The Ashoka Hotel is in the news, what with the resignation of its popular Managing Director, Brig. Raj Sarin (who, by any reckoning, has done a fine job), a threatened strike on the part of a section of its staff and an acrimonious conflict between two rival unions which divide the allegiance of the Hotel employees. A local newspaper has rightly complained that, as a result, the Hotel's patrons are having rather a rough deal. With the tourist season around the corner, it is to be hoped that peace and decorum will soon be restored in the Hotel and its surroundings. The institution itself deserves no less, and here I recall with great pleasure a recent incident which demonstrated the high standards of character and conduct which have been inculcated among its staff. My host who had paid for the lunch with the aid of Diners' Club credit card had also left a ten-rupee note on the plate as a tip, but the bearer would not take it protesting that tips were not allowed. It is not often that one comes across self-denial of this kind although in most hotels tipping is formally prohibited as a result of an understanding between managements and staff.

Trade Winds

DOLLARS FOR DEVELOPMENT

BY THE middle of October, the total U.S. economic assistance to this country had risen to \$5,023.1 million (Rs. 2,391.9 crores). During the last two and a half months, the increase in assistance was of the order of \$50 million. A foreign exchange loan of \$27 million was announced from U.S. Export-Import Bank to Coromandel Fertilizers Ltd., Visakhapatnam—one of the largest fertilizer factories. It will also receive a loan in rupees of Rs. 10.76 crores from the Cooley Fund. To meet the needs of the Indian starch industry, a supplemental P.L. 480 agreement for 110,000 tons of maize valued at Rs. 3.7 crores was also recently announced. Under title III of P.L. 480, an increase of \$10 million in the value of milk and other foods was also made known; these supplies are used largely in providing free lunches to about 7 million school children.

Agreements covering U.S. Government credits totalling Rs. 5.56 crores to five Indian firms were signed recently. These enterprises, all of which have American participation, will help in increasing the production of paper, chemicals, diesel engines, gears and poultry products. The five firms to receive the latest loans are Union Carbide of India Ltd. (Rs. 2.16 crores), Mandya National Paper Mills Ltd. (Rs. 1.5 crores), Kirloskar Cummins Ltd. (Rs. 1.25 crores), Napco Bevel Gear of India Ltd. (Rs. 40 lakhs) and Arbor Acres Farm India (Private) Ltd. Rs. 25 lakhs.

Union Carbide of India will utilise the rupee credit and a U.S. Export-Import Bank dollar loan of \$7.6 million (Rs. 3.6 crores) to expand its polyethylene and chemical plants at Trombay, Calcutta and Madras. The expansion will enable the firm to double its output for sale of butyl alcohol, butyl acetate and ethyl acetate, begin producing plasticisers, increase its high pressure polyethylene output 3.5 times, and produce benzene, propylene and ethylene. These chemicals are in great demand in India and the firm's expansion programme will help to reduce import of these items.

The Mandya National Paper Mills is located at Belagula, Mysore State. Parsons & Whittemore, Inc., of New York, a large manufacturer of paper equipment, is collaborating in this enterprise. The credit will help to expand the production of paper at the plant from 35 tons to 70 tons per day.

The factory under construction at Poona of Kirloskar-Cummins Ltd., will produce 2,500 heavy duty general purpose diesel engines annually. These engines, ranging from 150 to 800 horse power, will be used in construction equipment of all types, power generators and large trucks. They will be fitted to shovels, drag lines, crawler tractors, air compressors and other such units requiring large power sources. At the present time diesel engines of this capacity are imported, but the firm hopes to export some of its products in the near future. Cummins Engine Co. Inc., of Columbus, Indiana, is collaborating in this venture.

Napco Bevel Gear of India is erecting a factory at Faridabad, Punjab, to manufacture precision gears, universal joints and other parts for automobiles, machine tools, agricultural machinery, etc.

'KIPPING' LOAN TO INDIA

An agreement for a loan of £4 million (Rs. 5.33 crores) to the Government of India from the British Government was signed at New Delhi on October 16 by Sir Paul Gore Booth, British High Commissioner, and Shri P. Govindan Nair, Additional Secretary, Ministry of Finance, Department of Economic Affairs. This loan is part of the offer made by the British Government at recent meetings of the Aid India Consortium in Paris and Washington of further aid amounting to £30 million (Rs. 40 crores) to be committed in 1963-64 as part of their contribution towards the foreign exchange costs of economic development under India's third Five-Year Plan. The

loan is for a period of 25 years, but repayments of principal will not begin until after the seventh year. In view of India's special circumstances, and in accordance with the undertaking given by the Secretary of State for Commonwealth Relations in Britain in Parliament on July 17, 1963, the interest that would otherwise be due during the first seven years of the loan will also be waived. This loan is to be used to improve the operating efficiency of manufacturers in India who traditionally look to Britain for their supplies and who are experiencing difficulties because of India's tight foreign exchange situation. The need to make funds available for this purpose was emphasized to the British and Indian authorities by Sir Norman Kipping, Director General of the Federation of British Industries, who visited India earlier this year.

PRODUCTIVITY IN CABLE INDUSTRY

Some interesting recommendations have been made in the report submitted by an Indian Productivity Team which visited the United States and Japan some time ago. This Team led by Mr. V. G. G. Nayar, Chairman of The Aluminium Industries, was sponsored by the National Productivity Council last year to study the working of the cable industry in these countries. It made a thorough study of the organisation of the industry in both the countries and has drawn conclusions for possible application in India. One of its recommendations is that the Indian cable industry should follow the Japanese pattern of dispersal of factories all over the country not only to bestow the benefits of industrialisation evenly but also to prevent possible dislocation in the event of a major calamity. It has also made some interesting findings on the system of organisation which is followed in American management. It states, for instance, that the proper sources of authority and their relationship to the rest of establishment should be defined by organisation charts. It has made a study of the delegation of authority and responsibility as it exists in American management.

A significant finding of the report is about the definition of 'productivity' which does not merely mean labour-productivity. In both the countries—Japan and the U.S.A.—the concept is also a measure of economy of other means such as materials, machinery, capital and management. Higher productivity, so far as items other than labour are concerned, is achieved through controls on stores and inventory and costing methods which enable realistic and competitive price fixation.

Commenting on the metals used for cables, the report states that better availability and price consistency of aluminium as compared with copper, along with the lightness in Japan and the U.S. to consider the use of aluminium for most types of insulated wires and cables. Such choice has, however, been based purely on economic and technical advantages. Aluminium is considered ideal for all bare and lated cables involving big volumes of insulation. The report has estimated that at least 10 per cent progressive additional demand every year and another 10 per cent for replenishing obsolescent equipment. In other words, it has recommended that the Government should encourage and sponsor the establishment of a sufficient number of units for the manufacture of cable-making equipment in the country.

DESIGN CELL FOR KOYALI REFINERY

An Indo-Soviet Cell has been set up to design and engineer certain jobs of the Koyali refinery near Baroda. About 30 Indian and 7 Soviet engineers are associated with the Cell. The Soviets have joined the Cell recently. The Indian engineers have already completed about 40 per cent of the designing work. Some of these engineers were earlier associated

COOL RUNNING

no trouble on long hauls;
more profits per vehicle

Tyre trouble on a long haul can eat into your profits. It means costly delay and much trouble and expense. On long, fast runs heat acts as the great enemy of your tyres. It weakens the tyre cord, softens the tread rubber and damages the casing.

Dunlop truck and bus tyres are unequalled for their cool running. They are made to stand up to the heat of long runs in hot temperatures without weakening. They will help you to earn more profits per vehicle on those strenuous thousand-mile trips by giving trouble-free service. One more reason why Dunlop tyres will help run your truck or bus at the lowest cost per mile.

DUNLOP TRUCK & BUS TYRES
LOWEST COST PER MILE

DGC-11

One of the fastest growing general insurance companies in India

MADRAS MOTOR & GENERAL INSURANCE COMPANY LIMITED

The stability of a general insurance company depends upon the continued patronage of its clients. The ability to expand the field of activities and serve new clients sets the pace of its growth.

The swift and steady growth of Madras Motor & General Insurance Company Limited indicates that it possesses both these qualities in ample measure.

with the Soviet Design Organisation in Moscow during 1962 when the main project report of the refinery was being prepared. The refinery, which is being set up in the Public Sector with the technical and financial assistance of the Soviet Union, is being designed to process two million tons of crude per annum. Its capacity will ultimately be increased to 3 million tons per annum. The first stage of the refinery is likely to go on stream by the end of 1964. The detailed project report of the refinery has already been received, examined and completed with the help of the Soviet experts. The equipment for the refinery has already started arriving from the Soviet Union. Estimated to cost about Rs. 27.78 crores, the refinery will employ about 1,000 personnel and produce a variety of products including liquid petroleum, gas, motor-gasoline, solvents, kerosene, high speed diesel-oil and fuel oil.

NAHORKATIYA PLANT AT FULL CAPACITY

The Nahorkatiya crude conditioning plant, first of its kind in the world, which was completed last year and ran successfully on 25 per cent of its capacity during the previous winter season is now ready to operate on full throughput. Static pressure testing has been carried out on the individual fluid circuits and the cooling water circuits have been run. The unit will now stand by till the pumping programme for the next cold season is finalized. The Nahorkatiya crude conditioning plant forms part of the 720 mile Oil India Pipeline in North East India. The first stage of this pipeline system connecting the oilfields in Nahorkatiya with the Gauhati Re-

finery was commissioned in March, 1962 and is since supplying crude oil to the Gauhati Refinery. The second sector of 470 mile pipeline, Gauhati-Barauni, was completed in February, 1963.

NEWSPRINT POLICY

The page cuts imposed on daily newspapers (including Sunday editions) at the commencement of the current licensing year have been discontinued with effect from October 1, 1963. Daily newspapers (including Sunday editions) having a circulation between 10,000 and 50,000 copies will be allowed to increase their circulation of 1961-62 by 20% during October 1963 - March, 1964, but subject to a maximum of 50,000 copies. Newspaper establishments eligible for additional newsprint quota should submit their applications to the Registrar of Newspapers for India by November 30, 1963.

INCENTIVES FOR D. MARK ABROAD

The Government of the Federal Republic of Germany has submitted to Parliament the draft of a law on tax privileges to promote private investment in developing countries. In its new law the West German Government proposes to improve the taxation of reserves and to admit a valuation allowance. In future, German investors are to be permitted to deduct a 15-per cent valuation allowance from the fixed assets invested in a developing country. This alleviation is intended to be a compensation for the permanent risk which investors in developing

RONUK

Telephone 63550.

countries have to bear. The reserve items, which can be deducted from the profits before taxation, are to be increased to fifty per cent of the costs of the investments which are already reduced by the valuation allowance. They are to be dissolved after a period of six business years after which at least a sixth of their value will be fully taxed. The new law also provides that hidden reserves may not be taxed if the investor delivers machines or other production equipment to the developing countries. West German private investment in developing countries, in terms of per cent of the gross national product, amounts to about half of what has been invested by France, Britain and Italy. The new tax law is intended to be an incentive to promote German investments in developing countries. So far only political risks have been covered for a certain period.

TRUCKS FOR ARMY

Out of the 10,000 components that go into the making of a Shaktiman truck for the Indian Army, almost 75 per cent are now indigenous. When production started in 1959 at the Defence Ministry's Gun Carriage Factory at Jabalpur, only 35 per cent of the components were indigenous. Some of the major components like the engine and the axle are also made indigenously, at the Small Arms Factory. Over 3,700 Shaktimans have been produced so far, and the target for 1963-64 is 2,000 trucks. Produced in collaboration with a West German firm, it is a multi-fuel engine which can run on kerosene, diesel oil, petrol or, if need be, even on its own lubricating oil. This greatly increases the vehicle's flexibility and manoeuvrability.

LAND MORTGAGE BANK DEBENTURES

The National Co-operative Development Corporation decided at a recent meeting in New Delhi to purchase debentures floated by Central Land Mortgage Banks up to an overall limit of 25 per cent of its surplus funds. This will, however, be subject to the condition that such purchases should be limited to the extent of the shortfall, if any, but not exceeding 5 per cent of any individual issue by a Central Land Mortgage Bank. If there is no shortfall in subscription from other sources in respect of any issue, it has been decided that the Corporation should not step in. Subscription to the debentures will be confined as far as possible to States where land mortgage banking has comparatively not been well developed.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LTD.

The Sixty-sixth Annual General Meeting was held on October 24th at Victoria House, Bloomsbury Square, London, W.C.1., Sir William Lamond, the Chairman presiding.

The Report of the Directors was adopted and payment was sanctioned of a Final Ordinary Dividend of 4 per cent (actual) for the year ended 31st March, 1963. Sir William Lamond, Mr. J. W. Gauntlett and Sir Walter Michelmores were re-elected Directors. The remuneration of the Auditors was fixed.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

Another decision taken by the Corporation is that financial assistance be given to national and inter-State co-operative institutions registered under the Multi-unit Co-operative Assistance Act for schemes relating to credit, marketing, processing and storage. Such assistance should be in the form of share capital loan and subsidy for construction of godowns and subsidy for managerial staff. The reason for providing assistance to such institutions is that being national or inter-State institutions, no particular State Government might be interested in giving assistance to them. The Corporation has also decided that funds may be utilised for promoting other co-operative schemes and schemes not covered already by the Central Government on the merits of each case.

QANTAS' GOOD YEAR

Qantas Airways Australia, Pool Partner of B.O.A.C. and Air-India, announced record revenue and profit for the year ended March 31, 1963. Revenue exceeded £A14 million for first time and nett profit of £A1.46 million after taxation was highest ever and compares with the profit for the previous year of £A480,000. Number of passengers carried totalled 240,032—an increase of 52,000 on the previous year—and passenger miles performed totalled over 978 million compared with nearly 752 million for the year 1961-62. The overall production increased 20.2 per cent and the basic reason for the successful year was original choice of Boeing 707/138 aircraft for mainline fleet and subsequent conversion to Turbofan Powered 707/138B VJet model. Another reason for the successful year was careful cost control.

EVEREADY TORCH CONTEST

The Delhi Branch of Union Carbide India Limited have recently announced a mammoth sales promotion and advertising campaign for promoting the use of Eveready torches. This is the biggest single advertising and sales promotion campaign ever undertaken by Eveready in India. The campaign is designed to motivate the non-users to purchase and use Eveready flashlights. This contest runs from August 15th to November 5th. Rs. 35,000/- in prizes are to be won by 2,003 consumers and retailers. The entrant has to list 9 out of the 12 reasons given on the entry form for choosing an Eveready torch, in order of importance along with a cash memo for the purchase of an Eveready torch.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

Company Affairs

OMEGA CABLE ISSUE

OMEGA INSULATED COMPANY (INDIA) LTD. is entering the capital market with an issue of Rs. 70 lakhs made up of 70,000 equity shares of Rs. 100 each, out of which Rs. 30 lakhs have been subscribed by the sponsors and their friends, and the balance of Rs. 40 lakhs is being offered to the public. The subscription list opens on November 4, 1963 and will close on November 20, 1963 or earlier but not before November 11, 1963. The entire issue is underwritten by financial institutions including the IFC, ICICI, MIIC, LIC, Canara Bank and Somaya-julu and Co. The authorised capital of the company is Rs. 3 crores. The total capital outlay of the first phase of the project is Rs. 115 lakhs out of which a sum of Rs. 70 lakhs is being raised by this issue and the remaining Rs. 45 lakhs through loan capital.

In the first phase, the company will produce 30 million core yards of PVC and VIR cables. The technical collaborators for the first phase are Kelsey Engineering Ltd. of Canada. The entire plant is expected to be completed in November, while production is scheduled to commence in March, 1964. Purchase of Rs. 33 lakhs worth of machinery from Canada and the United States has been finalised and is scheduled to arrive by December. The factory is to be located at Ambattur. All preliminary arrangements have been made for acquiring the raw materials such as aluminium, rubber and chemicals.

Negotiations are also in progress in England and France for the second phase of the programme, namely, 280 miles per annum of paper insulated lead-covered power cables, for which the company has already been granted a licence. The directors have also finalised negotiations with American concerns for technical and financial participation for the manufacture of cable accessories and also for the production of 3,000 tons of ACSR and all-aluminium conductors every year. An application to the Government for ACSR licence has been made.

The company obviously has an elaborate programme of manufacturing various types of cables and wires which include flexible cards, cotton and silk braided conduit wires and cables, low and high tension power cables, telegraph and telephone cables, marine power cables etc. The demand for these cables and wires has been rapidly rising in line with the growing tempo of industrialisation and electrification in the country. The new issue, therefore, stands bright chances of being well accepted in the market.

HIND LEVER'S DIVIDEND

The directors of Hindustan Lever Ltd. have declared an interim dividend of 60 nP. per share (taxable) for the year ending December 31, 1963. The dividend is payable on November 12 to shareholders registered in the books of the company on November 5. The Directors have expressed the hope that the dividend of Rs. 1.20 per share (taxable) paid in 1962 can be maintained this year despite the heavy incidence of super-profits tax on the company.

UNION CARBIDE

The Union Carbide India Ltd. has declared an interim dividend of 75 nP. a share, less tax, for 1963, payable on or after November 25. Transfer books will remain closed from October 28 to November 3.

DELHI CLOTH MILLS

The directors of the Delhi Cloth and General Mills Ltd. have finalised the basis of allotment of the recent issue of Rs. 2,00,000 (9 per cent) fifth redeemable cumulative preference shares of Rs. 25 each at par in consultation with the

authorities of the Delhi Stock Exchange. Applicants for 10 to 80 shares have been allotted in full. The percentage of allotment for the remaining brackets is: 90 to 130 shares—80; 150 to 200 shares—70; 240 to 400 shares—60; 420 to 3,000 shares—50 and 4,000 to 10,000 shares—44.65.

MADRAS RUBBER SUBSCRIPTION

In response to the issue of 6,25,000 shares of Rs. 10 each of Madras Rubber Factory Limited, the company received 13,637 applications for a total of 6,08,745 right shares and 6,442 applications for a total of 3,58,326 additional shares. The directors have allotted 6,08,745 right shares. As far as 16,255 surplus shares available for applicants for additional shares are concerned, it has decided, with the approval of Controller of Capital Issues, to allow 1 share each to the holders of 1 to 20 shares, 2 shares each to holders of 21 to 50 shares, 4 shares each to holders of 51 to 100 shares, 10 shares each to holders of 101 to 200 shares, 20 shares each to holders of 201 to 500 shares, 45 shares each to holders of 501 to 1000 shares and 65 shares each to holders of 1001 and more shares.

POLYSTYRENE PROJECT

A Rs. 6-crore project for the manufacture of polystyrene and copolymers is being set up by Shri Ram Mills Ltd. of Bombay. The name of the new company is to be Hindustan Polymers Ltd. The plant is located at Visakhapatnam with an annual capacity of 7,500 tons each. The raw material to be utilised will be alcohol from molasses. A refinery having an annual capacity of 1.5 million gallons is proposed to be set up for this purpose. The company has secured technical collaboration of Distillers Company Ltd. of the U.K. Technical assistance will be provided by Universal Oil Products Company Inc. of U.S.A., while Power Gas Corporation of the U.K. will supply plant and equipment on a turn-key basis. The foreign exchange outlay on this project is estimated at Rs. 2.36 crores. The factory is expected to be ready for operation by the end of 1965.

WIRE ROPE PROJECT

Bombay Wire Ropes Ltd. will shortly enter the capital market with a public issue of Rs. 27.50 lakhs. The company is setting up a wire rope manufacturing project in Maharashtra in collaboration with Ashahi Wire Rope Manufacturing Co. Ltd. and Kobe Steelworks Ltd. of Japan. The capital outlay of the project is estimated at Rs. 106 lakhs. The authorised capital of the company is Rs. 2 crores. The issued capital is Rs. 55 lakhs in 5,50,000 shares of Rs. 10 each. Of this, the directors, promoters and their friends have taken up shares worth Rs. 10.03 lakhs. They have also agreed to take up further capital of Rs. 17.47 lakhs including the firm allotment of Rs. five lakhs to the LIC. The entire public issue is underwritten. The factory will be situated at Kolshet near Thana, Bombay. The licensed capacity is 3,000 tons a year of wire ropes. The company has obtained an import licence for the machinery from Japan for Rs. 38.36 lakhs. The balance of machinery will be ordered from indigenous sources.

USHA RECTIFIER

A factory for the manufacture of rectifiers, elements, photo voltaic cells and diodes which are of vital importance to defence, is being set up at Badarpur near Delhi by Usha Rectifier Corporation (India) Limited. It has arranged foreign collaboration with International Rectifier Corporation of California on a 50-50 basis which will supply the entire foreign exchange requirements of the plant. It will have an annual capacity of 48,000 sq. m. of rectifier cells. It is expected to go

into production by the second half of 1964. The construction of the factory building has already started. The company is likely to enter the market during its expansion stage.

ROHTAS INDUSTRIES

The directors of Rohtas Industries Ltd., have stated in their annual report for the year ended March 31, 1963, that the production of company's various units, except sugar, improved considerably. Paper showed a marked increase in production from 46,565 tonnes to 52,243 tonnes with a large availability of imported pulp. The position regarding the supply of bamboo for paper improved but at a considerably increased cost. Since the rates of royalty charged by the State Governments continued to be high, and weighed heavily, the delivery cost of bamboo to the company's factory was considered high despite its proximity to the raw material source. The bamboo pulp mill is now producing a larger percentage of bleached pulp. Certain new equipment are under installation. Under the scheme recommended by the Development Council for Pulp and Allied Industries, the company will be able to increase the production by about 10,000 tonnes, if foreign exchange of Rs. 30 lakhs is made available. The production of vulcanized fibre unit was affected owing to inadequacy of imported base paper. It is trying to manufacture paper base on a commercial scale. The directors have pointed out that despite the recognition that paper production cannot reach the target envisaged under the third Plan, no remedial action has been taken so far, and feel that the widening gap between production and demand can be bridged only if necessary incentives to the industry are provided through satisfactory revision of prices. They hope that the Government would take an early decision on the memorandum submitted by the joint committee of the paper industry. Its cement production increased from 2.68 lakh tonnes to 3.20 lakh tonnes during the year. The production of clinker went up from 2.86 lakhs to 2.91 lakh tonnes, and of asbestos cement from 17,700 tonnes to 19,092 tonnes. The production of sugar was lower at 5,713 tonnes against 11,611 tonnes mainly because of the short duration of the crushing season. The short season was largely due to the shortage of cane. It attained an all-time record in the production of vanaspati at 11,270 tonnes against 9,795 tonnes in the previous year.

The production of caustic soda also moved up from 5,575 tonnes to 5,643 tonnes.

SCINDIA STEAM

The Scindia Steam Navigation Company Ltd. has recorded impressive results for the year ended June 30, 1963. Its gross profit for the year increased to Rs. 3.31 crores as against last year's Rs. 2.46 crores. Consequently, the directors have decided to step up the equity dividend to a rupee per share (gross) as against 60 nP. (gross) last year. This favourable turn in the company's fortunes has followed a rise in its gross earnings from Rs. 17.01 crores to Rs. 18.21 crores, the freight income adding up to Rs. 17.68 crores against Rs. 16.49 crores in the previous year. The directors have proposed a provision of Rs. 1.92 crores for depreciation, Rs. 68 lakhs for taxation and Rs. 9 lakhs for statutory development rebate reserve. The equity dividend absorbed Rs. 56.23 lakhs as against Rs. 33.79 lakhs last year. While the company has had to provide a much larger amount for taxation, the burden of absence of any fresh addition to company's fleet. It is pointed out that the company was obliged to draw as much as Rs. 48 lakhs from general reserve last year in order to pay the dividend and provide for development rebate reserve.

MADRAS FORGINGS

Madras Forgings and Allied Industries Ltd. will enter the capital market on October 31, with a public issue of 11,000 equity shares of Rs. 100 each. The subscription list will close on November 13 or earlier but not before November 1. The issued capital is Rs. 15 lakhs of which the directors and their friends have taken up Rs. 4 lakhs. The company will set up a plant for the manufacture of forgings and castings with a capacity of 6,000 tons per annum at Coimbatore. The plant is expected to go into production in the second quarter of 1964.

MODI SPINNING

The working of Modi Spinning and Weaving Mills Company Limited for the year ended April 30, 1963 has resulted in a lower net profit of Rs. 10.59 lakhs as compared to Rs. 20.77

NOTHING IN MODERN INDUSTRIAL TECHNIQUES IS MORE SPECTACULAR THAN MASS PRODUCTION. IT PUTS WITHIN OUR REACH ALMOST EVERY ARTICLE OF DAY-TO-DAY USE... FROM PINS AND NEEDLES TO MOTOR-CARS. lakhs in the previous year. The directors have proposed a dividend at 9 per cent on old shares and proportionately on new shares to be paid from dividend reserve to which a transfer of Rs. 10.65 lakhs has been made. The dividend had absorbed Rs. 18.46 lakhs in the previous year. Allocations include depreciation Rs. 25.73 lakhs, development rebate reserve Rs. 2.51 lakhs and taxation Rs. 13.10 lakhs.

The directors have pointed out that they have decided to lay more emphasis on the production of fine and super-fine qualities of cloth. They have already installed mercerizing plant and the sanforizing range will begin functioning at the beginning of 1964. The drafting system of the composite mill is also being converted to spin better quality yarn. The company added 6,400 spindles in February, making a total of 56,200 spindles. The new project comprising 25,000 spindles and 500 looms is being implemented as per schedule. The spinning plant is expected to start functioning during the current year. The company has received Rs. 45 lakhs out of the sanctioned loan of Rs. 98 lakhs from the Industrial Finance Corporation of India. In addition, the company has already installed a saw-gin and cottonseed delinting plant at a cost of Rs. 14.50 lakhs at Abohor in Punjab. This plant went into production in December, 1962. The rupees 30-lakh distillery factory at Yamunanagar is expected to go into production by the end of 1963.

METAL BOX'S PAPER PLANT

The Metal Box Company of India Ltd., have added paper to their metal and plastic packaging services. Its paper group will be located in Bombay. A manufacturing licence was granted to Metal Box last year for the manufacture of treated and laminated papers and boards and containers made therefrom. By providing in India paper packaging to international standards, it will assist exporters of consumer goods. Metal Box will also introduce specialised paper packaging systems designed to balance mass production of consumer products. This new packaging concept will assist many industries serving home and export demand, including food products (particularly frozen foods), pharmaceuticals, toilet products and confectionery. Another important facility from the Metal Box Paper group will be tamperproof paper cartons.

GOODYEAR TIRE FACTORY

The Goodyear Tire and Rubber Company will build a new tyre factory in southern Italy which will give Goodyear 67 manufacturing units all over the world out of which 8 are in Europe and in neighbouring areas. The Italian plant will be operated by Goodyear Italiana S.P.A., Goodyear's Italian subsidiary. Passenger and truck tyres and tubes will be produced by the factory for sale in Italy and for export to European and near east countries.

TWA'S OPERATIONS

Trans World Airlines carried 650,468 passengers and 728 million revenue passenger miles during the month of August this year, which is an all-time record. According to preliminary figures, it was the eighth consecutive month that T.W.A. reported a higher percentage of improvement in domestic passenger miles over the previous year.

TEXTOL COMPANY

The working of Textool Company Ltd. for the year ended April 30, 1963, has resulted in a lower net profit of Rs. 12.39 lakhs as compared to Rs. 14.52 lakhs for the previous year. The directors have proposed an equity dividend at 12 per cent on old shares and proportionate dividend on new shares. Dividend will absorb Rs. 6.24 lakhs. Other allocations include depreciation to the extent of Rs. 5.76 lakhs, taxation Rs. 9.20 lakhs and development rebate reserve Rs. 2 lakhs. It is indicated that the company's new branch factory at Singanallur for manufacturing fly frames has not yet gone into full production. The directors point out that the acute shortage of raw materials

such as pig iron and tin sheets has affected the company's production programme. The cone winders under manufacture in collaboration with Messrs. Kamitsu Seisakusho Ltd. of Japan, will be marketed shortly.

CAPITAL ISSUES

Eight companies have been authorised to raise capital aggregating more than Rs. 2.85 crores. The consent of the Controller of Capital Issues is valid for 12 months.

Somasundaram Paper Mill Ltd., has been given consent to the issue of capital of Rs. 25 lakhs divided into 2,00,000 equity shares of Rs. 10 each for cash at par and 50,000 9.5 per cent cumulative preference shares of Rs. 10 each free of company's tax but subject to tax at source at the prescribed rate, for cash at par. This is inclusive of shares of the value of Rs. 66,430 already subscribed and paid-up.

Rehabilitation Industries Corporation Ltd., is to issue capital of Rs. 50 lakhs, divided into 5,000 equity shares of Rs. 1,000 each. The shares will be issued for cash and will be subscribed by the President of India.

Indian Oil Company Limited, a Government of India undertaking is raising further capital of Rs. 65,45,000 divided into 6,545 equity shares of Rs. 1,000 each to be issued privately for cash at par.

Standard Motor Products of India Limited, Madras, is issuing capital of Rs. 25 lakhs in equity shares of Rs. 10 each for cash at par. Out of this, shares of the value of Rs. 9,21,840 will be offered as rights to Standard Triumph International Ltd., U.K. and Rs. 12 lakhs will be issued to the public simultaneously with the rights offer.

Ossoor Estates Limited, Mangalore, is issuing bonus capital of Rs. 3.25 lakhs by capitalizing the company's general reserves to a like extent. The bonus shares will be issued in the ratio of one share for every two existing shares.

P. S. Ball Bearing Co Ltd., Delhi, is raising capital of Rs. 60 lakhs divided into 5,00,000 equity shares of Rs. 10 each and 10,000 preference shares of Rs. 100 each to be issued for cash at par. Of this 2,50,000 equity shares will be offered for public subscription by prospectus.

Bombay Malleable Iron Castings and Allied Industries Limited, Bombay will raise Rs. 50 lakhs capital in 50,000 equity shares of Rs. 100 each to be issued for cash at par. Of this, shares of Rs. 20 lakhs will be subscribed privately and the balance of Rs. 30 lakhs will be offered to the public by prospectus.

The Gauhati Bank Limited, Gauhati is issuing capital of Rs. 6,43,000 divided into 1,28,600 shares of Rs. 5 each for allotment to depositors on adjustment for the conversion of their 30 per cent deposits in closed fund account.

LICENCES ISSUED

The following licences have been issued under the industries (Development and Regulation) Act, 1951—During the week ending 12th October, 1963. The list contains the name and address of the licensee, the articles of manufacture and the annual installed capacity:

COAL

Shri Om Prakash Agarwalla, Bera Colliery Co., P.O. Jharia, Distt. Dhanbad (Bihar)—Coal 80,677 tonnes.

BOILERS AND STEAM GENERATING PLANT

Nestler Boilers Private Ltd., Love Lane, Cross Lane, By-culla, Bombay-27. Proposed name: M/s. Nestler—NU Way Private Ltd. (Maharashtra)—Industrial Commercial and domestic range of various sizes of oil burners: Rs. 15 lakhs worth.

ELECTRICAL EQUIPMENT

Shri C. R. Gandhi, Poly Profile Corporation, 54, Tardeo Road, Bombay-7. Proposed name: M/s. Hindusthan Radiator

Corporation (Borivli, Maharashtra)—Steel Radiators for H.T. Transformers and such other equipment 624 tons. Shri N. S. Sethuraman, C/o Sethuram Thiagrajan and Co., 272/273, Angappa Naicken Street, Madras-1. Proposed name: Chilton Electric Products India Ltd. (Madras — Madras). 1. (a) Deion Miniature Circuit breakers—15,000 Nos. (b) (i) Panel boards and special enclosures—8,000 ft. (ii) Bus ducts—5,000 ft. 2. Earth leakage circuit breakers—1,200 Nos. 3. Rotary switches—1,200 Nos. Hind Rectifiers Ltd., Lake Road, Bhandup, Bombay-78 (Maharashtra)—Silicon Diodes 42,000 Nos.

TEXTILE MACHINERY

Ahmedabad Victoria Iron Works Co. Ltd., Dudeswar Road, Ahmedabad-1 (Gujarat)—All types of Flyers and pressers used for speed frames of cotton textiles, Worsted and waste silk 18,000 pieces.

HAND TOOLS

Deepak Industries Ltd., 16, Hare Street, Calcutta-1 (West Bengal)—Gear teeth generating tools (viz. Blade type-cutters)—2,400 Nos.

FINE CHEMICALS

Kesar Sugar Works Ltd., 45-47, Apollo Street, Fort, Bombay-1 (Maharashtra)—Capacity per annum after expansion in tonnes: 1. Sodium Thiosulphate—720; 2. Sodium Metabisulphite 56; 3. Sodium sulphite 720; 4. Chromic Acid/Chrome Salts 175; 5. Sodium Bisulphite 530; 6. Pot Metabisulphite 2.

SYNTHETIC RESINS AND PLASTICS

Caprihans (India) Private Ltd., Post Box No. 1443, Janmabhoomi Chambers, Fort Street, Ballard Estate, Bombay-1 (Kurla, Bombay, Maharashtra)—Phenolic Resin Varnishes 180 tonnes.

COTTON TEXTILES

Shri G. Daniel, Vice President, Kanya Kumari District Co-operative Central Bank, Nagercoil Proposed name: Kanya Kumari District Co-operative Spinning Mills Ltd. (Kanya-Kumari Distt., Madras)—12,000 spindles for manufacture of cotton yarn. Shree Siddeswara Textile Mills Private Ltd., Post Box No. 78, Davangere (Mysore)—6,160 spindles for manufacture of cotton yarn.

JUTE

Sri Krishna Mills Ltd., Eluru (West Godavri District) (Andhra Pradesh)—Jute products (sacking) 34 looms.

MILK FOODS

The Regional Dairy Development Officer, Rajkot. Proposed name: Rajkot Milk Scheme (Gujarat)—Milk powder 600 tonnes. Kaira District Co-operative Milk Producer's Union Ltd., Anand (Gujarat)—Milk Powder 2400 tonnes.

CHANGE IN NAMES (Owners or Undertakings)

During the week ending 12th October, 1963

(Information given below pertains to certain particular licences)

Shri V. D. Swami, Madras to M/s. Mac-Tools Ltd., Madras. From M/s. Motihari Cotton Mills, Calcutta to M/s. Mahalakshmi Fibres and Industries Ltd., Calcutta.

LICENCES REVOKED

During the week ending 12th October, 1963

(Information given below pertains to certain particular licences)

M/s. J. Barman and Co., New Delhi—A. C. Single phase House Service Meters. M/s. Mukandlal Bansilal and Sons, Bombay—Cotton yarn.

A CORRECTION

Our issue dated October 4, 1963, carried under 'Licences Revoked' an item which indicated that the industrial licence issued in the name of M/s. OFU-Lynx Ltd., Calcutta, for Furnaces had been revoked. On further information from the company it may be stated that two such licences had been granted to it, one for Calcutta and the second for Bombay. The company had decided to surrender its Bombay licence to the Government voluntarily, and to concentrate on the Calcutta factory.

HOW TO GET YOUR BANKING WORK DONE 70 MILES ABOVE THE EARTH

When you order the Union Bank to transact business abroad, they do things in double-quick time, using Telex. Telex transmits the message in radio waves to the ionosphere seventy miles above the earth, from where they bounce back and are picked up abroad, at the required station. The Union Bank is one of the few banks in India subscribing to Telex. Open an account with us to ensure that you get prompt banking service in keeping with space-age speed. The Union bank has correspondents in 50 countries, with 24,007 offices!

ASP/UBI-11

In Factories, Hospitals, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In factories sudden darkness can cause injury and damage to machinery. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual

mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for factories, hospitals, schools, banks and public places.

New York, the city of skyscrapers—so easy to reach by KLM

Before you plan your next trip to America, here is what you should know about KLM's remarkable reliability and its jet services to New York, Houston, Montreal or Mexico City

KLM has been flying across the North Atlantic for years. It is eminently suited to give advice on things American, from tours and sight-seeing to everyday living. KLM has flown longer to the States than any other continental European airline. Read more KLM facts...

1. KLM was the first non-American airline to order DC-8 jets, and the first to operate them. DC-8 jets are flown by KLM on its weekly west-bound services from Calcutta on Fridays and from Delhi on Wednesdays, and also on its five weekly flights from Karachi on Mondays, Wednesdays, Thursdays, Saturdays and Sundays. Immediate connecting flights are available at Amsterdam to New York. Frequent flights are also operated to Houston, Montreal or Mexico City from Amsterdam.
2. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay any day of the week, by providing connections at Karachi, Cairo, Beirut or Teheran (depending on the day of travel), with KLM's flights to Amsterdam and onwards to North America.
3. Another attractive possibility to go to America is to fly across the Pacific. Take KLM's east-bound DC-8 flight from Delhi on Tuesday morning, connecting you at Manila after a night's rest there, with the Philippine Air Lines (PAL) DC-8 service to San Francisco via Honolulu. Going from Calcutta, you can easily avail of interline services to Manila, linking with PAL services to San Francisco on Saturdays. Passengers from Bombay can fly to Delhi to connect with the KLM service leaving on Tuesday morning.
4. Travelling First Class on a KLM DC-8 jet, you sit in unstinted comfort. Your seat is as

"Miniguide to the USA"

Before you visit the USA, ask KLM for a free copy of the "Miniguide to the USA". This pocket-size booklet is packed with information on what to see, where to stay and how to live—economically—in the States.

food and delicacies regularly from Holland. The service in these rest houses matches the standards of a good European hotel.

Amsterdam Advantages

8. The Tax-Free Shopping Centre at Amsterdam Airport is the largest on the European continent. Cameras, tobacco products, perfume, wrist watches and tape recorders are just a few of its bargains.

9. Take advantage of "Hilton Special"—a stay of two days and a night at the Hilton Hotel, Amsterdam; plus sight-seeing tours covering a canal boat trip, visits to Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond cutting factory and other places of tourist interest. And all this for US \$ 17.00.

10. Your travel agent will help you with all your travel arrangements. He is an expert and his experience will tell you where and how you can make the very most of your time and money. Your travel agent's advice is valuable. He'll tell you about the advantages of flying KLM.

BOOKS BRIEFLY

Does Religion Retard Economic Progress?

Hindu Culture, Economic Development and Economic Planning in India: By K. William Kapp; Asia Publishing House, Bombay; Price Rs. 20.

Reviewed by R. P. RAO

ANY BOOK on effects of Hindu culture on economic development and planning is welcome. This is particularly so when the nation has just learnt that the progress during the first two years of the third Plan was behind schedule and knows that in spite of the best efforts of the authorities since independence, food production has failed to overtake population growth in the country.

Is Hindu culture scuttling or retarding the economic progress and planning and, if so, to what extent, is a highly relevant question. The people should know the fact. While agreeing in principle with certain general aspects expressed by the author, the vast majority of Indians will not share his views and conclusions.

Instead of discussing the effects of present day Hindu society on current economic development and planning, Mr. Kapp has chosen a few decades earlier Hindu society to find out its effects on the existing development and planning. To the extent of this disparity in the dates, the subject of the book misses its own mark and makes it far from being real. Obviously in the last few decades many changes have taken place in the Hindu society even for a superficial observer.

Again, describing about the "kinship and family structure" of the Hindu society, Mr. Kapp quotes a passage from the Hindu Law and Customs by J. Jolly published in 1928. The passage says: "... not only parents and children, brothers and step brothers live on the common property, but it may sometimes include ascendants, descendants, and collaterals up to many generations." Is the author justified in imposing 1928 Hindu society on 1963 economic development and planning to arrive at his conclusion?

What shocks the Indian reader most and turns him pale is the author's view on racial discrimination and segregation. While condemning casteism in Hindu society, the author says: "... caste, much more than its Western counterpart — racial discrimination and segregation — has always been an important obstacle to socio-economic change and as such has played not only a major part in the economic stagnation of pre-independence India, but today is still a major impediment to economic development." While Indians are trying their best to get out of this tight jacket of casteism, their Western counterparts, who claim to possess a superior culture, are going about pushing the Negro community down the jacket of racial discrimination and segregation.

According to Mr. Kapp, the Karma theory is responsible for "the cultivator who fails to take water from the new irrigation canal because it may rain or who delays the building of field channels, the villagers who despite many draughts have not bothered to sink a well, or the peasant who will not make use of improved techniques because he is convinced that increases in yields are not due to improved seeds and fertilizer but to fate." While the hold of Karma theory is strong on him, still it is not to the extent the author makes out. His failings are largely due to illiteracy and lack of proper machinery to educate him about the new methods. The ab-

sence of incentives and the right type of administrative set up are some of the other reasons for his present condition.

WORLD MONETARY SYSTEM

India and International Financial Reform: By C. N. Vakil and Kersi D. Doodha; Vora & Co., Bombay; 1962; Pp. x + 80; Price Rs. 6.

Reviewed by D. KRISHNASWAMI RAO

PROFESSOR C. N. VAKIL, formerly Director of the School of Economics, University of Bombay, and Mr Kersi Doodha, a research scholar of the University, examine the debate that has been on since 1958 on the reform of the international monetary system, and analyse its bearing on our country, the success of whose developmental efforts will partly depend on the state of world liquidity.

The authors begin by postulating the basic problem of international liquidity, which is that of the inability of new gold output to keep pace with the annual increase in world production and trade and the consequent constrictive effect on world prosperity imposed by the shortage of international reserves.

The various plans put forward in the last four years for the reform of the international monetary system are next considered. In contrast to Professor Robert Triffin's emphasis on the inadequacy of reserves the authors hold that the immediate threat to the international monetary system arises from volatile movements of short-term funds and they would like to tackle the problem with a minimum of change in the present structure of the International Monetary Fund. It is their view that recent developments in international monetary co-operation reduce the need for radical transformation of the Fund on the lines suggested by Triffin. Probably it would be more correct to say that the leavening influence of Triffin's ideas has led members of the Fund into new lines of co-operation.

The authors have tried to consider the implications for India of the proposed reform of the world monetary system. They outline the balance of payments difficulties that India has faced during the course of her planned development and the part played by foreign aid in meeting them. Then follows a discussion of capital-output ratios in relation to foreign aid and of India's export promotion possibilities, all of which does not seem germane to the main theme of the book.

The crux of the situation is simple. The free world will have to face up sooner or later to the problem posed by a shortage of international reserves, because otherwise it would hamper both normal economic growth in the richer countries of the world and the efforts at development of the poorer ones which are so dependent on aid from the developed countries. India as one of the leading members of the IMF should devote her attention to this problem.

There are some points in the book that need rectification. For instance, Britain did not go off the gold standard in 1934, nor was she the last to do so, as is stated on page 16. Footnote 4 on Page 75 reads: "The rules of the Lenders' Club recently announced may be summarized as follows:"—but nothing follows! On Page 76 the Jacobsson Plan of stand-by credits for the Fund is criticised on the ground that it seeks a solution only for speculative movements of short-term capital and not for shortage of liquidity, whereas earlier (on Page 46) the authors state their "considered view that the immediate threat to the world is not from ... dearth of liquidity, but speculative movements of capital."

This is only an announcement of the proposed issue of capital and not a prospectus and interested persons may apply for a copy of the prospectus.

THE OMEGA INSULATED CABLE COMPANY (INDIA) LTD.

Registered office : 122½ Mount Rd., MADRAS-6.

The subscription list will open on the 4th November, 1963, and will close at the closing of the banking hours on 20th November 1963, or earlier at the discretion of the Directors, but in no case earlier than the close of banking hours on the 11th November, 1963.

SCOPE AND PROPOSED ACTIVITIES

In the first phase, the company will produce 30 million core yards of PVC and VIR cables per annum. But the company has got industrial licence for the manufacture of 45 million core yards of VIR and PVC and 280 miles of PILC cables per annum. The company has been fortunate in securing the technical collaboration of Messrs Kelsey Engineering Ltd., North Vancouver B.C., Canada, which is a reputed company of consulting engineers who have long experience in designing similar factories in many parts of the world.

The total outlay of the project is Rs. 1.15 crores, out of which Rs. 70 lakhs is equity capital and the balance loan capital arranged through banks. Orders have been placed for the entire machinery for the factory valued at Rs. 32.64 lakhs from American suppliers and all the machinery will be shipped before December 1963 and according to present estimates, the commencement of production is expected to be by about the middle of 1964.

The demand for cables and wires has been rapidly rising in tune with the growing tempo of industrialisation in the country. Increasing power generation will call for increasing demand for cables and conductors for the transmission and distribution of power. There is wide scope for the export of a sizable portion of the production to countries in the Middle East and Far East.

LOCATION OF THE INDUSTRY

The factory is located at Ambattur, 8 miles from Madras. For this purpose 16.31 acres have been assigned by the Government of Madras.

BOARD OF DIRECTORS

When Ramanathan talks

of Angels, he's completely down to earth!

'Angel fish,' says Ramanathan 'are among the nicest things with fins.' He's kept an aquarium for six years and has a vast reservoir of fish lore. 'My Black Mollys and Swordtails,' he says, 'have reproduced half a dozen times.' The only fish which produce live young they have large families. Ramanathan rears fish as he does most things with deep interest, care and knowledge. Ramanathan is a Fuelling Superintendent with Burmah-Shell, New Delhi.

SIMPLE PISTONS... SOPHISTICATED JETS. His job is to supervise the receipt/storage/delivery of aviation fuels. It's a complicated and difficult task. There are many grades of aviation fuels that must meet the highest standards of quality; oils and specialities; aircraft ranging from simple pistons to sophisticated jets; time schedules—worked to the minute. Constant vigilance is an absolute necessity. 'And there's the question of speed,' says Ramanathan. 'A record 45

litres per minute in 1943 when I joined and 4,500 litres per minute now.' Presently on a special assignment at the Branch Office, Ramanathan co-ordinates quality control, equipment and stores for eight airfields in the Delhi area.

TODAY, AS EVER, PEOPLE LIKE RAMANATHAN ARE WORKING FOR YOU. 'Ramanathan,' says a colleague, recalling Kipling, 'can move with kings and keep the common touch. He's friendly and respected.' His interests are few and simple. They include a good library and travel. 'I've seen India,' Ramanathan says, 'working for Burmah-Shell.' Ramanathan and people like him—at all levels of responsibility—are ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

RECORDS AND STATISTICS

Foreign Investments

SINCE INDEPENDENCE, Britain's private investment in India has more than doubled itself. It constitutes just under 75 per cent of all foreign private investment. In 1948, British capital invested in India totalled Rs. 206 crores. In 1960, out of the total foreign private investment of Rs. 612 crores, British invested capital amounted to Rs. 446 crores. This represents an average increase of Rs. 20 crores a year.

Some of the best known names in British industry are now investing in India and the number of such new enterprises and joint ventures continues to increase.

Imperial Chemical Industries Limited have many interests in India and among notable developments was the first commercial explosives plant built in Bihar as a joint enterprise by ICI and the Government of India.

At Rishra, in West Bengal, in May 1960, India's first polythene plant was opened. This project cost Rs. 4 crores and has an annual capacity of 3,500 tons. It was built by an ICI subsidiary, the Alkali & Chemical Corporation of India Limited, is based on alcohol obtained from molasses and will save India Rs. 1.5 crores a year in foreign exchange on imports. The same Corporation is also to build a rubber chemical plant at Rishra.

Instances of Indo-British co-operation in road transport include the motor car manufacturing agreement between Hindustan Motors Limited and the British Motor Corporation, and the agreement between Standard Motor Products of India Limited, Madras, and the Standard Motor Company of Coventry. In addition, Ashok Leyland Limited of Madras are associated with Leyland Motors Limited of Lancashire, in the production of lorry and bus chassis.

Aid to Motor Industry

To meet the demands of the expanding Indian Motor industry, Joseph Lucas Ltd., of Birmingham, have in collaboration with T. V. Sundaram Iyengar and Sons (TVS) of South India formed a new company which is manufacturing all types of automobile electrical equipment. Lucas have a 64 per cent share in the new company, and investment, by way of plant and machinery, of just over £ 1 million. They also have formed a new company, Brake India Ltd., again in collaboration with T. V. Sundaram Iyengar and Sons, to manufacture Automobile Brake Systems.

Many of the bicycles in use in India carry familiar British names. The "Hercules" bicycle is produced in the Madras factory of T.I. Cycles of India Limited, which is associated with the Tube Investments Limited, and the Hercules Cycles and Motor Cycle Co. Limited, both of Birmingham. Since 1952, the "Raleigh" has been manufactured at the Asansol factory of Sen Raleigh Industries Limited, in association with the Raleigh Cycle Co. Ltd. of Nottingham. Tube Products of India Ltd., in association with Tube Products Ltd., Oldbury, produce steel tubes at their Avadi plant for the cycle industry.

The Enfield Cycle Co. Ltd., Redditch, through their associates, Enfield India Limited, are producing motor cycles at a plant in Madras at the rate of 5,000 machines a year.

Dunlops are another well-known British company actively engaged in new projects such as rubber tyres and tubes at Ambattur and vehicle wheels and rims at Avadi, both near Madras.

In the electrical field, machinery of various types is being

manufactured by AEI Manufacturing Company Private Limited of Calcutta, an Indian subsidiary of Associated Electrical Industries.

The English Electric Company Limited are engaged in ventures such as the manufacture of low voltage switch and fuse distribution equipment and complex control panels in Madras.

W.T. Henley's Telegraph Works Company Limited, in co-operation with Henley's Cables (India) Limited, has put up 60 per cent of the Rs. 1.1 crores capital required for an electric wire and cable factory in Poona.

The Automatic Telephone and Electric Company (India) Private Ltd., with its factory in Bangalore, was the first major concern of its kind to be set up by the Government of India with foreign collaboration after Independence and is generally regarded as one of the most successful examples of Indo-British collaboration.

Heavy Machinery

There is a large-scale project at Durgapur for the manufacture of heavy machinery for cement plant, coal mining equipment, boilers, pressure vessels, heat exchangers, and similar items. This plant, opened on 6th February, 1962, by the late Dr. B. C. Roy, then Chief Minister of West Bengal, has been established by a new company, A.C.C. Vickers-Babcock Limited, in which two leading British companies, Vickers Armstrong and Babcock and Wilcox, are collaborating with Associated Cement Companies of India. This project is one of the biggest in the private sector — in terms of modern power station boilers, the yearly manufacturing capacity of AVB is estimated as equivalent to 500,000 kw. and the combined cement machinery manufacturing capacity will be approximately four to five plants per year, each plant having a capacity of 500 to 600 tons per day.

Consolidated Pneumatic Tool Company Limited has invested Rs. 0.15 crores to manufacture pneumatic tools and air compressors at Mulund, Bombay.

A factory for the manufacture of cold rolled steel strip has been set up in Bombay. The project has been sponsored by Graham Firth Steel Products (India) Private Ltd., a new company formed by Indian interests in collaboration with Graham Firth Steel Products Limited of Walsall, England. One-third of the capital outlay of the project will be subscribed by the British company and the remainder by the Indian participants. The contribution of the British company takes the form of complete plant, machinery, tools and other equipment and technical advice. The collaboration agreement does not involve any payment of royalty and the company has the right to use the "Firsteel" trade mark of the parent company. The factory will have a final capacity of 25,000 tons of finished steel strip a year.

Three Scottish firms formed a Rs. 10 lakhs syndicate to establish and operate a factory to produce paper-making machinery at Calcutta. The firms are Bertrams Limited, Ernest Scott and Co., and James Bertram and Sons Ltd. A former jute mill was converted for the project.

A well-known British engineering firm, Head, Wrightson

and Co. Ltd., of Thornaby-on-Tees, County Durham, which has had close links with India for many years has formed a new subsidiary with administrative headquarters in Calcutta. The new company under the name of Head, Wrightson India Limited, was inaugurated on 1-2-61 and acts as contracting company for the supply — as far as possible from Indian sources — of various types of plant to the designs of the parent company.

As a result of an agreement signed between Metropolitan-Cammell Carriage and Wagon Co. of Birmingham and Southern Structural of Madras, the Indian firm is to produce welded rolling stock instead of riveted carriages. Under the agreement, which was signed in Birmingham, the British firm is to acquire a substantial share-holding in Southern Structural.

Messrs. Heath, Hicks and Perken (Thermometers) Ltd., London, are collaborating with Pearls and Beads (India) Ltd., Aligarh, for the manufacture of thermometers and glass syringes. One factory will be located in Aligarh and thermometrical unit, because of the temperature and moisture factors, is to be set up at Mussoorie.

Industrial Instruments

The Cambridge Instruments Co. Ltd. have joined with Hindustan Precision Instruments (P) Ltd. for the manufacture of industrial instruments and with Messrs. Scientific Repairs and Trading Co. for the production of industrial dial thermometers.

The heavy engineering firm of John Thompson Limited of Wolverhampton, Staffordshire, has entered into an agreement with the Indian Sugar and General Engineering Corporation for the manufacture of some of its major products in India. Initially they are concentrating on machinery for the sugar industry but all large pressure vessels can be made in their factory.

There is participation to the extent of 70 per cent by Messrs. Fisons Limited of Britain (the principals of Messrs. Bengers Laboratories Limited), in a collaborative venture with Bengers Laboratories (India) Private Limited, covering all aspects of the manufacture and packing of Dextron B.P. and Iron Dextron (Pharmaceutical).

There is a technical collaboration agreement between Twyford Limited (England) and Hindustan Twyford Limited

for the manufacture of sanitary-ware and household ceramics.

Isaac Holden and Sons Limited of Bradford are collaborating with Duncan Bros. and a wool-combing factory, with an annual capacity of 10 million lbs., has been set up near Calcutta in West Bengal.

Gannon Norton Metal and Diamond Dies Ltd., Bombay, —a joint venture of Gannon Dunkerley and Co. Ltd., Bombay and Wire Drawing Dies (Manchester) Ltd.—has been formed to manufacture wire drawing dies of tungsten carbide and diamonds. Wire Drawing Dies in a subsidiary of the British firm Sir James Farmer Norton and Co. Ltd. The plant is expected to manufacture dies to the value of about Rs. 7,20,000 a year, which would help in saving foreign exchange to the extent of some Rs. 5,30,000 annually.

Sugar Machinery

Bookers, a leading British industrial group, have announced the incorporation of a company in India in partnership with the Sawhney Organisation. The company will set up a heavy engineering works to manufacture sugar machinery and industrial process turbines.

Boots Pure Drug Co. Ltd. have undertaken the manufacture of insulin in collaboration with an Indian firm.

Among other well-known firms who have recently had schemes approved are the following:—

Chubb & Sons' Lock & Safe Fire resisting and strong doors. Co. Ltd.

Wellman Smith Owen Engineering Corporation Ltd. Industrial furnaces and heat treatment equipment.

Humphrey and Glasgow Ltd. Erection of resin and intermediates plants.

British Jeffrey Diamond Ltd. Short wall coal cutters

Sunday Times Publications Ltd. Printing and publication of books

Hall Harding Ltd. Printing machines

G.E.C. of India (Mfg.) Ltd. House service meters.

Aveling-Barford Ltd. Road Rollers

Ferranti Ltd. Transformers

Imperial Chemical Industries Limited. Non-ferrous alloy sheets and strips.

Bush Electrical Engg. Co. Ltd. Electric motors, transformers and alternators.

Joshua Heap and Co. Ltd. Threading and screwing machines.

Henry Meadows Ltd. Meadows diesel engines

J. H. Fennex & Co. (Overseas) Ltd. Conveyer belting.

Water is Good

IN THE WORDS of the Atharva Veda, "water is good; water, indeed, is sustenance". Over the last sixteen years, one of the prime purposes of economic planning in this country has been to profit by this wisdom of the sages. Strictly speaking, the grand conception of gigantic multi-purpose projects which would tame and train the rivers to serve Man's many needs in this country, had been anticipated to some extent even before the five-year Plans. Nevertheless, its concrete implementation has belonged almost wholly to the years after 1951-52. The multi-purpose projects have shared fully in the controversies of the period. Their engineering had been questioned more than occasionally, while their economics have been challenged quite frequently. The debate is an unending one, but the question whether the large resources channelled into them could not have been more profitably utilised in competing ways capable of giving earlier and possibly higher returns, has now surely become academic. The completion of the Bhakra Dam and the celebration of that event last week with the Prime Minister dedicating the waters of Gobindsagar to the service of the nation, must, however, be regarded as marking the end of a phase in the running history of India's planning of her rivers. It is true that there are multi-purpose projects of truly large dimensions — Kosi and Nagarjunasagar — which are still in progress, but they would seem to be the last of their lineage, at least as indicated by foreseeable intentions of planning for power or irrigation.

In its vital statistics, Bhakra undoubtedly is a very impressive achievement. Its dimensions in engineering terms have been noted and respected the world over. Its economic benefits already promise to be abundant. Bhakra-Nangal is mothering both agriculture and industry in a part of the country which is fast building up an enviable reputation for leading the nation in its economic progress. Nevertheless, it certainly seems to be relevant to recall another historic Indian achievement in the service of the truth that water is good. We refer here to one of the most bountiful of river projects ever undertaken in this country, the celebrated "Upper Anicut", which Sir Arthur Cotton built in the middle years of the last century in the south of India to maintain and reinforce the "Grand Anicut" constructed according to tradition as early as in the closing decades of the second century A.D., across the lower reaches of the Kaveri river. The point in mentioning the "Upper Anicut" in this context is that it was reputed to have cost only Rs. 15 lakhs and was credited with having converted one entire district in the east coast into the granary of South India, an enduring asset to which the Mettur dam, another inexpensive works had subsequently added substantially and the "Package Programme" is currently said to be adding only marginally.

The rupee now is certainly not what it was then, but even after allowance has been made for that, it is certainly no comforting thought that whereas only Rs. 15 lakhs were spent on the construction of a highly productive water works a hundred years ago, now a sum equal to that is quite often spent on the mere ceremonial inauguration of a project or the celebration of its completion. It is all the more necessary, therefore, that every effort should be made to squeeze the maximum economic and social benefits out of the highly expensive multi-purpose river projects which have been an important and on the whole constructive constituent of our development programmes. In achieving this end much would certainly depend on the Government, State or Centre, and more specifically on the administrative agency which is operating a particular project. But even more does depend on the attitudes of those communities which are

November 1, 1963

directly benefiting from these projects. In Punjab, for instance, there had been a great deal of agitation at one time over water rates. But it has never been very convincingly proved that irrigation as such has ever been too dear. It is quite a different thing that sections of the farming community, because of their general poverty or backwardness, may not be able to pay a reasonable price for water for their fields. But what has been even more relevant is that politicians have always been eager to fish in these troubled waters. Whether it is water or power, those who make use of it must learn to live with the idea that a fair and reasonable price must be paid for it. Only thus may enough funds be secured for further expansion of these or other facilities of which the nation is in such great

Clearing the Excise Chaos

THE REPORT of the Central Excise Reorganisation Committee with Mr. A. K. Chanda, former Comptroller and Auditor-General, as its chairman, is a realistic and clear-headed document on a subject of much complexity. It deals with a perfectly chaotic system of taxation which has now come to provide a major part of the Centre's revenue, but still operated with rules and procedures devised years ago to cope with a situation entirely very different. Clearly, therefore, a thorough-going programme of reform has become overdue so that the duty is levied with reference to some well defined economic principle or philosophy and is not used as an instrument of exaction by the rapacious tax-gatherer. It had become overdue even in 1960 when the Government appointed the Chanda Committee.

As was to be expected, the Committee's verdict on the system is that it is wasteful, and is riddled with ineffective privileges and exemptions. Yet such is the system through which the Central Government expects to collect about Rs. 700 crores during the current financial year as against only Rs. 93 crores barely ten years ago, from 67 commodities against 15 then. The proportion of this tax to total Central revenues has gone up from 22 per cent to 47 per cent over a decade — and this proportion has more than doubled when the total tax revenue itself has gone up by nearly four times. The point, however, is not how much is being collected through excise levies, but whether the collection is being done in the most efficient way possible. This is exactly what the Chanda Committee had to find out, and this the Committee has done very well indeed.

In order to spot the main weaknesses, the Committee had to undertake an exhaustive survey of the entire field of excise taxation of commodities. It would be worthwhile to summarise some of its findings. We see that excessive documentation and physical check for excise purposes create unnecessary difficulties for the sugar industry which could be avoided with audit type of control. A simple levy has become extremely complex in the case of the match industry, because the

need. Equally important it is to realise that the facilities must not only be paid for, but that they should also be employed in the most economic and efficient manner possible. A major weakness in our planning, whether in industry or agriculture, whether in the public sector or the private, has always been the infrequent presence of this sense of thrift. Surely the most befitting thought on this occasion, when one of the most spectacular construction tasks to be undertaken in this country in the name of economic planning has been completed with the fulfilling of the Bhakra project, must be that Bhakra's gifts must be used well and wisely by the agricultural and industrial communities of the region for the welfare of the nation.

categorisation of factories has been changed too frequently and preferential rates of duty are introduced even for individual producers. In the paper industry, dissimilar varieties are grouped for common tariff rates; even the same varieties are at times classified differently at different paper mills, and what is worse, excise officers usually assess at the highest of the several applicable rates. In the case of the soap industry, the excise effort concerning non-power operated factories has been nothing more than surveillance and, therefore, unproductive. In electric wires and cables, preference in valuation for assessment has practically become an incentive to the production of non-standard cables. In the vegetable oils industry, this has led to greater and greater fragmentation despite all the measures to counteract it.

On the basis of these discoveries, the Committee has come to the conclusion that a commodity in which half the production is distributed in the small sector is not a very suitable article for the duty levy. A typical example is provided by the vegetable non-essential oils industry and the fact that tax yield from this source has not gone up despite the abolition of excise exemption gives an interesting insight into the practical and economic effects of excise duty. Therefore, the Committee has laid down the following general principle: low-priced articles of common consumption are best suited for excise levies, as also luxury articles. Capital goods, in view of their place in the economic development of the country, should be lightly taxed. Commodities with small revenue potential are best left alone, as administration of levy in these commodities is expensive and also difficult. In other words, there should be no indiscriminate levy of excise duty on new articles and the possibility of increasing yields by adjusting rates of established excise on goods already taxed should be fully explored before considering new levies.

In order to simplify the excise duty structure, the form in which it should be levied is important. The Committee has found that the system of *ad valorem* duties is not exactly a fair way of fixing the tariff.

November 1, 1963

EASTERN ECONOMIST

889

Because of the difficulties inherent in a tax of this nature which is concerned with the market value of various commodities for the purpose of determining the tariff, frequent disputes occur. Perhaps the duty could have been more smoothly administered had the set-up of the Central Excise Department been suited for the task. In a number of cases, *ad valorem* rates had to be hastily converted into wholly or partially specific rates as the former did not work. The Committee, therefore, recommends that generally specific rates of duty should be preferred, although this might mean some difficulties for small industries. Where specific rates cannot be evolved, tariff values for goods chargeable *ad valorem* should be fixed after proper enquiry.

The Committee's views on the scheme for allowing drawbacks and sets-off of duty on raw material and components used for making other excisable goods appeal to common sense. The drawback and set-off rates vary from commodity to commodity and, therefore, create a feeling of discrimination among those favoured less. Moreover, they do not always serve the interests of either the internal economy or export trade. Clearly, a more rational principle of application needs to be evolved, although it is not possible to bring all commodities under a common code. Each major industry has its own distinctive features and its own pattern of production and distribution, but allowing for these variations, there must be some means by which more acceptable rates of drawback or set-off can be devised.

Another valuable recommendation of the Committee concerns relief for manufacturing industry. Manufacturers' plea that due to the system of multiple levies, duty on raw materials and components on delivery from the producing factory blocks up their capital and they are out of pocket to the extent of interest they might have earned on this money has impressed the Chanda Committee. So it suggests relief in the form of transfer of duty liability with the goods, the duty being collected along with that leviable on the final product. Similar reliefs, it is recommended, should be provided for goods to be refined or reprocessed. This will also facilitate the determination of *ad hoc* rates of refund on export. As for individual units in need of some help, a cash subsidy instead of a preferential duty is recommended. Here the Committee introduces the idea that scope of introducing the added-value tax system on the French model should be examined; the system had led to beneficial results in that country. There is no reason why it should not do the same in India. The Committee also stresses that the exporter, in order to get the full benefit of the incentives which are allowed to him, must be given *ad hoc* rates of rebate, which should be fixed for as wide a range of commodities as possible on broad estimates of the incidence of all such duties borne at every stage. It is essential that the exporter should know the quantum of rebate which will accrue to him on the goods he exports.

Finally, the Committee's idea on the determination

of assessable value is eminently sensible and should be translated into rules in India in as short a time as possible. The determination, it rightly says, on the basis of production cost plus a fixed margin is not practicable and the principle of assessment on the basis of list prices minus fixed deductions, can have limited application. Assessable value, should, therefore, correspond to the ex-factory price less excise duty, without reference to any particular market. For this purpose, transactions in which there is no special relationship between the manufacturer and purchaser should be distinguished from those in which there is such relationship. In direct sales, assessment should be on invoice value less duty and other post-clearance charges. As for transactions between producer and buyer on a special basis, rules should specify inclusions and exclusions to be made, so that it would be possible to arrive at a fair assessable value.

These recommendations, obviously soundly conceived, should appeal to the Government as it evidently has to the business community as a whole. In fact, the Government appears to have already anticipated some of the Committee's recommendations by introducing, for example, audit type of checks in as many as 23 industries and by abolishing the levy in sectors where production is dispersed over numerous small units. But it is important that the recommendations as a whole should be implemented early. The excise duties, as already said, are now the mainstay of Central revenues, and it is so, not only because the limits to direct taxation have been reached, but also because the country's industrial structure has grown in impressive proportions. The levy has now to play the role of an important economic regulator also and in view of its obvious connection with the price level or the cost of living, the policy which will guide its imposition will have to be framed most carefully.

Eastern Economist 20 Years Ago

OCTOBER 29, 1943

Some stir has been created in New Delhi by the speech of Dr. Ambedkar at the meeting of the Reconstruction Policy Committee on Post-War Public Works and Electric Power. He came out as a strong champion of industrialisation. Pleading for cheap and abundant electricity, Dr. Ambedkar said: "At every decade this negative balance between population and production is increasing in an alarming degree, leaving India with the inheritance of poverty, more poverty and chronic poverty. A rot has set in. It can only stop when agriculture is made profitable. Nothing can open possibilities of making agriculture profitable except a serious drive in favour of industrialisation". As certain observations of the Labour Member at the last Tripartite Labour Conference gave rise to misunderstanding this unqualified demand for an active policy of industrialisation as the only way to remove poverty has caused a good deal of satisfaction in non-official circles. But the question is — what are the Government of India doing now to promote industrialisation and to ensure that India is able to hold its own in the fierce world competition which will come after the war?

Highlights of the Week

THE BHAKRA PROJECT

THE COMPLETION of the giant Bhakra Dam has been hailed as "a dream come true". For Punjab it is, indeed, so. The idea of impounding the waters of the river Sutlej behind the majestic Bhakra gorge originated with Sir Louis Dane, the then Lt. Governor of Punjab, as long back as 1908. But it took nearly 55 years to be translated into concrete. For the Indian nation to whom it was dedicated by the Prime Minister on the sunny morning of October 22, the Dam, however, means much more. It is a symbol of the nation's unity, its struggle against poverty and hunger and of the growing confidence to undertake mighty tasks.

The Dam today forms the backbone of the Rs. 175 crores multipurpose Bhakra-Nangal project having eight components. The long delays which occurred in the starting of the work on it before Independence have in a way proved to be only a blessing in disguise. Originally, it was conceived as a purely irrigation scheme. As it has ultimately turned out to be, it is to provide both irrigation and power facilities. The eight components of the project are: (1) Bhakra Dam with two power generating plants — one on the left bank of the river and the other on the right bank; (2) Nangal Dam and Head-regulator; (3) Nangal Hydel Channel; (4) Two power houses on the Nangal Hydel Channel — one at Ganguwal and the other at Kotla; (5) Re-modelling of the Rupar Headworks and Sirhind Canal; (6) Bhakra Canals; (7) Bist Doab Canal; and (8) Transmission of electric energy. All the eight components, except the setting up of the right bank power house, have been completed.

The highest straight gravity dam in the world, Bhakra with its 740 ft. height from the deepest foundation, towers the famous Hoover Dam of the United States by as many as 14 ft. From a base width of 680 ft., it rises majestically to a 30 ft. roadway at the top spanning a 1,700 ft. wide gorge. The impounded waters form a 55-mile long lake with a storage capacity of 8 million acre-feet of water, the live storage being 6.35 million acre-feet. The cost of constructing the Dam alone came to Rs. 59 crores. The task was completed under very trying conditions. At one stage, when the mishap occurred to the Hoist Chamber, a major catastrophe could be averted only with great difficulty.

The benefits flowing from the project — both direct and indirect — will be immense. Ultimately, irrigation facilities are expected to be extended to an area of about 6.7 million acres in the arid tracts of South-East Punjab and the deserts of Rajasthan. This will help in raising 101 million tons of additional foodgrains, 800,000 bales of cotton and 500,000 tons of sugarcane. The two power houses at Ganguwal and Kotla have an installed capacity of 154,000 kW. per annum. The combined peak capacity of the two plants at Bhakra is to be 1.05 million kW., firm capacity being 800,000 kW. This supply will feed the industries not only in Punjab but also in Delhi and its neighbourhood. The project is considered to be financially productive on the basis of the direct returns from it. The indirect advantages would include immunisation of the downstream areas from recurrent floods and reclamation of wastelands. A fisheries project has been finalized for the impounded waters behind the Dam. It is to be undertaken jointly by the Governments of Punjab and Himachal Pradesh.

HMT's THIRD UNIT

THE HINDUSTAN Machine Tools added another feather to its cap when its third unit was formally inaugurated on October 23 by the Prime Minister at Pinjore, an ancient and historic village in the shadows of the Himalayas, about 13 miles from Chandigarh — the ultra-modern capital of Punjab. The establishment of this factory is a boon to this northern State whom paucity of mineral resources has made depen-

dent primarily on small and medium scale industry. This is the first giant industrial enterprise to be set up in Punjab.

Built at a cost of Rs. 7.5 crores, of which the foreign exchange component amounts to Rs. 1.75 crores, the factory has a capacity to turn out annually 80-85 machines worth Rs. 5 crores (the first complete machine will come out from here before June, 1964). This capacity is to be doubled by the end of the current Plan period by the addition of another similar unit. The investment on the project then will amount to Rs. 10 crores. With the setting up of the Pinjore factory, HMT has entered the first phase of its specialisation programme. The Pinjore plant will concentrate on the production of machine tools based on the milling principle, although it will also produce gear-cutting machines. The former line of manufacture will be gradually taken off the two Bangalore factories of HMT which will engage themselves with the production of newer ranges of machine tools. Gear-cutting machines are to be produced for the first time at Pinjore.

The Pinjore plant has been built entirely by a team of young Indian engineers whose average age works out to not more than 27 years. Further, the job has been completed in a record time of 17 months. This evokes optimism about the HMT's ambitious expansion programme of adding a Rs. 5 crores capacity new unit every year up to 1970 being accomplished according to the schedule. Currently, HMT is setting up two more plants at Kalamassery (Kerala) and Sanatnagar (Andhra Pradesh). The former is to be commissioned into production next year and the latter in 1965. In the next three years, the Punjab, Kerala and Andhra Pradesh factories will be doubled in capacity by turn. Two more units will be added in 1969 and 1970. The locations for these are yet to be decided.

Financing Scheme

Although the second unit at Bangalore was financed by HMT from its own resources, the finances for the Pinjore factory were secured from the Union Government. The State Government made available the land. This was in accordance with the general scheme of finance decided for the first five units. The scheme envisages every alternate unit, i.e. HMT II AND IV, to be financed from internal resources. The next five units, however, will be set up with HMT's own resources, even after providing for progressive reduction in sale prices and for greater amenities to the employees.

The expansion programme which HMT has embarked upon is expected to enable it to produce machine tools worth Rs. 16 crores in 1965-66. This will mean exceeding the Rs. 10 crores target stipulated for this public sector enterprise in the Plan by 60 per cent and should go a long way in filling the gap between indigenous output and the overall Rs. 30 crores target for the machine tools industry, caused by the slow progress registered by the private sector and the other public sector schemes. Output from these sources in 1965-66 is estimated around Rs. 9 crores, as against Rs. 20 crores anticipated in the Plan. By 1970-71 HMT's output is expected to go up to Rs. 50 crores per annum. This will be catering to nearly 50 per cent of the country's requirements of machine tools at that time.

ACCELERATING INDUSTRIALISATION

TWO MEASURES of liberalisation have been recommended by the Advisory Committee on Capital Issues Control in the Government policy on diversification of manufacturing activity by the existing companies. The first suggestion is to the effect that the established companies should be permitted to utilize their surpluses for branching out to new lines of manufacture even if they are unconnected with their existing activities. Such a diversification, however, is to be subject to the stipulation that the new lines of manufacture should not be those in which foreign collaboration is not allowed by the

Government. The second recommendation is that while ensuring that 49 per cent of the new capital required for financing diversification is offered to the public, care should be taken that the existing ownership and control is not seriously disturbed. This implies injection of a good measure of flexibility in the application of this rule, designed to achieve the dual objective of dispersal of economic power and efficiency in industrial management. In present-day conditions of the paucity of entrepreneurship and the shyness of new capital, the two suggestions of the Capital Issues Control Advisory Committee obviously are wholesome.

The Committee has also suggested that the exemption limit on capital issues not needing the approval of the Controller should be raised from Rs. 10 lakhs to Rs. 15 lakhs. Such a relaxation, it is felt, will provide a good deal of psychological incentive for setting up new industrial units. It is also warranted in view of the rising costs of setting up new projects. The Committee has found the existing provision fixing the debt-equity ratio at 2:1 as satisfactory. It has, therefore, not called for any relaxation in this regard.

Meanwhile, the Union Government is stated to be devising measures to expedite the disposal of applications for industrial licences. A decision is said to have been already taken to clear without reference to the Licensing Committee certain categories of applications if the State Governments or the Departments concerned have no objection to the technical feasibility of the schemes. Among these are included (a) the applications for regularisation of the manufacturing activity of industrial undertakings which were in existence at the time the Industrial (Development and Regulation) Act, 1951, came into force but which could not get themselves registered within a specified period; (b) the requests for change of location of existing industrial undertakings within the same State or from one State to another; and (c) the plans for

production of new articles where such production does not involve installation of any additional machinery and use of imported raw materials. It is hoped that these changes will reduce the time for disposal of applications for industrial licences from nearly one year as at present to about four to five months.

YEN CREDIT

AN UNDERSTANDING has been reached between the Governments of India and Japan on the utilization of the third 23.4 billion yen credit (Rs. 30.95 crores) announced by the Japanese Government at the Aid-India Consortium meeting on August 7, 1963. The credit is to be made available by the Export-Import Bank of Japan in collaboration with some private Japanese banks.

A major portion of this loan is to be used for further financing of the Gorakhpur Fertilizer Factory and the Durgapur Alloy and Tool Steel Plant. The remainder can be used for purchases from Japan of plant and machinery required for some other projects and for the general economic development during the current Plan period.

The credit is to be repaid in 15 years, including a grace period of 5 years. It carries interest at the rate of 5.75 per cent per annum. Compared to the previous two loans given by Japan, the terms of the third credit are slightly more favourable. The first loan, provided in 1958, carried the same rate of interest, but it was repayable in 10 years. The second one, made available in 1961, is to be repaid in 20 semi-annual instalments commencing from 1967, but carries interest at the rate of 6 per cent per annum.

The first two yen credits totalling 52.2 billion (Rs. 69.04 crores), were utilised for purchases in Japan of railway, power, coal and iron ore mining and processing equipment, ships, port equipment, machine tools and a few other items of industrial machinery.

WINDOW ON THE WORLD

Americans Agitated About Patents

From R. V. MURTHY

NEW YORK: NO FINANCIAL columnist from India visiting the U.S.A. today can fail to notice two things. One is the countrywide concern expressed by American businessmen over the proposal to abolish patent rights in India and the resultant piling up of all applications for registration of patent rights pending the relevant legislation. The other is the anxiety which is being felt here about the pending legislation by the U.S. Congress on cotton to bring about one price for both domestic consumption and for exports.

The question of patent rights was raised by people both official and non-official who wanted to know whether the draft bill would be passed in its present form. Spokesmen of both the National Chamber of Commerce in Washington and the American Manufacturers' Association here felt greatly disturbed about it. The general feeling is that in industries such as pharmaceuticals, patents for drugs and medicines and formulae have been taken after considerable expenditure in energy and money and years of research and that to make it an open house as it were for everybody to manufacture patented goods is to plunge the industry into confusion. Inasmuch as the proposal to abolish patents is a blanket one, it is feared all industrial inventions would come within the ambit of the pending legislation. If so, it is apprehended, foreign collaborators may not exactly be eager to go to our country and surrender all their special processes and patents for being copied wholesale by India. Indeed, several of them seem to be reviewing their proposals for collaboration wherever their patents are involved, not necessarily proposals concerning pharmaceutical ventures only. As yet, no politician seems to have interested himself in this business, but the prospect is around the corner. Clearly, there would appear to be urgent need for rethinking on the part of New Delhi if it is serious about encouraging more and more foreign participation and foreign investment in our country.

★★

A visit to the New York cotton exchange was very rewarding, in the sense that it gave an idea of the extent to which cotton trade has been in the doldrums today. Practically all activity seems to be at a standstill pending the one-price formula legislation. Today, because of the pressure of cotton growers, mills in this country have to pay a relatively high price than importers of U.S. cotton. Incidentally, this is one of the reasons trotted out to explain the unwillingness of the United States to increase her offtake of Indian textiles—"surely you do not expect us to sell our cotton to you giving you a price advantage and buy your textiles to compete with our mills which have to pay a higher price," they say. Be that as it may, until the proposed legislation is through, no one would like to make any long-term commitment. Even mills, which buy spot cotton, are doing only hand-to-mouth business, it was explained to me. Whatever the ultimate result—though the protagonists of the one-price formula feel they will win the race—the southern cotton-growing interests will have a hard time of it and despite all the support they could count on in Congress, may have to give in. It is not clear whether, in the process, acreage restrictions also will go, as the cotton-growing regions other than the South have been insisting. What the effects of unrestricted acreage under

cotton and the one-price formula will have on the American economy remains to be seen, but so far as the consumers of American cotton—and India is one—are concerned, the result would undoubtedly be cheaper cotton, at any rate a cotton price influenced by the normal laws of demand and supply in the world.

★★

"Either we dynamise our economics or we get dynamited," declared Mr. Asoka Mehta at the recent meeting of the Second Committee of the United Nations to highlight "the sense of overpowering urgency," as he called it, of the problems of development affecting two-thirds of the world's population today. It is the understanding and amelioration of the teeming millions of Asia, he said, that will provide the key-stone to the arch of peace. This, he added, was not just the pressure of population but the pressure of raw, unappeased hunger itself, and the nations of the world would have to face it and satisfy it. How is this being done? Is what is being done enough and, if not, what needs to be done? These were the questions to which Mr. Asoka Mehta addressed himself appropriately. While not being unappreciative of the valuable assistance extended by the developed countries, Mr. Mehta made the point that in 1961, whereas the commercial flow of international finance amounted to \$4,367 million, the reverse flow in the payment of interest, profit and dividends from the underdeveloped countries to the rich countries totalled up to \$3,393 million and wondered whether it was at all necessary for the developed countries scrupulously to adhere to the biblical injunction of the left hand not knowing what the right hand was doing.

There can be no two opinions on whether or not the poor countries need assistance, but it is relevant to find out if, in assisting their poorer brethren, developed countries happen to harm their own interests, in other words, whether, by helping the developing countries the developed countries are obliged to reduce their own standards of living, as some of them are alleged to have expressed. Strongly refuting this suggestion, Mr. Mehta went on to say that "in less than ten weeks, the United States invests more than what India plans to do in its entire third five-year Plan, and reaps also an equivalent harvest in the same ten weeks ... more than half the income of the rich world is there and one's analysis cannot totally ignore that reality." And so, he suggested, giving away one per cent or more of the national income of countries such as the United States should not at all matter. On the other hand, in their present phase of economic development, countries such as India have, of necessity, to seek aid from those countries that can afford. Only such foreign aid can overcome the lag in savings. Accordingly, Mr. Mehta wanted the United Nations not only to evolve some definite policy of outflow of income from the rich to the poor countries but also to introduce more statistical clarity in its annual reports to ascertain whether or not even the self-imposed one per cent burden is, in fact, being borne by the rich countries.

Mr. Mehta emphasized that socialistic ideas played a functional role in the early processes of development and that socialism had an instinctive appeal in the poorer countries. He went on to say that India's own choice had been in favour of a system of mixed economy and explained: "My country has a

WASH WHITE! WASH BRIGHT!

system of mixed economy. We have given a variety of incentives and facilities to the private sector to make a significant contribution to the growth of the economy. But when the nation has to step up the rate of saving, can it be done by the public sector alone, which accounts for only a small fraction of the national income? The private sector has to make the major contribution to the savings effort, and experience shows that such contribution is not inimical to its own long-term interests."

Mr. Mehta urged the rich nations to play their part in the "miracle of growth" by liberal assistance to the poorer countries and asked "the men of capital to modify for a while, their familiar ways."

Addressing the rich countries, he said: "We are told that we cannot expect the people of the rich countries, free and prosperous as they are, to change their habits and attitudes. We cannot be unsympathetic to this traditionalist outlook of the modernists. But do they realise how great a strain the developing countries have to bear in the process of transformation? In the course of a generation the habits of centuries have to be completely changed. The psychological and social strain involved has to be imagined. Conventional wisdom warns us that 'no man puts the new wine into old wine-skins; else the new wine will burst the skins, and be spilled, and the skins shall perish.' But what does the record of the developing countries show? Has not the new, heady wine of science and technology been slowly poured into the old skins of traditional society, and the wine has not spilled, the old-skins are changing, not bursting? The social tour de force is not easy to accomplish. Let us look back for a moment at the early period of development of the highly industrialised countries. Did they not, even though their time span of development was much longer, and even though the emergence and assimilation of the fruits of Science and Technology were much slower than today, pay the price of transformation in slums and terror, in reeking corruption and in periodical coups d'etat? When we seek a far-reaching and rapid social transformation, while honouring the rights of man, are we not entitled to claim a little fraternity in the task of bearing the strains of transformation? When the developing countries ask for favourable opportunities for the

export of manufactured goods, of simply processed articles, the highly industrialised countries object, even though all that we seek is to supply just one per cent of their expanding production of goods. We are told that when already technological changes require an adjustment of three per cent every year, how can they add on an additional burden of one per cent to it? Unfortunately, no one has similarly quantified the rate of social transformation in the developing countries. Is it too much to ask for a fraternal sharing of strains through easier terms of trade or through economic aid, but please, not in the ways of Penelope, taking out the knots in the night, that have been woven in the day?

"Now that Science and Technology need no longer remain harnessed to the chariot of war, has not the time come to attach them to the coach of development, so that technology may be trained to balance the sociological needs of the developing countries, where the ratio of man-power to resources is often so different from those of the affluent societies? As peace dawns and wider horizons become visible, we are invited to embark on new voyages of thought and discovery."

Turning to the countries with centrally planned economies, particularly to the foremost among them, he said:—"We in the developing countries admire at once the liberal political institutions of the West and the austere economic discipline of the East. It is that discipline that we seek to make our own. We are not unaware of the emerging and welcome pressures inside these countries, of the implications and consequences of the dismantling of the system associated with the 'cult of personality.' These very pressures demand that the centrally planned economy countries review their plans of development with a view to providing an even larger scope for imports from developing countries; they demand that the prices at which production from the developing countries can be sold in the internal market be adjusted with a view to stimulating the demand for those goods and commodities. Socialist countries should also include in their forward planning significant projects of these developing countries that are nearing the critical stage of the take-off."

Khrushchev's Feet of Gold

By RICHARD PROUST

PARIS:

GOLD, THE newest major Soviet export item, is getting top billing in the European press as the Soviet Union unloads large quantities of the yellow metal on Western markets.

The purpose of this financial operation, which is imbued with typical Soviet secretiveness, is to obtain foreign exchange to help pay for wheat Moscow is buying from Australia, Canada, France and now from the United States.

European bullion dealers report that a "large" consignment of Soviet gold reached continental markets in recent weeks. Unofficial estimates of Russian selling over the past few weeks range up to about \$280,000,000, which is considerably more than the entire value of Soviet gold sold during all of last year. This is estimated at \$200,000,000, about the average annual sale for the last eight years.

The volume of the recent shipments, which began at the beginning of September, is estimated at 300 tons. Sales have been mostly through London, Paris and Basel, Switzerland.

An immediate effect of the transactions has been a sharp

drop in the price of gold on the sophisticated London bullion market, the most important of Europe. Gold fell there 0.5 cent an ounce in terms of the U.S.A. dollar, to a level of \$35.065, equaling the eight-month low touched at the end of September.

As a result, the markets in London, Paris and Basel are in a nervous state, and dealers found even a marked shortage of buyers. Tokyo now reports that Japan may increase the proportion of her external reserves held in gold.

Most of the gold Russia unloaded on the Continent is being resold later in the London bullion market. A large new supply would depress further the price of the precious metal. And it is expected, in fact, that further amounts will follow now that the United States has approved a \$250,000,000 wheat sale to the Soviet Union.

The U.S.S.R. is one of the world's major gold producers, but has always made a great mystery of gold, a commodity it seems afraid of and which, to its own embarrassment, it values highly. Lenin boasted: "When we conquer on a world scale, I think we shall use gold for the purpose of building public lavatories." But he quickly cautioned, "Meanwhile we

must save gold, sell it at the highest price, buy goods with it at the lowest price. When living among wolves, howl like the wolves."

The Russians still howl like "capitalist wolves," while making a state secret of their gold supplies. These are, indeed, large, but probably not as large as some experts claim. A good estimate is that Soviet holdings are about the size of those of Britain, which is \$4,000,000,000.

Soviet leaders have displayed what in ideological terms seems a strange determination to hoard gold in the best traditions of many European peoples who have little or no faith in their national currencies. The gold is used as a theoretical backing for currency in circulation, the ruble being officially set at 0.987 of a gram. Gold is also used to settle international trade debts and, occasionally to finance subversion.

Russia's annual gold production is estimated by Dr. M. A. Kriz of the First National City Bank of New York at between 10,000,000 and 17,000,000 ounces, a value of \$350,000,000 to

Alec Douglas-Home: An Assessment

By JOSSLEYN HENNESSY

LONDON:

WITH THE appointment of Sir Alec Douglas-Home as Prime Minister, Britain emerges from nine months of irrelevant scandals alleged in high places, topped by the paralysing uncertainty over Mr. Macmillan's future, which have diverted the nation's attention and energies from the facts of life.

What effect will Sir Alec have on British politics?

Whether or not the Conservatives will win the next election is known only to a silent and inscrutable deity, but their chances have improved. The latest opinion poll reduces Labour's lead from 20 percent to 9 percent. Apart from the economic upswell in production, employment, and exports, that I have reported in previous weeks, Sir Alec's personality may help his party appreciably.

Television, which gathers audiences of twenty millions and more, has become an important political factor. The masses are influenced by the simplicity of language with which a politician is capable of making his points, and by the courtesy, good humour, frankness, and lack of hesitation, with which he answers the tough, searching, and often embarrassing questions in which British TV interviewers specialise. An American newspaper colleague assures me that no Congressman would tolerate the sort of questions that British politicians are called upon to face. Mr. Macmillan is not bad on TV, but Sir Alec is easily his superior. Mr. Macmillan never goes before the cameras without careful preparation of his theme, and this reveals itself in a certain lack of spontaneity.

After Sir Alec's TV interviews last week those of his political opponents who had foretold that we would see an easily outclassed aristocratic nonentity, out of touch with the common man, have been warned by leading newspapers which support Labour that to under-estimate Sir Alec would be fatal. Under the relentless glare of the closely focussed TV lights, he is relaxed, friendly, direct, and tough, and unlike Lord Hailsham who, to the delight of his opponents, can be goaded into explosions of temper, Sir Alec never raises his voice above a conversational, and often ruminative, tone. He can express complicated ideas in simple language. Faced with an embarrassing question, he does not fall back on a tortuous reply. He either answers it frankly or says with a disarming smile that his questioner must await the course of events to learn the answer that he seeks. There were two outstanding moments in Sir Alec's telecast which brought murmurs of delighted appreciation from the group of journalists of all shades of political opinion with whom I was watch-

\$595,000,000. This would make her the world's second largest producer after the Union of South Africa. But these estimates are considered exaggerated by some Kremlinologists.

Gold and platinum are found chiefly in the Urals and the Altai Mountains, as well as in the Amur and Kolyma regions in the far east. During the Stalin era the Ministry of Interior and the feared Security Police, headed by Beria, were running the rich gold mines of Siberia, which were manned with slave labour and administered as punitive camps.

In a recent article in the Soviet magazine "Kommunist," the Communist Party head of the Magadan Province in north-east Siberia, a major gold mining area, admitted that the mines had been manned by forced labourers before 1955. But the official asserted that these labourers had been replaced by free workers and that the mines are now largely mechanized.

The gold mines are in a region closed to foreigners and nobody in the West can verify whether conditions have changed under Mr. Khrushchev. Gold continues to be a major puzzle of the Soviet economy.—FNS.

ing it. First, when his interviewer said "You know that many people believe that Mr. Wilson will make mince meat of you in the Commons," Sir Alec smiled slightly and said with a quizzical composure that the printed word cannot convey: "I'd be surprised." Secondly, when the interviewer suggested to him pointblank that as the fourteenth earl he was an out of date figure, Sir Alec replied with a meditative air which, again, defies the printed page, "Well, I suppose, when you come to think of it, Mr. Wilson is the fourteenth Mr. Wilson. That all men are equal is a good doctrine. But are all men equal, except peers?"

The Opposition has seized on Mr. Butler's failure to secure the Premiership, and on the resignations of Mr. Ian Macleod and of Mr. Enoch Powell as indicating the triumph of the Conservative reactionaries and an end to progressive policies. Sir Alec denied this good humouredly on TV, and his denial makes sense, because the mood of the country is "central", neither extreme right nor extreme left. Mr. Wilson who, before his election to the leadership of the Labour party was identified with the left wing, has since moved to the right of his centre. This corresponds to the left of centre in the Conservatives, and informed observers have had no difficulty in accepting Sir Alec's assertion that this would be his place. Mr. Macleod and Mr. Powell have put themselves in a position to make a bid for the leadership of the party if Sir Alec (a) fails to move left or (b) loses the election. On (b) they have an even chance. On (a) none at all, unless Sir Alec develops suicidal tendencies, which are quite out of character with what we know of him.

In foreign affairs Sir Alec is reliably reported to have more influence with the US government than any other post-war foreign minister, partly because of his firm attitude towards communism, whether Soviet or Chinese, but mainly because of his toughness and skill as a negotiator.

In the Commonwealth Sir Alec is well known, as he was Commonwealth Relations Secretary for five and a half years during which he travelled widely. After becoming Foreign Minister he aroused criticism in Asia and Africa when some of his speeches were interpreted as unsympathetic to newly independent countries. In fact, a re-reading of those speeches shows that what he was protesting about at the UNO was what has been called the "double standard", that is the tendency of some newly independent countries to rail against the former colonial power while being blind to the widespread operations of communist neo-colonialism, of which Asia, at any rate, has experienced some startling examples.

LISTENING POSTS

P. M. Makes up His Mind

By Our Special Correspondent

NEW DELHI:

THE PRIME MINISTER has at last made up his mind on the subject of Punjab's controversial Chief Minister. He has recommended to the President that allegations of improper conduct made against Mr. Pratap Singh Kairon by some of the leaders of the Opposition parties in the Punjab Vidhan Sabha in a memorandum submitted to the President on July 23, 1963 should be investigated by "a high authority" who will be functioning under the Commissions of Inquiry Act of 1952.

Under this Act, the authority conducting the inquiry may consist of one or more members and will have the powers of a civil court, while trying a suit under the Code of Civil Procedure, 1908, in respect of (a) summoning and enforcing the attendance of any person and examining him on oath; (b) requiring the discovery and production of any document; (c) receiving evidence on affidavits; (d) issuing Commissions for the examination of witnesses or documents; and (f) any other matter which may be prescribed.

An inquiry held under the Act could be either in private or in public or "in camera". Citing the precedent of the recent inquiry held by Lord Denning in the United Kingdom, the Prime Minister has suggested that the inquiry should be held in private and that the inquiring authority should have power to fix its own procedure to summon such witnesses as he may consider necessary and allow counsel to appear. The Prime Minister has made it clear that in proposing such an inquiry, he has not by any means persuaded himself that the charges made against Punjab's Chief Minister have substance prima facie. On the contrary, he has quite frankly stated that he is ordering the inquiry only because compulsions of a political nature have made it impossible for him not to do so. In his view the charges made in the memorandum of July 13, to which the inquiry is to be strictly confined, include vague and repetitive allegations and he has consequently insisted that the exact issues to be inquired into should be cleared up on the basis of those charges before the inquiry begins. The Prime Minister has added that it would be necessary to make it clear to those who make the charges that they will be held fully responsible for the veracity of each of the charges to be inquired into.

Reasonable Decision

Mr. Nehru, after discussing the demand that Mr. Kairon should be asked to resign pending the results of the inquiry, has expressed his inability to agree to this course on the ground that the resignation might well create a situation which would be against the public interest. While all fair-minded observers will surely concede that the Prime Minister's decision on the various aspects of the Kairon affair have been, on the whole, reasonable and right, it is unlikely that critics will readily accept Mr. Nehru's verdict that Mr. Kairon need not resign pending the outcome of the inquiry. So far as public opinion is concerned, however, it will not hesitate to endorse the Prime Minister's stand. What matters clearly is that the inquiry should be conducted by an independent authority enjoying adequate powers for the purpose. This seems now to have been ensured. While the Prime Minister has not specified the person who would be conducting the inquiry, it appears that the latter will be selected from among eminent jurists who have retired from high positions on the Bench. The President's official notification is expected any time.

**

Speaking at Ahmedabad last week, the Minister for Oil, Mr. Alagesan announced that a petro-chemical complex would

be established in the public sector at a cost of Rs. 75 crores as an adjunct to the oil refinery at Koyali, near Baroda.

One of the major recommendations made by Dr. Henny of the French Petroleum Institute, it will be recalled, was that the petro-chemical complex should be built around a refinery in order to ensure the maximum utilization of the various feed stocks, which would be available from a refinery. His suggestion was that the planning and economics of petro-chemical complex should be closely integrated with that of refinery and the whole development should be under one umbrella.

The Government in the Ministry of Mines and Fuel has planned a project, largely based on these recommendations. The Gujarat project, it is proposed, should be developed in four stages. The cost of the first three stages is placed at Rs. 35 crores with foreign exchange component of Rs. 21 crores. It is proposed to meet the cost of the first three stages from the left-over credit extended to India by E.N.I. As regards the fourth stage, the intention appears to be to seek foreign assistance, either through a loan or by equity participation from some international firms, several of whom have reported to have indicated their interest.

Priority for Fertilizers

The project, it should be evident, is linked to the availability of naphtha and the priorities given to the development of petro-chemical industry in the scheme of development. To put it crudely, the issue is between fertilizers and plastics. The Government, in the Ministry of Heavy Industries, has already decided to put up a fertilizer plant at Baroda and another in Rajasthan, near Jodhpur, both of which would be fed on naphtha or gas from Gujarat. The Fertilizer Planning Group is at present engaged in studying the suitability of various sites and the availability of raw materials for the further development of the fertilizer industry in the fourth Plan period. As a first step, therefore, calculations are being made of the availability of naphtha and gas in Gujarat region and their requirements for gasoline and fertilizer plants, which it has already been decided to establish or proposed to establish with naphtha or gas as feed stock. The future of the petro-chemical industry in Gujarat region, therefore, will depend on the study now under way. Viewed from this angle, the Oil Minister's statement should be regarded as rather premature.

The Henny Report had also suggested that, before launching the industry, a study should be made of the demand for end products. Prima facie, this detailed study in respect of Gujarat is not yet ready. On this study will depend the target for DMT.

