940 before taxation, compared with Rs. 6,91,344 for the previous year. Out of the profit of Rs. 5,28,940, provision for taxation comes to Rs. 3,02,000 (against Rs. 3,46,000). This leaves a net profit of Rs. 2,26,940 after taxation (against Rs 3,45,344). With the amount of Rs. 31,706 brought in, the total available for appropriation amounts to Rs. 2,58,646. The preference dividend at 5.31 percent accounts for Rs. 55,256. The ordinary dividend of 9 percent (the same) will absorb Rs. 2,02,500. The balance of Rs. 890 is carried forward.

The total crop for the year amounted to 730 tonnes, against an estimated crop of 750 tonnes. The crop for the previous year was 681 tonnes. The coffee crop has been valued on the basis of Rs. 2.20 a point. The estimated coffee crop for 1963-64 is put at 975 tonnes. The directors' report says that prospects for the coming year are promising.

Bombay Wire Ropes Share Offer

THE subscription list for the Rs. 27.50 lakhs public issue—all in equity shares of Rs. 10 each—of Bombay Wire Ropes Ltd will open on 5th December and close on 14th or earlier, but not before 9th December. The entire public issue has been underwritten. The Company has been licensed to manufacture 3,000 tons of steel wire ropes a year on a double-shift basis in the initial stage. The factory will be located in Kolshet near Thana (Bombay). The two Japanese firms—Asahi Wire Rope Manufacturing Company and Kobe Steel Works—are collaborating in the venture. The project is estimated to cost Rs. 1.06 crores which it is proposed will be met by the issue of share capital of Rs. 55 lakhs, bank borrowings of Rs. 16 lakhs, a loan of Rs. 30 lakhs from the I.C.I.C.I. and deposits of Rs. 5 lakhs from the Company's sole selling agents.

The Company has received the licence for the import of capital goods worth Rs. 38.36 lakhs from Japan under yen credit. The rest of the equipment is to be obtained from indigenous sources. The design of the factory building and the lay-out of the plant have been finalised in consultation with the Japanese collaborators. The main raw material required for the manufacture of steel wire ropes is high carbon steel rods which will become available from indigenous sources from about the middle of 1964.

The Company has an authorised capital of Rs. 2 crores of which Rs. 55 lakhs in equity shares of Rs. 10 each is being issued for the present. Of this, shares worth Rs. 10.03 lakhs have been subscribed by the promoters. A further amount of Rs. 17.47 lakhs, including Rs. 5 lakhs reserved for firm allotment to the Life Insurance Corporation, has been agreed to be taken up by the directors and their friends. The balance of Rs. 27.50 lakhs is being offered for public subscription. The board of directors includes Mr. C. C. Desai (chairman), Mr. R. C. Nagri, Mr. Hiralal Chhaganlal Shah, Mr. B. N. Chaturvedi, Mr. S. K. Jajodia, Mr. M. T. Dalwani and Mr. Himatlal Chhaganlal Shah (managing director).

Tractors (India) Disappoints

IN spite of an increase of about 95 percent in the sales from Rs. 1.12 crores to Rs. 2.18 crores, the gross profit of Tractors (India) Ltd for the year ended June 1963, is slightly lower at Rs. 22.89 lakhs, against Rs. 23.32 lakhs. The net profit, however, is substantially down because of enhanced tax liability amounting to Rs. 17.40 lakhs, against Rs. 10.25 lakhs; this is because the Company has had to provide Rs. 6.40 lakhs for super profits tax in respect of 1962-63 and 1961-62. The provision for depreciation amounts to Rs. 1.19 lakhs, against Rs. 1.15 lakhs and that for development rebate Rs. 2,025, against Rs. 11,282, leaving a net profit of Rs. 4.28 lakhs, against Rs. 11.81 lakhs.

No provision has been made for general reserve and dividend equalisation which had received Rs. 6.40 lakhs and Rs. 7.50 lakhs, respectively, in the preceding year.

The dividend has been reduced from Rs. 3.25 to Rs. 2.25 a share (Rs. 100-paid) and even for the payment of the reduced dividend, the directors have had to withdraw Rs. 7.50 lakhs from the dividend equalisation reserve. The proposed dividend absorbs Rs. 7.21 lakhs, against Rs. 10.42 lakhs. A sum of Rs. 61,000 has been set aside for bad and doubtful debts. The 96,200 equity shares issued during 1962-63 do not participate in the year's dividend. The directors state that the petroleum equipment division, created two years ago, has now started making a sizable contribution to the Company's business. They are exploring the question of further expansion both in the marketing and manufacturing fields. Coles Cranes of India, a new Company formed by Tractors (India) in collaboration with Steels Engineering Products of the U.K., has reached its licensed capacity within 18 months of commencing production and has achieved ahead of target a very high indigenous content. Within two years of its working, the Company has been able to pay a dividend of 10 percent.

Panchura Estates Earns More

THE working of Panchura Estates Ltd for the year ended June 1963 shows a higher net profit of Rs. 50,552, after providing for depreciation and Rs. 25,000 for taxation. With Rs. 49,223 brought forward from the previous year, the total surplus comes to Rs. 99,775. Out of this, the directors have recommended a dividend of 15 percent on the increased capital (against 15 percent on the old capital last year). The dividend at 15 percent on the old equity shares amounts to Rs. 22,500. The dividend on the new equity shares absorbs Rs. 5,625. The balance of Rs. 71,650 is carried forward.

The coffee crop for the year amounted to 11,892 bushels, against an estimate of 9,000 bushels. The valuation has been maintained at Rs. 20 a bushel. It is expected that the actual receipt will exceed the estimate. The Company harvested 70,198 kilograms of green leaf during the year. It raised its share capital through the issue of new shares. The directors state that the project for which the money was raised could not materialise since the Government of India did not grant its permission for the same. So the directors have decided to carry on their existing activities for the present. Meanwhile, negotiations are being carried on for the purchase of a suitable property adjacent to the existing estate. The estimated coffee crop for 1963-64 is placed at 15,000 bushels and the tea crop at 75,000 kilograms.

Share Offer by Kutch Salt

THE Kutch Salt and Allied Industries Ltd which has been engaged in the manufacture of salt and gypsum for over a decade will soon enter the capital market to raise Rs. 12.50 lakhs in equity shares of Rs. 10 each for financing its new project in Kandla. The Company proposes to set up a salt works at Kandla with a target of 225,000 tons a year. The project is estimated to cost about Rs. 25 lakhs which will be met by the proposed capital issue and balance by borrowings. The first stage of the project has already been completed and actual production has commenced. The first crop of the new unit is expected to be marketed by the end of January 1964. The targeted production of 225,000 tons will be achieved in the third stage. When the expansion activities of the Company both in Kandla and at the existing works in Jakhau are completed, the total production will rise from 100,000 tons to 325,000 tons. The Company will then be the largest salt producer in the country. The directors visualise bright prospects for the Company as the cost of production will be substantially reduced because of proposed mechanisation and higher production. Kutch Salt has an authorised capital of Rs. 50 lakhs of which Rs. 12.50 lakhs has been subscribed. It has obtained the sanction of the Controller of Capital Issues for the proposed issue of 125,000 equity shares of Rs. 10 each at par.

The Company's working results for the year ended August 1963 show that after providing Rs. 85,328 (against Rs. 85,544) for depreciation and reducing other charges, it has made a pre-tax profit of Rs. 3.63 lakhs, against Rs. 3.15 lakhs in the preceding year. Taxation absorbs Rs. 93,000 (against nil) and a sum of Rs. 1.50 lakhs (against nil) has been transferred to the general reserve. The taxable dividend of 7.5 percent absorbs Rs. 83,531. Sales during 1962-63 amounted to Rs. 14.08 lakhs, against Rs. 14.24 lakhs in 1961-62.

Kasturi and Sons Earns Less

DUE to a general increase in working costs, there was a drop in the profit of Kasturi and Sons Ltd, Madras, for the year ended June 1963. The net profit for the year amounts to Rs. 19,52,592, after providing Rs 6,87,049 for depreciation. The previous year's profit was Rs. 22,92,388, after providing Rs. 6,89,489 for depreciation. With Rs. 3,230 brought forward from the previous year and Rs. 2,81,000 transferred from general reserve, the total available surplus comes to Rs. 22,36,822.

Out of this, provision for taxation amounts to Rs. 14,55,000 (against Rs. 12,30,000). Reserve for debenture redemption sinking fund gets Rs. 2,00,000 (the same) and reserve for development rebate Rs. 30,324 (against Rs. 47,090). Expenses relating to the previous year amounted to Rs. 4,554. The dividend on preference shares at 9 percent accounted for Rs 1,35,000. The dividend on equity shares at 9 percent (against Rs. 16 percent) absorbed Rs. 2,97,000. The bslance of Rs. 8,447 is carried forward.

Everest Refrigerants to Make Methane Gases

EVEREST Refrigerants Ltd which proposes to set up a plant in Andheri (Bombay) for the manufacture of halogenated and flourinated methane gases and other chemicals will soon be in the market to raise Rs. 25 lakhs through public subscription for financing the project. Technical Enterprises Inc. of the U.S.A., the world renowned designers and engineers of plant and machinery for the manufacture of chemicals, is collaborating in the venture. The Company has been licensed to manufacture annually 1,155 tons of hydroflouric acid, 990 tons of aluminium triflouride, 1,980 tons of carbon tetrachloride and 4 million cans of acrosol packages. It is claimed that the Company's plant will be the first of its kind in the country to manufacture flourochloro methane (E.C.M.) gases, which are widely used in air-conditioning, refrigeration, cold storage, etcetera.

The project is estimated to cost Rs. 1.20 crores of which Rs. 60 lakhs will be provided by share capital and the balance by loans. The authorised capital of the Company will be Rs. 2 crores. The issued capital will be Rs. 60 lakhs made up of Rs. 48 lakhs in equity shares of Rs. 10 each and Rs. 12 lakhs in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The promoters, directors, their friends and associates will take up equity shares worth Rs. 19 lakhs and preference shares of the value of Rs. 6 lakhs. The foreign technical collaborators will subscribe for equity shares worth Rs. 10 lakhs. The balance of Rs. 25 lakhs consisting of 190,000 equity shares and 6,000 perference shares are to be offered for public subscription. The entire public issue has been underwritten. The promoters expect the factory buildings to be ready by the end of the first quarter of 1964.

New Capital Issues

SIX companies have been authorised to raise capital totalling Rs. 4.39 crores. The following are the details:

Tractors and Farm Equipment Ltd, Madras, engaged in the manufacture of Ferguson tractors, implements and allied equipments, is to issue further capital of Rs 1 crore divided into 1,000,000 equity shares of Rs. 10 each, for cash at par. The new capital will be subscribed as 51 percent by Simpson and Company Ltd., Madras and 49 percent by Massey-Ferguson Ltd. Canada, and/or their subsidiaries

General Tyres Ltd, Calcutta, is issuing capital of Rs. 80 lakhs in 800,000 equity shares of Rs. 10 each for cash at par. The proposed capital is required for the expansion in the manufacture of motor-vehicle tyres and tubes. It will be issued to existing shareholders.

Guest, Keen, Williams, Limited. Calcutta, is to issue Rs 1.5 crores in 7 percent debenture stock, 1973-78 in units of Rs 1,000 each The capital is required for meeting the capital cost of the various projects of expansion in the manufacture of free cutting steel and spring steel, ingots, bars and rods, bright bars and wood screws estimated to cost Rs 6.75 crores.

The Patna Electric Supply Company Ltd, Calcutta, is to issue capital of Rs. 35,07,380 divided into 350,738 equity shares of Rs. 10 each for cash at par. The money will be used for meeting the capital expenditure necessary for the purpose of carrying out urgent development. etcetera

Mafatlal Fine Spinning And Manufacturing Company Ltd. Bombay, is issuing capital of Rs 29 lakhs divided into 29,000 equity shares of Rs 100 each for cash at a premium of Rs. 275 a share. Out of this, shares of the value of Rs. 14.50 lakhs will be issued to existing shareholders on rights basis and the remaining Rs 14.50 lakhs to the public through prospectus. The proceeds of the issue will be used for the manufacture of fluorine chemicals.

Premier Metres and Instruments Manufacturing Company Ltd, Bombay, a new company, is to issue capital of Rs. 45 lakhs for cash at par consisting of Rs. 35 lakhs in equity shares of Rs 10 each and Rs. 10 lakhs in 9.5 percent cumulative redeemable preference shares of Rs. 100 each. The proceeds of the issue will be used for the manufacture of electricity meters.

BANK BILL AND GOLD CONTROL WORRY OPERATORS

Wednesday Evening.

THE working of the Calcutta stock market has been interrupted by holidays during the past week. Lyons Range has been overwhelmed by gloom because of the assassination of President Kennedy and the death of Maharashtra's Chief Minister, Mr. M. S. Kannamwar. The market reopened on Tuesday in a subdued mood and the downward trend has continued since. The sharp fall on Wall Street and in Tokyo, following the assassination of President Kennedy, has caused some nervousness in Lyons Range. Bulls are inclined to lighten their commitment, while bears are more aggressive.

The undertone has weakened due to some adverse developments in the economic situation. The forthcoming Banking Companies Amendment Bill has made operators cautious since it is likely to place severe restrictions on the working of banks in the private sector. The Gold Control Bill seeks to regulate dealings in gold and the possession of it on a permanent basis. The provision empowering the Government to ask people to declare their holdings of gold ornaments above a specified limit has shaken confidence. So far the Government has only asked people to declare their gold, and not ornaments. New Delhi's growing concern over the circulation of "unaccounted money" has given rise to fresh uncertainties. The likely move to regulate the acceptance of public deposits by commercial houses is interpreted bearishly. Although the Government is justified in enforcing measures to ensure the security of these deposits, any undue restriction may hamper the flow of funds into trade and industry.

In the circumstances, the Government's move to establish a unit trust in the public sector has not caused much enthusiasm. The unit trust has been welcomed in priciple, but it is doubtful whether a single trust managed and controlled by the Government can revive confidence in the capital market. The underlying principle of a unit trust is to channel people's savings into industrial investments. It is also considered a suitable agency to spread the ownership of corporate shares among the middle and lower income groups. There is no doubt that the proposed trust will be financially strong since its capital will be subscribed by the Reserve Bank, the Life Insurance Corporation of India, the State Bank and its subsidiaries, commercial banks and other financial institutions. It is a good idea to exempt the trust from paying income tax and super tax. The unitholders too will be exempted from paying income tax on the dividends they may receive. But a single trust in the public sector may suffer from the stagnation which is inevitable in a commercial undertaking run by bureaucrats. So it is rightly pointed out in that similar trusts should also be allowed in the private sector to encourage healthy competition.

Although the technical position of the market has improved due to the shake-out during the past few days, the near-term trend may not be encouraging until Mr. T. T. Krishnamachari, Central Finance Minister, announces some incentives in his statement on the economic situation in the Lok Sabha.

Indian Iron have closed lower after wide fluctuations. Enginering shares like Guest, Keen, Williams, Texmaco, Jessop, Burn, Indian Standard Wagon and Britannia Engineering have declined. Guest, Keen, Williams are quoted ex-bonus. Jute shares have been hesitant and turnover has declined with the steady fall in gunny prices, combined with sluggish foreign enquiries. Birla, New Central, Champdany, Union, Barnagore, Anglo-India and Howrah have been transacted. Stray business has been done in coal shares, but prices have declined. Burrakur, Central India and Equitable have changed hands. Cotton mill shares have lacked interest due to uncertainty concerning the price of cloth. J. K. Rayon have fluctuated both days. Scattered interest has been shown in Elgin, Jay Shree Textiles and Dunbar. Bank shares are subdued due to the forthcoming Banking Companies Amendment Bill.

Turnover has centred on clearing scrip in the miscellaneous section and their prices have declined in the absence of support. Except for Union Carbide, which have been firm on rumours of a bonus issue, other shares have moved down. Paper shares have been sold freely and their prices have dropped. Interest has been shown in Orient, Sirpur, Seshasayee and Indian Paper Pulp. Scattered business has been transacted in selected tea shares. Jaybirpara and Hasimara have been prominent in the Dooars group.

Government securities have been steady despite limited turnover. Banks have shown little interest due to the approach of the busy season. The 3 percent Conversion loan 1986 is quoted at Rs. 65.95. Selected State Government loans have been bought.

Bombay

BAD CORPORATE NEWS AFFECTS SENTIMENT

COMPANIES BILL CAUSES NERVOUSNESS

Wednesday Evening.

THE Bombay stock market was closed for several days during the past week. Although it officially reopened on Tuesday, no business was transacted in view of the death of Mr. M. S. Kannamwar, Maharashtra's Chief Minister. Dalal Street has been stunned by the assassination of President Kennedy. The trend has weakened appreciably due to nervous long liquidation, combined with bear pressure. Confidence has been shaken by sharp declines in Wall Street and Tokyo following the assassination of President Kennedy. Bulls have rushed in to take their profits, while fresh support has been conspicuous by its absence. The weakness is attributable partly to unfavourable corporate news and partly to the forthcoming Banking Companies Amendment Bill. The Bill to amend the Companies Act has also caused nervousness.

Dalal Street has been disappointed by the statement of Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, that he would favour the nationalisation of the motor-vehicle industry if it was possible. Premier Automobiles have passed the dividend for the first time in several years. The profit has been squeezed by rising production costs, combined with a smaller turnover. The delay in announcing a rise in the retention price of steel has disappointed operators. In any case, there has been a general inclination not to extend commitments until Mr. T. T. Krishnamachari, Central Finance Minister, makes his statement in the Lok Sabha. The approach of the busy season has made money conditions tighter.

Tata Steel ordinary have declined to Rs. 144.50. Among engineering shares, Tata Locomotive, Premier Construction and Larsen and Toubro have lost. Mukand Iron have been barely steady. Among motor-vehicle shares, Premier Automobiles have slumped on passing the dividend. Hindustan Motors have reacted on profit-taking. Cotton mill shares have shown widespread losses. Although the mill industry has been asked to increase its spindles and looms, investors have been disappointed by the delay in increasing the prices of cloth. Century, Bombay Dyeing, Kohinoor, Svadeshi, Morarjee, Standard and Simplex have been marked down. India United ordinary have declined on a predominance of sellers.

Miscellaneous shares have shown mixed trends. Sugar shares have been steady on prospects of an increase in the price of the commodity. Belapur, Walchandnagar Industries and Phalton have gained slightly. Steamship company shares have also met with support because of the encouraging statement by the chairman of Scindia Steam Navigation Co. Ltd. Scindia Steam and Great Eastern Shipping have been quoted higher.

Cement shares have been quiet. Associated Cement and Digvijay have been sold at lower prices. Mining shares have been subdued, and Be Be Petrol have lost further ground on passing the dividend. Rayon shares have moved down in sympathy with the general trend. National Rayon have met with pressure. Chemical shares have reacted. Tata Chemical and Indian Dyestuff have lost on balance. Turnover in cash shares has been negligible.

Bank shares have lacked interest on rumours that the Banking Companies Amendment Bill might restrict dividends of bank shares. Insurance shares have been quiet on the propect that the Life Insurance Corporation will begin to underwrite general business in a big way. Electric company shares have been sluggish and their prices have declined on balance. Ahmedabad Electric, Bombay Suburban and Tata Hydro have been transacted.

Madras

BIG DECLINE IN TURNOVER

GILT-EDGED REMAIN STEADY

Tuesday Evening.

THE Madras stock market has been easier during the past week. Turnover has declined appreciably and the undertone has weakened since the market reopened after having closed because of the assassination of President Kennedy. The absence of support from outside sources, combined with easier advices from Dalal Street, has made operators cautious. Investors have also

turned hesitant due to the forthcoming Banking Companies Amendment Bill. A great deal of uncertainty prevails about the economic statement to be made shortly by Mr. T. T. Krishnamachari, Central Finance Minister, in the Lok Sabha. Business in clearing shares has declined to almost a trickle. Investment buying has been confined to selected bank, electric and planting shares.

Government securities have been steady and selected State Government loans have been supported. In the banking group, Canara Industrial and Banking Syndicate have been steady at Rs. 157.50 and Indian Overseas at Rs. 148. Among electric companies, Ellore have been taken at Rs. 22 on the decision to pay Rs. 5 a share to the shareholders out of the compensation received from the Government of Andhra Pradesh for acquiring the electricity supply undertaking of the Company. It is proposed to change the name of the Company to Ellore Engineering Co. Ltd.

Among sugar shares, Deccan have reacted to Rs. 12.30, but E.I.D. have been supported up to Rs. 38.10. Jeypore have been quoted at Rs. 16 on declaring a taxable ordinary dividend of 15 percent. Madura have changed hands at Rs. 10 on paying a taxable ordinary dividend of 8 percent. Kothari have been quoted at Rs. 7 on passing the dividend.

Blue Mountain have declined to Rs. 2.65 in the planting section. Cochin Malabar have been available at Rs. 6.22 and Consolidated Coffee at Rs. 21.40. Ouchterlony have changed hands at Rs. 4.65 and Periakaramalai at Rs. 3.42 Ossoor have been steady at Rs. 3.53 since the Company has issued bonus shares in the proportion of one bonus share for every two held. Nonsuch have been taken at Rs. 23.80 on declaring a final taxable ordinary dividend of 15 percent, making 20 percent for the year. Business has passed in Parkside at Rs. 27.50 on paying a final taxable ordinary dividend of 17.5 percent, making 25 percent for the year. Scattered support has been extended to Highland at Rs. 15.67, to Peermade at Rs. 20.50, to Amalgamated at Rs. 10.01 and to Kil Kotagiri at Rs. 5.30.

Except for Buckingham which have been steady at Rs. 292 due to rumours of a bonus share issue, textile shares have generally moved down. South India Viscose have reacted to Rs. 146 and Travancore Rayon to Rs. 26.50. Business has passed in Lakshmi at Rs. 133 and in Madura at Rs. 33.75. Coimbatore Spinning have come to hand at Rs. 87 on declaring a taxable ordinary dividend of 9 percent. Loyal have been bought at Rs. 42.50 and Mettur at Rs. 299. Ramakrishna have been taken at Rs. 217.80 and Rajapalayam at Rs 148.80.

Miscellaneous shares have been weaker in sympathy with the general trend. Aluminium Industries have been available at Rs. 19.35 and Ashok Leyland at Rs. 7.33. Among cement shares, Dalmia have come to hand at Rs. 13.05 and India Cement at Rs. 5.60. Mettur Chemical have been transacted at Rs. 13.25. The Company proposes to issue 600,000 ordinary shares of Rs. 10 each and 300,000 cumulative preference shares of Rs. 10 each carrying a fixed dividend of 9.3 percent, both at par, to the existing shareholders.

Spencer have been steady at Rs. 20.50 on declaring a taxable ordinary dividend of 12 percent, making 18 percent for the year. Seshasayee Paper have met with support up to Rs. 8.15 and Tube Investment have been transacted at Rs. 228 on repeating the taxable ordinary dividend of 10 percent. Kirloskar Electric have been sold at Rs. 18.50 and Madras Rubber at Rs. 15.12. Business has been done in Aspinwall at Rs. 8.40 and in Rane (Madras) at Rs. 8.55.

Cut down your lubricants
Cut out your paper-work

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

Help your Purchase Officer to eliminate the stacks of paper that collect in his office...the unnecessary flood of Purchase Orders. When each department in a plant specifies a lubricant without reference to the purchases of other departments, there is bound to be duplication and waste.

The Caltex "Stop-Loss" programme can do away with this lubrication waste...can cut a great deal of Purchase Order paper-work.

Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

It will be worth your while to find out specifically how Caltex "Stop-Loss" can help to ease the problems in your plant.

Help your operation to greater profit with the Caltex "Stop-Loss" programme.

London

RECOVERY IN SHARES AFTER WEEK-END

SUPPORT AT LOWER LEVELS

London, 27th November.

THE stock market stood up remarkably well to the news of President Kennedy's death. Thanks largely to the intervening week-end, which gave investors and the market time to absorb and reflect on the news, the market opened calmly last Monday. There was no excitement and no drastic reaction in prices. Dealers quoted wider and lower prices at the opening to deter sellers, but in the event, little selling developed. In fact, "cheap" buyers appeared, and prices soon started to recover. By the close on Monday, something like half of the day's losses had been recovered and falls seldom exceeded 1s on the day. On Tuesday, quietly firm conditions developed while awaiting the re-opening of Wall Street in the afternoon. Prior to Mr. Kennedy's death, the market had been in a rather unsettled state despite the continued flow of good company and economic news.

Domestic political events and the sharp setback on Wall Street last Thursday had been the main unsettling influences. Compared with the previous week's levels, prices in virtually all sections were lower, but the losses were by no means heavy. The exception was provided by good shares which moved up sharply on Tuesday following Cape and London buying and reported American interest. Gilt-edged were only fractionally lower on the week, while industrials generally were no more than a few pence lower. Internationals recorded small falls, but dollar stocks were well down. Oils were helped by the free scrip issues announced by Shell and Royal Dutch.

MORE FUNDS NEEDED BY STATE FINANCE CORPORATIONS

(BY A SPECIAL CORRESPONDENT)

The State Finance Corporations are doing useful work by providing funds to medium industries. In this work, they usually supplement the work of the Industrial Finance Corporation. Since a Bill will be moved in the Lok Sabha during the current session to convert the I.F.C. into a development bank, it is likely that a similar step will be taken to convert the State Finance Corporations into regional development banks in the future.

EVERY State in India now has a Finance Corporation. The first State Finance Corporation was established in Madras in 1949 and the last two in Gujarat and Kashmir in 1960. Like the Industrial Finance Corporation which is playing an important rôle in financing industries at the all-India level, the State Finance Corporations are doing useful work at the regional level. With the conversion of the I.F.C. into a development bank, it is likely that the State Finance Corporations will be converted into regional development banks. This is because the work of the State Finance Corporations is considered as a useful supplement to that of the I.F.C. The current session of the Lok Sabha is expected to consider a Bill to convert the I.F.C. into a development bank. The working results of all the State Finance Corporations for 1962-63 point to the progress made by them.

The folowing table gives an idea of the activities of the State Finance Corporations at a glance :

	In Rs. Crores Loans			
Industrially advanced States	Paid-up capital plus bonds	Sanctioned	Disbursed	Outstanding
Maharashtra	3.74	10.29	6.24	4.08
Madras	3.68	10.55	8.52	6.94
Punjab	3.67	7.92	4.42	3.34
West Bengal	3.00	6.15	3.64	2.85
Mysore	2.30	1.57	1.29	1.24
Kerala	2.10	3.12	2.30	1.62
Total	18.49	39.60	26.41	20.07

	In Rs. Crores Loans			
Industrially backward States	Paid-up capital plus bonds	Sanctioned	Disbursed	Outstanding
Madhya Pradesh	1.55	5.82	1.94	1.51
Orissa	1.00	1.32	0.78	0.71
Rajasthan	1.50	2.72	1.47	1.17
Andhra	2.05	4.21	2.18	1.62
Assam	2.82	4.33	3.18	2.52
Bihar	2.50	3.80	2.77	2.12
Gujarat	1.39	1.59	0.91	1.04
Kashmir	0.50	0.26	0.08	0.08
Uttar Pradesh	2.02	3.78	1.83	1.21
Total	15.33	27.83	15.14	11.99
Grand total	33.82	67.43	41.55	32.06

It is clear that the progress achieved by the Corporations in the industrially advanced States is more encouraging than in backward ones. Madras, Maharashtra, Punjab and West Bengal occupy the first four places in terms of loans granted. The Corporations in the four States account for about 50 percent of the aggregate loans sanctioned by all the State Finance Corporations. The loans sanctioned by the Corporations—taking the average for all the States—during 1962-63 were twice the total paid-up capital and the bonds issued. Thus, at the end of March 1963, the combined resources of the Corporations stood at Rs. 33.82 crores whereas the loans sanctioned amounted to Rs. 67.43 crores. The loans actually disbursed were very much smaller at Rs. 41.6 crores. The loans outstanding amounted to Rs. 32.06 crores or very close to total resources. This shows that the resources of the Corporations are being used intensively.

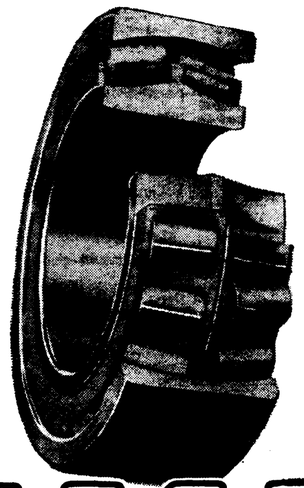
Attractive Terms for Borrowers

During 1962-63, the Corporations raised Rs. 4 crores through the issue of bonds. Attractive terms were offered to borrowers—an interest rate of 4.75 percent and an issue price of Rs. 99 in several cases. During 1961-62, the Corporations were able to borrow at much favourable rates, namely, 4.50 percent. The higher rate offered in 1962-63 was the result of the stringency in the money market. Among the Corporations, those of Orissa and Kashmir have not borrowed through the issue of bonds so far. While the Andhra, Madras and Kashmir State Finance Corporations have a paid-up capital of Rs. 1.5 crores, Rs. 1.32 crores and Rs. 50 lakhs, all the other Corporations have a paid-up capital of Rs. 1 crore. In the industrially backward States of Andhra, Madhya Pradesh and Rajasthan, the paid-up capital is about twice the amount of bonds issued. In the other States, the amount of bonds issued is far in excess of paid-up capital.

The State Finance Corporations must increase their resources if they are to meet the growing demands on their resources. One of the ways of increasing their resources is to strengthen their capital base. Last year, for instance, the Orissa State Finance Corporation raised its capital from Rs. 50 lakhs to Rs. 1 crore. There is no fear that the Corporations will be unable to maintain the dividends. This is because they are now primarily operating in a sellers' market. Most of the Corporations raised their interest rates to borrowers by ½ percent in 1962-63. The Maharashtra State Finance Corporation became more viable during the year because it did not have to seek a subvention from the State Government in order to pay the dividend. The Assam State Finance Corporation suffered a setback in 1962-63, and it had to ask for assistance from the State Government. It was, however, a special case in view of the Chinese attack. As the State Finance Corporations will be able to maintain dividends even on enhanced capital base, they could increase their paid-up capital.

Taking Public Deposits

The deposits taken from the public were a useful source of funds to the State Finance Corporations. During 1962-63, public deposits with the Madras State Finance Corporation amounted to Rs. 6 crores. The Kerala and Andhra Corporations started accepting deposits, although the response was not as satisfactory as in Madras. The Corporation in these States thus started competing successfully with commercial banks. In Maharashtra and West Bengal, the response from the public was not happy because of the payment of a much higher rate of interest by industrial houses.



The State Finance Corporations have taken full advantage of the credit guarantee scheme of the Government of India which enables them to lend at minimum risk. A majority of State Governments made it a point to route the funds under the State Aid to Industries Acts through the State Finance Corporations. The funds collected from such aid naturally helped the Corporations to increase their liquidity.

Rôle of Refinance Corporation

The Refinance Corporation for Industry is another source of funds for the State Finance Corporations. The Corporations of Madras, Maharashtra and Punjab borrowed Rs. 2.7 crores from the former in 1962-63. But the volume of assistance from the Refinance Corporation has yet to assume significance.

With the raising of the rate of interest on loans by ½ percent to 7½ percent in 1962-63, several State Finance Corporations liberalised their conditions of lending. For instance, the Andhra State Finance Corporation reduced its margin from 50 percent to 40 percent on loans for the construction of buildings; the margin on loans for machinery was reduced to 25 percent. The Rajasthan Corporation decided that loans up to 75 percent of the c.i.f. value of imported machinery plus the Customs duty might be granted to industrial concerns. The Gujarat Finance Corporation took several measures specially to assist small industries. The Madhya Pradesh Corporation finalised a scheme for giving advances against shipping documents and railway receipts.

But there appears to have been some overlapping of jurisdiction between the work of the I.F.C. and the State Finance Corporations since they all finance medium establishments. It is necessary to eliminate the conflicting jurisdiction in co-ordinating the future work of the I.F.C. and the State Finance Corporations.

SKF

SKF designs and manufactures a complete line of all types and sizes of the four basic anti-friction bearings... ball bearings; cylindrical, spherical and tapered roller bearings. Because we make all types, you can always be sure of getting the right bearing in the right place.

THE CALCUTTA MONEY MARKET

FAIR DECREASE IN ADVANCES

Wednesday, 27th November.

THE aggregate level of advances has shown a fair decrease in the Calcutta money market during the past week, most of the decline being on account of the iron, steel and engineering industries. The credit given to the jute mills is noticeably larger. But the requirements of the other major borrowers—such as the cotton and sugar mills, and the food-grains and seeds trade—have changed very little. In the interbank market, conditions have generally been easy. The call rate moved up to 3 percent at one stage, but has subsequently declined to 2½ percent.

The exchange market has been active, with an excellent supply of tea and gunny bills. The demand for remittances is fair. In the London market, sterling shows fractional losses against most of the important currencies, with the exception of the Belgian and the Swedish.

SILVER RULED STEADY IN CALCUTTA during the past week. Turnover was small. The price rose from Rs. 230 to Rs. 231.75, quoted today for ready. The London and New York prices were shown at 111⅛d and 129.3 cents. Gold continued steady and the price of 14-carat increased from Rs. 62 to Rs. 62.75.

THERE WERE DROPS OF Rs. 10.95 crores to Rs. 2,275.59 crores in active notes and of Rs. 9.01 crores to Rs. 2,288.87 crores in the total note issue, according to the statement of the Reserve Bank of India for the week ended 22nd November, 1963. Notes held in the Banking Department, consequently, increased by Rs. 1.95 crores to Rs. 13.28 crores. Deposits of the Government of India rose by Rs. 22.30 crores to Rs. 73.05 crores, while those of State Governments fell by Rs. 8.93 crores to Rs. 11.62 crores. Balances of scheduled banks at Rs. 84.91 crores showed a drop of Rs. 10.26 crores. Their loans from the Reserve Bank declined from Rs. 2.44 crores to Rs. 37.90 lakhs, of which advances against usance bills amounted to nil (Rs. 17 lakhs). Balances held abroad improved by Rs. 1.06 crores to Rs. 10.34 crores. Investments at Rs. 273.30 crores showed a gain of Rs. 9.77 crores. Ways and means advances stood at Rs. 31.24 crores, against Rs. 27.47 crores.

DURING THE WEEK ENDED 22ND November, Government of India Treasury bills for Rs. 34,33,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 26th November. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.420 percent were allotted 50 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 2nd December.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 27th November to 30th November at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 20th November to 23rd November amounted to Rs. 2.57 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 15th November, 1963, shows a drop of Rs. 5.25 crores to Rs. 593.32 crores in total deposits. Investments in Government securities are down by Rs. 10.81 crores to Rs. 305.20 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 4.39 crores to Rs. 258.29 crores. Cash and balances are, in consequence, shown at Rs. 33.75 crores or Rs. 17.12 crores higher.

LIFE INSURANCE CORPORATION OF INDIA

CHAIRMAN, MR. B. K. KAUL'S STATEMENT

The following is the statement by Mr. B. K. Kaul, I.C.S., Chairman, at the Ninetieth Meeting of the Life Insurance Corporation of India held in Bombay on 25th November, 1963.

The draft of the Annual Report and the Statement of Accounts for the period 1st January, 1962 to 31st March, 1963 have been circulated and are now before us for our consideration.

New Business

During the accounting period our new business amounted to Rs. 746 crores under 17.68 lakhs policies as against Rs. 609 crores under 14.70 lakhs policies in the year 1961. As the present accounting period comprised of 15 months as against 12 months in the previous year, a direct comparison of the figures is not possible. However, the new business performance during the accounting period may be evaluated by comparison of the business completed during the year 1st April, 1962 to 31st March, 1963 with that completed in the year 1st April, 1961 to 31st March, 1962. In that year the Corporation completed a business of Rs. 617 crores; and now for the 12 months period 1st April, 1962 to 31st March, 1963, it has completed a new business of Rs. 708 crores. The progress may be considered satisfactory.

It is gratifying to note that as many as 12.22 lakhs policies issued during the accounting period were taken by persons who were insuring for the first time. This shows the growing insurance consciousness amongst our people and also the effort made by our field force to spread the message of insurance to people who had not so far availed of this benefit.

Rural Development

Out of the total new policies, as many as 6.77 lakhs policies assuring Rs. 233.45 crores were issued to people in rural areas. Thus, about two-fifths of our total policies and about one-third of the total sums assured were written in the rural areas.

As a result of a recent amendment to the Insurance Rules 1939, it will now be possible for us to appoint Co-operative Societies and Panchayats as our agents. Depending upon the co-operation that we can get from this source this should give a fillip to rural business.

The main difficulty in regard to rural business is lack of facilities for collection of premiums. We had launched early in 1962 a pilot scheme in the Jaipur District of Rajasthan for collection of premiums through post offices. Efforts are being made to extend this scheme to other areas, where no collection facilities are available, in consultation with the postal authorities. We have also made arrangements with the Government of Madhya Pradesh for Block Development Offices to collect life insurance premiums at their headquarters.

We now have an office in each of 253 out of the 312 districts and in 5 out of the 11 Union Territories in India. In 1963-64, we proposed to open offices in 2 more districts. Besides these offices, we have development centres in 27 of the remaining districts and in one of the remaining Union Territories. We are proposing to open 16 Branches and sub-offices during 1963-64. Our organisation is now spread fairly wide in the country.

Non-Medical Business

Paucity of medical examiners for conducting medical examination of the lives to be assured in rural areas has always been a difficulty in extending our activities in the rural areas. This has been got over to a large extent by a wider application of the non-medical scheme.

Under the general scheme, which now extends throughout the country, medical examination is waived in respect of proponents within certain age groups, provided the total insurance on their lives does not exceed Rs. 2,000. Under this scheme, new business of Rs. 43.44 crores under 2.87 lakhs policies was completed during the accounting period.

Besides the general scheme, we are also insuring without medical examination special categories of persons in civil employment up to a total sum assured of Rs. 5,000 which limit was increased in 1961 to Rs. 10,000 in the case of eligible persons whose ages at entry do not exceed 30 years nearer birthday, and also in the case of category "A-1" of the commissioned officers in the Armed Forces. Under this scheme, new business of Rs. 112.23 crores under 4.25 lakhs policies was completed during the accounting period bringing the total non-medical

Mr. B. K. Kaul, I.C.S.

business to Rs. 155.67 crores under 7.13 lakhs policies.

Foreign Business

The political and economic changes in some of the foreign countries where we operate have had their effect on the development of our business. Due to various reasons our progress in Fiji and Malaysia has not been satisfactory, but in U.K. and Aden we have made good progress. We have been able to maintain our position in East Africa and Mauritius. Due to the sustained efforts of our officers and agents, our total foreign business during the accounting period came to Rs. 11.24 crores under 9,498 policies as against Rs. 10.03 crores under 8,056 policies in the year 1961. Special mention must be made of our London Branch which wrote during the accounting period a new business amounting to over Rs. 2 crores.

Business in Goa

We started transacting new business in Goa, Diu and Daman in 1962 and up to 31st March, 1963 we issued 2,451 policies assuring Rs. 1.28 crores. Policies issued by the erstwhile Portuguese companies to Indian citizens which are now serviced by the Corporation, will be taken over by us after the Life Insurance Corporation Act is made applicable to these territories.

Group Insurance & Group Superannuation Schemes

During the accounting period, new business amounting to Rs. 10.49 crores was written under the Group Insurance Schemes, and under the Group Superannuation Schemes, Life Annuities of over Rs. 5 lakhs and Annuity Certain of over Rs. 1 lakh per annum have been granted. This business has made considerable progress in the Western Countries. We can also write larger business under these schemes if we get the necessary support from the employers of the bigger undertakings. These schemes provide the benefits of life insurance at cheaper rates, and with the employer contributing a part of the premiums, the burden on the employees is further reduced. I am sure enlightened employers will come forward in larger numbers to make the benefits of these schemes available to their employees.

Business in Force

The total business in force as at 31st March, 1963 was Rs. 3,168 crores under 95 lakhs policies as against Rs. 2,737 crores under 86 lakhs policies at the end of 1961, thus recording an increase of 15.7% during the period.

Lapse Ratio

The ratio of net lapses to the mean business in force was 8.1% during the period 1st January, 1962 to 31st March, 1963 as against 7% in 1961 and 6.6% in 1960. The tendency of the net lapse ratio to rise in spite of the efforts put in to improve the quality of business is disquieting. There is hardly anything an insurer can do to prevent lapses attributable to factors beyond its control. At the same time, efforts to improve the quality of business so as to minimize lapses attributable to new business of doubtful quality must be continued to be made; if anything they need to be pursued more vigorously. With this end in view it has been recently decided that a fresh proposal, from any person whose existing policy has lapsed within the preceding 3 years, would be entertained only if such lapsed policy is first revived by him for which purpose special facilities are now given.

Valuations

During the period under review the Third Biennial Valuation of the Corporation's business as at 31st December, 1961 was completed. As a result thereof Rs. 32.73 crores were allocated to the participating policies; the rates of reversionary bonus allotted to policies issued by the Corporation, as well as policies issued by the erstwhile insurers, were the same as those declared in respect of the first two valuations as at 31st December, 1957 and 31st December, 1959 respectively. The amount allocated to the Central Government was Rs. 1.72 crores.

Consequent upon the change in the accounting year of the Corporation it has been decided to make the Fourth Valuation of the Corporation's business as at 31st March, 1963 and the same is in progress. It is expected that the results of this valuation would be available early in 1964.

Mortality Investigations

The Corporation has taken on hand a detailed investigation into the mortality of assured lives during the years 1961-64. It is proposed to construct a Life Table, on the basis of the experience during the years 1961-64 of medically examined male lives accepted at ordinary rates under Whole Life and Endowment Assurance plans. It is also proposed to investigate separately the experience of male lives assured under the non-medical scheme, and of the female lives assured with the Corporation.

During the period under review a preliminary investigation into the mortality of assured male lives has been made. A Life Table based upon the experience during 1961 of nine major Integrated Head Office Units, accounting for about three-fourths of the entire business in force of all the insurers prior to nationalisation, has been prepared and incorporated in the Report. The results of this investigation confirm that there has been considerable improvement in the mortality of assured lives in India since the publication of Oriental's 1925-35 experience. The investigation into the mortality experience of lives assured with the Divisional Offices of the Corporation also confirms the same.

Premium Rates

It has often been suggested that in view of the favourable experience of the Corporation, particularly in regard to mortality, the premium rates should be reduced. I may mention in this connection that when most of the insurers effected substantial reductions in the rates of premium in 1954 a considerable part of the current favourable experience with respect to mortality and interest was anticipated and taken into account. Further, in adopting in 1956 the premium rates of the "Oriental", after further reducing them by Re. 1/- per thousand sum assured or 5% of the premium, whichever was less, the Corporation anticipated economy in expenses. However, in view of the increasing pressures of inflationary forces it would be too much to expect any significant reduction in expenses in the near future.

As regards the mortality basis underlying the premium rates the same can be reviewed only when the low rates of mortality now being experienced are stabilised. This would be known only in 1966 when the results of the detailed investigation into the mortality experience for the years 1961-64 undertaken by the Corporation are expected to become available.

Apart from this it is the general practice among insurers even in foreign countries not to revise frequently the premium rates for with profit policies. The general view of the insurers is that changes in experience as regards mortality, interest and expenses can more equitably be handled under with profit policies by changes in the bonus rates than by changes in the general level of premiums. This is particularly significant when 90% to 95% of the new business is generally under with profit plans as is the case in this country. Moreover, passing on the benefits of favourable experience in the form of reversionary bonuses to the policyholders rather than reductions in premiums is desirable as an anti-inflationary measure.

Premium and other Income

The premium for the accounting period amounted to Rs. 150.38 crores against Rs. 112.30 crores in the year 1961.

The total income for the accounting period was of the order of Rs. 185 crores as against Rs. 141 crores in 1961.

Life Fund, Investments and Total Assets

The Corporation's life fund as at 31st March, 1963 was Rs. 720.70 crores registering a handsome rise of Rs. 91.94 crores after taking into account the adjustments made to the life fund at the beginning of the year.

Of the total investments in India of Rs. 623.64 crores the public sector accounted for 76.8% and the private sector 23.2%. During the year, 58 new

issues were underwritten to the extent of an aggregate sum of Rs. 19.53 crores.

The total assets of the Corporation as at 31st March, 1963 amounted to Rs. 785.94 crores as against Rs. 696.31 crores at the end of the year 1961. The net increase in the assets of the Corporation, since its inception, amounted to Rs. 371 crores.

Rate of Interest

The Income from interest, dividends and rents before deduction of income-tax rose to Rs. 39.38 crores during the accounting period from Rs. 27.95 crores in 1961. The gross rate of interest realised on the mean life insurance fund was 4.76% per annum as against 4.80% per annum during the previous year.

The net rate realised also fell from 4.68% in 1960 to 4.08% during the period. The marked fall in the net rate of interest is mainly attributable to the fact that, whereas the tax refund accounted for in the Revenue Account for the year 1961 comprised refund in respect of two years, in the accounting period under review such tax refund comprised refund in respect of one year. Had only one year's refund been received in 1961, the net rate of interest for that year would have been 4.20% as against 4.08% per annum during the period of 15 months ended 31st March, 1963.

Again, dividends on Preference or Ordinary Shares are generally declared once a year. There are comparatively few declarations of dividends during the months of January, February and March. Thus, the total quantum of dividends declared during the period of 15 months, which included, besides the calendar year 1962, the first quarter of 1963, was not proportionately higher. As a result, the yield for the entire period of 15 months was depressed. Since the annual rates of interest, gross as well as net, were derived by adjustment of the respective rates for the 15 months period, the same have shown a fall by comparison with the normal accounting period of one year.

Expenses of Management

The overall expense ratio of the Corporation for the accounting period is 29.3% as against 28.0% in 1961. The renewal expense ratio, for the period is 14.13% as against 12.42% in 1961. The increase is largely attributable to the addition to the expenses on salaries and allowances due to revision in the salary scales of employees in Classes III & IV with effect from 1st January, 1962 as a result of the settlement with the two Associations representing these employees.

Claims

Claims for the accounting period inclusive of bonus addition amounted to Rs. 31.40 crores under matured policies and Rs. 12.56 crores under policies becoming claims by death. The total claims for the period amounted to Rs. 43.96 crores as compared with Rs. 34.11 crores in 1961. Outstanding claims as at 31st March, 1963 amounted to Rs. 13.55 crores as against Rs. 13.93 crores as at 31st December, 1961.

Building Activities

We have on hand construction of a large number of buildings to house our offices and also for investment purposes. Although the shortage of building materials has hindered our building activities to some extent, special efforts are being made to complete the various buildings, at different stages of construction, as early as possible. The housing of our offices in our buildings would relieve the present congestion and would lead to more efficient working. Suitable plots of land have been, therefore, purchased for our Divisional and Branch Office buildings at various centres.

Mortgages

The scheme for grant of loans on mortgage of immovable properties has been extended to 5 additional centres and is now in operation in 26 cities. The revised scheme for grant of loans to policyholders for construction of houses termed "Own Your Home Scheme" has since been finalised. It will come into operation in 26 selected places in early 1964 and will be extended to 30 more places during the course of that year. This Scheme will enable the middle class people to own their homes with the help of loan facilities.

I have always received sincere co-operation and valuable advice from my colleagues on the Board and on the Investment Committee. I offer my grateful thanks to them. I take this opportunity to record my appreciation of the services rendered by the officers and staff at all levels. It is their services which have solely contributed to the fine results achieved by the Corporation. Finally, I thank all the agents who have done such excellent work in spreading the message of insurance to people, thereby enabling the Corporation to maintain the steady increase in the new business.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

As early as 1937, the existing blooming mill at TISCO was modernised by Schloemann. TISCO have now installed a new Schloemann blooming mill for their expansion programme

ROLLING MILLS HAMMERS PRESSES

In her steady progress towards economic and industrial advancement, India demands the finest plants and equipment for her heavy industries — and Schloemann have been supplying the country with the latest designs in rolling mills, hammers and presses for over a quarter of a century.

SCHLOEMANN plants for India's Heavy Industry

Sole Distributors:
VOLTAS
Head Office: Bombay 1
Calcutta-Madras-New Delhi
Bangalore-Cochin-Kanpur

Among the industrial undertakings in India which are using or have ordered Schloemann plant and equipment are:
Tata Iron & Steel Co. Limited
Hindustan Steel Limited
Mysore Iron & Steel Works
Tata Locomotive & Engineering Co. Limited
Indian Steel & Wire Products Limited
Krishna Steel Industries
Atomic Energy Establishment, Trombay, Bombay
National Small Scale Industries, New Delhi

CENTRAL CABINET CHANGES MADE BUT SOME ANOMALIES REMAIN

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India announced the following changes in the Union Cabinet during the past week. Mr. C. Subramaniam relinquished the office of the Central Minister of Steel and Heavy Industries, and assumed the office of the Minister of Steel, Mines and Heavy Engineering. Professor Humayun Kabir relinquished the office of the Central Minister of Scientific Research and Cultural Affairs and his temporary charge of the Ministry of Education; and assumed the office of the Central Minister of Petroleum and Chemicals. Mr. M. C. Chagla assumed the office of the Central Minister of Education.

Mr. O. V. Alagesan relinquished the office of the Minister of State in charge of the Central Ministry of Mines and Fuel, and assumed the office of the Minister of State in the Ministry of Petroleum and Chemicals. Mr. A. M. Thomas relinquished the office of the Deputy Minister in the Ministry of Food and Agriculture, and assumed the office of the Minister of State in the Ministry of Food and Agriculture. Mr. Bhakt Darshan assumed the office of the Deputy Minister in the Central Ministry of Education.

The Presidential Order

Side by side, the President issued an order, making certain amendments in the Government of India (Allocation of Business) Rules, 1961. They are as follows: The Central Ministry of Mines and Fuel ceases to exist. A new Ministry of Petroleum and Chemicals has been constituted with two departments under it, namely, the Department of Petroleum and the Department of Chemicals. Subjects relating to petroleum under the former Central Ministry of Mines and Fuel have been placed under the new Department of Petroleum; those relating to the chemical industries have been transferred from the Central Ministry of Industry, along with fertilisers from the Department of Heavy Industries, to the new Department of Chemicals.

The Central Ministry of Steel and Heavy Industries ceases to exist. A new Ministry of Steel, Mines and Heavy Engineering has been constituted with three departments under it, namely, the Department of Iron and Steel, the Department of Heavy Engineering, the Department of Mines and Metals. The subjects under the Department of Iron and Steel remain unchanged. Those under the previous Department of Heavy Industries, other than fertilisers, have been placed under the new Department of Heavy Engineering. Subjects relating to mines and coal under the previous Central Ministry of Mines and Fuel, as well as non-ferrous metals, have been placed under the new Department of Mines and Metals.

The Central Ministry of Scientific Research and Cultural Affairs ceases to exist. The Ministry of Education has been reconstituted with two departments under it, namely, the Department of Education and the Department of Science. The subjects under the previous Central Ministry of Education along with those for Cultural Affairs which were under the former Ministry of Scientific Research and Cultural Affairs have been placed under the new Department of Education. The remaining subjects under the former Central Ministry of Scientific Research and Cultural Affairs, with one or two exceptions, have been placed under the new Department of Science under the Central Ministry of Education.

The announcement does not complete the so-called reorganisation of the Central Cabinet. Two other instalments are expected, one by the end of this month and the other after the annual session of the Congress in Bhubaneswar, say, by the middle of January.

The reorganisation announced last week follows the recommendations of the Khera Committee, which submitted its report in September. The Committee recommended the creation of "blocks" or departments for the following: oil, chemicals, including fertilisers and petro-chemicals, mines and minerals, steel, engineering and light industries, including textile and jute industries, small-scale industries, industrial policy, commerce, education, including technical education and science.

The second instalment of Cabinet changes, due very shortly, is expected to transfer the textile and jute industries from the Central Ministry of International Trade to the Ministry of Industry. Cement, which is at present with the Department of Heavy Engineering, is likely to be transferred to the Central Ministry of Industries.

It will be recalled that under the Reforms Constitution of 1919, there were Departments of Commerce and Railways and Industries and Labour. When the Government of India Act, 1935, came into force Railways and Commerce were separated, and the new administrative set-up was called the Department of Commerce and the Department of Transport, including Railways. Industries were similarly separated from Labour and the new departments were called (1) Industries and Supply and (2) Labour, which included the Central Public Works Department. This was more or less the set-up which the Congress rulers inherited from the British in 1947. A few years' experience brought the defects of the system to the surface. The case of plywood illustrates one minor point of conflict between the Central Ministries of Commerce and Industries. The Ministry of Industry wanted to ban plywood imports to protect India's growing industry while the Central Ministry of Commerce demanded imports from Sweden on the ground that Indian plywood was unsuitable for making tea chests and that export of tea in chests made of Indian plywood was unacceptable in London.

A combined Ministry of Commerce and Industry was later created with Mr. T. T. Krishnamachari as its first Minister. He was succeeded by Messrs Morarji Desai, Lal Bahadur Shastri and K. C. Reddy, the last of whom had the privilege of presiding over its liquidation. It was during Mr. Reddy's stewardship of the Central Ministry of Commerce and Industry that one big chunk, called the Department of Heavy Industries was taken away from it and placed under Mr. C. Subramaniam and the jute and textile industries were transferred to the Central Ministry of Commerce. The Ministry was abolished after Mr. K. C. Reddy resigned from the Cabinet and was replaced by a Ministry of Industry and a Ministry of Commerce, each of which was placed in the charge of a Minister of State. In the final round of changes last week, even chemicals have been taken away, leaving the Central Ministry of Industry with the following subjects:

Industrial policy: general industrial policy, the administration of the Industries (Development and Regulation) Act, 1961, industrial management, and productivity in industry.

Industries and industrial development: The Ministry is in charge of industries and industrial development, including planning, development and control of, and assistance to, all industries other than those dealt with by any other department. The following specific industries are under its control: light engineering industries (namely, sewing machines, typewriters, weighing machines, bicycles, etcetera; light industries (namely, plywood, stationery, matches, cagarettes, etcetera); light electrical engineering industries; cables; optical glass project; raw films; hard board; paper and newsprint; tyres and tubes; and salt.

Small-scale industries: The Ministry is in charge of co-ordination of the development of small-scale industries and has control over the Small-scale Industries Board, and the National Small Industries Corporation. It also looks after the setting up of new industries in townships for displaced persons and colonies and places where there are heavy concentrations of displaced persons for mitigating their unemployment in the western region, namely, Punjab, Uttar Pradesh, Maharashtra, Gujarat, Rajasthan, Madhya Pradesh and the Union Territory of Delhi.

Industrial co-operation: The Ministry is in charge of co-operation in the industrial sector, excepting co-operative sugar factories.

Village industries: The Ministry looks after the co-ordination and development of village industries, including *khadi* and handicrafts; Ambar *charka;* and sericulture.

As for patents and designs, etcetera, it looks after the standardisation of international products and raw materials; the Indian Standards Institution (Certification Marks) Act, 1952, and the Indian Patents and Designs Act, 1911.

Diffusion of Responsibility

Why the Ministry was abolished after it had stood the test of successful working, leading to speedier industrialisation, has not been disclosed. The present stagnation in agriculture is largely due to the diffusion of responsibility among a number of sovereign, independent units which were created largely on political considerations. A similar process is now being carried out in the sphere of industries, which have given a fairly good account of themselves. The triumph of political over economic considerations has created the present state of instability in the industrial sphere. Unless a strong personality is brought to the Central Cabinet to assume charge of a combined Ministry of Commerce and Industries, the instability will persist, affecting industrial production, foreign investment and economic growth. Even more important is the question of co-ordination between the various units now held by the three Ministries, namely, petroleum, chemicals, steel, mines and minerals, engineering industries, commerce and the leftover industries under the Central Ministry of Industry. The difficulty will be the greater because industrial policy and its implementation are under a Minister of State, who has no Cabinet rank. It is a paradox that such subjects as agriculture and education, which were transferred to the States as early as 1921, are now held by Cabinet Ministers, while those for which the Centre has Constitutional responsibility are held by Ministers of States. Until the Government's policy is directed towards curbing industrial growth, the Prime Minister, it is suggested, should set up a council of Ministers for various industries and commerce, with a senior Minister in charge. The Council should meet every week. There should also be a corresponding council of Secretaries.

This leaves the Technical Directorate. Some think that its present independent identity should be maintained. Others say that it should be tagged on to the Ministry in-charge of industrial policy. When further reorganisation of the Cabinet is made, some decision should be taken on this problem also.

However unwelcome it may be the viewpoint of the administration has to be given some consideration while effecting departmental changes.

Ever since the implementation of the Kamaraj plan, the Central secretariat—with the exception of some of its limbs—has been in a state of coma. The Khera report received good publicity in the Press, on the basis of which some conjectures about reorganisation were made. This was almost two months ago. The reorganisation of the Cabinet is now being carried out when Parliament is in session and the Ministries should normally be expected to get ready for preparing their estimates of expenditure for inclusion in the annual Budget. The reorganisation now in progress will be in the nature of partition proceedings in relation to the Central Ministries of Mines and Fuel, Heavy Industries and Industry. Files will have to be sorted out and the personnel dealing with them will have to be transferred from one Ministry to another. In other words, normal working will be suspended for quite some time.

Mr. M. C. Chagla, it may be added, was no problem to Mr. Nehru. He returned to this country over a month ago and agreed to become the Central Education Minister. The delay in taking a decision on him has been unfortunate. According to reports, the Prime Minister wanted to apply his knife and cut out quite a few parasites languishing in his Cabinet. The delay enabled them to do the lobbying and persuade the Prime Minister to let them stay.

There is yet another aspect of the reorganisation. What is common between oil and chemicals on the one hand, and the revision of *Gazetteers* on the other, is not disclosed. Logic and reason demand that the latter item be either retained with the Ministry of Education or transferred to the Ministry of Information.

Checks and Balances

Lastly, a system of checks and balances has been introduced. With Mr. Chagla as the Education Minister, Mr. Bhakt Darshan has been appointed as the Deputy Education Minister to pacify the Hindi enthusiasts.

As for the calibre of the Ministers, Mr. Nehru should be the best judge of his colleagues. Leaving aside the idea of having a Macaulay as the Law Minister and a Hailey as the Home Minister, the Congress during Mr. Nehru's tenure of office has produced no giants to assist him in his great task. This country nevertheless can still boast of talent. But it cannot

be attracted to the Central Cabinet under the steelframe of the Congress Party's ideology. Even Mr. Chagla happens to be an outsider.

How the Government is wasting the poor taxpayer's money on so-called international conferences was brought out during question time in the Lok Sabha last week. Under the aegis of the Food and Agriculture Organisation, a meeting of experts on agricultural projects was held in New Delhi from 30th September to 11th October, 1963. The Central Minister for Agriculture said that "no proposals were expected to be put forward and none was done. The discussion related to the possibilities of improvements in the techniques of farming projections on which various views were expressed."

New Delhi also was the venue of a conference of India's diplomats functioning in the Middle East and Africa. A decision was reached to assist these countries with qualified teachers and engineers. Following the meeting, the Government decided to maintain a panel of qualified and experienced Indian experts in the teaching, medical and engineering fields for expeditiously meeting the demands from Asian and African countries. "Those who wish to be considered for such an assignment and possess at least five years' experience as teachers, lecturers and professors in English, Mathematics, Economics, Physics, Chemistry, Botany and Geology; physicians, surgeons, E.N.T. specialists, ophthalmologists, venereologists, anaesthetists or as civil, mechanical, electrical, metallurgical and mining engineers, surveyors or architects may enrol themselves with the Ministry of Home Affairs. Application forms would be available from the Foreign Assignment Section of the Ministry."

Side by side, the former Central Minister of Education, Professor Humayun Kabir, recently stated in reply to a question in the Lok Sabha that there was a dearth of qualified teachers for higher education in India. He added that to attract and retain the services of qualified teachers, the University Grants Commission had adopted various measures. The Minister continued that for the improvement of service conditions of teachers, other measures such as the provision of residential accommodation, pension-*cum*-gratuity-*cum*-insurance and sabbatical leave were also being considered in order to make the teaching profession more attractive.

The same is the case with qualified doctors and engineers who are in short supply. It will thus be seen that as in the case of sugar, the Government has created a sugar famine in order to earn a small amount of foreign exchange, so also it is planning further to deplete an already short supply of technical men in order to increase its prestige abroad. All this creates a feeling of amusement in the circles which India's Foreign Office tries to impress.

STATE ENTERPRISES

Craze for Publicity

A new advertising technique for public enterprises was introduced here last week. While the Treasury benches were found napping over an adjournment motion relating to his Ministry, the Central Minister for Transport and Civil Aviation was seen receiving a cheque of Rs. 66 lakhs from the chairman of Air-India as last year's profits of A.-I. By the same token, the chairman of the Indian Oil Company should be arranging a function to present a cheque to the Central Minister of Petroleum and Chemicals, Professor Humayun Kabir, representing the profits of his company. In February, another function could be held to enable the Central Railway Minister and the Posts and Telegraphs Minister to present cheques to the Finance Minister, in lieu of the profits earned by their organisations.

The Press Information Bureau issued a Press release last week which stated that "Professor Humayun Kabir met Mr. O.V.Alagesan". Since both are members of the Cabinet, they should have known each other, at least since it was constituted two years ago.

This craze for publicity among the Central Ministers should have been discarded after eight Ministers had left the Central Cabinet. But they too are still making unsuccessful attempts to catch the public eye.

INDUSTRIAL LICENSING

Minister Reviews Progress

The Central Minister of Industry, Mr. Nityanand Kanungo, told the Informal Consultative Committee of Parliament attached to his Ministry that in a number of important industries, "the third plan targets have been more or less fully covered by licences under the Industries (Development and Regulation) Act." Approvals have also been given in principle during the first two years of the plan for arrangements for financing the import of equipment worth arcund Rs. 340 crores by the private sector. After approval in principle, negotiations with lending institutions and collaborators have to be undertaken. So there will be a time lag before these approvals materialise in imports. Further foreign exchange approvals for about Rs. 250 crores will be needed to cover the third plan targets.

In view of the time lag between the release of foreign exchange and the actual establishment of capacity, there are likely to be shortfalls in relation to the third plan targets in a number of industries, such as newsprint, rayon-grade pulp, synthetic rubber, fertilisers, and aluminium (in relation to the revised targets). In order that the capacity visualised in the third plan as well as the additional capacity to meet the requirements of the first and second years of the fourth plan may be established in time, the projects need to be implemented most speedily. The Government is studying the measures needed for this purpose.

The licences under which no effective steps are taken by licensees continue to be revoked, according to the procedure prescribed under the Industries (Development and Regulation) Act. The number of licences revoked was 374 in 1962-63 and 103 in 1963-64 (up to September 1963), the Minister said.

HUNGARY

New Trade Pact Signed

A new long-term trade and payments agreement for a period of five years, which is to be effective from 1st January, 1964, was signed here last week by Mr. Jeno Incze, the Hungarian Minister of Foreign Trade, and Mr. Manubhai Shah, Central Minister of International Trade of the Government of India.

As a result of the new agreement, the turnover of trade is expected to be doubled by 1966, compared with that in 1963, which is about Rs. 8.50 crores each way. Exports each way are expected to reach Rs. 12.50 crores in 1964, Rs. 14.50 crores in 1965 and about Rs. 17 crores in 1966. India will export deoiled groundnut meal, deoiled rice bran and other deoiled cakes, manufactured industrial and chemical products, iron ore, mica, shellac and other traditional items of exports such as tea, coffee, H.P.S. groundnuts and cashew kernels. Main items entering into the list of exports from Hungary to India will be rolled steel products, alloy tool and special steel, machine tools, equipment for power-stations and capital goods such as flood control equipment, industrial furnaces, cable manufacturing plants, equipment for the chemical and pharmaceutical industries, equipment for the glass and lamp industries, fish and meat meals, ore and mineral testing plants, welding electrode and gas producer plants and electrical railway safety and signalling equipment.

Along with the agreement, a letter has also been exchanged on the granting of a line of credit of Rs. 12 crores by Hungary to India for implementing important industrial projects included in the third plan as well as those which may be undertaken in the fourth plan. Details of this credit will be settled by negotiations between the representatives of the two Governments during the next few months. The projects likely to be financed under this credit and technical collaboration between India and Hungary are aluminium plant, glass factory or dressing plant and powerstations.

SHIPPING

Indo-East German Service

Letters for the establishment of a joint regular shipping service between East Germany and India were exchanged here last week between the Governments of the two countries. The arrangement, which came into force immediately, will be for a period of two years in the first instance. According to the exchange of letters, the Director-General of Shipping, Government of India, and the Head of the Main Department of Shipping, East German Ministry of Transport, shall be the competent authorities for the two parties who will grant the most-favoured treatment to the vessels of either country while entering, leaving and staying in the ports of either party, except vessels engaged in coastal trade, inland, navigation or fisheries under their respective jurisdiction.

The cargoes assigned to the joint regular shipping line will be carried on the principle of share and share alike, irrespective of the terms of sale in relation to both general and bulk cargo, with a view to maintaining equality between the two parties concerning freight earnings.

To ensure the continued maintenance of this arrangement and discuss all questions of mutual sea transport, the competent authorities of both the parties, with representatives of their shipping company or companies, shall meet at least once a year or whenever requested by either party, either in East Germany or India. The competent authorities shall jointly make arrangements for clearing, handling and taking care of the ships of the parties in the ports of either country.

The settlement of freights relating to the exchange of goods between East Germany and India, as well as the settlement of charges for passenger transport on ships of East Germany and India and of all costs for entering and leaving, staying, loading and discharging, and handling of ships in the ports as well as for supplies and services shall be carried out on the basis of the trade and payments arrangements made under the exchange of letters of 18th December, 1959, or under such arrangements which may be in force between the parties on the relevant data.

PRICE INDEX

Decline Claimed by T.T.K.

In the course of a statement he made in the Lok Sabha on the level of prices during the last three months, the Central Finance Minister, Mr. T. T. Krishnamachari, said: "Wholesale prices have shown a measure of stability during the past three months. The index rose from 138 in the first week of August to 137.2 in the first week of September, but has since declined to 136 during the week ended 2nd November. The prices of rise, *gur* and vegetable oils, which were rising until the middle of October, have shown an easier tendency during the last few weeks. The index number of wholesale prices of manufactured articles has also remained fairly steady during the last three months. During the current season, the supply position of rice, cotton, jute, and sugarcane is expected to be better than in the last season. This, together with the Government's constant efforts to increase production generally, should help keep the situation under control. At the same time, a sudden drop in prices would adversely affect production and must be avoided".

STATE BANK

Foreign Currency Loans

The State Bank of India has agreed to assist a few of its clients to obtain loans in foreign currency for financing essential imports. The loans are intended to be repaid from subsequent export earnings of borrowers. Any assistance which may be rendered to them by the bank will be within the scope of the Government's import or other policies, and will also be subject to the specific approval of the Central Government in each case. The State Bank's scheme is purely experimental at this stage, and it is not possible to indicate the extent of the assistance which may be granted by the bank under the scheme.

FOREIGN COLLABORATION

Approval from Government

During the three months ended 30th September, 1963, the Government of India has approved 79 foreign collaboration cases. These were mainly in the fields of chemical, electrical, engineering and motor-car industries. Some of the important industries are plasticisers, intermediates, starch and dextrose powder, aluminium paste, transformers, cables, switchgear, malleable iron casting, industrial turbines, steel forgings, pumps, machine tools, motor-car ancilliaries and shock absorbers.

JUTE INDUSTRY

Progress of Modernisation

The modernisation of the jute industry up to the spinning stage is almost complete. It is reported that 82.3 percent of the fine yarn capacity and 82.3 percent of the coarse yarn capacity required to feed the standard hessian and sacking looms have been modernised. Besides, all the installed broad-looms are being fed with sliver spun yarn. The industry is currently modernising its winding sections. It is at present carrying on experiments on two alternative types of fully automatic looms for modernising the weaving section. Pending the selection of the particular type of loom, the standard looms are being rendered semi-automatic by fitting coploaders to them.

The industry has recorded the highest increase in production this year, compared with that of the past years. It has reached an output of 830,000 tons during the six months of 1963-64 (April 1963 to September 1963), compared with 604,000 tons in the same period of 1962-63.

Jute goods exports in the six months April-September 1963 have reached the highest record so far at Rs. 82 crores, compared with Rs. 71 crores in the same period of 1962-63.

In order to accelerate the pace of modernisation and thus improve the competitive position of the industry, a self-financing scheme has been introduced which facilitates the import of required machinery for preparatory and post-spinning stages. The industry has taken advantage of the facility.

TEA

Raising Exports

The Government has taken the following steps to reduce the cost of production of Indian tea to make it more competitive in foreign markets:

(1) The export duty on tea was abolished with effect from 1st March, 1963.

(2) The basic excise duty on green tea has been reduced by 5nP a kilogram.

(3) With a view to improving the quality of tea, the Tea Board has put into operation the hire-purchase scheme involving a total financial outlay of Rs. 5 crores for the supply of tea machinery and irrigation equipment to tea factories and tea gardens.

(4) To assist the tea industry to increase its yield, the tea plantation finance scheme has been in force since October 1962. This scheme is aimed at enabling the industry to carry out replantation and new plantation with loans from the Tea Board. A revolving fund of Rs. 5 crores has been sanctioned for the purpose.

(5) The Government is meeting in full the industry's requirements of nitrogenous fertilisers in the form of neat sulphate of ammonia.

IRON ORE

A New Cess Levied

A cess of 25nP has been levied on each metric ton of iron ore since 1st October, 1963, with a view to starting a welfare fund for workers. It will be administered through tripartite advisory committees, one for Bihar and one for Orissa, one for Andhra Pradesh and Mysore, and one for Madhya Pradesh and Maharashtra, and the Cess Commissioners for each region. It is also proposed to have a co-ordinating committee at the Centre comprising the chairman of the advisory committees and others to co-ordinate and supervise the activities of the fund.

STEEL

New Corporation Planned

A corporation is being formed to undertake a sizable share of all new steel works construction. Its purpose will be to reduce construction costs and to conserve skills in the specialised fields of steel works construction. The new company will undertake construction at different sites.

REFRACTORY

Plant in Public Sector

A proposal has been made to set up a basic refractory plant in the public sector, but the location has not so far been decided. The need for refractories is at present estimated at about 700,000 tons a year but is likely to increase when the steel capacity is further expanded. A major portion of the present requirements is met from indigenous sources and the balance from imports.

YUGOSLAVIA

Purchase of Iron Ore

A Yugoslav delegation headed by Mr. P. Vukcevic, which has been negotiating the purchase of iron ore from the Minerals and Metals Trading Corporation of India Ltd during 1963, has signed an agreement. The agreement provides for the purchase of 300,000 tons of iron ore from India by Yugoslavia with an option to be exercised by the buyers for an additional purchase of 100,000 tons.

E.C.A.F.E.

Economic Co-operation in Asia

Mr. Manubhai Shah, Central Minister of International Trade, will lead a six-member Indian delegation which will participate in the special conference on Asian economic co-operation beginning in Manila on 3rd December. All the member-countries of the E.C.A.F.E. will participate in the meeting.

In 1961, a consultative group of experts, led by Mr. K. B. Lall of India, reported on the possibilities of economic co-operation in the E.C.A.F.E. region. After this, another group of experts prepared a report which was considered by the preparatory meeting in Bangkok in October this year. The conclusion emerging from the detailed discussions will be considered by the Manila conference.

CEMENT

Plant in Private Sector

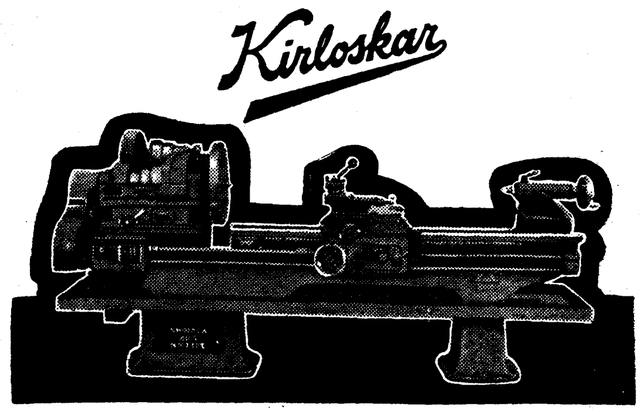
The Government will shortly grant a letter of approval agreeing to the setting up of a cement factory in the private sector in Himachal Pradesh, with an annual capacity of 100,000 tons.

SUGAR

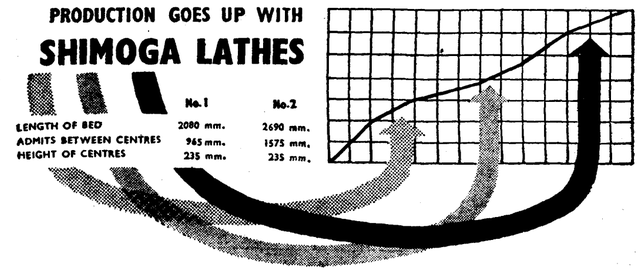
Prices Raised

As a result of the revision of sugarcane prices announced on 30th October, 1963, the Government has raised the ex-factory prices of sugar by Rs. 3 to Rs. 8 a quintal in different areas. The new prices have already come into force.

CHARKHA



Earnings of Spinners, Weavers



The annual average earnings of a spinner of cotton yarn on Ambar *charkha* and traditional *charkha*, with 2 to 4 hours' work a day and 150 to 200 work-days in a year, were Rs. 60 and Rs. 25, respectively. The average income of a weaver, for the corresponding period, while working for six months to eight months in a year at the rate of 25 work days in a month varied from Rs. 100 to Rs. 500 a year.

SEAMLESS STEEL TUBES

New Unit in Punjab

The Central Government has approved the Punjab Govenment's proposal for setting up a unit for manufacturing seamless steel tubes.

London

F.B.I. FORECASTS BOOM YEAR FOR BRITAIN

(FROM OUR LONDON CORRESPONDENT)

THE British economy faces a year of economic growth. That is the view taken by most business men and economists, as well as of the official forecasters in the Treasury. This correspondent dealt with the views of some of these interests in the last despatch. They are further supported by the National Institute of Economic and Social Research, which joins the F.B.I. survey in thinking that 1964 will be a boom year in Britain. It expects output to rise much higher in 1964 than in 1963—perhaps 5½-6 percent against 3 percent—and unemployment to fall by the end of the year to 1.6-1.7 percent. It also foresees that this expansion may lead to a stockbuilding boom resulting in a "significant, though not dangerous" worsening in the balance of payments.

The upshot of the Institute's appraisal, published in the *Economic Review*, is that any further stimulus—in the Budget or by other means—would be out of place. On the other hand, it believes it is much too early yet to contemplate immediate steps to restrain the increase in demand. Although the expected fall in unemployment would carry it below 2 percent, which some regard as the danger level, it would still be above 1½ percent, which others regard as a tolerable or even desirable level." In any case, the Institute considers that any restraint now would have a bad effect on business confidence "at a time when private investment is at last beginning to rise."

About 1965, the Institute is less certain. It suspects that there has been no marked rise in the underlying growth of productivity and thinks it is quite possible that the increase in demand in 1965 may result in a further fall in unemployment to well below 1½ percent. Private investment should be rising fast by then and public investment could also still be rising fast if, as seems likely, it lags behind the programme next year.

The Institute considers that if it becomes clear during next year that such an outcome for 1965 is likely "it will be necessary to impose some restraints." These, it suggests, should fall on private consumption or on current public spending. It would oppose attempts to curtail the rise in either private or public investment on the grounds that cuts in these sectors "take a long time to be effective, are intolerably disruptive of properly balanced programmes, and in any case, jeopardise future increases in productivity."

The Institute finds no immediate grounds for alarm in the probable worsening of the balance of payments next year. Much of this will be due to cyclical stockbuilding, which it regards as a normal accompaniment of a recovery in home demand. Only if 1964 reveals a further appreciable fall in the U.K.'s share of world trade, it suggests, will the longer-term balance of payments prospects be really disturbing. "Export performance is the trend to watch." The Institute thinks it possible that the long-term downward trend "in our share of world exports of manufactures may already have been resumed. It attributes the recent rise in our exports to the rapid expansion of world trade rather than any improvement in our competitive position. But the evidence of a change of trend is still very slim. In any case, it seems likely that there will be "a sufficient rise in world trade, helped by a marked rise in the incomes of primary producers, to raise the value of exports of goods by perhaps 8 percent in the year 1964."

Fixed Investment

Fixed investment, in the Institute's view, should follow a fairly steady upward trend from now on, although much of this will probably come from the public sector. Housing may not rise a great deal after the end of 1963 and any rise in total manufacturing investment "seems likely to be fairly slow." The Institute still expects investment by the iron and steel and motor-vehicle industries to fall heavily in 1964. It thinks that stocks will rise by somewhere in the region of £750 million, of which up to half might represent stockbuilding of imports. On the other hand, it foresees consumers' expenditure rising by only about 3 to 3½ percent, against 4 percent in 1963, on the assumption that there will be no stimulus comparable to the tax cuts which have raised consumption this year.

On productivity, the Institute says the revised figures for employment just published by the Ministry of Labour indicate that the rise has been rather smaller than a number of recent estimates have suggested. It points out also that "while the economy is recovering from a long period of stagnation there is bound to be a rapid increase in output a man employed. This gives scope for a bigger than average increase during 1963 and 1964." "The testing time for a long-term rate of growth higher than that of the 1950's will not come before 1965 or 1966," the Institute concludes.

Thus one finds the F.B.I. and the independent National Institute delivering similar verdicts—with rare accord both find that the present expansionary phase should last at least until the end of 1964. Mr. Maudling, who for months has been going round preaching optimism to reluctant industrialists, has good reason to be pleased. But if these forecasts are right—and the consensus of expert opinion is that expansion of the order of 5 to 6 percent should be within Britains' reach in 1964—what is to follow, in 1965? So far no one is (or should be) prepared to hazard more than a guess. Guesses, however, can sometimes be instructive. The Chancellor is hopeful. Sterling, he told one of his many audiences last week, could be protected throughout a long period of expansion—so long as costs and prices remained competitive. The F.B.I. is also guardedly confident: the expansion, it thinks, could carry over into 1965—"other things being equal."

The National Institute is more ready to admit doubts. The picture for 1965 is, in its view, "less clear." And it goes on to envisage the possibility that, some time in the course of next year, it may be necessary to impose restraints. Its reason for thinking so is made clear. It believes the increase in demand in 1965 may well result in unemployment falling below 1½ percent—and even the expansionist Institute apparently regards this as the minimum level which is tolerable.

Problem of Resources

This is the critical question. Once the present slack in the economy is taken up can output continue to rise without running up against the ceiling of the country's resources? Or shall Britain once be again be faced with wage inflation and/or balance of payments troubles? Mr. Maudling clearly had this in mind when he said that the next problem would be "how to establish a sustained 4 percent growth rate as we approach capacity working." The U.K. is, it is true, still some way from facing that problem. The first stages of expansion are unlikely to be hindered by labour scarcity. Although there may be local shortages in some areas in the south and Midlands, and possibly some shortages elsewhere of particular skills, in general the supply of labour should be ample to cope with the demands which are likely in the next six to nine months. Unemployment remains relatively high: there will be a substantial rise in the labour force as yet another part of the "bulge" reaches working age: and a boom can be counted on to bring more married women and older people back into employment.

The National Institute estimates that the rise in employment from these sources, comparing mid-1964 with mid-1963, could be as much as 350,000. Nevertheless, the Institute also reckons that by the end of next year, unemployment may have fallen to about 1.6-1.7 percent: by 1965, with continued expansion, it could go lower. This absence of a large reserve of labour, as Mr. Richard Fry points out in an article in the current *National Provincial Bank Review* is what distinguishes Britain from the countries in Europe and elsewhere which have enjoyed periods of rapid growth in recent years. For Britain to perform a comparable economic miracle "without the mainstay of a large labour reserve which all previous performers have been able to bring into play" would, Mr. Fry says, "be a formidable feat—although he adds hopefully that "it is no longer beyond human capacity."

Increasing Productivity

It is easy enough in principle to see where the way around this difficulty lies: it is in a larger rise in productivity. Some observers claim to have detected an improvement already in the past year. Regrettably, the evidence is still thin. As the National Institute points out, there is bound to be a rapid increase in output a man employed while the economy is recovering from a long bout of stagnation. For this reason, productivity is likely to show a bigger than average increase this year, and probably next year as well. But so far the Institute's economists have found little evidence of any marked rise in the underlying growth. The testing time still lies ahead. There are some hopeful signs. The past year has brought many signs of a greater drive in industry to increase efficiency. The N.E.D.C. has begun to have an influence on union thinking. Regional development—as long as it is not pushed to uneconomic lengths—can help to bring a more even distribution of the load. But it remains to be seen how far attitudes to economic growth have really changed.

There was no further rise in the industrial production index in September, after allowing for seasonal factors. The figure for "all industries" which includes construction, mining and utilities, was unchanged at 121 and that for manufacturing industries was also unchanged at 122. However, taking the third quarter of 1963, the seasonally adjusted index for all industries was about 3 percent higher, and that for manufacturing industries 3½ percent higher than in the second quarter. A comment from the Treasury was: "The upward trend in production continued in September."

Compared with the third quarter of 1962, the index for all industries showed a 4 percent rise and that for manufacturing a rise of 4½ percent. On this basis, Mr. Maudling was able to tell the O.E.C.D. Council in Paris the other day that he was hoping to sustain the present rate of growth into 1964 without any danger of inflation. There was still some spare capacity, he said, and international trade prospects looked encouraging. The O.E.C.D. meeting was called to consider how the Western nations were living up to their joint decision to attempt a 50 percent increase in total output in the present decade. So far, things have gone better than most people expected. While the rate of expansion in the Common Market has slowed down, it is still substantial. The U.K. after a period of deliberate restriction is now moving along the planned rate of growth. In the United States, the Department of Commerce has just stated that in the first three-quarters of this year, the gross national product was 5¼ percent above the same period for 1962 in money values and 3¾ percent in real terms. No check is in sight anywhere for at least six or nine months. All this makes good news.

'BEHAR' the dependable name in

FIRECLAY & SILICA Refractories

For nearly half a century BIHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRE CEMENT • STOPPERS • SLEEVES • NOZZLES • TUYERS, ETC.

FIBRE PRICES WILL NOT BE RAISED, SAYS MINISTER

THERE is no possibility of an increase in the floor price for raw jute, according to the Central Minister for International Trade, Mr. Manubhai Shah's statement in the Lok Sabha last week. The consensus of opinion, he said, was that fibre prices were "well supported". They were fixed after taking into consideration the international prices of jute goods so as to ensure the maximum benefit to the grower. Judging from the trend of prices in Calcutta and the upcountry markets, the objective of ensuring a fair economic price to the grower had already been achieved, Mr. Shah said.

Meanwhile, inter-ministery differences over jute prices have been resolved by an expert committee. The Central Agriculture Ministry's demand for an increase in the price of inferior grades of jute from Bihar has been rejected. The representative of the Central Finance Ministry, who led the five-man committee, is believed to have suggested that the restrictions on the purchase of inferior jute from Bihar should be removed immediately.

The committee has suggested that the price differential between the Bottom grade and the inferior grade fixed by the Government should continue unchanged. So the price of the B Bottom variety should be Rs. 23 a Bengal maund and that of the Cross Bottom grade should be Rs. 21, delivered at Calcutta godowns. It has suggested that the prices to be paid to cultivators at secondary markets should be fixed on the basis of this price and in accordance with the formula suggested by the Patil Committee.

Inferior Grades to be Discouraged

The expert committee is of the view that giving a higher price for inferior grades will encourage the production of these varieties, whereas it is the policy of the Government to promote the cultivation of superior varieties. The latter are especially important at a time when competition from Pakistan is increasing and there has not been any substantial increase in India's share of the rising world trade in jute goods. The committee has suggested that instead of increasing the price of inferior varieties, the Government should continue the present differential for two more years and then widen it further so that the production of inferior grades is discouraged. It also says that the prices of inferior Bihar jute, which the Central Agriculture Ministry wanted to be raised, are ruling about Rs. 3.50 lower than the prices fixed by the Government. Any increase will, therefore, create an unrealistic situation and the S.T.C. will have to incur a heavy loss in disposing of the stocks it has lifted.

Further Setback in Gunny Offtake

There has been a further setback in the despatches of jute goods from mills reporting to the I.J.M.A. The offtake has declined from 96,500 tonnes in Septemer to 95,000 tonnes in October. A sharp increase in sacking offtake from 35,500 tonnes to 43,200 tonnes could not offset the decline in hessian from 45,800 tonnes to 40,600 tonnes and in other goods from 15,200 tonnes to 11,200 tonnes. Despite an increase in sacking exports from 19,100 tonnes to 21,900 tonnes, the total tonnage has declined by 7,100 to 66,900.

The rise in heavy goods offtake is due to the clearance of held-over September shipment cargo to Cuba. Exports of both hessian and miscellaneous goods have suffered—the former from 42,500 tonnes to 36,900 tonnes and the latter from 12,400 tonnes to 8,100 tonnes.

Internal offtake has improved from 22,500 tonnes to 28,100 tonnes due to bigger demand for packing sugar and cereals. Sacking offtake has risen from 16,400 tonnes to 21,300 tonnes, hessian from 3,300 tonnes to 3,700 tonnes, and others from 2,800 tonnes to 3,100 tonnes.

Despatches for the comparable months in 1962 also showed similar trends. The total offtake fell from 96,800 tonnes in September to 93,300 tonnes in October. Of this, exports showed a decline from 75,400 tonnes to 68,700 tonnes, while internal consumption improved from 21,400 tonnes to 24,600 tonnes.

Shipper circles believe that sacking stocks at the end of October would have declined by further 5,000 tonnes or so, had the month's shipment quota of heavy Cees been despatched to Cuba in full. With internal consumption improving in the next few months and heavy shipments to Cuba and other destinations, sacking stocks, it is expected, will decline gradually. The market does not seem to be worried about the small increase in hessian stocks because of slackness in overseas bookings during October. The dullness in overseas markets is due to the fact that buyers are consuming their stocks. From current indications, it appears that world consumer interest may revive by the end of the year. The total offtake of hessian in 1964, it is expected, will increase by about 10 percent over that of 1963.

Prospects in Australia

Indian sacking would gradually lose ground in Australia unless prices were reduced and brought in line with those of Pakistani products, said Mr. J. H. Freeman, deputy president of the Australian Jute Goods Association, in an interview in Calcutta last week. Pakistani competition is serious in cornsacks. Pakistan has wrested about 75 percent of India's former market by offering discounts ranging from 1 percent to 3 percent on the Indian prices. Also, the quality of Indian goods had not been satisfactory, he added. He welcomed the voluntary quality control and preshipment inspection schemes recently introduced by the I.J.M.A.

Referring to the comparative cost of production, Mr. Freeman said that Pakistan's lower fibre costs were offset by higher depreciation charges and operating costs. The export bonus vouchers help her to quote a lower price. At present India is meeting about 80 percent of the Asutralian demand for woolpacks, and Pakistan the rest. Here too there is keen competition. Indian woolpacks might be difficult to sell once Pakistan is in a position to produce more of these goods. The growing popularity of bulk handling in Australia poses yet another serious threat to the consumption of jute goods.

Referring to Australian complaints about the loose fibre-ends in woolpacks contaminating wool, Mr. Freeman said that woolpackers in that country were carrying on expensive research for finding an alternative packing material. But until a substitude is found and until Pakistan steps into the picture, Indian woolpacks may enjoy a good market there.

Australian demand for woolpacks, he said, could be expected throughout the year.

November Forward Contracts

The East India Jute and Hessian Exchange Association has declared that cornsacks can be tendered at a premium of Rs. 1.35 in lieu of B Twills at the settlement of November futures. As for hessian, the alternative varieties tenderable are 40in. 7½oz. at a discount of Rs. 11.50 and 40in. 10oz. "C" Group at a discount of 35nP. The differentials fixed for alternative varieties are in accordance with the current market differentials and as such are considered fair. It is, however, worth noting that at a discount of Rs. 11.50, the deliveries of 40in. 7½oz. will be few and far between, as the demand for this fabric will be continuing fairly well and it is commanding a premium for all positions up to July-September next year.

The outstandings in both sacking and hessian November are fairly large, the former being over 100,000 bales, and the latter around 20,000 bales. It is expected that if the premiums on February futures are raised any further, at the current low levels of Rs. 46, bulls will be encouraged to carry their goods forward, especially when the full loss of interest is being borne. In this eventuality, the potential deliveries in hessian may disappear altogether, with large bears finding themselves in a tight corner with no goods to deliver. Bears have shown no inclination to switch over their ready positions to February, even though the differential has been 40nP to 50nP in their favour. If deliveries had been withheld, these differentials would perhaps have narrowed down to nothing.

Pakistani Expansion Plan

East Pakistan proposes to put into operation about 30,000 jute looms by the end of its third plan, according to Mr. A. K. M. Hafizuddin, chairman of the East Pakistan Industrial Development Corporation. In this way, it is hoped to absorb about 50 percent of the province's fibre output. The second plan envisaged a loomage target of 10,000. A Lahore message says that the British Government has agreed to advance a loan of £2.36 million for expanding the East Pakistani jute industry. The loan is to be used for raising the second plan loomage target to 14,000. The World Bank has also been approached for a further loan to develop the jute industry.