Following are the major intermediates proposed to be produced at the proposed plant in Gujarat:

PHASE ONE	Benzene	32,700 tons
(1966)	Toluene	15,000 tons
PHASE TWO	Methanol	4,500 tons
(1966-67)	Isoprene	41,000 tons
PHASE THREE	O. Xylene	10,350 tons
(1967)	P. Xylene	8,050 tons
	Ethyl-Benzene	14,000 tons
PHASE FOUR	Ethylene	45,800 tons
(1968)	Propylene	24,800 tons
	Butadiene	24,900 tons
	Benzene	30,000 tons

**

Much satisfaction should be caused by the Planning Commission's recommendation for the location of the fourth Plan industrial projects in a way so as to utilize the avail-

November 1, 1963

able facilities of transport, power, water and townships to the maximum. This does not amount to going back on the policy of regional development. But it certainly would put a break on the dispersal of too many projects under political pressures, sometimes at the sacrifice of economic considerations. The location of new industrial projects, wherever feasible, in areas where infra-structure has already been strengthened should help in bringing down the costs of their setting up—so essential for containing the expanding spiral of prices.

The Planning Commission has also suggested that comparative studies should be undertaken of different lines of action for a particular project. This is necessary for avoiding the past mistake of including in the Plan projects without detailed cost-benefit studies. The Commission feels that in future no project should be included in the Plan unless a feasible study of it is available. For projects not fully worked out, the provision in the Plan should be made in broad terms.

Advance action has also been stressed to be taken in regard to projects proposed to be included in the fourth Plan. This should take the form of initiation of negotiations for foreign exchange, sanction of preliminary works, etc. In regard to the third Plan projects spilling over to the fourth Plan, the Commission is stated to be of the view that where action has not yet been initiated, it should be quickly taken on hand so that these projects can be completed early during the fourth Plan period.

In drawing up new projects, it has been suggested that attention should be paid to the manpower aspects of development, both quantitative and qualitative. It has also been stressed that adequate use should be made of the services

of scientists and technologists in universities and national laboratories for deciding on matters such as import substitution, techniques of production to be adopted and planning of output on the basis of indigenous raw materials.

★★

The Polish Ambassador in India, Mr. P. Ogrodzinski, stated in a lecture in New Delhi on October 28, 1963, that the possibilities of economic co-operation between the two countries have not been fully explored and whatever had been achieved so far represented only an initial stage in the possibilities of "further strengthening, enriching and expanding" the relations between the two countries. Even so, trade between the two countries, which was only Rs. 5.83 crores in 1959, had increased to more than Rs. 19 crores in 1962. He expressed the hope that the current year would further mark an increase in the turnover of trade between the two countries, exceeding Rs. 20 crores.

Important changes in the structure of India's trade with Poland had been brought about in recent years. In the initial stages, it was the raw materials which were exported from India to Poland; but now the products of the Indian industry have come to occupy a significant place in Polish imports from India and in this regard, he specifically mentioned the contribution made by the Indian textile machinery industry. In regard to India's imports from Poland, he stated that "complete industrial projects formed the main and basic part". The industrial projects supplied to India so far were covered by two agreements on economic cooperation: one of 1960 and the other of 1962 which together provided for delivery to this country of complete industrial projects valued at Rs. 29.8 crores. The projects stipulated in the agreements which are either under construction or are to be erected

shortly include "the deep coal mine in Sudamadih, the electric power plant in Barauni, a coal washery in Karanapura, a machine tools factory in Hyderabad, a factory of motor cycles and scooters in Faridabad and boilers for the Maharashtra State Electricity Board for Paras and Bushawal power plants". Contracts have also been signed for the delivery of the Polish-made cargo vessels (of 10,000 DWT) to the Shipping Corporation of India.

He went on to explain that Poland commanded in coal mining experience of almost 200 years with an actual output of 110 million tons per annum currently. It is playing an important role in the development of the coal industry in this country. According to the credit agreement, the construction of nine deep mines with a planned annual output of two to three million tons each will be started. These mines are expected to increase the output of coal in this country by 22 to 25 million tonnes per year. It will certainly go a long way in hastening the industrialization of this country, as "these coal mines will supply coke to the big steel plants of India's North-Eastern industrial region" and will assist in the development of heavy industry. Also, the Polish Government have concluded contracts for the construction of coal washeries. The construction of a factory of mining machinery and of electric power plants that will work on the middlings from the coal mines constructed by Poland has also been agreed to. Poland has also agreed to continue the supply of mining equipment until India is in a position to produce her own mining machinery. Poland is also lending its services for the training programme for technicians. Poland has already offered her assistance in setting up a chair to teach modern methods of mining at the Indian School of Mines in Dhanbad as well as in organizing one of the N.C.D.C.'s training centres. There are plans to train Indian specialists in Poland.

Collaboration in Steel

A new trade agreement between India and Poland will be negotiated in the next few weeks. This agreement will be operative for a period of five years and, according to the current expectations, the Ambassador said, it will double or treble the present trade turnover. He stressed the point that in view of the future possibilities of the Indian steel industry, it was worthwhile to take into consideration the possibility of collaboration between steel industries of the two countries in the form of long-term contracts for mutual supplies of specific steel products. This collaboration can be extended to the machine building industries as well. The Ambassador expressed the hope that the day was not far off when Indian factories would start manufacturing mining machines (which were being imported from Poland).

★★

Phillips Petroleum has made proposals for setting up a plant for the manufacture of synthetic rubber in India. This

proposal also hinges on the availability of naphtha in this country. On the basis of the "Malaviya Plan" which includes expansion of public sector refineries, including the one in Gujarat and the proposed refinery at Cochin, there should be three million tons of naphtha available in India by 1966. Half of this will be used for the production of motor spirit. According to tentative estimates demand for naphtha for the manufacture of fertilizer should be one million tons by 1970. By that time, at least two more refineries, one at Madras and another at Haldia, may go on stream. Side by side, production of gas at Cambay and Ankleshwar is being stepped up and output from the latter sources may reach one million cubic metric feet a year.

It should, therefore, be evident that the proposal of Phillips Petroleum for setting up a synthetic rubber plant can only be considered, firstly when the overall petroleum picture in regard to the availability of naphtha becomes available and the priorities between fertilizer plants and the petrochemical industry, including the manufacture of synthetic rubber, are settled.

★★

Mention should also be made of the refinery capacity in India and of the proposals of Burmah Shell and Esso to replace their refinery agreements by industrial licences granted under the Industries Regulation and Control Act. The Government's first priority is to set up a two million ton refinery in Madras in the "Public sector". Public sector, so far as new refineries are concerned, now means majority participation by the State in the equity capital. In addition to Burmah Shell, Esso and Caltex, ENI, Phillips Petroleum, Standard of Indiana, a Japanese and a German concern have shown interest. Two of them ENI and Phillips Petroleum, have reportedly submitted project reports. The Government's plan appears to be to start negotiations early in 1964.

Both Burmah Shell and Esso have given up their earlier demand for linking up the replacement of the refinery agreements by industrial licences with the Government permitting the expansion of their refineries. As desired by the Government, they will agree to the question of expansion to be considered on its own merit.

So far as the replacement of the refinery agreements is concerned, the two oil companies will like an assurance that they would be allowed to import crude from their sources at world competitive prices and that the Government of India would not reduce their competitiveness by levying import duties on crude. Secondly, they would desire that they will not be discriminated against, particularly in respect of taxation and marketing vis-a-vis public sector refineries. Thirdly, they will like an assurance that foreign exchange will be made available to them to repatriate their profits to their countries. Esso, in addition has proposed to merge into one unit its refinery and marketing organisation.

Verdict for Sugar Industry

From Our Correspondent

BOMBAY:

MR. JUSTICE Kotwal and Mr. Justice Mody of the Maharashtra High Court struck down Section 28 of the Maharashtra Agricultural Lands (Ceiling on Holdings) Act, 1961 as invalid and ultra vires of the Constitution. This section related to the acquisition of land held by joint stock companies in Maharashtra. It will be recalled that three sugar companies affected by the Land Ceilings Act filed a writ petition under Article 226 of the Constitution. The three sugar companies are the Belapur Sugar Company Ltd., Maharashtra Sugar Mills Ltd., and the Gangapur Sugar Mills Ltd. The rest of the Act was held valid. In other words the Bench ruled that the State was competent to pass a ceiling act like the Maharashtra

Agricultural Lands Act but held that Section 28 which related to sugar companies was repugnant to Article 14 of the Constitution as the acquisition of lands was not for a public purpose nor was it an agrarian reform.

It was urged on behalf of the petitioners that the Act provided for expropriation of lands on which sugarcane was grown. Both sugar and sugar industry were controlled by the Central Government under the Industries (Development and Regulation) Act and the Essential Commodities Act. It was urged that the sugar industry, which was a controlled industry, was an exclusive subject given to the Central field of legislation under entry 52 of the Union legislative list, namely, "industries, the control of which by the Union was declared

November 1, 1963

by Parliament to be expedient in the public interest." Their Lordships were unable to accept the petitioners' contention that the Act was a piece of colourable legislation. The objects of the Act were referred to in the judgment and these were stated in the preamble, namely, to secure the distribution of agricultural land and the distribution thereof to the landless and other persons and the imposition of a maximum limit or ceiling on the holdings of agricultural land in the State and for providing for the acquisition of land held in excess of the ceiling. The judges were however unable to understand how the taking of the lands from one corporation and giving it for cultivation to another owned or controlled by the State could have any connection or nexus with the objects of the impugned enactment. In fact, it seemed that vesting surplus land in the Maharashtra State Farming Corporation would bring into being a state of things contrary to the very purpose and object of the enactment. It would place in the possession of 50 odd officers of Government large areas of land of the petitioners in bulk or without regard to the object of distribution to landless peasantry or any equality of distribution at all.

★★

The three central trade unions—the Indian National Trade Union Congress, the All India Trade Union Congress and the Hind Mazdoor Sabha—have opposed the Maharashtra Government's proposal to link the present series of consumer price index numbers with the fresh one. The fresh series was bound to suffer if it was linked with the present one in its unrectified form as the inaccuracies in the indices would be carried into the new series. The mere introduction of a fresh series of consumer price indices is no consolation to workers if they continue to be robbed of their legitimate dearness allowance owing to errors in the present old index figures being bodily incorporated in the new series. It has been emphasized that the question of linking the two series should be considered only after the present series was rectified and "is allowed to operate in its rectified form for a reasonable length of time." INTUC has even further stipulated that the linking of the present series—after the rectification of the defect—with the new one should be done only after the "new series is also corrected by further adjusting the linking factor for some inherent defects in the compilation of the new series." The defects in the present series pointed out include "wrong, inadequate and faulty price collection" by the Labour Department. As glaring instance in point, a reference was made to the wrong basis adopted in the present series to arrive at the figure for expenses on cloth, house rent, transport and medicine.

★★

Mr. Chester Bowles, United States Ambassador in India, addressed a crowded press conference on Wednesday last at the Bombay USIS Centre. This was his first visit to the city after his return to India as Ambassador. He expressed the conviction that as long as the present Chinese government continued in power, both India and the United States would have 'a very hard China to deal with.' India was doing the right thing in strengthening and perparing her armed forces to meet all possible contingencies in the future and getting the best equipment for them. India and America, according to Mr. Bowles, were the two countries in the world 'who see China in the same perspective' today.

As regards India's development projects, Mr. Bowles was of the opinion that major projects would count little if the villages of India were ignored for it was here that the future of the country lay. Communism would not bother either India or the United States provided the two nations fulfilled their appointed tasks. This is because communism can only thrive when there are failures. Turning to the Bokaro project, he congratulated the Prime Minister on the tactful handling of the situation by withdrawing the request for aid. The reason

for American withdrawal had nothing to do with the public sector and his country had already helped the public sector in India in a big way.

★★

The Karmoham Conference has announced its decision to cut down the increase in freight rates from 12½ per cent, which came into effect from August 1, 1963, to 10 per cent. All vessels loading at or after 24.00 hours Wednesday, October 23 at any port will take the new rates on such cargo as is loaded in that port or at subsequent ports. The Conference has also decided to offer shippers from India and Pakistan an immediate rebate contract as a running alternative to the deferred rebate system which presently exists. This new contract, to be used at shippers' option, will be similar to the revised form now being considered in the East-bound trades and is hoped to be ready for introduction on January 1, 1964. The revision of the rates by the Conference marks a significant achievement for the Indian companies as well as for the Government. The decision of the Conference has not been wholly unexpected as a 10 per cent increase in rates has been wholly unexpected quarters as a compromise measure. The general reaction in the trade circles appears to be that so far as it goes, the move of the Conference has to be welcomed since it signified a realisation of the true feelings of the shippers in this matter and an attempt to accommodate their interests.

THE MAGIC OF THE WEAVER'S CRAFT

The veteran weaver tends his loom. His sharp old eyes take in every detail...watch every thread. The magic of his craft is a skill handed down from father to son - a skill that the Indian weaver has perfected.

It is difficult to imagine India without the handloom weaver...for handlooms are part of our very life. Equally impossible is the thought of India without its leading bank. In cities, towns and villages throughout the land, the State Bank of India gives its customers

prompt and courteous service.

SISTA'S-SB-78A

that established companies should be permitted to utilise their surplus for diversifying into new lines of manufacture—even lines unconnected with their existing activity. The second recommendation is that while ensuring that 49 per cent of new capital needed for financing diversification is offered to the public, equal care should be taken to ensure that 'the existing ownership and control is not seriously disturbed.' In other words, the stipulation of issuing 49 per cent of the new capital is to be administered flexibly. The Committee recommended that the exemption limit on capital issues not needing the approval of the Controller should be raised from Rs. 10 lakhs to Rs. 15 lakhs. Such a relaxation has been suggested primarily to provide "a psychological incentive" of liberalisation. Another reason is that the cost of projects has risen since August 1959 when the exemption limit was raised from Rs. 5 lakhs to Rs. 10 lakhs. The Committee examined the stipulation fixing the debt-equity ratio at 2:1. It found that the stipulation was flexibly administered and did not need to be liberalised further. When the Government of India is searching for new policies to maintain the tempo of investment activity, the Capital Issues Control Committee has done well to come forward with helpful suggestions.

★★

The Committee of the Indian Merchants' Chamber in a communication addressed to the Committee on Manganese Ore appointed by the Government of India to go into the question of maintaining the country's markets for manganese ore abroad, has referred to the fall in manganese ore exports in recent years and emphasised the need to consider this question in a comprehensive manner. The Committee has suggested that the Geological Department should help the mine-owners in making as accurate estimates as possible about the production potential of the mines, and to facilitate planning of mining in the immediate future in order to avoid waste. Referring to the difficulties experienced by the mining industry on account of delays in grant of import licences for machineries and spares, the Committee has stressed the need for appropriate steps to facilitate the import of modern plant and machinery as also essential spares required for the mining industry for its uninterrupted and efficient functioning. The Committee has also invited attention to the inadequacy of the income-tax depreciation allowed to the mining industry and suggested suitable revision of the same, having regard to the nature of the industry.

With regard to the marketing of manganese ore, the Committee has pointed out that the main difficulty has arisen from the lack of consistency in the barter policy where

practically all the exports of manganese ore are done against barter transactions. Further, the discount that is allowed under the barter arrangements goes on changing from time to time. This policy has seriously come in the way of building up a stable export trade in manganese. The Committee of the Chamber has, therefore, suggested a thorough overhaul of the export policy in regard to manganese ore. The Committee contended that if the State Trading Corporation is to be the sole exporting agency, it must assume the responsibility of purchasing all the production from the producers on a long-term basis. Otherwise, the Committee stated that the S.T.C. should be considered on par with other exporters and should not be given any special privileges. The setting up of an Export Promotion Council for manganese ore as also the adoption of suitable Export Incentive Scheme for this item are also suggested by the Committee.

★★

Mr B. M. Grover, the Chairman of Indian Woollen Mills' Association Ltd., told that body's third Annual General Meeting, held in Bombay recently, that as a result of the emergency, the entire industrial activity in the country, particularly that of the woollen industry, was mobilised and geared to face the Chinese challenge. The tremendous demand arising from the defence services for woollen goods has spelt a boom for the industry. In order to enable the industry to live up to demand the Government so far has granted special licences worth Rs. 9.18 crores for importing woollen and raw materials. Apart from the raw materials, special licences have also been granted for importing dyes and chemicals, synthetic fabrics, etc. Further, the Government has accorded facilities for importing the urgently required spares, accessories, and other machinery parts. In the result, Mr Grover said, the industry was able to meet the defence requirements to a very substantial extent.

As the defence preparedness is a long drawn out process its demands from the woollen industry will continue to be enormous. In such an event, whether the woollen industry with its out-moded machinery would be able to stand the stress and strain was doubted by Mr Grover. However, the Government, he said, has been very sympathetic to the industry's case for effecting modernisation by importing the latest type of wool textile machinery.

According to the third five-year Plan target, the total raw wool production at the end of the Plan is expected to reach 90 million lbs. and at present raw wool production in the country is about 78 million lbs. Our exports of raw wool which was

nearly 33 to 38 million lbs earning foreign exchange to the extent of Rs. 9 crores—when the total production was only 70 million lbs—has fallen considerably recently to nearly 28 million lbs, despite increased production thus indicating the increased off-take by the Indian industry. A substantial portion of raw wool that is being utilised in this country, at least in

Promoting Industries

From Our Correspondent

CALCUTTA:

THE ASSAM STATE Industrial Development Council, comprising five sub-committees, has made a number of recommendations for accelerating the industrialisation of the State. Some of the major industries that have been recommended for intensive promotion are the manufacture of coal tar boilers, machinery for roads and the tea industry. The sub-committee on Minerals and Petro-chemicals had suggested the setting up of a low temperature coal carbonisation plant and a carbon black plant. The State Government on its part will provide special incentives under the industrial road programme, while it is also taking active steps to meet the power requirements of all new industries. In the sphere of small industries, there is already the Assam Small Industries Development Corporation which in its very first year of existence has considerable achievement to its credit. Apart from establishing industries such as hardboard and veneer, it acts as the main distributor of raw materials to the small industries sector as a whole. It is also to embark on a number of new schemes and an important objective of the corporation is to sponsor new units with a view to ultimately making them over to deserving small entrepreneurs. All this, however, will not suffice if the objective of rapid industrialisation of the State especially in the sphere of small industries is to be realised.

The Central authorities seem to attribute the backwardness of States such as Assam to their failure to take advantage of the facilities that are now available to them through organisations such as the National Small Scale Industries Corporation. Referring to one such comment, Assam's Minister for Industries, Mr. K. P. Tripathy, has recently pointed out that the so-called backwardness of Assam and other States in its category is due to the fact that the regional offices of the NSIC are located at the capitals of the four advanced States of Punjab, Maharashtra, West Bengal and Madras with the result that all the benefits have accrued largely to these States, while the remaining States like Assam have been neglected. In his view the only remedy is to route further development of small industries to the underdeveloped areas by preferential treatment as to allotment of raw materials, finance, machinery and technical know-how.

★★

Indications are that the steady trend in the tea auctions noticeable for some time now will continue during the remainder of the current season in Northern India. This is largely because production of North Indian crop up to the end of September has amounted to only 397.7 million pounds as compared with 414.2 million pounds in the corresponding period of the last year. Though October is generally a good cropping period, it is not expected that the large shortfall of 16.5 million pounds will be made up before the season comes to a close. This lower production has been the main strength of the Calcutta tea market which may even experience better prices than hitherto to realise in coming months, especially at the fag end of the season. A significant feature has been that despite the large deficit in output, the quantum of export of North Indian tea has been well maintained. The explanation for this is to be found in the fact that more and more tea estates have been steadily changing over to the CTC process of manufacture with the result that many of these teas have

the worsted sector, is however being wasted, according to Mr. Grover. To mitigate this evil the authorities should keep a thorough check on the unauthorised combing units which are completely ill equipped in machinery; and in certain cases even the full process of manufacturing wool tops is not carried out, he said.

now become exportable types. But the higher prices have not generated much enthusiasm because despite the large shortfall in North Indian output world supply of tea has not recorded any significant decline as production in South India and Ceylon has been higher than last year. It has not therefore been always easy for North Indian producers this season to sell at the higher prices on account of the competition from Ceylon and Africa.

Knowledgeable circles have pointed out that the proper thing for India to do is to take early and energetic steps to step up tea production, by giving facilities to the tea industry, mainly in the shape of financial assistance which does not constitute too much of a burden. It has also been pointed out that the present tendency to curb domestic consumption with a view to making available increased quantities for export may turn out to be detrimental to the country in the long run. It is only to be expected that with the present emphasis on ever increasing production of tea in many countries, there may come a time, perhaps not in the distant future, that the overall world supply is in excess of world demand. In such circumstances, an active domestic market will go a long way towards taking care of the excess supply.

★★

Lyons Range closed last week for the long Puja vacation (from October 23 to November 3) on a rather subdued tone. This slight setback is largely because of a general precautionary tendency that usually precedes the year's longest closure. The undertone has, however, continued to be constructive in the sense that there has been no serious erosion of the recent gains. Lyons Range still believes, in company with other stock markets in the country, that conditions conducive to the orderly growth of the corporate sector will soon be brought about by the Government. Talking to pressmen admitting that the Government is in a state of rethinking in every direction with a view to making the method of planning more flexible, revealed precious little about the shape of the stock market is interested. On the other hand, it would appear that he does not think that the reactions in the stock market are reliable guides to the state of affairs in the country. At other times his reference to the existence of large amounts of unaccounted money and the poor collection of income-tax dues from sections other than the salaried classes would have created adverse reaction, but for reasons best palatable passages in the Finance Minister's speeches.

However the Finance Minister's assurance given in his recent broadcast that there will be no dearth of credit for the Reserve Bank, Mr. P. C. Bhattacharya. According to him extent to which its credit policy can be liberalised to meet the needs of the present situation. But so far as the stock market is concerned, the changes in the credit policy that be minor ones. That the current enthusiasm in stock markets is not fully reciprocated by genuine investors is evident from the continued patchy support for cash scrips. The investor

who goes by hard facts such as the return he gets on his investment as well as the growth prospects of the enterprises in which he has a stake has got little in the way of encouragement. Both the political and economic situations are still so much clouded for him to venture forth into the stock market with confidence. If the Sino-Indian border dispute has not shown further deterioration, there is now renewed anxiety over Indo-Pakistani relations. On the economic front, much has been promised but actually there is little to show that some of the major difficulties of industry will be resolved in the near future. This will become clear when an industry-wise assessment of the outlook is made. A common adverse factor for all industries is power shortage and the only gain so far is a realisation on the part of the Government that the power programmes should be speeded up. But it is doubtful that, even with all the speeding up of the projects, there will be any marked improvement in the supply position in the next two years.

Another handicap that afflicts equally a number of industries is the pegging at an uneconomic level of the selling

price of their products. Despite a number of facilities given to the coal industry, it continues to find it impracticable to raise adequate finances so sorely needed for its modernisation programme. It is the complaint of the industry that while its cost of production has been increasing steadily over the past several years, it has been obliged to sell its output at a level fixed many years ago. The same applies to the paper industry. It has been pointed out by the industry that its progress has been affected among other things by the uneconomic selling price allowed for its products. It is not clear how Government is going to help industries such as the engineering industry overcome the shortage of raw materials. The fact that the quantum of untied foreign loans has been increased in the current year's pledges of aid will no doubt go some way in relieving the situation but it would appear that idle capacity will perforce have to continue at a considerable level as the Finance Minister in his recent broadcast has ruled out the possibility of any marked liberalisation of imports. The cotton textile industry has been long pleading for a rise in cloth prices, but indications are that Government will find some excuse to turn down the request.

Reading the Sphinx's Riddles

From Our Correspondent

MADRAS:

IT WAS generally expected that an important announcement regarding the liberalization of credit restrictions would be made by the Reserve Bank following the meeting of its Central Board of Directors held in Madras on Monday, last week. The Union Finance Minister also met the Directors of the Central Board and later had discussions with the Governor and the Deputy Governors who had come to the city to attend the meeting. As Mr Krishnamachari was due to meet the pressmen later, it had been hoped that there would be some positive indication. But beyond stating that the broadcast speech was his "Bible" and that his plans would unfold themselves slowly he refused to answer specific questions.

The Governor of the Reserve Bank, however, stated that the meeting of the Central Board of Directors considered the various questions relating to credit liberalization and examined the part played by unaccounted money in the fluctuations of prices for commodities. He, however, declined to state what exactly were the decisions that were taken as the announcement was expected to be made only from Bombay sometime later.

Constructive Approach

There is reason to believe that the authorities are anxious to adopt a constructive approach especially as the Finance Minister is inclined to be sympathetic and keen to pursue constructive policies which would stimulate the economy. The decision regarding relaxation of credit terms has to be taken at an early date so that banks can draw up their plans to meet the needs of the industry and trade during the 1963-64 busy season. Fortunately, they are much better placed now than they were at this time last year as the contraction in advances during the slack season has been sizable and deposits also have increased at a fairly fast rate. Thus, surplus funds increased up to about Rs. 250 crores between May and the end of October this year out of which a substantial sum has been invested in gilt-edged securities. The opportunity has been also utilized to reduce borrowings from the Reserve Bank. Cash balances too have risen to some extent. It is, however, anticipated that, with an increase in industrial output and liberalization of import restrictions, the demand for funds may be on a large scale in the next few months and any change in the policy regarding borrowing from the Reserve

Bank by member banks would be helpful in boosting production and keep down interest rates.

While there is no need for a hurried decision, the observations of Mr P. C. Battacharya, Governor of the Reserve Bank, seemed to imply that there might be a modification of the two-tier system and borrowing could be made from Central Banking institution at cheaper rates. At the Dinner given to him by the Bankers' Club, he emphasized the role played by the Reserve Bank in providing cheaper credit for promoting the export trade and helping the co-operative institutions. If banks could be allowed to borrow against Government securities outside the quota and regular borrowings also can be on a cheaper basis, it is generally felt lending rates will not increase further and with liberal credit facilities, industry and trade will be able to function more efficiently.

Some favourable developments are naturally awaited. But there is anxiety to know what exactly would be the changes in indirect and direct taxes as the stock markets would be enthused only if capital formation in the corporate sector is encouraged by a reduced tax burden and the improved ability to pay higher dividends. The absence of any specific announcement had a chilling effect on the local and Bombay markets initially but thereafter there has been a resumption of the uptrend in prices with continuing good corporate news and a firm belief that the developments in the next few months in the economic situation would be favourable. The stock markets remained buoyant until the developments on the cease-fire line in Kashmir led to slight profit-taking towards the close.

★★

The employees of the Central Government were eagerly expecting a pronouncement by Mr T. T. Krishnamachari about the up-grading of Madras City for payment of emoluments. This question would obviously seem to bristle with difficulties and the decision by the Central Government has been delayed only because of the fact that the population formula cannot be satisfied. When talking to pressmen, Mr T. T. Krishnamachari, therefore, stated that it was being examined how Government employees could be compensated for the increased cost of living in important urban centres by adopting a new approach to the whole problem. The size of the population as well as the cost of living might be taken into consideration for upgrading cities like Madras, Ahmedabad, Hyderabad and

November 1, 1963

other centres. It is not known whether this procedure would result in that benefit to Government employees which is generally expected.

★★

The cyclone that hit the coast near Cuddalore a few days back could have caused greater damage to life and standing crops if it had continued for another 24 hours. The onset of the monsoon with a bang has no doubt been welcomed. But the uprooting of trees and the disruption of communication facilities caused considerable confusion for a time. Indeed, life in Cuddalore and Pondicherry was at a standstill for two days. The Madras City has received welcome rains and the inflow of water into the Red Hills lake has been timely. The heavy rainfall in the catchment areas of the hydel reservoirs of Periyar and Nilgiris also has reduced the fears about the need for a power cut early next year. But a ship carrying coal, which was in Madras Harbour and had to go out into the sea, got grounded as it was trying to anchor in the sea outside. After sometime the cargo of coal also caught fire in the bargain. This has since been put out and efforts are being made to refloat the ship.

The standing sugarcane crop is reported to have suffered some damage in the Cuddalore area. But in the rest of the State the crops have not been affected. Only for a time it was feared that the Kuruval crop in Tanjore, which was ready for harvest, would be badly damaged. Luckily, the yield is not expected to be affected to any great extent on account of the prevalence of bad weather conditions in the past few days. If the monsoon proves to be normal in the remaining weeks of the year, agricultural operations are expected to be benefitted to a considerable extent.

★★

Addressing the Fourth Seminar of Co-operative Sugar Factories in Coimbatore recently, Mr. S. D. Misra, Union Deputy Minister for Co-operation, said that the Government was justified in giving preference to the co-operatives in the establishment of sugar factories. Their performance during the last five or six years was excellent; during 1962-63 the co-operative sector produced 4.7 lakh metric tons of sugar representing 21 per cent of the country's production. The share of the co-operative sector in the production of raw sugar for export was 31 per cent. Further, the performance of co-operatives in repayment of loans had been very reassuring. Some of the factories had repaid the loan to the Indian Finance Corporation earlier than the stipulated period.

Mr. Misra also said that a decision had recently been taken to resume further licensing of about five lakh tons immediately to meet the increased demand in the internal market and for export. So far as expansions were concerned most of the co-operatives were likely to get the necessary licences subject to availability of adequate cane and finances. He said that a decision had been taken to give preference to co-operatives in the establishment of new units.

Mr. Mishra urged the sugar co-operatives to consolidate their achievements and look forward to a diversified development in the fourth Plan. The Government would no doubt plan for the expansion of existing units and sanction all new units in the co-operative sector. But it was necessary to think of creating complexes of various industries for utilising by-products of sugar industry. He suggested that they should work out schemes for starting paper plants and power alcohol plants by utilising such by-products as bagasse and molasses. Mr. Misra felt that the establishment of half a dozen central workshops in suitable localities to fabricate simple and improved agricultural implements, for the manufacture of spare parts and for undertaking servicing of the machinery would

result in considerable saving to the sugar co-operatives.

The Deputy Minister referred to some undesirable features in the organizational and administrative aspects of the sugar co-operatives and said that in some of the factories the entire Board of Management was nominated for a very long period and in some others the Government officials happened to be the common Chairman of all the sugar co-operatives in the States. The sugar co-operative in the State of Maharashtra had set an example in that the Board of Management was an elected body. The State Government had not nominated any official on the Board. He commended this example and advised similar procedure in other States. The Minister said that in some co-operatives there was reservation of seats for the well-to-do class of members. This was a negation of co-operative principles. The Government of India had examined this problem and advised the State Governments to review current practices. He said competition among co-operative societies in the recruitment of senior technical personnel was undesirable and should be avoided. Some of the co-operatives were buying cane from non-growers and in some cases sugar co-operatives were selling their sugar through private agencies and buying their requirements not from co-operatives but from individuals and traders. All this was contrary to the co-operative spirit. The Central Banks, Mr. Misra observed, were investing considerable funds in the affect the expansion of agricultural credit. Emphasising the importance of research Mr. Misra said that they had to find out why certain units were more efficient than others. He said the success of the co-operative movement depended on the building up of a cadre of workers at all levels and the availability of adequate and qualified technical and managerial personnel.

★★

With a buoyancy in the stock market, new companies are coming out to raise their capital. In the next few weeks it is expected that W. S. Insulators, Chemicals and Plastics, shares for subscription to the public. W. S. Insulators of India Limited has a programme for manufacturing H.T. and L.T. Insulators of different types and distribution apparatus in collaboration with Westinghouse International Electric Company U.S.A. The factory will be located in Porur village near Madras, the land having been already acquired. Westinghouse Electric are the largest manufacturers of various products in the world having under their control 200 factories in different parts of the globe. The Indian company has been licensed to manufacture 4,800 tons of insulators and other products. Besides, another licence has been obtained for producing porcelain fuse cut-outs of different types and of all voltages. It is expected that the new factory will come into operation in a short period.

The working results of Tube Investments of India Limited for the year ended July 31, 1963 should be regarded as satisfactory bearing in mind the difficult conditions that obtained during the year and the cut in production on account of power shortage. The net profit, before taxation and depreciation, has decreased only slightly to Rs. 128.98 lakhs from Rs. 135.32 lakhs in 1961-62. The provision for depreciation is higher at Rs. 40.43 lakhs against Rs. 37.11 lakhs. But there was a sharp drop in the allocation to development rebate to Rs. 3.32 lakhs from Rs. 20.76 lakhs. Taxation has accounted for the large sum of Rs. 45.42 lakhs against Rs. 40.59 lakhs and the transfer to General Reserve has had to be reduced to Rs. 13 lakhs from Rs. 15 lakhs. The appropriation to dividend equalisation reserve, however, remained unchanged being Rs. 2 lakhs. The dividend on equity capital has been maintained at 10 per cent, taxable.

The moving finger writes

MUCH DISAPPOINTMENT has lately been expressed over the slow progress of population control measures. It is now being generally recognised that surgical sterilization offers probably the most satisfactory short-term means to substantial results. It is reassuring that more and more people, both men and women, in towns or villages, are responding to the "surgical" approach. There is, however, a strong school of thought which emphasizes that, in the family planning movement in this country, primary reliance should be placed on the potentialities of an oral contraceptive cheap enough to be used by the poorer sections of the people and simple enough to be understood by the unsophisticated or the uneducated. Oral contraceptives, however, are still a much-debated subject, if not among medical circles, certainly among the lay public. I therefore feel that it may be useful to reproduce here a responsible account of the progress which seems to have been made in research and development in this field:

"The first step in this field was made twelve years ago in the Research Laboratories of G. D. Searle and Company of America. A Searle chemist synthesized norethynodrel, a chemical derived from the root of the barbasco (Mexico yam). This is almost, but not quite the same chemically as a natural female hormone that controls much of the menstrual cycle and at certain times helps to prevent ovulation—the release of an egg from the ovary so that it can be fertilised by a sperm. This represents a major advantage in respect of convenience and acceptability as compared with the clumsy methods of contraception previously available. Equally important, as extensive tests have shown, 'the pill' offers a degree of effectiveness never before achieved or considered possible.

"The drug was first tested as an oral contraceptive in 1955 by Dr. Gregory Pincus and Dr. John Rock, in collaboration with Dr. Edris Rice-Wray, in a large-scale test among women volunteers in Puerto Rico. While on the pills, only 16 out of 838 women in four study areas became pregnant and all 16 admitted to having occasionally omitted to take their pills. Equally important, among the 174 women who dropped out of the test because they had decided it was time to have another baby, conception occurred promptly....

"Norethynodrel has been authoritatively described as 'the best, the most effective contraceptive known to man. Its failure rate in patients who take it consistently is virtually zero.'

"The oral contraceptive is simply taken. To prevent conception, a woman need only take one tablet a day for twenty days of each month.

"The most extensive and comprehensive clinical trials have failed to yield any evidence of harmful or dangerous long-term effects, and there has been no impairment of subsequent fertility. In addition, no harmful effect upon children born to women who have used the drug has been found."

★★

Mr. P. S. Narayan Prasad, Director of the Asian Institute of Economic Development Planning at Bangkok, who

was in New Delhi a few weeks ago mainly for the purpose of discussing with the Planning Commission the directions along which that body could assist in the organising and staffing of the Institute, has great respect for the record of the planners and planning in this country. He has evidently been persuaded that the organisational procedures evolved by the Planning Commission could serve as a model, if not as an ideal, for other developing economies.

The Bangkok Institute was established last March at the Manila session of ECAFE and will begin operations in January, 1964. As an autonomous organ of ECAFE, the Institute will undertake the training of Asian economic planners on a regional basis. It will have training, research and advisory functions in the field of economic development and planning in the ECAFE region, but its main purpose will be to raise the professional ability and competence and to broaden the experience of personnel working on development programming and implementation in countries of the region. The core of the Institute's training activities will be an annual basic training course of from nine to ten months' duration to be held at Bangkok where the Institute is located.

Discussing his plans for the Institute with a group of local journalists, Mr. Prasad explained that its main object would be to train middle group economic officials of the Governments in the region in the techniques of developmental planning. Candidates from semi-governmental or private financial and other institutions concerned with economic development might be admitted if sponsored by the home governments. Mr. Prasad said that special courses of two or three months' duration each would be organised from time to time to meet the particular needs of the countries covered. He conceded that it would not be easy to find experts of the required calibre to staff the Institute. But he felt that the problem could be solved with cooperation from international institutions such as the World Bank or governmental organisations as well as the Planning Commission here.

Mr. Prasad, who is a permanent official of the World Bank, has taken up the Directorship of the Institute of Economic Development Planning after a term in Nigeria where he helped that Government to organise economic planning and administration. He was understandably enthusiastic about the progress of this country where abundant natural resources could be exploited with the application of modern technology. Mr. Prasad feels that enough has been done to give a start to the organised economic development of Nigeria in which international institutions such as the World Bank and many Western countries are now actively participating by providing financial and technical assistance. Mr. Prasad holds the view that the Government of India should explore the scope for strengthening friendly ties with Nigeria and other African countries by exporting Indian planning techniques and technicians. According to him such assistance will be greatly appreciated as there is a dearth of qualified personnel in those countries. Referring specifically to Nigeria's need of medical and nursing personnel, Mr. Prasad said that the Nigerian Government would be only too glad to avail itself of Indian assistance in relieving this and similar shortages.

V. B.

Trade Winds

U.S. LOANS

THE GOVERNMENT of India and the United States have concluded three agreements providing for U.S. loans totalling \$39.6 million (Rs. 18.8 crores) for the expansion of the Chandrapura thermal power station, the supply of 54 diesel locomotives to the Indian railways and a ropeway project in the Jharia coal fields. The credits have been extended by the U.S. Agency for International Development. As in the case of other loans by U.S.A.I.D., the repayment terms have been arranged to reduce the burden on India's foreign exchange resources. The loans are repayable by the Government of India over a period of 40 years with a grace period of 10 years. They are free of interest and carry a service charge of three quarters of one per cent per annum.

The largest of the loans, \$16 million, is for meeting the foreign exchange costs of adding a 140,000 kW generator to the Chandrapura thermal station in the Damodar Valley. Earlier U.S. loans totalling Rs. 34.8 crores are financing the entire cost of the first stage of the project, which is nearing completion and provides for construction of the power station and the installation of two 140,000 kW units. On completion of the second stage Chandrapura will have a total installed capacity of 420,000 kW, which will make it the largest thermal power station in India.

The second loan of \$15.85 million will finance 54 broad gauge diesel locomotives for the Indian railways. The third Plan calls for 299 broad gauge diesel locomotives to be put into service. All of these are being supplied by credits extended by the U.S. Agency for International Development and its predecessor, the Development Loan Fund. The U.S. Export-Import Bank has authorized a loan of \$19 million for India's only diesel locomotive factory currently under construction at Varanasi. Compared with a steam engine, the diesel locomotive has a higher speed and can haul a larger load. Furthermore, it can operate for long periods without taking time off for maintenance. The diesels already in service are helping in the faster movement of goods trains carrying coal, iron ore and steel.

The third loan, for \$7.7 million, is for a ropeway project in the Jharia coal fields, Bihar, which will transport 3 million tons of sand annually. The sand, obtained from the Damodar River bed, will be used to fill up mined spaces in the coal fields. The roofs of the rich coal mines in the region are supported by vast coal pillars. By stowing sand most of the good quality coking coal in the pillars can be removed. The project will increase coal production by 1.5 million tons annually.

I.C.C. CONGRESS

Mr. L. R. Duchesne, Administrative Director of the International Chamber of Commerce arrived in New Delhi on October 21, on a week's visit. The International Chamber of Commerce, the office of which is situated in Paris, enjoys the highest consultative status (category 'A') with the United Nations and will be holding its next biennial congress in New Delhi from 6th to 12th February, 1965. Mr. Bharat Ram, President of the Federation of India Chambers of Commerce and Industry and of the Indian National Committee of the ICC, will be the Chairman of the Congress. Mr. Duchesne will discuss with the officials of the FICCI and the INC various matters relating to the organization of the Congress, and its programme. The ICC Congress is a general assembly of its

members from over 60 countries. Held once every two years and attended by 1,500 to 2,000 delegates as well as by representatives of some 60 international organisations, both governmental and private, the ICC Congress is the world forum of businessmen, the place where they meet, exchange experience, discuss topical economic issues. The Congress lays down broad framework for future activities of this world businessmen's organization. It will be for the first time that the ICC Congress would be held in India and a second time in Asia. In Asia, so far only Japan has played host to the ICC Congress (in 1955).

TO TOKYO

A three-man Indian delegation, led by Mr. S. N. Bilgrami, Chairman, National Mineral Development Corporation, left for Tokyo on October 21, to negotiate terms and conditions for the utilisation of the Japanese financial assistance for the Bailadila iron-ore project and cognate matters connected with the Kiriburu and Bailadila projects. The other members of the delegation are: Mr. M. Butt, Joint Secretary, Ministry of Mines and Fuel, and Mr. D. J. Madan, Joint Secretary, Ministry of Finance and Financial Adviser to the Ministry of Mines and Fuel. The Bailadila iron ore project is being developed by the National Mineral Development Corporation, reached between the Government of India and the Government of Japan on March 8, 1960 for the supply of about 4 million tons of iron-ore per annum from the middle of 1966 for a period of 15 years in the first instance. The Bailadila area contains 14 distinct deposits. The Government of Japan has agreed to make available foreign exchange credit of about Rs. 10 crores for the purchase of machinery and equipment not available in India.

PROJECTS LICENSED IN SEPTEMBER

Licences for the establishment of 15 new undertakings were issued last month under the Industries (Development and Regulation) Act. Of these, five licences were for Madras, four for West Bengal, two for Maharashtra, and one each for Bihar, Gujarat, Madhya Pradesh and Punjab. Sixty-one licences for substantial expansion, manufacture of new articles, for change of location of existing units and for carrying on the business of existing undertakings, were also issued.

TO EUROPE UNDER INDIAN SAILS

For the first time, Indian shipowners will provide a monthly sailing from India to the U.K. and Continent on a regular basis. This decision was taken in Bombay on October 19, 1963, by the independent Indian shipowners, shippers and representatives of the Government of India, Ministry of Transport. The service, which will be outside the India/U.K.-Continent Conference, is a reflection of the determination of all shipping and other interests in India to develop an independent service which will not be subject to such arbitrary increases in freight rates as were recently announced by the India/U.K.-Continent Conference.

INDIA ELECTED MEMBER OF IMCO COUNCIL

The Inter-Governmental Maritime Consultative Organization Convention at its Third Assembly meeting held in London last month elected India as a Member of the IMCO Council. India is one of the maritime nations having a substantial interest in providing international shipping services.

The Leader of the Indian Delegation, Dr. Nagendra Singh, Additional Secretary in the Ministry of Transport, was elected as the President of the IMCO Assembly.

HARD AS STEEL

Steel producers in the territory of the European Coal and Steel Pool — the predecessor of the European Economic Community in the field of coal and steel — are facing increasing difficulties. The steel industries of France and the Federal Republic of Germany are mainly affected by hard competition. Today they are confronted with U.S., Scandinavian, British and Soviet bloc competition. Tomorrow the world's developing countries will join the ranks of the competitors. The increase in the productive capacity of the steel industries was an inevitable result of Europe's overall economic expansion after the last war. The economic development and the existence of high-grade iron ore deposits in oversea countries are responsible for the steel surge in Asia, Latin America and also in Africa.

Long-term forecasts indicate that steel consumers in the highly industrialised nations will be interested to a growing extent in the purchase of good moderate-priced steel from overseas countries. Expensive investments in the European steel industries, however, demand a slow, gradual regrouping of business policies. All in all, European steel industrialists have retained their optimism. They believe that they can remain competitive with the help of modern production installations and that the general economic development will require still larger quantities of steel. It is by no means certain that the European Coal and Steel Pool will introduce protective measures for the European steel industries. The number of steel consumers is larger than the number of steel producers in the six member countries of the Community.

TECHNICAL TRAINING UNDER COLOMBO PLAN

During the last few years, the Colombo Plan has been paying particular attention to the increasing importance of intra-regional training at the technician level — a development which flows from the original concept of the Colombo Plan as a co-operative effort for the economic development of South and South-East Asia. During 1962-63, 4,433 training places were provided as compared to previous year's peak figure of 4,529. One factor to be taken into consideration is that, in addition to the 4,433 trainees who went this year, a considerable number of trainees of previous years are still under training. Out of last year's 4,529 awards, 2,344 were for periods of over one year and 741 out of the 1960-61 awards were for periods over two years. It could, therefore, be assumed that approximately 6,000 Colombo Plan trainees are being catered for by the donor countries at any given time during the year. This year 383 training places have been provided by countries within the region i.e. about 9 per cent of the overall total for the year. If regional training under the United States Third Country Training Programme (259) are taken into account, training provided in the region constitutes nearly 14.5 per cent of the year's total.

The statistics reveal that the United States (which joined the Colombo Plan Council in 1958-59) is the largest donor of training places having provided 1,941 places last year — i.e. 44 per cent of the total training awards made last year, with Britain (669), Australia (533), Canada (348), Japan (314), India (242) and New Zealand (225) following in that order. India (742) maintains her unbroken record as the recipient of the largest number of training awards each year and is followed by Indonesia (622), Pakistan (501), Thailand (497), Vietnam (370), Philippines (368), Nepal (265), Federation of Malaya (236) and Ceylon (195).

From the inception of the Colombo Plan to June 1963 the countries within the region have taken in 2,691 trainees from the neighbouring countries in conformity with the concept of mutual aid embodied in the spirit of the Plan. This constitutes 9.4 per cent of the total number of training places (28,495) provided during the same period. If regional training places provided under the third country programme funded by the United States are also taken into account, the percentage would increase to about 15.

India's ranks as the major donor of training places within the region, having provided 2,156 (80 per cent) of the cumulative total, of which 1,390 or 52 per cent were to Nepal and 766 or 28 per cent were to other countries of the region. The other countries have provided 535 training places i.e., 20 per cent of the cumulative total. Singapore (158) and Pakistan (137) are second and third largest donors respectively and the Federation of Malaya (87) and Ceylon (76) occupy fourth and fifth positions.

During 1962-63, 383 training places were provided within the region as compared with 456 provided in the preceding year. India, the major donor, provided 242 places during the year which falls short of the peak figure of 369 reached in 1961-62. Apart from India, which has maintained a more or less regular upward trend in the number of training places provided each year, the other countries have only made spasmodic contributions.

CELCON—A NEW SYNTHETIC PLASTIC

At New Delhi last week, Eric Knott, South-East Asian representative of Celanese Polymer Company, explained at a seminar the various qualities of Celcon which has, according to tests applied in the United States, properties making it a creditable replacement for a number of metal components used in automobiles, electric equipment, lighting, metal cans and drums, aircraft and military goods. The Celanese Polymer Company of the United States has marketed this product in America for about two years and is now exploring the Indian market; it has already appointed Duncan Brothers Ltd. as its agents in this country. On display at the seminar were a large number of goods made of Celcon such as hub-caps, battery cases, fuel pumps, light diffusers, hinges, non-sparking tools, sewer pipes, nails, screws, bolts, nuts, washers, aerosol cans and fire extinguishers, which had extra ordinary finish. Celcon can be fabricated by injection moulding, extrusion, blow moulding and other established high volume thermoplastic processing techniques. It has high mechanical strength, stiffness, toughness and resistance to impact force over extended periods of time and through broad ranges of temperature and environment. It is of great interest to design engineers who may consider using it in applications formerly utilizing wood, die-cast, metals such as magnesium, aluminium, zinc, brass, iron and steel. In cost it has an advantage varying from 30 to 50 per cent over similar engineering products made of metals and other traditional raw materials. It has not been used widely for domestic utensils and other household goods because cheaper plastics of the same family can give the same service at a lower cost. In any case, the ability of this synthetic product to replace steel, iron and various other metals in engineering products is nothing short of a sensational discovery. The Polymer Company has long-term plans to manufacture this product in this country.

MARKETING OF AUSTRALIAN WHEAT

The Australian Wheat Board has completed a cash sale of 58.5 million bushels of wheat and flour for shipment, mainly to Eastern European countries and Siberia. The buyers have the option to purchase a further 5.5 million

bushels. The chairman of the Board, Mr. J. V. Moroney, said recently that the deal would return between £ 40 million and £ 50 million if the buyers exercised their option to take the full 64,000,000 bushels. Most of the wheat would be of fair average quality, but the contract also included some premium wheat. Shipment would take place mainly in 1964 and full cash payment would be made when each cargo was despatched. Mr. Moroney said that the board had had a record month of trading in which it had contracted to sell more than 76,000,000 bushels for shipment overseas during the remaining months of this year, and well into 1964. There would be no excess carry-over from the record 1962-63 crop, and a substantial part of the 1963-64 crop, yet to be harvested, had already been sold forward.

WHEAT DEAL RAISES SHIPPING COSTS

The gigantic sale of wheat and other foodstuffs exceeding 10 million tons by the United States, Australia and Canada to the USSR and other East European countries has already been reported in these columns (see Eastern Economist pages 750 and 808). This large-scale sale has posed difficult problems in international shipping though at the time of writing it is not known as to what arrangements have been made in regard to booking ships for transport of the nego-

tiated foodstuffs. An important fact to be taken note of is that the products will have to be carried over very long distances which might take anything from six to nine weeks in transfer from the giving to the receiving end. Rough calculations have indicated that on the average nearly 200 ships (capacity 12,000 to 14,000 tons) will be required in order to carry all the foodstuffs, having a natural impact on shipping rates as well as on the prices of ships. This element in the marine business has imparted a new buoyancy in shipping.

The rising shipping costs cannot fail to cause concern to African and Asian countries which will be hard hit; hitherto shipping has been inexpensive, but now it is threatening to raise the costs all round. It is not clear if the ships are going to be chartered by the USSR or the USA. In case the United States is to undertake this task, it is possible that according to statutory obligations, half of the cargo exported from the United States would have to be carried on American bottoms. It is also possible that some of the "flags of convenience"—Panama, Lebanon and Honduras—might be called upon to undertake this task. All the foodstuffs currently negotiated are not needed by the USSR alone; a part of them will have to be sent to Cuba, Poland and East Germany whom the USSR had promised to provide agricultural products on the basis of old bilateral trade agreements.

DAGGER BRAND CUTTERS FOR LASTING PRECISION PERFORMANCE

BACKED BY 25 YEARS OF TRADITION and rigid control at every stage of production DAGGER BRAND CUTTERS (available in metric and inch sizes) assure precision performance. They are made of superior quality steel, specially heat-treated to ensure long life, and manufactured in India's biggest and most modern factory for Small Tools.

THE INDIAN TOOL MFRS. Ltd.

101 Sion Road, Bombay 22

ASP/IT-24

Company Affairs

W.S. INSULATORS

W. S. INSULATORS of India Ltd. will enter the capital market with a public issue of Rs. 82.50 lakhs made up of 20,000 cumulative preference shares (9.5%) of Rs. 100 each (free of company's tax, but subject to deduction of tax at source at the prescribed rates) and 6,25,000 equity shares of Rs. 10 each. The subscription list will open on November 6, 1963, and will close on November 18 or earlier at the discretion of the directors, but not before November 3, 1963. The authorised capital of the company is Rs. 2 crores out of which issued capital is Rs. 1.10 crores. The promoters, directors and their friends and associates have subscribed to 2,01,125 equity shares of Rs. 10 each. The technical collaborators Messrs. Westinghouse Electric International Company of New York have agreed to subscribe to 23,875 equity shares of Rs. 10 each. The Life Insurance Corporation of India have agreed to subscribe to 50,000 equity shares of Rs. 10 each against underwriting arrangement. The entire issue offered to the public for subscription is fully underwritten.

The company proposes to instal a factory to manufacture high tension insulators of all types from 11 KV to 220 KV. It has concluded a technical collaboration agreement with Messrs. Westinghouse Electric International Company, New York, U.S.A. The collaborators, besides providing the company with technical know-how with regard to design and manufacture of licensed products, have agreed to train necessary Indian personnel at their works in the U.S.A. The company has taken possession of land in Chingleput District in Madras and has already obtained a licence for the establishment of a new industrial undertaking with the capacity of 2,400 tons per annum of HT and LT insulators, lightning arresters, condenser bushings etc. The company has also an industrial licence for the manufacture of fuse cutouts, distribution by-pass switches with a capacity of 1,200 numbers per annum. The company has also received a licence for doubling the capacity. It is estimated that the total cost of plant and machinery will be about Rs. 81.7 lakhs out of which the equipment to be imported amounting to Rs. 58 lakhs will be paid out of the ICICI loans. The American suppliers of plant and machinery have offered very favourable delivery periods.

In view of the fact that the products undertaken to be manufactured by the company will continue to be in great demand as electric power generation, transmission and distribution in India are to be continuously expanded, the issue is likely to receive a ready response in the market.

ALUMINIUM INDUSTRIES

The directors of the Aluminium Industries Ltd. in their annual report for the year to March 31, 1963, have indicated that there was a brisk demand for the company's products. The availability of indigenous aluminium metal in larger quantities enabled their company to roll rods for other conductor manufacturers also. It produced about 55,200 kilometres of bare conductor and 10.19 million core metres of covered aluminium conductor during the year. The directors have stated that the work connected with the expansion of the covered aluminium conductor factory at Kundara and the new factory at Hyderabad is nearing completion. These additional manufacturing facilities are expected to increase its covered conductor production towards the end of 1963. Orders for machinery for the manufacture of low voltage aluminium underground cable at Kundara have been placed. This new factory is expected to be commissioned in the middle of 1964. The Government of India have granted a licence

for the expansion of the aluminium rod rolling mill at Kundara. It is making efforts to secure foreign exchange required for the implementation of this expansion. In order to partly finance these schemes, it increased its share capital by the issue of 3,50,000 equity shares at a premium of Rs. 3.50 per share.

The company made a net profit of Rs. 15.90 lakhs after making provision for depreciation to the extent of Rs. 14.87 lakhs and after providing a sum of Rs. 39.50 lakhs for taxation. The payment of final dividend of 60 nP. per share subject to deduction of income-tax together with the interim dividend of 90 nP. per share distributed in March-April, 1963, absorbs (the aggregate dividend for the year being 15 per cent) Rs. 15 lakhs. A sum of Rs. 1 lakh is transferred to the general reserve and Rs. 2 lakhs to dividend equalisation reserve.

INDIAN PLASTICS

Indian Plastics Ltd., Bombay, has made a profit of Rs. 5.81 lakhs for the year ended March 31, 1963. The directors have proposed to transfer Rs. 3.19 lakhs towards depreciation, Rs. 1.50 lakhs towards income tax and Rs. 45,692 towards development rebate reserve. It is indicated that during the first half of the year, the company could not fare well. A huge stock of finished goods had accumulated and to avoid further accumulation of stocks the production was kept down. There were signs of improvement in the market in the latter part of the year and the movement of finished goods became satisfactory. The working was also affected by increase in the prices of raw materials and stores. The demand for PF and UF powder produced by the company increased considerably as technical know-how formula was being received from time to time from Messrs. Bakelite Gesellschaft M.B.H., the collaborators of the company. If this progress continues, the directors expect that it will record improved operation. They are consequently planning for expansion of this plant. The working of the radio division was slightly better during the year under report and it manufactured new model sets in collaboration with Hyakawa Electric Company Ltd., who are one of the leading manufacturers of transistor and valve sets in Japan.

UNITED CARBON ISSUE

United Carbon Limited will shortly enter the capital market with a public issue of Rs. 46.61 lakhs. The authorised capital of the company is Rs. 3 crores and the issued capital Rs. 155.35 lakhs in equity shares of Rs. 100 each. Of the issued capital, the directors and their friends will take up shares worth Rs. 46.60 lakhs while the foreign collaborators will take up Rs. 62.14 lakhs. United Carbon Limited of the U.S. will provide the technical collaboration. The company's factory will be located at Mulund, near Bombay. The factory will manufacture carbon black, furnace black, gas black and natural gas black. The annual capacity of the plant will be 13,600 tons which will be built at an estimated cost of nearly Rs. 3 crores. The factory is expected to go into production in 1964.

JOHN OAKEY AND MOHAN

John Oakey and Mohan Limited will enter the capital market shortly for public subscription of 3,20,573 equity shares of Rs. 10 each. The company has an authorised capital of Rs. 1 crore. The present issue is of 5,00,000 equity shares of Rs. 10 each. Of this, 1,79,427 equity shares have already been subscribed by directors, promoters and their

friends. The balance is to be offered for public subscription. The company is setting up its plant at Mohannagar in Gaziabad for the manufacture of various types of abrasives in collaboration with John Oakey & Sons Ltd., London. The company will also manufacture water proof abrasives, the plant for which is nearing completion at Mohannagar.

BARODA RAYON

Baroda Rayon's plant at Udhna has been operating satisfactorily and the current production is reported to be eight tons per day on a 100 deniers basis against the installed capacity of 6.25 tons. The company has been permitted to sell 50 per cent of its output in the open market and its products of 60 to 65 deniers have been exempt from price control. It is said to have sold its entire production till the end of the current year. Its plan to instal eight additional frames in order to raise its production capacity by 1.25 tons per day on a 100 deniers basis and the necessary import licence is being awaited. With regular production of all departments the company's annual turnover is expected to amount to about Rs. 4 crores.

ORIENTAL POWER CABLES

The directors of Oriental Power Cables Limited have stated in their annual report for the year to May 31, 1963 that the steel structures of the factory building and staff quarters have already been constructed. The erection of machinery will commence shortly and is expected to be completed by March, 1964. The company has entered into lease agreement for land with Government of Rajasthan for a period of 99 years. It has received an import licence for plant and machinery worth Rs. 90.91 lakhs. The major portion of foreign machinery has already been received at site. The necessary applications for the import of raw materials have also been made.

ASSAM SILLIMANITE

The expansion programme undertaken by the Assam Sillimanite Limited has shown good progress. It is reported that the refractory at Ramgarh is nearing completion and the factory No. I is already in operation. With the completion of extension to the factory and recent installation of new equipment, the present production of 3,000 tons per annum of sillimanite and fireclay refractories will be increased to 5,000 tons shortly. The turnover will rise to Rs. 30 lakhs per annum. The factory is also being geared to produce acid-proof bricks and calcined kyanite. The maintenance workshop is expected to be commissioned shortly. The factory No. II is under construction. Foundations for three-chamber kilns have been constructed and kilns will be available for higher temperature calcination from January 1964.

SOMASUNDRAM PAPER MILLS

Somasundram Paper Mills Ltd., will shortly enter the market to raise funds for its project of paper manufacture in Madras State. The capacity of the plant will be 3,000 tons of paper and pulp per annum and the total estimated capital expenditure about Rs. 40 lakhs. The factory will be situated in Tanjore District. The raw material to be used is rice straw which is in plentiful supply in the region. The authorised capital of the company is Rs. 50 lakhs and the issued capital Rs. 25 lakhs, divided into equity shares of Rs. 20 lakhs and preference shares of Rs. 5 lakhs. With the present paid up capital of Rs. 66,430, the proposed issue will be for Rs. 19.33 lakhs worth of equity shares and Rs. 5 lakhs worth of preference shares. Out of this the public issue will be for a

total of Rs. 17 lakhs — Rs. 12 lakhs in equity shares and Rs. 5 lakhs in preference shares.

USHA MARTIN BLACK

Usha Martin Black (Wire Ropes) Limited is undertaking an expansion programme at its factory and will be importing certain new machinery and equipment. Its application for importing machinery worth Rs. 26 lakhs for completing the second phase of the project to manufacture 7,200 tons per annum of steel wire ropes has been approved by the Government in principle. The Commonwealth Development Finance Company Ltd., London, has agreed to make available financial accommodation to the extent of Rs. 20 lakhs in sterling and by subscribing Rs. 6 lakhs in 50,000 equity shares of Rs. 10 each at a premium of Rs. 2.

KUSUM ENGINEERING

In its Silver Jubilee year Kusum Engineering Company Ltd. recorded considerably optimistic results. The total sales for the year ended March 31, 1963, were around Rs. 16.98 lakhs, against Rs. 15.66 lakhs a year before. The increase in the gross profit was not in proportion to the increase in sales which was essentially due to higher costs. There were shortages of some basic raw materials and coal, and shortage of electricity was also a constant problem. The company, however, was able to increase its productive capacity. The floor space of the steel foundry was extended. The gross profit for the year was Rs. 4.16 lakhs. The gross profit distribute dividend at the rate of 6 per cent which was 1 per cent more than the previous year.

CAPITAL ISSUES

Four companies have been authorised to raise fresh capital amounting to Rs. 97.84 lakhs.

Two companies are issuing bonus shares, one cumulative redeemable preference shares and the other equities. In all cases, the consent of the Controller of Capital Issues is valid for 12 months.

Mahalakshmi Fibres and Industries Limited, Calcutta, is to issue capital of Rs. 39,84,800 divided into Rs. 10 lakhs in cumulative redeemable preference shares and the balance in equity shares. The capital is required for the establishment of a spinning mill with 12,000 spindles at Ranchi.

Waldies Zinc Pigments Limited, Calcutta, is issuing 60,000 equity shares of Rs. 10 each as fully paid up bonus shares on capitalization of reserves to the extent of Rs. 6 lakhs. The bonus shares will be issued in the ratio of one bonus share for every two shares held.

D. Waldie and Company (Lead Oxides) Limited, Calcutta, will issue 7,000 equity shares of Rs. 100 each as fully paid up bonus shares on capitalization of reserves to the extent of Rs. 7 lakhs. The bonus shares will be issued in the ratio of one bonus share for every share held.

Bombay Cutting Tools Limited, Bombay, will issue capital of Rs. 45 lakhs in equity shares of Rs. 10 each for cash at par. Out of this, shares of the value of Rs. 25 lakhs would be issued to the public by prospectus. The proceeds of the issue would be utilized for the manufacture of hand taps, two piece dies, round dies, milling cutters, reamers, tool bits and conventry dies.

LICENCES ISSUED

The following licences have been issued under the Industries (Development and Regulation) Act, 1951, during the week ending 19th October, 1963. The list contains the

names and addresses of the licencees, the articles of manufacture and the annual installed capacity.

IRON AND STEEL CASTINGS

Shri Arvind R. Shroff, C/o. Crescent Agencies Private Ltd., 27/33, Medows Street, Fort, Bombay-1. Proposed name: Consolidated Castings Private Ltd., Goregaon (Bombay), Maharashtra—Ferrous Castings 300 M. Tonnes.

NON-FERROUS METALS

Indian Aluminium Co., UCO Bank Building, Parliament Street, New Delhi (Alwaye, Kerala)—Aluminium ingots (electrolytic grade for manufacture of conductors) 5,000 metric tons. A. T. Gooyee Metal Works (P) Ltd., 11A, Umakanta Sen Lane, Calcutta-30 (West Bengal)—Extruded brass Sections 120; Brass forgings 240; Non-ferrous alloy castings 240; Copper strips Busbars and flats 408 (capacity per annum in metric tons).

COAL

Equitable Coal Co. Ltd., 2, Fairlie Place, Calcutta-1, Proposed name: Jamuria 5 & 6 Pits Colliery (P.O. Jamuria, Distt. Burdwan, West Bengal)—Coal 2,50,000 tonnes. Shri Mahabir Prasad Marwary, Village & P.O. Pathargama, Distt. Santhal Parganas, Proposed name: Hurrah Block 2 Colliery (District Santhal Parganas, Bihar)—Coal: 1st year 6,000 tonnes; 2nd year 8,400 tonnes; 3rd year 12,000 tonnes; 4th year 18,000 tonnes. Shanta Brothers Private Ltd., Vaswani Mansions, Dinsha Wacha Road, Churchgate, Bombay-1. Proposed name: Maharashtra Coke Oven Ltd. (Bombay, Maharashtra)—Ammonia 1,750 metric tons, Coke Breeze 10,290 metric tons, Coke oven gas 365,95,00,000 cft., Light oil 12,33,000 gls., Coal-tar 20,580 metric tons or 51,45,000 gallons.

ELECTRIC LAMPS

Electric Lamp Manufacturers (India) Ltd. 1, Taratolla Road, Garden Reach, Calcutta-24. (West Bengal)—(i) High wattage Lamps—Infra-red, inside mirrored etc., (ii) Cap for Fluorescent Lamp 10 million Nos.

ELECTRICAL CABLES AND WIRES

Madras Wire Products, 9, First Main Road, C. I. T. Nagar, Madras-35 (Ambattur, Madras)—Paper Covered Wires and strips 600 tons.

ELECTRONIC EQUIPMENT

Bharat Electronics Ltd., Jalahalli P.O., Bangalore-13 (Mysore)—Tape Recorders (Professional type) 200 Nos. Emcipi Electronic Private Ltd., 6-2, Connaught Place, New Delhi-1 (Gurgaon, Punjab)—Transistors: 1 million Nos.

AUTOMOBILES

Standard Motor Products of India Ltd., 29, Mount Road, Madras-2 (Madras)—One-ton truck 1,500 Nos.

CEMENT MACHINERY

ACC-Vickers-Babcock Ltd., 16, Queen's Road Estate, Bombay-1 (Durgapur, West Bengal)—Cement making and general mining machinery, in particular crushers, grinding mills, rotary kilns, driers, air separators, heat exchangers, conveying and transport equipment used in Cement and general mining industries—2270 tonnes.

MACHINE TOOLS

Shri K. C. Venkatesh, 275, Jayarajnagar, Block-2, Bangalore-11 (Mysore)—(i) Turret Lathes Rs. 50 lakhs worth; (ii) Second operation Lathes Rs. 25 lakhs worth.

INORGANIC HEAVY CHEMICALS

Dharamsi Morarji Chemical Co. Ltd., 317-21, Dr. Dadabhoi Naoroji Road, Bombay (Ambernath, Maharashtra)—Chlorosulphonic acid 5590 tonnes.

SYNTHETIC RESINS AND PLASTICS

Industrial and Agricultural Engineering Co. (Bombay)

Private Ltd., 43, Forbes Street, Fort, Bombay-1 (Bhandup, Bombay, Maharashtra)—Polystyrene base cation exchange resin—90 cubic metres.

INSECTICIDES, FUNGICIDES, ETC.

Pesticides Ltd., 28, Sayani Road, Bombay-28 (Maharashtra)—Benzene Hexachloride 750 tonnes, Lindane 75 tonnes.

MISCELLANEOUS CHEMICALS

Godrej Soap Private Ltd., 316, Delisle Road, P.O. Jacob Circle, Bombay-1 (Vikhroli, Bombay, Maharashtra)—Fatty Acids 10,000 tons Glycerine (as a by-product) 1,000 tons.

COTTON TEXTILES

The Gemathy Mills, Viravanallur, (Tirunelveli Dist. Madras)—13,000 spindles for the manufacture of cotton yarn.

WOOLLEN TEXTILES

The Bombay Fine Worsted Manufacturers, C/o. Castle Mills, Thana, Agra Road, Bombay (Dehra Dun, Uttar Pradesh)—Wool tops 3 million lbs.

SYNTHETIC TEXTILES

Khetan Industries (P) Ltd., Khetan Bhavan, 198, Jarnshedji Tata Road, Churchgate, P.O. Box No. 1402, Bombay-1 (Maharashtra)—Dyeing 1 lakh yards per month, Printing 1 lakh yds. per month. Shri Dharamachand Jain, Proprietor, M/s. Pravati Textile Mills, 34-B, Ratu Serkar Lane, Calcutta-7 (P.O. Panihati, Distt., 24-Parganas, West Bengal)—Art silk and cotton fabrics 62 powerlooms (52 on cotton yarn and 10 on art silk yarn). Common Wealth Spinning and Knitting Mills Private Ltd., 236, Industrial Area 'A', Ludhiana (Punjab)—1,600 spindles to produce 0.65 m. kgs. of mixed waste yarn..

MILK FOOD

Mehsana District, Co-operative Milk Producers Union Ltd., Mehsana (Gujarat)—Milk Powder 2,400 M. tonnes.

FLOUR

Gorakhpur Flour Mills, 365A, Rail Bazar, (Cantt), Kanpur (Gorakhpur, Uttar Pradesh)—Atta, Maida, Suji, Rawa, Bran etc. (Wheat Products), 15,000 tonnes (in terms of wheat).

CHINA WARE AND POTTERY

Perfect Pottery Company (Madhya Bharat) Ltd., Jabalpur, (Ratlam, Madhya Pradesh)—Stone ware pipes and fittings including acid resisting bricks, tiles, etc. 3,600 tonnes.

SANITRY WARE

Director of Industries and Commerce, Government of Madras, Madras. Proposed name: Government Ceramic Centre with Commercial Section (Vridhachalam, Distt. South Arcot, Madras)—Sanitary-ware 800 tonnes, Low Tension Insulators, 100 tonnes.

CHANGE IN NAMES (Owners and Undertakings)

During the week ending 19th October, 1963
(Information given below pertains to certain specific licencees).

From Shri V. Pandurangiah, Madras to M/s. Madras Alloy and Stainless Steel Ltd., Madras. From M/s. De Smet Extraction (India) Private Ltd., Bombay to M/s. De Smet (India) Private Ltd. From M/s. Rabhnad Chemical Industries Private Ltd., Bombay to M/s. Maleic India Private Ltd., Bombay.

LICENCES REVOKED OR SURRENDERED

During the week ending 19th October, 1963
(Information given below pertains to certain specific licencees).

M/s. Binani Metal Works Ltd., Calcutta — Milling machines. M/s. Sanitex Chemical Industries Ltd., Baroda — Oxalic acid. M/s. The Modern Mills Ltd., Bombay — Cuprammonium Filament Yarn.

COMPANY MEETING

KERALA STATE INDUSTRIAL DEVELOPMENT CORPORATION LIMITED

Speech delivered by Shri K. R. K. Menon, Chairman, at the Second Annual General Meeting on 30th October, 1963

Gentlemen:

I have great pleasure in placing before you the accounts of the Kerala State Industrial Development Corporation Ltd. for the year ending 31st March, 1963 and the Report of the Board of Directors of the Corporation on the working of the Corporation during that period. With your permission I shall take the report as read.

2. You will perhaps agree that purely from a statistical point of view — and against the background of our admittedly limited monetary resources — the Corporation has done fairly well last year, and what it has done in that year represents a definite advance, qualitatively as well as quantitatively, on our achievements in the previous year, which was the first year of our existence. The total paid-up capital of the 9 concerns for whom financial assistance was sanctioned by the Corporation during the year under review amounted to Rs. 170 lakhs. It is also worthy of note that in our very second year such services as we were called upon to render to industry have been performed by us on a financially self-supporting basis with a small profit thrown in. I confidently hope that with progressively better balance sheets to our credit in the coming years we should be able to attract investments and deposits from the public without much difficulty. I take this opportunity to express our thanks again to our Managing Director and the staff who have worked hard and loyally to make a financial success of our operations last year.

3. The adequacy or otherwise of a Development Corporation like ours cannot, however, be truly assessed wholly in terms of either the numbers and categories of new industrial enterprises which the Corporation helps to bring into existence or old ones which it helps to expand, nor indeed in terms of the Corporation's own balance sheet, reflecting as it does the financial results of its operations during a particular year. The more appropriate basis for judgment, should in my opinion, be the contribution that the Corporation makes towards the creation of a progressively congenial "climate" for the expansion of existing industrial units and the institution of new ones. This is particularly so in the case of an industrially backward State like Kerala, where the crux of industrial expansion is very definitely the creation of a satisfactory "climate" for attracting capital and entrepreneurial skill from outside the State. The main question that I therefore propose to ask of myself this afternoon — and on which I should like to share my thoughts with you if I may — is whether and if so to what extent, this climate for industrial investment in our State has bettered since I had the pleasure of addressing you last. I shall also attempt, briefly, to bring to your notice certain salient aspects of this problem which strikes me as being worthy of serious consideration by you, the representatives of the Government of Kerala, who happen to be the sole shareholders of this Corporation.

4. My own personal assessment of the degree of improve-

ment that has been brought about in the climate for investment of outside industrial capital and entrepreneurial skill in Kerala over the past twelve months is that, taken by and large, it has been fairly satisfactory, though, I must hasten to add that I had hoped it would have been much better than it actually was. Our personal contacts with outside entrepreneurs — including those from abroad — during the past year were more numerous and frequent than in the preceding year, and I am glad to say, the results of these contacts — some of them which are still in the process of active negotiations will therefore take some time to bear fruit — have also been somewhat better. The labour problem, which is usually one which weighs greatly on the minds of outside investors, has, I am glad to say, presented no serious difficulties during the year under report. Other, and more serious difficulties, however, there have been, and it is about these difficulties only that I propose to speak today. I trust I will not be misunderstood as a pessimistic prophet of doom for choosing to dwell exclusively on the dark side of the picture.

5. The first and the foremost factor which has tended to—and still continues—to engender doubts and difficulties in the minds of outside capitalists and industrial entrepreneurs so far as large-scale investment in Kerala is concerned, is the "alleged" instability in the political situation in the State, I use the word "alleged" in this connection deliberately and advisedly, as I do not know anything about the real state of affairs so far as this particular aspect is concerned. I do know, however, that doubts and suspicions regarding political stability, however baseless they are, and however hazy and incoherent in shape and content, are nevertheless insidious and destructive in their cumulative effect on the minds of business people who are invited to risk the investment of appreciably large amounts of capital in industrial ventures of the operation of this political "instability" factor so far as Kerala is concerned, is that, contrary to the ordinary laws of physics, the visibility — and therefore, unfortunately, the proportion to the distance at which the onlooker is placed. The result is that the slightest ripple, the gentlest whisper, the most innocuous gesture, emanating from the political front in Kerala have a disastrous habit of swelling into shapes and on the eyes and ears of people outside the State, and more especially the business community who are quite understanding that on one of the occasions when doubts and suspicions regarding the Kerala political situation happened to make their periodic and unfortunately, all too frequent, appearances in Delhi, a leading businessman, with whom I had been trying to induce to come to Kerala asked me quite bluntly whether I did not think that it would be safer for him to wait for a few days more to make up his mind — that was, he told me, till after the President's rule for the State had been declared in a formal announcement which he thought was imminent! We in Kerala of course

know that nothing could have been more ridiculous than this, but I sincerely hope and trust that neither our political workers nor the press and public of our State will treat this as a ludicrous or insignificant incident to be laughed away. I aver solemnly that this is a matter which deserves our serious attention if we wish to ensure an appropriate degree of economic progress in our State. There is a moral to this which is obvious, as it is inescapable, namely, that we in Kerala are dangerously vulnerable.

6. We are vulnerable not only because by a sheer freak of fortune a long and tiresome distance separates us from the seat of Central power and authority in the country, but also because this same distance factor tends to distort the very image of our being to the vision of our friends outside on whose active help and co-operation we depend almost solely for our industrial expansion. It is my humble opinion, therefore, that all of us, from the highest political dignitaries of our State — ministerial and otherwise — to the smallest worker should refrain from saying or doing anything which, however innocent or innocuous it might look to our own domestic eyes, would lend itself to distortion and exaggeration in quarters outside which matter to us most. I hope you will not consider it presumptuous on my part if I were to take this opportunity to make a special appeal to those who are in the forefront of Kerala politics to bear in mind that, today, economics is our prime problem, and that, in this view, we just cannot afford to take the risk of being hurt by placing ourselves continuously in this vulnerable position. The crucial — and in a sense fundamental — economic problem of our State today is the problem of attracting outside capital for our industrial expansion, which alone can help us to tackle our twin problems of poverty and unemployment. In the solution of this problem we are dependent almost totally and completely on the creation of a proper climate of political stability and unity in the State, which would give businessmen from outside the necessary confidence and courage to risk investing their capital in industrial enterprises in our State. I beg leave to say with all the emphasis at my command that to ignore this will be at our peril.

7. Before I leave this subject I crave your indulgence for being allowed to cite one more example of how the creation, and fostering, of the necessary "climate" for outside industrial capital to flow into our State can be impeded by even the most well-meaning among us. The example that I am going to give you pertains to the negotiations that I had been conducting on behalf of the Corporation during the past year for inducing one of the biggest business houses in India to invest a risk capital of a few crores of rupees in the expansion scheme of our Travancore Titanium Products Ltd., who had been granted, more than two years ago, an industrial licence for increasing their daily output from 18 tons of titanium dioxide to 68 tons. On two different occasions during my negotiations, when I had come to a stage where success was not only in sight, but could easily have been achieved, a spanner was thrown into the works — not deliberately perhaps — by an eminent citizen of Kerala agitating each time at the highest quarters in New Delhi, the point that the success of these negotiations would mean the swallowing up of a public sector concern by a unit of the private sector. The two eminent gentlemen who had initiated this move in the midst of my delicate negotiations had not unfortunately paused to ascertain the relevant facts. If they had done so they would have known that the balance of advantage for our State would certainly have lain in our inducing this firm to collaborate with our Government in working this scheme on terms and conditions which could have been settled to the satisfaction of both parties. However, my negotiations had to be suspended twice on account of this opposition, which

was presumably based on "ideological" grounds. Finally, when the threads were taken up again I found that the party concerned had cooled off — a not unnatural or surprising sequel — and, very politely and quietly, they withdrew their offer. We are now left still searching high and low, and far and wide, for a suitable collaborator to work this very expensive, but highly profitable, scheme. The moral of this is obvious, namely, that you cannot have the cake and eat it too. It is perhaps incongruous to speak of cake in present conditions in Kerala; so, if I may change over to its poor country-cousin, bread, it is good to remember that the proverbial half a loaf is certainly very much better than none. If we ignore or forget this almost arithmetically true aphorism in our ideological or other enthusiasm in the economic field we are bound to suffer, and we shall have only ourselves to thank, for it.

8. A very important factor which continues to operate as an effective handicap in the way of speedy industrialisation in Kerala is the paucity of industrial licences which can be implemented in our State. I must make it quite clear that by this I do not mean that the Central Government have not treated applications for industrial licences from Kerala with sympathy and expedition. Indeed they have done so, and I wish to take this opportunity to place on record our Corporation's appreciation of and gratefulness for, this. I must however, repeat now, what I ventured to say in my last year's speech in this connection, namely, that in the case of a State like Kerala, where local capital and entrepreneurship are almost totally absent, a solution to our large-scale industrial development problem must necessarily be looked for in the direction of positive intervention on our behalf and in our favour by the one all-powerful authority in our controlled economy of today, namely, the Central Government. It just will not do for the Central Government to be merely liberal and sympathetic — as they undoubtedly are — in the disposal of such applications as come forward from Kerala or elsewhere for the setting up of industries in this State. I suggested last year — and I repeat this suggestion again today — that the Central Government must be persuaded to take steps to ensure that, out of the large number of industrial licences granted throughout the country, an adequate number is reserved for and diverted to Kerala till such time as our backward State attains a minimum level of industrialisation suited to the requirements of its relatively large and poor population.

9. Action on these lines to set right geographical imbalances in the distribution of industrial potential is by no means so revolutionary or so unorthodox as it may sound. You will be interested to know in this connection that, recently the Indian Investment Centre — one of the leading organisations in this country which has been set up by the Government of India for promoting industrial investment — conducted a special study of this problem of imbalances in the geographical distribution of industries in India, with a view to locating specific areas where industrial development has been lagging behind and is essential and feasible. The Centre's recommendations are now understood to be under active consideration by the Government of India. I would suggest that the Government of Kerala should take this opportunity to press our case on the Central Government for special and preferential treatment with renewed strength.

10. Besides industrial licences there is another field in which the Central Government can assist Kerala to an appreciable extent in the matter of acceleration of our industrial development. This is by the establishment of a Free-Trade Zone near about Cochin or any other suitable port in Kerala. This will help the establishment of many engineering indus-

November 1, 1963

tries such as copper rods, sheets, circles and tubes, portable machine tools, sewing machine needles, typewriters, duplicators, water-coolers etc., the manufacture of which is dependent on imported raw material in short supply. A Free-Trade Zone is, as is well-known, "an area, separated from the rest of the country, in which foreign merchandise, machinery, raw materials, processed goods and finished products can be brought in and exported 'without customs duty'. Its main purpose is to encourage the exports of the country by reducing the restrictions and red tape involved in import and export procedures". There are Free-Trade Zones even in advanced industrial countries like the U.S.A. round about the great port cities of New York, Boston and Philadelphia. In India we have one at Khandla, and it is understood that the feasibility of having one at Shewa-Neva seven miles east of Bombay harbour is under active consideration at present. Kerala would, from many points of view, be an ideal place to locate a Free-Trade Zone, and I trust this matter will be taken up seriously by the Government of Kerala with the Central Government.

11. It may be useful, before I leave this topic of geographical imbalances, if I place before you certain observations that have been made by a celebrated American economist, Mr. W. W. Rostow, Counsellor and Chairman of the Policy Planning Council of the United States Department of State in an article entitled "The question of Rich and Poor". Starting with the observation that "the most critical difference among nations is not whether they are rich or poor, but whether they are regularly growing or stagnant". Mr. Rostow goes on to point out that "within most of the major nations, whatever their average level of income, there are rich and poor areas". Italy and France for example, Mr. Rostow says, still have special problems of under-development, in their southern regions; so has Brazil in her north-east region. And these problems of the under-developed areas in each of these countries are being tackled with concentrated vigour by the respective government concerned. It need, therefore, cause no special alarm or uneasiness if Kerala also, by coincidence, located in the southern corner of India, which has a similar problem of under-development, and possibly in a more acute form, seeks to impress on the Central Government the urgent and pressing need for special steps being taken to solve this problem urgently and effectively. The per capita annual income in Kerala is only Rs. 124, as against the national figure of Rs. 544. This latter figure is itself piteously low in all conscience, but I submit that, as the Kerala figure is even lower—I would say, dangerously lower—there should be no hesitation on the part of the Government of India or of the Central Planning Commission to give top priority to Kerala's case, the case of the "weak and needy", in the words of our Central Finance Minister, in the great family that India represents.

12. It is pertinent to recall here another significant Statement made by Mr. Rostow in the article from which I have been quoting; it is this —

"In short, the critical problems of difference in level of income and of growth rate may not lie as between different nations but **within developing nations themselves**." It would almost seem — but of course it is not true — that Mr. Rostow might have had Kerala in mind when he said this. I would, therefore, very respectfully, and with all the emphasis at my command, again urge the Government of Kerala to take up this matter with the Central Government and try and persuade them to give a re-orientation to their industrial development policy, and start on an effective scheme of giving special and preferential treatment, in the matter of industrial licences, to backward States like Kerala.

13. Another step that I would strongly urge the Govern-

ment of Kerala to take as early as possible in connection with the creation of a proper climate for the attraction of outside industrial capital into the State is the adoption of a rational and effective scheme for the supply of adequate amount of electric power to industrial units, without the interruptions that have of late become a normal incident of our electric supply system. Cheap electricity is about the biggest attraction we can offer to the industrial entrepreneurs from outside, but we have now arrived at the stage where talking of the quantity we can supply and the cheapness of our rates alone will not cut much ice with the managements of factories. To them, an uninterrupted supply is of equal, if not, greater, importance and, much as we may aver that the interruptions are due, almost entirely, to factor beyond our control, such as, fall in the level of our reservoirs at our Hydro-Electric stations on account of drop in the rainfall, we must face the problem squarely in the face and set about remedying this defect, which looks as if it is going to be an almost perennial one, by setting up thermal stations of the requisite capacity wherever possible and necessary. I trust this matter also will claim the urgent attention of the Government of Kerala.

14. It is possible that my repeated references and appeals in the course of this speech, to the two Governments concerned—Kerala Government and the Government of India—might have jarred on your ears as inappropriate, coming from the Chairman of an Industrial Development Corporation registered as a private limited company whose primary function is the development of large-scale industries in the private sector. In case it has, let me in self-defence quote again from Mr. Rostow, who, as I said, is a top-ranking official of the Government of the United States of America, which of course, as is well known, is deeply attached to the virtues of private enterprise. Here is what Mr Rostow says:—

"We believe national programming of the development process is required as a basis both for the domestic mobilisation of resources and effective foreign aid. National programs are needed because, as Adam Smith noted long ago—when prescribing for under-developed Britain of the eighteenth century—governments must help create their basic frame work within which a modern economy can develop."

"It is the Government which must organise and finance the education system and reshape it to the nation's changing needs. It is the government which must lay out and, in most cases, finance the fundamental social overhead projects—highways, irrigation projects, and the like—on which private agricultural and industrial development depends. It is the government which must solve problems of land tenure and create the frame work within which agricultural productivity can be improved by the individual peasant."

"It is the government which must assure that the savings of the community are effectively mobilised by equitable taxation, so that social overhead projects can be financed without inflation and on terms the people will regard as fair. It is the government which must devise policies which insure that the foreign accounts are kept in balance and that the development effort is not frustrated by a foreign exchange crisis."

"These minimal functions were performed by governments even in nations most deeply committed to private enterprises, blessed with ample land and an old tradition of private entrepreneurship—like Canada and the United States."

Note : This does not purport to be a record of the proceedings of the Annual General Meeting.

Gunning for Galbraith

The New Argument in Economics: The Public Versus The Private Sector: Edited by Helmut Schoeck and James W. Wiggins; Published by D. Van Nostrand Company, Inc., Princeton, New Jersey; Pp. 264; Price \$5.95.

THIS COLLECTION of twelve articles on the philosophy and politics of the public sector provides controversial reading matter of a most stimulating kind. It is in the nature of a symposium to which have contributed men from a variety of disciplines: Economics, Statistics, Business Administration, History, Law, Philosophy, Political Science and Sociology. President W. Allen Wallis of the University of Rochester, Karl Brandt of Stanford University, a former Federal Trade Commissioner, Lowell B. Mason, Wilson E. Schmidt of the George Washington University and Arthur A. Shenfield, Economic Director of the Federation of British Industries, are among those who have taken part in this symposium.

The central theme of the discussion is a complete rejection of the argument that a political rather than market allocation of the resources required to maintain and expand the essential services which the people need is called for because of the alleged imbalance resulting from excessive private expenditures or 'luxuries' and trivialities. In this sense the contributions serve to emphasize the strength of that part of the American academic opinion which is opposed to, say, the thesis of Galbraith in "The Affluent Society". But the symposium has set out to do much more than rebut the ideas of a particular professor. Its purpose seems to be to marshal analysis and arguments against the inarticulate major premise of much of present-day government action in the United States and elsewhere in the direction of a continued shift in favour of "an ever-increasing public, tax-supported and governmentally-controlled or directed sector" of a mixed economy. With what great vigour the counter-attack is mounted may be appreciated from this quotation from the Preface by the Editors:

Adoration of Public Sector

"The title for the volume was chosen in irony, of course. The 'new argument' in economics and public policy is, as anyone familiar with economic history knows, even older than pre-nineteenth-century socialism. Mercantilism and sumptuary laws, the latter even found in rather undeveloped tribal societies, anticipated many of the notions now revived in the present adoration of the 'public sector'."

This line of attack is further elaborated in the first essay in the collection by President Wallis. He observes:

"Socialism has traditionally been associated with government ownership of land and capital. The modern movement would continue a large measure of private ownership and private enterprise, but seeks to elaborate and to extend control of private activities and to confiscate a large and growing part of private products. This is carried on partly in the name of unmet social needs at home, and partly in the name of national security. It is in many respects on all fours with mercantilism, the economic policy followed by England and other European countries in the seventeenth and eighteenth centuries, which was a major cause of the American Revolution. Indeed, the movement to enlarge the 'public sector' represents perhaps the most powerful reactionary force that has arisen since the departure of mercantilism from this country with the adoption of the Constitution in 1789."

The discussion here should, of course, provide rich mate-

rial in our own country for Rajaji writing in the 'Swarajya' or for the Forum of Free Enterprise for its publications and publicity. But it would be a mistake to dismiss this discussion as an extreme anti-public sector position which is isolated from the mainstream of current ideas and action. Recent trends in U.S. Congressional opinion with regard to some aspects of the foreign aid programme have demonstrated how strong and substantial is the distrust of the public sector in influential American minds. This apart, the essays here have certainly thrown out a wealth of stimulating and provocative thoughts on the important problem of the role of the State in the economic life of the community. Here are some illustrative quotations:

Pressure Groups

"The expansion of the Federal Government's welfare activities has led to a great increase in the importance of pressure groups. Many of the programmes for expansion of the public sector get their effective backing, not from those who would receive the service, but from those who would sell it to the government As a matter of fact, as government welfare programmes have fallen more and more under the control of pressure groups, the real problems have tended to be neglected. The consideration of depressed-areas relief illustrates this. There is not a depressed-area problem, but many different problems, with varied causes. Some of the most serious of these problems are in the so-called 'hillbilly' areas — the mountain regions of certain Southern and border States. These groups for the most part lack sufficient voting strength to attract any substantial federal funds. Federal funds flow instead to areas where breakdown of law and order, lack of even justice in the courts and administrative agencies, demoralisation of the labour force, and exploitation by state and local governments have driven industry away. Federal funds tend to subsidize and perpetuate the causes of the difficulty." — W. Allen Wallis.

"The decline of confidence in the competence of the individual has in fact been the basic reason for the vast extension of the state's regulatory activities. States license teachers because local school boards would be incompetent to hire good teachers. The FTC compels the labelling of fabrics because the consumer could not detect substitutions of inferior goods. The individual is compelled to pay Social Security taxes because he would not or could not make provision for his personal security. Airline pilots are certified by the CAB, because the airlines would not insist upon well-qualified pilots. Elevators are inspected because owners of apartment and office buildings would let them become dangerous. Stock prospectuses must be approved by the SEC, for investors would be susceptible to fraudulent claims. And so it goes.

"This decline in faith in the individual lurks behind the great majority of public controls. Let the reader ask of any such control: Is it necessary if men are informed and in comfortable economic circumstances? If the answer is no, the control assumes incompetence Since there is no absolute standard of competence, there is no limit to the possible scope of this extension of public controls. It is at least as difficult for an ordinary person to tell whether his television set is properly constructed as it is to tell whether the surgeon is skilful; so why not regulate the production of television sets? It is at least as difficult for this person to judge which universities offer satisfactory training for a Ph.D. in economics as it is to judge whether a house has been built

November 1, 1963

properly; so why not regulate the granting of advanced degrees?

"It is all too evident that by a proper use of statistics — and what is proper in the area of public opinion and policy differs remarkably from what is proper in a college course in statistics — one can continuously enlarge the area of individual incompetence. What is not so evident to many is that the same philosophy and technique lends itself to areas other than economic life, and in particular to politics.

"An individual who cannot choose a barber still chooses his Congressman, a choice many would have deemed more difficult. (Why then has there been a secular improvement in refrigerators, which we are told we cannot judge, but not in aldermen?). An individual who cannot understand the cost of instalment credit when he buys an automobile (or so certain probable legislation assumes) is quite able to judge the costs and returns of the foreign-aid programme, the farm programme, and the highway programme. An anti-democratic element is clearly immanent in the position of the critics of individual competence.

"If we accept, as I do, the increasing distrust of the individual as the primary source of the growth of the state's control of economic and social life, we still face the questions: Is the distrust justified, and is the remedy of public control appropriate?

"In a sense, the distrust of the individual is always justifiable. If we merely pose, as public policy has posed, the question: Do some people act foolishly or blindly in any area? — the answer will always be, 'of course'. Whatever standard of wise behaviour we accept, some people will fail to meet it. Someone will always starve amidst plenty, maltreat children out of thoughtlessness or sadism, buy fraudulent wares, etc. And since the standard of wise conduct is both arbitrary and flexible upward, this will always be true.

Reported Episode

"The magnitude of the shortcomings of individuals, however, cannot be ascertained so simply. Would a large number of parents fail to send their children to school in the absence of compulsory school laws? The proponents of such legislation assert this to be the case, but they offer no evidence. Would city land-use pattern be chaotic (whatever that means) in the absence of zoning? It is so asserted, but the evidence has not been published. The history of reform rests much more upon shockingly reported episodes than upon documented failures of numerous individuals.

"Nor, in the reckoning, is any attention paid to possible shortcomings of the state in seeking to remedy the deficiencies of some individuals. These shortcomings may be illustrated by one state activity: the licensing of teachers. Local citizens and their school boards were deemed incapable of choosing competent teachers; so state licences must be obtained. The states have largely eliminated the ability of local school boards to hire untrained teachers or nephews of school board members, but only at real cost:

- The imposition of a set of course requirements that have the effect of reducing the competence of teachers.
- The exclusion of a large number of highly qualified teachers (the liberal arts graduates).
- The imposition of tenure systems that make it virtually impossible to discharge incompetent teachers.

"There is no need to reach here a decision on whether the state's control of teachers has led to a net improvement or

deterioration of education; the point is that deficiencies are at least as inherent in the political process as in the behaviour of individuals that it seeks to remedy." — George J. Stigler.

"It is a widely adopted, supposedly progressive and wise attitude of the American public that, when facing the alternative of having certain economic services performed either by private or by public enterprise, one should not be dogmatic in favour of either one form of enterprise, but should be open-minded and choose the one that can perform better. In reality the choice is seldom, if ever, made by this test. Compared with private enterprise, public enterprise has very decisive weaknesses. Even if these were generally recognized, they would probably not dissuade a part of the electorate from endorsing the choice of public enterprise, but in many instances they would prevent the majority decision in its favour.

Innovation at a Discount

"Public enterprise operates usually as a monopoly, i.e., without the constant test of its performance by competition. In most instances it does not have to cover its full costs of operation because the public underwrites its losses. It has a minimum of incentives to improve its efficiency by innovation of equipment or procedure because such managerial decisions involve not only the opportunity of gain, but the risk of losses, which civil servants are not supposed to take unless they have received from superior officials, upon application, a full authorization to go ahead. This inhibition is worst where public enterprise is operated by civil servants with security of tenure, but even where the management is engaged by contract with a limited renewable term, the tendency is powerful to follow common traditional rules and standard procedures. The manager of a public enterprise is not, and therefore cannot — indeed must not — act like a free, self-reliant entrepreneur, but must act as an employee who is dependent on the political approval of his superiors and, in the end, of the public itself.

"Economic theory generally offers no guidance for judging the differential performance of public and private enterprise. But we can point to certain crucial weaknesses of public economic action. The tax-fed public sector within the frame of political democracy is superimposed upon the porting structure of the private economy while it is simultaneously interfering and competing with the enterprises that constitute the private economy.

"The greatest weakness of a major part of the public sector lies in the segregation of the bearing of costs from the reaping of benefits, particularly at the federal and state levels of government. However, often this is true even at the local level of Government. Since the economic activities of the public sector expand in relation to political control of votes, some groups of people are always tempted to try to get benefits without sharing in the costs. Because this requires little more than pressure-group tactics, it is a happy hunting ground for local and regional politicians. In the long run, of course, it is an illusion for beneficiaries to expect to escape entirely sharing the costs. But their successful political pressures frequently lead to substantial waste of the nation's resources and to unwarranted expenditures." — Karl Brandt.

"In 'The Affluent Society', John Kenneth Galbraith persuasively refurbishes the arguments in favour of widening the public and narrowing the private sector of our economy. Let me examine some of his major ideas.

"Galbraith argues foremost that there is an 'imbalance'

November 1, 1963

between the public and the private sector. Economists have overlooked that 'imbalance' because their obsolete 'conventional wisdom' leads them to focus on 'scarcity', whereas we have 'affluence'.

"Galbraith's argument here rests on his confusion or equivocation between the technical meaning of 'scarcity' — i.e., need for allocation — and the colloquial meaning — i.e., insufficiency, or poverty. If the two meanings of 'scarcity' are separated, his argument is seen to be without merit.

"Economists are aware that our affluence has increased (colloquial meaning); but affluence does not make rational allocation obsolete (technical meaning). Allocation, the subject matter of economics — the problem: how can we make the best use of our resources? — becomes 'obsolete' only with the millennium. For, though we can and do produce a great deal in temporal society, we cannot produce enough to satisfy all desires; thus it remains rational to allocate — i.e., to choose between alternative satisfactions, and to economize — i.e., to satisfy desires with the least expenditure of resources.

Equivocation Not Original

"Indeed, Galbraith himself advocates forcible reallocation of resources from the private to the public sector, thus implying that the scarcity, which makes allocation (choice) necessary, and which he is at pains to deny, is still with us. In his equivocation between the technical and colloquial meanings of 'scarcity', Galbraith is not altogether original. He follows the 'conventional wisdom' of millenarians, utopians, and Marxians. However, the chiliastic sects realized that there is scarcity in temporal society; and the Marxists realized that there is scarcity in non-Communist society. The discovery that scarcity is 'obsolete' in our society is original with Galbraith, but no improvement on 'conventional wisdom'. (The supposed disappearance of scarcity leads Galbraith to conclude that we need no longer emphasize productivity — a consistent conclusion, as dangerous as it is wrong).

"Galbraith's 'imbalance' itself turns out to be a rhetorical device disguised as an argument. No indication is given — let alone substantiated — as to where a 'balance' could be found, or by what means one might locate it. Hence the word 'imbalance' does no more than denote Galbraith's dissatisfaction with the present allocation of resources between the public and the private sector; his conclusion merely restates that premise; and his reasoning but affirms what it is supposed to prove, namely, that the public sector should be expanded.

"(Galbraith suggests, often with striking illustrations, that specific public services are lagging. He takes it for granted that the lag is caused by insufficient financing. The term 'imbalance' helps to evade analysis of the distribution and of the effectiveness of the use of money within the public sector — the actual problems causing most of the 'deficiencies' Galbraith mentions. More money is not likely to improve matters and may make them worse. Reorganization is called for).

"Economists took the idea of balance from mechanics to describe a state without an endogenous tendency to change (equilibrium). Galbraith gives it a laudatory sense — balance becomes an unspecified but ideal distribution between public and private sectors — and proceeds to use the descriptive term perscriptively. By this device, he retains the authority the term derived from its objective reference, though he has surreptitiously cut it adrift. This public relations stratagem has worked well; in defense of reason, I suggest that from now on, unless an author tells us how he determines 'im-

balance' in the economy, we ought to grant only that it exists in his mind.

"Colin Clark has tried to prove that we suffer from the opposite imbalance, that the public sector is over-expanded whenever it uses (or, better, attempts to use) more than 25 per cent of the national income. When that happens, he thinks, the ostensive welfare goals are defeated, and the economy generally suffers. At least Clark tells how to locate his imbalance and its effects. He tries to prove a meaningful proposition. I do not think he succeeds, but Galbraith does not even try — and for good reason; he does not have a genuine proposition to which evidence could be relevant". — Earnest Van Den Haag.

".... For the past dozen years, I have centered attention on a fascinating phenomenon in the life of government bureaus, which burgeons for want of a better name under what I call Mason's Law. It is a law concerning the unauthorized growth of authority. I mean the constant tendency of government agencies to aggrandize their coercive powers far beyond what Congress gave them and often beyond what was permitted by our Constitution, as the words and language of that basic law were understood and accepted when it was adopted.

"Whatever views my colleagues have regarding the outcome of a social order based on a gorged public sector, all have assumed that the growth was created by an outside source, the legislative. My paper deals with a growth that is generally spontaneous within the agency itself. It is not a growth of function, but a growth of power. Let me give three simple examples to illustrate:

".... The function of the Federal Trade Commission is to stop unfair acts and practices in commerce and to compile corporate statistics.

Inquisitorial Power

"But under the guise of carrying out this function, the Commission now assumes the power to presume a man guilty unless he can prove his innocence; it assumes the right to ignore statutes of limitations; a man can be charged with offenses dating so far back that he would never be able to marshal testimony in his defense; it assumes the power to prosecute a man for doing something that was not declared wrong until after he did it; it assumes the right to ignore facts and infer guilt; and it assumes inquisitorial powers. Because there is no such material entity as 'the state' — only a horde of little human beings running around behind a great big fictitious label — personal power feeds on public authority. One set of administrative officers, calling themselves 'the state', subjects another set of humans called private citizens to inquisition, penalties, and even imprisonment without recourse to the courts. When a prosecutor is authorized by statute to sit in judgment on his own case, it is impossible to stop the growth of personal power never originally contemplated by Congress when it created his function.

"Much of this tyranny in trade regulation stems from the bureaucratic notion that the public sector can force the market place to protect the dreamy, the ill-favoured, the incompetent, and even the just plain lazy. Even with a bloated public sector and all the tyrannous powers outlined above, this will never be accomplished." — Lowell Blake Mason.

The discussion or rather discussions contained between the covers of this volume range over such wide and varied ground that they defy summary. Hence this reviewer has resorted to extensive quotations in the hope that they will adequately capture for the prospective reader the savour of these studies and whet his appetite for the full course.

Readers' Roundtable

TAXING RIGHTS SHARES

Sir, — With regard to the clarification issued by the Central Board of Revenue concerning "Tax on value of Rights Shares", it is very difficult to understand it. A clarification can be with regard to a matter which is not itself clear. Until very recently there was hardly any question of any tax being levied on the allottees of rights shares. The question of tax arose only if such shares were transferred in which case the difference between the value paid by the shareholder for the acquisition of the rights and the value realised by him on its sale became exigible to tax according as he was an investor or a dealer. In the first case it was a capital gain and in the second it was a tax on income.

Recently, however, in some cases the Income Tax Officers began taxing the difference as a revenue receipt in all cases irrespective of whether the assessee was an investor or a dealer and this was done on the accrual basis.

Far from clearing up the position, the clarification issued by the C.B.R. imposes the tax liability in all cases where the recipient of the rights is a dealer in shares or an employee of the company or a director thereof or a person having substantial interest in such company. The relatives of last two categories also come in for assessment.

In my opinion the whole clarification is misconceived. There is no warrant whatever for taxing an employee of a company who receives the rights shares not 'qua' employee but as a shareholder of the company. The benefit goes to him not because he is an employee, but as a shareholder of the company. The benefit which he gets has nothing to do with his service to the company, but it is in proportion to the share of his capital to the total paid up equity capital of the company in common with other shareholders. It is also difficult to understand why relatives of Directors or persons having substantial interest in the company should come in for a discriminatory treatment. Nothing is given by the company to them because they are relatives of directors or of persons having substantial interest in the company. Neither the directors nor the persons aforesaid benefit by such allotments. In my opinion the recourse to Section 2(24)(iii)(iv) is entirely unjustified in this context.

It is indeed most surprising that the Central Board of Revenue, instead of restraining the Income Tax authorities in Bombay from proceeding in the way in which they were doing, should have widened the Income Tax net by subjecting to tax the issue of rights shares in the hands of such shareholders also.

The climate for investment is not too congenial and Government has taken some active steps to revive the investment market. The progress in this matter is rather tardy; but the objective of Government is clear enough. It is, therefore, most unfortunate that on a matter of this nature with which the investor is intimately concerned, the C.B.R. should issue a so-called clarification which in effect means a new imposition.

J. J. ASHAR
Chairman,

BOMBAY: The Company Law Association of India

SUGAR SHORTAGE

Sir—Acute shortage of sugar and steady price increases have brought on controls on movement as well as prices, but the position will remain fluid. It is obvious that the problem has arisen because of Central Government's decision to curtail the production by 10 per cent in 1961-62.

It is widely known that, whenever controls are imposed, both production and consumption have shown a marked tendency to fall and as soon as controls are lifted or their rigidity relaxed production and consumption have shown a tendency

to increase. For instance, during the last five years of controls between 1942-47 production declined from 1.17 million tons to 950,000 tons. Consumption also fell from 1.23 million tons to 972,000 tons. Sugar was decontrolled in December, 1947. During the next two seasons production was much higher and there was also a spectacular increase in consumption from 776,000 tons to 1.182 million tons — a rise of over 50 per cent. In September, 1949 controls were again reimposed. Production once more declined to 978,000 tons against a little above one million tons during the previous year. After the control policy was modified and incentives were granted, production again increased to 1.483 million tons.

In 1952-53 sugar was completely decontrolled. As a result, both consumption and production continued to rise till 1958 when it approached a level of 2 million tons. In July 1958 controls were again reimposed and the following season production declined to 1.92 million tons from 1.98 million tons achieved during the previous year. In October, 1959 policy of controls was modified and incentives for higher production were granted. Production increased and reached the peak figure of 2.98 million tons. After decontrol in September, 1961 the annual consumption rose from about 2 million tons to 2.5 million tons in the current year.

Who does not know that controls have never offered any lasting remedy for rising prices? In fact they tend to aggravate the situation. Rise in production alone can keep prices in check and satisfy the increasing demand for sugar which is a welcome corollary of the rising living standards of the people. The authorities may reasonably be expected to consider as to how to offer the necessary incentives both to the growers of sugar cane and the sugar factories to maximise production with which the country can meet the internal demand and also to export sugar to earn the much needed valuable foreign exchange required for defence as well as development.

NEW DELHI

VIRENDRA AGARWALA

PLANNED WASTE

Sir, — The Prime Minister recently expressed his sense of "fright" at the growth of the Planning Commission. "A grown into a huge organisation with all the departments of Government almost duplicated there, and each one sending in papers to the other. That is the normal habit of Government." In this context, the following figures are revealing:

Between 1952-53 and 1962-63, the number of gazetted officers in the Commission increased from 76 to 265, non-gazetted staff from 126 to 593. Expenditure on officers' salary increased from Rs. 4.8 lakhs to Rs. 24.46 lakhs, and on establishment from Rs. 2.83 lakhs to Rs. 16.5 lakhs.

In the absence of accountability, and no personal stakes, it is but natural that the Planning Commission as also other Governmental officers should be dilatory and indifferent to the colossal wastage of public funds. For instance, a Parliamentary Committee pointed out that out of Rs. 1,044 crores realised as additional taxes during the second Plan, only Rs. 439 crores went for the Plan, the rest having been swallowed up in non-Plan, non-developmental expenditure. The Hindustan Steel Plants had cost Rs. 698 crores till March 31, 1963, and had incurred a loss of Rs. 61.5 crores. It is reported that the fertiliser plant at Rourkela built at a cost of Rs. 26 crores (original estimates Rs. 16 crores) is practically standing idle for over a year!

These and many more items of "planned" wastage and the deadweight of an unproductive bureaucracy (approaching eight million at all levels) are paid for by the people of this poor country through heavy direct and indirect taxes.

BOMBAY

"ARISTIDES"

FIBREGLASS PILKINGTON LIMITED

This announcement is not a Prospectus. Persons interested in full details are requested to obtain copies of the Prospectus which are available from the Registered Office of the Company or from the offices of the Company's Underwriters, Brokers and Bankers.

FIBREGLASS PILKINGTON LIMITED

(Incorporated on 27th day of June 1962 under the Companies Act, 1956).

REGISTERED OFFICE:

9, Wallace Street, Fort, Bombay-1. BR.

EXISTING & PROPOSED ACTIVITIES OF THE COMPANY:

The Company was incorporated on 27th day of June, 1962 as a public Company limited by shares with the objects stated in its Memorandum of Association and with the immediate object of carrying on the business of manufacturers of and merchants in glass fibres and glass fibre products, the three main types of products to be manufactured being:—

1. Glass Wool Insulation. This can be used to preserve heat and cold, to reduce sound and noise, as insulation for boilers, ships, cold stores, refrigerators, air-conditioning equipment, cooking equipment, road and rail transport, and many other varied applications.

2. Glass textile yarns, fabrics and mats which can be used as a basic reinforcement material for the manufacture of glass fibre reinforced plastics, translucent roofing sheets, boat and car bodies, structural parts of road and rail vehicles, containers and many other products. Glass textile yarns can be woven into decorative textiles, coated fabrics and material for the insulation of electrical equipment.

3. Glass staple tissue, which can be used as an anti-corrosive wrapping for pipelines, as a base for bituminous roofing felts and canal lining membrane, and as a spacer in electric batteries, and in many other ways.

The Company holds a number of patents and patent licence and the Technical Consultants of the Company are Fibreglass Limited, England, who are the leading manufacturers of glass fibres in the United Kingdom.

LOCATION OF THE INDUSTRY:

The first plant of the Company will be erected at Thana near Bombay. The Company has purchased two plots of land which together have an area of approximately 50,664 sq. yds. The Company has also entered into an agreement with the Bombay Company (Private) Limited for the purchase of a further plot of adjacent land admeasuring 5,607 sq. yds. approximately.

The site is connected with Thana by road and Thana is directly linked with Bombay by rail.

BOARD OF DIRECTORS

Name, Description & Address:	Occupation		
1. Mr. John Creek (Chairman) British. Ravenhead Works, St. Helens, Lancashire, England.	Managing Director, Fibreglass Limited, England.	5. Mr. Ghanshyam Vishwa Nath Indian. 9, Wallace Street, Fort, Bombay-1. BR.	(1) Chairman, the Bombay Company (Private) Ltd., (2) Director of (a) The Bombay Burmah Trading Corp'n. Ltd. (b) The Lakshmi-Vishnu Cotton Mills Ltd., and other Companies.
2. Mr. Rajendra Ambalal Shah (Alternate for Mr. John Creek) Indian. State Bank Building Annexe Bank Street, Bombay.	(1) Solicitor & Partner of Crawford Bayley & Co., Solicitors. (2) Director of (a) Suhrid Geigy Ltd. (b) Rockwell India Ltd. and other Companies.	6. Mr. Dipti Kumar Basu Indian. National Insurance Building Parliament Street, New Delhi.	(1) Solicitor & Partner of (a) Orr Dignam & Co., Calcutta & New Delhi. (b) King and Partridge, Madras, Ootacamund & Bangalore.
3. Mr. Muthiah Annamalai Chidambaram Indian. Catholic Centre, No. 6, Armenian Street, Madras-1.	(1) Chairman of South India Steel & Sugars Ltd., (2) Director of (a) Indian Aluminium Co. Ltd., (b) Machinery Manufacturers' Corp'n Ltd., and other Companies.		(2) Director of (a) Goodyear India Ltd., (b) Arbor Acres Farms India Ltd., and other Companies.
4. Mr. Nityanand Mangesh Wagle Indian. 1, Forbes Street, Bombay.	(1) Managing Director of Greaves Cotton & Co. Ltd. (2) Director of (a) Bombay Dyeing & Manufacturing Co. Ltd. (b) Central Bank of India Ltd., and other Companies.	7. Mr. Reginald Gordon Hayes British 9, Wallace Street, Fort, Bombay-1. BR.	Managing Director, Fibreglass Pilkington Limited.
		MANAGING DIRECTOR Mr. Reginald Gordon Hayes, 9, Wallace Street, Fort, BOMBAY-1. BR.	

SHARE CAPITAL

	Rs.
Authorised	
25,00,000 Equity Shares of Rs. 10/- each	2,50,00,000
Issued, Subscribed and Fully paid:	
7 Equity Shares of Rs. 10/- each	70
Present Issue	
11,99,993 Equity Shares of Rs. 10/- each	1,19,99,930
	<u>1,20,00,000</u>

Out of the Present Issue the following have agreed to take up shares as follows:

(i) Fibreglass Limited U.K.	60,00,000
(ii) The Bombay Company (Private) Ltd.	4,80,000
(iii) Directors, Friends and Associates	3,19,930

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION

5,20,000 Equity Shares of Rs. 10/- each (on which Rs. 5/- are payable on application)	52,00,000
	<u>Rs. 1,19,99,930</u>

DATE OF THE OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The Subscription List will open at the commencement of banking hours on 11th November, 1963, and will close at the close of banking hours on 20th November, 1963 or earlier at the discretion of the Directors but not earlier than the close of Banking hours on 13th November, 1963.

COPIES OF APPLICATION FORMS and PROSPECTUS CAN BE OBTAINED FROM THE REGISTERED OFFICE OF THE COMPANY OR FROM THE UNDER MENTIONED UNDERWRITERS, BROKERS AND BANKERS.

UNDERWRITERS

1. The Bank of India Limited, Mahatma Gandhi Road, Bombay-1. BR.
2. The Chartered Bank, 23/25, Mahatma Gandhi Road, Bombay-1. BR.
3. Place, Siddons & Gough (Private) Ltd., 6, Lyons Range, Calcutta-1.

Messrs. M. Najappaiah Jahgirdar, 181, Cavalry Road, Bangalore-1.

THE MYSORE KIRLOSKAR LTD.
Yantrapur, P. O. Harihar

NOTICE

NOTICE is hereby given that the Twentysecond Annual General Meeting of the Company will be held on Saturday the 23rd November, 1963 at 4-00 P.M. (I.S.T.) at the Registered Office of the Company at Harihar to transact the business, the details of which have been made known to the share holders separately by notice sent along with the Balance Sheet and Profit and Loss account and Directors Report.

The Share Transfer Books and Membership Register shall remain closed from the 9th November, 1963 to 23rd November, 1963 (both days inclusive).

By Order of the Board
For THE MYSORE KIRLOSKAR LIMITED
V. K. BODAS
ASST. SECRETARY.

Dated : 21st Sept. '63.

ANNOUNCEMENT REGARDING PROPOSED ISSUE OF CAPITAL

This is only an announcement and not a prospectus

Applications are invited on the basis of the Prospectus, copies whereof are available from the Company's Bankers, Underwriters and Brokers.

A copy of this Prospectus together with the documents specified therein has been duly delivered to the Registrar of Companies, Madras, for registration as required by Section 60 of the Companies Act, 1 of 1956.

Consent of the Central Government has been obtained to this issue by an order, a complete copy of which is open for inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed in regard to them.

An Industrial Licence (bearing No. L/34(6)/12/60/L/IND dated 15th July 1960 together with an amendment letter No. 6 (58) L. ind 60 dated 5th November 1960) has been obtained from the Central Government for the establishment of this new industrial undertaking at Madras (Porur, Saidapet Taluk, Chingleput District, Madras State) a copy of which is open for inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or of opinion expressed in regard to it.

Application has been made to the Madras Stock Exchange & an application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation for the shares of the Company.

The Subscription list will open at the commencement of banking hours on 6th November 1963 and will remain open until the close of banking hours on 18th November 1963 unless closed earlier if the issue is oversubscribed or later at the discretion of the Directors but not earlier than the close of the banking hours on 8th November 1963.

W. S. INSULATORS OF INDIA LIMITED

Licensed by Westinghouse

(Incorporated on 23rd August 1961 under the Companies Act, 1956)

SHARE CAPITAL:

	Rs.
(i) Authorised	
50,000 9.5% (free Income-tax payable by the Company, but subject to deduction of taxes at source at the prescribed rates) Cumulative Preference Shares of Rs. 100/- each	50,00,000
15,00,000, Equity shares of Rs. 10/- each	1,50,00,000
	<u>2,00,00,000</u>
(ii) Issued:	
20,000 9.5% (free from Income-tax payable by the Company, but subject to deduction of taxes at source at the prescribed rates) Cumulative Preference Shares of Rs. 100/- each	20,00,000
9,00,000 Equity Shares of Rs. 10/- each	90,00,000
	<u>1,10,00,000</u>

(iii) Subscribed:	
The Promoters, Directors of the Company, their friends and associates have subscribed as under: 51,000 Equity Shares of Rs. 10/- each subscribed and allotted Rs. 5,10,000	
1,50,125 Equity Shares of Rs. 10/- each which will be allotted in full	Rs. 15,01,250 20,11,250

It is a condition of the consent of the Controller of Capital Issues that the above shares shall be non-transferable for a period of one year from the respective dates of allotment thereof.

- (iv) **Capital agreed to be reserved for firm allotment:**
(a) The Technical Collaborators M/s. West-

inghouse Electric International Co. of New York, (U.S.A.) have agreed to subscribe for 23,875 Equity Shares of Rs. 10/- each of the aggregate value of	2,38,750
(b) The Life Insurance Corporation of India, Bombay, against underwriting arrangement with them have agreed to subscribe for 50,000 equity shares of Rs. 10/- each to an aggregate value of	5,00,000
(v) Now offered at par for public Subscription: 20,000 9.5% (free of Company's tax, but subject to deduction of taxes at source at the prescribed rates) Cumulative Preference Shares of Rs. 100/- each	20,00,000
6,25,000 Equity Shares of Rs. 10/- each	62,50,000
	<u>82,50,000</u>

Necessary resolution under Section 81 of the Companies Act, has been passed by the Company in General meeting on 29th October 1962 for the public issue of Capital.

UNDERWRITING:
The entire issue offered to the public for subscription is fully underwritten as follows:

	Class and face value of shares underwritten	
	Equity	Preference
	Shares.	Shares.
	Rs.	Rs.
1. The Madras Industrial Investment Corporation Ltd.	16,00,000	11,50,000
2. The Life Insurance Corporation of India	10,00,000	5,00,000
3. The Industrial Finance Corporation of India	15,00,000	

(Continued on next page)

4. The Punjab National Bank Ltd.	10,00,000	
5. The Canara Bank Ltd.	5,00,000	
6. The Canara Industrial and Banking Syndicate Ltd	2,50,000	2,50,000
7. M/s. H. P. Mehta & Co., Share Brokers, Delhi	3,00,000	
8. M/s. Raja Ram Bhasin & Co., Share Brokers, Delhi	3,00,000	
9. The Oriental Fire and General Insurance Co., Ltd., Bombay		1,00,000
10. M/s. Chitra & Co., Share Brokers, Madras	1,00,000	
11. M/s. Paterson & Co., Share Brokers, Madras	1,00,000	
12. M/s. Subramaniam & Co., Share Brokers, Madras	1,00,000	
	<u>67,50,000</u>	<u>20,00,000</u>

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

TERMS OF PAYMENT

6,25,000 Equity Shares and 20,000 Preference Shares offered for public subscription at par for cash in terms of this Prospectus are payable as follows:

Equity Shares:

On application—Rs. 2/50 per share.

On allotment—(within 2 months from date of allotment) Rs. 2/50 per share.

The balance Rs. 5/- per share payable will be called up in two equal instalments at the discretion of the Directors at an interval of not less than 3 months between the calls, the first of such calls being made not earlier than 4 months from date of allotment.

Preference Shares:

On application—Rs. 25/- per share.

On allotment—Rs. 25/- per share (within two months from date of allotment).

The balance of Rs. 50/- per share payable will be called up in two instalments at the discretion of the Directors at an interval of not less than 3 months between the calls, the first of such calls being made not earlier than 4 months from date of allotment.

The application moneys not utilised will be returned within a period of two months from the date of closing the subscription list or within such extended period as may be found necessary by the Board and agreed to by Government.

The Calls on both the Equity and Preference Shares will be made simultaneously so that at no time the ratio of the paid up Equity Capital to the paid up Preference Capital is less than 9:2.

No shares have been issued at a premium nor are any shares presently to be issued at a premium.

BOARD OF DIRECTORS

OBJECTS

The Company was incorporated on 23rd August 1961 for carrying out the several objects, set out in its Memorandum of Association. The main objects of the Company are as set out in the Memorandum of Association, a printed copy of which is available for inspection and include inter-alia the following:

To manufacture, buy, sell, exchange, alter, improve manipulate, prepare for market, import or export or otherwise deal in all kinds of insulators of all types and of all voltages from low tension to high tension voltages upto 330 K. V. and above, porcelain supports, separators, baffles, fixtures, bushings, condensers of all makes and of all types for all industrial, domestic and other uses, apparatus insulators, condenser bushings, transformers and circuit breakers for voltages upto 330 K. V. and above, distribution transformer bushings, bulk type transformer bushings, capacitor bushings, fuse cutout porcelain, voltage regulator bushings, potential and current transformer bushings, wall bushings, ceramic condensers, switch, bus, station and post insulators for outdoor voltages upto 330 K. V. and above, indoor switch and bus insulators, station porcelain insulators, distribution insulators, guy strain insulators, H. V. and L. V. type insulators, suspension type insulators, line post insulators, spool type insulators upto 330 K. V. and above, telegraph and telephone insulators, insulators for Railway requirements, Insulators for Electronic and Radio Industries, Fuse Units, Outdoor and Indoor Fuse Cutouts of all voltages and ranges, L. T. and H. T. Switchgear insulating materials, switch bases and all kinds of porcelain and other insulating products, disconnecting and air break switches of all types and descriptions.

To carry on the business of manufacturing, buying, selling, reselling, altering, importing, exporting, improving, assembling, distributing lightning arresters, or surge divertors of all voltages and of all types ranging from low tension to high tension voltages upto 330 K. V. and above, distribution type lightning arresters, station type lightning arresters, auto-valve

lightning arresters, encapsulation type lightning arresters and all other types and designs of lightning arresters required for the electrical trade industry, power stations, substations, distribution networks and for all other allied uses.

To carry on the business of manufacture of Porcelain fuse cutouts of all types and Enclosed, open and distribution bypass switches and of all voltages.

SCOPE AND PROSPECTS

Electric Power Generation, Transmission and Distribution in India are to be more than doubled during the third Five-Year Plan. The installed generating capacity by the end of the third Five Year Plan will be 12.69 million K. W. as against 5.7 million K. W. in the Second Five-Year Plan. No large scale transmission and distribution of electrical power is possible without insulators and lightning arresters. The present installed capacity for H. T. and L. T. insulators in the country is about 13,250 tons. However, only about 8,500 tons of Insulators are manufactured. The demand anticipated by 1965 is 30,000 tons and by 1970 it is likely to be about 47,000 tons.

This factory proposes to manufacture High Tension Insulators of all types from 11 K. V. to 220 K. V. Apart from systems, there is a growing demand for Apparatus Insulators like busbar supports, bushings for current, potential and high voltage transformers and for circuit breakers and switchgears. These are at present mainly imported and will have to be met by future production. The company, therefore expects to satisfy to a very large extent the present demand for these products at prices which will be attractive to the consumers.

TECHNICAL COLLABORATION

The Company has concluded a technical collaboration agreement with the approval of the Government of India with U.S.A. The period of the agreement will be for 10 years in the first instance. The Collaborators besides providing the sign and manufacture of licensed products have agreed to train necessary Indian personnel at their works in the U.S.A. The agreement provides for the payment, in two equal instalments of U.S. \$30,000 to "Westinghouse" towards the Know-how charges and for the training of three Indian personnel for a period of 4 months each. The Company will get the benefit of all Westinghouse patents for these products and also of the research continuously carried on by over 6,000 scientists and engineers in the Westinghouse Laboratories, which are spread over the World.

In the field of Electrical Porcelain, over 80% of all major design developments have been made by Westinghouse. A tremendous store of experience goes with the manufacture of Westinghouse Electrical Porcelain.

LOAN CAPITAL

The Industrial Credit and Investment Corporation of India Limited have agreed in principle as per their letter No. PW/12342 dated October 19, 1962 to lend to the Company an amount in foreign currencies equivalent to U.S. \$1,218,000 (about Rs. 58 lakhs) subject to the approval of the Agency for International Development U.S.A. and a rupee loan of Rs. 10 lakhs to meet the capital cost of putting up a plant.

FACTORY SITE

The Company has taken possession of about 40 acres of land sanctioned for acquisition by the Government of Madras in Porur Village, Saidapet Taluk, Chingleput District, Madras State on the St. Thomas Mount-Poonamallee Trunk Road. The site has the advantage of road and rail (metre and broad

gauge) transport facilities. Madras Port facilities can also be availed of for export promotion.

INDUSTRIAL LICENCE

The Government of India have issued an Industrial Licence for the establishment of a new industrial undertaking with a capacity of 2,400 tons per annum of H.T. and L.T. Insulators, Lightning Arresters, Condenser Bushings, etc. on a single shift basis.

The Company also holds an Industrial Licence for the manufacture of Fuse Cutouts, Distribution By-Pass Switches, etc. with a capacity of 1,200 Nos. per annum.

EXPANSION

It may be mentioned that the Company has also received an Industrial Licence for doubling the capacity.

PLANT AND MACHINERY

It is estimated that the total cost of Plant and Machinery will be about Rs. 81.7 lakhs (erected at site). Out of the above Plant and Machinery the equipment to be imported amounting to Rs. 58 lakhs will be paid out of the ICICI loan as aforesaid.

The American Suppliers of Plant and Machinery have offered very favourable delivery periods, which will enable the Plant to go into production at an early date.

IMPORT LICENCE

The Import Licence has been received and further action is being taken to import the machinery.

RAW MATERIALS

Raw materials required like china clay, ball clay (partly), quartz, feldspar, etc. are available in South India; Silicon Carbide and part of ball clay have to be imported. The Company is making necessary arrangements for the timely supply of these raw materials.

POWER AND WATER SUPPLY

The Madras State Electricity Board has agreed to supply electric power to an extent of 1,250 KVA maximum demand. Adequate water is available from wells at site.

PRODUCTION AND PROFITABILITY

Production is expected to commence by the end of 1964. The Plant and machinery to be installed will make this Plant one of the most modern industries in the World. With the Westinghouse collaboration the scheme is expected to be very successful.

TAX BENEFITS

The Company will be entitled to the tax benefits under Section 33 and 84 of the Income-tax Act, 1961 and the Shareholders will be entitled to the benefits under Section 85 of the above Act. It may also be noted that the shareholders, who are Companies, will be entitled to exemption from Super-tax under Section 99 (i) (iv) of the Income-tax Act, 1961.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allot shares offered by this prospectus to the public for subscription is Rs. 50,00,000. Subscription of this amount is assured in term of the underwriting arrangement referred to below.

UNDERWRITING COMMISSION AND BROKERAGE

Underwriting Commission at the rate of 2½ per cent on the nominal value of the share underwritten is payable to the Underwriters. In addition to the said commission, brokerage at the rate of 1 per cent on the nominal value of the shares on allotments made in respect of applications made or procured by them provided that the relative forms of applications bear their respective stamps.

Brokerage at the rate of 1 per cent on the nominal value of the shares will be paid on allotment in respect of application bearing the stamp of a Bank or of a member of a recognised Stock Exchange.

No underwriting commission or brokerage will be allowed on shares which have been agreed to be subscribed by the Promoters, Directors, their friends and associates Managing Agents and foreign collaborators.

MANAGING AGENTS

Messrs. W. S. Industries, Madras, have been appointed as Managing Agents of the Company for a period of 10 years from the date of appointment on terms defined in the prospectus.

APPLICATION FOR ALLOTMENT OF SHARES

The application forms duly completed together with cheques or drafts for the full amount of Rs. 2-50 per Share for Equity Shares and Rs. 25/- per share for Preference Share payable on application must be delivered before the closing of the subscription list to the Registered Office of the Company at No. 33, Errabalu Chetti Street, Madras-1, or the Office of the Underwriters or Brokers to the issue or to any one of the Company's Bankers or their Branches.

Application sent to the Registered Office of the Company and accompanied by cheques drawn on the offices of any of the scheduled banks only at the following places will be considered:

MADRAS, BOMBAY, CALCUTTA, BANGALORE, NEW DELHI, HYDERABAD, AHMEDABAD AND INDORE

Cheques or demand drafts should be made payable to "W. S. INSULATORS OF INDIA LIMITED, Equity Issue/Preference Issue". Alternatively, cheques may be made in favour of one of the Bankers to the issue drawn on any scheduled bank at the places where the applications are submitted: "A/c W. S. INSULATORS OF INDIA LIMITED, Equity Issue/Preference Issue".

For the applicants' protection, cheques or drafts should be crossed "Account Payee only".

A separate cheque or draft must accompany each application.

RECORDS AND STATISTICS

Industrial Profits in 1962-63

THE CALCUTTA Stock Exchange has made a study of the balance sheets of companies issued after the 31st March, 1963, to discover the impact of taxation on the retained profits of the companies concerned. The results of the study are given below:

Table I shows that though some companies have made more profits in 1962-63, their net and retained profits have dwindled considerably because of absorption of a greater portion of their profits by way of taxation.

Table II shows that some companies on account of their lesser income in 1962-63 have earned lesser profits with the consequent reduction in their retained profits. The results would not have been so worse if the tax percentage would not have gone up.

Table III shows that some companies have earned

more profits in 1962-63 and consequently have secured more net and retained profits than in previous year. Here again the results would have been still better, if the tax percentage would not have gone up. Very few companies have shown separately tax liability for S.P.T. in their balance-sheets; as such, its full impact could not be ascertained. An effort has been made to show the effect of taxation on the capacity of companies to plough back funds for modernisation or expansion.

Because the percentage of retained profits of the companies has fallen during 1962-63 it must not, however, be supposed that the distribution by way of dividends had any influence on the same. As a matter of fact during the year most companies either reduced their dividends or were merely able to keep them unchanged.

TABLE I

Name of Company	Year	Pre-tax Profit	Tax	Tax %	(Rs. Lakhs)		
					Net Profit	Retained Profit	Retained Profit %
1. Dunlop Rubber	Dec. '62	330.38	234.78	71.0	95.59	45.88	13.8

Strike Me Pink

IT WAS a harried party that met at Jaipur to try sincerely, if somewhat desperately, to close its ranks against the confusion that threatens. Charity apart, it would be less than realistic to see it as a war between the factions. Those who believe in historical forces must live in fear of them, anxiously scanning the east and west and waiting for the fitful wind to change its direction. The Chinese betrayal along with the Cabinet changes and the election reverses that followed were man-made but they hit the Party, psychologically unprepared for them, like elemental forces. Reverentially, Mr. Nehru let them take over and work themselves out and, on occasion, stepped in to effect a minor but prudent change in direction.

The mood was duly penitent; the pronouncements on the working of the Kamaraj Plan, on the shifting influence of the Party with the country's young hopefuls, on corruption and foreign policy and, above all, the draft paper on democratic socialism evidenced not so much any malignant or unyielding purpose on the part of the leadership but a bewildered search for intelligibility after the breathless events had passed it by. Those who have been looking for exciting changes in high places have naturally stressed the negative aspect of the Kamaraj Plan, and it is only fitting that Mr. Morarji Desai should have moved a resolution giving it positive content. While it would be premature to pronounce on its success, the Plan has at least been instrumental in the emergence of energetic and possibly stable ministries in Bihar and Madhya Pradesh, and a smaller Central Cabinet is now better equipped to "act out" freely uninhibited by silent and conflicting reservations. The chastened and self-critical mood was echoed by Mr. Nanda when he argued, in his report on the election reverses, that the role of the Congress in the freedom movement no longer gave it cause for pride or pre-emption in the eyes of the people; the scars from forgotten battles cannot now be flaunted as virtue, a smug and overweening consciousness of which has hindered aliveness to the needs of the present. The non-controversial foreign policy resolution owed its easy passage to Mr. Nehru's prestige and to the party's single-minded pre-occupation with problems of organization. That the foreign press has been concertedly silent on India's refusal to treat the alliance of China and Soviet Russia as monolithic and her pioneering contribution towards bringing about a better realization, in Russia, of China's aggressive intentions which are incompatible with the realities of modern warfare is understandable; that the point has not been touched on in the Indian press is perhaps less than just.

The resolution on democratic socialism sounds less meaningful. What was it intended to achieve? The occasion is not an obvious one for the pious re-assertion of the Karachi and Avadi declarations. Mr. Nehru is being truer to Hindu tradition, of which he presumably disapproves, than he knows. In this tradition incantation has always been preferred to good works as a source of merit. Alternatively, if the resolution was meant to provide an ultimate principle of stability which will hold together the Right and the Left, the outlook is still not a clean landscape lit up in fair weather. For the Menons and Malavias will continue to strain at the extremities. If, like the Church of England, it is comprehension the Congress seeks within its ranks, in which High Churchmen and Wesleyans live in a nodding and uneasy but fruitful amity, Mr. Nehru's repeated strictures on Congressmen who have no faith in socialism ill accords with

November 15, 1963

his objective. Nor does it seem realistic to expect that he will succeed, by this means, in cleansing the party of the resilient unbelievers, staying on in the hope that the summit Socialism will soon pass. In the context of unfulfilled plan targets and a stagnant economy, the paper on democratic socialism does sound like nervous, lonely whistling in the dark.

The declaration of war on want is commendable, but where are these heroic campaigns being fought? We have still to establish an adequate supply of food for our people. The standard of living may have improved, but it has done so only marginally over large sections of the community. National consumption standards, even in the case of such bare essentials as minimum clothing, footwear, shelter, basic transport, or the use of essential leisure, have come nowhere near civilized human existence. Unemployment has not decreased; on the contrary, educated unemployment is growing menacingly. The halting increase in National Income is just managing to keep ahead of the increasing population. Mass poverty remains massive and India continues to be possibly the poorest country in the world. Millions of people live without social security while thousands are condemned to shift for themselves on street pavements in the cities or hovels in the villages, not knowing where the next meal is to come from.

The AICC notes truly enough that the foremost aim for the country has to be the removal of poverty with all its attendant evils. It concedes that this aim calls for rapid economic development with continuing rise in production, agricultural as well as industrial. It realises that the slow growth of our economy has hitherto been due to our inability to make full use of our manpower and industrial resources and it notes that this inability springs from our failure to take sufficient advantage of the advance in science and technology. But, at this point, its wisdom seems to falter. It is all very well to say that a modern apparatus of production has to be built up in the quickest possible time so that the economy of the country may be transformed into a modern and efficient one with a high level of production. The task is to define and determine how this is to be accomplished. This country no doubt must find its own answers as others have done in their contexts, but the AICC does not even seem to be asking itself the right questions yet.

It is not enough to say that the achievement of higher living standards and the provision of social justice and social security would depend on our success in securing rapid economic development which, in turn, would become possible only by full utilisation of science and technology. The expanding and intensive application of science and technology either in industry or agriculture would mean, in effect, the employment of more capital in the fields and in the factories. Production as well as productivity are determined by the extent to which the community is con-

cerned to accumulate and employ capital efficiently. It is true that a developing country is weakened from the start by the fact that its reserves of capital are negligible or non-existent while its current production is barely sufficient to cover its current consumption. Here, in other words, is the classic vicious circle of poverty breeding more poverty. Fortunately, it is not as if the circle cannot be broken. On the contrary, again and again, in the course of the historic process through which many nations of the world have broken through from poverty to affluence, means have been found of generating the capital that is required for the "take off" of the various national economies.

The point is whether sufficient priority is in fact being given in this country to this crucial problem of capital in the field of political or economic policy-making. There has always been and there definitely now is room for choice. We may, if we choose, follow such policies as will promote domestic capital formation by encouraging people to work more, earn more, save more and invest more. We may also, if we choose, take a realistic note of the terms on which foreign capital could be attracted to this country on a larger scale and then proceed to create the appropriate climate for that influx. Or, we may elect not to act purposively in these directions but be content to muddle through imagining that pious intentions or bold words could be a substitute for practical conduct of the nation's economic affairs. It is perhaps not an unfair reading of the AICC paper on Democratic Socialism that it suggests that the Congress leadership has not still arrived at the stage of facing the facts of our economic life squarely. How else are we to explain its indulgence in the cant and catchwords which speak of the threat of monopolistic trends or its obsession with the risk of wealth concentrating or economic disparities widening? The Wealth Tax statistics for 1961-62, (which is the latest year for which this data is available) show that the number of individuals assessed to this tax was less than 24,000 in a population of 459 million. Is it seriously suggested that our national policy should be more pre-occupied with how to destroy the wealth of these 24,000 rather than with the question of how to improve the lot of the 459 million people in this country?

Although there has been much ranting from various political platforms, it has never been convincingly shown that the fact of there being a few thousand rich men in this country is coming in the way of our agricultural yields increasing or there being more science and technology in the working of our industries. On the contrary, it is because there is at least this limited accumulation of capital, some of it in the entrepreneurial and investing sections of the society, that even the little industrialisation we have been having is made possible. This is true as much of industrial expansion in the public sector as it is of industries in the private for the simple reason that a very large proportion of Government revenues is derived either directly or indirectly from

November 15, 1963

EASTERN ECONOMIST

997

these sections of the community. It has been said often enough, even from Congress platforms, that socialism does not mean the redistribution of poverty. Why then is it that, on occasions such as these, the Congress leadership should encourage a false sense of values and a wrong sense of priorities, by attempting to make it appear as though the war that must be waged on the nation's economic front is not on the poverty of 459 million people, but on the wealth of 24,000?

The country is being conditioned to believe to its disadvantage that the rich becoming richer somehow necessarily involves the poor becoming poorer. Few have cared to ask why this should be so. Fewer still have stopped to see whether this is in fact so. And yet it is an elementary fact—and one which we may readily notice all over the world—that the economic well-being and progress of a community is not tested by the question, "How few of its people are poor?", but by the question, "How many of its people are rich?". The sensible and only worthwhile purpose of economic development is the rescue of the poor from their poverty, not the persecution of the rich for their wealth.

The Arithmetic of Hunger

EVER SINCE its establishment in October 1945, the Food and Agriculture Organisation of the United Nations has produced every year a review of the food and agricultural conditions in the world. *The State of Food and Agriculture*, 1963, released recently has once again focussed attention on the well-known fact that the ever-increasing population of the developing countries has continued its upward march and that whatever increase in output was recorded, was insufficient to keep pace with the fast multiplying numbers. During the last five years in particular, the world production of food has remained unchanged on *per capita* basis and, "in fact, the increase in total food production in the less developed regions has matched that in the more developed parts of the world, but their populations have been rising much faster". The Director-General of F.A.O., Mr. B. R. Sen, has drawn pointed attention to the World Food Congress which was held in Washington in June this year and where the "historic" declaration was made that "the persistence of hunger and malnutrition was unacceptable morally and socially" and that elimination of hunger from the world was the "primary task of this generation".

While these pious declarations at international gatherings do provide some mental satisfaction to the leaders of the developed countries, they hardly go far in bridging the gap between demand and supply of food in the developing countries. Projections made by the research staff of F.A.O. have confirmed that the hiatus between production and consumption of cereals in the case of the low-income countries is likely to increase — as a result of past trends based on the low-

This is for the simple reason that any policy which is unduly obsessed with the war on wealth is not only irrelevant to but even inconsistent with the true dynamics of economic expansion which is the increasing application of capital and consequently the intensive harnessing of science and technology to the processes of agriculture and industry. History has yet to show us an example of a country which has taken poverty away from its millions by the simple process of taking wealth away from its thousands. Even in the case of the Soviet Union, the immediate post-Revolution onslaught on property was more a political pogrom than an economic programme and it is probably true that the economic and psychological consequences of that onslaught were at least one explanation why it took so much time and involved so much mass suffering, strain and deprivation for the Soviet economy to find its bearings again in the mainstream of modern economic progress. From this point of view it could be suggested perhaps that the AICC paper is a profoundly unhistorical and depressingly unscientific document. Platitudinous and cliché-ridden, it not merely lacks a sense of urgency, but is wanting even in a feeling of contemporaneity.

income assumptions — from 8 million tons per annum during 1957-59 to 28 million tons in 1970 while the surplus in the case of the high-income countries will increase from 21 million tons to 63 million tons during the same period. In overall terms, the non-communist world will have, without doubt, more food than it needs though the weaker nations will continue to depend upon doles from the prosperous ones. Table I (page 998) taken from "Agricultural Commodities — Projections for 1970" — a publication of F.A.O. released last year — shows that the imbalance in the case of wheat in low-income countries will remain almost unchanged in 1970 on both low-income and high-income assumptions.

The underlying cause of the failure of the food crops to improve in the developing countries is described in the FAO reports as sluggishness in productivity, but the chapter devoted to productivity in agriculture stresses the obvious that "it is only by a larger output per man that farm incomes can be increased and the mass of the rural population relieved from the glaring poverty which now oppresses them." It is conceded that raising agricultural productivity is at once a technical and a social problem. It is also a problem of organization. How to organize the use of the latest techniques in raising agricultural productivity is the crux of the whole problem.

In the developed countries, the increase in production has been brought about primarily by raising the productivity of land. On the other hand, the developing countries have increased their output mostly by extending the agricultural area. Long-term studies made in regard to yield of wheat between 1909-13 and 1958-60 set out

in Table II below show that during the period under consideration, except for a handful of under-developed countries, yields have increased in varying degrees all over the world. It is estimated that in India and Pakistan in the half century under discussion, the yield of wheat fell by 6 per cent. At the other end of the scale are Bulgaria and Mexico which registered increases of more than 100 per cent. The United States, Argentina, Australia, Japan and New Zealand recorded increases in productivity by 50 to 100 per cent. While it is true that the rate of growth of wheat yields is a complex phenomenon resulting from a large number of factors, the fact remains that the improvement in yields has been decisively influenced by the technological revolution which has taken place in many countries.

The productivity of land needs to be studied along with efficiency of agricultural labour to know how hard the people in the developed

countries and the developing countries work in order to produce the same volume of food. In the under-developed countries, the average time used to produce 100 kg. of various farm products, is higher than in the developed countries. For example, in the United States, working time required to raise 100 kg. of output of farm products was not more than one hour as against 35 hours in Colombia and 46.3 hours in Japan (see table III). Figures are not available in regard to some of the under-developed countries including India, but they are definitely much higher than that of the developed countries. The lesson of this comparison is that the farmer in the developing countries has to put in more man hours than his counterpart in the developed countries but he continues to get a lower return.

Since World War II, there have been some changes in output per man in agriculture. In many countries the gross output per man (and often net output as well)

has risen much faster than the per capita national income indicating increasing efficiency of the agricultural sector (see table IV). In this country, the rate of rise in per capita income was almost the same as in agriculture; it means that India had not shared the happy experience of other countries such as Mexico, Colombia, the United States, Canada, the United Kingdom, Sweden, Italy, etc. where the average annual percentage rise in agriculture scored over the per capita rise in national income. A glaring exception to this rule

(Source: The State of Food and Agriculture, Table III-8, page 114).

was Japan where industrial expansion took such rapid strides that the fine performance in the agricultural sector was over-shadowed by achievements in the other sectors.

Capital is another important element in raising the productivity of agriculture. F.A.O. has attempted, on the basis of information available, an assessment of the sectoral capital-output ratios (see table V) for a few countries. It is seen that agriculture is not the "bargain sector" which it is usually supposed to be. Except for India and the U.S.A. where the ratios are around unity, all the other countries indicate significantly high levels. For every unit of agricultural output, 2.1 units of capital are needed in South Africa, 3.4 units in Argentina and 2.8 units in Colombia. The ratio in the case of this country is low not only because the value of capital in the form of implements is not large but also because of the large volume of non-monetised investment, an evaluation of which is extremely difficult if not impossible.

The land in the developing countries is tired i.e. it

has been denuded of all its nutrient contents and is in urgent need of replacement of some of the essential components. This can be achieved through the application of chemical fertilizers but their use is not spreading at the desired rate. In the first place, there are the usual social and economic barricades which need to be overcome. The comparative backwardness of the people in taking to the use of the new fertilizers has been found to be a big hurdle and unless a programme of wide publicity through demonstrations is carried on in these countries, the fertilizers, even if made available to the people, would not bring about the desired results. Whereas in a developed country the new techniques are made use of because the farmers know all the benefits accruing from them and have the knowledge as well as the patience to use them in the proper ways, the same situation does not exist in the developing countries. The increasing application of agricultural science will no doubt solve this problem, but the fertilizer use — rightly described as the spearhead of the agricultural development — needs much more careful study and handling than has been the case so far.

The use of fertilizers throughout the world has been sharply rising in recent years. At the beginning of the century only 2 million tonnes of fertilizers were being used in the world; by 1962 the use of fertilizers increased

TABLE IV
POST-WAR CHANGES IN OUTPUT PER MAN IN AGRICULTURE

to 29 million tonnes. In recent years, the consumption of fertilizers has increased, on the average, by about one million tonnes per year.

Whereas many factors are instrumental in raising crop productivity and in this list must be stated improved seed varieties, pest and disease control, irrigation, improved drainage, mechanisation etc., the use of chemical fertilizers has played, without any doubt, a dominant role. Table VI below shows the effect of fertilizers on yields of selected crops under carefully planned experiments in

some of the countries. Tea production in India (experimental farms only) increased by 92 per cent in ten years and output of tapioca by 197 per cent in one year. Similar encouraging results have been recorded in the case of other crops also. Paucity of training facilities for farmers in the proper use of fertilizers is one of the hurdles. Another difficulty is the extremely low purchasing power of farmers. Recommendations have already been made by various visiting teams to the developing nations including India that in order to encourage the widespread use of fertilizers, an effort

should be made to make available cheap credit to the farmers. The farmer will also need all possible help in determining the types of fertilizers needed by the soil as also the precise quantities in which they should

Initiative in Kerala

IT GOES to the credit of its energetic Chairman, Mr. K. R. K. Menon, that the Kerala Industrial Development Corporation Ltd., which has just produced its second annual report, has been able so quickly to assume definite purpose and direction. Even in narrow financial terms, the progress has been encouraging. As against a net loss of Rs. 26,850 in the first year, the Corporation earned a profit of Rs. 90,987 in 1962-63. The entire issued capital of Rs. 1 crore having been contributed by the Government of Kerala, the Controller of Capital Issues has agreed to sanction a further issue of capital to the extent of Rs. 95 lakhs, thereby enabling the Corporation to secure more funds for extending increased assistance to industrial expansion in Kerala.

In the second year of its functioning, the Corporation has sanctioned Rs. 24.36 lakhs in all to four companies as direct participation in their capital. The aggregate capital outlay on these four projects amounts to Rs. 156.50 lakhs. The Corporation had also agreed to underwrite shares of the face value of Rs. 64 lakhs. The total capital outlay of the four projects assisted in this manner is estimated at Rs. 716.76 lakhs. Besides this, the Corporation has sanctioned long-term loans to five parties to a total of Rs. 42.10 lakhs. Its directors have also agreed to provide guarantee for deferred payment of machinery to be procured from outside India to the value of Rs. 7.22 lakhs.

It will be seen that, despite its modest, initial resources, the Corporation is already functioning along the lines of a comprehensive institution for development financing and that the availability of Mr. Menon's experience as a former Chairman of the Industrial Finance Corporation of India is being put to good use. It is interesting that, even within the limitations of a beginner's small-scale operations, the Corporation is trying to diversify its interests, which is certainly the right thing since it would also help to diversify the pattern of industries in the State. Among the products which the assisted companies are engaged or are interested in manufacturing are steel bars and rods, steel wire ropes, calcium carbide, electricity and water meters, cotton yarn, titanium products, packaging paper and automobile tyres and tubes. Of particular interest is the formation of two companies, the Packaging Paper Corporation Ltd. and the Development Corporation Rubber Company Ltd. with the Kerala State Industrial Development Corporation as the major shareholder, in each case.

Good for a start as all this progress undoubtedly is, Mr. Menon has rightly said in his speech at the

be used. Unless the availability of fertilizers is coupled with easy access to technical knowledge, the broader objective of increased use of fertilizers is not likely to be attained.

second annual general meeting that the real test of the Corporation is not how much direct assistance it renders to industry, but whether, through its activities, it helps to create progressively a congenial climate in the State for expansion of existing industrial units and institution of new ones. Mr. Menon has tactfully referred to the aspect of political stability and we might agree with him that the much-discussed vulnerability of Kerala in this respect can be greatly exaggerated. At the same time it stands to reason that States which have a settled political leadership and a good and stable administration do have a hedge over others less fortunate where the preferences of investors or entrepreneurs are concerned. We are sure that Mr. Menon appreciates this point. He himself has emphasised in a very enlightened manner the important truth that States such as Kerala, "the internal" resources of which clearly have to be supplemented by "outside capital", ought to be sensitive to business sentiment in other parts of the country if substantial industrialization is to be achieved by them. To quote Mr. Menon, "The crucial — in essence fundamental — economic problem of our State today is the problem of attracting outside capital for our industrial expansion, which alone helps us to tackle our problems of poverty and unemployment."

Mr. Menon was speaking of Kerala within India. But there is in what he said also this larger truth that India itself and as a whole needs foreign assistance in a similar way. In both contexts action is required at two levels. In the first place there has to be a domestic effort to attract the outsider and in the second the outsider himself will necessarily have to develop a co-operative and even a liberal attitude. From this point of view Mr. Menon's appeal to the Central Government to show special consideration to Kerala in the issue of industrial licences cannot be lightly pushed aside although, for our part, we would certainly hesitate to agree with him that the reservation of licences on a regional basis can be considered to be among more suitable ways of achieving what is described as balanced regional industrial development. Reservations in other spheres have proved notoriously ineffective either in upgrading the privileged section or benefiting the community as a whole. In any case if the industrialisation of the nation is planned and pursued on the large scale on which it can and should be done, there will be no question of development having to be rationed among clamouring or queuing States. On the contrary, there will be work for all to do and each and every region must be assisted and, indeed, urged to do as much as possible.

Highlights of the Week

FINANCE MINISTERS CONFER

THE STATE Finance Ministers, assembled at New Delhi last week at a Conference convened by the Union Finance Minister, Mr. T. T. Krishnamachari, are said to have discussed a wide range of subjects, including measures to accelerate the growth of the economy and problems relating to sales tax, agricultural income-tax, urban property values and market borrowings. No specific decisions except one, however, have been announced, presumably because most of them have a direct or indirect bearing on the next year's budget proposals. The decision announced is to the effect that the ceiling applied after the declaration of the emergency last year, on the quantum of States' share in small savings collections will no longer be operative. The States will now get two-thirds of these collections in their respective areas without any upper limit. The small savings collections, it is stated, have been gathering momentum particularly after the withdrawal of the Compulsory Deposit Scheme. Criticisms of C.D.S. on the score that it would hamper voluntary savings, has, thus, been vindicated to a great extent.

The other important decision believed to have been taken relates to urban properties which have appreciated in value a good deal during the past few years. These properties may come in for taxation by States in the near future, although it is not going to be an easy and simple affair. In regard to market borrowings, divergent views are said to have been voiced at the Conference. Some States favoured the last year's system of floating joint loans by them and the Centre, while other — presumably those whose borrowing programmes have been meeting with an unqualified success — expressed themselves against it on the ground that a separate borrowing programme by them should be more helpful in augmenting their finances. The Union Government appears to be favouring the latter view, probably because under a joint borrowing programme, the States do not exert themselves fully. Last year, it is stated, nearly Rs. 82 crores worth of securities floated had to be taken up by the Reserve Bank. The States which do not have as yet sinking funds for redemption of their debts, have been advised to create such funds. At present, sinking funds are there only in three States — West Bengal, Gujarat and Orissa.

The State Finance Ministers are understood to have again turned down the plea often made by the trade for expanding the list of commodities on which sales tax should be replaced by additional excise duties, to include such items of general consumption as vanaspati, paper, cement and kerosene. In the interest of imparting uniformity in sales tax rates, however, the pattern being worked out by the Northern Regional Council may be adopted. About agricultural income-tax, the suggestion made by the Taxation Enquiry Commission that it should be merged with the Central Income-Tax, does not appear to have carried much weight at the Conference. It was, of course, proposed that rationalisation should be effected in this legislation for securing some measure of uniformity in the country as a whole.

With a view to stepping up the tempo of economic development, while stress was laid on energetically implementing the short-term agricultural programme drawn up by the Union Ministry of Food and Agriculture, it was felt that the rigours of the licensing system should be removed and a partial de-scheduling of industries brought about to foster the growth of small and medium-sized units. It was also suggested that in locating new industries, the natural advantages enjoyed by certain regions should not be sacrificed in the interest of balanced regional development.

The social security programme and development of tourism may be expected to receive a fillip as a result of this Conference.

Mr. T. T. Krishnamachari has suggested that the States should initiate action at an early date for providing social security first to the Government employees and then to others, sector by sector, so that fear from the minds of the people could be driven out within the next decade or so. The Central social security programme may be extended likewise (after Delhi, it has been applied on a limited scale to Bombay last week). In regard to tourism, the Union Finance Minister held out the promise of help to State Governments for construction of hotels, buildings and acquisition of lands, etc., and also for improvement of the places of tourist interest.

INDO-CZECH TRADE

A FIVE-YEAR trade pact, effective from January 1, 1964, has been concluded between India and Czechoslovakia to replace the existing three-year Trade and Payments Agreement between the two countries. The new agreement envisages doubling of the current trade either way — approximately Rs. 12.5 crores — in a period of three years. The targets fixed for 1964, 1965 and 1966 are Rs. 19.5 crores, Rs. 23.5 crores and Rs. 24.5 crores worth of trade each way, respectively. As under the existing arrangements, the trade between the two countries is to be on a balanced basis, payments being made only in Indian rupees.

Exports from India will include both traditional and non-traditional items. A significant feature is that nearly 10 per cent of these exports will be in non-traditional items. This list includes chemicals and drugs; tyres and tubes; asbestos; textiles and manufactures; rolled steel products; steel castings and forgings; plastic goods; plywood and veneers; jute; abrasives; paints; enamels and varnishes; leather manufactures including leather footwear; linoleum; tooth brushes; cigars and cigarettes; cotton textiles; readymade garments and shirts; nylon socks; tinned fruits, juices and concentrates; tinned sardines and other tinned fish; coir manufactures and ropes. The traditional items that will be exported from India include iron ore, jute products, textiles, tea, H.P.S. groundnuts, cashewnuts, coffee and tanned and semi-tanned hides and skins.

Import from Czechoslovakia will consist mainly of machine tools, heavy machinery and equipment for power projects and other heavy industries such as tractors. Czechoslovakia will also be supplying increasing quantities of tool, alloy and special steels, rolled steel products, ball bearings, chemicals, dye-intermediates and various other industrial raw materials and components.

The full benefit of the provision for engineering goods imports by Czechoslovakia can be derived only if the Indian exporters take special care to provide service facilities and spare parts for them. In regard to iron ore exports, the increase over the current level of about one million tons is proposed to be 20 per cent. Czechoslovakia has offered to receive iron ore deliveries in Indian bottoms. It is, however, doubtful if any large quantities of this commodity can be shipped in Indian vessels. This facility, no doubt, should help in getting a better price for our iron ore. But since the payment for the shipping service will be in rupees — it forms a part of the overall trade pattern — it may correspondingly cut down offtake by Czechoslovakia of other items of export. Further, the Indian shipping space can be utilised otherwise for earning or saving a good deal of convertible foreign exchange. The issue, however, has been left open for decision by the Government of India.

Czechoslovakia has also offered a new line of credit to the tune of \$50 million (nearly Rs. 24 crores) for financing

To the Steel Industry of India McKee offers specialized, experienced engineering and construction services

Among the major steel plant projects designed and built by McKee in every steel producing area of the world is the completely integrated steel plant illustrated above. Occupying a site two miles long and a half mile wide at Volta Redonda, Brazil, it is the largest steel plant in South America. After three consecutive expansions made by McKee it has an ingot capacity of 1,250,000 tons per year. The plant includes facilities for all phases of steel-making

from processing of raw materials to production of finished steel in various forms: rails; structural shapes; plate; hot and cold rolled sheets; tin plate.

The same specialized talents and capabilities responsible for this South American project can produce equally efficient facilities in India. We will welcome an opportunity to give you complete information on our comprehensive, diversified engineering-construction services.

THE E.I.D.—PARRY GROUP
1963

FOREIGN EXCHANGE AND PARRYS

FOREIGN EXCHANGE* — the most important factor in the country's economy today—is also the most important factor in the E.I.D.—Parry Group's plans for brighter and better tomorrows.

The production of fertilisers provides a good example of the E. I. D.—Parry Group's contribution towards increased food production and towards conserving foreign exchange by reducing the volume of fertiliser imports. In 1962/63 the Government have set aside no less than Rs. 40 crores for the import of

fertilisers to meet the deficiency between indigenous production and total demand. During the same period the E.I.D.—Parry Group will produce and distribute about 200,000 tons of fertilisers, which figure will be further increased by expansion programmes during the course of the Third Plan Period.

Other manufactures of this Group of nine companies of substance include sugar, confectionery, sanitaryware, light railway equipment, acids, chemicals, carbonic acid gas, and industrial and potable alcohol.

THE E.I.D.—PARRY GROUP, MADRAS

* The Foreign Exchange Bill for the Third Five-Year Plan is more than Rs. 1,900 crores.

PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

VDS/PP-3 CR

some projects during the fourth Plan period. The details about these are yet to be worked out. The Government of India has expressed the hope that this credit will also be doubled in line with the 100 per cent increase proposed in the trade between the two countries. Czechoslovakia, according to Mr. F. Hamouz, the Czech Minister of Foreign Trade, considers India a good country with which aid arrangements for specific projects can be concluded. In view of this, it is not unreasonable to expect that the \$50 million new credit offered will be stepped up substantially.

FIGHTING CORRUPTION

CORRUPTION IS an age-old phenomenon and in certain departments of Government time-honoured too. But there is little doubt that the evil has seeped much deeper into the fabric of the Indian administration in the post-Independence era than was the case earlier, thanks largely to the expansion of State activity in the economic sphere. It is encouraging to note that the Union Government has now decided to take energetic measures to eradicate this evil. Following the Santhanam Committee's recommendation in its interim report submitted about six months ago, it is proposed to set up soon a Central Vigilance Commission, headed by an eminent public man or a senior civilian. This agency will be supplementing, and not supplanting, the existing anti-corruption machinery in the Union Home Ministry such as the Special Police Establishment. The Santhanam Committee has recommended that the Commission should be given an independent status as in the case of the UPSC or the Election Commission. The Committee has also proposed that the Commission should have the sole authority to decide how a particular case brought before it should be dealt with — whether there should be a departmental enquiry or a prosecution before a court of law. To make its authority felt, it has been recommended that the Central Bureau of Investigation and the other existing vigilance agencies should function under the guidance of the proposed Commission which should be required to submit periodical reports of its activities to Parliament.

A number of other proposals made by the Santhanam Committee are also said to be under the consideration of the Government to fight the evil of corruption in administration. They relate to tightening up of the rules of conduct governing Central Government employees, making it incumbent on them to file annual returns of their assets and liabilities and simplification of procedures to ensure that no departmental enquiry against a Government servant takes more than six months. Proposals for stamping out corruption among Minister and politicians, have been left for the final report which the Santhanam Committee may submit early next year. The penal and administrative measures which may be adopted by the Government on the recommendations of the Santhanam Committee may go some way in striking fear in the minds of the bribe-takers and bribe-givers. But it will be optimistic to assume that they can have a lasting impact if concerted action is not taken simultaneously for simplification of cumbersome departmental procedures and elaborate economic controls. The steady increase in the cost of living, which has hit very hard indeed the fixed income groups — Government employees form an important section of them — has also to be brought under control; it has certainly been one of the primary causes for the spread of corruption at the lower levels in the public services.

PRESIDENT'S NEPAL VISIT

PRESIDENT RADHAKRISHNAN'S last week's visit to Nepal, reciprocating the courtesy of King Mahendra's visit to this country in August-September last, is another milestone in the steady promotion of mutual understanding, good-

will and co-operation between the two countries. The President is stated to have been impressed by the Nepal Government's efforts at promoting the economic and social advancement of the people. At the present juncture, when no small disillusionment has been caused to Kathmandu by the promised Chinese assistance for some industrial projects not materialising, this country's active interest in and readiness to co-operate with the development plans of Nepal need to be emphasized.

Already this has been done to some extent by New Delhi agreeing to Nepal's plea for transit facilities for her trade with Pakistan, without insisting on the bond system governing this trade. Under the Colombo Plan, India has been giving technical assistance to Nepal. If, as a sequel to the recent visit to Kathmandu of a delegation of prominent Indian industrialists, Indian capital and enterprise could help set up industries in the Himalayan Kingdom, the political understanding between the two countries will be strengthened further, thereby reinforcing the national integrity and security of both. On behalf of the Government of India, the President has rightly assured Kathmandu of full and friendly participation in the task of building up Nepal's economy and its people's welfare.

KISHAU DAM — ANOTHER BAKHRA?

MUCH SATISFACTION should obviously be caused by the crossing of the first and the most critical hurdle in the way of building the Kishau Dam on the river Tons, a tributary of the Jamuna. Conceived as long back as in 1943, the progress on this multi-purpose project has been held up due to inter-State rivalries. An agreement is stated to have been now reached at a conference held here last week to share the cost and benefits of this dam by U.P., Himachal Pradesh, Punjab, Rajasthan and Delhi.

The details in this regard will be worked out in due course. The principle agreed to is that the contribution of each State towards the cost of the dam should be in proportion to the benefits accruing to it. The sharing of the cost and benefits will be only in respect of the irrigation and power facilities to be created by the Kishau Dam. For the other power developments in U.P., the cost would be borne by the U.P. Government. Himachal Pradesh shall be free to develop irrigation and power projects unstream of this dam, without, of course, affecting it. Two more dams may be built — one across Giri above its confluence with the Tons and the other on its tributary Jalal. To maintain the existing supply of Jamuna water, a balancing pond may have to be provided when the Giri dam is constructed. This may necessitate the remodelling of the existing barrage at Tajewala or building another one also.

The investigation and preparation of the report on the Kishau Dam as well as its construction will be the task of the U.P. Government. The Himachal Pradesh Government might also be associated with the investigation work. In regard to the Giri and Jalal dams, all the work will be undertaken by the Himachal Pradesh Government. The investigation in respect of the balancing pond will be carried out by the Punjab Administration.

The size of the dam suggests that it will be an ambitious project. It will be 730 ft. high — only 10 ft. lower than the Bakhra Dam. Its catchment area will cover 1,886 sq. miles. The storage capacity created will be nearly 1.7 million acre-ft. According to the rough calculations, the project will help in irrigating 386,000 acres and in generating 227,500 kW. of firm power.

International Comparisons of National Income Statistics

By B. R. SHENOY

NEARLY ALL member-countries of the International Monetary Fund, which number 86, have now a running series of national income statistics, available for ready reference in the "International Financial Statistics". But international comparisons of these statistics may not be strictly valid or safe. First, the techniques and the principles of their computation may vary. Secondly, the goods and services content of a given unit of income may not be the same in all the countries whose national income statistics are brought under comparison.

The first limitation may, in due course, cease to have full validity with the increasing adherence by countries to international conventions in the use of national income concepts, terminology and the techniques of their computation. The Communist countries being slow in or averse to accepting these conventions, this limitation may persist in the comparison of the statistics of the free and the Communist countries.

The second limitation may have much wider and more lasting applicability. In the under-developed countries, the comparatively better-to-do groups of individuals may be able to command various personal services which may be generally beyond the reach of individuals in the same income categories in the richer countries. Thus, in Western Europe, North America and in the highly industrialised parts of the rest of the world, most people generally polish their own shoes, wash their own clothes, do the house-hold chores and the 'mali' work themselves, carry their own baggages in the air-ports and railway stations and so on. In the economically under-developed countries, middle-class people may not like to be seen doing these things themselves, apart from fashionable hobbies such as light gardening, now and again.

Costly Services

The explanation lies perhaps in the comparative riches of the industrialised countries. Riches imply high wages, wages being the workers' share of the national income. The richer a country the higher the wages and, therefore, the more costly are personal services. Under the compulsion of costs, more and more people prefer to "do-it-themselves" as national income grows, using the income thus "saved" to meet the endless series of other needs. Every house-holder becomes as a result a general "mistry" (mechanic) — he knows something of plumbing, carpentry, cycle and car repairs, house painting and he may mend and use garden tools with striking dexterity—with the garage or basement as his workshop; and every house-wife becomes a maid-of-all work, demanding and getting the meek assistance of the husband and teen-age children in the discharge of routine house-hold drudgeries. Dishwashing, carpet cleaning and lawn mowing are not strange experiences to the gentlemen of England, of Western Europe, of the more prosperous parts of the Commonwealth and of the USA. With domestic help at 4s. an hour and the laundering of a shirt costing 2s. 6d., self-help in house-hold work becomes a natural and normal phenomenon.

Growing riches and higher wages also explain — while being at the same time an evidence of growing riches — the manifold house-hold gadgets and the semi-processed foods, which reduce the time and the trouble of the daily cooking and of the other tyrannies of the house-wife. As national income moves up the ladder of affluence, the demand for the gadgets and the semi-processed foods becomes near universal. The disappearance of the house-maid kept pace with the emergence of the washing machine, the vacuum cleaner and the electric heaters; these, together with the television set and the family car—all adults in the family use it by arrangement—are the new symbols of good living for a growing propor-

"Eastern Economist" is glad to announce that Professor B. R. Shenoy, the well-known economist, who is now in Britain for an extended stay as a visiting professor in the University of London under the Commonwealth Exchange Scheme, has agreed to write regularly in these columns during his sojourn abroad. The first article in this series is published here.

tion of the masses.

Democracy and Communism may not have succeeded in bringing into being a classless society which their prophets are never tired of elaborating on. But the Western world today is a servantless society of super-markets. The term servant has almost disappeared from common usage; the rare practitioners of this unedifying profession wish to be described by other names and may like to refer to their employers as "clients"; like the advice of the legal luminaries and the Harley Street specialists, it is but the few that can afford a full-time help in the house, except, of course, under duress such as illness or other disability. Shop assistants being expensive, the customers serve themselves in the super-markets; they pick up into trollies their weekly assortments of the standardised mass-produced goods of daily consumption.

Retarding Economic Growth

Possibly, the virtual absence of the servant class may be a factor holding back the continued acceleration of the economic growth of the high-income communities. It is quite common for people of talent to be engaged like common workmen much of the time at home and frequently like secretaries part of the time in the office; though some physical work may be recreative and health-giving, an undue imposition of it on all may cost heavily to the national product; if relieved of some of these drudgeries, they may devote more time to pursuits in their special fields with much better advantage to themselves and to the national product. If so, the large Negro population of the USA may be viewed as a national asset speeding up the economic growth of the country. By taking over work which any man can do, they enable people with high production capacities to give to the community the full benefit of their abilities.

This reasoning suggests that a relaxation of the restrictions which prevail in some high-income economies on immigration from the under-developed parts of world may be in the long-term interests of the richer countries themselves. This may permit the most advantageous deployment of the human resources of the country. The mass support to the restrictions on immigration, like the protectionist measures on commodity imports, would seem to rest largely on the common fallacy that they are essential to the preservation of employment and incomes at a high level. The relaxation of the restrictions on immigration may also help to relieve the population pressures in the under-developed countries.

On the other hand, in the industrially advanced countries, manufactured goods are generally cheaper and of better quality. If the services content of the same range of income is larger in the under-developed countries, its manufactured goods content may be larger in the industrially advanced countries; this may militate in the opposite direction international comparisons of national income statistics.

This last factor has assumed undue importance in recent years. Indian visitors to the United Kingdom who run a house-hold establishment of their own, may find that the living costs in London are perhaps about

be even somewhat less than, in Bombay, Calcutta or Delhi. Rents seem lower, the cost of milk and milk-products may be about the same and manufactured articles are distinctly cheaper.

This strange experience is, however, deceptive. It is a misleading outcome of the unrealistic rate of exchange between rupees and sterling. A three-bed room house costing £50 a month, a refrigerator of the same value, or the miscellaneous house-hold expenditure of a like amount, at the present exchange rate, each amounts to Rs. 866.50. But it would be wholly delusory to jump from this to the conclusion that living costs in UK compare very well with living costs in India. The pounds sterling is worth much more than Rs. 13.33, its value in the official market. In the free markets for foreign exchange abroad, and in the black market in India, it is at a substantial premium, being at one time rated around Rs. 20. Even the free-market rate does not indicate the correct (the equilibrium) value of sterling in terms of Indian money. If the equilibrium rate should be say, Rs. 25=£1, an expenditure outlay of £50 on rent, on a refrigerator, or on house-hold needs at once become worth Rs. 1,250 each and the false picture of the comparative cheapness of London changes.

The optic illusion of the cost distortions ensuing from the exchange-rate over-valuation apart, ordinarily, the price disparity of manufactured goods as between the industrially advanced and the under-developed economies may not be larger than the costs of transport and the incidental payments, which, highly protected commodities apart, may not be very considerable under normal conditions of freedom in international trade. More usually, therefore, the goods and services content, of the incomes of the middle-class and the upper-income groups may be noticeably higher in the under-developed economies than in the industrially advanced ones. A family with an income of Rs. 500 per month in many respects is perhaps more comfortable in India, Burma, Ceylon and Pakistan than a family with the same income in the

industrialised West. In the former, such a family may have a part-time servant doing the more irksome house-hold jobs; in the rural areas it may own a house, though it may not have much of furniture. A millionaire in the under-developed countries probably lives in many respects like a multi-millionaire in the high-income economies of the West.

Despite these limitations of the international comparisons of national income statistics, India would seem to be about the poorest part of the world. Viewing the Indian people as a whole, in 1960, per capita income in India was about Rs. 294. In the same year per capita income in the USA was about Rs. 10,900, in Japan about Rs. 2,110, in Sweden about Rs. 8,500 and in Israel about Rs. 2,825.

Per capita income in India has also been rising at about the slowest pace in the world; from 1951 to 1959 this rise averaged a mere 1.3 per cent per year, the corresponding percentage being 7.2 in Japan, 6.1 in West Germany, 5.2 in Italy 5.0 in Israel and 3.6 in Burma. Few countries had a smaller rate of increase than India.

This underlines the immensity of the task before the Indian economy. It has a long way to go before the masses of the people may reach and move beyond the line of reasonable comfort for all; in the meanwhile, the industrially advanced parts of the world will have travelled leagues further ahead. The gaps between us and the others will have widened, unless the progress of the latter should get halted and reversed by a catastrophe or by the adoption of statist "planning".

This underlines, too, the great need to step up national savings and to avoid wasteful uses of savings, as economic development is a function of wisely invested savings. Our policies need to be oriented to stimulate savings and to ensure the most productive investment of savings. This is far from being the case. The Indian economic scene presents a picture of private and public extravagance, in the context of an acute scarcity of capital both in the private and the public sectors. This is largely the outcome of mis-guided policy measures.

"Not a case of the rich getting richer. This one, you know, was a poor man in 1947!"

WINDOW ON THE WORLD

War in the Sahara

From Our Special Correspondent

RABAT (Morocco):

THERE EXIST certain superficial resemblances between the border conflict now raging in the Sahara Desert, where Algeria meets Morocco, and the frontier conflict that opposes India and China. In both cases, a long, rambling, arbitrary frontier running through sparsely populated or quite unsettled regions becomes, at points, vague enough to allow contestation in more or less good faith — though good faith would require that differences of opinion be confronted in an amicable negotiation, and in both cases one party has refused that, preferring to press its claims by force of arms. Such vagueness about the delineation of the frontier, however, is in both cases only occasional: for the most part, the border is clear enough, but one party contests the manner in which it was determined. It argues, specifically, that the border was fixed, in those sections where it is clearly marked on the maps, by the imperialist power of yesterday and is thus not necessarily binding on the independent successor-States of today.

To call in question in this way all the frontier agreements of the past on the grounds that one did not like the regimes responsible for them would mean (as the Russians lately told the Chinese, apropos their own border with China) hell let loose all around the globe. For once you start on that line, there is no stopping: one can always appeal to some previous frontier arrangement as more suitable, and then to an earlier one, until (in Moscow's phrase) you get right back to the Old Testament. The point is that all historical frontiers are "unjust", depending on the accident of victory in days long gone by, but nations acquiesce in them for all that because they know that to arrange a new carve-up of the continents would not produce any better solution, but only (after immense suffering) new arbitrary border based on the accident of tomorrow's victories. No nation in Continental Europe today considers that it has its just or ideal frontiers (certainly not Switzerland, or Holland, or Spain, or France, or Italy, or Austria). Minor adjustments are still being negotiated amicably, as this year between France and Switzerland, and between Holland and West Germany. But the matter arouses little interest, because nations now know that their prestige and prosperity depend more on what goes on inside their borders, and on how they co-operate across their borders, than on territorial aggrandisement or frontier rectifications.

Specious Claims

To that general argument, China and Morocco reply that there is a quite specific and recent injustice to be remedied: the imposition of an unfavourable frontier on a weak nation ruled by men who were at the time the plaything of the imperialist installed in a neighbouring region. The Moroccans, for example, deny all value to the frontiers drawn by the French when they were the ruling power in Algeria and at the same time the "protector" of a puppet sultanate in Morocco. The claim is specious and does not really escape the objections made to all efforts to re-draw the map in order to repair historical accidents. Moreover, the Moroccans have discredited themselves by the extravagance of their claims, which go far beyond the few border posts now in dispute between themselves and the Algerians. They extend, indeed, to the huge tracts of the Algerian Sahara in the south and east, and then south across the Spanish possessions and Mauritania to Saint Louis du Senegal. (It was these latter claim that led to Rabat's refusal to recognise the independence of Mauritania, a republic that is now a member of the United Nations

and of the organisation of African States, despite Moroccan opposition).

At this point, all analogy between the Algero-Moroccan difference and the Sino-Indian conflict ceases. The areas in dispute in the Sahara have seen vast population movements (not in the sense that many people were involved but in that petty "empires" expanded and contracted over immense distances), and these shifts and changes can be held to warrant all sorts of conflicting "historical claims". Indeed such movements are still going on in our day, for the sparse populations involved are nomadic, and fluctuating in their allegiance to various suzerains. Tunisia, for example, has in reserve claims on the Algerian Sahara scarcely less extravagant than Morocco's, and when it comes to settling the southern borders of Algeria, where the Sahara runs into Negro Africa, affairs will be no less complicated.

Contrasting Features

More important is the contrasting political sense of the Algero-Moroccan conflict. For here (quite the reverse of the Sino-Indian dispute), the nation that is geographically expansionist (Morocco) is politically moderate if not conservative, whereas the Algerians, who want to solidify the borders left by imperialism are politically revolutionary. While refusing the more or less considerable territorial adjustments sought by Morocco, they have in view a frankly imperial design: the constitution of a North African unity in which the present regimes of Morocco and Tunisia (and later Libya) would be swallowed up in a revolutionary empire ruled from Algiers, or at least dominated by the ideology of Ben Bella.

That is why the armed skirmishes now going on around isolated Saharan outposts are of much less interest than the propaganda onslaught of the Algerians, of which the avowed aim is the overthrow of the Moroccan monarchy. Though it is the Moroccans who, no doubt foolishly, opened the frontier question and to that extent are formally the aggressors, it is the Algerians who are seeking to subvert the moderate regimes in neighbouring countries, and thus would eventually have been the aggressors even if the borders had been uncontested. The proof is that Mr. Bourguiba has not pressed his territorial claims (apparently on American advice) but has nevertheless been the target of conspiracies inspired from Algiers. The fantastic exaggeration of the border troubles by the Algerians (whereas in this country the affairs is taken calmly) shows that the dispute is serving as the occasion for a political challenge that was bound to be made in any event.

In the absence of foreign intervention (though this is perhaps an optimistic assumption, since Colonel Nasser is already intervening materially on the Algerian side), the future course of events could fairly safely be predicted. Lacking the means to enforce its extraordinary territorial pretensions, Rabat would probably abandon them as it is doing as regards Mauritania, and a satisfactory arrangement could be found for the Algero-Moroccan frontier. With less confidence but still fairly surely one could predict that the Algerian attempt to overthrow the Moroccan regime would similarly prove impossible of realisation, at least for many years. The monarchy in this country is not the "sick man" that the revolutionaries in Algiers imagine, and is, to be frank, more popular and solidly based than Ben Bella's own regime. Its economic achievements are not negligible, and would be notable were it not for the sacrifices that Morocco made in favour of Algerian independence. Nor are they discredited

MASSIVE TYRES

FOR MASSIVE WORK

The scraper and the dumper. Two powerful modern beasts of burden, indispensable for moving thousands of tons of earth at project sites with continuous operation. Tremendously heavy and strenuous work, requiring the toughest pneumatic tyres. Dunlop Power Grip and Earthmover tyres

are proving themselves superbly in service ... at Nagarjunasagar, Koyna, Neyveli and many other projects.

The tread pattern and especially tough casings of these Dunlop tyres were developed after prolonged field trials in different kinds of terrain in many parts of the world.

by the accusation that Morocco submits to neo-colonialism, meaning simply that it has welcomed foreign investment where this is consistent with its five-year plan of national development.

From this dual forecast that Moroccan territorial ambitions are as little liable to be realised as Algerian political designs, the European power most solicited to intervene, namely France, draws the conclusion that the wisest policy is strict neutrality and continued co-operation with both countries until the affair blows over. The British view of the case seems no different, and many African representatives here share the hope that events will take this course. The two super-Powers have a rather different opinion, and unless they prove in North Africa that they can co-operate in extending the area of detente, the Moroccan-Algerian conflict could have unpredictable results. The reason is that each of the super-Powers approaches the affair with its particular obsession: for the Americans, Fidelism, and for the Russians, the Chinese heresy.

More explicitly, the Algerian design of a revolutionary Maghreb built on the ruins of the present Moroccan and Tunisian regimes suggests to the Americans the danger of a new and greater Cuba at Europe's doorstep. The ferment in North Africa suggests to the Russians, in contrast (or is it really a contrast, in view of Fidel Castro's sympathy with the Chinese?) the danger of an immense progress of the

Chinese heresy in this part of the world. Already the Kabyle ultra-socialists who have challenged Ben Bella in Algeria are benefiting from Chinese support, and in the atmosphere of a revolutionary crusade against the "corrupt, neo-colonialist puppets" of Morocco and Tunisia, the Chinese variety of Communism would surely make further gains.

The temptation, then, would be for the Russians to espouse Ben Bella's cause in order to strengthen him against his pro-Chinese ultra-revolutionary opposition, and incidentally to demonstrate that Moscow was no more backward in assisting "anti-imperialist" demagoguery than Peking. The USA, in turn, is inclined to counter the Fidelist menace not so much by openly supporting the King of Morocco as by financing a joint exploitation of the disputed Saharan resources by all the North African States under disinterested (and expensive) American auspices. For all its seeming rationality, such a proposal at this point would probably only feed Algerian propaganda about Morocco being the instrument of "international capitalism and neo-colonialism". Rightly or wrongly, any Western plan for joint exploitation of the Sahara would be interpreted in Algiers as bolstering the "reactionary" governments of Morocco and Tunisia, and if this coincided with overt Russian support for Ben Bella, we would have another clash of the super-Powers — in a conflict that, left to itself, might well fizzle out in the desert.

Manna from Heaven

By JOSSLEYN HENNESSY

LONDON:

WITH AN election due next year, all three political parties are promising the earth, and more than all its fruits, to the electors.

We are to have more subsidised houses, more schools, the school age is to be raised to 16, the Robbins report on higher education (a document in four bulky, obviously unread, volumes which the government accepted overnight) raises the number of those in colleges and universities from their present total of 235,000 to 328,000 by 1967, and to 390,000 by 1973, more hospitals, new main roads, expansion of electricity and gas, higher old age pensions — the whole intoxicating caboodle in fact.

The electors are enthusiastically cheering on the politicians to vie with each other, under the fond impression that all these blessings will fall on them like manna from heaven, free, gratis, and for nothing. It is a sobering reflection on the success of teachers of astronomy that if any politician dared to proclaim that the earth was flat, he would be greeted with roars of derision. What have we economists taught the multitudes? Nothing. No politician dares to explain that it is the electors who will have to pay up. They can pay up by, e.g., abolishing restrictive price agreements and restrictive union practices, lowering tariffs, and working longer hours to produce the bigger national income needed to foot the bills. Unless the national income grows at so spectacular a rate that it becomes big enough to enable the masses simultaneously to spend on consumption as before and to provide for the new cornucopia of social benefits, it will be necessary to divert resources away from personal consumption and this can only be done by steeply increased taxes (promised by no party) or by inflation, which will force savings on the masses as the government creates credit for itself to buy the social services at whatever price is necessary, while making the masses pay higher prices for the same, or indeed possibly a smaller, volume of consumption goods and services.

The Chancellor of the Exchequer gave warning of these possibilities when he said that the increases that the government has already set on foot were on "a vast scale" — an increase of 20 per cent this year and a further seven per cent next year. "We have," he said, "reached the limits of

what can be done; to try to do more would result only in delay and rapidly rising prices". He added that the agreed programme of expansion could indeed be maintained but only if costs were kept stable and only if the country "chose steady growth with incomes rising at the satisfactory rate at which our economy is capable," instead of succumbing to the temptation to rush ahead too fast.

Have we then come to the end of our "Go" and are we on the verge of another "Stop"? Analysis of the facts suggests that if a pinch is to come, it is unlikely to be felt until the autumn of 1964.

Expansion in Electricity

The 20 per cent increase in public investment is unlikely to press on the limits of resources this year because of the big margin of under utilised capacity existing in 1962-63. Half of the extra £400 million to be spent in 1963-64 is allocated to the expansion of electricity, which combines a lower than average proportion of building work with a higher than average proportion of plant and machinery. This is fortunate because steel and heavy engineering have plenty of spare capacity. It is the Electricity Board's huge orders which have sent up engineering orders in recent months.

The extra load on building from other sources is nevertheless not to be sneezed at. The Tories' aim of 400,000 houses a year (needless to say the Liberals and Labour offer many more) falls on building, which is going ahead fast. The new universities, schools, hospitals and roads also fall mainly on building. It can at least be said that if demand for building expands faster than the industry's capacity, it does not lead (as do consumer goods) to a rise in imports, and so put the I.M.F. and Zurich's bankers in a tizzy, but it does cause a rise in prices which overflows into many other industries. So much effort has, however, been put into improving building techniques that responsible observers believe that the industry can keep pace with requirements until around the autumn of 1964 before strains set in which could lead to wider price repercussions.

No one foresees that Mr. Maudling can reduce taxes in next April's pre-election budget, but the chances are that with nine months breathing space before strains may really

set in, we will be able to get by without any increase in taxation (much as we, in our carefree acceptance of electoral largesse, deserve it). In that interval, the government could do much to improve the economy's prospects (and its own) by setting up priorities for public investment. The "Treasury Bulletin for Industry" for October gave a hint of this by pointing out that when public expenditure is absorbing a rising proportion of the gross national product, there is less for private consumption, private investment and for exports. The Treasury stressed that it was vital that private investment and export should not be starved if growth was to be sustained. (The Treasury

refrained from pointing out, as it rightly could have, that it is the U.K.'s private industry, and not the nationalised industries, which provides most of the taxation to finance the social services, and which pays for imports). "This consideration", said the Treasury significantly, "in effect limits the rate at which public expenditure should be allowed to rise." Priorities are necessary, "since a rapid expansion simultaneously on all fronts could place intolerable strains on the economy".

It is, however, relevant to note that, unlike the Denning Report, the "Treasury Bulletin for Industry" is not a best seller.

Upsurge in U. S. Exports

By GUY SIMS FITCH

WASHINGTON:

REPORTED improvement in the U.S. balance of international payments is underscored by the recent upsurge in the nation's exports.

The balance of payments is the relationship between total payments and receipts, and the large surplus of exports over imports is the major item on the plus side of the U.S. ledger. Export growth is being counted on to offset in large measure the heavy outflow of funds for such purposes as government assistance and private investment, which has been responsible for the continuing deficits in the U.S. payments position.

The latest government report shows that U.S. exports again spurted in September to a seasonally-adjusted monthly total of \$1,991 million. This is five per cent ahead of August, which itself was seven per cent over July. From current trends, U.S. officials estimate the 1963 export total may well reach a high of \$22,000 million, five per cent over 1962.

Buttressing Factors

The recent monthly export gains may represent the early stages of a substantial rise in U.S. shipments abroad. Buttressing the U.S. export potential are several special factors. One is the liberalization of import policies in several important trading nations. Another is the growing competitiveness of U.S. products in world markets, perhaps reflecting general price stability at home and rising wage and price levels abroad, notably in Western Europe.

The principal factor in U.S. export strength, however, seems to be the general increase in economic activity and demand throughout the free world, with emphasis on industrial nations which normally have been the largest buyers of American goods. This rising demand, it should be borne in mind, also extends to the United States, where the sustained upturn of the past few years shows no signs of abating and is, in fact, continuing to climb to new highs.

This sustained vigour of the domestic economy figures to be a source of continued strength for U.S. imports, which have been entering the country at a rate some four per cent above last year's. As the U.S. economy continues to flourish, so does the demand for more goods from abroad.

As a result, some caution is being expressed about any exuberant predictions of substantial improvement in the export surplus this year. Nevertheless, the estimates are that the surplus may approach \$5,000 million in 1963, against \$4,500 million in 1962.

These trade developments reaffirm in convincing fashion the U.S. treasury's assessment that the United States has its balance of payments problem "clearly under control." This statement was made in Paris recently by Treasury Under Secretary Robert V. Roosa, who is Chairman of the

10-nation group — the "Paris Committee of Ten" — which is studying long-range international monetary problems. According to Mr. Roosa, the U.S. deficit dropped sharply during the third quarter of the year, to an annual rate of less than \$2,000 million from the second quarter rate of about \$5,000 million.

A basic objective of U.S. policy is to end its international payments deficit as speedily as possible. But it intends to do this in an orderly manner, without retreating from its international responsibilities, and without the kind of abrupt action that might create serious problems for other countries.

Export expansion is but the element of the U.S. policy. In Paris, Mr. Roosa pointed particularly to the encouraging effects of policies aimed primarily at curbing the troublesome outflow of private capital from the United States and at encouraging the expansion of European capital markets. These included the increase in interest rates at home and the proposed U.S. tax on American purchases of foreign securities.

The current marked improvement in the U.S. balance of payments, coupled with the large export surplus and the firmness of U.S. policy, serve to reinforce the confidence in the readiness and ability of the United States to bring its international accounts into equilibrium. All this helps provide a favourable backdrop for the study of international monetary questions which has begun in Paris.

Eastern Economist 20 Years Ago

NOVEMBER 12, 1943

It was the late Professor Alfred Marshall who once astonished a British audience by his paradoxical statement that the British Factory Acts were a standing disgrace to the country. What he meant was that the necessity to have statutory legislation for the welfare of industrial workers reflected a lack of sense of their own duty on the part of the employers and if only employers had done their duty by the workers, there was no need for legislation at all. Whether or not this sort of obligation calls for a sublimated sense of social responsibility too great to be hoped for we cannot tell. But there is no doubt that the new Bill introduced in the Assembly last Monday providing for the compulsory recognition of trade unions is certainly a reflection on both the employers and the workers and is a measure of their failure to adjust their differences amicably without inviting the intervention of the Government.

LISTENING POSTS

Valentina's Week

By Our Special Correspondent

NEW DELHI:

THERE IS little doubt that this is Valentina's week. Three Soviet cosmonauts — Valentina Tereshkova, Andrian Nikolayev and Valery Bykovsky — are now in this country at the invitation of the Government of India. If the welcome given to them in the capital is any indication, they must be among the most popular State guests to have come to India. Valentina Tereshkova and Andrian Nikolayev are here immediately after their marriage and the honeymoon touch has certainly given a boost to their visit. Valery Bykovsky is accompanied by his wife who is also named Valentina.

As Ambassador Benediktov pointed out at the Press Conference which the "Space Trio" gave on Sunday, New Delhi is the only national capital (not counting Moscow) which has the distinction of having played host to five out of the six Soviet space travellers.

Coincident with the visit of the Soviet cosmonauts to this country, Premier Khrushchev has controverted an impression that seemed to have gained ground in Western Capitals that the Soviet Union was calling off its race to the Moon. The visiting cosmonauts themselves did not seem to be in doubt that the Soviet space programme will be pursued with full vigour and vision. Bykovsky, for instance, claimed that the successful flight of the new space vehicle, Polyot, has shown that the Soviet Union has developed techniques for putting space ships into orbit close to each other and controlling their movements and directions so that their further assembly in outer space for continuing the journey to the planets could be contemplated. To quote Bykovsky: ".... but let us not guess, it may be a few years or perhaps only months before it takes to launch such space ships". Words and thoughts such as these have certainly given a new dimension to the ideas and imagination of the people of Delhi these days. But let me not be misunderstood. The most agreeable and also the most impressive things about the visiting cosmonauts is that they do not give you the impression that they are a race of super-humans. Valentina could be the girl next door, and that I would say is the best of the Soviet Union's achievement in this grand business of the exploration of space.

★★

The Government of India has accepted the tender of the International Telephone and Telegraph Corporation of the United States for setting up a telephone switching factory in this country. Late in 1962, the World Bank granted a loan to India of 42 million dollars for the purchase from abroad of equipment to expand and improve telecommunications. This loan was intended to finance three projects, viz., microwave equipment, telephone switching and cables. Under this loan new telephone exchanges were planned at Delhi, Bombay and Madras for which equipment has to be imported. As part of development, the Government had decided to set up in this country a telephone switching factory in financial and technical collaboration with the successful tenderer, which, according to the decision now taken, is the International Telephone and Telegraph Corporation.

In the final selection, ITT, Nippon Electric Company of Japan and LN Ericsson of Sweden were the main competitors. A technical committee of three, which was appointed by the Government to recommend whose tender was to be accepted was divided, each member favouring a different tenderer. The former Secretary of the Ministry of Communications, Mr. M. M. Phillips, who examined the technical commit-

tee's report, recommended the acceptance of the tender of ITT for purchase of equipment and for collaboration in setting up the telephone switching factory. The Government has accepted this recommendation. It may be recalled that the Government had earlier decided to adopt the Continental switching system which is based on the use of crossbar switches utilising the indirect switching technique. The ITT tender was through its Belgian organisation. Its acceptance should enable the Government to utilise the Belgian credit for financing the factory project.

★★

Indo-German financial talks connected with the present negotiations on an investment promotion agreement are being continued in Bonn. The talks will concern a German promise to the Aid India Club to grant India additional assistance over and above the Rs. 60 crores for the first year of the current five-year Plan and the Rs. 108 crores for the Plan's second year (Rs. 33.8 crores, third year). The Government of India, it is reported, proposes to split up this additional assistance according to the following priorities (the names of the German supplier-firms are given within brackets): 1. Rourkela armour plant (Rheinstahl); 2. Mysore Iron and Steel Works (DEMAG, AEG and Boehler); 3. Shaktiman truck factory (MAN); 4. Krupp-MAN bridging; 5. Machine tools for the private sector; 6. Hindustan Shipyard (including MAN engines); 7. Research requirements of Atomic Energy Department; and 8. Power transmission and distribution (AEG, Siemens).

Indian estimates for the above items total roughly Rs. 17 crores, out of which supplier credit guarantees equivalent to Rs. 14 crores would constitute the additional assistance which is under negotiation now.

★★

The Union Ministry of Food and Agriculture expects that the situation on the rice and sugar fronts will ease to a considerable extent next year. The latest reports received by the Ministry indicate that West Bengal will have a bumper rice crop. The crops in Orissa and Madhya Pradesh too are said to be much better than last year when they suffered heavy losses due to floods and draught. The prospects in the South also are stated to be quite bright. The all-India rice output this year is expected to be of the order of 35 million tons.

A notable feature of this year's rice procurement programme will be its extension to interior and remote areas where distress sales of paddy take place because of absence of competition among buyers or middle-men. Arrangements for purchasing paddy in these areas are stated to be progressing well. This should help in increasing rice procurement for Central stocks. It is expected that the total procurement next year will go up to 1.5 million tons. Nearly two million tons are proposed to be purchased on Government account in Punjab.

The rabi crop outlook is also stated to be promising. The Ministry holds the view that there is absolutely no justification for the recent hardening tendency in wheat prices in Punjab. It is pointed out that the Centre has nearly 1.8 million tons of wheat which could be released to fair-price shops to curb any undue uptrend in the prices of this grain.

At the meeting of the National Development Council last week, there was a great deal of discussion on increasing agricultural production. For the first time some concrete measures have been suggested by the State Governments for

boosting agricultural output. The Agricultural Production Board, the setting up of which was announced at the NDC meeting, is expected to hold its first session here on November 16, before the Food and Agriculture Minister, Sardar Swaran Singh, proceeds abroad for the FAO Conference. There is a growing appreciation on the part of the State Governments of the need for forging close co-ordination between the various agencies connected with agricultural development, although it is not considered practicable that one State Minister should be entrusted with this task as has been done at the Centre. Co-ordination is envisaged to be effected between the various agencies looking after agrarian development at all the crucial levels — State, district as well as village. It is felt that all the developmental activity at the district level should be centred around the Collector who has the pivotal position in administration. The State Chief Ministers are expected to take more interest in agricultural development even if they do not take over this responsibility directly. The stress being laid now is on the 10-point Programme drawn up by the Union Ministry of Agriculture recently, under which concentrated efforts are to be made in promising areas and on implementation of measures which can yield quick results. These include programmes of soil conservation, seed multiplication and distribution, minor irrigation and distribution of chemical fertilizers. Financial sanction procedures for agricultural development are also proposed to be streamlined and simplified.