Crisis in Scottish Industry

After some years of relative prosperity, uncertainty faces the Scottish jute industry with the Government's decision to halve the 20-percent mark-up on imported hessian cloth and to set up an enquiry into the whole system of jute protection, says the *Financial Times* in a special survey. Recalling the dismissal of 160 workers in two mills engaged in making bags from hessian immediately after the announcement of the decision, the review says that other mills are expected to retrench their workers over the next few months.

Nevertheless, so long as the boom in broad loom tufted carpets—for which jute provides the backing—continues, the industry will feel reasonably secure, for as much as half of its output goes into that particular channel. One of the effects of the boom has been the installation of more wide looms in the Dundee district, where the bulk of the industry is localised.

Meanwhile, intensive research goes on at the industry's research centre to improve the quality of the fibre and find new uses for it. An experimental plant has recently been bought for coating and impregnating jute fabrics with plastics. There are considerable technical and economic difficulties in exploiting this new jute-based material. But there are many opportunities too. Jute has been, for its size, one of the British industries most conspicuous in modernising plant and equipment. Since the second World War, nearly £14 million has been spent on modernising the industry.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the jute goods market durig the past week. Barring an enquiry for about 15,000 tons of heavy goods from Brazil and scattered hessian business with the U.S.A., overseas enquiries were few and far between. The assassination of President Kennedy gave a big shock to operators and little business was transacted after Saturday. In hessian, the trend was dull, following discouraging reports from Argentina that the authorities had decided to curtail their offtake substantially due

to foreign exchange shortage. Australian purchases were more or less of a routine nature. The U.K. and the Continent were inactive. The Government of India showed little interest in replenishing its inventories. Stray shipper covering for ready and near positions in hessian on Tuesday induced a minor revival of interest in the specific positions. At the close, sacking was marked down slightly for all positions, while hessian scored fractional gains on balance. Turnover was small, with the undertone easy in the former and steady in the latter. In the futures market, operators were busy squaring up their outstanding against November contracts. Most of these were converted into February ones on payment of higher contango charges. Sacking suffered a serious setback, on profittaking after wide fluctuations, while hessian November closed with a small gain. Hessian February was marked a shade lower after moving within narrow limits. Turnover was moderate and the undertone easy in heavy goods and steady in hessian.

Wednesday's quotations were as follows:

	Nov.	Dec.	Jan.-Mar.	Apr.-June
40in. 7oz.	35.00	35.00	35.10	35.10
40in. 8oz.	37.75	—	—	—
40in 10oz.	46.70	46.75	46.75	46.75
B Twills	112.20	112.90	114.00	114.00
Cornsacks	113.50	114.50	115.25	115.25
Heavy Cees (Plain)	113.00	113.00	113.50	113.50
A Twills	131.75	132.75	134.00	133.50
Liverpools	123.25	124.00	125.50	125.50

Raw Jute: Divergent trends prevailed in the raw jute market during the past week. Mill agents were buying sizable quantities from upcountry markets against the November quota. Arrivls were more or less unchanged around 150,000 maunds a day and prices were 50nP to 75nP higher than the operational minimum levels. Sellers were reserved and not inclined to cut prices. It seemed that stocks were in stronger hands now, and the prospects of a bumper *aman* harvest induced them to hold their stocks fast. The advance announcement of a big quota for December was another stimulant. Despite higher advices from upcountry centres, prices reacted appreciably in the Calcutta spot market due to a predominance of sellers in average and lower grade fibre. Mills showed scattered interest only in selected grades and their prices were well maintained. Turnover was fair in the agency stations and small in Calcutta. The undertone was steady in the former and hesitant in the latter. In the futures market, nominal transactions took place in Upper Assam White Bottoms for December. In March contracts, prices tended to soften after minor fluctuations following scattered profit-taking. Bears were not inclined to cover their short positions at the existing levels. Turnover was small and the undertone easy at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices Rs. A Qtl.	Rs. A Md	T.S.D. Minimum Prices Rs. A Qtl.	Rs. A Md.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in October was 600,000 yards less than in September 1963, but was 4,300,000 yards more than in October a year ago. The average monthly 1963 consumption remains unchanged from the previous month and about 4 million yards a month more than the comparable period a year ago. Bag cut-up in October was 58 million yards and piecegoods deliveries 21.1 million yards, compared with 56 million and 18.8 million yards respectively, in 1962. U.S. spot stocks and afloats decreased, compared with those in September. At 277.9 million yards, 154.1 million yards were spots and 123.8 million yards were afloats. Stocks now represent about 3.5 months' supply at the present rate of consumption.

THE U.K. JUTE MARKETS

FIBRE IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

A FIRMER trend in the raw jute market in Pakistan was noticeable at the beginning of last week. This might have been due to some east European countries buying for early shipment. The main rise in prices was in the case of white jute, although some of the cheaper Tossa sellers also disappeared from the market. Demand from Dundee spinners was not large, and the business taking place was about equal to consumption. Registered sales to the U.K. during the first half of November were 30,617 bales, giving a total since the start of the season of approximately 420,000 bales.

More buying interest was shown by Continental countries during last week, and Belgium, France and Italy were in the market for supplies. This maintained a steadier market, but offers of the lower grades were made at well under minimum export rates.

The Siam jute market tended dearer for the better qualities and some buying interest was shown. Grade A was at £69 10s, grade B at £ 64 10s and grade C at £57 10s, delivered mill Dundee for December-January shipment.

Commodity Markets

RARE BOOM IN WORLD COFFEE MARKET

(FROM OUR SOUTH INDIAN CORRESPONDENT)

COFFEE, particularly the cheaper African Robusta, is at present enjoying one of the rare booms in the world market. The present prices are 50 to 100 percent more than those prevailing in 1962. For about the past one year, coffee has been steadily recovering from the serious recession which engulfed it before. For several years, coffee prices were extremely low, well below the cost of production in many countries. The reason was that the world production was growing faster than consumption. Excessive production was more pronounced in the case of the world's largest coffee-growing country—Brazil. There huge stocks got accumulated upsetting that country's economy which depended to a very large extent on the fortunes of coffee.

Even in those bad days, African coffees fared comparatively well. They had the good fortune of getting growing buyer support. This was largely because of their comparative cheapness. The growing popularity of instant coffee served the African coffees well. These growths are particularly suitable for the manufacture of instant coffee. African coffees have been thus finding persistently mounting demand both from European and American coffee roasters. It is said that a position has now been reached where the demand is apparently greater than the export quota given to African growers under the new International Coffee Agreement which came into force recently. Almost a scramble has developed for African coffees lately, and the export quota given to their growers, it is believed, has been used up for the current quarter.

The African growers have a distinct advantage in production costs over their counterparts elsewhere in the world. Their cost of production is comparatively low, and this enables them to sell their coffee much more cheaply than their rivals and still make a good profit. However, since the recent shooting up of prices, there is now little to choose between African and Brazilian prices. According to London reports, the price rise has not so far greatly affected the roaster's preference for African coffees. It is also said that the roasters have not been buying of late because most of them had enough in stock and could afford to wait for the prices to become more agreeable. According to these reports, roasters might go in for more of the Brazilian and other growths if prices of African coffees do not decline by the time their stocks are run down.

The African growers are said to be worried about the sky-rocketing of the prices of their coffees because of the possibilities of buyers turning their attention to other sources. They are, therefore, trying to get a larger export quota to prevent what is called the "unhealthy" rise in prices. They have already approached the International Coffee Council with a request for the upward revision of their quota. But Brazil is said to be opposing all requests for revising the export quota of African growers. The African growers are threatening that they will leave the International Coffee Agreement if their requests are not conceded, and if Brazil uses this agreement drawn for the purpose of stabilising coffee prices and marketing to advance her own interests at the expense of other producers.

India is another country which is asking for an upward revision of the export quota. She too grows Robusta coffee, which is in great demand in the world market now. Robusta forms over one-third of India's production of about 60,000 tonnes. This humbler grade was mostly dumped on the internal market in view of the low consumer preference abroad for this grade in the past. In view of the changed pattern in the buyer interest, India can profitably export this grade as long as the present trend continues and utilise more of the higher grade Arabica coffees for internal consumption. It all depends as to how far this country's request for an upward revision of the export quota will be granted by the Coffee Council which is at present considering this demand of African and Asian producers. Some concession may be shown to those who are demanding more liberal quotas in view of the apparent shortage in the world market.

TEA BOARD

New Propaganda Drive

Planting circles in south India are happy about the new propaganda preparations of the Tea Board. After some ten years of hesitation and confused inaction, promotional activity in tea has come into life. The Tea Board has been paying greater attention to propaganda for Indian tea abroad since the past three years and its latest budget is considered as a demonstration of "expansive thinking" on campaigns in the overseas markets. Promotional activities in Britain, America, Australia and New Zealand and the Middle East are being intensified and expanded over a larger area. The Tea Board has posted an officer in Brussels to keep Indian tea on the move in the European Common Market countries where tea will have duty-free entry from next January.

Indian tea which had domination over all other growths has suffered a marked and persistent decline since 1953. Taking India's traditional markets together, the fall was from 143 million kilograms in 1953 to 122.5 million kilograms in 1962. As a percentage of the total tea imported by these markets, the Indian share fell from 64 percent in 1953 to 48.5 percent in 1962. However, India gained some marked gains in exports to countries like Russia, which bought either on barter agreement or with the facility of rupee accounts. Promotional efforts are likely to meet with better response from the traditional markets who offer their free currencies in payment. The UPASI's *Planters' Chronicle* commenting editorially on the subject of tea promotion says that "the new liveliness in tea promotion is welcome and something for which the tea industry has to be thankful". The Journal is of the view that expanded and intensified promotional activities in those countries like Britain where India is steadily losing ground is a step in the right direction and the prosperous European Six with

their nil duty import of tea present tantalizing prospects. The E.C.M. countries consume about 42 million lbs for their 180 million people and India supplies only about 7 million lbs to this market. "A vigorous effort here should be richly rewarding", the *Chronicle* says. The journal asks for a rethinking in official policy concerning internal propaganda which at present is virtually neglected. If an excessive dependence on the export market coupled with the creation of a huge surplus results in a slump, the first to suffer would be the producers. Their ability to take a loss has been considerably weakened in recent years. To force them to produce more and to leave them heavily dependent on the export market is obviously imprudent. They should not be left entirely at the mercy of the easily changing fortunes of the world tea markets. The prudent course is the development of the domestic market as an insurance against adversity abroad, the *Planters' Chronicle* says.

TEA

Downward Trend in Prices

(BY A SPECIAL CORRESPONDENT)

PRODUCTION from north India continues to lag and the latest figures show a shortfall of 12 million lbs. In the early part of the season, tea prices were fairly satisfactory, but in recent months, the tendency has been downwards. Although tea output from northern India is running behind last year's figure, other producers including south India are making up.

During the current season, teas sold up to Sale No. 23, amounted to 48½ million kilograms, at an average price of Rs. 5.67 a kilogram, compared with 51-4/5 million kilograms in the same period of 1962 at an average price of Rs. 5.60 a kilogram.

It will be noted that the average sale price shows little gain to compensate for the small crop.

The district averages compare as follows (prices a kilogram):

	1963	1962
Assam	... Rs. 6.03	Rs. 6.12
Cachar	... Rs. 4.63	Rs. 4.17
Darjeeling	... Rs. 7.35	Rs. 7.42
Dooars	... Rs. 4.85	Rs. 4.68
Terai	... Rs. 4.89	Rs. 4.59

Dust teas have sold approximately at about the same rate as last year, namely, Rs. 4.92 a kilogram, compared with Rs. 4.87 a kilogram.

In view of the smaller amount of tea available, exports have been well maintained. Shipments to the U.K. stood at 57½ million kilograms on 7th November, compared with 51½ million kilograms last year; and available ships are fully booked for the U.K. The U.A.R. has taken less and Russia has about the same, while deliveries to the U.S.A. have been maintained. Canada shows a drop, while Ireland has improved her offtake by about 1 million lb. Total exports from 1st July to 7th November this year amount to 82 million kilograms, compared with 79¼ million kilograms last year.

In view of the smaller crop this should be considered good going.

Here are production figures from the major world suppliers (in million kilograms):

	1963	1962
North India ...	225.6	231.0
South India ...	64.4	60.4
Pakistan ...	20.4	19.1
Ceylon ...	155.3	143.8
Indonesia ...	21.0	23.1
Africa ...	31.0	30.3

Adding the output of sundry newcomers the whole production is given at 525 million kilograms, against 515.2 million kilograms a year ago. China and Japan and other areas are also making tea. Hence there is a danger of overproduction, but at the Mincing Lane auction on 18th November, there was a somewhat better enquiry and at the Calcutta sale of leaf teas on the same day, there was a slight improvement in demand, but at prices generally lower than in the previous week C.T.C. opened steady, but later became irregular and even the best Assams were reported easier, especially towards the close.

On 24th November, a notification was published that the Central Government has decided to reduce the excise duty on green tea.

In past issues, this correspondent has frequently referred to the necessity of increasing internal consumption. Recent comments made by no less and authority than Mr. Brooke of Brooke Bond Co. Ltd. has emphasized this matter. The greatest, easiest and quickest way to increase consumption is to assist India's internal market. The Government or the Tea Board should send a delegation and a tea van to the International Youth Camp recently held at Wadi-el-Natroun in Egypt to serve tea free as well as giving all campers 60 grammes of Assam Tea freely-packed in polythene bags. Then similar good work should also be done at home.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October 1963. As compared with September, the October index for Food reveals a rise of 2 points, while those for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 609 and 317 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 2 points during October 1963.

CALCUTTA TO HOST SHIPPING CONFERENCE

Work is progressing fast on preparations for the fifth Shipping and Shipbuilding Conference, to be held in Calcutta between 10th and 14th February, 1964. A large number of foreign delegates, representing shipping and shipbuilding interests, are expected to attend. The Conference will provide a valuable forum for an exchange of ideas on design, construction, operation and maintenance of ships, and problems relating to shipping and shipbuilding in India and other parts of the world. A large number of technical papers have already been received from individuals and organisations in India and abroad. The Conference was first organised by the Naval Architecture Society of the Indian Institute of Technology, Kharagpur, in 1958. The next two sessions were also held there. Bombay was the venue of the fourth session. The Conference is being held in Calcutta, for the first time, in view of the decision of the last session that Kharagpur, Bombay and Calcutta would be the venue for future sessions, by rotation.

(W) After giving six months notice.

(X) Rs. 5,00,000 will be redeemed each year from and after 1964.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

DANGERS IN THE BANK AND COMPANY LAW CHANGES

THE stock markets have reacted with fear and anxiety to the collection of Bills introduced by the Finance Minister, Mr. T. T. Krishnamachari, in the Lok Sabha on Tuesday of last week. Equity prices, having risen smartly since Mr. Krishnamachari moved to his new portfolio towards the end of August, were still edging their way upwards until the middle of last month. The trend was reversed as rumours began to circulate that drastic changes were proposed in the laws relating to banks and to companies—changes which, it was said, would be inspired by the report of the Vivian Bose Commission on the administration of Dalmia-Jain concerns published early this year. Most, although not all, of the rumours have been confirmed with the formal introduction of the Banking Laws (Miscellaneous Provisions) Bill and the Companies (Amendment) Bill last week.

On careful reading, there can be no doubt that the Banking Bill and the Companies Bill are drastic and of far-reaching significance. The ostensible purpose for which they have been introduced is good. It is to check malpractices of the sort which have sometimes enabled big fish to use for their own private and selfish interests the money they have got from smaller fry—malpractices which were described in great and shocking detail in the Vivian Bose Commission's report. In reply to a number of the criticisms contained in the report, the plea had been offered that the alleged malpractices were not malpractices at all since they did not violate the laws of the time. In a sense, the two Bills now introduced are the answer to the plea : not only are the laws to be tightened, but more and more of the decisions as to what is right or wrong, legal or illegal, are to be transferred to the executive, on the assumption that even the most elaborate legislative measures in the world inevitably have their unknown quota of loopholes. The general trend of the Bills—whereby the right to exercise, and then to enforce, a judgment is to be shifted increasingly from the judiciary to the executive is reinforced by one old and extremely regrettable circumstance. It is that in this country the delays involved in judicial processes are enormous : often does it happen that before the law courts get round to taking their first look at a case, the damage done is irreparable and the culprits have vanished from the scene.

In essence, therefore, the basic aims and assumptions underlying the two Bills involve major questions of principle—relating, in particular, to the supremacy of the rule of law and the sanctity of legal processes. The first question of principle is : granting that no law can be perfect, is it right nevertheless to vest sweeping residuary powers in the executive in an effort to ensure that the loopholes discovered from day to day are promptly plugged? The second question is : granting that legal action takes a long time because the courts are overburdened with a host of cases big and small, is it still right to short-circuit them for the sake of promptness by what really are arbitrary administrative edicts? A third and related question is: is it right to remove a bank director or a company manager through what in essence would be a Government decision, and then leave it to them to establish their innocence months or years later through appeals to the executive or the judiciary? In this sense at least, the normal legal dictum which prescribes that a man should be assumed to be innocent until he is proven guilty stands in serious danger of being reversed.

Understandably, the answers to all these questions will vary from person to person, from country to country, and from time to time. But, without blowing a volcanic blast of hot air about the principles of democracy and the rule of law, two things may be said for a start. The first is that if there is justification for sweeping powers, it exists only to the extent that the administration charged with using them is itself judicious, efficient and incorruptible. One hopes India's will be one day, even if it not so now. The second is that, in all fairness, if the administration is given more powers, concerted measures should simultaneously be taken to reduce the law's delays so that those powers may be subject to the restraints implicit in a prompt judicial test. The Reserve Bank, or the Finance Ministry, or the Government as a whole, in other words, is no substitute for the high courts.

That said, the justification or otherwise for the Banking Bill, as for the Companies Bill, depends in the final analysis on the restraint and discrimination with which the powers they confer are going to be used. On this, clearly no judgment is possible straightaway, although the powers as such are drastic and could in practice put many institutions on the high road to nationalisation without compensation. Under the Banking Bill, for example, the Reserve Bank could remove a bank director or a bank executive at will, and install a new one in his place. It could go further and appoint up to five additional directors in any bank it wanted to—the two provisions together ensuring that its recommendations and advice are not disregarded to the extent they may have been in the past. Other major provisions are aimed at ensuring that the more influential personalities in a bank do not play around with the funds they manage, at the cost of depositors and shareholders. The Reserve Bank can already tell a bank not to give an unsecured loan to its directors or to the private companies in which they may be interested; the Bill would extend the restriction. Depending on the circumstances, the Reserve Bank could now also order a bank not to write off loans to its directors or to companies in which they may be interested (the acceptable procedure for writing off loans in these cases should perhaps be similar to the one followed by the tax authorities). Finally, the voting rights which an individual shareholder of a bank can exercise are to be reduced by the Bill from the present maximum of 5 percent to a maximum of 1 percent of the total shareholding.

It may be argued that provisions such as these, stringent though they are, are still not wholly knave-proof, not at least in theory. In practice, however, it is likely to be found that they give the Reserve Bank all the power it will ever need to exercise, and possibly more. Many people believe that the powers which the Reserve Bank

already has, including those exercised under the euphemism of "informal persuasion", are so great that no more are required. The emphasis, according to them, should be on using the existing authority promptly and adequately when malpractices are suspected, as the Reserve Bank notably failed to do in the Palai Central and Laxmi Bank affairs. The central bankers' answers would probably be that while the powers are extensive, they are susceptible to legal challenge should a bank director or manager be inclined to delay the enforcement of a particular edict. As for "informal persuasion", advice given in this form is not impossible to ignore; some important banks have reportedly neglected recommendations on such subjects as maintaining a healthy advance-deposit ratio. It is to be wondered, however, whether dictatorship of the sort the Bill implies is the answer to sporadic indiscipline—a dictatorship, incidentally, which would be based on the questionable assumption that the Reserve Bank is the fount of all impartiality and wisdom.

If the Banking Bill represents one side of the coin minted by the Vivian Bose Commission's report, the Companies Bill represents the other. The provisions of the two, in fact, run parallel for a large part of the way. The Banking Bill gives the Reserve Bank the power to push directors or managerial personnel out of a bank. The Companies Bill provides for the establishment of a tribunal with judicial powers on whose recommendation the Central Government could push directors or managerial personnel out of a company. The tribunal could act on a complaint from minority shareholders or from the Central Government.

A safeguard has been provided that an aggrieved person could challenge the tribunal's decision in a high court on any question of law, although the person concerned could be made to stay out of office while the case continued. The assumption is implicit that, unlike the Government, doughty heroes from the shadier ranks of Indian business will have the patience, as well as the financial and spiritual stamina, to fight prolonged legal battles which tend usually to last for years. The assumption may not be wholly incorrect in a country where some people love litigation as dearly as they do their own beautiful wives. The anxiety will nevertheless remain that others who are unwilling or unable to spend the remainder of their lives trudging up and down the corridors of the high courts stand in danger of being unjustly penalised.

The second striking parallel between the Banking Bill and the Companies Bill is this: whereas the former drastically reduces the voting rights of a bank's major shareholders, the latter seeks to do roughly the same thing for many companies by enabling the Government to appoint a person to exercise voting rights in respect of a trust with a significant shareholding. The explanation is offered that trusts play an important part in the indirect control of companies by monied and vested interests who find it advantageous to exercise this control through nominees. The system has led to abuses, including the avoidance or evasion of taxes. It is, therefore, necessary to prevent the use of the voting rights attached to shares held by trusts for advancing the personal interests of the donors. In view of the practices followed by a number of business houses in this country, the need for some restriction is clear. Any welcome given to the new provision will, however, be qualified by the thought that the Government could in practice quietly take over the control of a company in which a trust may happen to have a major shareholding. If the threat discourages certain trusts from using their money for shady investments, it will have served some purpose. The ingenuity of those controlling the trusts cannot, however, be under-estimated when it comes to finding loopholes. Care may have to be taken in order to ensure that the law is not avoided by subjecting the trusts and their shareholdings to a process of amœbic reproduction by splitting.

While the virtues or vices of most of the provisions of the Banking Bill as well as the Companies Bill will show up only in actual working, the measures contain two features on which a categorical judgment is possible straightaway. The first feature, in the Banking Bill, is that the Reserve Bank has been given the power to demand information from and to inspect firms, companies and other financing institutions, including those which trade in stocks and shares or which accept deposits from the public or which do hire-purchase business. A main aim here, it appears, is to try and detect the black money which is allegedly being used on a large scale by some companies and financial institutions existing outside the banking system proper. Evidently the purpose for the time being is only to seek information, not to exercise firm control. Honest institutions will probably find little that is objectionable in all this, although even they may not find controls palatable should these be introduced at a later stage. If the demand for bank funds were to slacken for any reason, it would not be surprising to find the banks pleading for strict controls on competing financial institutions *via* controversies of the sort that have in recent years greatly enlivened the British banking world.

The second feature, which is thoroughly objectionable and stands out as a black mark on the Companies Bill, consists of the provision whereby a loan given by the Government to a company could be converted almost at will into the shares of that company. It is explained that, at present, a company's shareholders may not agree to convert a loan from the Government, or from a specified financial institution, into shares. In that case, there is a danger that the loan would not be given at all, "thus impeding the flow of capital required for industrial development." Therefore, the explanation continues, the possibility of conversion has to be provided for, subject to a safeguard; and rather oddly it is claimed that the safeguard is the "prior approval of the Central Government." The need to get Government approval, it is asserted, "would provide adequate protection to the legitimate interests of shareholders in so far as conversion of loans raised from or debentures issued to financial institutions like L.I.C., I.F.C., N.I.D.C., I.C.I.C.I. or international or Commonwealth financial institutions like the International Finance Corporation or the Commonwealth Development Finance Company is concerned."

The argument here is highly questionable. To begin with, there is no reason why an institution giving a loan should not say from the very start that it might want later on to convert that loan into shares—and negotiate accordingly. At a time when the shortage of capital is acute, the bargaining position of the borrowing companies is generally weaker; depending on the origin of the loan and the terms of conversion, a substantial number of the companies could probably be persuaded into offering a conversion option right from the start. Secondly, under the Bill, it is prescribed that when the Government orders a company to convert a loan into shares, the terms of conversion will be "fair and equitable": although the terms could be challenged in a high court, the assurance given is too vague and the safeguards provided are extremely inadequate. Thirdly, the most dangerous aspect of the proposal is that it would open a new backdoor to the nationalisation of companies which have borrowed money heavily from the Government or from its progeny of financial institutions.

In this way, the net result may be that many companies would be persuaded to do without both the loan and the expansion the loan is intended to finance—thus defeating the proclaimed purpose of the provision. In any event, it is a strange variety of justice where companies are first forced to borrow from the Government because the Government's fiscal and pricing policies prevent them from raising resources on their own; and are then presented with the prospect of having the Government as a major or even controlling shareholder. The disturbing suspicion will remain that the real purpose of the provision is very different from the one given officially. The real purpose may be to create the scope for selective and partial nationalisation at low cost whenever it may happen to suit the governmental fancy.

India's Resources
are Precious
WASTE NOT,
WANT NOT

THE THIRD PLAN FAILURE

In relation to India's needs, the basic goals of the third plan are admittedly modest. But this does not imply that all the individual targets fixed for 1965-66 are practical and feasible; some are plainly unrealistic, such as the hope of raising 98 million tons of coal under present conditions. If shortfalls were confined only to the fields where the planners' fancy got the better of their discretion while setting targets, there would be little cause for regret. As things stand, however, it is clear that almost every major task will remain substantially unfulfilled. The daily struggle for existence will not only have been made no easier for the bulk of the population, but perhaps more difficult by the unmistakable inflationary pressures at work in the last two years. In a country where millions live at the subsistence level, this might mean an aggravation of distress which can have serious political repurcussions.

The failure of the third plan—the mid-term appraisal by the Planning Commission published last week is more an epitaph than a progress report—is nothing short of a tragedy, the more so because the country will have paid the full price required for development but without obtaining the corresponding benefits. As the appraisal says, investment in the public sector is likely to amount to Rs. 8,000 crores over the five years—or Rs. 500 crores in excess of the provision originally made. Yet national income, which has increased by only 2.5 percent a year in the last two years, will not rise by anything like the 30 percent stipulated for the quinquennium. The shortfall will not be on account of any minor miscalculation of capital-output ratios, which cannot always be precisely determined in advance, but because a large part of the investment will not begin to yield benefits until some years after the end of the plan period. This only means that the next round of development will have to start from a lower base, making further advance that much more difficult.

To talk, therefore, of stepping up the rate of growth to 7 percent a year and savings to something like 20 percent during the fourth plan is not only absurd, but dangerous. Savings of 20 percent or more can indeed be extracted, but in a poor country, the process is a slow one and the additional saving has to come out of the incremental income rather than by depressing the already low living standards. In other words, the rise in investment should be so graduated that a portion of the increase in national income is set apart for improving the living standards of the population, especially that large section which is at the subsistence level. This has been one of the implicit assumptions of Indian planning which is in some danger of being lost sight of in the wishful thinking now going on in relation to the fourth plan.

Pitching the growth rate at 7 percent, or, for that matter, any other figure, on the plea that this is necessary to achieve the long-term goal of a certain *per capita* income takes one nowhere. A high rate may be desirable and worth striving for, but airy promises make no political sense if the immediate effect is a reduction of consumption. Furthermore, to set goals, modest or ambitious, seems quite pointless until implementation is made surer than it has been in the past. The gap between promise and performance, always wide, seems to be growing—a situation which warrants looking into the reasons for failure as a first step before hatching further plans for the future. The shortfalls looming ahead of the third plan lend urgency to this enquiry since prompt action may

yet be able to make some difference to the final result.

The first point to note is that the shortfalls were, in one sense, inevitable. The total task, as formulated in the third plan, was much larger in both physical and financial terms than allowed for in calculating either the effort or the cost involved. It is stated, for instance, that the accepted programmes of mining and industrial development actually require Rs. 2,800 crores, and not the Rs. 1,800 crores budgeted for. Likewise, the foreign exchange requirements were seriously under-estimated, a fact to which a Reserve Bank study on the balance of payments situation had drawn attention some months ago. The Bank's doubts are supported by the admission that although foreign aid commitments already amount to Rs. 2,100 crores, fully covering the gap originally visualised, another Rs. 450 crores of non-project aid will be necessary to see the plan through.

The under-estimation of requirements is attributable to two reasons. In the first place, planning is still carried out on a superficial and amateurish basis, without any of the preparatory work on which concrete decisions can be made. This is because the sponsors of new schemes—the Central Ministries or the State Governments—have no separate machinery to undertake detailed planning at a technical level. The responsibility is thrust on operating departments or enterprises, and inevitably gets sidetracked because of immediate preoccupations. Evidence of this is provided by the inability to furnish preliminary planning data for new power and irrigation schemes for many months after the Planning Commission had been pressed by the sponsoring States into including their pet projects in the third plan.

In these conditions, both physical planning and budgeting can only be notional, and no one need be surprised if schemes do not get started in time. The defaults reflect in part the lack of qualified manpower—design and planning engineers—to undertake the preparatory work, but that is not the whole story. There is also a good deal of politicking involved. The sponsoring States, the Central Ministries and the Planning Commission—all know that available resources cannot possibly accommodate every one of the schemes proposed. But some get included in the plan, notionally that is, to avoid the unpleasantness that may result from a firm rejection. For all its length and supposed sophistication, the final plan document is in some ways a patchwork quilt of the schemes that have the right political appeal.

This kind of make-believe planning has to come to a stop. The Planning Commission—supposedly a technical agency insulated from political pressures—has an important part to play. Unfortunately, its technical rôle has been eclipsed over the years by the proportion of Central Ministers doubling as its members. The anomaly has been defended on the ground that the involvement of senior members of the Government in the work of the Commission is necessary to give it prestige and influence. Even if it was true at one stage, it can hardly be the case today after 12 years of planning.

By definition, as it were, the Planning Commission is also supposed to provide, on a continuing basis, an independent and objective evaluation of implementation. This it has singularly failed to do. Progress reports are always late and constitute a mere formality. Reading the report published last March on the first year of the plan, one would hardly suspect that anything was really amiss. In many cases, the report was only a rehash of the information, inadequate and misleading, that the agencies concerned had already published in one form or another. The mid-term appraisal published last week is a somewhat more factual document but even now it only catalogues shortfalls while failing to offer any analysis at all of the contributory factors. The *raison d'être* of an independent commission is that it should stand apart from the executive and provide an independent audit of performance. As at present constituted, this is probably the last thing that one can expect from the Planning Commission today.

CYNICISM ABOUT GOLD

THE bullion markets have hardly reacted to the Gold Control Bill introduced in the Lok Sabha last week. The price of gold is steady around Rs. 100 a 10 grams, compared with the international price of about Rs. 53 a 10 grams. The Bill seeks to place gold control on a permanent footing since the present Gold Control Rules have been enforced under the Defence of India Rules and, therefore, look like an emergency measure. In addition to all the provisions of the Gold Control Rules, the Bill contains a new one designed to give the Government the power to ask individuals to declare their holdings of gold ornaments in excess of a certain ceiling. Although the ceiling has not yet been notified, the Government will announce it in due course after getting the views of Parliament. It is, however, widely believed that the Government will be generous in fixing the ceiling, at least for the time being. Some think that it may be between Rs. 10,000 and Rs. 25,000 worth of ornaments, but may be reduced gradually in stages.

Despite the hint of a ceiling on gold ornaments the trade does not look alarmed. This may be due to the belief that like the gold bonds scheme and the Gold Control Rules, the new legislation will not succeed in its objectives. Although the need to check the gold-hoarding habits of the people has been reinforced by the emergency following the Chinese aggression, gold control is essentially an important socio-economic measure. The habit of hoarding gold in the form of ornaments or bullion is ingrained in the people of this country since time immemorial. Apart from serving as a means of social ostentation, gold has proved to be an useful store of value. It has also served as a standby asset in case of distress. It has been used as a medium for raising credit in the rural areas. The restrictions imposed by the Gold Control Rules have interfered to some extent with the flow of credit to rural areas generally. Under the present circumstances, the economic arguments against holding gold have gained force for a variety of reasons. First, gold is by far the biggest single factor responsible for the leakage of foreign exchange. Smuggling has involved an annual loss of Rs. 30 crores or more of foreign exchange. Secondly, a substantial amount of savings lie blocked in idle gold hoards, which are estimated to amount to Rs. 1,750 crores or more at the current international price. If these idle hoards could be mobilised, the foreign exchange shortage would be greatly relieved.

Judging by the experience of the gold bonds scheme and the Gold Control Rules, many are likely to be sceptical about the success of the Gold Control Bill. It is a sad commentary on the Gold Control Rules that gold worth only Rs. 23 crores or so has so far been declared. The Rules have made it obligatory for a person to declare all holdings in excess of 50 grams. It is said that since the Rules did not prescribe any limit on the holding of gold ornaments, bullion holdings were converted into ornaments as soon as the Rules were promulgated. The present Bill seeks to plug the loophole. It may be relevant, however, to point out that under the Gold Control Rules, no person was formerly allowed to make fresh ornaments except out of 14-carat gold. But in response to political pressure, Mr. T. T. Krishnamachari relaxed these Rules soon after taking over the Finance portfolio last August, permitting the people to remake old ornaments of pure gold. This has made it still easier to conceal contraband gold in the form of ornaments.

It is true that the Gold Control Bill in its present form nearly completes the entire gamut of gold control, at least in theory. The proposed law has two main objectives. Firstly, the idea is that the smuggling of the metal should be substantially checked, if not stopped fully. Secondly, if the public can be weaned away from the gold habit, savings will be prevented from going into idle hoards. But, judging by experience, it is doubtful whether effective administrative machinery can be set up to enforce gold control efficiently. Moreover, it is not certain whether the Government will be bold enough to face the political outcry which is likely to arise when the measure is implemented. As far as smuggling is concerned, many take a cynical view. To begin with, it is not understandable why the Government's anti-smuggling measures have so badly failed. Yet the Government continues to believe that when gold control succeeds, the demand for the metal will fall, and the domestic price of gold too will decline sufficiently to make it unattractive for the smuggler to persist in this illegal trade. Considering that the Government does not feel confident about meeting the full demand for even 14-carat gold in the near future, the prospect is that the price of the metal will rise rather than fall.

The success of control depends on whether the savings hitherto hoarded in gold will be diverted to productive purposes. If these savings are dissipated in consumption, the purpose of gold control will be defeated. The intrinsic value of gold should not be overlooked. Apart from serving as a reliable store of value, it is still accepted as an international medium of exchange. This apart, it has served as an excellent hedge against inflation. It should not be forgotten that the public has been forced to keep a part of their savings in gold to cover the risk of inflation. In the circumstances, it is evident that if gold control is not supplemented by other economic reforms, particularly by measures to curb inflation, it is unlikely to succeed.

Current News and Comment

First Unit Trust in India

The Bill introduced in the Lok Sabha to set up the Unit Trust of India in the public sector has not caused much excitement in the stock markets. This is partly because it has been overshadowed by other developments, such as the move to add new teeth to banking law and company law. There are also doubts whether a unit trust managed by Government officials will be enterprising in its investment policy. The idea of starting a unit trust has been in the air for many years. As far back as 1954, the Shroff Committee on Finance for the Private Sector had suggested the setting up of unit trusts in both the private and public sectors in order to mobilise the savings of smaller investors. Briefly, the Government's scheme is that the Unit Trust of India will be set up with an initial fund of Rs. 5 crores, of which the Reserve Bank will provide Rs. 2.5 crores, the State Bank (with its subsidiaries) Rs. 75 lakhs and the Life Insurance Corporation Rs. 75 lakhs. Other financial institutions will be invited to contribute the remaining Rs. 1 crore and if there is any shortfall it will be made up by the Reserve Bank. This will give a strong financial base to the new institution from the very start. Provision has been made for returning part or the whole of the initial fund to the contributors, when the Trust does not feel the need for this assistance.

The Trust will be run by a nine-man board of trustees, of whom the chairman and four other members will represent the Reserve Bank, one the L.I.C. and one the State Bank. The Trust will buy and sell securities, bonds, shares and other stocks of statutory corporations, companies and other corporate bodies. As the face value of the units will be only Rs. 100 and as they will be available on tap, it is hoped that small investors will be attracted. The units will be freely transferable and can be pledged with banks for obtaining loans. The Trust will also buy back the units at prices based on the value of its assets, which will be announced from time to time. The scheme has some attractive features. The Trust wil distribute not less than 90 percent of the net income to unitholders, the management expenses being restricted to a ceiling of 5 percent of the income attributable to the units (if the expenses are higher they will be

adjusted against the income accruing to those who contribute the Trusts' initial funds). The Trust's income will be exempt from payment of income tax, super tax or any other direct tax. Furthermore, the payment made to the unitholder will be exempt from income tax, although not from super tax, up to a limit of Rs. 1,000 a year. Exemption from super tax has not been given since the unit trusts are primarily intended for the lower-income groups and not for the richer sections. The exemption from income tax equalises the position of unitholders with that of investors in tax-free Government savings schemes.

Unit trusts, also known abroad as mutual funds, are popular in several countries. Their main advantages are that they offer the small saver an opportunity to invest in shares, and, by giving him the benefit of expert management, reduce the risks of loss. Some investment companies have been fulfilling this purpose so far in India, although in a limited way. But since they are owned mostly by business houses, they have worked by and large to the advantage of their promoters. The unit trust does not have this drawback. But being a public-sector venture, it may have some weaknesses and disabilities peculiar to bureaucratic management. It is doubtful whether it will have sufficient independence and expert knowledge to be able to select the best scrip from the unitholder's point of view. The creation of a unit trust is welcome in principle, but not as a State monopoly. As suggested by the Shroff Committee nine years ago, and more recently by the meeting of stock exchange presidents, unit trusts should be encouraged in the private sector as well. If the Trust is conceived as a new agency to support the capital market, its success will depend upon the extent to which it is able to attract unitholders. It also remains to be seen whether the big initial contributions to be made by the L.I.C. and other institutions to the Trust will not affect their normal investment activity.

Protection for Bicycles Withdrawn

The Government of India acting on the Tariff Commission's recommendation has decided to discontinue protection for the bicycle industry with effect from January 1964. Except for some of the major producers, the rest of the industry had pleaded for protection for a further period of three years. While conceding that a comparison of the estimated fair ex-works prices of indigenous bicycles and components with landed costs ex-duty of their imported counterparts, *prima facie* indicates the need for continued protection, the Tariff Commission feels convinced that the industry has now come of age and that it can and should be allowed to stand on its own wheels. It says that any unnecessary extension of protection may, far from making producers cost-conscious, make them take a sheltered market for granted. Both in bicycles and components the industry has attained a fair degree of self-sufficiency making it possible not only to dispense with imports, but also to develop a potential for export,

From a mere 4,000 pieces in 1947, when protection was first granted, the production of bicycles reached the figure of 1.216 million in 1962. The domestic demand for bicycles in 1963 is estimated at 1.25 million and is expected to rise gradually to 1.55 million in 1966. The present installed capacity of the industry is 1.369 million in the large-scale sector comprising some 21 units and 832,000 in the small-scale sector having nearly 145 units. The capacities already installed are considered adequate for meeting the estimated demand for the third plan period and with multiple shift working it can cater for a much larger demand. As for quality, the large producers having technical collaboration with reputed manufacturers abroad have come up to the standards of their collaborators. Some of the medium-sized units also have gained a reputation for their products and have been able to secure a share in the export trade. The position of the industry has substantially improved concerning the indigenous availability of raw materials and stores and the total value of import content in the cost of a bicycle is now estimated at no more than 10 per cent. Production in the organised sector of the industry has not suffered any serious setback despite the present difficulties in the availability of raw materials and their high cost, particularly those of steel items. The Tariff Commission says that the industry has "attained the degree of maturity and stability that should enable it to hold its own without specific tariff protection and maintain the required level of production for meeting both domestic and export needs, given the necessary marginal assistance in the matter of its requirements of the critical raw materials and stores if and when these cannot be met in full from indigenous sources." In arriving at this conclusion, the Commission has taken into account the case of producers of both bicycles and components in the scall-scale sectors.

An unqualified withdrawal of protection involving discontinuance of the watch on the industry and its price by a body like the Tariff Commission, may prompt producers and/or their distributors to take undue advantage of the prevailing market conditions. They might push up their selling prices in disregard of the interests of the consumer who has ungrudgingly borne the burden of protection for about 16 years. In order to safeguard the interests of consumers, the Commission has recommended that the manufacturers should be asked to freeze prices of their bicycles (without saddles and accessories) at the levels of their f.o.r. destination prices prevailing on 18th July, 1963. These prices should be exclusive of their respective wholesalers' commission. The Commission has suggested that the distributors' margin should not exceed 15 percent of the net selling price, and further that producers should not be allowed to increase their prices except with the prior approval of the Government.

Esso Project in Rameshwaram

Esso Standard Eastern is carrying out experiments on new uses of petroleum products and has already developed a sand dune stabilising oil, agricultural mulch and an oil-based fungicide. The Company has recently launched a pilot project in Rameshwaram with a view to protecting the seven-mile track of the Southern Railways from the encroaching sand. The project aims at stabilisation of the sand dunes. The Company has recently carried out experiments in this field with the help of a special oil. The oil allows vegetation to take root, thus halting the progress of desert and, in some cases, even reversing it. The new process involves spraying of the oil on dune areas. This holds together the surface particles of sand against wind erosion. In India, Esso has tried the technique on sand dunes in Rajasthan with success. Similar projects have been undertaken to preserve highways in the desert areas of Rajasthan and Punjab. The Rameshwaram project is the first one being conducted on a ten-acre area.

Revival in World Shipping

The statistical tables in Lloyd's Register of Shipping for 1963 show that although Britain's merchant fleet declined slightly during the year ended July 1963, she still operates the largest fleet of merchant ships in the world. The U.K. fleet declined during the year by 93,000 tons to 21.565 million tons, mainly as a result of the scrapping of old tonnage.This contraction, the *Financial Times* points out, must have occurred in the dry-cargo sector of the fleet, since the size of the U.K.'s tanker fleet increased by 331,000 tons over the period to 7.79 million tons. In terms of merchant fleets operated, Norway occupies second place, Liberia third, Japan fourth, Greece fifth and West Germany sixth. Apart from Britain, the U.S.A. was the only other country which showed a decline in its merchant tonnage. All other countries expanded their fleet during the year. This indicates a revival in the world shipbuilding industry after about six years of depression.

The countries where substantial increases in tonnage have taken place are Norway, Japan, Greece, and Russia. The last mentioned expanded her fleet by 750,000 tons to an estimated 5.4 million tons. Russia, it is reported, has launched a massive merchant shipbuilding programme. This is interesting news to the western shipbuilding countries. The tonnage under "flags of convenience" grew over the year by 818,000 tons to 11.4 million tons. Referring to shipping scrapped, Lloyd's Register says that after a record total of 3.7 million tons in 1961, the tonnage broken up throughout the world in 1962 was only slightly over 3 million tons, but "there are signs that this will rise again." The world's oil-tanker fleet expanded over the year by 1.8 million tons to 47.1 million tons.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations for the 1963 Fund:

Rs. 175
The management staff of the Imperial Tobacco Co. of India Ltd, Kidderpore Branch.

Rs. 100
Kumari Jayshree Birla.

Rs. 51
S. K. Birla.

Rs. 50

Previously acknowledged Rs. 2,359.25

Grand Total Rs. 2,925.25

TEA CONSUMPTION IN EUROPE

IN none of the larger states of Europe has the use of tea made more steady progress than in Germany. Though still hardly to be ranked as a tea drinking country, like Holland or Russia, Germany, nevertheless, is already the third largest market for tea on the continent, and in view of her great and growing population must soon occupy a place second only to that of Russia. In the remarkable commercial development which has been so prominent throughout the German Empire during the last twenty years, tea at first lagged somewhat behind, but is now tending to move at a rate more in unison with the general tide of prosperity. The promised reduction of the tea duty, under the new German tariff, by some 75 per cent. seems likely not merely to prove a stimulus to the present progressive tendency, but to place Germany at no distant date in the front rank as a field for tea in Europe. It may, therefore, be not unprofitable to examine the present conditions and tendency in some detail. General Statistics—The population of Germany at the census of 1900 was 56,345,014 and is today estimated to exceed 57½ millions. The total imports of tea for home consumption in 1902 are officially stated at 3,402,700 kilos, or about 7,485,900 lbs. This gives a per head consumption of nearly 60 grammes (2.1 oz.). Compared with previous years, these figures show an advance which may be tabulated thus:

Germany—Net Imports of Tea

1888	...	...	kilos	1,780,150
1891	...	...	,,	2,221,000
1894	...	...	,,	2,840,100
1897	...	...	,,	2,660,600
1898	...	...	,,	2,896,500
1899	...	...	,,	2,958,900
1900	...	...	,,	3,053,500
1901	...	...	,,	3,300,000
1902	...	...	,,	3,402,000

We here find an increase, in the 10 years 1888-98, of about 65 per cent, and in the last 5 years, 1898-1902, a further advance of over 17 per cent in imports.

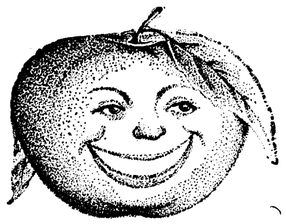
A Ditcher's Diary

MANY THINGS STILL DON'T ADD UP ABOUT PRESIDENT Kennedy's assassination in Dallas; I am content to wait for the report from the Earl Warren Commission, which will not be easily fooled. Meanwhile, as I saw Lyndon Johnson on the cover of *Time* and Kennedy on that of *Newsweek* I wondered whose was the better decision. In Hemingway's *The Old Man and the Sea*, story of a man defeated by a fish, the last line is: "The old man was dreaming about the lions". This is the American dream; I am only mildly sorry that Henry R. Luce could so soon forget Kennedy and not at all surprised that U.S.I.S. has already started lionising Lyndon. What sort of a President will Johnson make? We, including President Ayub Khan, may be surprised. Harry Truman was much more obscure when he found himself President; yet he turned out to be a very effective President indeed. The decision to drop that bomb on Hiroshima was his; he it was who sacked MacArthur. If Henry R. Luce wanted to emphasise the wonderful continuity of American political life, Lyndon Johnson has proclaimed his adherence to Kennedy's policies. Nor am I forgetful of the objective compulsions of the facts of international life in our time, which no U.S. President can ignore. But, and but again, there will be a difference. Not merely in style, where Lyndon should not even try to be Jack any more than "Lady Bird" should imitate Jacqueline, but in content. It seems to me unlikely that aid to India will be very gravely affected either way; New Delhi's fears may be as exaggerated as Rawalpindi's euphoria. Even if Kennedy's vision of a better world is by history put down as mainly verbal, Johnson will take a long time living down his reputation as a dextrous political operator concerned more with the domestic scene than with the parlous world we live in. We should still remember that no U.S. President can be internationally effective unless he be sure of his home base. (Think of the contrast between Wilson and Roosevelt.) Kennedy sought to show that the man makes the office; in Johnson's case, the office may make the man.

WHAT'S SO SINISTER ABOUT THE PROPOSED VISITS OF Mr. Chou En-lai and Marshal Chen-yi to Cairo and Nairobi, respectively? That they will fly over India, with India's consent, seems entirely a matter of detail. From an unquestioning faith in China's good will, which was misguided, this country appears to have gone to the other extreme of considering every Chinese move with suspicion and nothing but. I think the Government of India is absolutely right in according permission to the Chinese planes to fly over India; a local humorist has shrewdly welcomed the fact that, by seeking permission, Peking concedes that at least some territory is Indian. India was among the first countries to point out that communist China exists, that it contains a third or more of mankind, that international agreements on nuclear tests or partial disarmament are meaningless without China's participation, and that the U.N. and the U.S.A. are stupid to deny China its proper representation. I cannot help feeling that the teacher is in danger of forgetting the lessons he once gave. I never seek or use private information on public issues; "scoops" are the one thing I do not trade in. But it will not surprise or dismay me one bit if (a) the Chinese leaders offer to halt in New Delhi on their way back and (b) if New Delhi welcomes the offer. Only the Government can decide how long the emergency must last. Meanwhile it has to be recorded that, before leaving for Cairo and Nairobi, the Chinese Prime Minister or Marshal Chen-yi has not casually told reporters that the Chinese army, or frontier guards, have been ordered to throw out the Indians from this place or that. That India is improving her defences is entirely right; the West is equally right in helping India achieve that. Yet India needs to be reminded of another of the lessons she once imparted with great eloquence: that the policy of speaking from a position of strength is barren. It should not be necessary to be more explicit. There may well be contacts between the Indian and Chinese delegations in Cairo or Nairobi; whether the leader chosen by India for Nairobi and Zanzibar was the best available for a difficult task is another matter.



THE ATTENDANCE OF PRESIDENT DE GAULLE AT THE funeral of President Kennedy was, I suspect, nothing more than a personal tribute. It was certainly not an affirmation of respect and loyalty to the Atlantic alliance of which Mr. Kennedy was the head. I only hope that President Johnson used the opportunity to become acquainted with de Gaulle, because it seems to me that of all the legacies he has inherited, the French President represents by far the least enviable. And that includes even the issue of civil rights. It has been clear for some time that only the strength of President Kennedy's personality was keeping France in the western alliance. Now, anything could happen; with France drawing away from the United States, and unable to find consolation with the Soviet Union because that country is courting American support in her quarrel with China, the obvious people to whom the French could turn now are the Chinese. President de Gaulle served notice a short time ago that he was anxious to interest himself in south-east Asia; I thought then that this could only have one possible interpretation. It has been rumoured recently that France is thinking of recognising the Peking Government. That would probably lead to a reopening of trade between the two countries, especially in wheat, if Dr. Erhard refuses to go along with the French on the Common Market agricultural policy. So a drift towards China on the part of de Gaulle's foreign policy would seem to be imminent, unless President Johnson can head it off, which I do not think he can, if only because his political position during the remaining year to the next Presidential election is likely to be too delicate to permit of bold initiatives. I, for one, would hate to see even a mild friendship blossom between France and China; there is far too much at stake for us all. Not that I consider continued isolation of the Chinese to be an unmitigated blessing; far from it. But I do think that if China is to have a window on the world it would be better for everybody if the United Nations were to supply it, not a Power as obsessed with national self-assertion as France is at the moment.

A FEW MONTHS AGO I OUTLINED HERE A LITTLE scheme of my own for preserving the Abu Simbel temples on the Nile. It has not been adopted, which is scarcely surprising because it was probably unsound. The fact is that I know next to nothing about these things, except that they cost money. The one that has been accepted will absorb $32 million, not including a safety margin of another $4 million. I was looking at a list of contributors the other day which I am now hoping is not a correct one. This is because India's name is on it; to the tune of $590,000. I can appreciate why Egypt, although a poor country, is prepared to put up $11.5 million, and why the United States is providing the lion's share at $12 million. But when Britain's contribution is so far only $210,000 and affluent Sweden's only $500,000. I cannot see why India should be prepared to mortgage her meagre foreign exchange resources to this extent. Devotion to the cause of culture is laudable enough, but it could presumably be satisfied just as easily if the money were spent on some of India's own archæological treasures, of which there is certainly no shortage. And I have surely no need to point out that this country could use both the employment created and the tourist revenue it would be likely to attract. But perhaps I have missed the point; maybe the object is really a political one. If so, then without questioning the Government's strategy, I am sorry it should be considered necessary. If Egypt is not sufficiently sympathetic to appreciate that this country is unable to afford costly gestures in a field not directly connected with her immediate survival, then it is doubtful whether she would be capable of being a worthwhile ally in an emergency. I have already written in this diary about the need to preserve

the Abu Simbel temples for posterity, so nobody could doubt my devotion to the general cause. But there must be plenty of money available for such things without India having to stump up. What about the Soviet Union, for example? It is her money which is helping to build the Aswan Dam. I know. But she is not absolved from the moral obligation to contribute something towards preserving what her work is threatening to destroy. Yet I have not noticed Russia's name on the list.

NEW DELHI WILL NO DOUBT CLAIM THAT NAGALAND, sixteenth State of the Indian Union, has come not a day too late—or too soon. If there is any truth in the claim, this must be one of the very rare instances, in all history, of perfect timing. I think the *Observer*, generally sympathetic towards this country, was wrong to champion the cause of Phizo and to question the proposition, *Le Nagaland, c'est indienne*. (If this reminds you of some parallel, let it be noted that many outside India came to think of India *vis-à-vis* Nagaland on those lines, incorrectly in my view.) It should be remembered still that Nagaland's Statehood has been blessed by Phizo's nephew, not Phizo. The manner in which some of the other 15 States have on occasion behaved in face of Central recommendations or directives should make Phizo feel that Statehood is as good as sovereignty, short of applying for U.N. membership; but, raillery apart, the future of the new State will depend entirely on how New Delhi treats it: and New Delhi has reason to be wary. The Press has, so far, been so shut out of Nagaland and the public knows so little about all that has gone on that comment, based on public knowledge, is almost impossible. Points to remember are that many in Nagaland are Christians who, rightly or wrongly, want an English education rather than a Hindi, a point they have in common with many Indian children whose parents are some of the most militant advocates of Hindi and nothing else. Does it mean a special status for Nagaland? Well, it already shares a Governor with another State, as no other State does. Kashmir too is still protected by Article 370. All I know is that Nagaland's integration will not come through rapid Hindi-isation, Hindu-isation or plainsman-isation. Let me warn Delhi that Nagaland may well be the beginning of a problem rather than the end of one, unless New Delhi devises a better mixture of severity and generosity than has been seen so far. Or, do the two mix less well than gin and vermouth?

THE CALCUTTA LIGHT OPERA GROUP AND SOCIETY'S latest production, *The Maid of the Mountains*, did indeed leave a lot to be desired, especially in the choice of cast; nevertheless, last Friday's performance was on the whole good, and, frankly, I enjoyed it. To my mind, in a musical comedy the quality of the music is of first importance, and in this case it was uniformly high—an achievement for which the credit goes chiefly to Bernard Jacob as musical director and conductor of the orchestra. Sheila D'Souza in the title rôle of Teresa, the mountain maid, sang delightfully some numbers which are extremely popular today; and Bob Rosario, as Beppo, apparently sang much better in later performances than he did on the opening night. As for the acting, I thought Arnold Epstein as Baldasarre, the brigand chief and a main character in the play, was rather disappointing; had it not been for Ernani Giambuzzi as Tonio the brigand buffoon, Srithi Banerjee as Tonio's deserted wife Vittoria, and Angus Rotchell (as General Malona, Governor of Santo, who was in near-disgrace for his failure to capture Baldasarre), the play might have flopped. Ernani Giambuzzi and Srithi Banerjee gave a splendid performance, especially towards the end, and brought the whole show back to life. Considering that the C.L.O.G.S. are amateurs, one's admiration for the enthusiasm and hard work which goes into these performances is so much the greater. *The Maid of the Mountains* was fifteenth in the series presented by the Society over the years, and the proceeds of the show are to go to the West Bengal Governor's T.B. Aftercare Fund, a very worthy cause for supporting which the members of the Society deserve full credit.

THE DITCHER

Guide for Investors

SPENCER EARNS LESS, PAYS THE SAME

IN spite of an increase in sales and receipts, the net profit of Spencer and Co. Ltd for the year ended June 1963, has fallen from the previous year's level. But the directors have maintained the total dividend for the year at 18 percent (the same). The net profit for the year amounts to Rs. 11,83,282, after providing Rs. 4,12,740 for depreciation and Rs. 11,75,000 for taxation, compared with the previous year's net profit of Rs. 12,67,432, after providing Rs. 4,06,912 for depreciation and Rs. 10,85,000 for taxation. With the amount of Rs. 10,74,117 brought forward, and with a sum of Rs. 13,484 being the profit on the sale of sundry assets, the total comes to Rs. 22,70,883. Out of this, the interim dividend on A and B preference shares amounted to Rs. 63,703 and Rs. 1,31,999, respectively. The interim ordinary dividend of 6 percent has absorbed Rs. 2,40,000. The proposed final dividend of 12 percent on ordinary shares will absorb Rs. 4,80,000. The final dividend on A and B preference shares accounts for Rs. 64,477 and Rs. 1,33,881, respectively. A sum of Rs. 13,484 is transferred to capital reserve (against Rs. 14,628), Rs. 15,000 is transferred to development rebate reserve (against Rs. 12,500) and general reserve gets Rs. 3,90,910 (against nil). Investment reserve gets Rs. 300,000 (against nil). The balance of Rs. 4,37,429 is carried forward. Sales were higher at Rs. 5,42,18,106, against Rs. 5,08,60,881 in the previous year.

In the Rob Roy Tea Estate, there has been an appreciable increase in the crop during the year at 206,000 kliograms, compared with 176,000 kilograms in the previous year. The price was also higher at Rs. 4.34 a kilogram, compared with Rs. 4.28 a kilogram in the previous year. In hotels, there was an increase in the average daily occupancy and profits were correspondingly higher. Due to the difficulty in obtaining supplies of coke for the carbon dioxide factory, there was a fall in carbon dioxide gas production during the year.

Excellent Results from Air-India

AIR-INDIA has produced excellent results for the year ended March 1963. The performance has been very satisfactory, in that there has been an increase of 16.3 percent in capacity offered, compared with that for 1961-62. The financial results are the best since the inception of the Corporation. Operating revenues have amounted to Rs. 24.53 crores while operating expenses are Rs. 21.07 crores. Hence the gross operating profit has amounted to Rs. 3.45 crores. The net surplus amounts to Rs. 1.35 crores, after providing Rs. 96.93 lakhs for loss on assets sold, Rs. 1 crore for development rebate reserve and Rs. 13.73 lakhs for net interest. The directors have decided to pay a dividend of 5 percent on the ordinary share capital, subject to the approval of the Government. It may be relevant to point out that the investment of the Government in this Company amounts to Rs. 26.82 crores. Out of this, the Government has determined that half the amount should be treated as equity capital and half loan capital carrying interest of 4.5 percent, but this interest has been waived up to 1st October, 1966.

Commenting on prospects, the directors mention that Air-India is still a relatively small member of a large and fiercely competitive international industry, and that most of the factors influencing profits are beyond its control. Nevertheless, among the international carriers it is best able to bear up the vicissitudes and uncertainties inherent in this industry and to benefit from favourable factors in view of its standardised fleet and efficient operations.

The Corporation's ability to increase its profitability depends mainly on the load factors which it is able to achieve. The growing prosperity of several countries which has led to a rapid and continuous growth in international trade and tourism, combined with the present trend towards lower fares, may be expected to enlarge the total market considerably in coming years. Hence higher loan factors are likely to result. The Corporation's ability to secure a legitimate share of the growing market will depend on the continuous expansion of its fleet in step with the growth of traffic in its existing routes and the expansion of its operations to new routes. It is encouraging that the Corporation's net foreign exchange earnings in future are expected to be more than sufficient to pay for any additional aircraft which it may buy. Apart from the foreign exchange question, the total funds required for expansion will largely be covered by earnings retained out of profits and such additional rupee investment as may be provided by the Government.

Ballarpur Paper Maintains Dividend

THE expansion programme of the Ballarpur Paper and Straw Board Mills Ltd has made considerable progress. The erection of one of the new machines taken up in May last has been completed, and it has begun to function since October 1963. The erection of other machines, the paper pulp mill, the recovery boilers and coal boilers are likely to be completed soon. The M.F. machine should start producing by March 1964. The Empacel pulp and paper mills is likely to be completed by the middle of next year.

The profit has fallen from Rs. 63.66 lakhs for 1961-62 to Rs. 47.98 lakhs, after transferring Rs. 7.92 lakhs (against Rs. 7.42 lakhs) to depreciation. The fall has largely been due to rising production costs which have been inflated by higher raw material prices. The cost of essential chemicals has moved up considerably. The increase in the rate of royalty has boosted the cost of raw materials. The price of electric energy has gone up. The increased interest payments amounting to Rs. 12.50 lakhs have largely been due to the expansion programme.

The taxable ordinary dividend of 14.5 percent has been repeated to absorb Rs. 20.73 lakhs. The yield amounts to 8.1 percent at the present price of Rs. 18 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 80,000 (against Rs. 1.20 lakhs), tax reserve Rs. 23.50 lakhs (against a tax provision of Rs. 31.50 lakhs). Dividend equalisation reserve is allocated Rs. 24 lakhs (against Rs. 5 lakhs) and the recommended dividends will be paid out of this reserve. The carry-forward is Rs. 50,902, against Rs. 93,245 brought in. Production rose from 12,786 tons to 13,225 tons, and sales from 12,639 tons to 13,185 tons.

J. K. Steel Raises Dividend

J. K Steel Ltd has produced satisfactory results for the year ended June 1963. The trading profit has risen from Rs. 23.23 lakhs for 1961-62 to Rs. 32.27 lakhs for 1962-63. Depreciation is allocated Rs. 3.19 lakhs (against Rs. 2.77 lakhs) and development rebate reserve Rs. 6,000 (against Rs. 4,700). A sum of Rs. 14.63 lakhs has been transferred to taxation reserve, against a tax provision of Rs. 9.10 lakhs. General reserve absorbs Rs. 15.24 lakhs (against Rs. 6.50 lakhs). The taxable ordinary dividend has been increased from 10 percent to 15 percent, which works out to a return of 8.8 percent at the present price of Rs. 17 a share of Rs. 10 each. The dividend will be paid out of general reserve.

The expansion programme has made satisfactory progress. The electric hoist and chain pulley blocks plant has been installed and will start production soon. Steps have been taken to expand the wire rope project. The Industrial Credit and Investment Corporation of India has sanctioned a loan of Rs. 36 lakhs for the purpose. Orders for the equipment have been given. This project may begin to operate within a year. The Company has obtained industrial licences to expand its cold rolling mills for producing further 4,800 tons a year and to manufacture electric overhead travelling cranes. Although turnover rose from Rs. 1.14 crores to Rs. 1.76 crores, the output has been interrupted by the unsatisfactory supply of raw materials and the shortage of power. The supply of billet has been short while that of skelp has been erratic and unsatisfactory. The Government will soon fix new retention prices of jute bailing hoops, and the Company has asked for an increase in these prices due to rising production costs.

Rights from Central India Spinning

THE directors of Central India Spinning, Weaving and Manufacturing Co. Ltd, popularly known as the Nagpur Mills, have decided to go ahead with the equity issue of Rs. 46.87 lakhs. The proposal approved by the Government and the shareholders had been dropped last year because of the severe slump in the investment market. But now that the financial and capital markets have improved and there has been a revival of confidence, the directors feel that the issue of fresh capital should not be delayed any longer. The Company proposes to issue rights shares at par in the proportion of one new share for each one held. The offer will be made at the appropriate time.

Tata Sons Private Ltd and Sassoon J. David and Co. Ltd have agreed to take up at par such shares and additional shares of the proposed issue as are not taken up by other shareholders towards satisfaction of their loans to the Company. They have also agreed to take up their full quota of new shares which will be offered to them against their holding of about 4 percent of the share capital. Additional equity capital is needed for reducing the Company's debt and to correct partially the disparity in the debt equity ratio and in the ratio of share capital to fixed assets. Besides, funds are also required for purchasing machinery and equipment for rehabilitation of the mills and for improving the profitability of the Company.

Engel India Share Offer

ENGEL India Machines and Tools Ltd has started building a composite factory at Taratala Road, near Calcutta, to manufacture injection moulding machines and moulds required by the plastic industry. Production is expected to begin by the middle of next year. The Company has entered into a technical and financial collaboration with Maschinenfabrik Ludwig Engel K. G. of Austria. The Austrian Company will also subscribe for shares in the Indian Company.

The subscribed capital of Engel India amounts to Rs. 12.50 lakhs, divided into shares of Rs. 10 each. The directors and their friends have subscribed for shares worth Rs. 12.41 lakhs. The Company is now offering 375,000 ordinary shares of Rs. 10 each for subscription. The Austrian Company will subscribe for 75,000 shares, and 50,000 shares will be allotted to companies and other persons connected with the Indian plastic industry. The remaining 250,000 shares are being offered to the public for subscription at par. (Fuller details have been published on a later page in this week's issue of *Capital*.) The list opens on 16th December. 1963 Union Carbide India Ltd is the sole selling agents of the Company. The board of directors consists of reputed Indian and foreign business men. They are Mr. Ranadeb Chaudhuri, Mr. Ludwig Engel, Mr. Henry Joshua Silverston (alternate to Mr. Engel), Mr Cattavoor Shanmugam Loganathan, Mr. Kishore Dharamsey Khatau, Maharajkumar Pradeep Chandra Bhanj Deo

Thermocole®

GETS AROUND PIPES AT GLAXO

The pipes at the GLAXO Fine Chemical Factory live through the most exacting conditions with a sense of security. No wonder. THERMOCOLE protects them against temperature variation and moisture—the scourge of all low-temperature piping.

There are many organisations in India that know and use THERMOCOLE for vessel and pipe insulation and GLAXO is one of them.

THERMOCOLE is foamed polystyrene—the lightest rigid insulating material in the Industry. It has a very low thermal conductivity and is resistant to moisture. Available in handy, close-fitting sections, THERMOCOLE is the ideal material for pipe insulation.

The Trade Name—THERMOCOLE is your guarantee of Quality for Expanded Polystyrene

Blue Mountain Estates Pays the Same

FOLLOWING a rise in the tea and coffee crops for the year ended June 1963, the profits from the plantations of Blue Mountain Estates and Industries, have increased substantially to Rs. 15.5 lakhs from the previous year's Rs. 11.5 lakhs. But the net profits for the year are much lower than those of the previous year, due to a larger provision for taxation and depreciation. The depreciation for the superphosphate factory alone accounted for Rs. 6,85,000. The net profit for the year is Rs. 5 87,848, after providing Rs. 9,03,314 for depreciation (against Rs. 2,03,276), and Rs. 6,50,000 for taxation (against Rs. 4,24,000). This compares with the previous year's net profit of Rs. 8,18,823. With the amount of Rs. 56,928 brought forward, and with a transfer of Rs. 2,50,000 from dividend equalisation reserve, the available surplus comes to Rs. 8,94,776. Out of this, the directors have recommended a dividend of 10 percent (the same). This dividend will absorb Rs. 8,40,000, leaving a balance of Rs. 54,776 which is carried forward.

The tea crop for the year amounted to 853,764 kilograms, against 716,244 kilograms. The cost of production was lower at Rs. 3.65 a kilogram, against Rs. 4.12 a kilogram. The sale price was Rs. 4.81 a kilogram, against Rs. 4.84 a kilogram. The coffee crop amounted to 7,99,579 kilograms, against 612,417 kilograms. The estimated tea crop for 1963-64 is 905,000 kilograms at a cost of Rs. 3.72 a kilogram. The coffee crop is estimated at 5,20,000 kilograms. As for the development programme, the directors' report says that the Company is awaiting a loan from the Tea Board for extending nearly 200 acres of tea in Nilgiri Estates during the next five years. Due to intensive cultivation, the crop has increased by about 250,000 kilograms during the last two years, and it is expected to reach 1.5 million kilograms by 1970. The directors are also intending to extend 100 acres of coffee and replant 30 acres of coffee with tea during the next two or three years.

Referring to the fertiliser factory, the report says that the factory went into production in the last week of August 1962, and the factory produced 20,500 tonnes of superphosphate and sold about 11,000 tonnes. The factory also made up and marketed about 2,000 tonnes of mixtures. The chairman says that fertiliser sales would have been higher had the monsoon not failed in the south.

Ugar Sugar Cuts Dividend

THE working results of the Ugar Sugar Works Ltd for the year ended June 1963 show an all-round improvement over the previous year, in that production, sales and the gross profit are all higher. The Company crushed 138,000 tonnes (against 135,000 tonnes) of cane producing 176,000 bags (against 169,000 bags) of sugar at an average recovery of 12.68 percent, against 12.53 percent in the previous year. Sales increased by about 40 percent from Rs. 1.64 crores to Rs. 2.29 crores. The increase in the gross profit, however, was much smaller, around 10 percent, from Rs. 27.41 lakhs to Rs. 30.04 lakhs. The profit margin was affected by higher manufacturing costs. But in spite of the Company's improved performance, the dividend has been drastically reduced from 12 percent to 6 percent.

The dividend cut has been necessitated by the fall in the net profit from Rs. 8.43 lakhs to Rs. 5.14 lakhs because of larger provision for depreciation and taxation. Managing agents receive Rs. 2.12 lakhs, against Rs. 2.10 lakhs, provision for depreciation is higher at Rs. 7.29 lakhs, against Rs. 5.88 lakhs and taxation accounts for Rs. 15.49 lakhs, against Rs. 11 lakhs. The tax liability is higher because the Company has had to provide Rs. 4.11 lakhs for super profits tax for two years, 1961-62 and 1962-63. The directors state that the Company lost Rs. 1.52 lakhs on sugar export and that it had to spend Rs. 6.59 lakhs more on purchased cane. Out of the net profit of Rs. 5.14 lakhs, the directors have set aside Rs. 5.22 lakhs (against Rs. 1.14 lakhs) for development rebate reserve, leaving a surplus of Rs. 1.92 lakhs, against Rs. 7.29 lakhs.

Including Rs. 1.49 lakhs, being balance of the profit brought forward from the previous year, excess provision for bonus and cane cess and transferring Rs. 40,680 from dividend equalisation reserve, the disposable surplus amounts to Rs. 3.81 lakhs. No provision has been made for capital reserve which received Rs. 1.83 lakhs in the preceding year. The preference dividend absorbs Rs. 1.20 lakhs (against Rs. 1.65 lakhs) and equity dividend Rs. 2.33 lakhs (against Rs. 4.76 lakhs), leaving a balance of Rs. 23,749 to be carried forward. The Company proposes to increase its capacity to 2,000 tonnes a day, and it has also chalked out a cane development programme. The Company's industrial alcohol plant was inaugurated in April 1963.

Godavari Sugar Earns More

DESPITE an increase of about 33 percent in the gross profit from Rs. 79.07 lakhs to Rs. 105.42 lakhs, the Godavari Sugar Mills has reduced the dividend for the year ended May 1963 from 20 percent to 10 percent. The reduced dividend is, however, on the increased capital of Rs. 1 crore, against Rs. 60 lakhs in the preceding year. The cut in the dividend has been necessitated by the heavy fall in the net profit because of the enormous increase in the tax liability. The directors have provided Rs. 36 lakhs for income tax, Rs. 34 lakhs for agricultural income tax which includes Rs. 17 lakhs for previous years and Rs. 15 lakhs for super profits tax for 1961-62 and 1962-63, making a total of Rs. 85 lakhs, compared with to Rs. 34 lakhs in the preceding year. After providing Rs 10.25 lakhs (against Rs. 9.47 lakhs) for depreciation, the net profit amounts to a mere Rs. 3.81 lakhs, against Rs. 30.60 lakhs in 1961-62. With Rs. 2.38 lakhs brought forward from the previous year, adding Rs. 4 lakhs being provision for bonus recredited, Rs. 9.50 lakhs transferred from general reserve and Rs. 12,203 being unclaimed salaries, the disposable surplus amounts to Rs. 19.82 lakhs.

From this, the directors have provided Rs. 6.70 lakhs (against Rs. 5.43 lakhs) for bonus pertaining to the previous year, Rs. 1.22 lakhs (against Rs. 1.33 lakhs) for development rebate reserve, Rs. 25,000 (the same) for gratuity, Rs 1.45 lakhs for preference dividend and Rs 10 lakhs (against Rs. 12 lakhs) for ordinary dividend. After making these appropriations, there remains a surplus of Rs. 18,849 to be carried forward. The directors state in their report that the distillery in Captainganj worked intermittently due to the shortage of coal and molasses. The Company's new distillery plant which is under erection is expected to go into production in early 1964. The Company proposes to undertake the manufacture of butyl alcohol and butyl acetate in Barabanki (U.P.) in collaboration with a French firm. The Government has agreed to sanction the import of equipment worth Rs. 68 lakhs under French credit. Steps are being taken to implement the project at an early date.

Deccan Sugar and Abkhari Repeats

A SUBSTANTIAL rise in sales and profits and the maintenance of equity dividend at 18 percent, feature the trading results of the Deccan Sugar and Abkhari Co. Ltd for the year ended May 1963. The net profit for the year amounts to Rs. 12,17,598, after providing Rs. 7,70,947 for depreciation and Rs 16,82,923 for taxation. This compares with the previous year's net profit of Rs. 8,83,335, after providing Rs. 6,81,338 for depreciation and Rs. 10,53,449 for taxation. The provision of Rs. 16,82,923 for taxation includes Rs. 2,55,000 for super profits tax. The surplus brought forward from the previous year is Rs. 1,02,809 from which is deducted a sum of Rs. 100,000 being special appropriation to general reserve (against Rs. 100,000), leaving a balance of Rs. 2,809, which together with the profit of the year, amounts to Rs. 12,20,407.

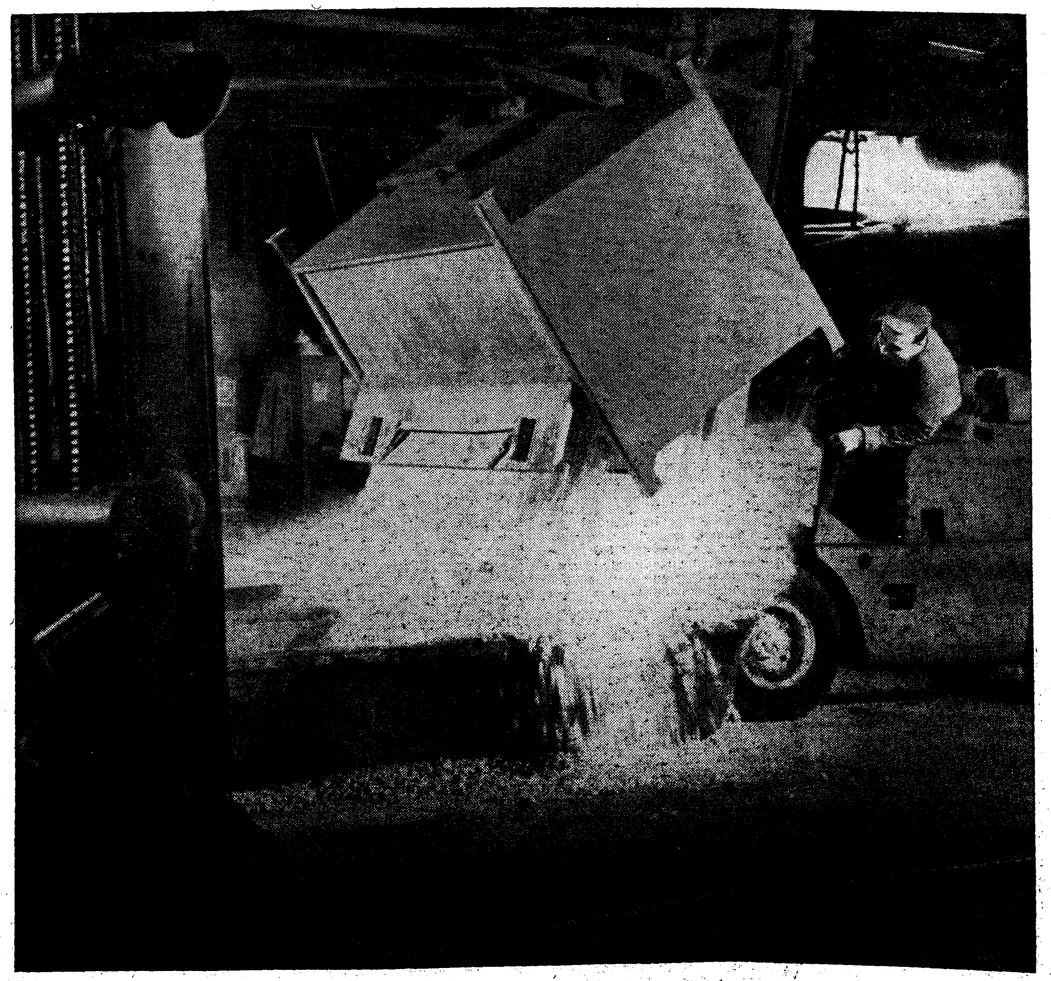
Out of this, development rebate reserve gets Rs. 1,80,000 (against Rs. 53,000), and rehabilitation reserve Rs. 2,50,000 (against nil). The interim preference dividend at 4.55 percent has absorbed Rs. 31,850, and the final preference dividend of 4.55 percent accounts for Rs. 31,850. The interim dividend at 6.5 percent on the ordinary shares has absorbed Rs. 2,58,960. The proposed final dividend of 11.5 percent accounts for Rs. 4,58,160. The balance of Rs. 9,587 is carried forward.

At the Samalkot factory, the 1962-63 season started on 29th November, 1962, and finished on 8th April, 1963. During this period, 105,993 tonnes of cane were crushed and 11,757 tonnes of raw sugar were produced at a recovery of 11.03 percent (raw). The equivalent recovery in terms of white sugar is 10.66 percent. This compares with 112,319 tonnes of cane crushed and 11,672 tonnes of sugar produced at a recovery of 10.39 percent during the previous season. It is reported that this is the first time that the factory has produced raw sugar, all of which was for export.

At the Pugalur factory, the 1962 special season started on 22nd September, 1962, and finished on 30th October, 1962. During this period, 30,508 tonnes of cane were crushed and 2,865 tonnes of sugar were produced at a recovery of 9.39 percent, the relative figures for the comparable previous season being 64,070 tonnes of cane, 5,886 tonnes of sugar and 9.19 percent recovery. The main season for 1962-63 started on 7th December, 1962, and finished on 29th April, 1963. A total of 139,131 tonnes of cane were crushed and 14,672 tonnes of sugar were produced at an average recovery of 10.55 percent, the relative figures for the comparable previous season being 134,654 tonnes of cane, 14,710 tonnes of sugar and 10.92 percent recovery. The lower production in the 1962 special season was due to the restriction on production imposed by the Government during the 1961-62 sugar year.

Cauvery Sugar and Chemicals Maintains

ALTHOUGH the net profit (subject to taxation) of Cauvery Sugar and Chemicals Ltd for the year ended June 1963 is lower than that of the previous year, the profit, available after tax provision, is higher because of the smaller provision for taxation. The directors have maintained the ordinary dividend at 6 percent. The pre-tax profit for the year amounts to Rs. 10.55 lakhs, after providing Rs. 5.41 lakhs for depreciation. The previous year's profit was Rs. 11.18 lakhs, after providing Rs. 4.87 lakhs for depreciation. Out of this, tax provision amounts to Rs. 1.31 lakhs, including a transfer of Rs. 30,000 to taxation equalisation reserve. This leaves a net after-tax profit of Rs. 9.24 lakhs (against Rs. 4.83 lakhs). With Rs. 1.682 brought forward from the previous year, the total available for appropriation comes to Rs. 9.26 lakhs. Out of this, development rebate reserve accounts for Rs. 1.27 lakhs (against Rs. 14,000). General reserve gets Rs. 1 lakh (against nil). Preliminary expenses written off amounted to Rs. 3 lakhs (against Rs. 1 lakh). The preference dividend at 7.8 percent amounts to Rs. 1.56 lakhs. The proposed ordinary dividend will absorb Rs. 2.40 lakhs. The balance of Rs. 3,114 is carried forward.



The directors state in their report that the 1962 special season had to be postponed as the quota of sugar production fixed for the factory for the 1961-62 sugar year was achieved at the end of 1961-62 main season itself. So crushing started on 1st November, 1962, and ended on 8th April, 1963. During this period, 117,980 tonnes of sugarcane were crushed and 10,657 tonnes of sugar produced at an average recovery of 9.03 percent. This compares with 209.042 tonnes of cane crushed and 19,174 tonnes of sugar produced at an average recovery of 9.17 percent during the previous season. The lower crush was due to the cut imposed by the Government of India in the 1961-62 sugar year. Total capital, reserves and surplus excluding taxation equalisation reserve amounted to Rs. 75.45 lakhs as at 30th June, 1963, against Rs. 73.17 lakhs in the previous year. No provision for super profits tax for the accounting years 1962 and 1963 has been made as it is considered that there will be no liability on this account. Total sales for the year amounted to Rs. 2.03 crores (against Rs. 1.69 crores).

Kaycee Industries Earns More

KAYCEE Industries Ltd shows an appreciable improvement in its working results for the year ended June 1963. Sales have increased by about 34 percent from Rs. 39.47 lakhs to Rs. 82.80 lakhs, and the gross profit has shot up by nearly 85 percent from Rs. 3.19 lakhs to Rs. 5.92 lakhs. The working results would have been still better but for the setback in the sales of products manufactured in Pakistan from Rs. 14.66 lakhs to Rs. 10.92 lakhs. After providing Rs. 99,641 (against Rs. 77,931) for depreciation, Rs. 30,703 (against Rs. 9,354) for development rebate reserve and Rs. 2 lakhs (against nil) for taxation, there is a balance of Rs. 2.61 lakhs which has been adjusted against the loss of Rs. 4.96 lakhs brought forward from the previous year, leaving a deficit of Rs. 2.35 lakhs to be wiped out. The Company reports an increase in the production of rotary switches and water meters manufac-

Policyholders' Servicing and Research Institute (PSRI) offers Special Policy Servicing and Assistance in obtaining benefit of the impending, "Own Your Home Scheme" with details to owners of new policies of sizeable amount.

THEY ROLL LONGER AT LESS COST ON TIMKEN TAPERED ROLLER BEARINGS

The fork lift truck is a crucial link in profitable production. That's why so many manufacturers—and buyers—of lift trucks specify Timken tapered roller bearings. They know that Timken bearings are precision made of the finest case-hardened, nickel-rich steel to keep rolling trouble-free under the toughest conditions. And they're tapered to take loads from all directions and roll true with practically no friction. Engineers of The Timken Roller Bearing Company have worked with all industries where wheels and shafts turn to make all kinds of machines more dependable, more productive, more saleable. If you're designing machines, let Timken bearing engineers show you how their bearings can cut assembly costs and maintenance costs – give longer bearing life and top performance.

New Swadeshi Sugar Fares Well

THE preliminary report on the working of the New Swadeshi Sugar Mills for the year ended June 1963, indicates a substantial improvement over the previous year's performance although the dividend has only been maintained at 29 percent. The gross profit has gone up by as much as 76 percent from Rs. 11.55 lakhs to Rs. 20.40 lakhs. Allocation to development rebate reserve has been reduced from Rs. 2.82 lakhs to Rs. 11,544 but the directors have set aside Rs. 5 lakhs (against nil) for renovation and renewal reserve. The provision for depreciation is unchanged at Rs. 2.80 lakhs, but taxation accounts for a substantially larger amount of Rs. 8.30 lakhs, against Rs. 2.20 lakhs. General reserve gets Rs. 21,757, against nil. After providing for the proposed dividend which absorbs Rs. 3.94 lakhs (the same), there remains a surplus of Rs. 16,111 to be carried forward, against Rs. 12,698 brought in. The Rs. 100-paid share of the Company is quoted nominally around Rs. 350.

Pesticides to Expand Further

PESTICIDES Ltd, which started production in January 1963 and has already reached rated capacity concerning B.H.C. technical malathion technical, zinc phosphide, copper oxychloride technical and suprous oxide, proposes to carry out a substantial expansion of the existing capacity and also take to new lines of production. The present capacity of the B.H.C. technical is to be stepped up from 5 tons to 7.5 tons a day and that of the malathion plant from 100 kilograms to 300 kilograms a day. The expanded capacity is expected to be achieved by about the middle of next year. In addition, the Company has obtained industrial licences to manufacture annually 75 tons of lindane technical and 3,000 tons of ethylene dichloride. The organo mercurial plant and lindane plant are likely to be commissioned by about the middle of 1964.

The implementation of the expansion of capacity and commissioning of new plants will, of course, be subject to getting the requisite licences for the import of capital goods and raw materials wherever necessary. The Company expects to get import licences shortly. The entire expansion programme including the manufacture of new items is estimated to cost about Rs. 30 lakhs, of which the foreign exchange component is estimated around Rs. 10 lakhs. The Company proposes to meet the additional expenditure from its own resources and through loans. The Company's turnover in 1963, it is expected, will be around Rs. 25 lakhs and the turnover is likely to increase to around Rs. 65 lakhs next year. The directors are hopeful about declaring a maiden dividend for 1964. The Rs. 10-paid share of Pesticides is currently quoted around Rs. 8.16.

Waterfall Estates Repeats

ALTHOUGH the dividend has only been maintained at 10 percent, the working of Waterfall Estates Ltd during the year ended June 1963, shows a considerable improvement over the previous year's results because of the record tea crop and realisation of higher prices from the sale of tea. The Company's gross profit has risen by about 38 percent from Rs. 14.19 lakhs to Rs. 19.66 lakhs. The total tea crop set a new record at 828,000 kilograms, compared with 705,000 kilograms in the previous season. The increase in the all-in cost from Rs. 3.18 a kilogram to Rs. 3.27 a kilogram was more than offset by the increase in the average net price realised from Rs. 3.98 a kilogram to Rs. 4.20 a kilogram. The coffee crop, however, was lower at 513,000 kilograms, against 590,000 kilograms.

From the year's gross profit of Rs. 19.66 lakhs, the directors have provided Rs. 2.58 lakhs (against Rs. 2.20 lakhs) for depreciation, Rs. 24,800 (against Rs. 49,908) for development rebate reserve, Rs. 8 lakhs (against Rs. 5.08 lakhs) for taxation and Rs. 2.50 lakhs (against nil) for general reserve. Preference and ordinary dividends absorb Rs. 5.04 lakhs, leaving a sum of Rs. 81,380 to be carried forward, against Rs. 1.13 lakhs brought in.

The chairman, Mr. D. C. Kothari's speech holds out the prospect of better results for the current year. The tea crop is estimated around 900,000 kilograms at an all-in cost of Rs. 3.26 a kilogram, and the coffee crop is placed at 525,000 kilograms at an all-in cost of Rs. 2.90 a kilogram. During 1962-63, the Company received 2,800 tonnes of coffee for curing and the target for the current year is 3,000 to 3,500 tonnes. If all goes well, the tea crop is likely to reach the figure of 1.5 million kilograms before 1970. Due to the extension of tea acreage and intensive cultivation, the tea crop has been showing a steady increase over the past three years. With a view to relieving heavy congestion in the factory, it is proposed to construct another factory at a cost of Rs. 10 lakhs. This factory will produce orthodox teas while the present factory will manufacture C.T.C. teas. A phased programme extending to five years for planting some 200 acres of jungle in Waterfall Estate and extension of coffee area by 80 acres in Keshvurthy Estate is proposed to be taken up. The Rs. 2-paid share of the Company is currently quoted around Rs. 2.45.

Neelamalai Tea and Coffee Earns More, Pays Same

WITH a rise in the tea and coffee crop, Neelamalai Tea and Coffee Estates reports a higher profit for the year, ended June 1963. The average price realised for tea was also higher than that of the previous year. But the directors point out that although there has been an appreciable increase in the crop, the benefits accruing from it have been neutralised to a large extent by higher production costs. The pre-tax profit for the year amounted to Rs. 8,78,001.66, compared with the previous year's profit of Rs. 7,91,002. With the amount of Rs. 17,771.46 brought forward, the total comes to Rs. 8,95,773.12.—Out of this, the directors have provided Rs. 4,95,000 for taxation (against Rs. 400,000).

The 5 percent dividend on preference shares (gross 5¼ percent) amounts to Rs. 99,000. The proposed equity dividend at 7½ percent (the same) amounts to Rs. 2,70,000. A sum of Rs. 11,500 is transferred to development rebate reserve (against Rs. 20,550). The balance of Rs. 20,273.12 is carried forward. The tea crop for the year amounted to 9,84,000 kilograms (against 822,585 kilograms). The cost of production has risen to Rs. 3.44 kilogram from Rs. 3.25 a kilogram in the previous year. The price realised was Rs. 5.22 a kilogram (against Rs. 5.15). The coffee crop amounted to 77,062 tonnes, against 44,043 tonnes. The coffee payment for the season 1961-62 amounted to Rs. 2.26 a point. The crop for the year has been valued at Rs. 2.15 a point.

The directors' report says that recently, the Mysore State Government has brought an amendment to the Agricultural Income Tax Act, by which the sale proceeds of timber in general has become liable to agricultural income tax with retrospective effect. Last year, the Company deducted the sale proceeds of trees from the value of land as the directors were then advised that there might not be any liability to tax. But in view of the recent amendment to the Agricultural Income Tax Act, the directors say that the position will have to be reviewed. The estimated tea crop for 1963-64 is put at 880,000 kilograms and the coffee crop at 150 tonnes.

B. R. Cotton Resumes Dividend Payment

B. R. COTTON Mills Ltd has not only cleared preference dividends which had been in arrears since 1954-55, but has also declared a dividend of 9 percent for the year ended March 1963. All this has been made possible by the profit of Rs. 52.14 lakhs realised on sale of fixed assets to the Morarjee Gokuldas Spinning and Weaving Company. The trading results of B. R. Cotton for 1962-63 are, in fact, very disappointing. Sales are down from Rs. 2.205 crores to Rs. 1.655 crores and the Company has incurred a loss of Rs. 10.53 lakhs, against a profit of Rs. 13.70 lakhs in 1961-62. The directors have had to provide a sum of Rs. 8.39 lakhs for the payment of bonus to workers for 1959 to 1962, leave wages, gratuity, etcetera.