As regards sugar, the expectation now is that not only an output of three million tons will be achieved, but even the original target of raising production to 3.3 million tons may be realised. The latest advices reveal that already 69 sugar factories have gone into production this year, as against 49 at this time last year. In West U.P. alone, which accounted for a substantial fall in sugar output during the last crushing

season, as many as 27 factories have started production as against 15 last year. Although the international price of sugar has hardened to £105 per ton and is expected to go up further, no change in the present programme of exporting only 300,000 tons of sugar for which commitments have already been made, is envisaged till the supply position in the domestic market improves and there are clear indications that at no time during the next year shortages will develop. For putting the sugar industry on a sound footing from the long-term point of view, thought is being given to the improvement of sugarcane in yield and quantity, especially in North India, modernisation and rehabilitation of the industry and creation of another half a million tons capacity in the next two or three years. The Experts Committee which is going into the question of modernisation is expected to submit its report shortly. Indications are that the approach to the modernisation of the sugar industry will be similar to the one adopted in the case of cotton textiles. The indigenous sugar machinery manufacturing capacity, it is hoped, will be able to supply equipment for the 500,000 tons additional capacity proposed to be installed by the end of the third Plan period.

★★

Income-Tax Officers may be clothed with more powers for checking tax evasion. An indication to this effect was given by Mr. T. T. Krishnamachari, Union Minister for Finance, while addressing a four-day meeting of the Income-tax officials here last week. The new powers that may be conferred on these officers will enable them to make on-the-spot inquiries.

Two other measures are also contemplated for netting in those who are at present dodging this tax. These are simplification of the Income-tax Law and creation of a service agency in every tax office. Simplification of the Law is to be attempted for making it easily comprehensible so that unneces-

sary harassment of the tax-payer is avoided. The creation of the service agency is thought necessary for properly guiding assessee in such matters as filing returns.

Various estimates have been made in the recent past of the extent to which income-tax is evaded in this country. Prof. Kaldor, a few years ago, assessed it at Rs. 200 crores. But the Central Board of Revenue has been of the opinion that tax evasion may be of the order of Rs. 20 to 30 crores. The Finance Minister holds the view that the rate of income-tax realisation currently is around 40 per cent. If it can be stepped up even to about 70 per cent, it should be easier for the Finance Ministry to contemplate reliefs and lower taxation. At the same time it should not be overlooked that excessive tax rates are themselves an incitement to evasion. Lower rates may lead to larger revenues in due course.

The problem of arrears was also discussed. Effective arrears of income tax are stated to have risen to nearly Rs. 175 crores. According to the Public Accounts Committee, the arrears on March 31, 1961, amounted to about Rs. 137 crores.

The Central Board of Revenue is being streamlined. Mr. B. D. Pande has taken over as its new Chairman, replacing Mr. V. V. Chari who becomes Additional Secretary in the Department of Expenditure. Mr. B. N. Banerji has been made Vice-Chairman of the Board for Indirect Taxes. His place as Member for Central Excise has been taken by Mr. R. S. Mishra. Another post of Vice-Chairman for Direct Taxes is being created. It is likely to be filled by Mr. J. P. Singh, at present Member in charge of Estate Duty. Mr. Narayana Rao, Commissioner of Income-tax, Bombay, will be shortly joining the C.B.R. as Member in charge of Income-tax Affairs.

Mr. K. F. Landegger, President of the well-known American firm of Parsons and Whittemore, Incorporated, New York, who is now visiting this country is convinced that the importance of sugarcane bagasse and other "annual" fibres as the raw material for paper-making is bound to grow rapidly. According to him this trend has become clear in many countries of the world and as the availability of bamboo becomes more and more inadequate for meeting the demands of the expanding paper industry in this country, new paper-making plants will have to be designed for the utilisation of bagasse. Parsons and Whittemore have, in fact, collaborated with the Mandya National Paper Mills in Mysore State in the construction of a plant based on the utilisation of bagasse. According to Mr. Landegger, the Mandya plant has already successfully used 80 per cent bagasse in some trial runs, while its average utilisation of bagasse is 71 per cent, which, according to Mr. Landegger, is no mean achievement. In the United States, Mr. Landegger claims, good writing paper is being manufactured using 100 per cent bagasse and he sees no reason why this cannot be repeated in this country as well as the relevant techniques are mastered. Parsons and Whittemore have also participated in putting up a plant for Seshasayee Paper Mills in Madras State. This new plant is claimed to be already producing more than its rated capacity. Negotiations have now been reportedly completed with a leading sugar manufacturer in Western U.P. for the construction of a paper plant which would utilise the bagasse available from the sugar factory belonging to the same group.

Parsons and Whittemore are also stated to be interested in promoting an industrial undertaking for the manufacture of machinery for paper plants. An industrial licence has been granted for this project and discussions regarding the formation of a company in which Parsons and Whittemore will have a large financial interest, are now stated to be in progress between the Union Government and the promoters.

A seminar-cum-workshop on buyer and seller relations was held at New Delhi last week under the joint auspices of

the National Association of Purchasing Executives, the Rotary Club of Delhi and the Eastern Purchasing Journal. The seminar was inaugurated by Mr. A. K. Roy, Comptroller and Auditor-General of India, who laid stress on the evolution of proper procedures for purchasing and selling because it could lead to the saving of vast sums of money and improvement in the quality of output. Present at the seminar were buyers and sellers from both the public and private sectors. They had a free exchange of ideas regarding sound relationships between buyers and sellers, including a code of ethics. Mr. A. R. Palit explained with concrete instance how the price line could be held in check by the adoption of latest techniques. What was needed was to ensure continuity of production with the minimum possible investment so as to attain maximum productivity. A few figures were pressed into service at the seminar to illustrate the magnitude of the problem. It is estimated that Indian industries spend, on the average, 64 paise out of each sale of a rupee on purchased items while the balance is absorbed by wages and salaries, overhead expenses, management and profit. Again, about 90 per cent of the "working capital" in Indian industries is tied up in inventories which account for not less than Rs. 1,000 crores. New methods on materials management such as quality control, standardisation, etc. can reduce the volume of inventories and thus reduce costs. In Japan a materials management institute exists and it has done good service to the industry. The seminar arrived at the conclusion that a Steering Committee should implement the findings of the

seminar and endeavour to bring into being an institute for material management in this country as well.

★★

The Inter-State Transport Commission has directed the State Transport authorities of West Bengal and Delhi to issue permits for public carriers for Delhi-Calcutta inter-State route up to a maximum number of 60, 30 for each State. The Commission has also laid down conditions which the State Governments have to enforce in the selection of operators for grant of these permits. One of the conditions is that preference should be given to transport co-operatives.

The Ministry of Community Development and Co-operation has therefore requested the two State Governments to take up immediately the question of organising transport co-operatives so that they may benefit by the preference which the Inter-State Transport Commission has decided to accord to co-operatives in the grant of these permits.

★★

A Trade Delegation from Hungary led by Dr. L. Ujhazy, Director-General, Ministry of Foreign Trade, is now in New Delhi to negotiate a long-term trade and payments agreement between India and Hungary and also to fix the quantum of trade for the next three years.

The Hungarian Minister for Foreign Trade, Mr. J. Incze, will be arriving here soon when he will sign the trade agreement on behalf of his Government. From the Indian side Mr. Manubhai Shah, Minister for International Trade, will sign the agreement.

As a result of the current negotiations it is hoped that

the volume of Indo-Hungarian trade, which is now of the order of Rs. 883 lakhs each way, will be doubled towards the end of 1966.

★★

Mr. Walter Scheel, Minister for Economic Co-operation in the Federal Republic of Germany, is arriving in New Delhi on November 23, 1963 on a fortnight's visit to this country at the invitation of the Government of India. He will be accompanied by a team of senior officials.

Mr. Scheel is expected to tour some parts of the country visiting some industrial plants including the steel plant and the fertilizer factory at Rourkela as well as some German aided industrial establishments. He will also visit the Prototype Technical Centre, Okhla, and the agricultural project at Mandi in Punjab.

Mr. Scheel will leave for Germany on December 8, 1963.

★★

A ten-member delegation from Poland led by Mr. F. Modrzewski, Vice-Minister of Foreign Trade, is arriving on the 18th of this month. It will hold discussions for a long-term trade agreement with India.

The present trade and payments agreement which was signed in November 1959 is expiring by the end of December this year.

★★

Oil has been in news again during the week. Following the visit of the Vice-Chairman of the Oil and Natural Gas Commission last month, both Iran and Kuwait have decided to send separate delegations to India within the next few

weeks for further discussion on the proposal for joint exploration for oil. The discussions may cover the question of importing into India crude and petroleum products on long-term basis on special concessional terms.

There has been some loose talk in regard to the proposals of the three oil companies to replace their refinery agreements by industrial licences. It is explained that the three Western oil companies have dual organisations: one, rupee companies owning and managing their refineries and the other, older organisations based on sterling or dollar capital, owning and managing their distribution of petroleum products. The refineries are wholly owned by the Western oil companies, outsiders having some preference shares. The distribution companies are wholly non-Indian.

Two of the oil companies, namely Esso and Caltex, have made proposals to merge their two organisations into one. In the event of their agreement with the Government, the dollar-based distribution companies will cease to exist and will be merged with their rupee refinery companies.

The Export Risks Insurance Corporation has raised its

Banks Cautioned About Advances

From Our Correspondent

BOMBAY:

SOON AFTER the announcement of the new credit policy for the 1963-64 busy season, the Reserve Bank came out with another circular informing scheduled banks that it expects them to make suitable 'adjustments' in their patterns of lending rates, particularly in the higher ranges following the liberalisation of the terms of Reserve Bank accommodation on October 30. There was also a rider in the circular advising the banks to exercise caution in regard to advance against shares and to maintain margins normally considered necessary. Thus the policy of credit liberalisation has been followed by a tip to banks against unrestrained credit expansion in the coming busy season. The object can be achieved, according to the Reserve Bank, firstly, by extinguishing the unutilised limits and secondly, by ensuring that the total of the limits sanctioned by banks bears a realistic relationship to their resources. Scheduled banks should seek to balance their credit with resources and avoid relying heavily on the Reserve Bank accommodation. While the suggestions are welcome, because the earlier circular gave the impression that the Reserve Bank was for providing easy credit for asking in the next busy season (1963-64), the downward adjustment of lending rates may be somewhat impracticable. The prevailing rates are not unduly high when compared with the overall pattern of interest rates in the economy and the upward revision of the Bank rate to 4½ per cent in January last.

★★

The Reserve Bank has directed the scheduled banks to submit by November 15 information on ownership of shares by joint stock companies and other corporate bodies, including the statutory corporations. The data should show details of ownership by banks, general insurance companies and other financial institutions such as the LIC. The immediate provocation for the circular seems to be the need for obtaining information for the proposed amendment of the Banking Companies' Act and the Companies' Act. A study conducted by the Company Law Administration on the question of inter-locking directorships between banks and other joint stock undertakings showed that the concentration was somewhat heavy in the case of the first 'big five' banks in the private sector. Probably the Banking Companies' Act would aim at putting a stop to the possible abuses resulting from

indemnity to banks under its packing credit policy from 50 per cent to 66-2/3 per cent. This is in accordance with the recommendation made some time ago by a study group on export finance, headed by Mr. K. P. Mathrani. The premium rates have not been raised.

The Export Risk Insurance Corporation's packing credit policy is designed to help exporters secure a line of credit from banks for the purpose of buying, processing and packing goods destined for the export market. Formerly, under this scheme the Corporation shared the risk of loss with the lending banks in the ratio of 1:1. Now, under its revised policy, the Corporation will bear the bulk of the risk and cover the banks in the ratio of 2:1. This step will enable banks to liberalise their lending policies. The packing credit policy, which was introduced towards the end of 1960, is becoming increasingly popular with exporters and banks. The value of advances secured by exporters under the Corporation's packing credit policy stood at Rs. 54 lakhs in 1961, but rose sharply to Rs. 2.5 crores in 1962 and is likely to be of the order of Rs. 5 crores at the end of the current year.

the association of banks' directors with various companies.

★★

Savings bank deposits grew more rapidly in centres with a population of below 100,000 than in those with a population of above 100,000, says a study conducted by the Reserve Bank. During the four years ended 1961, the overall growth rate of savings was 44 per cent but the annual rate was far from uniform. Savings deposits stood at Rs. 188 crores in 1957 and increased by Rs. 17 crores or 9 per cent in 1958, by Rs. 12 crores or 6 per cent in 1959, by Rs. 29 crores or 13 per cent in 1960 and by Rs. 25 crores or 10 per cent in 1961. The overall rate of growth of deposits in the smaller centres was 52 per cent as compared to 40 per cent in the larger centres. An important reason for the spurt in deposits was the inten-

sive branch expansion programme launched by scheduled banks in the smaller centres. Orissa records the largest percentage increase in savings deposits (143 per cent) followed by Madhya Pradesh (104 per cent), Bombay (62 per cent) and West Bengal (55 per cent). Orissa and Madhya Pradesh were having a low level of deposits, in absolute terms, in 1957 since they are backward. In contrast, the growth of deposits in East Punjab was only 10 per cent. In Rajasthan, the rate was 24 per cent. In Uttar Pradesh and Kashmir it was 25 per cent. There was a sustained rise in the average amount of savings deposits per office in Bombay (from Rs. 783 lakhs in 1957 to Rs. 1019 lakhs in 1961).

★★

The Textile Commissioner's proposal for appointing an inquiry committee to review the working of the price stamping system has a mixed reception in industrial and trade circles. The proposal was to appoint a ten-member committee to review the working of the present system of price stamping of cotton textiles. Leading businessmen and officials are to be associated with the Committee. The price stamping system has failed, in the elementary objective of providing cotton textiles to consumers at a fair price. Some of the leading mill owners however maintain that the system has helped to keep the prices of cotton textiles under check. The trade interests feel that prices of cloth would have been lower but for the price stamping system. Despite price stamping, the ills of illegal premia exist. The consumers interests would be safeguarded only if the system ensures that mills stamp only fair prices. It is however agreed by everybody, mills and the trade, that there is no general shortage of cloth. The general feeling is that the appointment of the Committee should have been preceded by measures to uproot the known evils of the system. The ICMF should be directed and empowered to take suitable action against the erring members. The authorities should examine the possibility of manufacturing the varieties in short supply.

★★

The Government of India's decision to permit the LIC into the general insurance field in a big way is being viewed with anxiety by the general insurance circles. Although the LIC will not edge out private companies from the business, this is what is going to happen in practice. The diversion of business from private companies to the LIC, it is felt, will be the last straw on the back of the general insurance companies. Even now public sector projects insure with the LIC subsidiaries, namely, the National and Oriental; the State Trading Corporation has its own arrangements. The LIC's entry into general insurance cannot however take away the

business of major groups who route them through the insurance companies connected with the groups.

★★

Mr. Lalchand Hirachand, addressing the Thirty-sixth Annual General Meeting of the Maharashtra Chamber of Commerce, Bombay, entered a strong protest against the Constitution (Seventeenth) Amendment Bill. Describing it as a measure which transcends party-politics and raises grave and fundamental issues of a legal and political character, Mr. Lalchand Hirachand said: "This Bill which is calculated to amend Article 31-A of the Constitution, seeks to enlarge the definition of the expression, 'estate' and to embrace for expropriation any land held under ryotwari settlement and land held or left for the purpose of agriculture. It is wrong to say that this amendment is meant to strike at excessive possession of agricultural land. On the contrary, it will, at one stroke, make all farmers and owners of land mere intermediaries taking away their inalienable right to property. The Bill will make the peasant class legally extinct and will bring us very close to Article 6 of the Constitution of U.S.S.R. wherein all land has been held as State Property."

Mr. Lalchand Hirachand referred in this connection to the Land Ceiling Act passed by the Maharashtra Government and pointed out that although the Bombay High Court has declared Section 28 of that Act "ultra vires" of the Constitution on the ground that the Section which provides, "inter alia", for the management of surplus agricultural lands taken over from sugar factories by a State-owned corporation, is discriminatory in the highest degree against the industrial undertakings, the Seventeenth Amendment, if passed, would result in validating this and other such Acts of doubtful validity.

Mr. Lalchand Hirachand also complained that certain measures of State legislation were arbitrary, oppressive and calculated to affect the economy of the State adversely. In his view, the proposed Bill providing for the abolition of special tenures in the City of Bombay and the Bill to replace the present low levy of Town Duty by the Bombay Municipal Corporation by a levy of octroi on a wide range of goods is likely to hit trade and industry to an extent unwarranted by revenue purposes.

Mr. Lalchand Hirachand, however, had good words to say about the Union Finance Minister's recent broadcast which indeed he described as the only redeeming feature "in the prevailing atmosphere of uncertainty and despair". He hoped that the Finance Minister's approach to fiscal and other problems would be positive and realistic and that he would take adequate measures for stimulating the economy.

Jaipur Discounted By Investors

From Our Correspondent

CALCUTTA:

IT IS a measure of the strength of the revived confidence in the stock market that even the speeches at the recent AICC session and the resolution on Socialism have failed to curb the enthusiasm of the bulls. It is no doubt true that when the AICC was in session and the words of the protagonists of rapid socialism were fresh in the memory, there was some hesitation with the result that for some time it appeared that equity prices would cry halt to their upward movement. But the depression proved to be shortlived as both operators and investors have evidently come to the conclusion that what they should care about is not what is being ultimately aimed at but what Government spokesmen have indicated unmistakably as Mr. T. T. Krishnamachari has done since he assumed his new post as Finance Minister. The Finance Minister has not only spoken about the need for activating the economy but has already taken some steps towards realising this objective.

The liberalisation of credit and more particularly the revocation of the restriction as to minimum margin on bank advances against shares has provided fresh incentive to the bullish sentiment.

Corporate news too has been encouraging in that there have been more bonus announcements. Guest, Keen, Williams has applied to the Controller of Capital Issues for permission to issue bonus shares on the basis of one ordinary share for every two existing shares. Another important bonus issue announcement has been from that of Indian Aluminium which proposes to issue one bonus share to every four held. From present indications it would appear that it would require some very strong adverse development to arrest the bulls' exuberance. Careful market analysts, however, have been cautioning investors against overdoing the buying spree in view of the fact that the emergency is still very much with us and that the threat to the security of the country from the

unfriendly neighbours has not diminished. In other words, the Finance Minister will still be obliged to find the resources both for defence and development at the time of framing his budget in February next. While it may be perhaps safe to assume that the next Budget will not come in the way of industrial expansion, it remains to be seen whether shareholders will be allowed to partake of the increased corporate profits.

★★

The need for lending massive support to the jute market emphasised in this column last week has since been suggested by the Indian Central Jute Committee in its latest issue of the Jute Bulletin. The article has pointed out that though the overall statistical position of jute is sound there is a temporary over-supply in the jute market due to three factors: "First, there has been an early crop this year which makes a big difference to the pattern of marketing in a country where delayed harvesting of jute is the rule on account of retting difficulties. Secondly, growers need ready cash to meet social obligations flowing from the Pujas. Thirdly, the price of paddy has registered an exorbitant increase; this makes the holding of jute by growers for a better market impossible". It is the last factor which has been responsible for the onrush of arrivals in October, despite the announcement of a fairly large compulsory quota for the jute mills and a quota for the Buffer Stock Association. With food prices soaring, the cultivator has naturally been placed in a sad predicament and the only alternative open to him has been to dispose

of his jute so as to buy rice. The Bulletin has rightly warned that, if paddy prices do not ease appreciably by the end of November, jute will possibly pass into the hands of middlemen, thereby defeating the elaborate arrangements that have been made by the authorities to ensure a reasonable return to the jute grower.

To prevent such an undesirable development, the ICJC has called for immediate massive purchase of raw jute for the Jute Buffer Stock Association and the State Trading Corporation to mop up the market surplus. Referring to the size of this year's crop, the ICJC has pointed out that though the area under jute may not have changed much one way or the other, compared to the 1962 acreage, there has been a significant rise in the acre yield because the growing conditions have been very favourable throughout the season. This strengthens the belief that this year's crop will also be a bumper one, and consequently there will be a sizable surplus left over after meeting all requirements. It is possible that the JBBSA will be asked to increase its purchase before long because the long-standing question of turning over of the stock of jute held by it has now been satisfactorily settled. The JBBSA has now decided to turn over 50 per cent of its stocks of the previous season's jute within the next six or seven weeks. Since the State Bank of India which is providing the credit for the JBBSA has made it clear that the turned over stocks should be replaced by new stocks from the new season crop, the JBBSA has necessarily to step up its purchases in coming weeks.

New Deal for Automobile Components?

From Our Correspondent

MADRAS:

THE WORLD Bank team is on a visit to Madras in order to examine the problems confronting automobile producers, ancillary industries and the State Government in developing road transport facilities. On account of the difficult foreign exchange situation, it has not been possible for the Central Government to allot the required foreign exchange for importing raw materials and components and parts to step up output of cars and trucks and components by the ancillary industries. The Highway Department of the State Government has been pointing out that the allotment for improving existing roads and constructing new links has not been adequate and it has been possible to incur expenditure only on projects which had a higher priority. There was also a shortage of road-making equipment.

As a result of the representations made by the Central Government for giving untied loans, it had been expected that the World Bank would be prepared to give a loan of \$90 million out of which \$30 million would be available for meeting the needs of automobile producers and ancillary industries and for purchasing essential machinery and equipment by the Highways Department. The team has had discussions with the Ministers of the State Government and engineers. It has also been meeting representatives of the automobile industry in its various departments and it is hoped, as a result of the intimate discussions held with nearly every manufacturer on a confidential basis, the experts would be able to draw up a plan which would help the producers to step up their output and utilise existing capacity effectively.

It has been complained that the ancillary industries, which have grown at a fast rate in recent years, have not been able to utilise their capacity fully and raw material supplies have been inadequate. The only car manufacturer has not been allotted the required foreign exchange while Ashok Leyland, an important producer of trucks, is also having its problems. These have been to some extent minimised by the grant of a recent loan by the British Government on the basis of the recommendations of Sir Norman Kipping, Director-General of

British Federation of Industries. Even so, with an expansion plan under implementation and a serious scarcity of spare parts, it is felt that the proposed loan of \$30 million should be equitably distributed and that this allotment should be in addition to the existing foreign exchange allocation out of current earnings. In fact, it has been argued that the liberalisation policy should be independent of the non-project assistance secured from the World Bank as the demand for various types of vehicles is greatly unsatisfied and it is difficult also to maintain the existing vehicles and keep them going.

The ancillary industries have been doing very well as in the past two or three years large-sized units have been set up for the manufacture of truck wheels, electrical equipment and air-brakes. Only recently it was indicated by another producer that plans were under way for stepping up output of clutch disc, steering gear system and engine valves. One more big unit is reported to have been granted a licence for manufacturing other components and parts. It is expected that, as a result of these developments, it would be possible to suspend the imports of many essential items though there may be need for importing raw materials till such time that arrangements for indigenous manufacture fructified. It is, however, a matter for gratification that the industry will be in a position to produce up to 85 per cent of components and parts within the country and with the slightly increased foreign exchange allocation it would be possible to increase output significantly. It is emphasised that the automobile industry would be able to achieve a significant increase in its output if, besides a satisfactory quota out of current earnings, the assistance from the World Bank is also utilized for balancing equipment and manufacturing such components and parts as are not being produced in this country. The World Bank team is reported to have been impressed with the work done by some of the bigger producers.

The Madras State Government has a good record in respect of road development, but the Chief Engineer has pointed out that the allotment of about Rs. 4 crores annually for development of road facilities has fallen short of the minimum

of Rs. 4½ crores and construction work has also been impeded to a certain extent by the lack of an adequate number of road rollers and other equipment. The Chief Engineer has emphasised the need for constructing a national highway on the East Coast with the assistance of the World Bank. The work can be completed in a short period as there are only small missing links though the surface of the road will have to be considerably improved and bridges and culverts strengthened. There is, therefore, anxiety to know what exactly will be the eventual outcome as a result of the visit of the World Bank team.

★★

After returning from his foreign tour, the Madras Minister for Industries has been busy examining how new industries can be developed and to what extent the State Government can provide the basic facilities in different districts. So far as Madras is concerned the problem of water supply is expected to become acute if arrangements are not made in a short period to bring water either from Krishna or Cauvery or produce fresh water by desalinising sea water. When he laid the foundation stone for a new factory near Madras for manufacturing lightning arrestors and low tension and high tension porcelain insulators, Mr. R. Venkataraman stated that there was possibility for desalinising on a large scale sea water with the co-operation of Westinghouse International Electric which is one of the leading producers of electrical equipment in the world. This American firm will be co-operating with W. S. Insulators India Limited for manufacturing lightning arrestors and porcelain insulators. This same firm will be asked by the Government to conduct experiments for desalinising sea water so that fresh water supplies can be augmented. The cost of production is still high being 60 cents per 1000 gallons, but it is felt that the steam released in the

process of distillation could be utilised for running a thermal station having a capacity of 100 mW. If a satisfactory process could be evolved for utilising steam the cost of distillation can be reduced appreciably. The addition to water availability would be greatly helpful.

★★

The second factory of India Cements at Sankaridrug, near Salem, was commissioned into production a few days back. This unit, which has an initial capacity of 200,000 tons annually, has been constructed in the record time of 14 months and the layout of the factory has been so designed that the capacity can be doubled to 400,000 tons without incurring any large capital expenditure. This factory has already received a licence for expanding its capacity by 200,000 tons and it is expected that by the beginning of 1965, the expanded plant will be in operation. Already, the company is having a factory at Talaiyuthu in Tirunelveli District with a capacity of 5 lakh tons annually.

Inaugurating the factory, Mr. R. Venkataraman, the Industries Minister, stated that there were plans to increase the output of cement in the next few years in a big way. In Trichy District large limestone deposits are available and a licence has been already issued to the Rajas of Cheetinad for starting a factory with a capacity of 500,000 tons to be achieved in two stages. The necessary arrangements are being made to purchase plant and machinery. It is also being examined whether another cement factory, having a capacity of 200,000 tons, can be started near Rameswaram for utilizing limestone deposits in that area. The promoters of Madras Cements Limited have been carrying out the necessary negotiations with foreign interests for purchasing plant and machinery. A separate company may be formed for this purpose.

ASP/17-28

The moving finger writes

I CERTAINLY am not impressed with the show put up by the "Keep Left" brigade at Jaipur. That Messrs Menon and Malaviya, fighting for dear political life, would try their damndest to be noticed was only to be expected and I for one would say that all their vociferous verbal thrashing about only goes to show how nervous and unsure they are of their personal or factional status within the Congress Party. Quite a few Special Correspondents of newspapers have persuaded themselves to describe the Menon-Malaviya performance as "stealing the show", but the "thievery" is unlikely to bring any solid gains to the "thieves". It is just because doctrinaire or double-crossing extremism has been virtually routed in the councils of the Congress Party that its practitioners have been overworking themselves at Jaipur to create an illusion that they and their way of thinking continue to count for something. I am confident that, when the time arrives for the general session at Bhubaneshwar, much of the froth would have blown away.

★★

I said that I was not impressed by what went on in Jaipur, but I am rather depressed. As an exhibition of political infantilism, the wobbling of the Congress leadership could hardly have been worse. The Prime Minister did his usual Hamlet again. I particularly find it difficult to make any sense out of his complaint that the declaration on democratic socialism lacked a sense of urgency. Neither democracy nor democratic socialism can be built up in any country, let alone this one, in a hurry. Whether as political, social or economic institutions or as a way of life, they have to evolve over a period as each generation becomes more civilized, more outward-looking, and more compassionate. This is not a matter of passing a series of resolutions at Congress sessions or even a set of Laws in Parliament. The first step is to secure to the people the primary prerequisites of civilized living, a minimum of food, clothing and shelter, opportunities of education and individual betterment and some easing of the haunting fears of unemployment or pauperism. It is necessary to remind Mr. Nehru that, after sixteen years of Independence, and despite many bold declarations of the ruling party and the Government, this first step is still half way in the air. Let the economic policies and programmes of the ruling party first demonstrate that they are capable of generating enough economic progress within a reasonable period of time to enable the people of this country to start living a civilized life.

★★

It is not easy to appreciate the importance of Mr. Swaran Singh going to Rome with a retinue of Civil Servants to attend the forthcoming Annual Conference of the F.A.O. It is not as if any significant policy decisions are going to be taken at this Conference. One cannot, in fact, imagine the F.A.O. doing anything significant, especially under its present Director-General (appointed in 1956), who, I see, is proposing to stand for re-election for a further term. This most ineffective of the U.N. Agencies has become a mere talking shop. It is a pity that India's Food and Agriculture Minister should find it possible to spare time from his urgent and complicated responsibilities to undertake this jaunt. It is perhaps not irrelevant to point out here that the present

Finance Minister decided to send a Secretary of the Economic Affairs Department of the Finance Ministry to attend the Washington meetings of the I.M.F. and the World Bank rather than go himself. Mr. Krishnamachari obviously reasoned that, having recently become Finance Minister, he had work to do here. I should presume that the same logic applies to Mr. Swaran Singh. It is admitted on all hands that the portfolio of Food and Agriculture needs some very decisive handling. It is also fairly well-known that for medical reasons Mr. Swaran Singh has had to stay away from his work after taking charge of this difficult portfolio. Now that he is happily well again I should have thought that he would have wanted to make up for lost time. All this apart, when the declaration of emergency is still in force, it is only proper that at least Cabinet Ministers deny themselves the luxury of foreign visits, unless such visits are demonstrably unavoidable.

★★

Mr. Krishan Bhatia in "The Statesman" has rightly criticised the lavish and extravagant hospitality organised at the Jaipur Session of the A.I.C.C. as being grossly inconsistent with the formal sermonising on austerity by Congress leaders. But the contrast becomes even more glaring when the free-for-all feasting at the A.I.C.C. canteen is related to the famine now raging in the Bikaner-Jaisalmer areas of Rajasthan. I hear reports that not only are cattle and other livestock perishing in their thousands for want of fodder and water, but also that quite a few hundred thousand people have been confronted with acute scarcity conditions. It appears that there is just not enough water to drink even for the human population in these areas and with winter now coming over these northern deserts, the destitution of those ill-fed, ill-clad and famine-stricken communities will surely be aggravated. It is strange that Rajasthan's Chief Minister, who reportedly went to Bombay to collect money from businessmen for the A.I.C.C. extravaganza is still to exert himself to provide funds for the relief of the distressed in those remote regions of the State.

★★

I see that "Eastern Economist's" description of "The Current's" scare-mongering about bank nationalisation as a "canard" has cut Mr. D. F. Karaka to the quick. It amuses me that in a front-page report in the issue of his weekly last week, Mr. Karaka seems to be much less certain of the Government's alleged intention to nationalize banks than he seemed to be in his earlier story of October 5. It is even more entertaining to find Mr. Karaka claiming that, if his earlier report that the Finance Minister would be nationalising banks at the instance of the Prime Minister fails to be substantiated by events, it will only be because the publicity he has given to Mr. Nehru's intentions has frightened the latter into second thoughts. This is slick journalism indeed. You circulate a false story knowing it to be false and when your bluff is called you pretend that what you said would have happened had you not said that it would happen. "Dim" must indeed be taking a dim view of the intelligence of his readers.

V. B.

Trade Winds

NORTHERN LIGHTS

AT A high level conference presided over by Dr. K. L. Rao, Union Minister of Irrigation and Power, Jammu and Kashmir, Himachal Pradesh, Punjab, Delhi and Rajasthan have agreed to form the Northern Regional Electricity Board. The main function of the Board, which will have an advisory status, will be to plan and ensure integrated operation of the systems in the region in such a manner that at any time the total amount of electricity generated and transmitted gives the maximum possible benefit to the region as a whole.

This is the second Regional Electricity Board which has been constituted. Earlier this week, Madras, Andhra, Mysore and Kerala agreed to form the Southern Regional Electricity Board. It is proposed to have seven regional boards in the country which will operate regional super grids and ultimately help in the formation of an all-India power grid.

The integrated operation of Punjab and Delhi systems alone will result in a saving of 110,000 KW in installed capacity corresponding to the conditions in 1966-67. The approximate capital expenditure that would be incurred if the two systems had to make independent provisions for installing an additional generating capacity of 110,000 KW is estimated to be Rs. 9.9 crores and the annual running charges about Rs. 89 lakhs.

The two transmission lines, which will interlink the power systems of the region, are expected to be completed in about 18 months' time. The transmission lines include a 220 KV single circuit line from Faridabad in Punjab State to Delhi 'C' station and a 220 KV double circuit line from Hissar in Punjab State to Jaipur via Khetri in Rajasthan State.

The scope of the Regional Board, to start with, would be very limited. It will not interfere either in the generation or distribution of electricity within a State or a Union Territory. It will, however, help in reducing the standby capacity which can be distributed among the States. The Board will also ensure supply of electricity in a particular State in case of a power failure.

Ultimately the functions of the Board will include:

- (1) Reviewing the progress of power development schemes in the region.
- (2) Planning and ensuring integrated operation of the systems in the region in such a manner that at any time the total amount of electricity generated and transmitted shall give the maximum possible benefits to the region as a whole.
- (3) Preparation of a co-ordinated overhaul and maintenance programme for the generating plants in the region.
- (4) Determining the generation schedules to be followed by the constituent systems.
- (5) Determining the quanta of power available for exchange from time to time between the States, over and above the requirements of each State.
- (6) Determination of a suitable tariff structure to govern exchanges of power within the region.
- (7) Consideration of any other relevant matter for appropriate action thereon.

The members of the Board would include the Minister of State for Irrigation and Power, Jammu and Kashmir, the Chairman, Punjab State Electricity Board, the Chairman, Rajasthan State Electricity Board, the Chairman, DESU, Chief

Secretary, Himachal Pradesh, a representative of the Central Electricity Authority and a member Secretary.

The Chairman of the Punjab State Electricity Board will be the Chairman of the regional body for the first two years. Afterwards, the representatives of the other States will be the Chairman of the Board by rotation every year. The headquarters of the Board will be located in Delhi.

EXPORTS OF OILSEEDS

Mr. H. R. Raja, the Chairman of the Indian Oil and Produce Exporters Association told the sixth annual general meeting, held in Bombay recently that under the Government's export incentive scheme, the export of oil seeds and their products had been stepped up considerably. In 1962-63 exports of oil seeds, vegetable oils (non-essential) and oil cakes/meal fetched about Rs. 49.31 crores in foreign exchange. The major foreign exchange earner individually at Rs. 31.79 crores was cake/meal. The table below in this context is self revealing. Mr. Raja said that under the export incentive scheme there was good revival of export trade in groundnut oil.

Item	(Rs. lakhs)
	Amount
1. Vegetable Oils (non-essential)	
Groundnut oil	7,82.9
Castor oil	4,28.7
Linseed oil	12.8
Tobacco seed oil	9.4
Mustar oil	4.8
Total (incl. others)	13,17.1
2. Oilseed Cakes and Meal	
Defatted groundnut meal	26,52.0
Groundnut cakes	1,92.5
Cottonseed cakes	1,38.0
Linseed cakes	1,06.5
Total (incl. others)	31,79.1
3. Oilseeds, Oilnuts, and Oil Kernels	
Groundnuts	4,07.2
Poppy seed	3.3
Nigar seed	1.7
Total (incl. others)	4,34.9
Grand Total	49,31.1

Due to the failure of the olive crop in Spain last year, India was able to build up a good export trade in groundnut oil. It is interesting to note that the current trend indicate further improvement in the pace of exports of these products. Mr. Raja opined that with the development of the solvent extraction industry in the country, the day is not far off when this country would be able to reach the mark of one million tons of export of groundnut extraction. The export of vegetable oils, however, is still handicapped by higher Indian prices.

The Chairman of IOPEA emphasised the need for setting up an export promotion council for oil seeds, vegetable oils and oil cakes/meal. Referring to the production of oil seeds and their products in the country, he pointed out that, even after two years of the third Plan, the country has failed to achieve the target of 76 lakh tons of production of five major oil seeds set for the second Plan. The basic problem, he said has been the low yield per acre — the average yield of groundnut in India is about 640 lbs. per acre as against the world average of 900 lbs. Since the limits of extensive cultivation

One of the fastest growing general insurance companies in India MADRAS MOTOR & GENERAL INSURANCE COMPANY LIMITED

The stability of a general insurance company depends upon the continued patronage of its clients. The ability to expand the field of activities and serve new clients sets the pace of its growth.

The swift and steady growth of Madras Motor & General Insurance Company Limited indicates that it possesses both these qualities in ample measure.

A TASK FOR FLYING FINGERS

In the cool, clean, mountain air, the tea gardens of Assam spread out like vast, green carpets. With lightning speed, the cheerful tea pickers pluck the tender tea-tips as soon as they grow. Only young leaves will do for processing. People like these busy workers are the real people of the country — industrious, happy, with faith in the progress of new India... a progress in which we at the **State Bank of India** are proud to play our part, by serving the nation through our network of branches throughout the land.

November 15, 1963

November 15, 1963

EASTERN ECONOMIST

1029

have been reached with regard to these crops, Mr. Raja said that the Government should call for concerted and vigorous efforts to increase per acre yield of oil seeds in our country through intensive cultivation. Unless scientific methods of cultivation are undertaken it is just not possible to achieve the current Plan target of 98 lakh tons of oil seeds.

FORWARD TRADING IN KAPAS

Due to an improvement in the supply position of cotton during the current cotton season 1963-64, the Government of India has decided, as a temporary measure, to remove the ban on futures trading in kapas. The ban was imposed in November, 1962 when the supply position of cotton was acute and prices had touched the ceiling. The Forward Markets Commission is examining the desirability or otherwise of bringing Kapas under the Regulatory Provision of the Forward Contracts (Regulation) Act, 1952. Meanwhile, the Commission will permit resumption of forward trading in Kapas under the auspices of registered associations with certain safeguards such as, requiring them to seek prior permission of the Commission before commencing trade in any delivery, fixation of appropriate maximum prices for Kapas in relation to cotton with the concurrence of the Commission and imposition of such limits on price fluctuations of Kapas as may be conducive to the smooth functioning of the markets. The concerned associations will also be required to submit to the Commission such returns relating to their trading activity as might be prescribed by the Commission. It is notified for the information of the trade that such permission as is granted by the Commission to commence trading in any particular delivery in Kapas will be without prejudice to any action that may be taken by the Central Government to bring Kapas within the Regulatory Provisions of the Forward Contracts (Regulation) Act, 1952.

EXCISE DUTY ON KHANDSARI

The Government of India has revised, with effect from November 1, 1963, the rates of compounded levy of excise duty by 33-1/3 per cent (approximately) in respect of Khand-sari sugar manufactured with and without the aid of sulphitation plants.

THERMAL STATION FOR HARDUAGANJ

A contract was signed recently at Lucknow between the Uttar Pradesh State Electricity Board and the ALL UNION MACHINOEEXPORT TRUST of the Ministry of Foreign Trade of the U.S.S.R. for the construction of a thermal power station in Harduaganj. Simultaneously, an agreement was concluded for the delivery from the U.S.S.R. of building equipment for the station worth Rs. 35,00,000. The Harduaganj thermal power station will have an initial capacity of 100 mW. with two units of 50 mW. each. Its capacity can, however, be extended upto 800 mW. It will be the biggest thermal power station in the western part of U.P. All the major equipments for the station, which will be supplied from the U.S.S.R., have been designed taking into consideration the tropical conditions of the country and the big ash content of the Indian coal that will be used in the boilers.

The detailed project report will provide for using also equipments and materials of Indian manufacture. The high efficiency of the power station will be ensured by using a high pressure steam and a direct-flow water supply system. The water will be supplied from the upper Ganga canal. All the main processes at the station will be automated, which will make it possible to minimise the number of personnel. The power station is to be commissioned during the third five-year Plan i.e., by 1st April, 1966. Erection will be conducted with the technical assistance of Soviet specialists. The power station

will be designed by Teploelektroproekt Institute, which has great experience in designing a number of thermal power stations in India such as, Neyveli, Patratu, Obra, Korba and others. Indian engineers will participate in the designing work.

OUTPUT OF PAINTS PRODUCTS

According to the estimate of the Ad hoc Committee for paint and allied industries which has recently submitted its report to the Union Government, the annual output of paints products by the end of the fourth five-year Plan will have to be stepped up by 380,000 tons from the present rate of 80,000 tons. The Committee is of the view that the paints industry is an ideal one for development in the small-scale sector. It has pointed out that while small-scale industries in many countries play very important part in the production of paints, in India about 10 large-scale firms practically account for 50 per cent of the total production. An investment of Rs. 3.5 lakhs in machinery is considered adequate for manufacturing almost all the different types of paint products provided technical know-how is available. To help the small-scale units to get this technical know-how, the Committee has recommended that proposals for foreign collaboration from small-scale paint units should be sympathetically considered, and that the services of foreign technicians might be obtained by the Central Small Industries Organisation, which should also appoint a panel of Indian consultants, making a beginning through the appointment of two consultants, one in Bombay and another in Calcutta.

In view of the preponderance of government-oriented purchases in India, the Committee has examined the present position with regard to purchases both by the Central and State Governments, inspection procedure, registration with various organisations, earnest money and security deposits, etc. It is of the view that Government-oriented purchases should be restricted to the small-scale sector whenever possible. The Committee has emphasised the need for equipping the small-scale units with up-to-date machinery and recommended that facilities for importing such machinery, as are not manufactured in the country, might be provided. Referring to the decision of the Government that a capacity of 190,000 tons would have to be established by 1966 and about 110,000 tons of capacity would have to be created during the next two to three years, and to the decision of the Licensing Committee to develop an additional capacity of 50,000 tons in the large-scale sector, the Committee has recommended that the remaining capacity of 50,000 to 60,000 tons might be entirely reserved for the small-scale sector. Further, licensing of production of dry distemper, red lead, red oxide, aluminium paints, bitumen paints, wagon blacks, graphite paints and all paste paints should be reserved entirely for the small-scale sector. Recognising the technically complex and wide nature of the paints industry, the Committee has urged the need for centralised control of the industry so that it may develop in a balanced way ensuring maximum utilization of the available resources.

TAXATION AND GROWTH

At the regional conference of the Federation of Indian Chambers of Commerce and Industry held at Kanpur recently, Mr. Bharat Ram, President of the Federation, pointed out that prompt consideration should be given to correcting the stagnation of the economy. The fundamental weakness in the industrial sector, he said, lies in shortage of finance both in terms of foreign exchange and rupee finance. Irksome regulations relating to share participation by foreigners, payment of royalties, technical fees, remuneration to technical personnel, etc., lead to delays. There is over dependence on taxation and over spending the receipts on non-productive

civil uses. The yield from the additional taxation already imposed by the Centre will, over the five years, exceed the target laid down in the third Plan. Additional taxation at the Centre and States in the first three years of the third Plan is expected to raise the ratio of tax revenue to national income from 9.6 per cent to over 13 per cent. This stupendous magnitude of taxation inevitably tells upon the capacity of the private sector to save and invest. As a result of this, there has been a dampening of enthusiasm for new industrial projects. The immediate need, he stressed, is to make our taxation structure investment-oriented, both in regard to principles and content, as far as circumstances permit, so that investment activity may proceed without fear of drastic and frequent changes.

PLANTATION INDUSTRY IN MYSORE

At the fifth annual general meeting of the Mysore State Planters' Association, Mr. P. G. Gurjer, Chairman of the Association, in his speech dwelt at length on many of the problems facing the plantation industry. Criticising high taxation, Mr. Gurjer said that allowing for variations in the size of the incomes, the tax provisions made by plantations in the State now amount to nearly 60 per cent of their income. Mr. Gurjer's view was that the present state of taxation would not leave with the grower the means to lay aside anything for development. The Chairman's complaint was that plantations were not given depreciation for their field assets. Although the Tariff Commission recommended a depreciation allowance for rubber and the Centre endorsed it for the State's consideration, Mysore alone among the rubber growing States has refused to allow depreciation as a legitimate deduction.

In spite of the fact that costs have gone up, no special consideration is being extended to the industry to mitigate its special handicaps. Mr. Gurjer felt that if plantations industry was to progress, the excise duty on its produce should be abolished, octroi and sales-tax should be lightened and taxation, directly and indirectly, levied should be lowered to tolerable levels. Referring to the recent amendment to the Mysore Agricultural Income-Tax Act, Mr. Gurjer stated that the amendment provides for expenditure incurred on upkeep and maintenance of replanted tea upto the time of bearing; for precisely the same expenditure for maintaining immature coffee and rubber areas, no deduction is allowed under the Act. Since the industry is not allowed depreciation on its most important assets, namely, the plants, plantations cannot accumulate resources to replace capital wastage of its planted assets.

MANAGEMENT OF MARKETING

At a seminar held recently by the Calcutta Productivity Council and the Calcutta Management Association, Mr. R. H. Mody, in his inaugural address, dwelt at length on 'management of international marketing'. Mr. Mody pointed out that in spite of the willingness of industry to export and also governmental encouragement, it is necessary to ensure certain other conditions if the export drive is to succeed. The first essential, he underlined, is to know one's market. Although some basic information on consumption habits in importing countries is available, the knowledge is far from adequate. It is only through reasonably comprehensive market surveys that a clear picture of the extent of potential demand, the specific tastes, habits and characteristics of the markets concerned can be obtained. Instances have not been lacking in the past when we have sent goods made to a design without any effort to assess its suitability in the markets concerned, in sharp contrast with the determined efforts to meet customers' preference made by our competitors. Western countries and Japan are particularly careful in this regard. Take for ins-

tance, he said, the case of Nescafe (instant coffee) which is made in no less than 30 different tastes to suit different markets throughout the world. The second point which Mr. Mody highlighted, is high quality and competitive prices for all export goods.

It is also necessary to ensure that when supply is sent to foreign markets, the schedule and regularity of exports is maintained. Equally important is the provision of after sales service. In the development and management of international marketing, sustained publicity and salesmanship are of cardinal importance. There is, finally, need for co-ordinating the work of various export promotion councils.

WAGE SURVEY

The Labour Bureau of the Ministry of Labour and Employment, Government of India has launched the second occupational wage survey. Data will be collected during the course of the survey on the occupational wage rates and earnings of industrial workers employed in 45 major manufacturing, mining and plantation industries. The survey will also make available some information on overtime working and incentive bonus scheme. A similar occupational wage survey was conducted by the Bureau in 1958-59. Besides yielding information on the occupational wage rates and earnings of industrial workers, this survey will also enable an appraisal of the changes in wage rates and earnings since the time of the last survey.

COPYRIGHT ACT EXTENDED TO PERU

In a notification issued in the Gazette of India Extraordinary dated the 25th October, 1963, the Government of India have extended the operation of the Copyright Act, 1957 (14 of 1957), to the works of Peru.

This is consequent on the ratification of the Universal Copyright Convention by the Government of Peru.

Company Affairs

SAKTHI SUGARS ISSUE

SAKTHI SUGARS LTD., a new company incorporated in 1961, with the object of manufacturing and marketing sugar, confectionery, power alcohol, etc., is going ahead with the construction of a sugar factory at Appakudal, about eight miles from Bhavani in Madras State. This is a sugar-cane growing belt fed by Bhavanisagar and the Mettur Dam canals and the Kalingrayan and other irrigation channels. An area of nearly 30,000 acres is under sugarcane cultivation with an average yield of about 40 tons per acre. The company has made arrangements for the supplies of sugar plant and machinery from Walchandnagar Industries Ltd. The project will involve a capital outlay of around Rs. 155 lakhs of which a sum of Rs. 75 lakhs is being raised in the form of 75,000 equity shares of Rs. 100 each. Another sum of Rs. 70 lakhs will be raised by a loan from the Punjab National Bank and the remaining Rs. 10 lakhs by short-term deposits. The factory will start operations from the 1964 season.

The company has entered the capital market with an offer to the public of 39,896 equity shares of Rs. 100 each at par. The subscription list opened on November 11, 1963, to close on November 20, 1963, or earlier at the discretion of the directors but not before November 16, 1963. (Details were published in "Eastern Economist" dated November 8, 1963). The authorised capital is Rs. one crore made up of 75,000 equity shares of Rs. 100 each and 25,000 redeemable cumulative preference shares of Rs. 100 each. The issued capital is Rs. 75 lakhs made up of 75,000 equity shares out of which 35,104 equity shares have been allotted to directors, promoters and their friends and to the signatories to the Memorandum of Association. This issue has been underwritten to the extent of Rs. 20 lakhs by the Madras Industrial Investment Corporation Ltd. and Rs. 5 lakhs by the Life Insurance Corporation of India. In regard to the balance of Rs. 14,89,600, the company has an undertaking from Mr. N. Mahalingam, one of its directors, that in the event of the public subscription falling short of this amount, he would procure subscriptions to make up such deficit.

HINDUSTAN POLYMERS

Hindustan Polymers Limited will enter the capital market shortly with a public issue of 127,400 equity shares of Rs. 100 each at par. Its authorised capital is Rs. five crores made up of 300,000 equity shares of Rs. 100 each and Rs. 200,000 unclassified shares of Rs. 100 each. The entire public issue is underwritten. Out of the issued capital of Rs. three crores constituting 300,000 equity shares, 112,600 shares have been subscribed by the promoters, directors and their friends. Bakelite Xylonite Limited, London, a subsidiary of the technical collaborators has subscribed 20,000 equity shares. Commonwealth Development Finance Co., Ltd., London and the Industrial Credit and Investment Corporation of India Limited, Bombay, have subscribed 20,000 equity shares each. Total subscribed capital up till now is Rs. 1,72,60,000 and the total paid-up capital Rs. 43,30,250.

The immediate object of the company is to manufacture power alcohol, styrene monomer, polystyrene and its copolymers and by-products derived from these items. The Government of India have issued a licence for the manufacture of 10,000 tons of styrene monomer, 7,500 tons of polystyrene and its copolymers and 1.5 million gallons of power alcohol every year. The company has made applications to the Government to obtain licences worth Rs. 2.23 crores for the import of plant, machinery and equipment. It has secured technical assistance and collaboration of Universal Oil Products Co., Inc., of USA and BX Plastics Ltd., England. The Power Gas Corporation Limited, England will be the suppliers of plant and machinery for styrene monomer and polystyrene and will also supervise

its erection. Molasses and benzene will be the basis for the production of styrene monomer and polystyrene. The plant will be located at Visakapatnam where land has already been acquired.

ARUNODAY MILLS

Arunoday Mills Limited have entered the capital market with a public issue of Rs. 17.50 lakhs made up of 125,000 equity shares of Rs. 10 each and 5,000 redeemable cumulative preference shares (9.5 per cent) of Rs. 100 each. The subscription list opened on November 11 to close on November 23, or earlier but not before November 14. The whole issue has been underwritten. The company has an authorised capital of Rs. one crore and an issued capital (including the current issue) of Rs. 30.00 lakhs, out of which shares worth Rs. 12.50 lakhs have been subscribed by the directors, their friends and their associates. The company is putting up a textile mill at Morvi in Gujarat, a cotton growing area. It has been granted industrial licences for a spinning unit of 12,000 spindles and 324 automatic looms.

The present scheme will involve a capital outlay of Rs. 79.50 lakhs including working capital. A sum of Rs. 30.00 lakhs will be raised by share capital, Rs. 5.50 lakhs by 10 years deferred payment of machinery, Rs. 29.50 lakhs by term-loan from Bank of Baroda under arrangement with Refinance Corporation for Industries and Rs. 14.50 lakhs by loans for working capital from Bank of Baroda Limited. The company has a special advantage in the import of machinery as the Government has allowed it to import combers, cane-winners, etc., against foreign exchange obtained by issue of equity shares to non-residents. Out of equity shares worth Rs. 12.50 lakhs subscribed by promoters and their friends, shares worth Rs. 4.45 lakhs are issued to non-residents. Production is expected to start by September, 1964.

ROCKWELL INDIA

Rockwell India Ltd., a new machine tool manufacturing company, proposes to enter the market shortly to raise Rs. 7.35 lakhs by public subscription. The company has a Rs. 57.13 lakh project for the manufacture of wood working and metal working machinery at Udhana in Surat district, with the technical and financial collaboration of Rockwell Manufacturing Company of USA and its subsidiary, Rockwell International S.A., Switzerland. The authorised capital of the company is Rs. one crore and the issued capital is Rs. 30 lakhs. Equity capital of Rs. 22.65 lakhs has been subscribed and fully paid-up — the foreign collaborators have subscribed to the extent of Rs. 14.99 lakhs and Batliboi and Company, the major Indian promoters, to the extent of Rs. 7.65 lakhs. It will now raise Rs. 7.35 lakhs by public subscription and Rs. 27.13 lakhs by a loan from banks and other sources. While approving the project, the Government of India have stipulated that the company should export at least 20 per cent of its products.

INDIAN ALUMINIUM

The directors of Indian Aluminium Company Limited propose to call an extraordinary general meeting on December 16 for the purpose of considering and, if thought fit, passing a resolution which would entitle the holders of ordinary shares, in respect of which par or nominal value has been fully paid up, to one fully paid bonus share of Rs. 10 each for every four shares held as on December 16. An interim dividend of Rs. 0.75 per ordinary share was declared for the year ended December 31, 1963.

ASHOK LEYLAND

Ashok Leyland has finalized the details of its rights issue to finance its phased programme of manufacturing Leyland heavy duty commercial vehicles and diesel engines. The additional capital to be raised is Rs. 55.25 lakhs divided into

11,05,000 equity shares of Rs. 5 each to be offered at par to the existing shareholders in the ratio of one share for every nine shares held on October 31, 1963. Of these shares, Leyland Motors Ltd., UK will be offered 662,777 shares of the value of Rs. 33.14 lakhs at par and will be allotted to them from time to time against supply of plant and machinery. The balance of 441,999 shares of the value of Rs. 22.10 lakhs will be offered to the other shareholders. The shareholders are entitled to apply for additional shares and will be allotted shares not taken up by members other than Leyland Motors Ltd.

The company is now in the process of increasing the output of Comet chassis to 5,000 per annum, with 25 per cent additional capacity in the production of spare parts and in addition an output of 1,200 heavy duty type '680' diesel engines. With the rapid expansion of the factory and for the implementation of the manufacturing programme of the company, heavy capital expenditure by way of plant and machinery and building has to be incurred. A part of this expenditure will be provided by the proposed rights issue.

GUEST, KEEN, WILLIAMS

The directors of Guest, Keen, Williams Ltd. have decided to issue bonus shares, in the proportion of one bonus share for every two shares held, by capitalising reserves. The company has already applied to the Government for necessary sanction. When the bonus shares are issued, the ordinary share capital will be increased by Rs. two crores to Rs. six crores. The prospects for the company are very promising because it intends to diversify its activities. The directors have also declared an interim taxable ordinary dividend of 6 per cent for the year ending December, 1963.

BHARAT BIJLEE

The directors of Bharat Bijlee Ltd., propose to raise additional capital of Rs. 60 lakhs in 30,000 equity shares of Rs. 100 each and 30,000 redeemable cumulative preference shares (9.3 per cent) of Rs. 100 each, subject to the approval of the Controller of Capital Issues, to finance the company's expansion programme. The shares will be offered to the existing shareholders as rights. In addition to this, the company has arranged a bank loan of Rs. 50 lakhs. Arrangements are also being made for foreign exchange accommodation. The year ended June 30, 1963, was encouraging. Sales improved from Rs. 81.36 lakhs last year to Rs. 108.72 lakhs and gross profit consequently reached Rs. 14.21 lakhs, an increase of nearly Rs. 4.49 lakhs over the previous year. The directors have proposed the payment of dividend at the rate of 8 per cent on the old shares and a proportionate distribution of 6 per cent on the new shares absorbing Rs. 1.90 lakhs. The company has made an application to the Maharashtra Industrial Development Corporation for allotment of a large area of land on long-term lease in the Kalwa Industrial Estates.

FORT GLOSTER

Fort Gloster Industries is issuing rights shares in the ratio of one for two at a premium of Rs. 90 per share. The company had to abandon some time ago an earlier plan of making a rights issue to finance a large-scale expansion of its cable division, as the Chinese aggression and developments thereafter had an adverse impact on the capital market. The company's original scheme has been modified in the light of its present needs. It has undertaken to manufacture all types of railway signalling cables with insulation of paper, P.V.C. and rubber and also certain special cables in rubber, P.V.C. and polythene, besides paper insulated and lead covered cables.

TATA CHEMICALS EXPANSION

Mr. J. R. D. Tata, Chairman of Tata Chemicals Limited, has indicated in his statement appended to the annual report for the year ended June 30, 1963, that the company was planning a further expansion after the completion of its previous

expansion programme. Already, its expansion project has enabled its production of soda ash to increase from 57,000 tonnes in 1957 to 128,000 tonnes during the year under review. The production of dense ash which stabilised from January 1962 totalled 21,600 tonnes compared with 5,500 tonnes last year. The production of refined sodium bicarbonate was 6 per cent higher than the previous year and the salt season was also considered exceptionally good; as much as 186,000 tonnes of salt were produced at Mithapur and 65,000 tonnes at Okhamadhi. The Chairman indicated that as against the previous plan of having an increase of the order of around 100 tonnes a day of soda ash at Mithapur, a substantially larger expansion could be undertaken in view of the reduced dependence on supplies of fresh water for technical operations. An increase in salt production was also likely to help this expansion plan. The company has secured approval from the Government for doubling its present capacity of 30,000 tonnes of heavy ash and the Chairman was hopeful that with the proposed expansion, there would be considerable improvement in its profitability. During the year under review, the value of products sold, inclusive of excise duty recovered, amounted to Rs. 7.15 crores as against Rs. 5.31 crores last year. This improved sales proceeds were reflected in the higher profits which stood around Rs. 79.48 lakhs as against last year's Rs. 16.94 lakhs. The directors have proposed to transfer Rs. 3.94 lakhs towards general reserve and Rs. 41 lakhs towards development rebate reserve. A dividend of Re. one per ordinary share (70 nP. net) is proposed to be paid against a dividend of 65 nP. (46 nP. net) paid last year. It will absorb a sum of Rs. 30.24 lakhs.

BHARAT BALL BEARING

A new ball bearing factory was recently opened at Ranchi by the Union Minister for Steel and Heavy Industries. Mr. Bharat Ram, Chairman of the company (Bharat Ball Bearing), stated that the demand for ball and roller bearings is estimated at 20 million and 38 million pieces by the end of the third and fourth Plans respectively. While sufficient licences have been issued to cover the requirements up to the end of the third Plan, the capacity which has come into being is only of the order of 4 million bearings per annum, but is capable of being raised to 15 million per year by more intensive working and three-shift operation. Since there are doubts about all of the remaining licensed capacity maturing, Mr. Bharat Ram suggested that the Government should keep the situation under constant review and re-pattern the licensed capacity to ensure speedy commissioning, at least, of the bulk of

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Drawing of 5% Rupee Debenture Stock, 1970 For Redemption

Holders of 5% Debenture Stock (Indian Issue) are hereby advised that a Drawing will be held on Tuesday, the 3rd December, 1963, in London.

Notice is hereby given that the Indian Debenture Register and the relative Transfer Books will be closed for a period of 10 days from 24th November to 3rd December, 1963, both dates inclusive.

BY ORDER OF THE BOARD,
D. P. M. KANGA,
Agent.

VICTORIA HOUSE,
Calcutta, 4th November, 1963

...If you are trying to dent high costs, here is something to get your teeth into! By making use of the Caltex "Stop-Loss" Programme you cut costs by proper lubrication. Programmed maintenance practices will help you to keep your equipment and your machinery in top condition and will also boost profits. It is not a mere question of more oil or more grease. The Caltex "Stop-Loss" Programme will help you to select the proper lubrication practices, to train your personnel to proper maintenance procedures. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

the required capacity. At the same time considering the importance of this industry which is highly specialised and calls for precision in production, it is necessary to ensure that the licensing policy is qualitative in its approach.

The industry had enjoyed protection all along and after the last Tariff Commission's enquiry, it was decided that protection should be extended till the end of 1965. The Commission, however, pointed out that in spite of the long years of protection and considerable expansion in production, prices had continued to be considerably higher than those of imported equipment. This is a matter to which the industry should now devote serious attention.

Referring to expansion plans of the Bharat Ball Bearing Company Limited, Mr. Bharat Ram pointed out that they have in hand a project for the installation of forging capacity in order to produce ball bearings of 52 m.m. diameter and above. Arrangements are also being finalised for technical collaboration for the manufacture of roller bearings. Bharat Ball Bearing Company Limited has applied to the Government for doubling the capacity of ball and roller bearings from 2.5 million pieces to 5 million pieces per year and also for a licence for the manufacture of railway axle boxes complete with bearings.

PRESTOLITE OF INDIA

The factory of Prestolite of India Ltd. at Faridabad is expected to go into production in January, 1964. Mr. J. J. Bhomrich, President of the Prestolite International Corporation of the U.S., the foreign collaborators of the Indian company, indicated that the Government have approved the company's expansion plan under which it will produce apart from other 14 items, 50,000 units each of wind screen wipers assembly and distributors assembly. The company hopes to get an additional loan of Rs. 10 lakhs from the Punjab Financial Corporation for its expansion programme. It will start with an indigenous content of its final products to the extent of 50 per cent but soon will reach a level of 80 to 90 per cent in two to three years.

COMPANY REGISTRATIONS

Eighty-six companies with an authorised capital of Rs. 3,541.45 lakhs were registered in the Western Region comprising U.P., Punjab, Rajasthan, Himachal Pradesh and Delhi during the quarter ending September 30, 1963. Out of these companies four are public companies, 79 are private companies and three are associations not for profit. Five companies with an authorised capital of over Rs. 50 lakhs were registered in Delhi.

During the period under review, 23 companies with a paid-up capital of Rs. 42.72 lakhs went into liquidation, and 47 companies with a paid-up capital of Rs. 9.19 lakhs were struck off the Register of Companies under Section 560 of the Companies Act, 1956.

The total number of companies at work on September 30, 1963 was 4,585. They included 830 public companies, 3,564 private limited companies and 191 associations not for profit. The authorised capital of these companies was Rs. 301.40 crores and Rs. 386.15 crores, while the paid-up capital amounted to Rs. 74.76 crores and Rs. 136.54 crores respectively.

MYSORE SPINNING

The Mysore Spinning and Manufacturing Company Ltd. for the year ended February 28, 1963, shows a lower net profit at Rs. 2.04 lakhs as against Rs. 3.20 lakhs last year. In view of this lower profit and a large provision for development rebate (Rs. 3.09 lakhs), the directors have proposed not to pay any dividend. Instead they have proposed to issue bonus shares in the ratio of 1 : 8 after capitalising the share premium

account and a portion of the general reserve. As a result of the bonus issue, the directors feel that the equity capital of the company will be more in line with the net block which already exceeds Rs. one crore.

During the year under review, the prices of Indian cotton generally ruled very high but there was no rise in prices of yarn and cloth realised by the mills because of the voluntary price regulation scheme undertaken by the cotton mills industry. The price realisation on exports were no better because the compulsory export obligations scheme had a depressing effect on the prices. Under the programme of renovation of the existing plain looms, 80 looms were rebuilt and various items of new machinery were brought into use. To meet a part of the capital expenditure under the expansion and modernisation programme aggregating to over Rs. 80 lakhs, the company has been sanctioned a medium-term loan of Rs. 50 lakhs by its bankers — the State Bank of India — who have already advanced Rs. 40 lakhs as interim accommodation.

CAPITAL ISSUES

Six companies have been authorized to raise capital aggregating Rs. 16.80 crores. The consent of the Controller of Capital Issues is valid for 12 months.

Madras Tube Company Limited, Madras, has been given consent to issue capital of Rs. 124.93 lakhs, divided into 9,49,300 equity shares of Rs. 10 each and 30,000 preference shares of Rs. 100 each, to be issued for cash at par. Of these, shares of the value of not less than Rs. 61.25 lakhs will be offered for public subscription.

Hindustan Times Limited, New Delhi, is to issue capital of Rs. 120 lakhs in debentures of Rs. 1,000 each carrying an interest of not exceeding 7½ per cent. This is in supersession of an earlier issue. The proceeds of the issue will be utilized for the construction of its own building.

Usha Spinning and Weaving Mills, Delhi, is raising further capital of Rs. 35 lakhs divided into preference shares of the value of Rs. 13 lakhs and equity shares of the value of Rs. 22 lakhs.

Indian Drugs and Pharmaceuticals Limited, Delhi, a Central Government undertaking, is to issue further capital of Rs. 3 crores divided into 30,000 equity shares of Rs. 1,000 each for cash at par.

National Coal Development Corporation Limited, Ranchi, a Central Government undertaking, is to issue further capital of Rs. 10 crores divided into 1,00,000 equity shares of Rs. 1,000 each to be issued for cash at par.

The Singareni Collieries Company Limited, Hyderabad, a Government company, is issuing capital of Rs. 1 crore divided into 10,00,000 equity shares of Rs. 10 each to be subscribed privately at par.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951—during the week ending 2nd November, 1963. The list contains the names and addresses of the licencees, the articles of manufacture and annual installed capacity:

ELECTRICAL CABLES & WIRES

Enamelled Wires Private Ltd., Mash Trading Co., Odeon Building, Connaught Circus, New Delhi (Kalyan, District Thana, Maharashtra) — (1) Enamelled Copper Wires 420 tons, (2) Paper etc. covered wires and strips 360 tons. Victor Cables Corporation, 5775, Sadar Bazar, Delhi (Delhi) —(1)

Enamelled Copper Wires 200 tons, (2) Paper etc. covered wires and strips 200 tons.

AUTOMOBILES

Shri Shrilal Saraogi, 123, Chittaranjan Avenue, Calcutta, Proposed name: M/s. Magadh Transport Ltd. (Barauni, Bihar) — Automobile bodies 100 Nos. D.M.R. Auto Industries, 108, Netaji Subhas Road, C/o M/s. Copra Motors, 139, Regent Park, Calcutta-40, (Sonepat, Punjab) — Bus bodies 480 Nos., Pick-up bodies 1,440 Nos., Station Wagon bodies 1,080 Nos., Load Carrier bodies 1,560 Nos., Vin bodies 660 Nos., Tipping bodies 840 Nos., Diesel and oil tanker bodies—180 Nos.

STORAGE BATTERIES

Himco (India) Private Ltd., Tin Printing Building, Subzi Mandi, Delhi-6, Proposed name: M/s. G.M.C., M/s. Himco Industries Ltd. (Maharashtra) — (1) Rubber battery containers 12,500 Nos., (2) Plastic containers 2,000 Nos., (3) Micro-porous rubber separators 2.5 million Nos.

INORGANIC HEAVY CHEMICALS

Jayshree Chemicals and Fertilizers, India Exchange, Calcutta-1 (Khardah, 24 Parganas, West Bengal) — Alum (including Ferric, Pink and Ammonia Alums) 8250 tonnes. M/s. Delhi Cloth and General Mills Co. Ltd., Bara Hindu Rao, Delhi-6, Proposed name: Rajasthan Vinyl and Chemical Industries (Kota, Rajasthan) — Caustic Soda 6600 tons.

DRUGS AND PHARMACEUTICALS

Dr. Kanshi Ram Gauri, Ghaziabad, Proposed name: Dr. Gauri and Co. (Sohana, Distt. Gurgaon, Punjab) — (1) Rubber contraceptives — Capacity to be fixed later, (2) Billigenic active compounds food dyestuff from curcuma roots — 6,000 kgs. dry extracts. Merck Sharp & Dhome of India Ltd., Dugal House, Backbay Reclamation, Bombay-1 (Maharashtra) — (1) Aldomet tablets 18 lakhs tablets, (2) Aldomet injections 60 litres.

COTTON TEXTILES

Prakash Cotton Mills Private Ltd., Off Fergusson Road, Lower Parel, Bombay-13 (Ratnagiri Distt. Maharashtra) — 500 automatic looms for manufacture of cotton textiles.

TEXTILES

The Nuddea Mills Ltd., 2 Fairlie Place, Calcutta (West Bengal) — Wide Hessian (Carpet Backing Cloth) 40 broad looms for producing 4200 tonnes.

WOOLLEN TEXTILES

Foreign Import & Export Association, Gool Mansion, Homji Street, Fort, Bombay (Rajasthan) — Wool tops 700,000 kgs.

PAPER

Madhya Pradesh Board and Paper Mills, Vidisha (Madhya Pradesh) — Straw board and mill boards 2,880 tonnes, Pulp 2,880 tonnes.

CHANGE IN NAMES (Owners or Undertakings)

During the week ending 2nd November, 1963

(Information pertains to particular licences)

From Ram Tirath Iron & Steel Re-rolling Mills Mandi Gobindgarh to Shri Munshi Ram Mittal Mandi Gobindgarh. From M/s. Jain & Rai, Bhilai to M/s. Bhilai Engineering Corporation (Private) Ltd., Bhilai. From M/s. Sak Industries, New Delhi to M/s. Inex Engine Valves Private Ltd. New Delhi. From name of the licensee: Shri Hassan Marikar, Trivandrum to Name of the undertaking: M/s. Marikar Industries Ltd., Trivandrum. From M/s. The Associated Cement Companies Ltd., Bombay to M/s. The Associated Cement Companies Ltd., Engineering Works, Bombay. From M/s. Kusum Hosiery Mills Ltd., Calcutta to M/s. Kusum Hosiery Mills Private Ltd., Calcutta. From M/s. Structural Ceramic Fuse (Private) Ltd., Bombay to M/s. Structural Ceramics Ltd., Bombay. From M/s. The Associated Cement Companies Ltd., Bombay to M/s. The Associated Cement Companies Ltd.'s Engineering Works, Bombay.

LICENCES REVOKED OR SURRENDERED

During the week ending 2nd November, 1963

(Information pertains to particular licences)

The Ahmedabad Jupiter Spg. Wvg. & Mfg. Co. Ltd., Bombay — Malleable pipe castings and fittings; Transmission towers and other structural work (except towers for telephone lines); Boilers and pressure vessels. M/s. Ravi Industries (P) Ltd., Thana — High speed draw frames. M/s. The Ahmedabad Jupiter Spg. Wvg. & Mfg. Co. Ltd., Bombay — E.O.T. cranes and winches. M/s. Rallis Chemicals Ltd., Bombay — Aluminium sulphate and other alumes. M/s. Brij Textiles, Bombay — Art silk piecegoods. M/s. Lakshmi Devi Sugar Mills Private Ltd., P.O. Chhitauni, Distt. Deoria — Sugar.

BOOKS BRIEFLY

Mathematics Made Easy

An Introduction to Mathematics for Students of Economics:
By J. Parry Lewis; MacMillan & Co., Ltd.; Pp. 394;
Price 20s. net.

THE LONG-FELT need for an elementary book on Mathematics catering to the needs of the students of Economics is fulfilled. As the author himself envisages in the Preface, the book with its various sections starts at a very basic level but goes a long way into the subject.

The first section dealing with Algebra chiefly contains the results to be acquainted with for a good understanding of the later chapters. It is good that the proofs are omitted. The revision chapter, given for the brushing up of ideas already familiar, is quite exhaustive. The two chapters that follow introduce the ideas of summation of series and the more complicated idea of permutations and the Binomial theorem in a well-planned manner.

Section Two, touching the fringes of Trigonometry, Co-ordinate Geometry, Conic Sections and Polar Co-ordinates makes a full exposition to the required level of the respective topics concerned. The author, while dealing with the graphs, fully keeps himself aware of the utility of them to an aspiring economist. The Trigonometric Graphs which are useful in Trade Cycles analysis, are explained particularly well. The student, however, may find the going a little difficult at first; the more complicated ideas in the conic section and polar co-ordinates could perhaps have been avoided in such an introductory book.

The author, realising the need for a thorough knowledge of calculus to economists, has well devoted the last three sections to the subject. The topics discussed range from the elementary principle of limits to the more advanced idea of differential equations—everything simplified as far as could be done. The idea of continuity which is very essential for a proper understanding of this section is well elucidated with a number of examples. The interpretation of the meaning of derivatives is another well-executed part of the book. But sometimes the author loses himself in the great depths of Mathematics where the readers to whom this

work is intended must surely find themselves in very deep waters indeed.

The students may feel it convenient to follow the chapters on Maxima and Minima and the points of Inflection as they have been explained with reference to the case of a monopolist. Integration, as a process of summation, is also well explained. One cannot refrain from making specific mention of the manner in which the principle of logarithms is introduced. The benefit to the student would have been greater had there been at least an appendix dealing with the use of logarithms in calculations. The chapter on Exponentials nicely introduces the concept of 'e' through a very good example. Two important theorems viz., those of MacLaurin's and Taylor's have been formally touched upon.

The section on function of many variables would pose the maximum difficulty to the reader. But the author has taken pains to render the matter in simplified manner, often choosing illustrations from economic theory. The theory of partial differentiation, Maxima and Minima of functions of two or more variables, use of Lagrange multipliers, homogeneous functions and Euler's theorem have been explained in reference to economic problems. To facilitate easy solution of certain equations, determinants have been brought in.

The last section begins with an introduction to complex numbers, knowledge of which is required to follow the succeeding chapters. The important ideas on imaginary and complex numbers are adequately elucidated. Even at the outset of the next chapter the author, with a clear example, explains the circumstances which give rise to solution of difference and differential equations, simultaneously indicating the difference between them. Though this chapter and the next deal with the elementary theory of difference and differential equations, they require considerable amount of interest and persuasion on the part of the student. The author has taken enough precaution not to go beyond the scope of the book.

Throughout the book one could find a good number of Exercises with graded problems. There are some useful Appendices.

V. N. S.

Readers' Roundtable

MISCHIEF OF SPT

Sir, — I have gone through the article "The Mischief of SPT" in the issue of October 18. The analysis and arguments put forward by Sagattarius are very interesting.

There are two important things that we have to keep in mind. One is that the country is in need of quick industrialisation and the other, investors expect a good return on their capital. The fiscal policy should be so designed as to meet both these requirements. The problem is acute and any delay in taking a decision will only result in more harm to the country. For the past year and a half investors have been just sitting on the fence and are in no mood to invest money in industry.

It is true that some new industries have already gone into production. But it will take time for them to declare dividend on equity shares for, under the existing law unless and until the company makes full provision for depreciation and dividend on Preference shares it is debarred from declaring any dividend on ordinary shares.

The Preference shareholders too are unhappy and dissatisfied. To give an example, the Preference shareholders of Hindustan Aluminium have got no dividend for the last three

years, although this enterprise has been remarkably quick in being commissioned. Despite all this expectations, it will be another two years before the company can begin paying dividend to Preference shareholders. Dividend on ordinary shares will take still longer. It is, therefore, very important that the existing law is modified so as to make it possible for Preference shareholders to get dividends immediately after the company begins to earn. The arrears of dividend on the Preference shares of Hindustan Aluminium have amounted to about Rs. 23/- and taking this into account the value of this class of shares at present should be Rs. 125/-. But the market price is only Rs. 107. In these circumstances, can any sane investor think of going in for Preference shares of new companies? New industries cannot be promoted without adequate inducements and attractions being offered to the public. To attract new investment capital, the Government will have to give ample reassurance. And this can be provided only if it announces without much delay a tax reduction programme for the next three years on the lines adopted by the U.S. Government.

RECORDS AND STATISTICS

AICC on Democracy and Socialism

THE ALL-INDIA Congress Working Committee, at its two-day session in Jaipur, had released a Paper on Democracy and Socialism which sums up the Congress ideology as one of "Democratic Socialism based on democracy, dignity of the individual and social justice." The statement gives the highest importance to the provision of a "national minimum" to every individual "in respect of food, clothing housing, education and health" by the end of the fifth Plan. This Paper is in the nature of a draft declaration which will be further processed for discussion at the plenary session of the Congress to be held at Bhubaneswar in January in the light of the speeches and suggestions at the Jaipur meet. The following is the full text of the Paper on "Democracy and Socialism."

The Indian National Congress, in its role as the emancipator of the country from alien rule was not merely concerned with the winning of political freedom but had a social objective also. This social objective of the national movement was brought into greater prominence after the advent of Gandhiji's leadership. This was given expression to in the various resolutions of the Congress notable amongst them being the Karachi Resolution of 1931. Various constructive programmes of Mahatmaji, particularly removal of untouchability, social uplift of women, rural development with cottage industries—all these had a social objective to achieve, while the new forces released by these programmes lent strength to the freedom movement.

After the attainment of freedom, naturally the Congress as the party in power was called upon to give concrete shape to these social objectives and take positive steps to achieve the goal. The preamble of the Indian Constitution and the directive principles contained therein were formulated with this purpose in view and with the adoption of the Constitution these became national goals and objectives.

Equitable Distribution

It is in this context the Avadi Session of the Congress in 1955 laid down that in order to realize the object of the Congress and to further the objective stated in the Preamble and Directive Principles of State policy of the Constitution of India, planning should take place with a view to the establishment of a socialistic pattern of society, where the principal means of production are under social ownership or control, production is progressively speeded up and there is equitable distribution of the national wealth. In 1957 the Congress formally adopted the establishment by peaceful and legitimate means of a Socialist Co-operative Commonwealth as its objective in Art. I of its Constitution. Thus the establishment of a "socialistic pattern of society" came to be adopted as the object and aim of the Congress. But this was not a new aim. Throughout its eventful history the Congress has been, steadily and consciously, moving towards this objective.

Since then the Congress has fought two general elections on the basis of "planning for socialism" and the people of India have largely endorsed this policy. In formulating the various five year Plans this objective has been kept in the

forefront and Parliament also has accepted the socialistic approach to economic development.

Thus the Congress has become associated with the socialistic ideology and goal. In the various resolutions passed by the Congress and the AICC, it has defined broadly the economic and social content of a socialistic society. In spite of this general acceptance of a socialist ideal there is a good deal of vague thinking in regard to this and socialism has come to mean "all things to all men" even inside the Congress. Therefore, it has become necessary to lay down a charter of socialist policies and programmes which should broadly guide the words and deeds of Congressmen in the organisation and in charge of the administration of the country.

Democratic Socialism

'Democratic Socialism' is the objective of the Congress. In achieving this goal of socialism the Congress categorically repudiates the philosophy of action based on Marxian philosophy of class war, establishment of the dictatorship of the proletariat and the complete socialisation of all the means of production and distribution of goods. The great contribution Marx made to economic thought is undeniable but Marxian socialist theories were propounded at a time when in the wake of the industrial revolution capitalism was passing through a particular stage of exploitation and oppression of the working class. Since then, democracy based on adult franchise, the concept of a welfare state and the further revolutionary changes in the techniques of production brought about by scientific and technological progress have made Marxian philosophy out of date and invalid in many respects.

The Congress ideology of democratic socialism is based on democracy, dignity of the human individual and social justice. The Congress stands for the achievement of the socialist goal through peaceful and legitimate means. It stands committed to the Constitution of India and principles embodied in it.

Socialist society ensures equality of opportunity to all its people. But equality in a poor society only implies sharing in the poverty of the people. The logic of socialism, therefore, leads to its first pre-condition being the removal of poverty in the country with all its attendant evils. In this context rapid economic development leading to increase in production gets priority. To achieve this end the old and traditional methods of production should give place to modern and more efficient methods of production based on science and technology. While in the present context of increasing population and unemployment there is a place for production through cottage and village industries by adopting the old techniques of production it has to be realised that we would be condemning the people employed in these traditional industries to a low level of income and, therefore, to a low standard of living. Transformation of the economy into a modern and efficient one with a high level of production is unavoidable and this should be one of the fundamental policies of the Congress.

This process of building up a modern apparatus of production has to be achieved in the quickest possible time. Vast resources in trained men and material are required for this purpose. In an underdeveloped country like India these resources are scarce. Therefore, it becomes necessary to utilize the available resources to the best advantage possible. This

in its turn requires laying down of priorities and channelling the resources according to accepted priorities. This can happen only in a planned economy. The Congress has therefore accepted the concept of planned economic development as its policy.

Planning for economic development necessarily involves a certain amount of control at various levels to achieve the targets of production according to plan. In addition to that it has to be ensured that economic development should not result in the concentration of wealth and means of production to the common detriment. Hence the Congress has declared that it should be ensured that the principal means of production and strategic economic institutions are under social ownership or control, production is progressively speeded up and there is equitable distribution of national wealth. Therefore, controls for enforcing the discipline of a planned economy become inevitable.

Mixed Economy

The Congress has accepted the concept of a mixed economy in the industrial sector. The Industrial Policy Resolution of the Government of India has been formulated in accordance with this policy according to which the public sector has to play a strategic role in economic development. The public sector must play a progressively greater part more particularly in the field of basic industries. The private sector also has been assigned an important role in the economy of the country and it will have to play its part within the broad strategy of the national plan of development.

What is most important is to attain rapid economic development leading to plenty and abundance so that the basic needs of every individual may be provided for. This condition can be achieved only by the full utilization of science and technology. Indeed, a socialist programme cannot be conceived of except in the context of a scientific and technological society. Therefore, the development of science and technology will have to be given the topmost priority. Scientific and technical education will have to be organised on a wide basis and conditions for research and development of science and technology will have to be created. Therefore it becomes necessary to make every effort to bring about a modern and scientific outlook among the people. This cannot happen in a community of illiterate and uneducated people. A programme of education to cover the entire coming generation will have to be evolved and implemented. The role of science and education in economic development cannot be over-emphasized. The Congress attaches the utmost importance to the spread of education and development of science and technology in the process of building up a socialist society. The maximum educational opportunity should be provided to one and all without any distinction and discrimination.

In an agricultural country like India the structure of the agricultural economy, agrarian relations and laws are matters of vital concern. The industrial development of India is inextricably linked with increased agricultural production. Further in the context of providing food for the increasing population of India agricultural development is a must for India.

The aim of Congress policy in regard to land has been that actual tiller of the land should be brought into direct relationship with the State and the intermediary interests should be eliminated. Further there should be a maximum limit for the size of the holding under personal cultivation. The goal of land reforms should be a co-operative rural economy based on the village community and on voluntary association. Co-operation should play a major role in providing credit, supplies and market facilities to the agricul-

turists. Wherever possible joint co-operative farming should be organized with the consent of the cultivators concerned.

The modern techniques of production will have to be introduced in the agricultural sector also to increase production. Irrigation facilities, improved seeds, fertilisers, modern and efficient agricultural implements should be made available. Research in agriculture will have to be organized and the results made available to the ryots. The role of science is therefore of the utmost significance not only in industry but also in the development of agriculture. Along with agricultural development steps should be taken for all round development of the village community. Panchayathiraj and community development have a great part to play in this programme.

Social justice is the keynote of democratic socialism. Vast disparities existing in the society will have to be progressively reduced and that should be achieved not merely by limiting concentration of wealth at the higher levels but also by bringing up the level of the people at the bottom more and more. Weaker sections of the community will have to be given protection by measures of social security on a progressively widening base. A national minimum in the general standard of living should be ensured to every individual. The real measure of our national progress is the extent of progress of the welfare of the lowest among the low—what the society has been able to provide "unto this last man."

Social Justice

Socialism does not merely signify changes in the economic relations of human beings. It involves fundamental changes in the social structure, in ways of thinking and in ways of living. Caste and class have no place in the socialist order that is envisaged by the Congress. Old ideas about privilege on the basis of birth or caste or class or money or the hierarchy of office should be discarded. The dignity of labour should be recognised. Indeed, the dignity of the individual in every grade of life should be ensured. Congressmen in their everyday life should become exemplars of this socialist philosophy.

"Man does not live by bread alone" is true of any type of society. Mere material prosperity alone will not make human life rich, meaningful and happy. Therefore along with economic development ethical and spiritual values will have to be fostered. This alone will lead to the full development of human resources and character. It is only on this basis that the present day acquisitive and competitive structure can be gradually changed into a society which is socialist and yet provides adequate incentives for the full development of the individual and the community.

This is the vision of a society which the Indian National Congress envisages, wherein poverty, disease and ignorance form occupy a strictly limited place, wherein all citizens have equal opportunities and wherein ethical and spiritual values contribute to the enrichment of the individual and the communal life.

Not By Bread Alone

THE PRIME Minister has been emphasizing repeatedly that the progress of the country should be judged by the ability of its economy to provide food, clothing, houses and other essentials of life to its people. We are sure that he will readily agree that economic progress defined in these terms is not yet in our grasp. Last week, people living in some of the suburbs of Bombay City, where drinking water had gone scarce, were reported to have marched to the Bombay Municipal Corporation carrying empty pails and demanding that they be given water. Some time ago, in rice-short West Bengal, desperate citizens had threateningly assembled before grain shops. On the condition of national housing, the less said the better.

In the urban areas, slums have been growing from bad to worse. Except where organised industry has been able to provide subsidized housing for its workers or the Central Government has given cheap housing for its employees, very high rents for very poor housing is the rule, this being probably the most important single factor for the economic and social distress of the middle and low income groups in our towns and cities. In the rural areas, housing in the mass continues to be rudimentary and primitive and there is not even a show of effort at improving the miserable hovels in which millions in the countryside pass their huddled lives. We are not suggesting here that bad as the basic living conditions of the people are, they were not even worse 15 years ago or earlier and we are, of course, convinced that, but for such development effort as there had been in the intervening period, the living conditions of the people would have been even worse than what they are at present. What we would urge is that the standards of economic progress so rightly defined by Mr. Nehru are yet to become the standards by which the Government's economic policies and programmes are influenced and directed.

Lately, there has been a tendency to blame the failure to achieve a reasonable growth in the national income in recent years on shortcomings in the agricultural sector. Mr. Nehru himself seems to be highly impressed with this notion. As a result, the last meeting of the National Development Council was wrongly converted into a session for an extremely amateurish and inconsequential discussion on agriculture. Scarcely anything new was said at the meeting of the Council and we certainly do not believe that either the Committee which is to speed up agricultural reforms under Mr. Nanda's inspiration, or the projected Central Board for Agricultural Production, which seems to be Mr. Swaran Singh's bright contribution to the proceedings, is going to make any difference at all to the disappointing lack of dynamism in the nation's agriculture.

It is a pity that although there is ceaseless talk of the need for higher production and higher productivity, there is a lack of adequate recognition at the policy-making levels of the basic truth that the improved science and technology which the Prime Minister wishes to see applied in agriculture and industry is determined by the level of investment in farms and factories. There has been much speculation why India's agriculture has not stepped forward as firmly as it should have done considering the amounts earmarked for agricultural development under the five-year Plans. But there has hardly been any mention of the possibility that if agricultural progress has not been definitely established it is because the productive application of capital to land has not made any appreciable progress despite the crores of rupees which the Government may be spending in the name of agricultural development programmes. While it is

true that Government-directed investment in major and minor irrigation projects which are in the nature of economic overheads in agriculture, has been effective in that context, it is important to note that the individual farmer's investment in farm assets, which determines the degree of utilisation of government-sponsored environmental facilities and which directly and closely impinges on the production and productivity of individual farm holdings, has not made any steady or significant advance. According to official statistics, such as the data collected by the All-India Rural Credit Survey, individuals' net investments in farm assets, which were Rs. 79 crores in 1948-49, improved to about Rs. 95 crores by 1950-51, but had in the subsequent years up to 1957-58 (the period for which data is available) remained at a somewhat lower level.

It is significant that, despite the various credit and other measures taken by the Government to add to the resources of the farming community individuals' investments in farm assets have not appreciably increased. The conclusion is hard to resist that a good deal of the much-advertised pumping of money into agriculture by government agencies is offset by the withdrawal of individual resources from investment in land and farming. It is important that we should ask why this is so, since farm prices have remained on the whole at a relatively high level and markets for most of the principal crops have been of an "assured" nature, thanks to the high level of demand. It seems likely that the deterrent to increased individual investment in land has come from the restrictions put on such investment by various measures of so-called agrarian reform and the consequent atmosphere of insecurity and uncertainty in which the institution of private property in land has been wrapped up.

There is perhaps a good deal to be said for the argument that matters could be improved if at least the uncertainty about agrarian reforms could be ended by the speedy implementation of the measures that have been planned in this respect. But such an approach would essentially be escapist if not defeatist. There is still time for a more positive and constructive policy and for a dispassionate and searching examination of the basic question whether policy should not be so framed as to encourage the inflow of more capital into agriculture in the form of productive and profitable investment by those individuals who have the resources to make such investments and the experience needed to make those investments pay not only in personal but in social terms. It may, however, be futile to look for such an enlightened approach from the Nanda Committee which the National Development Council at its last meeting had cheerfully spawned.

It is, therefore, greatly to be regretted that the National Development Council, meeting at this critical stage in the fortunes of the third Plan, should have wasted national time and money by confining its pro-

ceedings almost wholly to an unproductive discussion on agriculture. It is possible that some good might have come out of this meeting had the occasion been availed of to focus the nation's attention on the important fact that the progress of the economy has slowed down, not only because there have been shortfalls in agriculture, but because of the much more general slack in or misdirection of development effort over many large and important areas of the economy, including industry.

It may be argued that, since stagnation in industry is a matter which is more directly related to the Central Government's policies, a discussion of this question at a meeting of the National Development Council might not have been relevant. Since, however, the National Development Council is not merely a platform for consultation between the members of the Central Government and Chief Ministers of the State Governments, but is alleged to be a high-level policy-directing body for all economic development, it is clear that it should not have ignored the issue of stagnation in industry. There was in fact little meaning in the National Development Council being made to state most solemnly that agriculture should be given top priority. It is not as if there is any clash or conflict of interests between agriculture and industry. What could be profitably spent on agriculture is certainly not determined by what can be forcibly diverted from industry. The limiting factor in agriculture is the climate for efficient farming by individual farmers and their capacity and willingness to invest more capital in farm assets.

So far as the progress of the economy — the progress which, as Mr. Nehru rightly insists, should provide enough food, clothing, shelter and other basic amenities to the people — is concerned, it cannot surely be doubt-

Eastern Economist 20 Years Ago

NOVEMBER 19, 1943

On the 31st March, 1939, the total external public debt of India amounted to Rs. 445 crores. Today the whole of this debt to Britain has been practically wiped out. There is only a very insignificant amount still outstanding which owing to certain legal or other difficulties cannot be liquidated. The liability of the Government of India in respect of pension charges which, if funded, is estimated to amount to Rs. 200 crores can hardly be treated as a debt. It is only an annual charge to be borne from annual revenues, as it constitutes something like deferred pay and cannot, therefore, be regarded as anything of the nature of a capital debt. Besides these debts of the Government there was a considerable amount of private foreign investment mostly British which in 1939 was estimated to be Rs. 400 crores. Since the war a considerable amount has been bought off by Indian investors and today the total of private foreign investment may be estimated at not more than about Rs. 100 or 150 crores.

ed that industrial expansion should also be pursued with the utmost vigour and an adequate employment of national resources. Here again the important point is to ensure that more and more capital from individuals' savings as well as from public funds is inducted into industrial expansion. To the extent that the domestic capital resources at the present time must necessarily fall short of the total capital requirements of industry, it is also clearly desirable that a climate should be created for foreign enterprise and capital to come to this country to a much larger extent than has been the case so far. It is true that there are some very real difficulties in the way of the rapid economic progress of this country, but there is no reason to believe that, given the correct policies, those obstacles cannot be surmounted. There was, in a recent issue of *The Economist* (London), a striking and highly thought-provoking advertisement by the Shell oil group which, we believe, could be usefully framed and hung on the walls of the chambers of our Ministers and top business leaders. This advertisement said in part:

"Take four small mountainous islands, barely 1/6th of the land growing food, with poor coal, little iron, and few resources except for its 95 million people. How very hard to live in Nippon you might think.

1. Yet in the last ten years, the Japanese have doubled their real income, have banked a surprising amount of personal savings, and have become one of the most literate people in the world.

A NATION OF TECHNICIANS

2. The Japanese themselves have no easy explanation for their prosperity. Labour is no longer cheap. Steel workers average about £40 a month. Even workers in small handicraft firms average £15, plus quite exceptional benefits.

Planning in Wonderland

"WELL, in our country", said Alice, still panting a little, "you'd generally get to somewhere else — if you ran very fast for a long time, as we've been doing."

"A slow sort of country!" said the Queen. "Now, here, you see, it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that!"

— Through the Looking-Glass

The "quick" estimates of national income for 1962-63, released recently by the Central Statistical Organization, is sheer Lewis Carroll. The Government's planning machinery has been working hard, perhaps, but obviously ineffectively since the nation's economy has virtually stayed put; and truly, the economy must race at twice its present speed "to get somewhere". A rise of 4.5 per cent in total national income in real terms in the first two years of the third five-year Plan is a sad commentary on the way planning has been conducted in this country, especially as the Plan has set down a

3. The answer is probably technical expertise at every level. For the past 10 years Japan's 239 universities have poured out a flood of technicians. Today Japan claims more engineers than any other country, except the USA and Russia.

TEN YEARS OF FRENZIED INVENTIVENESS

4. Short of land, the Japanese farmed the sea intensively, became the world's greatest exporters of seafood.

5. Short of resources, the Japanese complemented their traditional heavy industries with ones that made delicate and difficult things. For example, the electric appliance industry multiplied itself by 22 in 10 years, now exports radios, washing machines, and miniature colour television sets even to the USA.

ENERGY: THE BIG SWITCH TO OIL

6. Growing 17 per cent a year, industry soon outstripped the energy resources of the country.

7. So Japan turned to oil. As an oil consuming nation, she jumped from 7th place in 1953 to 3rd in 1963 (in this effort all oil companies invested heavily). Apart from supplying more oil power for the nation, the new refineries attracted petroleum chemical and other satellite industries....

A NEW WAY OF LIFE

8. Today the Japanese have no more leisure than they ever had, but they certainly have more means. In winter, the young crowd the ski-slopes. After the autumn harvests, bus-loads of farmers' wives pack the hot-springs resorts. And all year round, thousands of executives indulge in the new golf craze on greens set in the rice and millet patches."

In Japan they are not discussing "democratic socialism". They do not have the time. Having doubled their living standards through the Fifties, they are now busy planning to double them again over the Sixties.

target of more than five per cent increase in each year.

It is worth mentioning here that the inadequate performance of the economy as shown by the national income figures was forecast by *Eastern Economist* earlier this year in an article entitled "Taxation and Income" in its issue dated June 14. It was stated then that "it is now widely known that 1962-63 has been an unsatisfactory year.... the total increase in national income may not be more than two to 2.5 per cent." The Central Statistical Organization has, for some unknown reasons, delayed the issuance of these so-called "quick" estimates which were published in the past in August every year. Evidently the inertia or sloth displayed in the national economy has proved contagious.

Table I (next page) sets out the sector-wise percentage rise in national income in 1962-63 over 1961-62 at 1948-49 prices, highlighting the fact that a rise of two per cent in overall terms was witnessed despite a fall of 2.1 per cent in agriculture which contributed 38.6 per cent of the national income. The relatively fast-moving sectors

were communications, railways, organized banking and insurance (rise from 8.6 per cent to 9.5 per cent) though the combined contribution of all these sectors was hardly 4.1 per cent of the total national income. Mining and factory establishments shared 9.5 per cent of the total income with a rise of 8.1 per cent. All the remaining sectors were sluggish, though they did record a rise instead of a fall as in agriculture. The last column of the table shows that the improvement in output in mining and manufacturing was offset by the drop in agriculture and that the modest net rise corresponds to the contribution of the remaining sectors.

TABLE I.

(At 1948-49 prices)

Sector	Percentage contribution to total national income: 1961-62	Percentage change over 1961-62	Contribution to the overall percentage rise in 1962-63 over 1961-62
Agriculture (proper)	38.6	-2.1	-0.8
Mining and factory establishments	9.5	8.1	0.8
Communications	0.4	9.5	Neg.
Railways	2.6	8.7	0.2
Organized banking & Insurance	1.1	8.6	0.1
Other commerce and transport	15.3	2.5	0.4
Other sectors	32.5	4.0	1.3
All Sectors	100.0	2.0	2.0

Table II shows that in 1962-63 India's per capita income (at 1948-49 prices) at Rs. 294.2 showed an insignificant increase over the corresponding estimate in the preceding year and over the last year of the second Plan. In fact, the standard of living of the people, as measured by this indicator, has remained stationary since the end of the second Plan. Similar periods of stagnation were also witnessed between 1955-56 and 1957-58 and again between 1958-59 and 1959-60. It is, however, known that two consecutive unfavourable years are usually followed by a favourable one and it will not be too much to expect a good harvest in 1963-64, leading to a substantial increase in national income in real terms. The shortfall in the first two years can, however, be hardly made up in the last three years of the Plan, as it will amount to attaining a continuous rise of about seven per cent per annum in each one of the three years

which, to say the least, does not seem to be within the capacity of our planners.

TABLE II.