A sum of Rs. 1.75 lakhs has been set aside for payment of claims for non-fulfilment of export contracts. Other allocations include depreciation Rs. 13,013 (against Rs. 4.19 lakhs), wealth tax for 1956-67 Rs. 31,477, income tax penalty Rs. 2.10 lakhs, reserve for doubtful debts Rs. 1.77 lakhs, accumulated preference dividends Rs. 7.02 lakhs and equity dividend Rs. 3.60 lakhs. After making certain adjustments, a sum of Rs. 22.76 lakhs is being carried forward, against Rs. 8,291 brought in. The directors state in their report that the balance of the first mortgage debenture liability, amounting to Rs. 10.14 lakhs, including interest up to the date of payment, has been satisfied in full and the debentures have been cancelled. The remaining block assets of the Company are now free of all encumbrances.

In view of the losses and carry forward of depreciation from the previous years, no provision has been made for taxation. The arbitration proceedings between the sole selling agents and ex-sole distributors of the Company are still in progress. However, the sole agents have informed the Company that the stocks of cloth consigned at Rs. 5.93 lakhs have been sold for Rs. 5.03 lakhs. And accordingly, due adjustment was made in the year's accounts. The Rs. 100-paid share of the Company is currently quoted around Rs. 102.

Jam Mills Skips Again

IN spite of a modest increase in the sales from Rs. 1.34 crores to Rs. 1.39 crores, the gross profit of the Jam Shri Ranjitsinghji Spinning and Weaving Mills Co. Ltd for the year ended June 1963, has suffered a sizable setback from Rs. 7.20 lakhs to Rs. 4.30 lakhs. The directors have been obliged to skip the dividend once again. The profit margin has been squeezed by the increased cost of cotton and stores, increased dearness allowances and adverse trading conditions without any increase in the prices of cloth. Besides, production was affected by the installation of machinery and electrical equipment. The directors are, however, hopeful of better results for the current year. The pattern of production of cloth has been changed from coarse and medium varieties to higher medium varieties and also from grey to bleached dyed and printed varieties for which there is a growing demand in the market.

The Company has been able to get power supply from the Koyna project from April 1963, and the mills have been running completely on electricity since June. This is expected to result in a substantial saving in power cost from the current year. Out of the year's gross profit of Rs. 4.30 lakhs, the directors have provided Rs. 2.01 lakhs for depreciation for 1958-59 and bonus of Rs. 62,080 for the year 1960, and the balance of the profit amounting to Rs. 1.67 lakhs is being used to reduce the deficit brought forward from Rs. 4.95 lakhs to Rs. 4.28 lakhs. The arrears of depreciation and development rebate are placed at Rs. 8.57 lakhs. Additions made to fixed assets during 1962-63 amounted to Rs. 16.58 lakhs, of which electrical equipment and installation accounted for Rs. 8.37 lakhs.

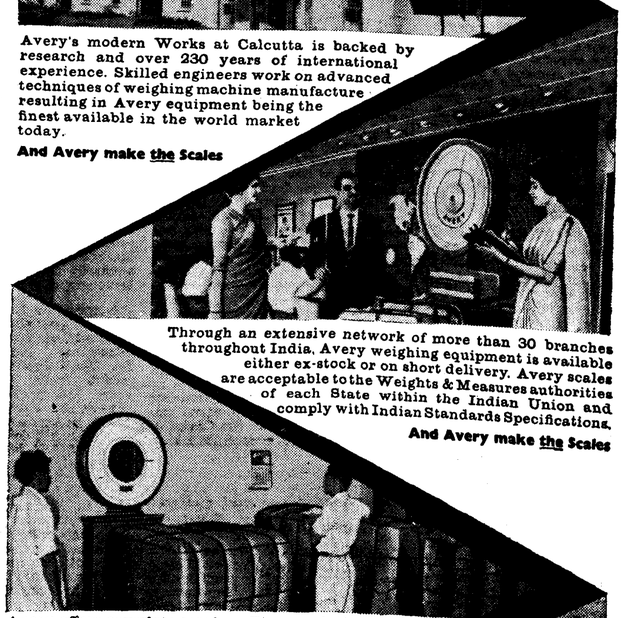
New Capital Issues

FOUR companies have been authorised to raise capital amounting to Rs. 1.38 crores. Two are issuing equity shares, and two equities plus preference shares. One is offering all its new capital to the existing shareholders on rights basis and another part of it on a rights basis. Two are offering part of their shares to the public through prospectus. In all cases, the consent of the Controller of Capital Issues is valid for 12 months. The following are the details:

Raj Prakash Spinning Mills Ltd is to issue capital of Rs. 30 lakhs in shares of Rs. 100 each—Rs. 25 lakhs equity and Rs. 5 lakhs in 9½ percent preference shares—for cash at par. Of these, equity shares of the value of Rs. 15 lakhs and the entire preference shares will be offered to the public by prospectus. The proceeds will be used in the establishment of a spinning mill with a capacity of 12,000 cotton yarn spindles.

Wyman-Gordon India Ltd, Bombay, is issuing further capital of Rs. 25 lakhs divided into 25,000 equity shares of Rs. 100 each for cash at par, to be issued to the existing shareholders on rights basis. Out of this, shares of the value of Rs. 12.50 lakhs will be issued to Wyman-Gordon Company of the U.S.A. The proceeds of the issue will be used for financing the expansion of the forge plant.

Gammon India Ltd, Bombay, is to issue further capital of Rs. 73 lakhs consisting of Rs. 23 lakhs divided into 230,000 equity shares of Rs. 10 each on rights basis in the ratio of one share for every five held for cash at a premium of Rs. 1.50 a share and Rs. 50 lakhs divided into 50,000 9.3 percent redeemable preference shares of Rs. 100 for cash at par to be issued to the public by prospectus. The proceeds of the issue will be used for carrying on the business as civil engineers and contractors.



Sri Anjaneya Cotton Mills (P) Ltd, Devangere (Mysore State), is to issue further capital of Rs. 10 lakhs, divided into 200 equity shares of Rs. 5,000 each for cash at par to be subscribed privately by the directors and their friends. The proceeds will be used for purchasing textile machinery.

BANKING AND COMPANIES BILLS STILL WORRY LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has closed in a hesitant mood during the past week. The earlier shake-out was due to nervous long liquidation, combined with bear pressure. Considering the several shocks Lyons Range has had to face, its resilience is remarkable. Sentiment was shaken by the sharp fall in Wall Street following the assassination of President Kennedy. The introduction of several economic Bills in the Lok Sabha last week has caused nervousness. The proposed amendments to banking and company laws, in particular, have disturbed confidence. It is feared that the severe restrictions proposed on private banks will interfere with the flow of credit to trade and industry. Anyway, the prospect of a bigger supply of bank credit to the stock market is considered remote under the present circumstances.

Lyons Range is worried by one important provision of the Companies (Amendment) Bill. It relates to the loans given to companies by the Government and financing institutions like the L.I.C., I.F.C., N.I.D.C., I.C.I.C.I. and international and Commonwealth financial institutions. It is proposed to empower the Government to convert its loans to a company into shares of the latter at will. If the loans can be converted into shares, the control or ownership of a company may easily pass into the hands of the Government. It is likely that several companies will, therefore, be chary of taking loans from the Government. Since corporate profitability has, by and large, been restrained by the Government's policies, the danger is that modernisation, expansion and diversification of activities will suffer due to the shortage of funds.

The stock market has given little attention to the move to set up a unit trust in the public sector. Since it is likely to function in a stereotyped way like other Government undertakings, it may not contribute to the revival of confidence in the capital market. It is generally felt that the benefits of unit trusts could be more pronounced if they are also allowed in the private sector.

There has been a moderate recovery towards the close due to replacement purchases and short-covering. Wednesday's clearing passed off smoothly. There has been little change in carry-forward charges. Operators are, nevertheless, reluctant to extend their commitments for the time being. There is a general inclination to wait until the Central Finance Minister makes his statement on economic affairs in the Lok Sabha. It is believed that he may announce fresh incentives to promote economic growth. Whether he will indicate his intention to modify, if not scrap, the super profits tax is anybody's guess. Anyway, the shake-out has done a lot of good in that the technical position of the market has improved. Whether the present level of prices has discounted all unfavourable developments is difficult to say. The near-term trend is likely to remain uncertain.

Indian Iron have declined considerably and sentiment has weakened due to discouraging production figures of the Company for November. The output of pig iron has declined from 81,704 tons in October to 76,696 tons in November. The production of steel ingots has fallen from 85,840 tons to 81,595 tons and that of salable steel from 76,520 tons to 64,682 tons. Despatches of salable steel have been smaller at 63,617 tons, against 73,051 tons. The managing agents of the Company attribute the decline in the production of pig iron to the fact that one furnace has been put out for relining.

Engineering shares have fallen, although the closing prices show a modest recovery. Guest, Keen, Williams, Texmaco, Jessop, Burn, Indian Standard Wagon, and Kumardhubi have been transacted. Britannia Engineering have been maintained. J. K. Steel have gained on paying a bigger ordinary dividend.

Turnover in miscellaneous shares has declined and prices have generally slipped back due to the absence of fresh support. Although clearing scrip have recovered slightly towards the close, they show considerable losses over the past week. Union Carbide have been steady on prospects of a rights share issue in the proportion of three new ordinary shares for every seven held. The Controller of Capital Issues will decide at what price the new shares are to be issued.

Britannia Biscuits have spurted sharply on favourable corporate rumours. Goodyear India have been maintained on reports of bigger production. Interest has been taken in Angelo Brothers. India Steamship have reacted on pressure. Among new scrip, attention has centred on Hindustan Aluminium, Hindusthan Twyfords, and India Carban. Electric company shares have been neglected, but stray business in Calcutta Electric has been done.

Bank shares have been sold. United Commercial and United Bank have been transacted. General insurance shares like Ruby General have been depressed on the prospect that the L.I.C. will enter this field of business early next year. Paper shares have lost on balance, but attention has generally been concentrated on Orient, India Paper Pulp, Seshasayee and Sirpur. Ballarpur have been maintained on producing good results, although the ordinary taxable dividend of 14.5 percent has been repeated.

Sugar shares have been offered freely without attracting support. The prospect of an increase in the price of the commodity has been ignored by investors. Dyer Meakin Breweries have been an exception since the Company is mostly concerned with producing alcohol. Cotton mill shares have been quiet. J. K. Rayon have moved both ways. Elgin have been steady on prospects of a bonus issue. Interest has been shown in Dunbar, Bowreah and Jay Shree Textiles.

Jute shares have moved down in sympathy with the general trend. The investors have been disturbed by the sluggish overseas enquiries for gunnies. Birla, Champdany, Anglo-India, New Central, Union, Northbrook, India and Ganges have lost on balance. Kamarhatty and Kanknarrah have been about steady on declaring taxable interim ordinary dividends of 5 percent each. Coal shares have lacked interest and stray business in Burrakur, Central India and Equitable has been transacted. Turnover in tea shares has been small and fluctuations have been narrow. In Assam group, Grob. Tezpore and Betjan have attracted attention. Among Dooars gardens, Hasimara and Birpara have been steady. In Darjeeling group, Margaret's Hope have been transacted.

Government securities have been steady. Support has been extended to short- and medium-dated stocks. The 3 percent Conversion loan 1963 is quoted at Rs. 65.85. Selected preference shares have been favoured.

Bombay

INCENTIVES HOPED FOR FROM T. T. K.

LITTLE INTEREST IN UNIT TRUST

Wednesday Evening.

THE Bombay stock market has started the new account on Monday on a slightly steadier tone. The earlier nervousness has abated considerably, but the shake-out has helped improve the technical position. Dalal Street has been disturbed by the bearish implications of the proposed amendments to the company and banking laws. The decision to form a unit trust in the public sector has been coldly received, as it is not likely to be of much help to

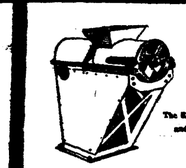
Rotorvanes GIVE YOU A POWERFUL MECHANIZED GRIP ON tea

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine.



Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.

The Rotorvane will help you make good tea.

The Portable Intermediate Feed enlarges feed to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

PORT ENGINEERING WORKS LTD.
Secretaries & Tre

the capital market under the present circumstances.

The corporate news has not been favourable. Talk of nationalising the motor-car industry in order to reduce the prices of motor-vehicles has induced pressure in motor-vehicle shares. Cotton mill interests are worried because the Government is not keen on increasing cloth prices for the time being. Sentiment has, nevertheless, improved towards the close due to replacement purchases. Bears have also begun to cover their open positions in view of the general belief that the Central Finance Minister may indicate fresh incentives for economic growth in his forthcoming statement on the economic situation in the Lok Sabha.

Tata Steel ordinary have settled down to a lower price of Rs. 24.20. The higher production figures for November have helped the recovery at the close. Among engineering shares, Tata Locomotive, Premier Construction and *Larsen and Toubro* have shown fair losses on balance. Mukand Iron have been about steady on influential support. Gammon India have been maintained on prospects of a rights share issue in the proportion of one new ordinary share for every five held, at a premium of Rs. 1.50 a share. In motor-vehicle shares, Hindustan Motors have declined on pressure from Lyons Range. Premier Automobiles have been depressed, although the interim margin imposed on sellers has been withdrawn.

Cotton mill shares have shown widespread losses. Century, Bombay Dyeing, Kohinoor, Standard, Svadeshi and Tata Mills dropped earlier, but they have recovered somewhat towards the close. India United ordinary and Gokak have also been subdued.

Miscellaneous shares have fluctuated in line with the general trend. In the cement group, Associated Cement have been sold freely due to the repetition of the ordinary taxable dividend at 12 percent. In the absence of fuller details about the working results, it is not possible to ascertain whether the dividend will have to be paid by drawing on reserves as in previous years. Digvijay have been quiet. Sugar shares have *lacked interest despite the prospects* of an increase in the price of the commodity. Belapur, Walchandnagar Industries and *Phalton* have declined.

Mining shares have been subdued, and Shivrajpur Syndicate have fallen on a predominance of sellers. Steamship company shares have reacted. Scindia and Great Eastern Shipping have been quoted lower. Chemical shares have been quiet. Tata Chemicals have lost in spite of the prospects of expansion, as has been indicated in the chairman's *statement at the* annual general meeting of the Company. Rayon shares have fallen. National Rayon have declined on pressure. Business in cash shares has been negligible and prices have declined on balance.

In banks, Central Bank and Bank of India have been transacted. New India Assurance have been offered freely in the insurance section. Stray business has been transacted in electric company shares. Ahmedabad, Tata Power and Bombay Suburban have changed hands.

Madras

BOMBAY ADVICES MAKE OPERATORS HESITANT

POOR TURNOVER IN CLEARING SHARES

Tuesday Evening.

THE Madras stock market has been quiet during the past week and share prices have declined generally in reduced turnover. The trend has been hesitant due to uncertainties created by the proposed amendments to the company and banking laws. Easier Dalal Street advices, combined with the lack of support from outside sources, have shaken confidence. Turnover in clearing shares has declined to almost a trickle. There has been a predominance of sellers in cash scrip which have shown fair losses. Investors and operators are inclined to hold off until Mr. T T. Krishnamachari, Central Finance Minister, makes his statement on the economic situation in the Lok Sabha.

Government securities have been steady and support has been extended to selected State Government loans. Interest has been taken in selected preference shares. Bank shares have been neglected, and stray business has been transacted in Indian Overseas at Rs. 147.50 and in Canara at Rs. 81.50. Among electric companies, Salem-Erode have changed hands at Rs. 14.28 and Negapatam at Rs. 10.70. Sugar shares have declined on pressure. Deccan have been available at Rs. 12.35 and E.I.D. at Rs. 38.10. K.C.P. have been at Rs. 23.90 on declaring an ordinary dividend of 15 percent, subject to the sanction of the Industrial Finance Corporation. Madura have been transacted at Rs. 10 on declaring a taxable ordinary dividend of 8 percent.

Planting shares have generally been quiet due to the absence of buyers. Blue Mountain have declined to Rs. 2.60 and Cochin Malabar to Rs. 6.25. Consolidated Coffee have been offered at Rs. 21.35 and Ouchterlony at Rs. 4.65. Business has passed in Periakaramalai at Rs. 3.42 and in Nelliampathy at Rs. 3.68. Panchura have been done at Rs. 3.25 on declaring a taxable ordinary dividend of 15 percent on old shares. Waterfall have come to hand at Rs. 2.45 on declaring a taxable ordinary dividend of 10 percent. Kil Kotagiri have dropped to Rs 5.20, Nilambur to Rs. 12.75. Parkside to Rs. 27.50 and Savamalai to Rs. 4.55.

Except for Buckingham and Bangalore Woollen, cotton textile shares have been subdued. The former scrip have quoted Rs 297 and the latter Rs. 235. Anglo-French have been sold at Rs. 142.25 and Loyal at Rs. 42.50. Business has passed in Mettur at Rs. 299 and in Rajapalayam at Rs. 148.40. Ramakrishna have been taken at Rs. 217.80 and Kothari at Rs. 9.35. Vijayeswari have been done at Rs. 112 and Adoni at Rs. 9.40. South India Viscose have slumped to Rs. 138 and Travancore Rayon to Rs. 25.75. Lakshmi have been transacted at Rs. 133 and Madura at Rs. 33.75.

Miscellaneous shares have been quiet. Aluminium Industries have been available at Rs. 19.35 and Ashok Leyland at Rs. 7.12. Mettur Chemical have been somewhat steady around Rs. 12.28. Among cement shares, Dalmia have come to hand at Rs. 12.70 and India Cement at Rs. 5.52. South India Steel have been done at Rs. 9.37 on declaring a taxable ordinary dividend of 7.5 percent. Seshasayee Paper have been steady at Rs. 8 and Tube Investment at Rs. 228. Ruby Rubber have been wanted at Rs. 4.65 on the payment of a taxable ordinary dividend of 4.5 percent. Spencer have been steady at Rs 20.75, but Madras Rubber have been easier at Rs. 14.80. Kirloskar Electric have been transacted at Rs. 18.50 and Parry's Confectionery at Rs. 3.25.

CPERATORS CHEERED BY POLITICAL NEWS

WIDESPREAD RISE IN EQUITIES

London, 4th December.

IT was an extremely satisfactory week in the stock market and prices moved ahead in response to a demand which increased daily. The remarkable rebound on Wall Street after the heavy fall registered on the day of President Kennedy's assassination set the pace for the London market. Sentiment was cheered by a steady flow of good business news and in the past two days, optimism concerning the Government's chances in next year's general election was boosted by the defeat of Labour in the Australian and New Zealand elections. Gilt-edged were helped at one time by the decline in the U.S. Treasury Bill rate, but with buying interest almost entirely confined to equities, they later faded into the background. A flood of new issues also held money back from the gilt-edged market. The advance in equities was on a broad front, but among the outstanding sections were textiles, building and engineering shares. Bank, insurance and property shares also gave a good account of themselves. Dollar stocks, of course, reflected Wall Street and gains were substantial. Gold shares gave a satisfactory performance in quiet trading and most other mining sections made some headway with tins reflecting the fresh rise in the metal price to its highest level since the Korean crisis. Oils showed up well and Shell advanced to a new 1963 peak. Rubbers and teas improved.

SHELLAC STEADY

During the week ended 4th December, 1963, the market was steady.

	(Rs. a package)
Pure buttonlac	98 value. 100 buyers 104 sellers.
Lemon one shellac	114 value. 100 to 106 buyers.
Lemon two shellac	104 to 110 sellers. 90 value. 86 buyers. 90 sellers.
Standard one shellac	72. 74 buyers 76. 78 sellers.
Pure T. N. shellac	64. 66 buyers. 68. 70 sellers
Golden kusmi seedlac	119 to 134 value.
Kusmi one seedlac	80. 90 value.
Golden Bysacky seedlac	76. 80 value
Manbhum Fine Bysacky seedlac	56. 60 value.
Fine Bysacky seedlac	48. 50 value.
Genuine Bysacky seedlac	38. 40 value.
Grade One Class B seedlac	56 value. 56. 60 buyers. 60. 64 sellers.
Grade Two Class B seedlac	42. 44 buyers. 46. 48 sellers.

Shipments during November until 28th were 17,267 packages.

Money

NEW BANKING BILL CONTAINS DRACONIAN PROVISIONS

(BY A SPECIAL CORRESPONDENT)

The new Banking Bill, which the Central Finance Minister has introduced in the current session of the Lok Sabha, is a draconian measure, so it has come as a rude shock to the banking community. A special correspondent doubts whether the Reserve Bank will be able to administer the powers which are proposed to be conferred on it. The Bank's administrative machinery requires to be strengthened if it is at all necessary to assume fresh powers to curb the alleged irregularities in the banking system.

TRUE to his word, the Central Finance Minister, Mr. T. T. Krishnamachari, has introduced the Banking Laws (Miscellaneous Provisions) Bill in the Lok Sabha. Although the contents of the Bill are on the lines anticipated earlier, and were known to most people interested in banking affairs, surprisingly few copies of the Bill were made available to the Press and the public. The drastic nature of its provisions has come as a rude shock to the banking fraternity. Many believe that if the Bill is seriously implemented, it will sound the death-knell of the private sector in banking. Bankers, it is felt, should organise meetings and conferences to educate public opinion against the draconian banking reform. The least that can be done is that the Bill should be referred to a select committee and those who are affected by it should be given a reasonable opportunity to express their opinion.

Unsecured Advances

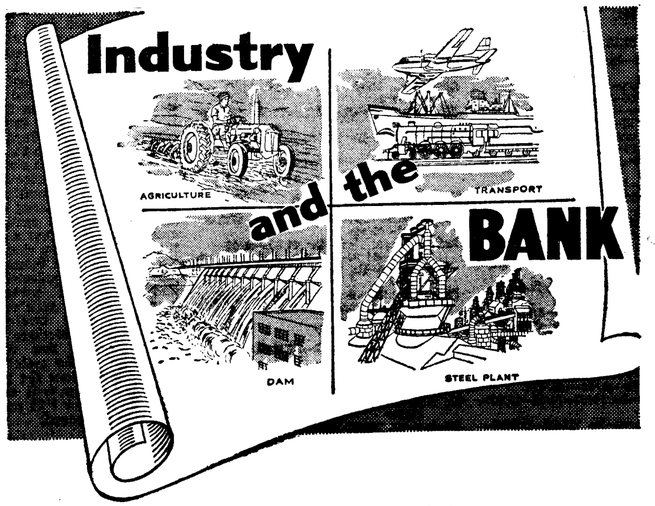
The new Bill prohibits a bank from sanctioning unsecured advances to (a) any of its directors; (b) firms or private companies in which any of its directors is interested as partner or managing agent or guarantor or to individuals in cases where any of its directors is a guarantor; (c) to any public company in which the chairman of the board of directors of the bank is interested as chairman or managing director of the public company or as director or partner of the managing agent of such a company. There are several companies in which chairmen of banks and other directors have interests. These companies are playing a vital rôle in holding the price line, raising exports and producing items which are essential for defence effort.

Because of the new provisions, if the banks sharply reduce or stop finance to the companies which are associated with these chairmen and directors, there is bound to be a setback in the economy. Advances to directors' companies in the case of the State Bank come to as much as 27 percent, against 13 percent in the case of banks in the private sector. Many firms and companies controlled by directors of banks are sound by any standard and they would certainly stand any scrutiny as far as prudent business principles are concerned. In fact, it is banks which often invite eminent industrialists to join their boards of management in order to get business and connections. How otherwise could banks function in an underdeveloped country which suffers from the paucity of capital and managerial talent?

In addition, according to the provisions of the Banking Bill, a bank can be forbidden to remit—without the prior approval of the Reserve Bank—any debt due to it from the directors of any firm or company in which the bank's directors are interested or if any of the bank's directors is his partner or guarantor. The Reserve Bank is also to be empowered to nominate up to a maximum of five persons as additional directors of a bank if, in its opinion, this is essential in the interests of the bank and its depositors. It is difficult to appreciate the need for these provisions The first provision prohibiting the writing off of the debts of directors' firms is tantamount to the allegation that they are conspiring to cheat the banks. This is a sweeping allegation which should have been brought to public notice with concrete instances to justify the draconian measure. Similarly, the power given to the Reserve Bank to remove directors and officers of banks and appoint not more than five additional directors is, to say the least, drastic. Bureaucratic interference in the day-to-day administration of banks will grow. Should the banking system be made a playground of politicians and bureaucrats? Banking is a serious affair, and should be conducted on business lines. Any premature tampering with it will dislocate the entire financial mechanism.

Issuing Directives

The Reserve Bank is empowered to issue directives to banks, either generally or individually, on (a) the maximum amount of advances which, in the light of the paid-up capital, reserves and deposits of a bank and other relevant considerations, may be made by that bank to any company or individual; (b) the maximum amount up to which, keeping in mind the above considerations, guarantees may be given by a bank on behalf of any company or individual; and (c) the rate of interest and other terms and conditions on which advances may be offered or gurantees given.



If a bank with an equity base of Rs. 10 crores is directed by the Reserve Bank to give the equivalent of not more than 15 percent of its equity capital in the shape of any particular advance, the result will be that the particular banking company will have to recall the excess advance. In other words, all advances in excess of Rs. 1.5 crores will have to be called back. If each director's or chairman's firm is suddenly asked to pay back—in several cases the bank advances are more than Rs. 5 crores—it will be the surest way of sending the concern into liquidation overnight.

What seems necessary, therefore, is that the provisions of the Bill should be kept in reserve to tackle possible abuses in the banking system which might come to the notice of the Reserve Bank. It is essential that nothing should be done to disturb the *status quo*. Meanwhile, before the provisions are implemented, the safeguards should be clearly defined to prevent bureaucratic bungling. An important question in this context is the effectiveness with which the Reserve Bank will be able to administer the powers which are proposed to be conferred on it. The Bank's administrative machinery has not been strengthened so that it may exercise its new powers efficiently.

Control on Non-banking Companies

The new Bill also gives powers to the Reserve Bank to control the operations of non-banking credit institutions and companies which accept deposits from the public. It is said that bankers, who themselves head some of the companies accepting deposits from the public, suspect that this practice is affecting bank deposits. The impression may not be correct. Firstly, the deposits kept by the public with companies constitute an infinitesimal portion of the aggregate deposits of scheduled banks. For instance, public deposits with companies are estimated at around Rs. 100 crores, against more than Rs. 2,200 crores of deposits with scheduled banks. Is the legislation worth the trouble under such circumstances?

Secondly, the deposits are percolating to the companies because of the unrealistic structure of interests rates maintained by the inter-bank agreement on deposits. Bankers, it will be recalled, pegged the interest rates on deposits roughly at the 1958 level, whereas there has been an upward trend in interest rates in the economy, including an upward revision of Bank rate If commercial banks raised the interest rates, they could have prevented the flow of deposits to companies. But the present legislation tries to prescribe the wrong medicine. The minimum that the Reserve Bank should do is not to burden itself with an unwieldy task. If the Bank has trouble in implementing the lagislation, it will have very few sympathisers to support its case.

Blueprints of expansion of a nation's industrial activity require adequate financial resources for implementation.

Allahabad Bank plays its part in providing funds for projects. The investor's money thus plays a vital role in the country's rapid development, the Bank guaranteeing its security and interest to the investor.

THE CALCUTTA MONEY MARKET

SLIGHT DECLINE IN ADVANCES

Wednesday, 4th December.

THE general level of advances has decreased a little in the Calcutta money market during the past week. Most of the decrease is in the accommodation given to the iron, steel and engineering industries, although the credit against foodgrains and seeds is also nominally down. Cotton and sugar advances are unchanged, but the requirements of the jute mills show a fair increase. In the inter-bank market, conditions have become very tight because of tax payments and the call rate has jumped up to 5 percent.

The exhcange market has been active, with a good supply of tea and gunny bills. The demand for remittances is fair. In the London market, the weakness of sterling has persisted and it shows losses in relation to all the major currencies except the Swedish and the Dutch. The Swedish kroner has been noticeably easier over the past fortnight.

SILVER WAS VERY STEADY IN Calcutta during the past week due to a sharp rise in purchases especially from upcountry. The price rose from the previous week's level of Rs. 231.75 to Rs. 280, quoted today for ready. The London and New York prices were 111⅛d and 129.3 cents. In spite of a sharp rise in silver, gold was almost steady. The price of 14-carat quoted at Rs. 63, against Rs. 62.75.

DURING THE WEEK ENDED 29TH November, Government of India Treasury bills for Rs. 20,83,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 3rd December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.320 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 9th December.

IT IS STATED THAT 91-DAY INTERmediate Treasury Bills will be sold from 4th December to 7th December at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 27th November to 30th November amounted to Rs. 4.77 crores only.

THE DECLINE OF RS. 10.54 CRORES TO Rs. 2,265.05 crores in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 29th November, 1963. The total note issue rose by Rs. 1.11 crores to Rs. 2,289.93 crores. Notes held in the Banking Department consequently increased by Rs. 11.64 crores to Rs. 24.92 crores. Deposits of the Government of India and those of State Governments dropped by Rs. 1.91 crores and Rs. 43 lakhs to Rs. 71.14 crores and Rs. 11.19 crores, respectively. Balances of scheduled banks at Rs. 78.91 crores showed a decline of Rs. 6 crores. Balances held abroad were only Rs. 5 lakhs larger at Rs. 10.39 crores. Investments declined by Rs. 26.94 crores to Rs. 246.36 crores. Loans to scheduled banks rose from Rs. 39.90 lakhs to Rs. 79.65 lakhs, of which there was no advance against usance bills. Ways and means advances stood at Rs. 31.81 crores, against Rs. 31.24 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 22nd November, 1963, shows a drop of Rs. 72 lakhs to Rs. 592.60 crores in total deposits. Investments in Government securities are up by Rs. 9.05 crores to Rs. 314.25 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 93 lakhs to Rs. 259.22 crores. Cash and balances are, in consequence, shown at Rs. 22.33 crores, or Rs. 11.42 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 22nd November, 1963, shows Demand and Time liabilities at Rs. 1,115.33 crores (Rs. 27.65 crores on account of borrowings from banks) and Rs. 1,327.99 crores (Rs. 20.51 crores), compared with Rs. 1,111.77 crores (Rs. 25,57 crores) and Rs. 1,320.99 crores (Rs. 18.06 crores), respectively, in the previous week. Cash has increased by Rs. 3.57 crores to Rs. 57.43 crores, while balances with the Reserve Bank have decreased by Rs. 9.94 crores to Rs. 82.88 crores. There is a rise of Rs. 8.49 crores to Rs. 771.75 crores in investments. Advances and bills discounted at Rs. 1,494.94 crores show a drop of Rs. 1.25 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 61.2 percent, against 6 percent and 61.5 percent.

Experience on the line makes the General Electric, U.S.A. boiling water reactor your best investment

3 BILLION KILOWATT-HOURS

Through October, 1963, five G-E boiling-water-reactor plants operating on utility systems had generated more than three billion gross kwh, most of it in the last 30 months. By 1968, at least six more G-E BWRs will be on the line, and the power they produce will have passed 16 billion kwh.

So we speak from experience — operating experience — when we detail the advantages of the G-E BWR's design simplicity... low operating costs... high availability... and easy maintenance.

The simple, direct-cycle design needs less structural material and less auxiliary equipment. There's no heat exchanger to reduce steam temperatures and to complicate maintenance. Steam flows directly to the General Electric turbine-generator at 1000 psi and 545F.

The reactor building is accessible even during operation. To simplify reactor maintenance and refuelling, G. E. uses a bottom-mounted system of mechanical control for the BWR. These bottom-mounted mechanical drives also allow more efficient control and use of fuel. How does this work out in practice? The operators of Dresden Nuclear Power Station (220,000 kwe) report that their BWR plant has matched the ***best*** coal-fired plant on their system in availability.

What happens when the turbine does need inspection or maintenance? Experience has shown there is no delay. When the turbine is thermally ***cool enough*** to work on, it's radioactively ***safe*** to work on.

General Electric boiling water reactors are the most economical nuclear-power producers for utilities... now and for the future. We are offering BWRs in whatever rating you require, at firm prices, with performance warranted. We'd welcome a chance to discuss them with you. Contact **International General Electric Company (India) Pvt. Ltd., Thackersey House, Graham Road, Ballard Estate, Bombay-1** or write *International General Electric Company, Dept. 30-32 CP, 159, Madison Avenue, New York, NY 10016, U.S.A.*

ANNOUNCEMENT

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT OF THE PROPOSED ISSUE OF THE CAPITAL. INTERESTED PERSONS MAY OBTAIN COPIES OF THE PROSPECTUS FROM THE COMPANY'S REGISTERED OFFICE, BANKERS, BROKERS AND UNDERWRITERS.

ENGEL INDIA MACHINES & TOOLS LIMITED

(Incorporated in India as a Public Company on 26th April, 1962 under the Companies Act, 1956.)

Registered Office: 6, Old Post Office Street, Calcutta-1.

SCOPE AND PROPOSED ACTIVITIES

A. **Objects of the Company:** The Company was incorporated on 26th April, 1962 with the following main objects as stated in the Memorandum of Association of the Company (a copy of which is available for inspection by the public) :—

(i) To manufacture and deal in all kinds of machines, tools and die casting equipment.

(ii) To manufacture and deal in all kinds of dies and moulds.

(iii) To carry on business of manufacturers of and dealers in machineries and equipment required for plastic goods.

(iv) To manufacture and deal in plastic moulding powders and compounds and all such articles and things as can be made therefrom or which can be used for or in connection with the manufacture thereof.

(v) To manufacture articles and things which can or may be manufactured from PVC compounds.

B. **Location of Factory:** The Company is setting up a composite plant at Calcutta to manufacture injection moulding machines and moulds required by the plastic industry. The factory will be located at Taratala Road, Calcutta on approximately 12 bighas of land in respect of which the Company has entered into a long-term lease with the Commissioners for the Port of Calcutta. The factory site is within a highly industrialised area and is well served by good roads connecting the site to the Port of Calcutta and other engineering industries. The erection of the factory has been started and production is planned to commence by about mid 1964.

C. **Technical and Financial Collaboration with Ludwig Engel K. G., Schwertberg, Austria:** The Company has entered into a technical and financial collaboration with Maschinenfabrik Ludwig Engel K. G. of Austria in terms of which the Austrian Company will subscribe for shares in the Company and will make available the necessary technical know-how and provide the other technical assistance required for the production of the machineries and moulds to be manufactured by the Company.

DELHI CLOTH AND GENERAL MILLS CO. LTD.

CHAIRMAN, MR. BHARAT RAM'S ADDRESS

The following is the speech by LALA BHARAT RAM, Chairman, Board of Directors, Delhi Cloth & General Mills Co., Ltd., delivered at the 75th Annual General Meeting of the shareholders of the Company on the 2nd December, 1963, at Bara Hindu Rao, Delhi-6.

Ladies & Gentlemen,

I am happy to welcome you to the 75th Annual General Meeting of your Company. I cannot, however, help making a reference at the beginning of this meeting to the memory of my respected father, the late Lala Shri Ram. The growth and prosperity of DCM are largely the fruit of his hard work and devotion, and the inspiration his integrity and high ideals gave to the rest of us. No greater homage could be paid to his memory than that all of us should continue and carry on his great work with the same devotion and high integrity which he showed. We met last year under the cloud of the Chinese aggression. The Chinese aggression had various repercussions. There was on the one hand a spontaneous patriotic upsurge in the country, and on the other, various friendly countries extended financial and military assistance. Even though there is, at the moment, a cease-fire, the danger of aggression has not altogether receded. The country has to keep itself prepared for any eventuality and it would be dangerous to relax our preparation. The Chinese aggression was bound to have its repercussions on our economy. Some of our efforts had necessarily to be diverted from civilian needs to military requirements. It is however unfortunate that instead of there being a spurt in production, there has been a slowing down in the economy. The mid-term appraisal of the Third Plan is a matter of concern; for it reveals that the economy is dragging at a time when it ought to be pushing forward with greater speed. The shortfall in the agricultural sector, which is not only a sizable component, but on which depends the productivity of the industrial sector as well, is reflected in the total

Mr. Bharat Ram

national output. In the industrial sector also, while development effort has been larger and more broad-based, the general index of Industrial production fell short of the average increase of 11% visualised in the Plan to 6.5% in the first year and 8% in the second year. It would seem that the only effort that has exceeded the target is in the field of additional taxation, which is expected to be in excess by Rs. 1,100 crores by the end of the Third Plan, the yield being at Rs. 1,900 crores as against Rs. 800 crores. I am sure, this excessive taxation is greatly responsible for the slowing down of the tempo of development.

Defence Requirements

Apart from the requirements of defence, with the fast growing population and the need for improving the standard of living of the people, we have before us a gigantic task. This can be accomplished only if the production increases considerably faster than the population. One of the most important factors affecting our rate of development is the perennial shortage of foreign exchange. While we should be grateful for the assistance which various friendly countries are giving to us in the form of loans and grants, we cannot with any certainty depend on the assistance continuing at these levels indefinitely. We must, therefore, depend on our own efforts to bridge the gap between our imports and exports. To my mind, there is no other way except to work hard, produce more and export more. We must not think in terms of exporting only our surpluses. With the growing population and demand we shall never have surpluses except in a very few commodities. Therefore, we will have to restrict in many cases our own consumption so as to export. In order that we succeed in our export effort, we have to be competitive and produce goods of quality which would be acceptable in other countries. It is necessary to ensure that costs do not go up. The costs can remain low if output per man, whether in the industry or on the farm, increases. While I am not against increases in wages, I would emphasise that if there is not more than a corresponding increase in productivity per man, the costs will continue to go up and we will be wiped out of the world market. It is unfortunate that India's share in world trade has declined from 2.1% to 1.1% during the last decade of planning. When compared with other developed countries, the value of India's exports as percentage of national income works out to about 7% as against 19% for U.K. 21% for West Germany and 12% for Japan. I do not propose to spell out in detail here the various measures necessary to put our economy on an even keel, but shall only reiterate the important fact that the standard of living consists not of money but what the money will buy and money will only buy more goods and services provided the productivity per man increases.

In spite of all our efforts we shall still need more foreign capital and it is necessary that everything is done not merely to provide incentives to foreign investors but also to create a feeling of confidence in our fiscal policies. The stability in our fiscal policy is the biggest factor in creating confidence for the foreign investor. Frequent changes not only upset the programmes of financing but also create a feeling of uncertainty.

Quicker Growth

I have every faith in the country's capacity for quicker growth provided we all work hard and our economic policies are practical and not affected by ideologies.

Coming back to the Company's affairs, although there has been an appreciable increase in total sales, profits have been lower due to rising costs of raw materials, stores and wages. In the case of sugar, unfortunately, like the rest of the industry, your factories also had a very short season which increased the cost of pro-

DUNLOP
HIGHWAY *for highest*
mileage on long heavy hauls

The Dunlop Highway Truck and Bus Tyre assures higher initial tread mileage on heavily laden long distance trucks and modern fast buses. And finally, when the tyre is worn smooth, the excellent retreadability of the casing means that it will continue to serve for many more thousands of miles.

DUNLOP HIGHWAY
for HIGHEST MILEAGE

DGC-23

duction and considerably reduced the profits. In addition, Government's fiscal measures like Super Profits Tax, Emergency Risk Insurance, etc. have further reduced the profits. The Company has continued to follow a policy of expanding its activities. Our Project for the manufacture of plastics to which I made a reference last year is nearly complete. One of its products, namely, caustic soda, is already in the market and it is expected that PVC will be in the market within a short time.

Likewise, the Rajasthan Rayons Project is also progressing satisfactorily and it is expected that the factory will start producing high-grade rayon tyrecord by about the end of 1964.

Last year I had referred to two major schemes of expansion. One, the spinning mill at Hissar, and the other, the expansion in sugar mills at Mawana. The extension of our Hissar spinning unit is continuing at a rapid pace and it is expected that the capacity will increase from 37,000 to 63,000 spindles by the beginning of the next year. The expansion of the Mawana Sugar Works from 1,500 tons crushing capacity per day to 3,000 tons per day has been done. We are, of course, facing a few teething troubles, but I hope they will soon be over. Apart from these major expansions and new projects we have been continuing to renovate our existing equipment. I have no doubt that as soon as the new projects have come into production and the expansions have been completed the profits of the Company will increase.

New Export Company

The record of exports of your Company has again been satisfactory. While on the subject of exports, I would like to refer to a new Organisation which we propose to set up for handling our export business. It is proposed to set up a new export Company. This would be a subsidiary of your Company. While in the first instance, it would export the products of Delhi Cloth Mills, in course of time, it would take up the export of other manufacturers' products also. It would thus grow into a trading company, the benefits of which will accrue to our shareholders.

One of the problems facing the industry in the country today is shortage of personnel. As your Company is also expanding its activities, it had also felt these shortages. The Management now is busy concentrating on training our management personnel at all levels. Today the science of management has made great advances and it has become a great science. Your Company has started a separate department for not only training fresh people but also to teach the modern techniques of management to the existing staff. In addition to starting our own department for training, your Company has been sending people to various management courses to other places. I am sure, this policy will pay rich dividends.

I am glad it has been possible for your Company to maintain the same rate of dividend as last year in spite of lower profits. In addition to this, the benefit of undistributed tax-exempt profit under Section 15(c) of the old Income-tax Act has also been passed on to the shareholders. In effect, 34% of the dividend will be exempt from tax in the hands of the shareholders. Thus, most of the shareholders will get a higher net dividend than last year. I may, however, make it clear that this is in the nature of a windfall for this year only.

Before concluding, I would like to record our sincere appreciation of the good work of all our workers and staff whose efforts have enabled us to achieve satisfactory results during the year.

NOTE :—This does not purport to be a record of the proceedings of the Annual General Meeting.

New Delhi

BILLS TO AMEND COMPANY AND BANK LAW, CREATE UNIT TRUST

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr. T. T. Krishnamachari, introduced a number of Bills in Parliament last week. One seeks to amend the banking law and the second to amend the Companies Act. The third intends to create a unit trust in the public sector. Another Bill relates to gold control which is at present done through the Defence of India Rules.

Existing enactments relating to banks do not provide for any control over companies and institutions which, although they are not treated as banks, accept deposits from the public and carry on other business which is allied to banking. For more effective supervision and management of the monetary and credit system by the Reserve Bank, the new Banking Bill empowers the Reserve Bank to regulate the conditions on which deposits may be accepted by non-banking companies or institutions. The Reserve Bank has also been empowered to issue directives to any financial institution on matters in which the Reserve Bank, as the central banking institution, may be interested from the point of view of credit control. The Bill makes it clear that the appointment of a person managing the affairs of a bank cannot be in excess of five years at a time.

The Reserve Bank has been empowered to remove any person associated with a banking company if it is considered necessary or desirable to do so, whether or not that person is found to have contravened the provisions of any law; and to appoint any other person in place of the person who may be so removed.

The existing law prohibits the granting of unsecured loans to directors and to private companies in which they are interested. It is now proposed to make it clear that the question of a banking company being a partner or managing agent of any other concern does not arise and to extend the prohibition to public companies also in some cases.

The maximum voting rights of individual shareholders of any banking company or any subsidiary of the State Bank are reduced from 5 percent to 1 percent. The Bill deletes the provision in the existing Act requiring the Reserve Bank to maintain as its assets coins or notes of the value not less than Rs. 50 crores or one-sixth of the total assets held in its Issue Department, whichever is higher.

Setting Up Tribunal

In order to facilitate quick action against persons involved in cases of fraud, misfeasance and other such malpractices and irregularities in the management of companies, the Companies Amendment Bill seeks to set up a tribunal whose findings will enable the Central Government to remove such persons from the position of managerial authority in any company. The three-man tribunal will also be empowered to hear certain applications. The Bill enlarges the scope of the existing law to provide for the entertainment of applications, among other things, on the ground of public interest. The tribunal will be empowered to exercise the powers and functions of a court under such sections of the Companies Act as the Central Government, from time to time, may notify.

In order to prevent the use of voting rights attached to shares held by trusts for the advancement of the personal interest of donors, the Bill empowers the Central Government to appoint a person to exercise such voting rights with a view to securing the proper management of a company in the interests of shareholders. In cases where the Government has advanced a loan to a company, the Bill empowers the former to direct the conversion of such a loan into shares of that company on fair and equitable terms. The Bill also seeks to create a board to which will be entrusted most of the powers and functions of the Central Government. The Government at present functions through the Company Law Department which has recently been transferred to the Central Ministry of Finance.

Another Bill introduced last week will bifurcate the Central Board of Revenue into the Central Board of Direct Taxes and the Central Board of Excise and Customs, both functioning under the Central Ministry of Finance.

Moving the Bill to amend the Companies Act, Mr. Krishnamachari said that the Government did not subscribe to the theory that the private sector should not be helped. The Government wants to help the private sector. At the same time, it wants to ensure that the interests of shareholders are safeguarded and that the money lent to the private sector is properly used.

World Bank Report

Mr. Krishnamachari said that the World Bank, which could not be said to be unfavourable to the private sector, stated in its report on Indian economic conditions that the textile industry in the country was primarily to blame for the delays in carrying out modernisation schemes and that it had failed to plough back its profits for modernisation. The modernisation of the industry is a formidable task. Apart from the textile industry, the jute and woollen industries have also to be modernised requiring crores of rupees.

The amendment Bills which the Finance Minister brought before the House should be read in the context of the Government's desire to enlarge the scope of assistance to the private sector. In the absence of the powers which the Government is now seeking, Mr. Krishnamachari said, it will not be possible for it to ensure that the private sector plays a constructive rôle in the development of the economy.

Mr. Krishnamachari said that the Government might bring forward a Bill for making comprehensive amendments to the Companies Act in the next session of Parliament to give effect to the recommendations of the Vivan Bose Commission and the Daphtary-Sastri Committee. In framing that Bill, every effort would be made to simplify the Companies Act.

The Unit Trust of India Bill seeks to encourage savings by providing for various classes of investors the facility of investing their money in units of the Trust. The latter will invest its initial capital in shares and other securities and will distribute every year not less than 90 percent of its net income accruing to unit holders.

Under the Bill, an initial capital of the Trust will be contributed by the Reserve Bank of India, Rs. 75 lakhs each by the State Bank of India and the Life Insurance Corporation and the remaining Rs. 1 crore will be offered to scheduled banks in the private sector or any other financial institution. A special contribution may be made by the Reserve Bank in the first instance for making up any deficiency in the contribution from the private sector. The three public-sector financial contributors will not be allowed to transfer their holdings to other institutions. Other contributors will, however, be able to do so among themselves. The management of the Trust will be vested in a board of nine members, two representing the private-sector contributors. The Trust will deal in stocks and shares, but not in immovable property. It will be empowered to obtain normal banking accommodation from the Reserve Bank for 90 days. The period can be extended to six months in an emergency. The Central Government may, in certain contingencies, guarantee the bonds of the Trust for the purpose of enabling it to borrow from the Reserve Bank.

Tax Exemptions

The Trust shall not be liable to pay income tax, super tax, super profits tax or any other tax on any income, profits or gains derived by it from any source. Where the income received by a unit holder, being an individual, from the Trust in relation to units does not exceed Rs. 1,000 such income, and where such income exceeds Rs. 1,000, a sum of Rs. 1,000 shall be excluded in computing the total income of the unit holder for the purposes of income tax but not of super tax. Where a contributing institution is liable to be assessed to super profits tax under the Super Profits Tax Act, 1963, in relation to its own income, profits or gains and receives any sum from the Trust under the Act in relation to its contribution to the initial capital such sum as reduced by the amount of any income tax and super tax payable on it shall be excluded from the total income of the said institution in computing its chargeable profits for the purpose of super profits tax.

No deduction of income tax or super tax shall be made on any interest or dividend payable to the Trust in relation to any securities or shares owned by it or in which it has full beneficial interest; and no deduction of income tax shall be made by the Trust from the income distributed by it to a unit holder being an individual.

The board of Trustees will be reconstituted after the initial capital has been completely refunded, in the manner prescribed by the Central Government, in consultation with the Reserve Bank.

LABOUR

Contradictions in Policy

India's labour policy is in the third stage of evolution. When it was in the first stage, the British were blamed for introducing labour legislation in order to reduce the competitiveness of Indian products. If the then Government of India tried to improve the working conditions of textile labour, it was accused of hitting India's mills with a view to benefiting the Lancashire cotton industry. In the second stage of evolution, organised industrial labour was sought to be protected from Indian and foreign employers who were accused of exploiting it for their own benefit. Labour thus became a tool of the politicians. In this process, the laws, including case laws, were so evolved as to eliminate competition from the labour market. Side by side, and notwithstanding many voluminous reports, unorganised agricultural labour and *khadi* workers were left out of the scheme of benefits provided for industrial labour.

In the third stage of evolution, the Government is discovering that its labour policy is adversely affecting production even in public-sector units. The case of the Rourkela steel plant illustrates the point. The overtime scheme is the most pernicious one ever devised, as far as productivity is concerned. It has given an impetus to the go-slow movement during office hours so as to enable the "much exploited" worker even in the Central Secretariat to earn some extra income.

According to the bank award, labour engaged in the banking industry is compulsorily obliged to do 160 hours of overtime during 12 months in addition to 30 hours of overtime work "by consent." Since September 1963, the bank trade unions have directed their members not to work overtime "by consent". The result is an increase in the delays in providing services to customers. The Government presumably hopes that the setback in the working of banks will soon be overcome by a seminar on productivity, which is being organised at an early date. Productivity teams may also be sent out to improve the working of Indian banks.

Paradoxically, highly industrialised and advanced countries like Switzerland have working hours for banks from 7 a.m. to 7 p.m. with a couple of hours recess for lunch, while in an underdeveloped country like India banks work from 10 a.m. to 2 p.m. except on Saturdays, when they close at 12 noon. Unlike in the West, the banking habit itself is still being developed here. It also looks a paradox that while India demands special treatment for her goods on the plea of her economic backwardness at G.A.T.T. and elsewhere, she should be ahead of, say, the U.S.A. as far as labour legislation is concerned. The third paradox is that socialist and welfare State doctrines apply to organised industrial labour alone, out leave agricultural labour unprotected from the exploitation of the landowning farmer and even co-operatives.

The fourth and final paradox is that while crores of rupees are being spent on export promotion, labour laws and wage boards are systematically raising the cost of production, thereby making Indian goods uncompetitive in export markets. The less said about productivity, the better. There can be no real increase in productivity unless competition is reintroduced, especially in the labour market. As it is, the average person in many an establishment, including banks, does not work for even three hours a day.

An attempt was made in pre-independence days to create an organisation like the I.L.O. to work out labour laws suitable for the undeve-

loped or underdeveloped countries. The attempt was not repeated after the first session was held in India.

U.K.

More Aid Promised

While speaking at a Press conference in New Delhi last week, Mr. Robert Carr, U.K. Minister for Technical co-operation, who is currently on a visit to India, gave an assurance of increasing British assistance this year for developing the Indian Institute of Technology, Delhi, by providing staff and equipment amounting in all to over £1 million by 1967. Mr. Carr said that Britain would be able to provide by next year the eight professors, advisers and supervisors for whom the Director of the Institute had recently made a special request. Furthermore, the British Government would be able to offer more money in 1963-64 than it had hoped. "As an earnest of our intentions to assist you as quickly as possible," Mr. Carr said, "we are increasing the value of our contribution this year by £50,000 to a total of £135,000. This did not mean an increase in the overall contribution of £650,000 in British equipment to be provided over the next four years by the U.K. Government and the trust fund established by British industry; but it will help complete the job more quickly provided short-delivery items from the 1964-65 programme are purchased before 31st March next year. This will be a task for the Director and the trust to tackle urgently. Mr. Carr understood that the chairman of the trust had already written to Professor Thacker about it.

Lastly, the sponsors of the trust in Britain are about to launch a further appeal to British industry for more funds to provide equipment. The Minister said that there appeared to be a prospect of a good response. He added that capital aid from the U.K. Government for India's second plan totalled £80.5 million. For the third plan, Britain has so far pledged £125 million.

The terms of British aid have been progressively eased. Credits to India are now for 25 years and include a seven-year grace period before repayments of principal begin. During the seven-year period, the interest payments have been waived entirely. As in these years the whole of the loan is outstanding, it implies a considerable easing of the debt burden.

Britain has recognised that Indian needs cannot be met entirely by aid linked to specific projects. The country also requires aid which can be quickly and easily used for the purchase of machinery, components and raw materials for the running of the economy. So far, more than half of British capital aid has been made available in this form, and has thus provided valuable and immediate help to the India's balance of payments.

RISK INSURANCE

Premium Collected

The collection of war risk insurance premium in factories amounted to Rs. 14,37,71,042, till 31st August, 1963. The collections, along with the emergency, still continue.

L.I.C.

General Insurance Plans

The Central Finance Minister, Mr. T. T. Krishnamachari, said in the Lok Sabha last week that the Government had decided to permit the State-owned Life Insurance Corporation to enter the field of general insurance as well. The L.I.C. Act allows it to take up this line of business, if and when it is permitted by the Government. One of the subsidiaries of the L.I.C., namely, Oriental Life Assurance Company, at present operates in this field. An official spokesman stated that the decision should not be a pointer that general insurance was being nationalised "or otherwise". The L.I.C. will work on a non-tariff basis.

FRANCE

New Consultancy Firm Planned

A French mining group, partly State-owned and known as Sofremines Society, is planning to set up a consultancy firm in India in the field of mining and mineral extraction.

ORGANIC CHEMICALS

Project in Difficulties

Hindustan Organic Chemicals in the public sector, which is to manufacture intermediates and organic chemicals, has got into difficulties because of the time taken for concluding an agreement and deciding the pattern of production. The German consortium, including Bayer, which was to collaborate in the project has, therefore, expressed its desire to withdraw from the scheme. The Government has considered a proposal to reorient the entire scheme, leaving out a number of the originally proposed products and adding a number of new ones to make the project economically attractive. A preliminary project report has been called for from Indian experts.

SHIPPING

Expansion of Repair Shop

Chowgule and Co. Ltd of Goa has been permitted to expand its maintenance and repair shop to enable it to repair 48 small vessels a year and to manufacture three new vessels, in addition to manufacturing 600 tons of structurals a year. The firm's application for a loan is being examined.

ENFIELD INDIA

New Plans

Enfield India Ltd has set aside practically its entire capacity for the manufacture of motor-cycles for defence, it is learned here. The Company is planning to turn out an attractive scooter with a Villiers engine, a British product. In addition, it has plans to manufacture Villiers industrial engines. An industrial estate with 20 units is being planned to manufacture ancillaries and components. An associate of the firm is manufacturing high capacity electrical transformers as well as distribution transformers of a somewhat lower capacity. Here again, its collaborators are a British company.

PETRO-CHEMICALS

New Naphtha Cracker Unit

With his British, German and American collaborators, Mr. A. Mafatlal is in New Delhi to discuss with the Government the finalisation of the naphtha cracker unit and the petro-chemical project in Bombay. He has been given a letter of intent to set up a 200,000-ton naphtha cracker unit there. His pro-chemical project plans to produce ethylene among other things.

KUWAIT

Talks on Joint Ventures

The Minister of Commerce of the Kuwait Government and Mr. Manubhai Shah, Central Minister of International Trade, discussed last week the scope for establishing joint ventures in Kuwait by Indian parties and the Kuwait Government and also for setting up joint enterprises in India with Kuwait participation. Possibilities were also discussed for financing the capital projects through sterling investments by the Kuwait Government and business men.

The projects considered included a number of hotels in India and some engineering and chemical projects. Similarly, because of the availability of cheap power in Kuwait, it was thought feasible to set up there caustic soda plants, pig iron and castings plants, steel and wooden furniture factories and plastic goods factories with Indian "know-how."

A small Indian technical team will be visiting Kuwait shortly to chalk out a programme of joint ventures. After the report of the team is considered by the Government of Kuwait and India, Mr. Manubhai Shah may visit Kuwait early next year for finalising the broad programme of trade and economic co-operation between the two countries.

The Government of India has decided to hold an Indian industrial exhibition in Kuwait in February next year. It is expected to last about a fortnight and will be India's first trade promotion exhibition to be held in the Persian Gulf area.

WEST GERMANY

Credit Pact Signed

The West German Minister of Economic Co-operation, Mr. Walter Scheel, and the Central Finance Minister, Mr. T. T. Krishnamachari, signed an agreement last week. It provides for the utilisation of 336.6 million deutschemarks (Rs. 40.06 crores) of West German credit in the following manner:

(A sum of 220.6 million deutschemarks (Rs. 26.25 crores) will be used for (i) the purchase of commodities from West Germany amounting to 40 million deutschemarks (Rs. 4.76 crores); (ii) further financing of certain projects already under construction with economic assistance from West Germany amounting to 40 million deutschemarks (Rs. 4.76 crores); (iii) finance of new projects with an estimated foreign exchange cost of 97.5 million deutschemarks (Rs. 11.60 crores); (iv) foreign exchange loans for financing institutions in India amounting to 15 million deutschemarks (Rs. 1.78 crores); and for (v) balance of payment support in accordance with the terms of the agreement amounting to 28.1 million deutschemarks (Rs. 3.35 crores).

A further sum of 116 million deutschemarks (Rs. 13.81 crores) will be used by way of West German Government guarantees for the purchase of ships. The terms for repayment and interest rates are as follows:

(a) In relation to 110 million deutschemarks (Rs. 13.09 crores), a maturity of 25 years (including seven years of grace and an interest rate of 3 percent.

(b) For 110.6 million deutschemarks (Rs. 13.16 crores), a maturity of 20 years and an interest rate of 5.5 percent. Out of this, the period of grace will be five years for 90 million deutschemarks (Rs. 10.71 crores) and 12 years for the rest.

(c) The terms for the suppliers' credit for the purchase of ships will be settled between the buyers and sellers.

Agreement has also been reached between the two Governments providing for certain special facilities for German prewar assets in India. Hitherto, these amounts could be used for purposes of approved reinvestment in India. It has now been agreed that remittance facilities should also be given to the extent of Rs. 10 lakhs a month for a total amount not exceeding Rs. 63 lakhs, so that the balances which have not so far been used in accordance with the existing procedures may be put to effective use at the earliest possible date.

IMMEDIATE DELIVERY

BIRD'S SILLIMANITE BRICKS AND BLOCKS

Standard Sillimanite Bricks are now available ex-stock. Sillimanite Wedges, Arches and Blocks (including cement kiln blocks) within 4 to 6 weeks.

KFS is but one of the many progressive divisions of the Bird-Heilgers Group. The Group, with its varied industrial activities, plays a significant role in the country's economy.

For your immediate requirements: KUMARDHUBI FIRECLAY & SILICA WORKS LIMITED
Managing Agents: BIRD & CO. (PRIVATE) LTD., Chartered Bank Buildings, Calcutta-1
Works: Kumardhubi, Dist. Dhanbad, Bihar.

B2/KFS.6A

SWITZERLAND

Use of Credit

The Swiss credit of 30 million Swiss francs is proposed to be used for importing the following: electric locomotives and components for the railways; capital goods for installing additional machines as well as for creating capacity in this country; automatic looms for the textile industry; and other capital goods.

COAL WASHERIES

New Units under Third Plan

Seven coal washeries are at present working in the country. They are Jamadoba, West Bokaro, Lodna, Kargali, Durgapur, Dugda No. 1 and Bhojudih. Apart from the expansion of two washeries in Kargali and Bhojudih, five more coal washeries are expected to be completed during the remaining period of the third plan. These are Patherdih, Dugda No. 2, Kathara, Karanpura and Swang. All of them are in Bihar.

It is proposed to create, with Polish collaboration, facilities in the heavy machine-building plant in Ranchi and the coal mining machinery plant in Durgapur for the manufacture of coal preparation plants, including washeries and ore beneficiation equipment. The details of capital costs and equipment to be produced are yet to be worked out.

HUNGARY

Pact on Indian Exports

Contracts for the export of consumer gods worth about Rs. 37 lakhs were signed between the State Trading Corporation and Konsumex of the Hungarian People's Republic. The agreement provides for the export of woollen and cotton fabrics and knitwears worth Rs. 22.5 lakhs, shoes and *chappals* Rs. 12 lakhs, handicafts Rs. 1.1 lakhs and paper products Rs. 1.5 lakhs. The Hungarian delegation has also carried with it samples of Indian razor blades, further varieties of woollen and cotton textiles for examination in Budapest. More orders are expected to be placed in the near future.

FERTILISERS

Foreign Exchange Allotted

For 1964, foreign exchange worth Rs. 30 crores has been allotted for importing fertilisers. Orders for the supply of 50,000 tons of urea from Japan valued at Rs. 1.95 crores have been placed so far. Purchases against the balance allocation are still being considered.

TRACTORS

Import Licences Issued

Licences have been issued during 1963 for the import of 3,790 tractors from Russia, Poland and Czechoslovakia. The number of tractors to be imported from each country and the foreign exchange involved in imports are as follows:

Russia	2,290	Rs. 1.50 crores
Czechoslovakia	500	Rs. 46.63 lakhs
Poland	1,000 (in S.K.d packs)	Exact amount not known as a number of locally manufactured components are to be fitted in imported tractors

Arrangements for the import of tractors during 1964 have not yet taken a final shape.

TEA

New Centre in London

A new Indian Tea Centre will soon be opened in Oxford Street, London's busiest shopping centre. The new centre will have four Indian girl receptionists. There will be an Indian cook and also an English one.

PIG IRON

Capacity in Private Sector

The Government has reserved a capacity of 500,000 tons for the production of pig iron in the private sector during the third plan period and has not made any stipulation as to the number of pig iron plants to be set up within that capacity. At the time of granting an industrial licence to a private party, the merits of the location suggested are examined in all aspects. The Government helps the parties concerned in securing foreign exchange for importing capital goods for an approved scheme.

HEAVY ELECTRICALS

Report on New Project

The detailed project report for the heavy electricals project in Ramachandrapuram, near Hyderabad, received from the Czech Government covered only the manufacture of steam turbo-sets of 12 and 25 megawatt sizes. The project is now being designed in consultation with the Czech experts to cover the manufacturing of units up to 100 megawatts.

ALLOY AND SPECIAL STEEL

Licences Issued

The Government has issued licences for setting up two plants for the production of alloy and special steel in Kanpur. One licence has been issued for the manufacture or (i) low alloy and carbon steels (including free-cutting and spring steel but excluding stainless steel). The second licence has been issued for manufacturing all types of silico-manganese alloy steels suitable for manufacturing springs for 19,800 tons a year.

FOREIGN EXCHANGE

New Amendment Bill

The Government is considering certain suggestions for amending the Foreign Exchange Regulations Act, 1947. A Bill will be introduced shortly on the proposals which are now being finalised.

GOLD CONTROL

Licence Fees Reduced

Under the Gold Control Rules, the fee for taking out a dealer's licence or a refiner's licence had been fixed as Rs. 100. The question of reducing the annual renewal fee of such licences was being considered by the Government of India, and it has now been decided that this should be fixed at Rs. 25.

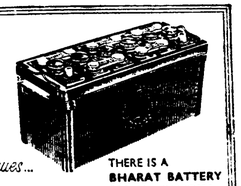
Central assistance to the State Governments for the rehabilitation of goldsmiths, who are affected by the Gold Control Order, has been liberalised. The conditions for the grant of certificates for self-employed goldsmiths have also been liberalised.

AGRICULTURE

Outlay on Development

During the 12 years ended 1962-63, an outlay of about Rs. 536 crores has been incurred on the schemes relating to agricultural production, including land development, minor irrigation and soil conservation under the five year plans.

SUGARCANE



Raising Price

The Central Food Ministry is considering the demand made by the east U.P. and Bihar sugarcane growers, millowners and the U.P. Government for a uniform increase of the cane price to Rs. 2 a maund.

ESSO SPONSORS EXHIBITION IN CALCUTTA

An exhibition called "Save Foreign Exchange for India", sponsored by Esso Standard Eastern, will be held at the National Congress Park (Park Circus Maidan), Calcutta, from 11th to 17th December, 1963. Mr. P. C. Sen, Chief Minister of West Bengal, will inaugurate the exhibition. The object of the exhibition is to highlight the progress made by Indian industry in manufacturing material and equipment which meet Esso's specific requirements. Since most of these items were hitherto imported by the oil Company, their local manufacture indicates considerable advancement in the field of engineering goods and equipment. Over 50 Indian manufacturers, who are helping Esso to save valuable foreign exchange for India, are likely to participate in the exhibition. Photographs, charts and other visual aids will show how Esso has been saving and earning foreign exchange by various operations including the refining of petroleum products at its Bombay refinery, export of surplus motor gasoline, purchases of goods made in India and the introduction of more efficient methods of manufacture and transport.

STARTING BUSINESS SCHOOLS ON THE HARVARD PATTERN IN U.K.

(FROM OUR LONDON CORRESPONDENT)

LORD FRANKS, Provost of Worcester College and a member of the National Economic Development Council, was invited by a group of industrial leaders in July to investigate setting up one or more business schools, following a good deal of general discussion in industry and, more specifically, a positive recommendation towards this end in the N.E.D.C.'s April report. In his report just published, Lord Franks makes these five recommendations:

(1) Two business schools of high quality to be established in Britain.

(2) Each to be part of a university but enjoying considerable autonomy as a partnership between the university and business.

(3) These business schools to be situated within major industrial and commercial conurbations.

(4) Courses to be offered for both post-graduation and post-experience students (i.e., students who have spent some time working in industry).

(5) One business school to be associated jointly with the London School of Economics and Imperial College of the University of London, and the other with Manchester University..

The report has already been welcomed by Mr. Peter Runge, president of the Federation of British Industries, and Mr. Cecil Mead, chairman of the British Institute of Management. In a letter which is being circulated to leading business men, Mr. Runge says he thinks the F.B.I. is likely to favour "immediate backing" for the report. Support from both business and the Government, by way of the University Grants Committee, is regarded as necessary by Lord Franks, who suggests that the capital cost of each school "might approach" £1 million while running costs "might build up towards £400,000 a year."

Lord Robbins, in his report, has made recommendations for business schools similar to Lord Franks', and Mr. Edward Heath, in the debate in the House of Commons on the Queen's Speech, said he was "delighted" at the initiative taken in asking Lord Franks to make a report. In his letter, Mr. Runge urges business men to face the fact that industry will have to find "large funds."

One problem noted by both Lord Franks and Lord Robbins as being likely to face the business schools is that of recruiting adequate staffs at academic salaries, since both agree that the schools should be started at existing educational institutions. The latter emphasises as a solution the employment of part-time staffs, while the former leans towards the idea that the incomes of fulltime staffs should be made up by means of consultancy fees "or perhaps by directorships." Lord Franks quotes as an example of the difficulty "experts in quantitative techniques" who would receive salaries in industry which would compel the schools to pay them as much as £7,500.

The school which Lord Franks outlines in his report would have 200 post-graduate students and 70 to 100 post experience men studying at one time. The school year would be divided into two semesters of 20 weeks each; post-graduates would study for one whole year, while post-experience students would attend for one semester. There would be two main types of courses—in "framework knowledge" and management skills. The first would include applied economics, sociology, and psychology; the second would entail operational research, linear programming, resource allocation and strategic and business planning, decision theory and computer uses.

Funds for the School

The board of the school would be composed in roughly equal numbers of business men and academics, with the university Vice-Chancellor as its chairman. The money required would come in similar proportions from business and the university. Thus a balance of emphasis between the two potentiality conflicting worlds would be achieved. Finally, the school would be attached to an existing university rather than a new one, and the university would be chosen at least partly because of its situation in a major industrial area.

Lord Franks stresses in his report that the choices of the universities to be in association with the business schools "imposed themselves." Both Manchester and the L.S.E. and the Imperial College put "well thought-out and practical proposals" to Lord Franks, and both were prepared to back the venture "with their full resources."

Mr. H J. Gray, director of the National Association of British Manufacturers, referring to the report the other day, said that he was confident that his Association would generally welcome the establishment of two business schools as recommended in Lord Franks' report. But many small firms, he said, would be likely to find difficulty in releasing their young managers or future managers for as long as 20 weeks. He hoped that provision for shorter courses would be made to meet the needs of such firms. In the meantime, Manchester University has already got down to the matter of introducing a new course in business management—a one-year diploma for advanced studies which has just taken its first 15 post-graduate students. According to Professor B. R. Williams of the Department of Economics, this will in time offer the academic equivalent of a degree at the Harvard Business School.

"Our course will not be the same Harvard's in detail," Professor Williams explained, "but it will be the same in its essentially analytical treatment of management problems." In a memorandum to a sub-committee of the University Grants Committee, he and his colleagues stated that they planned to extend the course for a second year. If this was necessary for its prestige, the course might lead to a higher degree. Within five years, it was likely that there would be 100 students on the new course. Some of them would be immediate graduates and others would be young men with some industrial experience. When the two-year course was running, graduates in accountancy and economics would need to take the second part only. This would contain economics, accountancy, industrial sociology, and quantitative techniques for business as compulsory subjects.

Graduates with other degrees would start with part one, which would give a basic training in economics, accountancy, law, industrial sociology, business mathematics and statistics, and political and social institutions. Professor Williams explained that although the university was keen to expand fast, "the limiting factor at the moment is demand". The first students had been assured of grants, but financial support for an expanded programme was not yet certain. Equally, new graduates needed some convincing that their chances in industry would be enhanced by possessing this diploma.

Courses for Middle Managers

This course, like everything else at the university and Faculty of Technology connected with business management, was being directed by the year-old Manchester School of Management and Administration. The school was also planning three-month courses for "middle managers" who were likely to be promoted from specialist to very senior positions. They would enable them to evaluate the work of specialists using the latest business techniques and to solve business problems in group projects. The school had been granted £66,000 over the next four years by the University Grants Committee so that it could take on six new members of staff who would strengthen it for the two new projects. Men with experience of similar courses at Sheffield University, notably, Professor D. C. Hague, the new Professor of Applied Economics at Manchester, had recently joined the staff.

Professor Williams claimed that there was now a bigger concentration of talent in the business studies field at Manchester than anywhere else in the country. The School of Management and Administration was working on a bigger scale than the London School of Economics and Imperial College, London, which were the chief rivals. The Manchester school had the special advantage of co-operating with the Centre for Business Research, which was the only one of its kind in the United Kingdom.

The School of Management might well be housed in a new building and it was proposed that those firms already co-operating with the Business Research Centre, and others as well, should be invited to advise in the direction of the whole school. Their representatives might have a formal position in its constitution. While on the question of training for business, it will be of interest to turn our attention to another recent development which could prove of real value. It has recently been announced that foreign language examinations devised for British exporters will be introduced early next year by the London and Birmingham Chambers of Commerce. The examinations have been drawn up and designed by business men experienced in overseas trade and the emphasis will be on candidates' conversational ability and comprehension of a language, rather than on academic prowess.

In the statement announcing the scheme, the two Chambers describe it as "a break-through in foreign language examinations for British business men engaged in overseas trade." It is claimed that, for the first time, thousands of business men, technicians, salesmen, and others learning foreign languages have agreed standards at which to aim. The tests will be in three grades—elementary, intermediate, and advanced. A successful candidate at elementary level should, the Chambers believe, be capable of travelling through a country without undue difficulty and with a knowledge of customary forms of address and introduction.

Candidates passing the intermediate stage should then have the conversational ability to talk on everyday topics "and sufficient confidence in the language to take their place socially." Advanced grade candidates should be able to do all this, and conduct their normal business activities in the foreign language. The London Chamber of Commerce will be the examining body, although certificates to successful candidates will be issued jointly by London and Birmingham. Birmingham first suggested the examination because of "a phenomenal increase" in language study through courses provided by companies, language laboratories, and evening schools. At least, 300 candidates from the Birmingham area are expected to sit for the first examinations, due to be held in January.

MORE U.K. ECONOMIC AID NEEDED FOR THE COMMONWEALTH

By Robert W. Brock

Mr. Brock, who was editor of "Capital" from 1928 to 1932, expresses the view that the Tory Party has neglected the Commonwealth in its desire to join the European Common Market. The policy needs to be reversed in Britain's own economic and political interests.

WRITING in the London *Australia and New Zealand Weekly* dated 2nd June, 1962, I declared: "The U.K. must choose between the Common Market and the Commonwealth. It cannot bestride both". Today she is not bestriding either. As reflected in the recent historic speech of New Zealand's Premier, who spoke of the "parting of the ways"—a significant phrase from the spokesman of the most British of the British Dominions—the U.K. has weakened her political and commercial links with the Comonwealth without the remotest prospect of achieving any comparable or compensating status in Europe.

Only a Party dominated by Victorian imperialists in their political dotage could have created that equivocal position. Whereas the code word of the Attlee Government when conceding full independence to India, Pakistan, Ceylon and Burma was "liberation"—political and economic—the codeword of the Tory continuation of the de-colonialisation programme was "liquidation"—also political and economic. As wartime leader, Sir Winston Churchill affirmed pontifically: "I have not become First Minister of the Crown in order to liquidate the British Empire". Mr. Harold Macmillan accepted the rôle of liquidator as a deliberate act of policy.

No other convincing explanation of the Common Market project—the most highly sophisticated Party manoeuvre this century—is available. For Tory politicians of Macmillan's generation the old, centralised Empire "died" when it ceased to fly the Union Jack and to accept Whitehall-Westminster domination. Historically, Toryism has never postured as a political creed or vehicle dedicated to the promotion of freedom and independence among subject peoples. Nor has its decolonialisation activities in Africa and elsewhere reflected any variation either in its philosophy or programme.

Baldwin-Halifax Reforms

When Churchill, the greatest, most typical Tory of all time, was waging his fanatical campaign against the Baldwin-Halifax Reforms I was able to hamstring his opposition by initiating the Lancashire-India Cotton Agreement negotiations of which the political corollary, as I prescribed, was the "scrapping" by the Manchester Chamber of its memorandum supporting the Churchillian view, and the consequential transfer of Lancashire Parliamentary allegiance to the official programme. As I recall emphasising to the Secretary of the Manchester Chamber in an hour-long discussion: "You cannot shake hands with Indian millowners—nationalists to a man—with your right hand—and land them political black eyes with your left". The hard-headed Lancastrians saw the point. Churchill fumed, inside Parliament and out, even accusing Sir Samuel Hoare of "suborning" the Manchester Chamber. But the Reforms went through, and the Lancashire-India Agreement survived until Hitler decreed its termination.

The U.K.'s entry into Europe would have involved the submergence not only of British political sovereignty, but of her political traditions and forms of government. There are more political dictatorships in Europe than in the Commonwealth: there are more genuine Parliamentary democracies in the Commonwealth than in either Europe or South America. Not long ago, the Burmese Secretary-General of the U.N. described the transformation of the ancient Empire into the autonomous Commonwealth as "one of the most glorious chapters in human history". During his recent visit, the President of India described "the transfer of power in India as one of the greatest acts of reconciliation in human history."

Commonwealth members are volunteers, not political conscripts, wholly independent in terms both of domestic government and external relations—not "Cuba's" liable to "economic boycott" if they fail to conform to external guidance. In contrast to Britain's own colonial record, the European attitude to subject peoples, by Germany, by France as in Algeria, by Italy as in Abyssinia, by Belgium as in the Congo, has been less immune from criticism. Financial aid by the Six to their former colonies excludes industrial development, apart from Continental branch factories, limiting productivity and trade almost wholly to primary products.

Tory Attitude

Having written off the Commonwealth, to quote the *Daily Telegraph*, as a "myth", it was not surprising to read in the *Daily Express*, that when the Tory Conference in Blackpool reached the discussion of resolutions on Commonwealth development, many of the Ministers, and a large part of the audience, walked out. The propagandist campaign under Torry leadership to enter Europe—subsidised so heavily by U.K. citizens of alien origin and still of alien outlook—has produced a distortion of outlook which will be erased only by a change of Government. As their policies attest, the Tory philosophy of empire is the philosophy of "the sucked orange": namely, "When you have squeezed the fruit dry, discard what remains".

As the political progenitors of the autonomous Commonwealth, the first major assignment of the Labour Party, if it regains power next year, will be to broaden out the welfare State into the welfare Commonwealth. That assignment does not present any insuperable difficulties—political, financial or commercial. The present Government has not made any serious attempt to promote Commonwealth development—it has never been on its agenda. Investment in Europe became their over-riding aim. No Government in British history has been guilty of a more massive political and economic miscalculation. The accelerating approach of automation, which the Labour leader calculates will necessitate creating 10 million new jobs in the U.K., means, beyond all challenge, that the development of Commonwealth trade represents the greatest economic opportunity available to Britain in the free world.

Ten million workers to be transferred to new industries to produce what? Not the consumer goods which Commonwealth countries are producing, and will produce increasingly, for themselves. Industrial production, on an automation basis, can prosper only if dedicated mainly to producing the capital equipment every Commonwealth country is crying out for, and which this country, traditionally and scientifically, is well-qualified to produce. Creative investment is the vital link between supply and demand, and the affluent State, if its financial resources were efficiently mobilised, could double and treble its current capital allocations to Commonwealth countries without undue strain.

Two figures will suffice to justify that calculation. Whereas gambling transactions in the U.K. absorb £1,000 million a year, the country's current investment in Commonwealth develoment is under £200 million. The concurrent effect is heavy unemployment in U.K. industries producing capital equipment, and, in Asia and Africa, a rate of economic expansion so slow that, measured by every reliable yardstick, the "have" countries are growing progressively richer, and "have-not" nations progressively poorer.

First Step

If this disastrous retrogression is to be reversed, the first step by the next Government should be the creation of a Commonwealth Investment Council. The Commonwealth Economic Consultative Council created in 1947 has remained barren because it was intended to do so. The Commonwealth Development Council, advocated by a former Chancellor of the Exchequer, Mr. Selwyn Lloyd, would be equally barren unless allied with a Ministry of Commonwealth Economic Development (absorbing the two outmoded Commonwealth-Colonial Departments headed by Mr. Sandys) reinforced by the adequate and continuous supply of investment capital which could be mobilised by the sale, on tap, of Commonwealth Development bonds through the National Savings Organisation which, over the years, has collected £8,000 million for U.K. Government capital commitments and could raise comparable funds for productive investment in Commonwealth projects if employed to do so.

Of American "aid" aggregating £1,250 million, 80 percent. or £1,000 million, represents an export subsidy financed by Government loans leading to the shipment of U.S. goods which could not be consigned commercially. The late President Kennedy underlined that point when he warned Congress that curtailment of aid would mean curtailment of American exports. U.K. investment in Commonwealth countries will lag until it is based on the same mutually beneficial basis.

The term "aid" should be applied only to exemption from interest payments until the projects financed go into production and become financially self-supporting. Subject to that reservation, all U.K. Commonwealth loans should be "tied", wholly and irrevocably, to U.K. export contracts implementing development schemes endorsed by the proposed Commonwealth Investment Council whose most valuable service would be to suggest priorities based on "fair shares for each and all". Obviously, U.K. investment in this sphere would supplement, not supplant, loans by the World Bank and all other international agencies and sources.

The adoption of the three-tier structure urged above would make immediately available, at political level, a fully representative and authoritative Commonwealth Economic Development Council, administratively self-contained, and financially self-propelled. On its present basis, political independence represents only "freedom" to under-feed. Britain's historic responsibility as "empire-builders" will not be completed until "Freedom from Hunger" is translated from a political project into an economic reality.

Books

A SURVEY OF FOREIGN AID

Foreign Aid and India's Economic Development. By V. K. R. V. Rao and Dharam Narain. (Published by Asia Publishing House, Calicut Street, Ballard Estate, Bombay 1. Price Rs. 12, pages 98.)

The five year plans of India rely heavily on foreign assistance for developing many key sectors of the economy. So a survey of the nature and magnitude of foreign aid, which the country has so far received and been promised, and of the issues connected with its use is certainly welcome. This little book has as its authors an older economist of repute, Dr. V. K. R. V. Rao, and one of our bright younger economists, Dr. Dharam Narain. It is a compact, useful piece of work but perhaps as it was undertaken at the instance of the U.N.E.S.C.O., it is not as frank and objective as some may have wished it to be. Not that some of the major issues have not been uncovered, but there is often an attempt to sweeten the pill. One must also mention that this is not a field about which the Government has been generous in publicising all the facts that a research worker may need for an appraisal. The work is perhaps best judged as a quick survey, based on existing material, and not the fruit of research.

Foreign aid in this book means aid from institutions and is exclusive of the substantial foreign assistance received for industrialisation in the private sector, either by foreigners in concerns controlled by them or in enterprises where there is Indian collaboration. Up to March 1961, a total of Rs. 3,000 crores of foreign aid was authorised, of which 57 percent was utilised by then. One should not shriek at this shortfall in utilisation: administrative delays apart, a fair proportion of the authorisations include amounts scheduled for future release. The two outstanding facts of the aid authorised so far are its predominantly bilateral (84 percent of the total) and tied (76 percent of the total) natures. These suggest, as the authors point out, that "donors attach importance to the aid they give as an instrument of their trade promotions". A sectorwise breakdown of authorised aid shows that the import of foodgrains accounts for over a third—35 percent; industry, mining, and power take up another 46 percent; agriculture and natural resources 3 percent, and services, etcetera, absorb the balance of 16 percent. The book devotes a chapter to the machinery of aid where the different Government agencies involved at various levels are described as also the various foreign agencies with which co-ordination is necessary. The chapter on the impact of aid makes clear that such an assessment is extremely difficult, since it is not even possible to formulate clearly the necessary concepts in this matter. In the concluding section of the book, the authors make a few suggestions, namely, that aid should be increasingly linked with programmes rather than projects, so that once the programme is approved it should not be necessary to analyse inidvidual projects in detail or have separate agreements for them; that aid should increasingly be untied; that it should increasingly take the form of long period commitments rather than be subject to negotiations from year to year; aid for specific projects should—as far as possible—not take the "turn key" form which deprives the receiver of experience acquired in construction and initial operation, etcetera. In the last few months, the Government of India has succeeded in convincing some of its benefactors abroad of the need to give untied loans. But its future is not very certain.

INCOME TAX LAW

Indian Income Tax—Law and Practice. By Sukumar Bhattacharya. (Published by Nababharat Publishers, 72 Mahatma Gandhi Road, Calcutta 9. Price Rs. 12.50, pages 480.)

The Indian income tax law is extremely complex and has been made the more intricate by the many amendments introduced from time to time. Although the literature on the subject is growing, most authors have shown a tendency to reproduce the various provisions of the Act without making any serious attempt to interpret them comprehensively in the context of case law. The great merit of Mr. Bhattacharya's book is that it does not attempt any such short-cut; it is a painstaking and useful work on the subject. Assessees who are lost in the bewildering maze of the law may consult the book with advantage. Apart from definitions of income, the mode of assessing the total income and the treatment of losses, there is an elaborate discussion on the procedure of income tax assessment, collection and recovery of sums payable under the Act, refunds and penalties, etcetera. The book also outlines the basic provisions of the legislation on wealth tax, gift tax, the super profits tax and the compulsory deposit scheme. The inclusion of the latter two, in particular, makes Mr. Bhattacharya's work usefully up-to-date. Although the book is written mainly for advanced students of taxation, it will also prove useful to the specialist as a dependable work of reference.

CORPORATE MANAGEMENT

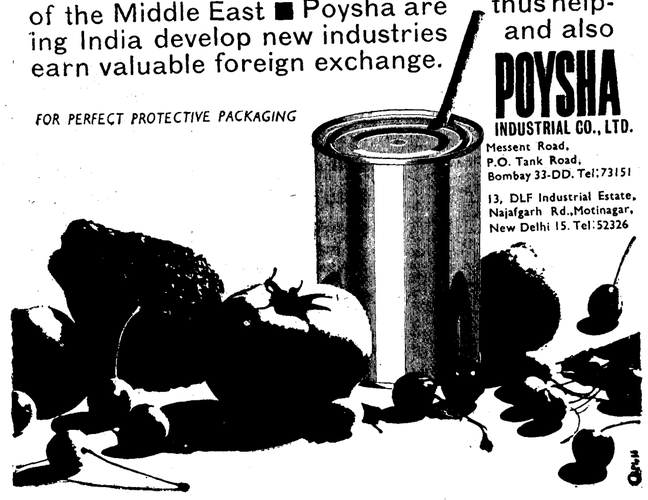
Corporate Management. (Published by the Association of Company Secretaries and Executives, 134/1, Mahatma Gandhi Road, Calcutta 7. Price Rs. 3, pages 26.)

The Association of Company Secretaries and Executives arranged a symposium on corporate management in May 1963, in which participants representing the official, professional and management sectors took part. The symposium attempted to assess the present-day problems of corporate management, namely, fair return to shareholders, retention of profits, strict compliance with various conditions of law; interests of consumers and the maintenance of amicable relationship between employers and labour.

MANAGEMENT TRAINING

Sales and Management Training in India. by T. A A. Latiff. (Published by the author from the Small Extension Training Institute, Hyderabad. Price Rs. 2, pages 34.)

This booklet is a collection of articles written by the autthor, some of which had appeared in certain journals separately. The demand for trained personnel to look after and run industrial organisations in India is steadily increasing. This demand can be met only by training programmes for personnel in all levels of management. The present book will also prove to be a useful addition to the literature on the science of selling. The author's illustrations are taken from the problems of training of the insurance sales force but should be applicable to selling other goods as well.



CANNED FOR CONVENIENCE After a tiring day's work how pleasant it is to relax, sipping your favourite fruit juice from a chilled small can! How convenient these 5½ oz cans are! They are easy to handle and take less storage space ■ Poysha, one of the leading tin container makers in the country, pioneered the manufacture of these cans. This made possible greater utilisation of our fruits and vegetables and helped create a new export item. First marketed in 1961, hundreds of thousands of these containers, made by Poysha, have already been used by leading canners to export fruit juices to the countries of the Middle East ■ Poysha are thus helping India develop new industries and also earn valuable foreign exchange.

Jute

PLEA TO IMPROVE COMPETITIVE POSITION OF INDIAN EXPORTERS

A STRONG plea asking the Central Government to strengthen the competitive position of Indian gunny exporters as against their Pakistani rivals, has been made by Mr. D. Duncan Smith, chairman, Calcutta Jute Fabric Shippers Association. The plea is made in an article on "ways to improve India's competitive position" published last week.

Mr. Smith suggests that the Government should seriously consider how best the difficulties resulting from Pakistan's export subsidy can be overcome. Ultimately steps will have to be taken either to make up the difference or to extend some other form of assistance to Indian exporters, if they are to retain their present position in the export trade. Referring to the incidence of wages, Mr. Smith says that as the cost of labour increases, it is essential to modernise the industry and produce more goods at lower cost.

According to Mr. Smith, India's main problem in export markets is the unequal competition from Pakistan on account of her export bonus scheme. In terms of money, Pakistan's advantage amounts to about Rs. 4 to Rs. 5 a 100 bags of B Twills. In order to derive the maximum advantage, mills export their goods themselves. Besides, Pakistani mills concentrate on producing only standard goods, particularly sacking, due to the fact that the operatives are not as efficient as they are in India.

Mr. Smith continues that India's strength today should be in her "know-how", as she has had vastly richer experience than Pakistan. With this background, Indian mills should and have, to some extent, diversified their production, manufacturing speciality goods in small or large quantities. These are as yet unobtainable in Pakistan.

There are certain essential factors that must be established before the industry can effectively compete with Pakistan over a long term. The jute cultivator must have a reasonable return for his efforts. This can be achieved on a permanent basis more easily by increasing the yield an acre and by producing quality jute with the use of modern farming practices. Pakistan has already achieved much in this direction. The mills must not be put in an uneconomic trading position by any artificial regulation of supply and demand or by Government controls, which will react on the industry's ability to sustain and expand production. India must produce goods of high quality and back them with service to overseas buyers in order to create an atmosphere of goodwill and co-operation.

Fall in Raw Jute Imports

Mr. Manubhai Shah, Central Minister for International Trade, told the Lok Sabha last week that India had almost achieved self-sufficiency in raw jute during the past three years. Imports of superior grades of fibre and cuttings from Pakistan have gradually declined from Rs. 7 crores in 1960-61 to Rs. 3 crores in 1962-63. They will fall further this year. He expressed the hope that it would not be necessary even to import marginal quantities from that country when India developed the production of selected grade jute. Considerable spadework has already been done in this direction.

Mr. Shah said that Pakistan's recent agreement with China was not likely to affect India's fibre trade with Pakistan. The 1963-65 Indo-Pakistani trade pact provided for importing such quantities of raw fibre as may be specified by India in September every year. He said that the two Governments were co-operating to curb the smuggling of jute across the border. The Government of India thought that Pakistani prices were very low and Indian upcountry rates had been maintained well above the operational minima.

Fibre Statistics

Stocks of raw jute with mills reporting to the I.J.M.A. were 1,575,000 bales at the end of October, against 1,261,000 bales a month earlier, according to reliable sources. Besides, mills had not taken delivery of 1,323,000 bales already purchased and lying in transit or awaiting movement from upcountry areas. So mill purchases and stocks at the beginning of November were around 2,898,000 bales. At the October consumption level of around 558,000 bales, the stocks will last for 5.18 months.