Year (financial)	National income at 1948-49 prices (in Rs. 100 crores)	Per capita income (in Rs.) at 1948-49 prices (based on 1941, 1951 and 1961 population census figures)
1950-51	88.5	247.5
1955-56	104.8	267.8
1956-57	110.0	275.6
1957-58	108.9	267.3
1958-59	116.5	280.1
1959-60	118.6	279.2
1960-61	127.5	293.7
1961-62 (preliminary estimate)	130.2	293.4
1961-62 (partially revised)	130.9	295.0
1962-63 (provisional)	133.5	294.2

Highlights of the Week

LANDMARKS IN ENGINEERING INDUSTRY

NOVEMBER 15 and 16, 1963, will go down in the history of the Indian engineering industries as red letter days. Those were the dates on which the Prime Minister formally commissioned three important industrial projects — The Heavy Machine Building Plant at Ranchi, the Coal Mining Machinery Project at Durgapur and the AC electric locomotives manufacturing unit at Chittaranjan — which in the days to come will not only help in saving large foreign exchange expenditures but will also assist in stepping up the tempo of economic development.

The Heavy Machine Building Plant, set up in collaboration with the USSR, is designed to produce diverse types of heavy machinery items such as equipment for iron and steel, mineral oil, coal mining, chemicals, fertilizers and cement industries. Some general engineering items will also be manufactured here. These include heavy cranes, excavators, oil drilling rigs and crushing and grinding equipment. The stress, however, is to be on the production of machinery for the iron and steel industry. In view of the increasing demand for these equipments, the original capacity of this project—45,000 tons of machinery per annum—has been raised to 80,000 tons, with provision to expand it further to 1,65,000 tons, if necessary. The product pattern of the 80,000 tons capacity will be as follows:

Description of items	Figure in tons	
	1st stage (45,000)	2nd stage (80,000)
Coke Ovens and Bye-Product equipment	6,000	7,700
Blast Furnace equipment	4,000	5,500
Steel Making equipment	5,000	7,000
Crushing and Grinding equipment	2,100	3,150
Crane equipment	4,400	6,570
Rolling Mill equipment	20,000	34,500
Spare parts for metallurgical equipment	1,500	1,080
Heavy Mining equipment	..	880
Excavators	..	4,950
Press Forging equipment	..	1,360
Heavy Oil Drilling Rigs	..	5,500
Misc. Heavy Machine Parts & assemblies	2,000	1,810
TOTAL	45,000	80,000

Costing about Rs. 40 crores (approximately half of which is the foreign exchange component), the plant, when in full production in the middle of the next Plan, will be turning out machinery valued at nearly Rs. 42 crores a year.

The Coal Mining Machinery Project at Durgapur has also been set up with Soviet collaboration. Its capacity, too, has been decided to be increased from the originally contemplated level of 30,000 tons per annum to 45,000 tons. The total outlay in this case is estimated at Rs. 30 crores, of which the foreign exchange component will be nearly Rs. 13 crores. The value of the finished machinery items to be produced here will be Rs. 24 crores per annum.

These two plants form two important components of the 4-unit heavy engineering complex being built by the fully-owned Government of India undertaking, the Heavy Engineer-

ing Corporation Limited. The other two schemes of this complex are the Foundry/Forge Project and the Heavy Machine Tools Plant, both located at Ranchi. The Foundry/Forge and the Heavy Machine Tools plants are being set up with assistance from Czechoslovakia. The annual rated capacity of the Foundry/Forge unit is to be: Grey Iron Foundry 46,600 tons; Steel Foundry 88,382 tons, Non-ferrous Foundry 700 tons, Steel Forgings 32,954 tons (all for use at the Heavy Machine Building Plant), and other castings and forgings to the tune of 32,000 tons for supply to outside users. The Heavy Machine Tools Plant will have a capacity to turn out 10,000 tons of tools and equipment per annum. The four projects, when in full operation, will provide employment to 23,300 engineers and workers.

Ambitious Programme

The commissioning of the first Indian-built AC electric locomotive from Chittaranjan Works marks an important event in the ambitious programme chalked out for the electrification of Indian Railways. By April 1966, five to six such locomotives will be rolled out of Chittaranjan every month. Although electrification of Indian Railways started as early as 1925, only about 380 route kilometres were energised till the beginning of the first Plan. During the second Plan period, this process was accelerated with a view to meeting the rapidly increasing freight traffic, especially in the coal and steel belts. As a result, already about 1,178 route kilometres have been electrified on the most modern 25 KV AC system in the eastern region where the trunk routes have reached the point of saturation with steam traction. By the end of the current Plan period, a total route length of nearly 2,864 kilometres is expected to be energised. It will be then possible to run through electric trains from Calcutta Docks to Kanpur. During the next Plan period, this electrification programme is envisaged to be stepped up even at a faster rate. The manufacture of electric locos at Chittaranjan, therefore, has not come a day late.

The Chittaranjan Works ventured into the manufacture of electric locomotive two years ago with the production of DC locomotives and turned out by August this year 21 of them for use in the Bombay region. Since, however, all future electrification of the railways is proposed to be on the AC system, these works have switched over to the manufacture of AC locomotives only. It is encouraging to note that the Railways are living up to their reputation of manufacturing indigenously all the equipment required by them. In the manufacture of electric locomotives also, this process has been initiated. All their mechanical portions are fabricated at the Chittaranjan Works. The electric equipment, of course, will have to be imported till the Bhopal Heavy Electricals starts producing it. In regard to the overhead equipment too, the import-substitution process has been taken on hand.

With the electrification and dieselisation — a diesel engines manufacturing unit has been set up at Varanasi — of the Indian Railways, the transport difficulties now faced should ease to a considerable extent.

NSIC'S PROBLEMS

THE STATE-OWNED National Small Industries Corporation has revised its hire-purchase terms. Service charges have been increased from five per cent to six per cent. The rate of interest has been made uniform at 6 per cent for all categories, as against 4½, 6, 3½ and 5 per cent previously, depending on the value and the group to which the applicants belonged.

The earnest money requirements have also been revised upward; 20 per cent of the value of machines and 30 per cent of that of furnaces is now payable as deposit in one instalment before placement of orders. Hitherto, these rates were 10 per cent when the value of application was less than Rs. 50,000 and 20 or 30 per cent in other cases. Facilities were also provided for the ancillary industries to pay this amount in two equal instalments. As regards the period of repayment, the concessions given to ancillaries to the public sector have also been withdrawn.

Although the above revision has been effected for putting the NSIC on a sounder footing and for running it on commercial lines, it should go some way in further improving the default ratio of the loans extended by the Corporation. It is encouraging to note that the last two years' trend of deterioration in the default ratio has been reversed as a sequel to the co-operation extended by the Federation of Associations of Small Industries and the State Directors of Industries and the decision empowering Branch Managers of the Corporation to repossess the machines hired out if the payment instalments for them are withheld without any ostensible reason. This healthy tendency should receive further fillip if adequate arrangements are made for meeting the raw material requirements of the small-scale industries. The problem faced is both in respect of imported and indigenous materials.

Foreign Exchange Shortage

The most important bottleneck in the successful functioning of the NSIC, however, is the foreign exchange shortage. Because of this, the Corporation is said to have stopped, since November, 1962, consideration of new applications for import of machinery and equipment even though it has got deposits to the tune of nearly Rs. 75 lakhs as earnest money from its clients. Efforts, of course, are being made to secure an allocation of nearly Rs. 10 crores out of the credits being made available by the Governments of West Germany, the United States and Japan, but they have not been crowned with success as yet. There are being experienced some difficulties in the import of balancing equipment as well. The NSIC's immediate foreign exchange requirements are stated to be of the order of Rs. 2.5 crores. The Union Government will do well to look into this matter. The East European assistance is said to be not in much request from the small-scale sector. Supplies of machinery from indigenous sources, however, are arranged to the extent possible.

After the emergency, the NSIC has been called upon to supply a large number of items for the defence forces. Most of these are the traditional products like hosiery goods and barrack blankets. But two new lines of manufacture entrusted to it are ammunition boots and components and spares for armament. Some 30 parties have been selected for the latter purpose. Government purchases from the NSIC, which have been going up steadily during the past few years, are expected to more than double this year. As against goods worth Rs. 14.52 crores supplied last year, the Corporation has already effected deliveries to the tune of Rs. 19 crores during the first six months of the current financial year. Total Government purchases through this agency this year may come to about Rs. 30 crores. The Railways too have been buying through the NSIC in increasing quantities. In 1962-63, these purchases amounted to Rs. 1.65 crores as against Rs. 1.23 crores in 1961-62 and Rs. 36.72 lakhs in 1960-61. The marketing operations of the Corporation have been extended; now they include sale of machine tools, radio valves and electric motors as well. Exports of shoes to Russia have also been going up after a temporary setback in 1962. This year these exports may come to nearly Rs. 100 lakhs, as against Rs. 40 lakhs last year. Hungary is another market which is being developed by the NSIC for export of shoes. Not much

progress, however, has been made by the Corporation in extending its operations to the non-urban areas. Most of the machinery supplied by it has been to the small-scale entrepreneurs in the 11 principal cities in the country.

DIVIDED COUNSEL

THE EXPECTATIONS raised as a result of the deliberations of the All-India Council for Secondary Education three weeks ago, that all controversy about higher secondary education will end soon and concerted efforts will be made to impart uniformity in the school education pattern have been belied. The Conference of the State Education Ministers, Vice-Chancellors and some eminent educationists held here last week, has resolved that, while a 12-year course of secondary education should be the goal towards which the country must work, there should be "room for flexibility and experiment". This betrays that no unanimity has been reached as yet on ushering in a 12-year course for children's schooling. As a result of this, the controversy over 18+ being made the minimum age for admission to university studies also remains to be settled. Meanwhile, this age limit is to be generally 17+ and in no case less than 16+.

The Conference, however, has suggested that special assistance should be given by the Centre to all States which have to increase the child's schooling period by one year at the secondary level. This assistance should cover teachers, textbooks, libraries and laboratories. The other important decisions taken in regard to the secondary and university education are: (1) the standard to be achieved at the end of secondary education should for the present be raised so as to be equivalent at least to the intermediate examination of the former 4-year colleges; (2) except for the academic course in humanities and sciences, the other courses should be job-oriented with a view to making the products of secondary education fit for employment in agriculture, industry, trade, commerce or other vocations and also providing them with opportunities of higher education should they later so desire; (3) the duration of the first degree course in arts and science should be three years throughout the country and special assistance from the Centre should be given wherever this involves the addition of one year; and (4) the Central Ministry of Education should take steps for the review of curricula and the preparation and production of better textbooks on a national basis.

In regard to primary education, the Conference has resolved that every effort should be made to achieve by the end of the fourth Plan period, universal and free primary education of the duration of five years commencing at 6+ on compulsory basis, admission being permissible at 5+. Great stress has been laid on girls' education. It has been recommended that special programmes should be drawn up in this respect as Centrally-sponsored schemes on the basis of 100 per cent grants outside the State Plan ceilings. Similar measures, it has been suggested, need be taken for the other weaker sections of the community, particularly the scheduled tribes. Another notable recommendation made is that special attention should be paid to introduction of science at the primary stage. A plea has been made for provision of adequate funds both for the expansion of primary education and for improving the quality of teachers by properly training them and increasing their emoluments. This, it is thought, will help in achieving reasonable qualitative standards of education.

As regards basic education, it has been recommended that its content should be constantly reviewed in order to ensure that it serves effectively the needs of the changing society and the advance of industry, science and technology. The new scheme of granting loans for construction of elementary school buildings and quarters for women teachers has been welcomed and suggestions have been made for making the repayment of these loans easy.

What is Wrong with Our Universities?

By DR. G. JACOB

(Vice-Chancellor, Patna University)

MR. T. M. RAO's thought-provoking article on this subject, which appeared in "Eastern Economist" of October 11, has compared conditions prevailing in the universities in the United States of America with those obtaining in Indian universities. The comparison has highlighted some of the serious weak points of our universities.

That education is good and necessary for human beings, and for society, is now universally accepted. According to Strumilin, the Soviet Academician, who made these calculations about 40 years ago, four years of primary education will increase the efficiency of a person by almost 50 per cent, secondary education by a little more than 100 per cent, and university education by 300 per cent. These estimates are based on the assumption that the kind of education that is offered is suited to the needs, the abilities and the temperaments of the individuals involved. It also assumes that what is imparted is good education, in the sense that it is designed to enlarge and inform, stimulate and discipline the intellects and the personalities of individuals; and that the individuals and the society they belong to can, in an economic and financial way, afford the education that they desire. The last of these assumptions is very significant as far as Indian universities are concerned. The individuals, in the society to which we belong, must be able to afford, in an economic and financial way, the education which we want to impart. It is here that Indian universities find themselves seriously handicapped. While a university lecturer's salary in the United Kingdom is about twice the per capita income, in India it is more than 15 times, and yet the university lecturer in India is not a highly paid person.

Quality Vs. Quantity

In India, in every sphere of life, we are faced with the problem of the low per capita income of the people, and the consequent lack of funds and facilities. In the sphere of university education, this has raised the very difficult problem of quality versus quantity. As against the 350,000 students in the universities in 1951, today we have 104 million students in Indian universities. In 12 years' time, the number of students has gone up by four times. Still, we have come nowhere near the saturation point. It has been estimated that of the age group eligible to go to a university (in our country, it will be 16 to 22) about 20 to 25 per cent will be able to profit from a university education. In the United States of America, about 25 per cent of that age group goes to the universities. Not that every one who will profit by a university education goes to a university, or that all who may not profit from such an education stay away. But a good proportion of those who can profit from university education gets into the universities. In one of the estimates, it was worked out that in the U.S.A. 50 per cent of the White Protestant boys, who are Ph.D. material, eventually get their Ph.D. As against this, even with a 1.4 million students in our universities, we are having in our universities only about three per cent of the age group of 16 to 22. If 20 to 25 per cent of the age group can profit from university education, our universities will have to provide, in the not very remote future, accommodation for more than seven times the present number, and taking into account the increasing population, this will be 10 times the present number.

These are the dimensions of the problem of expansion of university education which this country has to face. At the

same time, in the realm of scholarship, scientific research and technological studies there are no local standards. There are only international standards. It will be wasteful to have scientific research unless we can have research of international standard. To be able to achieve international standards, in whatever sphere of work we take up, we need greater facilities and more than that, we need the finest human material, highly intelligent and sincerely devoted to its work. How to reconcile this need for the highest quality in our university education with our quantitative requirements? One way to tackle this problem will be to build up university centres which will measure up to international standards, and to try and bring to these centres the best boys and girls from all over the country. In addition, there will have to be a very large number of colleges, distributed all over, to cater to the needs of the large number of students wanting higher education.

Meagre Emoluments

At present we are not able to attract to the teaching staff of the universities and colleges the best material in the country because we are not paying them emoluments comparable to those available in the senior administrative services. The Government of Ceylon appointed a University Commission in March, 1963. In the report of this Commission, which has just come out, it has been stated:

"We accept the view that the salary of a university teacher should compare favourably with those of the superior grades in the Public Service and should enable those who enter University Service to maintain comparable standards of living. At the same time it must not be forgotten that while a university teacher enjoys the tranquillity of congenial work in one's chosen sphere, a public servant is often transferable from place to place and subject to the many stresses and strains of official life."

"We are of the opinion that the maximum salary of a professor which is the same as that of the highest grade of the Administrative Service should be maintained at that level."

If similar scales of salary are introduced in this country, we may be able to retain a percentage of our brightest boys as teachers in the universities. Still many of them may prefer the administrative services, because of the various fields in which an administrator can find expression for his talents and also scope for promotion. Again, since the majority of people in this land are not highly educated, we do not have many people who can admire and respect scholarship and scholars.

Science and learning are highly respected in Germany. A recent demographic survey conducted in West Germany showed that university professors are the group most highly esteemed by the population. They are followed by doctors, and only then, by industrialists, merchants and the nobility. It is, therefore, no wonder that at one of those German Universities, even a young first term-student has opportunities of attending the lectures of a Nobel Prize winner. On the other hand, those who wield authority will be respected by the general run of people. This again is a factor which drives many young men to the administrative services in preference

to the teaching profession. There are many teachers who are anxious to become Heads of Departments or Principals because the administrative part of those jobs attracts them. Thus there is a bias towards administrative assignments. There is no immediate solution to this problem. As education spreads more extensively, and when there is greater and greater recognition of scholarship, and honour for men of scholarship, many of our talented young men may take to scholarly pursuits, and will not be attracted by the petty dignity attached to administrative jobs. Today, with a lower salary, and with no satisfaction arising out of wielding authority over other men, a large percentage of people, who come to the teaching profession, are those who could not get into other superior services. They start their career with a sense of frustration, with a feeling that they were not good enough (or had not been lucky enough) to get into one of the superior administrative services.

In the ultimate analysis, the tone of a university is set by the quality of its teachers. A university, whose teachers have a very high standard of scholarship, will naturally attract very good students. Cambridge University is even today a great centre for scientific studies. I was counting up the number of Fellows of the Royal Society who are in the various Science Departments in the University of Cambridge, and I found that there are 55 of them. Cambridge University today has a total enrolment of 8,000 students. For a university of that size, there are on the staff 55 Fellows of the Royal Society, and 22 Fellows of the British Academy, and a Library of two million books. In the University of Southern California, there are several Nobel Laureates in the different branches of Science. In India, we have had so far only one Nobel Laureate in Science. A student will have to make a pilgrimage to Bangalore, if he has to see him. The under-graduate students of California University come across Nobel Laureates in the corridors of their departments.

Seminar Method

Mr. T. M. Rao has rightly laid emphasis on the seminar method of instruction. A class is divided into three or four groups, each group consisting of 15 or 16 students. Each student is then asked to prepare a Paper and to present it to the whole group. This is followed by discussion. The teacher, or teachers present, guide the discussion, without monopolising the talking. The group is small enough to enable every one to participate in the discussion. The person who presents the Paper has to answer the criticisms offered. Thus thinking is stimulated, and also facility of expression. Clarity of expression follows from clarity of thought. A Seminar of this sort is a much better training for a senior student than the lecture method. To make the Seminars more effective, essays presented at the Seminar have to be marked, and the marks thus given included in the marks of the final examination.

Mr. Rao has made a specific reference to the antiquated curriculum of our Engineering colleges. He says that there is too much of subjects like Building Materialism, Building Construction, Surveying and Workshop, and not enough of Mathematics, Structural Theory and Fluid Dynamics. While it is true that our syllabi could be made up-to-date, it is not possible to copy wholesale the Engineering syllabus of a university of the United States. In this country the students need more practical experience. In our society it was considered to be degrading for a middle class person to do manual work. Also, students have less experience with mechanical devices because they do not live in a mechanized environment. So, more time is needed for their professional training. Also, because technicians in India are not as well-trained and not as reliable as in the United States of America and other such countries, professionals have to spend more

time in supervising the work of technicians. They, therefore, need the technician's training as well as their own. If the professional course is to be high, it has, therefore, to be of a longer period than what it is in the highly industrialized countries.

There is a great deal of force in what Mr. Rao says about the very useful contribution made by a strong Board of Trustees in the American universities. The presence of men of high position in commerce and industry on such Boards will be helpful both in linking up the university with the needs of commerce and industry, and also in raising funds for the university. In fact, in most of the American universities, the main function of a Vice-Chancellor is to raise funds for the university. Conditions are very different in this country. We do not have many highly developed industries so that we do not have a selection of industrial magnates, who are also interested in higher education. Even the very few, who are there, are not generally associated with the universities. If some of them could be brought into the Executive Bodies of the universities, they would be a help in linking up industries and commerce with the universities, and also in helping the universities in finding funds from the industrial sector.

Government Creatures

It has been observed that Indian universities are creatures of Government, and suffer from all the weaknesses of government-sponsored organizations. This is partly true. For example, if a Vice-Chancellor is appointed on the recommendation of the Government in power, a Minister may use the autonomy of the university may thus suffer. Even worse than that, the Minister will wield authority in the university, without being answerable for that. In the Delhi University, the Vice-Chancellor is appointed by the Visitor from a panel of not less than three persons recommended by a Committee. The recommending Committee consists of three persons, two of whom shall be persons not connected with the University or a recognized college or institute, nominated by the Syndicate, and one person nominated by the Visitor. The Visitor shall appoint one of the three persons to be the Chairman of the Committee. The Committee appointed by the Government of Mysore, to report on the establishment of a university at Bangalore, in their report which has very recently been published, has recommended the adoption of the Delhi pattern for the selection and appointment of the Vice-Chancellor. If this procedure is followed, it should be possible to ensure the autonomy and independence of the university.

In the Report of the Universities' Commission of Ceylon, a conclusion has been reached that the Governor-General should be the Ex-Officio Chancellor of the universities. For Indian universities also the existing practice of having the Governors of States as Chancellors may continue. But there is a significant recommendation in the Report of the Ceylon Universities' Commission, viz., "That when the Governor-General acts as Chancellor of the University, he should not be bound by the conventions that would apply to him as the Head of the State." A similar provision, if made in respect of Governors of Indian universities, will further contribute to the development of universities on autonomous and healthy lines.

DETECTIVE STORY

The search for oil's hiding places goes on. The prospector first needs a map of the region he is to explore in. Mapping done from the air is quickest, and the pictures produced by aerial photography, when examined in pairs under a stereoscope, help to provide clues to what lies beneath the surface of the earth. Then the geologist searches a promising area for outcrops of rock strata exposed by erosion. He examines samples

of rock for fossils which may give clues to deeper beds. In these and other ways he begins to piece together data which will enable him to make a three-dimensional map of the underground formations.

Geology, the science of the earth's rocks; photogeology, the study of aerial photographs; and palaeontology, the study of fossils, are only a few of the sciences applied in the initial stages of oil exploration.

WINDOW ON THE WORLD

Insuring Against Inflation

By R. V. MURTHY

CHICAGO:

A LEADING insurance company in the United States is shortly expected to launch a scheme of variable annuities. It must be noted here that previous efforts made by this very company in the same direction were not viewed with favour by the authorities. Lately, however, opinion even in official circles would appear to have shifted in favour of variable annuities as a sound form of investment.

Now, a variable annuity differs from both fixed annuity and mutual fund investment, or, for that matter, investment in common stocks on one's own or through one's bankers. A fixed annuity is a contract between an individual and an insurance company whereby the former undertakes to pay a given sum at stated intervals for a specified period in return for an undertaking by the insurance company to return to the individual his savings in the form of monthly, bi-monthly, quarterly or half-yearly payments commencing at the end of an agreed period and lasting till the individual's death. Except for the insurance company's guarantee to pay the agreed annuity until death, an investment in mutual funds or in bank savings or mortgage bonds or in common stocks also would amount to the same. Only insurance companies are able to provide this guarantee by operating on the principle of averages based on actuarial calculations.

SEC's Role

There is one more difference between investment in mutual funds and in variable annuities; whereas it is necessary to analyse carefully the mutual fund, it need not be so in respect of an investment in variable annuities issued by an insurance company for the simple reason that the investments made by an insurance company are subject to strict State supervision (in the U.S.). Although stock issues are also subject to control by the S.E.C. (Security Exchange Commission), it is argued, "the S.E.C. cannot prevent the sale of a fraudulent issue if the issue reveals with sufficient emphasis that the issue is fraudulent". On the other hand, a State Commissioner of Insurance, it is said, "can prevent the issuance of an insurance contract that is not fraudulently made merely if he feels that the contract is inequitable or not in the public interest". In this connection, it has been pointed out that "the S.E.C. never passes on the quality of issues registered with it and that it is a violation of law for anybody to state that the S.E.C. has approved of an issue".

Prof. Wilford J. Eiteman of the Michigan University, who is a stout champion of variable annuities, contends that the phasing of a life insurance or fixed annuity contract permits of 'a defeat of the investor's purpose' even where the terms of the contract are fulfilled to the letter. According to this, he says, certain progressive insurance companies have set out to remedy the deficiency by pleading with the authorities to permit the issue of a new variable annuity contract. Presently this is not permissible, but the pressure of informed public opinion seems to have influenced the authorities to review their stand.

To quote Prof. Eiteman, the variable annuity is "a device designed to enable an annuity contract to carry out the intentions of the parties involved". Based on the long-run

trend of common stock prices—this has been upward at a rate slightly in excess of three per cent per year—it has been suggested that contracts written in terms of common stock units should offer investors a hedge against inflation. Explaining how the variable annuity scheme would work, Prof. Eiteman says: "During the accumulation period, the annuitant would turn over to the insurance company a specified sum of money each month. These sums would be invested by the insurance company in common stocks. The account of the annuitant (annuity holder) would be credited with a certain number of 'units'. The number of units credited would depend on the price level of common stocks of the time. When stock prices are high, the annuitant would be credited with fewer units and when stock prices are low, he would be credited with more units. At the end of the period of accumulation, the insurance company would agree to pay the annuitant a monthly sum equal to the value of a certain number of units for as long as the annuitant might live. The amount the annuitant would receive in units would be fixed, but the cash value of the units would vary from month to month according as the market value of common stocks varied."

Whether it is a life insurance policy or a fixed annuity, both the letter and the spirit of the contract are fulfilled only if, for the entire duration of the contract, the unit of currency of the country concerned remains constant. This is hardly the case, as the history of any country's currency shows. Even the dollar which is placed on a par with gold has been no exception. For the value of the dollar has re-

remained constant only in 11 years of the 75 years ended 1955; in 18 of these years the dollar increased in value, but it declined in value in as many as 44 years. At the end of 1955, the dollar had only one-third of the value that it had in 1880! In other words, never once in 75 years has an annuitant or a policyholder in an insurance company who accumulated his savings over a period of 20 years and lived out a life expectancy of 20 years enjoyed as much consumption during retirement as he gave up during the period of accumulation. To put it differently, the decline in the value of currency defeated the intentions of the contracting parties in every typical contract made during the years 1880-1955. It is claimed for the variable annuity that it enables the parties to carry out the intentions.

For a developing country which has perforce to pass through years of inflation (notwithstanding the assertion to the contrary of economists such as Milton Friedman) it goes without saying that protection against inflation is a matter of great importance. After examining the record of the purchasing power of a unit of securities over 75 years between 1880 and 1955, Mr. Eiteman states that, despite the wide fluctuations in values from year to year, an investor in a

variable annuity was able to enjoy more consumption during his retirement than he gave up during the period of accumulation. Even when the value of a unit of currency remains stable—it is maintained by the advocates of a variable annuity scheme—the annuity payable in a fixed number of currency units of stable value insures that the annuity holder will be able to enjoy as much consumption in retirement as he sacrifices during the period of accumulation. In fact, he enjoys more, thanks to the benefits of better and higher national production leading to higher distribution of wages and profits.

In passing, it must be pointed out that, for the aforesaid scheme to succeed, the period of contract of a variable annuity must be not less than 15 years. Experience has established that a random selection of diversified stocks of well-known companies, accumulated over this period of time, is certain to prove profitable. The conclusion then is that although investment in mutual funds, investment clubs or personal ownership of a diversified list of common stocks also yields the same result as a variable annuity, the latter has its special attraction and is, therefore, not just one more means of hedging an investment proposition against inflation.

Morocco at the Crossroads

From Our Special Correspondent

CASABLANCA:

THE KINGDOM of Morocco had already entered on a difficult, if not critical, phase of its political and economic growth before the current conflict with neighbouring Algeria began. The laudable attempt to found here Islam's only liberal state—liberal politically and liberal, in the narrower economic sense, in its business life—encountered serious trouble in the summer of this year. In May it had to be officially admitted that the current five-year Plan (1960-64) had failed and would have to be replaced by an interim plan; some of the economic measures that followed (and others that were rumoured) gravely impaired business confidence and caused an outflow of capital. The political crisis in July, when the leaders of the opposition were imprisoned, showed that the ills were not merely economic, and in turn caused a further deterioration of the business climate. The border war with Algeria, naturally, has worsened the situation considerably, though some people assert that it was precipitated deliberately by Rabat in order to divert discontent from the home front by kindling nationalist sentiment.

However, there is no reason to suppose that these setbacks are more than growing pains, inevitable in the course of an experiment in liberalism unique in free Africa. For all her current difficulties, Morocco enjoys the most flourishing economic situation of any of the North African nations and if the present crisis of confidence is resolved within a few months, economic expansion could well be resumed. Nor is the recent repression a sign that Rabat has broken with its liberal designs. The Constitution (one of the few genuine constitutions in Africa, since one cannot call by that name a solemn document that says the boss can do whatever he likes, even if it has been approved by the people in a plebiscite, as in Algeria) is still in force and will not be openly violated unless the imprisoned deputies are prevented from taking their seats when parliament re-assembles shortly.

Morocco, then, is at the crossways but it is too early to say that it has abandoned the liberal path chosen at independence in 1956 and pursued faithfully until the summer of 1963. The border conflict with Algeria, or more accurately the conversion of that disagreement by the Algerians into a relentless

ideological war, vastly complicates Morocco's adjustment to the new and uncertain situation. It is unfortunately only too easy to imagine the King's advisers taking this struggle as a pretext to give up the experiment in liberalism. The "threat to the nation's security", that is, could be the excuse to continue or intensify the repression of the opposition; worse asserting that the free economy had failed and must be replaced by authoritarian policies; and the attacks on Moroccan attempts to "outbid" them in a series of demagogic expropriations.

Population Explosion

It is easy to imagine this, but those things are not certain. On the contrary, if the conflict with Ben Bella's dictatorship were to continue, the regime in Rabat would be well advised to seek its strength exactly in the contrast between its own political and economic tolerance and the one-man rule across the border—all the more because it can show results, in the shape of fairly satisfactory economic progress since independence, whereas no other North African State can boast as much. To be sure, that progress is pointing compared with what had been hoped for, but for much the same reason as elsewhere throughout the developing world: notable absolute gains in production have been eaten up by the population explosion. A country with a population of 12.5 million sees 350,000 additions every year, bringing a lakh of extra workers in search of jobs annually, many of whom crowd into the deplorable shanty towns on the outskirts of Casablanca. In short, the familiar problems of development which growth-rates of even 7 per cent do not, at first, seem to alleviate.

When the 1960-64 plan was given up, it was officially because it had been found "too ambitious". True, it had been written in haste and contained many gaps and contradictions, but for those who understand the real function of a democratic national plan in a largely free-enterprise economy there is no disgrace in scrapping a plan and starting again with one better suited to current circumstances. Yet the plan could scarcely be described as over-ambitious; its targets seemed modest in relation to needs, and the growth rate had already

been cut back in 1962 from 7 per cent to 6.2 per cent annually. The real reason for the failure of the plan was the inadequacy of private investment and notably of foreign investment, at least for projects considered desirable by the planners. This disaffection of private capital for investment in Morocco was not necessarily permanent; obviously many people, both Moroccan and foreign, were waiting to see how the country handled its first post-independence difficulties, such as the agrarian reform and the definition of its frontiers. A year or two of modest progress, allowing time for the first major projects to mature and for the Government in Rabat to demonstrate that it was faithful to its liberal options, would perhaps have sufficed to turn the tide. All this prospect is now thrown into doubt by the proportions assumed by the untimely border conflict with Algeria.

Agrarian Reforms

The persistence of a large foreign (mainly French) population in Morocco is taken by Algerian opponents (now that they have found themselves unable to retain their European minority) as a sign of this country's inadequately nationalist temper. In reality, it is a tribute to the wise economic policies followed by Rabat in the first seven years of independence. It has not been inconsistent with a serious agrarian reform (though injustice in the distribution of land in favour of the foreign settler was never as blatant here as in Algeria: Morocco was a protectorate not a colony of settlement). The "lands of colonisation", meaning farms handed out free to foreigners by the imperialist, are now being taken back together with immediately adjacent Melk lands, meaning farms bought by foreigners from Moroccans but exploited along with "lands of colonisation". Though the question of compensation has not been settled, the foreign community has taken this reform calmly, having expected it for some time.

The substantial foreign community in Morocco (whose northern coast after all is only five miles from Europe and whose history has always been entwined with that of Europe) is not the expression of any secular injustice as in certain other colonies. Since independence a great part of these people had adjusted to the new regime without difficulty and their presence was a guarantee of assistance and capital inflows that other developing countries have to seek by other means. There are 250,000 Europeans in Morocco, against only 130,000 left in

Algeria and 65,000 in Tunisia; that is to say, Morocco has lost only half her pre-independence foreign population, whereas Tunisia has lost three-quarters and Algeria at least seven-eighths. Their presence in no way abated Morocco's independence but was on the contrary a ferment favouring economic growth. It will continue to be so, despite the insecurity introduced by the border conflict, unless Rabat chooses to out-Herod Herod by mistaking expropriation of the minority for an answer to the Algerians' political campaign against Moroccan liberalism.

One mentions the case of the foreign community not because it is in itself an important aspect of the Moroccan scene but because it is the symbol, or the barometer, of the monarchy's attempt to build economic progress on liberal methods without recourse to demagogic diversions such as have been a substitute for economic thinking elsewhere in Islam. Certainly, a break with those methods in Morocco would make many other casualties besides the foreigners, and to start with the Moroccan opposition in the political sphere and domestic free enterprise in the economic. By signifying a retreat to authoritarianism dubbed "Arab socialism", it would quite dry up the flow of local enterprise and foreign capital, whose hesitations caused difficulties this summer. For the sake of those who imagine that this would at least be a gain for the cause of Arab nationalism, one must recall that the Moroccan monarchy has managed to pursue its nationalist objectives without losing the friendship of the foreign powers. For example, the four US strategic bases in the country are being evacuated this year, the contract for the Voice of America relay station runs out at the same time and will not be renewed, the last vestiges of the international zone in Tangier have gone, and Rabat has not abridged its claims on the remaining Spanish enclaves.

In short, the material advantages of national liberation from the remnants of colonial status have been attained, or are in course of being achieved, along with an agrarian reform, without sacrificing the aid and support of the foreign powers formerly interested in Morocco and without losing the advantage of a useful foreign element in the population. Very little more in that line would be achieved by choosing to follow the path of Ben Bella and Colonel Nasser, who are Morocco's enemies. But liberal regimes have disappeared before today by choosing to imitate their enemies.

OECD Supports US Policies

By GUY SIMS FITCH

WASHINGTON:

IT SOMETIMES seems that the occasional and inevitable instances of disagreement among free nations receive wider airings than do those basic meetings of the mind which underlie their essentially enduring relationships. A case in point is last week's session in Paris of the important Economic Policy Committee (EPC) of the 20-nation Organization for Economic Co-operation and Development (OECD), which links Canada and the United States with 18 West European countries.

This committee looks toward a closer coordination of policy among its members. It examines their economic performances and prospects, and special issues of common concern. It is a high-level gathering, attended by leading government officials. The United States, for instance, is represented by Walter W. Heller, Chairman of President Kennedy's Council of Economic Advisers.

The international co-operation and understanding developed in the OECD are reflected in EPC evaluation of and

attitudes toward U.S. policies and programmes. Last week's meeting, in this regard, disclosed a widespread European endorsement of the U.S. Government's vigorous moves to end its balance of payments deficit and bring its international accounts into equilibrium.

This approval embraces the rise in interest rates in the United States and the Kennedy Administration's proposed interest equalization tax on American purchases of foreign securities. Both these steps are aimed at curtailing the outflow of private capital from the United States, which has been a prime factor in the nation's payments difficulties.

Significantly, the European members of OECD, despite some emerging economic difficulties of their own, generally have refrained from actions that might tend to offset the effectiveness of these U.S. moves. Thus, they have not raised their own interest rates to any significant degree, thereby avoiding possible incentives for a renewed heavy inflow of private capital from the United States.

Strong support also was forthcoming at the EPC for

those domestic policies of the United States that are aimed at reinforcing the current U.S. economic expansion. Two years ago, it will be recalled, an OECD-wide economic growth rate of 50 per cent was set for the decade of the 1960s. At last week's meeting, the EPC confirmed that achievement of this objective is on target, following two years of excellent economic progress in the United States and Western Europe, with another good year in prospect for 1964.

When the 50 per cent goal was first set, a big question mark in the minds of many experts was the large and influential U.S. economy, which apparently had fallen into a pattern of relatively slow growth during the late 1950's. But that pattern has changed markedly since then.

As was noted in Paris last week, since the start of the current sustained and vigorous U.S. expansion in early 1961, the U.S. growth rate has been close to five percent a year. If maintained — and at this writing there is no sign of any imminent slowdown—this rate would enable the U.S. to meet and surpass its OECD goal. Based on this performance, and on the excellent productivity gains of the past three years, many experts now see the U.S. economy entering a period of sustained and high-level growth.

Related to this expectation are U.S. policy determinations aimed at accelerating the nation's long-term economic growth, and these also received the general endorsement of the EPC. Particularly encouraging to all concerned is President Kennedy's proposed tax cut for American individuals and businesses, which is still wending its way through Congressional channels.

The feeling is that a substantial tax reduction would

further stimulate U.S. economic activity and would help prolong and buttress the already vibrant expansion. Given the size and position of the U.S. economy, such a development figures to have widespread beneficial effects in Europe and other parts of the world as well. It also could help solve the balance of payments problem by attracting an enlarged flow of private investment, both domestic and foreign into the U.S. economy.

Results thus far point to the successful operation of two novel labour-management contracts, both negotiated through time-tested free collective bargaining between companies and unions in the United States.

These contracts have attracted particular attention because they are the first of their kind to be instituted in two of the nation's basic industries, automobiles and steel. They go to the heart of one of the most demanding and difficult of modern labour-management problems—the impact of automation and ways of bringing its benefits more fully on workers whose jobs and earnings may be affected.

The automobile case involves a profit-sharing arrangement officially referred to as a "progress-sharing" plan—entered into by the American Motors Corporation (AMC) and the United Automobile Workers Union (UAW). Under it, AMC workers receive the first 15 per cent of before-tax profits, after an amount equal to 10 per cent of the company's net worth is deducted. One-third of this workers' fund is set aside in company stock, and two thirds in cash and other benefits.

No one can know in advance, of course, just how much goes into this progress-sharing fund, since it is tied to fluctuating

The Truth about Man-Made Fibres...IV

How Man-Made Fibres help India's Industries

MAN-MADE fibres serve a multitude of domestic and industrial needs. Their versatility and relative inexpensiveness benefit the manufacturer. Consumers gain from the variety of products improved by man-made fibres and the nation while saving considerable foreign exchange, benefits from the increased production of clothing.

More fibre for the textile industry

Man-made fibres provide filament and staple yarns for woven and knitted fabrics. Rayon, Nylon and Polyester yarns are also mixed, matched and blended into many other materials. Man-made fibres have made possible the production of both high quality,

and versatile fabrics at prices that everyone can afford.

Improved consumer products

Purified cellulose acetate tow in cigarette filters, enables cleaner smoking by preventing the intake of nicotine. Transparent film provides completely hygienic packaging for food-stuffs and pharmaceuticals. And such diverse commodities as sewing thread, upholstery, carpets and paper, gain from the use of man-made fibres.

Greater ruggedness for tyres

Rayon and nylon tyre-cord yarn give great strength and resistance against heat, fatigue and deformation. They are in fact, stipulated by all the leading tyre manufacturers in India and throughout the world.

Reserves for defence

Apart from the manufacture of tarpaulin, parachute cord, tyre-cord and fabrics vital to

the armed forces, the Man-made fibre industry forms a ready reserve for basic chemicals such as sulphuric acid, caustic soda and carbon bisulphide, needed for munition production. The peacetime man-made fibre industry can in times of war, be of strategic importance to the nation.

In industry or in defence, in conserving foreign exchange or in clothing the common man, Man-made fibres are playing an increasingly important role.

Man-Made Fibres Serve India's Vital Needs

White to play
and mate in two:
leave it to
Ram Nath Sharma

The Black King stands aloof and defiant. He is guarded by a Pawn, a squat, menacing Castle and a scheming Bishop. Dark and determined, they surround him in a defensive phalanx. But White is attacking with two crafty Knights, a disdainful Queen and a spearhead of Pawns... Ram Nath Sharma masterminds the strategy. Two moves, and the Black King is checkmated: Sharma, chess player and tank lorry driver at Shakurbasti Depot, Delhi, smiles. Careful strategy has won the day!

A LORRYLOAD OF POWER

Sharma has been driving cars, tank lorries and trucks for Burmah-Shell for twenty years. He delivers motor spirit and high speed diesel oil to dealers, aviation fuels to aviation depots and packed lubricating oils to customers... the

correct quantity and grade against each order. He must drive with infinite care, unload with every precaution, keep his presence of mind. Over two decades of performance, he has never been known to panic.

TODAY, AS EVER, PEOPLE LIKE SHARMA ARE WORKING FOR YOU 'I have 125 shares in the Society,' says Sharma. A prominent member of the company's Co-op. Credit and Thrift Society, Sharma is proud of his work in Burmah-Shell. It has meant a fuller, satisfying life for him and his family. Sharma and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work, working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

tuating profits. But last year, the first of the contract's operation, the 27,000 AMC production workers received stock worth nearly \$3.3 million, while another \$6.5 million went into improved pension and insurance programmes and into supplementary unemployment benefits for workers who may be laid off.

This year, the progress-sharing fund promises to be even larger, in view of the company's expanded operations and rising earnings. Preliminary estimates indicate that AMC employees, with their progress-sharing bonus, will be earning substantially more than those employed by other automobile companies.

One result of the AMC plan is to give workers a stake in the kind of improved operations that will further promote productivity and help the company advance its earnings position. Another result, according to company spokesmen, has been a marked improvement in workers' attitude and morale.

Even more revolutionary in its concept and impact may be the contract negotiated last winter in the steel industry, between the Kaiser Steel Corporation and the United States Workers Union (USW). This can properly be described as a cost-sharing as well as a profit-sharing plan. It encourages workers not only to accept but also to initiate operating efficiencies.

Key feature is a complex formula, drawn by a tripartite board of management, union and public representatives, by which cost savings resulting from technological advances and operating improvements are divided between the company and the employees. The company distributes 32.5 per cent of

whatever has been saved to its 4,800 workers — about 45 per cent of its total force — who thus far have chosen to participate in the plan.

For the first five months in which the sharing plan was in effect, beginning early this year, the company's cost savings have been calculated at no less than \$9.6 million. Not all of this is directly attributable to worker efforts, of course; management decisions are still vital. Nevertheless, company executives acknowledge that workers' efforts have contributed handsomely to the best cost performance in Kaiser history and a marked improvement in Kaiser earnings.

Participation Successful

So far, workers participating in the plan have done remarkably well. They have received monthly bonuses, over and above their regular pay-cheques, averaging nearly \$80 — the equivalent of a weekly wage increase of close to \$20. Reduction in Kaiser earnings in the months ahead could tend to reduce the bonus payments. The fact remains, however, that each participating worker figures to receive hundreds of dollars a year in bonus payments.

None claims that these plans necessarily represent the final work in labour-management adjustments to technological gains. But they have succeeded beyond the expectations of most critics, and companies and employees appear to have prospered under them. Each in its own way has enabled workers to share more fully in the fruits of technology, and with the prospects of greater job security and unemployment protection than might otherwise have been the case.

Brussels Talks on Trade

From Our Special Correspondent

BRUSSELS:

THE FANTASTIC complexity and the apparent remoteness of the agricultural problems debated here are enough to discourage interest overseas, at least outside circles directly concerned with trade in farm produce. Yet the upshot of the marathon negotiation between the Six on their agricultural policy will be crucial not only for world commerce in products like rice and vegetable oils, and not only for the future of the Common Market itself, but for the outcome of the Kennedy Round of tariff negotiations whose importance for all world trade is evident. Indeed, the Six have never been able to discuss their agricultural policy serenely and in isolation from wider questions, because that discussion has always been entangled with the general problems of Europe's relations with the USA, Britain, the Commonwealth and the developing world. The issue of Britain's admission to the Common Market, which would have had repercussions on world trade in many things besides farm produce, ran afoul of the agricultural obstacle. And it is no exaggeration to say that the fate of the Kennedy negotiations on tariff reductions will be decided not in Geneva but here in Brussels in the coming six weeks, in the course of arid and highly technical debates about support prices for beef, rice, dairy produce and what have you.

There are two reasons for this, one tactical, the other of substance. The first is that West Germany and France have different interests both as regards trade in farm produce and as regards the Kennedy Round, and naturally they wish to bargain, making concessions on one point in return for equivalent concessions from the other side on the other matter. That is simply a question of tactics, an accidental overlapping of separate issues. It is already enough, however, for us to predict (in view of the laboriousness of the bargaining) that the Kennedy Round will not open in Geneva in May next year, and may not even begin before 1965.

The second and more substantial reason is that agricul-

tural products are themselves implicated in the Kennedy Round, and will in fact be among the most difficult subjects in that negotiation. Now, the sense and the very possibility of bargaining between the Americans and the Europeans about trade will depend on the shape that the Six give their agricultural policy in the weeks ahead. It was at first imagined that the Six need not fix that policy before 1970 (indeed, that is all that is required by the Rome Treaty), and that meantime they could go ahead and negotiate tariff reductions on manufactures with the Americans, and hence with the rest of the world. The recent, and still unresolved, "chicken war" has shown that this is impossible; increased protection for European poultry at once led to tariff reprisals (or the threat of them) affecting a long list of manufactures. The Americans want to recoup their losses in agricultural trade by way of penalties and concessions over the whole field of mutual commerce. And so it goes right through the list. Duties on industrial goods cannot be discussed apart from trade in farm produce, and the course of that trade cannot be known until the Six decide to what extent they are going to protect their farms from produce from America, the Commonwealth and the developing nations.

Without going into the extraordinarily intricate details of the current negotiations between the Six, a few examples will reveal the impact of their debates on wider trade questions. Take first the comparatively simple case of rice. The Common Market includes two big importers, West Germany and Holland, and two producers, France which is about self-sufficient and Italy which is an exporter. A joint policy implies that (as within the frontiers of one State) members of the union give preference to the rice produced in the region, and this will be done by fixing a threshold price for imports, which will be taxed when they fall below that price. To set too high a "threshold price" would inconvenience rice exporters in Asia and Africa, but above all in the U.S.A. for that country now supplies 50 to 60 per cent of all the rice

November 22, 1963

required by the Common Market. Before the war the Americans used to export only 700,000 quintals of rice; today they export 6.8 million quintals. This is another case (like poultry and oilseeds) where Americans farmers have increased their production immensely, counting on Europe to absorb their surplus. Now that European production too is increasing, and that the Common Market requires that Italian rice have preference in Holland and Germany, the Americans are faced with losing part of this market. They will fight to retain it as tenaciously as they did over chickens.

Turn then to butter, where the question is complicated by the competition with margarine — which in turn brings in the question of world trade in oilseeds from which that substitute is made. Here again European output is rising fast, for the same reasons as elsewhere: farmers in this region are applying, with a delay of a decade or so, the identical techniques that led to large increases in American production, increases that for a time could be absorbed by Europe and cannot be so much longer. For example, the French cattle herd is half as big as Russia's but each cow's milk production is only half that obtained in Holland; relatively simple improvements in husbandry, now being undertaken, will soon close this latter gap — whereupon the Common Market will find itself with an annual butter surplus of 300,000 to 400,000 tons. To encourage its local consumption, and to finance its export on to world markets where prices are low because of dumping, it is proposed to tax margarine.

Americans are Losers

To do that would of course affect African and Asian exporters of groundnut oil, but once again the biggest losers would be the Americans, who last year supplied 300,000 tons out of 336,000 tons of soja oil imported by the Common Market. Notice that before the war the Americans used to sell only 12,000 tons of this product; they have boosted their production by 1,300 per cent, banking as everywhere else on the temporary lag in European farming techniques to allow them to win the European market. The unification of the West European market and its increasing self-sufficiency in edible fats threaten this American outlet, so the decisions taken by the Six on this obscure question could entail trade losses of millions of dollars.

Common Market preference and protection for the third product now being discussed here, beef, would affect the interests of overseas suppliers of frozen meat and, more immediately, Denmark's trade in fresh meat with West Germany. It brings up matters of equal importance, because the Germans take relations with Denmark as a test case of the Common Market's commerce with outside suppliers of farm produce and notably those in EFTA. West Germany traditionally finances its industrial exports to such countries by way of imports of their foodstuffs, and to give preference to Common Market food could jeopardise this trade, already threatened in the case of Denmark by the customs preference that EFTA members give each other. Indeed alarm about the effects of this EFTA preference on traditional German exports to north Europe is one of the reasons the Germans are so anxious to see the Kennedy negotiations succeed: a reduction of all Western tariffs would decrease the disadvantage German manufactures suffer as against British in Scandinavia, Switzerland and Austria. True, it would also decrease the disadvantage suffered by British and American goods inside the Common Market, but the Germans think that the former point is much more important if the Six are to discriminate against outsiders' farm produce.

Understanding of these complex conflicts of interest would be so much simpler if one could accept the contrast between a free-trading West Germany, ready to buy the world's farm

produce in order to safeguard its export markets in manufactures, and a protectionist France, more concerned to safeguard its farmers than to win export markets abroad. Unfortunately, this contrast is very wide of the truth because the Germans, ultra-liberal on questions of trade in industrial goods, wish to practise arch-protectionism where their own farmers' pockets are involved. It is German reluctance to lower their support prices, the highest in the region if not in the world, that has so far prevented the Six finding a joint agricultural policy that would be moderately protectionist (enough to unite the six-nation market in farm produce) without seriously indisposing the Americans.

This contradiction in the German attitude is based on such respectable motives that Bonn is not always aware of its inconsistency. For instance, to support their argument that the agricultural protection of the Six was already playing havoc with the food exports of their oldest customers, the Germans lately had the ECM Commission reckon up the decline of the region's food imports. The result was not what they expected. It emerged that the Six had indeed bought less food from outside, but not because they were preferring each other's food — for trade inside the region had not noticeably increased. On the contrary, the reason was that West Germany had been importing less in order to maintain the lavish protection of its own farmers. The mischief that the Germans thought was being done in Brussels was in reality being done in Bonn.

Ultimately, the outcome of the non-stop negotiations that will start here between the Six on December 2 and go on till the end of the year will not be decided by technical considerations but by political options. The question for the West Germans will be, at that level, whether the Europeans want to maintain the economic unity of the Atlantic world, make the commercial concessions needful to preserve American military protection, and lay the foundations of an open, liberal Atlantic partnership. For the French on the other hand, the prime political question will be whether the Six want to maintain the Common Market (which would be of little interest of tens of millions of Euro-peans unless it included a unified market in farm produce) as far as possible liberal attitude in negotiations with the U.S.A. and the rest of the world.

Official Appraisal of Third Plan

By Our Special Correspondent

NEW DELHI :

"IN TERMS of national income growth, the achievement in the first two years of the third Plan has been considerably less than what was anticipated at the beginning of the third Plan period", says the Mid-term Appraisal of the third Plan prepared by the Planning Commission for submission to Parliament next week. It is expected that this report will be discussed in the two Houses early next month.

In the two-year period, 1961-63, the annual rate of increase in national income is estimated to have been about 2.5 per cent as compared to the rate of something over 5 per cent envisaged in the third Plan. In order that the third Plan targets may be reached, the annual growth in the remaining three years of the Plan has to be substantially higher than the annual growth rate achieved in the past two years.

Proceeding to assess the reasons for the relatively low rate of national income growth in the first two years of the Plan, the Planning Commission points out that in the first year of the third Plan, the agricultural output was higher than in the previous year; the index for agricultural production increased from 139.6 in 1960-61 to 141.4 in 1961-62, but in the next year, namely, 1962-63, there was a set-back in the output of foodgrains as well as of sugarcane, jute and oil seeds; consequently, the index for total agricultural production was, according to provisional estimates, 136.8 in that year.

Bright Prospects

Crop prospects during the current year (1963-64) are, however, brighter. In this connection, it is to be borne in mind that in both the first and the second Plan periods, there have been wide fluctuations in agricultural output as a result of fluctuations in weather conditions. In fact, during the second Plan period agricultural production in 1957-58 and in 1959-60, when weather conditions were adverse, was less than in the previous years by 6.7 per cent and 3.9 per cent respectively. In comparison, output in 1961-62 has been higher than in 1960-61 and that in 1962-63 is provisionally estimated to be about 3 per cent less than in 1961-62. There is, therefore, some ground for thinking that over the years the amplitude of fluctuations in the downward direction has been reduced somewhat. In view of this and taking into account the special efforts now being made to increase agricultural productivity, it seems reasonable to expect that, with favourable monsoons, there could well be a sizable increase in total agricultural output during the remaining period of the third Plan.

Compared to the agricultural sector, the performance of the industrial sector is more encouraging, though it has not been satisfactory in some respects. Industrial production increased by 6.5 and 8.0 per cent respectively in the first two years of the third Plan. Once again, it is clear that these increases are not in consonance with the rise of something like 11 per cent per annum anticipated in the third Plan document. But in judging the performance of the industrial sector, it is necessary to take note of the structural changes that are occurring alongside of the steady increases in output.

In the programmes for industrial investment, the emphasis in the third Plan, as in the second Plan, has been on the development of new industries producing capital goods and basic intermediate goods. If we look at the production trends in these industries, the picture is brighter. For instance, compared to the increase of 15.6 per cent in the general index of industrial production between 1960 and 1962,

the increase in the output of basic metals has been of the order of 25.8 per cent. In the same period, the output of fertilisers has gone up by 25.9 per cent; of heavy organic chemicals by 38.7 per cent; and of heavy inorganic chemicals by 53.5 per cent; of industrial machinery by 47 per cent; of transport equipment by 21 per cent; of electrical machinery by 18.2 per cent; and of electricity generation by 30.6 per cent. If, in spite of these increases, the aggregate index shows only a moderate rise, it is because the additional output in consumer goods industries — which have a large weight in the total index — has been comparatively less. Cloth production in the mill sector of the cotton textile industry was actually smaller in 1962 than in the previous years; but this was more than offset by the increase in the output of the decentralised sector. In other words, production increases in the capital and intermediate goods industries, which are crucial for the attainment of a self-reliant economy, have been larger than in the general index.

It should, however, be added that, for the attainment of the third Plan targets, in the case of some industries, the rate of growth in their output has to be higher than in the last two years. The implementation of several important Plan projects in both the public and private sectors has been behind schedule for various reasons. Several steps are being taken to avoid delays in implementation and remove the impediments to better utilisation of installed capacity. While these measures may be expected to improve the trends in industrial production to some extent, the actual increase in output will be markedly influenced by increases in the supply of raw materials and components — indigenous as well as imported. It should also be mentioned in this context that many of the newer industries being set up in the economy are technically more complex and the process of adapting them to our conditions is often a time-consuming one. Consequently, the scope for reducing the average time-lag between the making of investments and the realisation of outputs may not be the same in all industries. But, as procedural or administrative delays are reduced and inter-related investments come to fruition, it would be reasonable to expect a significant improvement in the response of total industrial output to the investments undertaken in the Plan.

Raw Materials Shortage

As is well known, shortages in the supply of raw materials have tended to cause a slower increase in actual output as compared to the addition to production capacity in several industries. While the increase in aggregate national product has, therefore, been less than anticipated in the Plan, nevertheless there has been no proportionate set-back on the investment side. Firm estimates of aggregate investment and savings in the economy during the past two years are not available; but judging from such partial data, as are available, it would appear that not only has investment in the strategic areas been high but it has also been increasing at an appreciable rate.

In the public sector, for instance, investment made by the Central Government on Plan projects is estimated to have risen from about Rs. 430 crores in 1960-61 to about Rs. 690 crores (revised estimates) in 1962-63. The budget estimates for 1963-64 are of the order of Rs. 840 crores. At the same time, Central assistance to States for Plan projects, the bulk of which would be for capital formation purposes, has risen from Rs. 252 crores in 1960-61 to about Rs. 430 crores in 1962-63 (revised estimates). In the private industrial sector, judging from data relating to capital issues, bank and other

institutional credit to industry, imports of capital goods, etc., aggregate investment in the first two years, though not the pattern, seems to be more or less in tune with the amounts envisaged for the five-year period. Making allowance for the net inflow of foreign resources during the period, it would also appear that a part of the additional investment has been financed through additional domestic savings. By and large, therefore, it seems probable that the aggregate investment/income and savings/income ratios have increased to a significant extent in the first two years of the third Plan.

Additional employment generated in the non-agricultural sector during the first two years has been estimated at 3.2 millions. Precise estimates of additional employment in the agricultural sector are not available. Concurrently with the increase in employment, there has been an increase in the number of people seeking employment. By and large, therefore, it would appear that no serious dent has been made on the problem of unemployment in the country; and the number of persons seeking employment through the Employment Exchanges has risen during the last two years from 15.6 lakhs to 24.8 lakhs. In respect of certain categories of technical personnel, however, the supply has not been adequate.

In the third Plan a wide range of important tasks were assigned to the private sector. However, progress on the part of private industry has lagged behind in a number of key areas, such as, alloy tool and stainless steel, steel castings, steel forgings, machine tools, fertilisers, cement, paper and newsprint and in some chemical industries. Shortfall in these fields will have repercussions on future development and it is necessary to devise appropriate means for ensuring that major targets assigned to the private sector are in fact realised in keeping with the requirements of the economy and the scheme of the Plan.

Bearish Markets

The stock markets, which had continued to be buoyant since 1958, turned bearish after July 1962 and this trend was further accentuated after the declaration of emergency in October 1962. Between July 1962 and June 1963, the index of share prices fell by 16 per cent; while part of this fall was in the nature of a corrective to the large rise in share prices that had occurred between 1958 and 1961, a major factor, affecting sentiment in the capital market, was the situation caused by the emergency.

The disturbed conditions in the market affected the capital raised by industries in the private sector by way of market issues. Though the consent granted by the Controller of Capital Issues to private sector companies increased from Rs. 133 crores in 1961 to Rs. 163 crores in 1962, actual raisings through shares and debentures amounted to only Rs. 100 crores as against Rs. 99 crores in the previous year. This was offset to some extent by an increase in the loans sanctioned and disbursed by term-lending institutions like the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India and the Refinance Corporation for Industry. With the new capital issue market being rather sluggish, these credit institutions as well as the commercial banks may face an increased demand for funds from the private industrial sector.

The Union Ministry of Finance, it is understood, has authorised the Life Insurance Corporation to liberalise its housing loans policy. The new scheme is expected to be announced early next month.

Indications are that two important changes will be made in this policy. The first will be lowering of the minimum loan limit from Rs. 20,000 to Rs. 10,000. This will mean that a person who has got himself insured for a sum of Rs. 11,500 will be able to get from LIC a loan for house building to the tune of Rs. 10,000. The maximum loan limit of Rs. 100,000, however, is not likely to be altered.

The other significant change envisaged is that in future housing loans will be made available by LIC against policies even if they have run for only two years. At present the minimum requirement in this regard is that a policy against which a housing loan is sought must have run for five years.

No liberalisation in the rate of interest applicable to these loans is proposed. At present, this rate is 7½ per cent per annum. But a rebate of one per cent is allowed if the repayment of the principle and interest is prompt. No relaxation is also likely to be made in the maximum period of 20 years during which the housing loans are required to be reimbursed to LIC along with the interest on them.

On the opening day of the Winter Session of Parliament, the Union Finance Minister, Mr. T. T. Krishnamachari, presented the second supplementary demands for the current financial year involving an additional expenditure of Rs. 11.33 crores. Of this, supplementary demands on revenue account amount to Rs. 5.54 crores and those on capital account to Rs. 5.79 crores.

The main items of additional expenditure on revenue account are: (1) Rs. 3 crores on account of sale proceeds etc., of acquired evacuee property transferred to Capital for adjustment against compensation paid to displaced persons; (2) Rs. 2.25 crores for payment of grants-in-aid to the new State of Nagaland; and (3) Rs. 16 lakhs for payment of grant-in-aid to the Indian Statistical Institute.

The increase in expenditure on capital account has been

occasioned by the purchase of shares of Cochin Refineries Ltd. (Rs. 3.32 crores), of the Minerals and Metals Trading Corporation of India Ltd. (Rs. 2 crores) and of the Singareni Collieries Co. Ltd., (Rs. 35 lakhs).

The total additional expenditure of Rs. 11.33 crores will be set off against receipts and recoveries etc., to the tune of Rs. 5 crores. The net outgo from the Consolidated Fund arising from supplementary demands, therefore, will be of the order of Rs. 6.33 crores only.

The Government has set up a small, high-power standing committee consisting of Mr. S. Ranganathan, Secretary, Ministry of Industries, Mr. L. K. Jha, Secretary, Economic Affairs, Ministry of Finance and a Representative of Planning Commission. The Committee will have a permanent Secretary. It will coopt for particular discussions the Secretary of the Ministry whose subject may come up before it.

This committee will give prompt and clear-cut advice to foreign entrepreneurs seeking fields of investment in India, inter-alia, in regard to scope for investment in a particular field, whether foreign participation would be permissible and if so in what ratio. The committee, it is expected, will lay down broad principles which could be explained to a foreign entrepreneur by the Secretary of the Committee, who may seek advice of the Committee on issues not covered by the rules. The Committee will start functioning at an early date.

The Swaminathan Committee on Industries Development Licensing procedure held its second meeting during the week. It was decided on that occasion to pick out "key industries" which were essential and therefore needed expansion as the base for self-sustaining growth for other industries and in which the gap between planned target and expected production was considerable. The committee did not rule out making interim recommendations in regard to accelerated procedure for establishing capacity in such industries. It may also suggest industries in which advanced action for the fourth Plan would be necessary.

The Central Board of Revenue is being reorganised. It will be bifurcated into a Board for Direct Taxes with Mr. J. P. Singh as its chairman and another Board for Indirect Taxes, with Mr. B. N. Bannerji as its chairman. The erstwhile chairman of the Central Board of Revenue has already been posted as an Additional Secretary for Expenditure.

There will be a third Board for Company Law which has been transferred to the Ministry of Finance.

Representatives of the Government of India and Canada concluded and initialled in Ottawa two agreements in the atomic energy field which could be of far-reaching significance to both countries. These agreements will be formally signed in New Delhi shortly.

One of these agreements is between the atomic energy authorities of the two countries. These authorities will freely exchange scientific and technical information which has already been obtained, or may be obtained during the period of the agreement, in regard to the development of heavy water moderated reactor systems. Either part will, if requested by the other, furnish information and detailed design data, including plans and working drawings regarding the design and construction of nuclear power stations of the heavy water type.

This agreement will initially run for a period of eight years and may be extended by mutual agreement. During the early years of the agreement valuable information already developed as a result of Canada's special experience in heavy water system will be transferred to the Government of India for full commercial use in India. This information, which has been valued by the Government of India at five million dollars,

is to be transferred without cost to India and without deduction from Colombo Plan or other assistance.

Under another agreement between the two Governments, Canada and India will co-operate in the construction of a nuclear power station of the CANDU type with a net electrical output of 200 megawatts to be located in Rajasthan State. The Indian Department of Atomic Energy will act as prime contractors and be responsible for the erection of the station. Canada will provide the design with detailed working drawings and specifications of the station up to the steam raising equipment while India will provide the design for the rest of the station.

Half of the initial charge of uranium fuel will be procured from Canada. Canada will also supply such additional fuel for the station as may be required by India from time to time, provided that the Canadian fuel is not more expensive than other foreign fuel.

Credit Facilities

The Government of Canada will provide, under the Export Credits Insurance Act, credit facilities for the purchase of services, material and equipment supplied by Canada which is estimated to cost approximately 35 million dollars; the total cost of the project is about 70 million dollars.

Canada and India have agreed to exchange information regarding the operation of this station and its counterpart, the Douglas Point nuclear generating station now under construction in Canada. They have also agreed that the two stations shall be used only for peaceful purposes and the agreement includes appropriate provisions to this end. A unique feature of the agreement is that these provisions are completely reciprocal, conferring on India and Canada identical facilities for assuring themselves that both stations are being so used.

It is explained that the CANDU (Canadian Deuterium Uranium) nuclear power station burns natural uranium and is both cooled and moderated by heavy water. It will have a net electrical output of 200,000 kw. The CANDU reactor was developed by Atomic Energy of Canada Limited from the 20,000 kw. prototype NPD (Nuclear Power Demonstration) reactor at Rolphton, Ontario, which went into operation in 1962.

The fuel for the CANDU reactor is natural uranium fuel fabricated into a 19 element fuel bundle which is 19½ inches long. The weight of the bundle is 36 pounds, of which 33 pounds is uranium dioxide. Four thousand bundles will be required for the first stage. When the fuel is taken out of the reactor it is stored permanently under water. Fuelling machines designed for the reactor permit refuelling at the rate of about five bundles a day while the reactor is in operation.

Although the initial capital cost of a CANDU nuclear power station is relatively high, the simplified fuel cycle and the use of natural uranium results in a net cost of electrical energy competitive with coal or oil burning thermal units. Additional savings are realized by the high burn-up of fuel characteristic of the CANDU system which results in minimum quantity of radioactive waste and simplified waste disposal problem.

Plat Brothers of the United Kingdom, leading manufacturers of textile machinery have arranged a loan of £7.5 million from British banks to finance the modernisation in India of such cotton textile units which needed rehabilitation. Their representative, along with a representative of the Export Guarantee Department, is here to discuss the details and select units which need modernisation. The Export Guarantee Department has lately raised the period of loan from seven to ten years.

The Government of India has arranged a loan from the USAID for the purchase of fertilizers. Tenders have been

invited from US firms for 80,000 tons of various types of fertilizers.

★★

Hindustan Aircraft Ltd. is tentatively taking charge of the public sector project for manufacturing heavy earth-moving equipment at Kolar in collaboration with Westinghouse, it is learned. HAL is already undertaking the assembly of imported C.K.D. Components and is supplying such equipment to dam constructions and others.

★★

The National Harbour Board, at its concluding session recommended that with a view to helping the growth of Indian economy on a balanced basis, attention should be paid to the further development of intermediate and minor ports. The Board also discussed the scope for the improvement of selected minor ports for the berthing of small coasting vessels alongside these ports.

The Board decided to set up a technical committee to look into the problems of conversion of existing sailing craft into mechanised vessels and for the construction of mechanised sailing vessels.

The National Harbour Board was informed during the week that the capacity of Indian Railways to move coal had been recently augmented and that there was no likelihood of a situation arising again wherein the Ministry of Transport would be rushed into making special arrangements for the movement of coal by sea. There was considerable discussion on the subject and doubts were expressed on the soundness of this approach.

The Board unanimously recommended the relaxation of the application of harbour rules and the grant of concessional port charges for fishing vessels.

Earlier, the Board viewed with concern the fact that the mobility of maritime shipping was seriously hampered by the lack of adequate charting of Indian waters, and strongly recommended that electronic aid for hydrographic investigations should be provided to the Chief Hydrographer without further delay.

★★

A Delegation from the Mitsubishi Group of Industries, Japan, led by Mr. I. Matsushita, Vice-President of the Mitsubishi Shipbuilding and Engineering Company, has had discussions with the Government, in regard to the Cochin Shipyard. The Mitsubishi Group has submitted detailed and

concrete proposals for collaboration in the project, which are now under active consideration of the Government. After these proposals have been examined, further negotiations with the Mitsubishi Group will be carried on in Tokyo, as desired by the Japanese delegation.

★★

The Agricultural Production Board held its first meeting here during the week. The Board, the construction of which was announced at the meeting of the National Development Council earlier this month, has been set up to effect co-ordination between the concerned Ministries of the Central Government in matters relating to improvement of agricultural production.

The Minister for Irrigation and Power, Dr. K. L. Rao, informed the Board that a million acres of land, irrigation facilities for which already existed as a result of irrigation projects completed in the States of Gujarat, Uttar Pradesh, West Bengal and Mysore could be harnessed for an immediate increase in food production. The Chairman of the Board, Mr. Swaran Singh, said that he would take up the matter personally with the Chief Ministers of the States to ensure immediate action in this regard.

★★

Chemical and processing plant for the annual production of 2,000 tons "Terylene" Polyester Fibre is now being constructed by Chemicals and Fibres of India Limited on their new 225 acres site at Thana, Bombay.

The cost of the plant now being erected at Thana will be Rs. 3.5 crores, but already plans are being prepared for a phased, five-fold increase in production capacity with simultaneous diversification to include filament yarn in addition to staple fibre in the range of products. Similar spectacular growths in output have already been achieved in other countries, namely, Japan, where production has commenced only in comparatively recent years. Polyester Fibre is sold as "Terylene" in the UK, "Dacron" in the USA, "Trivera" in Germany, and as "Tetoron" in Japan. The trade name "Terene" has been registered for use in India.

The basic raw materials for Polyester Fibre manufacture are derived from petroleum, and it is envisaged that indigenous sources of supply of these materials will become available in the next 5-10 years, with further large savings in foreign exchange. Even at the outset there will be substantial savings in foreign exchange at present incurred in the importation of wool tops and long staple cotton.

Bankers' Doubts and Anxieties

From Our Correspondent

BOMBAY:

WITH THE announcement that the Winter session of the Lok Sabha will discuss the Banking Companies' Amendment Act, an uneasy feeling is evident among the prominent bankers. All sorts of rumours are circulating about the probable amendments to the Banking Companies Act. The Government, it is generally believed, would slash the voting power of large shareholders of banking companies. Now the voting power of a single shareholder is pegged at 5 per cent of the total voting rights of all shareholders. This is to be reduced, according to knowledgeable circles, to one per cent. The Reserve Bank is also expected to assume powers over the appointment and tenure of directors and chief executives of banks. It is considered likely that the Government and the Reserve Bank may appoint a certain number of directors to the Boards of individual big banks. Other amendments mentioned are that there would be a statutory credit/deposit ratio fixed for the entire banking system. It is also likely that a retirement age may be fixed for bank directors and senior

executives of banks. A ceiling is likely on developmental expenditure incurred for opening new offices of banks.

★★

General insurers are evolving a strategy to face what they consider a threat to their business posed by the proposed tariff insurer in the field of general insurance. The major plank of the strategy seems to be to reduce tariff rates with resulting from a consequent decline in premium income. A cut in expenses can be achieved by reducing business commission from the statutory ceiling rate of 15 per cent to, say, 10 per cent of the premium income. Establishment expenses level is accepted. The strategy has not yet been spelt out in detail. Even the proponents of the strategy admit that it is difficult to implement and would impose hardships on medium and small insurers who constitute the majority. Insurers have reduced premium rates frequently in recent years.

His blood has saved many lives

Way back in 1935, at Jamshedpur's Main Hospital, a man lay dying. Only a transfusion of blood could save him. In those days, most people thought that blood donation permanently damaged health. But a young man came forward and voluntarily gave his blood to sustain the ebbing life. Between 1935 and 1955, the same man freely gave his blood no less than 40 times—on an average twice a year—for victims of industrial accidents, to save men critically ill.

This extraordinary man is T. S. Balam, a typist with Tata Steel at Jamshedpur, a happy, healthy family man of 50. Although he still wants to donate blood, doctors decline his offer in view of his advancing years.

Inspired by the selfless example of men like Balam, many, many others in the steel town have donated blood. No less than 20,000 employees of Tata Steel have had their blood tested and grouped, while many more are coming forward regularly for testing and grouping... to help prevent avoidable deaths... to save families from sorrow and ruin.

This is yet another instance of the fellow-feeling, born of the indivisible bond of labour, that binds together the steelmen in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

They cut, for instance, fire premium rates by an average of 10 per cent in 1960 and by a further 15 per cent in 1962. Marine and motor premium rates could not be lowered because of unfavourable loss experience in these two departments. In the event of a rate war, the general insurers in private sector would face total extinction resulting in loss of employment to 15,000 employees. The question which is currently perturbing the general insurers is whether the LIC, as a non-tariff insurer, would marshal its surplus of Rs. 50 to 60 crores to commence a rate war and its wide net work of field staff to snatch away business.

The Bombay Millowners' Association has decided to appeal to the Supreme Court against the award of the Industrial Court giving an extra seven days' privilege leave and five days' casual leave to cotton mill workers of Greater Bombay with effect from January 1, 1964. The award will result in an extra burden of well over Rs. 2 crores a year on the Bombay cotton mill industry. The extra burden, it is mentioned, will be placing the industry at a great disadvantage not only in relation to other textile centres in the country but also in its drive to increase the exports. The Bombay mills have to bear the brunt of exporting more than 50 per cent of the total exports of cotton textiles from India. The need of the hour is to expand the export trade and not to hamper it. It will also be difficult for the mills to absorb the extra burden. While recommending an increase in wages of the textile workers, the Central Wage Board had urged that no further demand should be made on the industry for a further period of five years. The Bombay mill workers will be the first to get such leave if the Supreme Court concedes the demand of the Meher Award.

The protected sector, by and large, maintained a steady progress during 1962-63 according to a report of the Tariff Commission. Of the 24 protected industries, 12 recorded further improvement. The output of caustic soda, titanium dioxide and automobile spark plugs declined during the year. In seven other industries production in certain sectors received a setback. The production of raw silk and matches remained static. Indigenous raw materials constituted the bulk of supplies in 19 of the industries. Protected industries continued to build up and expand export markets. The general economic situation last year was not conducive to steady industrial growth. The disturbing impact of the Emergency and

the lack of progress in agricultural output tended to inhibit the scope for industrial development.

The decision of the Maharashtra Government to hand over the Poona Electric Supply Company Limited from private management to the Maharashtra Electricity Board, instead of the Poona Municipal Corporation, caused wide resentment in civic circles. The changeover was accompanied by a hartal. The Mayor of Poona, Mr. Sardar Kirad, who led a protest procession, said that the Government had done the Corporation and the people of Poona great injustice by disregarding the corporation's plea for the transfer of the power company to it. He said that the agitation would continue and a 'marcha' would be taken to the Maharashtra Legislature when it begins its session in Bombay next month.

Mr. Kannamwar, the Chief Minister, however, was quite firm and is reported to have told a deputation of the Poona Municipal Corporation that the State Government could not make an exception in the case of Poona and depart from its policy of placing electricity undertakings in charge of the State Electricity Board whenever they were transferred from private control. The Chief Minister declined to commit himself to a suggestion that the State Government should call a conference of representatives of the Government, Poona Municipal Corporation and the Electricity Board to discuss the demand. The Maharashtra State Electricity Board Chief, Mr. M. D. Bhat, announced that there would be no increase in the rates of electricity in Poona until the Board had improved the receiving and distribution systems. This might take at least six months. He expressed the conviction as an ex-Civic Commissioner of Poona, that the Municipal Corporation would not be able to take over 'such a highly technical and capital-intensive' task. It was inevitable that the Board should increase in Poona eventually the rate for domestic consumption from the present 13 nP. to the general Board rate of 31 nP. per unit. The rates of his Board, according to Mr. Bhat, were the same as elsewhere in India. The per unit rates were: Mysore 28 nP., Madras 29 nP., Kerala 39 nP., Maharashtra 31 nP., Gujarat 32.8 nP., Punjab 30.2 nP., U.P. 38 nP., West Bengal 41 nP.

The Poona Electric Supply Corporation was prematurely taken over by the Government in view of the repeated power failures. The Government had done the right thing in resisting the demand of the Poona Municipal Corporation that the undertaking should be handed over to it.

Realism in Andhra Pradesh

From Our Correspondent

MADRAS:

THE DECISION of the Andhra Pradesh Government to dispose of its minority holdings in joint-stock companies and transfer the Andhra Paper Mills to the management of private industrialists in order to be able to utilise effectively the released funds for other purposes has touched off a serious controversy. The investment in some of the existing companies in which there is a predominant outside interest can be realised profitably while the development of the Andhra Paper Mills, if left to the private sector, will enable the diversion of Rs. 6 to Rs. 7 crores for being utilised on other projects. Even before the Governor's address was presented to the Legislature it had been known that the Andhra Paper Mills would be handed over to the private sector. A point of privilege was even raised. But since it was explained that a Cabinet decision had been taken sometime earlier, the controversy now relates to the proposal for transfer of the

mill to private interest in the midst of an expansion programme.

The State Government's decision cannot be considered unwise as a similar move some years back has been found profitable. The Hyderabad Allwyn Metal Works has expanded beyond recognition while Sirpur Paper Mills has increased its capacity appreciably and it is presently engaged in a programme of diversifying its output. Sirsilk too has been producing acetate yarn efficiently and it is expected that in the coming years the profit would make better showing. It is, therefore, felt that the Andhra Paper Mills also would fare better if the management was handed over to a competent industrial house. Unfortunately, the mill, which has had a chequered career, was not able to think of any big expansion programme until recently, notwithstanding the fact that it has been in existence for over three decades. The scheme to increase the production capacity to 60 tons daily will cost

about Rs. 6 crores. Already, expenditure has been incurred to the extent of Rs. 1.8 crores while machinery worth about Rs. 2 crores has been received. It will need careful management and vigorous supervision by experienced personnel in order to complete the plan and realise the fruits of larger capital expenditure. As it is felt that about Rs. 10.15 crores can be freed for use in other directions, the State's Chief Minister is apparently determined to hand over the paper mill to the private sector.

The State Government is conscious of the fact the progress on the industrial front in the past few years has been halting while the neighbouring State has been advancing at a fairly fast rate. This is perhaps the reason why it was thought advisable sometime back to accept Dr. Dharma Teja's proposal for constructing a thermal plant having a capacity of 200mW at Ramagundam and that the cost of the project should be repaid over a period of 15 years. The availability of power from this source will be helpful in boosting production especially as at about the same time a thermal station at Kothagudem also might be completed. Since there are many other schemes pending and the State has been handicapped on account of the non-availability of resources, it has been urged on the Centre that the Nagarjunasagar Project should be executed as a Central undertaking and that the State should be free to develop its potentialities in other directions. The Central Government have no doubt helped the State Governments to develop the collieries. There is also a scheme for expanding the capacity of Praga Tools Corporation while many Central projects are to be constructed in the next few years. While these developments no doubt augur well for the future, it is emphasised that local talent must be more enterprising and the natural resources, which are abundant in the region, should be effectively exploited.

♦♦

There is increasing realisation of the need for improving railway transport facilities between Vijayawada and Madras. The doubling of the track which is expected to be completed in a short period will, of course, be helpful in handling a larger volume of passenger and freight traffic. But it is felt that there will be a larger flow of traffic from the North-East as well as the North and that it will be necessary to electrify the track upto Vijayawada from Madras especially as the position will become more difficult after the completion of the new Krishna and Godavari railway bridges. Mr. S. V. Ramaswamy has, however, indicated that the plans might fructify only after some years as the requisite power will have to be made available by the Andhra Pradesh State Electricity Board which would be possible only after the completion of the Nagarjunasagar and Kothagudem projects. Even so, it will be necessary to undertake planning considerably in advance as the experience of the electrification of the line between Madras and Villupuram should not be repeated. This latter project has unfortunately been making halting progress and many excuses were found for delaying the implementation of the scheme. Even though it was apparent from the beginning that electric locomotives could not be got from indigenous sources, it was said that the project had to wait for the supply of locomotives from Chittaranjan. Only when the Railway Board realised that it was advantageous to concentrate on broad gauge locomotives, orders were placed for importing locomotives from Japan. Even in regard to the multiple unit coaches it has been pointed out that electric motors could not be supplied by the Heavy Electricals Unit in Bhopal. These motors too have now to be imported. The travelling public in Madras, though vexed, will probably feel grateful that the scheme has at last the prospect of being completed and that electric trains would be run in this section sometime in the latter half of next year. The necessary sanction has also been given for the conver-

sion of the electrification system between Tambaram and Beach into A.C. system.

★★

There has been a sharp break in jaggery prices in Madras State in the past fortnight in spite of the fact that exports of jaggery have been prevented from Andhra Pradesh. Prices in Madras City too have slumped. Andhra Pradesh has a lucrative export trade in the finer grades of jaggery and the restriction on exports from this area should normally have had a bolstering effect on the Madras market. It is now felt that the demand for jaggery may not be in evidence on the same scale as before as the peak of the demand for sugar and other sweetening agents, in connection with the festive season, has been passed. Besides, the new sugar season has had a good start and ample quantities of factory sugar are expected to be available in different parts of the country. As the standing crop is reported to be satisfactory and with the slump in prices for jaggery there may not also be diversion of cane on a large scale, it is hoped that, in the current season, there should be significant increase in the output of sugar mills. The mills in Andhra, Madras and Mysore are expected to do better though one unit in the Parry group is experiencing difficulty in its crushing operations on account of the dispute with growers over the quantum of bonus that should be paid to them. It is expected that the deadlock would be resolved and regular working recommenced.

★★

It is rather unfortunate that there was a dispute over the quantum of bonus between the workers and some mills in the Coimbatore area. Even though the State Government wanted to arrive at an agreed settlement and avert unpleasantness on the eve of Deepavali, trouble arose in the case of a few units where the leaders demanded payment of a bonus higher than what would be available under the formula of the South Indian Mill-Owners' Association. As the demands of labour for a higher bonus, the workers became restive especially as they wanted to get paid before Deepavali. As the administrative staff were manhandled and there were stay-in-strikes, the police had to interfere and the management of the three mills declared lock-outs as it was realised that the demand for higher bonus was not quite reasonable. Work was resumed after a short interval in two mills and sometime later in the third mill. Peace now prevails in the Manchester of the South.

★★

There is some confusion, however, in the yarn markets. Apart from the fact that immediately before Deepavali there was no brisk demand for yarn, as only cloth in larger quantities was needed immediately, the change-over to the metric system has caused some dislocation in the transaction of business. The weavers have to become familiar with the new weights. It is expected that the various difficulties would be got over in the next few weeks and trade will again be brisk.

Meanwhile, it is not clear how the spinning units would be expanding their capacity and whether there would be any desire on their part to instal looms up to the permitted quota. It is no doubt recognised that the decision of the Central Government to allow existing mills to expand their capacity is a wise move, but serious difficulties are anticipated in the implementation of the different schemes as, apart from the problem of finding additional financial resources, the position in regard to the availability of textile machinery is very acute. If the efforts to import textile machinery on the basis of a barter deal with a leading firm in Britain prove to be successful and if arrangements are also made to step up indigenous production of textile machinery, the industry in this part of the country can expect to grow bigger in stature in the next two or three years.

4 outstanding features 4-way economy

BLUE STAR-WORTHINGTON Packaged Air Conditioners 5, 7½ and 10 tons

- Plus this economy
- ★ Single units from 5 to 10 tons, cut costs on tonnage
 - ★ Units can operate without ductwork, save installation costs
 - ★ Single units can be connected to form multiple system, reduce expansion costs
 - ★ Every unit tested individually for performance ensures low operation and maintenance costs

The moving fingerprints

THAT MR. MORARJI Desai has no guilty conscience about Dr. Jivraj Mehta is evident enough. That Mr. Nehru has is equally clear. It was to be expected that the latter would compensate Dr. Mehta for the loss of Chief Ministership by appointing him to some high public office or the other. Nevertheless, the appointment of Dr. Mehta as our High Commissioner in the UK is certainly surprising. Himself in his seventies, the Prime Minister may well imagine that age can be no bar to the holding of high offices of State. But it is no reflection on Dr. Mehta's fine public standing or proved administrative capacity that he would have made a more suitable High Commissioner had he been born say 20 years or 25 years later. The importance of our diplomatic representation in the UK is still second only to that of our diplomatic representation in Washington or Moscow. It is a pity that Mr. Nehru should have always acted as if he regards the London job as a sinecure in his gift. The recent course of British politics has been such that it would be quite unwise not to be prepared on our part for the British role in world affairs becoming more important and interesting in the coming months. The present Conservative Government is unlikely to be flattered by Mr. Nehru's nomination of a dethroned and aging politician for whom this may well be his last public office. Mr. Harold Wilson — now counting the steps to 10, Downing Street — is even less likely to be pleased. Our man in London ought to be a relatively young and energetic individual of good standing in public life and with years to look forward to the service of the country. That it does not occur to the Prime Minister to make an appointment of that d underlines the Moghul Court atmosphere in which Mr. Nehru is wont to decide these matters.

★ ★

The energetic Secretary of the Forum of Free Enterprise, Mr. M. R. Pai, has sent me the following observation of Prof. Thomas Balogh, quoted in the September, 1963 issue of "Industry" published by the Canadian Manufacturers' Association, Toronto: "The free enterprise system has been immensely successful, perhaps the most successful thing we have ever had, and its problems arise from its success..." What is significant about this statement is that Prof. Balogh has made it. He is, of course, one of the leading left-wing economists of our time and one of the two advisers on economic matters in whom the leader of the British Socialist Party, Mr. Harold Wilson, is reported to repose great confidence. The man who shares this honour with Thomas Balogh is Prof. Nicholas Kaldor, a name rather well known in this country.

The US Newsmagazine, "Time", recently recalled that Professors Kaldor and Balogh "are both Hungarian-born and are known as those 'evil Hungarians', nick-named respectively 'Buda' and 'Pest'." Such of us in this country as may not have a high opinion of some parts of Prof. Kaldor's ill-digested advice to the Government of India on income-tax matters would perhaps be disposed to suggest that the nick-names could have been more aptly transposed. In any case, Prof. Balogh — 'Pest' though he may seem to be to those sections of the British public who have no cause for rejoicing in his reported triumph in convincing Mr. Harold Wilson of the need for control over corporate profits and dividends, and a tax on capital — surely reveals himself in a very agreeable light in the passage quoted by the Canadian Manufacturers' Association. If the meaning of Prof. Balogh's statement is that the conduct of free enterprise has to be related to the social

good without its own technical efficiency being destroyed, few indeed will demur. But what is unfortunately being argued very often in this country is that free enterprise, meaning essentially the private sector, does not compare favourably in efficiency with a directed economy meaning essentially a dominating public sector. This contention, of course, is sheer nonsense. I have yet to see any sound economic justification being provided for the State becoming merchant or manufacturer. There is also the tendency to assert that even if free enterprise, as an economic instrument, may be relatively more efficient, its superior efficiency could nevertheless be justifiably sacrificed to certain vague and variously defined or described values. This comes near to suggesting that the cook should be honoured because he dances the 'bhanga' beautifully.

★ ★

It has been suggested that the nuclear test ban and now the American wheat sales to the Communist bloc are evidence that the cold war is changing into a cosy parlour game. I would cite one more proof which is that the Russians are now clashing with the Americans, not over Cuba, but over cashew-nuts and I am happy to share with my readers this delicious skit for which I am indebted to the Information Department of the Soviet Embassy.

"Cashew-nuts taste good, they are readily used by the confectionery industry in the USSR and served with cocktails in the United States.

"But too strong a cocktail taken with cashew-nuts may only turn the head and make one say something extraordinarily silly.

"I do not know whether the 'New York Post' staff drink too many cocktails, but someone of this staff has, apparently under the influence of cocktails, produced a cock-and-bull story.

"The story is that the Russians have greatly increased their purchases of cashew-nuts in India only to re-sell them to the United States.

"The man who made up this story has a rather fertile imagination; the 'details' he gives have an element of the dramatic. As soon as the Indians gather their cashew-nuts, says he, the Moscow purchasers pop up from nowhere and buy the whole lot, paying in 'unstable rupees' (as the newspaper puts it). When the cargo is still east of Suez, however, the Russians skilfully change the way-bills and re-direct the nuts to US markets.

"Through this monstrous nonsense, the 'New York Post' tries to kill two birds with one stone; it attempts to show that the trade practices of the Russians are not so faultless, after all, and secondly, that instead of the Indians getting the dollars they need so much, the Russians get them.

"The story in the 'New York Post' has only one grain of truth in it; the Soviet Union has actually increased its purchase of cashew-nuts in India. And that was done on the request of the Indian side. The rest is a ridiculous fabrication of the kind the American press often indulges in...

"We could trade on a wide scale with the United States and we do not require Indian nuts for that. There are enough goods on both sides that could be exchanged."

V. B.

Trade Winds

COAL ENOUGH

WITH THE increased production of coal and easy transport position, it is possible to meet the entire demand of coal for various categories of consumers, including consumers of brick burning coal and soft coke for domestic consumption. At present, supplies to these categories of consumers are being made, by and large, through block rakes under a planned movement. This planned movement is restricted to the quotas fixed for each State or for individual consumers.

It has been decided that every consumer of coal who desires to have more stocks, over and above the quota already fixed, should be given additional quota without any limits as to quantities. All consumers are, therefore, advised to get in touch with the State Coal Controllers or their sponsoring authorities or even the Coal Controller at Calcutta for getting additional quotas. The movement will, as far as possible, be in full rakes.

AUTOMOBILE BODY-BUILDING

At the last meeting of the Development Council for Automobile Industry, it was explained that the target of producing 60,000 commercial vehicle per annum by the end of the third five-year Plan could be realised with the release of an additional Rs. 25 crores of foreign exchange to the leading automobile manufacturers for the import of capital equipment. Efforts are also currently being made for gearing up ancillary units through expansion programmes. It is, however, unfortunate that Government remains totally indifferent to the corresponding expansion of automobile body building industry with the result that there is a considerable time lag between the manufacture of a chassis and the construction of a body including the cab. There is a belief, it appears, that production of commercial vehicles is synonymous with the manufacture of chassis. Much of this belief, however, has been very rudely shaken by the experience of the Defence Ministry during the present emergency.

A large number of vehicles required for defence which were to go into service during the first part of this year were not put on the road and commissioned due to the fact that the body-building facilities had not been adequate. Thanks, however, to successful collaboration between the technical services of the Ministry of Defence and Hyderabad Allwyn, the problem of speeding up the process of body building for general service (GS) military trucks has been effectively dealt with to some extent through the engineering of "kitable" cab bodies (as described in "Eastern Economist" of October 18, p. 794). These bodies are mass produced and transported easily in CKD condition to various ordnance depots and assembled quickly on to the chassis by depot personnel.

All this is good as far as it goes but to do away with the shortages, it is high time the needs of the body building had been evaluated in a realistic manner and steps taken to meet them. Body builders are facing a number of serious problems such as difficulties in obtaining high tensile or Tiscor and CRCA steel for body framework; toughened glass for wind screens and windows; ERW tubing; body-building hardware, particularly rivets and other fasteners, machinery and equipment. Very little of this equipment is manufactured indigenously and most of it has to be imported so that the needs of the automobile body builders may be met. It is necessary that they should be given the necessary assistance in importing this equipment to the extent which is not available locally, particularly when it is an established fact that it will take some time before this equipment is manufactured in the country itself. There is, however, no reason why some of the

items of this equipment, for example, cab bodies, buckets, and load bodies, etc., which can be manufactured and assembled in this country should be permitted to be imported.

On an estimate, recently prepared, it is observed that there will be a total turn-over of Rs. 168.38 crores during the third five-year Plan period on automobile body building alone. Assuming that 25 per cent of body building work on goods trucks, 75 per cent on passenger buses and 25 per cent on three-wheelers and rickshaws body builders, the latter will have to be equipped to carry out work to the value of:

1. Rs. 13.2 crores on goods trucks,
2. Rs. 82.1 crores on passenger buses and,
3. Rs. 4.9 crores on jeeps and three-wheelers.

Rs. 100.2 crores.

It will, therefore, be seen that large-scale body builders alone will be required to carry out work of the value of Rs. 20 crores per annum, which is equivalent to the production of all other ancillaries taken together.

EXPORT SNAGS

The need for maximising exports has been stressed by Mr. R. H. Mody in the course of his inaugural address on "Management of International Marketing" at the seminar jointly held by the Calcutta Productivity Council and the Calcutta Management Association in Calcutta last week. Expansion of export has always been a felt need but with the added pressure from the national emergency, the need has become even more compelling. While it is a happy augury that 1962-63 has been a satisfactory year for export earnings, there can be no complacency because the task that awaits the nation is still big enough to require the concerted efforts of one and all. Mr. Mody has pointed out that the viability of the country requires a doubling of exports by 1970 and this is not an easy task considering the intense competition in world markets for most of the products that we can export. A feature of our export trade is that it is as yet mainly confined to traditional items based on agriculture and Mr. Mody has made it clear that we will continue to rely upon traditional items for some time to come for a large part of the increase in total earnings that we aspire to achieve. Efforts at increasing export earnings from non-traditional items have necessarily to be intensified but it is better to acknowledge that with our high costs it will be quite difficult to sell these items overseas. In his view, therefore, our efforts at promoting exports should mainly be directed towards maximising the sales of traditional items till such time as "industrial base is diversified enough to warrant making a big bid in new items." And success in maximising exports of traditional items cannot come easily mainly for the following two reasons: world demand for such items is relatively inelastic and other developing nations are also competitors in most of these items. Thus, India's position as the world's largest supplier of jute goods is being threatened very seriously by Pakistan. This country is fast building up a jute industry and besides having the advantage of new machinery and a plentiful supply of high quality raw material is also adopting questionable measures to undercut our products in world markets. Indications are that buyers number of consuming countries are attempting to have their own manufacturing industry. The problem for the Indian jute industry will therefore be one of remaining competitive and the answer is to be found in rapid modernisation and specialisation.

Mr. Mody blames the "wrong headed fiscal policies at

the Centre and State levels" for the setback in our tea exports over the past few years. Even after realisation has dawned upon the Government that while our tea exports had been declining, other producing countries had been strengthening their position, the remedy has been half-hearted in that the abolition of the export duty has been accompanied by other fiscal levies which left the selling price of Indian tea more or less at the same level as before the abolition of the export duty. The decline in cotton textile exports is now accepted on all hands as due to our high price and inability to match the quality of our competitors. The answer to this now baffling question is rapid modernisation which alone will increase our productivity so essential for bringing down the cost of production. Mr. Mody has pointed out that in cotton textiles specialisation has to be attempted at an increasing pace by "moving over from greys to finished textiles bearing the distinctive stamp of Indian designs". The effort at pushing non-traditional items in world markets according to him is to be made only on the realisation that such export will involve some deprivation to the home market. Above all success in export promotion will depend on the close co-operation of industry and Government. As a matter of fact the share of the responsibility of Government in this is greater than that of private enterprise because the ability of industries to increase exports depends at the present juncture, with the multifarious controls and heavy taxation, to a large extent on Government.

FAIRS AND EXHIBITIONS

At the meeting of the ad hoc Exhibitions Advisory Committee, held recently under the Chairmanship of Mr. Manubhai Shah, Union Minister of International Trade, the need for a concerted effort to bring effectively to the notice of the foreign buyer the variety of products that India can offer to world markets was stressed. It was decided that this country should participate in 25 exhibitions and fairs in various countries of the world. In the case of some countries, wholly Indian exhibitions will be organized. The Committee decided to set up a small group under the chairmanship of Mr. H. D. Shouri, Joint-Secretary, Ministry of International Trade, to assess the effect of exhibitions held and to suggest measures to intensify the follow-up action taken by Export Promotion Councils and Commodity Boards as a result of the experience gained. The proposed Indian Council of Fairs and Exhibitions would be able to co-ordinate and channel many of the activities of these bodies and function effectively to publicise and sell Indian products abroad.

Mr. Manubhai Shah suggested that each export promotion council should have a separate wing to concentrate on the work of publicity and sale abroad through participation in exhibitions. Each council should be equipped to study and also disseminate knowledge on what products are available for sale and export and to which region. This should be done with the aid of regional exhibitions and well-run show rooms. Mr. Manubhai Shah said that each export promotion council should participate in its individual capacity in exhibitions in countries which offer scope for the sale of the products it deals with. The State Trading Corporation and the Minerals and Metals Trading Corporation should also explore possibilities of having permanent exhibitions or large show rooms abroad.

ROURKELA EXPANSION

The first consignment of materials ordered by Hindustan Steel Ltd. for the expansion of the Rourkela Steel Works to an annual capacity of 1.8 million tons has been received at the plant site. The consignment comprises equipment and machinery for a 125 tons per day rotary kiln plant designed

for the production of sinter dolomite for the manufacture of tar dolomite bricks to be used for the lining of the oxygen blast LD-converters at Rourkela. The order valued at approximately Rs. 6.3 million was awarded to the Westofen GmbH, Wiesbaden, a subsidiary of the Didier-werke AG of Germany. About 25 per cent of the total contract value will be commissioned by Didier sub-contractors in India. Although the contract came into force only in July this year, the firm succeeded in shipping approximately 550 tons of machinery and equipment for this contract during September-October, 1963. Erection will be completed by July next year.