During the month the mills purchased 833,000 bales of Indian jute and 5,000 bales of Pakistani jute. The total quantity of fibre secured during the current season up to the end of October was 3,306,000 bales. Of this, 3,242,000 bales were of Indian origin, and 64,000 bales were from Pakistan.

THE JUTE MARKETS

Manufactured Goods: Opening on a subdued note, the manufactured goods market inproved during the past week. Sentiment continued to be depressed during the earlier half due to the virtual absence of enquiries and the heavy deliveries operators had to arrange to settle their outstandings against November futures contracts. Mills also emerged as keen sellers for all positions. All due-date transactions in the spot and futures markets were completed without any difficulty. On Friday, reports of a Government tender for 15,000 bales of B Twills for November-December delivery reversed the trend. Later, scattered hessian business was reported with the U.S.A. An enquiry for substantial quantities of hessian from Russia hardened prices further on Tuesday. In heavy goods, a second B Twill tender for near positions and a Syrian order were bagged. Besides increasing covering activity in the spot market, talk of these deals stimulated the trend in the futures market, where prices tended to firm up from the lowest levels. Hessian closed the week with a sizable gain after moderate fluctuations, while sacking retraced part of the lost ground after wide movements. Turnover was moderate and the undertone soft in sacking but steadier in hessian.

Wednesday's quotations were as follows:

	Dec.	Jan.-Mar.	Apr.-June	July-Sept.
40in. 7½oz.	34.75	35.00	35.00	35.00
40in. 8oz.	37.60	—	—	—
40in. 10oz.	46.60	46.65	46.90	46.90
B Twills	112.25	113.40	113.75	113.75
Cornsacks	115.00	115.00	115.50	115.50
Heavy Cees (Plain)	112.50	113.00	113.25	113.25
A Twills	132.75	134.25	133.75	133.75
Liverpools	124.00	125.25	125.50	125.50

Raw Jute: Divergent trends prevailed in the raw jute market during the past week. The spot market was steady and the futures market subdued. Mills showed nominal interest in Calcutta, but their agents were active in the upcountry agencies. Prices hovered around the official minima in Calcutta and at higher-than-parity levels in the secondary markets. With mills having purchased more than the November quota of 1.05 million bales during the month and a heavy December quota of 1 million bales pending, holders seemed to be reassured. Arrivals have declined to about 125,000 maunds a day in the secondary markets. The fibre now seemed to be lying in stronger hands and there was no evidence of selling pressure. Brisk movements of fibre took place from the interior to the Calcutta godowns. In the futures market, December contracts for Upper Assam White Bottoms were practically closed. Against March contracts, long liquidation by bulls depressed prices, for bears were reluctant to cover their short positions at the existing levels. Turnover was moderate and the undertone cautious but steady in the spot market and hesitant in the futures market.

Wednesday's quotations were as follows:

Landed at Mills (Basis Bottoms)

	T.S.D. Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md	Rs. A. Qtl.	Rs. A Md.
Assam-Agartala Jute	80.38	30.00	80.38	30.00
Northern Jute	77.70	29.00	79.04	29.50
Western Desal Jute	72.34	27.00	73.68	27.50
Selected Daissee	87.07	32.50	85.74	32.00

THE U.K. JUTE MARKETS

LITTLE BUYING INTEREST SHOWN

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firm in Pakistan last week. Most of the very cheap sellers either withdrew from the market, or raised their prices. Because there are two levels at which sales of raw jute can be registered, it is the smaller shippers and the Jute Marketing Corporation who obtained the bulk of the export business. These smaller shippers now raised their prices, but there were still sellers of the lower grades willing to accept considerably less than the minimum export rates.

Reports from Pakistan said with so many regulations in force for the sale of raw jute, sellers had become very discontented and this could affect the size of the crop sown next season. The quality of some parcels of jute arriving in the U.K. was very good which showed that some shippers had been upgrading their standards.

Offers of Mill Firsts were scarce, and no price was quoted last week. However, practically no buying interest was shown in this high grade of white jute. Mill Lightnings were available at £111, Mill Hearts at £95 5s and Grade Hearts at £79, c.i.f. U.K., for November-December shipment. Offers of Grade Tossa-2/3 were not being freely made, but one or two small parcels were available at £132. Grade Tossa-4 was named at £107. There were sellers of Dacca Tossa-5 at £135 and of Dacca Tossa-6 at £109. Outport Tossa-2/3 was firmer at £94 10s and Outport Tossa-4 at £84, for November-December shipment. The small buying interest showed by Dundee spinners was mainly for spot parcels of good quality.

Prices of cuttings were steady at £56 for S.N.C. and at £48 10s for N.C. Mesta was unchanged at £97 10s for A, at £72 5s for B, at £67 5s for C and at £43 for cuttings, c.i.f. U.K., November-December shipment. The Siam jute market was irregular with the prices of the better qualities tending dearer and the medium and lower grades remained unchanged. Grade A was offered at £71 10s, grade B at £63 10s and grade C at £58, delivered mill Dundee for December-January shipment.

The Calcutta goods market was much firmer for sackings, but about unchanged for hessians. Quotations were at 70s 5d for 40in. 10oz. and at 52s 11d for 7½oz. a 100 yards f.o.b. Calcutta for November shipment, at 70s 11d and 53s 1d December and at 70s 11d and 53s 3d January-March. B Twills were at 171s 9d, 172s 6d and 174s 1d for the respective shipment periods.

Prices of yarns and cloth were steady in Dundee. Spinners and manufacturers were very busy, and had practically nothing to sell in the near delivery position. The heavy end of the trade received further orders for narrow sackings, and most producers are now fully booked until the end of February.

EXPORT PROSPECTS FOR BICYCLES

By S. K. Srivastava

The Indian bicycle industry has entered the export field in a small way, but as competition is keen it has to sell its product at well below the ex-factory price. Export prospects cannot improve as long as production costs remain high.

AMONG the non-traditional items of export, bicycles have recently attained a position of some importance. The bicycle industry started in 1930, but its developments became spectacular only after the beginning of national planning. At the start of the first plan, the large-scale sector consisted of only two units located in Bombay and Patna. Their combined production capacity was 120,000 bicycles annually. Several units came into existence during the first plan period, and the industry grew rapidly. The number of firms manufacturing complete bicycles increased to 14 in 1956, and further to 20 in 1961. The first years of the two plans and the latest year for which comparable data are available have, therefore, been chosen to study the production cost and prices in the industry with which the export prospect is intimately linked.

To begin with, a bird's eye-view may be taken of the industry's rapid expansion, and its effects on imports and exports. Table I below gives the relevant statistical data.

TABLE I

PRODUCTION, IMPORT AND EXPORT OF BICYCLES (Nos.)

Year	Production	Import	Export
1951	114,276	197,578	—
1956	683,963	156,454	12
1961	1,040,591	391	3,439

It will be seen from this table that the increase in production during the above period has been striking. As a result, bicycle imports have gone down substantially. (The present import consists largely of bicycle spare parts. Even this has fallen from Rs. 2.4 crores in 1956-57 to Rs. 16.6 lakhs in 1962-63.) Exports have, on the other hand, clearly emerged, and are looking up. In terms of value, the rise has been from Rs. 45,880 in 1956-57 to Rs. 6.9 lakhs in 1961-62. In 1962-63, there was a further increase to Rs. 10.4 lakhs. It was originally expected that the number of bicycles exported would rise to 150,000 in 1960-61, and the second plan target was fixed accordingly. The actual export of bicycles, however, lagged considerably behind.

The Indian bicycle is being exported principally to Afghanistan and Egypt. The other countries to which they are exported are East Pakistan, Iran and Turkey. As an incentive to the export of bicycles, the Government has allowed under the Customs and Central Excise Duties Export Drawback (General) Rules, 1960, rebates in a flat rate form for each of the exported brand. A reduction in railway freight rates is also allowed. Where indigenous steel is used, a replenishment quota of 13⅓ percent of the quantity actually consumed in the exported product is allowed. Besides these export promotion measures, market surveys on bicycles were sponsored by the Government in Singapore, Malaya and adjacent territories and Aden.

Third Plan Export Target

The real problem is to increase the volume of exports and widen the overseas markets for the Indian bicycle. The third plan target of export, it may be recalled, has been fixed at 200,000 bicycles by 1965-66, which brings one to the main question of production cost and prices. Data relating to the cost or production are available from the Census of Indian Manufactures (now redesignated as the Annual Survey of Industries). The available data, however, relate to the entire output and not separately to each of the products—major or minor—manufactured by the industry. As the purpose is to study the unit cost of production, it is necessary to estimate the industry's gross output in terms of its major product, namely, the bicycles in the present case. This has been done in Table II. It will be recalled that the prices of steel had been raised in 1956. As the impact of the increase in steel prices is reflected in that year's cost of production, the cost data for the subsequent year, namely, 1957, have also been studied in Table III.

Production Costs

A closer examination of the statistical data presented in Tables II and III shows the following salient features of the bicycle industry:

(1) Except for 1957 when there was a slight fall in the cost of production, compared with the previous year, the unit cost of output has steadily increased in the bicycle industry during the period 1951-1960. Compared with 1951, the material cost rose by Rs. 28.41 for every bicycle produced in 1960. The total input showed an even greater rise, namely, Rs. 36.41. This may be explained partly by the rise in the work done by others and depreciation, and partly by the appreciable consumption of previous year's semi-finished products during 1960.

(2) The total manufacturing cost, however, showed a lesser rise, namely, Rs. 25.78 for every bicycle produced (in 1960 over 1951) in relation to the increases registered by material cost or total input. This is evidently due to the decrease in labour cost a unit of output achieved by the industry during the same period. The amount of wages, salaries, etcetera, spent on every bicycle produced fell by Rs. 10.62. This was a significant fall. It might be attributed to the greater degree of mechanisation introduced in the industry during the period as shown by the rise in depreciation charges.

(3) The slight increase in the amount paid to other concerns for work done for the industry, it may be inferred, is due to the growth of subcontracting activity, which is to be regarded as a welcome feature. It is prevalent in all industrially developed countries, and is today a recognised part of the modern industrial complex.

(4) The fact that the production cost has gone up, notwithstanding (i) the decline in labour cost, (ii) the increase in mechanisation (iii) the rise in the scale of production, and (iv) the fall in the import of components and spares, shows that full economies of large-scale operations have not been achieved by the industry and that the level of technological efficiency has also not advanced. One might even guess that as the indigenous component of the Indian bicycle has increased, the cost has risen suggesting thereby that the cost of production of parts and accessories has been more than that of the imported brand.

(5) As a result of the increase in the cost of production, the ex-factory sale price of the Indian bicycle rose from Rs. 120 in 1951 to Rs. 137 in 1960. The rise in price was, however, less than the increase in the production cost. Even then, it seems, it was a factor responsible for the failure of the 1960-61 export target.

Increased Selling Price

Evidence of the rise in the bicycle price is available from the enquiries of the Tariff Commission also. The last Tariff Commission enquiry was held in 1960. According to the statement of prices appended to the commission's report, prices of certain brands charged at Rs. 125 and Rs. 135 a cycle in 1954 increased to Rs. 138 and Rs. 145, respectively, in 1960.

It must be remembered that there is a close connection between the level of export and the competitive position of the industry. The lower the cost of production, the stronger is the competitive position, and consequently, the larger is the export possibility. The prices of Indian bicycles viewed in relation to the prevailing prices in other countries alone provide a correct basis for judging the competitive position of the industry in international markets. But, as the price data for different countries are not readily available, only an approximate idea of the position can be had by comparing the ex-factory price of bicycles with the actual import and export prices. It is true that the export price being f.o.b. and the import price being c.i.f., they are not strictly comparable between themselves or with the ex-factory price. Their relative differences may, however, be still meaningful as can be seen from the following: The relevant price data are as follows:

	Average prices of a bicycle in 1960
Ex-factory price	Rs. 137
Import price	Rs. 174
Export price	Rs. 123

Need to Cut Costs

The prices may now be analysed as follows:

(1) The higher import price in relation to the export price is understandable, and may be explained partly by its components of insurance, freight, duties, etcetera, and partly by the difference in quality. But the fact that it is not much higher than the ex-factory price suggests a possibility of the latter price not comparing favourably with that of the other countries in international markets.

(2) That the export price of bicycles is lower than the ex-factory price—normally it is expected to be the other way—only confirms the Indian bicycle's somewhat unfavourable position in foreign markets *vis-à-vis* other producers. Clearly, (unless there has been under-invoicing) the Indian bicycle is not selling in foreign markets at the price it is being sold in the country. In fact, but for the lower export price, it appears the export of bicycles from India would not have been possible.

TABLE II

ESTIMATE OF PHYSICAL OUTPUT

Year	Gross output: Major product (bicycle) Quantity No.*	Major product (bicycle) Value (Rs.)	Other products (including work done) Value (Rs.)	Major product (bicycle equivalent (2))	Total Quantity (4)	Total Value (Rs.)	Ex-factory sale value (3) (Rs.)
1951	121,888	1,46,12,848	60,13,731	50,114	172,002	2,06,26,579	120
1956	591,707	7,95,74,920	2,02,36,967	1,51,022	742,729	9,98,11,887	134
1957	748,653	9,58,37,734	2,50,91,558	1,96,028	944,681	12,09,29,292	128
1960	1,017,080	13,89,78,396	9,56,97,000	6,98,518	1,715,598	23,46,75,396	137

* The production of bicycles shown in this column differs with that shown in column (2) of Table I. The production series are taken from different sources and their coverage is not identical.

(2) The value in column (4) converted at the rate worked out from columns (2) and (3) yields the equivalent of major product, namely, bicycle (Nos.).

TABLE III

MANUFACTURING COSTS (in Rs.)

Year	Value at factory of fuels, lubricants, electricity, etcetera, consumed: Amount	Unit cost	Value at factory of raw materials, chemicals, packing materials, etcetera, consumed: Amount	Unit cost	Work done by others: Amount	Unit cost	Depreciation: Amount	Unit cost	Total input: Amount	Unit cost	Salaries, wages and benefits: Amount	cost Unit	Total manufactured expenses: Amount	Unit cost
1951	3,88,268	2.26	95,46,342	55.50	65,801	0.38	5,90,594	3.43	1,07,02,821	62.22	50,24,296	29.21	1,57,27,117	91.44
1956	21,27,289	2.86	5,82,29,072	78.40	5,47,681	0.74	22,03,160	2.97	6,83,40,933	85.28	1,55,97,150	21.00	7,89,38,083	106.28
1957	27,14,640	2.87	7,20,28,017	76.24	7,35,869	0.78	25,48,852	2.70	7,85,98,973	83.20	1,88,50,730	19.95	9,74,49,703	103.16
1960	49,92,886	2.91	14,39,70,917	83.91	20,45,416	1.19	76,44,163	4.46	16,92,12,776	98.63	3,18,89,147	18.59	20,11,01,922	117.22

N.B.—The unit cost has been worked out by dividing the respective cost by the physical output (Vide column (6) of Table II).
The amounts of the individual input items [columns (2), (4), (6) and (8)] do not add up to the total input column (10) which is adjusted for the difference in the opening and closing stocks of semi-finished products and finished products used for further manufacture during the year.

Commodity Markets

DECLINING TREND IN TEA PRICES

NEED FOR CROP REGULATION

(BY A SPECIAL CORRESPONDENT)

NORTH Indian tea production up to 15th November was 529,091,839 lbs, compared with 546,052,748 lbs in the same period of 1962. These figures should result in firmer commodity prices, but in fact, do not do so. The reason for falling prices is to be found in the supply-and-demand situation. Apart from north India and Indonesia, there is already too much tea in sight in world markets. Uneconomic prices would result in loss to producers.

The question of renewal, in a revised form, of some method of restricting world crops or even using import duties against some of the newcomers seems desirable. This correspondent is aware of the great difficulties involved, but if world coffee producers have managed to evolve a working scheme to regulate supplies, tea growers too should be able to reach some such arrangement in their own interest. Meanwhile, it is being complained that Government aid to this important industry is not adequate. There are schemes for assistance under hire-purchase arrangements for machinery, supply of fertilisers at concessional rates as also financial assistance for replanting.

The last matter may not be so important if the methods advocated by Professor R. D. Hawooth by which clones shall replace growth from seeds can be widely adopted. The Tocklai experimental station has, of course, been working on these lines for some years. This correspondent has no practical experience of this method, but it would appear to save time in development. But the question whether cuttings can be potted and then transplanted is not still unsettled.

Again how much heavy pruning of this nature can a healthy bush stand without loss of yield in following seasons? With 3,500 or more clones required an acre, there is a nice nursery man's job in the offing. It certainly sounds quicker and safer to develop from cuttings rather than seeds and there would be a gain of perhaps two years in time. It is reasonable to presume that the bulk of recent planting will result in higher yields from quicker maturing bushes and that new planting from 1959 will be giving heavy yields by 1964 or 1965, or maybe in both seasons north India will make up the heavy falls during 1962 and 1963.

South India, Ceylon, and China are all likely to export more tea. Meanwhile, African output is proceeding faster than originally estimated by the F.A.O. Taking the five years 1957-61, the major growing areas increased production by about 237 million lbs. but world exports were up by less than 100 million lbs. These figures emphasise the importance of cultivating internal markets.

It looks a safe assumption that given normal climatic conditions, too much tea is now being produced. Otherwise, why should commodity prices fall? Of the surplus poundage, India makes about 60 percent of plain tea, but other countries manufacture a far higher percentage of common teas. Even quality gardens may find the going more difficult as in the past few years the price differential between plain and quality teas has narrowed from 2s 10d a lb plain and 5s 9d a lb quality to 2s 5½d a lb plain and 5s 2½d a lb quality.

COMPANY AND PUBLIC NOTICES

THE ORISSA MINERALS DEVELOPMENT COMPANY LIMITED

AT a meeting of the Board of Directors held on Thursday the 28th November, 1963, the following Dividend was recommended for declaration at the Annual General Meeting to be held on the 30th December, 1963, to be paid for the year ended 30th June, 1963, subject to deduction of tax.

On the Ordinary Shares at the rate of 10 per cent per annum, subject to deduction of tax.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED.
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta, 28th November, 1963.

THE ORISSA MINERALS DEVELOPMENT COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 11 A.M. on Monday, the 30th December, 1963, for the following purposes—

1. To adopt the Profit and Loss Account of the Company for the year ended 30th June, 1963, and the Balance Sheet as at that date together with the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

As Special Business

4. To consider and if thought fit to pass, with or without modification, the following resolution of which Notice has been received from a member under Section 257 of the Companies Act, 1956, which will be proposed as an ordinary resolution—

"THAT Mr. B. P. Ray be and is hereby appointed a Director of the Company".

5. To consider and if thought fit to pass the following resolution which will be proposed as a Special resolution—

"That the provisions of the Articles of Association of the Company be altered in the manner following, that is to say—

(a) That in Article 92 (line 5) the words "and shall be Chairman of the Board" be and are hereby deleted.

(b) That Article 116 be and is hereby deleted and that the following new Article 116 be substituted therefor.

116. The Directors may elect some one of themselves to be Chairman of the Board to preside over their meetings and determine the period for which he is to hold office. If no such Chairman is elected or if at any meeting the Chairman is not present at the time appointed for holding the same, the Directors present shall choose some one of their number to be chairman of such meeting".

The Share Transfer Register of the Company will be closed from 16th December, 1963 to 30th December, 1963, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED.
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta, 28th November, 1963.

Notes:—

(a) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend if declared, will be paid on or after 13th January, 1964 to those shareholders so entitled whose names appear in the Company's books on the 30th December, 1963, or to their mandatees. No application for Dividend Warrants will be necessary.

(c) **The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is being sent to the members.**

STATE BANK OF INDIA

NOTICE

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Monday, the 16th December, 1963 to Tuesday, the 31st December, 1963, both days inclusive.

N. A. KRISHNAN,
Managing Director.

Bombay, the 13th November, 1963
22nd Krtk. 1885 (Saka).

THE BURRAKUR COAL COMPANY LIMITED

AT a Meeting of the Board of Directors held on Thursday the 28th November, 1963, the following Dividends were recommended for declaration at the Annual General Meeting to be held on the 27th December, 1963, subject to deduction of Tax.

On 22,998 7% Cumulative Preference shares at the rate of 9.10 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On 45,000 6% Second Cumulative Preference Shares at the rate of 4.995 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On Ordinary shares at 13 per cent per annum.

By Order of the Board,

BIRD & CO (PRIVATE) LIMITED.
Managing Agents.

Registered Office,
Chartered Bank Buildings,
Calcutta, 28th November, 1963.

THE GENERAL INVESTMENT & TRUST CO. LTD.

Notice of Interim Dividend

THE Board of Directors has sanctioned payment of the following Interim Dividends for the year ending 29th February, 1964, subject to deduction of tax.

On the 1st Cumulative Preference Shares @ 3.25%.

On the 2nd Cumulative Taxable Preference Shares @ 2.438%.

The above dividends will be paid on or after the 6th January, 1964, to those members whose names appear in the Company's books on the 23th December, 1963, or to their mandatees.

The Share Transfer Registers of the Company will be closed from 19th December, 1963, to 28th December, 1963, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED.
Secretary.

Registered Office,
Chartered Bank Buildings,
Calcutta, 2nd December, 1963.

THE INVESTMENT & FINANCE COMPANY LIMITED

Notice of Interim Dividends

THE Board of Directors has sanctioned payment of the following Interim Dividends for the year ending 29th February, 1964, subject to deduction of tax.

On the 1st Cumulative Preference Shares @ 3.25%.

On the 2nd Cumulative Taxable Preference Shares @ 2.438%.

The above dividends will be paid on or after the 6th January, 1964, to those members whose names appear in the Company's books on the 26th December, 1963, or to their mandatees.

The Share Transfer Registers of the Company will be closed from 19th December, 1963, to 26th December, 1963, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED.
Secretary.

Registered Office,
Chartered Bank Buildings,
Calcutta, 2nd December, 1963.

JESSOP & CO. LTD.

NOTICE is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half-year ending 31st October, 1963, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 12th December, 1963 to 16th December, 1963, both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 16th December, 1963 or to their Mandatees.

By Order of the Board,

K. S. BASU,
Secretary.

63, Netaji Subhas Road,
Calcutta, 27th November, 1963.

THE BURRAKUR COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 11 A.M. on Friday, the 27th December, 1963 for the following purposes :—

1. To adopt the Profit and Loss Account of the Company for the year ended 30th June, 1963 and the Balance Sheet as at that date and to receive the Directors' and Auditors' Report thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in place of the retiring Directors.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and if thought fit, to pass with or without modification the following resolutions which will be proposed as Special Resolutions.

That the provisions of the Articles of Association of the Company be altered in the following manner that is to say.

(a) That Article 161 of the Articles of Association of the Company be amended deleting the word "three" in line 4 and substituting therefor the word "six".

(b) That in Article 92 (line 8) the words "and such one of them as from time to time shall be named by the Managing Agents shall be the Chairman of the Board" be and are hereby deleted.

(c) That Article 116 be and is hereby deleted and that the following New Article 116 be substituted therefor.

"116. The Directors may elect some one of themselves to be Chairman of the Board to preside over their meetings and determine the period for which he is to hold office. If no such Chairman is elected or if at any meeting the Chairman is not present at the time appointed for holding the same, the Directors present shall choose some one of their member to be Chairman of such meeting."

The Share Transfer Registers of the Company will be closed from the 18th December, 1963 to the 27th December, 1963, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

Registered Office,
Chartered Bank Buildings,
Calcutta, 28th November, 1963.

Notes :

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 15th January, 1964, to those members so entitled, whose names appear in the Company's books on the 27th December, 1963, or to their mandatees. No application for dividend warrants will be necessary.

(c) **The relative explanatory statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all members.**

TATA-JOHNSON LIMITED ★ JAMSHEDPUR ★

ASSOCHAM: THE SEARCH FOR ECONOMIC EFFICIENCY

THE quality of the main debate at the annual general meeting of the Associated Chambers of Commerce is prone inevitably to vary widely from year to year. If the exchanges at the meeting in Calcutta last Saturday were unusually harmonious, constructive and practical, the credit is due equally to the two main speakers—Mr. A. R. Foster, president of Assocham, and Mr. C. Subramaniam, Central Minister for Steel, Mines and Heavy Engineering. Mr. Foster set the tone for the proceedings in a speech that was notable for its blend of frankness and courtesy. And Mr. Subramaniam reciprocated the gesture in words that business men nowadays do not always have the pleasure to hear: "I find myself in agreement with so much that you have said that I feel confident in expressing the hope that, in the years to come, we in industry and in Government will tackle our formidable problems in a spirit of mutual understanding and dedication to a common cause." To many among the audience present, it must have seemed that the years of quiet diplomacy which have yielded such close accord on public occasions have been remarkably fruitful; the value of agreement on general issues is not to be under-estimated even if it is accompanied by sharp differences on details.

The year which Mr. Foster and Mr. Subramaniam reviewed has been marked by more than its fair share of difficulties. A major one stems from the decline in food and agricultural production. Industrial production has increased, but at a far slower pace than the planners had visualised, mainly because in many important sectors productive capacity has remained idle in spite of the impetus expected from the emergency. The rise in prices has led to hardship, labour unrest and political agitation. The drastic Budget which Mr. Morarji Desai presented in February, apart from contributing handsomely to the price rise, has knocked the capital market for a six; new companies in particular have found it difficult to raise the money they need. There is some solace in the fact that the shortage of foreign exchange is not as acute as it might have been, thanks to the liberal inflow of external aid and an encouraging increase in exports. The shortage of rail transport capacity and of the lower grades of coal too has eased, although the power situation remains precarious in large parts of the country. Finally, as Mr. Foster pointed out, the Central Government's revenues are buoyant—or at least as buoyant as one might expect after the gross under-estimation of revenues in Indian Budgets each year.

Many of the difficulties, as the Assocham president said, result from "cumulative weaknesses of policy and administration"; and perhaps nowhere is this truer than in agriculture. Ambitious programmes have been framed for raising farm output. It is easy to agree with Mr. Subramaniam that not only has the output been increased, but fluctuations have been reduced. The fact remains, however, that: (1) the rise has not kept pace with requirements; (2) during the past two years, the output of foodgrains has steadily declined; (3) shortages, even if marginal, still tend seriously to undermine economic stability; and (4) perhaps most important of all, if India had had to buy with her free foreign exchange reserves the crucial supplies she has been getting from the United States under the P.L. 480 programme, those reserves would long ago have vanished. The hungry may find little consolation in Mr. Subramaniam's reminder that, according to the Government's statistics, farm production has been rising faster in modern India than in certain phases of Japanese, Canadian or U.S. history. Indeed, some statisticians may be inclined to issue the contrary reminder that the Indian rise is in part illusory, in the sense that it is due to the elimination of a number of statistical imperfections which at times made nonsense of the earlier crop estimates.

The important point, surely, is that agricultural production could have been increased much more rapidly in this country if Central and State Ministries had concentrated more on it than on their private political squabbles. Not only have land reform programmes been ill-advised; efforts to promote the use of irrigation water, fertilisers, pesticides and scientific techniques have been sluggish too. Mr. Subramaniam paid a generous and well-deserved compliment to the planters represented in Assocham when he described them as, "in a sense, the most efficient agriculturists in the country", since they had achieved remarkably high yields on the plantations. But he did not care to add that the preconditions of their success—large farms, efficient management and the constant search for scientific improvements—are precisely the ones which the Government's own policies often ignore, if not firmly discourage, in the rest of Indian agriculture.

If "cumulative weaknesses of policy and administration" have done much to hamper agricultural progress, they have done a great deal to hamper the progress of industry too. Mr. Foster referred to the damage caused by price and distribution controls on strategic supplies such as coal, paper, cement, iron, steel, fertilisers and electrical power. Supposedly intended to check inflationary pressures, the controls have in fact served to divert capital to less essential uses, and have thus actually contributed to inflation by accentuating the shortages of these commodities. Mr. Subramaniam offered the defence that the price of coal had been increased 12 times, and the retention price of iron and steel raised by 25 percent, within the last five years; he claimed, therefore, that the controls had been operated with a fair degree of flexibility" The argument missed the point, however, that the number of times the price of a commodity is raised, or the proportion by which it is raised, is not of crucial importance. The prices in question were to begin with far too low. To have raised them 100 times or by 100 percent is no answer, especially if the prices of other goods have increased almost as often or as rapidly in the generally inflationary situation. The important need is that in industries which are considered essential, price and distribution controls have to be operated in such a way that production is maximised. In other words, the industries have to be allowed to conserve the resources and raise the fresh funds necessary for ex-

pansion. The acute and prolonged shortage of the commodities Mr. Foster listed confirms that this has not been done.

Far and away the most reassuring part of Mr. Subramaniam's speech was the indication that the Government is having second thoughts on the virtues of the controls now in force. Mr. Subramaniam personally deserves much of the credit for sponsoring the reviews—which cover not only iron and steel, but also industrial licensing, coal prices and the use of foreign aid. His remarks on whether controls were perfect or useless were superfluous; few except those on the lunatic fringe of the left and right take the extreme positions that the Minister laboriously set out to condemn. Mr. Subramaniam did, however, hit the nail on the head when he declared that "considerable vested interests have developed around some of the present controls". But the refreshing candour would have been more welcome if it had been supplemented by the admission that the controls have got to the stage where the administration itself finds it does not have the time and the expertise to operate them in the meticulous detail in which they exist. The greater the perplexities of the administration, the greater is the sway of vested interests, among whom the political ones are by no means the least powerful. The Government will need all the luck and resolution it can find if, in the face of opposition from politicians and the bureaucracy, it is to evolve some sense out of the present paraphernalia of controls.

Apart from the regulations relating to the price and distribution of essential commodities, serious harm has been done by the policies for industrial licensing. Regional and State pressures have led to the dispersal of industries to areas where, in strictly economic terms, they have no reason to exist. No less often, the licensing policies have been abused in the effort to establish several small units where the economies of scale clearly prescribe the need for only one large one. Mr. Subramaniam last Saturday paid the customary lip-service to "the need to avoid excessive concentration of wealth and economic power"—the slogan under which the country has already been littered with host of uncompetitive industrial orphans. But one hopes the more important of his statements on the subject was that "we cannot, even for the sake of encouraging new entrants or for the sake of balanced regional development, encourage the proliferation of uneconomic units without retarding the general progress of industry in the country as a whole."

The hint was given that somehow the two divergent aims—of preventing the concentration of economic power, and yet promoting the establishment of large and economic new units—would be reconciled by setting up new financial institutions or diversifying the activities of those that already exist. The assumption seems implicit that the financial institutions will help supply the capital which new entrepreneurs might not be able to raise on their own. But, if that is the case, there is a fair chance that the idea may be stillborn. Experience shows that it is not only capital which new entrepreneurs lack; what is more important in India nowadays, they are also frequently short of the managerial and technical know-how which is essential for the success of a new undertaking, especially if it is to be a large and competitive one.

Among the relatively unorthodox features of Mr. Foster's address was the emphasis on the rôle of management, particularly in the effort to raise productivity. As the Assocham president pointed out, in many industries labour costs are high and *per capita* output is low. If production costs could be reduced, exports would become more competitive and domestic prices would come down. Greater productivity is, therefore, essential; it can increase efficiency and output along with workers' earnings. Under Mr. Foster's presidentship, Assocham has helped promote the general awareness of work-study and productivity techniques; particularly interesting is the experience that bonuses paid monthly to workers for increased output are gaining popularity where they have been based on properly-designed productivity schemes. It may be true that in many industries the greatest threat to productivity comes from the shortage of raw materials, power or other facilities. The general point nevertheless remains valid that large sectors of Indian industry could benefit by adopting scientific management techniques, especially those aimed at reducing costs and improving efficiency.

Good management is in fact crucial to the problem of advance planning and effective implementation which Mr. Subramaniam discussed in a wider context. The Minister's argument was that India was moving on to a new, higher and more complex phase of industrial development. Until recently, the development had been confined to relatively simple fields and to industries which required relatively small amounts of capital. The difficulties which had now arisen were to a large extent inevitable, being due to the growth in the complexity and capital requirements of industrial enterprise. The argument is understandable, if not particularly original: it does not, however, answer the criticism that when India decided to move to the so-called "higher phase of development", she could have prepared more adequately for the difficulties that were expected to arise. That, after all, is what planning was for. If recurrent crises are to be accepted coolly as an inevitable accompaniment to each "higher phase of development", it would be hard to visualise a more derogatory comment on the quality of the planning the Government takes pride in.

The major weakness of current planning is not that the programmes, for industry or in other spheres, have become highly complex; that was only to be expected. The weakness is that the managerial and technical personnel required to deal with programmes of such complexity do not exist in anywhere near adequate numbers. Mr. Subramaniam's rule over Hindustan Steel cannot have left him unaware of the problem. Yet it is disappointing to find that in his emphasis on the need for advance and detailed planning for a number of alternative projects (an emphasis which may spring from the Bokaro fiasco), he said almost nothing about the men who are to do such planning. A widespread impression is that the people required to plan broadly for a few projects are already in short supply. Where, then, are the much larger numbers required to plan in detail for several alternatives to be found?

There are two ways in which the difficulty might be eased, although not eliminated. One is for the Government to farm out more projects to private entrepreneurs who are in a position to commandeer the managerial and technical personnel required. The other is to give such personnel greater incentives, along with the training facilities required to increase their numbers. Both possibilities have in the past been limited by irrational fiscal policies born of ideological prejudices. The impact of personal taxation has greatly affected the inflow of qualified technicians and managers from abroad. It has also greatly reduced the incentives for Indians and expatriates already working in industry. The provision whereby a company paying more than Rs. 5,000 a month to an Indian employee is penalised, has proved particularly discriminatory and reprehensible. As Mr. Foster pointed out, it is often through the hard work and assiduous persuasion of Indians in this category that foreign investors are brought to invest money in this country. Proper rewards to salaried personnel, especially at the senior levels, are an essential precondition for the success of "the managerial revolution."

Apart from a substantial reduction in personal taxation, Mr. Foster pleaded for a thoroughgoing reform of the taxes relating to companies. Mr. Subramaniam skirted the issue in his reply, which was perhaps understandable since he does not hold the Finance portfolio. The fact remains, however, that no single levy has done more damage to investment confidence in recent years than the super profits tax; its abolition, or drastic modification, is therefore a matter of top priority. The Government is prone to advertise the concessions it gives to new undertakings. These are admittedly substantial, but they are available for only a limited period. After that, the enterprise becomes subject to a level of taxation which is high by international standards, and which inevitably affects the decisions of the long-term investor. Discussing the taxes on intercorporate investment, Mr. Foster made the point that "since most foreign private investment in India in future must come from foreign companies rather than individuals, the elimination of this multiple taxation of company profits" is of special importance. Only in ways such as these might the havoc wrought by the last Central Budget be repaired to some extent by the one to come.

ENGINEERING BOTTLENECKS

THE continuing expansion of the engineering industries is among the few bright spots one can discern in the current economic scene. It is helping to strengthen and diversify the industrial base, at the same time as it enlarges import savings. While the overall growth in industrial production during the past two years averaged only 7.5 percent annually, production increased by 25 percent in the basic metals industry, by 69 percent in the manufacture of metal products and by 18 percent to 22 percent in machine manufacturing. While citing these figures in his presidential address to the Engineering Association of India last week in Calcutta, however, Mr. T. R. Gupta was acutely conscious of the blemishes. The levels of production attained represent in most cases a belated endeavour to come up to the second plan targets, while the output of finished steel is still 500,000 tons short of the 4.5-million-ton level expected by 1960-61. The delays persist, and the realisation of the 1965-66 goals will almost certainly be deferred until the second or third year of the next plan. In the meantime, the gap between the demand and supply of the industry's basic raw materials is bound to widen, with the result that the proportion of idle capacity, already high, will increase still further.

According to estimates furnished by a survey conducted by the Association, the demand of the engineering units for rolled steel in 1962-63 was roughly 2 million tons, of which only 30 percent or 40 percent was met. In pig iron, the situation was only a little better, the supply from existing sources meeting no more than 40 percent or 50 percent of the demand. The solution, according to Mr. Gupta, lies in importing 1 million tons of steel and an equivalent quantity of pig iron until domestic supplies can be augmented. Some imports of both will, no doubt, be arranged—Mr. Subramaniam has given several assurances about this in the Lok Sabha and in his address to the Steel Advisory Council last month—but the quantity will depend on many things other than Mr. Krishnamachari's willingness to scrape together the necessary foreign exchange. The decisive factor may be the non-project assistance India is able to get from all sources, a total to which the recent World Bank proposal to consider financing maintenance imports may make an important difference. With so many uncertainties still involved, it is obviously too early for anyone to hold out firm hopes even though the value of additional production of engineering goods in saving imports may be fully recognised.

The import of iron and steel, by itself, will not take the engineering industries very far. In relation to the more important lines of production, what can be made locally needs to be supplemented in varying degrees by components and completing equipment from abroad. The motor-vehicle makers, for instance, cannot function without substantial imports of components, necessitating release of foreign exchange, even on a highly restricted basis, at the rate of Rs. 4 crores a year. The Bhopal heavy electrical plant will require, as Mr. Subramaniam admitted at the Association

India's Resources
are Precious
WASTE NOT,
WANT NOT

meeting, imports of about Rs. 6 crores a year over the fourth plan period. The unfortunate effect of the present lop-sided development of engineering industries will be seen in a serious aggravation of the foreign exchange problem. This follows from the fact that complete power plants, for example, may be purchased out of project aid, but the import requirements of local manufacture will have to come from the much smaller amount available as non-project assistance. Considered in this light, the first priority in the future development of engineering must go to closing the gaps in the industries' existing structure.

This implies providing for the necessary investment as a first charge on available resources, even if it means having to do without some of the ambitious schemes now being discussed. Mr. Gupta underlined in this context the urgency of building up the machine tool industry and setting up ten or 20 tool-rooms in different parts of the country to manufacture dies, jigs and fixtures. These are undoubtedly important but there are several others deserving equal priority. Ball bearings, fasteners, welding electrodes and tungsten carbide are all basic items without which the engineering industries can hardly function, yet their development has unfortunately been allowed to fall behind. Only a few moths ago, the shortage of electrodes brought fabricators virtually to a halt, necessitating imports on an emergency basis. Was this another instance where New Delhi, in its preoccupation with grandiose projects, had missed out on the small but vital detail that would make all the difference between success and failure?

The Government has set up an Ancillary Industries Board to develop the supply of components to 16 large-scale industries. Success in this endeavour will depend a great deal on arranging for technical know-how, especially for precision-engineering items. In cases where a proved component or instrument is to be taken up for manufacture, it will be necessary to pay either royalties or technical fees—matters which cannot be quickly negotiated because of the procedural hurdles set up by New Delhi. Even where no patent rights are involved, processing may require specialised know-how, such as of a designer or heat treatment specialist, for which technical personnel may need to be brought out on short-term contracts. As Mr. Gupta pointed out, each such contract has to be approved by the Government and the decision is often delayed, as a result, for much longer than a suitable person is prepared to wait. These procedural problems are common to all industries, but there are two reasons why the resulting handicaps will bear more heavily on ancillary units than on others. In the first place, ancillary units are almost by definition small, and therefore without the resources for prodding New Delhi into prompter action. Secondly, the need for technical expertise grows inversely with the size of the final product.

In his address to the Engineering Association of India, Mr. Subramaniam spoke at some length on the need to develop indigenous know-how. There can hardly be two opinions about the merits of achieving greater self-sufficiency as long as it is accepted that no country can ever lay claim to a monopoly of worthwhile ideas. This implies a willingness to borrow from others (or accepting otherwise the penalties of obsolescence), as seen in the interchange of manufacturing know-how taking place all the time among the advanced nations. Russia, for instance, has just agreed to pay a stiff price for the use of German chemical technology for producing fertilisers from naphtha while it negotiated earlier a deal with Austria for the use of the well-known L.D. process of steel-making. Even so, India will need to follow in Japan's footsteps by gradually building up a fund of indigenous technology, enlarging and enriching what has been borrowed. This cannot be accomplished overnight, least of all where immediate commercial production is required. For the present, therefore, there should be no hesitation at all in making further borrowing and accepting with good grace the price that has to be paid for it. The price is, in fact, quite small, as is evident from the figures cited by Mr. Krishnamachari in a recent discussion with some M.P.s. He is reported to have told them that remittances on account of royalties and patents amounted to Rs. 3.39 crores last year, which constituted perhaps a minute fraction of the value of output attributable to the technical assistance covered by these payments.

At a time like the present when the speeding up of development is especially important to overcome the unfortunate lags of the past two years, any reluctance to use ready-made technology cannot but set the engineering industry back. This applies not only in the private sector but also in the public. Enterprises like the coal-mining machinery plant in Durgapur or the heavy machine building unit in Ranchi cannot begin to function without assistance with designs, including shop drawings. Like several design functions, the latter can indeed be tackled by Indian meantime, the completed plant and equipment will have to stand idle. In the circumstances, exhortations to industry to stand on its own feet a design organisation and get it working. In the engineers, provided the time is given to assemble as rapidly as possible cannot but have an ominous ring suggesting that New Delhi may be thinking of adding to all the many hurdles obstructing the acquisition of new technology. In fact, if Mr. Subramaniam's entirely sensible advice about detailed advance preparation for new industrial projects is to be heeded, the need for technological assistance will be all the greater. India has a large corps of engineers but understandably their experience in designing and planning new units is limited. In recognition of this gap, the Government has itself been most anxious to persuade overseas firms to set up Indian offices with, of course, local participation to fill the large gaps in consultancy services.

U.K.: COST OF MODERNISATION

POLITICALLY-MINDED Britons regard their country's economic expansion in 1963 as a preparation for the general election of 1964, but the ideas circulating and the plans taking shape near the end of 1963 transcend politics. What they involve is the rapid modernisation of the country, both economically and socially. Short-term political expediency may provide the impetus, but the transformation will be permanent. The important question is whether it can be financed without excessive strain. The British Government revealed recently its notions of capital spending in the public sector in 1963-64 and 1964-65. The proposed increase in this spending is as much as 20 percent in 1963-64 but only 7 percent in 1964-65, according to the White Paper on the subject. Yet medium- and long-term projects involving massive additional spending have been proposed since the White Paper was published, although at that time the Chancellor of the Exchequer warned that the Government had reached a temporary limit of spending. These projects range from the modernisation of horticulture, for which the Government is offering financial aid amounting to £50 million in the next ten years, to the total reconstruction of city centres and other "conurbations", of which a prospective increase in spending on urban roads from £50 million a year now to £140 million a year by 1970 represents a comparatively small proportion of the cost Intermediate is a five year plan for improving the telephone service, at a cost of £900 million.

In the opinion of the London *Financial Times*, the Buchanan Report on the redevelopment of Britain's cities to accommodate vehicular traffic "is arguably the most important published by any British Government since the war". It recognises not only that investment in vehicles must be matched by investment in roads, but also that the whole traditional concept of a city, where traffic and people, at leisure or at work, are intermingled is outmoded. The Minister of Transport has already approved, in principle, the recommendations of the investigating committee, and the construction industry is assessing their implications. The financial authorities, however, are more reticent. These ideas of "a new Britain" are related to, yet separate from, the idea of "continuous growth". They cannot take concrete shape unless the economy expands and so provides the required resources. But modernisation and expansion of industry, and development of technical knowledge (the Government is working simultaneously on a big plan for higher education), require massive capital investment, on which the cost of social modernisation will be superimposed. Regrets for past neglect are unprofitable, but it must be recognised that delay in undertaking these tasks has concentrated a huge total of capital commitments in a comparatively short period of time. The rapid increase in public spending is causing some official anxiety even in the current fiscal year, for the increase in private-sector investment, unaccountably delayed, is now progressing fast.

The financial problem is short- or medium-term, not long-term. In due time a modernised and expanded economy, complemented by the growing economies of other sterling countries, will provide a very strong base for the pound as an international currency. But in the period between the initiation of capital investment and the maturing of benefits from it, the financial strain will be considerable; and arrangements for international financial collaboration (among sophisticated countries such as Britain) were not devised for this kind of contingency. However, great benefits can be gained by modernisation of methods involving only small capital investment or none at all. Improvements in organisation, administrative and operational, have already transformed the earnings of some important British companies, and the economies reflected in profits are a general economic gain, which could be immensely increased if all companies conformed with the standards of the best. It is gratifying to observe that British industry, in general, is not efficiency-conscious. Scientific methods of quality control may be costly, but capital invested in them may yield quick returns. At the conference of the British Productivity Council in Eastbourne in November Major-General B. G. Ralfs, chairman of the National Council for Quality and Reliability, said that quality control could raise the productivity of British industry by 5 percent. He estimated that the nation could save £500 million a year by eliminating even half the wastage caused by faulty manufacture.

There are other opportunities for saving on a comparable scale. Damage caused by erosion of metals, in Britain alone, has been estimated at some £600 million a year; and anti-corrosion is now a recognised science. The economic loss caused by accidents has been estimated at some £500 million a year; and this "modern epidemic plague" (as a report by the Royal College of Surgeons of England has described it) is preventable. So are fires, which cause total damage (including consequential losses) far in excess of the direct damage of nearly £70 million annual rate (calculated on the unprecedentedly high figures for the first ten months of 1963). The biggest potential saving is in the cost of defence, which, at the recent rate of increase, will soon reach £2,000 million a year It is arguable that an appreciable reduction in this essentially profitless expenditure is a necessary condition of the fulfilment of Britain's plans. The British Government's interest in improving East-West relations is not concerned only with trade. The basic resources needed for Britain's modernisation and development exist, and the currency will not be strained if they can be more efficiently and more effectively employed. Otherwise, some of the plans for "a new Britain" will necessarily be deferred.

L.I.C. IN GENERAL INSURANCE

THE Central Finance Minister, Mr T. T. Krishnamachari, has recently explained in the Lok Sabha the rôle that the Life Insurance Corporation will play as a general insurer. According to him, it is the board of the L.I.C. which has decided that the Corporation should take up general insurance business. The Government fully agrees with the decision. But the provisions of the Insurance Act, 1938, relating to the General Insurance Council, the executive committee of

the General Insurance Council and the Tariff Committee will not apply to the Corporation. Th L.I.C. intends to transact general insurance business as a non-tariff insurer. The Government, according to Mr. Krishnamachari, has no objection to this proposal. In taking up general insurance business itself rather than through its subsidiary, the L.I.C. will extend the public sector in the general insurance field, and in its relationship to private insurers, will function more or less in the same way as the State Bank of India does in the field of banking. Elaborating Mr. Krishnamachari's statement, a Finance Ministry spokesman has said that general insurance is to be treated like industries in Schedule "B" of the Industrial Policy Resolution, where the public sector has a predominant rôle but private units also exist. According to the spokesman, the decision is not to be interpreted as a step towards the nationalisation of general insurance or as an alternative to nationalisation. The L.I.C.'s decision has to be judged on its merits and not in the perspective of nationalisation, which, according to him, is an entirely separate issue. Another aim is to set a healthier tone in general insurance by spreading honest practices.

It has not yet been made clear how the L.I.C. will proceed to achieve this aim, although the implications of the move are obvious. Several pronouncements have been made with a view to consoling insurers. The chairman of the L.I.C., Mr. B. K. Kaul, has stated that the Corporation will not start unhealthy competition in the insurance market, although it will operate without tariff restrictions. In other words, it will charge any rates it considers correct, so as to benefit the insured as well as the insurers. According to the chairman, the L.I.C. will adopt tariff rates for the time being, but it will follow a flexible policy later. By reducing the rates, the L.I.C. hopes to set a healthier tone in the market. Meanwhile, because of the reduced premium income from retained business which must inevitably follow, the private companies, it is suggested, will have little money to "buy" business in the market and will thus be in a straitjacket.

The executive committee of the General Insurance Council some time ago framed the so-called Code of Conduct to check malpractices. Its chairman, Mr. E. Kolet, has sent a swarm of inspecting officers to many companies. The reports of the inspecting officers have often been harsh and unfair. By a curious mishap, they have been used to explain the condition of general insurance business to the public, Parliament and the Government of India. The executive committee must take full responsibility for this unfortunate state of affairs and also for the consequences which have followed and baffled them. Some feel that the least that it can now do is to withdraw from the field altogether, wind up the administrative machinery and abandon the so-called Code of Conduct. The L.I.C., in any case, will not be guided by the executive committee. The south Indian companies are already out of the purview of inspections by the administrative machinery. Under the circumstances, many of the other companies too may withdraw the undertakings given if the executive committee does not show the foresight to avoid incurring further expenses uselessly.

An anomalous position has arisen concerning the Statistical Bureau of the Tariff Committee. If the L.I.C. figures are not integrated with the statistics of the Committee, they will lose all value. Furthermore, since the L.I.C.'s rates are likely to be different from those of tariff insurers, a major problem will arise in integrating the figures even if they are offered by the L.I.C. So the Statistical Bureau cannot legitimately proceed further with the work. Since the expenses are borne by insurers themselves, it is felt that the activities of the Statistical Bureau may have to cease if the L.I.C. is not included in the final compilation.

Current News and Comment

Group Report on Gold Control

The publication of the report of the Informal Group on Gold Control is belated, but it is interesting to see that most of its recommendations have already been incorporated in the Gold Control Bill now being considered by the Lok Sabha. The report, therefore, deserves study. The group was headed by Mr. S. S. Khera, Cabinet Secretary, as chairman and consisted of other five officials as members. It was constituted on 5th September, 1963, to review the working of the Gold Control Order and to suggest ways of improving, simplifying and rationalising the rules.

The main objectives of the Gold Control Order are to curb smuggling by making it less easy to dispose of gold in the domestic market and to reduce the demand for the metal by discouraging its consumption. The group is of the view that gold control has succeeded in reducing smuggling. But judging from the size of smuggled gold seized in recent months it does not look as if smuggling has been effectively curbed. The substantial discount at which the rupee has been quoted in unofficial foreign exchange markets suggests that smugglers have been sufficiently active because the exchange value of the rupee depreciates in direct proportion to the volume of gold smuggled. It is true that the price of gold has been more or less steady in recent months. But this by itself should not give rise to complacency as this is due to the general uncertainty which gold control has caused. The reduced demand for the metal, for the time being, at any rate, is partly due to the control over individual holdings of non-ornament gold, and partly because of the control over refiners and big dealers.

Impressed by the theoretical justification for gold control under the present circumstances, the report has recommended that instead of operating it as a part of the Defence of India Rules the control should be given a separate and permanent legislative footing. This recommendation has now been implemented by the Government by introducing the Gold Control Bill. On the recommendation of the group also, the Bill seeks to plug an important loophole by authorising the Government to call for information on individual gold ornament holdings above a certain limit. The former stipulation of compelling an individual to declare only his holding of non-ornament gold above a specified limit used to encourage people to hoard gold in the form of ornaments rather than bullion.

The report has rightly pointed out that quick measures should be taken to mitigate the hardships which have followed in the wake of gold control. It is regretted that no worthwhile measure has so far been adopted to rehabilitate the numerous goldsmiths who have lost their only source of livelihood. The Central Government should prepare a scheme of rehabilitation, but since the implementation of any such scheme will have to be entrusted to the State Government, the Centre will need to maintain a close watch on the progress of the scheme in the States.

Attention has been drawn to the adverse effects of the control on the supply of rural credit. A majority of the cultivators still rely on obtaining credit by pledging gold. Since their credit-raising capacity has been hampered by gold control, it is urgently necessary to improve the supply of credit through agencies like land mortgage banks, co-operative societies and kindred institutions. Although the group is in favour of discouraging bank advances against gold, it has discreetly recommended that commercial banks should be left free to fix the valuation of gold or ornaments for determining credit limits.

It is necessary to devise suitable forms of investment for siphoning off the funds which would otherwise be blocked in gold hoards. The group does realise the need, but it has not suggested any alternative investment. It is difficult to find an investment comparable to gold which has traditionally served as an excellent store of value and as a hedge against inflation. These attributes alone have made it a universally popular medium of investment. Since gold control constitutes an attack on the traditional habits of the people it is necessary to propagate its importance and virtues more vigorously. Unless the public support for it can be won, the measure might flounder on popular resistance. In the field of propaganda, therefore, official efforts should be supplemented by the work of popular non-official agencies, the report has stressed.

Working of Joint Ventures Surveyed

In an article on dividends in joint venture companies and subsidiaries of foreign companies by Dr. G. Balakrishnan and Raj Behari published in the latest issue of *Company News and Notes*, some interesting information has been given relating to dividends declared by companies having foreign equity capital participation. The authors have studied 76 public limited and 79 private limited companies. Thirty-five of the former and forty-five of the latter are subsidiaries of foreign companies. The accounts of the companies relate to 1961-62.

Out of the 79 private companies, one incurred a loss and seven made profits of more than 50 percent on their sales income. Six companies did not pay dividend. The largest number of companies, namely, 25 paid dividends of less than 10 percent on their net worth. Seven companies paid dividends of more than 100 percent on their net worth. Out of these companies, 58 have equity capital participation from the U.K. and 12 from the U.S.A. The remaining represent equity participation from such countries as Japan, Germany and Switzerland. The number of companies having U.S. equity capital participation constitute about one-fifth of those with U.K. capital participation. Two of the U.S. companies paid dividends of more than 100 percent on their net worth, compared with four companies with U.K. equity participation which declared similar dividends. Out of the 79 private companies, 45 are subsidiaries of foreign companies. The U.K. subsidiaries are 35 and the U.S. ones only six. Forty-eight companies have been engaged in the manufacture and processing of metals and chemicals and 14 have been dealing with trade, commerce or finance.

The bulk of the 76 public-limited companies made profits of less than 15 percent on their sales and capital employed. Only one company made a profit of more than 50 percent on its sales income. Out of these companies, 41 paid dividends of less than 10 percent on their net worth and only one company paid a dividend of more than 100 percent on its net worth. Of these public-limited companies, 63 have equity participation from the U.K. and five from the U.S.A. Of these companies, 35 are subsidiaries of foreign companies; the U.K. subsidiary companies are 35. Out of the 76 public companies, 35 have been engaged in the manufacture and processing of metals and chemicals while 14 have been engaged in trade, commerce or finance.

Value of Equities

In a study that surveys the value-conserving achievement of 131 equity shares of the U.S.A., Canada, and 11 European countries against that of gold during the period from 1930 to 1962, only 36 had a poor record compared with the yellow metal. How the company shares fared in value in terms of 1930 purchasing power, including stock dividends and splits, compared with the changes in the gold investment, brought about by devaluations, shows some interesting if rather disparate results. For example, that perennial favourite of widows and orphans, American Telephone and Telegraph took 31 years, inclusive of stock splits, to equal the increased value of the amount of gold that originally cost the same as one share in 1930. In terms of constant 1930 dollars, American Telephone and Telegraph's 1962 closing price—adjusted for splits—was 13.1 percent below its 1930 opening. On the other hand, Royal Dutch Petroleum, after early setbacks, managed to equal its gold value by 1936. In spite of three subsequent devaluations, the gold equivalent was reached again in 1953, and has been exceeded ever since. If computed in constant guilders, the old Company's adjusted price at the end of 1962 was 88 percent above the 1930 investment.

Titled *Common Stocks* vs. *Gold*, this study is unique in these days of managed paper moneys. All security rankings are effected in constant monetary units of 1930 value. However, Dr. Franz Pick, New York currency specialist and author of this book, does not believe that the connotations of "managed" are entirely bad. "The quality of "management," Dr. Pick says in the foreword, 'was the most decisive factor affecting the conservation of assets in constant value. The period was marked by unprecedented technological change and vast political and social upheaval. The resilience of corporate shares comes close to being a qualified miracle, qualified because the shadow of the hammer and sickle covers the graves of thousands of companies, not to speak of expropriations and nationalisations in many other lands. With very few 'exceptions", Dr. Pick continued, "the stocks I chose for the analysis were the objects of world-wide interest and speculation 32 years ago. Had I picked the now defunct shares of many internationally renowned organisations, the record of the book would have been completely different". Among the best hedges in countries where corporate shares managed to survive, the following compilation shows the number of times the stocks increased in terms of 1930 purchasing power units:

Company	Times increased	Industry	Country
Beecham	74.61	Pharmaceutical, chemical	U.K.
I.B.M.	51.51	Office machinery	U.K.
Ciba	31.45	Pharmaceutical, chemical	Switzerland
Sandoz	19.45	Pharmaceutical, chemical	Switzerland
Elektrokemisk	18.57	Chemical	Norway
Peugeot	16.39	Motor-car	France
Marks and Spencer	15.25	Retail trade	U.K.
John Brown	14.47	Shipbuilding	U.S.
Francaise des Petroles	13.92	Oil	France
Distillers-Seagrams	13.81	Liquor	Canada

Income Statistics for Planning

In his presidential address to the fourth Indian Conference on Research in National Income in Bhopal recently, Dr. N. S. R. Sastri, Statistical Adviser to the Reserve Bank of India, observed that the growth rate in India has not been uniform during the first, second and third plans. When the first plan commenced in 1951, the index of net output at 1948-49 prices stood at 105.2. It increased at an average annual rate of between 3 percent and 4 percent during the first two plans. But the rate during 1962 and 1963 was only about 2 percent. Still more disquieting is the fact that while the growth rate in some selected regions of the country has been high, it has rather been low in some others. There are many causes for this disparity in regional development, which will have to be removed to secure a more balanced growth of India's economy. But at the same time, it is necessary to compute the growth rate for different States or homogenous regions, in addition to the growth rate at the aggregate national level, to plan balanced regional development on more scientific lines.

Although agricultural output in India is much influenced by monsoons and fluctuates from year to year, fairly reliable data on national income and output from agriculture, mining and large-scale industries, organised commerce and transport and communications and Government services are available. But these, taken together, account only for a little over two-thirds of the total national income. The estimates for the other one-third are based on rather uncertain data. This introduces an element of error in national income estimates in India. This also accounts for the differences in the estimates prepared by the various organisations at the Centre and in the States. It is, therefore, necessary to improve the collection and analysis of data on national planning.

More scientific use of statistical data has been made possible by such recent developments as the econometric method of model-building. Although Dr. Sastri did not properly emphasise this fact, these econometric models, however, are not properly adjusted for use in the economically underdeveloped countries where detailed and adequate data are not available. It is necessary for Indian economists and statisticians to evolve suitable variations of these models for use under Indian conditions. Moreover, as Dr. Sastri emphasised, the collection and processing of data in India will have to be done on a much larger scale and much more thoroughly than has been possible so far.

At the end of the three-day conference, a meeting of directors of State bureaux of economics and statistics was also held, which decided that every

The Annual is being published along with the issue of CAPITAL dated 19th December, 1963, and will be available at Rs. 5 a copy (postage extra). Registered subscribers will receive their copies free, but others should write for their copies immediately to the Commercial Manager, CAPITAL, 5, Mission Row, Calcutta-1. Please place your order early. No copies can be sent by V. P. Post.

State should prepare a manual of its own income. These estimates at the State level should be prepared on uniform lines so as to make comparison possible. The decision at this meeting that each State should prepare a note indicating its peculiar difficulties in preparing estimates on the basis of standard methods prescribed by the Central Statistical Organisation, would help in finding out ways and means of removing these difficulties. If the fourth plan would have an outline for a ten-year period and if it would have a predominantly regional bias, as Mr. Tarlok Singh, member of the Planning Commission, is reported to have told the meeting, the statistical data on national income prepared by different States would prove very useful.

Increasing Indian Exports

In his presidential speech at the third quarterly meeting of the Indian Council of Foreign Trade in Madras recently, Mr. Murarji J. Vaidya, emphasised the fact that at the present rate of increase in exports, the third plan target for export earnings was unlikely to be achieved. With India's export earnings at Rs. 679.5 crores in 1961-62 and at Rs. 739.9 crores in 1962-63, there was a gap of Rs. 60.6 crores in the target of export earnings for the first two years of the plan. It has not been sufficiently realised in official circles that there is a close connection between production and exports. With increased money incomes and a population rising at the rate of over 2 percent a year, the demand for different goods in the country has been increasing, and sufficient export surpluses are not available. Mr. Vaidya emphasised the fact that unless concerted efforts are made to increase industrial and agricultural output, it might not be possible to increase the exports to the desired level.

Although exports of new commodities have to be increased as far as possible, it is through the traditional export goods that it would be possible to achieve a sizable export surplus. In this connection Mr. Vaidya emphasised that the system of compulsory exports of a portion of a factory's production which has been adopted has failed and should be done away with. It is not only that the internal prices are higher than export prices and do not provide the incentive for producers to export even part of their output, but most producers are not suited by reason of their size and organisation to cater for the export market. A better method, according to Mr. Vaidya, would be for the Government to take the producers and exporters into confidence and to encourage voluntary exports. It should be possible to levy a cess on internal consumption to equalise export losses. This might, in some cases, increase the internal prices of goods, but that risk would be worth taking in the interests of earning an export surplus. Along with this, Mr. Vaidya suggested that the formation of more free trade zones should be considered for stimulating the export trade, and the free trade zones which are already being formed should come into operation early. The exporters have already accepted a code of conduct.

Nationalisation of Audit Opposed

At a two-day session in New Delhi recently, the Central Council of the Institute of Chartered Accountants of India strongly opposed the suggestion, recently made by the Company Law Administrator, that audit should be nationalised. There is no doubt that there are deficiencies, and the auditors have not in all cases discharged their duty to shareholders, the company management and society in general. But the defect will not be removed as long as the level of integrity of auditors is not improved, their numbers remain inadequate, and the Companies Act is not simplified. It is not clear under the circumstances how the situation would improve if the company auditors are appointed by the Government instead of by managements.

The Central Council of the I.C.A.I. has decided that in order to raise the number of auditors in the country and to encourage young men to enter the profession, the system of charging premiums from articled clerks should be abolished and one-year's remission in the training period should be allowed in the case of first and second-class commerce graduates.

Grand Total Rs. 4,018.75.

INDIAN SILK EXPORTS

WERE a Calcutta business man asked how a system of preferential tariffs would affect Indian trade, he would not be likely to name raw silk as one of the commodities exported from the country. Probably very few even know that silk has a place among the products of India's fertile plains. Yet sericulture, though a small industry, and one about which little is known by outsiders, is of great importance in certain parts of Central Bengal, and in those parts are a number of silk-reeling filatures where raw silk for the European market is produced under European supervision. In days long gone by sericulture was practised in all the provinces of India, but it has now died out everywhere, except in Bengal, and in Kashmir where the industry has lately been much encouraged by the State. The cocoon-rearing area comprises the district of Murshidabad, and the adjacent parts of Rajshahi, Malda, Birbhum and Nadia. The industry is also carried on to a small extent in Midnapore and Bogra. There are three European concerns engaged in reeling raw silk for export. They own over fifty filatures, and employ about thirty Europeans in the work of supervision. There are also many properly-equipped filatures owned by natives, of whom most sell their silk to the big European concerns. The annual export of filature raw silk is about 8,000 mds., worth about Rs. 60,00,000. It is mostly taken by France and England, a few bales going to Italy and the United States. There are also annually exported about 3,000 mds. of waste silk, worth about Rs. 3,00,000. The Bombay silk-weaving mills sometimes take a small quantity of Bengal filature silk, but they obtain their supply chiefly from China and Japan. A large quantity of what is called "khoongroo" silk is also produced by native reelers in the villages of the cocoon-rearing districts. The "khoongroo" silk is of a very inferior quality. It is bought by the hand-loom weavers of Murshidabad and Banaras and other towns in the north-west. The value of the annual output of "khoongroo" is probably about ten lakhs of rupees.

A Ditcher's Diary

HAVING ONCE SAID HERE BEFORE THAT PARLIAMENTARY democracy in south-east Asia is not exactly operating in a sellers' market, I cannot quite make up my mind about the reported move by Indian M.P.s to enhance their salaries and allowances. It is quite impossible to lay down that democracy in India is worth so many crores and no more, especially when the population is increasing, calling for more and more M.P.s. Yet the members of the Lok Sabha and the Rajya Sabha had better be wary. I have always been rather sceptical about the theory that M.P.s, or any other set of people, get corrupted because they are not paid enough. How much, it has rightly been asked, is enough? In a poor country such as India, a thousand rupees a month (which, I am told, is what it comes to for an M.P.) can hardly be considered too little. Yet, who am I to say that an honourable M.P. should be paid less than I am? In spite of labour legislation and all that, the law of supply and demand still determines wages. This is the one law that will not do for legislators. An additional complication is that, as has been pointed out, M.P.s are about the only people on earth who can fix their own price. The Indian Parliament has time and again approved measures restricting perquisites for ordinary citizens, particularly in the business community. It can expect but little sympathy when it asks for more of them for itself. Once again, I think the central problem is inflation. There is too much money about and there are too many legislators around. It may be tactically feasible for the Congress Parliamentary Party to work out agreements with Parties in the Opposition to avoid a row in Parliament over an upward revision of M.P.s' emoluments; the people at large may still look askance at the proceedings. Where India's parliamentary democracy has failed is in making the people feel that their election of a man to Parliament is a road to privileges denied to themselves. A legislator is certainly worthy of his hire; but what is a fair wage? The cost of becoming an M.P. is so monstrous that one dare not name the price of keeping so many M.P.s. They had better, still, watch their step, as a Calcutta bar with an uneven entrance warns its customers.

THE INDIAN PARLIAMENT HAS STILL TO PRODUCE its Jenkins; the Indian judiciary its Stable. On obscenity, sex and morals, our courts are still ruled by the Hicklin test, outdated even in the country of its origin. A welcome exception was a Calcutta magistrate's judgment on a belly-dancer; another, equally welcome, was Mr. Justice Banerjee's verdict last week at the Calcutta High Court on the rule obtained by a Golam Mohiuddin against the Government of West Bengal. "This is not", said Mr. Justice Banerjee, "a court of morals. ... Participation in drinking orgies at public places is not becoming conduct. But merely taking alcoholic drink is not improper. ... I am not prepared to say that mere drinking in the company of girl receptionists of a hotel is immoral". "Hurray", I say, with due respect to his lordship. As a matter of routine State Governments go to the Supreme Court when a verdict goes against them; so I will say no more on the case which appears to involve some of the more questionable aspects of public administration and personal vengeance in West Bengal. If, however, Mr. Justice Banerjee took the view that Golam Mohiuddin, Curator at the Botanical Gardens, had not been given reasonable opportunity to defend himself, it seems, to a layman, rather confusing that he thought fit to refer to "high officers who were found to have misbehaved (but) were not proceeded against". Did these "high officers" have a reasonable opportunity of defending themselves? This, however, is incidental. The judgment made an impact on me mainly because last week I had the pleasure of meeting a Frenchman and an Englishman who are at the moment working on a book on morality in the twentieth century. Armed with round-the-world tickets, they found in India a resurgence of puritanism. It was interesting to hear them say that so much public discussion on corruption must indicate general disapproval of current goings-on; "it couldn't all be hypocrisy". What about Hindu ideas on sex and drink as seen in Konarak and Khajuraho? I told the visiting investigators that they had come to the wrong address for firm answers. Morality in 1963! The subject daunts me.

HOW TO LIVE WITH MOTOR-CARS IS NOT SOMEthing which seems likely to trouble us in India for a while yet: the difficulty here is how to get hold of them. But in the West it is already among the most pressing problems of the day, as well as potentially the most expensive. The summaries I have read of the Buchanan report on traffic in Britain's towns thrilled me with the vision of the future they projected, which may be because I am not going to be asked to pay for it. But for the luckless British taxpayer, the prospect of all the country's major town centres having to be completely reconstructed during the next 50 years or so just to accommodate the growing volume of motor traffic must be frightening indeed—and especially so when one considers that by the time it has been done, it will probably have to be started all over again. Things move so fast in the modern world that by the end of this century the ideal of personal transport may no longer be the motor-car, but some version of helicopter. The lesson is, of course, that towns are built to last too long; technical change is nowadays so rapid that it easily outpaces the rate of urban adjustment. So what to do? I would say the problem is partly psychological and partly one of taxation. We must learn to adjust our ideas about the reasonable life of the towns we build, and governments should encourage us by accepting a rate of depreciation, even on residential property, no less rapid than that already used for industrial buildings. This is not a particularly revolutionary suggestion; in some countries housing is already accepted as a charge against tax liability. It reduces yields, certainly; but these can be made up in other ways. The great advantage is that it encourages a much more rapid rate of urban change, one that can perhaps keep pace with developments in other fields. Not a matter of the greatest urgency in India at the moment. But it may be within a few years, notwithstanding the Government's persistent efforts to immunise us from the contagion of the motor-vehicle altogether.

WEIGHING MACHINES WERE AMONG MY MOST indefatigable enemies for years. I tried everything from diets to exercise. I even cut down on my otherwise entirely therapeutic consumption of alcohol, although not for long. But the only effect I ever noticed was a sharp deterioration in temper and a marked tendency to think ill of one's fellow men. That was until I discovered the perfect way to avoid being worried about over-weight: simply to ignore weighing machines. I can confidently recommend the remedy to others, because I do feel that far too much anxious attention is paid nowadays to those few extra pounds. No less an authority than the Royal Air Force is beginning to think the same way. A new laboratory is being set up at the Farnborough Institute of Aviation Medicine where, it is hoped, some light can be thrown on the relationship between the expanding waistline and the amount of bone and muscle in the body. Quite rightly in my opinion, the theory is rejected that the weighing machine is at all a reliable guide to physical fitness, and the principle is established that standard weight-for-age statistics do not tell enough. What then is to be the criterion? Density, that's the thing. To calculate it the victim must be immersed in water, in Archimedes style. And volume too; that will be measured in special gas chambers and later compared with vital statistics. I hope some readers will be as reassured as I am to know that the question of whether or not one is carrying too much weight will in future be a far more complicated one, to be answered only after the most rigorous scientific testing. This will also include the use of high-speed sound measuring devices, previously employed in fat-stock markets for recording the

plumpness of pigs, and now designed to detect fatty layers in human beings. All very enlightened, and rightly so; after all, a verdict of over-weight is not to be lightly arrived at when it can involve months of dreary dieting. I might venture to suggest, therefore, that when your wife next comments that you are putting it on round the middle, you must tactfully point out that such is only to be expected for a man of your bone and muscle structure. But I happen to know that women are usually impervious to such logic. It is a pity really, because just for once facts might be on your side.

MR. CHAGLA'S REMARKS THE OTHER DAY ABOUT THE chaos in technical education certainly indicate that he has made the right diagnosis and has the right ideas. But I hope it will not be dismissed merely as nagging cynicism if one says that to make the diagnosis and state the prescription is not enough; not many subjects in recent years have attracted fruitless verbosity on quite the same scale as technical education has done. The difficulties in finding the teachers and the facilities for technical institutions, as Mr. Chagla is aware, are formidable. But I suspect that they are not the worst of the handicaps he may face; greater ones may spring from the fact that for political reasons the educational effort is diffused over myriad fields, so little that is worth while gets done in any. Mr. Krishnamachari's statement on Tuesday that no Indian will be left uneducated by 1971 is a common example of the sort of thing I have in mind. As a slogan, it is impeccable, especially now that circumstances have played havoc with the earlier boast about providing compulsory primary education for all children by 1966. But the resources available for education are strictly limited, and it is hard to conceive of a surer way of wasting them than to give primary education to millions to whom, for the time being, it can be of no earthly use. It is precisely expensive ideas like these that cause technical education to be starved of the money it needs. Mr. Chagla's standing in the Congress Party being what it is, I should be surprised if he succeeded in doing anything to stop the drain of resources on fads, including the promotion of Hindi. Without the resources, technical education will remain a centre of attention—but only for the debating societies.

SO DEATH CAME LAST WEEK TO HASSAN SHAHEED Suhrawardy in Beirut. His personal responsibility for the Great Calcutta Killing on 16th August, 1946, remains a matter of debate; he had indeed declared a public holiday but I have as often heard him wholly blamed as wholly exonerated. The importance of that day in the configuration of India's history has still not been accorded its rightful place. It was that killing which made, I think, most Indians resign themselves to the sad inevitability of partition; and partition came exactly a year later. On the same day, 16th, a month later came what was then called the Great Calcutta Rain. The city was completely immobilised. Had the rains come on 16th August, 1946, the history of this subcontinent might have been entirely different, not necessarily less bloody. Suhrawardy was an intellectual turned politician; and such men can be dangerous. He was also Food Minister during the Bengal famine of 1943. Perhaps he is destined to be remembered mainly by such grim calamities, at least in India. In Pakistan, especially in the east, his fame may rest on his part in ending the myth of the Muslim League. For myself, I remember a night in Calcutta when I had gone to a fête in aid of Polish refugees. Suhrawardy had on that day laid down office as Chief Minister and he too came to the fête, about 1-30 a.m. On the way home, driving through streets darkened by wartime restrictions, he spoke, in accents Bengal may never hear again, of the great relief of being out of office. I do not believe he was wholly hypocritical. He did indeed become Pakistan's Prime Minister briefly; but he might have gone much farther in politics much earlier if he had for once permitted himself to consider Jinnah superior to him. I dread brilliance in politicians; Suhrawardy was brilliant. How much more we would know of the history of our time if he had taken time off to write an honest autobiography!

THE DITCHER

Guide for Investors

CEMENT INVESTORS REMAIN CAUTIOUS

(BY A SPECIAL CORRESPONDENT)

CEMENT shares have moderately improved over the past year. The index for the ordinary shares has risen from 146.5 to 151.7 (1952-53 equals 100). Despite the modest rise, there has been an undercurrent of anxiety about these shares. The latest reports of cement companies have disturbed the investors. In spite of an overall improvement in the working results of these companies for 1962-63, the dividend on equity capital has improved little. Associated Cement, for example, has only repeated a taxable ordinary dividend of 12 percent.

There has generally been a considerable rise in production and sales, but the good effects have been largely offset by substantial increases in manufacturing costs. Salaries, wages and the prices of various raw materials have risen considerably. The freight rates, coal prices, electricity charges and royalty on limestone have gone up. Contributing to the bigger sales income however, has been the increase in the retention price of cement sanctioned since November 1961. Although the trading profits have improved despite rising production costs, the net profits have been held down by heavier taxation, including the super profits tax. As a result, the net profitability of cement companies has generally fallen below the average of other industries. The dividend policy of the former has also been more conservative, as they have been inclined to plough back considerable funds into the business to finance modernisation and expansion.

In view of the poor profit outlook, the shares of new cement companies have suffered. Several of them have been quoted below par. The established companies have also found it difficult to raise funds from the open market due to the low return on the capital employed in this industry. In the circumstances, it is wondered whether the expansion target set for the industry in the third plan will be achieved. The present installed capacity amounts to nearly 10.1 million tons. The third plan target for installed capacity has been fixed at 15.2 million tons.

Although licences for setting up new units and expanding the existing ones have been issued for an additional installed capacity of 5.59 million tons, it is doubtful whether these schemes will be fully implemented. Unless the profit outlook can be improved by increasing the retention price, reducing production costs and relieving taxation, confidence will not be revived easily. In the meantime, there has been an acute shortage of the commodity. In several States, particularly in West Bengal, cement is being sold at rates much higher than the control price in the black market. The control and distribution systems in this State have greatly inconvenienced the consumer.

Delhi Cloth Mills Expands and Diversifies

THE ordinary shares of Delhi Cloth and General Mills Co. Ltd have been steady around Rs. 47.56 because of the encouraging statement made by Mr. Bharat Ram, chairman, at the annual general meeting of the Company in Delhi last week. He pointed out (a fuller version of the speech was published in *Capital* last week) that the Rajasthan rayon project had progressed satisfactorily. The factory will soon start producing high-grade rayon tyre cord. The capacity of the spinning mill in Hissar will soon be increased from 37,000 spindles to 63,000 spindles. The crushing capacity of the Mawana sugar works has been doubled to 3,000 tons a day. The project for the manufacture of plastics has almost been completed. It has already started producing caustic soda, and the manufacture of P.V.C. will be taken up shortly. The Company has, meanwhile, taken steps to renovate the existing equipment of all factories. There should be a substantial rise in production as soon as the expansion is fully completed. It is hoped that the profits of the Company will also improve in proportion. Delhi Cloth has been making vigorous efforts for increasing exports of all commodities produced by it. It is proposed to set up a new company for exports. The latter will be a subsidiary of Delhi Cloth and is expected to export the products of other companies in due course.

Although the Company's sales rose in 1962-63, the profit has been smaller due to rising prices of raw materials, stores and wages. The working of the sugar factory has been affected by the cane shortage. The adverse effects of the super profits tax, the emergency risks insurance scheme and heavier taxation have been reflected in the smaller profit. A taxable ordinary dividend of 13 percent has nevertheless been repeated. The shareholders will enjoy the benefit of tax exemption to the extent of 34 percent of the total dividend under the income tax law, but this gain should be considered a windfall for the year.

New Central Jute Modernises

THE satisfactory results of the New Central Jute Mills Co. Ltd for 1962-63 have largely been due to its expansion. In his chairman's statement at the annual general meeting of the Company held last week, Mr. A. K. Jain said (a full next of his speech is printed on a later page in this issue of *Capital*) that the rise in output had occurred because of the planned expansion. The complement of broad-looms rose by 104 to 256 during 1962-63. A further 71 broad-looms have been installed since. The total capacity of the broad-looms is now 327, against the licensed capacity of 350. An important point is that a large part of these broad-looms has been fabricated by the Company in its own workshop. The latter has been modernised and strengthened to meet the rising needs of indigenous manufacture. Commenting on the future of carpet-backing cloth, the chairman pointed out that the overseas demand depended greatly on the quality of the cloth. The Company has installed two single-beam dressing machines to improve the quality of its cloth.

Although the Sahu Chemicals and Fertilisers' unit has considerably increased output, the profit has been held down by rising production costs. The prices of basic raw materials have been very high. Production during the current year has improved further, but the profit depends greatly on the prices of basic raw materials. The Company has meanwhile taken steps to reduce production costs. It has been collaborating with a company in Thailand to set up a jute mill in that country. It will also supply the equipment for the mill. So it is expected that a substantial amount of foreign exchange will be earned from the project. New Central Jute has made a record profit of Rs. 1.32 crores for 1962-63, after providing Rs. 53 lakhs for depreciation.

Good Outlook for Jay Engineering

PRESIDING at the annual general meeting of the Jay Engineering Works Ltd held in Calcutta last week, Mr. Charat Ram took a fairly optimistic view about the working for the current year. (A full text of his speech has been published on a later page in this week's *Capital*.) The fall in the profit for 1962-63 has largely been due to increased production costs. Enhanced excise and import duties and freight has inflated production costs. The new Hyderabad factory has also suffered a loss.

The output of sewing machines and fans has improved. The production was interrupted by power shedding in Calcutta. Current production has, however, been showing a satisfactory trend. An important factor is that the improvement in production has largely been due to better planning techniques without any new investment of capital. The automatic sewing machines have become popular. They are produced in the Hyderabad factory and steps have been taken to improve their output, but it may be another two or three years before this new factory shows satisfactory profits. Jay Engineering has concentrated its attention on increasing exports which amounted to Rs. 1 crore for 1962-63. An independent division called the "Usha International" has been set up to promote exports.

Stanes Amalgamated Coffee Pays Less

A SUBSTANTIAL fall in the coffee crop which was uneconomical has led to a fall in the profit of Stanes Amalgamated Coffee Estates Ltd for the year ended June 1963. The dividend is consequently reduced to 12 percent from the previous year's level of 15 percent. The pre-tax profit for the year amounted to Rs. 3,16,837, compared with Rs. 4,72,840 in the previous year. With the amount of Rs. 20,649 brought forward, and Rs. 1,542 being excess provision for taxation no longer required, the total available for appropriation comes to Rs. 3,39,028. Out of this, provision for taxation amounts to Rs. 1,50,000 (against Rs. 2,46,000). A sum of Rs. 9,000 is transferred to pension and gratuity reserve (against Rs. 10,000), Rs. 4,247 is transferred to development rebate reserve (against Rs. 1,000). No amount is transferred to general reserve (against Rs. 70,000 last year) and Rs. 10,000 is transferred to reserve for redemption of debentures (against Rs. 20,000). Rs. 45,000 is allocated to development reserve (against nil). The dividend at 12 percent accounts for Rs. 1,08,000. The balance of Rs. 17,781 is carried forward to the next year.

The tea crop for the year amounted to 408,265 kilograms, against 423,601 kilograms in the previous year. The average sale price was Rs. 4.51 a kilogram, against Rs. 4.44 a kilogram. The average price for green leaf was 72nP a kilogram, against 65nP a kilogram. The coffee crop was 44 tonnes, against 88 tonnes. The crop was not big enough to make the pruning of the coffee economical, with the result that the Company incurred a loss of Rs. 34,435, compared with a profit of Rs. 64,134 in the previous year. The estimated tea crop for 1963-64 is put at 423,750 kilograms. The coffee crop is estimated at 44 tonnes.

Expansion of Morarjee Goculdas Spinning

THE chairman of the Morarjee Goculdas Spinning and Weaving Co. Ltd, Mr. Gopikisan Piramal, takes a cautious view of the outlook for the cotton mill industry in view of the rising manufacturing expenses, combined with virtually no change in the price of cloth. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) The Company has undertaken ambitious modernisation and expansion programme to maintain its operational efficiency. The increased provision for development rebate reserve and depreciation has largely been due to bigger investments in assets and the establishment of the second unit. The latter has begun production and is expected to contribute substantially to total earnings of the Company. The move to issue bonus shares has been deferred in view of the heavy bonus share tax. The idea of issuing rights shares has been abandoned because the Controller of Capital Issues has insisted on big premiums on the issue. Meanwhile, the Company has financed the modernisation and expansion programmes largely through bank borrowings.

Referring to the dividend cut, the chairman referred to the rising manufacturing costs. The prices of cotton, stores, chemicals as well as wages have increased. Additional payments have been made on account of bonus. The super profits tax has absorbed

large sum. Moreover, the compulory war risks insurance has imposed n additional financial burden on the Company. Meanwhile, the selling rice of cloth has been held down. The export price of cloth has been ower than that in the domestic market. Besides, cloth for defence has o be manufactured at cut prices.

Balrampur Sugar Passes Dividend

THE Balrampur Sugar Co. Ltd has passed the dividend for the year nded June 1963. The trading profit mounts to Rs. 18,926. Bringing in Rs. 15,763 from 1961-62, the total redit balance amounts to Rs. 34,689. Depreciation is allocated Rs. 1.79 lakhs (against Rs. 1.76 lakhs) and taxation Rs. 8,867 for previous years. So a debit balance of Rs. 1.53 lakhs has been carried forward. The disappointing result has been due to the shortest season that the Company has had in several years. The factory worked for only 73 days (against 145 days) in the previous season. The cane supply was acutely short and it amounted to only 542,410 quintals (against 1.1 million quintals). Recovery nevertheless improved from 9.71 percent to 9.99 percent. The factory produced 39,608 quintals of raw sugar for export.

The directors take a cautious view about the prospect for the current 1963-64 season. The outlook for the cane supply is not considered bright. Although the Government has increased the price of sugarcane, a considerable part of the supply is being diverted to the production of *khandsari* and *gur*.

Cowcoody Coffee Cuts Dividend

A LOWER crop leading to a fall in profit, resulted in a cut in the dividend to 17½ percent by Cowcoody Estates for the year ended June 1963. The earnings on equity capital fell to 25 percent before tax, against 31 percent in the previous year. The net profit for the year amounts to Rs. 73,311, after providing Rs. 30,000 for taxation, against Rs. 86,590 after providing Rs. 42,200 for taxation. With the amount of Rs. 40,202 brought forward from the previous year and with Rs. 21,380 being excess provision for taxation in the previous years, the total comes to Rs. 1,34,893. Out of this, Rs. 25,000 is transferred to general reserve (against nil). The interim dividend of 7½ percent has absorbed Rs. 30,642.

The final dividend of 10 percent accounts for Rs. 40,856. The total dividend for the year is 17½ percent (against 20 percent). The balance of Rs. 38,395 is carried forward. The total coffee crop for the year amounted to 112.576 tonnes (against 114.586 tonnes). The estate expenditure a metric tonne was higher at Rs. 2,332 (against Rs. 2,277). The final payment on the 1961-62 season's crop was Rs. 2.26 a point, but bonus points on the basis of Rs. 10 a 50 kilos of Arabica Parchment and Rs. 6 a 50 kilos of Arabica Cherry have been awarded. The 1963-64 crop has been estimated at 112 metric tonnes.

Prospects for Kothari Sugar

INADEQUATE supply of sugarcane due to its diversion to jaggery is one of the main points of the report of the directors of Kothari Sugars and Chemicals Ltd for the year ended June 1963. The factory was able to obtain only 33,678 tonnes of cane during January-April 1963, and was forced to close the maiden season on 10th April, 1963, after having produced 31,060 bags of sugar of one quintal each. Aggravating the situation, the daily supply of cane to the factory averaged below 500 tons, against the rated capacity of 1,000 tons a day. This was partly due to the fact that the average yield from each acre of 25 tonnes was much below the Company's expectation of 30 tonnes. The average recovery of 9.42 percent for the maiden crush is considered satisfactory.

The prospects for 1963-64 appear to be encouraging. Sugarcane supply, following the success of the Company in inducing the ryots to register their crops with the factory to the extent of 4,000 acres and the prospect of getting at least 30,000 more tonnes of cane from the remaining 2,000 acres, is expected to improve substantially. It is expected that the regulatory measures of the State Government in the matter of preventing crushing of cane for jaggery, will help improve the supply position to the factory. Hence, the directors expect a continuous crushing season of 130 days and a production of 12,000 tonnes of sugar for the current season, as against 3,106 tonnes for the year ended 30th June, 1963.

The statement of accounts for the year shows a loss of Rs. 16,486, before providing for depreciation, and this, along with the previous year's loss of Rs. 1,10,276, is carried forward.

Nil from Tulsipur Sugar

THE Tulsipur Sugar Co. Ltd has passed the dividend for the year ended June 1963. It has incurred a loss of Rs. 2.63 lakhs, after providing Rs. 2.68 lakhs (against Rs. 2.64 lakhs) for depreciation. The loss amounted to Rs. 47,085 for 1961-62. Bringing in the previous loss, the total debit balance of Rs. 3.76 lakhs has been carried forward. The directors have pointed to heavy interest charges on account of borrowings for completing the expansion schemes. The Company crushed only 80,020 tons, against 138,831 tons, due to the shortage of cane, but recovery improved from 9.72 percent to 10.14 percent. It is hoped that during the current (1963-64) season, the cane supply will improve due to the rise sanctioned by the Government in its price.

India Carbon Does Well

THE ordinary shares of the India Carbon Ltd have been steady around Rs. 15.75 due to the encouraging report for the year ended June 1963. Sales rose from Rs. 29,628 to Rs. 48.66 lakhs, but the factory could be run for only about four months due to an acute shortage of raw materials. The supply of the latter, it is expected, will be better during the current year. The trading profit has amounted to Rs. 6.94 lakhs of which depreciation absorbs Rs. 3.65 lakhs. There was a loss of Rs. 1.81 lakhs for 1961-62. Development rebate reserve is allocated Rs. 1.59 lakhs, and the previous debit balance has been wiped out.

India Machinery Fares Well

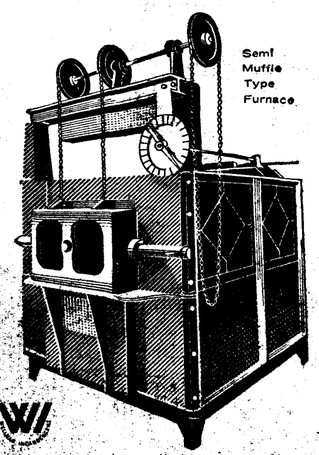
THE India Machinery Co. Ltd has made a profit of Rs. 5.93 lakhs for the year ended June 1963, against Rs. 4.18 lakhs for 1961-62. A taxable ordinary dividend of 8 percent has been declared to absorb Rs. 1.76 lakhs. Taxation is allocated Rs. 3 lakhs (against Rs. 2.15 lakhs) and reserve Rs. 50,000 (against the same). The carry-forward is Rs. 18,047, against Rs. 22,475 brought in. Turnover rose from Rs. 32.15 lakhs to Rs. 40.39 lakhs.

Eastend Paper Passes Dividend

THE Eastend Paper Industries Ltd shows a debit balance of Rs. 45,048 for the year ended June 1963. Bringing in a loss of Rs. 79,599, the total debit balance to be carried forward amounts to Rs. 1.25 lakhs. The dividend has been passed. Out of a loan of Rs. 20 lakhs sanctioned by the Industrial Finance Corporation, a sum of Rs. 15 lakhs has been received. There has been considerable progress in installing the factory. A large part of the plant and equipment has arrived and is being installed. The factory, it is expected, will begin production in January 1964. Arrangements have been made to buy pulp locally until the pulping unit is installed.

Malwa Sugar Loses Again

THE Malwa Sugar Mills Co. Ltd has incurred a loss of Rs. 11.06 lakhs for the year ended June 1963, against a loss of Rs. 12.74 lakhs for 1961-62, after providing Rs. 5.14 lakhs (against Rs. 7.37 lakhs) for depreciation. Development rebate has been allocated Rs. 1,600 (against Rs. 13,700). The dividend has been passed, and a debit balance of Rs. 10.70 lakhs has been carried forward. The output of sugar fell from 87,897 quintals to 48,644 quintals, but recovery rose from 8.57 percent to 9.20 percent. The factory had the shortest season in ten years due to an acute shortage of the cane supply.



The current crop report is satisfactory, in that area under cane cultivation has increased. In view of the high price of *gur*, it is feared that more cane will be diverted to *gur* manufacture. The Company has, therefore, decided to import and sell *gur* to the cane-growers below the market price. The Company has applied to the Government for sanction to increase the output capacity to 1,500 tons a day. The Government has also been approached for help in the matter of rehabilitation, expansion and modernisation of the factory. The Company has increased the area under cane cultivation.

Steel and Allied Products Repeats

STEEL and Allied Products Ltd has made a smaller profit of Rs. 6.54 lakhs for the year ended June 1963, against Rs. 8.82 lakhs for 1961-62, after transferring Rs. 3.44 lakhs (against Rs. 2.91 lakhs) to depreciation. The taxable ordinary dividend of 10 percent has been repeated to

Once he hears the call of the hills, there's no stopping Debdas Banerji!

'Camping's my first love,' he says enthusiastically. 'You live close to nature, cook your own food over open campfires, fend for yourself, and return a new man.' An active member of the Rover Scout Troop, Banerji enjoys his annual camping trip... the days of hiking, the many views of nature, treasured in memory and photographs when he returns.

BLUEPRINTS AND BUDGETS

A foreman at Burmah-Shell's Installation at Budge Budge, Calcutta, he is in charge of the drawing office. He prepares blueprints, estimates budgetary expenses, and controls costs. He performs his responsible task with the knowledge and experience of years on the job.

TODAY, AS EVER, PEOPLE LIKE BANERJI ARE WORKING FOR YOU

Banerji is a happy man. 'Living at peace with your environment,' he says, 'is the only thing that matters.' He has the look of a man who has achieved it.

Banerji and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work ... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

absorb Rs. 2.25 lakhs, but the payment of the dividend is subject to the sanction of the Industrial Finance Corporation. Development rebate reserve is allocated Rs. 39,200 (against Rs. 50,000) and taxation Rs. 4.65 lakhs (against Rs. 4.50 lakhs). Out of the latter, super profits tax amounts to Rs. 1.10 lakhs. The carry-forward is Rs. 21,632, against Rs. 22,122 brought in. Turnover amounted to Rs. 60.62 lakhs (against Rs. 60.20 lakhs), but the production was interrupted by a prolonged labour strike. The output during the current year has so far been satisfactory and has amounted to Rs. 31.50 lakhs to date.

Arrangements have been made to produce coal segmental saws from early next year. The expansion programme for producing taps, dies and chasers has been finalised. Construction work will start as soon as the import licence for plant and equipment is received. Messrs Vermont American Corporation, the foreign collaborators, will supply some equipment in exchange of shares. The directors have, therefore, decided to allot shares of Rs. 2.30 to the foreign collaborators, subject to the approval of the Reserve Bank of India.

Shah Construction Pays More

THE Shah Construction Co. Ltd has stepped up the dividend for the year ended June 1963 from 9 percent to 10 percent. The preliminary report on the Company's working shows an improvement over the previous year's performance. The gross profit is up by about 17 percent from Rs. 12.07 lakhs to Rs. 14.06 lakhs. Appropriations include depreciation Rs. 2.95 lakhs (against Rs. 2.63 lakhs), development rebate reserve Rs. 1.46 lakhs (against Rs. 22,692) and taxation Rs. 6.20 lakhs, including Rs. 1.20 lakhs for super profits tax (against Rs. 5.30 lakhs). The proposed dividend absorbs Rs. 4 lakhs, against Rs. 3.60 lakhs, leaving a sum of Rs. 77,964 to be carried forward, against Rs. 1.33 lakhs brought in. The work on hand including those in partnership up-to-date are placed at over Rs. 9.5 crores. The Rs. 100-paid share of the Company is currently quoted around Rs. 143.

Progress of Trichy Steel Rolling Mills

ACCORDING to the second annual report of the directors of Trichy Steel Rooling Mills for the period from 1st September, 1962 to 30th September, 1963, the net income of the Company amounts to Rs. 5,480, out of which Rs. 2,740 is provided for taxation and Rs. 2,740 for preliminary expenses. As the erection of the plant and machinery was completed by the end of September 1963, and trial runs of the various machinery also started on 1st October, 1963, it has been decided to close the accounts for the second financial year on 30th September, 1963, covering a period of 13 months. During the period, all the expenses have been charged to capital account. The directors hope that the mill will reach the full licensed capacity of 50 tonnes a day very shortly.

Loyal Textile Mills Skips

DUE to loss in working during the year ended June 1963, the directors of Loyal Textile Mills Ltd have not recommended any dividend on the ordinary shares. The directors, however, are considering payment of dividend on preference shares for the year out of the current year's profits, since the results for the current year so far are reported to be encouraging. The year's working has resulted in a net loss of Rs. 90,246, compared with the previous year's net profit of Rs. 8,59,862.

The directors' report says that the levy of 30 percent tax on electric energy, 100 percent power cut for a fortnight, payment of emergency risks insurance premium, cess on Indian cotton consumption, increase in ceiling prices of cotton by about Rs. 125 a candy, low ceiling prices of yarn and cloth, and heavy excise duty, have all affected the working results of the Company. They add that even the revised yarn ceiling prices are also not remunerative for an old mill like that of this Company.

During the year, the Company drew a further sum of Rs. 3.72 lakhs from the National Industrial Development Corporation Ltd, for the first stage of the rehabilitation scheme. Out of the total loan of Rs. 8.73 lakhs sanctioned, Rs. 7.40 lakhs have so far been drawn. During the last four years, Rs. 41.19 lakhs worth fixed assets have been added by way of rehabilitation and additions. The directors say that the Company has applied to the National Industrial Development Corporation Ltd for a further loan of Rs. 8.90 lakhs for implementing the second phase of rehabilitation scheme.

Standard Batteries Fares Well

THE Standard Batteries Ltd has done exceedingly well during the year ended June 1963. Sales have gone up by about 20 percent from Rs. 1.38 crores to Rs. 1.65 crores, and the gross profit has increased by about 50 percent from Rs. 14.28 lakhs to Rs. 21.69 lakhs. The dividend has been maintained at 10 percent, but it is on a higher capital of Rs. 45 lakhs as increased by the one-for-five rights issue in June 1962. After providing Rs. 4.53 lakhs (against Rs. 4.41 lakhs) for depreciation, Rs. 96,212 (against Rs. 67,703) for development rebate reserve and Rs. 9 lakhs (against Rs. 5.60 lakhs) for taxation and after deducting other prior charges, the net profit amounts to Rs. 5.67 lakhs (against Rs. 2.62 lakhs in 1961-62). The directors have set aside Rs. 1.20 lakhs (against nil) for general reserve and a sum of Rs. 4.50 lakhs has been transferred to the dividend reserve which will be used for the payment of the proposed dividend. In the preceding year, the directors had to withdraw Rs. 1.15 lakhs from the dividend equalisation fund to provide for the payment of the dividend absorbing Rs. 3.75 lakhs. After making various appropriations, there remains a sum of Rs. 12,045 to be carried

forward, against Rs. 14,979 brought in.

The directors state that with the increasing demand for special and improved equipment to streamline the manufacture and assembly of various types, the Company has plans to set up a separate department for experimenting on a pilot scale various processes. Standard Batteries is the first Indian Company selected by the Indian Railways to build suitable batteries as original equipment for the giant "Alco" diesel electric locomotive. The Company has been the first to export Indian made train lighting batteries to the Iraqi Railways. The Company has contributed about 90 percent of the total export of batteries from India during 1962-63. Recently, it has signed a contract with East Germany for supplying products worth Rs. 18 lakhs. The technical collaboration agreement with A. B. Tudor of Sweden has been renewed for a further period of five years. The Rs. 100-paid share of Standard Batteries is quoted around Rs. 173.75.

Indian Metals Share Offer

INDIAN Metals and Ferro-Alloys Ltd which proposes to set up a plant in Rayagda (Koraput district in Orissa) for the manufacture of ferro-silicon is offering 161,700 equity shares of Rs. 10 each and 20,000 9.5 percent redeemable cumulative preference shares of Rs. 100 each for public subscription. The list will open on 18th December and close on the 28th or earlier but not before 20th December. The proposed plant will have an annual capacity of 7,200 tons of ferro-silicon. The project is estimated to cost Rs. 1.36 crores, of which Rs. 56 lakhs is likely to be spent on machinery and equipment including installation charges and Rs. 20 lakhs on land and buildings. Working capital requirements are estimated around Rs. 26 lakhs. The cost of the project, it is proposed, will be met by the share capital of Rs. 75 lakhs, a loan of Rs. 39 lakhs from the I.C.I.C.I., another of Rs. 5 lakhs from the Orissa State Financial Corporation and bank borrowings to the tune of Rs. 17 lakhs. Machinery worth Rs. 39 lakhs will be imported and the foreign exchange requirements are being met by the I.C.I.C.I. loan.

The Company has secured the technical collaboration of Elektrokemisk A/S of Oslo, Norway, which will supply the necessary equipment, drawings and technical know-how, train key personnel and commission the plant. The foreign collaborator has guaranteed that the annual output of the furnace will not be less than 6,000 tons provided that raw materials of a specified standard are used.

The Company has an authorised capital of Rs. 1 crore comprising Rs. 80 lakhs in equity shares and Rs. 20 lakhs in preference shares. The issued capital will be Rs. 75 lakhs of which equity shares worth Rs. 20,52,120 have already been subscribed. Equity shares worth Rs. 15.50 lakhs are being taken up by the Industrial Development Corporation of Orissa and directors and their friends are subscribing for equity shares of the value of Rs. 1,80,880. The remaining capital made up of Rs. 16.17 lakhs in equity shares and Rs. 20 lakhs in preference is now being offered for public subscription. Out of this, equity shares worth Rs. 11 lakhs and the entire preference capital have been underwritten by the Orissa State Financial Corporation, Industrial Finance Corporation of India and the Indian Overseas Bank.

Every Dunlop Gold Seal car tyre is hand-built, the 'layers' being put together carefully and symmetrically. The 'raw' tyre is then separately and minutely examined and vulcanised under strictly controlled conditions. The finished Gold Seal tyre is once more closely scrutinised.

By such meticulous processing and scrutiny, the high quality of the Dunlop Gold Seal is maintained and you are assured of a tyre that gives you high trouble-free mileage and top road safety.

DC-58

Prospects for Arlabs

THE working results of Arlabs Ltd, pioneer manufacturers of vats and other dyestuffs, for the year ended June 1963, show an appreciable improvement over the previous year's performance. Sales are up from Rs. 50.90 lakhs to Rs. 98.02 lakhs, and the Company has made a gross profit of Rs. 8.40 lakhs, against a loss of Rs. 10.73 lakhs in the preceding year. The net profit after depreciation is shown at Rs. 4.91 lakhs. The directors, however, point out that the operations during 1962-63 should better be compared with those of the earlier three years—1958-59 to 1960-61—when production and sales were of the order of Rs. 95 lakhs with profits averaging at Rs. 20 lakhs. The profit margin has been reduced by about 15 percent due to several factors, more particularly, lower selling prices of solubised vats, azoics and other products, compared with the earlier years, and an increase in production costs. Competition from the small-scale dyestuff manufacturers enjoying better treatment in imported raw material supplies and the successive curtailment of import licences on the other hand in the case of big manufacturers has placed Arlabs in an invidious position.

To absorb heavy overheads, production has to be maintained at the maximum possible level, which, with the Company's limited import licences, cannot be attained except by purchasing export promotion licences on payment of heavy premiums. A major portion of the vats produced during 1962-63 was used for the manufacture of solubised vats. Market situation during the year remained unfavourable because of the emergency and the consequent dull condition of the dyestuff market. Until the implementation of the vat expansion programme for which the new capital issue was made during the year, the burden of interest charges and overhead expenses will naturally affect the profit during the transition period. Recently, the imports of various finished dyes have been banned by the Government. These include two products newly introduced by Arlabs—vat Magenta B and vat violet 4R. This should help increase the Company's turnover. The vat expansion programme which was expected to start in June 1963 has been delayed by six months due to delay in getting the building materials. The construction of building, however, started during the year.

The working of Pigments, Lakes Manufacturing Co.—a subsidiary—showed a loss of Rs. 1.83 lakhs. Production capacity of napthols and bases could not be adequately used because of raw material shortage. Production of vat violet 4R starting from basic intermediate reached the final stage and the production of vat golden yellow G.K. was set up during the year. Development of vat brown BR has been taken in hand. The results of this work on intermediates and vat dyes on which considerable amount of time, energy and money have been spent will not yield fruit till regular production is undertaken. The completion of Arlabs' expansion programme and regular production of vats by the subsidiary will enable the Company to recoup past losses within a reasonable period. The Company has a paid-up capital of Rs. 26.66 lakhs and its reserves and surplus amount to Rs. 17.82 lakhs.

Empire Dyeing Changes Hands

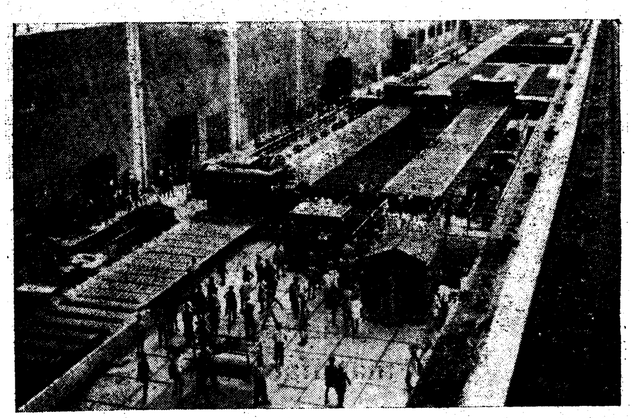
THE controlling interest in Empire Dyeing and Manufacturing Co. Ltd has changed hands. W. H. Brady and Co. Ltd, managing agents of the company, have sold their investments of 35,843 shares of Rs. 15 each at Rs. 100 to Mr. S. C. Malhotra who was formerly connected with Killicks. It might be mentioned here that the share of Empire Dyeing has been quoted nominally around Rs. 55 for quite some time. Its book value as on 31st December, 1962, works out to Rs. 33 a share. As a result of the sale, W. H. Brady and Co. Ltd will relinquish the managing agency with effect from 31st December, 1963. All the formalities in connection with the transfer of the controlling interest have been completed. As on 31st December, 1962, the Company had a paid-up capital of Rs. 9 lakhs, which was backed by reserves and surplus amounting to Rs. 10.9 lakhs. The gross block of Rs. 29.1 lakhs had been written down to Rs. 10.9 lakhs.

Kirloskar Brothers Results Impress

KIRLOSKAR Brothers Ltd report highly encouraging results for the year ended July 1963. The sales have increased by about 23.5 percent from Rs. 3.91 crores to Rs. 4.83 crores, and the gross profit has gone up by nearly 25.6 percent from Rs. 47.45 lakhs to Rs. 59.64 lakhs. The dividend, however, has just been maintained at 10 percent. This is partly because of the increase in the capital effected during 1962-63 and partly because the Company needs large sums for its expansion schemes. After providing Rs. 13.96 lakhs (against Rs. 12.38 lakhs) for depreciation, Rs. 5.64 lakhs (against Rs. 7.17 lakhs) for development rebate reserve and Rs. 18.13 lakhs (against Rs. 13.52 lakhs) for taxation, and deducting other prior charges, the net profit amounts to Rs. 18.15 lakhs, against Rs. 11.20 lakhs in 1961-62.

With Rs. 12,309 brought forward from the previous year and writing back excess provisions amounting to Rs. 38,778, the disposable surplus amounts to Rs. 18.65 lakhs. Additions to various reserves amount to Rs. 12 lakhs, compared with only Rs. 5.45 lakhs in the preceding year. A sum of Rs. 6.10 lakhs has been transferred to the dividend reserve, out of which is to be paid the equity dividend. The proposed preference dividend absorbs Rs. 36,246 (against nil) and the equity dividend accounts for Rs. 6.10 lakhs, against Rs. 5.78 lakhs, leaving a surplus of Rs. 19,417 to be carried forward. During 1962-63, the Company's capital was increased by the issue of 9 percent redeemable cumulative preference shares worth Rs. 15 lakhs, and equity shares of the value of Rs. 10 lakhs. The equity shares were issued at a premium of Rs. 12 a share.

The directors report a further expansion in the manufacturing and trading activities of the Company during the year. However, the Company's products are said to be meeting with increased competition and production costs are going up due to the rise in the prices of raw materials. The production of vertical turret lathes with partially imported components is to start shortly. The Dewas factory commenced production in December 1962, and is now working to its full capacity. The Company is taking up new lines of production and has signed an agreement with an American firm for the manufacture of hermetically-sealed compressor units needed by producers of refrigerators and air-conditioners.



Sree Akkamamba Textile Earns Less, Pays the Same

THE directors of Sree Akkamamba Textiles Ltd have maintained a dividend of 8 percent for the year ended June 1963, although the net profit for the year is lower than that of the previous year. The turnover is higher at Rs. 66,01,189, compared with Rs. 60,59,357 for the previous year. The improved working of the Company's spinning mills did not result in higher profits, and this is due to the increase in cotton prices during the year as well as the increase in the wage bill and also the lower ceiling prices fixed for yarn. As the ceiling prices for yarn have been revised since February 1963, the profit position is reported to be better.

During the year, the average spindle in action for each shift was 16,850, against 16,663 of the previous year. Counts manufactured this year were 10s, 20s, 24s, 26s, 30s, 40s, 42s, 60s and 80s. Finer counts were manufactured in increased quantities. The total production for the year amounted to 5,897 bales, against 6,177 bales. Total production in bales is less than that of last year, as the Company concentrated more on higher counts. During the year, the Company exported 150 bales of 24s count to foreign countries.

Referring to the expansion programme, the directors say that since the last report, a further expansion licence for 556 spindles has been received. The expansion programme of the additional spindleage of 6,556 spindles is under progress. Some of the plant and machinery has been received and the expansion is expected to be completed by about the end of 1964. This total expansion is expected to cost about Rs. 30 lakhs. The Company has applied to the Industrial Finance Corporation of India for a fresh loan of Rs. 11 lakhs. The balance of capital required will be met by the Company's own funds and by the issue of fresh capital.

The net profit for 1962-63 amounted to Rs. 3,89,297, after providing Rs. 3,76,299 for depreciation, compared with Rs. 4,96,560 for the previous year after providing Rs. 3,83,079 for depreciation. Adding to the year's net profit, a sum of Rs. 25,798.37 brought forward from the previous year, and a sum of Rs. 6,258.56 being excess provision for bonus in 1961-62, the total comes to Rs. 4,21,354.02. Out of this, prior charges amounted to Rs. 1,878.59. Development rebate reserve

A view of the finishing end plant built by Schloemann for the heavy plate mill in Rourkela

SCHLOEMANN
plant for India's heavy industry

- Rolling Mills for Ferrous and Non-Ferrous Metals
- Counterblow Hammers
- Hydraulic Presses
- Extrusion Presses

It was more than 25 years ago that SCHLOEMANN—a German mechanical engineering company, then practically unheard of in India—received their first order from a progressive Indian company.

Since then, SCHLOEMANN have participated increasingly in India's industrial expansion... supplying the finest in plant and equipment that help produce the basic materials for a higher standard of living.

Of the many nationally important undertakings that have chosen SCHLOEMANN machinery are TISCO, Hindustan Steel at Rourkela, TELCO, the Mysore Iron & Steel Works, and the Indian Steel & Wire Products Ltd.

Today, SCHLOEMANN—a well-known and trusted name the world over—are proud to be able to offer Indian industries the very latest plant... in the very same spirit of technical co-operation existing since that first order from India over 25 years ago.

SCHLOEMANN—over 25 years of co-operation with INDIA

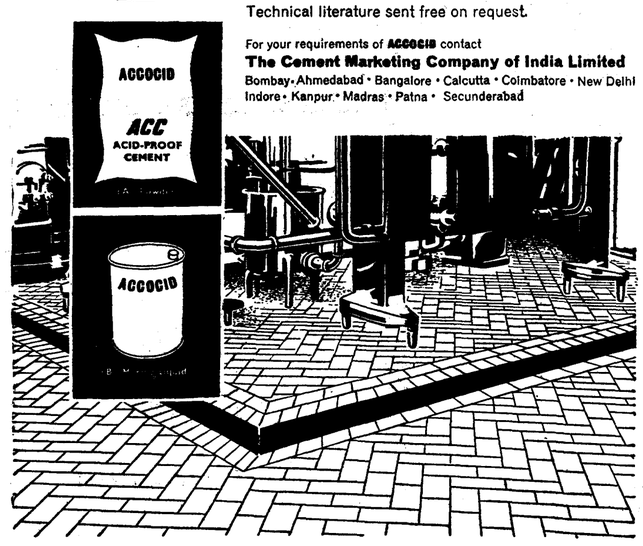
gets Rs. 2,620 (against Rs. nil), general reserve Rs. 1.50 lakhs (against Rs. 1.50 lakhs). Dividend equalisation reserve gets Rs. 80,000 (against Rs. 1.50 lakhs). The proposed dividend of 8 percent accounts for Rs. 1,61,877.60. The balance of Rs. 20,177.83 is carried forward.

Progress of Mandya National Paper

THE directors' report of the Mandya National Paper Mills Ltd, mentions the teething troubles, power cut, bagasse shortage and the high cost of production which resulted in a working loss of Rs. 28,42,856 during the year ended June 1963. The trial operations started in the last week of April last year and continued until the end of July 1962. The production started on a commercial scale by the middle of August 1962. The trial operation loss during July 1962 amounting to Rs. 5,82,000 has been capitalised and transferred to the head plant and machinery. No depreciation has been provided.

The total finished production during the year was 6,018 tonnes in a period of nine months, against a rated annual capacity of 10,800 tonnes. The report says that 52 days' production was lost because of the non-availability of power. Although the paper manufactured by the Company was well received in the market and the entire production has been sold, the distressing feature is the steady and continuous rise in the prices of chemicals and other stores. The compulsory insurance against emergency risks has put a heavy burden on the resources of the Company, the total amount for the two quarters being Rs. 1,23,256. The small increase made by the management in the selling price of paper in June 1962 was found to be inadequate to cover the rise in costs.

Another point noted by the directors is the fact that the new units are in an unfavourable position because of the very high cost of capital investment and the consequential high financing charges. In August 1963, the Company was sanctioned a loan of Rs. 1.50 crores by the Agency for International Development, Washington. This loan has been used to redeem part of the unsecured loans and current liabilities after reserving a sum of Rs. 33 lakhs to meet part of the cost of the proposed expansion. The Company has been allotted permanent power by the Mysore State Electricity Board. Referring to the proposals for expansion of the present capacity of the mills, the report says that these proposals are nearing completion.



A special cement which resists the corrosive action of acids and chemicals

ACCOCID

s recommended for setting acid-resisting bricks and tiles or acid-resisting natural stone slabs for acid storage and pickling-tanks, acid towers and fume-stacks, reaction-vats and tanks, laboratory bench-tops, floorings etc.

ACCOCID is supplied in two parts:
(A) a powder packed in 50 kg. special jute bags with polythene liners, to be mixed with
(B) a liquid packed in 15-litre G.I. drums.

New Capital Issues

FIVE companies have been authorised to raise capital aggregating Rs. 1.83 crores. Four companies will be issuing equities and one equities plus preference shares. Three are offering part of their shares to the public for subscription. One is offering part of its equities to the resident existing shareholders. In all cases, the consent of the Controller of Capital issues is valid for 12 months. The following are the details.

York India Limited, Delhi is to issue Rs. 30 lakhs capital in equity shares of Rs. 10 each. Of these, shares of the value of Rs. 15 lakhs will be allotted to Borg-Warner Corporation, Chicago, U.S.A. Rs. 7.50 lakhs to be subscribed privately and the balance of Rs. 7.50 lakhs to be offered to the public for subscription. The proceeds will be utilized in the manufacture of refrigeration and air-conditioning equipment.

Bajaj Tempo Limited, Bombay is issuing Rs. 62,27,100 equity capital in shares of Rs. 10 each to be issued at par. Of these, shares of the value of Rs. 17,77,100 will be allotted to non-residents against supply of plant and machinery. Rs. 20.20 lakhs value of shares will be offered to the resident existing shareholders of the company and Rs. 27.30 lakhs will be offered to the public for cash. The proceeds will be ultilized on the company's expansion programme for the manufacture of Tempo-3-wheelers as also the manufacture of Tempo Viking 4-Wheelers.

Raghubir Singh Felt Mill Ltd is to issue capital of Rs. 23 lakhs divided into 7,000—9½% preference shares of Rs. 100 each and 180,000 equity shares of Rs. 10 each. The capital is required for the establishment of a felt mill in Ludhiana.

Chittoor Textiles Limited (Cotton Spinning Mills), Bangaripalayam (Andhra Pradesh) is to issue capital of Rs. 25 lakhs divided into 25,000 equity shares of Rs. 100 each for cash at par. Out of this, shares of the value of Rs. 25 lakhs will be offered to the public. The money will be utilized for the construction of factory building and purchase of machinery, etc.

The Mahendra Mills Ltd, Ahmedabad, is to issue Rs. 43,12,500 in equity shares of Rs. 100 each, to be issued for cash at par. The capital will be used for installing 500 automatic looms.

LYONS RANGE WELCOMES SPEECH OF MINISTER AT ASSOCHAM

Wednesday Evening.

THERE has been a smart recovery in the Calcutta stock market during the past week. Replacement purchases, combined with brisk short-covering, have raised prices, particularly of clearing scrip. The undertone is firm and bulls have the upper hand. The recent shake-out has improved the technical position. This apart, the economic news has been favourable.

The recommendations of the Select Committee on the Companies (Amendment) Bill are believed to have reduced the harshness of the original proposals. It remains to be seen whether the Government will accept the recommendations fully. Although the Central Finance Minister's observations in the Lok Sabha on the measures to activate the capital market have been welcomed, the market is unlikely to take a decisive turn until positive incentives in the form of tax reliefs are offered. It is generally believed that hopes of raising Rs. 100 crores a year for the proposed unit trust are exaggerated. The mere multiplication of financing institutions to supply funds to trade and industry will not help the investment climate, unless concrete measures are taken to improve the profitability of corporate enterprises.

Lyons Range has been impressed by the address of Mr. C. Subramaniam, Central Minister for Steel, Mines and Heavy Engineering, at the meeting of the Associated Chambers of Commerce in Calcutta last Saturday. If the Government takes steps to mitigate the adverse effects of controls and pricing policies, economic development should be stimulated. The cumbrous licensing procedures have to be ended if new enterprises are to be encouraged. Steel shares have been in the limelight since the stock market has bullishly interpreted the statement in the Lok Sabha about the outstanding loans given by the Government to the two private steel companies. Since the Government has not implemented the Tariff Commission's recommendation to provide an additional element in steel retention prices for repaying the loans, it is hoped that the Government will be generous in taking any new step.

Indian Iron have been marked up on sustained support, combined with short-covering. Among engineering shares, Texmaco have met with influential support. J. K. Steel have improved on paying a higher dividend. Interest has been taken in Guest, Keen, Williams, Jessop, Indian Standard Wagon and Burn. Binani Metals have been steady.

Clearing miscellaneous shares have moved up on fresh purchases. Hindustan Motors have been particularly active. Indian Cable have, nevertheless, reacted on profit-taking. Union Carbide have been steady on rumours of a rights share issue. Alkali Chemical, Goodyear India, Angelo Brothers and British Paints have hardened. British India Corporation have gained on replacement buying. Electric company shares have been sluggish and stray business in Calcutta Electric has been transacted.

Among managing agency shares, Jardine Henderson have attracted attention. General insurance company shares have been freely sold and Ruby General have retreated. Paper shares have recovered towards the close. Attention has centred on Orient, Seshasayee, Sirpur, Titaghur and Ballarpur. Sugar shares have been freely offered without meeting with support. Dyer Meakin Breweries have, nevertheless, been steady on interested buying. Among new shares, India Carbon have been steady on prospects of improved working during the current year. Hindustan Aluminium and Universal Cable have gained.

Despite limited turnover, selected jute shares have hardened. Investors are, nevertheless, inclined to wait and see whether overseas buying of jute goods picks up as expected. Birla, New Central and Champdany have been active. Interest in Kamarhatty, Kanknarrah, Howrah, Union, Lawrence, India, Ganges and Megna has been shown. Stray support has been forthcoming for selected coal shares, although investors have been disturbed by the decline in demand, especially for inferior coal. Burrakur, Western Bengal, East Indian and Central India have been transacted.

In cotton mills, J. K. Rayon have recovered on short-covering. Elgin have been steady on prospects of a bonus issue. Jay Shree Textiles and Dunbar have changed hands. Bank shares have been sluggish. Stray business in United Commercial and United Bank have been transacted. In the tea section, attention has been concentrated on selected Dooars gardens. Jaybirpara and Hasimara have been wanted. In Assam group, Grob, Tezpore and Betjan have been bought.

Government securities have been steady but business has been restricted. Banks have been cautious in view of the year-end closing of accounts. The prices of short and medium-dated stocks have been fully steady and sellers have been fewer. The Reserve Bank has increased its buying rate to Rs. 99.55 for the 3 percent 1964 loan. The market price has, nevertheless, been slightly higher than the former rate. The 3 percent Conversion loan 1986 quotes Rs. 65.85.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during November 1963 was: iron 146,300 metric tons; steel ingots 158,300 metric tons and salable steel 126,600 metric tons.

Bombay

STEEL SHARES LEAD RECOVERY

T.T.K. SPEECH HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market has closed the past week on a steady note after an earlier dull phase. The prices of selected shares have been marked up on renewed buying. There has also been a great deal of short-covering. The earlier shake-out has done a lot of good to the market by weeding out the weak holders. Dalal Street has been bullish on hopes that the existing restrictions on trading in clearing scrip might soon be substantially relaxed, if not removed.

The market has improved under the lead of steel shares, since operators have been encouraged by the statement made by Mr. C. Subramaniam, Central Minister of Steel, Mines and Heavy Engineering, in the Lok Sabha last week. Commenting on the loans given by the Government to the private steel companies, he said that no repayment had so far been made. But the Government too had not allowed any additional element in the retention price of steel for repaying the loans. The additional payment was formerly recommended by the Tariff Commission.

The bullish trend has also strengthened on the statement made by Mr. T. T. Krishnamachari, Central Finance Minister, in the Lok Sabha last week that the Government was keen on reviving confidence in the capital market. In view of buoyant revenue receipts during the current financial year, the stock market is hopeful that there will be tax reliefs in the next Budget, if not earlier.

Tata Steel ordinary have improved to Rs. 145.75. Among engineering shares, Tata Locomotive and Mukand Iron have gained. Interest has been shown in Cooper Engineering and Alcock Ashdown. Hindustan Motors have recovered smartly among motor-vehicle shares due to influential support. Premier Automobiles have been sluggish.

The smart rise in Century has been an outstanding feature of the cotton

Mr. F. C. COOPER (General Manager)

mill section. Bombay Dyeing, Kohinoor, Gokak, Svadeshi and Standard have improved on replacement buying. Morarjee have been steady on an encouraging statement by the chairman at the annual general meeting of the Company. India United ordinary and Simplex have also gained. Kaiser-i-Hind have been offered freely due to the passing of the dividend. This is the sixth year in succession that the Company has skipped the dividend.

Selected miscellaneous shares have moved up in sympathy with the general trend. In sugar shares, Walchandnagar Industries have been steady, but Belapur have been sluggish due to the dividend cut. The prospect of the Company is, nevertheless, considered good, since the excess land will not be taken over by the Government of Maharashtra under the Land Ceilings Act. Among steamship company shares, Scindia have gained on invesment support. Great Eastern Shipping have been steady.

Cement shares have been quietly steady. Associated Cement and Digvijay have fluctuated narrowly. Mining shares have been subdued, and Shivrajpur Syndicate have been sold freely. In chemical shares, Tata Chemical have been steady on replacement purchases. Rayon shares have picked up on rumours of decontrol of artificial silk yarn. National Rayon and Gwalior Rayon have gained on balance. Voltas have been active. Business in cash shares has been negligible and fluctuations have been narrow. In banks, stray business has been transacted in Central and Baroda. Among electric company shares, Ahmedabad, Bombay Suburban and Tata Hydro have been about steady.

Madras

SHORTAGE OF FUNDS FEARED

SELECTIVE BUYING OF STATE LOANS

Tuesday Evening.

THE Madras stock market has improved slightly during the past week due to higher advices from Dalal Street. Turnover has, nevertheless, been negligible, since outside support has been lacking. Investors have been cautious in view of various uncertainties. The stock market fears that the shortage of funds will be accentuated due to the year-end closing of bank accounts.

Selected State Government loans have been bought. Limited business has been transacted in bank shares. Indian have quoted at Rs. 158 and Canara at Rs. 81.50. Stray support has been extended to Ellore at Rs. 18.50 and to South Madras at Rs. 10.90 in electric companies. Sugar shares have been dealt in cautiously, since investors are not certain whether the increased price sanctioned by the Government for the commodity will help improve the profitability of sugar factories. Deccan have been available at Rs. 12 and Andhra at Rs. 17.36. Business has passed in E.I.D. at Rs. 38.50 and in K.C.P. at Rs. 23.90. Mysore have retreated to Rs. 47.75 due to the disappointing results of the Company. The trading profit has appreciably declined.

Business in planting shares has been restrained and prices have shown little change. Blue Mountain have been available at Rs. 2.55 and Cochin Malabar at Rs. 6.25. Consolidated Coffee have changed hands at Rs. 21.87 and Ouchterlony at Rs. 4.35. Periakaramalai have been transacted at Rs. 3.49. Interest has been taken in Kailas at Rs. 6.30, in Woodland at Rs. 6.90 and in Parkside at Rs. 27.50. Peermade have changed hands at Rs. 20.50, Savamalai at Rs. 4.55 and Bababudin at Rs. 5.50.

In textiles, attention has been concentrated on Bangalore Woollen at Rs. 233.50 and in Buckingham at Rs. 297. Akkamamba have been transacted at Rs. 9.44 on payment of a taxable ordinary dividend of 8 percent. South India Viscose have gained fractionally at Rs. 142.75 and Travancore Rayon at Rs. 25.25. Lakshmi have been quoted at Rs. 132.50 and Madura at Rs. 33.85. Interest has been taken in Rajalakshmi at Rs. 97, in Radhakrishna at Rs. 30 and in Ramakrishna at Rs. 217.80.

Miscellaneous shares have been sluggish and fluctuations have been narrow. Aluminium Industries have quoted at Rs. 19.15, while Ashok Leyland have been freely sold down to Rs. 7.12. In cement shares, Dalmia have been available at Rs. 12.62 and India Cement at Rs. 5.48. Among engineering shares, South India Steel have quoted Rs. 9.37 on paying a taxable ordinary dividend of 7.5 percent. Mettur Chemical have been steady at Rs. 12.75 and Seshasayee Paper at Rs. 7.95. Business has passed in Standard Motors at Rs. 10.33, in Parry's Confectionery at Rs. 3.20 and in Textool at Rs. 146.50. Madras Rubber have been placed at Rs. 14.80 and Kirloskar Electric at Rs. 18.75. Aspinwall have been steady at Rs. 5.57 and Binny at Rs. 287.50.

BANKERS COMMENT ON THE NEW BILL

(BY A SPECIAL CORRESPONDENT)

Indian bankers have expressed their views on the new Bill to amend banking law. They feel that the sweeping powers proposed under the legislation would seriously interfere with the smooth working of banks and provisions such as removal and appointment of directors or chief executives might undermine popular confidence in the system.

THE chairman of the Indian Banks Association has addressed a communication to the Governor of the Reserve Bank indicating his views on the various clauses of the amending Bill. (The Bill has 55 clauses and would vitally affect the functioning of the banking system in the country.) It is, therefore, necessary that the bankers' views on the proposed legislation are given a fair hearing. But according to the present schedule, the Bill is to be considered and passed by the Lok Sabha within next week, and in all probability the authorities would not consider what the bankers want to convey.

Why is the Government of India in such a desperate hurry? The reason seems to be the agitated political opinion in a section of the Congress Party which has been vocal in demanding nationalisation of commercial banks. The present session of the Rajya Sabha started discussing once again the question of bank nationalisation on the basis of a motion introduced by Mr. Raghunath Reddy. The Government was only a silent spectator to the fierce debate which raged for four and a half hours on 6th December. It proved inconclusive, but it is to be resumed once again on 20th December. The general expectation is that the Government will push the new banking Bill into law before the debate in the Rajya Sabha is resumed to disarm the supporters of the move.

Whatever the Government might do, the bankers have at least the satisfaction that they have put forward their views on the Bill. Their unanimous impression is that drastic and unduly wide powers are proposed to be taken under the Bill and those will seriously interfere with the smooth functioning of the banks.

Removal of Directors

Clause 18 of the Bill provides for the removal of a director or chief executive officer or other officer or employee of a bank if he has violated, in the opinion of the Reserve Bank, the provisions of any law. According to the bankers, the assumption of such far-reaching and sweeping powers would adversely affect the confidence of the public in the banking system. Since banks are credit institutions functioning on the basis of the goodwill of the public, nothing should be done to undermine confidence. The removal at the discretion of the Reserve Bank of persons associated with banks without giving them an opportunity for an explanation is not only arbitrary but undemocratic. Even in an emergency, it would be fair to give the person so affected at least a short time to furnish an explanation. The board of directors of the bank concerned should be given an opportunity to appoint a fresh director or person in place of the dismissed one, in consultation with the Reserve Bank, if that is considered essential to secure the smooth functioning of the board. If for any reason, the suggestion of the bankers is not acceptable to the Government, the Reserve Bank should consult the board of directors of the bank concerned before appointing any director or person to fill the vacancy.

As for the provision enabling the Reserve Bank to appoint up to five additional directors, bankers feel that the appointment of only one director would serve the purpose which the Government has in mind, as the Reserve Bank already has enough powers under the Banking Companies Act to deal with malpractices.

According to the bankers, Clause 11 of the Bill prohibiting a bank from making unsecured advances to a public limited company if the chairman of the former is interested as chairman or managing director of the public company or in other ways, would hinder the functioning of banks and first-class companies. Banks exercise great care in granting unsecured advances and give them to first-class parties only. Instances of bad and doubtful debts in unsecured advances are very few.

Again, under the present banking practices, the discounting of Government supply bills is treated as an unsecured advance. With the increased rôle of the public sector and the rise in defence expenditure, many companies are supplying goods to Government departments. Further, the trust receipt facilities for clearing imported goods also come under the category of unsecured advances. The prohibition in the Bill would, therefore, hamper the various methods of finance. It would particularly impose a serious handicap on the functioning of those companies the chairmen or directors of whose managing agents are chairmen of banks, it would also restrict the business of the banks concerned. The deletion of this amendment to Section 20 of the present Banking Companies Act is strongly advocated by the bankers.

Limiting Advances

Clause 13 of the Bill enables the Reserve Bank to give directions to banks as to the maximum amount of advances or other financial accommodation which may be made by them, or the maximum amount up to which guarantees may be given by them on behalf of one company or association of persons or individuals. According to the bankers, the imposition of such a maximum limit would inhibit the growth of industries. Granting advances is a matter of individual discretion of a banking company, and if loans to specific industrial concerns require to be curtailed in the context of directions given by the Reserve Bank, the borrowing concerns will not be able to make the best use of the curtailed advances. It is essential that the individual banks, rather than the Reserve Bank, should be the sole judge of borrowers' creditworthiness. In recent years, guarantees issued on behalf of new industrial companies concerning their deferred payment agreements run into large amounts and banks have been called upon more and more to enter this type of business in view of the rapid industrial development of the country. Such a maximum would force the banks naturally to curtail this activity.

Clause 9 of the Bill provides for reduction of the maximum voting rights of a shareholder fom 5 percent to 1 percent of the total voting rights. In the opinion of bankers, the existing percentage should be retained. This is because competent and experienced persons would not stand for election if the percentage is reduced. Consequently, the stability of management of banks would be adversely affected.

enjoy unique JAL service on your next flight to LONDON and other gay cities of Europe

Leave Calcutta Sunday or Thursday evening (2220 hours) aboard a luxurious JAL DC-8 Jet. (Also by connection at Karachi.) Arrive in Rome for breakfast; London for lunch. Visit Cairo and Frankfurt along the way. Or, fly JAL's morning service east through Bangkok and Hong Kong to Tokyo, where JAL's trans-Pacific jets leave daily for the U.S.A. Either way, JAL's wonderful hospitality will make your flight truly enjoyable.

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Wednesday, 11th December.

THE general level of advances has shown a fair increase in the Calcutta money market during the past week. Most of the rise is in the requirements of the jute mills, although the borrowings of the sugar mills are also slightly higher. The credit given to the other main categories—the cotton and woollen mills, the iron, steel and engineering industries, and the foodgrains and seeds trade—is unchanged. In the inter-bank market, conditions have been steady and the call rate quotes 5 percent.

The exchange market has been moderately active, with an excellent supply of tea bills and a fair number of gunny bills. The demand for remittances is moderate. In the London market, sterling has been fairly steady and shows nominal gains against most of the important currencies except the West German, Swiss and Belgian.

SILVER WAS STEADY IN CALCUTTA during the past week. The price advanced from the previous week's level of Rs. 235 to Rs. 237.75, quoted today for ready. The London and New York prices amounted to 111⅛d and 129.3 cents. Despite a rise in silver, gold was quiet and the price of 14-carat fell from Rs. 63 to Rs. 62.25.

DURING THE WEEK ENDED 6TH DECEMBER, Government of India Treasury bills for Rs. 1,54,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 10th December. The total amount offered was Rs. 2,12,00,000. Tenders at Rs. 99.425 percent were accepted in full, and those at Rs. 99.420 percent were allotted 93 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.315 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 16th December.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 11th December to 14th December at Rs. 99.436 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 4th December to 7th December amounted to Rs. 1,39,25,000.

RISES OF RS. 46.62 CRORES TO RS. 2,336.60 crores in the total note issue and of Rs. 48.48 crores to Rs. 2,313.53 crores in active notes were notable features of the return of the Reserve Bank of India for the week ended 6th December, 1963. The currency expansion was covered by raising rupee securities by Rs. 50 crores to Rs. 2,009.31 crores in the paper currency reserve. This was done by transferring securities from the Banking Department in which investments were Rs. 53.58 crores smaller at Rs. 192.78 crores. Deposits of the Government of India rose by Rs. 12.87 crores to Rs. 84.01 crores while those of State Governments fell by Rs. 98 lakhs to Rs. 10.21 crores. Balances of scheduled banks at Rs. 82.93 crores showed a rise of Rs. 4.02 crores. Balances held abroad rose by Rs. 2.37 crores to Rs. 12.76 crores. Loans to scheduled banks rose from Rs. 79.65 lakhs to Rs. 14.61 crores of which advances against usance bills amounted to Rs. 4.44 crores, against nil. Ways and means advances stood at Rs. 46.54 crores, against Rs. 31.81 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 29th November, 1963, showed a rise of Rs. 37 lakhs to Rs. 592.97 crores in total deposits. Investments in Government securities fell by Rs. 76 crores to Rs. 307.49 crores, while other authorised investments remained unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, declined by Rs. 75 lakhs to Rs. 258.47 crores. Cash and balances were, in consequence, shown at Rs. 21.67 crores or Rs. 66 lakhs less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 29th November, 1963, showed Demand and Time liabilities at Rs. 1,123.79 crores (Rs. 29.47 crores on account of borrowings from banks) and Rs. 1,324.71 crores (Rs. 22.21 crores), compared with Rs. 1,115.33 crores (Rs. 27.65 crores) and Rs. 1,327.99 crores (Rs. 20.51 crores), respectively, in the previous week. Cash declined by Rs. 1.75 crores to Rs. 55.68 crores, while balances with the Reserve Bank decreased by Rs. 9.95 crores to Rs. 72.93 crores. There was a drop of Rs. 4.78 crores to Rs. 766.97 crores in investments. Advances and bills discounted at Rs. 1,498.62 crores showed a rise of Rs. 3.68 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.3 percent and 61.2 percent, against 5.7 percent and 61.2 percent.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

CHAIRMAN, MR. A. K. JAIN'S ADDRESS

The following is the speech delivered by Mr. A. K. Jain, Chairman, New Central Jute Mills Co., Ltd., at the Annual General Meeting of the shareholders of the Company held on 3rd December, 1963.

Gentlemen,

I have great pleasure in extending a hearty welcome to you all.

The Report and Accounts of the Company have already been in your hands. You would have found that the Company has made outstanding progress all round during the year.

In the tragic assassination of President Kennedy, which stunned all of us, the world has lost a great and noble leader and statesman. It was his dynamic leadership that led to the spontaneous supply of arms and equipment to our country at a time of national peril last year. The people of the world will remember President Kennedy as a man who fought for peace and understanding among nations and progressive development in all underdeveloped and backward countries. Our heartfelt sympathies go out to Mrs. Kennedy and the little children and the American people.

Testing Time

The past year has been a testing time for us from the point of view of preparing for the defence of the country and stabilising the economy's development. The Government, the industrial and business community, politicians and economists have been thinking as to the ways and means of gearing up national effort. The situation demands policies and actions well-tuned to the urgent needs of development, taking into account the lessons of the past. The mid-term appraisal of the Third Five Year Plan has indicated that the rate of increase in industrial production has lagged behind the target and agricultural production has fared worse. Against the annual target of 11.1%, the actual increase in industrial production was 6.5% in 1961-62 and 8% in 1962-63.

Concerted efforts have been made by your Company's jute mills to build up production and exports for earning larger foreign exchange for the country. There was an increase of over 21% in the output during 1962-63 over 1961-62. The planned expansion of your Company also contributed to increased employment for skilled and unskilled workmen and technical and supervisory personnel. The complement of broad-looms was increased during the year 1962-63 by 104 to reach a total of 286. During the current year, 71 additional broad-looms were installed raising the total to 327 against the licensed capacity of 350 broad-looms. Your Company thus installed 92% of its licensed capacity of broad-looms. The industry achieved installation of only just over 50% of the licensed capacity, according to available figures. With the implementation of a steady programme of expansion, your Company also made large contribution to export earnings.

It can, therefore, be legitimately claimed that your Company made substantial and all round progress. The profit attained in 1962-63 amounting to Rs. 1.32 crores after providing over Rs. 53 lakhs for depreciation is not only an all time record for your Company but is also the highest in the jute industry as assessed from a study of published Balance Sheets of jute companies for the year. The management adopted a policy of large-scale expansion of the Company's jute mills at substantial sacrifice of their own managerial remuneration. During the last three years ended March, 1963, the total of managing agents' and directors' remuneration amounted to Rs. 47,176 only.

Fabrication of Broad-looms

Simultaneously with the building up of your mills' loomage strength, successful fabrication of broad-looms in the Company's workshop was also achieved. The workshop has been modernised and strengthened to meet the increasing needs of indigenous manufacture. In the year 1961-62, out of the total broad-looms installed, 7% was fabricated in your own workshop; the percentage increased to 33% in 1962-63 and to as much as 92% in the current year. The own fabrication of looms has, apart from expediting your Company's expansion programme, resulted in a saving of Rs. 50 lakhs foreign exchange expenditure to the country and economy to the Company in capital expenditure.

The future of the carpet backing industry in this country would depend on the growth of consumption in the foreign market. Every effort should be made to encourage the use of double back in carpet backing for which it is very important to improve the quality of carpet backing manufacture in this country. Your Company's production is already well accepted in the overseas markets. In order to propagate the use of double back by supply of better quality carpet backing, your Company has already installed 2 single beam dressing machines.

I mentioned in my last year's speech about the increase in production in Sahu Chemicals & Fertilizers unit. I also referred to the modifications in the plant on the advice of the technical collaborators. I am happy to state that the modifications carried out have resulted in substantial improvement in the output during the year. During the current year, there should be further increase in output as in the period of 8 months ending November, 1963 there is a 25% increase in production as compared to what was achieved in the corresponding period of the previous year. The substantial improvement in the production of last year could not, however, contribute to the total earnings of the Company because of the higher cost of basic materials which absorbed the advantages of increased production. The contribution of the expected improvement in production to the current year's financial results would also depend on the extent to which the increasing cost of basic materials, over which the industry has no control, is checked and on the price policy of the Government. There is all out effort to keep costs down, increase productivity and contribute to the maintenance of reasonable price level. It is hoped that the recent agreement with the employees of the Sahu Chemicals & Fertilizers unit will add to the harmonious endeavour to further stepping up of production in the unit.

Increased Exports

The Government and industry in the country have been concentrating on increased exports to augment foreign exchange earnings. An important aspect in the matter of exports especially with reference to lesser developed countries in the Far East is the building up of goodwill by direct contribution to the development of industries in those countries as the urge to develop one's own economy is paramount in every nation. Thailand is a country with large availability of Kenaf fibre. Many countries including the United Kingdom and Pakistan have been trying to enter the industrial field in this country. Your Company has entered into a collaboration arrangement with a Thai company for supply of technical know-how for putting up a jute unit to meet Thai needs. In this project, your Company will also be supplying jute mill machinery and equipment from India. While thus we shall be exporting our machinery and earning foreign exchange, we shall have the satisfaction of contributing to the industrialisation of friendly Thailand. Your Company has also undertaken training of Thai apprentices in your jute mills in Calcutta so that these technicians fully trained and equipped may be able to take up their responsibilities in manning the Thai jute mill. It is a matter for pride that, here again, your Company has given a lead to the Indian jute mills.

All the progress in work, profit and export earnings would not have been possible but for the enthusiastic and willing co-operation of the administrative and technical staff and workmen of the Company, to whom, I convey, on your behalf, our sincere thanks.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

IN THE HAPPY WORLD OF CHILDHOOD

Lost in her dreams, this little girl expresses all the charm of children everywhere. She is a young Garhwali, but her dreams and hopes and happy games belong not to her particular region but to the separate world of childhood.

The children of India wear many costumes and colours, but all of them bring love and laughter into our lives. In their hands lies the future of our nation — a tomorrow that we, at the State Bank of India, believe to be bright with promise. Tomorrow, as today, the **State Bank of India** will serve the nation through its network of branches throughout the land.

THE JAY ENGINEERING WORKS LIMITED

HIGHER COSTS AFFECT PROFITS: EXPORTS IMPROVE

NEED FOR REASONABLE RETURN ON INVESTMENT CAPITAL

CHAIRMAN, MR. CHARAT RAM OUTLINES FACTORS FOR INDUSTRIAL GROWTH

The following is the text of the speech by Lala Charat Ram, Chairman, Board of Directors, The Jay Engineering Works Ltd., delivered at the 26th Annual General Meeting of the shareholders of the Company on December 5, 1963, in Calcutta.

Ladies and gentlemen,

I have great pleasure in welcoming you to the 26th Annual General Meeting of the Company.

End of an Era

As you are aware, Sir Shri Ram Ji, who could well be called the father of The Jay Engineering Works, passed away on January 11 this year. This completes one era in the growth of our company, which started rather humbly in a motor garage. From such humble beginnings, to a widely public owned company, employing nearly Rs. 14 crores, is the culmination of the great entrepreneurial and management effort which Sir Shri Ram Ji brought to bear on the affairs of the company. I am fully concious of the responsibility that rests on all of us now for continuing this process of growth, and the high traditions that we have inherited.

Before proceeding further, I should like to make a reference to the great international and national tragedies that have taken place during the last one month. The death of President Kennedy has removed from the international scene, a statesman and a personality recognized by all nations of the world, including those termed to be sitting in so called opposite camps, as a man of peace, vision and courage. The unfortunate accident, resulting in the death of five of our top defence personnel has certainly impoverished our country to that extent; each of these five officers of our defence forces had an admirable record of service to the country, and I take this opportunity of paying our humble tribute in their memory.

Decline in Profits

The annual report of the company for the year ended March 1963, has been with you for some time now, and with your permission I shall take it as read. I owe an explanation for the reduction in profits which has necessitated a reduction in dividends, as well as in the remuneration of managing agents and the profit sharing bonus of the workers. I had referred in my speech at the last Annual General Meeting, to the many escalating factors bearing on the cost of production of industrial goods. The situation has continued to worsen during the year, and the incidence of excise and import duties on raw materials, raw material prices, railway freight, etc. went up further substantially. Furthermore, the Supreme Court decided that the company must make provident fund contributions on a part of production bonus payments made to employees, and provision has had to be made for this liability, retrospectively from January 1960. The Hyderabad Factory which commenced operations during the year, suffered a loss because of the usual initial troubles, which has also contributed in reducing the overall profits of the company. I am glad to be able to state, that the operations of the current year as of date, are satisfactory, and the year should end with a much better showing, if no untoward happenings mar the operations. My reference here is to the unfortunate reactions of labour to the reduction in their profit sharing bonus payable on the basis of subsisting terms which have been in operation for all these years. We are attempting to avoid any

Mr. Charat Ram

adverse reactions on this account, but it is uncertain as to what direction the labour leadership will take.

Inflationary Tendencies

The "cost-price" squeeze situation, in which the company finds itself, is typical of industrial operations all over the country. There is much talk about holding the price line, and everybody, whether it be the Government, or the labour, or the consumer, seems to be busy enlarging upon the responsibility cast on everybody else, for keeping prices down. The snag is that prices are not a function of surfacial agitation, but of interacting economic forces which are not neutralized by the effusion of gratis advice. You will observe that the bulk of increase in costs in our, and for that matter any other operation, is almost entirely due to official imports, or increase in costs of Government sponsored services like transport, etc. I am not unappreciative of the need for additional revenue caused by the violation of our frontiers by mainland China, and for purposes of economic growth. I do hold, however, that the steps that are taken to meet these pressures, must not jeopardize the long term economic strategy of a developing country, the foremost requirement of which is that inflation should not eat up the nominal addition to resources. It is my submission that prices will be held in check by abstaining from inflation oriented measures, and not by King Canutish decrees.

Attitude of Labour

Our relations with labour during the year under review have been good. I am however apprehensive of increasing tendency in the country to think of industrial labour as an absolute overriding group in the community, instead of being an integral part of a homogeneous whole whose interests are in definite alignment with those of other components of the community. The industrial worker community forms barely 1% of the total population of the country, and in the national interest it would be worthwhile for this community to consider the impact on the total economy of its policies. Their leadership has led to shortsighted demands in the matter of annual emoluments and working conditions which have little relationship with the requirements of the country's economy. It is saddening to see the image of conflict of interest that is sought to be created between the employees and the industry of the country. It is forgotten that the interests of the two are identical and the primary challenge for both is to enlarge the size of the economic pie, rather than quarrel over one's share in a constant, or a diminishing pie. More and better jobs, improved wages, and better working conditions are possible only if industry is productive and profitable. If planners and politicians are really to solve the problem of unemployment, there is need to understand how jobs come into being. Jobs exist not because of some impersonal automatic phenomenon called "consumer purchasing power", but because of growth of industry.

Motivation of Industrial Growth

Entrepreneurs start new ventures, or expand old ones only when they see a prospect of profit commensurate with the risks. It is immaterial whether such risk taking entrepreneurial activity is sponsored by the State or by the people; that is a question of social liberty rather than of economics. What is important is to understand that an economic enterprise can perpetuate and expand itself only when it produces a reasonable return on investment for the service that it renders, and ploughs back a considerable part of such earnings. Anything that militates against this process of earning and plough back, cuts at the very roots of the concept of fuller employment. The shares of spoils of either an acquisitive business or an acquisitive labour force cannot sustain for any length of time by increasing the demands on the consumer. They must be generated within the enterprise by increasing productivity and lowering costs. This is the common task of business and of labour, and can only be discharged by an understanding labour leadership, unhampered in its decisions by political and agitational considerations. I am confident that Jay Engineering will continue to provide an example of an industrial enterprise in which industrial relations are governed by the larger interests of the consumer, and the industry.

One cause of the image of conflict of Interest to which I have referred above, is the misrepresentation by certain elements, that business is made up of a few giant corporations; these elements harangue the imaginary few giant corporations on their "social responsibilities" and "duties". Actually, this picture is quite false, and industrial ownership is increasingly becoming more and more broad-based. Far from being the cause of concentration of economic power, business, along with the intelligentsia, the professional people, etc. provides a counter-vailing force against the concentration of all power in the ruling apparatus of the country, and thereby helps to keep alive the concepts of individual liberty guaranteed by our Constitution.

Ladies and gentlemen, I have dealt at length on some of the basic influences relevant to business enterprise, because we ourselves are so intimately affected by those factors. I believe it to be the duty of business men, to draw attention to the existence of such basic truths which can be disregarded in policy making, only at the cost of economic stability and growth.

I will now refer to certain aspects of our company's operations during the year.

Increase in Production

Production of sewing machines registered an increase of over 20% over the previous year, while the production of fans increased by over 10%. The performance would have been better had not the production been hampered by power shedding in Calcutta. Current production levels are maintaining a rising trend. A notable feature of our current year's operations is, that as a consequence of improved production planning techniques, the increase in production is not accompanied by corresponding increases in the capital employed.

Usha Zig-Zag Introduced

Our automatic Zig Zag sewing machine under the name of "Ushamatic" was marketed during the year, and has been well received the market. This machine is being produced in our Hyderabad Factory and steps are being taken to gradually increase its production. The operations of Hyderabad Factory are however likely to take another two or three years to show satisfactory profitability.

Higher Exports

Last year I had referred to a setback in our exports. I am glad that our exports in 1962-63 have exceeded the level of Rs. 1 crore, being about 20% higher than last year. Steps are being taken to reorganize our exports set-up for greater sales effort. As a step towards that, an independent division under the name of "Usha International" has been set up in our sales agency. As you know, Sir Shri Ram Ji always placed a special emphasis on exports as a measure not only of discharge of his economic responsibilities to the company, but also of his responsibility to the nation. We view with concern the phenomenon that the incremental rise in non-traditional exports of the country is far below the additional effort and expense that is going into export promotion measures. This underlines the need for some degree of persuasive compulsion, to which I had made a reference last year also.

Management and Personnel

We have of late been taking a fresh look at our management structure and personnel. It is not an unusual occurrence, that the growth of a company is not accompanied by commensurate development in its management organization. We have been particularly fortunate in that the personnel policies followed by Sir Shri Ram Ji created a devoted band of executives in Jay Engineering, which has borne creditably the burdens of growth of an expanding organization. It has however become necessary now to take a long term view of management requirements, and to bring about the necessary rationalization in the structure and staffing of the organization.

Slow Plan Progress

A brief reference to the progress of the Five Year Plans of our country will not be out of place here. The Planning Commission has been undertaking what may be termed as an agonizing reappraisal of the progress of the Third Plan. This appraisal has been revealing, and a matter of concern. Whereas increasing amounts of money are being poured in year

(Continued on to page 876)

(Continued from page 875)

after year, the resultant return on these investments are showing a decreasing trend. Productivity of investment capital is of vital importance, and if the fulfilment of an ideology is not more important than the provision of increased quantum of goods, the Planning Commission and the Government might consider reorienting the direction of the investments being made in the country. The general index of industrial production has so far been less than half of what was visualized in the Plan. We can usefully learn some lessons from the war devastated economies of Japan and Germany, for the economic growth and up-lifting of our own country. Increasing fiscal allocations in our Plan budgets would be of little avail, if there is a decreasing return from these. The important fact has to be realized that the standard of living is meaningful not in terms of money, but what the money will buy, and money will only buy more goods and services, provided the productivity of investment increases. The crucial question before the country is as to whether our country is being directed towards the satisfaction of the ideology of a certain group of people, or for a system that will provide increasing quantum of goods for the consumption of the people now and hereafter.

N.B.—This does not purport to be a record of the proceedings of the annual general meeting.

THE MORARJEE GOCULDAS SPG. & WVG. CO. LTD.

SPEECH OF THE CHAIRMAN, MR. GOPIKISAN PIRAMAL

The following is the speech by Mr. Gopikisan Piramal, Chairman, The Morarjee Goculdas Spg. & Wvg. Co. Ltd., delivered at the 92nd Annual General Meeting of the Company, on the 6th December, 1963.

Gentlemen,

I extend to you all a warm welcome to the 92nd Annual General Meeting of your Company.

Before I proceed to matters specific to your Company, I must express our profound sorrow at the recent loss of President Kennedy, our Chief Minister, Shri M. S. Kannamwar, and five top officers of our defence services.

As participants in the prosperity of your Company, I am sure that the question uppermost in your minds must be the dividend cut this year. You will at the same time also appreciate that any decline or growth in the dividend has always to be viewed in a larger context.

What, then, are the factors that have contributed to a reduction in your dividend this year? The movement of operating expenses and sales receipts is a case in point. You will recall that every year I have had to make a very special mention of the rising costs of cotton, stores, colours and chemicals, labour, etc. The upward thrust of prices is an institutional feature of our economy and is to a great extent beyond our control. As a matter of fact, we have learnt to live with rising costs. Apart from the relentless increase in manufacturing expenses, we have also to meet fresh and unanticipated charges in the shape of excess payment of bonus of over Rs. 18 lacs for 1959 to 1961 and S. P. T. of Rs. 6 lacs. The national emergency has also affected general trade conditions in several ways. For example, we have had to spend Rs. 1.7 lacs on compulsory war risks insurance from January/June, 1963 and have contributed Rs. 2.67 lacs to the National Defence Fund. My reference to our defence contribution is not of a grudging sort, but is intended only to underline the various ways in which your Company's Profits are depleted.

Selling Prices

On the other hand such increased outgoings are not matched by any increase in the selling prices of cloth. We are committed to the voluntary price control scheme which prevents us from selling at prices higher than those obtaining in 1961 while exports are at prices lower than home prices. Again, the national emergency obliges us to manufacture defence cloth at sacrificial prices. You will thus observe that while the basic principle of business is to buy cheap and sell dear, we are faced with the topsy-turvy situation of having to buy dear and sell cheap. I would earnestly request the authorities concerned to actively consider the present price-cost squeeze before much irrepairable damage is done to the industry.

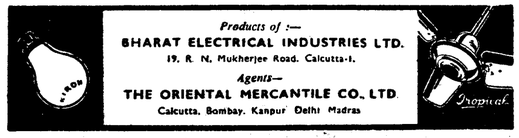
We in industry, however, have to meet constant challenges to our progress and the most potent weapon at our disposal is efficiency plus modernisation. I will, with a great measure of satisfaction, place here on record that the meticulous care, efficiency and economy exercised at all levels in your Company's working has been largely responsible for the near maintenance of the gross profit and the avoidance of a more severe setback. Various adverse factors may at times conspire to put back a Company in its working but the general soundness and health of an industrial undertaking will always prevail. I would say that unless the price-cost disparity is removed, sparkling financial results cannot always be achieved. However, within the limitations of current economic conditions your Company is successfully striving to maintain and consolidate its normal progress this year and in the coming years.

The considerable expansion and modernisation which we have been undertaking is one of your Company's favourable features in the long run. The nature of this programme is reflected in a comparative study of your Company's balance sheets, e.g., the statutory provision of Rs. 13 lacs for Development Rebate Reserve as required by the Income-tax Act has arisen on account of new capital additions to your Company during the year. The benefits of these additions will not accrue immediately but in the years to come. Again, the accelerated depreciation provision this year is on account of your second unit and other new assets which should vastly contribute to your Company's earning potential. Your No. 2 unit has gone into production and the major part of the year has kept us busy with overcoming such initial working difficulties as changes in qualities, re-stocking the mill, labour problems, etc. These, of course, are the teething troubles and growing pains of any new undertaking and we can now safely look forward to a steady improvement.

I will now touch upon some of the financial aspects of your Company.

Bonus Shares

Last year we had resolved to issue bonus shares in the ratio of one equity share for three equity shares from the Reserve Fund. However, in view of the fact that the maintenance of the dividend on the existing capital is becoming progressively difficult due to various reasons I have already stated, we have deemed it fit to defer the bonus issue. Even assuming that a lower dividend were acceptable on the increased capital, it would not be desirable to issue bonus shares as your Company would have to pay an additional 12.5% by way of taxes.



We have also thought it inadvisable to issue right shares this year as the premium suggested by the Controller of Capital Issues was rather high. Considering the prevailing conditions in the stock market, we did not think it fit to burden you with high-priced right shares.

In order to finance the large scale expansion of your Company, we have taken recourse to bank borrowings instead of going to the capital market at a time when the market was in an uncertain mood.

In conclusion, I will once again stress that unless the upward trend of cost is checked and prices are suitably revised it would become increasingly difficult for cloth manufacturers to operate on a profitable basis. However, the intrinsic strength of your Company and our all-out efforts at modernisation and increased efficiency permit us to look forward to the future with healthy optimism.

Finally, I thank you all, my colleagues on the Board, our staff and workers for their unstinted co-operation.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

MEETING OF ASSOCIATED CHAMBERS

TEXT OF RESOLUTIONS ADOPTED

AT the annual general meeting of the Associated Chambers of Commerce of India held in Calcutta on Saturday and Monday, the following resolutions were adopted unanimously:

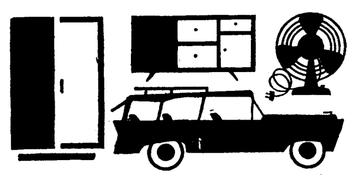
Taxation: *Bombay Chamber of Commerce and Industry* while recognising the need to safeguard the Central Government tax revenues required to finance development programmes and to meet defence needs, the Associated Chambers nonetheless consider that the tax measures introduced in the 1963 Budget have operated in a manner not then foreseen, in that (a) the effect of these taxes and, in particular, the super profits tax, has been to undermine confidence so that investment in new projects and industrial development has been retarded. The cash resources of companies are being eroded to an extent that must force recourse to bank borrowing to meet commitments. As the total tax collections have been substantially greater than was expected, there is a case for a re-examination of the current structure of taxation. The Chambers would also stress the need for certain concessions in the matter of tax on inter-corporate dividends and bonus shares, and the abrogation of the provisions for disallowance of remuneration of Indian nationals in excess of Rs. 5,000 a month; (b) the Associated Chambers consider that personal taxation is unreasonably high in its incidence, constitutes a severe disincentive to extra effort, saving and investment, and will increasingly hamper the creation and retention of high-calibre administrative and technical staff. If Indian industry is to be staffed by managerial and technical cadres comparable in quality with those of other industrialised countries, comparable rewards must be offered. The Chambers would urge that the structure of personal taxation should be such that it is possible for assessees, Indian and expatriate alike, to attain nett earnings equivalent to those available in other countries, and that in the case of expatriates, the system should permit of allowances which recognise the additional expense which they incur by reason of working abroad.

Power—*Bengal Chamber of Commerce and Industry.* The electric power shortage continues to be a major obstacle to industrial production and expansion and—despite the publicity the subject has received, the expert investigations undertaken, and the additional capital investment sanctioned—future supply and demand remain a matter of controversy and there is no general agreement concerning the long-term pattern of power development. Further, experience in certain areas emphasises the need to supplement existing hydro-electric sources by thermal generating stations and the need to speed the development of State and regional grids. The Associated Chambers of Commerce, therefore, urge that the expansion of power generating and distributing capacity should continue to receive a very high priority in the Government's investment programme; that power development plans should be the subject of centralised and high-level study and agreement; that future power availability and demand should be realistically and authoritatively assessed so that industrial expansion can be planned with accuracy and confidence; that a more liberal attitude should be adopted in the matter of allowing industrial units to install their own generating equipment and the necessary foreign exchange released for that purpose; and, finally, that the financial provisions of the Electricity (Supply) Act, 1948, should be amended at an early date so as to remove those factors which at present inhibit the supply of new capital to supply undertakings.

Prices—*Punjab and Delhi Chamber of Commerce.* The Associated Chambers recognise that the price problem presents peculiar difficulties at the present time because of the need for combating inflationary pressure arising from the strains of a developing economy coupled with the demands of defence, while at the same time providing incentives which will encourage increased production. The Chambers believe experience to have shown that controls over prices are ineffective and do more harm than good, and that the only real and lasting solution to the problem is increased productivity. The Chambers, therefore, advocate an adequate return on capital in order to finance expansion and attract fresh investment, and urge that, where the Government does not find it possible to abolish controlled prices for industrial products, those prices should be realistically fixed so as to take full account of increased manufacturing costs. In particular the Chambers draw attention to the heavy incidence of additional fiscal duties which have been responsible for much of the increase in consumer prices wrongly attributed to profiteering or hoarding.

Food and Agriculture—*Madras Chamber of Commerce.* The inability to achieve a substantial and steady increase in agricultural output, both foodgrains and cash crops, constitutes the single greatest obstacle to the country's economic advancement and gravely threatens the people's living standards, the stability of prices and the performance of the export industries. While the means of increasing agricultural productivity are well known—such as improved seeds, fertilisers, pesticides, irrigation, the use of modern implements and better methods of cultivation, including the encouragement of mechanical farming—the practical adoption of these methods on a significant scale has yet to be achieved. The Associated Chambers of Commerce therefore advocate—(a) greater support for the administrative machinery and personnel connected with agriculture, particularly at the State and district levels, so as to establish more intimate and effective contact with the cultivator; (b) the expansion and improvement of adequate short-term agricultural credit on terms attractive to the cultivator; and (c) a re-examination in line with the recommendations of the Planning Commission of the policy of fixing land ceilings so as to ensure the most economic and efficient use of the land. The Chambers must add that all efforts to improve the internal food supply seem doomed to failure if there is a continuance of the present massive and unregulated growth in population.

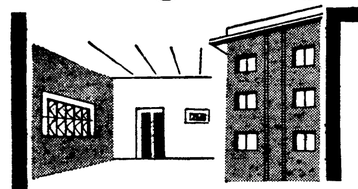
Exports—*Bengal Chamber of Commerce and Industry.* The Associated Chambers congratulate the Government of India on the vigour with which the export promotion effort continues to be prosecuted and on the signs that a limited success is at last being achieved in this difficult field of trade. They pledge continued co-operation and intensified endeavour on the part of their constituents, whose contribution to the country's exports is already very substantial. For the future, the Chambers would record that India must continue for some prolonged time to depend to a major extent on the earnings of the traditional and well-established export industries and, to safeguard and fortify some of the more important of those industries, they strongly recommend that—(a) the tea industry should be allowed the finance necessary for an expansion and improvement of its output by tax reliefs, there should be a curb on expenditure which is not directly productive, and notably on statutory labour amenities under the Plantation Labour Act, and the industry should be granted direct financial assistance: (b) more urgent and realistic attention should be devoted to the threat posed by Pakistani competition in the overseas markets of the jute manufacturing industry and effective action taken to meet that competition; and (c) modernisation and increased productivity should be encouraged in the cotton textile industry.



Industry and Defence Production—*Upper India Chamber of Commerce.* The Associated Chambers of Commerce of India hereby pledge the continued support and co-operation of their constituents in discharging the responsibilities devolving on industry by reason of the national emergency. They are anxious to make a full and unstinted contribution to defence production particularly by the maximum use of surplus and available productive capacity and they stress the need for improved contact and consultation between the Government and industry and for a joint and co-operative effort to solve mutual problems.

protective finishes that stay bright longer

SHALIMAR SUPERLAC



SYNTHETIC ENAMEL AND PLASTIC EMULSION

Shalimar Superlac Synthetic Enamel can be brushed, sprayed or dip-applied to almost any surface. It gives a hard, glossy finish and is ideally suited for all types of domestic and industrial use. Available in 38 intermixable colours.

Shalimar Superlac Plastic Emulsion comes in 28 fabulous shades. It is easy to apply, odourless and gives a flat finish.

Quick-drying and washable, both these Shalimar Paint specialities have high covering capacities and are particularly economical in use.

HARVEYS
STEP UP THEIR
INDUSTRIAL
FABRIC
PRODUCTION!

Now they can serve more industries than ever!

Harveys' Madura Mills—India's largest producers of industrial fabrics—have to date been supplying leading manufacturers throughout the country with a wide variety of light, medium and heavy industrial fabrics. The installation of additional new high speed looms and up-to-date precision machinery-among the world's most modern-*now enables Harveys to accept many more orders of varied character.*

Why you should come to Harveys:

Harveys never compromise on quality. Harvey industrial fabrics are equal to the world's best. The most modern machinery...highly experienced and skilled technical personnel...and relentless testing at every stage of manufacture—ensure that all Harvey fabrics are of unbeatable quality.

Harveys can manufacture to a variety of specifications. Whether it's Rayon Warp Sheet for tyres, or Canvas for the Shoe, Tent and allied industries—Harveys can produce it! Every yard of Harvey industrial fabrics conforms rigidly to specifications—a fact that has won Harveys the confidence of manufacturers in India and abroad.

New Delhi

T.T.K. EXPLAINS ROYALTY TERMS FOR FOREIGN ENTREPRENEURS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr. T. T. Krishnamachari, recently explained at some length the Government of India's policy on the payment of royalty, etcetera, to foreign entrepreneurs collaborating with Indian companies. As is well known, there is no fixed rate of royalty, and each case is considered on its merits.

The Government feels that royalty as a source of income should not be treated differently from other sources of income for the purpose of taxation. The rate of tax on royalties payable under agreements entered into after 31st March, 1961, and approved by the Government of India has been reduced from 63 percent to 50 percent. Apart from royalty as such, a distinction is made for payments attributable to technical assistance or research contribution. The latter is worked out on the basis that the Indian company's payments should bear the same proportion towards the total expenses incurred by the foreign company for carrying on research work as the Indian company's production bears to the total output of the foreign company.

Payments for technical services rendered outside the country are exempted from income tax to the extent the services are rendered outside India. As for payment for technical services rendered in India, the actual expenses incurred by the foreign collaborator in rendering such services in India are deductible in computing the total taxable amount.

There has not been a single instance where negotiations between Indian and foreign collaborators have broken down because the royalty rate negotiated is rejected by the Government as being too high. But in several cases, India has negotiated successfully to reduce the rates of royalty payments and has altered certain other conditions of the collaboration agreement, like the foreign company permitting the Indian manufacturer the right to export his manufactured article to neighbouring countries.

The figures for remittances on account of royalty payments to foreign concerns are not separately available, since they are merged with the figures of payments for the use of trademarks, copy rights and rentals payable for foreign machinery in the balance-of-payments data. The following amounts were remitted abroad to foreign concerns on account of royalty payments, patents, etcetera, by the public and private sectors during the period 1960 to the first quarter of 1963:

Year	(In Rs. lakhs) Amount
1960	226
1961	252
1962	339
1963 (January-March)	84

The following statement gives the total value of the shares which the Government agreed may be issued to foreign subscribers, and the number of cases involved during the period 1st January, 1960 to 30th June, 1963, in new and existing companies:

Year	New companies		Existing companies		Total	
	No. of cases	Amount (Rs. crores	No. of cases	Amount (Rs. crores)	No. of cases	Amount (Rs. crores)
1960	110	11.20	94	8.33	204	19.53
1961	116	19.19	132	16.63	248	35.82
1962	143	20.03	110	9.81	253	29.84
1963 (January-June)	48	10.70	66	5.29	114	15.99

A large number of industries in the private sector have received foreign technical and financial collaboration from firms in the U.K., the U.S.A., West Germany, Italy, Switzerland, Japan, France, Canada, Austria, Holland, Sweden, Czechoslovakia and Poland. The arrangements have resulted in the setting up of joint ventures. In the past four years, the number of schemes approved for foreign technical collaboration and financial participation was as follows:

Year	Number
1960	390
1961	402
1962	289
1963 (up to 30.h September)	227

Collaboration cases approved by the Government in the past four years cover a wide range of large and medium-sized industries which include the following: alloy and special steels, steel castings, steel forgings, non-ferrous metals, heavy structurals including cranes, industrial machinery for textiles, jute, mining, washeries, cement-making, paper making, and sugar machinery, machine tools, shovels and earth-moving equipment, motor-cars and ancillaries, ball and roller bearings, electric motors and transformers, cables and wires, other electrical industries, heavy chemicals, miscellaneous chemicals, fertilisers, drugs and pharmaceuticals, dyestuffs, rayon and staple fibre, paper, paper board and pulp, etcetera, refractories, plastics, rubber manufactures (including synthetic rubber), industrial gases, cotton textiles, industrial and scientific instruments, and watches.

FOREIGN BANKS

Granting of Licences

There has been some controversy about the permission granted by the Reserve Bank of India to the Bank of America for commencing business in India. The bank will shortly be opening its first office in India in Bombay.

The present policy on the granting of licences to foreign banks, for the commencement of business in India for the first time or for the opening of further branches in case the foreign banks are already functioning here, is restrictive. As Indian banks are now well equipped, and are in a position to undertake all kinds of banking business, including foreign exchange transactions, it is not necessary, the Government feels, to allow the opening of offices by new exchange banks or the expansion of the activities of the existing ones. The Government clarified its policy as early as 1961 in the following terms:

"The fields in which foreign capital is ordinarily not needed have also been listed. This list includes banking, insurance, trading and commercial activities and plantations. Private capital, foreign or Indian, as a rule, is not being allowed in the industries listed in Schedule 'A' of the Industrial Policy Resolution of 1956. In special circumstances, however, exceptions may be made where, after full consideration, this is found to be in the public interest."

Under Section 22 of the Banking Companies Act, 1949, permission cannot normally be granted to any institution for the commencement of business in India, if the country in which it is incorporated discriminates against Indian banks, or if it is not considered desirable in the public interest to do so. Under Section 23 of the Banking Companies Act, the policy which is lately being followed is that foreign banks should be permitted to open further branches in India only on a limited scale and, as far as possible, only in port towns.

In the case of the United States, the position is that there is no specific provision in the federal laws for the opening of branches within that country by foreign banks. In some States, however, there are specific local laws, prohibiting the opening of branches of foreign banks. According to the legislation which is in force in the majority of the other States, branches can be opened only by banks which are incorporated within the States.

Although the policy on granting licences to foreign banks for the commencement of business or for the opening of branches within India is restrictive, it is implemented in a flexible manner, considering the interests of the Indian economy. In the case of the Bank of America, it is claimed that the advantages accruing to the country—in the form of a sizable inflow of short-term capital which is expected to be invested and also in the form of the contribution which the bank is expected to make towards the country's development—outweigh the other considerations. The decision to grant a licence to the bank under Section 22 of the Banking Companies Act is, therefore, justified. For similar reasons, the Reserve Bank had permitted the opening of a branch by the Bank of Japan in New Delhi.

Unbanked Towns

The *Reserve Bank of India Bulletin* recently published an interesting study of unbanked towns in India. According to the study, the populationwise analysis of the unbanked towns shows that out of 2,583 towns with a population of less than 100,000, 1,015 towns (39 percent) were unbanked. No town in the higher population groups 1 and 2, (namely, 1 million and above, and 500,000 and above but less than 1 million) was unbanked. In group 3, namely, towns with a population of 100,000 and above but less than 500,000, only two towns were unbanked, and both were in West Bengal. Almost all the unbanked towns (99.8 percent) were in population groups of "below 100,000."

Among the major States, as at the end of March 1962, the highest percentage of unbanked towns was in West Bengal; in this State 114 out of 184 towns (about 62 percent) had no modern banking facilities. In contrast, Gujarat had the least number of unbanked towns; out of 181 towns only 21 (about 12 percent) were unbanked. The percentage of unbanked towns to the total number of towns in different States as at the end of March 1962, is as follows:

State	Total No. of towns	No. of banked towns	Percentage of (2) to (1)
West Bengal	184	114	62
Jammu and Kashmir	43	25	58
Assam	60	34	57
Madras	333	170	50
Bihar	153	74	48
Andhra Pradesh	223	97	44
Uttar Pradesa	275	109	40
Rajasthan	145	55	38
Orissa	62	22	36
Kerala	92	33	36
Mysore	230	81	35
Madhya Pradesh	219	58	27
Punjab	187	51	27
Maharashtra	265	60	23
Gujarat	161	21	12

Except in Rajasthan, Maharashtra and West Bengal, the highest percentagle of unbanked towns was in the group 9, namely, towns having a population below 5,000; it was as high as 100 in Assam, Bihar, Kerala and Orissa. Except for two towns in West Bengal, all towns which had a population of 100,000 and above were served by modern banking facilities. Unbanked towns were predominant in the population group 8 (namely, 5,000 and above but less than 10,000) in States such as Rajasthan (35 towns or 69 percent), Maharashtra (39 towns or 44 percent) and West Bengal (45 towns or 90 percent). In other States also, the proportion of unbanked towns in this population group was the largest, next only to that in the group of towns having a population below 5,000.

The classification of towns listed in the 1961 census on the basis of the presence of different types of modern banking facilities shows that as at the end of March 1962, 1,332 (about 50 percent) out of 2,690 towns in the country were not served by the offices of any scheduled bank while 1,017 (about 38 percent) did not have modern banking facilities of any type, namely, scheduled, non-scheduled or co-operative; 315 towns depended entirely on the facilities extended by non-scheduled and co-operative banks.

This should indicate the need for greater and better banking facilities. It should also indicate the need for extending banking hours.

THIRD PLAN

Mid-term Appraisal

The mid-term appraisal by the Planning Commission of the third tive year plan dominated the discussions in New Delhi last week. Both the Congress and the Opposition united to attack the Planning Commission for faulty planning and inefficient execution. The Federation of Indian Chambers of Commerce and Industry, as usual, has tried to provide a brief to the critics of the plan. It, however, looks strange that the Planning Commission should have devoted a few paragraphs and the Federation none at all to export promotion by this country.

The whole conception of planning has been given a new slant. The progress is judged not by development as such but by the expenditure incurred and the employment opportunities created. With the Prime Minister as its chairman, the Planning Commission has become part of the Government machinery and has failed to fix responsibility for shortfalls in implementing the plan. Agricultural production is a case in point. That production could not be increased rapidly due to too much diffusion of responsibilty, has been known to the Commission for some years. This

knowledge was refreshed by the teams the Commission sent out to the States earlier this year. The Commission also knows that irrigation potential has not been fully used. Yet it has failed to fix responsibility for the failure. It is common knowledge that the Community Development programme has failed in the rural areas. It has even failed to persuade the cultivator to dig up channels for irrigating his field. Meanwhile, the Central Ministry of Community Development has airily declared that it has urged the State Governments to dig up channels and recover the cost from cultivators.

There is another aspect to the plans for food production. Apart from fixing the targets for production, the Commission has taken no steps to prevent the diversion of acreage from food crops to cash crops. Thanks to the ceiling on land holdings, a large acreage has been diverted to fruit cultivation. Even otherwise, due to higher profitability, large areas in Himachal Pradesh have been diverted to fruit cultivation. In the final analysis, price is the determining factor for agricultural production. The case of sugarcane illustrates the point. Unlike food, there has never been a grow-more-sugarcane campaign. And yet, year by year, depending on price, the sugarcane acreage has been rising. In other words, by manipulating prices, the Planning Commission could have reached the production targets for foograins. This is done in the United States with success and could have been applied here. The main snag is that it would have achieved results at the cost of employment. Meanwhile, the shortages are explained away by claims that the cultivator is eating more than he should or did before. About ten years ago, the Central Ministry of Food created "shortages" overnight by raising its estimates of *per capita* consumption of food by two ounces a head.

The Commission has now made any recommendation so far that all the various Ministries trading in the name of food self-sufficiency should be brought under one umbrella. The Board of Agriculture created by the National Development Council in its last meeting is not likely to find a solution. It is a device to retain certain Ministries intact and permit them to increase their entourage.

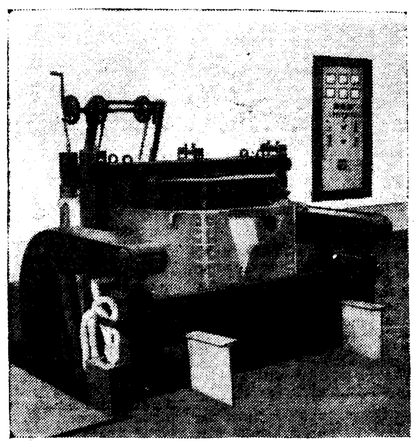
As far as industries are concerned, the Government has taken or is taking steps to remove various hurdles which adversely affect their rapid growth. A high-powered standing committee is being set up. Side by side, a list of 40 industries, in which investment capacity is still available, is being published. Arriving in New Delhi, a foreign investor can contact the Secretary to the Investment Committee who will readily furnish him with the list of industries in which capacities are still available for licensing. He will tell him what is the permissible percentage of foreign investment in the particular industry in which he is interested. The Indian Investment Centre can help find a suitable Indian party, if necessary, to collaborate with him.

Procedural delays are being tackled by another committee which, in addition to Government representatives, includes those of Indian and foreign trade and commerce. The committee will review the operation of various controls, the procedure for the import of capital goods, raising of capital and foreign collaboration. The committee is expected to submit an interim report shortly.

The mid-term appraisal of the third plan has pointed to a number of bottlenecks preventing rapid economic growth. They include transport and power supply. Even before the mid-term appraisal, the Government had, through the good offices of the World Bank, set up a committee on transport in general and coal transport in particular.

As for power, the Government felt that its development was of vital importance so it should have the opinion of a body of Indian and foreign experts who should be requested to review and make recommendations on the future pattern of power development and distribution. So in December 1962, it set up an electric power supply committee which is still at work. Meanwhile, according to the mid-term appraisal of the third plan, the slow progress of power schemes in the second plan was due to the foreign exchange shortage. High priority was, therefore, accorded to power schemes as far as the release of foreign exchange during the current plan is concerned. In addition, several new power schemes totalling 1.1 million kilowatts not originally included in the third plan have been accepted.

The lack of provision for maintenance imports was a grave lacuna which the third plan has tried to remedy. The volume of maintenance imports goes up in a growing economy. This was recently highlighted by the Director-General of the Federation of British Industries, Sir Norman Kipping, who in his report suggested that a portion of British aid be earmarked for maintenance imports. Similar suggestions were made by the West German Government. The Government has accepted the suggestions, and a portion of the British and German credit to India is now earmarked for maintenance imports, including the import of spare parts from Britain and Germany.



A portion of the U.S. and Canadian aid has enabled India to import a large quantity of industrial raw materials. A World Bank team is now in India to work out details of the components needed by this country for its motor-car and other industries.

MAINS FREQUENCY

ELECTRIC INDUCTION FURNACE

DUCTLESS TYPE

for melting special cast irons viz., S.G. iron, Mehanite, Malleable and also non-ferrous metals

Salient features:

- Initial cold starting.
- Light and heavy scrap, turnings and boarings can also be used for melting.
- Plain shape of crucible facilitates erection and repair of the refractory.
- High power factor—maximum thermal efficiency—most economical in operation.

Manufactured by NSE in collaboration with the famous Italian firm Forni Electtrici A. Tagliaferri, S.P.A. Milano.

U.K.

Circulating Annual Accounts

The Government is aware that certain British companies in India are finding it difficult to comply with the requirement of British law which lays down that every stockholder must receive a copy of annual accounts which in turn is opposed to the prohibition imposed on them by the Defence of India Rules in this matter. In reply to the representations made to it, the Government of India has stated that the directors of such companies in the United Kingdom may circulate copies of their annual accounts to their shareholders residing outside India or to any authority in the United Kingdom in order to comply with the requirements of the U.K. Companies Act.

U.N.O.

Trade Conference in Geneva

The U.N. Conference on Trade and Development is scheduled to be held in Geneva from 25th March to 15th June, 1964. The provisional agenda for the conference as drawn up by the preparatory committee of the conference is as follows:

(a) Trade needs of developing countries for their accelerated economic growth.

(b) Trade problems between countries: (i) at similar levels of development; (ii) at different stages of development; and (iii) having different economic and social systems.

(c) Programme of measures, actions for the removal of obstacles (tariff, non-tariff and others) and of discriminatory practices and for the expansion of market opportunities for primary commodity exports and for increases in their consumption and imports in developed countries.

(d) Measures and actions for the promotion of trade in primary commodities among developing countries.

(e) Measures for stabilisation of primary commodity markets at equitable and remunerative prices, including commodity arrangements.

(f) International compensatory financing and measures for stabilisation of primary export earnings at adequate levels.

(g) Measures for the expansion of markets of the developed countries for exports of manufactures and semi-manufactures of developing countries. This includes (i) programme of measures and actions for the progressive reduction and elimination of tariffs on imports of manufactures and semi-manufactures; (ii) programme of measures and actions for the progressive reduction and elimination of quantitative and other restrictions and discriminatory practices to imports of manufactures and semi-manufactures; and (iii) programme of measures and actions for the expansion of market opportunities for exports of manufactures and semi-manufactures produced in developing countries and for increases in their consumption and imports.

(h) Implications of regional economic groupings. This includes implications for trade and development of developing countries of economic groupings and developed countries and/or preferential trading arrangements.

CANADA

Loan Pacts Signed

Three agreements for a loan of $16.70 million to the Government of India by the Export Credits Insurance Corporation of Canada were signed in Ottawa on 4th December by Mr. Mitchell Sharp, Canadian Minister of Trade and Commerce and Mr. C. S. Jha, India's High Commissioner in Canada.