Under HSL's Rourkela expansion scheme, Koppers Export GmbH, Essen, Germany, has been awarded the contract recently for adding capacity to the existing by-products recovery plant. Present planned capacity of 1,680,000 nm³ day coke oven gas will be increased to purify 2,520,000 nm³ daily and to recover the various by-products. In detail, the following units will be extended: the gas primary cooling units, the gas conveying units, the electrostatic gas detarrer, the gas final cooling unit, the benzol washing and distillation unit, and hydrogen sulphide absorption unit and the plant for obtaining sulphuric acid by the wet catalysis method. Further, a plant for the recovery of ammonium sulphide for the total coke oven gas capacity is to be newly installed. The Koppers installation at Rourkela has been commissioned in 1959. The expansion work of this plant is scheduled for completion by October, 1965.

MACHINE EXPORTS

A permanent office of the Indian Engineering Export Promotion Council will be opened in Frankfurt on December 1. This office will inform German and European buyers about the profitability of purchasing Indian made industrial products. The idea of this bureau originated with an Indian manufacturers' delegation, headed by Mr. S. L. Kirloskar, which toured Germany early this year.

AID FOR INVESTORS

By improving already existing tax privileges, the Government of the Federal Republic of Germany expects to encourage private business to invest more than previously in developing countries. A Bill for that purpose was recently given a first reading by the German Bundestag. All parties represented in the House welcomed the Bill. There is a reasonable chance that the Bundestag will give a second and third reading to the Bill. The Socialist Democratic party's opposition which had criticized not only some of the planned measures but also the idea of the Bill itself, when the Bill was drafted, has changed its attitude and is now one of the strongest supporters of the Bill. Both the Bundestag and the Federal Government hope that the Bill will work as a new incentive for increased private investment in the developing countries. So far private German investments abroad have reached a total of about 5,000 million D-marks, including only a small proportion invested in developing countries.

PROTECTION TO DYESTUFF INDUSTRY

The Government of India has accepted the Tariff Commission's recommendation that protection granted to the industry should be continued for the remaining period of protection, that is, till December 31, 1964, at the existing rates of duty. The Government has also accepted the Commission's recommendation to continue the concessional duties at present leviable on certain intermediates up to December 31, 1964, when the position will be reviewed in regard to the need for further protection.

In the Resolution, the Government has taken note of

certain ancillary recommendations of the Commission for assistance to the industry and will take suitable steps to implement them as far as possible. The attention of the producers of organic and inorganic chemicals/intermediates and the manufacturers of sodium sulphide/dyestuffs is also drawn to some of the recommendations in the Resolution.

CHRYSLER TURBINE CAR

The Turbine car designed by Chrysler in the US has controls and instruments of the same type as those in any conventional car. It incorporates many luxury features including power steering, power brakes, power window lifts and leather seats and trim. The real difference lies under the bonnet. Chrysler Turbine engine supplies vibrationless power immediately. It is light and compact with only a fraction of the parts of a piston engine. It is reliable, economical and runs at a high peak of efficiency.

The front end has its functional elements merged into the form of the car. The 7-inch (18 cm.) headlights are set in bold outlining rings. These simulate a bladed turbine wheel. The grille is designed with horizontal aluminium bars framed in stainless steel. The headlamp housings serve as the front bumpers with additional protection from the heavy gauge number plate housing. In profile, a low, thin roofing silhouette rests on the car's narrow front and wide rear pillars. The low appearance is emphasised by a subtle horizontal crease-line along both sides of the body. It has been produced in only one colour — turbine bronze. Its roof and rear pillars are covered in black vinyl. The turbine symbolism is repeated at the rear end in the ribbed tubes housing the reversing lights. These, and the tail and indicator lights are recessed into the massive bumper area. The most significant advance among the accessories is featured in the heater assembly. This incorporates an "instant heat" gas-to-air exchanger.

STEADY PROGRESS OF CIVIL AVIATION

According to figures for the first half of 1963, Air-India and the Indian Airlines Corporation carried more passengers and cargo than during the corresponding period of 1962. There was an increase in the frequency of Air-India's services to the USA to a daily service during the summer, the commissioning of an airport surveillance radar at Bombay and the signing of an agreement between India and the Federal Republic of Germany relating to air services. The first prototype Kartik single-seater high performance sail plane was successfully test-flown.

During the first half of 1963, the Indian Airlines Corporation, on its scheduled services flew 16,013,456 km., carrying 505,365 passengers, 15,996,936 kgs. of cargo and 3,801,287 kgs. of mail, as against 15,537,419 kms. flown and 452,958 passengers, 15,977,141 kgs. of cargo and 3,345,195 kgs. of mail carried during the corresponding period of 1962. The capacity ton kilometres during the period under review was 65,628,281 as against 58,707,049 during the corresponding period of 1962. Air-India introduced an additional service on the route Bombay-New Delhi-Bangkok-Hong Kong-Tokyo with effect from April 1, 1963. The two Corporations during the period under review and eight air transport companies and seventeen flying clubs continued to hold permits for non-scheduled operations. On non-scheduled services, Indian air carriers flew 3,839,336 kms., carrying 44,805 passengers and 17,037,740 kgs. of cargo during the first half of 1963, as against 3,121,710 kms. flown and 61,482 passengers and 20,856,832 kgs. of cargo carried

during the corresponding period of 1962. Eightytwo aerodromes were maintained by the Civil Aviation Department at the end of June, 1963.

AIR FRANCE

Air France maintains that the group fare is a major consideration in developing traffic. At a recent IATA conference, at Salzburg, Air France's proposal concerning reduction of fares for both first class and economy class were among the very lowest submitted for consideration. For New York-Paris, Air France recommended one way economy class fares of \$225 and for the months of June, July, August and September, the fare of \$265. For first class, Air France suggested a fare reduction to \$350 instead of the present \$475, one way New York-London.

PRODUCTION OF UE DIESEL ENGINES

An agreement for the production and sales of Mitsubishi UE diesel engines was signed on October 31, between Mitsubishi Shipbuilding Engineering Company Ltd. and Sasebo Heavy Industries, Ltd. Types of UE diesel engines to be manufactured by Sasebo under Mitsubishi licence are the UEC 75/150 and UEC 85/160 cross-head type high output engines for large sized vessels and the UET 52/65 trunk piston type for large power dredgers and power generating plants. Besides the agreement with Sasebo, Mitsubishi had already concluded a license agreement with the following four Japanese companies: Kobe Hatsudoki Company Ltd. (February, 1957); Hayashika Shipbuilding and Engineering Co., Ltd. (August, 1959); Akasaka Iron Works Company Ltd. (December, 1960); Ube Industries Ltd. (March, 1961). Mitsubishi company expects that the production of UE engines, especially that of the high output UEC diesels will be increased through the agreement with Sasebo, well-known for the construction of large-sized vessels.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

SCALES**

Avery's modern Works at Calcutta is backed by research and over 230 years of international experience. Skilled engineers work on advanced techniques of weighing machine manufacture resulting in Avery equipment being the finest available in the world market today.

And Avery make the Scales

Through an extensive network of more than 30 branches throughout India, Avery weighing equipment is available either ex-stock or on short delivery. Avery scales are acceptable to the Weights & Measures authorities of each State within the Indian Union and comply with Indian Standards Specifications.

And Avery make the Scales

Avery offers complete service. Representatives will show how Avery scales can bring greater profits to your business. Trained technical representatives answer any problem on material weighing and provide after-sales service on all Avery weighing equipment.

And Avery make the Scales

WORLD INDUSTRY RELIES ON

AVERY

For full details on entire range of Avery weighing equipment, write to:

THE AVERY COMPANY OF INDIA PRIVATE LIMITED

Avery House, 28/2, Waterloo Street, Calcutta-1

Avery scales serve world industry. Over 230 years of Avery experience, advanced methods of production, constant research and quality control have made Avery weighing equipment the most reliable available.

And Avery make the Scales

You don't know SUZUKI ? or do you ?

If you have not already met her, make her acquaintance by flying Air France to Tokyo to attend the Olympic Games. You will never forget her name—SUZUKI. You will always carry pleasant memories of your journey to Tokyo and back by Air France.

From Delhi Air France operates three weekly flights to Tokyo—on Monday, Wednesday and Friday, and from Calcutta there is a flight every Saturday.

Leave Delhi in the morning and reach Tokyo the same evening.

Company Affairs

INDIAN METALS ISSUE

INDIAN METALS and Ferro Alloys Ltd. is expected to enter the market early next month with a public issue of Rs. 36.17 lakhs, made up of 161,700 equity shares of Rs. 10 each and 20,000 redeemable cumulative preference shares (9.5 per cent) of Rs. 100 each. The whole of the preference issue and Rs. 11 lakhs of the equity issue have been under-written. The company, which was incorporated in November, 1961, has an authorised capital of Rs. one crore in 800,000 equity shares of Rs. 10 each and 20,000 preference shares of Rs. 100 each. The issued capital at present is Rs. 20.52 lakhs and the company proposes to raise a further capital of Rs. 54.48 lakhs—Rs. 34.48 lakhs in equity shares and Rs. 20 lakhs in preference shares. Of the present issue, the Industrial Development Corporation of Orissa Ltd. has agreed to subscribe equity capital of the value of Rs. 16.50 lakhs and directors and their friends have agreed to take up Rs. 1.81 lakhs.

The company has been licensed to set up a plant for the manufacture of ferro-silicon at Rayagada in Orissa. The principal raw materials for the production of ferro-silicon are quartzite, scrap iron and coke. About 10 miles from the plant site there is an extensive high purity deposit of quartzite for which a prospecting licence has been granted by the Government of Orissa. The company has entered into collaboration agreement with Elektrokemisk A/S of Oslo for the supply of necessary equipment and technical know-how. The total capital outlay on the project is estimated at Rs. 1.36 crores which will be financed by the capital issue of Rs. 75 lakhs, loan of Rs. 39 lakhs in foreign exchange from the ICICI, a rupee loan of Rs. 5 lakhs from the Orissa State Financial Corporation and borrowing of Rs. 17 lakhs from banks.

KEYTUA CHEMICALS

Keytuo Chemicals Limited, a new company, will enter the capital market on November 27 with their public issue of equity capital worth Rs. 4.90 lakhs. The subscription list will close on December 10 or earlier, but not before November 30. It has an authorised capital of Rs. 10 lakhs all of which is issued. The directors and their friends have agreed to take shares worth Rs. 5.10 lakhs. The factory premises at Andheri near Bombay have been finalised and the construction is expected to commence shortly. The company will start with the production of styrene emulsions with a capacity of 1,000 litres per day which will gradually be increased to 5,000 litres. The trial production is expected to start by April 1964.

The manufacture of plastisol for the purpose of coating and foam will be the second item on the manufacturing programme which will be undertaken by the end of 1964. It also proposes to manufacture certain basic chemicals like potassium chloride, light basic magnesium carbonate, sodium sulphate and table salt and then go on to the manufacture of bromide chemicals and sodium sulphate, subject to the availability of the technical know-how. It may be added that technical know-how is being made available by the research laboratories in the country.

EVEREST REFRIGERANTS

Everest Refrigerants Ltd., which proposes to manufacture halogenated and fluorinated methane gases like freon, and other chemicals, will enter the capital market shortly with a public issue of Rs. 25 lakhs. The authorised capital of the company is Rs. two crores and issued capital Rs. 60 lakhs divided into 480,000 equity shares of Rs. 10 each and 12,000 redeemable cumulative preference shares (9.3 per cent) of Rs. 100 each. The directors and their friends and associates will subscribe equity and preference shares to the extent of Rs. 19 lakhs and Rs. 6 lakhs respectively. Technical Enterprises Inc., USA, the technical collaborators, will subscribe

equity shares worth Rs. 10 lakhs. The balance of Rs. 25 lakhs made up of 790,000 equity shares and 6,000 preference shares will be offered to the public for subscription. The entire issue is underwritten. The technical collaborators, Technical Enterprises, Inc. of USA, are well-known designers and engineers in plant and machinery for the manufacture of chemicals. The factory, which will be located at Andheri, Bombay, is expected to be completed in the first quarter of 1964. The capital outlay for the project is estimated at Rs. 1.20 crores of which Rs. 60 lakhs will be raised by share capital and the balance by borrowings. The products to be manufactured by the company are widely used in air-conditioning, refrigeration, cold storage, deep freezing, etc.

MYSORE SUGAR

Mysore Sugar Company Ltd. is expected to enter the capital market to raise funds for its new expansion schemes. It has obtained industrial licence to manufacture a new product—"acetate"—with a capacity of 10 tons per day. For this purpose it formed a new company to be named as the Mysore Acetate and Chemicals Company Ltd. with an authorised capital of Rs. five crores. The Mysore Government will take shares of the value of Rs. 50 lakhs and the Mysore Sugar Company to the extent of Rs. 30 lakhs. The foreign collaborators will participate in the share capital to the extent of Rs. 68 lakhs for part payment of the plant and machinery and the technical know-how. Shares worth Rs. 77 lakhs will be offered to the public. The Mysore Sugar Company proposes to manufacture acetic acid and acetic anhydride from alcohol and sell them to the new company. The annual production target for cellulose triacetate will be 1,000 tons. The foreign collaborators who will supply machinery and plant and technical know-how are a well-known photographic film manufacturers of Belgium. The collaborators also include an American and a Swedish corporation. The estimated cost of the project is around Rs. 4.15 crores which will be raised partly by share capital, partly by foreign loans and loans from the ICICI and the remainder from Indian banks.

DELHI CLOTH MILLS

The Delhi Cloth and General Mills Company Ltd., proposes to increase its issued capital by Rs. one crore to Rs. 6.77 crores by issuing 200,000 right shares and 200,000 redeemable cumulative preference shares, both of Rs. 25 each. The right shares are likely to be issued at a premium of Rs. 5 a share or at such premium as may be fixed by the Government. The company has applied to the Controller of Capital Issues for necessary sanction. According to the company's latest annual report, for the year ended June 30, 1963, the increase in capital is proposed to meet in part the cost of two projects — PVC and rayon tyre cord — at Kotah. Since the start of these projects there has been an all-round rise in machinery prices, cost of construction and labour and incidence of customs duty.

The company also proposes to float a new company which will be a wholly owned subsidiary to undertake exports. Initially, the new company will deal mainly with the exports of DCM products, but its activities will be extended to the purchase, export and import of all types of commodities, including those made by other companies. The authorised capital will be Rs. 10 lakhs, divided into 10,000 equity shares of Rs. 100 each. To start with, the issued and subscribed capital will be Rs. one lakh.

The working of the company for the year under review shows that the operations of the chemical division including vanaspati were satisfactory, but the sugar factories suffered a slight set-back. The crushing capacity of the Mawana sugar factory is being increased from 1,500 to 3,000 tons a

day. The caustic soda plant of the PVC project has gone into production and the entire PVC plant is expected to be commissioned by the end of this year. Work on the rayon tyre cord project is also in progress where the first batch of machinery has already been shipped from the USA. The capacity for spinning from waste is being increased and a new plant is being set up in the Swatantra Bharat Mills for this purpose. The company has been granted an industrial licence for establishing a staple bleaching powder plant of 15 tons a day. To purchase plant and machinery for this factory an agreement has been reached in principle with the ICICI for a loan of DM 945,000 which works out to nearly Rs. 11.25 lakhs.

CENTRAL BANK ISSUE

The directors of Central Bank of India have decided to raise additional capital by issuing 634,625 new ordinary shares which will be offered at a premium of Rs. 5 per share to the existing shareholders in the ratio of one new ordinary share for every two existing shares held. This will increase the paid-up capital of the bank from Rs. 3.15 crores to Rs. 4.74 crores and the reserves from Rs. 5.10 crores to Rs. 5.42 crores, bringing the total capital funds to Rs. 10.16 crores. The bank had obtained consent last year to this issue but on account of the declaration of emergency and the consequent unsettled conditions in the market, the directors had to postpone it.

METTUR CHEMICALS

The directors of the Mettur Chemical and Industrial Corporation Ltd. proposes to increase the dividend on its new preference shares from 9 per cent to 9.3 per cent. It may be recalled that the company has been given permission by the Controller of Capital Issues to make a fresh preference issue of Rs. 30 lakhs along with the equity issue of Rs. 60 lakhs. At an extraordinary general meeting held in March, 1962, it was resolved to fix dividend on new preference shares at 9 per cent, free of company's income tax, but subject to deduction of tax at source. In view of the conditions prevailing presently in the market, the directors have now realised that the new preference shares should carry a dividend of at least 9.3 per cent in place of 9 per cent. Necessary resolution in this regard is to be passed at an extraordinary general meeting of the company to be held on November 30.

INVESTA MACHINE TOOLS

The Controller of Capital Issues has permitted Investa Machine Tools & Engineering Co. Ltd., to issue at par to the existing ordinary shareholders further equity capital of Rs. 25 lakhs in the ratio of one new ordinary share for two existing ordinary shares. On the 25,000 new ordinary shares, a sum of Rs. 25 is payable on application, Rs. 25 on allotment and the balance of Rs. 50 as and when called up by the directors in two calls of Rs. 25 each, the first call to be made not earlier than three months after the date of allotment and the second and final call not earlier than three months thereafter.

COOPER ENGINEERING

The Cooper Engineering Ltd. will soon increase its share capital by Rs. 45.20 lakhs by the issue of 45,200 equity shares of Rs. 100 each at par. The new shares will be issued to the shareholders in the proportion of one for every two shares held. During the year ended June 30, 1963, the sales of the company increased from Rs. 1.93 crores to Rs. 2.61 crores. After providing Rs. 18.68 lakhs for depreciation and Rs. 3.92 lakhs for development rebate, the directors have proposed to pay a dividend of 8 per cent, subject to tax, which will absorb Rs. 7.23 lakhs. An amount of Rs. 3.23 lakhs has been transferred from development rebate reserve to general reserve out of which the dividends have to be paid. The production and sales of engines, machine tools and shaping machines were considered satisfactory. The ICICI has agreed to sanction a loan of Rs. 18.50 lakhs in free foreign exchange for the manu-

facture of vertical turret lathes. The company will also undertake the manufacture of automatic looms in collaboration with Messrs. Draper Corporation, USA.

HIND EQUIPMENT

Hindustan Equipment Supplies Ltd., Bombay, proposes to expand its output of alarum timepieces. Its licensed capacity of 150,000 pieces a year, to be achieved under a phased programme, has been executed ahead of the schedule. The company now proposes to step up its output to 200,000 pieces by 1964 and raise it progressively thereafter. Out of 110 parts in an alarum timepiece, the company is producing 103 indigenously and the rest are being imported to be assembled at the factory. In terms of value, the imported components presently work out to rupee one a piece assuming the consumer price at Rs. 30. It has submitted a proposal to the Development Wing for the manufacture of these vital components at a cost of Rs. 7.50 lakhs. The directors are of the opinion that the manufacture of the balancing assembly would be in the best interests of the country if the Government assured them that other manufacturers in the field would absorb their requirements from the company. Meanwhile, it has a proposal to undertake the manufacture of transistorized clocks. These expansion schemes would mean an expansion of the company's capital base subject to the policy of the Government.

ASIAN CABLES

Asian Cables Corporation Ltd. has maintained its steady progress and its new PVC cable plant has recently been commissioned into service. The company has also started the export of these cables to some West Asian countries and the price realised is about the same as offered to English cables. The foreign collaborators of the company, Messrs. Phelps Dodge Enfield International Corporation, USA, have paid full amount of Rs. 53.64 lakhs against 53,642 new equity shares allotted to them. It has received the necessary licence for the import of machinery for power cables and magnet wires plant for which orders have already been placed. The machinery against these orders will start arriving from January, 1964. The power cable plant is expected to go into production by the third quarter of 1964 and the magnet wires plant by the middle of 1964. Construction of factory building is progressing and the technicians are already under training in the UK at the collaborators' works.

AEG ENGINEERING

AEG of West Germany, well-known manufacturers of electrical machinery and equipment, have formed in collaboration with their Indian agents, a company for the purpose of erection, commissioning, servicing and repairing AEG equipment in the country. The new company to be called AEG Engineering of India Private Ltd., will have expert foreign and Indian technicians to assist Indian industries in solving problems of electrification and automation. The paid-up capital will be Rs. 10 lakhs in which AEG will have 50 per cent holding. The company expects to play an important part in the expansion of the Rourkela Steel Plant where the most modern five-stand cold rolling mill, the electro-sheet mill and all processing lines will be installed with AEG equipment from West Germany.

HOLMAN-CLIMAX MANUFACTURING

Holman-Climax Manufacturing Ltd., registered in October, 1958, is today a flourishing enterprise engaged in the production of portable and stationary air-compressors, rock drills, air hoists, industrial pneumatic tools, their accessories and spare parts. Its development has followed the pattern of phased manufacture which is now quite familiar in this country. Formed as a collaboration between the Bird-Heilgers Group and Holman Brothers Ltd., Camborne, England, it has established its factory at Titaghur. It started with 70 per cent

imported and 30 per cent indigenous components and now the machinery produced by the company is utilising only a little less than 100 per cent indigenous content. The collaborators are consultants and technical advisers to the company and have provided facilities for training qualified Indian technicians in close association with the industrial training institutes run by the West Bengal Government. The progress of the company could be judged from the performance of 1962 alone when it installed 35 machine tools and added another 20,000 sq. ft. to the existing works at Titaghur making a total of 60,000 sq. ft. It proposes to supply industrial pneumatic tools to the Government of India and has received orders from Associated Cement Companies apart from a considerable amount of business that is done within the Bird-Heilgers Group in fulfilling its needs in mining and industrial engineering. The Kolar goldfields also have been using Holman equipment consistently for many years.

INDIAN RUBBER EXPANSION

The Indian Rubber Regenerating Company Limited proposes to expand the annual installed capacity of its rubber reclaiming plant from 5,000 tons to 10,000 tons in order to meet the swelling demand for reclaimed rubber. The annual demand for such rubber is expected to go up from 10,000 tons to 16,000 tons in the fourth Plan period. The current value of reclaimed rubber imports exceeds Rs. one crore. The company has started booking orders for the reclaimed rubber and proposes to sell its products directly, without appointing any selling agents.

CAPITAL ISSUES

Four companies have been authorized by the Controller of Capital Issues to raise capital totalling Rs. 2.83 crores. One company will issue bonus shares, two equities and one equities plus redeemable preference shares. One of the com-

panies is offering part of its issue to non-resident Indians in Africa. This is a new company.

In the case of three companies, the consent of the Controller of Capital Issues is valid for 12 months, while for the fourth, it is valid only up to 25th February, 1964.

Guest, Keon, Williams Limited, Calcutta, is issuing bonus shares of the value of Rs. 2,10,72,910 on capitalization out of its share premium account. The proposed issue will be made in the ratio of one bonus share for every two shares held.

The Southern Gas Limited, Bombay, is to issue capital of Rs. 22,50,000 divided into 22,500 equity shares of Rs. 100 each for cash at par. The money will be used for setting up a factory for the manufacture, compressing and filling of both oxygen and acetylene gases.

Eastern Ceramics Limited, Bombay, a new company is to issue capital of Rs. 25 lakhs for cash at par consisting of Rs. 20 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 9.3 per cent cumulative redeemable preference shares of Rs. 100 each. Out of this, equity shares of the value of Rs. 13.75 lakhs will be offered for subscription to non-resident Indians in Africa and the remaining shares will be issued privately in India. The proceeds of the issue will be utilized for the manufacture of sanitary ware and glazed tiles. This is in supersession of an earlier issue. The consent is valid up to 25 February 1964.

India Pistons Limited, Madras, is to issue capital of Rs. 25 lakhs divided into 2,50,000 equity shares of Rs. 10 each to be issued privately at a premium of Rs. 15 a share. Of this 1,08,750 shares worth Rs. 10,87,500 (nominal) will be offered to Associated Engineering Limited, UK, against supply of plant and machinery and the balance for cash. The remaining shares will be allotted to Simpson and Company, Madras, for cash. The proceeds will be utilized for a second expansion for trebling the present production of the company.

TENDER NOTICE

Percentage rate tenders on prescribed forms obtainable on cash payment of Rs. 2/- each from the office of the undersigned are invited from contractors on the approved list for the following works:—

Name of work	App. Cost	Earnest Money	Time limit	Date and time of opening the tenders
Providing Interim Disposal Works at Panipat—Constructing 39" dia R.C.C. Sewer Screening Chamber, Collecting Tank, Pump Chamber and Laying Rising Main etc. and works contingent thereto	Rs. 50,000/-	Rs. 1,000/-	8 months	10-12-63 at 3-00 P.M.
Construction of 3 Nos. Rectangular & 6 Nos. Elevated Tanks at various places in Public Health Division, Karnal	Rs. 1,62,000/-	Rs. 3,300/-	18 Months	-do-
Providing 4 Nos. Tubewells at various places in Public Health Division, Karnal (with Reverse Hydraulic Rotary method.)	Rs. 1,00,000/-	Rs. 2,000/-	6 months	-do-

Plans specifications and further details can be seen in the office of the undersigned on any working day from 9-00 A.M. to 4 P.M.

Executive Engineer,
Public Health Division, Karnal.

BOOKS BRIEFLY

Who Saves?

Contractual Saving in India: By National Council of Applied Economic Research, New Delhi; Pp. 129; Price Rs. 7.50.

THE NATIONAL Council has, during the last few years, devoted a number of studies to the problem of saving in this country and has covered, in the volume under review, two modes of saving which are found predominantly in urban areas, namely, life insurance and provident fund. The role of both of these in households (which are responsible for about 8 per cent of national savings) has been, no doubt, of great significance; as much as 70 per cent of the contractual saving—life insurance and provident fund—is made by urban households which account for less than one-fifth of the total households in the country. Through a nationwide urban sample survey, the Council attempted to study in the last quarter of 1960 the various characteristics of the actual and potential savers, though it could not study the reasons for the presence of a large number of non-insurance and non-provident fund contributing households at all income levels.

Savings through these two channels in India constitute nearly one per cent of the national income or about 2 per cent of the non-agricultural income. This compares unfavourably with the USA, the UK and Japan where the corresponding percentages are 3.0, 3.8 and 3.5 respectively, implying that there is ample scope for further increasing contractual savings in this country. This conclusion is also re-emphasized by the Survey conducted by the Council which shows that as many as 84.4 per cent of the households did not have a single

member who was covered by life insurance. Despite the doubling of the total number of life policies issued between 1952 and 1960, less than one-fifth of the urban households were covered by the policies issued by the Life Insurance Corporation. The participation in provident funds was more common than life insurance; about 28 per cent of urban households, according to the survey, contributed to provident funds. It was also found that there was little competition between insurance payments and contributions to provident funds and that there was possibility of increasing the volume of urban household saving through both these methods, because there were households at all income levels who did not save in either of these forms. An increase of 10 per cent in life insurance at all income levels, it was estimated, was likely to throw up insurance premia payments by Rs 28 crores in the short period.

How far the capacity of these households to save has remained unimpaired since the last quarter of 1960 (when the survey was conducted) is hard to say but there are indications to show that it has been reduced to a certain extent. Prices have risen by 10 per cent in the last three years, additional surcharge on income-tax was levied in the last budget and the Compulsory Deposit Scheme will continue to take away a slice of the income of the income-tax paying classes. There is no direct or indirect evidence to show that incomes of these classes have moved up to match these increasing burdens.

It has been rightly suggested that another survey is required to know more about the attitudes of the non-participating respondents.

Readers' Roundtable

NO SUBSTITUTE FOR CAPITAL

Sir, — The article on the Wealth Tax in the issue of "Eastern Economist" of October 25 was very interesting. If the country has got only Rs. 350 crores wealth in the hands of over 1,300 people, the amount being equal to 700 million dollars, what result can you expect in the way of production. Yet it is this Rs. 350 crores which accounts for most of the revenues of the Central and State Governments. In the United States, industrial investment runs to over a thousand billion dollars. Approximately 500 people are earning over a million dollars. There are quite a few individuals having wealth of over billion dollars each. It is because of this that the United States has become an affluent society where almost everybody has his wants met. It is capital which multiplies and produces. If we in this country do not let capital accumulate, then what is there to multiply — except, of course, population? Consumption alone is not going to create more resources. It is this aspect which is not realised.

It has been emphasised that everybody should have housing. For a country such as India even if we have four million houses built every year, it will not provide sufficient accommodation for the entire population even in the next 50 years, as by that time the population will increase and all the old houses would start crumbling. Yet in the last 13 years of Planning, not even a million houses have been built. I do not understand what type of socialism it is which prevents people from becoming better off. In case of housing one has neither to bring any raw material from abroad nor is there difficulty in construction. Because of controls and restrictions on the economy, people cannot get coal and they cannot burn bricks. They cannot also produce as much cement as there

is demand for it for housing construction and other purposes.

A country such as Germany, even when it has a high income, is unable to compare in living standard with the United Kingdom, because the latter has accumulated wealth over three centuries and is therefore much better off than Germany in respect of capital accumulation. Unless therefore we create capital which multiplies and which is used by people for their comforts, such as, housing and other facilities which can be acquired over a certain number of years and owned by them as capital assets, we will never be able to improve our living standards. What we need is more capital, more capital assets, people owning more capital in various forms for investment and social security as well as current consumption.

New Delhi.

"REALIST"

OFFICIAL HOLIDAYS

Sir,—The Maharashtra Government is to be congratulated on reducing holidays from 28 to 18. There are far too many holidays in our country. Instead of having several holidays to honour the increasing number of heroes, Gandhi Jayanti can be the day for honouring all of them; Republic day in January is enough to affirm our faith in an independent democratic Republic. New Year's day need not be a holiday. In fact, we should begin the new year with purposeful work.

Similarly, the practice of declaring holidays when leaders die should be discontinued. At present, when such holidays are declared, mourning takes the form of visit to movie theatres and other places of entertainment! Cannot work be stopped for half an hour before the closing time of the day and a condolence meeting held when an important leader expires?

Sugar Gone Sour

IT IS UNFORTUNATE that, on the eve of his well-deserved promotion as Minister of Food and Agriculture, the hard-working and unassuming Mr. A. M. Thomas had to stand up in Lok Sabha and abjectly confess that the management of the sugar economy by his Ministry in recent years has ended in a dismal failure. He referred somewhere in his statement to the inherent instability of production in industries which are based on agricultural raw materials. In the case of the sugar industry, however, this plea is wholly untenable since it cannot at all be argued that the fall in sugar production in the last season or in the season before was occasioned to any extent by fluctuations in the output of sugarcane. It must be borne in mind that factories crush only a portion of the entire cane crop and that this percentage is less influenced by the total size of the crop than by the vagaries in official policies with regard to the sugar industry.

It is surprising that Mr. Thomas did not have the candour to admit that the mess which has been created in the sugar economy had its origin in the deliberate decision taken by the Government in the 1961-62 season to direct factories to cut the crushing of cane by 10 per cent. The disastrous discouragement consequently imparted to sugar production could have been corrected had the Government created the necessary economic climate for increased crushing of cane by factories. This they unfortunately failed to do. Mr. Thomas listed the various measures which the Government has taken, this year, to increase sugar production. But what is the use of dwelling on the Government's wisdom in this respect when it has been clearly demonstrated that the policy of "too little, too late" which the Government has been following in the matter of incentives is grossly inadequate for the Government's declared purpose of stepping up sugar production fast enough to provide for domestic consumption as well as for the large export market which is offering? If sugar production last year was barely 2.3 million tons, it was clearly because the Government failed to see that the concessions it grudgingly granted then were not enough to stimulate the industry sufficiently. Worse still, apart from absence of adequate incentives, the emergence of controls with a threat of more restrictions to come, has naturally had the effect of discouraging production further. Mr. Thomas himself has admitted in his statement that whenever distribution is controlled consumption has tended to go down, and where there is a possibility of consumption going down, it is but natural that production would tend in advance to adjust itself to lower levels. It ought to be plain, therefore, that, if the relatively long-term policy for sugar is to be that of increasing its production steadily so that the needs of the growing population and the requirements of a higher standard of living are met within the country, while at the same time sufficient quantities are left over to meet the substantial demand in world markets, it is unwise and self-defeating for the Government to go in for controls on production and distribution in the short period.

It is a pity that even after repeated failures in sugar policy the Government still lacks the gumption to understand or the guts to face up to the fact that, if the objective of a high level of production is to be achieved, it is necessary to give up panicky resorts to controls as well as to abandon the niggardly policy of keeping the sugar industry on short rations where incentives are concerned. It indeed surprises us that there should at all be any necessity for us or anybody else to dwell on the shortcomings of the Government's sugar policy as it has been practised in recent years. After all it is there for all to see that the Government has succeeded neither in protecting the consumers' interest in particular, nor in promoting the national interest in general. If its object has been to prevent a

rise in sugar prices it has not been able to do so. On the contrary it has been forced to take steps which have been adding to the cost of sugar production and, therefore, to the price. The Government has not also been able to prevent local shortages in the festival season. Consequently, it cannot be claimed that even the short-term interests of the consumers have been served. In other words, the long-term purpose of higher sugar production has been surrendered without any compensatory gain in the form of even temporary relief to consumers.

As for the national interest, the record is even more dismal. At a time when, as Mr. Thomas had to concede, prices in the world market are ruling very much higher than our cost of production and there is a golden opportunity for exporting amounts up to one million tons and earning Rs. 150 crores of foreign exchange, there is no substantial surplus of sugar for export, thanks to the Government's mismanagement. It becomes particularly difficult to forgive the Government for its bungling when it is remembered that not many years ago this country was heavily subsidizing the export of sugar at a time when world prices were low, the argument then advanced in favour of this policy being that the subsidies would pay for themselves as India built

itself up in due course as a major exporter of the commodity. Mr. Thomas, of course, is in no position today to talk about India being a major exporter in the foreseeable future. Actually he has been reduced to confessing that he sees no escape from shortages until long-term planning of sugar industry can bring about lasting improvement. Regarding exports, Mr. Thomas refers to existing export commitments of 300,000 tons and then remarks that there are possibilities of exports of another 200,000 to 300,000 tons "if we can secure it". In any country, democratic or other, where the accountability of the administration to the public is enforced to any degree, these words alone should have been enough to indict the Government of the gross mismanagement of economic affairs and a deplorable failure to look after national interests. But here in India it is always possible for the Government to blame the weather or the private sector by turn and then proceed to talk glibly about long-term planning.

We wonder what right Mr. Thomas or, indeed, anybody speaking on behalf of the Ministry of Food and Agriculture or the Government of India has to use the phrase "long-term planning". Millions of people have had to go without sufficient sugar or have had to pay high prices for their purchases during the recent

festival season. Simultaneously, the country is losing crores of rupees of foreign exchange which it was open to it to earn — and this at a time when the Government is sermonising ceaselessly on export promotion. Can any spokesman of the Government claim in these circumstances that the public must place confidence in the Government's planning, long-term or short-term? The fact that Mr. Thomas could speak of a buffer stock of sugar while world prices are nearly double our cost of production shows that his Ministry has not even begun to grasp elementary economic facts. Why should we be asked to sit on our surplus stocks of sugar (assuming that we have a surplus some day) if or when we could sell them at a good price abroad and supplement our foreign exchange resources? Glib talk such as this about buffer stocks and the rest shows that either the Government is ignorant or is not serious when it tries to manage individual industries or the national economy.

Mr. Thomas ought to understand that the Government has forfeited the right to ask the public to repose confidence in its sugar policy. If it wants to recover that right, it has to show in the immediate present that it can act boldly and imaginatively in the matter of stimulating a permanent, substantial and steady increase in sugar production in the immediate future. This object is not difficult to achieve because the built-in inhibitions and prejudices from which the Government's sugar policy has suffered, can be got over by a firm exercise of judgment. To start with, it must be realized that the organised sugar industry can never compete for supplies of cane unless, in the first place, the price of cane is de-controlled and secondly, and in consequence, the price of sugar is also de-controlled. This is the only way to restore sanity to the economics of the sugar industry. Fears that this would lead to sky-rocketing sugar prices are totally unfounded. It must be borne in mind that the demand for sugar is elastic, which means that prices cannot keep rising without demand tapering off. Secondly, it has been shown again and again that the sugar industry instinctively responds readily to de-control by increasing production. Therefore, the two powerful correctives of rising production and slackening demand as prices rise can be depended upon to lead to a reasonable level of prices being maintained, except in the very short period.

To the extent that faint hearts in the Government and elsewhere have to be nursed, the Government may for a short period after de-control take up a limited portion of the output of each sugar factory at a level of prices negotiated with the representatives of the industry and allocate the stocks thus acquired to the various States for distribution through fair price shops or consumer co-operatives. With this safeguard and complete de-control of movement not only of sugar but also Khand-sari and Gur, it should be possible to ensure that the normal trade channels resume functioning normally all over the country. Fortunately, the rail transport posi-

tion is fairly easy at present, with the result that the Railways should be able to provide all the transport that may be needed by the sugar industry. Thus one possible argument against complete de-control of production and trade, namely, the possibility that enough transport may not be available for the proper distribution of sugar in consuming areas disappears.

There has been so much talk, especially lately, of the need for increasing farm earnings, modernize agriculture and make the farmer interested in science and improved techniques. Surely one way of doing all this is to give every encouragement for the development of profitable commercial outlets for the main agricultural produce. In the case of sugarcane, both the fast rate at which the domestic demand for sugar is growing and the bright prospects of a high level of world trade over the years are there to be availed of. According to informed sources, it is possible for this country to negotiate long-term export contracts for up to one million tons of sugar per year on the basis of London prices prevailing at the time of shipment. It is also the case that foreign business men are prepared, if necessary, not only to sign contracts but also to help in organizing large sugar farms in this country on commercial lines besides providing foreign exchange — if this, again, is necessary — for the putting up of modern sugar plants

Eastern Economist 20 Years Ago

NOVEMBER 26, 1943

It is at this time of the year that New Delhi buzzes with speculations about the Finance Member's Budget plans for the coming year. As the revenue and expenditure figures for the first six months are now available, they may be taken as a fair basis for the revised estimates. The increase in revenue collections as compared with the previous year during these six months is as much as Rs. 300 crores. If the same proportion is maintained one may expect that the revised estimates for the whole year may exceed the Budget estimates by over Rs. 60 crores—a total of over Rs. 250 crores as against the Budget estimate of Rs. 195½ crores. There are certain interesting features of the revenue returns which may well have a bearing on the Budget proposals for the coming year. Though the Finance Member anticipated a decrease of Rs. one crore in customs receipts for the year, the first six months alone have yielded an increase of Rs. 3 crores. It looks as if the coming six months' yield may be even more fruitful, for the Government of India have announced their intention to import large quantities of goods. So also under "other heads," though the Finance Member has anticipated a decrease, the actual earnings during these six months have improved to the extent of Rs. 6 crores. The only revenue source which has failed to come up to expectations is the salt duty, but the coming six months may make up the deficiency now disclosed. Taking the figures as a whole the Finance Member has every reason to be satisfied with the revenue returns which have substantially exceeded his expectations. From the revenue point of view at least, the Finance Member can hardly put up a case for imposing any additional taxation.

SO MANY SACRED COWS!

quickly by importing equipment. We just do not see any reason why the Government should not address itself to these possibilities vigorously. Instead of thinking in sterile and narrow terms — of fixing the retail price of sugar to the last naya paisa, or banning the export of *burfi* or *peda* from Delhi or saying how much should be paid for sugarcane in Muzaffarnagar and how much in Ahmednagar — the Food and Agriculture Ministry would do well to start thinking in terms of

big development. We strongly urge that instead of holding periodic meetings with Food Ministers in the States to discuss gloomily and largely pointlessly how to make one grain of sugar do where two are needed, the Food and Agriculture Ministry ought to call for a development conference to draw up for prompt implementation a programme for expanding capacity and production in the industry as much as possible and as fast as possible.

Performance of Public Sector in Andhra Pradesh

THE INEFFICIENCY of public sector undertakings has been discussed in recent months both inside the Lok Sabha and outside indicating that the implications of the extension of the public sector in certain spheres have not been in the interest of the country. By and large, these discussions have centred in the working results of the undertakings controlled by the Union Government as very little is known about the fate of similar undertakings run by State Governments. A happy departure in this regard has been provided by Andhra Pradesh whose Director of the Bureau of Economics and Statistics has published the first volume on the working results of the public sector undertakings in that State. Most of the financial data provided relate to 1959-60. Some of the units have already advertised their working results for later years, but it is not without interest to study, through one publication, the performance of all these units in the same year.

Broadly, there are four different types of undertakings run by the State Government. To the first category belong the autonomous bodies such as the Andhra Pradesh State Financial Corporation and the State Road Transport Corporation. Secondly, there are eight Government Department undertakings. To the sphere of industry belong the remaining two categories, broadly divided into those where the State Government command a majority share and those where the State Government have only a minority share.

Table I alongside gives the results of the working of the autonomous bodies which together commanded Rs. 9.24 crores of capital and showed a gross profit, before taxation, of not more than Rs. 22.1 lakhs. The return on capital, thus, worked out to 2.2 per cent which is less than half of even the ruling bank rate. The rate of return in the case of the Financial Corporation at 3.7 per cent in 1960-61 is not discouraging in view of the fact that in that particular year the bank rate was around 4 per cent and the Financial Corporation was hardly five years old. Naturally, it could not increase its profitability ratio to a high figure because of its basic objective of assisting industries in the State by providing loans at comparatively cheaper rates of interest. What is really discouraging is the performance of the State Road Transport Corporation which employed a total of

Rs. 7.5 crores and could not show a profit of more than Rs. 13.6 lakhs giving a rate of return of 1.8 per cent only. It may be stated that the Road Transport Department started operating in 1932 as a part of the Nizam State Railway and at that time it had a very limited area of operation with a fleet of 33 vehicles only. The establishment of the new Transport Corporation on January 11, 1958, with larger financial allocations made the sphere of its activity wide commanding a fleet of more than 900 vehicles. Hitherto, all the financial allocations made by the State to the Corporation have been used up in buying new buses. The State has set the target of nationalizing road transport throughout its territory. It is stated by the Corporation that the financial allocations made by the State Government so far are not sufficient to extend its activities all over the State. No indication is, however, provided of any anxiety on the part of the Corporation to see that the capital invested is fruitfully employed.

Table II (p. 1103) gives the working results of the Government Department undertakings. The tale of the Road Transport Corporation is repeated here as well except for the distilleries and alcohol factories where the State Government enjoys monopoly and is able to reap a

Table I

PROFITABILITY RATIOS OF AUTONOMOUS BODIES

Andhra Pradesh State Financial Corporation	'60-61	176.0	..	6.5	..	3.7
Andhra Pradesh State Road Trans- port Corporation, Hyderabad	'59-60	748.0	..	13.6	..	1.8
TOTAL	..	924.0	..	20.1	..	2.2

harvest of enormous profits. This will be clear from the working results of the Government distilleries which with a total capital of Rs. 15.9 lakhs in 1959-60 was able to show a gross profit, after depreciation, of Rs. 15.7 lakhs. This also applies to the Andhra Pradesh Alcohol Factory and the Government Power Alcohol Factory though the return on capital in both the cases was much lower than that of the distilleries. Wherever competition with the private sector units is involved, the working results present a very dismal picture. Andhra Paper Mills is a clear illustration of the non-remunerative character of investments in industrial undertakings run by the State Government. In 1959-60, the total capital invested in paper mills was Rs. 100.5 lakhs while gross profits were not more than Rs. 3.3 lakhs showing a rate of return of 3.3 per cent. The Estimates Committee of the State Legislature had enquired into the working of this unit and had put forward some recommendations. It had recommended that the supplies of paper to the Government by the mills should be reduced to one-third of the annual production. A suggestion was also put forward for the establishment of a separate pulping unit which is feasible as a part of the present expansion programme so as to stop import of wood pulp. How far these suggestions will go in improving the working results of this unit (which was started in 1923 and has had a very chequered career involving it in liquidations a number of times) remains to be seen. The Estimates Committee had, however, not given any indication about the working of the unit to say if a detailed costing was necessary to ensure a reasonable cost of production. It could not be that the unit was supplying paper to the State Government at a concessional rate; the prices of paper have been fixed by the Central Government and while the industry has been agitating for a rise in paper prices, the working

results of most of them were not as unfavourable as that of this unit.

Keeping the above facts in view, the Andhra Pradesh Government are actively considering a proposal to hand over the paper mills to private sector. A declaration to this effect was made by the Chief Minister, Mr N. Sanjeeva Reddy, in the Legislative Assembly on November 14, 1963. He also said that a final decision on the subject would be taken shortly after taking into consideration the opinion expressed in the House. A sum of over Rs. 6 crores was needed for the expansion of the paper mills and the Government had on hand many vital projects for which funds were needed. It was for the precise objective of releasing these funds for development in other spheres that the State Government had come to the conclusion that it was in the larger interests of the community that the unit should be handed over to the private sector. In the same speech, he also said that the State's progress could be ensured only when the public and private sectors prospered simultaneously. If only the public sector were to perform the task of economic expansion, it might take a century to achieve the objective. It was also the intention of the Government to dispose of minority shares in industrial undertakings in the State so as to provide incentive for starting of new industries. The State has under consideration a proposal to dispose of a certain proportion of shares in the Nizam Sugar Factory (discussed hereafter) in which the Government has 75 per cent of the shares. It is proposed to sell these shares to local agriculturists. This step will create a feeling among the agriculturists of the area that the factory belonged to them. This, indeed, is a welcome change in the attitude of the State Government which has at long last realised that the public sector alone

TABLE II.

PROFITABILITY RATIOS OF GOVT. DEPARTMENT UNDERTAKINGS

Undertaking	Accounting year	Total Capital Employed (Rs. lakhs)	Sales (Rs. lakhs)	Gross Profits	Per- centage of (3) to (2)	Percentage of (3) to (1)
The Government Ceramic Factory	1959-60	15.2	6.1	1.0	1.6	10.5
Andhra Pradesh Life Insurance Department	1955-56	199.9	..	..	..	..
Govt. Distilleries	1959-60	15.9	29.8	15.7	52.7	98.7
Andhra Pradesh Power Alcohol Factory	1959-60	27.3	12.2	4.4	36.1	16.1
Andhra Paper Mills	1959-60	100.5	39.6	3.3	8.3	3.3

Govt. Fruit Preservation Factory	1958-59	2.3	0.5	..	..	..

cannot push through the development projects in the State.

Table III sets out the working results of the undertakings wherein the State has a majority holding. Except for the Nizam Sugar Factory—which is the largest sugar mill in India—the performance is in line with the usual working of the public sector undertakings. Tungabhadra Steel Products showed a rate of return of not more than 2.2 per cent. In the case of Singareni collieries and the Hyderabad Chemicals and Fertilizers, the profitability of capital was a little lower than 5 per cent in both the cases. In the case of the Nizam Sugar Factory, the rate of return was as high as 34.1 per cent. With a capital of Rs. 7.1 crores in 1959-60, the gross profit, before taxation, was Rs 2.44 crores. Partly, the profit had emerged because of the comparative lean all-India output of sugar and also various other advantages which the mill enjoyed. Particular mention needs to be made of the 16,000 acres estate where sugarcane is grown under the management of the company. Steps have been taken by the factory in recent years to encourage a rise in the yield of sugarcane and its sucrose content by advancing loans and supply of improved seeds and fertilizers to farmers. The factory was started in 1937 when it had a capacity of crushing 1,000-1,200 tons of cane per day. Currently it has a crushing capacity of 4,500 tons per day—more than four times the capacity in relation to 1937. In addition to the manufacture of sugar, it supplies molasses to the Government Power Alcohol Factory and has a confectionery unit of its own. Plans are afoot to manufacture newsprint from bagasse which is partly used as a fuel in the factory.

The fourth category of undertakings, namely those where the State Government has a minority share, consists of fourteen units and their working results are shown in Table IV (p. 1105). It is seen that the rate of return on capital, taking all the fourteen undertakings

together, was 6.7 per cent. There were two outstanding cases amongst this group, namely, the Vazir Sultan Tobacco Company and the Hyderabad Laminated Products Ltd., which had a rate of return around 30 per cent. The Vazir Sultan Tobacco Co., Ltd., was incorporated as long back as 1930 when it took over business of Vazir Sultan and Sons, manufacturers of cigarettes. In certain areas of this country, the Imperial Tobacco Company has been acting as the sole distributor of the company's brands of cigarettes. The most popular brand is 'Char Minar' whose present sales exceed Rs. 6 crores per annum. Hyderabad Laminated Products was incorporated in 1947. Since December, 1951, it has been under the control of M/s. Best & Company (Private) Ltd. and has been doing extremely well. Not all the raw materials needed for the products of the company are available within the country, amongst the imported ones being such chemicals as phenol, meta cresol and formaldehyde. Kraft paper, laminates, fabric, alcohol, etc., however, are readily available within the country. Efforts are being made to expand the capacity of the factory further.

The Andhra Pradesh Government holds shares of the value of Rs. 47.6 lakhs out of the total share capital of Rs 136.9 lakhs in Praga Tools Corporation Ltd., that makes the State Government a minority share-holder in the fortunes of the company. The Government of India holds shares of Rs. 70 lakhs and is the major partner. The administrative functions of the company are vested in the General Manager who acts under the overall policies of the Government of India. The rate of return on capital employed in the unit was 2.2 per cent only. Two of the units—Hyderabad Allwyn and Hyderabad Asbestos — which are under the control of Hyderabad Agencies Private Ltd. have shown improved results in recent years; they were in financial straits before coming under the control of the present management. In 1959-60, the net profit of Allwyn, after pro-

TABLE III.

UNDERTAKINGS IN WHICH STATE GOVT. HAS A MAJORITY SHARE

Undertaking	Accounting year	Total Capital Employed (Rs. lakhs)	Sales (Rs. lakhs)	Gross Profits	Percentage of (3) to (2)	Percentage of (3) to (1)
The Singareni Collieries Co. Ltd.	1960	866.6	640.0	41.4	6.5	4.8
The Hyderabad Chemicals & Fertilizers Ltd.	1959-60	64.8	79.3	3.2	4.0	4.9
The Nizam Sugar Factory Ltd.	1959-60	715.2	604.2	244.4	40.5	34.1
Tungabhadra Steel Products Ltd.	1960-61	83.5	4.8	1.8	37.5	2.2
TOTAL		1,730.1	1,328.3	290.8	21.9	16.8

viding for depreciation and development rebate, was 3.6 per cent of capital employed; the latest balance-sheet for 1962-63 has shown a better performance at a net profit of Rs. 7.2 lakhs with a total capital of Rs. 390 lakhs, showing a profitability of 4.4 per cent along with a steady increase in output as well as a widening of the range of its products. Sales of Allwyn have registered a steep rise from Rs. 1.75 crores in 1959-60 to Rs. 2.59 crores in 1962-63.

Hyderabad Asbestos Cement Products Ltd. which came under the control of the present management in 1958, has recorded spectacular progress. The total output of the unit was less than 20,000 metric tons in 1958 but it had risen to nearly 58,000 metric tons in 1962 and, according to the present reports, is likely to exceed the mark of 100,000 metric tons in 1963. It means that in five years the volume of output of asbestos has multiplied five times. A heartening feature of the working results for the year ended 31st December, 1962, was that it was possible for the company to wipe off completely all the past losses and to declare dividend which was at the rate of Re. 1 per share, absorbing a sum of Rs. 1.18 lakhs. The company is likely to do much better in 1963 because of the doubling in production in a single year and also because of the ready demand for its product.

The Sirpur Paper Mills improved its gross profit (after providing for depreciation but not taxation) from

Rs. 19.4 lakhs in 1959-60 to Rs. 33.3 lakhs in 1960-61 and Rs. 38.0 lakhs in 1961-62. The sizable increase in profit resulted despite the fall in output from 32,240 tons in 1959-60 to 22,820 tons in 1961-62 because of a protracted labour strike resulting in the closure of the factory for nearly three months. The working results in 1962-63 again showed a further deterioration because of the illegal strike by the workers for more than three months. The net sales dropped from Rs. 460.98 lakhs in 1961-62 to Rs. 340.02 lakhs in 1962-63. There was, as a natural consequence, a fall in profits which were almost one-seventh of the level in the preceding year. Equity dividend had to be slashed to 50 nP. gross per share against 80 nP; but for the strike the working results would have been markedly different. Its present capacity at 36,000 tons will be increased by another 11,400 tons per annum after the completion of the expansion programme. Sirsilk Ltd. has also, since 1959-60, shown a rise in total sales from Rs. 2.75 crores to Rs. 3.33 crores, but its net profit declined from Rs. 3.60 lakhs to Rs. 0.38 lakhs mainly because of the strike in the factory which lasted nearly a quarter of the year. Happily, the factory has resumed work after an amicable settlement with labour and Sirsilk is likely to show very good working results in the current year. By and large, it may be asserted that the units in this category which have come under the sway of dynamic managements have improved their financial results significantly and have a promising future ahead of them.

TABLE IV.

PROFITABILITY RATIOS OF COMPANIES IN WHICH THE STATE GOVERNMENT HAS A MINORITY SHARE

A Great Man, Great President

DEATH CAME suddenly to John Fitzgerald Kennedy, the 35th President of the United States of America, after 35 months of office. It was not the love of mythical gods, but malice of mean men that killed him. Whatever might have been the immediate motivation of the tortured thoughts that ended in the dark deed, by fighting for what is good and true, what is just and fair, in the affairs of men, the late President had provoked the evil forces of this world to array against him. It may be that, when the whole truth, and nothing but the truth, of that tragic Friday in Dallas comes to be revealed and recognised, the impulse that fired that fatal shot might be traced to some specific political passion or prejudice. But it would still be true that Kennedy died essentially because, like Mahatma Gandhi and Abraham Lincoln before him, he had to be a martyr in his cause before his Message could reach out into the hearts of ordinary men and women.

Kennedy was President for less than three years, but during that brief period he did succeed in accomplishing great good. He taught his own country and the world that the task of guiding great nations is not one for the political mercenary, but a responsibility of men of faith, vision, courage and intellect. He took his place in the White House so seriously that he spared no effort at gathering around himself for advice and admonition some of the most dedicated and the most able men his country could give him. It is perhaps thanks to this one factor that he has been able to achieve his many great successes in such vital areas as world peace, international economic development and the progressive resolution of racial conflicts in the United States and elsewhere. Kennedy in his middle forties was perhaps too young to want to be a philosopher king, but his deep humanity had its own philosophic quality just as his enormous craftsmanship as a campaigner on the rough course of American politics was at all times redeemed by a rare touch of the larger statesmanship. To one to whom the world owes so much, India's own indebtedness is large. He had respect for our history and values, sympathy for our battle with poverty, a willingness to help us always and particularly on the occasions of our greatest need. As the head of the most powerful nation in the world, he used its strength not as a giant but as a gentleman. As the leader of the richest country in the world, he used its wealth well and wisely. Kennedy at 46 is among the Immortals.

Voice of India

Paying a tribute to President Kennedy, the Prime Minister, Mr. Jawaharlal Nehru, said in Lok Sabha, on November 25:

"We meet here, today, under the shadow of shock and sorrow. To many of us, it is a personal shock and grief. But the crime that has been committed was something more than a personal one. It was a crime against humanity. A man has been struck down in pride of youth and achievement: a man of ideals, vision and courage, who sought to serve his own people as well as the larger causes of the world.

"President Kennedy revived among his people the ideals enshrined in the American Constitution and in a changing world, sought to apply them to the problems of today. He endeavoured, not without success, to work for the removal of the tensions that burden and distract the world and to ensure an abiding peace. He devoted himself to the removal of injustice and inequalities among men. In his own great country, he laboured for civil liberty

and worked so that Negroes might enjoy full freedom and opportunity without discrimination based on race or colour. In the wider world outside, a great part of which still suffers from poverty and lack of opportunities for growth, he threw his great energy and weight in favour of the development of under-developed countries so that people everywhere should have the blessings of freedom and the advantages that modern science and technology give.

"Wealth and prosperity came to his own country. To these President Kennedy added a deeper human and moral outlook which embraced in its scope the peoples of the world.

Self-Evident Truths

"To these great causes he dedicated himself, and the picture of a great President emerged which brought a measure of hope to the peoples of the world. To his high office he gave lustre and grace and people in distant parts of the world looked upon him with hope and affection. The memory of his great predecessor Abraham Lincoln, the Emancipator, was revived, and in the confusions and conflicts of the present day world came a vision of the "self-evident truths" that all men are created equal and have certain inalienable rights, and till these are fully achieved the vision of the founders of the American Republic will not be realised in its completeness.

"The gracious lady, his wife, to whom our thoughts must turn today in deepest sympathy, came to India and we had the privilege to give her an affectionate welcome. It was our hope that President Kennedy would also pay us a visit and he had himself expressed a wish to do so. That will not take place now, as an assassin's hand has put an end to a life which had already flowered so well and which gave promise of greater achievement in the future.

"A great President and a great man is dead, struck down by one of his own countrymen. We sorrow for this as indeed we must, but perhaps he has served the causes he cherished by his death even as he laboured for them in his life. Let us all draw inspiration from his fragrant memory and pay our homage to it.

"These words which I have said, I am sure, represent not only my sentiments but the sentiments of all the Members here and all the Parties that are represented in this Parliament."

Text of statement made by Secretary-General, Mr. R. K. Nehru, on behalf of the Government of India, at the Special Service held in the U.S. Embassy in New Delhi for the late President Kennedy on November 25:

"We have met here today, in deep sorrow, to honour the memory of a great President of the United States. A man of high purpose, deep vision and noble ideals, he had won our admiration and respect. More and more, the world as a whole, recognising his great qualities, was looking to him for leadership. And now suddenly, in his very prime, while his work was beginning to bear fruits, his illustrious life has been ended.

"We are all utterly shocked and deeply grieved by the tragic event which took place three days ago. President Kennedy's sudden death is a heavy loss for us all and has shaken the world. Our deepest thoughts today, our prayerful thoughts, are with those who were near and dear to him personally. We also share the deep sorrow of the great American people in the irreparable loss which they have suffered. The world as a whole has also suffered, for President Kennedy was not only a great President of the United States; he was also a great world leader who had dedicated himself

(Contd. from page 1106)

to the cause of world peace and the advancement of freedom, racial equality and human welfare.

"We in India have lost a genuine friend for whom we always had the highest respect. His sympathetic understanding of our problems and interest in the welfare of our people were deeply appreciated by us. We were encouraged by his interest and understanding in the efforts we are making to build our country in peace and freedom.

"The Government and people of India today are mourning the loss of a friend of India who was also a great world leader. Throughout the world, rich tributes are being paid to his illustrious memory. There can be no better tribute on our part than to resolve, on this day, that we shall dedicate ourselves anew to securing and strengthening the great cause of world peace and human progress which President Kennedy had made his own and to which he was able to make such an outstanding contribution in a few years before laying down his life."

Quality of His Head and Heart

"A man does what he must — in spite of personal consequences, in spite of obstacles and dangers and pressure — and that is the basis of all human morality." (A personal testament).

"My fellow Americans, ask not what your country can do for you, ask what you can do for your country."

"My fellow citizens of the world, ask not what America will do for you, but what together we can do for the freedom

of men." (Inaugural address, January 20, 1961).

"To those people in the huts and villages of half the globe struggling to break the bonds of mass misery, we pledge our best efforts to help them help themselves, for whatever period is required — not because the communists may be doing it, not because we seek their votes, but because it is right. If a free society cannot help the many who are poor, it cannot save the few who are rich." (Inaugural address, January 20, 1961).

"We are attempting to provide equality of opportunity so that all citizens, regardless of the race, have a chance to participate fully in our life". (Television interview, April 19, 1961).

"Our goal is not the victory of might, but vindication of right — not peace at the expense of freedom, but both peace and freedom, here in this hemisphere, and we hope, around the world". (Radio-TV address to the nation when offensive missiles discovered in Cuba, October 22, 1961).

"We in this country, in this generation, are — by destiny rather than by choice — the watchmen on the walls of world freedom...as was written long ago, 'except the Lord keep the city, the watchman waketh in vain'." (Excerpt from the speech he was going to make in Dallas, Texas, November 22, 1963, but never made).

INTERNATIONAL TRADE...

"Export or Perish"—"Import only what and when you must"—"Set right adverse Balance of Payment"—"Conserve foreign exchange"

these are the slogans one meets with day in and day out in the press and on the platform. International trade is indeed a complicated matter today.

You may be engaged in import or export of merchandise and may want to open a Letter of Credit or negotiate Bills drawn on a foreign buyer; You may contemplate the setting up of a new industry or expansion of an existing unit by importing capital equipment from abroad;

You may wish to offer a guarantee to the supplier of foreign machinery for deferred payment.

In fact, whatever be the nature or size of your business in and with foreign countries, you will always find it advantageous to turn to the CENTRAL for advice and assistance.

With a wide network of Branches throughout the country in the major port-towns as well in the hinterland, with a Branch in LONDON and with agency arrangements with first class Banks in all parts of the world, THE CENTRAL BANK OF INDIA is well-equipped to solve all your foreign exchange problems.

Highlights of the Week

MINISTERIAL RESHUFFLE

THE SECOND major Ministerial reshuffle and re-organization of the various Ministries at the Centre since the implementation of the Kamaraj Plan, has been announced. The Ministry of Scientific Research and Cultural Affairs has been abolished and the subjects merged in the Ministry of Education. The Ministries of Mines and Fuel and Steel and Heavy Industries have been reconstituted, the former as a new Ministry of Petroleum and Chemicals and the latter as the Ministry of Steel, Mines and Heavy Engineering.

The Ministry of Education will have two departments: (1) the Department of Education; and (2) the Department of Science. The former will deal with all matters previously handled by the Ministry of Education and the latter with subjects hitherto dealt with by the Ministry of Scientific Research and Cultural Affairs, except International Congress of Orientalists, revision of Gazetteers and administration of Muslim Waqfs.

The new Ministry of Petroleum and Chemicals also will have two departments under it: (1) the Department of Petroleum; and (2) the Department of Chemicals. All the subjects relating to petroleum under the former Ministry of Mines and Fuel have been placed under the Department of Petroleum. The Department of Chemicals will look after matters relating to fertilizers (transferred from the former Ministry of Steel and Heavy Industries), and petro-chemicals, synthetic rubber, drugs and other chemicals, plastics, dyestuffs, caustic soda and soda ash, chlorine, sulphuric acid, soaps and detergents, insecticides, antibiotics and power alcohol (transferred from the Ministry of Industry).

Interchange of Deptts.

The Ministry of Steel, Mines and Heavy Engineering will have three departments: (1) the Department of Iron and Steel; (2) the Department of Heavy Engineering; and (3) the Department of Mines and Metals. The subjects under the charge of the Department of Iron and Steel remain unchanged. The subjects under the previous Department of Heavy Industries, other than Fertilizers, have been placed under the new Department of Heavy Engineering. Subjects relating to mines, coal and non-ferrous metals, hitherto dealt with by the former Ministry of Mines and Fuel, have been placed under the charge of the Department of Mines and Metals.

The Ministry of Industry has been left to deal with matters relating to industrial policy, industrial co-operation, patents and designs, development of cables, light engineering, light electrical and light consumer industries, raw films, optical glass, hardboard, paper and newsprint, tyres and tubes, salt and small-scale and village industries.

The enlarged Ministry of Education has been placed under the charge of Mr. M. C. Chagla, the new Minister appointed to the Cabinet. Mr. Bhakt Darshan has been appointed as a Deputy Minister to assist Mr. Chagla. Mr. Mono Mohan Das, hitherto Deputy Minister in the Ministry of Scientific Research and Cultural Affairs, has been transferred in the same status to the Ministry of Education. This Ministry, thus, has now three Deputy Ministers: Mr. Bhakt Darshan, Mr. M. M. Das and Mrs. Sundaram Ramachandran. Prof. Humayun Kabir has been made the Minister-in-charge of Petroleum and Chemicals. He will also continue to administer the three subjects of International Congress of Orientalists, Gazetteers and Muslim Waqfs. Mr. O. V. Alagesan, who held the charge of the Ministry of Mines and Fuel as Minister of State, becomes Minister of State in the Ministry of Petroleum and Chemicals. Mr. C. Subramaniam has been redesignated as the Minister of Steel, Mines and Heavy Engineering. His deputy, Mr. P. C. Sethi, becomes Deputy Minister in this reorganised

Ministry. Another change is that Mr. A. M. Thomas, hitherto Deputy Minister in the Ministry of Food and Agriculture, has been promoted to the rank of Minister of State in this Ministry.

MINISTER FROM BONN

MR. WALTER SCHEEL, Minister for Economic Co-operation in the Government of the Federal Republic of Germany, arrived in New Delhi on November 23 for a visit which is to last till December 8 and which takes him to Patna, Calcutta, Jamshedpur, Rourkela, Madras, Bangalore and Bombay, besides Kathmandu, the capital of Nepal. Although the crammed itinerary has managed to include a few necessary and desirable diversions, such as visits to the Taj and Mahabalipuram, it is evident that the West German Minister is here on no holiday trip. Mr. Walter Scheel, who belongs to the Social Democratic Party, partners with the Christian Democrats in the Coalition at Bonn, is a young energetic and hard working Minister who has some very definite ideas on how the West German Government and West German industry could and should participate in the industrialisation of developing nations. Mr. Scheel is reputed to be in the confidence of the leaders of German industry to an extent possibly greater than even the trust given to Chancellor Erhard, the architect of the German economic miracle. The Federal Minister for Economic Co-operation takes the view that while Bonn should certainly continue to render assistance through development loans, the recipient countries should increasingly turn to German private capital and private enterprise for resources for in the issues of German Government aid as well as German private investment seem to call for a frank exchange of views and a sincere attempt at mutual understanding.

Mr. Walter Scheel will be in Rourkela on December 2 and 3. It is unfortunate that this first visit to this outstanding project in Indo-German economic co-operation should be taking place against the background of strikes and production losses at the steel works. There is perhaps insufficient appreciation in this country of the state of sensitiveness of German sentiment to troubles in Rourkela. There has lately been some adverse comment, not altogether unjustified, in the West German press on the question of "Indian working discipline". Dusseldorf: "It (Indian working discipline) does not yet come up to European standards. In other words, the Indian workers still do not consider the plant as their own, with which they have to live. This again is somewhat the failure of Indian management which pays first class experts less than corresponding private enterprises."

Durgapur Precedent

'Handelsblatt' proceeds to point out that erection work relating to Rourkela expansion, contrary to the practice during the first stage of construction, will be executed by Indian firms. It admits that everything possible has been done on the part of Rourkela management as well as from the German side to co-ordinate operational responsibility of the German experts with Indian erection work. Nevertheless, it raises a significant query whether the precedent of Durgapur, where a British national has been appointed General Manager with a rank higher than that of the Indian General Superintendent, a step "could become necessary in time". Whether Mr. Scheel exactly these terms or not, it is reasonable to assume that the question of ensuring the efficient execution of Rourkela expansion is bound to figure prominently on his agenda in New Delhi.

Meanwhile, further light has been thrown on the proposed

utilisation of the Rs. 47.36 crores assistance committed by West Germany for India's development during the third year of the current Plan. Approximately Rs. 12 crores of this are to be used for implementation of four projects: (i) the Special Steel Project at Rourkela; (ii) the Alloy and Tool Steel Project of the Mysore Iron & Steel Works; (iii) the expansion of the Government's truck project; and (iv) power transmission and distribution equipment. The balance Rs. 35.36 crores will be available for (a) importing equipment for some specially agreed continuing projects such as the Rourkela Fertilizer Plant, the Neyveli Briquetting and Carbonisation Plant, the Kalinga Pig Iron Plant and the Mysore Government's new electric factory; (b) import of non-project commodities; (c) assistance for financial institutions like the National Small Industries Corporation and the Industrial Credit and Investment Corporation of India (to be re-lent to private sector medium-sized industries); and (d) placing of orders for buying ships. Some suppliers' credit is also proposed to be made available for the last mentioned purpose.

Next only to U.S.

The total assistance that West Germany has extended to India since the beginning of the second Plan totals Rs. 360.63 crores — next only to that provided by the United States under the Aid-India Club. Of this, aid to the tune of Rs. 140.06 crores has been given for the second Plan and the remainder Rs. 220.57 crores for the first three years of the current Plan. Bulk of the assistance has come in the form of credits, although some outright grants and technical assistance has also been there. Indo-West German economic co-operation should get a further fillip as a sequel to the current visit of Mr. Walter Scheel. So far as private West German investments in India are concerned, the one inhibiting factor in the recent past has been that West Germany has been insisting on our subscribing to an Investment Guarantee Scheme under which the safeguards to be provided for West German investments will have to be more preferential than those provided for investments from the other Western countries. The Government of India, though it appreciates the West German point of view, has its limitations because such guarantees have to follow a general pattern. The most that it is prepared to offer is an agreement on the pattern of the one entered into with the United States. If this issue is resolved satisfactorily during Mr. Scheel's present visit, it will go a long way in stepping up the flow of private West German capital to this country. Today, there are said to be some 65 firms here which have West German equity participation in their capital to the tune of Rs. 6 crores. Some of these are wholly German and others joint ventures.

OPERATION 'SIKSHA'

THE SUCCESSFUL completion of the air exercises held in eastern and north-western India during the last fortnight with assistance from the US, the UK, and Australia, goes to show that given an opportunity and equipment, the Indian Air Force personnel can stand on an equal footing with the best in the world. The operation should help in inspiring further confidence in our Air Force and needs to be hailed as a landmark in its short history. It takes our defence preparations against the Chinese a good step further. The US Administration made available for these exercises a major portion of the equipment, especially the radar system, and 18 Sabrejets, the F-100s. The UK provided the electric and communications apparatus, besides a squadron of 12 Javelins. Two Canberra bombers were sent by the Australian Royal Air Force. Over a hundred Hunters, Gnats, Canberra Jets and Vampires participated from the Indian side.

Besides the valuable experience and training which these exercises have provided to the IAF personnel in the handling of modern sophisticated air equipment, they are believed to have lent force to the Indian contention that the Chinese menace can be met squarely only if the IAF is equipped with supersonic aircraft. A detailed assessment, however, must await an analysis of the results of the operation.

**HOW
TO HAVE
A PRIVATE
TREASURE-HOUSE
FOR Rs. 12
A YEAR**

Lock away your jewels, documents and other valuables in a safe treasure-house provided by Union Bank's safe deposit vaults. Lockers vary in size and are available from Rs. 12 a year onwards. You have the key; nobody else can open it!

Off-Guard and Flat-Footed

By A. K. MUKERJI

NEW DELHI: Monday.

WITH THE shadow cast at the time of writing by the double tragedy over the week-end—the death in a helicopter accident of top-ranking officers of our Services and President Kennedy's assassination—the compulsion is strong for suspending criticism for a while. Nevertheless for the record it is necessary to note that seldom has Parliament opened its sessions with the treasury benches so off-guard and flat-footed as they were last week. Obviously, despite the Kamaraj Plan re-invigoration and Jaipur (or was it because of these?) they found it irksome to remember that sleep-walking was the surest way to falling flat on one's nose.

It is possible the Opposition made much too much of the Walcott affair—and that on the very first day when the Congress MPs apparently took it for granted that all that they needed doing was to relax and yawn (both literally and metaphorically). Mr. Nath Pai in particular drew a couple of quite irrelevant red herrings across the trail, especially in his speech while moving his motion of adjournment, which possibly mirrored the depth of his feelings but certainly added no new cubits to his stature as a parliamentarian. The chink in his armour showed up clearly when Mr. Indrajit Gupta Communistically interspersed his support to the motion with plentiful references to the tycoons and Maharajahs friendly to the adventurer Walcott and rounded up with a warning to the USA ("neo-imperialist, Capitalist?") that the bonafides of its professed friendship for us would be in question unless it caught the American culprit and handed him over to our Government.

Bizarre and Grotesque

All this was bizarre and grotesque and disproportionately extravagant. Nevertheless there is no pardoning the Government's failure, first, to oppose at the very outset the consideration of the motion but for which the Congress members (even the Ministers) would not have kept quiet when the Speaker asked whether there was any objection to it and, then, to properly appraise what really was at stake. Mr. Walcott's escape with his Piper Cub from Safdarjang airport, whatever the explanation for it in formal, legalistic terms, was a matter that was, all told, one of our honour before the world since it tended to expose our administrative vigilance in the midst of the emergency as extremely poor. The Home Minister as well as the Transport Minister could have easily retrieved the position by treating it as such. Instead, they fell back on a defence positively lame on most counts and as unconvincing on the whole as the Opposition scare-crow of a major lapse in the Government's security set-up.

That the lapse on the score of security arrangements is generally glaring is beyond doubt as proved all over again by Mr. Nehru's conspicuously laboured enunciations last week in both the Houses while dealing with the arrests connected with Pakistan's espionage activities in India; and also by the public disclosure by Mr. S. N. Dwivedy (PSP) of how the Deputy Chief of Pakistan's Central Intelligence Service had recently slunk in un-noticed in the garb of a Buddhist lama and had gone back unchecked after staying for some time in the Ladakh Buddha Vihara in the very heart of the capital. But it was clearly straining credulity to link up this lapse with Mr. Walcott's get-away. Neither of the two spokesmen of

the Government cared to make this point central to their thesis.

The position was not materially different when the Home Minister, Mr. Gulzari Lal Nanda, moved the motion introducing the Bill for the continuation of the Preventive Detention Act. Maybe the debate slated on the Bill will make things clearer but last week it did not seem wholly clear that the case in favour of the Bill was impregnable. Two points already made—one by Mr. H. V. Kamath and the other by Dr. Ram Manohar Lohia—remain to be answered to carry conviction. Since Defence of India Rules already provide for cases such as those covered by the Preventive Detention Act, what is the need for having two measures for dealing with almost self-same contingencies? Secondly, if there is need for Preventive Detention, would it not be proper to incorporate its provisions in the Penal Code rather than have a separate, special measure? However, the arguments the Opposition advanced—and these are bound to be repeated in elaboration when the Bill comes up for discussion—were more sentimental than tenable and to no small extent a tongue-in-cheek business. After all it was not for nothing that no member actually contested the validity of the principle of preventive detention, which was admitted to be an unavoidable evil in some circumstances.

Administrative Sloth

On a par with the experience during these two debates was that of the Government's approach in both the Houses to the crucial problem of corruption and administrative sloth and inefficiency. During the discussion following questions in the Rajya Sabha on the enquiry by the Das Commission into the Kairon affair, Mr. Nehru was markedly circumspect while referring to the Chief Minister of the Punjab, but landed into his earlier mistake during the last session of overly energetic defence of one under fire—this time of the Chief Minister of Kerala. The facts of the case may be impeccable (as claimed) but the more important question surely is how the Government projects the image of its being unqualifiedly keen on rooting out corruption.

This failure to face realities was at its crassest when the Government came during the week to deal with economic issues—both those currently agitating the public mind and those intimate to the country's economic health. In point of fact it was on these issues that the Government's approach seemed shot through with ideas mirroring an amazing degree of irresponsibility, amateurishness and casualness. The answers to questions and statements in the two Houses on the acute food (including sugar) and price situations offered about the worst examples of this. Reference may be made to Mr. A. M. Thomas's 'faux pas' on the rice prices in West Bengal, which provoked angry protests from the Opposition, even from the Congress benches, and eventually compelled him to later appear before Parliament in virtual sack-cloth and ashes to apologize for the hopelessly wrong figures earlier quoted by him.

Characteristically this same cavalier casualness marked the Government's overall approach revealed during the debates and statements on Mr. Kanungo's motion on Public Sector undertakings and, inevitably more strikingly, in the ever irrepressible Minister of International Trade, Mr. Manubhai Shah's breath-taking 'obiter dicta' on, among other things,

the development of automobile industry and his optimistic ooziings on export prospects.

As if to underscore the pity of it all, Mr. Kanungo's motion in the Lok Sabha for setting up a watch-dog committee of both the Houses on public sector undertakings sparked as many as 28 amendments, not a few of them from Congress members, at least one of whom (Mr. A. C. Guha) even pressed for a division! The motion was eventually adopted by the Lok Sabha but not without leaving the legacy of a nagging doubt. Though welcome, as most members said, especially after the inclusion under its sway of Hindustan Aircraft, Bharat Electronics, Mazagaon Docks and Garden Reach Workshop which had initially been proposed to be excluded, it remains to be seen if the Committee does not find itself shorn, as Mr. Guha put it, of the rights and prerogatives hitherto available to the Estimates and Public Accounts Committees.

The week ended on a sad note, following the news conveyed by the Defence Minister of the death of six officers of the Services. A day earlier, Mr. Nehru introduced the Minister of Education, Mr. M. C. Chagla, to the Lok Sabha.

The week witnessed the re-emergence of the linguistic spectre, thanks to Hindi fanatics—the Lohia Socialists mostly but not a few among the Congress members too. The DMK member who raised a point of order in Tamil in the Lok Sabha actually rang an alarm bell. It is in the interests of the future of Hindi as an official language that the lesson of this warning does not go unheeded. What can be won through patience and liberal accommodation of non-Hindi-speaking communities might well be lost for good otherwise.

Automobile Debate

The debate in the Rajya Sabha on the private member's motion of Mr. Krishna Chandra (Congress) on the report of the Development Council for the automobile industry highlighted a number of interesting points but it will be best remembered because it made the Minister of Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, put his foot into his mouth. Besides suggesting that a way to reduce car prices would be to go in for a uniform model by all the manufacturers as this would cut down the cost of spares and ancillaries, he allowed rhetoric to get the better of him when, in the course of his elaboration of the best way of reducing prices, he went on virtually to play to the gallery on the issue of the nationalization of the industry, though for reasons apparently of expediency he was discreetly equivocal. The point he left untouched or evaded was how to resolve the problem of essential materials unavailable in the country, and difficult to have freely so long as the foreign exchange position continues to be tight, in the absence of which increased output of automobiles (the key to reduction of costs) is impossible. This, taken with the high proportion of taxation of various kinds in pricing structure of automobiles, is really the crux of the problem and there is no use complaining that the Development Council of the industry has not succeeded in its task of promoting development.

Question Hour

THE UNION Finance Minister, Mr. T. T. Krishnamachari, told the Rajya Sabha last week that the State Bank of India had agreed to assist a few of its clients in obtaining loans in foreign currencies for financing some essential imports. Such loans, he added, were intended to be repaid from the subsequent export earnings of the borrowers. The assistance to be rendered by the Bank would be within the scope of the Government's import and other policies and specific approval would have to be obtained from the Union Government in each case. This scheme, Mr. Krishnamachari further stated,

was at present purely experimental. It was, therefore, not possible to indicate the extent to which assistance might be granted by the State Bank under it.

Iron and Steel Prices: Mr. C. Subramaniam said in the Lok Sabha that the Government was still considering the recommendations of the Raj and the Producers' Committees on the control of price and distribution of steel. However, the first sale price of steel would be fixed by the Joint Plan Committee of the main producers as envisaged by the Raj Committee.

In a written reply he indicated that for reducing costs and for conserving skills in specialized fields of steel construction the Government proposed to set up a new corporation for undertaking a sizable share of all new steel works construction.

The MIGs Project: Giving information on the Airframe and Aero-Engine Factories for the manufacture of MIG fighter aircraft in collaboration with the Soviet Union, Mr. K. Raghuramaiah, Minister of Defence Production, said the project reports completed by an Indian team in consultation with Russian specialists "were currently under examination by Government."

The Minister added that land had been acquired at Koraput in Orissa and was being acquired at Nasik in Maharashtra. Administrative approval for the first-phase construction programme, amounting to Rs. 3.5 crores, had been issued for the Airframe Factory at Nasik. For the Aero-Engine Factory at Koraput, the first-phase estimate, amounting to Rs. 3.16 crores was under examination. A site near Hyderabad in Andhra Pradesh had been selected for the factory to be established for the manufacture of electronic components.

Production of AVRO-748s: In answer to a question on the production of AVRO-748 transport planes at the Aircraft

POLITICS MAKES STRANGE BEDFELLOWS!

Manufacturing Depot, Kanpur, Mr. Raghuramaiah said three aircraft of Series I had been completed; the manufacture of the fourth aircraft of Series I and the fifth and sixth aircraft of Series II was now in hand. When asked whether any foreigner was still working at the AMD, the Minister replied in the affirmative adding that the foreigner was a stress-engineer whose services had been retained only to train Indian personnel.

Helicopter Programme : In reply to another question, the Minister said the Hindustan Aircraft Ltd., had a plan for the manufacture of helicopters in collaboration with French firms. The manufacturing programme was under consideration.

Trade Agreements : Mr. Manubhai Shah, Minister of International Trade, told the Lok Sabha that a trade delegation

from France and another from West Germany were expected early next year. By March next Afghanistan, Algeria, Bulgaria, Ceylon, Hungary, Philippines, Poland, Rumania, and South Korea, among others, were expected to send trade delegations.

The Minister said the volume of Indo-Soviet trade during 1963 was estimated at Rs. 50 crores each way and that it was expected to reach about Rs. 110-crores each way in 1966.

Gold Control Rules : Mr. T. T. Krishnamachari, Finance Minister, said the Rules would be revised if it was found that relaxation would help relieve unemployment among goldsmiths. But they would in no case be so revised as to defeat the objective of the measure. In no case would dealers be permitted either to sell or buy ornaments above 14 ct. purity.

Indian Airlines Corporation uses

ALLWYN

STEEL FURNITURE

Allwyn Filing Cabinets have drawers fitted with rails or compressors and mounted on Allwyn ball-bearing suspension slides for smooth and frictionless operation. Each drawer has a label-holder and an automatic locking device. Steel keys are provided in duplicate.

THE ALLWYN RANGE OF FINE STEEL FURNITURE includes executive desks, standard office tables, swivel chairs, tubular chairs, utility cabinets, filing units, racks, stands, locker cup-boards, trays, waste paper baskets, wardrobes and beds.

THE HYDERABAD ALLWYN METAL WORKS LTD.

YEARS OF

INDO-BRITISH

CO-OPERATION

Speaking at the fourth session of the Indian National Congress held at Allahabad in 1888, its President, George Yule, made a forceful plea for the adoption of measures by the Government of the day which "would unite England and India not by hard and brittle bonds which may snap at any moment, but by the flexible and more enduring ligaments of common interests promoted, and common duties discharged."

The Firm which George Yule and his brother Andrew established in 1863 celebrates its Centenary this year—a hundred years in which it has played a significant part in the development of many of India's vital industries.

Thermocole®

GETS AROUND PIPES AT GLAXO

The pipes at the GLAXO Fine Chemical Factory live through the most exacting conditions with a sense of security. No wonder. THERMOCOLE protects them against temperature variation and moisture—the scourge of all low-temperature piping.

There are many organisations in India that know and use THERMOCOLE for vessel and pipe insulation and GLAXO is one of them.

THERMOCOLE is foamed polystyrene—the lightest rigid insulating material in the industry. It has a very low thermal conductivity and is resistant to moisture. Available in handy, close-fitting sections, THERMOCOLE is the ideal material for pipe insulation.

Is There Democracy in India?

By C. RAJAGOPALACHARI

DEMOCRACY IS a form of government in which the people as a whole have effective power and control over affairs. The people may exercise this power directly or through elected agents under a free electoral system. A government in which a party oligarchy operates in the name of the people and in effect holds all power is only a democracy in name. Reality, not mere definition, makes the government a democracy that is, a government by the people. The difference between reality and legal definitions is well brought out by the most recent example of artificial definitions, the proposed 17th Amendment according to which every field shall be deemed to be a zamindari estate and every owner of land a zamindar.

Constitutions refusing freedom of action to none but a single party which has seized power are not democracies. But communist parties claim that the governments of Soviet Russia and China are democracies. The claim is put forward not only by communists but now by several rulers in Africa and elsewhere. They argue that democratic government can be run by a single party, under a system by which no other party but the one in power can legally exist. This is based on the proposition and made plausible on the ground that opposition views can be and are expressed and considered inside the single party in power. There may be for some time just government under this system but it is not democracy. It is an oligarchy—government by a few who control all power. There were articles published recently in the 'New Leader' by Susan and Peter Ritner condemning what was called "one-party democracy". Tom Mboya of Nairobi (Kenya), however, wrote a long letter published in the same journal claiming that Western democracy is not the only type of democracy in the world and that in a single party rule such as now obtains in Kenya, because the rule of law is recognised, the judiciary is independent, the press is respected, and trade unions and other pressure groups are also allowed to exist; power is distributed and so the Kenya Government run by the Kenya African National Union party is not a dictatorship or oligarchy but democracy. This argument is fallacious. Indonesia's guided democracy is also claimed to be a democracy. So also General Ayub's Government in Pakistan. These examples are likely to grow. We do not want that kind of democracy. They are not democracies except in name. What they mean is that there can be good government outside democracy. The usual plea is that an emergency prevails which does not end but continues indefinitely or that some permanent circumstances of the country call for that kind of government. This may be so, but those governments are not democracies.

Political Liberty in Jeopardy

Experience has taught us that political liberty is in jeopardy in all such arrangements whatever be the justification. Soon the rule of law comes to an end, the independence of the judiciary evaporates and the press becomes subservient. Trade Unions and other sectional organisations come under the strict regulations of the party in power and its leaders. There may be differences and discussions inside the party where the leader is sagacious, but it is monolithic all the same. The more powerful section inside always prevails and does not permit any opposition to be active or to be free to express itself and acquaint the people with its views. It is given no opportunity to canvass public support. Such canvassing would be treason and sooner or later the prison accommodates the dissidents. A pluralist structure is absolutely essential for a democracy to function as such. It is argued that every party organisation is really oligarchy. But assuming this, it is obvious that there must be such countervailing oligarchies keeping each other in order, so that democracies

This is the text of the Andrews Memorial lecture delivered by Mr. C. Rajagopalachari on November 22, under the auspices of St. Stephen's College, Delhi. Offering "a few words of personal explanation", the speaker said at the end of his address: "The College Union when inviting me desired that I should speak on this occasion on the problems and prospects of democracy in India. I suggested that I might speak on Charlie Andrews's Mission in India and not on the subject proposed which can possibly make me appear as if I seized a students' platform for pushing a political controversy forward. But the College Union insisted that I should speak on that topic and so I have done. I have not gone into greater detail than I have done in order to reduce the controversial topics to the absolute minimum."

Answering questions, Mr. Rajagopalachari said: "I will prefer an evolutionary movement for the establishment of a real democracy in the country, but it may not be possible to prevent a revolutionary movement."

Question: Is India a democracy at present?

Answer: I have made it clear it is not.

Q. What are the prospects of democracy here?

A. Bleak.

Q. Where does the hope lie?

A. In young angry men who will stand up for individual liberty.

Q. Why is India described as the largest democracy?

A. There can be no illusions about the size. But the definition of democracy is wrong.

Q. Is the present party doing more to strengthen itself rather than democracy?

A. You have spoken my mind.

may be really democracies. In the cracks between these countervailing oligarchies, the individual has some chance to draw free breath, although all political parties may deteriorate into oligarchies. The one-party system democracies where the ruling party faces no powerful opposition or none at all always ends in totalitarianism and in the wreckage of individual freedom without which there can be no real democracy.

So then democracy must have a ruling party as well as a party or parties in opposition operating effectively. No party in office can be assumed to have perfect wisdom. Unless another party is in a position to criticise and point out errors and there is an open debate there is no democracy.

This is the point at which we can examine the problem and assess the prospects of democracy in India.

The expensive nature of the elections is a big block in the way of a good strong opposition party forming itself and sitting in Parliament in India. The economic hold of the party in power makes the rise of any other party extremely difficult if not impossible. And one party rule adopting what is called socialism means total economic power vesting in the ruling party, making the rise of any other parliamentary party practically impossible.

The poverty of the people which we wish to remove, and which until it is removed is there, produces two results. One is that no others but those in power can afford to go through the expensive elections. The other is that votes are easily purchased in large blocks so that it cannot be said that there is a free electoral system. The single-party control over Indian affairs and the simultaneous elections to the State legislatures and to Parliament practically on the same issues

or on the same ideologies, together lead to the extinction of State Governments as independent units united in a federation. The Union becomes a legal fiction. The States dwindle into local boards completely controlled by the central organization. And if a policy is adopted by this monolithic government of State control over the whole national economy, it leads to very grave consequences, viz., total loss of individual freedom. Such freedom as prevails is enjoyed only by licence and permission at the option of the central authority.

Unless then the system of election be re-organized so as to make elections very much less expensive and unless a new party arises strong enough to act as countervailing force in Parliament and in the State legislatures against the party now in power, there is not much of a prospect for real democracy. This new party may arise by a split in the present ruling party. The chances of an opposition party arising by a split in the ruling group are small in my opinion, because careerism dominates the atmosphere in the ruling party.

The present leadership has not only secured for itself total power over the economy which is disastrous for free elections and for any individual freedom but it has by maintaining an image of divine heirship to authority robbed the bulk of our young people of their power of thinking in an independent and orderly way. It has drained the individual citizen of all confidence in himself. This spiritual damage is not less than what Gandhiji complained the British regime had done in its time. It was not in my opinion so bad then as it is now under Swaraj. If the Congress Party sets about organising its committees to control the official machine, viz., the ministers, the heads of departments and the district officials, there will be an end of democracy as we understand it. It will be a replica of the Soviet system of a powerful minority's absolutism. I have set out our problems. One can state the problems. When we proceed to appraise prospects we are in a difficult field. Mice and men may propose and plan. But times and circumstances change. Calculations go wrong and

God disposes. When things go very wrong anything may happen. It is dangerous to foretell; because often foretelling itself brings about catastrophes. As against this dark picture, I may put before you my hope that the people of our country have solid virtues and will not allow things to go wrong. They will assert themselves and save democracy in spite of single party tyrannies and their cumulative powers. When good government fades away from Asian regimes, the nexus between the civil administration and the strong defence forces organized and maintained by government gets weakened. When this happens the forces maintained by the nation for security become themselves a greater danger to democracy. We should not forget this. We should also remember the presence of a communist party with a strong base among industrial workers, always bent on subverting democracy and intent on establishing a minority regime in the name of the oppressed proletariat. The defence forces and the radio stations and the communist party are not minor elements of danger although if and as long as good government is established and running smoothly, these are not only not dangers but very useful each in its own way.

A stable democracy and a strong opposition party always to be faced daily by the ruling party are essential for democracy and good government. Educated young men and women should assert themselves and be active and bring about these conditions — not lapse into inactivity. They should learn to follow the Gita doctrine of how to live and die — to act according to conviction irrespective of prospects of success, not allowing difficulties and doubts to lead to inaction:

कर्मण्येवाधिकारस्ते मा फलेषु कदाचन ।
मा कर्मफलहेतुर्भूर्मा ते सङ्गोस्त्वकर्मणेन ॥

I believe in the potentiality of our youth, be they in colleges or outside. A time will come when weighing their private interests and security against national calamity, they will dare to lose all in a bid for true democracy.

BETTER TO HAVE LOVED AND LOST...

Are Our Planning Targets Realistic?

By T. M. RAO

IN DEVELOPMENT planning the first question that would arise is: "How much total investment is needed to produce target increases in per capita income?" In order to answer this question, the relationship between Investment I and the consequent increase in income Y, has to be determined. This relationship I/Y is called the incremental capital-output ratio (ICOR).

In measuring ICOR for any given country it is necessary to obtain wealth estimates for at least two different dates, income estimates for the same dates and calculate the ratio between the increment in capital and that in income. The dates must be far enough apart in time so that the probable margin of error in the estimate of capital or income at each date is small relative to the increment between the dates. It is only for a relatively few countries that long income series are available. Added to this, no precise measurements of the aggregate capital stock of various countries are available. "For these reasons the number of countries for which the necessary set of estimates can be made without a feeling that the statistical margin of error present renders the conclusion very doubtful."¹

In the absence of a long series of income and wealth statistics it is possible to derive ICOR from national income statistics available over short periods. However an ICOR derived from a short period in the past is not really useful as a basis for projecting capital requirements. To determine the capital requirements of a given income target, one needs a figure, preferably for each major sector of the economy, approximating an average relation between additions to the stock of capital and increases in national income over some period in the future.

Benjamin Higgins observes: "The use of an average over five previous years is justified only if those five years are part of a much longer period, so that there is a solid basis for assuming that the average for the five years is an approximation to a ratio that is stable in the long run, and if the planning period will not be significantly different from the last five years. If, for example, the previous five years represent the completion of a reconstruction period, while the plan explicitly provides for a long-run structural change, a projection of the ICOR in the recent past can be dangerous. Moreover, over short periods, the net investment figures in the national accounts are seldom an accurate measure of actual increases in the stock of productive capital. The net investment is usually derived from gross investment and a depreciation figure that is based on an accounting concept, rather than an estimate of the actual depletion of the stock of productive capital."²

ICOR and Priorities

There is the danger that planners may slip into the error of using ICOR as a factor in determining priorities. It is not the ICOR's that should be compared in choosing among investment projects, but their contributions to income during a crucial period. This has been clearly brought out in the following concept.

The goal of development policy is not the maximum output at a point of time but a maximum rate of growth over time. Consider the following example of two potential investments. The total output over the life span of Investment B is 400 as against 160 for Investment A. The capital-output ratios, on the other hand, are 5.0 and 2.5 respectively. In each case annual

output net of depreciation is 15. Which investment yields the greater increase in national output?

	Investment A	Investment B
Initial investment	100	100
Annual Output	40	20
Investment Life (years)	4	20
Annual straight line depreciation	25	5
Total output over investment life	160	400
Capital-output ratio	2.5	5.0

Overlooking any costs other than that of the investment, the output streams may be reduced to comparability by means of discounting. Given a rate of interest, it is possible to assign a present value to the income streams of \$40 for 4 years and \$20 for 20 years. Assuming an interest rate of 5 per cent, the present values would be \$142 and \$249 respectively. Thus Investment A is "worth" \$142 in output and Investment B is "worth" \$249. The choice would clearly favour Investment B and the fact that the capital-output ratio is less "favourable" is irrelevant.³

There is also danger in using in a country ICOR's derived from experience in other countries where statistics are more complete. The range of ICOR among highly developed countries is itself very wide: from 3 in the United States to 7.4 in the Netherlands. It would be difficult to decide from these figures what would be an appropriate ICOR for any particular underdeveloped country. The averages for individual countries, moreover, hide wide fluctuations in the figures from one year to another, or even from one decade to another. For the United States, ICOR varies from 4.8 for the period 1899 to 1919 to 1.9 for the decade 1919 to 1929. For Britain the figure ranges from 8.4 for the decade 1885 to 1895 to 0.4 for the period 1905 to 1909.

The figures (see Table I) show a range of ICOR from 2.3 to 7.4 for the industrially advanced countries. For the underdeveloped countries the figures show a range from 1.2 to 3.3.

There is a wide range of ICOR from one sector to another

TABLE I ICOR FOR VARIOUS COUNTRIES AND PERIODS		
Country	Period	ICOR
Long periods, reasonably reliable data:		
United States	1879-1953	2.3 : 1
Japan	1924-1939	4.7 : 1
Denmark	1864-1939	3.5 : 1
The Netherlands	1900-1952	7.4 : 1
Sweden	1896-1929	3.5 : 1
Long periods, unsatisfactory data:		
Canada	1895-1920	4.2 : 1
	1895-1929	2.7 : 1
United Kingdom	1865-1933	5.9 : 1
Australia	1913-1938	3.9 : 1
France	1852-1913	7.4 : 1
Italy	1861-1895	4.5 : 1
Underdeveloped countries:		
Short (plan) periods:		
Czechoslovakia	1948-1953	3.3
Poland	1950-1955	2.0
Hungary	1950-1954	3.2
Bulgaria	1949-1953	1.2
Yugoslavia	1947-1951	2.2

Source: Benjamin Higgins, *Economic Development*, W. W. Norton & Co., Inc., New York 1959, p. 645

of the same economy. For the United States, the highest sectoral ICOR's are more than 100 times as high as the lowest one. For India, the only other country for which sectoral estimates are available, the range is from 1 to 5. Even with this range of structural variation, it is apparent that the aggregate ICOR will depend a good deal on the investment structure in the development plan, and that it will change as the structure of investment changes in the course of economic development. (See Table II).

TABLE II
ICOR's for VARIOUS SECTORS

Country and Sector	ICOR
United States ¹ :	
Trade and services	0.1 or less
Manufacturing	1.3 to 2.0
Housing and Public Utilities	10 or more
India ² :	
Calculations:	
Cement	3.0 — 3.5
Pulp and paper	3.5 — 4.0
Iron and steel	3.5 — 4.0
Agriculture	1.0
Estimates:	
Small industries	2.0
Factories	3.0
Mining	4.0
Communication and transport	5.0

Source: 1 United States Department of State, "Intelligence Report No. 7670", Washington, D.C., 1958.
2 Massachusetts Institute of Technology, India Project.