The loan covers the following three projects in India: $8 million for the construction of the Rana Pratap Sagar Hydroelectric project in Rajasthan, $1 million for the Alwaye smelter extension and the foil mill in Bombay of the Indian Aluminium Co. Ltd and $7.70 million for the purchase of 37 diesel electric locomotives and spare parts from Canada.

POWER

Shortfall under Third Plan

Against the third plan power targets of 600,000 kilowatts, 730,000 kilowatts and 1.05 million kilowatts during the first three years ending March 1964, the achievement will be 430,000 kilowatts, 690,000 kilowatts and 720,000 kilowatts, respectively. Thus against a total target of 2.38 million kilowatts during these three years, the total achievement will be 1.84 million kilowatts, thus registering a shortfall of 540,000 kilowatts. The shortfall is mainly due to delay in commissioning the 62.5-megawatt set at Dhuvaran power-station in Gujarat, 89 megawatts in Sharavathy (Mysore), 140 megawatts in Chandrapura (D.V.C.), 50 megawatts in Patharthu (Bihar), and the Mettur tunnel scheme (100 megawatts) which were all due to be established by March 1964. In the fourth and fifth years of the plan, further examination will be necessary before achievements for the last two years of the plan can be realistically estimated.

The U.S.A. has agreed to give loans amounting to Rs. 24 crores for the three power projects, namely, Bandel, Cambay and Birsinghpur. The total estimated cost and generating capacity of these three projects are as follows:

	Estimated cost in Rs. crores Rs.	Generating capacity
Bandel	29	4 × 75/ 87.5 MW
Cambay	25	4 × 50/ 62.5 MW
Birsinghpur	11	2 × 30 MW

STEEL

M.P. Wants New Plant

The Government of Madhya Pradesh has made representations to the Central Government for locating a steel plant near Jagadalpur. The proposed plant, it is explained, can use Bailadilla iron ore, local limestone, electricity from Korba, water from the river Indravati and meet a considerable share of the total coal requirements from the State's own resources. It is further stated that metallurgical coal or coke can be imported through Visakhapatnam, if required, and that the strategic Udy process of steel making may be adopted. The production of flat products like plates for shipbuilding at Visakhapatnam as well as pipes and cold or hot rolled strips, is envisaged.

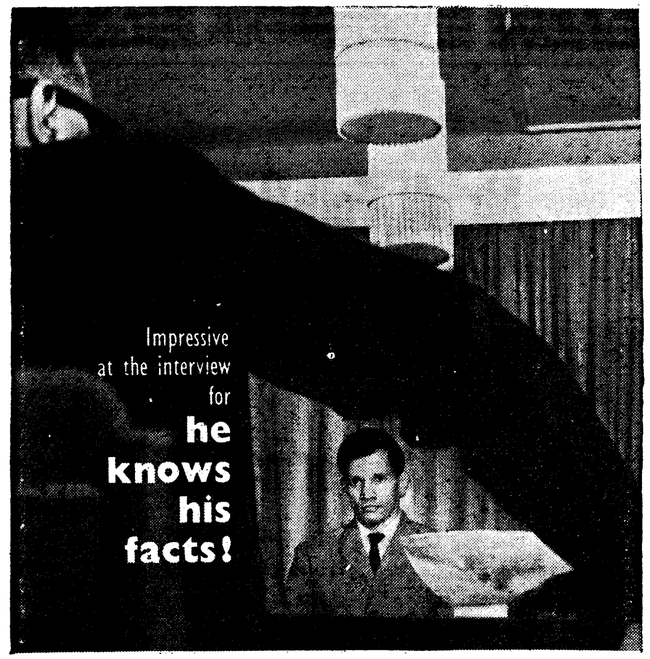
CARBONISATION PLANTS

Progress Achieved

The public sector programme of the third five year plan originally included the establishment of three low temperature carbonisation plants, of which one was to be in Kothagudum (Singareni). But the proposal could not make any progress for want of adequate resources, both internal and foreign. In the private sector, however, an application for industrial licence to set up a low temperature carbonisation plant at Kothagudum was considered and a letter of intent agreeing to the proposal was issued about a year ago. But the applicant does not seem to have made any progress so far in relation to this scheme.

COAL

Demand Estimate Revised



A review of the demand for coal by various categories of consumers during the third plan period was made recently. It shows that the overall demand is likely to be of the order of about 90 million tons, against the original estimate of about 98 million tons. From the trend of production, it is expected that this revised demand for coal during the third plan period will be met fully

A coal mine in Ramgarh, with an annual production target of 1.5 million tons, is proposed to be developed by the National Coal Development Corporation, under the U.S. Agency for International Development (A.I.D.) programme. Messrs Pierce Management Corporation of the U.S.A., deputed by the A.I.D., have prepared a project report for the production of 1.26 million tons by open-cast (strip mining) and 240,000 tons from underground mines, at a total cost of about Rs. 6.75 crores. The foreign exchange component of the cost will be Rs. 2 crores. The A.I.D. authorities are presently considering the question of granting a loan of this amount to cover the cost of imported machinery and equipment.

CEMENT

Creating Additional Capacity

The target of installed capacity to be achieved by the cement industry

Correct knowledge of facts and figures is absolutely necessary for anyone who aims at success. *The Economic Times* gives you important financial news in an interesting, easy-to-read manner. ■ Information about taxation, company matters, labour problems, industrial progress, banking, marketing and advertising is no problem for the reader of *The Economic Times*. He has it at his finger-tips. ■ Keep up-to-date on industrial, business and financial matters by reading *The Economic Times* daily.

Yearly Rs. 73.00; Half-yearly Rs. 36.50; Quarterly Rs. 18.25. For further details, please contact: The Circulation Manager, C/o *The Economic Times*, The Times of India Building, Dr. Dadadbhoy Naoroji Road, Bombay 1.

CALCUTTA OFFICE: 13-1 & 13-2, Government Place, East, Calcutta 1. Phone: 23-9311 (3 lines)

during the third plan is 15.2 million tons. The present capacity is 10.1 million tons. Additional capacity has been licensed for setting up new units and expanding the existing ones to the extent of 5.59 million tons. Advance approval has also been given for a capacity of 3.5 million tons.

Import licences have been issued for plant and machinery for schemes covering a capacity of 3 million tons. Import licences are expected to be issued shortly for creating an additional capacity of 1 million tons. Moreover, the release of foreign exchange has been agreed to in principle to cover a further capacity of 2 million tons. Continuous pressure is being exerted on cement licensees for completing their projects within the stipulated period. Progress in the implementation of the schemes depends mainly on the availability of foreign exchange, the capacity of indigenous manufacturers to deliver plant and machinery in time and the speed with which the licensees are able to complete the raw material survey and raise the necessary capital. On the basis of the progress made so far in the implementation of the pending projects, the growth of capacity during the remaining period of the third plan is expected to be as follows:

	(In million tons)
Capacity at the end of 1963-64	10.5
Capacity at the end of 1964-65	11.4
Capacity at the end of 1965-66	14.4

The details of proposals for setting up new cement factories in the public sector are as follows:

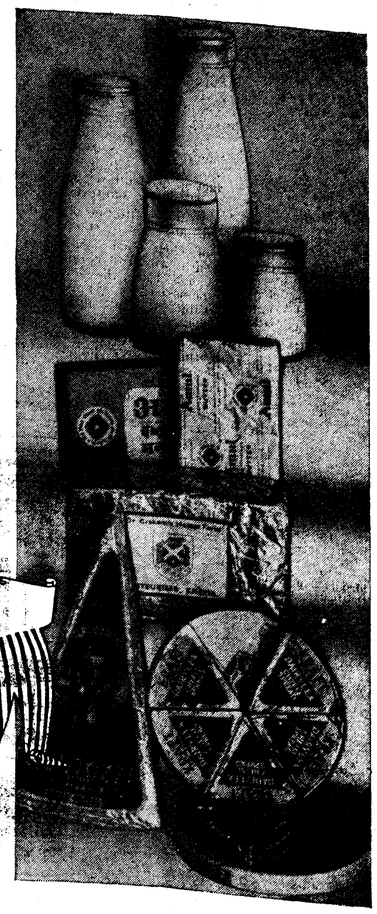
Party	Location	Capacity (tons)
Industrial Development Corporation of Orissa Ltd	Sambalpur district	396,000
U.P. Government cement factory	Chopan	400,000
Andhra Pradesh Mining Corporation Ltd	Bonakalu	198,000
J. and K. Minerals Ltd	Riasi	203,180
Assam State Electricity Board	Garampani	100,000

A scheme for a cement factory in Nim ka Thana, Sikar district, Rajasthan, for an annual capacity of 203,180 tons has been approved. A formal licence will be granted after the party has made firm arrangements for the plant and machinery.

SUGAR

World Production Rises

World sugar production in 1963-64 is expected to reach 58.7 million short tons, 3.7 million tons above last year and second only to the record 1960-61 crop of 60.1 million tons. The averages were increased in Iran, India, Pakistan and Turkey. The U.S. Foreign Agricultural Service has reported that most recent estimates show a gain from last year of 3.8 million tons in free world production but a drop of 100,000 tons in the Sino-Soviet *bloc*, including Cuba, in spite of bigger crops in eastern Europe and communist China. A drop of 300,000 tons in Russia's crop is attributed mainly to the prolonged drought, since acreage planted was up by 5 percent.



Following severe hurricane damage in Cuba in October, that country's production estimate dropped to 200,000 tons below last year's 4.2 million tons. The current estimate is more than 1.8 million tons below the 1955-60 average. The United States is harvesting record sugar beet and cane crops, and increases are also indicated in Mexico and Central America. South America expects a 300,000-ton increase over last year, although Brazil, its largest producer, has reported a slightly reduced crop.

Both western and eastern Europe increased their sugar acreage this year. An increase of about 825,000 tons is indicated for western Europe's production, and the total crop for eastern Europe, outside Russia, is 250,000 tons above last year. African production is about 450,000 tons. Total increases in Asia are about 1.3 million tons with India accounting for more than half of this increase. Estimates for communist China indicate an increase of 150,000 tons over last year.

For countries of the Near East and south Asia, the comparisons between the 1963-64 year and the averages of 1955-60 were as follows. Turkey, 509,000 tons, compared with an average of 408,000 tons; Iran, 200,000 tons, compared with 119,000 tons; India, 3,800,000 tons, compared with 2,737,000 tons; Pakistan, 292,000 tons, compared with 174,000 tons. The figures also represent increases in varying degrees over the 1962-63 production year.

The proposed increase in the price of sugarcane to Rs. 2 a maund should raise sugar production in this country. But India's export advantage due to increased world production should be reduced. India may not get similar price for its sugar as it did in the current year.

Mr. Al Foil Packs Dairy Products to Perfection

Aluminium Packaging keeps Dairy Products full-flavoured, fresh and uncontaminated right up to the consumer's table.

Al Foil completely seals out light which causes rancidity in butter; retains the moisture balance in butter, cheese and margarine and prevents 'freezer burn' when storage in the frigidaire is necessary. That's why dairy packagers choose Al Foil for product protection.

SPUN PIPES

Kerala Project Approved

The Central Government has approved a proposal of the Kerala State Industrial Development Corporation Ltd for setting up an industrial undertaking for the manufacture of cast iron spun pipes in Kerala. The proposal for collaboration has not yet been receiv.

TEXTILE MACHINERY

New Development Council

The Government has decided to set up a separate development council for the textile machinery industry. The council will consist of representatives of the industry, users of textile machinery, persons possessing technical knowledge and Government officers.

TINPLATES

Demand and Production

The present annual demand for tinplates has been estimated at 200,000 tons. Against this demand, a production of 94,325 tons was reached in 1962; for the period January-September 1963, a production of 71,771 tons has been attained. By 1965-66, the demand for tinplates is estimated to reach 261,000 tons. To achieve production of this order, a capacity of 430,000 tons has been licensed in both public and private sectors.

S.T.C.

Trade in New Items

The State Trading Corporation has taken up the trade in the following new items this year: *export trade*: men's shirts, nylon socks, ladies' sandals, cigarettes, razor blades, soaps and cosmetics, sports goods, semi-precious stones, paper products, packed tea, instant coffee, biscuits and confectionery, cashewnuts in tins, mango juice, mango slices, pineapple juice and tooth brushes; and *import trade*—sulphur.

TRANSPORT

Plan Provision Raised

As a result of the mid-term appraisal, the third plan provisions for roads, ports, inland water transport and meteorology have been increased as follows:

	Third plan provisions Original	Revised (In Rs. crores)
Roads	272.00	416.30
Ports	86.50	110.00
Inland water transport	5.50	6.50
Meteorology	3.00	3.18

SHIPPING

New Tanker Company

The Government has approved in principle the formation of a new Indian shipping company with the collaboration of the Phillips Petroleum Company of the U.S.A. Phillips Petroleum will invest 40 percent in the share capital of the proposed company, which will be in foreign exchange. There will be a progressive addition to the Indian tanker fleet without any foreign exchange outlay.

E.C.A.F.E.

The Manila Conference

Speaking at a Press conference in New Delhi last week, the Central Minister of International Trade, Mr. Manubhai Shah, described the Manila conference of E.C.A.F.E. as a step forward towards a regional conference. He said that the conference had adopted two resolutions which may eventually lead to the development and expansion of trade within the region.

The resolution on Asian economic co-operation stresses the need for closer economic co-operation among the Asian countries in view of the serious difficulties encountered by most of them in achieving even the minimum desirable rates of economic growth. It stresses the need for practical measures to promote regional co-operation and urges the acceptance of the following broad objectives:

(1) Co-operation in trade, especially through the promotion of intra-regional trade; agriculture; transport and communications;

(2) Promotion of intra-regional trade through trade liberalisation, including measures for the removal of quantitative restrictions and reduction of tariffs, and through the promotion of free trade areas or Custom unions on a sub-regional basis;

(3) Promotion of exports of primary commodities, manufactures and semi-manufactures to countries outside the E.C.A.F.E. region; measures are also to be taken for the improvement of productivity and the reduction of costs;

(4) Co-ordination of efforts for the planning and execution of agreed projects in industry, mineral production, agriculture and fisheries on a regional or sub-regional basis;

(5) Rationalisation of ocean freight rates and routes; and

(6) Government purchases to be used as a means of promoting intra-regional trade; the Governments are to be asked to give preference, where possible, to goods produced in the region.

To attain these objectives, *ad hoc* meetings of Government representatives and experts will be called as soon as possible to make the necessary studies and to recommend such institutional arrangements as may be necessary to put specific projects into effect.

As for specific proposals, the resolution lists the following six areas of action agreed on at the ministerial conference:

(1) Liberalisation of trade, removal of quota restrictions and the reduction of tariffs within the region;

(2) Promotion of exports of primary commodities at remunerative and stable prices;

(3) Co-ordination in the establishment of industrial and other projects, including joint ventures, on a regional or sub-regional basis;

(4) Establishment of an Asian development bank to mobilise and direct resources for regional projects and to promote trade among the Asian countries;

(5) Rationalisation of ocean freight rates; and

(6) Co-ordination of Asian air transport facilities.

In recognition of the right of free transit for land-locked countries, the ministerial conference asked the E.C.A.F.E. secretariat to prepare a draft convention on the unrestricted right of transport facilities for land-locked countries along the lines of the Barcelona Convention, which has been amplified and modernised.

To provide the institutional follow-up and to decide on any further steps for an intensified regional co-operation of programmes, "meetings of ministers or high-level representatives. . . on the lines of the present ministerial conference" are to be convened by the E.C.A.F.E. "from time to time."

SWEDEN

Forest Expert for India

A Swedish forestry expert, Mr. Eriand Freden, has been appointed to conduct the planning of a large F.A.O. scheme of making an inventory of India's forest resources. The planning alone is estimated to cost 14 million kroners ($2,700,000). The project is the first major effort to establish a balance in the agricultural and forest development in India. The inventory will be made by means of aerial photogrammetry. The results obtained will be processed in data machines. Mr. Freden, who left for the F.A.O. in Rome on his three-month mission on 18th November, will also be responsible for planning reafforestation and other measures designed to improve sylviculture in India.

MEEC-18A

London

SAFEGUARD FOR U.K. HOUSEWIFE IN HIRE PURCHASE

(FROM OUR LONDON CORRESPONDENT)

MAJOR advances in consumer protection are proposed in the U.K. Government's Hire Purchase Bill introduced in the House of Lords last week. The measure goes much further than anyone had predicted—it improves substantialy on the proposals made by the Molony Committee on consumer protection, and introduces new and original provisions to cover transactions in motor-cars.

The principal proposals are: (1) To require a "cooling-off" period for all hire-purchase agreements signed "anywhere other than at trade premises." This will cover all "doorstep" transactions.

(2) To introduce a system of licensing certificates for cars bought on hire purchase. Log books would be held by the hire-purchase company and the fraudulent sale of such motor-cars before hire-purchase commitments have been discharged will be made more difficult.

(3) The protection of existing Acts to be extended to goods of up to £2,000 instead of the present limit of £300.

(4) To make hire-purchase companies (i.e., the legal sellers of goods) responsible for the representations and promises of shopkeepers and salesmen.

(5) To lay down special words of warning on hire-purchase contract forms in the space where customers sign.

This Bill, which rather surprisingly was not mentioned in the Queen's Speech, should be easily the most popular piece of legislation of the present session. It may even be designed in part as election material to show the Conservative Government's concern for consumer interests.

Consumer protection has been the keynote of the drafting by the Board of Trade, and the most remarkable point about the provisions themselves is that they go further and appear to achieve their aim more efficiently than the private proposals made so far.

There have been a number of unsuccessful attempts at private members' legislation in this field, and only recently, this session, Lord Peddie introduced a Bill in the House of Lords covering doorstep transactions and the protection limit for existing legislation. The new measure is stronger in both these directions. The most original point of the Bill is the new system of thwarting those who try to sell motor-cars which are still subject to hire-purchase agreements. Under the new measure, the hirer (or buyer) will be issued with a licensing certificate, and the hire-purchase company (or owner) will keep the registration book. If he fails to keep it, and lets the hirer have it, he will not be able to repossess the vehicle from an innocent third party.

Innocent Third Parties

It is the protection of these innocent third parties at which the provision is principally aimed. In practice, anyone buying a secondhand motor-car will be protected to a far greater degree than at present if the seller produces the log book. If he can only produce a licensing certificate, it will be *prima facie* evidence that there is an undischarged hire-purchase commitment on the vehicle.

The Board of Trade rejected the idea of setting up a national register of vehicle ownership, or of taking over the register kept by the big hire-purchase companies, on the grounds that it would be too big an undertaking. The measure, as now conceived, has the advantage of giving maximum protection for the innocent buyer in the simplest possible way—even more simply, in fact, than with a national register. The decision to raise to £2,000 the ceiling of protection for hire-purchase and credit sale transactions, departs from the Molony recommendation on the point. The Molony report suggested a definition to limit the transactions covered, but the Board of Trade feels that a monetary limit provides less opportunity for legal dispute.

The present limit—although often criticised for being far too low—has in fact worked well. The principal protection afforded has been against repossession when a substantial proportion of hire-purchase payments have been made. The new figure of £2,000 will cover the majority of transactions in motor-cars. The figure is the hire-purchase price, not the cash price.

The "cooling off" period laid down under the Bill will be three clear days from the signing of the contract. The three days' period will start from the day following signature, and if a contract has to be sent by post, they will start only when the contract has been signed.

A customer will be able to cancel the transaction at any time during the period, and the provision that this should apply to agreements signed "anywhere other than at trade premises" is extremely wide. It should effectively cover all the cases of high-pressure salesmanship, against which there have been so many complaints in recent years. Similarly, the provision about representation from shopkeepers or salesmen should effectively plug what has been a similar loophole in the law. By law, the dealer (shopkeeper or salesman) has not been the agent of the hire-purchase company providing the money for the transaction. Therefore, any representations made by the dealer, however false, have not affected the contract.

The position will be completely reversed under the new Bill, and hire-purchase companies may well object that this will place too stringent a burden on them. It is to the Government's credit that the consumer's interest has outweighed such objections. Other detailed provisions include a clause to prevent automatic termination of a hire-purchase agreement if the hirer dies; a proposal that if an advertisement quotes the hire-purchase charges as a rate of interest, the rate must be calculated according to a specified formula; to bring the law of hire-purchase in Scotland into line with that of England and Wales.

The Bill has been introduced in the House of Lords and will receive a second reading there before Christmas, with the committee stage taken soon after. The Board of Trade is still conducting detailed investigations into the wider problems of hire-purchase, but from the practical viewpoint of the consumer, the present Bill goes very far towards eliminating the immediate dangers.

The Economic Outlook

Following up a recent despatch covering various opinions on the economic outlook facing Britain, it is good to learn that British merchants engaged in foreign trade are taking a more optimistic view about the business situation as a whole than they did four months ago. But the growth of optimism about exports is less marked. In particular, a significant number expect delivery dates to lengthen and export prices to increase. These are the main points to emerge from the latest merchanting trends enquiry carried out by the Association of British Chambers of Commerce. Answers were provided by 300 merchants with an estimated annual turnover of just over £450 million who accounted for about 7¼ percent of British exports last year and some 4 percent of total U.K. imports.

Just over half the exporters expect prices to remain unchanged, but 40 percent see some increases over the next four months. Well over half those in textiles and clothing expect prices to go up, but only a quarter of the merchants dealing with engineering products (including vehicles) foresee a rise in prices. Food, industrial materials and manufactured chemicals are the only categories where a fall in prices is thought likely by a substantial number of merchants.

Most exporters report that deliveries, prices and length of delivery have remained unchanged over the past four months. There have been some price increases and very few report lower prices for export business. Moreover, while most exporters expect orders, deliveries and prices to continue at about current rates, a significant number expect delivery dates to lengthen and prices to rise. All trades report improved prospects in western Europe, the Middle East, south-east Asia, Japan and Australasia, and all take a gloomy view of the outlook in the Indian subcontinent. Prospects in other markets vary from trade to trade. In central and South America, textile and clothing firms are fairly pessimistic while prospects for engineering products are more hopeful. Again, while all types of merchants are optimistic on balance about Australasia, some mention is made of the effects of increased import duties, notably on paper, and of reductions in import quotas as a result of rapidly expanding local production.

More important, merchants expect a rise than a fall in new import orders placed and significant increases in the rate of import arrivals are foreseen. This applies to all products. In the same way, considerably more merchants expect higher rather than lower prices. Half the merchants importing food and drink, for example, and nearly half those dealing with textile materials, think that prices will rise.

Jute

MEASURES TO MEET PAKISTANI COMPETITION

AT the annual meeting of the Associated Chambers of Commerce in Calcutta during the past week, the Hon. S. P. Sinha referred to the excellent record of the jute industry during the past two years. Working at full capacity, it has maintained its position as the country's largest foreign exchange earner, fetching about Rs. 156 crores, or 23 percent of the total earnings last year. The main factors which have helped in this achievement are an adequate supply of raw jute to the mills, the remarkably well-sustained overseas demand for jute goods and the rapid development of U.S. demand for Indian carpet-backing cloth.

The Hon. Sinha described the competition from Pakistan, which is assuming serious proportions, as the greatest threat to the future prosperity of the Indian industry. He recalled the circumstances under which Pakistan is now equipped with 10,000 looms after having started from scratch 12 years ago. She has already made substantial inroads into India's traditional sacking markets. At the present rate of expansion, she could conceivably take over India's entire sacking exports in a matter of four years. She has embarked upon a substantial expansion of capacity, and has taken steps for manufacturing huge quantities of hessian and carpet-backing material, in which India now holds a strong position.

Cheap Jute

Pakistan's advantage is that she has an abundance of cheap and high-grade jute, pays lower wages to her labour, and operates an export bonus scheme which is a gold mine for the millowners. These four factors together offer the Pakistani industry a cost advantage of about Rs. 400 a ton over the Indian industry in overseas markets. The Hon. Sinha expressed doubts about the future outlook for the Indian industry but felt that "as yet it is not beyond remedy." In his opinion, the immediate need is to find an answer to the artificial stimulus which the Pakistani mills enjoy. He hoped that the Government of India and the Indian Jute Mills Association would be able to accomplish this task between themselves.

He suggested three main steps to solve the problem. First, an abundant supply of cheap and high-grade jute should be made available to the mills. For this there should be a rapid improvement in cultivation so as to raise the yield and the quality of the fibre. Secondly, enough provision should be made for the import of cuttings for blending purposes and of higher grade fibre for manufacturing speciality fabrics. The imports should be effected at the most suitable "market opportunity". Thirdly, the Indian industry should actively modernise plant and equipment. The Government should be more liberal in issuing licences for importing any equipment which is not manufactured in the country. Imports of components and materials for the indigenous producers of jute mill machinery should also be allowed.

Pakistan to Make Carpet-backing

The People's Jute Mills Ltd in Khulna, East Pakistan, has appointed the biggest British jute manufacturing establishment, Jute Industries Ltd, Dundee, as its sole distributor for the carpet-backing cloth which the former proposes to manufacture from early next year. The British firm, which manufactures substantial quantities of broad-loom hessian cloth, has already got trade contacts all over the world.

The Pakistani authorities are also examining a scheme for setting up 12 mills to manufacture 135,000 tons of carpet-backing cloth a year for the tufted carpet industry. Firm orders have been placed for the supply of machiney worth about Rs. 1 crore for four new mills by 1965.

Sharp Rise in Jute Goods Stocks

Despite the clearance of October shipment heavy goods bound for Cuba, the brisk offtake by the sugar and packing industries and the Government of India, gunny stocks with mills reporting to the I.J.M.A. rose sharply by 3,100 tonnes to 111,400 tonnes during November. Hessian stocks rose by 5,500 tonnes to 40,000 tonnes, and other goods by 2,000 tonnes to 23,600 tonnes. Sacking stocks fell by 4,400 tonnes to 47,800 tonnes. In November last year, the stocks were 91,400 tonnes—27,700 tonnes of hessian, 50,500 tonnes of sacking and 13,200 tonnes of miscellaneous goods.

I.J.M.A. Quality Control Scheme

The Indian Jute Mills Association has set up a special body called the I.J.M.A. Quality Control and Inspection Committee to deal with all matters connected with quality control, inspection, standardisation, quality certification, consumers' complaints and appeal on inspection. This step has been taken in pursuance of the voluntary quality control and inspection scheme sponsored some time ago.

The immediate aim is to arrange for the inspection of jute manufactures of all varieties and grades, standard or non-standard, on the basis of either I.S.I. specifications or any foreign standards agreed upon between buyers and sellers. The long-term objective is to extend a quality control service to the industry. The working out of a sound quality control programme at this mills, including the maintenance of certifiable statistical data, will give a sound guarantee for the standards of goods produced by the mills.

A central bureau with powers derived from the I.J.M.A. Quality Control and Inspection Committee has been formed to organise the inspection of jute manufactures in the mills. There is a possibility that the bureau will arrange for putting suitable certification marks or stamps on the goods inspected. The bureau will have a staff of 32 inspectors and field assistants and will operate from the I.J.M.A. Research Institute.

Mills have been grouped into six zones. Inspection work in the first one, covering about 13,000 looms, will commence from this month. The goods to be initially taken up under the scheme are 40in. 7½oz. and 40in. 10oz. hessian, cornsacks, heavy Cees, B Twills and A Twills. Specifications have already been formulated by the Indian Standards Institution for the first four items. Those for the last two are still in the draft stage.

LJ.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of November as follows:

Description	30th November, 1963		31st October, 1963		Increase over (+) or decrease from (−) last month		30th November, 1962	
	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)
Hessian cloth and bag	12.88.25 (14.09)	40.0 (39.4)	11.15.41 (12.20)	34.5 (32.9)	+1.72.84 (+1.89)	+5.5 (+5.5)	9.15.57 (10.01)	27.7 (27.2)
Sacking cloth and bag	10.77.34 (11.78)	47.8 (47.0)	11.56.90 (12.65)	52.2 (51.4)	−79.56 (−87)	−4.4 (−4.4)	11.09.23 (12.13)	50.5 (49.7)

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. Barring small business in hessian with the U.S.A. and scattered enquiries, overseas interest was negligible. Mills emerged as keen sellers for all positions, further depressing sentiment. Reports about freight bookings for gunnies were discouraging. When the November stock figures were published on Monday, there was a mild rally in heavy goods due to the decline of 4,400 tonnes in sacking stocks. But the higher levels induced profit-taking and earlier gains were reduced. Hessian lost further ground on the news of an increase of 5,500 tonnes in November stocks. On Tuesday, talk of substantial business with the U.S.A. caused a brief flutter of activity, but selling pressure from mills and holders reversed the trend. Towards the close, heavy goods showed marked losses in the ready and near positions and small losses in the later positions. Hessian suffered more. In the futures market, operators were worried by the discouraging outlook for gunnies. There was a general inclination to reduce commitments. Bears sat on the sidelines awaiting a further decline in prices, so tired long liquidation depressed values. Hessian suffered more than sacking. But fluctuations were narrow in the former and wide in the latter. The turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations were as follows:

Raw Jute: Dull conditions ruled in the raw jute market during the past week. Having completed their November purchase quota of 1.05 million bales, mills took little interest in purchasing in the Calcutta market. Their agents were concentrating on buying selected grade fibre against the December quota of 1 million bales in the upcountry markets, where prices were above the official minima in the case of the better qualities. The average quality of most of the crop harvested in the Daisse districts of West Bengal and in parts of Orissa and Bihar, following the heavy late-September and early-October showers, was much better than the Bottom grade. So jute circles, both in Calcutta and upcountry, felt that no price support was necessary for this fibre since it always comanded a higher price in competitive bidding. There seemed to be a glut of inferior grade jute with holders in Calcutta and agency stations. Their concern over the accumulation of stocks induced a lot of selling pressure, as a result of which prices reacted below the official floor levels. Daily arrivals had gradually declined to around 100,000 maunds and offerings amounted to about 30,000 bales on an all-India basis. No difficulty was experienced in moving jute from upcountry areas to Calcutta godowns. As mill warehouses and godowns were packed to capacity, there was a general tendency to pur-

chase for the forward positions. Towards the close, sellers became reserved and Assam Bottoms hardened to some extent. In the futures market, Upper Assam White Bottoms for March eased on large-scale profit-taking by bulls. Bears were hesitant to cover their positions at the current levels in view of the softer trend in the spot market. At the close, the price was marked down after minor fluctuations. The turnover was moderate and the undertone easy at the close.

Wednesday's quotations were as follows:

THE U.K. JUTE MARKETS

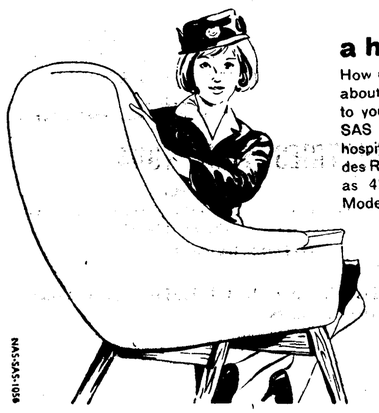
FIBRE IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firm in Pakistan during the past week, and most of the cheaper sellers disappeared. However, the lower grades of both white and Tossa jute were still available at well under minimum export prices. The position in Dundee was very irregular with a wide range of prices quoted.

It was difficult to follow actual prices as many shippers upgraded the quality of their marks, in order to overcome having to make offers at under the official rates, but could lead to complications in future seasons. As a result, spinners were very selective in their buying and business was not always taking place at the lowest quoted rates. The upgrading took place most of the season, but the trend appeared to be accelerating.

Nearly 200,000 bales of raw jute will be arriving at Dundee this month, and no doubt a portion of this will be unsold to spinners. This is bound to have a weakening effect on the position here. Already, demand from spinners has slowed down because of this fact. Offers were made at £139 for Mill Firsts, at £110 10s for Mill Lightnings, at £95 for Mill Hearts and at £80 for Grade Hearts, c.i.f. U.K. for December-January shipment. Grade Tossa-2/3 was named at £128 and Grade Tossa-4 at £108 10s. Dacca Tossa-5 was offered at £138 15s and Dacca Tossa-6 at £109. There were sellers of Output Tossa-2/3 at £95 and of Output Tossa-4 at £83 10s, for December-January shipment.



Cuttings became firmer, but here quality has improved of late. Offers were at £56 for S.N.C and at £48 10s for N.C. Mesta was steady at £80 for A, at £73 for B, at £67 for C and at £44 for cuttings, c.i.f. U.K. for December-January shipment.

The Siam jute market was firm but irregular, with a scarcity of offers of the better qualities. Prices were at £72, 10s for grade A, at £63 for grade B and at £58 for grade C, delivered mill Dundee for December/January shipment.

The Calcutta goods market was quiet with only a small buying interest shown. Quotations were at 70s 4d for 40in. 10oz. and at 52s 8d for 7½oz. a 100 yards f.o.b. Calcutta for December shipment, at 70s 9d and 52s 10d January and at 70s 9d and 52s 11d February. B Twills were at 170s 8d, 171s 5d and 172s 2d for the respective shipment periods.

Orders continued to be received for jute yarns and cloth in Dundee. Spinners and manufacturers were very busy and were generally fully booked for delivery over the next three months. More buying interest was shown in the heavy end of the trade, and some descriptions of sackings were difficult to obtain for reasonably early delivery.

NOW EVERY SATURDAY TO EUROPE

a heart-warming invitation to travel

How much a chair, and a smile, can tell you about the Scandinavians—about their good taste, skill and loving care. If these qualities appeal to you, then see how SAS applies them in the air. Come aboard an SAS modern jet liner, anywhere around the world. You'll find the hospitable service and the famous cuisine (honoured by La Chaine des Rotisseurs !) something of a revelation. RAW RUBBER OUTPUT RISES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA is likely to produce 41,000 tonnes of natural rubber during the current financial year, according to the latest estimate of the Rubber Board. Production for the first five months of 1963-64 was 14,547 tonnes, compared with 12,099 tonnes and 9,424 tonnes of the corresponding periods of 1962-63 and 1961-62, respectively. Production has thus risen by 20.23 percent during the first five months of 1963-64. The increase, according to the Rubber Board, was due to extremely favourable weather conditions. Secondly, the areas replanted with high-yielding material under the Board-sponsored subsidised replanting scheme have come to tapping. There are clones which can give about 1,000 lbs and more from each acre under proper care. Active control of leaf diseases has also contributed to the increase.

The Rubber Board has estimated rubber consumption in 1963-64 in this country at 72,000 tonnes including that of synthetic rubber. The estimated consumption for the first five months of the year was 30,047 tonnes, which compared favourably with the Board's annual estimate.

The replanting scheme of the Rubber Board is lagging behind the target. The target fixed for replanting from 1957, that is, the year in which the scheme was introduced, to 1962, was 45,000 acres, and the actual area replanted was only 23,980 acres. Of the total of 23,980 acres replanted, the area belonging to estates of 50 acres and above was 11,956 acres, out of an eligible area of 77,106 acres and to small holdings 12,024 acres out of an eligible area of 1,13,883 acres. One of the reasons for the slow progress is that the subsidy given until 1960 was unattractive. It is also stated that after the enhancement of the subsidy rate in 1960 to Rs. 1,600 an acre, the estates above 50 acres have put their worn-out areas under slaughter-tapping and the replanting programme will receive momentum from 1964 onwards. This may be partly true, but in the case of the smallholders that cannot be the main reason. It is also said that the administrative delays in making payments of subsidy instalments after the completion of work is a source of discouragement to smallholders. The Board has taken some steps to remove this complaint.

Replanting is of great importance to the rubber planting industry because its very future depends upon replacing the low yielding trees which constitute the bulk of the present stands, with high-yielding planting material. The Rubber Board has reached a position to supply all the good planting materials available in the world to the needy growers in this country. There is a fairly attractive subsidy also. What is now needed is a more active interest in replanting on the part of the growers.

Malaysia is trying for direct deals with Russia and east European countries as a part of its new plan to stabilise the market for its rubber. Malaysia is faced with a two-pronged attack on its rubber economy, on the one side from Indonesia and on the other, from the United States. Until the formation of Malaysia, Indonesia used to get its rubber refined and sold through Singapore. With its new confrontation policy, Indonesia has now entered into direct trade agreements with China, Russia, east European countries and Brazil. This has given a big jolt to the Malaysian economy. However, the rubber export trade in Singapore draws some comfort from the fact that Indonesia is not in a position to meet the entire requirements of the countries with which she has struck a direct deal, and they will still have to look for Malayan rubber. It is said that the United States also has been doing some harm to the rubber economy of Malaya by dumping into the world market its synthetic rubber which is cheaper. Despite Malaysian appeals, the U.S.A. has done little to support natural rubber. Instead the American synthetic rubber producers are carrying on a vigorous campaign to boost the sale of their products. One of their propagandists was even sent to Singapore to lecture on the superior qualities of the man-made rubber. Annoyed Malaysian rubber producers protested to the Government against U.S. propaganda and decided to take its own delegation to Russia and east European countries to make direct trade agreements. An eight-member delegation is now in eastern Europe exploring the possibilities for establishing direct agreements.

Russia, it is said, is interested in entering into direct trade agreements with Malaysia. This year, Russia is well ahead as Malaysia's chief rubber buyer. In the first seven months, Russian offtake was 134,030 tons, compared with 96,263 tons by the U.S.A. and 71,440 tons by Britain. Last year, Russia's rubber purchases totalled 190,236 tons, compared with the 192,880 tons by the U.S.A., and Britain's 135,756 tons. Other communist purchases included Poland 18,236 tons, Czechoslovakia 7,372 tons, Yugoslavia 5,165 tons and Cuba 2,751 tons.

Last year, Malaysia's rubber production reached 760,000 tons. This year, the production is expected to touch 780,000 tons and by 1970 about 1 million tons. Rubber contributes over 50 pecent of Malaysia's export earnings and provides employment for a very large number of its population. Rubber thus plays a very important part in the Malaysian economy.

Demand from Cardamom Growers

The cardamom growers, too, are making a demand for depreciation allowance, while computing the agricultural income tax. They have given a memorandum to the Kerala Government urging it to provide for suitable depreciation, or rehabilitation allowance and also to treat expenditure on the upkeep of immature plants as revenue expenditure. Their plea is that cardamom is a plant with comparatively a very small life span (seven years) and unless its replacement in proper time is encouraged, the cardamom plantations of the State would die out. There are at present about 100,000 acres of cardamom plantations in Kerala, and their production comes to well over 2,000 tons a year constituting two-thirds of India's total output of this spice which is one of India's traditional export commodities. Due to the precipitous fall in the price of cardamom since the past three years, the cardamom growers are in financial difficulties and this has its reflections in the field. Upkeep of plants and replanting of the worn-out ones are not being attended to properly. The cardamom growers are asking for financial assistance to maintain their estates in good shape. In their memorandum, they have asked the Kerala Government to authorise the State Land Mortgage Bank to keep up the financing of cardamom estates. This may be possible by using the refinance facilities offered by the Agricultural Refinance Corporation.

The introduction of quality control, standardisation of grades and the fixing of floor and ceiling prices by the Central Government are showing their results. Cardamom prices are recovering from the nadir they reached last year. Present Cochin auction prices are Rs. 2 to 4 a kilo more than the prices obtained in the corresponding sales last year.

The cardamom growers are divided over the Government's proposal to constitute a Cardamom Board on the lines of the Coffee Board and making cardamom marketing its monopoly. While the disorganised small growers welcome this proposal, the more advanced and organised section is not favourably inclined. In the latter's opinion, if the pooled system of marketing is introduced in cardamom, it will become disadvantageous to the growers in the long run. The country's total production being very small at about 3,000 tons a year, the

Exhibition A MIRROR OF INDUSTRIAL PROGRESS

"Industrial progress constitutes the key-stone of the edifice of a strong defence and quicker rate of growth. Both the private and the public sectors during the three Plans have played their successful roles in promoting industrial progress in the country. I hope the Calcutta Industries Fair, 1964, will successfully depict a picture of this progress to the benefit of all concerned.

Success of a large exhibition of this nature depends very much on the co-operation of the various industries and industrial organisations. The Chambers, Associations and Federations of the various industrial organisations in the private sector enterprises will be well-advised to utilise this forum to present a true picture of the country's industrial progress wtih special reference to West Bengal."

We cordially invite you to take part in depicting a picture of your progress through this Exhibition—the biggest in Eastern India.

(P.C.Sen)
Chief Minister, West Bengal.

administrative cost under the pooled system will become unbearable, they say.

TEA

Home Consumption Drops

(BY A SPECIAL CORRESPONDENT)

SOME members of the Tea Board are said to be happy about increased exports to some consuming areas, but it is not the volume but the earnings which count. Messrs Carritt Moran and Company in a recent report offer the following comment on the subject: "Production costs are, however, inevitably high on account of statutory obligations and other charges, while labour productivity is all too often distressingly low, and there are many estates which are barely profitable at present prices. If the Indian production and export targets of the five year plan should be achieved, it is considered in some quarters that the result would be an excess of world production over consumption, and a sufficient drop in the price of tea to cause considerable embarrassment to producers of all except quality tea.

They add: "A recent Press report indicated that the consumption of tea in India during 1962 actually dropped, and this was hailed as a creditable achievement in aiding exports. We have on previous occasions stressed the importance of a strong internal demand to act as a buffer against possible overproduction, also the fact that the actual weight of tea exported is less important than the amount of foreign exchange earned by such exports".

The consumption of tea in India is still extremely low, and if the tea drinking habit is discouraged, it could well be difficult to revive at a later date. It is surprising to learn that internal consumption fell during 1962, but with the armed forces to be catered for, 1963 should show a revival. What are the members of the I.T.A. and other producing interests doing about the situation?

Tea prices at sale No. 25 at the end of November were considerably below the rates ruling a year ago, namely, Rs 4.76 a kilogram, against Rs. 5.44 a kilogram in 1962. The overall price gain has also been lost as the average rate realised from this season was Rs. 5.57 a kilogram, compared with Rs. 5.61 a kilogram last year. All districts share in the fall, but prices are still well above the level paid in the 1961-62 season, when the last sale in November realised only Rs. 3.83 a kilogram and total sales to the same date averaged Rs. 4.98 a kilogram. The price trend of dust sales follows that of leaf tea sales.

Exports have been brisk. Although the grand total from 1st July to 22nd November shows little change at 208 million lbs this year and 208¾ million lbs in 1962, actual shipments to the U.K. are shown at 145 million lbs, compared with 134 million lbs a year ago, but this may be a misfortune if the extra weight causes lower prices in Mincing Lane.

Many of the countries which absorbed more tea as a result of visits by the tea delegations to the western countries have mostly taken less this year. The U.A.R. has done poorly with a drop of nearly 3 million lbs and the Sudan has taken less. Probably Ceylon has exported more to these countries. Only Russia shows a 1¼ million rise, but the U.S.A. is short by much the same amount. Canada shows a small fall, and Turkey's oftake is less by about 750,000 lbs. Last year, that country's imports were 3¾ million lbs and in 1961. imports were 5¼ million lbs. More has gone to eastern Europe, but Germany and the rest of western Europe show little change.

Offering at the Calcutta tea auctions to the end of November totalled 55,178,615 kilograms of leaf and 21,410,641 kilograms of dust, making a total of 76,582,286 kilograms.

This may be about three-fifths to three-quarters of the crop and if the balance of this season's offerings have to be disposed of at lower prices, then the authorities should take immediate steps to encourage internal consumption. The Africans are thought to like tea, but the first preference there is for stronger stuff such as beer.

Our South Indian Correspondent writes: There is again a growing resentment among the tea interests against the State levy of 5 percent sales tax on teas sold through Cochin auctions. This levy has existed for the past few years, and has had a retarding effect on the growth of this terminal market for south Indian tea. This Kerala levy of 5 percent sales tax plus 5 percent surcharge on it on all teas sold at the Cochin auctions is anomalous taxation, affected interests say. Although Cochin auction prices are supposed to be inclusive of sales tax, in effect prices are merely dictated by those ruling in the international market and the tax is invariably paid by the producer and not the buyer whether the tea is exported or consumed at home.

The producers have been requesting the Kerala Government to wave this tax at least on export teas with a view to encouraging exports which has become part of the national policy. They represented to the Sales Tax Enquiry Committee appointed by the State Government some time ago that the State Government might be persuaded either to give up this anomalous levy entirely or at least to arrange refund in the case of exported teas. There was practically no response for this plea.

The growers and the trade point out that the State Government also has a rôle to play in export promotion, and should not remain unresponsive to the demand for the abolition of this levy which also has a retarding effect on the export drive. The State Government's stand is that it can hardly afford to give any concession in view of its difficult financial position.

The rubber growers are pleased with the Kerala Government's decision to exempt from taxation the rehabilitation and depreciation allowance of Rs. 9 a 100 lbs included in the statutory price of rubber as recommended by the Tariff Commission and the Central Government. The Kerala Agricultural Income Tax Rules have been amended recently permitting this reduction, while computing income for the assessment of agricultural income tax with effect from the assessment year 1963-64.

SHELLAC UNCHANGED

During the week ended 10th December, the market was unchanged. The range of quotations was as follows:

	Rs. a package
Pure Buttonlac	Rs. 104 value
Lemon One Shellac	Rs. 106 buyers
	Rs. 110 sellers
Lemon Two Shellac	Rs. 86 buyers
	Rs. 90 sellers
Standard One Shellac	Rs. 74 buyers
	Rs. 78 sellers
Pure TN Shellac	Rs. 66 buyers
	Rs. 70 sellers
Golden Kusmi Seedlac	Rs. 130 value
Kusmi One Seedlac	Rs. 90 value
Golden Bysacky Seedlac	Rs. 90 value
Manbhum Fine Bysacky Seedlac	Rs. 60 value
Fine Bysacky Seedlac	Rs. 50 value
Genuine Bysacky Seedlac	Rs. 40 value
Grade One Class B Seedlac	Rs. 60 buyers
	Rs. 64 sellers
Grade Two Class B Seedlac	Rs. 44 buyers
	Rs. 48 sellers

Shipments during December until the 4th were 1,911 packages.

TAX DOUBTS, COMPANY LAW REFORM SUBDUE SHARES

THE stock markets are slightly baffled by the statement on economic policy made by the Central Finance Minister, Mr. T. T. Krishnamachari, in the Lok Sabha on Monday. Operators say that the statement is in some ways bullish, in others bearish, so it is not easy to assess on the whole the right direction in which equity prices ought to be adjusted. Those prices had earlier been sliding downwards in response to the Government's decision to reject the recommendation of the Select Committee on the question of allowing the Government to convert its loans to a company into the shares of that company. The Companies (Amendment) Bill proposed that the Government should be allowed to convert not only future loans, but also those given in the past, into share capital at will. The Select Committee rightly opposed applying such a provision to loans given in the past; it accepted the objection that a change of this nature would clearly involve a breach of contract. In what may be described as the Kamaraj Plan for Company Law Reform, the final verdict on whether the Select Committee's recommendation should be accepted or rejected was left to Mr. Nehru. The verdict finally emerged that the recommendation should be rejected: the Government, in other words, should have the right to convert even loans given to companies in the past into share capital as and when it suited its convenience. The trump card of intelligence before these extraordinary proceedings was produced characteristically by Mr. Nehru: even under Hitler, India's Prime Minister was reported as saying in defence of his views, the Government had the power and the right to force such conversions.

The Select Committee had said that if past loans given by the Government were to be converted into share capital at all, they should be converted only if the company in question had defaulted in repaying interest or capital, or if it had violated the loan agreement. The curious feature is that the Finance Minister was a member of the Select Committee which made the recommendation; but to the final report he did not append a minute of dissent (as some other members did). Mr. Krishnamachari explained subsequently that ministers do not normally go round appending minutes of dissent to reports. This is true in the sense that their business is not to register futile protests, but to make decisions. Nevertheless, the equivocal nature of the Finance Minister's stand—by first acquiescing in the Select Committee's recommendation, and later supporting Mr. Nehru's contrary verdict—has led to an anomaly which has drawn not particularly flattering comment. Mr. Krishnamachari is to be complimented on diluting the severity of the verdict to some extent by adding a clause at the last minute which provides that a proposal to convert Government loans into share capital will be effective only after it has been before Parliament for 30 days. But the fear remains that in practical terms the value of the qualification is approximately nil: there is no shortage of Congress members of the Lok Sabha who readily emit a "yes" as soon as the crack of the Party whip is heard.

Not only is the Government's abrupt dismissal of the Select Committee's recommendation highly improper; to acquire the unrestricted right to convert past loans into the share capital of a company implies a brazen disregard for the sanctity of contracts. When giving loans, the Government is entitled to claim no more rights than anybody else; if others cannot alter the terms of a loan agreement unilaterally, there is no reason why the Government should be allowed to do so. Like any other lender, the Government should have the foresight to demand the right of conversion from the very start—before, not after, the loan is given. The Select Committee's recommendation has been rejected on the excuse that the credit and reputation of a company will suffer if the Government is obliged to say that it is converting the loan because the company has defaulted or violated the loan agreement. But the more important point has been ignored that if the Government has the right of conversion to begin with, other creditors and investors will automatically become chary of giving their money to such a company. The net effect of the whole provision will be precisely the opposite of what has been advertised as the aim of the Government: the flow of capital into borrowing companies will be discouraged for fear that shareholders might one day find the Government as their biggest partner.

The assurance has been given that the terms of conversion will be fair and equitable. Provision has also been made for the terms to become justiciable, if necessary by appeal to a high court. The suspicion will nevertheless continue that the right of conversion, apart from containing a threat of State control, might be intended to bring windfall gains to the Government. It would coolly collect interest on its loan at a virtually guaranteed rate during the early years when a new company might not be making a profit. After the company becomes profitable, the Government would have the right to become a shareholder, and collect larger sums by way of dividends. It would thus have the best of both worlds. No attention has been paid to the fact that the interests of other shareholders would suffer in the process. The conversion of loans into shares could inflate the share capital in such a way that the company finds it impossible to pay reasonable dividends. Profitability too may decline, since interest payments are a deductible item of expenditure for tax purposes, whereas dividend payments are not. The threat to ownership and profitability is likely to discourage companies from taking loans from the Government; in the process, schemes for modernisation, expansion and diversification are liable to suffer.

Another provision in the Companies (Amendment) Bill gives the Government the power to appoint a public trustee to exercise voting rights on behalf of a trust which has a shareholding in a particular company. The amendment has been denounced as unfair and unjust, because it appears that a trustee can be deprived of his right to vote

as a shareholder even if nothing is alleged or proven against him. The power can be exercised on behalf of private family trusts or public charitable trusts, as well as in relation to shares in both private and public companies. It was originally proposed that the power would be exercised only in the public interest, but now even this vague safeguard has been removed in order to make the provision wholly arbitrary. The public trustees appointed by the Government might well become a powerful and dangerous element in corporate life.

While the final form of the Companies (Amendment) Bill has come as a shock to the stock markets, there is moderate compensation in the fact that price controls on 16 commodities have been abolished. The commodities include rayon, soda ash, staple fibre, soap, tyres, tubes, sheet glass and paper board (but not paper). Consequently the shares of companies which produce these commodities have been marked up. The raising of the exemption limit for capital issues control, from Rs. 10 lakhs to Rs. 25 lakhs, has been welcomed. Furthermore, industrial units created with a capital of Rs. 25 lakhs or less will no longer require an industrial licence. Considering that the policies of the Government have hindered expansion by fixing the prices of various commodities at unrealistically low levels, the gradual dismantling of price controls is welcome. The decision to raise the exemption limit for capital issues from Rs. 10 lakhs to Rs. 25 lakhs was also long overdue. The depreciation in the value of the rupee had made the former limit unrealistic; and small enterprises will tend to grow and prosper faster if they are freed from the long procedural delays involved in getting the Government's sanction for raising capital. The relaxation relating to industrial licensing is a step in the right direction, but its practical significance will be limited by the fact that the Government will still maintain a close check on imports of plant and machinery because of the foreign exchange shortage. The main benefit is likely to go to industries which are in a position to use the equipment and raw materials that are available within the country.

The stock markets have welcomed Mr. Krishnamachari's decision not to collect any premiums under the emergency risks insurance scheme for the quarter ended March 1964 since the Government's tax revenues remain buoyant. The welcome has been given in spite of the Finance Minister's implicit admission that what passes under the description of an insurance premium is really a tax impost; in other words, that the emergency suits not only the political but also the fiscal convenience of the Government. Mr. Krishnamachari has stated that the premium rates for the subsequent quarters will be announced later from time to time. Granting for the moment that the emergency, and emergency risks insurance, are to continue, the promised flexibility in fixing premium rates seems appropriate.

The most discouraging aspect of the Finance Minister's statement on Monday, from the viewpoint of investors, is the hint that the tax burden is not likely to be decreased in the coming year. More money, it is stated, will be required to finance the rising tempo of expenditure on programmes for defence and development. The possibility remains that the tax structure will be modified and rationalised; indeed, this is essential if economic growth is at all to continue. But the words Mr. Krishnamachari has chosen have set the stock markets guessing again as to whether or not he will abolish (or at least drastically modify) the super profits tax. Most operators agree that deficit financing has to be restricted if inflationary pressures are to be checked. But it is hard to see how economic development can be promoted if the already crippling burden of taxes is not going to be reduced. The Finance Minister must believe that he has some magic formulæ up his sleeve—the formal disclosure of which will be anxiously awaited.

The general view is that the measures taken so far, together with those in prospect, will play only a marginal, albeit useful, rôle in promoting the recovery of the capital market. The flow of bank finance to industries has been liberalised under the credit policy announced by the Reserve Bank seven weeks ago. The resources of various financing institutions, like the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India, are being increased. The unit trust which is to be set up will, in due course, help mobilise the savings of small investors who may not at present be providing much money for industrial expansion. The proposal to set up a development bank (which, contrary to earlier impressions, seems likely to be a separate institution from the I.F.C.) might also help promote the flow of medium-term and long-term industrial finance. In all these plans and proposals, however, it appears that the emphasis is still too much on the institutional paraphernalia rather than on creating and mobilising the savings which alone can ensure steady expansion.

As the stock markets see it, the need for the savings is underlined by the fact that the rate of industrial expansion is not improving. Compared with the previous year, industrial production rose by 8 percent in 1962-63. During the current year, it is likely to rise again by 8 percent. The proportions are far below the targets set by the planners—which is one reason why the third plan is heading for a flop. Mr. Krishnamachari may be justified in offering the hope that agricultural production will show an impressive recovery during the current year. But the reminder may not be out of place that similar optimism was displayed at this time last year about the crop prospects for 1962-63; only four months after that agricultural year ended did the Government's statisticians wake up to discover that farm output had in fact dropped sharply.

PLANNING CHOICES

THE failure of the Chinese leap forward has set economists round the world emphasising the primacy of agriculture in developing nations, and its crucial rôle in their economic advance. Professor Walt Whitman Rostow of "take-off" fame, who is now chairman of the U.S. State Department's Policy Planning Council, recently pointed to the "severe structural distortion" in a number of developing countries in Asia, Africa and Latin America because of the relative stagnation of their agriculture. India too suffers from the stagnation, so the Professor's prescriptions are of immediate interest. His general charge is that many countries neglect the countryside because of the mistaken notion that emphasis on the improvement of agriculture is a sign of neo-colonialism.

In purely financial terms, any validity this charge might have had during the second plan should no longer hold good because agriculture has been given first place not only in the share of total investment but also in the priorities laid down by the third plan. If money investment alone could transform Indian agriculture, there should now be little to worry about, considering the funds being pumped into the countryside. The experience of the last two years confirms, however, that capital outlay by itself is not enough. In many ways, it is less important than what may be described as the organisational factors—the reinforcement of incentives and motivations at the human level through land reforms, the provision of credit, adjustment of the terms of trade between the rural and urban sectors, and the variety of measures required to end the isolation of the village. That these measures should include the bait of attractive consumer goods, the desire for which will push the farmer to make greater efforts in the field, is indisputable, even though one may doubt whether Professor Rostow's proposal for a Sears-Roebuck catalogue, or any merchandising equivalent thereof, is really necessary to create the desire for a better life in the Indian countryside. The spread of education, halting though it has been, is sparking off a revolution in aspirations which is reflected in the increasing consumption of mill-made cloth and factory-made footwear in areas where an improvement in agricultural productivity permits an advance in living standards. In Indian conditions, therefore, baits are less important than the effort to enlarge the supply of consumer goods which will find a ready market even without the benefit of imported merchandising know-how.

What prevents more consumer goods from being produced is partly the Indian Government's heavy industry orientation and partly the built-in restraints imposed by the backwardness of the economy. Professor Rostow's list of consumer goods for the countryside starts with textiles, canvas shoes and flashlights. A moment's reflection shows that India's basic handicap in making even such elementary products is the foreign exchange shortage. Textile output is limited partly by the division of the industry between the mills and handlooms (and this has an important bearing on costs too); but the main limit is the inadequate domestic supply of cotton—a situation attributable to the pattern of crop specialisation which was perfectly reasonable in undivided India. Likewise, canvas shoes have a rubber content which, however small, must come from imports since Indian plantations cannot be developed fast enough to meet the rising demand. The same is the case with flashlights. The alloy metal container and the lead case for batteries have, in present conditions, a high import content.

Professor Rostow's solution of coaxing more from the countryside by the bait of consumer goods is thus not as simple a proposition as it may seem at first sight. Only an economy where the foundations of an industrial structure have been securely laid can hope to provide an ample supply of goods at reasonable prices. Some say that it would be a poor solution indeed if India or any other developing country were to divert its limited resources to the production of consumer goods while the basic task of laying the foundations remains undone. According to them, there is really no conflict between investment in a steel plant and the aim of providing more consumer goods. While this generalisation may be widely accepted, differences may arise when one gets down to the details of working out the respective shares of steel and, say, textiles in the total investment plan. Even here, what seems to India the right course to adopt may seem wrong-headed to others because they fail to see the pressures to which the economy is subject. With population rising at over 2 percent a year, a short spurt in growth would be quite meaningless if the final result is to make the future even less secure than it already is. Very often, therefore, the minimum Indian plan for basic industries may seem much too ambitious to others. But when they really look into the matter, they may come to accept the validity of many Indian objectives.

Quite apart from the issue of consumer goods *versus* investment goods, the fact remains that agriculture itself cannot move forward without a variety of industrial inputs. The increase of 16 percent in agricultural production obtained in the past decade through the extension of cultivation has practically exhausted the possibilities in this direction. Further advance must increasingly depend on raising the level of farm productivity which will mainly require an adequate supply of water and fertilisers for the fields. Given these the farmer can be relied upon to raise two, if not three, crops where only one is now possible, and thus to bring about a dramatic increase in output. The problem of irrigation can be tackled in several ways, the stress now being on small works like tanks and wells which can be built quickly with locally available materials. This line of approach is unexceptionable, but it is obvious that small works can help only in storing or tapping the water that the monsoon brings. When the monsoon itself fails, the protection provided against drought through such devices is feeble indeed. The right course is, therefore, to go ahead with both large and small works simultaneously, since one does not come in the way of the other (and especially if local resources are being employed for the latter in conformity with the aims of the community development programme). Large works are, however, hardly feasible unless the industrial resources required for building them, such as earth-moving machinery, steel and cement, are available.

The same dependence on industry characterises fertilisers, whatever the process or end product one may have in view. In fact, the economy of fertiliser application depends a great deal on the cost at which the material is produced—a function of the scale of manufacture. This is fully recognised in the plans drawn up for fertiliser production under which new units are being located only where supplies of the starting materials—coal or naphtha—are abundant. Most people, one imagines, could have no objection to developing countries setting up indigenous fertiliser capacity but what is perhaps overlooked is that units of the industry cannot come up in an economy which is not industrially geared for the purpose. The plants going up in Trombay with U.S. aid or in Nahorkatiya with British aid would be inconceivable without the oil refineries supplying the raw materials, and the plants in Sindri and Rourkela without the supporting coke oven batteries.

Unless one assumes permanent dependence on foreign aid, an effort has to be made to reduce the present high import content of new fertiliser capacity by initiating local manufacture of equipment and supplies. Otherwise, the progress of fertiliser production will continue to be as disappointing as it has been in the current plan during which several eminently worthwhile schemes have been halted by the foreign exchange shortage. This again takes one back to the need for strengthening the industrial base. There is no getting away from the fact that economic development is possible only with simultaneous advances in both sectors.

HIRE-PURCHASE FINANCE

THE British Government's moves (albeit late and inadequate) to modernise the law of hire-purchase have focussed attention on the rôle of consumer credit in economic expansion. Simultaneously, the quarterly figures compiled by the U.K. Board of Trade have demonstrated the importance of the rôle. They have demonstrated also the growing importance of hire-purchase finance companies in the monetary system. The Board of Trade figures show total hire-purchase and other credit extended by finance companies aggregating £658 million at the end of the third quarter of 1963. The figure represents an increase of £18 million in the quarter, following an increase of £27 million in the previous quarter. The survey shows that the total assets of the finance companies at the end of September amounted to £793 million representing an increase of £43 million in the quarter, which, the Board of Trade remarked, "is the largest increase in hire-purchase companies' assets since these surveys began".

A few weeks before the figures were published, however, a representative of the companies, Mr. John Bellamy, assistant secretary of the Finance Houses Association, writing in the *Guardian*, warned against "using credit outstanding as a sensitive indicator to present economic conditions". The figure reflects, he explained, not only the rate of new transactions but also the rate of maturing of old transactions, entered into perhaps two, three or four years previously. He warned also against ignoring the seasonal factor, in a business which is largely concerned with financing purchases of motor-cars. The demand for cars is strongest in Britain in the second quarter of the year, so an increase in consumer credit in that quarter is not, alone, evidence of economic acceleration. Similarly, a decrease in credit later in the year is not, alone, evidence of deceleration. The increase in the third quarter, reported since Mr. Bellamy's remarks, is obviously significant. Mr. Bellamy observed, indeed, that "the advance of hire-purchase credit so far this year reflects not merely a seasonal change but a real growth in demand".

A few months ago, there was still some doubt that the demand for consumer goods in Britain would grow fast enough to achieve the economic growth rate of 4 percent a year that the Government had accepted as appropriate. Now there is some fear that credit-assisted demand may exceed the safe limit of growth. And in this situation a new possibility has arisen, that consumers will economise their savings by taking more durable equipment on lease instead of buying it. Renting instead of buying television sets has already transformed an important sector of the trade in durable goods, and demand for medium-term car-hiring facilities is already considerable. The more elaborate types of domestic equipment are not only costly to buy but also costly to maintain—and maintenance requires skilled servicing. Moreover, technical changes accelerate obsolescence. Impending changes in the television system are one reason why many Britons prefer to rent a set rather than to buy one: they assume (rightly or wrongly) that a new set may soon be out-of-date.

Leasing equipment to industry is a fast-growing business, which requires abundant finance—and the resources of various financial institutions. The equipment-leasing system was imported into Britain from the United States, where it is estimated that the finance absorbed in it has increased in ten years (to 1962) from $10 million to $800 million a year. Some British companies, such as Rank-Xerox, which leases, not sells, its Xerox copying machines, provide their own finance. But the current trend is represented rather by International Computers and Tabulators, which, burdened by the financial requirements of its leased equipment, arranged finance from some of London's merchant banks through a new company, Computer Leasings. The hire-purchase finance companies are, of course, directly involved in this kind of business; and the commercial banks, being financially linked with the finance companies, are indirectly involved in it. But the banks, encouraged by a parallel movement in the United States, are now considering the possibilities of direct participation in leasing. Huge resources will become available if they proceed along this line. But some of the money used to finance leasing will replace ordinary bank advances to customers. In principle, advances are granted for short-term requirements, but in practice they are used partly to finance purchases of equipment. An extension of leasing arrangements would, therefore, reduce the need for advances.

The banks' investments in finance companies are a very small proportion of their total assets, not enough to compensate them if finance companies take an increasing proportion of Britain's total financial business, so that the banks' proportion is reduced. As far as leasing is concerned, the problem is not immediate, for the value of industrial leasing in Britain is still no more than £15 million a year—very small by comparison with the American figure. But bankers watch long-term trends. Some of the remarks by Mr. Bellamy, in his article in the *Guardian*, could be interpreted as a warning to financial institutions with which hire-purchase finance houses compete. "The functions of finance houses are similar to those of banks and building societies, and finance houses may be consulted in the same way as these institutions." He adds: "The vast majority of hirers who successfully complete transactions with one company should be encouraged to regard it as *their* finance house—in the same way as they think of *their* bank or *their* insurance company—to whom they may look for their instalment credit needs in the future." The financial institutions are competing for the custom of individuals and firms requiring credit. It is not difficult to visualise circumstances in which such competition would embarrass the authorities. The technique of credit control has been strengthened in recent years, but it is less flexible in hire-purchase business than in ordinary banking business, and leasing presents new problems.

Current News and Comment

Insuring Export Risks

Export risks insurance is a relatively new idea all over the world, but it is beginning to play a significant rôle in the promotion of international trade. India's Export Risks Insurance Corporation, which is still in its infancy, has made good progress during the short span of its existence of a little over six years and its recent results have been particularly gratifying. The policies issued during the first 11 months of the current year alone show a rise of 85 percent over the base of 1961; the risk values underwritten have risen by 171 percent and the premium income has gone up by about 93 percent. Bank finance availed of by exporters through the agency of the Corporation has increased by nearly 254 percent. What is more, the average premium rate has gone down to less than a quarter of 1 percent. In his welcome address at the symposium on "Export Risks Insurance and Export Finance" held in Bombay last week under the auspices of the Export Risks Insurance Corporation, the chairman, Mr. Ramnath A. Podar, said that by the end of the current year, the E. R. I. C. will have underwritten risks amounting to Rs. 30 crores, against Rs. 20.69 crores in 1962 and Rs. 12.01 crores in 1961, and that this figure could be expected to rise to Rs. 50 crores in 1964 and to Rs. 80 crores to Rs. 100 crores in 1965. Mr. Podar added that these targets might look very ambitious, but he assured the audience that the Corporation was determined to intensify its efforts to achieve them.

The Export Risks Insurance Corporation has devised a wide range of policies—shipments policy, contracts policy, packing credit policy, manufacturers' credit policy, exporters' credit policy and market development policy—to suit the varying requirements of exporters. The Corporation provides a cover for commercial and political risks and also enables exporters to secure finance both at the pre-shipment and post-shipment stages. The credit insurance facilities offered by the E. R. I. C., according to its managing director, Dr. S. P. Chablani, are in line with the standards of the leading credit insurers in the world—the E. C. G. D. in the U. K., Hermes in West Germany, Coface in France and the M. I. T. I. in Japan. It is true that the E. R. I. C. covers hardly 4 percent of India's exports, but if allowance is made for exports made under irrevocable credits opened in banks by foreign buyers and exports made on a consignment basis which do not need to be insured, the E. R. I. C.'s coverage, in terms of insurable risks, should be something like 15 percent of the real risky exports. The performance compares well with that of its counterpart organisations of the same age. The Corporation, says Dr. Chablani, is by no means content with its progress, and is determined to carry the gospel of "export with safety" to every exporter who must be made to understand that the security provided by the E. R. I. C. cover is essential for the success of his ventures. The Corporation has built a library of credit information on as many as 15,000 buyers which is of great help to the exporter in having an insight into the standing and creditworthiness of his overseas buyers.

The growing consciousness among exporters of the usefulness of the various facilities offered by the Export Risks Insurance Corporation, is an encouraging sign. That the E. R. I. C. has an increasingly important rôle to play in the task of export promotion is widely recognised. Participating in the symposium, Mr. C. N. Vakil said that the gap between the international price and

India's Resources
are Precious
WASTE NOT,
WANT NOT

the domestic cost of production could be met by giving various facilities to exporters which included, among other things, credit facilities. Export risks insurance help the exporter to improve his financial standing *vis-à-vis* his bankers. The E. R. I. C.'s policies are assignable to banks. This enables the exporter to enlarge his business without unduly straining his financial resources. Mr. Vakil was, however, quick to add that the high cost structure of indigenous industries could not be underwritten. He also emphasised the need for gearing domestic production to suit changing overseas demand. Another speaker, Mr. P. A. Narielwala, urged the Corporation to set up more branch offices, particularly at the port towns like Cochin, with a view to establishing a closer contact with the export trade. He said that at times foreign buyers asked for credit terms, especially on durable goods, up to three years. Indian exporters will need to provide these facilities and this could be done with export credit aid.

The third participant in the symposium, Mr. N. M. Choksi, managing director of the Bank of Baroda, said that while fixing their approved credit lines for various buyers, the E. R. I. C. should provide for a fair amount of latitude to Indian exporters when covering risks. Reasonable excesses in credit limits for buyers, if allowed, would prove greatly advantageous to exporters and should be considered by the Corporation in the light of its experience. He also urged the Corporation to speed up the settlement of claims because the delay in realising claims from the E. R. I. C. causes an avoidable strain on the resources of the exporters. Mr. Choksi said that like the E. C. G. D. in the U. K., the E. R. I. C. should effect settlement of claims at the rate of exchange prevailing on the date of contract or of shipment. It could also extend additional assistance by issuing special policies in favour of banks to cover clean advances which they might be asked to make to finance "export deficits".

In his inaugural speech, the Central Minister for International Trade, Mr. Manubhai Shah, spoke about the export consciousness and the climate of export promotion in the country—the essential prerequisites for launching a vigorous export drive. World opinion was also now in favour of allowing the developing countries to expand their trade by gradually dismantling tariff walls and removing non-tariff barriers. Of course, the success of export drive will depend primarily on an integrated policy for stepping up domestic production, increase in productivity, quality of products and progressive marketing techniques. Quality is perhaps most essential in a buyers' market. Mr. Manubhai Shah referred to the rôle of incentives in export promotion and said that there was no country in the world which did not offer incentives in one form or another. Government assistance to exporters was legitimate and economically justified because international prices had no relation to local costs of production.

He assured the trade that the Government was willing to underwrite any worthwhile export proposition. Export contracts would not be allowed to remain unfulfilled for want of finance or materials. The Minister emphasised the need for market research commodity surveys in overseas markets. The recently created market development fund could help in this direction. He urged educational institutions to establish a faculty for foreign trade. Mr. Manubhai Shah declared that the Government agreed in principle that the interest rates on export credit should be much lower than the rates for internal credit. He pointed out that a sub-committee would soon be appointed for examining the possibility of making export credit cheaper. The Minister stated that the E. R. I. C. would be transformed into an Export Credit and Guarantee Corporation by 15th January, 1964. The E. C. G. C. will fill the various gaps in the system of export credit; it will offer facilities which will make available more credit for the exporter to enable him to boost the export trade. The country will indeed have to make a desperate effort to be able to step up exports from the present Rs. 750-crore level to Rs. 1,400 crores by the end of the fourth plan.

HOW SHALIMAR WORKS ? ...No. 4

Being a season of goodwill we temporarily call a halt to our Dynamic Contribution to Industry and on behalf of Me and My Mates in the Works (and that lot up in the Office) we wish you, Our Customers, a very prosperous New Year. I'll be back at work again next month. See you then.

West German Aid for India

Addressing a Press conference on the eve of his departure after a two-week visit to India, the West German Minister for Economic Co-operation, Mr. Walter Scheel, said that India enjoyed a "special position" in his country's "development aid policy" Of the total 6,782 million deutschemarks granted by West Germany for capital aid up to 30th June, 1963, India's share stood as high as 29.6 percent at 2,045 million deutschemarks—and India has received 66.7 million deutschemarks out of total 735 million deutschemarks sanctioned for technical assistance. This is not all because West Germany has also been indirectly rendering substantial help by contributing substantial credits to international organisations like the World Bank, I.D.A., I.F.C., E.P.T.A. and the Special Fund

Mr. Scheel said that in the field of development aid, his Government aimed at increased participation in industrial ventures by German private enterprise. He expected interesting "development impulses" to arise from private investments, and, apart from this, the West German Government's budget for development aid had been exhausted. In order to encourage and further extend private investments, Bonn had developed a set of guiding principles. One of them was a guarantee by which up to 90 percent of the amount invested could, under certain circumstances, be insured against political risks. Besides, the German Development Corporation was doing its best in this direction. Mr. Scheel hoped that the flow of private investments from West Germany into India would increase with the guarantee agreement between the two countries on the safety of such investments and the tax incentives sought to be given by his Government for German private investments in developing countries. But he was quick to add that the most important prerequisite for private investments was a favourable economic climate in the developing countries. Such good experience as private capital has so far had was not sufficient to remove the foreign investor's understandable fear of discrimination and expropriation.

The West German Minister, however, seemed satisfied with the official attitude in New Delhi and it was pleasing to hear that the fiscal measures in India did not inhibit the inflow of capital. "Taxes are high all over the world", said Mr. Scheel. He emphasised the importance of promoting the foreign trade of the developing countries by a concentrated application of all possible development measures, in particular through capital aid and technical assistance. These measures, added Mr Scheel, should be applied within the framework of commercial aid to reach a structural balance, that is, all developing countries must become importers and exporters of raw materials and industrial products at the same time. Commercial aid must prevent a trend leading to the necessity of granting more and more capital aid to remove the increasing deficits in the balance of payments.

Mr. Scheel predicted a continuing shortage of food in developing countries during the coming years because of the continuing growth of population. Food supplies would have to be given on a long-term basis. But Mr. Scheel cautioned that food aid should not hamper expansion of agricultural production in developing countries. On the contrary, food aid should help to set free forces for further expansion and intensification of agricultural production. Production aids are better than a continuous supply of cereals. Between 1957 and 1963, the Government of India has sanctioned 1,560 foreign collaboration agreements out of which 210 have been with Germans. Mr. Scheel expressed the hope that scores of large and medium private firms would come forth for financial and technical collaboration with their counterparts in India provided of course, the investment climate continues to remain favourable.

Better Outlook for Goatskin Exports

Raw goatskin exporters are having a busy time. In spite of the virtual suspension of business for some six weeks following the ill-advised ban on the export of raw goatskins of 36 inches and above, shippers seem confident of improving on their previous year's performance. Business put through over the past few months is reported to have been very large. What is more, the prices realised have been substantially higher than in the past. The prices of raw goatskins which had slumped from Rs. 575 to Rs. 350 (for 100 pieces) following the imposition of the ban on the export of large-sized skins have soared to an all-time high of Rs. 775. But as the year draws to a close, a feeling of uneasiness is beginning to prevail among exporters. It is not that the shippers expect any setback in overseas demand, but they are not certain whether the current policy which expires on 31st December will be continued during 1964. There are quite a few who fear that the Government might once again, wittingly or unwittingly, play into the hands of certain vested interests who persuaded it to ban the export of raw goatskins measuring 36 inches and above; fortunately, the ban was withdrawn after about six weeks following strong protests not only from the export trade, but also from overseas buyers.

At a time when the Central Government has launched a big "export offensive", any kind of restriction on the export of raw goatskins is completely unjustified. Few will quarrel with the basic philosophy behind the Government's policy of progressively transforming exports from raw hides and skins into tanned leather and leather manufactures in order to create additional employment in the tanning industry at home and increasing the country's foreign exchange earnings. But the supply position of goatskins is so very comfortable that even after meeting all the requirements of the home market for raw and tanned material, a large surplus remains. India has the largest goat livestock in the world figuring over 80 million. The total production of raw goatskins in the country at present is estimated at between 45 million and 50 million pieces. The total absorption by tanners amounts to 16 million pieces—12 million southerns and Deccans and about 4 million northerns—leaving a surplus of well over 29 million pieces. Raw goatskin exports in 1962 totalled 16.7 million pieces, leaving a new surplus of 12.3 million pieces for any additional demand for tanners. Of the 16.7 million pieces of raw goatskins exported in 1962, 11.7 million pieces were from northern and north-eastern regions shipped from Calcutta and 5 million from central and western regions exported through Bombay.

In view of the extremely comfortable supply position, the indigenous tanning industry has not experienced any difficulty in securing raw skins. A sizable surplus of raw skins has always existed and it has not been possible for the tanning industry to make use of the surplus profitably. The tanned skins industry has its limitations, both from the point of view of capacity and technical ability. The tanning industry's claim that restrictions on raw skins exports, particularly those of large sizes, will enable it to step up the export of tanned products which can fetch higher prices, cannot be substantiated by factual data. The tanned industry's export performance over the past four years during which the export quota for raw goatskins has been progressively reduced from 100 percent to 60 percent of the best year's performance, has been far from encouraging. In spite of the liberal incentives under which exporters of tanned goatskins are allowed to import chemicals and certain scarce commodities up to 75 percent of their export earnings, tanned goatskin exports between 1959-60 and 1962-63 have not registered any improvement, and have fluctuated between Rs. 9.28 crores and Rs. 8.11 crores.

Against this, earnings from the exports of raw goatskins have been fairly well maintained in spite of the substantial fall in the export quota. Raw goatskin exports fetched Rs. 9.58 crores in 1932-63 against Rs. 7.62 crores in 1961-62. Rs. 9.14 crores in 1960-61 and Rs. 10.69 crores in 1959-60. Export earnings from tanned goatskins in the past four years 1962-63 to 1959-60, were Rs. 8.17 crores, Rs. 9.23 crores, Rs. 8.11 crores and Rs. 9.22 crores, respectively. That earnings from raw skin exports should have been well maintained in spite of the quota reductions shows that the overseas buyers have been paying steadily higher prices for Indian raw goatskins In spite of liberal export incentives and increasing restrictions of raw skin export the tanning industry has miserably failed in the achievement of export targets. The export target for tanned hides and skins for 1961-62 has been set at Rs. 29 crores, and the actual achievement was only Rs. 23.31 crores. The target for 1962-63 was fixed at Rs. 30 crores, but earnings totalled only Rs. 21.08 crores.

Few will question the need for developing the local tanning and finishing industry for goatskins. But restrictions on export should be based on a careful objective assessment of the availability of raw goatskins, the differences in their qualities, the actual requirements of the tanning industry and its capacity to absorb additional supplies. Since nearly 70 percent of the raw skin export consists of large size, 36 inches and above, restriction on the exports of these varieties virtually amounts to a ban on raw skin exports.

The U.S.A. and Russia, the main importers of goatskins, together lift about 80 percent of Indian skins. Both are interested primarily in raw and wet-salted skins. Their requirements are confined almost exclusively to large-sized skins, measuring 36 inches and above; they reluctantly lift smaller sizes only as a part of package deals. In any event, restrictions on raw goatskin exports are quite unjustified as long as there is a net surplus available. The Government will be well-advised in consulting the representatives of both the tanning industry and raw skin exporters before formulating its export policy.

E.C.A.F.E. Discussion on Population

Inaugurating the ten-day Asian Population Conference organised by the E.C.A.F.E. in New Delhi last week, Mr. Nehru pleaded for bringing

about a balance among the demographic, economic and social factors for accelerating economic growth. As was pointed out by Mr. Gulzarilal Nanda, the small rise of 18 percent in India's *per capita* income in the first two plan periods was due to the fact that the national income over this period increased by nearly 42 percent, while the country's population increased by 21½ percent. In the first two years of the third plan, the rate of economic growth at 2¼ to 2½ percent a year has been about the same as the rise rate in the country's population which has prevented an increase in the *per capita* income, in fact, *per capita* income has actually declined marginally, But this problem of unbalance between population increase and economic development is not only peculiar to India. All the countries in the E.C.A.F.E. region suffer from it in varying degrees.

The Executive Secretary, Mr. U. Nyun, told the conference that the *E.C.A.F.E.* region, had only one-sixth of the world's land area, but half the world's population: moreover, the rate of population increase in nearly one-third of the region has been as high as 2½ to 3½ percent a year during the past decade. If an investment of 4 percent of the country's national income has to be made every year in order to maintain the existing standards of living, when the population is increasing at the rate of 1 percent a year, the annual investment rate in these countries should have been greater than 10 to 14 percent of national income in order to increase the standard of living. But actually the annual rate of investment in most of the countries in this region has been much smaller. The inadequate investment rate poses many serious problems.

One of the main reasons for this unbalance is that while the death rate in these countries has fallen, the birth rate has not declined. In the case of the developed countries of the West, the death rate has declined, but the birth rate has also declined. The economically underdeveloped countries of Asia have, therefore, to concentrate their efforts on reducing the birth rate. But

NOTICE

There will be no issue of CAPITAL on 26th December, 1963, as the markets will be closed for the Christmas holidays. The first issue of the New Year will be published on Thursday, 2nd January, 1964.

family family planning is not quite as easy as might appear, due primarily to the poor response of the people to family planning schemes and the lack of practical, easily available and cheap methods. In fact, in spite of best efforts, the family planning programme in the third plan has not made much progress. The E.C.A.F.E. conference, in addition to discussing the methods of identifying, selecting and integrating economic, social and demographic policies into development programmes, should have discussed ways and means of making family planning programmes in the developing countries more effective. It is now being more clearly realised that unless the population increase is effectively controlled, the developing countries would scarcely be in a position to provide employment to all the new entrants to the labour force, or to increase the per capita availability of foodgrains and other consumer goods, on which the people's welfare so vitally depends.

Esso Exhibition in Calcutta

Esso Standard Eastern has organised an exhibition at Park Circus Maidan, Calcutta, showing the Company's rôle in earning and saving foreign exchange. The exhibition shows that the object has been achieved in three different ways, firstly, by exporting products surplus to India's requirements, secondly by manufacturing products which were hitherto imported and thirdly, by buying more goods and services in India. Nearly 500 items made indigenously for the Company's use are displayed at the exhibition. Over 50 manufacturers who are helping Esso in saving foreign exchange by manufacturing various products locally are participating in the exhibition. The interesting items include a mdoel of Esso's refinery in Bombay, an asphalt drum conveyor system and a can filling machine. There is also an exhibit about sand-dune stabilisation, a pilot project on which has recently been launched in Rameshwaram. There is a separate stall which shows the items still being imported. The organisers appropriately describe it as the Rs. 1.67-crore challenge to Indian manufacturers, since the indigenous production of those items will save that much money in foreign exchange.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity increased by 9.7 points during April 1963. There were rises in tea, jute, yarn, coal, bicycles, electricity and railway tonne-kilometres. Sugar, cloth, cement, pig iron, finished steel, paper, tyres and motor-cars declined.

INDIA AND SUGAR CONVENTION

NOW that the export bounties and the cartel bounties are supposed to be no longer existent, and the countervailing duties on this side have been remitted—in such a breathless hurry—on all beet sugar produced after 31st August 1903, in countires that have ratified the convention, it is a question of serious import how the sugar industry in India is likely to stand affected. Our Government, it is understood, had decided to maintain the duties until the 31st March 1904, and then to reconsider the position but other counsel prevailed and the Secretary of State said "no" Is this then an indication of a price Britain has agreed to pay for the renewal of the commercial treaty wtih Germany? Some are of opinion that Britain came under an obligation of some kind or another as regards India in connection with the sugar convention, the extent and nature of which have not transpired in this country. If any such undertaking was given it has apparently been *sub rosa*, for, as far as we are aware, nothing of the kind has ever been published. We know that from England was wrung—through fear of the labours of the conference being brought to nought—a promise not to adopt a preferential tariff in favour of any of her Colonies producing cane sugar, and notably in respect of the customs duty should any increase of the present rate be found necessary. We cannot see, however, that such proviso applies to India at all, nor that it justifies the role, which we are apparently expected to assume under the new regime. It has always been understood that India had the opinion of joining the convention or standing entirely clear. In fact, in a summary of the provisions of the convention before us, it is stated: "A few additional classes are added in the final protocol, of which the chief are ..... (c) that the British Colonies and India may have the opinion of joining the union." India then is placed in a very anomalous position; she has not subscribed to the convention, but by order of the Secretary of State is being held bound by it, and it looks almost as if we were to be deprived of advantages that as a contracting party we would be entitled to.

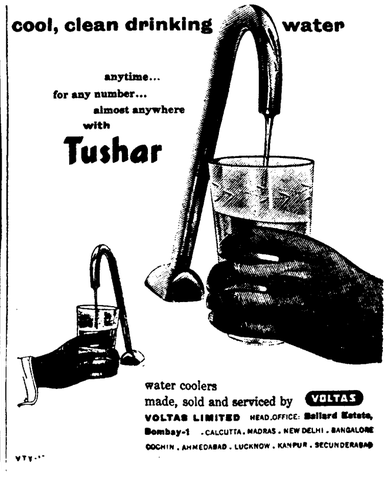
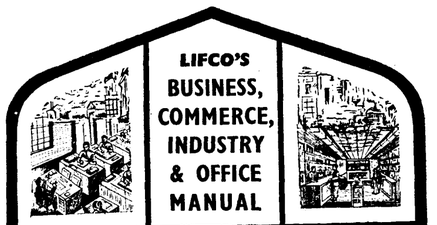
A Ditcher's Diary

THIS COUNTRY'S REACTION TO THE REPORTED POSSIbility of the U.S. Seventh Fleet cruising in the Indian Ocean, which Dr. Soekarno calls by another name anyway, seems to me more traumatic than political. Mr. Nehru may be a little more forthcoming on the subject later today than he was on Tuesday; but if the U. S. decision is to impress a thing or two on Pakistan, as it has been interpreted in the U. S. A., it is difficult to understand why New Delhi should not be pleased about it. The reason, I suppose, is that the slightest physical proximity to India of the Western military arm, if manned, seems a threat to the country's non-alignment. These fears, I suggest, would have been appropriate a couple of centuries ago, when the West was conquering the world, or a few years ago, when the late Mr. Dulles was seeking alliances against international communism. If anything, the West is now so busy disengaging itself that, I imagine, even willing entrants to alliances may have to wait a long while in a long queue. Because I think non-alignment the correct policy for India, I think we can now afford to be less touchy or nervous about it. Think of the ordinary American citizen, not "overly" informed and rather literal-minded. He hears that India passionately wants modern supersonic aircraft from his country; and then he hears that even the suggestion of the U. S. Seventh Fleet approaching not India but the Indian Ocean is greeted in New Delhi with so obvious a lack of enthusiasm as to amount to disapproval. International relations are not always reducible to personal terms; but think of a man who has borrowed a great deal from you, has received gifts from you and expects more, and then he lets it be known that if by any chance you dropped in for a cup of tea you would most certainly not be welcome. Indo-U. S. relations have improved a lot over the years; but there are still far too many pockets of suspicion in both India and the U. S. A.; and it is simply not fair to blame the Americans for it all. I am looking forward to Mr. Nehru's statement today which should be communicative and careful and, at once, gracious.



I LIKE THE INDIAN ELECTORATE AS MUCH FOR ITS wisdom in electing, generally, workable majorities as for, occasionally, springing surprises. For Mr. Nehru to the surprise was added pain when the Congress got just one seat in the former Portuguese territories and none at all in the main area, Goa. It does the ruling Party, prone everywhere to complacency, no harm at all to receive periodic shocks; the Congress will do well to ponder over its Goa reverses more deeply than is its usual habit. Yet I cannot help feeling that Mr. Nehru may be right in refusing to merge Goa immediately with either Maharashtra or Mysore. If voting was on communal lines, as Mr. Nehru has argued without everybody agreeing with him, I suggest recognition of the reality that communalism exists in India. The majority community is no more above communalism than the minorities and with less justification than the latter. The fact is that Goa has a fairly large Roman Catholic population; some say it is 40 percent and others put it at 48; and there seems little doubt that the Maharashtrawadi Gomantak is dominated by Hindus, as is the Indian National Congress. Telling such truths was once rightly unpopular, because the British could take advantage of these divisions. There is no need for equivocation now. India's religious minorities are in general treated better than in most countries This is not to say that they are entirely unjustified in fearing a particular brand of Hinduism which seeks, every now and again, militant self-assertion at the expense of others. When the Indian troops liberated Goa two years ago the people there were given certain promises. The whole world heard them and breaches thereof will be looked at critically, whatever the verdict of Goa's first election. Undemocratic? Perhaps. But I am by no means sure that the election was fought exclusively on this question. After emotions have settled down, a referendum may provide an answer. After Maharashtra has scrapped Prohibition, I may be prepared to reconsider the question! So may Goans.



BY NOW, PROBABLY MOST OF OUR READERS ARE aware that this year *Capital* is commemorating its seventy-fifth birthday. The seventy-fifth anniversary number we are bringing out to mark the occasion, we are sure you will agree, is entirely in keeping with what we always try to be: serious, conservative, well-informed, reliable and moderately priced. Another anniversary this year is that of *Vogue*, the London fashion magazine, and the publication which marks its seventieth birthday, apart from being lavish, flamboyant and colourful, costs the sterling equivalent of Rs. 72.50. So you see, it all depends on what image you want to maintain. In fact, of course, *Capital* and *Vogue* have more in common than you might think. We are both subject to the inexorable laws of newspaper economics, for one thing, and that cannot help but evoke a spirit of comradeship in these hard times. In its own field, *Vogue* is every bit as purposeful and high-minded as we always try to be. And, again in our respective fields, we can both claim the sincere compliment of persistent imitation. Adding the coincidence that *Capital*, although only for a short time, once employed an assistant editor who had previously filled a similar post on *Vogue*, it is no exaggeration to say that we are practically related. Personally I have always had the highest respect for the sheer professionalism which goes into *Vogue's* production and the genuine efforts it makes to improve the tastes of its readers. If, unlike *Capital*, it pursues its objective with rather more gloss and glitter, that is surely in the nature of the world with which it has to deal. Its snobbery, too, is something we really do not have in common. But otherwise we are both in business to promote business, and in this way we each make our individual contributions to the economies in which we work. I shall enjoy reading *The World of Vogue* if I get hold of a copy, and especially shall I be interested in the pictures. Not necessarily the fashions: it seems to me that modern western *haute couture* has fallen into the hands of people who really deplore the female sex and do their best to denigrate it. But the sight of all those beautiful girl models is always a joy; and it makes such a welcome change from the kind of figures we in *Capital* have to deal with.