The effect on estimates of capital requirements of relatively small errors in ICOR estimates is borne out by an arithmetic example. Assuming an investment coefficient of 0.1 (that is, that net investment is 10 per cent of net national income) one obtains the following results:

ICOR	Rate of Growth (%)
3.0	3.3
1.8	5.5
4.2	2.4

Bearing in mind that the problem of economic development is essentially one of raising the growth rate by one or two percentage points, it is clear that the uncertainty surrounding the value of ICOR renders its application difficult. Assume, for example, that the development target is a 4 per cent growth in output per year and that we wish to determine the investment coefficient required to meet this target. The development equation would then yield the following results for the various ICOR's:

ICOR	Required Investment Coefficient (%)
3.0	12.0
1.8	7.5
4.2	16.8

The available data seem to indicate certain relationships between ICOR and other economic variables. In the figures for advanced countries, there is some indication that ICOR falls with the achievement of high levels of industrialization. This tendency is explained by the necessity of making heavy investments in social capital in the early phases of development. However, this experience may not be a reliable guide to results of planned development. If, for example, it is planned to concentrate on agricultural improvement in the early phases and gradually to increase the pace of industrialization, it is conceivable that ICOR would rise rather than fall in the course of the country's development.

There seems to be some indication that ICOR's may be particularly low in reconstruction periods, when existing plant

and equipment, land, skilled labour and management are being brought back into productive use.

There is also some evidence that ICOR's are lower where population growth is more rapid. There are two possible explanations for this relationship: rapid population growth prevents waste of capital by assuring markets for almost any investment; and a rapid increase in the labour supply permits capital accumulation without departing from the optimal ratio of labour to capital.

In the first five-year Plan (1951-1956) the Planning Commission raised two basic questions: "What increase in per capita income can we reasonably hope to attain over a given period of years? What rate of capital formation will be required to achieve it?" Underlying the Plan there were two basic assumptions: that population growth would continue at the rate of 1.25 per cent annually, and that the incremental capital-output ratio would start at 3:1 and rise gradually to about 4:1.

The actual capital-output ratio under the first Plan was calculated at 1.8:1, somewhat better than anticipated. Making allowance for the favourable monsoons and the shift in structure of investment, the ICOR for the second Plan was set at 2.3:1; it was estimated that in the course of subsequent Plans it would rise to 2.6, 3.4 and 3.7.

In relation to these assumptions, what has been the actual experience? The capital-output ratio for the second Plan which ended in 1961 turns out to be 3.1, which is clearly higher than the Plan estimate of 2.3. This would show that the estimates of the capital-output ratio have proved too optimistic. In other words the investment undertaken thus far has failed to produce the predicted increase in output. If this trend were to continue—there is nothing to indicate that it would not—the targets under the future Plans may have to be scaled down or in the alternative the rate of investment must increase appreciably.

India-China Contrast

Gross investment in India rose from 9.4 per cent of gross national income in 1950 to 15.8 per cent in 1957, an average of about 14.7 per cent. Over the same period Chinese gross investment rose from 10.7 per cent of gross national income to 22.0 per cent, an average of 17.6 per cent. But when one takes into account the greater growth of Chinese output, it appears that the absolute level of Chinese gross investment in 1957 was four times what it was in 1950, while in India investment had barely doubled over the same period. It also appears that a large share of total investment in India went into replacement and depreciation, so that the difference in net investment would be even more strikingly in China's favour.

More important than the difference in investment, however, was the difference in what was produced by investment in the two countries. China was simply more successful in raising output with a given volume of investment than India was. Professor Malenbaum made the following calculations of incremental gross capital-output ratios for the two countries⁴:

Period	India	China
1950-57		
First Plan years	4.05	2.08
pre-Plan years	3.29	2.38
post-Plan years	7.71	1.31
	4.97	

Thus "over the period as a whole, China generated a unit of gross income flows with essentially half the gross investment that was required in India."

In the third Plan, it is anticipated that national income would increase at the rate of five per cent per annum under the assumptions that capital formation would reach 14 per cent of net national product and population growth would be 2.14

per cent per annum. The growth rates for the economy in the fourth and fifth five-year Plans are expected to continue at five per cent per annum, given the rate of investment to reach about 17 per cent of national income.

The assumptions contained in the five-year Plans and anticipated growth rates are summarized in the following table:

Years	Average Rate of Investment	Population Growth per annum	ICOR	Rate of Growth of National Income
Actuals:				
1951-56	7%	1.58%	1.8	3.4%
1956-61	11%	1.91%	3.1	3.7%
Estimates:				
1961-66	13%	2.14%	2.6	5.0%
(third plan)				
1966-71	15%	1.90%	3.4	5.0%
1971-76	16%	1.47%	3.7	5.0%

While the assumption regarding ICOR in the second Plan was 2.3, it actually turned out to be 3.1. That is to say the investment undertaken had failed to produce expected increase in income. If the second Plan experience is any guide, then the assumption regarding ICOR in the third Plan may be wide of the mark. There is evidence to show that during a period of structural change the ICOR's tend to be generally high. Let us then assume an ICOR of 3.0 and accept the population growth of 2.14 per cent contained in the Plan frame. Then to achieve an annual growth rate of 5 per cent, it will be necessary to attain an average rate of investment of 15% of national income. This is certainly higher than the rate of investment of 14% expected to be achieved towards the end of the third Plan. Here below is indicated the extent of capital formation necessary to maintain a growth rate of 5 per cent during the successive plans:

Years	Population Growth Rate	ICOR (Assumed)	Rate of Investment Required
1961-66	2.14%	3.0	15.0%
1966-71	1.9%	3.5	17.5%
1971-76	1.4%	3.7	18.5%

It is not easy to attain the above rates of investment in the context of low level of savings in the country. "The Plan aims at raising the level of investment in the economy from about 11 per cent of national income by the end of the second Plan to about 14 per cent by the end of the third Plan. The rate of savings in the economy is at present around 8 per cent of national income. This has to be raised to about 11 per cent by the end of the third Plan, the balance representing inflow of resources from abroad."⁵

Given the resources for investment effort as indicated in the Plan frames, what indeed will be the growth rates that will be achieved during the next 15-year period? The following table seeks to provide some answers to this question.

Years	Rate of Investment (assumed)	ICOR	Rate of growth of National Income	Population growth per annum	Rate of growth of p.c.
1961-66	13%	3.0	4.3%	2.14%	2.1%
1966-71	15%	3.5	4.3%	1.90%	2.3%
1971-76	16%	3.7	4.3%	1.47%	2.8%

The fear that the rate of growth during the third Plan period may not exceed 4.5 per cent has also been expressed by Rosenstein-Rodan who based his conclusion on the fact that the ICOR assumed in the Plan may prove optimistic and also the fact that the average and marginal savings rates may fall below expectations. He has therefore urged that external aid to India might be increased during the fourth and fifth Plans

in order to maintain a five per cent growth rate.⁶

Should the estimates of per capita growth rates indicated in Table V prove correct, then the per capita income in India would be no more than Rs. 425 (about 90 U.S. dollars) by 1976. By the same year the United States per capita income is expected to reach nearly \$3000. This would go to show that the gap between the rich and poor countries would continue to widen.

In order to reach a per capita income of Rs. 475 (say about \$100) by 1976, it would be necessary to maintain a per capita growth rate of 3.1%. The following table shows what it means in terms of capital formation.

Years	Population growth rate	Rate of growth of income per head	ICOR (assumed)	Rate of Investment
1961-66	2.14%	3.1%	3.0	15.7%
1966-71	1.90%	3.1%	3.5	17.5%
1971-76	1.47%	3.1%	3.7	17.0%

The above figures would indicate that a much higher investment effort would be called for than what is contemplated in the plans. This is not beyond the realm of practicability, provided every effort is made to encourage greater private investment, both domestic and foreign.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

5% RUPEE DEBENTURE STOCK, 1970
INTEREST FOR THE HALF-YEAR ENDING
31ST DECEMBER, 1963

NOTICE is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st January, 1964, to Debenture Stockholders registered in the books of the Company on 19th December, 1963. Applications for transfers received at the Company's office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 19th December, 1963, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 20th December, 1963, to 31st December, 1963 both days inclusive.

By Order of the Board,
D. P. M. KANGA,
A G E N T

Victoria House,
Calcutta, 18th November, 1963.

WINDOW ON THE WORLD

The Chances in Brussels

From Our Special Correspondent

BRUSSELS:

THE SIX Governments of the Common Market have fixed the timetable for the crucial negotiations that will be carried on here from now to the end of the year (and may be a bit beyond). The Council of Ministers will meet on December 2 to start the examination of two dossiers which (as was explained here last week) are closely connected: a report on the preparation of the Kennedy round of tariff negotiations, and the proposed regulations for a unified six-nation market in beef, rice and dairy produce. These are interdependent questions, it will be recalled because to the extent that the Six give preference to those farm products within the region, they discriminate against imports of the same products from outside, and notably from the USA. It happens that agricultural produce is among the USA's main exports to West Europe, and thus will be well up on the agenda when the Kennedy round opens. Moreover, the West Germans will agree to costly concessions on farm policy only if, in return, their partners give a firm undertaking to ensure the success of the Kennedy negotiations.

Then, on December 16 the Six will turn to consideration of the Mansholt plan, which suggests introduction of a single support price for cereals throughout the region as from next July. This revolutionary plan, which goes far beyond anything the Six are committed to in the Treaty or by their existing undertakings, raises questions that affect, directly, the incomes of about a fifth of the Common Market's population, and, indirectly, the export earnings of grain farmers all round the world and the price level in all the Six economies. It should be noted that negotiation on the two previously mentioned issues will not have been completed by December 16, so the debate on the Mansholt plan will be grafted on to a discussion that is already sufficiently complicated. Not only that, but some time in the same month the Six will have to settle the financial problem of how agricultural surpluses are to be subsidised for export. The idea is that members who continue to buy food from abroad when surpluses exist in the region should pay a special import levy that will be used to subsidise the sale on world markets of the Common Market food they declined to prefer.

Deadlines and Ultimatums

So the situation will be that parallel negotiations on these four separate but interdependent issues will be going on throughout December. As far as the agriculture ministers are concerned, it will be a non-stop session, with daily meetings lasting up to 18 hours succeeding each other right up to the end of the month. For, hanging over the Six are various deadlines, some arising from common consent to settle certain problems by a set date, others arising from more or less veiled ultimatums issued by various parties. For example, the matter of financing export of surpluses must be resolved, it has been agreed for months by the Six, before December 31, and the arrangements for beef, rice and dairy produce must also be completed by the same date, according to the accepted schedule. One ultimatum is no less precise: General de Gaulle has said that if the Common Market does not have a clear agricultural policy laid out by the end of the year, the whole venture will be in danger of shipwreck. The West Germans, for their part, have intimated that unless preparations for the Kennedy round are well advanced, taking account of the opening date set for that confrontation (May 4, 1964), all progress toward European integration will cease.

What are the chances of the Six fulfilling this exhausting

timetable before the year runs out? Very slight, in the view of veterans of diplomatic marathons here. However, the Six have resorted before today to the strategem invented in French budget debates of stopping the clock at midnight on December 31 and not opening the new calendar until the job is finished, even if that takes two weeks of the New Year. Thus, deadlines and ultimatums need not be taken literally, provided the negotiations are in full swing and seem to be making progress. As long as any possibility of accord is in sight, no one is going to pull out and implement his threats in the last days of December. Remains the question of whether any hope of agreement will subsist at that date.

Immense Stakes

Optimism on that score is far from general in Brussels. Though they may assess it as greater or less, everyone take seriously the possibility of a breakdown that could lead to a rupture among the Six. This is so because the stakes — financial, commercial, political and electoral — are immense, not only for the Six themselves but for the Americans who are feverishly active in the wings. Indeed, the decisive factor will probably be, not the pressure of the Americans, but suspicion among the Six about each other's attitude toward co-operation with the Americans. Specifically, if the Germans feel that the French are pressing for a degree of agricultural protection that would seriously indispose the USA (touching off a generalised "chicken war" right through the list of farm products) without contemplating generous tariff disarmament on manufactures, then they will take the risk of disrupting the community by blocking all further integration.

Conversely, if the French suspect that the Germans put the "cohesion of the Atlantic world" (i.e. pleasing the Americans) on the same footing as European integration, then there is no doubt that President de Gaulle will break off as brutally as he did with Britain, and for exactly the same reasons. Except in the polemic of his opponents, this does not mean that the General is systematically opposed to satisfactory arrangements with the USA, or that he envisages an entirely autarchic Common Market, etc. We have yet to see, in the detail of the coming negotiations, just what the Gaullist position is on each trade problem, but the general stand is clear enough. The European political entity, Paris declares, can be liberal or protectionist (and no doubt it would be better for all concerned if it were liberal), but the first requirement is that it exist as a political entity, and that means trade in manufactures, Holland is liberal and Britain protectionist, and as regards trade in farm produce Belgium is liberal and the USA protectionist, but all of that is secondary to the main point that inside Holland, Britain, Belgium or the USA national interests are put above outsiders' interests, however respectable. That is to say, those nations exist as political entities and the question of what foreign trade policy they pursue comes after. So it must be with the Common Market. Pleas for liberal import policies will be in season later, and there is no reason to think that Paris will stubbornly reject them, but anyone who at this stage puts maintenance of traditional imports above constitution of the European unit is not seriously concerned with Continental unity.

However clear these two positions may be, it is evident that much of the coming negotiation will consist in trying to judge the opposite party's ulterior motives, to weigh up his

intentions rather than the value of the particular propositions he is putting forward. It is for that reason that their upshot is essentially unpredictable. The details of the complex bargaining about individual products will, in the last analysis, matter much less than the general style of reasoning used by the French and Germans, not only in the conference rooms but in such vague discussions as recently in Paris between Dr Erhard and General de Gaulle.

This is inevitable because, for all the arid precision of the experts' dossiers, each side is inviting the other to leap into the unknown. The economists have filled volumes with exact calculations but no one really knows what will be the impact on millions of citizens of unifying grain prices at one swoop, or halving tariffs in trade between West Europe and the USA. It may be that the first measure will irritate West German farmers, affect the electoral fortunes of the Christian Democrats cast a large burden on the Federal Republic's budget, encourage uneconomic diversion of French farmland to wheat-growing, and ruin efforts to stabilise French prices. It may be, too, that tariff disarmament along the lines urged by Mr. Kennedy will expose European industry to ruthless competition from the bigger American corporations, further deteriorate the Common Market's large adverse trade balance, and so on. But none of these dangers would be insurmountable.

World Capital Market

By PAUL BAREAU

LONDON:

THE CITY of London has in the last few weeks laid claims to have become once again the greatest international capital market. A number of issues have been made in the City: to the Belgian Government, to Italy, to the City of Copenhagen, and a new loan to the City of Vienna is now in course of negotiation. There can be no denying the facts. But there has been considerable discussion and even criticism of the policies involved. Some critics of these projects have said that London's aspirations to become again the principal world capital market are illusions of grandeur and the kind of pride that comes before a fall.

The occasion for this sudden revival of what some had thought to be defunct activities was the recent U.S. Government decision to impose a tax on foreign issues made in the New York market (other than issues by under-developed countries) and on purchases of foreign securities by American citizens. This move, intended to provide part of the defence for the dollar during the persistence of the U.S. balance of payments deficit, was rightly seen here in Britain as an abdication — temporary at least — by the United States from their position as the greatest capital market in the world. It was, therefore, seen as a heaven-sent opportunity for London to usurp that position and regain the pre-eminence which it enjoyed in this context throughout the nineteenth and part of the twentieth centuries.

The ability to seize this chance was a substantial improvement in the United Kingdom balance of payments and the strength of sterling which has been an impressive reflection of that improvement. The most reassuring feature of the recent economic recovery in Britain has been the way in which a very satisfactory rate of domestic expansion has been reconciled with an ability to export more and to build up a sizable surplus in the balance of current international payments. As long as this can last, Britain can indeed play a much more active part than it has done recently in satisfying the capital needs of other countries.

The oddest and most significant feature of the recent

able, or without remedy, provided the Continentals were determined to deal with them as a community. That is what the figures cannot reveal, and so the outcome must depend on guesses about intentions.

Since the possibility of failure is envisaged, one is entitled to speculate on the consequences. They would be considerable. Not only would the Common Market be condemned to a more or less rapid decomposition (and the European Free Trade Area, its shadow, along with it), but the Kennedy plan for tariff reductions would evaporate. In that event GATT's days would be numbered and the Americans would be free to seek the new base for world trade that they have long had in mind: a fresh global trade organisation which this time included Soviet Russia and which would act as the trade and economic development body of the United Nations. Long before that plan had matured, however, Messrs. Kennedy, Erhard and Douglas-Home would have had to face their respective electorates, and they would do so empty-handed, obliged to confess the failure of the policies their governments have pursued these several years past. One can stop the dreary catalogue there, because it is already sufficiently catastrophic. Nothing less grave, however, would be the result of breakdown in the negotiations in Brussels in December.

resurgence in new foreign issues in the London market has been the technique by which they have avoided any pressure on the balance of payments and on sterling. Three loans have been made in foreign currencies. Dollars have been lent to Belgium and Italy and Swiss francs to Denmark. These operations involve no pressure on Britain's external finances since the currencies in question are borrowed from abroad and then relent to foreign borrowers. The only risk in such operations, and it is considerable but calculated, is that the periods for which these currencies are borrowed and then relent are not necessarily identical. The dollars which have been lent to Belgium are of the variety known as Euro-dollars. They are for the most part borrowed by London banks for relatively short periods. They have been lent to the Government of Belgium for three years. There is here some element of "borrowing short and lending long" but the London banking consortium is confident that it is doing no more than normal, traditional banking business and that it has reserves which will enable it to meet any demand by foreign depositors of Euro-dollars in London.

The development of these foreign currency issues is part of the emergence of an international capital market in foreign currencies. These currencies are usually given the prefix "Euro" but the markets in which they are dealt extend well beyond Europe. The reasons for the emergence of this international money or capital market is the wide margin that tends to separate credit and debit interest rates in countries such as the United States, Switzerland and even Britain. Given these margins, it pays the foreign holder of dollars, Swiss francs or sterling, to find another foreign borrower of these currencies rather than entrust his dollars, Swiss francs or sterling, to an American, Swiss or British bank.

Nowhere is this margin wider than in Switzerland where the banks in order to discourage the inflow of unwanted foreign refugee capital, have actually gone to the length of charging interest on money deposited with them on foreign account. What, therefore, can be more natural than that foreign holders of Swiss francs should deposit them not with a Swiss bank, where they will be charged for the privilege,

but at a reasonable rate of interest with a British consortium which is now relending these Swiss francs to the City of Copenhagen and, of course, making a reasonable profit into the bargain.

The Swiss authorities have expressed severe displeasure at this particular development. They have argued that since the City of Copenhagen does not need Swiss francs but a wide range of other currencies, it will sell Swiss francs in the market and, therefore, bring pressure on that currency. They have also argued that this particular operation must undermine their control of their own capital market; that it is, therefore, an unwanted and unpleasant intrusion into their own domestic affairs. The complaints, it should be added, have had little effect on the initiators of this particular operation in London. Their contention is that the Swiss franc is a convertible currency, that they have contravened no written or unwritten laws of banking etiquette and that the Swiss have only themselves to blame for allowing circumstances to develop in which a market in Euro-Swiss francs has emerged.

London, however, is doing more than merely acting as an intermediary. It is also lending some of Britain's own substance to foreign countries. That will be done with the Austrian loan which will be expressed in sterling. This operation has been specially favoured by the authorities who have announced that it can be issued in the denomination of

bearer bonds and that no income tax will be deducted from the interest paid on these bonds. This is an attempt to encourage foreign participation in this particular issue and thus to cushion its impact on sterling and on the British balance of payments. But the fact remains that some domestic subscriptions will be made and that in the context of this particular issue the consortium of City of London banks will be doing rather more than merely act as an intermediary.

Is this, then, the end of the control of capital issues in the London market? It has had a long life. It began in the 1930's in the usual informal, empirical way, with the setting up of an advisory Capital Issues Committee. It became a watertight and statutory affair with the outbreak of the war and the emergence of exchange control. Since the end of the war there has been a special and privileged position for sterling area borrowers in the London market: exchange control does not apply to other sterling countries. That preferential treatment is in process of being extended to the countries of the European Free Trade Association of which Denmark and Austria are members.

Whether the British balance of payments can stand a substantial outflow of capital is questionable. But there is a substantial surplus in Western Europe as a whole and the only really organised capital market in Western Europe is the City of London. It looks as though it were coming into its own as the mobiliser and redistributor of European savings.

Bowles Writes to P.M.

By Our Special Correspondent

NEW DELHI:

THE PRIME MINISTER'S recent insistence on the quick completion of land reform measures, according to knowledgeable circles, is at least due in part to a very interesting Memorandum which Mr. Chester Bowles, the US Ambassador, had sent to him on October 30 on what Mr. Bowles described as "the second stage in India's rural development".

Writing as "a friend and observer", Ambassador Bowles says that, while some progress has been achieved in the sphere of agrarian reforms and other areas of rural development, there is now need to pursue vigorously the "second stage" of development during which the first priority should be given to the strengthening of land reform legislation and administration. Secondly, the "second stage" should provide first for review and then for the improvement of existing rural programmes, such as agricultural improvement, community development, irrigation and rural electric power.

The US Ambassador has promised the Prime Minister another Memorandum in the near future on the "complex subject" of agrarian reforms with "some suggestions for action". Meanwhile, he has made a specific proposal relating to another field of rural development which, in his view, will represent a bold initial step "to give much greater depth to the community development programme with special emphasis on the rural towns". Briefly, his proposal is that, instead of concentrating on rural development in a single area an amount of resources which cannot realistically be found on the same scale for the country as a whole in any foreseeable future, a prototype for integrated development should be worked out on the basis of a single district in terms of the resources which could be spent on a district proportionate to what might be available for an all-India programme in 1977.

Ambassador Bowles concludes his communication with an offer that, while the programme he suggests "must be, by and large, an Indian effort", the US Government "will be delighted to assist within the limitation of our available resources". Spelling out this assistance, he mentions the assigning of technical people for setting up the test districts and peace corp volunteers for the work of guidance and training in such districts and the provision of United States-owned rupees for various projects as well as some foreign exchange loans for the purchase of transport, communications and hospital equipment and other essentials that may have to be procured from abroad.

★★

To recall the Finance Minister's picturesque phrase about changes in the composition of the Planning Commission, the snake, it appears, is going through a gradual process of shedding its skin. At least two Members are expected to leave shortly. Mr. C. M. Trivedi, the acting Deputy Chairman, has made a written request to the Prime Minister to relieve him of his responsibilities by the beginning of December. But Mr. Trivedi will not be retiring from public service. It appears that the Home Minister has invited him to act as an arbitrator in inter-State boundary disputes. Another Member of the Planning Commission, Prof. M. S. Thacker, is reportedly negotiating with the United Nations for employment. In the first flush of the emergency, Prof. Thacker was appointed Chairman of several emergency committees. Most of them probably have not been able to find work to do, which is perhaps why Prof. Thacker himself has been finding it possible to spend more time abroad than at home. Another stalwart who is also reportedly thinking of turning his back on Yojana Bhavan is Mr. Shriman Narayan who, it appears, is exploring possi-

bilities of being fitted into an appropriately senior position in the Congress Party organisation.

All these possible and probable departures, voluntary or otherwise, no doubt give the Prime Minister an opportunity to make amends for certain earlier appointments which had led the uncharitable to remark that the Planning Commission was being reduced to a cattle-shed. Unfortunately, it is by no means certain that Mr. Nehru is in a penitential mood. On the contrary, there are reports that a superannuated ICS official (who is shortly to leave a top job in the Central Secretariat) and an ex-Minister (who has been unlucky in a by-election and has been kept hanging around in New Delhi) are likely to be considered for the vacancies. The ex-Minister I need not name. The civilian in question is Mr. S. S. Khera, Cabinet Secretary. Of Mr. Khera's great competence and his excellent reputation in the various responsible positions which he has been filling so adequately throughout his career in the ICS, there certainly cannot be any doubt. But what may be doubted is that he can continue to serve his country best only by joining the Planning Commission. Here it is not irrelevant to point out that the Planning Commission already has amongst its Members an ex-ICS man, Mr. Tarlok Singh, whose administrative background, experience and training, if not temperament, are probably about the same as Mr. Khera's. Unless it is considered useful to shift Mr. Tarlok Singh elsewhere in due course and there are plans to that end, the High Command at Yojana Bhawan obviously does not stand to gain by the inclusion of another ex-civilian at this stage.

Incidentally, it is obvious that, although Mr. Nehru, naturally, will have the final say, at least three others will individually have a large voice in this matter. Mr. Nanda, who has managed to continue as a Member of the Planning Commission, may be depended upon to press his preferences. Equally clearly, the Finance Minister is unlikely to refrain from expressing some very definite views. And then there is Mr. Asoka Mehta — it may be flattering to his ego but it is certainly going to be embarrassing to him to be lobbied for support by two senior Central Ministers.

★★

The proposal that the Central Government should take over major irrigation and power projects from the State sector was made by the Andhra Chief Minister at the last meeting of the National Development Council. Mr. Sanjiva Reddi reportedly argued that if mineral-based development such as the erection of steel plants could be the responsibility of the Centre, there was no reason why water, which is also a natural resource, should not be harnessed for irrigation and power under Central responsibility, in cases where the projects are big and complex. Mr. Reddi's suggestion is stated to have met with immediate resistance from the Defence Minister, Mr. Chavan, who pointed out to the National Development Council that the taking over of irrigation and power projects by the Centre would change the entire concept of planning as a federal responsibility as distinct from an exclusive obligation of the Centre.

It may be pointed out here that Mr. Reddi's recipe is not a novel one. The Bhakra and Hirakud projects, for instance, were placed outside the State plans in the first five-year Plan and tied to the Centre's apron-strings. Subsequently, it was found that the arrangement did not work satisfactorily and, consequently, both projects were handed over to the States. It is, therefore, unlikely that Mr. Reddi's proposal will be found acceptable, but at least Chief Ministers of four States are stated to be not unfavourably inclined to support their

durable
protective paint
for wood
**SHALIMAR
WOODKOTE**

Specially formulated and ready-mixed, Shalimar Woodkote is an ideal finishing paint for all woodwork—indoors or out. Impervious to moisture, Shalimar Woodkote gives a hard, glossy, long-lasting surface, and the special varnish medium that it contains ensures elasticity and durability. Available in 26 distinctive colours.

colleague in Andhra. From the States' point of view, the proposal has the merit that it will not lock up a high proportion of State resources in major river projects which cost a lot of money and take time to yield a return on investment. The Central Government is being pressed for a decision, but an aspect of the matter which does not seem to have entered the calculations of Mr. Reddi and his supporters is that, if the Centre is to shoulder the responsibility that is being thrust on it, it will also naturally demand that it be left free to fix the pattern of priorities for the various major irrigation and power projects as among various States. Whether State governments will be happy to grant this discretion to the Centre is doubtful.

★★

The West German Minister for Economic Cooperation, Dr. Walter Scheel, currently on a visit to this country, told newsmen on Saturday that one of the reasons for the proposed change in his country's pattern of financing development aid was to clear the way for an increased flow of private capital to the developing countries. A Bill offering incentives to the West German entrepreneurs investing their capital in the under-developed countries, he added, had already been introduced in the West German Parliament. The German investors, Dr. Scheel thought, were particularly keen to come to India because the Indian economy had already reached a remarkable stage of development and the infra-structure here had been strengthened considerably.

Indo-German collaboration, Dr. Scheel opined, could cover almost all fields. He hinted that German investors would be agreeable to participating in joint ventures with Indians on a minority basis in the shareholding. They would also like to reinvest their profits here itself.

Dr. Scheel explained that the investment guarantees being sought by West Germany from India were warranted because of the past experience of the German investors abroad; they had lost all their assets in the foreign territories during the two world wars. Provision of these guarantees, he thought, would help the German investors to overcome their psychological inhibitions. Dr. Scheel will be holding the final round of discussions on this issue with the Government of India during his current visit.

Bokaro Project

Dr. Scheel ruled out the possibility of West German assistance for the Bokaro project on the ground that his Government had only limited funds at its disposal for extending development aid. A project of the proportions of Bokaro, he added, would have to be considered carefully before anything definite could be said about financing it.

The West German Minister agreed that it was no use extending credits to the developing countries for fostering their economic growth and at the same time adopting restrictive practices in regard to imports of their products. He assured that his country would exert its influence with the European Economic Community for the removal of trade barriers between it and the under-developed nations. As a proof of this liberal policy, he cited the instance of the E.E.C. agreeing to a nil tariff on tea and also reductions in duties on certain other imports from India. West Germany, he further pointed out, had started purchasing manufactured goods, such as sewing machines, from India. He suggested that we should undertake extensive market research and advertising in world markets for stepping up our exports.

One of the reasons for his present visit, Dr. Scheel said, was to make an on-the-spot study of the projects set up here with German collaboration so that he could be in a better position to plead with his Parliament for increasing aid to this country.

★★

The rearrangement of responsibilities among the Council of Ministers announced last week, does not complete the so

called reorganisation of the business of government. Two other instalments are envisaged, one by the end of this month and the other after the annual session of the Congress at Bhuvaneshwar, say, by the middle of January. The reorganisation announced during the week follows the recommendations of the Khera Committee, which made its report some time in September. The Khera Committee had recommended the creation of "blocks" or departments included in which were the Departments of Oil, Chemicals, including Fertilizers and Petro-Chemicals, Mines and Minerals, Steel, Engineering Industries, Light Industries, including Textile and Jute Industries, Small-scale Industries, Industrial Policy, Commerce, Education including Technical Education and Science.

★★

The Government of India has approved, in principle, the creation of further capacity in seven of the existing Paper mills by providing balancing Equipment or by effecting minor modifications. The details are (expansion in tons of paper per year): Titagur Paper Mills (three units) 20,000; Bengal Paper Mills 21,000; Orient Paper Mills 11,800; Sirpur Paper Mills 12,000; India Paper Mills 4,000; Rohtas Industries 11,800; and Shree Gopal Paper Mills 7,000.

★★

The Government of India has approved of a project for the manufacture of specialised greases by Victor Union Manufacturing Corporation Ltd., Calcutta in collaboration with UNOCO, Limited, a subsidiary of Union Oil Company of California. The foreign collaborators will import all capital equipment and will thereby contribute 49 per cent to the equity capital. Items to be manufactured are Greases, Soda, Aluminium, Barium, Calcium, Lithium, Lead soap, Strontium, and miscellaneous specialised base. On a single shift basis, the unit is expected to produce 800,000 kilograms a year.

These greases are being imported at present for use as lubricants in the steel and heavy machinery industries and the Railways. Estimated demand for these greases by 1966 is placed at 35,000 tons a year. There are two principal manufacturers of these greases at present. They are Balmer Lawrie and ESSO with licensed capacity of 16,000 tons and 6,000 tons respectively. In addition 2,000 tons of greases are being produced by small manufacturers.

★★

The Government of India has arranged for the import of 2,290 tractors from the Soviet Union and 1000 tractors in semi-knocked down condition from Poland to meet the urgent requirement of the farm sector. The following is the break-up:

Russian Tractors (Built-up)	
Make/Model	No.
DT-14B	1,500
DT-28	100
Byelarus-MTZ	690
Total	2,290
Polish Tractors (in s.k.d. packs)	
URSUS C-325	1,000

★★

Letters for the establishment of a joint regular shipping line between the ports of the two countries were exchanged last week between the German Democratic Republic and the Government of India. The arrangement which came into force immediately will be for a period of two years in the first instance. According to the Exchange of letters, the Director-General of Shipping, Government of India, and the Head of the Main Department of Shipping, Ministry of Transport of the German Democratic Republic, shall be the competent authorities for the two parties who will grant the most-favoured treatment to the vessels of either country while entering, leaving and staying in the ports of either party, except vessels engaged in coastal trade, inland, navigation

or fisheries under their respective jurisdiction. The cargoes assigned to the joint regular shipping line will be carried on the principle of share and share alike, irrespective of the terms of sale both in respect of general cargo and bulk cargo, with a view to maintaining equality between the two parties in respect of freight earnings.

Mr. Manubhai Shah, Minister of International Trade, will lead a six-member Indian delegation to the Special Conference

Tall Talk on Automobiles

From Our Correspondent

BOMBAY:

THE STATESMENT of the Union Minister for Steel and Heavy Engineering, Mr. C. Subramaniam, that the Government was considering a proposal to set up a single automobile manufacturing unit with a capacity of 50,000 cars instead of the three existing manufacturers has come as a deep shock to the automobile circles in Bombay. According to a leading spokesman of the industry, the proposal was quite impracticable and that, in any case, it ignored the realities of the cost structure of the industry. Of the total cost, materials and components accounted for 70 per cent over which the industry had no control. Overheads accounted for 20 per cent of the cost and could be reduced by raising production. The principal problem was therefore one of tackling the major cost factor and the Government had not done anything to make available to the industry materials and components in adequate quantities and lower prices. 'The automobile industry is an industry of many other industries whose costs are unknown.' If the cost of automobile industry were to be brought down, the basic requirements such as steel, tyres, coke, pig-iron and various other components had to be stepped up. The Government should have some patience and first concentrate on building up the ancillary industries which feed the automobile industry. The amalgamation of three units may succeed only in increasing the confusion and dislocating production.

According to Mr. Lalchand Hirachand, Chairman of the Premier Automobiles Ltd., the proposal of the Minister to have a single unit would not be of any special advantage. The proposal was considered in the past and it was felt that it would pose a number of difficult problems, the chief among them being the transport of components. The real problem was due to heavy taxation and low volume of production.

★★

The wholesale prices of sugar in Maharashtra State were raised by Rs. 5.15 per quintal following a similar increase granted to sugar mills in the State. The revised prices, which came into effect from November 18, are being criticized as too low. The wholesale traders are allowed a margin of profit of Rs. 1.75 per quintal, inclusive of 50 nP. commission earmarked for the mills' agents. This margin of profit was fixed on the assumption that the expenses on transportation would amount to Rs. 3 per bag. Actually the transportation cost works out to Rs. 4.00 per bag, thus reducing the profit margin to 50 nP. per bag which is described as ridiculous in the context of the large investment in the business.

★★

The Standing Committee of the recognised stock exchanges of the country, which assembled in Bombay, decided to request the Government to relax the existing margin regulations on share business. The Committee made a number of useful suggestions aimed at serving the interests of brokers and investors alike. The President of the Bombay Stock Exchange, Mr. K. R. P. Shroff, presided over the deliberations. It was attended by the presidents of all the leading stock exchanges, except Calcutta and Indore. The Committee felt that in respect of units of trading in shares, it was desirable to have uniformity

in Asian Economic Cooperation beginning in Manila on the 3rd of next month. In 1961 a consultative group of experts, led by Mr. K. B. Lal of India, had reported on the possibilities of economic cooperation in the ECAFE Region. As a sequel to this another group of experts had prepared a report which was considered by the preparatory meeting held in Bangkok from October 21 to 26, this year. The conclusions emerging from the detailed discussions will be discussed by the ministerial conference at Manila.

on the different stock exchanges. It was decided to request companies to waive transfer, consolidation and splitting fees in the interest of investors. The Committee further agreed that it would be desirable for company directors to declare their dividends before the actual closure of transfer books with a view to avoiding subsequent accounting adjustments.

It was decided to request companies to issue share certificates and allotment letters in market lots. Companies, according to the Committee, should also be requested to take decisions on dividends, bonus and right issues so that these could be communicated to the stock exchanges during the trading session. The companies should accept shares for transfer received after the closure of transfer books when the shares had been despatched in time but the delay had been caused owing to conditions beyond the shareholders' control. A recommendation would be made to the Government for making arrangements for the sale of share transfer stamps at different places for the convenience of investors in the mofussil. As regards the question of members of one stock exchange opening offices in areas of other recognised stock exchanges, the general view was that the opening of such branches would affect the business of members of smaller exchanges. Important public companies would be requested to issue, in conformity with the listing arrangements, periodical reviews about their working for the information of members.

★★

The ECAFE Conference on the development of the fertilizer industry in Asia and the Far East was inaugurated here last week by the Union Minister for Steel and Heavy Engineering, Mr. C. Subramaniam. He disclosed that India was ready to offer technical assistance to the ECAFE countries for setting up fertilizer units in the region. This country's plans visualize production of from 1.5 to 2 million tons of nitrogen per annum by the end of the fourth Plan. During each year of that Plan, it is proposed to complete two new factories.

Mr. Subramaniam pointed out that the problem of the high foreign exchange cost of equipment had to be dealt with by developing indigenous know-how and facilities for fabrication of fertilizer plants. The Government of India had in this connection taken steps for setting up a pressure vessels plants with British assistance and a pumps and compressors plant with Soviet assistance. There was a move to make naphtha the basic raw material for the industry. This might help to bring down cost. The Minister invited concrete suggestions from the conference for an effective and yet not too costly a system of extensive soil analysis. He also stressed the importance of a training programme for the farmer on a mass scale in the use of fertilizers in gaseous and liquid forms as well as in the solid state.

Mr. A. G. Menon, Chief of the Industries and Natural Resources Division of the ECAFE, in a statement read on behalf of Mr. U Nyun, Executive Secretary of the ECAFE, observed that the output of fertilizers rose from over 1.5 million metric tons to over 2.5 million metric tons in terms

of plant nutrients between 1953 and 1961. Nearly 70 per cent of the increase was, however, accounted for by Japan. The limited size of the domestic market in most of the countries was the cardinal impediment to the development of the industry in the region. Within the next five years it was estimated that in the region's consumption of fertiliser nutrients would increase

K. K. Birla Puts the Record Straight

From Our Correspondent

CALCUTTA :

SOME OF the extremist speeches made at the AICC session at Jaipur were subjected to critical analysis by Mr. K. K. Birla in his address to the Indian Chamber of Commerce last week. The President of the Chamber vigorously rebutted the thesis that the concentration of wealth was increasing and that monopolistic tendencies were threatening democracy or the people's welfare.

An important point made by Mr. Birla was that since the rate of growth of the national income was falling behind the increase in population, it had become urgently necessary to step up investment and production by encouraging domestic enterprise as well as foreign investments through enlightened economic policies.

Mr. Birla said in part :

"I am glad that there is some evidence of re-thinking in the statements recently made by our new Finance Minister, Mr. T. T. Krishnamachari, and the steps that he has already taken particularly in regard to the monetary policy. Shri Krishnamachari has so rightly observed that the financial and economic policy must serve first and foremost the requirements of rapid growth. To the extent that ideological concepts do not restrict economic expansion and curb individual initiative and enterprise but seek to stimulate and reward the same, it should be possible to realise this objective. After all, if a social system has to justify itself, it has to provide adequately for human welfare which means freedom from want, social security, opportunity for betterment, and the like. These are objectives common to any progressive society. If the new approach towards future economic expansion is less restrictive and more helpful to individual initiative and enterprise, it will go a long way to develop the country's economy faster.

Right Step

"Liberalisation of supply of credit for productive purposes which has recently been announced by the Reserve Bank is a step in the right direction although to what extent the demand for capital for more production will be met is yet to be seen. The resources for investment have continuously to expand which means that people should have more to save and to invest. Ultimately, production could not be increased on a sustained basis without a significant revival of investment activity. Therefore, as the economic and fiscal policies take shape in the light of this new thinking and fresh approach towards rapid economic growth, I hope, there will be indications of a better climate for investment activity than what has been prevailing so far.

"Foreign businessmen who have been interested in participating in the equity capital in Indian industrial development have been discouraged mainly by two factors: firstly, the pattern of the present structure of corporate taxation and secondly the dilatory procedures and policies relating to industrial licensing. We have the assurance from the Finance Minister that he will review the fiscal policies so as to meet the requirements of rapid growth. It is necessary that the country should not lose the growing opportunities of attracting more equity capital from abroad, particularly when there is keenness on the part of foreigners to invest in countries like India which have such large market potentialities. As regards procedural difficulties in industrial licensing and delays which have discouraged both foreign and Indian investors, I am glad that the Government have shown some awareness of this pro-

blem as has been indicated by the appointment of a Committee to study this question and suggest remedies. While during recent years the Government have from time to time taken steps to appoint committees on various problems, not in all cases has there been an effective implementation of the recommendations of such committees. I feel that this question of simplification of the licensing procedure and the removal of rigidity in economic planning is of fundamental importance to the country at the present moment...

"Today, planning has become so rigid that even where it is possible to set up industries without foreign exchange requirements, it is not possible to do so. The list of industries included under licensing has continued to increase with the growth of our economic planning which has been too rigid. It is not new to mention that as a result of the far too complicated licensing procedures involved and the large number of authorities and Government departments which come into the picture, it becomes extremely difficult to get the green signal to set up an enterprise for several months and sometimes for indefinitely and once he finds the Indian procedure frustrating for setting up of new enterprises. It is an irony that at present even where the Government agrees to certain principles, there is delay in taking decisions; for, the officials sometimes take the view that it is safer 'not to act' rather than 'to act'.

Streamlined Procedure

"I would suggest that the Government should declare in advance the lines of new industries where foreign collaborations are invited and in those specific fields they must set up a time-schedule and an agreed policy among the various departments, and they should be able to say that within a certain minimum period of time a foreign collaboration will be given a green signal. The procedure should be streamlined by eliminating a large number of time-consuming steps which have to be taken to promote an enterprise; and a single co-ordinating authority should sanction setting up of new enterprises within a minimum period of time. In this connection, on the utilisation of foreign aid and I do hope that this Committee would recommend effective measures for the maximum utilisation of foreign aid and loans. It is unfortunate that be utilised speedily due to various restrictions and delays in the rupee resources, as without matching rupee capital sometimes foreign aid becomes infructuous.

"I would like to touch upon one other important aspect of our economic policy and planning which concerns the approach to the so-called concentration of wealth and economic power. It may of interest to members to know that recent wealth tax statistics have indicated certain significant facts. It appears that the bulk of assessments in both 1960-61 and 1961-62 were in the net wealth bracket of Rs. 2 lakhs to Rs. 12 lakhs. The total number of Wealth Tax assesseees in 1961-62 were 23,815 of which 22,407 or roughly 94 per cent were in the net wealth bracket of Rs. 2 lakhs to Rs. 12 lakhs. The 1,408 in number which is only about 6 per cent of the total has increased in the lower slabs while the number of assesseees in the higher slabs and the average per capita wealth has come

November 29, 1963

1127

down. The data which is available now shows that the wealth tax is fast reducing the wealth tax assesseees in the group above Rs. 50 lakhs. Their number as a matter of fact has dwindled from 191 in 1960-61 to 165 in 1961-62 or by 14 per cent over a year. At this rate very soon this class of assesseees is likely to vanish. The fact that the fiscal policy leads to disinvestments among a class of people is not conducive to higher economic activity in the country. The erosion of capital in this manner reduces capital formation and discourages both foreign and indigenous investment. Private foreign capital is attracted more towards Indian counterparts which have substantial financial backing and industrial experience.

"Income-tax Statistics compiled by the Central Board of Revenue have recently become available for the year 1961-62. A study of the figures therein shows that between 1956-57 and 1961-62, small incomes have increased both in numbers and in the total aggregate while the bigger incomes are declining. In the income group "Not exceeding Rs. 15,000", the number of assesseees has risen from 422,328 in 1956-57 to 820,441 in 1961-62, i.e. by about 95 per cent. The total assessed income of these assesseees, rose during the period from Rs. 294.95 crores to Rs. 511.96 crores, i.e. by about 75 per cent. On the other hand, incomes above Rs. 2 lakhs have substantially declined both in number and aggregate. The number of assesseees with an income of above Rs. 2 lakhs fell from 650 in 1956-57 to 543 in 1961-62, that is by about 16 per cent. The total aggregate of the incomes of these assesseees fell during the same period from Rs. 27.07 crores to Rs. 20.10 crores, that is by about 26 per cent. This shows that income disparities, of which one hears frequently from political platforms, are definitely getting reduced, and the rich are not getting richer as alleged.

No Concentration of Economic Power

"I would also refer to the recent survey by the Reserve Bank based upon 70 companies which includes 10 of the largest companies in India. This survey showed that out of a total capital of Rs. 272 crores covered by these companies, as much as Rs. 212 crores was owned by 492,000 shareholders out of which 52 per cent were individuals and the rest institutions. Among the individuals 65 per cent hold shares of the value of Rs. 1,000 or under and 28 per cent hold shares of the value not exceeding Rs. 5,000 each. This was the position in 1959. During recent years the number of small shareholders has increased further. Today the position is that companies are owned by a large number of small shareholders and they function under a very rigorous company law which ensures to them the right to choose the type of management they desire. In the light of the increasing dispersal of ownership of the corporate sector and the larger powers vested in the shareholders under the company law, the emphasis often being laid on the concentration of economic power appears to be completely out of date. One basic factor is that there is hardly any big business in India compared to international standards. The biggest company in the world is the General Motors of USA whose annual sales exceed \$14 billion or Rs. 7,000 crores. This is an industrial empire by itself. The biggest company outside the USA is the Royal Dutch Shell, whose sales exceed \$6 billion or Rs. 3,000 crores. Indian companies are mere toys in comparison with these concerns. In fact, the biggest company in India occupies a very low position among the industrial giants of the world, and comes nowhere within the first 150 companies outside the USA. Including USA it does not figure amongst the first 450 companies of the world. In almost every big field of industry we have just started to make a beginning. If on ideological grounds these enterprises are not allowed to grow, I am afraid, our future economic expansion will receive a set-back. After all, the concepts of planning and development mean ultimately larger and efficient output for the people. It is realised that there could be no 'laissez faire' in the present context. But the danger is that in an under-developed eco-

nomy if ideological concepts are allowed to restrict the growth and expansion of enterprise they will react on the growth of the economy and on our capacity to export which is so vital for our economy.

"The business community has noted with surprise and regret the trend of the speeches made at the A.-I.C.C. session at Jaipur. In so far as the speeches made by those who have been under a cloud for whatever reason are concerned, they need not be taken seriously. There is, as a matter of fact, no evidence whatsoever to support that the lower strata of the society is not rising. On the contrary, the percentage of assesseees in the high income group has been dwindling while that in the lower income group has been rising as explained earlier. As a matter of fact with the heavy incidence of taxation which in the higher income brackets works out to more than 100 per cent the picture could not have been but otherwise.

Unfounded Allegation

"The statement made at Jaipur that the "unaccounted money" in the country is Rs. 3,000 crores is absolutely unfounded. According to the official figures published at the end of 1960-61 the total investment in the private sector amounted to Rs. 2,000 crores. The present estimate of the investment of the private sector is about Rs. 3,000 crores. I fail to understand as to how an amount equal to the entire investment of the private sector could remain outside the accounts. What is even more fantastic is the statement that businessmen are running a parallel Government of their own in the country. Such statements are not made out of ignorance. They are made only with political motives but they do incalculable harm outside the country.

"It was also mentioned at the A.-I.C.C. Session that there was a trend towards more monopolies in the country. Permit me to analyse this statement. There are 465 cotton textile mills and 209 sugar mills in this country. Does this indicate a tendency towards monopolies in these two of the biggest industries of the country? There are 27 concerns manufacturing electric motors and 28 manufacturing diesel engines. Similar figures could be cited for other industries also. Does this indicate any tendency towards monopolies? In every country, there are but three or four important manufacturers of a particular item. Our policy of licensing on the other hand has been so liberal that in many lines important manufacturers of the world are represented in this country. Does this indicate any monopolistic tendency?....."

★★

Lyons Range has developed an easier undertone following profit-taking and mounting bear pressure. Bull operators are evidently in no mood to extend commitments till the outlook becomes clear. At the moment there is a general tendency to await the Finance Minister's statement in the Lok Sabha. Reports that it will come only towards the end of the session have somewhat unnerved the weaker elements in the market. Moreover, the Banking Companies Amendment Bill has caused some apprehension. The report that the Life Insurance Corporation has decided to engage actively in general insurance business has been pointed as a clever move on the part of the Government to nationalise general insurance without paying compensation. The fact that a motion on the nationalisation of banks has been tabled has its disturbing influence on market sentiment. Meantime bears are drawing attention to repeated references to "unaccounted" money by all and sundry, following the Finance Minister's mention of it. Otherwise the outlook for the corporate sector does not appear to be particularly discouraging with the credit relaxation already announced and indications of further relaxations which will enable industries to resume their interrupted march. But both operators and investors have been confused as to the shape of future Government policies affecting the private sector, for even senior ministers such as Mr. C. Subramaniam seem bent on talking in riddles on such sensitive issues as the nationalization of major industries.

The moving finger writes

IN DEVELOPMENT planning the first question that would "will discover" that his appointment "is not going to be universally welcomed in Congress Party ranks." I do not think that the discovery is in the future. Unless Mr Chagla is either very dense or very egoistic—and I believe that he is neither—he should already have acquired this particular piece of knowledge. In fact, my information is that Mr Chagla is under no illusion regarding how precisely the Congress Party has reacted to the Prime Minister's decision to offer him a Ministership. According to one report Mr Chagla had lugubriously remarked some time ago that all the support which the Prime Minister seemed to have received in this matter from his colleagues in the Cabinet was confined to "the negative approval" extended by Mr T. T. Krishnamachari. According to New Delhi gossip, there was resistance to Mr Chagla's appointment even from within the Prime Minister's establishment.

★ ★

The Education portfolio seems to have been Mr Chagla's second choice. It appears that his first preference was for Cabinet responsibility in the areas of Commerce and Industry. The attachment of Cultural Affairs to the Education portfolio is not exactly governed by administrative logic. I am not denying that Education and Culture have a lot to go with each other but so have Law and Culture, or even External Affairs and Culture, especially as our foreign policy presumably continues to be informed by the spirit, if not the letter, of Panch Sheel. What I am interested in pointing out here is that the portfolio of Cultural Affairs, as has taken shape over the years, has more in common, in administrative terms, with the activities of the Ministry of Information and Broadcasting than it has with the Education Ministry. I am, therefore, inclined to suspect that the decision to merge Cultural Affairs with Education has been motivated in the main by a feeling that Mr Chagla's personal eminence should be suitably acknowledged in the size of the domain allotted to him. On a strictly rational basis, Cultural Affairs could have more suitably belonged to Mr Satya Narayan Sinha, that is to say, the Ministry of Information and Broadcasting.

★ ★

There is surely grist to Dr Lohia's mill in the Central Government's decision to appoint Mr R. K. Nehru as Officer on Special Duty in the Ministry of International Trade after his retirement from the Indian Civil Service. The excuse for this appointment is that a person of Mr Nehru's background and experience is needed to master-mind the Government's participation in the World Trade Conference to be held in Geneva in March next. Now I do not deny that the conference will be of the utmost importance to our trade interests. Nor am I doubting that Mr R. K. Nehru is a very important person, and is consequently well-qualified to be thought of for important assignments. But, at the same time, it is rather difficult for me to agree that there is no regular officer of sufficient seniority or ability in the Ministry of International Trade itself to whom the work now assigned to Mr Nehru could have been safely entrusted. Actually, cynic that I am, I am rather inclined to think that much of the work will in any case be done by the Joint Secretaries and the Deputy Secretaries. It has often been said that, while the Prime Minister finds it difficult to suit men to jobs, he does not seem to have the

same difficulty in finding jobs to fit men. It is possible that the R. K. Nehru affair may be cited as a case in point. It is also possible that had a reported earlier attempt to secure for Mr R. K. Nehru the Chairmanship of the Commonwealth Economic Committee in London succeeded, it might have occurred to the Government of India that, if the Ministry of International Trade really needed special assistance, our Ambassador at Brussels could temporarily have been recalled to provide it.

It may be that I am harsh, but I must confess that my patience, never very generous, is rather strained. Day in and day out, we hear Ministers and others charging the private sector with corrupting the public services by offering juicy jobs to retiring civilians. On such occasions, it is freely said that the prospects of such post-retirement benefits are bound to undermine the integrity of public servants in office while dealing with business firms. May I ask whether this logic does not apply to extraordinary Government favours shown to select civil servants? Demoralisation can be of many kinds and if civil servants (meaning thereby not merely ICS officers, but also officers of other public services) have lost, or are losing rapidly, the ability to give frank and independent advice to Ministers, it is surely because of the corrupting practice of special extensions being granted to favoured officials after they reach the age of retirement, or special posts being created for their benefit once their retirement can no longer be deferred.

It may no doubt be argued on behalf of the Government that, since the country is short of talented and experienced men, their services should be made use of to the utmost. But, apart from the fact that such reasoning can apply with equal force to business houses employing retired Government personnel, I would like to say very emphatically that it is bad for the country and very bad indeed for its people that the idea should be encouraged that men of talent can contribute to the national good only by serving the Government or the private sector even after their retirement. After all, there is such a thing as honorary work in various cultural and social fields. Our public men, especially those who are Ministers, are never tired of haranguing on the high importance of voluntary organisations in the life of the community. May I ask how these voluntary organisations are expected to build themselves up and play significant roles in the affairs of the nation if it comes to be an accepted principle for men of any talent to stick to the last to paid employment of some kind or the other? Finally, I would urge that the logic of pensions is that, apart from the fact that they provide security to the individuals concerned in their retirement, they could also be of some encouragement to them if they desire to devote some of the ripe years of their lives to voluntary service to the community. I have very little doubt that our public life—even more, our political life—would have been a lot better had some of those elderly persons who are so eager to grind out the evenings of their lives as Governors or special officers in the Government or liaison officers with business firms chosen to say that "enough is enough" and gone to spend with their communities what free time they might have in promoting social and cultural activities.

V.B.

Trade Winds

EXPORTS OF GUAR GUM

ONE OF THE export industries in this country which needs to be protected against government-assisted competition from manufacturers in Pakistan is the guar gum industry. Guar gum is extracted from guar seed, which is a leguminous crop of dry areas and is cultivated in the States of Punjab and Rajasthan and to a lesser extent, Gujarat. The gum is utilised for a large number of industrial purposes, for instance, as a finishing agent in the textile and paper industries and in the manufacture of pharmaceutical products. It is also in demand in the food industries as a stabilizer for ice cream and as a base of reducing diets. The domestic off-take, however, is negligible, although it may be expected to improve gradually. So far, the industry, the origins of which are relatively recent, has been developed on the basis of the export demand which absorbs virtually the entire output. Guar gum is shipped to the United States, Western Europe and Japan. The foreign exchange earnings amount to about Rs. one crore per year, but there is scope for expansion if competition from Pakistan could be suitably dealt with.

The Pakistan industry has the advantage that it receives a concealed subsidy in the form of import entitlements to the extent of 40 per cent of the value of its exports. Indian manufacturers have been urging the Ministry of International Trade here that compensatory incentives should be provided for them if they are to maintain and improve upon their share of the world market. It is important to note in this connection that the development of the guar gum export industry has stimulated the increased cultivation of this crop and raised it to the status of a commercial or cash crop of growing importance to the rural economy of the dry areas in Rajasthan and elsewhere. There is, in fact, here some similarity to the spectacular spread of groundnut cultivation in this country in the early years of this century. Although guar can never become a major crop in the sense in which groundnut is a major crop, it is evident that, as the gum industry develops and a steady and expanding commercial outlet is provided, the cultivation of guar will keep on becoming popular. In fact, the ICAR has lately been devoting attention to research on improving strains of guar and several high-yielding varieties have been selected for propagation. This is undoubtedly a matter of some significance since both guar seed and guar meal, which is the residue left after the gum is extracted, are valuable cattle feed and their increased availability should, therefore, be of benefit to the livestock economy. The consolidation of the export trade in guar gum which would determine the profitability of cultivation of guar, is therefore necessary and desirable from many angles. Consequently, reports that the Government of India is considering measures for strengthening the export trade are to be welcomed.

In view of the fact that the crop has been affected lately by drought conditions in some of the growing areas, it is feared that the Indian industry may be further handicapped in its exports by a rise in guar seed prices. It is consequently believed that the Ministry of International Trade will make an early announcement of export incentives to offset Pakistan's advantages in this respect.

FIRST NATIONAL

The First National City Bank, New York, opened on November 18, 1963, its first branch in New Delhi. This brings the total branches of this bank in India to four; its three other branches are already functioning at Bombay, Calcutta, and Madras. Incidentally the New Delhi branch is the 101st overseas unit that the Bank has opened during its long history

of 150 years and marks the 50th year of its operations in this country.

The Bank has performed a useful service in the recent years in attracting US capital investments to India. It is understood that one of the important functions of its New Delhi branch will be to foster this trend further by helping in processing applications from Indo-US industrial ventures for assistance from the Cooley Fund which has been created out of the sale proceeds of the commodities supplied by the United States to this country under PL 480. The bank will also act as an agency for disbursement of this assistance to the parties whom it helps in securing it. The First National City Bank is a member of the Exchange Banks' Association of India.

Inaugurating the New Delhi branch, Mr. G. L. Mehta expressed the hope that the bank would continue to lend its assistance to foreign entrepreneurs and business men, especially from the United States, in making contacts and getting from the Government here relevant information required for starting industrial enterprises. He commended the practice of American banks of making advances against security of plant and equipment and thereby helping the private enterprise in carrying out expansion and development of new units, particularly in the medium and small sectors of industry. This, he added, was the one feature which distinguished American banking from the traditional British banking system. He was happy that Indian banks had also recently introduced this element into their business. With the revival of the capital market, Mr. Mehta hoped, commercial banks in India will take an increasing part in the business of underwriting industrial debentures and shares in concert with the financial institutions such as the Industrial Finance Corporation, the Life Insurance Corporation and the Industrial Credit and Investment Corporation of India.

EXPORT OF IRON ORE

A delegation from Yugoslavia headed by Mr. P. Vukcevic, including Mr. O. Novakovic, Mr. N. Ilic and Mr. Petric, recently signed an agreement for the purchase of iron ore during 1964 with the Minerals and Trading Corporation of India Limited. The agreement provides for the purchase of 300,000 tons of iron ore from India by Yugoslavia with an option to be exercised by the purchasers for an additional purchase of 100,000 tons.

INDO-HUNGARIAN TRADE AGREEMENT

A five-year trade and payments agreement signed between India and Hungary last week will come into force from January next. The agreement envisages the doubling of the volume of trade between India and Hungary in the next three years from the present annual rate of Rs. 8.3 crores each way. Exports each way are expected to reach a level of Rs. 12.5 crores in 1964, Rs. 14.5 crores in 1965 and about Rs. 17.5 crores in 1966. India will export de-oiled groundnut meal, de-oiled rice bran and other de-oiled cakes, manufactured industrial and chemical products, iron ore, mica, shellac and other traditional items of exports such as tea, coffee, groundnuts and cashew kernels. Major items of imports from Hungary will be rolled steel products, tool alloy and special steel, machine tools, equipment for power stations and capital goods such as flood control equipment, industrial furnaces, cable manufacturing plants, equipment for chemical and pharmaceutical industry, equipment for glass and lamp industry, fish and meat meals, ore and mineral testing plants, welding electric plants, gas producer plants and electrical railway safety and signalling equipment.

During the course of the visit of Mr. Manubhai Shah,

Minister for International Trade, in June 1963, economic and trade relations between the two countries were studied and possibilities were explored for further extending economic co-operation. In the course of these negotiations, both the parties had agreed that there was great scope for increasing the traffic of traditional goods and enriching the assortment. The first trade agreement was signed in 1949 and since then goods traffic has been regulated by repeatedly renewed agreements for the exchange of goods.

In view of the fact that there exist large possibilities for extending economic co-operation between the two countries. Hungary has agreed to offer a credit of Rs. 12 crores to India for improvement of industrial projects included in the third Plan and also those that may be taken up in the fourth Plan period. The projects likely to be financed out of this credit will be in the fields of aluminium, glass manufacture, ore dressing and power generation.

DEVELOPMENT OF PORTS

The National Harbour Board, at its last week's meeting at Gandhidham, is stated to have made a number of recommendations for developing coastal shipping. These include improvement of selected minor ports for berthing of small coastal vessels, mechanisation of sailing vessels and study of cargoes best suited for the purpose. By far the most important recommendation, however, is that the work of chartering the Indian waters should be speeded up. This is said to be seriously impeding the mobility of maritime shipping. Use of electronic aids has been strongly pleaded for completion of this task. To start with, it has been suggested that two electronic aid units should be procured without further delay so that complete hydrographic surveys of at least the most sensitive areas are completed in about three years' time. If as a sequel to this, facilities are created for berthing at the smaller ports vessels of eight to 10 feet draft, all round the year, coastal shipping can be expected to provide a good deal of relief to the other forms of transport, particularly along the long stretches where railways do not run parallel.

For fostering the development of the fishing industry, the Board has suggested relaxation of the application of harbour rules and the grant of concessional port charges for fishing vessels.

PROGRESS OF PARADEEP

In a study of the traffic prospects of the Paradeep Port, the National Council of Applied Economic Research has stated that under favourable conditions, the port could initially command over three million tons of traffic in iron ore, coal and general cargo and that within a decade this could go up to between seven and eight million tons. There are considerable deposits of iron ore near the port and it commands a hinterland which is full of promise of industrial growth in areas such as Cuttack, Talcher, Hirakud and Rourkela. It is pointed out that more than two million tons of iron ore can be shipped from Paradeep in the first year of its working in 1965-66 and it can be stepped up to five million tons by 1970-71. The port is expected to be completed by 1965.

The study recalls that the question of developing a deep sea port in Orissa, between Calcutta and Visakhapatnam had engaged the attention of the authorities since 1948. It refers to the vast hinterland commanded by the port and says that as the rail and road links are developed and the organisation of industry and trade re-adjust themselves to the advent of new deep-sea port, the hinterland may extend itself beyond Orissa. Subject to certain overall and individual limitations, it is mentioned, a traffic of 3.12 million tons in 1965-66 and 7.29 million tons in 1970-71 can be expected at the port. Be-

tween 67 per cent and 70 per cent of this traffic would be in iron ore. If the expected coal traffic materialized, coastal trade at the port would be about 34.2 per cent of the total traffic in 1965-66 and 27.7 per cent in 1970-71. Deep-sea berths and fully mechanised handling facilities are likely to render Paradeep an attractive port for big ore carriers and ocean going ships.

HIGHER PRICES FOR SUGAR

Consequent upon the revision of sugarcane prices announced on October 30, 1963, the Government has reviewed the ex-factory sugar prices fixed under the Government of India Notification No. G.S.R. 677 dated April 17, 1963. It has been found necessary to raise the ex-factory prices by Rs. 3 to Rs. 8 per quintal in different areas. The new prices come into force immediately. The State Governments have been requested to arrange distribution in their States on the basis of pooled prices of sugar obtained from factories in different regions, so that the benefit of lower prices in a region, as against higher prices elsewhere, is passed on to the consumers and is not appropriated by middlemen.

SUGAR DUTY RELIEF

The Government of India has issued a notification granting fifty per cent excise duty rebates on quantities of sugar produced in excess of previous performance during the early and later part of the 1963-64 season, and twenty per cent rebate in respect of excess production during the main season. Provision has also been made to enable new units which have not yet attained their full capacity in production to get the benefit of excise duty rebate at a flat rate of 30 per cent over the production in excess of their real or notional production in the previous period of the 1961-62 season.

LOWER PRICES FOR VANASPATI

Following the refixation of maximum prices of Vanaspati in all the four zones last June, the prices in some of the zones were slightly increased on one or two occasions during the past few months in view of the increase in the price of raw oils in these zones. With the onset of the new groundnut season and the consequent fall in oil prices, the maximum prices of Vanaspati have been reduced by Rs. 100 per tonne or 10 nP. per kg. in the Eastern and Southern zones.

With the present reduction, the retail prices (exclusive of sales tax and other taxes, if any) for representative pack-sizes, applicable to the different zones, will be as shown below:

	Zone A (Western)	Zone B (Southern)	Zone C (Northern)	Zone D (Eastern)
16.5 kg tin	Rs. 48.18	Rs. 46.53	Rs. 48.51	Rs. 49.33
4.0 kg tin	Rs. 13.20	Rs. 12.80	Rs. 13.28	Rs. 13.48
2.0 kg tin	Rs. 6.90	Rs. 6.70	Rs. 6.94	Rs. 7.04
Loose per kg net	Rs. 2.92	Rs. 2.82	Rs. 2.94	Rs. 2.99

RELIEF ON GREEN TEA

In order to provide relief to the producers of green tea, the Government of India has decided to reduce the Central Excise duty on green tea produced in certain areas. The green tea produced in these areas will pay duty at 10 naye paise per kilogram instead of at 15 naye paise. The revised excise duty is applicable to Zone I as listed in Central Excise Tariff.

WOOL PRODUCTION

A new programme to improve sheep breeding and increase the production of wool in the country from 70 to 80 million lbs is being sponsored by the Union Ministry of Food and Agriculture. The programme includes the establishment of a full-fledged institute to undertake research in all branches

of wool industry. Large-scale wool grading centres are also being set up in Rajasthan to handle about 6 million lbs. of wool. To meet the requirements of trained personnel, a training school in wool grading was started at Jodhpur early this year under the guidance of specialists from Australia. The new grading facilities are expected to make available 10 to 12 million lbs. of quality wool, involving considerable saving in foreign exchange. There are over 40 million sheep in the country which produce about 70 million lbs. of wool every year. Besides, they yield over 400 million lbs. of meat and Rs. 8 to 9 crores worth of raw leather.

JUTE TRADE AT PEAK

The performance in terms of production and exports of Jute Industry touched a new high during the period April-September, 1963. The production of jute goods registered a record at 8.3 lakh tonnes during this period compared to 6.04 lakh tonnes during the corresponding period of 1962-63. The industry is working to its full capacity and is also increasing its spinning and weaving capacity.

Exports of jute goods touched a record figure of Rs. 82 crores in the first six months of 1963-64 compared to Rs. 71 crores during the same period in 1962-63. This performance is likely to be improved during the second half of the financial year 1963-64.

PROTECTION CONTINUED

The Government of India has accepted the recommendation of the Tariff Commission to continue protection to the Industry manufacturing ACSR (aluminium conductor steel reinforced) and AAC (all aluminium conductors) for a further period of three years ending December 31, 1966, at a reduced rate of protective duty of 25 per cent 'ad valorem' plus the usual surcharge. The Government has also accepted the recommendation of the Commission for continuing the existing policy of allowing imports of EC grade aluminium ingots/bars/rods for ACSR and AAC at the concessional duty of 15 per cent 'ad valorem' plus Rs. 360 per tonne.

The protection granted to the Sericulture Industry is to be continued, as recommended by the Tariff Commission, for a further period of three years up to the 31st December, 1966 at the existing rate of protective duty.

Tariff protection for the Cotton Textile Machinery Industry (Spinning Ring Frames, Spindles, Spinning Rings, Fluted Rollers and Automatic Looms), has been extended for a further period of three years, i.e., till 31st December, 1966 at the rate of protective duty of 10 per cent ad valorem. In accepting the Tariff Commission's recommendation to this effect, the Government has taken note of the view expressed by that body that it would not be desirable to equalise at the higher level the present rates of duty levied on inserts used in ring frames and doubling frames (a non-protected item).

PRODUCTION OF AGRICULTURAL TRACTORS

The Development Council on Automobile industry has recommended to the Government to set up a separate Panel to look after the development of agricultural tractors, tractor-drawn agricultural implements and earthmoving equipment manufacturing industries.

At present four firms with a combined capacity of 1,000 numbers of agricultural tractors have been licensed and the production has started. The production achieved in 1962 was 1,627 numbers and in 1963 up to September 1,032 numbers. The target of production set for this industry is 10,000 numbers per annum by 1965-66.

Earthmoving equipment consist of the following major items, namely, Crawler Tractors and attachments thereof,

Motorised Scrapers, Motorised Dumpers, Bulldozers and Shovels and Draglines.

Crawler Tractors are presently being manufactured by the Ministry of Defence in the Ordnance factories and shovels by two establishments in the private sector, namely, Messrs. Tata Engineering and Locomotive Co. Ltd. and Messrs. Hindustan Motors. Messrs. Hindustan Motors are also licensed for the manufacture of tractor attachments.

Following are the firms and their capacities for the manufacture of agricultural tractors:

Firm	Capacity Licensed per annum	Foreign Collaborator.
M/s. Eicher Tractor Corp'n. India Ltd., Faridabad.	1,000 Nos.	Gebr. Eicher Traktoren Fabrik, West Germany.
M/s. Tractor & Bulldozers Pvt. Ltd., Bombay.	1,000 Nos.	Czechoslovakia 1. Techno Export 2. Motokon, Pasague
M/s. Tractor & Farm Equipment Ltd., Madras.	3,000 Nos. 500 Nos.	Massey Ferguson, U.K.
M/s. International Tractor Co. of India Ltd., Bombay.	3,500 Nos.	International Harvester, U.S.A.
M/s. Ghaziabad Engg. Co. Ghaziabad.	3,500 Nos.	Renault, France.

Tillers (Agricultural Implements)

M/s. East Asiatic Co. (1) Ltd., Bombay	24,000 Nos.	Landmaster Ltd., U.K.
M/s. Indian Landsberg Implements Corp'n. (P) Ltd., Faridabad.	500/3,500 Nos.	Bajeresce Pflugfabric GMBH, Landsber, Germany.
M/s. Krishi Engines, Hyderabad.	53,000 Nos.	M/s. AKITO of Japan.
M/s. Escorts Ltd., New Delhi.	9,000 Nos.	NIL.
M/s. Marshal Sons & Co. (1) Ltd., Calcutta	200 Nos. 400 Nos.	1. Rubery Ocoen & Co. Ltd., U.K. 2. E. V. Twose Ltd., UK 3. John Wilders, UK.
M/s. Agricultural Discs. Ltd., Bombay (L.R. PATEL).	100,000 Nos.	W.A. Tyzaele & Co. Ltd., UK.
M/s. The Housing and General Finance Ltd., Delhi.	40,000 Nos.	NIL.

Heavy Earth Moving Equipment

M/s. Hindustan Motors Ltd., Calcutta.	Not assessed	Caterpillar Tractor Co. Ohio, USA.
M/s. Tata Engg. & Loco Co. Ltd., Jamshedpur.	100 Nos.	Harnischfoger Corp'n. USA.
M/s. Tractors and Bulldozers Pvt. Ltd., Bombay.	60 units	M/s. Vickers Armstrong Ltd., UK.
M/s. Tractor Engineers Pvt. Ltd., Bombay.	For 2,000 sets of tractors	M/s. Tractors Spares Pvt. Ltd., U.K.
M/s. Trackparts of India, Kanpur.	For 400 sets of tractors	M/s. Track Parts Ltd., UK.
M/s. Automobile & Agriculture Industries Corp'n., Bombay.		NIL.
M/s. Heavy Engg. Corp'n. Ltd., Ranchi (Bihar).	30 Nos. (4,950 tons)	NIL

BLUE STAR'S SERVICE TO INDUSTRY — 3

INDIA'S MODERN INDUSTRY DEPENDS ON ADVANCED INSTRUMENTATION

With new times come new ways. India's rapid industrial growth has created new and varied industries, requiring modern methods of automatic process control. Industries like steel and metals, petroleum and petro-chemicals, fertilizers and heavy chemicals, textiles and synthetic fibres, glass and ceramics, sugar and paper are dependent for process control on Honeywell instrumentation. ■ All over the country, in a great many industries, Blue Star-engineered Honeywell instrumentation is helping to step up production, reduce waste, improve quality and increase efficiency. ■ This is one of the many ways Blue Star serves Indian industry.

THIS IS BLUE STAR

Manufacturing: Water Coolers □ Packaged Air Conditioners □ Commercial Refrigeration Equipment □ Engineering & Contracting: Industrial Ventilation and Humidification □ Air Conditioning and Refrigeration—WORTHINGTON (U.S.A.) □ Instrumentation—HONEYWELL (U.S.A.) □ Distribution: □ Instruments for research, education, industry—PERKIN-ELMER, VARIAN (U.S.A.) □ Heavy Electrical Equipment for power projects—SCHNEIDER-WESTINGHOUSE (France) □ Pumps for all purposes—SIGMUND (U.K.) □ Material Testing Machines—VEB WERKSTOFFPRÜFMASCHINEN (G.D.R.) □ Business Machines—BÜROMASCHINEN-EXPORT (G.D.R.)

Company Affairs

AIR-INDIA'S DIVIDEND

THE MINISTER for Transport, Mr. Raj Bahadur, paid a deserved tribute to Air-India's progress when its chairman, Mr. J. R. D. Tata presented him last week a cheque for Rs. 66,69,725 representing the company's maiden dividend at five per cent on the equity capital contributed by the Government. Mr. Raj Bahadur spoke of the Airline's "proud and brilliant record of safety, efficiency and services in the highly competitive field of international air transport which has brought credit to the country." While congratulating Mr. J. R. D. Tata, under whose able stewardship the Air-India had shown this excellent performance, the Transport Minister said: "In our country you have had a unique and proud record in fostering and guiding the growth of civil air transport, both domestic and international, from the very inception 31 years ago and the Government of India deeply appreciates your magnificent contribution in this field".

Mr. Tata, while presenting the cheque, outlined the working of the Corporation and added that the initiative to pay this dividend had come from its board of directors who felt that, in view of the strong financial position of the Corporation, the time had come when the Government should get a return on its substantial investment in the Corporation. The Government, he added, had followed a generous policy towards Air-India and given it not only the necessary financial support but also the freedom of action and decision which was so necessary in the conduct of a commercial organisation. He felt that Air-India provided perhaps the best instance in the country of the correct relationship between a public sector enterprise and the Government. This policy has indeed been justified by the fact that during these ten years this Corporation has made remarkable progress. Revenue had grown from Rs. 3.5 crores to Rs. 24.5 crores and profits from Rs. 25 lakhs to Rs. 3.5 crores. He also disclosed that Air-India would undoubtedly break its own record of profit in the next year.

Mr. Tata pointed out that Air-India had been able to reduce its costs particularly since the Boeing had been introduced and he added that the Corporation had reached a stage of self-sustained growth when it could finance the bulk of its requirements of expansion out of its own profits and depreciation allocations, not only in rupees but also in foreign exchange. It is, indeed, gratifying that Air-India can pay for its purchases of additional aircraft at a time when the country is facing considerable difficulties on account of foreign exchange shortage.

BOAC'S PROFITS

British Overseas Airways Corporation expects to show a £3-million profit during 1963, which will be sufficient to cover all its operating costs as well as full interest on its working capital. Mr. Donald Erskine Crum, the Corporation's Manager in India, indicated that airline's business this year had shown a sharp recovery and was already running about £4-million ahead of the corresponding period last year. He disclosed that increase in business during the next year may be much more especially if B.O.A.C. is able to introduce fare cuts on the North Atlantic. The Corporation also has plans for the introduction of the Vickers VC 10 jetliners on its world routes early in 1964, when services will open to Africa also. Mr. Crum hoped that the introduction of VC 10 would also be a potent step towards increased tourist traffic, particularly to India, where it was likely to be introduced next autumn. B.O.A.C. had also proposals for increasing the flow of long-distance holiday-makers in close co-ordination with various local tourist authorities and agencies.

QANTAS EMPIRE AIRLINES

Qantas Empire Airlines Limited has shown a brilliant record for the year ended March 31, 1963, when it earned a net profit of £1,406,246 against a comparatively meagre sum of £408,817 last year. This is the first year in the company's history when its revenue has exceeded £40 million and traffic revenue alone has been 20 per cent higher than last year. Apart from other factors, a growing world-wide preference for economy class travel was one reason that accounted for this increased passenger revenue. Moreover, the operation for the first full year of the enlarged fleet of eleven Boeing V-jets permitted faster schedules with increased frequencies on main routes, and fewer stops on certain services.

HINDUSTAN MOTORS

The Commonwealth Development Finance Co. Ltd., is to make a sterling loan of £4,50,000 to Hindustan Motors Ltd., as a contribution towards the total estimated cost of £10,500,000 required for the expansion of the company's factory at Uttarpara, near Calcutta. The company at present manufactures Hindustan Ambassador cars and Bedford trucks in technical collaboration with British Motor Corporation Ltd., and Vauxhall Motors Ltd., respectively. The proposed expansion is intended to increase indigenously-manufactured components of Hindustan Ambassadors and Bedfords to about 90 per cent in each case.

SAKTHI SUGARS

Sakthi Sugars Limited has received quite favourable response in the market in respect of its public issue of Rs. 39.89 lakhs made up of 39,896 equity shares of Rs. 100 each. It is announced that the issue was fully subscribed before November 18, although the subscription list was to remain open till November 20.

BOMBAY WIRE ROPES

Bombay Wire Ropes Ltd. is offering for public subscription Rs. 27.50 lakhs in equity shares of Rs. 10 each. The subscription list will open on December 5 and close on December 14, but not earlier than December 9. The entire issue has been underwritten. The authorised capital is Rs. 2 crores and the issued capital is Rs. 55 lakhs out of which the promoters have subscribed to the extent of Rs. 10.03 lakhs. A further amount of Rs. 17.47 lakhs will be taken up by the directors and their friends inclusive of Rs. 5 lakhs reserved for firm allotment to the Life Insurance Corporation of India.

The company will undertake the manufacture of steel wire ropes in technical collaboration with Messrs. Kobe Steel Works Ltd. and Messrs. Asahi Wire Rope Manufacturing Company Ltd. of Japan. The licenced capacity is 3,000 tons per annum on double shift basis. The factory, which will be situated near Bombay, is expected to go into production by the end of 1964. The total capital outlay of the project is estimated at Rs. 106 lakhs which is proposed to be met by the present issue, a term loan of Rs. 30 lakhs and the balance from deposits from sole selling agents. The ICICI has agreed to provide a rupee loan of Rs. 30 lakhs which is repayable in 15 half yearly instalments starting from 1966. The necessary plant and machinery will be obtained on yen credit. The factory has been so designed as to allow expansion with a few additions to plant and machinery.

UNITED CARBON

United Carbon India Ltd. is offering for public subscription Rs. 48.61 lakhs in equity shares of Rs. 100 each. The subscription list will open on December 2, and close on December 12, but not before December 4. The authorised capital

is Rs. three crores. The project will require a capital outlay of Rs. 2.82 crores — Rs. 9.56 lakhs for land, Rs. 47.80 lakhs for imported plant and equipment, Rs. 1.43 crores for building and equipment to be purchased locally, Rs. 38.24 crores for preliminary and pre-operative expenses, Rs. 23.90 lakhs for working capital and Rs. 19.12 lakhs by way of provision for contingencies. This expenditure will be financed partly by issue of equity capital of Rs. 155.35 lakhs and partly from borrowings of the order of Rs. 140 lakhs.

Of the total capital of Rs. 155.35 lakhs, the United Carbon Company of the U.S.A., will subscribe for shares of the value of Rs. 47.80 lakhs in cash. They will be allowed free shares of the value of Rs. 14.34 lakhs in consideration of the know-how to be provided by them. The promoters and their friends have taken up shares of the value of Rs. 46.61 lakhs and the remaining shares worth Rs. 46.61 lakhs are now offered for public subscription.

This company has been floated to take up the manufacture of furnace type carbon black with financial and technical collaboration of United Carbon Company of the U.S.A. Its factory at Mulund in Bombay, is expected to go into production in the first quarter of 1965 with an initial capacity of 13,600 tons per annum. The foreign collaborators have agreed to design and erect the company's plant in co-operation with Brown and Root, leading U.S. contractors.

DEVIDAYAL CABLES

Devidayal Cable Industries Limited proposes to enter the capital market early in January 1964 with a public offer of Rs. 26.00 lakhs divided into 250,000 equity shares and 10,000 cumulative redeemable preference shares (9.5 per cent) both of Rs. 10 each. The authorised capital is Rs. 125 lakhs and subscribed and paid-up capital is Rs. 23.10 lakhs — Rs. 21.60 lakhs in equity shares and Rs. 1.50 lakhs in preference shares. The company will now make an issue of Rs. 37.50 lakhs — Rs. 27.50 lakhs in equity shares and Rs. 10 lakhs in preference shares. Of this, preference shares worth Rs. 7 lakhs have been agreed to be subscribed by LIC and Rs. 2 lakhs by Oriental Fire and General Insurance Company Limited against their underwriting commitments. The directors, their friends and associates will take up equity shares of the value of Rs. 2.50 lakhs and the balance of the issue will be offered for public subscription.

The company was incorporated in January 1953 as a private company and later on converted into a public limited company on October 31, 1963. It presently manufactures different types of winding wires and cables and has recently obtained licences for expansion of its present activities and taking up new items. It has been licensed to manufacture 5,000 tons of steel and alloy steel wires, high tensile wires and also new types of wires called glass insulated wires. It has also been licensed for the expansion of super synthetic enamelled wires and strips and DPC strips. The expansion project is estimated to cost Rs. 96.99 lakhs which will be financed by the new issue of Rs. 37.50 lakhs, loan from banks to the extent of Rs. 53.49 lakhs and retained earnings of Rs. 6 lakhs.

WANDLESIDE NATIONAL

Wandleside National Conductors Ltd., has offered for sale at par 6,000 equity shares of Rs. 100 each. The company had made a rights issue of 10,000 equity shares in the ratio of one share for every share held in March, 1962. The present offer represents the unabsorbed portion of that issue. The company, which commenced commercial production in December 1962, has reported a steady progress in its operations, with the output for the year ended September 30, 1963 estimated at about 60 tons of insulated conductors. The turnover is estimated at Rs. 24 lakhs and the gross profit at Rs. 3.50

lakhs. The company plans to increase its annual output to 100 tons by September, 1964, which will raise its turnover to Rs. 50 lakhs and its gross profit to Rs. 10 lakhs. The tax liability is likely to be relatively small on account of the benefit of initial depreciation and development rebate. The company which has a collaboration agreement with Wandleside Cable Works Ltd., London, had made this rights issue to finance its expansion programme.

JAYANT PAPER

Jayant Paper Mill Ltd. proposes to expand its production capacity to 30 tons per day for which it has applied to the Government. The directors of the company are negotiating with sugar mills for the purchase of bagasse to be used as additional raw material. The existing plant was commissioned in October, 1962 which has already achieved its full production capacity. The ground wood pulping plant has been received at the factory site and its installation will commence shortly. When it goes into full production, it will supply about five tons of ground wood pulp per day for the use of its paper mill. The company requires additional funds for this expansion programmes and for that it has raised its borrowing limit to Rs. 30 lakhs. The loan of Rs. 10 lakhs granted to the company by the Gujarat State Financial Corporation has been fully utilized. In the annual report of the company for the year ended June 30, 1963, the directors have observed that the paper plant of the company is working satisfactorily and sales of paper for the year have amounted to Rs. 36.19 lakhs. It has earned a gross profit of Rs. 7.13 lakhs out of which Rs. 3.57 lakhs have been separated towards depreciation and Rs. 3.42 lakhs for development rebate reserve.

SIRPUR PAPER

Sirpur Paper Mills Ltd. has shown less favourable results for the year ended June 30, 1963, and, consequently, the directors have decided to cut the dividend from 8.5 per cent to 5 per cent, less tax. This is attributed to the setback in production from 31,700 tons to about 24,000 tons following the closure of the factory for more than three months due to the strike by the labour, apart from the rise in production costs without a corresponding increase in the selling prices of paper. Net profit for the year was around Rs. 2.94 lakhs against Rs. 37.87 lakhs in the previous year. The provision for depreciation is Rs. 32.46 lakhs and for development rebate reserve Rs. 3 lakhs. Even for a reduced dividend the directors had to transfer Rs. 5 lakhs from contingency reserve and Rs. 11 lakhs from general reserve, apart from bringing in the surplus of Rs. 1.25 lakhs from the previous year. The directors have added that during the current year the company has shown satisfactory results. A five-year agreement between the management and the labour union has been signed and all the pending disputes have been settled. Plans for the modernisation and expansion of the mill as well as negotiations for the necessary foreign exchange are in progress.

MYSORE KIRLOSKAR

During the year ended June 30, 1963, Mysore Kirloskar Ltd. has registered a profit of Rs. 13.04 lakhs after providing for taxation, depreciation, and development rebate. The directors have proposed the payment of dividend, subject to deduction of tax, at the rate of 8 per cent per annum which will absorb Rs. one lakh. A sum of Rs. 5.75 lakhs is to be separated towards dividend reserve, Rs. 1.05 lakhs towards habilitation reserve, Rs. two lakhs towards replacement and reserve and Rs. 1.25 lakhs towards debt redemption reserve. The directors have further recommended the payment of dividend, subject to deduction of tax, at the rate of 10 per cent per annum on the amount paid-up on the equity shares as on June 30, 1963, out of dividend reserve.

The company has continued to make good progress in the

manufacture of various machine tools. The company, however, could not fulfil its proposed manufacture of No. 4 Capastan lathes and 7B Combination Turret lathes on account of the delay in receiving the imported components. In addition to the existing manufacture of these items, the company has already planned to take up the manufacture of 2D Capastan and 9C Combination Turret lathes. It also proposes to take up the manufacture of automatic chucking lathes and other types of machine tools for which negotiations are in progress.

CAPITAL ISSUES

Six companies have been authorised to raise capital aggregating Rs. 4.39 crores. The consent of the Controller of Capital Issues is valid for 12 months.

Tractors & Farm Equipment Limited, Madras, is to issue further capital of Rs. 100 lakhs divided into 10 lakh equity shares of Rs. 10 each, for cash at par. The new capital will be subscribed as 51 per cent by Simpson & Company Ltd., Madras and 49 per cent by Massey-Ferguson Ltd., Canada, and/or their subsidiaries.

General Tyres Limited, Calcutta, is issuing capital of Rs. 80 lakhs in eight lakh equity shares of Rs. 10 each for cash at par to the existing shareholders.

The Patna Electric Supply Company Limited, Calcutta, is to issue capital of Rs. 35,07,380 divided into 3,50,738 equity shares of Rs. 10 each for cash at par.

Guest, Keen, Williams Limited, Calcutta, is to issue Rs. 150 lakhs in 7 per cent debenture stock, 1973-78 in units of Rs. 1000 each.

Mafatlal Fine Spinning and Manufacturing Company Ltd., Bombay, is issuing capital of Rs. 29 lakhs divided into 29,000 equity shares of Rs. 100 each for cash at a premium of Rs. 275 per share. Out of this shares of the value of Rs. 14.50 lakhs will be issued to the existing shareholders on right basis and the remaining Rs. 14.50 lakhs to the public through prospectus.

Premier Meters and Instruments Manufacturing Company Ltd., Bombay, a new company, is to issue capital of Rs. 45 lakhs for cash at par consisting of Rs. 35 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 9.5 per cent cumulative redeemable preference shares of Rs. 100 each. Of the above the entire preference shares and equity shares of the value of Rs. 17.5 lakhs will be offered to the public by prospectus.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951 — during the fortnight ending 16th November, 1963. The list contains the names and addresses of the licensees, the articles of manufacture and the annual installed capacity.

PRODUCTS OF IRON AND STEEL

Beegee Corporation Pvt. Ltd., 25, Factory Area, Patiala (Punjab) — (1) Lattice Fabrication posts, Light structurals, Sub-Station Structural and Transmission Towers. (2) Gates and gearings and control gates for irrigation system. (The capacity to be fixed later). **Hakimrai Jaichand, United Bank of India Buldg., 6th Floor, Sir P. M. Road, Fort Bombay-1 (Maharashtra)** — Steel Forgings 2,400 tons. **Jonas Woodhead & Sons (India) Ltd., 47, Velachery Road, Post Box No. 2628, Madras-2 (Madras)** — Suspension Springs, including centre-less ground and shotpeened coiled springs for Railway rolling stock 2,400 tons per annum. (Capacity for leaf springs for automobiles not to exceed 1,260 tons).

COAL

Equitable Coal Co. Ltd., 2, Fairlie Place, Calcutta (P.O.

Jharia, Distt. Dhanbad, Bihar) — Coal 250,000 tonnes. **Goswami Neinong Coal and Transport Co. (P) Ltd., 'Ananda-Bhavan' Laban, Shillong (Pargana Myllen Sienship, U.K. and J. Hills, Shillong, Assam)** — Coal: 1st year — 12,000; 2nd year — 14,000; 3rd year — 18,000; 4th year — 20,000; 5th year — 25,000 tonnes.

MINERAL OILS

Cochin Refineries Ltd., 72/48, Chanakyapuri, New Delhi (Ernakulam, Kerala) (monthly capacity) —

Motor spirit	—	31,000 tonnes
Kerosene	—	37,500 "
Diesel Fuel	..	47,000 "
Furnace Oil	..	55,500 "
Asphalt	..	13,800 "

INTERNAL COMBUSTION ENGINES

Bimetal Bearings Ltd., Huzur Gardens, Sembiam, Madras-11 (Madras) — Bimetallic strips for manufacture of Thinwall Engine bearings 1,500,000 ft. strips.

ELECTRICAL EQUIPMENTS

Electric Construction and Equipment Private Ltd., 9, Kaliprasanna Singhee Road, Calcutta-2 (Sonapat or Bahadurgarh, Punjab) — (i) Transformers up to 33 KVA, 150,000 KVA. (ii) L.T. Oil Circuit breakers or Air Circuit breakers upto 2,000 AMP, 2,000 numbers.

ELECTRICAL MOTORS

Jyoti Ltd., Industrial Area, P.O. Chemical Industries, Baroda (Gujarat) — (i) A.C. Electric Motors (upto 450 HP only) 133,200 H.P. (ii) D.C. Electric Machines 12,000 KW (iii) A.C. Generators upto 3,000 KW only 66,000 KW.

ELECTRICAL CABLES AND WIRES

Hindustan Wire Products Ltd., Factory Area, Patiala (Punjab) — Enamelled Copper Wire 500 tons. **Electric Construction and Equipment Co. Ltd., 9, Kaliprasanna Singhee Road, Calcutta-2 (West Bengal)** — Paper etc. covered wires and strips — 240 tons. **Central Magnet Wire Products Private Ltd., C/o Shri K. D. Kapadia, 35, Vithaldas Road, Bombay-2. (Bhopal or Ratlam, Madhya Pradesh)** — (1) Enamelled copper wire and strips 200 tons. (2) Paper and Cotton covered wires and strips 300 tons. **Everlite Insulating Industries Private Ltd., 25 Swallow Lane, Calcutta-1 (West Bengal)** — Enamelled copper wire 120 tons. **Ajit Industries, 35, Vithal Das Road, Bombay-2. (Andheri, Bombay-59, Maharashtra)** — Enamelled Copper wires 100 tons. **The Premier Cable Co. Ltd., M-3, South Extension Part 1, Ring Road, New Delhi, (Kerala)** — (1) Enamelled copper wire 400 tons. (2) Paper cotton covered wires and strips 300 tons. **Assam Aluminium Cables Industries, Athagam, Gauhati (Assam)** — Enamelled copper wires 300 tons.

AUTOMOBILES

Prestolite of India Ltd., M-132, Connaught Circus, New Delhi-1 (Faridabad, Punjab) — Wind screen wiper assembly (consisting of a set of one motor, 2 arms and 2 blades) 50,000 sets. **Distributors (complete) 50,000 numbers. Bajaj Tempo Ltd., 134, Annie Beasant Road, Worli, Bombay-18 (Maharashtra)** — Tempo Hanseat, 3-Wheelers, 3,000 numbers. **Mercantile and Industrial Development Co. Pvt. Ltd., National House, 6, Tulloch Road, Apollo Bunder, Bombay-1 (Maharashtra)** — Aviation Refueller (capacity to be fixed on the basis of actual production).

TEXTILE MACHINERY

Lakshmi Card Clothing Manufacturing Co. (P) Ltd., Avannashi Road, Pappanaickenpalayam, Coimbatore-1 (Palladam Taluk, Madras) — Woollen Card clothing 250,000 meters. **Ahmedabad Victoria Iron Works Co. Ltd., Dudeswar Road, Ahmedabad (Gujarat)** — (1) Calender machines of 3, 5, 7 and

bowls, 6 units. (2) Jet system hot air stentering machines 5 machines. (3) Fully Automatic Jiggers, 50 units.

CHEMICAL MACHINERY

Andhra Foundry and Machine Co. Ltd., 28, Sarojini Devi Road, Secunderabad-26 (Andhra Pradesh) — Rubber Lined Equipment Rs.12 lakhs worth.

CONVEYING EQUIPMENT

TAK Machinery Ltd., Janmabhoomi Bhavan, Ghoga Street, Fort, Bombay-1 (Ambernath, Maharashtra) — Electric overhead Travelling cranes 72 numbers.

SIZE SEPARATION UNITS

K. G. Khosla & Co. (Private) Ltd., 1, Deshbandhu Gupta Road, New Delhi-1 (Punjab) — Automatic Centrifugal Flexible clutch coupling 3,000 numbers.

GRINDING WHEELS AND ABRASSIVES

Government Procelain Factory, P.B. No. 4, Science Institute Post, Bangalore-12 (Mysore) — (1) Refractories 1,000 tons. (2) Abrasive grains 400 tons. (3) Grinding wheels 570 tons.

MACHINE TOOLS

India Supplies Engineering Works Ltd., Behari Niwas, Kanpur (Uttar Pradesh) — (1) Glass tube cutting machines 12 numbers. (2) Flare machines 12 numbers. (3) Stem machines, 12 numbers. (4) Sealing machines, 12 numbers. (5) Capping machines, 12 numbers. Premraj Ganpatraaj & Co. (P) Ltd., 211, New Cloth Market, Ahmedabad-2. (Proposed name: Wire Machines Private Ltd.) (Gujarat) — High speed wire stranding machine, 12 numbers. High speed continuous wire drawing machines, 12 numbers. Shri H. R. Gajria, 3, Hari Niwas, C. Road, Churchgate, Bombay-1. Proposed name: Gajria Electric and Industrial Company Ltd., (Maharashtra) — (1) Electric hand tools like, drilling machines of various sizes, portable hand grinders, sanders etc, 24,000 Nos. (2) Bench type lathes, milling machines and tools and cutter grinders worth Rs. 900,000. (3) Dies, jigs and fixtures worth Rs. 500,000.

HAND TOOLS AND SMALL TOOLS

Govind & Company, 45/90, Cheeper Mohal, 55/108, General Ganj, Kanpur. Proposed name: M/s. Govind Electric Works (Uttar Pradesh) — Portable Electric Tools like electric drill, grinder screw drivers, wrenches and blowers 18,000 Nos. p.a. (Manufacture of fractional horse power motors to the extent required as components of built in tools also allowed). S. S. Miranda Private Ltd., 49, Champsi Bhimji Road, Mount Road, Mazagaon Bombay-10 (Ishwarbhai Patel Estate, Goergaon, Bombay, Maharashtra) — Hard metal typed tools, drills, cutters and dies, 50,000 Nos. J. K. Engineering Files, P.O. Jekegram, Thana (Maharashtra) — (Substantial Expansion) (1) Engineers Steel Files and Saw files 40,000 dozens. (2) Rasps: 5,000 dozens. (New Articles) Milled Cut Files (curved and straight tooth) 3,000 dozens.

INORGANIC HEAVY CHEMICALS

Shri Prakash Dayaram Vaswani, Attorney of Vaswani (India) Pvt. Ltd., 496, Kalvadevi Road, Bombay. Proposed name: M/s. Adhesive Tapes Private Ltd., (Thana, Dist. Surat), Maharashtra — (1) Black cloth insulating tapes or light duty packaging tapes or mask guard 50,000 Kgs. (2) Medical adhesive tapes or bookbinding tapes 30,000 meters (3) Rigid PVC tapes or Cellophane tapes or PVC Insulating tapes 300,000 meters. (4) Heavy duty packaging tapes 30,000 Kgs.

COTTON TEXTILES

Durga Cotton Spinning and Weaving Mills Ltd., 135, Bip-labi Rashbehari Bose Road, (Canning St.) Calcutta-1 (West Bengal) — 2,000 spindles for the manufacture of cotton yarn. Podar Mills Ltd., Podar Park, Statute Circle, Jaipur (Rajasthan) — 13,000 spindles for manufacture of cotton yarn. Ramchand Shrinarayan, 155, Narayandhuru Street, Bombay-3. Proposed name: Madhya Pradesh Spinning Mills Ltd., (Datia,

Madhya Pradesh) — 12,000 spindles for manufacture of cotton yarn.