KENYA HAS BEEN FREE A WHOLE WEEK AND ZANZIBAR all of nine days; and everyone seems mildly surprised that there has been remarkably little trouble. It is altogether too soon to uncross our fingers; there are not many successful multi-racial societies in the whole big world; and Kenya and Zanzibar have difficulties that are peculiarly theirs. Let it be on record that, so far, Mr. Jomo Kenyatta has behaved with impeccable statesmanship at least as far as the white settlers and Asians are concerned. They make up the economy of Kenya and those that have remained must be prepared to accept changes that will inevitably follow. If, however, there is excessive haste in Africanisation, permanent damage will be done to the economy. Mr. Jomo Kenyatta's prime source of worry may well be the smaller tribes; some of these follow K.A.D.U. and others, such as the Somali look altogether to another sovereign country, Somalia. Much has been said about the arbitrariness of most African frontiers: they really are absurdly destitute of all logical criteria It is remarkable still how reluctant most African leaders are to readjust boundaries; and, when they do want it, it is really expansion in the name of rationalisation. Somalia would like to have the Northern Territories from Kenya and Ogaden from Ethiopia; Ghana would like a bit of Togo, if not all of it. Africa is so big, although it has some of the most pint-sized States of the world, that its problems are bound to be big too. Apart from expansionism, the other thing to watch is the growth, or otherwise, of liberalism. On this point Ghana last week set the worst possible example; its President, Dr. Nkrumah, sacked the Chief Justice because he had refused to find

LIFCO'S
BUSINESS, COMMERCE, INDUSTRY & OFFICE MANUAL

A practical guide to working of shops, offices, mills, factories, etc. of the public and private sectors

Introduction — Office Structure — Office Employees — Office Services — Office Equipment — Letter-Writer — Office Note & Precis-Writing — Letters of Counsel — Enactments Concerning Managements and Labour — Hints on Style, Spelling, Usage & Pronunciation — Model Forms, Orders, Documents, etc. — Ready Reckoner & Conversion Tables — Hints on Central Sales Tax, Income-Tax & Excise Duty — Judicial Decisions — Index — etc., etc.

To every employer and employee the book will prove a mine of extraordinary information intelligently presented.

10" x 6½": Profusely illustrated: 960 Pages: Price Rs. 30
By Regd. Post Rs. 32·75 — No V. P. P.

"This useful omnibus volume beautifully rexine cloth-bound is a veritable mine of information for all those who are somebody in any office, business organisation or industry....."

guilty two ex-Ministers, ex-friends of the President. India's own judicial record has not improved since independence; but nothing so outrageous has happened here yet. Free from British rule since 1956, Ghana has now no freedom left. (The routine contradiction from the Ghana High Commission in New Delhi will be published when received.)

SPECULATION ABOUT WHAT THE WORLD OF THE future is going to be like is something that never ceases to be interesting. Which may account for my dedication to science fiction, but certainly explains why to me the present is tolerable at all. Take, for example, the fact that I have just had to write off my third shirt this month. The reason? The *dhobi*, of course. Sack him? There would be no point, for his successor would probably be worse. But not, I am sure, if it were to be an ultrasonic, soapless washing machine such as we are promised will be the vogue in 1988. That is according to Mr. Sebastian de Ferranti, and he ought to know, being the head of a major group of electronic companies. Mr de Ferranti has delivered this year's Keith lecture to the Royal Scottish Society of Arts in Edinburgh, and some of the developments he foreshadows make one's mouth water. Not the colour television sets which can be hung on the walls like pictures, although if, as Mr. de Ferranti predicts, newspapers will soon be transmitted on television channels and printed in the home, then that would be some consolation. But think of the electricity produced by the nuclear burning of hydrogen nuclei to helium which would be so cheap "it would not be worth while metering consumption". (I am sure somebody would think of taxing it, though.) And the "solid-state" device which would replace the electric lamp and "last the life of the house"? And along with "instant" newspapers, instant letters which would "come out of a machine in our offices the moment they are written". What a blessing that would be. Thus all I have to do to be free of the dual tyranny of my *dhobi* and the Calcutta postal authorities is to wait another 25 years. The prospect is a hopeful one. But by then we should have some of the things which that remarkable visionary Dr. Barnes Wallis (he invented the "bouncing" bomb, among other things) has been promising us too. Such as nuclear powered merchant submarines, which would presumably put Calcutta port out of business once for all, and aircraft flying at five times the speed of sound between Europe and Australia without refuelling, which would not do Dum Dum any good either. Yes, it is all very exciting. But I wonder how many shirts I shall have had to write off by then.

AS THIS IS THE LAST ISSUE OF *Capital* FOR 1963, I shall take the opportunity of thanking the many readers in India and abroad who have contributed so generously to the Christmas Toy Fund this year. The computation on an earlier page shows that the total in the Fund comes to Rs. 4,295.19 so far. It is gratifyingly better than the Rs. 3,868.20 we collected in 1962, but that of course was a poor year because of the sudden crop of competing calls on one's charity just after the Chinese invasion. I am disappointed, still, that the 1963 figure falls short of the total of Rs. 4,639.50 for 1961, so I should hasten to point out that the Fund has not yet closed for the year; there are still a few more days to go before Christmas, and we shall be glad to receive cheques, cash or toys as soon as you may care to send them. To those who have already sent their contributions, I can only express gratitude on behalf of the thousands of poor children into whose unfortunate lives they will be bringing a ray of happiness on Christmas morning. To others who intended to contribute to the Fund, but may perhaps have forgotten in the midst of their other pressing preoccupations, I would say: "Please send your gifts urgently, for there is still time; the sooner you send them, the surer we shall be of getting the toys to the children punctually." I hardly need add that the donations should be addressed to *Capital* Christmas Toy Fund, 5, Mission Row, Calcutta-1.

THE DITCHER

Guide for Investors

BETTER WORKING RESULTS FROM SCINDIA STEAM

COMMENTING on the improved results of the Scindia Steam Navigation Co. Ltd in his chairman's statement at the annual general meeting of the Company held in Bombay this week, Mr. Dharamsey M. Khatau said that the Company's performance had improved due to the rationalisation of the fleet and services. (A summary of the speech is printed on a later page in this week's issue of *Capital*). There has also been an upward revision of the freight rates. The increase in freights had long been overdue since they had remained steady at the same level since 1957. As for employing tramps to carry cargo now being transported by liners, Mr. Khatau felt that the move had resulted in wasteful competition. There is no point in competing with liners for the same cargo. The step, the chairman said, may hinder Indian shipping in international routes.

Referring to the one-man commission to review coastal freights, Mr. Khatau hoped that it would increase the rates to provide an adequate return on capital employed. Coastal vessels, he said, do not always get sufficient cargoes. So it is hoped that the Government will take steps to ensure that the vessels are fully employed. The Indian ships, which are operating along the coast, should be given a substantial part of the coal cargo over which the Government has control. Mr. Khatau suggested that an appropriate body like the Tariff Commission should be set up to fix freight rates after examining the operating costs. The latter have considerably increased due to bigger benefits given to dock labour under various awards and higher port charges.

The chairman took a fairly optimistic view of the prospects due to the recent spurt in the international freight market. He also hoped that the coastal freight rates would be raised in due course. As for the Konkan services, the amount of subsidy in lieu of the 8-percent increase in fares due from the Government has not yet been received. Since no agreement could be reached with the Maharashtra Government concerning the payment of its dues the Company did not resume these services from 1st September, 1963. They were resumed from 11th October, 1963, when the Maharashtra Government paid Rs. 4 lakhs on account. The chairman hoped that prompt measures would be taken by the committee to resolve the dispute with the Government. Meantime, the Company has taken steps to acquire new vessels which are expected to be ready in the near future.

J. K. Synthetics Resumes Dividend

J. K. SYNTHETICS Ltd has declared a taxable ordinary dividend of 10 percent, including an interim of 5 percent, for the year ended June 1963. The dividend was passed for 1961-62. At the present price of Rs. 12.87 a share of Rs. 10 each, the yield works out to 7.7 percent. Sales rose from Rs. 25.50 lakhs to Rs. 1.44 crores, but the working was interrupted by an acute shortage of raw materials. The directors say that the Company's application for an industrial licence to set up its own plant for producing caprolectum, which is an essential raw material, has not yet been sanctioned by the Government. It is relevant to mention that 1962-63 has been the first year during which the Company's plant worked fully. Steps have been taken to manufacture high tensile yarn for defence purposes, and a braiding plant has been installed to execute defence orders. Fixed assets have been raised by Rs. 20.84 lakhs. Further orders, amounting to Rs. 28 lakhs, have been placed for plant and equipment.

The profit has amounted to Rs. 26.31 lakhs for 1962-63, after providing Rs. 11.87 lakhs (against Rs. 15.68 lakhs) for depreciation and Rs. 20 lakhs for development rebate. The Company incurred a loss of Rs. 9.94 lakhs for 1961-62. General reserve is allocated Rs. 4 lakhs and dividends declared absorb Rs. 12.50 lakhs. The carry-forward is Rs. 30,393.

Birla Sugar Mill Group Results

THE reports of the Birla group of sugar mills for the year ended June 1963 have been published. Production has declined, except for New India Sugar, due to the shortage of cane supplies, although recovery has improved. As a result, the profit has dropped all-round. The directors say that the excise duty rebate sanctioned by the Government to stimulate production during the current season may benefit the factories only marginally. They think that the price of sugar fixed by the Government will not be sufficient to cover the rising production costs and the increased price of sugarcane.

The Bharat Sugar Mills Ltd has made a profit of Rs. 5.98 lakhs, against Rs. 6.89 lakhs for 1961-62, after transferring Rs. 62,858 (against Rs. 96,471) to depreciation. A taxable ordinary dividend of 15 percent has been maintained. The yield amounts to 9.4 percent at the present price of Rs. 16 a share of Rs. 10 each. Taxation reserve absorbs Rs. 4.40 lakhs, contingency reserve Rs. 19,768 (against Rs. 6,562) and dividend reserve Rs. 2.50 lakhs. The dividends declared will be paid out of the last mentioned reserve. The carry-forward is Rs. 9,429, against Rs. 20,705 brought in. The cane crush declined from 116,566 tons to 57,608 tons, but recovery improved from 9.58 percent to 9.94 percent. During the current 1963-64 season, the cane crush should amount to 68,000 tons. The Company's farms produced 1,217 tons of cane. About 2,050 tons of cane are expected to be produced during the current season.

The profit of Gobind Sugar Mills Ltd has declined from Rs. 7.43 lakhs to Rs. 5.7 lakhs, after providing Rs. 2.80 lakhs (against Rs. 2.95 lakhs) for depreciation and Rs. 31,000 (against Rs. 6,000) for development rebate reserve. The taxable ordinary dividend of 20 percent has been maintained and will be paid out of dividend reserve which is allocated Rs. 1.50 lakhs. The yield works out to 19.04 percent at the present price of Rs. 10.50 a share of Rs. 10 each. Taxation reserve absorbs Rs. 3.70 lakhs, renewal reserve Rs. 50,000 and contingency reserve Rs. 33,417 (against Rs. 1,075). The carry-forward is Rs. 3,093, against Rs. 19,428 brought in. The cane crush declined from 151,958 tons to 144,339 tons, but the recovery rose from 9.64 percent to 10.38 percent. The smaller crush has been due to restrictions imposed by the Government on sugar production and also because of insufficient rainfall. There has also been diversion of cane to the manufacture of *gur* and *khandsari*. The cane crush is expected to be about 130,600 tons during the current season.

The New India Sugar Mills Ltd has maintained the taxable ordinary dividend at 36.5 percent. At the present price of Rs. 31 a share of Rs. 10 each, the yield amounts to 11.77 percent. The profit has improved from Rs. 8.16 lakhs to Rs. 10.75 lakhs after transferring Rs. 2.22 lakhs (against Rs. 2.54 lakhs) to depreciation and Rs. 16,844 (against Rs. 8,119) to development rebate reserve. General reserve is allocated Rs. 19,877, taxation reserve Rs. 6 lakhs, special reserve Rs. 25,000, contingency reserve Rs. 28,841 (against Rs. 7,200) and renewals reserve Rs. 50,000. Dividend reserve is allocated Rs. 3.49 lakhs. Out of this, the dividends declared will be paid. The carry-forward is Rs. 10,710, against Rs. 7,890 brought in. The cane crush dropped from 197,540 tons to 124,343 tons, although the recovery improved from 9.03 percent to 9.92 percent. The cane crush is expected to be about 112,000 tons during the current season.

Champarun Sugar Skips Again

THE Champarun Sugar Co. Ltd has again passed the dividend for the year ended June 1963. The trading profit has amounted to Rs. 3.67 lakhs. Out of this, depreciation absorbs Rs. 2.12 lakhs (against Rs. 2.27 lakhs) and development rebate reserve Rs. 98,711 (against Rs. 27,820). The debit balance brought in has, therefore, been reduced to Rs. 8.51 lakhs which has been carried forward. Sales rose from Rs. 2.20 crores to Rs. 2.44 crores. The crushing season was very short and the factories worked for only 103 days (against 192 days) at the Barrah unit and for 90 days (against 201 days) at the Chanpatia unit. There was an acute shortage of cane supplies. The working of the Barrah factory was affected by frequent mechanical breakdowns. The Barrah factory had a cane crush of 728,634 quintals (against 1.4 million quintals), but recovery improved from 8.66 percent to 9.48 percent. The Chanpatia factory's crush declined from 1.5 million quintals to 628,971 quintals and recovery rose from 9.03 percent to 10.35 percent.

The directors have undertaken the first phase of the rehabilitation programme to improve the factories' operational efficiency. They are nevertheless worried because the increased sugar price sanctioned for east U. P. and north Bihar is not sufficient to compensate for the rise in the cane price. Attention has been given to develop cane cultivation during the current season.

Anaparai Estates Raises Dividend

DUE to a rise in the profit for the year ended June 1963, the directors of Anaparai Estates Ltd have stepped up the dividend to 15 percent from the previous year's 10 percent. The net profit amounts to Rs. 4,64,370, against Rs. 1,90,802 for the previous year. With the amount of Rs. 5,581 brought forward, the total available for appropriation comes to Rs. 4,69,951. Out of this, the provision for taxation is Rs. 2,54,000 (against Rs. 74,000). The dividend at 15 percent accounts for Rs. 1,81,176, leaving a balance of Rs. 34,775 which is carried forward.

The coffee produced has been valued at Rs. 2.10 a point. The total coffee crop realised for the year amounted to about 500 tons, against 468 tons in the previous year. The points awarded for coffee submitted to the Coffee Pool for the year amounted to 581,955, against 576,959 points awarded originally plus 441.839 bonus points awarded for the previous year. The reduction in basic points awarded for the various grades of coffee continues. It is expected that for the current year's crop also, bonus points may be awarded. The crop for 1963-64 is estimated at 510 tons.

Kirlampudi Sugar Mills Loses

ABNORMALLY low crushing for want of cane and the low price of sugar, mainly contributed to the adverse working results of the Kirlampudi Sugar Mills Ltd during the year ended June 1963. The Company had to face a number of financial problems on account of large payments towards the cane cess, to cane growers and others. The working has, therefore, resulted in a net loss of Rs. 16,12,196, against a net profit of Rs. 30,618 in the previous year, after providing Rs. 3,58,758 for depreciation (against Rs. 3,72,843) and Rs. 33,444 for development rebate (against Rs. 14,720). After deducting from the loss of Rs. 16,12,196, the sum of Rs. 1,40,607 brought forward from the previous

GETS AROUND PIPES AT GLAXO

The pipes at the GLAXO Fine Chemical Factory live through the most exacting conditions with a sense of security. No wonder. THERMOCOLE protects them against temperature variation and moisture—the scourge of all low-temperature piping.

There are many organisations in India that know and use THERMOCOLE for vessel and pipe insulation and GLAXO is one of them.

THERMOCOLE is foamed polystyrene—the lightest rigid insulating material in the Industry. It has a very low thermal conductivity and is resistant to moisture. Available in handy, close-fitting sections, THERMOCOLE is the ideal material for pipe insulation.

The Trade Name—THERMOCOLE is your guarantee of Quality for Expanded Polystyrene

TC. 14-496

year, the balance loss of Rs. 14,71,589 is carried forward.

The Company's factory crushed only 44,534 tonnes of cane during the year, with a recovery of 10.09 percent, compared with 105,147 tonnes in the 1961-62 season with a recovery of 70.02 percent. There is a sum of Rs. 5,58,657 standing to the credit of the debenture sinking fund. As the entire debenture amount has been paid off and the debentures have since been cancelled, the amount of Rs. 5,58,657. the report says, can be transferred to the profit and loss account and reduce the carry-forward loss to Rs. 9,12,932.

The factory has contracted for obtaining cane supplies amounting to about 120,000 tonnes for the current season and has already started crushing since 21st November, 1963. The Central Government has fixed the price of cane at Rs. 53.58 a tonne for this factory, against Rs. 44.60 a tonne in the previous season, with the corresponding increase in the price of sugar from Rs. 109.85 to Rs. 117 a quintal. The directors hope that in view of the increase in the price of cane and the easiness in the price of jaggery, the factory would be able to obtain satisfactory cane supplies and thus produce encouraging results for the current season.

Investment Trust Earns More, Pays the Same

THE working of the Investment of Trust of India Ltd for the year ended September 1963, has resulted in an improved net profit of Rs. 81,075, compared with Rs. 45,035 in the previous year. The dividend is maintained at 6 percent (the same). With the amount of Rs. 14,122 brought forward, the total comes to Rs. 95,197. Out of this, a sum of Rs. 20,000 is transferred to general reserve. The proposed dividend of 6 percent will absorb Rs. 60,000, leaving a balance of Rs. 15,197 which is carried forward.

The directors' report says that during the year, the investment market passed through a difficult period. While the Chinese aggression had its impact on equity values and investment psychology, the defence-oriented Budget for 1963-64 caused a heavy contraction in investment activity. The report adds that introduction of super profits tax impaired the capacity of companies to plough back adequate funds and also to maintain a reasonable dividend, although many established companies with a certain amount of strain, managed to maintain the previous rate of dividend, falling back on past resources. The Company's investment in ordinary shares amounted to 93.9 percent of the total investment, and preference shares and Government prize bonds amounted to 6.1 percent. Industrywise, the distribution of the Company's investments was 30.8 percent in plantations, 26.1 percent in textiles, 13.9 percent in engineering, 7.4 percent in cement, 3.5 percent in banking and insurance, 6.4 percent in sugars and chemicals, 5.5 percent in paper, 2.3 percent in rubber and tyres and 4.1 percent in miscellaneous shares.

Kelvinators Reports Fair Progress

IN their report for the year ended June 1963, the directors of Kelvinators of India Ltd state that the construction of the factory was completed in the first half of the year, and the balance of imported and indigenous machinery was installed. Except for the highly precision machines for compressor manufacture, machines put to use have been functioning satisfactorily and the trial runs on the rest of the machines are in progress. Vital components and raw materials worth Rs. 5.46 lakhs had been ordered, but very necessary consignments needed for the first phase reached the factory around the end of the year and later. Since the close of the year, the Company has been actively engaged in the first phase of refrigerator production. During 1962-63, the factory fabricated 500 cooler assemblies on a contract basis as it was decided to use the idle machine time, but this brought no financial gain to the Company. Its sales during the year amounted to Rs. 1.42 lakhs only The profit and loss account for 1962-63 shows a loss of Rs. 5.01 lakhs, after providing Rs. 1.84 lakhs for depreciation. The provision for depreciation in the preceding year amounted to Rs. 19,637.

Mahindra Ugine Scrip for Mahindra Shareholders

MAHINDRA and Mahindra Ltd has received the Government's sanction for offering privately at par 150,000 equity shares of Rs. 10 each of Mahindra Ugine Steel Co. Ltd to the equity shareholders of Mahindra and Mahindra whose names stand on the register of members as on 31st December, 1963. The Company has also been permitted by the Government to offer additional 50,000 equity shares in the first instance to the staff and workers of Mahindra and Mahindra and of its associate Companies.

The Government has, however, stipulated that these privately offered shares cannot be sold or transferred for a period of one year from the date of allotment. These shares will not be considered as rights issue in the terms of Section 81 of Companies Act. The basis of allotment of shares to the existing shareholders is as follows: 20 shares of Mahindra Ugine for those holding 1 to 200 shares of Mahindra and Mahindra, 50 shares for 201 to 500, 60 for 501 to 1,000, 70 for 1,001 to 2,000, 100 for 2,001 to 3,000, 125 for 3,001 to 5,000, 150 for 50,001 to 10,000 and 175 to 10,000 onwards. The shareholders have, however, been given the option to apply for additional shares.

Kamani Metal Earns More

THE working results of Kamani Metal and Alloys Ltd for the year ended June 1963 show an improvement over the previous year's performance in that both sales and gross profit are higher. But as against an increase of about 26 percent in the sales from Rs. 2.315 crores to Rs. 2.913 crores, the gross profit shows only a modest rise of less than 3 percent from Rs. 34.50 lakhs to Rs. 35.50 lakhs. In spite of the higher profit, the equity dividend has been reduced from 2 percent to 17 percent because of lower disposable surplus following an increase of about Rs. 5 lakhs in the tax provision. After providing Rs. 5.47 lakhs (against Rs. 5.66 lakhs) for depreciation, Rs. 65,000 (against Rs. 50,000) for development rebate reserve, Rs. 19.50 lakhs (against Rs. 14.60 lakhs) for tax reserve and an additional Rs. 1.44 lakhs (against 1.58 lakhs) for taxes for the preceding years, the net profit amounts to Rs. 6.10 lakhs, against Rs. 10.19 lakhs in the previous year. A sum of Rs. 1.80 lakhs (against Rs. 3.70 lakhs) has been set aside for general reserve. Preference dividend absorbs Rs. 92,000 (the same) and equity dividend accounts for Rs. 3.40 lakhs (against Rs. 5.60 lakhs). After making all these appropriations and certain minor adjustments, there remains a sum of Rs. 3,492 to be carried forward, against Rs. 6,046 brought in.

The directors state that the combined production of commercial and industrial quality sheets have remained more or less unchanged. The Company has been successful in manufacturing nickel-silver strips but due to the shortage of foreign exchange to import nickel, bulk production of this item could not be taken up. The Company has embarked on a planned programme of further diversification which would involve a capital investment of Rs. 66 lakhs. The Industrial Finance Corporation has agreed, in principle, to sanction a loan of Rs. 41 lakhs. The balance is to be met out of the Company's internal resources and the new equity capital of Rs. 10 lakhs issued in June 1963. Kamani Metal has acquired a controlling interest in Avineh S. A Tehran. It has also entered into a technical collaboration agreement with the Iranian firm and necessary financial assistance is also being provided. Technical collaboration agreement has been signed with Imperial Metal Industries (Kynoch) Ltd. Birmingham, a subsidiary of I. C. I., for the manufacture of sheets, strips and coils of copper and copper brass alloys.

Paper and Pulp Fares Well

THE Paper and Pulp Conversion Ltd reports encouraging results for the year ended July 1963. Sales are up by about 16.7 percent from Rs. 81.42 lakhs to Rs. 95.06 lakhs and the gross profit has risen by 19 percent from Rs. 9.03 lakhs to Rs. 10.75 lakhs. The dividend has been maintained at 9 percent. After adding Rs. 1.16 lakhs. being excess provision of liability written back. Rs. 1.01 lakhs transferred from contingency reserve and Rs. 23,000 from deferred taxation reserve, the directors have set aside Rs. 4.74 lakhs (against Rs. 4.64 lakhs) for depreciation, Rs. 97,400 (against Rs. 32,000) for development rebate, Rs. 5.71 lakhs (against Rs. 2.63 lakhs) for taxation and Rs. 1.78 lakhs (against nil) for dividend reserve. The proposed dividend is to be paid out of the dividend reserve. The directors state that the rising prices of raw materials, power, fuel, chemicals and enhanced burdens on account of war risks insurance and super profits tax nullified the benefit from Rs. 60 a tonne increase in the selling prices of paper. The machinery division of the Company sold equipment worth Rs. 1.97 lakhs besides manufacturing machinery worth Rs. 6.49 lakhs for the Company's own use. The Central Pulp Mills' project sponsored by the Company, it is said, has gained momentum.

Lower Dividend from Phosphate

THE directors of the Phosphate Co. Ltd take a fairly optimistic view about the Company's working for the current year in view of the possibility of a rise in production. The new continuous superphosphate plant has begun production. The ferro-alum plant is expected to reach the full production capacity in the near future. Meanwhile, the Company has issued 9,000 ordinary shares of Rs. 100 each at par to raise funds for expansion. The ordinary share capital has, therefore, been increased to Rs. 31.5 lakhs divided into shares of Rs. 100 each.

The profit has declined from Rs. 12.48 lakhs for 1961-62 to Rs. 10.49 lakhs for the year ended June 1963, after providing Rs. 4.70 lakhs (against Rs. 1.51 lakhs) for depreciation, Rs. 1.22 lakhs (against Rs. 3.23 lakhs) for development rebate and Rs. 6.50 lakhs (against Rs. 5.70 lakhs) for taxation. The taxable ordinary dividend has been cut from 17.5 percent to 15 percent. At the present price of Rs. 167 a share, the yield amounts to 8.9 percent. General reserve is allocated Rs. 1 lakh (the same) and dividend reserve Rs. 3.38 lakhs. Out of the latter reserve, the declared dividends will be paid. There is a carry-forward of Rs. 11,012, against Rs. 1.71 lakhs brought in. The demand for the Company's products has steadily increased. The directors think that the demand for fertilisers and mixtures will increase considerably due to the agricultural development programmes.

Ruby Rubber Pays the Same

DUE to a substantial increase in sales, Ruby Rubber Works Ltd has earned a higher net profit of Rs. 1,11,942.34 for the year ended June 1963, after providing for all charges and depreciation and also Rs. 45,000 for taxation. The net profit for the previous year was Rs. 95,559.74. With the amount of Rs. 1,684.38 brought forward, the total available for appropriation comes to Rs. 1,13,326 72. Out of this, the dividend at 10 percent on preference shares, subject to tax, amounts to Rs. 49,882. Development reserve gets Rs. 17,000 (against Rs. 2,280). The proposed dividend on ordinary shares at 4½ percent (against 4½ percent) accounts for Rs. 40,057.20. The balance of Rs. 2,187.52 is carried forward.

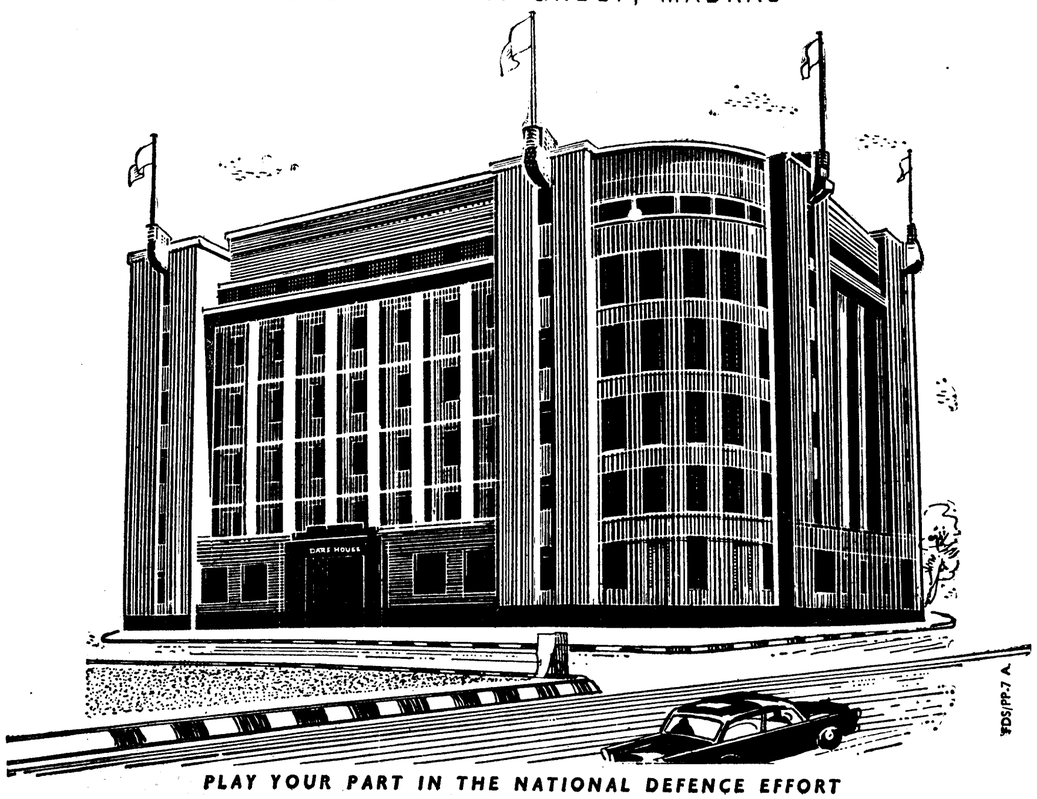
The directors say that the closing quarter of the financial year almost coincided with the power cut in Kerala which considerably affected production. The profit earned has not been in tune with the higher turnover of business, chiefly on account of the larger investment on heavy excise duty, increased cost of raw materials and chemicals and the higher rate of duty paid on carbon black and other chemicals. The demand for bicycle tyres and tubes showed a steady increase and the Company's machinery was geared up for maximum production.

There was an acute shortage of bead wire rings used in bicycle tyres. But it is said that this problem has been partially solved by the arrangements recently completed towards the local fabrication of the rings from steel wire purchased indigenously. The directors state that the Company has decided by a special resolution to sell the Bangalore branch business and assets to the Manimala Estates Ltd.

Motor and General Cuts Dividend

THE Motor and General Finance Ltd has reduced the dividend for the year ended June 1963 from 40 percent to 30 percent and even for the payment of the reduced dividend, the directors have had to withdraw a large amount—Rs. 7.20 lakhs—from general reserve. All this became necessary because the Company has had to provide a huge sum for super profits tax. The Company's working results are not unsatisfactory in that the gross profit is slightly higher at Rs. 41.92 lakhs, against Rs. 41.18 lakhs in the preceding year. While sales are down from Rs. 47.77 lakhs to Rs. 20.57 lakhs, hire-purchase charges fetched

1788
THE E.I.D.-PARRY GROUP
1963



THE HOUSE THAT THOMAS PARRY BUILT

Founded in 1788 as a small trading firm, Parrys have served the country well and truly for 175 years.

The remarkable progress made over one and three-quarter centuries has resulted in the E.I.D.-Parry Group of today, comprising nine companies of substance,—all making important contributions to the nation's economy.

The strong position it has achieved has given the Group courage and confidence to expand its resources to meet the country's diverse needs in fertilisers, sugar, confectionery, sanitaryware, acids, chemicals, light railway equipment, industrial and potable alcohol, etc.

THE E.I.D.—PARRY GROUP, MADRAS

PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

Rs. 68.23 lakhs, against Rs. 63.50 lakhs and income from investments also shows a small increase from Rs. 1.18 lakhs to Rs. 1.33 lakhs.

After providing Rs. 12,165 (against nil) for development rebate reserve and Rs. 25.50 lakhs (against Rs. 19 lakhs) for taxation, including Rs. 5.85 lakhs for super profits tax, the net profit amounts to Rs. 12.72 lakhs, (against Rs. 18.06 lakhs in 1961-62) From this the directors have set aside Rs. 6 lakhs for super profits tax for the assessment year 1963-64 and a further sum of Rs. 3.50 lakhs has been transferred to super profits tax reserve, leaving a surplus of Rs. 3.22 lakhs. This has been supplemented by transferring Rs. 7.20 lakhs from general reserve. The proposed 30 percent dividend absorbs Rs. 9.60 lakhs. After making minor adjustments, there remains a balance of Rs. 5,135 to be carried forward, against Rs. 13,223 brought in. The directors state that the complete withdrawal of commercial vehicles from civilian use necessitated by the emergency after the Chinese invasion has been partially relaxed and they expect better results for the current year.

Kolhapur Sugar Earns More

THE working results of Kolhapur Sugar Mills Ltd for the year ended June 1963, show that the Company has fared much better than in the preceding year. The sales are up by 50 percent from Rs. 3.17 crores to Rs. 4.73 crores, and the gross profit of Rs. 54.64 lakhs shows an increase of nearly 17 percent over the previous year's figure of Rs. 46.72 lakhs. After providing Rs. 20.24 lakhs (against Rs. 19.13 lakhs) for depreciation, Rs. 60,000 (against Rs. 96,000) for development rebate and Rs. 18.30 lakhs (against Rs. 12 lakhs) for taxation, the net profit for 1962-63 amounts to Rs. 12.68 lakhs, against Rs. 12.16 lakhs in the preceding year. With Rs. 88,432 brought forward from the previous year and adding Rs. 3.92 lakhs, being refund of tax, the disposable surplus amounts to Rs. 14.48 lakhs. Allocation to general reserve has been stepped up from Rs. 5 lakhs to Rs. 8 lakhs and a sum of Rs. 1.90 lakhs (against nil) has been set aside for dividend equalisation reserve.

The directors have transferred Rs. 7.50 lakhs to dividend reserve out of which is to be paid the proposed 10 percent dividend absorbing Rs. 7.47 lakhs. After making various appropriations, there remains a small sum of Rs. 8,672 to be carried forward. The Company has been licensed to manufacture 900 tonnes a year of ethyl acetate, 5,400 tonnes of carbon dioxide gas and 3,600 tonnes of dry ice. The directors state that the commissioning of the acetic acid plant has been delayed because of the delay in obtaining essential machinery and power line. The plant has now been erected, and it is likely to be commissioned early next year.

Madras Alloy and Stainless Steels

A NEW Company, Madras Alloy and Stainless Steels Ltd, will manufacture tool and die steels and stainless steel sheets up to one metre wide, and British assistance will help to meet the growing demand for these special types of steel in India. Two firms in Sheffield will train personnel from the Indian firm, whose plant is being designed by British metallurgical engineers. A spokesman for one of the two British firms—English Steel Corporation Ltd and Firth-Vickers Stainless Steels Ltd—said they would advise on the types of machinery to be installed. The new Indian Company will automatically benefit from English Steel Corporation's steel works recently opened for the production of high-quality alloy steels on a "flow-line" basis, which is claimed to be the most advanced of its type in Europe.

New Kaiser-I-Hind Disappoints

THE New Kaiser-I-Hind Spinning and Weaving Co. Ltd reports disappointing results for the year ended March 1963. Despite an increase of about 36 percent in the sales from Rs. 2.456 crores to Rs. 3.336 crores, the Company has incurred a loss of Rs. 26.81 lakhs without providing any depreciation; in 1961-62, it had made a profit of Rs. 21.15 lakhs. The dividend has been skipped for the sixth year in succession. Preference dividend is also in arrears since 1957-58. The directors attribute the Company's disappointing performance to a "multitude of adverse factors".

The Company has been making efforts to switch over to fine and fancy varieties such as suitings, shirtings, poplins, prints, etcetera, but the scheme of voluntary price regulation and stamping of cloth has, according to the directors, proved hard on newcomers in the field of finer varieties. Adverse trading conditions led to the accumulation of stocks, particularly of grey goods for processing. The profit margin was further squeezed by the high prices of cotton and the rise in overhead costs.

The loss for 1962-63 would have been higher by Rs. 7.72 lakhs but for the change in the valuation of closing stocks. At the end of March 1963, accumulated losses stood at Rs. 37.74 lakhs. The liability concerning preference dividends amounts to Rs. 5.85 lakhs and arrears of depreciation add up to Rs. 13.16 lakhs. Because of the extremely difficult financial position, the pace of the Company's modernisation has slowed down. However, the directors are exploring every possibility of quickening the pace of modernisation and improving the working of the mills. Barring some unforeseen circumstances, the directors are hopeful of the Company showing better results in future. The Rs. 100-paid share of New Kaiser-I-Hind is currently quoted around Rs. 53.

Mohatta and Heckel to Enter Market

PROMOTED by B. R. Herman and Mohatta (India) Private Ltd, Mohatta and Heckel Ltd which proposes to set up a factory in Khopoli (Maharashtra State) for the manufacture of steel wires and wire ropes will soon be in the market to raise funds for the proposed venture. The factory will have a capacity of 5,000 tons of steel wires and ropes a year. The project is estimated to cost Rs. 1.25 crores which is proposed to be met by the issue of equity shares worth Rs. 50 lakhs and preference shares of the value of Rs. 15 lakhs, a loan of Rs. 35 lakhs from the I.C.I.C.I. and the balance by bank borrowings. Out of the total issue, equity shares worth Rs. 10.75 lakhs will be subscribed by the promoters, directors and their friends and equity shares of the value of Rs. 10.60 lakhs will be taken up by the foreign collaborators, George Heckel GmbH, West Germany.

The remaining equity shares worth Rs. 28.50 lakhs and preference shares worth Rs. 15 lakhs will be offered for public subscription shortly. The I.C.I.C.I. has agreed, in principle, to provide a rupee loan of Rs. 35 lakhs. The Company has already received import licences and sanctions for the import of plant and orders for the major part of the plant have been placed. If all goes according to the promoters' plans, the factory is likely to go into production by the end of 1964.

Simon-Carves Share Offer Soon

SIMON-CARVES of India Ltd which is taking over the Indian business of Simon-Carves Ltd of the U. K. by purchasing all its assets and the goodwill for Rs. 60 lakhs will soon be in the market to raise Rs. 22 lakhs through public subscription. The firm will undertake engineering works, including the preparation of designs, drawings, procurement of machinery, equipment and tools and the construction and commissioning of plants. The parent firm in the U. K. will act as the technical consultants. Simon-Carves Ltd of the U. K. has executed many important contracts, particularly in steel and chemical industries, in both the public and private sectors.

The new Company has an authorised capital of Rs. 1 crore—all in equity shares of Rs. 10 each. The issued capital will be Rs. 60 lakhs. Out of this, shares worth Rs. 35 lakhs have been allotted to Simon-Carves Ltd of the U. K. for consideration other than in cash. The U. K. firm has also agreed to subscribe for another 10,000 equity shares. The directors, their friends and associates are taking up shares of the value of Rs. 2 lakhs. The remaining 220,000 equity shares will soon be offered for public subscription.

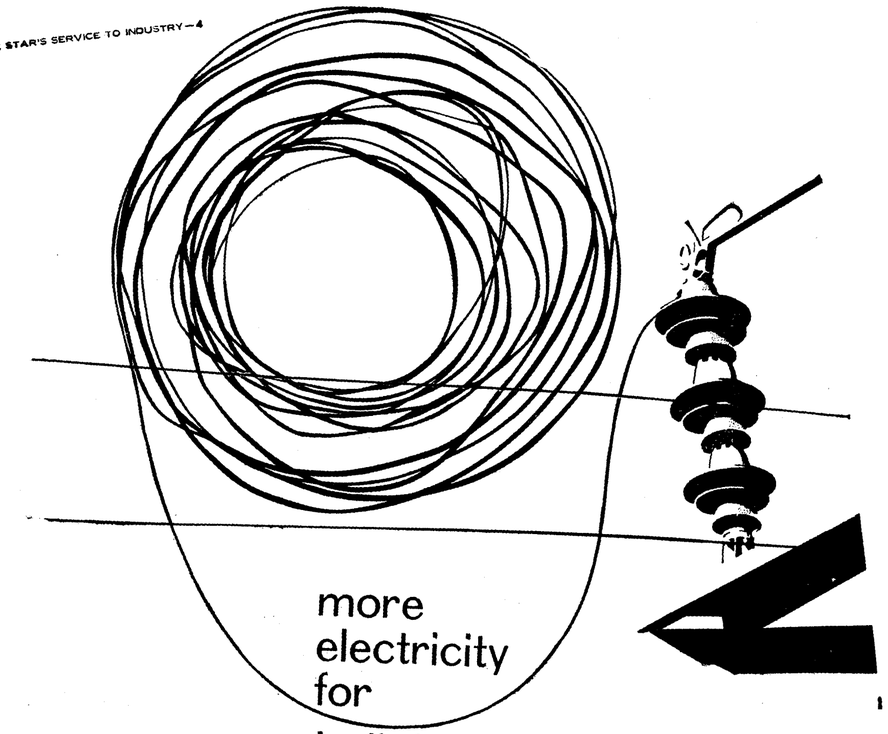
Share Offer from Borax Morarji

BORAX Morarji Ltd which has been licensed to manufacture 17,000 tons a year of borax and 3,000 tons of boric acid is offering 17,991 equity shares of Rs. 50 each at par. The subscription list will open on 6th January, 1964, and close on 15th January or earlier, but not before 8th January. The Company has been promoted by Dharamsi Morarji Chemical Co. and Borax (Holdings) Ltd of London. The factory will be located in Ambernath (Maharashtra). The project is estimated to cost Rs. 65 lakhs, which it is proposed, will be met by the share capital of Rs. 30 lakhs and bank borrowings of Rs. 35 lakhs.

The Company will have an authorised capital of Rs. 1 crore in equity shares of Rs. 50 each. The issued capital will be Rs. 30 lakhs of which shares of the value of Rs. 7.50 lakhs are being allotted to Dharamsi Chemical and Rs. 13.50 lakhs to the foreign collaborators. The remaining 17,991 equity shares which are to be offered for public subscription have been underwritten by Devkaran Nanjee Banking Co. Ltd. The British firm which is collaborating in the venture will provide the designs, drawings, etcetera, for the plant and machinery and supply the technical know-how. The Company has obtained the licence to import the necessary plant and equipment worth Rs. 7.96 lakhs.

The main raw materials required in the manufacture of borax and boric acid are sulphuric acid, which will be supplied by Dharamsi Morarjee, and boron which will need to be imported until such time as it has not been indigenously produced. The technical collaborators will assist in procuring this raw material. The plant is being designed to meet requirements of further expansion in order to cope with the steadily growing demand for borax and boric acid. The board of directors includes Mr. Raghavan Pillai, Mr. N. Dandekar, Mr. C. M. Houlton, Dr. D. R. Weeks, Mr. P. R. Morarji, Mr. S. P. Patel, Mr. D. R. Mararji, Mr. P. G. Kendell and Mr. R. A. Shah.

Mysore Acetate Will Enter Market Soon



SPONSORED by the Mysore Sugar Company Ltd, Mysore Acetate and Chemicals Co. Ltd is likely to enter the capital market some time in April to raise Rs. 67 lakhs through public subscription to meet a part of the cost of its Rs. 4.15-crore project for the manufacture of cellulose triacetate and secondary acetate moulding compounds. The factory will be located in Mandya in Mysore State. In the initial stages, the Company will manufacture annually 1,200 tons of cellulose triacetate and 2,400 tons of cellulose acetate. Cellulose triacetate is the raw material for the raw film industry and cellulose acetate is required for the manufacture of moulding powders for the plastic industdy. The raw materials required are acetic acid, acetic anhydride, cotton linters, plasticisers, etcetera. If all goes well, the factory is likely to go into production in the latter half of 1966 and, when in full production, the Company will have a turnover of about Rs. 3.8 crores.

Out of the Rs. 4.15 crores which will be required for the project, Rs. 3.65 crores will be spent on plant and machinery and buildings. Working capital requirements are estimated at Rs. 22 lakhs. The cost of imported machinery is placed around Rs. 1.75 crores. The cost of the project is proposed to be met from the share capital of Rs. 2.25 crores, loans in foreign currency amounting to Rs. 1 crore from the Export-Import Bank, Washington, and of Rs. 75 lakhs from the I.C.I.C.I. and rupee loans amounting to Rs. 15 lakhs. The I.C.I.C.I. has already sanctioned a loan of Rs. 54 lakhs and the balance of Rs 21 lakhs is under negotiation. The Company has an authorised capital of Rs. 5 crores—all in equity shares of Rs. 100 each. The issued capital will be Rs. 2.25 crores of which shares worth Rs. 10 lakhs will be subscribed by the directors and their friends, Rs. 30 lakhs by the Mysore Sugar Company and Rs. 50 lakhs by the Mysore State Government.

Von Kohorn Universal Corporation, New York, which is collaborating in the venture will take up shares of the value of Rs. 58.50 lakhs for consideration other than cash in part payment

BLUE STAR'S SERVICE TO INDUSTRY—4

India's expanding economy requires more and more electric power to meet her industrial and domestic needs. Today, a vast network of electric power projects spans the country—projects for generation and utilisation of electricity ■ Through the years, Blue Star has supplied these projects with alternators, transformers, condensers, switchgear, rectifiers—everything needed to send power surging through the land. ■ This is one of the many ways Blue Star serves Indian industry.

THIS IS BLUE STAR

Manufacturing: Water Coolers □ Packaged Air Conditioners □ Commercial Refrigeration Equipment □ **Engineering & Contracting:** Industrial Ventilation and Humidification □ Air Conditioning and Refrigeration—WORTHINGTON (U.S.A.) □ Instrumentation—HONEYWELL (U.S.A.) □ **Distribution:** Instruments for research, education, industry—PERKIN-ELMER, VARIAN (U.S.A.) □ Heavy Electrical Equipment for power projects—SCHNEIDER-WESTINGHOUSE (France) □ Pumps for all purposes—SIGMUND (U.K.) □ Material Testing Machines—VEB WERKSTOFFPRÜFMASCHINEN (G.D.R.) □ Business Machines—BÜROMASCHINEN-EXPORT (G.D.R.)

of the cost of plant and machinery, know-how, etcetera. The other technical collaborators, Aktiebolaget Chematur, Ankdamngatan, Sweden, will subscribe for shares worth Rs. 9.30 lakhs for consideration other than cash in part payment of the cost of plant and machinery, etcetera. The balance of Rs. 67 lakhs will be offered for public subscription. Efforts are being made to get the entire public issue underwitten.

Pulgaon Cotton Cuts Dividend

DESPITE a modest increase in the sales from Rs. 1.73 crores to Rs. 1.78 crores, the gross profit of Pulgaon Cotton Mills Ltd for the year ended June 1963, is down from Rs. 5.95 lakhs to Rs. 4.58 lakhs. The profit margin is said to have been squeezed by the rise in cotton prices and other manufacturing costs which were only partially offset by the improvement in working and efficiency. The setback in the profit has obliged the directors to reduce the dividend from 60nP to 40nP a share.

Appropriations of the gross profit include depreciation Rs. 2.52 lakhs (against Rs. 2.26 lakhs), development rebate reserve Rs. 82,000 lakh (against Rs. 33,000) and general reserve Rs. 2.50 lakhs (against nil). A sum of Rs. 1 lakh has been transferred to the dividend reserve out of which is to be paid the proposed dividend absorbing Rs. 60,000, against Rs. 90,000 in the preceding year. After making their allocations, there remains a sum of Rs. 5,000 to be carried forward, against Rs. 3.10 lakhs brought in. The directors expect the Company to show better results for the current year. The cotton supply position is better and steps are being taken to improve efficiency.

Engel India Machines Share Offer

ENGEL India Machines and Tools Ltd, which is setting up a plant near Calcutta for the manufacture of injection moulding machines and moulds with Austrian collaboration, is expected to go into production by October 1964. The Company will enter the capital market on 16th December with a public issue of Rs. 25 lakhs in equity shares of Rs. 10 each, its issued capital being Rs. 50 lakhs. The subscription list will close on 24th December or earlier, but not before 18th December. A sum of Rs. 2.50 a share is payable on application and a like amount on allotment. The entire public issue has been underwritten by institutions like the Life Insurance Corporation, Industrial Finance Corporation of India, the Central Bank of India, Canara Bank and the firms of brokers. Shares of the Company will be listed on the Calcutta Stock Exchange in due course.

The Company was incorporated in April 1962 for the manufacture of injection moulding machines and moulds for the plastic industry with the financial and technical collaboration of Maschinenfabrik Ludwig Engel K. G. of Austria. The factory site is located in a highly industrial area and is served by good roads and is close to Calcutta port as well as other engineering industries. The Company has been assured of an adequate supply of power. Most of the raw materials required for the manufacture of injection moulding machines and moulds are available locally and those which are not can be procured readily from established importers with the exception of certain electrical control equipment and hydraulic devices which will have to be imported. The factory building is nearing completion. Orders for plant and machinery, both imported and indigenous, have been placed. The collaborators have also agreed to earmark certain territories in the neighbouring countries with exclusive export rights for the Indian Company.

The Company proposes to produce 300 machines a year in the first stage and such quantity of moulds as may be desirable. There should be no difficulty in finding a market for the Company's products. Union Carbide India Ltd, a leading manufacturer of plastic raw materials, has been appointed as sole selling agents. Progress towards the implementation of the project has been considerable. The directors think that after production has been stabilised, the Company should be able to pay a reasonable dividend to the shareholders.

Bababudin Coffee Repeats

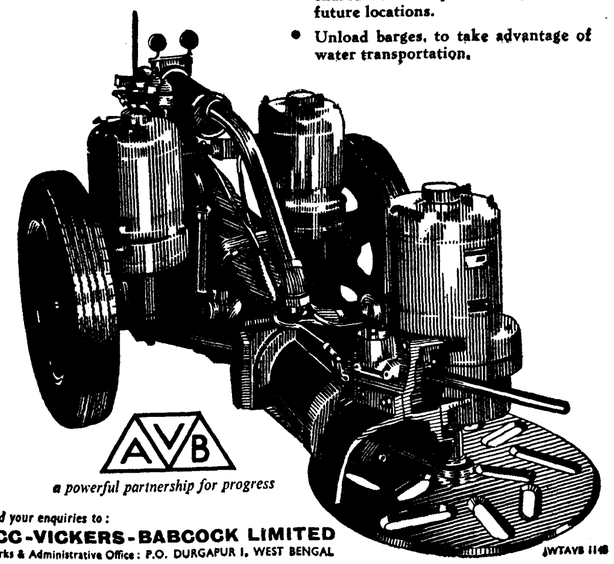
A MARKED rise in the crop, lower production cost and maintenance of the dividend at 6 percent on ordinary shares (the same) feature the working results of Bababudin Coffee and Produce Co. Ltd for the year ended June 1963. The net profit for the year amounts to Rs. 60,360.36, compared with a net loss of Rs. 84,984.04 for the previous year. With the amount of Rs. 487.61 brought forward and with Rs. 13,042.93 being surplus tax provision for the previous years, the available surplus comes to Rs. 73,890.90. Last year, the dividend was paid by transferring Rs. 64,000 from general reserve and Rs. 42,000 from dividend equalisation reserve. The dividend on preference shares at 6.035 percent amounts to Rs. 18,104. The ordinary dividend at 6 percent absorbs Rs. 24,000. Dividend equalisation reserve gets Rs. 29,000. The balance of Rs. 2,786.90 is carried forward.

Mysore Sugar Maintains

ALTHOUGH the dividend has been maintained at 30 percent. the working results of the Mysore Sugar Company Ltd for the year ended June 1963 are extremely disappointing. The gross profit has been nearly halved from Rs. 20.56 lakhs to Rs. 10.59 lakhs. Several factors contributed to the Company's disappointing performance during 1962-63. Sugar output fell from 38,056 tonnes to 27,390 tonnes because of the poor supply of cane. Sugarcane crushed during the season was 259,654 tonnes, against 385,016 tonnes in the preceding season. The output of alcohol was down from 713,268 gallons to 646,013 gallons.

Apart from reduced output, the Company had to bear an extra burden of Rs. 9.16 lakhs on account of the implementation of the recommendations of the Central Wage Board for the sugar industry and provide Rs. 2.22 lakhs additional bonus to employees for the years 1959-60 to 1961-62. There was also the loss of Rs. 1.69 lakhs on sugar export and the Company contributed Rs. 1 lakh to the National Defence Fund.

After providing Rs. 8.56 lakhs (against Rs. 8.46 lakhs) for depreciation, Rs. 70,000 (against Rs. 10 lakhs) for taxation and Rs. 81,008 (against Rs. 22.677) for development rebate, the net profit amounts to Rs. 52,390, against Rs. 1.87 lakhs in 1961-62. The directors have withdrawn Rs. 5.80 lakhs from the dividend equalisation reserve to provide for the payment of the proposed dividend which absorbs Rs. 6.54 lakhs. After making some minor adjustments, there remains a sum of Rs. 4,559 to be carried forward, against Rs. 25,593 brought in. The Company has applied to the Government for permission to expand its crushing capacity. Official sanction has been obtained for certain replacements in the factory and orders have been placed for the required equipment.



Coimbatore Spinning Cuts Dividend

FOLLOWING a sharp fall in the profit for the year ended December 1962, the directors of Coimbatore

FULLER-KINYON
REMOTE-CONTROL UNLOADER
for conveying bulk cement

In addition to the low cost of installation, operation and maintenance, it is the *only* conveying equipment which will:

- **Unload cement from railway wagons and pump it directly to storage silos or sheds.**
- **Convey underground to avoid interference, normally experienced with railroads, highways, etc.**
- **Permit the use of simple weatherproof sheds for cement storage.**
- **Enable you to use equipment purchased for one job on any and all future locations.**
- **Unload barges, to take advantage of water transportation.**

WTAVB 116

Spinning and Weaving Co. Ltd have recommended a dividend of 9 percent against 10 percent, in the previous year. Considering the size of the decline in the profit, the cut in the rate of dividend is not much. But the sales for the year were higher at Rs. 224.12 lakhs, against Rs. 214.99 lakhs in the previous year. The net profit for the year amounts to Rs. 2,30,218.07 after providing Rs. 4,63,181.50 for depreciation, compared with the previous year's net profit of Rs. 12,04,122 after providing Rs. 4,94,747 for depreciation.

New Capital Issues

SIX companies have been authorised to raise capital of Rs. 4.21 crores. One is issuing bonus shares, two equity shares and another two equities plus cumulative redeemable preference shares. The consent of the Controller of Capital Issues is valid for 12 months. The following are the details:

Chemicals and Fibres of India Ltd, Bombay, is to issue capital of Rs. 2.5 crores of which 60 percent will be allotted to the Imperial Chemical Industries Ltd, London. The capital is required for the establishment of a factory near Thana, Maharashtra, for the manufacture of polyester staple fibres. The total capital cost of the scheme is estimated at Rs. 5.85 crores which will be met by issue of capital of Rs. 2.5 crores and by loans from the Life Insurance Corporation of India and banks for the rest.

Vitamins India Ltd Bombay, a new company, will issue capital of Rs. 15 lakhs consisting of Rs. 12 lakhs in equity shares of Rs. 10 each, and Rs. 3 lakhs in 30,000 9.5 percent cumulative redeemable preference shares of Rs. 10 each. Out of this, equity shares of the value of Rs. 3 lakhs will be issued to Vitamins Ltd, London. The capital will be used for the manufacture of vitamealo concentrates and animal compound feeds.

The Great Eastern Shipping Company, Ltd, Bombay, is issuing 500,000 fully paid-up bonus of Rs. 10 each to be issued to the existing shareholders after the existing partly-paid shares have been paid up fully on capitalization of some of the company's free reserves.

Tools and Electricals India Ltd, Calcutta, is issuing capital of Rs. 30 lakhs being Rs. 40 lakhs in equity shares and Rs. 10 lakhs in 9 percent cumulative non-redeemable preference shares. The capital is required for manufacture of tools and die and moulds, etc. for which a factory will be established at Faridabad. The total capital cost is Rs. 102 lakhs.

The Modi Sugar Mills Ltd, Modinagar, J. P., is to issue further capital of Rs. 36,69,480 divided into 366, 948 equity shares of Rs. 10 each at par. The shares will first be offered to the company's existing shareholders on *pro rata* basis and only the shares not so taken up will be offered to the public. The proceeds will be utilised to install electric furnace, re-rolling mill and wire drawing plant at Modinagar for the manufacture of billets, rounds and wires.

Shardlow India Ltd, Madras, is to issue capital of Rs. 50 lakhs to equity shares of Rs. 10 each for cash at par. Out of this, shares of the value of Rs. 13,33,330 will be offered to Ambrose Shardlow and Company Ltd. U.K. against supply of capital equipment of equivalent value. The proceeds of the issue will be utilised for the manufacture of forgings and stamping for automobile, industrial marine and aircraft engines.

WE DO. AND GET IT RIGHT. IF THAT SOUNDS TOO OPTIMISTIC, CONSIDER THIS:

ABRASIVE GRAINS (ON SANDER BELTS, FOR INSTANCE) ARE OF IRREGULAR SHAPE...A BROAD BASE AND ONE OR MORE SHARP POINTS. SHARES IMPROVE ON DECONTROL OF PRICES

Wednesday Evening.

THERE have been wide fluctuations in the Calcutta stock market during the past week. At first share prices were marked down due to concern caused by the Government's decision to reject the Select Committee's recommendation and restore the original provision about converting Government loans, past and future, into the shares of companies. It is difficult to understand why the Government has taken this arbitrary right of conversion instead of incorporating it into loan agreements.

Although a moderate recovery has taken place towards the close in response to various incentives announced by Mr. T. T. Krishnamachari, Central Finance Minister, the trend, on the whole, has been indecisive. Lyons Range has found it difficult to strike a balance between the bullish and bearish factors arising out of the Finance Minister's economic policy statement. The decontrol of the prices of 16 commodities has been welcomed. The shares of companies producing these commodities have generally been marked up. Since the prices of several commodities have been fixed so low that they barely cover the production costs, the decontrol move is in the right direction. The prices of some of these items may temporarily move up, but in the long run they will be stabilised due to freer supplies and competition. The raising of the exemption limit from Rs. 10 lakhs to Rs. 25 lakhs both for capital issues control and industrial licensing should help stimulate economic development. The raising of the limit in the case of capital issues has been justified in view of the rise in project costs. The formation of new industrial units has been freed from cumbrous procedural delays, but those using domestic equipment and raw materials will benefit more because the import of foreign machinery and raw materials will continue to be regulated strictly.

The suspension of emergency risks insurance premiums for the first quarter of 1964 is timely. This should relieve industry and trade of a financial burden amounting to about Rs. 3 crores. In view of the improvement in the border situation it is hoped that the emergency insurance scheme will be scrapped. Despite buoyant revenue receipts during the current financial year, the prospect of any major relief in taxation in the coming year should be cautiously assessed because of the bigger Government expenditure indicated. The Finance Minister has, however, assured that the fiscal system will be stringent measures to trace and tax modified to stimulate savings, investment and production. If he takes the "unaccounted money," some relief should be possible.

Indian Iron have improved slightly, after erratic fluctuations. The clearing on Wednesday passed off smoothly and the carry-forward charges have been fairly moderate. Among engineering shares, Guest, Keen, Williams, Texmaco and J. K. Steel have been steady. Clearing miscellaneous shares have moved up in sympathy with the general trend. Among other miscellaneous scrip, Union Carbide have been steady on prospects of an ordinary rights issue. The Company has decided to issue 840,000 ordinary shares of Rs. 10 at a premium of Rs. 4 each, subject to the approval of the Controller of Capital Issues. These shares will be offered to its shareholders in the ratio of three new shares for every ten held. The shareholders will be asked to pay the full sum of Rs. 14 a share on acceptance of the offer. The funds will be used for expansion.

The ordinary shares of Midnapore Zemindary have smartly risen due to a take-over bid. It is reliably learnt that Andrew Yule and Company, the managing agents, has decided to sell its shares in Midnapore Zemindary at the rate of Rs. 15 a share. The other shareholders have been informed of this decision and Andrew Yule will relinquish the managing agency from 14th April, 1964. The offer to buy the shares has been made by Place, Siddons and Gough Private Ltd. Paper shares have been steady. Cotton mill shares have been selectively bought since the control on the prices of rayon and staple fibre has been withdrawn.

Turnover in jute shares has declined due to a fall in the prices of jute goods. Selected shares have met with support. Coal shares have been sluggish and stray business has been transacted. Investors in tea shares have held off due to the large fall in the current north Indian crop. Only selected Dooars gardens have attracted attention.

Government securities have been quietly steady. The 3 percent Conversion loan 1983 has quoted Rs. 65.80. The prices of short- and medium-dated stocks have hardened, but turnover has been restrained due to the shortage of sellers. Selected State Government loans have been steady.

Bombay

CHEMICAL AND RAYON SHARES RISE

T. T. K. STATEMENT WELCOMED

Wednesday Evening.

THE Bombay stock market has shown a substantial improvement towards the close of the past week. Share prices have improved on replacement purchases, combined with short-covering, in response to various incentives announced by Mr. T. T. Krishnamachari, Central Finance Minister, in Parliament last Monday. Selected chemical and rayon shares have improved smartly on decontrol of the prices of 16 commodities. It is thought that the development of these industries has hitherto been held down by the unrealistic prices fixed for their products. It is believed that decontrol will gradually be extended to other commodities such as steel, cement and paper. The move to raise the exemption limit for capital issues control from Rs. 10 lakhs to Rs. 25 lakhs has been bullishly interpreted, since it is believed that the move will encourage the issue of rights shares and bonus shares. An industrial unit employing a capital of up to Rs. 25 lakhs will henceforth be allowed to be formed without an industrial licence. This should help the development of new enterprises.

The suspension of emergency risks insurance premiums for the first quarter of 1964 has been welcomed in that it will give a relief to trade and industry to the extent of about Rs. 3 crores. The decision of the Government concerning the collection of this premium in future will be announced from time to time. It is hoped that it may no longer be necessary to keep the emergency risks insurance in force in view of the improvement in the Sino-Indian border situation. Although the Finance Minister has not indicated any relief in taxation for the time being, Dalal Street is hopeful that the super profits tax will be substantially modified, if not scrapped, in the next Budget.

The earlier disappointment over the passing of the Companies (Amendment) Bill has abated considerably. Tata Steel ordinary have gained at Rs. 145. In the engineering group, Tata Locomotive, Mukand Iron and Larsen and Toubro have been prominent. In motor-vehicle shares, Hindustan Motors have rallied on influential support. Premier Automobiles have been steady.

Selected cotton mill shares have been in the limelight due to price decontrol introduced for rayon and staple fibres. The prospects of an increase in the price of cloth has been brighter. Century, Bombay Dyeing, Kohinoor, Gokak.

OFFERS COMPLETE BANKING SERVICE

Mcrarjee and Standard have improved substantially. Interest has been shown in India United ordinary, Tata Mills and Svadeshi.

Miscellaneous share have moved up in sympathy with the general trend. In sugar shares, Belapur have recovered despite the cut in the ordinary dividend from 40 percent to 36 percent. Phalton and Walchandnagar Industries have been steady. Among cement shares, Associated Cement and Dalmia have been wanted. Scindia Steam have been a bright feature in steamship company shares due to the encouraging statement by the chairman of the Company at the annual general meeting. Mining shares have been quiet, and Shivrajpur Syndicate have been freely sold. Chemical shares have been buoyant due to price decontrol. Tata Chemical have touched a new peak. Rayon shares have been fancied. National Rayon and Gwalior Rayon have forged ahead.

Bank shares have been sluggish and stray business has been transacted. Bank of India and Central Bank have changed hands. Electric company shares have been steady. Ahmedabad and Tata Power have been bought.

Madras

SMART RECOVERY TOWARDS CLOSE

TURNOVER CONFINED TO CLEARING SCRIP

Tuesday Evening.

THE Madras stock market has recovered smartly towards the close of the past week after an earlier dull spell. The passing of the Companies (Amendment) Bill caused a great deal of anxiety earlier. Recovery has taken place in response to various incentives announced by Mr. T. T. Krishnamachari, Central Finance Minister, in the Lok Sabha last Monday. Firmer advices from Dalal Street have acted as an additional stimulant. Turnover has nevertheless been largely confined to clearing shares and prices have generally hardened. Support for cash shares has been cautious, but selling pressure has declined.

Selected Statement Government loans have been steady due to institutional buying. In banks, Canara have been transacted at Rs. 81.50 and Indian Overseas at Rs. 146. In electric companies, interest has been taken in Ellore at Rs. 18.50 and in West Coast at Rs. 17.35. Selected sugar shares have improved due to the prospect of a bigger production in the current season. E.I.D. have been bought at Rs. 28.65 and Mysore at Rs. 46.75. Deccan have nevertheless fallen to Rs. 11.45 on pressure. Madura have been quoted at Rs. 10 and K.C.P. at Rs. 23.90.

Despite limited turnover in planting shares, prices have on the whole hardened. Blue Mountain have changed hands at Rs. 2.53 and Cochin Malabar at Rs. 6.25. Consolidated Coffee have been quoted at Rs. 21.50 and Ouchterlony at Rs. 4.35. Business has passed in Periakaramalai at Rs. 3.47 and in Peermade at Rs. 20.50. Kailas have been steady at Rs. 6.20 on declaring an interim taxable ordinary dividend of 15 percent. Nilambur have been wanted up to Rs. 12.75 and Thamarapally at Rs. 16.40. T.R. and Tea have changed hands at Rs. 9.84 and Haileyburia have been quoted at Rs. 12.60. Kil Kotagiri have been transacted at Rs. 5.15 and Nilgiri at Rs. 8.50. Amalgamated have been steady at Rs. 10.01 and Ossoor at Rs. 3.50 on prospects of a bonus issue.

In textile shares, South India Viscose have recovered to Rs. 141 and Travancore Rayon to Rs. 25.50. Business has passed in Lakshmi at Rs. 132 and in Madura at Rs. 33.50. Interest has been taken in Bangalore Woollen at Rs. 233.50 and in Buckingham at Rs. 297. Adoni Spinning have changed hands at Rs. 9.40 and Balarama Varma at Rs. 107.75. Mettur have been wanted at Rs. 290 and Loyal at Rs. 42.50. Ramakrishna have been quoted at Rs. 217.80 and Rayalaseema at Rs. 137.

In the miscellaneous group, Aluminium Industries have been steady at Rs. 18.75 and Ashok Leyland have recovered to Rs. 7.20. In engineering shares, South India Steel have quoted Rs. 9.37 and Trichy Steel Rolling Rs. 10. Among cement shares, Dalmia have been steady at Rs. 12.62 and India at Rs. 5.45. Business has passed in Seshasayee Paper around Rs. 7.95. In transport companies, Tube Invesiment have improved to Rs. 222. Rane (Madras) have been done at Rs. 8.55 and Parry's Confectionery at Rs. 3.50. Spencer have changed hands at Rs. 20.75.

London

GOOD CORPORATE NEWS STIMULATES ACTIVITY

LEADING EQUITIES RISE

London, 18th December.

ALTHOUGH it is usual for business to fall off as Christmas draws nearer, conditions were quite active in the stock market during the past week and turnover was good. Demand was stimulated by the steady flow of good company results, and by optimistic statements by company chairmen on the business outlook. The Chancellor of the Exchequer was also encouraging with his views of the outlook for the economy in 1964, and there were similar forecasts coming from America concerning the U.S. economy. But fixed interest stocks were again out of the picture with attention focussed on equities. Gilt-edged were uncertain and inclined to ease. Dollar stocks followed in the wake of Wall Street where the trend was mostly upward. Many leading equities responded to buying, and gains were sharp in some cases. Distillers reflected the good interim statement while G.E.C., Allied Ironfounders, Tube Investment and Dunlops all showed up well. Steel shares were wanted following good dividend announcements. The feature of mining market was the buoyancy of platinum shares. Gold shares tended to drift lower and coppers were uncertain, but tins moved ahead in response to the rise in the metal price. Oils were very quiet Rubbers and teas moved irregularly.

PROVIDING EXPORT CREDIT ON REASONABLE TERMS

(BY A SPECIAL CORRESPONDENT)

The Government will convert the Export Risks Insurance Corporation into an Export Credit and Guarantee Corporation from the middle of January. The object of conversion is to offer liberal credit to exporters. Although the E.R.I.C. played a useful rôle in promoting exports, it was underwriting only a very small percentage of the country's export trade. A recent symposium in Bombay suggested how the new institution may prove more useful than its predecessor.

THE Export Risks Insurance Corporation, popularly known as the E. R. I. C., recently organised a symposium on its future rôle at the Sydenham College, Bombay. The discussion was arranged because the Corporation would convert itself into an Export Credit and Guarantee Corporation with effect from 15th January, 1964. The Central Minister for International Trade, Mr. Manubhai Shah, inaugurated the symposium. An economist, a banker and an industrialist, representing a cross-section of informed expert opinion, participated in the discussion.

During the past few years, competition in world markets has become severe with the emergence of a buyers' market. It is not unusual to find, according to Mr. Narielwala who participated in the discussion, that foreign importers are insisting on credit facilities stretched over a period even for consumer goods. So the need to offer protection to the Indian exporter against the risk element involved in credit transactions abroad has assumed a new significance.

Useful Rôle

The E. R. I. C. has played a useful rôle in promoting India's exports. With a paid-up capital of Rs. 50 lakhs, it has provided risk cover of nearly Rs. 30 crores this year. This represents an increase of 171 percent and 46 percent of the value of business in 1961 and 1962. Yet the Corporation is now underwriting only 15 percent of really risky exports and a bare 4 percent of the total value of the country's export trade. The reasons for such a poor coverage are several. Firstly, the bulk of India's export trade is transacted through either letters of credit by reputable and established parties in the field or on a consignment basis between branch offices and parent bodies located abroad. Secondly, the export risk consciousness has not yet developed among exporters, mainly because some of them are small exporters. So even the addition of a quarter percent premium to the costs makes the cover uneconomical to them. Mr. Manubhai Shah, therefore, rightly exhorted the exporters and manufacturers to develop export risk consciousness for sustaining the country's export promotion drive.

It is, however, obvious that the average exporter will be unable to heed the advice of the Minister unless there is a further reduction in the premium rates and the cost of credit provided by banks is substantially brought down. In several countries like Japan, the finance to the exporter is provided below Bank rate as is done in providing agricultural credit in India. Mr. Shah announced that a committee of experts, including those from the Reserve Bank, would study the question of providing cheap credit to exporters.

The Managing Director of the Corporation, Mr. S. P. Chablani, said that the E. R. I. C.'s efforts led to a rise in India's exports during the current year by at least Rs. 10 crores. Meanwhile, the country expects to export nearly Rs. 800 crores worth of goods and services in 1963, against Rs. 650 crores or so in 1962. Before Mr. Shah became the Central Minister for International Trade, the country's exports were lying stagnant around Rs. 615 crores for a number of years. The Minister has succeeded in bringing about a scientific approach to the problem of export promotion, of which the provision of adequate and cheap credit forms an important part. The Minister justified the preferential treatment in providing credit to exporters on two grounds. Firstly, the country has to make an all-out export drive in view of the growing developmental needs. Secondly, the world markets have become most sensitive and they are sustained by vested interests in every country. It is, therefore, a hard business to push the country's exports.

Providing Medium-term Credit

The E. R. I. C., when it is converted into the E. C. G. C., will have a paid-up capital of Rs. 2 crores. It will provide medium-term export credit in the shape of "refinance" against the export bills submitted to commercial banks along the lines of the Refinance Corporation for Industry. The Corporation will provide cover for the difference between internal and international prices so that the banks are enabled to extend credit to exporters an almost cent percent value of goods exported. It was estimated that the Corporation will cover exports worth Rs. 80 crores to Rs. 100 crores by 1965.

The participants in the symposium, including the Minister, emphasised the need for diverting a part of the country's production to overseas markets. According to Professor C. N. Vakil, part of the production in each industry should be dovetailed to overseas preferences. He cited the instance of *dhoties* and *sarees* manufactured in Lancashire and exported to the Indian market in pre-independence days, especially in the 'twenties and 'thirties of the present century. Mr. Ramnath Poddar, chairman of the E. R. I. C., said that the cotton textile industry was shortly scrapping the compulsory export quota scheme. This is because every mill has become conscious of the need to increase exports. The incentive scheme which has built-in incentives will take care of cotton textile exports, the chairman said.

Mr. N. M. Chokshi, managing director of the Bank of Baroda, suggested that the Corporation should show a fair amount of latitude in providing cover to Indian exporters. His other suggestions were, firstly, that the E. R. I. C. should allow, on the lines similar to the E. C. G. D. in Britain, discretion to exporters in extending due dates of payment of usance bills within certain limits without the prior notice to the Corporation. Secondly, the ratio of the E. R. I. C.'s share in the risk with banks should be further increased (this was recently stepped up from 1:1 to 2:1). Thirdly, the Corporation should give special cover without insisting on a comprehensive cover to exporters desiring the same so that banks might be able to extend finance with confidence. Fourthly, there should be a further reduction in the premium rates. Fifthly, the S. T. C. and the N. S. I. C. should be made to resort to credit insurance (the S. T. C. transacts its business by letters of credit now). Sixthly, the E. R. I. C. should evolve some method of allowing exporters a "no claim bonus".

Settling Claims

It would be useful if the E. R. I. C., like the E. C. G. D. in Britain, effects the settlement of claims at the rate of exchange prevailing on the date of contract or shipment. The E. R. I.C. should issue special policies in favour of banks to cover clean advances which might be made to finance export deficits. To put in a nutshell, Mr. Chokshi said that the risk element in export finance should be borne completely by the E. R. I. C. so that banks may be able to enter the business on a bigger scale without the fear of incurring any loss. This is exactly what a cautious and calculating banker would have done.

The E. R. I. C. would have to work in close co-operation with banks. Its chairman assured the audience that the suggestions put forward at the symposium would be kept in view when the new Corporation finalises its policies.

Suddenly, the production plans of a whole nation have to be adjusted. More steel is required to make more trucks, more tanks, more guns ... and more oxygen to make the steel, to cut and weld steel sheets to make the trucks and tanks, to take I.A.F. pilots to high altitudes to scour the skies, to revive the lungs of those wounded in battle ...

Indian Oxygen is helping the nation to meet the vital need for industrial and medical gases and equipment to use them. It has behind it the unqualified support of the British Oxygen Group of Companies who have offered their "great technical and engineering resources unreservedly" to India.

INDIAN OXYGEN LIMITED

THE CALCUTTA MONEY MARKET

SLIGHT INCREASE IN ADVANCES

Wednesday, 18th December.

THERE has been a slight increase in the general level of advances in the Calcutta money market during the past week. Most of the increase is accounted for by the sugar mills, and by the iron, steel and engineering industries. The credit given to the cotton and jute mills, and to the foodgrains and seeds trade, is unchanged. In the interbank market, conditions have been steady, and the call rate is quoted at 3½ percent.

The exchange market has been moderately active, with a fair supply of both tea and gunny bills. The demand for remittances has been good. In the London market, sterling has firmed up in relation to most of the major currencies, with the exception of the Dutch guilder.

BULLION FLUCTUATED NARROWLY IN Calcutta during the past week. Silver quoted Rs. 246. The London and New York prices amounted to 111⅛d and 129.3 cents. Gold was quiet and the price declined from Rs. 62.25 to Rs. 62 for 14-carat.

DURING THE WEEK ENDED 31ST DECEMBER, Government of India Treasury bills for Rs. 48,52,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 17th December. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.420 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.315 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 23rd December.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 18th December to 21st December, at Rs. 99.436 percent subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 11th December to 14th December amounted to Rs. 23 lakhs.

THERE WERE RISES OF RS. 22.70 crores to Rs. 2,336.23 crores in active notes and of Rs. 14.35 crores to Rs. 2,350.95 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 13th December, 1963. The currency expansion was covered partly by raising rupee securities by Rs. 10 crores to Rs. 2,019.31 crores and partly by increasing foreign securities by Rs. 5 crores to Rs. 97.46 crores in the paper currency reserve. As a result of the transfer of securities from the Banking Department, balances held abroad by this Department fell by Rs. 4.64 crores to Rs 8.22 crores. Deposits of the Government of India declined by Rs. 34.08 crores to Rs. 49.23 crores, while those of State Governments rose by Rs. 4.67 crores to Rs. 14.88 crores following the transfer of funds from the Centre to the State Governments. Balances of commercial banks at Rs. 82.73 crores showed a decline of Rs. 20 lakhs. Their loans from the Reserve Bank fell from Rs. 14.61 crores to Rs. 7.86 crores of which advances against usance bills amounted to Rs. 2.67 crores (Rs. 4.44 crores). Ways and means advances stood at Rs. 39.58 crores against Rs. 46.54 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 6th December, shows a drop of Rs. 1.83 crores to Rs. 591.14 crores in total deposits. Investments in Government securities are down by Rs. 5.11 crores to Rs. 302.38 crores, while other authorised investments remain unchanged at Rs. 8.95 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 11.53 crores to Rs. 270 crores. Cash and balances are, in consequence, shown at Rs. 18.44 crores or Rs. 3.23 crores less.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 20-12-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
20-12-63	23-3-64	2,00.00	Rs. 2.315%
13-12-63	16-3-64	2,00.00	Rs. 2.315%
6-12-63	9-3-64	2,00.00	Rs. 2.320%
29-11-63	3-3-64	2,00.00	Rs. 2.320%
22-11-63	25-2-64	2,00.00	Rs 2.318%
14-11-63	17-2-64	2,00.00	Rs. 2.300%
8-11-63	11-2-64	2,00.00	Rs. 2.310%
28-10-63	31-1-64	2,00.00	Rs 2.318%
23-10-63	26-1-64	2,00.00	Rs. 2.320%
18-10-63	21-1-64	2,00.00	Rs. 2.320%
11-10-63	14-1-64	2,00.00	Rs. 2.318%
4-10-63	7-1-64	2,00.00	Rs 2.318%
27-9-63	30-12-63	2,00.00	Rs 2.318%
20-9-63	23-12-63	2,00.00	Rs. 2.318%

(Monthly Maturities 000's omitted)

December, 1962	4,00.00
January 1964	10,00.00
February, 1964	6,00.00
March, 1964	8,00.00
Total	28,00.00

CLEARING HOUSE RETURNS

Week	Calcutta	Bombay
	Rs. (Lakhs)	
6-12-63	1,26.96	14,32.28
29-11-63	99,83.12	1,11,86
22-11-63	1,01.75	1,19,33

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 6th December, 1963, shows Demand and Time liabilities at Rs. 1,107.88 crores (Rs. 24.42 crores on account of borrowings from banks) and Rs. 1,306.44 crores (Rs. 22.27 crores), compared with Rs. 1,123.80 crores (Rs. 29.47 crores) and Rs. 1,324.71 crores (Rs. 22.21 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 44 lakhs and Rs. 8.59 crores to Rs. 56.12 crores and Rs. 81.52 crores, respectively. There is a drop of Rs. 29.50 crores to Rs. 737.47 crores in investments. Advances and bills discounted at Rs. 1,532.43 crores show a rise of Rs. 33.81 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 63.5 percent, against 5.3 percent and 61.2 percent.

THE SCINDIA STEAM NAVIGATION CO., LTD.

CHAIRMAN, MR. D. M. KHATAU'S REVIEW

The following is the summary of the Statement of Mr. Dharamsey M. Khatau, Chairman, The Scindia Steam Navigation Co. Ltd., made at the 44th Annual General Meeting of the Shareholders on Wednesday, the 18th December 1963, at Scindia House, Ballard Estate, Bombay.

The improvement in the Company's results in the year under review, observed Shri Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Co. Ltd., in his statement to the Shareholders of the Company at the 44th Annual General Meeting was due to improved performance and the upward revision of freight rates coupled with such rationalisation of the fleet and services as the Company achieved in its overseas trades having due regard to its essentially liner nature. The 10 per cent increase in the Westbound freights had come not a day too soon inasmuch as these freights had remained steady at the same level since 1957.

Regarding employment of 10/12,000 d.w.t. ships as tramps for carriage of cargoes presently being carried by Liner vessels, he said this would lead to wasteful competition. Shri Khatau requested the Government of India to bear this in mind and to see that no parallel service is sought to be established by tramp interests, as such a step would merely give a set-back to what has already been achieved by Indian shipping in the field of international shipping.

As regards the rates of freight on the Coast, Shri Khatau referred to the appointment of Shri T. S. Parasuraman, as a One-Man Commission to review the case of shipowners, and he hoped that the Commission would look into the urgent need of allowing the coastal operators an appropriate increase in freight rates so as to provide an adequate return on capital employed.

Coal Cargo

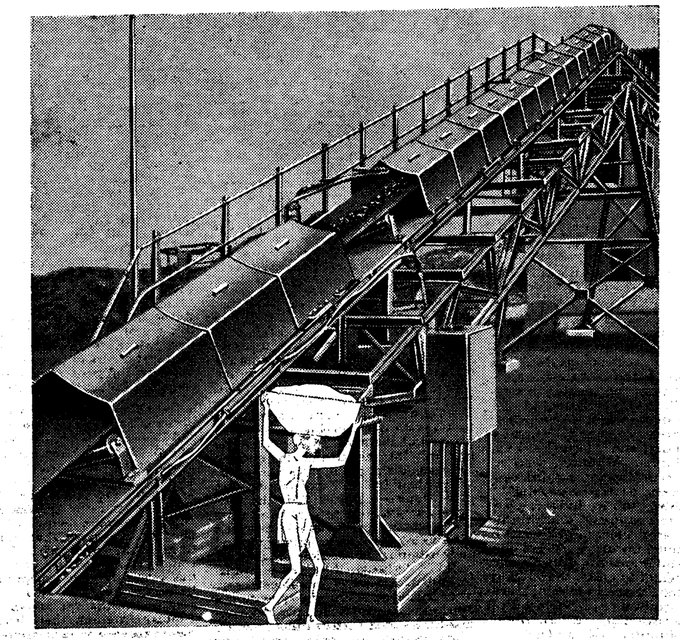
There was another aspect of coastal shipping which Shri Khatau dealt with in his observations: commenting on the occasional shift one noticed in the Government policy in allocation of coal cargo leading to withdrawal of some ships from coastal employment, he said it would be only fair that Indian shipping should expect to carry on the coast the increased quantity of the cargo that would be adequate for increased coastal tonnage so that coastal operators did not have to face the serious situation about finding cargo for their increased tonnages.

Shri Khatau referred to the problem of mounting operating costs arising from increased benefits given to the dock labour under various Awards and also from increased port charges and he said it was very necessary that the steps should be taken to establish an appropriate machinery like the Tariff Commission to evaluate such rise in costs with a view to suitable compensation in freight rates.

He further advised the meeting that, out of the three 17 knots fast motor vessels—JALAKIRT type—ordered with Messrs Hindustan Shipyard, the first vessel is now expected to be delivered by about the middle of 1964, although its keel was laid as far back as on 12th October, 1961. The second vessel is scheduled to be launched shortly and it will be ready sometime in 1965. Keel of the third vessel was laid on 26th April 1963. He also referred to the recent addition to the Company's fleet of two second-hand motor vessels —one of 12,800 d.w.t. and another of 11,700 d.w.t.—both built in 1958 and having a speed of 14 knots. These vessels have been acquired on a deferred payment basis.

His observations about future prospects were that:

> "the recent spurt in the international freight markets about which a reference has been made earlier will, it is hoped, have a steadying influence on the general level of liner rates. I also hope that the findings of the One-Man Commission now examining the coastal freight rates will lead to recommendations of more reasonable upward revision. With the Government of India recognising the need to ensure economic freights for our shipping and by proper planning, both in coastal and international spheres, we can look forward with confidence to a steady and planned progress of our industry."



Konkan Services

As regards Konkan Services, Shri Khatau stated that the amounts in respect of a subsidy in lieu of 8 per cent increase in fares as well as the repair cost in excess of the Rau Committee's estimate for the years 1961-62 and 1962-63 had not been received as promised by the Government. As no Agreement could be reached with the Government of Maharashtra in regard to the question of payment of dues payable by them, the Company could not resume the Konkan Services from 1st September 1963. Thanks, however, to the good offices of the Central Government, the Maharashtra Government paid an 'on account' amount of Rs. 4 lakhs which enabled the Company to resume its services from 11th October, 1963. He further stated that the Committee that was proposed to look into the matter had not yet started functioning and urged that early steps be taken to set it up.

Shri Khatau thanked Shri Jagjivan Ram, the then Minister of Transport and Communications, and Shri Raj Bahadur, Minister for Shipping and the officials of the Ministry of Transport for the interest taken in the shipping problems. He also referred to the services rendered to the cause of Indian shipping by Shri G. L. Mehta, the First Chairman of the National Shipping Board and welcomed Shri C. H. Bhabha the newly appointed Chairman of the Board and expressed his confidence that with his inspiration and efforts we would soon achieve and even exceed the target of two million tons for our national shipping.

He also appreciated the services rendered by the officers and staff and the Company's Agents abroad and in India and thanked the shippers and consignees for their continued support.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

COAL BELT CONVEYOR AT DCM CHEMICAL WORKS, DELHI

NO MORE SLAVERY... for in the modern age the treasures of your mines, factories or quarries can be carried mechanically — more humanely, efficiently and economically. If you have a problem of bulk handling, consult our specialists and they will design, fabricate and erect equipment to suit it perfectly.

IF IT'S A PROBLEM OF BULK HANDLING—ASK ELECON

LOAN CLAUSE IN COMPANIES BILL CAUSES FURORE IN LOK SABHA

(FROM OUR NEW DELHI CORRESPONDENT)

THE Companies (Amendment) Bill dominated discussions in the Lok Sabha last week. The Bill, in its original form, gave the Government the power to convert present or future loans advanced to a company into equity shares. The provision created grave apprehensions in business circles. In its representation to the Government, the Associated Chambers of Commerce of India, for example, has said: "The Chambers are very gravely concerned at the implications of the clause relating to the conversion by the Government of loans made by it into share capital. This clause would give powers whereby loans obtained from the Government by a company, before enactment of the Bill, can be converted into shares in the company on such terms and conditions as the Government may consider reasonable.

"In the opinion of the Chambers, these proposals are totally unacceptable. To change the very basis of a financial arrangement on which financial accommodation may have been received is to introduce an alteration in conditions which does not appear to be justified by any of the explanations given by the Government. The Chambers suggest that justice and expediency both require that the possible retrospective application of this measure should be removed."

The Bill was referred to a Select Committee. In its report, the latter recognised the force of the arguments advanced in the various representations and restricted the scope of the provision to future loans only. The amendment by the Select Committee was endorsed by a majority of the executive committee of the Congress Parliamentry Party. The Prime Minister, who presided, and the Central Finance Minister abstained from voting, while three "progressives" belonging to the Krishna Menon group voted against the amendment made by the Select Committee The minority thereupon called for a general meeting of the Congress Parliamentary Party to review the decision of its executive. This was acceded to by the Prime Minister. The general body, acting on "democratic" principles, delegated its power of taking a decision to its leader, namely, the Prime Minister. Mr. Nehru gave his verdict against the majority decision of the executive committee, thereby restoring the scope of the contested provision of the Bill to include the existing loans advanced to or debentures held by companies in the private sector. In doing this, the Prime Minister ignored the fact that not only did a majority of its own executive committee vote in favour of the Select Committee, but the report of the Select Committee, among others, was signed by his own Finance Minister.

The episode indicates the shape of things to come if the so-called progressives were to come to power. Communists often violated the agreements signed by them or their predecessors. The "progressives", similarly, may show no respect for agreements entered into by the Congress rulers.

Small Concession

Mr. Krishnamachari said in the Lok Sabha that the two steel companies in the private sector were likely to be affected because of the clause relating to the conversion of loans into equity shares. But in order to mollify the critics of the clause, he incorporated a last-minute concession by adding a rider that every order proposed to be issued for such conversion will have to be on the table of both Houses of Parliament for a period of 30 days to enable Members to scrutinise the order and make suggestions. Meanwhile, the battle is now easing within the Congress Party itself over the nationalisation of banks. Mr. Krishnamachari has so far stood up against this pressure. But the battle continues.

Mr. Nehru talked of pressure group tactics which, according to him, had succeeded in securing an amendment of the particular clause by the Select Committee and the majority endorsement of the amended clause by the Congress Party executive. To substantiate this, the Prime Minister should institute an enquiry. Alternatively, the members of his Party who were accused of surrendering their judgment to the pressure of "big money" should demand an enquiry into the allegation. The issue, however, is a bigger one, namely, whether there are any "lobbies" inside Parliament in general and the Congress Party in particular. If there are, what action has the Prime Minister taken to combat them? What about the sugar lobby, the cotton textile lobby, the *khadi* lobby, the bootleggers' lobby and so on? Coming in the wake of the Voice of America deal, the Companies (Amendment) Bill could have far-reaching repercussions.

In the light of this episode, the demand of the West German Government for an investment guarantee agreement is understandable. The focal point of the proposed agreement is the provision relating to arbitration. Under the scheme, in the event of a dispute over payment for German assets proposed to be nationalised, India and Germany each will appoint an arbitrator, who in their turn will appoint a third person not belonging to the country of either of them. In case India or Germany fail to nominate an arbitrator or the two arbitrators fail to select a third member during a period not exceeding three months, either party will be eligible to ask the World Court at the Hague to nominate all the three arbitrators or one arbitrator as the case may be. The award of this arbitration shall be final.

ECONOMIC TRENDS

Pre-Budget Survey

In his pre-Budget survey of the economic situation in the Lok Sabha on Monday, the Central Finance Minister, Mr. T. T. Krishnamachari, offered no hope of either reduction in taxation or a liberalisation of imports. An increase in production, productivity and exports, he said, was the need of the hour. "Unless industrial development in some important consumer goods industries, such as cotton textiles and sugar, picks up to a significant extent, it will not be possible for us to achieve the overall rate of growth in industrial production of the kind we urgently need." The Government has accordingly decided to abolish price controls on 16 commodities—rayon yarn, staple fibre, caustic soda, soda ash, hydrochloric acid, chlorine, calcium carbide, bleaching powder, chilean nitrate, muriate of potash, sulphate of potash, washing soap, tyres and tubes, sheet glass, paper board and natural rubber. Pending the report of the committee on the licensing of industries, grant of capital goods licences, control over capital issues, etcetera, the Government has raised the exemption limit for industrial licensing from Rs. 10 lakhs to Rs. 25 lakhs. Correspondingly, the exemption limit for the purpose of capital issues control is being raised from Rs. 10 lakhs to Rs. 25 lakhs.

Mr. Krishnamachari said: "In general, in the administration of all controls, including permissions for inter-corporate investments, we shall be guided mainly by the need to promote the growth of essential industries." He, however, made it clear that in the present state of foreign exchange reserves, the Government could not relax the scrutiny over the import of plant and machinery "associated" with any investment, however small it might be. In sanctioning the licences for the import of capital goods, the Government will, therefore, "continue to have utmost regard" for the essentiality of the industry and other relevant factors. Mr. Krishnamachari felt that no one should put up inessential industries which would need steady supplies of imported materials, or indigenous raw materials, of which there was an acute shortage and whose distribution was controlled by the Government.

Mr. Krishnamachari regretted that substantial additional taxation had to be imposed to meet the needs of defence and development, precisely at a time when there was a significant decline in agricultural production. This naturally led to a sharp rise in the prices of several basic necessities. The Central Finance Minister referred to the two basic problems of rising prices and the slow rate of economic growth. He claimed that the outlook for agricultural production was better which should make it possible to keep prices under control. "In the ultimate analysis, our success in dealing with economic problems will hinge on the success we achieve in stimulating and sustaining production and productivity." Although the Finance Minister felt that in a developing economy, there should be restraints on consumption and on less essential development, he stated that in India where a large section of people were living from hand-to-mouth, the approach to any unbalance or shortage could only be in terms of ending the shortage or unbalance at higher levels of supplies rather than in terms of greater and greater restraints on demand. Among the measures the Government has taken to stimulate growth are better credit facilities for legitimate purposes by the Reserve Bank, the enlargement of resources of the Industrial Finance Corporation and the Industrial Credit and Investment Corporation, the establishment of a unit trust in the public sector, and the proposed development bank.

Budgetary Outlay

"The Budgetary outlay next year will inevitably be considerably higher than during the current year. Given the continuance of the state of emergency and the threat to our borders, of which I see no visible signs of abatement, there cannot clearly be any question of the slackening of our defence effort. On the other hand, the plan outlay next year will have to be substantially larger. We are currently having discussions with the State Governments on their plans for 1964-65 and the indications are that Central assistance to the States next year for their plans will have to be significantly larger than in the current year. The outlay on the Centre's plan next year wil also have to be higher. Some increase in the non-plan expenditure is also inevitable. We have already taken a few measures to enlarge the area of social security.

"To a certain extent, the increase in both plan and non-plan expenditure would be offset by the growth in normal tax revenues and by greater use of external assistance as projects for which such assistance is earmarked begin to get completed. On the other hand, while it should be our endeavour to increase the receipts from small savings even beyond satisfactory levels for the current year, it will not be prudent—in the light of this year's experience and requirements of the rest of the economy for funds—to plan for any significant increase in resources to be raised by market borrowing. There also is no question of taking the lid off deficit financing at a time when utmost vigilance is required on the price front.

"In short, in any review of fiscal policies, the primary emphasis has to be on such forms of modification and rationalisation of the tax system as are calculated to improve the performance of the economy without disregarding the need for raising 'resources' on an adequate scale. The relevant question before us is, therefore, whether there is any scope for making such changes as would stimulate saving and investment, and production, and thereby contribute even more to the buoyancy of public revenues than the present tax system does. Perhaps the most important problem that faces us in the matter of fiscal reform is that of devising astute and stringent measures to meet the evil of tax evasion so that it may be possible to distribute the burden of taxation more justly and evenly between different individuals in the same or similar walk of life.

"We have thought too exclusively of social justice as justice between different classes or sections or community and not enough of injustice inherent in tax evasion as between different members of each class or profession and as between the honest taxpayer and the dishonest evader. Another avenue which I think we need to explore is that of surpluses from public enterprises. It has been common knowledge for some time that returns on investment in the public sector have not been commensurate with what we should expect. I venture to think that the steps we have taken on hand or are now taking would help to lift the economy to a somewhat higher level of effort and enterprise than has been the case for some time in the recent past."

Earlier Mr. Krishnamachari said that the economic situation showed a mixed trend. The foreign exchange position continues to be tight, although the decline in reserves has been arrested since August. It has not been necessary so far to fall back on the stand-by agreement with the I.M.F. On the contrary, India has repaid $25 million to the I.M.F. Mr. Krishnamachari expected that at the end of the current fiscal year, the reserves would be of the order of Rs. 300 crores. Internally, the budgetary outlook for the current year is not unsatisfactory despite major concessions in relation to the compulsory

savings scheme and the reduction on two occasions in the premium rates for the emergency risks insurance scheme." In view of this improvement, the Government has decided to collect no premium for emergency risks insurance for the quarter ending 31st March, 1964. Taking account of all factors, Mr. Krishnamachari claimed that the overall budgetary deficit in the current year should be lower than the Rs. 181 crores originally budgeted for.

RAILWAYS

Kunzru Committee Report

The Kunzru Committee on Railway Accidents has submitted its report to the Government. The following are the Committee's important findings: "Our study of accidents does not support the impression that the increase in traffic mainly accounts for the increase in accidents. The incidence of important accidents during the last six years has shown a decrease on the broad gauge and an increase on the metre gauge, where it has been throughout higher than on the former. Furthermore, the disparity between the two has been widening and deserves the special notice of the railway authorities.

"In examining the various categories of collisions, we find that (i) the incidence of collisions is about 50 percent more on the broad gauge than on the metre gauge. The incidence on the broad gauge and the metre gauge has been highest on the Eastern and the North Eastern Railways, and lowest on the Western and Southern Railways, respectively.

"(ii) Collisions between trains and shunting engines, which constituted the largest proportion of collisions, have been showing a downward trend on the broad gauge. We suggest that the measures, which have resulted in improvement on the broad gauge, should be applied also to the metre gauge, where there has been a deterioration. We suggest the need for special attention to collisions between two trains, whose proportion has been increasing on both the gauges:

"(iii) Thirty-four and 42 percent of the collisions, on the broad gauge and metre gauge, respectively, were caused by the reception of trains on blocked lines or by despatching them into blocked sections or by the incorrect setting of points in addition, drivers were responsible for 21 and 17 percent of the collisions on the two gauges, respectively. We emphasise the need for imparting training and a personalised approach to the station staff and drivers and to provide them with appropriate signalling aids.

"(iv) Collisions between trains and trolleys are more on the broad gauge than on the metre gauge and are susceptible of appreciable reduction for which the railways should enforce strictly the rules for trolley protection.

Incidence of Derailments

"Our analysis of derailments shows that (i) the incidence of derailments a million train miles on the broad gauge has been throughout lower than on the metre gauge. This shows that by raising the standard of equipment and its maintenance and by inculcating greater alertness among the operating staff, it is possible to neutralise the adverse effects of the higher intensity of traffic.

"(ii) Seventeen percent of the derailments on the broad gauge and 36 percent of those on the metre gauge occurred in mid-sections; such derailments being more dangerous, call for special steps to reduce their occurrence;

"(iii) (a) Fifty-two percent of the station derailments and 11 percent of mid-section derailments, on the broad gauge, were caused by various types of failure on the part of the staff. The corresponding figures for the metre gauge were 46 percent and 19 percent, respectively;

"(b) Sixty-one percent of the station derailments caused by failures of station staff on the broad gauge and 58 percent of those on the metre gauge were attributed to incorrect setting and non-locking of points. We, therefore, suggest that the guard should personally supervise shunting at all stations except where a shunting *jamadar* or a corresponding official is in charge of shunting. In all cases of shunting whether involving a passenger or a goods train, locking of facing points should be made compulsory.

"(c) Thirty-four percent of the station derailments on the broad gauge and 36 percent on the metre gauge were caused by the failures of drivers; the mid-section derailments attributed to them were 53 percent and 62 percent on the two gauges, respectively. We suggest an expeditious conclusion of the experiments undertaken by the Research, Designs and Standards Organisation (R.D.S.O.) so that more powerful and effective brakes may be provided on trains.

"(iv) Defective loading was responsible for 35 percent of mid-section derailments caused by failures of the staff on the broad gauge and 36 percent on the metre gauge. We suggest that the railways should make a detailed study of the nature of such defective loading and devices measures to avoid them.

"(v) On the metre gauge, track defects caused a larger number of derailments at stations than between stations. The position was the reverse on the broad gauge. The wide variations on the different railways in the accidents caused by track defects point to the need for raising the standard of the track and its maintenance on the railways, where the performance is poor.

"(iv) Sixteen percent of the derailments on the broad gauge and 20 percent on the metre gauge were caused by carriage and wagon defects, whose incidence varies considerably on the different railways. The incidence of these derailments a 100 million vehicle-miles on the metre gauge is 232 percent higher than on the broad gauge. This emphasises the urgent need for improvement on the metre gauge of some railways.

"(vii) Four percent of the derailments on each of the two gauges were caused by engine defects and we urge that the maintenance of engines on the railways with a bad performance should be improved appreciably.

Accidents at level crossings: The level crossing accidents have been showing an upward trend on both the gauges but more so on the metre gauge. Ninety percent of the accidents at manned level crossings on the metre gauge and 77 percent on the broad gauge were attributed to the failure of the railway staff, and this indicates the need for greater vigilance on the part of the gatemen. We suggest that the permanent way, loco and the transportation inspectors should watch and report on the alertness of the gatemen, and officers should make frequent checks on the working of the gatemen and the security factors at the gates. Severe action should be taken against those found not alert or absent from duty at the time of the passage of trains.

"Care should be taken to ensure that persons suffering from physical handicaps are not posted as gatemen. The highest incidence of level crossing accidents, both at manned and at unmanned level crossings, was on the North-east Frontier Railway, followed by the North Eastern Railway in the case of manned and the Eastern Railway in the case of unmanned level crossings. We urge these railways to make detailed investigations to determine the preventive measures to be taken.

New Fund Suggested

"We recommend the establishment of a railway level crossing fund somewhat on the pattern of the Canadian Railway's grade crossing fund, to finance all protective works at level crossings. This fund should be credited with yearly contributions by the Ministries of Railways and Transport and by the State Governments, on a basis to be determined by mutual consultation.

"*Central Railway:* Our analysis of accidents on the Central Railway shows that the collision between trains and shunting engines on its broadgauge section have been high, that the average incidence of derailments on its metre gauge section has been 82 percent more than on the broad gauge and that the station staff have been responsible for a very large number of collisions and derailments. This indicates the need for a more thorough check on their work.

"We find that the drivers were responsible for a large number of derailments, a good number of collisions and for most of the cases of disregard of signals, whose incidence was the highest on this railway. We suggest that the Railway Board's instructions on the minimum vacuum in the guard's brakevan should be brought into force, not later than 31st March, 1964, and the drivers should be given better and regular training in schools and on the footplate; for this purpose, the strength of loco inspectors should be augmented.

"We find that mid-section derailments constituted the bulk of derailments on the metre gauge and that carriage and wagon defects were the largest factor responsible for them. We observed that proper attention was not being given to wagons in the Matunga workshops.

"*Eastern Railway:* The results of our analysis of collisions on the Eastern Railway are as follows: (i) The number of collisons on this railway was the highest of all the broad gauge railways, during the last six years, although there has been a general trend towards a reduction in their number.

"(ii) A large number of collisions between trains and buffer ends or other stationary objects has been a peculiarity of this railway.

"(iii) Thirty-three percent of the collisions were due to drivers disregarding signals or to their failure to control in time the speed of trains. On the electrified section, this was partly due to the inadequate visibility of the signals to remedy which we suggest that multiple aspect colour light signalling should be provided in all schemes of electrification and their proper visibility ensured.

"(iv) The reception on or despatch of trains into blocked lines accounted for 30 percent of the collisions, which indicate the need for greater vigilance on the part of the station staff.

"(v) Twenty-seven percent of the collisions were due to non-protection of trolleys. This railway has laid down recently that trolleys should be protected by red flags and detonators from three-quarters of a mile instead of half a mile; we suggest that other railways should make a similar provision in their rules.

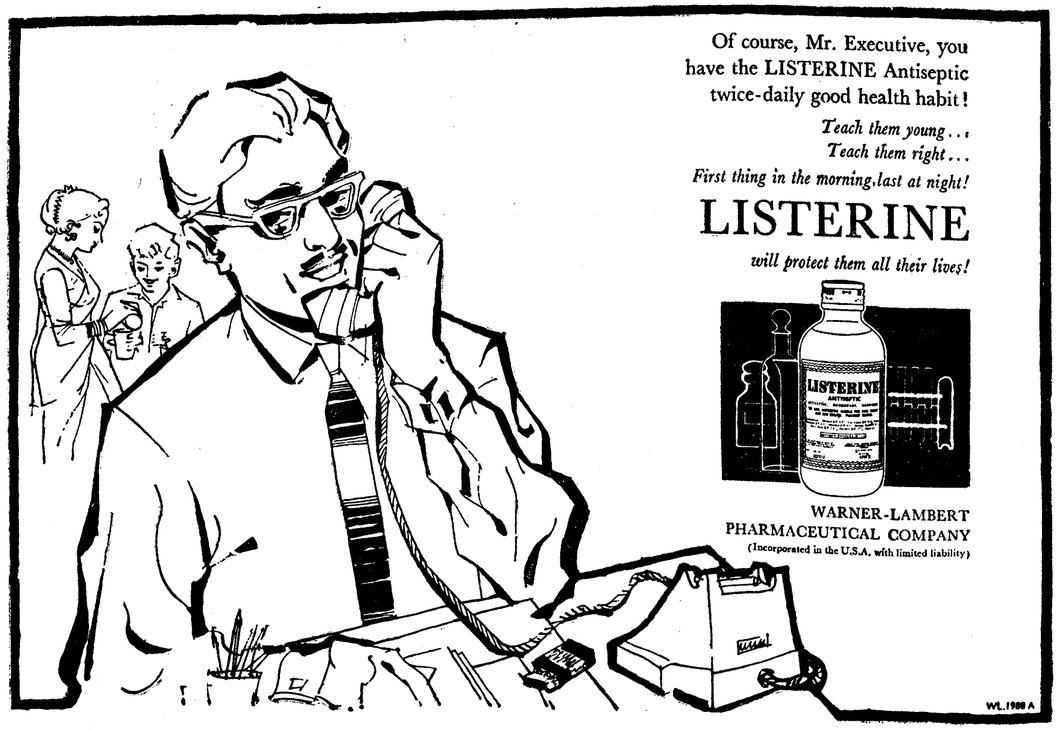
Mid-section Derailments

"We find that the proportion of mid-section derailments on the Eastern Railway has been increasing mainly on account of carriage and wagon defects. One-third of the train partings in India were on this railway and 60 percent of them resulted from the breakage of drawbars, links, etcetera. Besides the early completion of the programme of replacement of the drawbars of Class II steel by those of Class IV steel, we suggest that the procedure for the maintenance of rolling stock should be radically improved and strengthened on this railway.

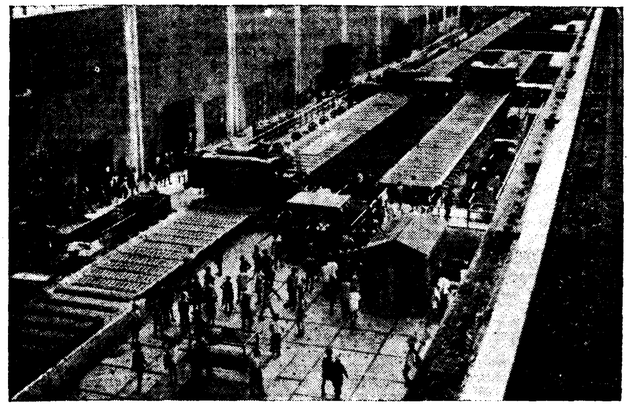
"We consider that the non-fulfilment of the track renewal programme was partly responsible for a large number of derailments due to track defects and suggest that the programme should be completed early.

"*North Eastern Railway:* Our analysis of accidents on the North Eastern Railway shows that the incidence of collisions has been the highest among the metregauge railways and the incidence of derailments, averted collisions and block irregularities was also very high. Fifty-four percent of the collisions on the railway were between trains and shunting engines and a large majority of the derailments took place at stations.

"This railway alone accounted for 43 percent to 49 percent of the different types of staff failures on all the metregauge railways. We comment on the widespread lack of knowledge of basic rules among the operating staff and suggest measures for improvement in this matter.



"Among the metregauge railways, derailments due to track defects were the highest on this railway. Defective track material, mostly in station yards at or near the points, accounted for the largest number of such derailments. The condition and maintenance of points and crossings were admitted to be poor. Sixty percent of the track was under speed restrictions at the time of our inspections.



"We find that 41 percent of the derailments due to engine defects on the metre gauge, occurred on this railway. The position concerning engine failures has also been unsatisfactory. We suggest that the railway should take steps, with special assistance from the Railway Board, to get over the shortage of spare parts, the inadequacy of competent supervisors and the widespread illiteracy among drivers.

WORLD BANK

Mr. Peter Wright in Delhi

Mr. Peter Wright of the World Bank was recently in town on his

A view of the finishing end plant built by Schloemann for the heavy plate mill in Rourkela

SCHLOEMANN
plant for India's heavy industry

It was more than 25 years ago that SCHLOEMANN—a German mechanical engineering company, then practically unheard of in India—received their first order from a progressive Indian company.

Since then, SCHLOEMANN have participated increasingly in India's industrial expansion... supplying the finest in plant and equipment that help produce the basic materials for a higher standard of living.

Of the many nationally important undertakings that have chosen SCHLOEMANN machinery are TISCO, Hindustan Steel at Rourkela, TELCO, the Mysore Iron & Steel Works, and the Indian Steel & Wire Products Ltd.

Today, SCHLOEMANN—a well-known and trusted name the world over—are proud to be able to offer Indian industries the very latest plant... in the very same spirit of technical co-operation existing since that first order from India over 25 years ago.

- Rolling Mills for Ferrous and Non-Ferrous Metals
- Counterblow Hammers
- Hydraulic Presses
- Extrusion Presses

SCHLOEMANN—over 25 years of co-operation with INDIA

VOLTAS *Sole Distributors:* VOLTAS LIMITED, Head Office: Bombay 1

DVS-VL 1961 (B)

way back to Washington. He had been to Nepal. During his brief stay in New Delhi, Mr. Wright met the Central Finance Minister, Mr. T.T. Krishnamachari, and the Deputy Chairman of the Planning Commission, Mr. Asoka Mehta. The main object of the visit was to study the changes in the economy that had taken place since he made his last report. His next report will be available before the meeting of the Aid-India Club due to be held in Paris during the spring. India, it is learned, will ask the Club to make commitments for the last two years of the plan as well as for the preliminary work or advance action for the fourth plan.

Indications, however, are that the U.S.A., due to the forthcoming Presidential elections. may not be able to make commitments for more than one year. There is a general dissatisfaction over the use the aid is being put to and the rigidity of the Indian approach to some basic problems. The plea that a 7 percent growth target for India is justified is not convincing either, in view of the growth rate of 2 percent so far achieved. There is a school of thought in New Delhi which is opposed to enlarging the scope of foreign assistance, which must follow, if the growth target is based on 7 percent. Foreign observers think that India should consider herself lucky if she succeeds in securing aid at the present rate. Then again, fixing targets, say, for steel production within a specified period is not regarded as realistic. As the Deputy Chairman of the Planning Commission, Mr. Mehta, with a detached mind, may reorganise the whole basis of planning, it is suggested here.

PENSIONS

Scheme for Central Employees

The Central Finance Minister, Mr. T. T. Krishnamachari, announced a liberal scheme of family pensions for Central Government employees in the Lok Sabha last week. The scheme provides for a life pension to the widow of an employee with a minimum of Rs. 25 a month and a maximum of Rs. 150 a month adjusted for different slabs of pay of the employee concerned. The scheme covers all regular employees, permanent and temporary, with one year's service. Allowances would be paid to minor children in the event of the death of the widow. On his part, the employee will surrender part of his gratuity equal to two months' emoluments as a token contribution. This contribution will not be applicable to defence services personnel as no gratuity is payable to them. The annual funded cost of the scheme will ultimately be Rs. 17.15 crores. The scheme will come into force on 1st January, 1964. The following is the text of Mr. Krishnamachari's statement:

"The Government has been considerering for some time measures to be adopted for providing social security to weaker sections of the population. As will be appreciated, this is a very wide question and different schemes have to be devised to meet the varying needs of the persons affected. While these considerations are still in progress, the Government has considered it desirable to make a beginning with a scheme of social security at least for its own employees, and has decided to revise very substantially the present family pension a pension for life to the widow of an employee.

"The new scheme provides for a minimum pension to the widow of Rs. 25 a month and a maximum pension of Rs. 150 a month adjusted for different slabs of pay of the employee concerned. The scheme will also provide for payment of allowances to minor children in the event of the widow dying. At present, an officer has to complete normally not less than 20 years' qualifying service for the widow to become entitled to a pension and the duration of the pension is also limited to a maximum period of ten years. Under the new scheme, the widow of any regular employee, whether permanent or temporary, who has put in one year's service will be a entitled to the pension for life in the event of death of the employee. The employee will, however, be required to surrender a small portion of the death-*cum*-retirement gratuity due to him, equal to two months' emoluments, as a token contribution. The new scheme will apply to all employees in service on 1st January, 1964, and also, of course, to those who enter service thereafter.

"The scheme will apply to all railway employees who opt for or are already on a pension scheme. The existing extraordinary pension scheme will be suitably revised to provide for somewhat higher benefits to bring it in line with the present scheme. The need for some such scheme has been envisaged by the Second Pay Commission and it is a matter of some satisfaction that it has now been possible to give a practical shape to it.

"As for defence services personnel, the new scheme would practically be non-contributory because no gratuity is payable to defence services personnel in addition to service pension. In cases where the minimum pension admissible at present is lower than Rs. 25, it will also be raised to this minimum.

"The annual funded cost of the scheme ultimately in about 25 years is estimated at Rs. 12.15 crores a year on the civil side and Rs. 5 crores a year on the defence side. The scheme will be brought into force from 1st January, 1964, and will provide a measure of security to wives and minor children of Central Government employees.

E.C.M.

Tariff Concessions

The following are the details of the recommendations of the Council of Ministers of the European Economic Community for concessions in the common external tariffs for some of the products:

Item	Existing rates of common external tariff	Duties according to the provisional decision of the Council of Ministers	Reported modifications in the provisional decision (subject to confirmation from the Commission of the E.E.C.)
Cashew kernels	5 percent	Complete suspension	2½ percent
Cardamom (unground)			
(i) For manufacture of essential oils and resionid	Exempted	-do-	-do-
(ii) Others	20 percent	Complete suspension	No change
Cardamom (crushed or ground)	25 percent	-do-	-do-
Coriander (unground) essential	-do-	-do-	-do-
(i) For manufacture of essential oils and resionid	Exempted	-do-	
(ii) Others	5 percent	-do-	-do-
Coriander (crushed or ground)	12 percent	-do-	-do-
Ginger			
(i) For manufacture of essential oils	Exempted		
(ii) Others	20 percent	Complete suspension	No change
Curry powder and paste	25 percent	-do-	-do-
Mango chutney	20-22%	-do-	-do-
Ginger preserved crystallised	25 percent	-do-	-do-
Ginger preserved in sugar	23-27%	-do-	-do-
Castor oil	8 percent	7 percent	-do-
Tobacco seed oil crude	5 percent	Complete suspension	-do-
Other	8 percent	-do-	
Chillies	20 percent		10 percent
Chillies powder	25 percent		12½ percent
Shellac bleached	3 percent	Complete suspension	No change

COAL

Demand Under Third Plan

The anticipated demand for coal at at the end of the third five year plan by various major consumers is as follows:

	Anticipated in 1965-66 (In million tons)
Coking Coal	
Steel plants	18.41
Merchant cokeries	2.00
Soft coke for domestic consumption	4.50
Non-coking coal	
Railways	20.00
Power houses	13.64
Cement factories	6.32
Paper mills	2.10
Textile mills	2.27
Brick kilns	4.00
Export	1.50
Bunker	0.15
Colliery consumption	2.50
Other consumers	12.92
	90.31

The capacity of the Kathara colliery of the National Coal Development Corporation will be expanded from 1.5 million tons a year to 3 million tons a year. Similarly, the Swang and Jarangdih mines will be reorganised and their combined total output increased from 300,000 tons to about 1 million tons. The Jarangdih and Swang scheme is to be executed in collaboration with the National Coal Board of the U.K.

Kathara in Bihar has been selected for setting up a coal washery with Russian credit. The total estimated cost of the project is Rs. 8.06 crores, out of which the foreign exchange component is estimated at Rs. 3.68 crores. The foreign exchange component comprises Rs. 2.58 crores under the rouble credit from Russia, Rs. 10 lakhs under the trade and payments agreement with the latter and Rs. 1 crore for the purchase of equipment from other countries. The construction work will commence early in 1964, and the washery is expected to be commissioned in October 1965. After the necessary trial runs, it will start production in December 1965.

HEAVY STRUCTURALS

Programme for Wardha Project

Due to the lack of foreign exchange, the heavy plates and vessel project and the heavy structurals project proposed to be set up in Wardha during the third plan period could not be implemented so far. Consequently, a rephasing and reorientation of these projects has become necessary. At present, the intention is to take up the heavy structurals project, with the addition of marginal items of plate and vessel work. Steps are being taken to find the necessary foreign exchange for this purpose.

DEVELOPMENT BANK

New Bill Expected

The Government's decision to establish a development bank and its relationship with the Industrial Finance Corporation is likely to be placed before the Lok Sabha in the shape of a Bill, it is disclosed here.

HINDUSTAN STEEL

Loss Incurred

After providing for depreciation, the total loss incurred by the Hindustan Steel Ltd up to March 1963, was Rs. 61.6 crores. Exclusive of the provision for depreciation, it made profits in the years 1961-62 and 1962-63.

WAGES

New Boards Appointed

Wage boards have been appointed for the iron ore mining industry, limestone and dolomite mining industries and for working journalists during 1963. The Government proposes to appoint a wage board for non-journalist employees of newspaper establishments. Its composition and terms of reference are being finalised. Demands have also been made for the appointment of wage boards for the port and dock workers engineering industry, electricity undertakings, chemical, paper, leather, transport, bidi and film industries.

COPPER STRIPS

New Unit Proposed

The Government of India has received an application from the Madhya Pradesh State Industries Corporation Ltd., Indore, for the grant of an industrial licence for setting up a factory in Bhopal for the manufacture of paper-covered copper strips for a capacity of 2,500 tons a year. The application is being considered by the Government. The Central Government does not intend to participate in the venture.

MAGNESITE

Deposits in U.P.

Magnesite deposits have been reported from the Almora districts of U.P. A reserve of 11.6 million tons, averaging about 40 percent to 44 percent magnesia, has been proved by the Indian Bureau of Mines in Dewaldhar and Agar Girechhina sectors.

MINING EQUIPMENT

New Company

Collaborating with an Indian firm in Calcutta, the British firm of Becorit (G.B.) Ltd has finalised negotiations to produce mining equipment on a 50:50 basis in India.

In collaboration with Octavius Steel Co. Ltd, of Calcutta, a new Company, Becorit (India) Ltd, is being formed.

The Company, for which factory buildings in 80 acres are now being constructed in Dhanbad, will ultimately supply roof supporting equipment, pit props and steel link roof bars for the Indian mining industry.

The new Company will not only provide the type of equipment in demand for the Indian mining industry, but also continue to utilise the latest technical know-how and developments available in Britain.

STEEL RE-ROLLING

Licences for New Mills

Two licences have been granted for the establishment of steel re-rolling mills in Kerala. Their details are as follows:

(1) A. V. Thomas and Co. Ltd, Alleppey: location—Cochin; and capacity—6,000 tons (annual).

(2) West India Steel Corporation Ltd, Kozhikode; location—Kozhikode; and capacity—15,000 tons (annual).

POLAND

Talks on Trade Pact

Mr. Franciszek Modrzewski, Polish Vice-Minister of Foreign Trade, has arrived in New Delhi for the final round of talks for a long-term trade agreement between India and Poland.

Trade talks between a Polish delegation and an Indian delegation led by Mr. D. S. Joshi have been going on since 18th November.

The volume of trade between the two countries in 1963 is expected to be of the order of Rs. 25 crores both ways. Poland, it is understood, will offer a line of credit to enable India to import some ships and power projects.

U.S.A.

Package Plants Offered

India has recently received a number of offers, particularly from the U. S. A., for package plants to be shipped to India. They include castings and forging plants. Apart from the time factor, they will bring with them this much needed know-how. The proposed equity participation should also ease the foreign exchange position. Another advantage is that there is no demand for royalty or other payments. They involve venture capital, which should be better than other forms of participation. The offers are being examined by the Government.

H.E.C.

Furnace for Bokaro

The Heavy Engineering Corporation has been commissioned to manufacture a large furnace for Bokaro and has been equipped with designs, coke ovens, handling of equipment, etcetera. Efforts are also in progress for utilising the manufacturing capacity in Bhilai and Durgapur for putting up blast furnaces. The private manufacturing capacity is being mobilised for manufacturing equipment for the expansion of the Durgapur and Rourkela steel works.

MOTOR-CARS

New Licences Issued

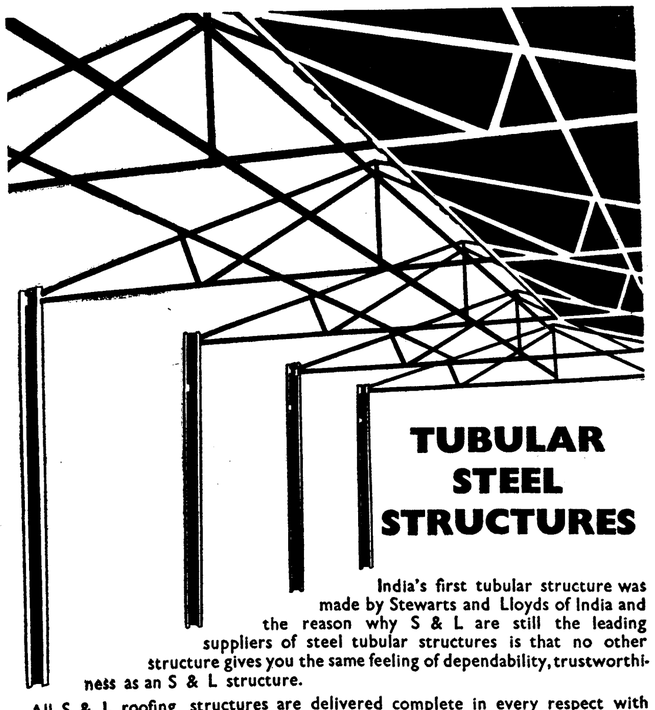
The Government has issued licences to the following manufacturers of motor-cars and automotive diesel engines for the manufacture of lorry and bus chassis:

Name of manufacturer	Item of manufacture	Capacity	Remarks
Simpson and Co. Ltd, Madras	3 to 5-ton lorry and bus chassis	Nos. 12,000 a year	This will be undertaken in a new undertaking
Standard Motors Products of India Ltd, Madras	1-ton lorry chassis	1,500 a year	The 1-ton lorry will be manufactured as a new article in its existing undertaking

A licence has also been issued to Bajaj Tempo Ltd., Bombay, for the expansion of its capacity for the manufacture of Tempo Hanseat three-wheelers from 1,000 to 4,000 numbers a year with permission to manufacture Tempo Viking four-wheelers within that capacity.

Nine thousand jeeps and lorries are being manufactured for the use of armed forces. Their details are as follows:

Description of stores	Quantity on order	Name of company	Foreign exchange obtained	Supply made
Jeeps	8,100	Mahindra and Mahindra Ltd, Bombay	Rs. 3,696 each	4,050 Nos.
Lorries: one-ton power wagons	10,700	Premier Automobiles Ltd, Bombay	Rs. 9,850 each	To commence from December 1963
Lorries	7,500 Nos.	Tata Engineering and Locomotive Co., Ltd, Bombay	Rs. 4,600 each	-do-



BURMAH-SHELL ROAD SAFETY CAMPAIGN

Burmah-Shell will shortly launch a road safety campaign in Bombay, Calcutta, Delhi and Madras. Releasing the plans of the campaign, Mr. P. J. Dickinson, general manager, stated in Bombay that the needless loss of many lives on the roads could be prevented only by the active participation of road users in the efforts of the Government for minimising the tragedy. It is in its capacity as road users that Burmah-Shell has decided to make its contribution to this community service. He said that the fields in which Burmah-Shell could best contribute were "Awareness" and "Education" The importance of awareness is sought to be publicised through a national Press campaign, a specially prepared film, and through hoardings and posters.

Specially designed traffic educational parks for school-going children, instructive and interesting comics, road safety code booklets in all major languages for motorists, scooterists and drivers of public vehicles are the main features of the educational aspect of the project.

The traffic educational parks, a novel feature of the campaign, are being built on land provided by the Government. Burmah-Shell will equip the parks with miniature automatic traffic lights, a network of roads and pedal cars to simulate actual traffic conditions. On these parks traffic police will impart instruction to school children.

The road safety code books have been compiled with the help of the Government and the Central Ministry of Transport. This booklet will be made freely available to all holders and applicants of driving licences.

TUBULAR STEEL STRUCTURES

India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

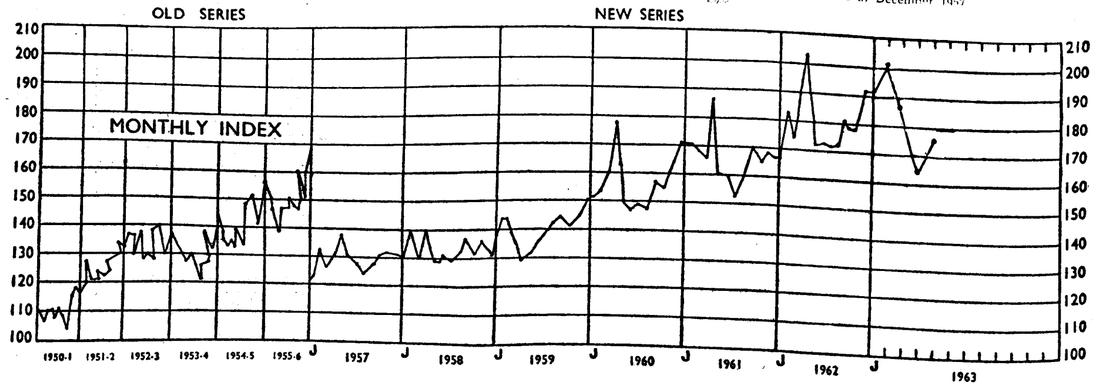
NAS-S & L-1064

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **



The *Capital* Index of Indian Industrial Activity (Base: 1953) has now been brought up to April 1963. Compared with the preceding month, there were rises in tea 42.61 points, jute 1.24 points, yarn 0.12 points, coal 6.38 points, bicycles 8.63 points, electricity 12.82 points, railway tonne-kilometres 10.55 points, while decreases occurred in sugar 191.46 points, cloth 0.74 points, cement 7.12 points, pig iron 6.15 points, finished steel 70.81 points, paper 15.31 points, tyres 5.96 points and motor-cars 85.69 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity rose by 9.7 points during April 1963

LULL IN GUNNY MARKET WORRIES INDUSTRY AND TRADE

THE lull in the gunny market during the past six weeks or so has been worrying the industry and the trade. In spite of some bookings, along with routine short and shipper covering, prices have declined. Between 21st October and 16th December ready B Twills have fallen from Rs. 113.20 to Rs. 111 and 40in. 10oz. hessian spot from Rs. 47.80 to Rs. 45.60. It is estimated that at the present level of production costs (ranging from Rs. 111 to Rs. 112 a 100 bags), mills make almost no profit on B Twills. In hessian, at the current level of Rs. 45.60 a 100 yards, they are left with a profit of about Rs. 85 a ton.

Anxiety has increased because the U.S.A. has shown little interest in replenishing her burlap stocks despite a high level of consumption. During October, she purchased a total of 47.72 million yards, out of which 43.34 million yards were booked from India. Of this, 22.37 million yards were for the ready positions, 18.66 million yards for November-December and 2.4 million yards for January and later deliveries. At the end of October, her undelivered bookings totalled 111.05 million yards, of which the major portion of 84.2 million yards was from India—57.6 million yards for November-December and 26.59 million yards for January onwards. Trade circles say that U.S. purchases during the past six weeks or so were of a routine nature.

Fall in Burlap Rates

There has been a steep decline in burlap prices in New York during recent weeks. A buyers' market has been prevailing there for some time. There were sellers over in 40in. 7½oz. hessian spot and afloat at 8.60 cents a yard on 16th December, against 8.90 cents on 5th December. In 40in. 10oz. hessian too, prices reacted similarly. Spot and afloat were on offer at 11.75 cents a yard on 5th December and 11.50 cents on 16th December. In the Calcutta market, 40in. 10oz. hessian prices have fallen from Rs. 46.20 to Rs. 44.80 a 100 yards for the December position between these dates. On the completion of the November contracts, the mills will be left with very small U.S. bookings for hessian, unless more orders are placed soon.

Shippers estimate that the U.S.A. has booked about 7,000 bales for November-December and about 3,000 bales for later positions during recent weeks. The U.K. bought small quantities, while European buyers placed orders for fair quantities of tarpaulin. As the Argentine vessel for November could not carry more than 14,000 bales, an extra steamer was allotted to take the balance. Argentinian offtake was better in November because of the uncertainty about freight space availability. She may take 8,000 bales or so for which another vessel is likely to be allocated. In case another steamer is available in January, the surplus of ready hessian may be reduced. Australia bought 6,000 bales for December-January shipment.

In sacking too, there have been some orders. The Government of India entered the market after a long time with a tender for 20,000 bales; more orders are expected for January-March. Australian woolpack committees have so far booked about 15,000 bales for January-September, completing about 80 percent of the buying for the 1964 clipping season. Among pending tenders may be mentioned the Ceylon Government's enquiry for 1.5 million bags of heavy goods and the Rangoon enquiry for 14 500 bales of sacking for January-February shipment. Although Pakistani capacity is overbooked, that country has not lost any opportunity to undercut India, and has taken a large number of orders for substantial lots this season.

Maximum Production to Continue

In spite of an increase of 3,100 tonnes—from 108,300 tonnes in October to 111,400 tonnes in November—in stocks of manufactured goods, the I.J.M.A. has decided to continue production at the maximum level until the end of January 1964. It is said that more than half the increase in stocks between June and November was accounted for by carpet-backing cloth.

The inter-mill movement of jute manufactures under bond for processing or further operation has been discontinued following the introduction of a revised procedure by the excise authorities. They have decided that processed or semi-processed jute products will move from one mill to another for such purposes on payment of duty. The consignee mill will get credit for the duty paid on such products immediately on receipt of the goods from the consignor mill. After discussing the new procedure with the authorities, I.J.M.A. representatives think that it will be more convenient than the old one.

Move to Raise Power Rates

The jute industry is worried about the latest move to raise the electricity tariff for all classes of consumers. The mills, it is believed, may ask the Jute Commissioner to oppose the increase. Any rise in production costs due to higher electricity charges will impair the competitive position of Indian gunnies in overseas markets.

The I.J.M.A. proposes to ask the Jute Commissioner to revise the monthly jute purchase programme, which is drawn up on the basis of a preliminary crop estimate prepared earlier during the year. The earlier estimate of supplies (including the fibre smuggled from Pakistan) was 7.7 million bales, but it has now been revised downwards to 7.3 million bales. Circles close to the industry feel that with the lifting of the December quota, mills will have absorbed about 69 percent of the supplies. So, for the remaining six months of the season, the purchase programme should be suitably revised. This is also warranted by the extreme shortage of warehouse accommodation in the Calcutta area.

Rise in Gunny Output

Working at the maximum level for 208 hours in November, against 200 hours in the previous month, mills reporting to the I.J.M.A. produced 103,800 tonnes of gunnies last month, against 96,200 tonnes in October. Hessian output increased by 3,600 tonnes to 45,400 tonnes, sacking by 2,400 tonnes to 42,000 tonnes and miscellaneous goods by 1,600 tonnes to 15,500 tonnes. The rise in hessian was helped by the diversion of a number of sacking looms to the production of the lighter fabric. In November last year, the mills worked for 208 hours, producing 101,400 tonnes of jute goods. Of these, 45,100 tonnes were hessian, 46,100 tonnes sacking and 10,200 tonnes other goods.

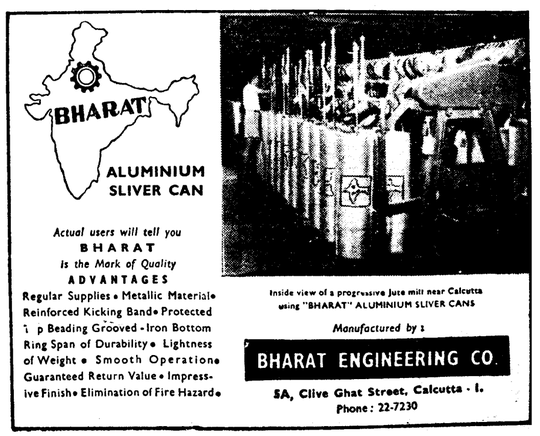
Pakistani Jute Policy

The Pakistan National Assembly has adopted the controversial Jute (Amendment) Bill which will replace the ordinance promulgated by President Ayub Khan. It confers more powers on the Central Government to regulate the various phases of the jute trade, including the sale and baling of the fibre. The ordinance had virtually completed the transfer of jurisdiction over the trade from the East Pakistan Government to the Centre.

Describing the ordinance as a retrograde measure, the Opposition said that it benefited neither the grower nor the nation. The ordinance had deprived growers of their bargaining power, aggravating the present slump in fibre prices. It demanded barter trade in jute with communist countries, nationalisation of the jute export trade as an alternative to complete nationalisation and the withdrawal of the ban on jute cultivation in the border areas.

Replying to the debate, Mr. Wahiduzzaman, Pakistan's Commerce Minister, claimed that the ordinance had ensured a minimum price to growers by compelling manufacturers, traders and shippers to buy jute according to a phased programme. He stated that the elimination of 300 Indian traders from the internal jute trade was a "bold and far-reaching step" towards the stabilisation of the market. He also said that the pre-Ayub *régimes* in Pakistan were responsible for helping India to expand her own raw jute production by "denying India supplies of jute at the right time."

THE JUTE MARKETS



Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. Poor enquiries and business from overseas neutralised the effect of the higher offtake of jute goods indicated by the I.J.M.A. gunny production and stock figures for November. While the output rose by 7,600 tonnes compared with October, stocks increased by only 3,100 tonnes, showing that November despatches were of the order of 100,000 tonnes. Sentiment did not pick up in spite of reports of a keen demand for freight space for December for certain destinations in the U.K. and on the Continent. The announcement of a reduction in freight rates for certain types of jute goods from Calcutta and East Pakistan to North America also failed to produce any effect. Shippers were worried over the strike by boatmen of the lighterage fleet at the Calcutta docks. The Labour Commissioner has intervened in the matter and normal conditions are expected to return soon. In the virtual absence of foreign business or enquiries or Government tenders, small transactions of a routine nature were done at gradually declining rates. With mills emerging as keen sellers for all positions, weak holders became nervous and sought to lighten their commitments by discounting rates. But even these did not induce shorts and shippers to cover their open positions. Easy conditions ruled in the futures market in sympathy with the trend in the spot section. Bulls liquidated their commitments while bears hammered prices down. At the close, both hessian and sacking prices slipped back to the lowest levels since the middle of July. Turnover was small and the undertone hesitant at the close.

Wednesday's quotations were as follows:

the past week. With the warehouses in the Calcutta area overflowing with stocks, mills concentrated on lifting their December quota in the upcountry markets. As they were manufacturing more of hessian and other speciality fabrics, they showed a preference for quality fibre. So high-grade jute commanded a premium in both Calcutta and upcountry markets. For the same reason, heavy stocks of offgrade fibre accumulated with the holders who were inclined to sell below the minimum levels. Daily arrivals declined to around 100,000 maunds in the agencies in view of the preoccupation of the farmers with the harvesting of the *aman* paddy crop. But still there was a lot of selling pressure in low-grade jute. Turnover was small in Calcutta and moderate in the upcountry markets. The undertone was hesitant in inferior grade jute and steady in quality fibre.

Wednesday's quotations were as follows:

THE U.K. JUTE MARKETS

FIBRE STILL IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

WITH a firm raw jute market in Pakistan some sellers in Dundee raised their prices by £1 a ton last week. However, the previously lowest quoted rates were still available and made the Dundee market very irregular. Spinners showed less interest in shipment parcels as large quantities of jute were arriving in Dundee, and a portion of this was still unsold to spinners.

Reports on the quality of jute arriving in Dundee said that in many instances, the fibre was well above the recognised standards, especially in the lower grades. As a result of this upgrading, it was more or less impossible to give a true value for the lower qualities of both white and Tossa jute.

The lowest rates being quoted for shipment parcels were £141 for Mill Firsts, at £110 10s for Mill Lightnings, at £95 10s for Mill Hearts and at £80 for Grade Hearts, c. i. f. U. K. for December-January shipment. Grade Tossa-$\frac{8}{8}$ was offered at £128 and Grade Tossa-4 at £108. Dacca Tossa-5 was at £137 and Dacca Tossa-6 at £111. There were sellers of Outport Tossa-$\frac{8}{8}$ at £95 and of Outport Tossa-4 at £84, c. i. f. U. K., December-January.

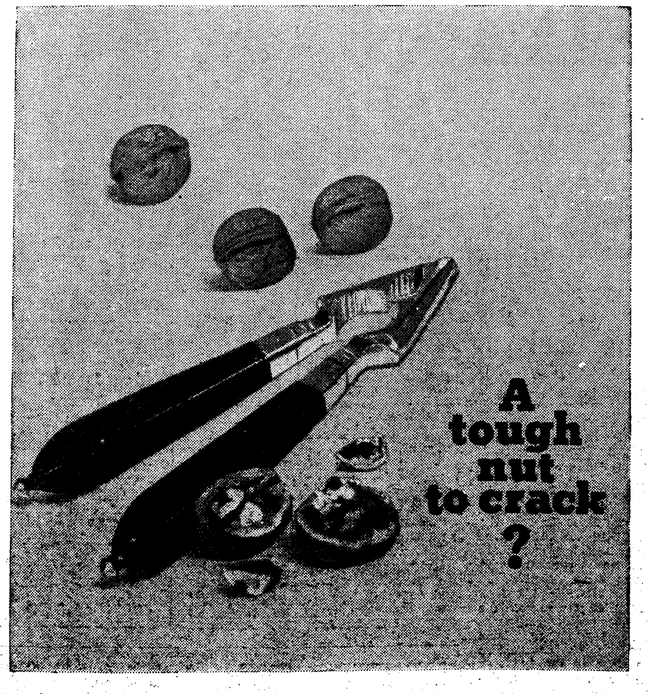
Cuttings were firmer at £56 15s for S. N. C. and at £48 10s for N. C. Some adjustments took place in the official prices of mesta, but this made little difference to the position. Mesta was offered at £80, mesta B at £71 10s, mesta C at £66 10s and cuttings at £46, c. i. f. U. K., December-January.

The Siam jute market was firm. Grade A was at £72, grade B at £63 and grade C at £58, delivered mill Dundee for December-January shipment.

The Calcutta goods market became easier for hessians. Some buying interest was shown for current shipment and it was expected that a fairly steady business would continue. Quotations were at 69s 8d for 40in. 10oz. and at 51s 10d for 7½oz. a 100 yards f. o. b. Calcutta for December shipment, at 70s 1d and 52s January and at 70s 4d and 52s February. B Twills were at 170s 6d, 171s 3d and 172s for the respective shipment periods.

Dundee jute spinners and manufacturers were very busy and had little to sell for reasonably early delivery. Most sellers were now asking more for common 8lb. cops (C. H. W.) and the generally quoted price was 16.70d a lb. Common hessians also become dearer at 16.37d a yard for 40in. 10½oz. and at 12.97d for 8oz.

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER



The Indian Jute Mills Association reports the total production of jute goods in November as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
7,575 tonnes	(7,455 tons)
22,964 thousand metres	(2,51.1 lakh yds.)
1,59.8 lakh nos.	
(b) Sacking	
41,360 tonnes	(40,707 tons)
8,88,98 thousand metres	(9,12.2 lakh yds.)
4,32.6 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
37,880 tonnes	(37,282 tons)
12,92,99 thousand metres	(14,14.0 lakh yds.)
(b) Sacking	
1,504 tonnes	(1,480 tons)
33,36 thousand metres	(36.5 lakh yds.)
3. Other Manufactures	
15,519 tonnes	(15,274 tons)
4. Total Production	
(All kinds)	
1,03,838 tonnes	(1,02,198 tons)

Summary

	(000 metres and 00,000 yds.) Nov. '63	Oct. '63	Nov. '62

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

...if you are trying to dent high costs, here is something to get your teeth into! By making use of the Caltex "Stop-Loss" Programme you cut costs by proper lubrication. Programmed maintenance practices will help you to keep your equipment and your machinery in top condition and will also boost profits.
It is not a mere question of more oil or more grease. The Caltex "Stop-Loss" Programme will help you to select the proper lubrication practices, to train your personnel to proper maintenance procedures. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

SAVE FOR SECURITY

PROMOTING ENGINEERING GOODS EXPORTS

By B. S. Agarwal
(Vice-chairman, Engineering Export Promotion Council)

Indian engineering goods offer a promising line of export, but the producers will not make much headway in overseas markets as long as this country does not offer incentives like suitable credit facilities, cost guarantees and tax concessions like the industrially advanced countries of the West, who are India's main competitors.

THE main problem facing India today which is also a supreme national obligation, is export promotion, not only as a long-term measure, but also an emergent one to be undertaken immediately in order to fulfil all the national plans and priorities. It has been recognised all round that for the successful implementation of the third plan, it is vital to increase this country's exports to the level of at least Rs. 3,700 crores for the five-year period rising from Rs. 640 crores in 1960-61 by Rs. 40 crores every year to Rs. 800 crores a year in 1964-65.

India's exports in the first and the second plans had more or less stagnated. Taking a five-year average, Rs. 613 crores was the annual average export in the first plan, and Rs. 622 crores was the approximate annual average in the second plan. By and large, the exports have not caught up. Yet the world trade has been expanding All over the world, the effort of every country, whether highly industrialised or a developing one or one which is still very much underdeveloped—is in the direction of increasing its exports.

Difficult Task

This article is mainly concerned with the export of engineering goods. Hitherto, about 90 percent of India's exports have come from the traditional items like agricultural commodities, plantation crops, textiles, etcetera. The new additions are manufactures like engineering goods, iron ore, metallic ores which form less than Rs. 100 to 150 crores out of the total exports of Rs. 650 crores of this country. It is, however, a fact that these new items have vast possibilities to diversify the pattern of existing exports. But to sell engineering goods in foreign countries is not an easy task. In the first place, there is hardly any surplus for export, but even if there is a surplus or the manufacturers are prepared to export a part of their production, they cannot just contact the buyer and sell it because there is no vacuum anywhere in the world. The industrialised countries of the West, who have been in the international markets for decades, are well entrenched in these markets. They have set up organisations, appointed agents, provided after-sales service and supported their efforts by regular personal visits and publicity through the Press, radio and other media.

As against this, Indian exporters have to enter overseas markets as newcomers. They are not known and their brands have to displace the established brands from the position the latter are occupying. This can be done only if (a) quality is comparable; (b) prices for comparable quality are, at least, 5 to 10 percent lower than the competitive lowest prices; (c) effective after-sales service is made available, wherever needed; and (d) the sale is supported by the frequent visits and regular intensive publicity and propaganda. Unfortunately, the conditions prevailing in India are not conducive to an aggressive sales policy. Indian exporters do not enjoy the facilities which their counterparts do in other countries.

Special Requirements

Another serious difficulty peculiar to India is that generally speaking, the manufacturers of engineering goods are not in a position to cope with the special requirements of the developing countries in Asia and Africa. Like India, they have achieved their independence only recently and are trying to industrialise as fast as possible. They have also foreign exchange difficulties and have, therefore, imposed import restrictions on many light engineering products which Indian manufacturers are in a position to offer. Some of them want to import capital equipment for industrialisation purposes. In the race which has followed as a result of the need for supplying plant and machinery on favourable credit terms, India has been left miles behind. There are no facilities under which a supplier of plant and machinery could offer credit for six years or so.

A study group was set up under the chairmanship of Mr. T. C. Kapur which submitted its report in 1960. Instead of taking immediate action, another committee has been set up under the chairmanship of Mr. K. P. Mathrani. The findings of this committee are not yet known. It is needless to emphasise that when far-reaching events are changing the world so fast, India cannot afford to go on in a leisurely fashion. Conditions will have to be created in which the exporters can meet competitors on an equal footing.

Incentives and Concessions

Some of the export incentives which have worked as powerful stimulants in promoting exports in other countries are described below :

Income tax rebate: Japan, Ireland, Australia and a few other countries have introduced taxation relief. Under the present Japanese law, a producer of major engineering products who exports in large quantities is exempt from tax of 5 percent of the gross value of his export contracts up to a maximum of 80 percent of his net export profit before tax.

Producers of smaller quantities and of other export goods in any quantity are exempt as above on 3 percent. An exporter is exempt as above on 1 percent. Facilities have also been provided in France, Australia, Portugal, the Netherlands, and the U.S.A. under which profits earned through a branch abroad and taxed there, are exempt from tax in the parent countries.

Cost guarantees: In France, exporters are entitled to obtain cost guarantee which covers the export against a rise in certain internal French prices, during the execution of a fixed price contract. The guarantee is obtainable only on major contracts, that is, for capital equipment which takes some time to complete (from ten months to three years). In Italy, the Government Insurance Company insures an exporter in the case of fixed price contracts against rises in the cost of production up to 10 percent of which the exporter bears 5 percent. The costs covered are raw materials, power, wages and salaries.

Credit facilities: France, West Germany, the U.S.A., Japan, Italy and the U.K. have all provided adequate facilities for short, medium and long-term credit to exporters at concessional rates. In Japan, the difference is 3 percent to 4 percent and in England, the exporter has an additional advantage of getting bank loans if the contracts are insured with the Export Credits Guarantee Department.

Sales and turnover taxes: In almost all the exporting countries, sales and turnover taxes are refunded to the exporters. Under the Italian law, engineering products are allowed an export refund of Customs duty and other Customs duties which are much more than the actual duties and taxes on products. The scheduled list 26 products is extremely comprehensive and lays down a rate of reimbursement calculated by weight varying from 15 lire a kilo (£9 a ton) to 900 lire a kilo (£500 a ton) for the exceptional case of Ta56 jets. On the metal products of engineering industries, the rebates vary between 15 and 40 lire a kilo.

Currency retention: Most of the countries after the war, particularly Japan and West Germany had schemes under which the exporters were allowed to retain a percentage of their total foreign exchange realisation which they could use in importing items of high margin which help them to meet part of their losses on exports.

Besides, insurance, banking and other facilities are available in highly industrialised countries like the U.K., Japan, and West Germany which indirectly help the exporters in various ways. The organisational arrangements for conducting market research, publicity overseas, organisation of trade fairs and exhibitions, etcetera, are also perfect with the result, the maximum amount of publicity and market research could be conducted on behalf of the small and medium-sized firms at the minimum of cost.

Delayed Decisions

The conditions in India have considerably improved during the past few years, but unfortunately, valuable time has been lost in discussions, and delayed decisions. Even now, some of the facilities offered to the exporters are not available to them without a suspicious scrutiny on the part of the authorities concerned. Taxation relief has been announced to the extent of 5 percent on the profits on export, but unless it is made clear that this relief would be available for the proportionate profit on export irrespective of the fact whether the export transactions made a profit or not, there would hardly be any advantage to the exporters of engineerings products.

The arrangement concerning credit facilities at a lower rate of interest should also be finalised without any further loss of time. Considerable portion of the capacity of many of the industries is lying idle. It is of utmost importance that the exporting industries are given all facilities to use their capacity to the full, and, if necessary, they should be given preference in Government contracts, etcetera. There is no doubt that given adequate encouragement, the export of engineering products could be much larger than what it is.

In the current year, engineering exports will be about Rs. 14 crores, which appears to be a very slow improvement. With the favourable export climate created by the Government and the growing awareness of the need to increase exports on behalf of the manufacturers of engineering goods, the industry must work on a target of Rs. 25 crores in the coming year.

Standard Sillimanite bricks are now available ex-stock. Sillimanite Wedges, Arches and Blocks (including cement kiln blocks) within 4 to 6 weeks.

KFS is but one of the many progressive divisions of the Bird-Heilgers Group. The Group, with its varied industrial activities, plays a significant role in the country's economy.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to August 1963. As compared with July, the August index for Government securities shows a rise of 0.1 point, while that for preference shares reveals a drop of 1.1 points.

There were increases in cottons 7.4 points, jutes 5.1 points, minings and oils 1.6 points, cements 2.6 points, engineerings 12.1 points, papers 35.9 points, miscellaneous 2.1 points, while decreases occurred in banks 0.6 points, coals 2.1 points, teas 6.7 points and sugars 0.7 points.

Combining all the factors, the *Capital* variable yield securities index rose by 3.2 points during August 1963.

Commodity Markets

RECORD RISE IN CASHEW EXPORTS EXPECTED

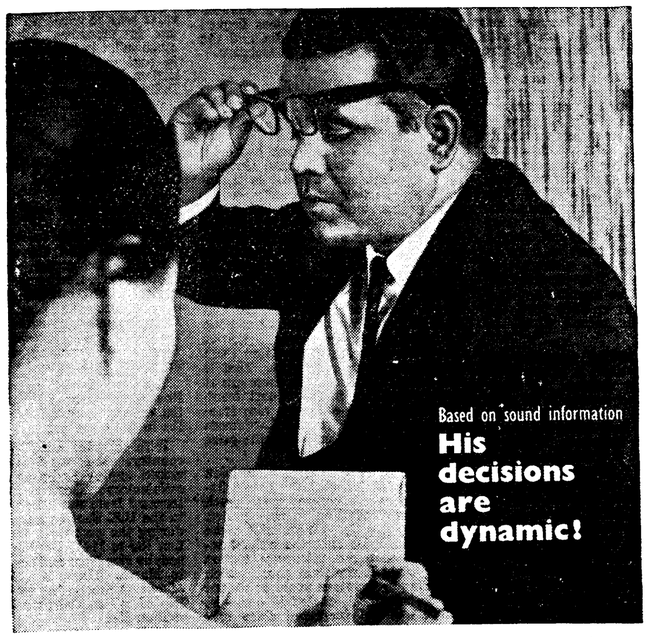
(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIAN cashew kernel exports are expected to touch a fresh record of about 52,000 tons this year, against 46,000 tons in 1962, which itself was a record. Foreign exchange earnings on this score, too, should touch a new high in view of the fact that prices did not fall below last year's level. The present prices are 56 to 57 cents a lb. Imported African raw nuts have buyers at present for Rs. 800 to Rs. 850 a ton, and this, it is said, is in parity with the kernel prices. The cashew processing industry in India imported 130,000 tons of African nuts in 1962.

Imports in 1963 will be higher at about 150,000 tons, according to official estimates. Indigenous supply is estimated at 60,000 tons to 65,000 tons. There is a proposal for starting co-operative cashew processing units in Orissa, West Bengal, Andhra and Maharashtra with a view to avoiding the present wastage of the cashew-nuts produced in these States. It is said that if they also can be processed properly as is being done in Kerala, Mangalore and Goa and made available for export, the indigenous supply which is reckoned at 60,000 to 65,000 tons, will go up by another 30,000 to 35,000 tons. This is a welcome proposal, more so in the light of the reports that the supply of raw nuts from Africa will get diminished on account of the starting of processing factories in that country. According to reports, a fully mechanised factory with a capacity of 9,000 tons a year has been set up in Tanganyika with Italian collaboration. It was the shortage of labour that stood in the way of African producers taking up processing in the past. If mechanisation could be introduced successfully as claimed by the sponsors of the new project, Africa can develop a cashew-processing industry of its own and compete with India in foreign markets.

There are, however, some people who are not inclined to believe that mechanisation can be introduced into cashew-processing successfully. Their argument is that cashew kernel being a kidney-shaped nut, it is virtually impossible to extract it from the hard outer cover and the delicate skin inside without damaging the kernel with any conceivable machine. It was this peculiar characteristic of the cashew nut that did not allow the introduction of mechanisation in the cashew-processing industry so far, they say. According to them, cashew-processing will continue to be a labour-intensive industry and the new threat of mechanisation is not going to change the industry's traditional character. This threat need not be taken very seriously, in their opinion.

U.S. buyers have been bidding for sizable quantities of Indian cashew kernels on ideas that supplies of raw nuts from Portuguese East Africa and British East Africa are likely to be smaller. Business in the past few days has been brisk with 320s November shipment fetching 38 cents a lb, December 56 cents, January-March 54 cents and February-April 53 cents. Sellers are reserved. Indian processors on their part are buying raw nuts from Africa after paying handsome prices. The value of African raw nuts has gone up to Rs. 865 a ton. India is said to have bought about 30,000 tonnes so far in the current season, compared with 14,000 tons in the corresponding period last season.



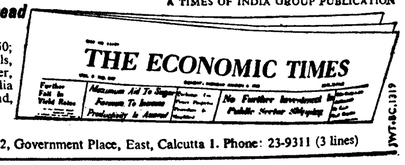
LEMONGRASS OIL

Stalemate in Export Trade

There is a stalemate in lemongrass oil export trade. Stocks accumulated with the State Trading Corporation which was asked by the Central Government a few months go to step in and buy lemongrass oil under the price support scheme. The foreign buyers were also unwilling to pay the floor price fixed by the Government. The exporters of this essential oil are urging the Government to abolish with immediate effect the floor price in order to enable them to compete in the world market through normal trade channels. It is said that while India under the export control order was holding out for the official floor price, Guatemala and China have been under-selling their entire production. The development of synthetics at a much lower price has also assumed serious proportions.

It is understood that the Indian Lemongrass Oil Exporters Association is moving the Ministry of International Trade in this connection. Their suggestions to the Government for breaking the present stalemate and putting back the Indian lemongrass oil on its rightful place again include reduction of S.T.C. procurement price to a level at which Indian lemongrass oil could stand competition, concessions in export incentives and liquidation of S.T.C. stocks, which are deteriorating in quality. It is said that if the S.T.C. stocks are not moved immediately, they will be overhanging the market and will adversely affect the price structure. The trade's suggestion is that the Government should fix a local selling price for Agmark-expired oil at which price, the exporters should be asked to purchase 15 to 20 percent of the S.T.C. stocks. In order to have a proper blend of acceptable quality, it is necessary to mix 80 to 85 percent of fresh oil with this Agmark-expired oil. The producing season in India will be closed in about two months. Unless this suggestion is implemented soon a sufficient quantity of fresh oil may not be available for blending.

According to the trade estimate, the production of lemongrass oil in India this year will touch a new high; the arrivals of the new crop in the market so far has exceeded the 1962 production figure of 1,450 tons. Ex-



Any business, if it is to succeed, needs a dynamic approach. That's where *The Economic Times* comes in. It brings vital financial information from all over India and abroad to the homes and offices of industrialists, financiers, executives, traders... of all businessmen. ■ You *need* to have the latest, first-hand news about export-import, commodities, company meetings, shipping and transport, taxation, insurance ...a complete picture of today's economic scene. *The Economic Times* gives it to you at a glance. ■ It goes further than that... to labour problems, development projects, business prospects, commentaries and analysis, enabling you to plan efficiently for the future. ports to the end of November were about 500 tons, compared, with 700 tons of the same period last year. Internal consumption during this period is put at about 100 tons, compared with 150 tons of the previous corresponding period. It is believed that the balance of about 850 tons are with the State Trading Corporation. According to a trade estimate, at least 200 tons more would be produced between now and January-February thanks to the exceptionally favourable weather conditions this season.

PEPPER

Price Rise Halted

The recent upward trend in pepper prices has been stopped due to discouraging advices from abroad and selling pressure in the markets of origin. According to latest reports from New York, grinders who are the most important factor in the pepper trade are holding off, probably waiting for more favourable prices. Spot and afloat are quoted at 33 cents a lb in New York at the time of writing. December and January are nominally quoted at 31 cents with practically no sales. Although there is no sign of panic on the part of the sellers because of this indifference on the part of American buyers at present, they are showing some interest to liquidate their stocks in view of the arrivals of new crop gaining larger proportions. Crop picking was started on Malabar coast about a couple of months ago. The new crop is expected to be slightly less than last season's 30,000 tons in view of the inadequate monsoon the growing areas in India experienced during this season. There must be a carry-over from the previous season's crop to compensate for this possible fall in production. The export from last season's crop was smaller than the previous season's record figure of 25,000 tons.

However, the Indian exporters are not anxious about the prospects held out by the new season. In their opinion, the world supply in all probability will be smaller this season and the buyers may have to pay a higher price for this crop. There is a dislocation in the supply line of Indonesian and Sarawak pepper on account of the strained relations between Indonesia and Malaysia, and the longer it continues to be, so much the better for Indian exporters. Indonesia's bid to sell her pepper without passing it over to the established trade in Singapore is likely to fail ultimately because of lack of experience, it is said. There are also reports that the supply from Indonesia will be smaller this time, but one cannot be sure of this in the absence of any reliable estimate of the Indonesian crop.

SPICES

Publicity in U.S.A.

Indo-U.S. co-operation in spices publicity is showing good results, according to a report of the American Spice Trade Association. There was a time when the Americans knew very little about Indian spices although America was a major market for them. Today, however, there are millions of Americans who have seen how pepper and other Indian spices are grown and harvested and prepared for shipment to their country. Through stories in their newspapers and magazines, lectures in their schools and a beautiful motion picture in full colour they are not only learning more about the use of spices in their cooking, but they are finding out the land which supplies them more spices than any other country in the world. All of this is the work of a joint educational and promotional programme of the Spices Export Promotion Council of India and the American Spice Trade Association.

CARDAMOM

Buffer Stock Scheme

A buffer stock system has just been introduced by the Central Government for cardamom. This is essentially a price support measure. Whenever prices tend to fall below the minimum export prices fixed by the Government by about Rs. 1.50 a kilogram, the scheme will come into operation with the Directorate of Cardamom Development and Marketing in Bangalore making the purchases from certified growers and co-operatives. World output has gone up considerably in recent years as there was growing competition from comparatively new growers. That is said to be the reason why there are at times stagnancy in the export front. Carryover of the old crops also creates complications for the Cardamom Disectorate in implementing the price stabilisation programme.

The exporters of cardamom have been complaining that the prices fixed under export control were much above the prevailing market prices, and consequently, shipments were not moving. To this, the official reply was that the minimum export prices were lower than those which prevailed in previous years as shown by the foreign exchange earnings which had not increased since 1960 in spite of a marked increase in exports.

ARECANUT

Development Scheme

The Indian Central Arecanut Committee has chalked out a twin-point production scheme for arecanut based on manuring and pest control. The establishment of nurseries, laying out of demonstration plots and provision of irrigation facilities are the other recommendations of the Committee for enhancing the areca output. India is at present facing a 30 percent shortage in arecanuts, although the area under cultivation in this country is fairly large at about 120,000 hectares. The chief growing areas are in Mysore, Kerala and Assam and these three States together account for 94.7 percent of the country's total output. Maharashtra, West Bengal and Madras are producers on a minor scale. There are projects to introduce this cultivation to new areas like Andhra Pradesh and Gujarat. The scope for expansion is however, considered limited. Therefore, the surer way to cover up the lag in output is intensive cultivation. The areca palm is known to respond well to pest control, manuring and irrigation. Therefore, self-sufficiency for India in this crop is not impossible.

TEA

North Indian Output Falls

(BY A SPECIAL CORRESPONDENT)

REPORTS up to end-November indicate that the production in Assam for the current season is practically over. Cachar was still plucking at end of the month, but the prospects there were poor. In eastern Dooars, conditions were normal for the time of year, but western Dooars, Terai and Darjeeling were completing their plucking operations.

The crop figures up to the end of November were 548,195,623 million lbs, compared with 566,422,260 million lbs in the same period of last year.

With shorter supplies from this country, the statistical situation would appear to be at the moment satisfactory. There is less tea to go forward from north India, and stocks in the U.K. showed a small reduction during the past week from 145.3 million lbs to 144.75 million lbs. Stocks usually rise from end-October through to March. There is a fair quantity of afloats amounting to 48.36 million lbs, of which Calcutta shipped 34.58 million lbs.

At the annual meeting of the Tea Traders Association last week, Mr. A. N. Sircar, president, commented on the following facts:

(a) There has been an increase of 10 million kilograms this year in world production, but India has produced 5.5 million kilograms less. (b) In spite of India's shortage, the country has exported more from Calcutta, thanks to improvements in transport and smoother and speedier handling at the docks. (c) Internal consumption fell by 7.9 million kilograms to 130 million kilograms in 1962, and will be far less in 1963 because of lower production and higher exports. (d) The propaganda drive in the E.C.M. areas has been good, but there is need for promotional activity in India.

With reference to tax relief, the president of the C.T.T.A. suggested (1) some form of incentive to boost exports by way of a drawback as also abolition of octroi in West Bengal and sales tax in Kerala as far as exports are concerned and (2) some tangible taxation relief is essential because the industry's borrowing capacity is limited.

Closing on an optimistic note, Mr. Sircar said, "We are confident that with Government understanding and support, we shall be able to achieve the targets set, both for production and exports in the near future". But not a word about profitable trading, and again, one is forced to enquire what is gained by exporting tea at a loss. If producing interests work at a loss, the Governments concerned will also have lower receipts from taxes. The chairman of the Indian Tea Association (London), Mr. H. N. Thomas, said at the annual general meeting, held recently, that Ceylon and south India seemed able to produce more tea each succeeding year, but the same did not apply to north India. The main reason was that the production for last two years suffered from adverse weather conditions. But producers were trying to increase tea production to the Government of India's target of 900 million lbs a year under the third five year plan.

He believed that planters could be materially assisted towards this end. It is a fact that where virgin soil was available this would produce earlier and larger crops than would be expected from replanting old existing tea arears. The cost of planting on the virgin soil had to be regarded as a capital charge under present regulations, but planters had been urging that where such virgin-soil planting was in replacement of existing tea areas, it should be allowed as a revenue charge.

As for tea research the chairman said that the original proposal involved an agreement that the equipment and buildings of the Tocklai Experimental Station should be leased to the proposed Tea Research Association for a nominal rent. In return for the facilities being offered in Tocklai, the Government of India, through the Council of Scientific and Industrial Research, was to meet 50 percent of the cost of carrying out the research work in Tocklai in the future, and about one-third of the capital expenditure.

The formation of the Tea Research Association on these terms was in fact on the point of completion when "we received with very great regret the news that the Government of India, because of the national emergency, felt that they could no longer go ahead with their undertaking to provide their promised portion of the funds. This was a grave disappointment, but I am pleased to say that more recently we have received information that the whole question is being reopened, and there now appears to be a distinct possibility that the proposed Tea Research Association will be constituted following an undertaking by the Indian Government to provide funds much on the basis of the original proposals."

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to November 1963. As compared with October, the November index for Food shows a drop of 10 points, while that for Miscellaneous shows a rise of 4 points. The indices for Fuel & Lighting and clothing remain unchanged at 308 and 609 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 4 points during November 1963.

INTEREST AND USURY: A DISCOURSE

A Discourse upon Usury. By Thomas Wilson. (Published by Frank Cass and Co. Ltd, 10 Woburn Walk, London, W.C. 1. Review copy received from Rupa and Co., 15, Bankim Chatterjee Street, Calcutta. Price 48s, pages 392.)

A discussion on the moral and religious basis of interest or usury may now seem uninteresting and superfluous to one. This was not so in the early days of capitalism when organised banking was conspicuously absent and lending was conducted by individuals and institutions who were in a position to exploit the needy borrowers. A class of financiers grew up in the United Kingdom during the Tudor period who were hated alike by the feudal lords and the common people, the former having borrowed at high rate of interest against the mortgage of their landed properties and were unable in many cases to meet their commitments and eventually became paupers. Their grievances were appreciated by the Government who brought in the Act of 1552 with the intention of abolishing usury and to protect the borrower.

The effects were not altogether benefical as industry and trade were short of credit and unauthorised borrowing took place in different forms. Leading men in the world of finance and commerce made repeated attempts to repeal the Act of 1552, and many theologians continued to preach the distinction between interest and usury, the former being just and reasonable, the latter connoting inequity and unnatural dealing with wealth. The controversy went on in spite of the compromise of 1571. Dr. Wilson could not reconcile himself with the theory that professional lenders, while pursuing their self-interest, could contribute to the social and spiritual welfare of the community. He came out with an all-out attack against interest and usury and the proposal for setting up banks in the big cities.

Although in his chequered and distinguished career, Dr. Wilson served the Queen faithfully as an ambassador and counsellor for 20 years of perils and stress of the Tudor England, he cannot with justice be called an Elizabethan. He belonged to an older age and to the group of dignified scholars who were conversed with the fundamentals of ethics, logic and philosophy. Mr. Tawney rightly points out that the economic outlook, the preoccupation with morality which Dr. Wilson interited, was that of the middle ages and his target was the individualism which was destroying it.

The brilliantly written foreword by Mr. Tawney does not only bring out the historical context in which Dr. Wilson wrote this book, but it also gives one an insight into the personality of the man who stood against the age. The theologians and philosophers of the past are dead and gone. Their works, however, remain. This book written by one of the most distinguished men of the Tudor age will no doubt be enviously preserved as a historical treasure.

SMALL INDUSTRIES

Small-scale and Household Industries in a Developing Economy. By M. C. Shetty. (Published by Asia Publishing House, Calicut Street, Ballard Estate, Bombay 1. Price Rs. 16, pages 232.)

This is a book written not only in defence of small-scale industries but it also aims at the factual assessment of the part played by them in the Indian economy in its present stage. For reasons of efficiency and economy, smaller units have come to stay in the advanced industrialised nations like the U.K. or the U.S.A. At least 25 percent of employment in the U.S.A. is provided by firms employing less than one hundred people. The proportion is considerably higher in Japan where small-scale units have traditionally excelled in the manufacture of a wide range of products.

The author advocates the development of small-scale labour-intensive industries to preserve scarce capital resources to be used more rewardingly in the sector of basic industries and secondly, to mitigate the problem of chronic unemployment in the country. The choice of alternative techniques of production employing more or less capital should conform to the principles of the "net social marginal product."

The structure of small-scale and household industries, based on surveys conducted in several parts of the country and the difficulties faced by them in the sphere of organisation, marketing, finance and technical skill, have been discussed. The author relates the attempts made by the Government since independence to remove these obstacles but further assistance and concentrated efforts are needed to place these units on a sound economic footing.

RETAIL TRADE

Retail Trade in Urban Areas of Union Territory of Delhi. (Compiled and published by the Research Department, Indian Co-operative Union Ltd. Janpath, New Delhi 1. Page 99.)

The report under review gives a detailed picture of the pattern of the retail trade—its nature and composition; range and volume of goods sold; methods, cost, margins and profits by size, distribution of shops; investment and rate of return on capi-

DUNLOP

HIGHWAY for highest mileage on long heavy hauls

The Dunlop Highway Truck and Bus Tyre assures higher initial tread mileage on heavily laden long distance trucks and modern fast buses. And finally, when the tyre is worn smooth, the excellent retreadability of the casing means that it will continue to serve for many more thousands of miles.

DUNLOP HIGHWAY for HIGHEST MILEAGE

DGC-23

tal; pricing and retail practices; composition of the consumers served and the pattern of consumption at different levels of income. The survey found that the average value of goods annually sold by most of the retailers ranged between Rs. 23,700 and Rs. 53,960. The amount of working capital a shop ranged between Rs. 4,320 and Rs. 15,038. The average gross monthly income varied between Rs. 78 and Rs. 905. Women made 15 percent of the purchases. The survey and the presentation are good.

CENSUS REPORT

Census of India, 1961 (Vol. XIII—Part VI—No. 1—Monograph No. 1): Tandi, a Village in Lahaul District, Punjab. (Published by the Manager of Publications, Delhi 8. Price Rs. 3.25, pages 75 + appendices and glossary.)

Tandi is a big village on the Ladakh-Kulu trade route and on the Chenab river and four miles from Keylong. This monograph on the socio-economic study of the village is complementary to the 1961 census report. Some of the conclusions of the study are as follows: land reforms which have introduced radical changes in Punjab have no impact on this area. The same is the case as far as the Community Development projects are concerned. The incidence of polyandry is fairly large and it suits the socio-economic structure and the needs of society. Even educated persons are not averse to polyandrous families. But it is only the eldest brother who is ceremoniously married to a woman. The report makes interesting reading. It is also factual.

ANNIVERSARY NUMBER

Khadi Gramodyog, Tenth Anniversary Number. (Published by Khadi and Village Industries Commission, Irla Road, Vile Parle (West), Bombay 56. Price Rs. 2, pages 144.)

The tenth anniversary number of the *Khadi Gramodyog* contains a number of valuable articles on different aspects of rural regeneration. There are several articles including those from Messrs Dhebar, V. L. Mehta and Morarji Desai. One would however, like to see the next year's number printed on hand-made paper.

FARM INCOME

Agricultural Income by States, 1960-61. (Compiled by the National Council of Applied Economic Research, New Delhi. Price Rs. 6, pages 88.)

Agriculture occupies the most vital place in the Indian economy, accounting for 43 percent of the national income and 70 percent of the total labour force. In the present study, agricultural income of different States have been estimated for 1960-61, the year of maximum agricultural production in recent years. This reports is in four parts. The first part gives a summary of the results of the study, while the second, third and fourth deal with the concepts and coverage, availability of data and the method of estimates, respectively. Wide inter-State differences have been observed in the gross and net output a person engaged in agriculture. Kerala with a gross output of Rs. 522 an acre and a labour productivity of Rs. 1,159 a worker tops other States, but cash crops dominate the farming in Kerala. The information might be useful in planning for raising agricultural output.

EXPORT GUIDE

How to Sell Successfully Overseas. By Alfred and George Tack. (Published by B. I. Publications, 369, Dadabhai Naoroji Road, Bombay 1. Price Rs. 22, pages 283.)

The Tack organisation needs hardly any introduction to the commercial executives in India. But perhaps many in this country may not be aware of this book even though the other books by Mr. Alfred Tack are well known here. Comparisons are odious, but one should read this book side by side with official export publications. Even the experienced export executive will find in this book much useful information in a readily available form.

CABLE INDUSTRY

Report of the Indian Productivity Study Team on Cable Industry. (Published by the National Productivity Council, 38 Golf Links, New Delhi 3. Pages 428 + XXVII.)

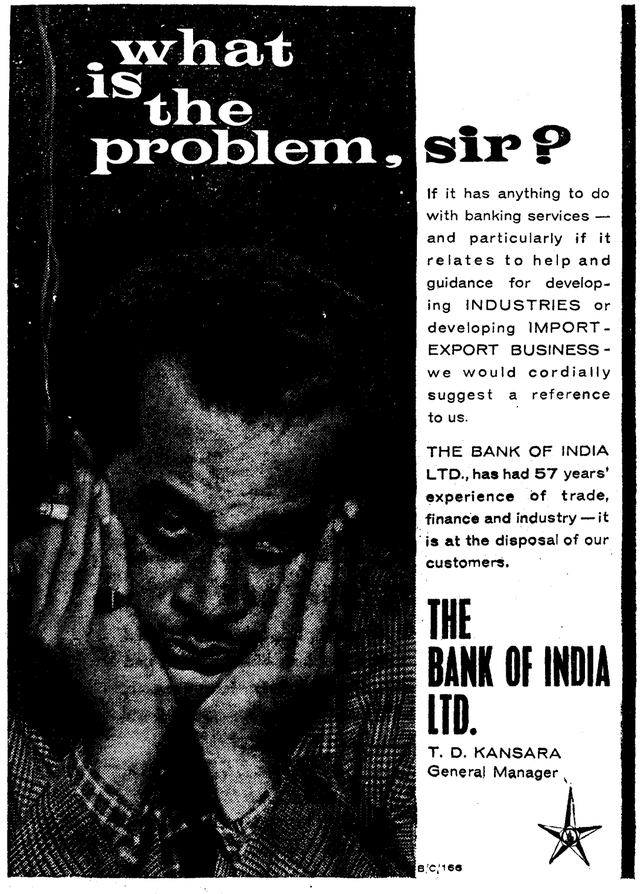
The National Productivity Council sent a study team to Japan and the U.S.A., and this excellent report embodies the observations and recommendations of the team. The report covers every aspect of the industry and it is one of the few reports that will withstand the passage of time. The illustrations and charts on pages 77 and 298 give the book the quality of a text-book on industrial engineering. The conclusions are given in chapter 20. The printing is good.

BANKING

The Financial Observer, Annual Number on Banking and Industry, 1963. (Published by *Financial Observer*, 17-19, Dalal Street, Wadia Building, Fort, Bombay 1. Price Rs. 10.)

The Financial Observer has brought out an annual number on banking and insurance. Because of the current debate on the nationalisation of banks and the entry of the Life Insurance Corporation into the general insurance field, the annual number has chosen an appropriate subject for discussion. There are several articles on such subjects as "Banking Habit In India" by Mr. N. A. Krishnan, managing director of the State Bank; the Agricultural Re-finance Corporation by Mr. V. Sivaraman, managing director; "Some Aspects of Industrial Finance" by Mr. K. C. Mittra; "Future of Life Insurance" by Mr. B. K. Kaul. Articles on general insurance have been written by Messrs Rakshit, General Manager of Oriental Fire and General and P. U. Patel, managing director of Universal Fire and General Insurance. There is an article on the Gold Control Board by Mr. G. B. Kotak, former chairman of the Board. There are also some articles on current problems of the banking system and taxation by well-known personalities such as Mr. R. C. Cooper, Mr. P. V. Gandhi and Mr. B. G. Shah. The annual number should prove interesting.

BOOKS RECEIVED



Fertiliser Statistics, 1962-63. (Issued by the Fertiliser Association of India, 85 Sundar Nagar, New Delhi 11. Price Rs. 10, pages 298.)

Report of the Survey of Demand for the Basic Raw Materials Required by the Engineering Industries. (Published by the Engineering Association of India, Research Department, India Exchange Building (8th floor), India Exchange Place, Calcutta 1. Pages 41.)

Agricultural Situation in India, Annual Number, 1963. Edited by S. Ramaswami. (Issued by the Economic and Statistical Adviser to the Government of India, Ministry of Food and Agriculture, and published by the Manager of Publications, Civil Lines, Delhi 6. Price Rs. 2, pages 245-404.)

Efficacy of Public Enterprise. Edited by V. V. Ramanadham. (Published by R. N. Sachdev for Allied Publishers (Private) Ltd, 15 Graham Road, Ballard Estate, Bombay 1. Price Rs. 16, pages 231.)

Development of Dandakaranya. (Published by the National Council of Applied Economic Research, Parisila Bhawan, 11 Indraprastha Estate, New Delhi 1. Price Rs. 10, pages 148.)

If it has anything to do with banking services — and particularly if it relates to help and guidance for developing INDUSTRIES or developing IMPORT-EXPORT BUSINESS - we would cordially suggest a reference to us.

THE BANK OF INDIA LTD., has had 57 years' experience of trade, finance and industry — it is at the disposal of our customers.

THE BANK OF INDIA LTD.

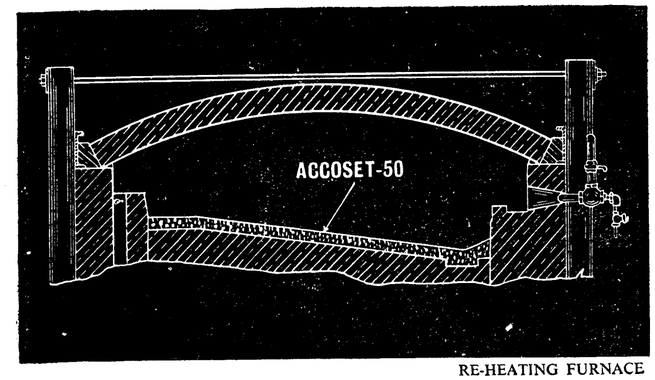
HIDES AND SKINS



The market ruled steady. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 10th December and 16th December, 1963)

Cowhides: Wet salted (Ord.) 13,000 pcs. on the basis of Rs. 8 to Rs. 11.25; Wet salted (Slaughtered) 31,300 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28 and Rs. 28.50; Wet salted (Ord.) 3,000 pcs. on the basis of 94 nP a lb.

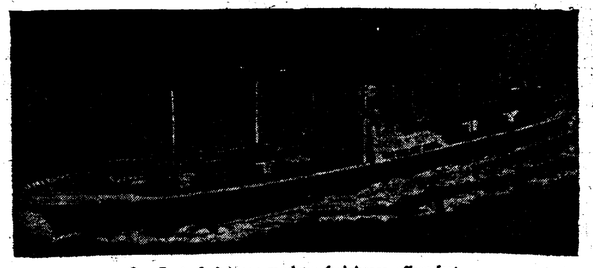
Goatskins: Wet salted (Patna, Daissee, Kustia) 58,000 pcs. on the basis of Rs. 330 to Rs. 350, Rs. 360 to Rs. 390 and Rs. 480 to Rs. 505; Wet salted (he-killed) on the basis of Rs. 4.87 and (she-killed) on the basis of Rs. 4.62 a piece; Assam-Dinajpur-Murshidabad 43,400 pcs. on the basis of Rs. 260 to Rs. 290 and Rs. 330; Purneah-Kissenganj 28,300 pcs. on the basis of Rs. 320 to Rs. 340 and Rs. 350; Patna 9,500 pcs. on the basis of Rs. 320 to Rs. 330; Purneah 4,000 pcs. on the basis of Rs. 470 to Rs. 480.

RE-HEATING FURNACE

ACC
HIGH TEMPERATURE REFRACTORY CEMENT

ACCOSET-50
for firebrick joints and linings that last longer.

To obtain maximum service from refractory bricks it is essential to join them firmly. ACCOSET-50, which has very little shrinkage in service, sets to a rock-like hardness, adheres rigidly to the brickwork and bonds so strongly that the lining becomes virtually monolithic.



ACCOSET-50 is recommended for jointing, bonding, monolithic and rammed linings, gunning, repairing and patching cracks in furnaces.

Technical literature sent free on request.

(F) Option to redeem all or any of the Debentures at a premium of Re. 1/- per cent by giving one month's notice on the 31st December 1954 or any subsequent interest date.
(G) May be redeemed on 30th June, 1957 at a premium of 1% or on 30th June, 1962, at a premium of 1½%.
(H) May be redeemed at a premium of Rs. 20/- per debenture (i.e. 2%) if redeemed earlier than 31st Dec. 1955 on 3 months notice.
(I) The Company has option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th Sept. 1955. At any time on or after 1st Oct. 1957 the holders may convert each note of Rs. 500/- into 25 ordinary shares to take effect on 1st Oct. in each year on giving 15 days' notice prior to such day.
(J) May be redeemed at 101% at any time after 31st March 1963 and at 100½% on any time after 31st March 1955.
(K) Rs. 1,500,000 Debentures will be redeemed at par annually by drawing from 1-9-65. Any Debenture outstanding on 1-9-69 will be redeemed on that date with option to redeem all Debentures at 101% on 1-9-64.
(L) Any time on 6 months' notice.
(M) At par in September 1960.
(N) May be redeemed at the end of 1965 or thereafter at 101%.
(O) Option to repay at par on or after 31st May 1961.
(P) Redeemable at par on 31st Dec. 1972 with option to redeem at par at any time on 6 months notice after 30th June 1958. At any time after 31st Dec. 1948 each note of Rs. 500/- may be converted into two ordinary shares of Rs. 100/- each ranking for dividend from 1st January following.
(Q) With option to redeem annually Rs. 4,00,000/- at par after 31-3-58 by drawing or by purchase in the open market.
(R) May be redeemed annually at par by drawing after 10th year also the whole issue at 101% on or after 31-3-63.
(S) (Option to repay at par one month's notice) At any time after 1st October 1956.
(T) (Option to repay at par on 6 months notice) after 1-1-67.
(U) (Option to repay on 3 months notice) At any time after 31st December 1960.
(V) May be redeemed at par on 30-6-66 or any subsequent interest date on one month's notice.
(W) After giving six months notice.
(X) Rs. 5,00,000 will be redeemed each year from and after 1964.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.