SUGAR

Sakthi Sugars Ltd., Sakthi Nilayam, Pollachi, Distt. Coimbatore (Appakudal, Bhavani Taluk, Distt. Coimbatore) Madras — Sugar cane crushing 1,250 tons per day. The Doaba Co-operative Sugar Mills Ltd., Nawansharh, Distt. Jullundur (Punjab) — Sugar cane crushing 1,000 tons per day.

ASBESTOS CEMENT

Asbestos Packing & Mfg. Co., 15A, Bruce Street, Fort, Bombay-1 (Maharashtra) — (1) Asbestos packings mattresses and mantle twine 120 tons. (2) Asbestos Mill Boards (New Article) 420 tons. (3) Asbestos Jointing Sheets & Gaskets (New Articles) 360 tons.

MINING MACHINERY

Octavious Steel Co. Ltd., 14, Old Court House St., Calcutta-1. Proposed name: Becorit (India) Ltd., (Sijua, Distt. Dhanbad, Bihar) — (1) Becorit Mechanical Pit Props 24,000 numbers. (2) Spare parts and accessories for (1) above 2,400 numbers. (3) Greetschel Steel Link Proof Bars 24,000 numbers.

MACHINE TOOLS

Utkal Machinery Ltd., Kansabahal, Near Rourkela, P.O. Box 47, Rourkela (Kansabahal, Orissa) — Presses — 40 to 100 tons capacity, 50 numbers. Mysore Kirloskar Ltd., Yantapur P.O., Harihar (Yantrapur, Mysore) — Automatic chucking lathes of maximum swing capacity 8½" to 16½" (inclusive of spares and components) 60 numbers.

CHEMICALS

Martin and Harris (Private) Ltd., Mercantile Buildings, Lail Bazar, Calcutta-1 (West Bengal) — Ethyl Oleate 1,800 litres. Kusum Products Ltd., 9, Brabourne Road, Calcutta-1 (Rishra, West Bengal) — Fatty Acids 4,500 tonnes.

DRUGS AND PHARMACEUTICALS

Burroughs Wellcome and Co. (India) Private Ltd., 16, Bank Street, Post Box No. 200, Bombay (Maharashtra) — Pethidine Hydrochloride 480 Kgs. Methadone Hydrochloride 12 Kgs.

COTTON TEXTILES

Sree Visalakshi Mills Ltd., Villamgudi, Tallakulam P.O., Madurai (Madras) — 246 spindles for manufacture of cotton waste yarn. Madan Industries Ltd., Hastinapur, Distt. Meerut (Uttar Pradesh) — 25,000 spindles for manufacture of cotton yarn.

CHANGE IN NAMES (Owners or Undertaking)

During the fortnight ending 16th November, 1963
(Information pertains to particular licences)

From name of the original undertaking: M/s. Shree Madanpur Coal Co. Ltd., P.O. Ondal, Burdwan Distt. to name of the new undertaking/owner: M/s. Ghanshyam Coal Industries Private Ltd., Calcutta. From M/s. Laxman Industries Ltd., New Delhi to M/s. Sylvania & Laxman Ltd., New Delhi.

LICENCES REVOKED OR SURRENDERED

During the fortnight ending 16th November, 1963
(Information pertains to particular licences)

Name of the licensee: Shri B. M. Bajoria, Calcutta. M/s. Krishna Paper Mills, Sakrigali Ghat — Printing and Writing paper and pulp. M/s. Burhanpur Tapti Mills Ltd., Burhanpur — Art silk fabrics.

M/s. Shakti International, Bombay — Transmission Towers and Steel structurals including other items like industrial machinery.

CHAIRMAN'S SPEECH

LIFE INSURANCE CORPORATION OF INDIA

*Statement by Shri B. K. Kaul, ICS,
Chairman, at the Ninetieth Meeting of
the Life Insurance Corporation of India
held in Bombay on 25th November 1963.*

The draft of the Annual Report and the Statement of Accounts for the period 1st January, 1962 to 31st March, 1963 have been circulated and are now before us for our consideration.

NEW BUSINESS:

During the accounting period our new business amounted to Rs. 746 crores under 17.68 lakhs policies as against Rs. 609 crores under 14.70 lakhs policies in the year 1961. As the present accounting period comprised of 15 months as against 12 months in the previous year, a direct comparison of the figures is not possible. However, the new business performance during the accounting period may be evaluated by a comparison of the business completed during the year 1st April, 1962 to 31st March, 1963 with that completed in the year 1st April 1961 to 31st March 1962. In that year the Corporation completed a business of Rs. 617 crores; and now for the 12 months period 1st April, 1962 to 31st March, 1963, it has completed a new business of Rs. 708 crores. The progress may be considered satisfactory.

It is gratifying to note that as many as 12.22 lakhs policies issued during the accounting period were taken by persons who were insuring for the first time. This shows the growing insurance consciousness amongst our people and also the effort made by our field force to spread the message of insurance to people who had not so far availed of this benefit.

RURAL DEVELOPMENT:

Out of the total new policies, as many as 6.77 lakh policies assuring Rs. 233.45 crores were issued to people in rural areas. Thus, about two-fifths of our total policies and about one-third of the total sums assured were written in the rural areas.

As a result of a recent amendment to the Insurance Rules 1939, it will now be possible for us to appoint Co-operative Societies and Panchayats as our agents. Depending upon the co-operation that we can get from this source this should give a fillip to rural business.

The main difficulty in regard to rural business is lack of facilities for collection of premiums. We had launched early in 1962 a pilot scheme in the Jaipur District of Rajasthan for collection of premiums through post offices. Efforts are being made to extend this scheme to other areas, where no collection facilities are available, in consultation with the postal authorities. We have also made arrangements with

the Government of Madhya Pradesh for Block Development Offices to collect life insurance premium at their headquarters.

We now have an office in each of 253 out of the 312 districts and in 5 out of the 11 Union Territories in India. In 1963-64, we proposed to open offices in 2 more districts. Besides these offices, we have development centres in 27 of the remaining districts and in one of the remaining Union Territories. We are proposing to open 16 branches and sub-offices during 1963-64. Our organisation is now spread fairly wide in the country.

NON-MEDICAL BUSINESS:

Paucity of medical examiners for conducting medical examination of the lives to be assured in rural areas has always been a difficulty in extending our activities in the rural areas. This has been got over to a large extent by a wider application of the non-medical scheme.

Under the general scheme, which now extends throughout the country medical examination is waived in respect of proponents within certain age groups, provided the total insurance on their lives does not exceed Rs. 2000. Under this scheme, new business of Rs. 43.44 crores under 2.87 lakhs policies was completed during the accounting period.

Besides the general scheme, we are also insuring without medical examination special categories of persons in civil employment upto a total sum assured of Rs. 5,000 which limit was increased in 1961 to Rs. 10,000 in the case of eligible persons whose ages at entry do not exceed 30 years nearer birthday, and also in the case of category "A-1" of the commissioned officers in the Armed Forces. Under this scheme, new business of Rs. 112.23 crores under 4.25 lakh policies was completed during the accounting period bringing the total non-medical business to Rs. 155.67 crores under 7.13 lakh policies.

FOREIGN BUSINESS:

The political and economic changes in some of the foreign countries where we operate have had their effect on the development of our business. Due to various reasons our progress in Fiji and Malaysia has not been satisfactory, but in U.K. and Aden we have made good progress. We have been able to maintain our position in East Africa and Mauritius. Due to the sustained efforts of our officers and agents, our total foreign business during the accounting period came to

Rs. 11.24 crores under 9,498 policies as against Rs. 10.03 crores under 8,056 policies in the year 1961. Special mention must be made of our London Branch which wrote during the accounting period a new business amounting to over Rs. 2 crores.

BUSINESS IN GOA:

We started transacting new business in Goa, Diu and Daman in 1962 and up to 31st March, 1963, we issued 2,451 policies assuring Rs. 1.28 crores. Policies issued by the erstwhile Portuguese companies to Indian citizens which are now being serviced by the Corporation, will be taken over by us after the Life Insurance Corporation Act is made applicable to these territories.

GROUP INSURANCE & GROUP SUPERANNUATION SCHEMES:

During the accounting period, new business amounting to Rs. 10.49 crores was written under the Group Insurance Schemes, and under the Group Superannuation Schemes, Life Annuities of over Rs. 5 lakhs and Annuity Certain of over Rs. 1 lakh per annum have been granted. This business has made considerable progress in the Western Countries. We can also write larger business under these schemes if we get the necessary support from the employers of the bigger undertakings. These schemes provide the benefits of life insurance at cheaper rates, and with the employer contributing a part of the premiums, the burden on the employees is further reduced. I am sure enlightened employers will come forward in larger numbers to make the benefits of these schemes available to their employees.

BUSINESS IN FORCE:

The total business in force as at 31st March, 1963 was Rs. 3,168 crores under 95 lakhs policies as against Rs. 2,737 crores under 86 lakhs policies at the end of 1961, thus recording an increase of 15.7 per cent during the period.

LAPSE RATIO:

The ratio of net lapses to the mean business in force was 8.1 per cent during the period 1st January, 1962 to 31st March, 1963 as against 7 per cent in 1961 and 6.6 per cent in 1960. The tendency of the net lapse ratio to rise in spite of the efforts put in to improve the quality of business is disquieting. There is hardly anything an insurer can do to prevent lapses attributable to factors beyond its control. At the same time, efforts to improve the quality of business so as to minimize lapses attributable to new business of doubtful quality must be continued to be made; if anything they need to be pursued more vigorously. With this end in view it has been recently decided that a fresh proposal, from any person whose existing policy has lapsed within the preceding 3 years, would be entertained only if such lapsed policy is first revived by him for which purpose special facilities are now given.

VALUATIONS:

During the period under review the Third Biennial Valuation of the Corporation's business as at 31st December, 1961 was completed. As a result thereof Rs. 32.73 crores were allocated to the participating policies; the rates of reversionary bonus allotted to policies issued by the Corporation, as well as policies issued by the erstwhile insurers, were the same as those declared in respect of the first two valuations as at 31st December, 1957 and 31st December, 1959 respectively. The amount allocated to the Central Government was Rs. 1.72 crores.

Consequent upon the change in the accounting year of the Corporation it has been decided to make the Fourth Valuation of the Corporation's business as at 31st March, 1963 and

the same is in progress. It is expected that the results of this valuation would be available early in 1964.

MORTALITY INVESTIGATIONS:

The Corporation has taken on hand a detailed investigation into the mortality of assured lives during the years 1961-64. It is proposed to construct a Life Table, on the basis of the experience during the years 1961-64 of medically examined male lives accepted at ordinary rates under Whole Life and Endowment Assurance plans. It is also proposed to investigate separately the experience of male lives assured under the non-medical scheme, and of the female lives assured with the Corporation.

During the period under review a preliminary investigation into the mortality of assured male lives has been made. A Life Table based upon the experience during 1961 of nine major Integrated Head Office Units, accounting for about three-fourths of the entire business in force of all the insurers prior to nationalisation, has been prepared and incorporated in the Report. The results of this investigation confirm that there has been considerable improvement in the mortality of assured lives in India since the publication of Oriental's 1925-35 experience. The investigation into the mortality experience of lives assured with the Divisional Offices of the Corporation also confirms the same.

PREMIUM RATES:

It has often been suggested that in view of the favourable experience of the Corporation, particularly in regard to mortality, the premium rates should be reduced. I may mention in this connection that when most of the insurers effected substantial reductions in the rates of premium in 1954 a considerable part of the current favourable experience with respect to mortality and interest was anticipated and taken into account. Further, in adopting in 1956 the premium rates of the "Oriental", after further reducing them by Re. 1/- per thousand sum assured or 5 per cent of the premium, whichever was less, the Corporation anticipated economy in expenses. However, in view of the increasing pressures of inflationary forces it would be too much to expect any significant reduction in expenses in the near future.

As regards the mortality basis underlying the premium rates the same can be reviewed only when the low rates of mortality now being experienced are stabilised. This would be known only in 1966, when the results of the detailed investigation into the mortality experience for the years 1961-64 undertaken by the Corporation are expected to become available.

Apart from this it is the general practice among insurers even in foreign countries not to revise frequently the premium rates for with profit policies. The general view of the insurers is that changes in experience as regards mortality, interest and expenses can more equitably be handled under with profit policies by changes in the bonus rates than by changes in the general level of premiums. This is particularly significant when 90 per cent to 95 per cent of the new business is generally under with profit plans as is the case in this country. Moreover, passing on the benefits of favourable experience in the form of reversionary bonuses to the policy-holders rather than reductions in premiums is desirable as an anti-inflationary measure.

PREMIUM AND OTHER INCOME:

The premium for the accounting period amounted to Rs. 150.38 crores against Rs. 112.30 crores in the year 1961.

The total income for the accounting period was of the order of Rs. 185 crores as against Rs. 141 crores in 1961.

interads

LIFE FUND, INVESTMENTS AND TOTAL ASSETS:

The Corporation's Life Fund as at 31st March, 1963 was Rs. 720.70 crores registering a handsome rise of Rs. 91.94 crores after taking into account the adjustments made to the life fund at the beginning of the year.

Of the total investments in India of Rs. 623.64 crores the public sector accounted for 76.8 per cent and the private sector 23.2 per cent. During the year, 58 new issues were underwritten to the extent of an aggregate sum of Rs. 19.53 crores.

The total assets of the Corporation as at 31st March, 1963 amounted to Rs. 785.94 crores as against Rs. 696.31 crores at the end of the year 1961. The net increase in the assets of the Corporation, since its inception, amounted to Rs. 371 crores.

RATE OF INTEREST:

The income from interest, dividends and rents before deduction of income-tax rose to Rs. 39.38 crores during the accounting period from Rs. 27.95 crores in 1961. The gross rate of interest realised on the mean life insurance fund was 4.76 per cent per annum as against 4.80 per cent per annum during the previous year.

The net rate realised also fell from 4.68 per cent in 1960 to 4.08 per cent during the period. The marked fall in the net rate of interest is mainly attributable to the fact that, whereas the tax refund accounted for in the Revenue Account for the year 1961 comprised refund in respect of two years, in the accounting period under review such tax refund comprised refund in respect of one year. Had only one year's refund been received in 1961, the net rate of interest for that year would have been 4.20 per cent as against 4.08 per cent per annum during the period of 15 months ended 31st March, 1963.

Again, dividends on Preference or Ordinary Shares are generally declared once a year. There are comparatively few declarations of dividends during the months of January, February and March. Thus, the total quantum of dividends declared during the period of 15 months, which included, besides the calendar year 1962, the first quarter of 1963, was not proportionately higher. As a result, the yield for the entire period of 15 months was depressed. Since the annual rates of interest, gross as well as net, were derived by adjustment of the respective rates for the 15 months period, the same have shown a fall by comparison with the normal accounting period of one year.

EXPENSES OF MANAGEMENT:

The overall expense ratio of the Corporation for the accounting period is 29.3 per cent as against 28.0 per cent in 1961. The renewal expense ratio, for the period is 14.13 per cent as against 12.42 per cent in 1961. The increase is largely attributable to the addition to the expenses on salaries and allowances due to revision in the salary scales of employees in Classes III and IV with effect from 1st January, 1962 as a result of the settlement with the two Associations representing these employees.

CLAIMS :

Claims for the accounting period inclusive of bonus addition amounted to Rs. 31.40 crores under matured policies and Rs. 12.56 crores under policies becoming claims by death. The total claims for the period amounted to Rs. 43.96 crores as compared with Rs. 34.11 crores in 1961. Outstanding claims as at 31st March, 1963 amounted to Rs. 13.55 crores as against Rs. 13.93 crores as at 31st December, 1961.

BUILDING ACTIVITIES:

We have on hand construction of a large number of buildings to house our offices and also for investment purposes.

Although the shortage of building materials has hindered our building activities to some extent special efforts are being made to complete the various buildings, at different stages of construction, as early as possible. The housing of our offices in our buildings would relieve the present congestion and would lead to more efficient working. Suitable plots of land have been, therefore, purchased for our Divisional and Branch Office buildings at various centres.

MORTGAGES:

The scheme for grant of loans on mortgage of immovable properties has been extended to 5 additional centres and is now in operation in 26 cities. The revised scheme for grant of loans to policyholders for construction of houses termed "Own Your Home Scheme" has since been finalised. It will come into operation in 26 selected places in early 1964 and will be extended to 30 more places during the course of that year. This scheme will enable the middle class people to own their homes with the help of loan facilities.

I have always received sincere co-operation and valuable advice from my colleagues on the Board and on the Investment Committee. I offer my grateful thanks to them. I take this opportunity to record my appreciation of the services rendered by the officers and staff at all levels. It is their services which have solely contributed to the fine results achieved by the Corporation. Finally, I thank all the agents who have done such excellent work in spreading the message of insurance to people, thereby enabling the Corporation to maintain the steady increase in the new business.

BOOKS BRIEFLY

Call for a Liberal U.K. Trade Policy

Overseas Trade Policy: A Report of the Federation of British Industries, London.

Reviewed by JOSELYN HENNESSY

THIS REPORT, which calls for a liberal British policy, particularly towards developing countries, acclaimed in the financial press as a constructive, forward-looking document, is one consequence of the failure of the Brussels negotiations for the UK's entry into the European Economic Community. It is a "Where-do-we-go-from-here?" exercise.

The report forcefully re-states the liberal-progressive view of world trade arrangements, namely, that expansion of trade from a world rather than from a regional view-point should be the primary aim and that GATT should be the principal instrument for this. "Indeed", says the report, "no viable alternative to GATT exists."

The F.B.I. urges that GATT should be revised in order to foster growth in the trade of developing countries. Trade not aid is the ultimate need and GATT's industrialised members should adopt the U.K.'s liberal policy of imports of manufactures from developing countries. If other GATT members were equally liberal, outlets for manufactures from developing countries would be substantially improved. The problem of low-wage competition does, however, call for some special measures. The only satisfactory basis for action is the progressive and orderly expansion of quotas. This is not only because, where there are wide disparities in costs, tariffs are ineffective, but because there are wide variations in the productive efficiency of the developing countries themselves, that some form of market sharing, at least in the interim, should protect the less efficient, and even deter others from the risks of too much specialisation. This principle has been accepted in the GATT Textile Agreement and could be applied elsewhere. None of this is incompatible with the aim to increase, not reduce, trade.

The F.B.I. cites with approval the British National Farmers' Union's comprehensive scheme for temperate agriculture. The British farmers recommended annual confrontations of production prices and trade policy among the chief trading countries. This is important since the depression and instability of agricultural prices arise largely from intense competition in a world market that is continually shrinking because of national support policies, and continually threatened by surpluses which cannot be marketed commercially. The British farmers urged that these reviews should lead to the negotiation of world commodity agreements, and that the U.K. should join other Western countries in the U.N. World Food Programme for the co-ordinated use of food surpluses as part of the aid programme.

There is obviously much in all this that is controversial and which may seem to run counter to the F.B.I.'s free trade philosophy. Certainly the U.K. needs to be cautious towards

any scheme which might substantially raise the cost of its imports, but this risk should be set against the repeated frustrations which U.K. exporters have suffered from the balance of payments difficulties of primary producing countries and from the depression or instability of commodity prices. Without international co-operation these problems will not solve themselves, and provided that the basic objectives remain the expansion of consumption, the smoothing out of fluctuations, and the discouragement of high cost production, there is a reasonable case for seeking such co-operation. The F.B.I. takes much the same attitude towards trade in basic raw materials and tropical products.

Turning to Commonwealth trade, the report, while reiterating the desirability of international collaboration to increase outlets for the produce and manufactures of the developing countries, observes that so long as the U.K. is entitled to enjoy existing preferences, she may legitimately try to ensure that GATT's no-new-preference rule does not work to the detriment of British exports. In general, the F.B.I. reasonably insists, as long as Commonwealth countries continue to enjoy free entry, or advantageous terms of entry, into the U.K., Britain should press for the most liberal interpretation of their obligations towards her. The F.B.I. asks whether the right of free entry for manufactures, at least from developed countries, should be continued, because the range of manufactured imports is growing, and the continuation of free entry for Commonwealth goods with the GATT no-new-preference rule debars the U.K. from raising her Most Favoured Nation tariff, except under the GATT 1953 waiver, whose rules are strict and whose procedure is cumbersome. Other Commonwealth countries, on the other hand, are free to raise their M.F.N. tariffs while keeping unchanged their margins of preference to the U.K.

The F.B.I. considers that the U.K. should make the most of the substantial preferences now available to her in the European Free Trade Association. "But it would be dangerously short-sighted to regard our special relations with the Commonwealth, or with E.F.T.A., as immutable long-term positions. We should thus be wary of over-commitment to particular groups of countries and particularly of involving ourselves in conflicting obligations that may militate against each other and, by forced stalemate, render advance and expansion so much harder to achieve. The failure at Brussels has excluded us from a new experimental trading club. But it is this very non-involvement that may offer us our greatest opportunity for following a policy of vigorous and flexible multilateralism that this country could promote as a model to be taken up by other major traders and, in particular, by the U.S.A. and the E.E.C."

This report was, of course, drawn up by the F.B.I. alone, but I have reason to believe that the parts summarised here correspond closely to the British Government's thinking.

Readers' Roundtable

DURGAPUR CANAL

Sir,—I am directed to point out that in the article entitled "The Durgapur Canal" published in your issue of October 18, 1963 the reason for the reduction of the rabi irrigation target to 55,000 acres has not been correctly given. It is not due to any bad or slipshod planning on the part of the DVC, as suggested in the article, but has been necessitated in the main by the massive growth of industries in the Valley, particularly in the Durgapur area, in recent years. There is considerable off-take of water from the reservoirs on this particular account, and the demand is likely to increase. The

retention of the original rabi irrigation target would not only affect the growth of industries but would also affect the year-round navigability of the DVC canal. It was in consideration of all these factors and, in particular, to keep the canal navigable throughout the year that a reduction of the target for rabi irrigation was suggested and agreed to between the West Bengal Government and the DVC.

G. P. GANGULI,
Chief Information Officer,
Damodar Valley Corporation.
Calcutta.

RECORDS AND STATISTICS

Third Plan: A Mid-term Appraisal

AN ASSESSMENT of the progress made by the Indian economy in the first two years of the third Plan has been made by the Planning Commission in its Report on "The Third Plan Mid-term Appraisal." The following tables taken from the Report give a broad picture of the performance of important sectors such as Agricul-

ture, Industry, Power, Transport and Communications, Education, Health, and other Social Services during the period 1961-62 to 1962-63 in comparison with the related targets of the third Plan. Further progress expected to be made in the remaining three years of the Plan has also been indicated.

INDUSTRIAL CAPACITY AND OUTPUT: 1960-61—1965-66

* Excluding the amount raised by way of changes in fares and freights which is included under item 2.

@ Including Prize bonds, Gold bonds and receipts from Compulsory Deposit Scheme.

+ Excluding the amount raised by changes in postal rates credit for which has been taken under item 2.

† Central assistance in respect of 1961-62 plan adds up to 344 crores. Of this 322 crores was paid during that very financial year while the balance was paid in 1962-63.

†† This is based on the data given in the State budgets and includes arrears in respect of 1961-62 paid in 1962-63.

@@ In the Central budget provision was made for Central assistance of Rs. 400 crores only. The figure adopted here is Rs. 450 crores as subsequently it was decided to increase the amount by Rs. 50 crores. Correspondingly the figure of deficit financing has been increased.

** As defined in the Plan, receipts under market loans refer to net absorption of Government securities by the public. Correspondingly deficit financing refers to changes in Government's indebtedness to the Reserve Bank. Receipts corresponding to external assistance include net receipts from foreign grants and loans as well as net accretion of rupee resources arising from P.L. 480 imports during the third Plan period.

*† Includes Union Territories.

Where Do We Go from Here?

TO COMMENT on the Mid-term Appraisal by the Planning Commission of the (lack of) progress of the third Plan is only in the nature of a formality. It is by now within the common experience of the country and its people that, while population is steadily increasing, the expansion of the economy is slowing down. In the last session of Parliament there was a debate on how extensive our poverty was. Apart from the merits of the particular figures or arguments advanced by certain sections of the critics of the Government which were obviously interested in making political capital out of the issue, it was undeniable that public opinion was in no doubt that, after 13 years of economic planning, mass poverty remained an explosive issue.

Apart from poverty in the abstract, men and women, whether as producers or consumers, have been coming up individually against shortages at every turn. A melancholy procession of Ministers has lately been exhorting the nation to grin and bear this misery. A few days back Mr. A. M. Thomas was good enough to tell us that the shortage of sugar could not be remedied in the short period and that we must therefore learn to live with it. He has been followed by Mr C. Subramaniam who, for his part, is counselling the country to learn to live with a shortage of steel. Now the Mid-term Appraisal resignedly states that in the two-year period, 1961-63, the annual rate of increase in national income is estimated to have been about 2.5 per cent as compared to the rate of something over five per cent envisaged in the third Plan. It points out that if the third Plan target is to be reached, the growth rate should rise substantially over the remaining three years. But it mercifully refrains from pretending that this necessary acceleration of the economy is likely to be achieved. It is possible that an attempt may be made to take credit for the Planning Commission for the candour of its Mid-term Appraisal. It has been conceded that agriculture has remained stagnant although this admission is qualified by references to the climatic inevitability of crop cycles. In the case of industry, while a more laudatory view is taken of the Plan's performance, most of the specific failures or arrears have been named and noted. In this sense, it is perhaps true that both light and shadow have been pictured. But whereas the former has been painted in lily-white, the latter has been drawn in an unduly mild grey.

More important still, where failures have been specified, no attempt has been made to fix responsibility. On the contrary, the question of responsibility, which indeed must be central to any "appraisal" or "reappraisal," has been allowed to be clouded by vague observations and, worse still, innuendoes and insinuations. For instance, when pointing out that there have been failures in reaching targets of production or capacity in many industries, the Planning Commission remarks with a false air of benevolent neutrality that "progress on the part of private industry has lagged behind in a number of key areas, such as alloy tool and stainless steel, steel castings, steel forgings, machine tools, fertilizers, cement, paper and newsprint and in some chemical industries." We wish the Planning Commission had attempted to go a little more deeply into this matter. A reappraisal, we will again emphasize, has use or meaning only if it proceeds to ask why there have been failures, when there have been failures. Unless this question is asked and an attempt is made to answer it, it is obvious that no moral can be drawn, no lesson learnt, no correctives worked out for the future.

A bald statement of the kind which the Planning Commission has made is even likely to do positive mischief. It may give the impression — which would be entirely wrong — that if some industrial targets are not

being reached in the private sector it is because the private sector as such is not qualified for the job. It is, therefore, very desirable and necessary that the Planning Commission should be pressed to spell out quite precisely why these targets have not been or are not being reached. There is, of course, no simple or single explanation. But there is certainly enough evidence to show that it is not any inherent weaknesses or defects in the private sector as such, but the circumstances foisted on it by Government policy in various matters, which are in the main responsible for industrial expansion in the private sector not being faster or more considerable than it has been.

It is a pity that certain important Central Ministers have set a fashion—which the Planning Commission in the Mid-term Appraisal has now followed—of abruptly asserting that the private sector has failed in this industry or that. Actually if we are going to discuss at all the respective performances of the private and public sectors, there is more to show the lapses and limitations of the latter than to indicate the failings of the former. Let us take some of the more important cases where both sectors have shared responsibility for the development of individual industries. In the case of iron and steel, it cannot be said that the private sector has not done what has been assigned to it. On the contrary, it is the production and planning of steel in the public sector which have been lagging behind. Thanks to the mess created during the second Plan in Rourkela, not only had the full and normal commissioning of that plant been delayed, but also its first phase of expansion. As regards additional new steel plants in the public sector, the story of Bokaro is still incomplete so that it is not necessary to go into it at the present time in greater detail than to say that the actual implementation of the project is going to take rather longer and is likely to prove far more difficult than the zealous Mr C. Subramaniam seems prepared to contemplate.

Turning to the fertilizer industry, which is often cited as an example of poor performance in the private sector, it is to be emphatically asserted that schedules in the public sector too have not been kept up by any means. Sindri is still a problem. The Rourkela plant is in the main an unknown quantity. At Trombay, the Government has not yet been able to appoint even a General Manager for the project. Other schemes in the public sector too are dragging their feet because they are being shunted from States to States or from States to the Centre. It is no doubt true that many private sector schemes in the fertilizer industry—as also in the aluminium and other industries—have not fructified after being licensed. But here again unless questions are asked to find out the whole truth, a summary indictment of the private sector as such would be wide of the mark. We do not want to go into this matter at great length here but we would certainly like to point out that in these and in many other industries, a proper assessment of what has gone wrong cannot be made except in the light of an examination of the granting of

licences to various parties concerned. Here the issue is whether the Government could not have avoided the still births of so many private sector schemes by taking greater care in advance to ascertain whether the parties to whom licences were being granted were both able and willing to go into business promptly. It would be a different matter if the Government had no regulatory powers in the matter of industrial expansion. But when the case is that an industry can be started only when a signal is given, it is right to insist that the signals should be properly operated.

This aspect of licensing, however, is a detail. There are the larger questions relating to the Government's fiscal policies, and secondly, the whole administrative apparatus of planning and the implementation of Plans. The Mid-term Appraisal is greatly concerned with the problem of resources in the public sector and in this connection it makes some very justifiable complaints against the somewhat casual manner in which State Governments have tried to evade their obligations. We wish that the Appraisal had also shown some interest in the question of resources for industrial investment in the private sector. While it suits it to say so, the Government is never tired of pointing out that a vast field remains for the private sector. But surely there is no point in saying that the private sector could do so much if it would when, at the same time, no measures are taken in terms of the Government's planning to provide

Eastern Economist 20 Years Ago DECEMBER 10, 1943

The Viceroy is shortly to leave on tour to visit Bengal and Assam. The main interest of this tour will undoubtedly be the address which he will deliver at the annual meeting of the Associated Chambers of Commerce in Calcutta. In the past this occasion has invariably been utilized by the Viceroys to review political developments and indicate the Government's policy, but Lord Wavell is likely to set up a new precedent. Though he cannot eschew politics altogether from his speech, it is understood that he will confine himself mainly to economic problems — particularly the food question — and the war situation. Evidently the Viceroy feels that the time has not yet come for him to make any political pronouncement. From talks in New Delhi it does not appear that he has so far unfolded any new plans to his colleagues in the Viceroy's Council. Discussions so far have mainly centred on food and civil supplies problems. The view in official circles is said to be that as a result of the measures taken by the Food Department the situation in Bengal, particularly Calcutta, is gradually brightening up. On the one hand, the view continues to be urged, as Mr. C. Rajagopalachari said the other day, that "bureaucratic authority cannot cope with the problem of food and clothing in any satisfactory manner" and that the present food crisis "is not due to neglect or inefficiency but to the inherent weakness of the Central Government as at present constituted and to the entire dependence of the provinces on such an administration." It is said that the Viceroy does not subscribe to this view. And he wants to show that the Central Government is strong enough to deal with the economic crisis and exact the necessary co-operation from the provinces. The coming year will show who is right.

for a favourable climate of expansion in the private sector.

The budget for the current year imposed on the economy in the name of the emergency is only the latest example of a continuing neglect of the need for building up a fiscal climate in which more savings will be made and more capital invested in the vast field for industrial expansion nominally left open to the private sector. It is surely a major weakness of the Mid-term Appraisal that the Planning Commission has not dared to examine the responsibility of fiscal policies for the slow growth of the economy.

Equally clearly, it is a second great deficiency in the Mid-term Appraisal that it has not ventured to consider how far the lack of purposiveness, the dilatoriness and the inherent inadequacies of the administrative machinery are responsible for stalling development. There was a faint glimmer of hope in the wake of the emergency that, at least as a result of the extraordinary stresses created by the Chinese aggression, the Government machinery would be provoked or promot-

A Tax on Housing

THE URBAN Land Tax Bill, which has been passed by the Madras Assembly on the basis of the recommendations of the Joint Select Committee, has come in for serious criticism. The several amendments proposed by the opposition members for minimising the severity of the new tax and eliminating anomalies, have not been accepted. The justification for the new levy is stated to be the right of the State Government to secure a share in the unearned appreciation in the value of urban land with the development of various projects, not to speak of the need for additional revenues. Even though the rate has been reduced to 0.4 per cent from 0.5 per cent as originally proposed, it is felt that the actual yield would be very much more than the Rs 50 lakhs estimated by the Government. Indeed, it has been contended that the Government have sought to penalise unduly urban land-owners as the increase in the stamp duty for registration last year by one and a half per cent to nine and a half per cent has had a soaking effect and the new levy would discourage further the construction of residential houses especially as the Madras Corporation also has been raising its property tax on the basis of a reassessment of rental values.

There is no doubt that the latest measure will operate inequitably as there are cases of owners who have long been in possession of the properties and who have no intention of selling them. As the value of land has appreciated notionally, any tax on the basis of market value might even result in the payment of tax which would be in excess of the annual rent. It is rather ironical that rents could be adjusted only when the urban land tax proves to be in excess of the annual rent. Otherwise, the incidence of this tax cannot be passed on to tenants. The freezing of rents on the basis

ed to act with a greater sense of urgency and a better sense of direction. This expectation has not come true. In fact, not even a beginning has been made in what may be described as the industrial mobilization of the nation for increased defence effort. Although, there are brave pronouncements from the platform that the Government would ensure that the defence effort was strengthened by the development effort and the development effort by the defence effort, in actual practice, even the rate of growth in the economy has not been quickened a bit in the last several months. To the extent that there is some revival of economic activity, it is partly a mechanical reaction from an intense period of depression and partly a gamble in the future intentions of the present Finance Minister. These are some of the facts of our economic life which the Mid-term Appraisal should have endeavoured to face and that it has not done so underlines the dismal fact that, to the Planning Commission and the Government, the relief of mass poverty, the betterment of the living conditions of our people and the development of the economic and industrial foundations of national security are of the second order of importance.

of a market value for houses that existed some time back and the levy of urban land tax on the basis of current market values for land are considered rather contradictory. It would have been far more appropriate if the State Government had suggested to the Centre that on the capital gain being secured on the sale of property, the former should get a share in the gain that related to the land covered by the property. It may be also suggested where there is a definite gain on transfer that a minimum surcharge can be levied in addition to the stamp duty, though a higher stamp duty has taken care of the appreciation in the value of not only land but also of the whole property and provided for the State Government some portion of this gain. There is no doubt that the rent is low in respect of houses built some years back and there is a case for revision of this rent. Besides, even with the tax on market value on the basis of specified zones, the administration of this novel levy would be found extremely difficult in application and would cause serious hardship to the lower and middle income groups particularly. The amendments moved by the D.M.K. members for fixing an exemption limit and levying slab rates has been rejected as being impracticable of implementation. But the Government's approach to the problem also is impracticable and it would have been far more equitable if a specific rate per ground had been levied and there was no attempt to impose another type of wealth tax on land without reference to the "yield" from land. The suggestion for giving greater relief to house-owners on a more liberal basis also has been rejected and it is now confined to 25 per cent of the tax as recommended by the Joint Select Committee. The tax will be levied first in Madras City. In the light of the experience gained, it may be extended to other municipal towns in the State.

THE MAGIC OF THE WEAVER'S CRAFT

The veteran weaver tends his loom. His sharp old eyes take in every detail...watch every thread. The magic of his craft is a skill handed down from father to son - a skill that the Indian weaver has perfected.

It is difficult to imagine India without the handloom weaver...for handlooms are part of our very life. Equally impossible is the thought of India without its leading bank. In cities, towns and villages throughout the land, the State Bank of India gives its customers

prompt and courteous service.

SISTA'S-SR-78A

Highlights of the Week

INDO-GERMAN COLLABORATION

DR. WALTER SCHEEL, the West German Minister for Economic Co-operation, at present on a two-week visit to this country, has fulfilled his first important task in the Indian capital — that of signing an agreement with the Union Government on the utilization of the balance DM 336.60 million (Rs. 40.06 crores) credit, out of the DM 398 million (Rs. 47.37 crores), promised by his country at the last August meeting of the Aid-India Consortium for the third year of our current Plan. The pact in regard to the utilization of DM 61.40 million (Rs. 7.31 crores) had been signed on April 25, 1963, at Bonn by virtue of which this amount had been allocated for refinancing the Rourkela liabilities.

The last week's agreement envisages that a sum of DM 220.60 million (Rs. 26.25 crores) out of the committed credit is to be utilized in the following manner: (1) DM 40 million (Rs. 4.76 crores) for purchase of commodities from West Germany (details of these commodities have yet to be settled, but these are to be non-project purchases under suppliers' credit); (2) DM 40 million (Rs. 4.78 crores) for financing four projects — the Rourkela Fertilizer Plan, the Neyveli Briquetting and Carbonisation Plant, the Kalinga Pig Iron Plant and the Mysore Government's new electric factory — already under construction with assistance from West Germany; (3) DM 97.50 million (Rs. 11.60 crores) for financing the foreign exchange cost of four new projects — the Special Steels Project at Rourkela, the Alloy and Tool Steels Project of Mysore Iron and Steel Works, expansion of the Government truck manufacturing project, and power transmission and distribution equipment; (4) DM 15 million (Rs. 1.78 crores) for extending foreign exchange loans to two financing institutions in this country — DM 10 million to the Industrial Credit and Investment Corporation of India and DM 5 million for the National Small Industries Corporation; and (5) DM 28.10 million (Rs. 3.50 crores) for balance of payments support. The remaining sum of DM 116 million (Rs. 13.81 crores) will be used by way of Federal Government's guarantees for purchase of ships by India under suppliers' credits. The details of the ships to be purchased are expected to be finalised in the near future.

While the terms on which suppliers' credit will be available for the purchase of ships will be settled between the Indian buyers and the German sellers, the terms of repayment and interest regarding the DM 220.60 million credit are as follows: (a) 25 years (including 7 years of grace) with interest at the rate of 3 per cent per annum in respect of DM 110 million (Rs. 13.09 crores); (b) 20 years (including a grace period of 5 years) with interest at the rate of 5.5 per cent in respect of DM 90 million (Rs. 10.71 crores); and (c) 20 years (with a grace period of 12 years) and interest at 5.5 per cent in respect of DM 20.60 million (Rs. 2.38 crores).

An agreement has also been reached between the two Governments providing for certain special facilities in regard to Germany's pre-war assets in India. Hitherto, the proceeds from these assets could be used for purposes of approved re-investment in this country. It has now been agreed that remittance facilities should also be given to the extent of Rs. 10 lakhs a month for a total number not exceeding Rs. 63 lakhs, so that the balances which have not so far been utilized in accordance with the existing procedures may be put to effective use at the earliest possible date. Dr. Scheel as well has had talks with Mr. T. T. Krishnamachari on the investment guarantees sought on the private West German capital being invested here. But nothing concrete has yet come out of these.

The West German Minister has also had discussions with

the Union Minister for International Trade, Mr. Manubhai Shah. In these talks came up for discussion India's continued huge balance of payments deficit with West Germany in particular and with the countries of the European Economic Community in general. Mr. Shah is understood to have impressed upon Dr. Scheel the need for liberalising, in the next two or three years, quota restrictions on some twenty items exported to West Germany from here. The prominent among these are cotton textiles, jute manufactures, coir goods and sewing machines. Among the rest are included laboratory ceramics ware, toilet articles of pottery, statuettes, fancy articles made of porcelain, imitation pearls, ceramics insulating fittings, simple mechanical lighters (gilded or silvered) and parts thereof, neat leather, toys of base materials, woven fabrics and knitted underwear of synthetic fibre. Dr. Scheel on his part is stated to have assured a liberal treatment to the entry of Indian goods into West Germany on international price marketing and quality basis. He is also said to have agreed that steps should be taken to bring the trade between the two countries on a more balanced basis. It was recognised that technical assistance from West Germany and continuous contact at the official level between the Indian Embassy at Bonn and the Government of Federal Republic of Germany have a great role to play in India's export promotion efforts in that country. It was also felt that there is a greater need for India undertaking market research and advertising in Germany.

LIC'S PROGRESS

FURTHER PROGRESS has been made by the Life Insurance Corporation of India in stepping up its new business (from Rs. 609 crores under 1,470,000 policies in the calendar year 1961 to Rs. 746 crores under 1,768,000 policies during the 15 months' period to March 31, 1963), and spreading the life insurance habit well into the rural areas. These achievements were among the highlights of the Chairman's statement at the 19th meeting of the Corporation last week.

Elsewhere there were shadows. All the efficiency coefficients have further deteriorated during the period under review. The lapse ratio, which had been steadily rising from as low as 5.3 per cent in 1958 to 6.6 per cent in 1960 and 7 per cent in 1961, had gone up to 8.1 per cent between January 1, 1962, and March 31, 1963. The overall expense ratio, after declining from 28.4 per cent in 1960 to 28 per cent in 1961, has jumped to 29.3 per cent. The renewal expense ratio has gone up from 12.42 per cent in 1961 to 14.13 per cent. The scaling of new peaks by all these ratios is obviously something which should cause no small concern not only to LIC but also to its policy-holders.

Although the Chairman, Mr. B. K. Kaul, has refrained from specifying any reason for the deterioration in the lapse ratio, it does not require any prophet to suggest that it should have been due mainly to two factors — the continued high pressure salesmanship by the LIC agents and the persistent erosion in the value of the rupee, as reflected in the mounting costs of living. Heavy taxation too may be another factor for the dents made in the recent past in the saving capacity of the insured people, a majority of whom belongs to the middle and lower middle classes. It is heartening that the LIC has decided not to entertain fresh proposals from those already insured if any existing policy or policies of theirs have lapsed in the preceding three years, unless the lapsed insurance is revived.

The increase in the overall expense ratio has been attributed by Mr. Kaul primarily to the upward revision necessitated in the salaries of the low-paid staff of the Corporation. But it ought to have been offset to some degree by the fairly

rapid increase in business under the two Non-Medical Business Schemes. During the 15 months' period to March 31, 1963, business booked by LIC under these schemes has been of the order of Rs. 155.67 crores under 713,000 policies. The overall expense ratio, no doubt, has been vitiated to no small extent by the fall in the Corporation's income from interest and dividends. The net rate of interest has gone down from 4.68 per cent in 1961 to 4.08 per cent in the accounting period under review.

It is, of course, encouraging to note that the Corporation has taken on hand a detailed investigation into the mortality of the assured lives during the years 1961-64, as the Oriental's 1925-35 mortality table which currently governs LIC premium rates has become too outmoded to reflect the recent increase in the average expectation of life in this country. Anticipating a demand for reduction in premium rates, Mr. Kaul has suggested that stepping up of the rates of bonus to policy-holders is a better way of serving their interest in the present-day inflationary conditions. But a golden mean has to be struck between the two courses. The fourth valuation report of the Corporation should obviously be keenly awaited by the policy-holders.

The finalisation of the revised "Own Your Home Scheme" by LIC has to be welcomed. This scheme is proposed to be put into operation in 26 selected places in the country early in 1964 and will be extended to another 30 places during the course of that year. The cause of housing would, however, be better served if the Corporation goes in for building houses on its own and makes these available to the public on the hire-purchase basis.

LIC AND GENERAL INSURANCE

THE DECISION of the Life Insurance Corporation to enter the general insurance field in a big way has been approved by the Union Government. A statement to this effect was made in the Lok Sabha on Friday last by the Minister of Finance, Mr. T. T. Krishnamachari. The Minister said that the intention behind this step was to provide the public sector with a role in this sphere more or less on the lines of that of the State Bank of India in commercial banking. The Corporation is expected to start transacting this business early next year.

A spokesman of the LIC has indicated that the Corporation will undertake general insurance business in addition to its subsidiary, the Oriental Fire and General Insurance Company; Oriental at present has a business to the tune of about Rs. 40 crores. The LIC will be a non-tariff insurer, while Oriental will continue as a tariff insurer. This, however, does not imply that the LIC will indulge in any cut-throat competition with the private general insurance companies. In the initial stages it will have the same tariff rates, but may adjust them later in the light of the experience gained, so that ultimately "correct" tariffs are evolved. The policy to be followed in this respect will be similar to the one followed by the State Bank in its competition with the private banking institutions.

It has been explained by a spokesman of the Ministry of Finance that the decision to allow LIC to go in for general insurance should not be regarded as the first step towards nationalisation of this business activity. It is neither an indication that this line of insurance will be nationalised in the future nor a hint to the contrary. The nationalization issue will have to be judged on its own merits. The present step itself might make it unnecessary for general insurance to be nationalized. Official circles have also tried to assuage the fears that the entry of LIC into general insurance might adversely affect the turnover of the private insurers. They argue that this business is an expanding one where there is scope for both the public and the private sectors to grow steadily.

The LIC's decision to take up general insurance, it is also suggested, will lead to a better utilization of its staff which, under a self-imposed code, is at present unable to canvass this business. The accounts of general insurance are proposed to be kept separate from those of the life business of the Corporation.

NEEDED A ROAD BOARD

THE STRONG plea put forth by Mr. N. G. Dewan, in his presidential address to the 27th session of the Indian Roads Congress, held at Chandigarh last week, for the formation of a Road Board more or less on the lines of the Railway Board, will obviously be widely endorsed. The development of roads and road transport is assuming heightened importance in the infra-structure of the Indian economy as a sequel to the stridently increasing traffic, both freight and passenger. The 20-year (1961-81) Roads Development Programme, recommended by the Chief Engineers a few years ago, envisaged increase in the total roads length in the country from nearly 3,32,000 miles in 1957 to as much as 6,57,000 miles in 1981. In view of the changing circumstances even this expansion may be on the conservative side. To implement successfully a programme of this magnitude -- apparently vast but not an ambitious one -- it will require an effective organization.

Mr. Dewan has suggested that the Road Board should have six functions: (1) policy, direction and control of the construction and maintenance of national highways, strategic roads and such other roads as may be found necessary for the development of the country as a whole; (2) control on traffic on roads mentioned above and other roads carrying inter-State traffic, policy regarding priorities, allocation of funds, specifications and general licensing policy for vehicles pertaining to road traffic; (3) enunciation of the principle of taxation of road transport for financing the development and maintenance of roads; (4) co-ordination of plans for road development and production of vehicles and proposals for allocation of funds; (5) assessment of the requirements of motor vehicles from time to time and formulation of specifications for them along with assistance for their manufacture; and (6) promotion of road and road transport research and arrangement for the training of personnel for construction of roads and operation of road transport.

Mr. Dewan has also made a number of other useful suggestions for the development of roads and road transport. Of these, particular mention may be made of his advocacy for heavier and much larger number of road vehicles, creation of an All-India Rural Communication Fund, proper maintenance and preservation of the roads already laid, prevention of ribbon development on roads and adjusting of roads harmoniously in the local topography. The use and manufacture of vehicles of higher pay-loads than at present has been suggested not only for meeting the additional long-distance goods traffic requirements of the country during the current Plan period -- estimated by Mr. Dewan at 123 million tons -- but also for bringing down the cost of road transport by a significant amount.

There is also apparently a strong case for stepping up further the outlay on roads development during the current Plan period. The Chief Engineers' 20-year Plan had estimated the cost of implementing their 1961-66 programme at Rs. 590 crores. The current provision in the third Plan, even after being increased twice from the original provision of Rs. 250 crores, is Rs. 438 crores -- Rs. 152 crores short of the experts' estimate. With total revenue from the road transport likely to touch Rs. 1,000 crores mark over the five-year period to 1965-66, this additional provision can be easily made, leaving Rs. 240 crores to be appropriated to general revenues and Rs. 170 crores to maintenance of roads.

FROM THE PRESS GALLERY

T. T. K.'s Week

By A. K. MUKERJI

NEW DELHI: Monday.

IN MATHEMATICAL parlance, 2 and 10 could as well add up to 12 or multiply themselves to 20 or even to 100, and, in algebraic refrain, lead on to either plus 8 or minus 8, depending not only on how the digits are arranged but also on what result the computation aims at. Judging by the look of things, though he is never short of ingenuity and seldom less than brilliant even when he stoops to calculated caution as of late, Mr. T. T. Krishnamachari cannot in fairness be said to have proceeded as of purpose to contrive a parallel puzzle of probabilities when he chose last week to present Parliament with five major Bills in a row. But the end-result of this inevitably was that, despite several other excitements each of which could steal the show had it come at any other time, last week in Parliament became T.T.K.'s own.

Time alone will show whether the mind that architected the Bills was agonizingly preoccupied with hunting the "man-eaters" of a certain memorable phrase or whether, as some of the professional leftist critics have already begun shrieking, in mellowed wisdom of experience it saw virtue in promoting reforms within the bounds of realism. Meanwhile the field remains open for big question marks and Mr. Krishnamachari himself cannot be unaware of this.

Gold Control Bill

Take the Gold Control Bill, which alone provoked marked opposition at the stage of its introduction, possibly because on the other four Bills most members of the Lok Sabha found themselves a bit out of their depth on first encounter. The ostensible purpose of the Bill, to paraphrase T.T.K.'s enunciation, is to achieve the objective of Gold Control. Well and good. But what is the tenable answer to the point made by Mr. N. G. Ranga (Swatantra) that the Gold Control Rules had initially been thought of specifically as only an emergency measure? Public memory may be short but not many have yet forgotten that the slogan with which the then Finance Minister, Mr. Morarji Desai, launched this measure was: Gold for Defence, for arms.

Putting a curb on gold smuggling, and on the drain on foreign exchange consequent thereto, was, it will be remembered, only incidental to this principal objective underlined at the time. This incidental objective has, moreover, apparently been attained only fictionally, despite Gold Control Order and Rules, judging by the puny catch over nearly a year both of smuggled gold and its smugglers that was revealed in reply to an interpellation last week.

The important question, however, is what the Bill boils down to in sum. Apart from the fact that it seeks to put on the Statute book a measure that was intended to be only an emergency measure, the proposal is to expand the scope of the earlier Rules to bring within this purview the possession even of gold ornaments beyond a specified limit. More. The Bill, when it is passed into an Act, would make it obligatory for those owning or possessing such ornaments beyond the specified limit to declare their holdings, in default of which they would be liable to rigorous punishment, including imprisonment. To be sure, the upper permissible limit of possession hitherto indicated lends the Bill somewhat of a saving grace. But the option would rest with the Government to revise this upper limit to bring it low enough to affect even the modest householder and the housewife; and this is an aspect the enormity of which cannot be said to be compensated for by the permissive character of the proposed enactment.

All told the end-effect might be to further extend the

already extensive octopus tentacles of "controls" which in the ultimate analysis means the projection of the not wholly incorruptible bureaucrat into spheres intimately private and as such a shot that is likely to aggravate the ills currently rampant in our country.

Apart from the provision enabling the Government to prescribe a ceiling on the possession of gold ornaments and to call for a declaration from all persons holding ornaments above that ceiling, the Gold Control Bill contains two other provisions not there in the present Gold Control Rules. Firstly, it provides that all categories of dealers in gold who were not licensed, should be registered. Secondly, all religious institutions -- temples, mutts, churches, mosques, gurdwaras or any other place of public religious worship -- are being allowed to retain the gold received by them as offerings, in the form in which it is received, so long as it is used exclusively for the purposes of the respective institutions. They shall, however, not convert any gold in their possession into gold of purity exceeding 14 carats or make from it ornaments or any other article of a purity exceeding 14 carats, without the permission of the Gold Administrator. They shall also not sell or otherwise transfer this gold in any form unless it has been converted into gold of a purity not exceeding 14 carats and unless in the case of gold other than ornaments, the sale or transfer is to a dealer or refinery licensed under the Act. Similarly, no pawnee who is not a dealer in gold shall sell any gold pledged with him on the failure of the pawner to redeem such gold, except in accordance with such conditions as may be prescribed.

Two other minor modifications have also been made in the existing Gold Control Rules. They are: (a) for minor intrusions of the Gold Control Order, the existing provision for the imposition of a sentence of imprisonment or fine has been replaced by a provision of penalty to be adjudged departmentally (otherwise, the penalties prescribed in the Bill correspond to Rule No. 126 of the Gold Control Order); (b) a dealer or a refinery who/which for any reason, discontinues his/its business will, in terms of the Bill, be allowed to dispose all the gold in his/its possession to any other licensed dealer or refinery (at present, such gold is to be deposited with the Gold Administrator and is purchased by the Central Government at the international price).

The Companies (Amendment) Bill

Shades of this same spectre as referred to under the Gold Control Bill would seem to lurk behind the Companies (Amendment) Bill, introduced in the Lok Sabha on November 26 and referred to a Select Committee after a 4-hour debate in the House two days later. The Bill 'inter alia' seeks to amend the Companies Act of 1956 in respect of certain matters. Obviously, the unfamiliarity of most members with so abstruse a subject as Company Law explains why, barring Mr. Morarka (Congress) and a few others, most others preferred to leave it alone more or less, although a reason for this undoubtedly was that opinion in favour of a change in the Companies Act has been overwhelming both in Parliament and outside of it since the publication of the Vivian Bose Commission report and thereafter of the recommendations of the Daphtary - Shastri Committee.

The revelations made by both were admittedly shocking for our people and the suspicion has also been fairly widespread that these were but "just the top of an ice-berg" in Mr. Krishnamachari's graphic phrase. Nevertheless, irrespective of the compulsion behind the Bill, it represents the process of enlarging the Government's increasing intrusion into spheres

the preservation of which ('albeit' minus their malpractices and maladies) is implicit in the principle of mixed economy under which the private sector has been accorded a legitimate place under our programme of planned development. Significantly, the Finance Minister has already notified Parliament that he proposes to move for further and more comprehensive amendments to the Act in the near future, possibly at the next session.

Happily the Finance Minister has gone on record with the reassuring affirmation that the main object of the Bill is not to obstruct the private sector but to assist its growth on proper lines. (This fact probably explains why, while entering a caveat against the abolition of the Company Law Department as a separate entity, Mr. Bhupesh Gupta literally scattered plentiful insinuations in his speech in the Rajya Sabha.) It should also be welcome that, thanks to the reasoned criticism voiced by Mr. Morarka and Mr. Ranga, the Finance Minister has agreed to have the provision in the Bill in respect of appointment of tribunals properly scrutinized at the stage of its examination by the Select Committee. Nevertheless the debate last week very nearly by-passed a number of important considerations which, it is to be hoped, will be adequately discussed in the Select Committee.

RBI (Amendment) Bill

Surprisingly, on the other three Bills introduced by the Finance Minister — namely, the Bill for the establishment of Unit Trust, another for amending the Reserve Bank of India Act and a third one for setting up two separate boards for revenue and direct taxes, and for Customs and Central Excise respectively — there was no serious criticism from any side. This was perhaps to be expected in a Parliament predominantly interested in political questions in the main. Even so the lack of interest set a precedent far from healthy, to put it mildly.

What was missed in the event becomes clear when some features of the RBI (Amendment) Bill — to take an example — are kept in mind. The objects of this Bill are to provide "(1) the supervision and control of the financial institutions in the interests of better or more effective control of credit, and (2) the regulation of the business of acceptance of deposits by these and other non-banking institutions in the public interest."

One of the provisions of the Bill, moreover, seeks to enable the Reserve Bank "to regulate or prohibit, where necessary, the issue by any non-banking institution of any prospectus or advertisement soliciting deposits of money from the public, and to specify the conditions subject to which any such advertisement or prospectus if not prohibited, may be issued."

The merits or the demerits of these provisions apart, the thin end of the wedge for pressing the Government's control to vital spheres of the country's economy which it reveals certainly calls for serious thinking. Of this there was little evidence during Parliament's consideration for the introduction of the Bill last week. The issues that needed to be joined were, for all practical purposes, not joined at all.

Unit Trusts

The Unit Trust of India Bill seeks to empower the Union Government to set up a Unit Trust in the public sector for encouraging savings by various classes of investors to promote the growth and diversification of the country's economy. The head office of the Trust will be in Bombay. Its initial capital will be Rs. 5 crores. Half of this will be contributed by the Reserve Bank. To the remainder, the Life Insurance Corporation will contribute Rs. 75 lakhs and the State Bank of India another Rs. 75 lakhs. The balance Rs. 100 lakhs will

financial institutions in the private sector. If this contribution falls short of Rs. 100 lakhs, the Reserve Bank will make it good and may later on transfer it to the private sector institutions, if necessary. The three public sector contributors will not be allowed to transfer their holdings to other institutions. The private sector contributors may, of course, do so among themselves. The initial contribution in all cases can be refunded at the option of the Trust.

The management of the Trust will be vested in a Board, consisting ordinarily of nine members. The Chairman and four other members will be nominated by the Reserve Bank and one each by the LIC and the State Bank. The remaining two members will be elected by the private sector contributors.

The Trust will deal in stocks, shares and securities, but not in immovable property. It will be empowered to obtain normal banking accommodation from lending institutions and also from the Reserve Bank for 90 days which period in an emergency may be extended to six months. The Central Government may in certain contingencies guarantee bonds of the Trust for the purpose of enabling it to borrow from the Reserve Bank. The Trust, however, will not be able to borrow any money directly from the Central Government.

The Bill provides that the Trust shall formulate a scheme in accordance with which units will be sold by it. These will be of the face value of not less than Rs. 10 and not more than Rs. 100 and will be backed by all the investments made by the Trust. The units will be sold at prices determined by the Trust having regard to the dividends declared. The Trust will purchase back the units, if necessary, at prices announced by it from time to time. There will be no limit on the number of units which can be purchased by or held by unit-holders. Transfers of units will be recognised under conditions which will be prescribed in the scheme to be formulated.

At least 90 per cent of the gross income of the Trust, less the management and other expenses, will be distributed to unit-holders. Dividends will be declared and distributed once every year.

The Trust will be exempted from payment of income-tax, super-tax, super profits tax or any other tax on its income. Where the income received by a unit-holder, being an individual, from the Trust in respect of units does not exceed one thousand rupees, such income, and where such income exceeds one thousand rupees, a sum of one thousand rupees, shall be excluded in computing the total income of the unit-holder for purposes of income-tax but not of super-tax, and where a contributing institution is liable to be assessed to super profits tax under the Super Profits Tax Act, 1963, in respect of its own income, profits or gains and receives any sum from the Trust under this Act in respect of its contribution to the initial capital, such sum as reduced by the amount of any income-tax and super-tax payable in respect thereof shall be excluded from the total income of the said institution in computing its chargeable profits for the purpose of super profits tax. No deduction of income-tax or super-tax shall be made on any interest or dividend payable to the Trust in respect of any securities or shares owned by it or in which it has full beneficial interest, and no deduction if income-tax shall be made by the Trust from the income distributed by it to a unit-holder being an individual.

Two Boards of Revenue

The Central Boards of Revenue Bill seeks to replace the Central Board of Revenue by two boards, one dealing with direct taxes and the other indirect taxes. The new boards will be named as the Central Board of Direct Taxes and the Central Board of Excise and Customs. The constitution of these boards had been recommended by the Direct Taxes Administration Enquiry Committee headed by Mr. Mahabir Prasad

and more recently by the Central Excise Reorganization Committee, led by Mr. Ashok Chanda, on the ground that very considerable expansion had taken place since 1954 in the Union Revenue Administration which called for substantially strengthening of the Central Board of Revenue. Both the boards will consist of not more than five members each, including the Chairman/Vice-Chairman. The Bill provides that the Central Government may make rules for the purpose of regulating the transaction of business by either board.

LIC and General Insurance

The announcement bringing general insurance within the scope of LIC's operations (though not exclusively to it alone) has not inappositely been characterized as T.T.K.'s Parthian shot of the week. How far the step is the beginning of a concession to the leftist clamour for the nationalization of general insurance too is a question to which the answer can at best be speculative at this stage. Only one thing seems clear. The effect of the step would be to have the State-owned LIC operate in the field of general insurance co-existently with the private companies much the same manner as the State Bank of India does with the Scheduled banks. This could lead to overall improvement of service forced by competition, provided the LIC set a record of prompt and efficient service expected of a concern handling general insurance. Optimism on this score must, however, be moderated by public experience of LIC's handling todate of life insurance.

Ombudsman Plan

An encouraging announcement which Mr. G. L. Nanda, Home Minister, made at a meeting of the Informal Parliamentary Consultative Committee for Home Affairs was that for the purpose of combating corruption the Government was thinking of setting up an independent authority like the Ombudsman in the Scandinavian countries. The details of the plan have yet to be worked out. But Mr. Nanda said attempt would be made to select persons of known integrity and experience for the proposed authority. Secondly, the authority would be free to investigate complaints against any person, however powerful or big. The channel of communication between the authority and those desiring to furnish information to it would, moreover, be direct, without any other agency coming in the way.

Other Highlights

On the political side proper, the main excitement of the week centred the red hot provocation provided by Pakistan's closure of our Assistant High Commissioner's office at Rajshahi. Naturally, Rawalpindi's action made for frayed tempers and speeches during the debate on the Calling Attention motion moved by Mr. Hem Barua (PSP) were mostly high-pitched emotional outpourings. Not a little of this stirred Mr. Nehru too; but he maintained his composure and refused to exchange exemplary restraint for adolescent prescriptions for rushing with immediate retaliatory action.

In a class apart but no less invested with emotional undertones was Parliament's reaction to the Defence Minister, Mr. Y. B. Chavan's statements on the Gulpur crash (which took the grim toll of six of our top-ranking officers of the service) and the Dakota crash near Banihal in which another batch of Defence personnel lost their lives. Mr. Chavan's statement on the Gulpur tragedy was an improvement on Mr. Nehru's earlier premature rejection of the apprehensions of sabotage. Nevertheless it did not offer a convincing answer to the query of Mr. Bhupesh Gupta about how all the six senior Services officers happened to fly in the same helicopter when it was known that there were two helipads both at the embarkation and the disembarkation points.

Although scantily noticed, in the Press Council Bill pre-

sented in the Rajya Sabha on November 26, the Minister of Information and Broadcasting served up a potential stick of dynamite.

Question Hour

THE FINANCE MINISTER, Mr. T. T. Krishnamachari, told the Lok Sabha on November 27, seven Indian firms had started or were about to start industries in foreign countries. The industries being set up were a textile mill in Ethiopia, assembly and progressive manufacture of non-ferrous metals in Ceylon and Burma, manufacture of pharmaceuticals in Ceylon, rolling mill in Trinidad, jute industry in Thailand and a cycle spokes manufacturing plant in East Africa. Most of the investments, Mr. Krishnamachari said, had been approved during the current year.

Gold Smuggling: The Minister of State for Finance, Mr. B. R. Bhagat claimed that gold smuggling had declined somewhat since the introduction of Gold Control. He said the Customs Authorities had seized gold valued at Rs. 54 lakhs during the period January 10 to October 31 this year. In the corresponding period last year the value of gold seized was Rs. 86 lakhs. In addition to the gold seized, 114 persons were arrested for gold smuggling and goods worth Rs. 29,63,000 (including gold valued at about Rs. 28,46,000) were recovered from them.

Coal Production: Mr. C. Subramaniam, Minister of Steel, Mines and Heavy Engineering, told the Rajya Sabha coal production had hit the 1962-63 target of 63 million tons. He said measures had been initiated for the fulfilment of the third Plan targets of 65.1 million tons from the West Bengal coalfields and 33.2 million tons from the outlying coalfields.

Pig Iron: Mr. Subramaniam said the Government had reserved a capacity of 0.5 million tonnes for the production of pig iron in the private sector during the third Plan period and had made no stipulations about the number of pig iron plants to be set up within the capacity. But in view of the private sector's "poor performance", the Government was thinking of setting up pig iron plants in the public sector. It had also been decided to import pig iron from the Soviet Union next year. The Minister countered allegations of insufficient aid to the private sector and said the Government helped the parties in securing the foreign exchange for capital goods requirements for an approved scheme.

Answering another question, Mr. Sethi, Deputy Minister of Steel, said it had not been possible to meet in full the small-scale industries' requirement of pig iron, but as a result of a further re-assessment of availability and utilization, the allocation for 1963-64 to the State list (small scale) foundries had been increased from 178,000 tonnes to 218,000 tonnes.

Uneconomic Sugar Mills: Mr. A. M. Thomas, Minister of State for Food, told the Lok Sabha the Government was not yet contemplating to take over uneconomic sugar mills. He said an official committee was looking into the working of such mills but the idea for the present was to see that these factories were modernized according to a phased programme.

Exports: During April-August 1963, India's exports to East European countries increased by Rs. 10 crores against an increase of Rs. 12 crores in the exports during the same period to Asian countries, Mr. Manubhai Shah, Minister of International Trade, told the Lok Sabha. Exports to Africa, however, showed a decline of nearly Rs. 2 crores.

He said the State Trading Corporation's exports to East European countries registered a decline of 12 per cent in 1961-62 as compared with 1960-61. Replying to a third question, Mr. Shah said the total turn-over of direct trade of the STC in 1962-63 amounted to Rs. 88.81 crores, besides indirect sales and turn-over which accounted for Rs. 55 crores, link and barter deals accounting for Rs. 12.33 crores.

WINDOW ON THE WORLD

Kennedy Round Without Kennedy

From Our Special Correspondent

PARIS:

JOHN KENNEDY'S main legacy in the international economic sphere is undoubtedly his grand design for an extensive liberalisation of trade between all the non-Communist nations. In principle, this scheme is to be discussed at a meeting of GATT that will begin next May and there is no reason, on the face of it, why the President's death should change the time-table or affect the chances of success of the "Kennedy Round", as it will no doubt continue to be called. His disappearance, however, is a suitable moment to review the fortunes to date of this, the biggest idea he had during his short term of office, and to assess the possibilities of it ever being realised.

The origin of the "trade-expansion" doctrine was dual: on the one hand, in the false trail that the US economy had taken, which had led it to harden into the paradoxical situation where rising output was accompanied by massive unemployment, indicating a radical misapplication of resources; and on the other hand, in the rise of the European trade blocs, principally the Common Market, which threatened a division of the Western world, a division that was politically undesirable as seen from Washington and which suggested that the same radical misapplication of resources was about to be repeated on an international scale. The remedy to both these situations, John Kennedy decided, was a new division of labour, both industrial and agricultural, reorganising economic activities throughout the Western world so that various lines of production would be concentrated in regions where they had a comparative advantage. Wasteful duplication of effort would thus be avoided, permitting a greater volume of exports from all regions without recourse to dumping or subsidies.

Two-Pronged Weapon

The instrument of this new division of labour was to be a ruthless reduction of protective tariffs, going as far as their complete abolition for products of which the industrialised West was responsible for most world output. This de-protection was a weapon aimed at two different protectionist blocs, one solidly established in the USA itself, the other just emerging in the Common Market. By beating a breach in the first, the American economy would be revived, would abandon activities only possible behind a high tariff barrier and would open up new markets to the growing industries of West Europe. By preventing the Europeans adopting protectionist methods used in the USA, West Europe would be saved the pointless investment in facilities that already existed in America on a scale adequate for all Western demand, would be encouraged to concentrate on affairs where it had an advantage over the Americans and incidentally this would open up markets to US industry which it could find nowhere else.

John Kennedy was of course President of the United States, not of West Europe, so it is not accusing him of anything, but simply recalling his patriotism, to point out that this scheme would have favoured US interests much more than any other. To put on the same level, as though they were partners capable of equal concessions, the gigantic American economy with its exorbitant protectionism and vast excess capacity, and the barely emerging and relatively unprotected Common Market, was to suggest a very one-sided bargain. One finds an exaggerated caricature of this conception of "equality" if one thinks back to the time when Britain offered free trade and no holds barred to Lancashire, on the one side, and to the Indian hand weavers, on the other. Not that the

disproportion here was anything like so great, but it was still striking enough for this bargain never to be considered were it not for the political and military predominance of the Americans over a West Europe living in the shadow of Soviet Russia. The point is that while, in abstract theory, free trade can be shown to be in everybody's interest, at any one moment and given the different stages of economic power attained by nations, its introduction is always very much more in one party's interest than the other's.

Still, the balance of advantages was near enough for this proposal to find supporters in Europe, at least in quarters where there was a lively sense of dependence on the USA. The first step toward its implementation was passage of the Trade Expansion Act which transferred from Congress to the President the power to exchange tariff concessions with foreign nations. This gave the President freedom to carry on the delicate negotiations and to make overall estimates of gains and losses without being paralysed by sectional interests who would put their small losses against great national gains, as regularly happens in Congress or any other parliament. It also removed the Europeans' fear, well based in American history, that concessions extracted from US negotiators would later be disavowed by Congress.

The Grand Design

The more ambitious elements in the grand design presupposed that Britain would be admitted to the Common Market, taking along with her a motley retinue of small West European nations (her partners in the Free Trade Association) and much of the Commonwealth. Only when this vast bloc was constituted could the Americans offer a mutual abolition of many important tariffs. This scheme ran aground when President de Gaulle in January dealt the death blow to the languishing negotiations between Britain and the Six. The late President then fell back on a more limited version of his design, which still however followed the same principles. A special session of GATT was called for next May where no tariffs would be abolished but where many would be halved. These negotiations were being actively prepared at the time of Kennedy's assassination. What stage had they reached?

Progress had been disappointingly slow, partly through the Americans' fault, partly through the Europeans'. The Americans' faults were three. The list of products on which they were prepared to make concessions was promised for September, but has not yet been seen. It has just gone to their Tariff Commission and will not be in the Europeans' hands in time to make opening of the negotiations possible by May. Next, in the preliminary negotiations the US delegation has given its partners the impression of being unwilling to bargain, preferring to impose its point of view without accepting any compromise. Thirdly, the altogether excessive manners adopted by the Americans during the "chicken war" (they claimed to have suffered a loss of \$46 million when an impartial arbitration showed that \$26 million was nearer the truth) aroused doubts about the possibility of reaching agreement with them on more substantial matters. These doubts and delays meant that the Geneva talks could hardly get going before the USA was plunged into an election campaign, so the feeling grew that if they started next year at all, it would only be for form's sake and they would be idling in neutral gear until 1965 — so there was no call to hurry.

The Europeans' fault relates, naturally, to their inability

to patch up a common agricultural policy in time to begin talks with the USA in which farm produce would occupy the main place — because 40 per cent of US exports to West Europe are farm produce. Until the Six had agreed on what future they wanted for their farms, it was no use going to Geneva, and they are not agreed on that yet.

The main delay, however, arose from a question that cannot be put down to either side's shortcomings because it consists in a blank disagreement about facts. This is the famous issue of "disparities" between the US and Common Market tariff structures, disparities which the Europeans hold (and after denying this, the Americans accept part of their case) are so great that to halve duties on both sides will have quite unequal results. The general position is familiar: if my tariff on X is 10 per cent and yours is 60 per cent, it is not a fair deal to make mine 5 per cent and yours 30 per cent, though both have been "equally" halved. For a start, your 30 per cent is still useful protection and my 5 per cent is worthless; and then I have no further concession to offer you later if we decide to extend tariff disarmament. The problem, once it was admitted by the Americans that such cases do arise, is to define "disparities" that warrant special treatment and not just simple halving.

The situation on the day John Kennedy was shot is this. The Europeans advocate a rule called 30+10, and the Americans are holding out for a 60+15 rule. That is, the Europeans say there is gross disparity whenever an American tariff is 30 per cent or more and is at the same time more than 10 points higher than the equivalent European tariff. The Americans say there is no disparity calling for special treatment (i.e. not just simple halving) unless their tariff is at least 60 per cent and at the same time at least 15 points higher than the European tariff. The dispute had reached a

deadlock, and to find a way out a commission of experts had been appointed to study the likely commercial results of applying the 30+10 rule to the tariffs of the USA, Britain and the Common Market. It had already emerged that the 30+10 rule would give disparities (i.e. exorbitantly high tariffs) for some 1,200 products in the US tariff schedule, equal to a fifth of the products they import. Note, as a further complication, that the Americans say all this arithmetic is beside the point; what matters is the actual volume of trade in each product and an estimate of the real commercial consequences of a change in a tariff. The Europeans had accepted this as an additional criterion, that is to work not only in percentages but in dollars and cents.

Kennedy's death removes the one man who had urgent electoral reasons, and reasons of personal prestige, for wanting this deadlock resolved next year. His successor is not committed to anything like the same extent, and will in any event have to fight a much more hazardous election, and one in which all such foreign-policy considerations might be overshadowed by domestic issues. The feeling in Paris is that a formal meeting might well take place in Geneva in May, to show that the rendezvous had been kept, but that there will be no progress with John Kennedy's grand design in the course of 1964.

Export-Credit Competition

IN RECENT years importers of capital equipment have benefited from competition between exporters of such equipment in the matter of export credit. Each Western country has been trying to secure business by offering longer credits to its customers. Since these credits in turn have to be insured, and can be so only by the State or public institutes, this competition has taken on an inter-governmental flavour. Governments have competed with each other by offering to guarantee a larger part of the export-credit risk and/or to insure the risk for longer periods. Yet the Governments of the major industrial countries are bound by an international convention that seeks to restrict such competition. This pact was signed under the auspices of the Union of Insurers of International Credits, known as the Berne Union. This body is not the only watchdog interested in limiting rivalry in export-credit: more recently the Common Market Commission enjoined that the Six should moderate their rivalry in the field.

The offer of export-credits, then, is subject to conflicting pressures, with some interests pushing for "more liberal" terms while others seek to prevent what they regard as recklessness. The pressure in favour of more generous credit is easily explained. Firstly, capital goods are an ever-increasing proportion of West European exports, and, because they are more expensive and take time to manufacture, install and set going, they pose credit problems not encountered with the consumer goods that once were Europe's principal exports. Secondly, important customers for these goods are the developing nations whose export earnings are insufficient to finance import of the machinery they urgently require for industrialization. Thirdly, there exists excess capacity in several branches of the European mechanical industry, and export orders are sought desperately to maintain activity, which is why, in particular, Governments regard it as "in the national interest" to guarantee export-credits which otherwise they might frown upon. Lastly, generous credits for machinery exports are part of the overall plans of countries like the U.S.A. and Britain to right their balance of payments.

The reasons for trying to put the brakes on are no less evident, and were recognized by Western Governments when they signed the Berne convention. Credit competition can become dangerous, and an open war between industrial nations trying to win customers in the developing world

could lead to a deterioration in the quality of credit which ultimately would not be in the interests either of lenders or borrowers. Governments know this and they have entered on this competition reluctantly, each seeking to protect its national industry from the efforts made by other countries to win orders. At the present moment, most Western capitals would welcome a more effective version of the Berne convention which really prevented outbidding by competitors. On the other hand, they are hesitant about setting up such an international mechanism because it would be interpreted by developing nations as a rich man's club seeking to deny them the credit facilities they need.

Welcome Change

Indeed, from the point of view of importers of capital goods, especially in developing countries, the competition between suppliers which has burst the bonds of the Berne convention is a welcome change. Still, appreciation of it must be tempered by the thought that borrowers have no interest in seeing too much competition between their bankers because one or two resounding failures can lead to a sharp contraction of credit tomorrow; the history of banking is full of illustrations, and one must admit that lending to certain developing nations is a very risky business. It is so exactly because rivalry between Western suppliers is limited to the length of loans, and there is no sense in lending longer and longer term to clients whose ability to repay is not improving.

In other words, as long as Western nations are doing relatively little to increase the export earnings of developing nations nor to cheapen credit to them, merely to increase the life of loans is dubious generosity. A co-ordination of export-credit policies between Western nations, provided it were not too restrictive, would be welcome—if it were accompanied by action on a matter of no less importance to developing countries: the rate of interest payable on such credits. There has been precious little competition here between Western Governments, and the cost of export-credits remains uniformly high. The only notable concessions have been in Britain, for the good reason that British bank rate (and interest on export-credits is generally geared to bank rate) had been carried very high indeed for balance-of-payments reasons. With bank rate at 6 per cent, export-credit would cost 7 or 7½ per cent per annum on a five-year loan; so an adjustment was inevitable. Japan has made a similar effort, in that it charges rates comparable with other countries for export-credits although its domestic money rates are high.

Apart from that, the cost of medium-term export-credit is about the same in all the industrial nations except that it is exceptionally high in West Germany. For long-term credits, Japan and Italy offer the lowest rates, West Germany the highest, with France and Britain in the middle. From the point of view of the developing nations all these rates are too high and pose repayment problems that are not resolved

merely by lengthening the life of the loans. A concerted effort to cheapen credit could significantly assist them, and if the Western nations took that occasion as an opportunity to impose uniform terms for the length of the credits, that would be regarded as sound banking rather than as egoism on the part of a rich nations' club.

Not that a return to the restrictive conditions of the original Berne convention would be welcomed; nor is there much chance of enforcing it, for Governments have recognised that its limits were too rigid in view of the current volume and nature of trade in capital goods. The Common Market Commission, for example, lately told members that they should consult each other whenever the five-year limit fixed by the Berne Union was to be exceeded, but not that they should refuse to grant or guarantee export-credits for longer than five years. The five-year limit was more or less generally observed between 1950 and 1955 but when demand for credit became more intense in 1958-59 (so that suppliers who offered longer loans began carrying off the orders) infractions of the rule became more common. West Germany and Britain agreed to insure longer-term credits when justified as "in the national interest," and these exceptions have by now become the custom which Berne has no chance of undoing.

Limit Extended

From 1961, Britain agreed that it was normal to give longer credit than five years for the sale of ships and for "very substantial equipment" such as steel mills, oil pipelines or electric generating plant costing at least £2 million. France followed this lead for similarly substantial projects. Seeing that the united front was fragmenting, Berne made a virtue of necessity and admitted that the five-year limit could be extended to seven years for the sale of, for example, aeroplanes or even to 15 years for exports financed by credits extended in terms of an inter-governmental agreement.

The original restrictions have, then, been considerably relaxed and importers might not be opposed to a fresh effort to co-ordinate the more generous practice of Western lenders on the condition that generosity were now extended to the more important matter of charges. The increased volume of the export-credit business in the last few years (it has doubled in many West European countries), the greater familiarity of exporters and credit institutions with the work, and the generally good record of borrowers, would all seem to justify an effort to reduce the present high rates of interest. Besides, insured export-credits now finance a significant and growing proportion of the total exports of West European countries: around 19 per cent on average. This proportion is much higher, naturally, if we look only at exports of machinery and equipment. Almost half of British exports of such goods benefit from insured credits, about a quarter of the same exports from Switzerland and Sweden, while in the

MASSIVE TYRES

FOR MASSIVE WORK

The scraper and the dumper. Two powerful modern beasts of burden, indispensable for moving thousands of tons of earth at project sites with continuous operation. Tremendously heavy and strenuous work, requiring the toughest pneumatic tyres. Dunlop Power Grip and Earthmover tyres are proving themselves superbly in service ... at Nagarjunasagar, Koyna, Neyveli and many other projects.

The tread pattern and especially tough casings of these Dunlop tyres were developed after prolonged field trials in different kinds of terrain in many parts of the world.

Common Market the figure ranges from 4 to 11 per cent. In turn, the percentage is greater if we look only at West European exports to developing countries. About 40 per cent of West German exports to those regions are financed by State-insured credits, and the figure is perhaps nowhere below 20 per cent for any industrialised nation.

Statistics on the absolute volume of industrialised nations' exports to developing countries insured by a State guarantee are hard to get, but an estimate by the Organisation for Economic Co-operation and Development for its

members (West Europe plus the U.S.A., Canada and Japan) gives these figures: \$18,100 million in 1956, increasing to \$21,200 million in 1960. These are substantial sums, and any measures that could lower the cost of extending such credits and of insuring them would be a significant contribution both to world trade and to the development of young nations. It would be a more useful contribution than continuation of the recent competition in extending longer and longer lines of costly credits and a more rational one because it would lighten, rather than just spread out over time, the cost of industrialisation.

Has My Watch Stopped?

By JOSSLEYN HENNESSY

LONDON:

YEARS AGO in the great days of the Marx Brothers era, Groucho, playing the role of a doctor taking a patient's pulse, remarked: "Either you're dead or my watch has stopped." Looking at the economic scene in the UK, I feel as perplexed as Groucho.

Consider some facts. In 1962, the New York stock exchange staged the greatest crash since 1929. Values, which had reached a peak of 735 Dow Jones points on December 13, 1961, had lost 200 points by June 28, 1962. This was a loss of one hundred thousand million dollars belonging to 17,000,000 people, or approximately \$6,000 to each individual. The market of 1929 did not recover its peak of 400 until 1956 — twenty-seven years later. Yet it recovered from its 1962 low to record the all-time peak of 760 on October 29, 1963, i.e., in eleven months. The 1929 crash spread panic round the Western world. The 1962 crash looks now like a passing wave. The accompanying fall on the London stock exchange, from 310 to 252, came when the UK had barely recovered from the 1961 credit squeeze. Unemployment was higher than at any time since the war, and was rising. The Conservative government's stock had begun to fall. Today, Labour's prospects of forming the next government look good. Yet the stock market has zoomed to 340. Other shocks that the economy and investors have had to withstand have been the Cuban crisis and the breakdown of the negotiations for the UK's entry into the European Economic Community.

The Main Difference

One important difference between the 1929 and 1962 crashes in both the USA and the UK arises from the vast increase in the numbers of small investors, many millions in the USA and certainly a million or two in the UK, who might have been expected to panic with catastrophic results. But far from panicking, in both countries they behaved like grizzled experts and began cumulatively to seize chances of picking up good stocks while they were cheap. The first thought that occurs to one is that in both the USA and the UK the investor has come to assume that no government today will allow a real depression to develop and that any recession is only a "Stop" preluding another "Go".

The UK's failure to enter the EEC seemed another grave reverse. The economy would not get the healthy competitive streamlining to which British industrial leaders had genuinely been looking forward. The Federation of British Industries glumly hinted that the UK might have to go back on post-war multilateral trade arrangements and resume bilateral pacts with good customers.

This was the hour of confusion which UK investors chose to launch a boomlet on the stock exchange! Why?

I ask myself if it could be that just as investors now assume that governments will not allow real depressions at home, so also do they assume that governments have developed workable techniques of international co-operation to smooth world depressions out between Stop and Go. To me, the analogy does not seem to be on all fours. We have indeed achieved a good deal of international co-operation but the complications are so great, and the clash of international interests so many and varied, that the possibilities seem limited.

Investors not Dismayed

Finally, how is it that the possibility of a Labour government apparently leaves savers, investors, and business leaders unperturbed? Mr. Harold Wilson's utterances must evidently have persuaded these varying, and traditionally nervous, groups that he is neither hostile to business nor indifferent to the importance of avoiding inflation and maintaining a stable currency. But what about the unions? In years of expansion and high employment will they continue to exercise the wage restraint necessary to enable export prices to remain competitive? Their price for such restraint is known: a higher profits tax, a surcharge on distributed profits and general capital gains tax. Are investors dismayed? No, they are pushing share prices higher!

Investors and business leaders cannot have forgotten that variations in export and import trends, and in the balance of payments, ultimately dominate any internationally trading economy. Again, how would sterling fare if the dollar came under real pressure? A Labour government could do no more about it than a Conservative government — watch and pray. A dozen other possible "bear" points for the UK economy will readily occur to any of the "Eastern Economist's" well-informed readers.

Nevertheless, come Hell or high water, UK savers, investors, and business leaders continue to put the most favourable interpretation on any new development. It seems that all are convinced that the government has put the good satellite "Expansion" into unending orbit. They seem persuaded that the government's economic advisers have digested the lessons of the past decade to such effect that this time the economy will not be pushed into the cycle of over-full employment, inflation, sterling crisis, and 7 per cent bank rate. Have we really mastered the techniques of keeping the economy at a steady pre-determined speed, like an aeroplane's automatic pilot? Yes, comes the reply, a new generation of economists and industrial leaders is supereding a tired unadventurous elder generation. Innovation is in the air.

That in the midst of this euphoria, I ask "Are they all crazy or has my watch stopped?", doubtless reveals me as hopelessly behind the times. I trust that I am!

A New Despotism?

By THE EDITOR

Speak roughly to your little boy,
And beat him when he sneezes:
He only does it to annoy,
Because he knows it teases.

— Lewis Carroll.

THE COMPANIES (Amendment) Bill, 1963, introduced in the Lok Sabha on November 29, 1963 has caused a certain amount of excitement in business circles and in the stock exchanges. This is perhaps natural, although, after the Vivian Bose Report, it was only to be expected that the Government would feel compelled to flex their legislative muscles.

In an introductory speech, a speech which was more reasonable than the Bill itself, the Finance Minister claimed as follows:

"In the absence of the powers which we are now seeking to assume, it would not be possible for the Government or the public sector undertakings to play a constructive role in the development of the private sector and, at the same time, to achieve the ends that we have in view. Therefore, industrial development is no longer the privilege of any particular section of this country. It is no longer a question of adding a few crores of investment to this industry or that industry. It is a question primarily of investment of crores of rupees, hundreds of them, in basic industries on which alone we can rely for fulfilling our aspirations for an economically independent and self-reliant India. Therefore, the objective of this measure is to make us lend enough money for the private sector where we are to grow, to develop, to modernize with their industries and become efficient because we do not subscribe to the theory that they should not be helped, for after all, there is only one sector in the country and that is the national sector. Every individual in this country owns every bit of property that belongs to the State and to individuals also, and that should be used for the betterment of the individual in this country. Having this in view we have framed these provisions so that Government can come forward perhaps in a bigger way to help the industries to grow and we cannot do that unless the moneys of the people of this country are safeguarded, unless we know that the money is going to be used for proper purpose and in expenditure that contributes to growth. That, Sir, is my justification for introducing this Bill before the House."

Put more simply and directly, these observations would seem to mean that Mr. T. T. Krishnamachari believes that the proposed Bill is necessary for and would help in promoting the confidence of the public and the Government in the proper functioning of the corporate sector. If this is his meaning, it seems to us rather a strange way of trying to build up an edifice of confidence on a base of a total distrust of the individuals who are running industries in the private sector.

It is no doubt true that in the business sector, as in other areas of our national life, there are people of varying standards of honesty and that those whose standards are not what they should be are occasionally to be found violating provisions of law or dictates of propriety. But, it is very important to make it clear here that neither the Vivian Bose Report nor any document which preceded or followed it has established that fraudulent practices or improper conduct are so extensive in the running of industries in this country that those who are in the control or in the management of business firms should be treated as second-class citizens who are not entitled to the fundamental right of equality before the Law. And yet precisely it is this injustice which the Company Law (Amendment) Bill in its present form proposes merrily to dispense.

We are aware that there is some substance in the Government's argument that the normal procedures of the law courts — because of the scope they provide to powerful litigants (who could after all finance their defence out of company funds) to delay proceedings or decisions almost indefinitely — have not been found adequate for coping with serious offences of fraud or misfeasance by major or even habitual violators of the Company Law or other relevant legislation. But surely this should ordinarily be an argument for examining how far procedural delays in the law courts could be eliminated within the framework of the enactment concerned. In other words, here is an issue which the Government might perhaps invite the Supreme Court or the Law Commission to investigate. If this is found to be too unexciting a recipe, a more effective approach may perhaps be to constitute a special Bench in the High Courts to deal with Company Law cases. Under such an arrangement, the Government might take powers to associate with the presiding judge an assessor nominated by itself. As a rule whenever expedition in the disposal of any particular class of law suits is considered necessary in the public interest, it is proper that some such procedure should be followed.

The temptation to create special agencies outside the judiciary must be resisted as much as possible if the rule of law is to be observed in spirit as well in letter and this country is to progress as a civilized democracy where the individual's rights are not restricted merely to what it pleases the Government of the day to permit. From this point of view, one of the main provisions of the Bill, which empowers the Government to deprive individuals of the offices they hold in the management of companies and debar them from holding such offices for a period of five years on the basis of the findings of a special Tribunal to whom the Government might refer their alleged misconduct, must be regarded as a grave abridgement of the right of the citizen to equality before law and the presence of natural justice in the ordering of the affairs of the community.

The Finance Minister has sought to make out that, because the proposed Tribunal will have a judicial bias in its composition and the aggrieved party could appeal to a High Court against the findings on points of law, nothing is being done to offend the spirit of the Rule of Law. But it is a common experience that, where Tribunals are constituted by the Executive and are made to function in an atmosphere where the prevailing principle is not that a person is presumed innocent until he is found guilty but that he is to be held guilty unless he can establish his innocence, a mere supposition of "judicial bias" is not enough to guarantee that justice will always be done, whatever may be the honest intentions of the sponsors of such Tribunals. In the particular case of this Bill, proposals for the constitution of the Tribunal and the wide scope given to the Government for making references to it immeasurably enhance the risks of official aggrandisement. Since the Government seems determined to proceed with this proposal for a Tribunal, it is therefore necessary that it should at least restrict very severely its potentialities for mischief.

In the first place, it is not enough that the Chairman of the Tribunal is to be a person having knowledge of and experience in law, who is, or has been, or is qualified for appointment as judge of a High Court. It is desirable to provide, in addition, that this official should be nominated by the Chief Justice of the Supreme Court and that his remuneration and conditions of service fixed by the Central Government in consultation with the Chief Justice. In his speech on the motion for reference to the Select Committee, Mr. Morarka made the valid point that, although the Bill provides that a Bench con-

One of the fastest growing general insurance companies in India

MADRAS MOTOR & GENERAL INSURANCE COMPANY LIMITED

The stability of a general insurance company depends upon the continued patronage of its clients. The ability to expand the field of activities and serve new clients sets the pace of its growth.

The swift and steady growth of Madras Motor & General Insurance Company Limited indicates that it possesses both these qualities in ample measure.

stituted by the Chairman of the Tribunal with more than one Member should include one person having knowledge and experience in law, it is necessary to provide further that where a Bench is constituted of only one Member, that Member should necessarily be a person having the same qualifications as those prescribed for the Chairman of the Tribunal. The Finance Minister has offered to consider this suggestion constructively and this is all to the good. Unfortunately, an even more important point which did not at all figure in the Lok Sabha which preceded the reference to the Select Committee was the procedure to be adopted in the Government making a reference to the Tribunal.

While we are prepared to assume that the Government would not ordinarily exercise this authority without good and sufficient reason, the possibilities of political harassment or persecution of a particular individual on personal or other grounds cannot be lightly discounted when it is proposed to arm the Executive with vast powers over the reputation and livelihood of private citizens. We need not go into this question at any great length but must add that thanks to the interaction of political democracy and a controlled economy, so many points of contact have been created between the business community on the one hand and the bureaucracy and the politicians on the other that there is an ever-present danger of personal or political axes being ground. In the circumstances it would amount to a cynical disregard on the part of Parliament of a real threat of disintegration of standards of administration and public life to go on vesting vast powers in the Executive without simultaneously providing against their arbitrary use or abuse. Somewhere in the course of his observations in the Lok Sabha on this Bill, the Finance Minister spoke of checks and balances. The need for such checks and balances seems to be most obvious and necessary in the case of the powers given to the Government to make a reference to the proposed Tribunal. It is consequently suggested that this reference should be made only in consultation with and with the consent of the Advisory Committee functioning under the Act. This is the minimum safeguard needed to persuade informed public opinion to reconcile itself to the proposal for a tribunal made in the Bill.

Equally important is the issue of the scope of the reference. The vast and vague definition — if it is to be described as a definition at all — of the grounds contemplated in the Bill for the making of a reference is undoubtedly among the most objectionable and offensive features of this measure. Mr. Morarka again has pointed out how the requirement regarding the substantiality of the evidence for initiating action against alleged offenders is being progressively diluted. In terms of the Bill, the Government could make a reference to the Tribunal merely if there are "circumstances suggesting" that an offence or impropriety has been committed. Since a person, who might in the end be found to have been unnecessarily and unjustifiably harassed by the reference, has no remedy against those who have thus used him ill, it is surely necessary that Parliament should, in fairness, impose more stringent requirements on the Executive with regard to the taking of decisions for making a reference to the Tribunal.

It is true that, if the suggestion that the approval of the Advisory Committee should be sought for a reference being made is accepted, the scope for frivolous proceedings will be considerably restricted. But since even the raising of a complaint before an Advisory Committee could harm the reputation of the individual involved, the law should surely be made to require that the Minister concerned should satisfy himself that there is a case for going to the Advisory Committee for the making of a reference to the Tribunal. An objection may be raised that it is unfair to expect the Minister to devote the time and energy required to study these matters for himself, but a fair answer would be that, when the Government assumes vast powers abridging the rights of the individual

citizen, some built-in checks are clearly necessary to ensure that those powers will be used sparingly and only when a clear case exists for their being exercised to protect a major public interest. The point is that the proposed Tribunal — on any reckoning extra judicial authority — is being set up not in order to deal with the temporary needs of an emergency but as a permanent part of the administration of the country. In the circumstances, its extraordinary position should be well preserved by writing into the relevant law every provision that may be needed to ensure that it is not lightly employed.

Allied to the issue of what should be the basis of a reference is the question what kinds of offences or misdemeanours should at all be dealt with by the special and extraordinary law. Here, again, the relevant provisions of the Bill seem to have been drafted with the primary objective of giving the Government a vast and undefined authority with no consideration for the citizen's right to the processes of the ordinary law of the land. As the Bill now stands, the Government's powers to remove managerial personnel from office on the recommendations of the Tribunal would apply not only to offences of fraud, misfeasance or breach of trust, but even to some undefined negligence or default in carrying out obligations and functions under the law. As Mr. Morarka pointed out, this could mean that a person might be hauled up for omitting to pay the call money on his shares on the due date. The next provision is even more strange since it provides that proceedings could be instituted against a person on the ground that he has not been managing his company in accordance with sound business principles or prudent commercial practices. On this reckoning, the entire Railway administration and the Posts & Telegraphs Department should be hanged from the nearest and the tallest tree. It should be interesting to know from the Government whether it is at all possible, except to a very limited extent, to determine for all circumstances what are in fact sound business principles or prudent commercial practices. Prudence by definition is a relative term and might justifiably range over the entire gamut from cowardice to foolhardiness.

Illogicality is stretched even further in the following provision which makes it an offence to conduct and manage a company in a manner which is likely to cause or has caused serious injury or damage to the interests of the trade, industry or business to which such company pertains. We wonder how all this extravagance in legislation could have been considered necessary. Whosoever has drafted this clause seems to be living in a nightmarish world where entire industries have been damaged or destroyed by the misconduct of management in individual companies. We should like to know what really are the facts the Government thinks it has in its possession to warrant such wild panic. In any case, where it really does happen that the mismanagement of a single company has been such as to jeopardize the entire trade or industry to which it belongs, it must surely be possible for the Government to locate some particular breach or violation of the law with which the persons guilty of such enormities could be charged. He would indeed be a clever man who manages to ruin an entire industry without falling foul of any specific provision of some law or another in a cognizable manner. Much as we would like to appreciate the Government's notion that businessmen as a class have diabolic powers for mischief, we must confess that we just fail to see how such a vague allegation could justifiably be made and the accused asked to rebut.

It is, however, the last provision in this part of the Bill which really takes the palm for unreason. The concluding part of this provision authorises the Government to make a reference to the Tribunal on the ground that a person has managed his business "in a manner prejudicial to public interest". Here again, if any offence has been committed, it should normally be possible for action to be taken under a specific provision of one or the other of the numerous laws for controlling the

activities of companies or individuals. Instead to make a vague charge, namely, "acting in a manner prejudicial to public interest", as a ground for Tribunal proceedings is ethically not much superior to charging a person with being "an enemy of the people" and sending him to the guillotine or to Siberia. The entrusting of such vague and vast powers to the Executive as is proposed in this part of the Bill, must necessarily bring the Government into contempt in any community which is seriously concerned about its democratic character.

If the proposals in their present form for the constitution and functioning of the Tribunal are the most disquieting feature of the Bill, easily the most perplexing is the provision under which the Government seeks authority to secure the conversion of its loans or debenture holdings into shares without the consent of the company having to be obtained in the ordinary manner. In the first place, while urgency may perhaps be pleaded for some other provisions of the Bill, we fail to see how that argument applies to this one. Since the Finance Minister has indicated that he intends to bring a more comprehensive Bill for amending the Companies Act, it is reasonable to ask why this proposal could not have been deferred for the time being instead of its being made part of a Bill which is evidently being rushed through now during a short session of Parliament. This objection is all the more valid since the implications of this move have to be carefully studied, especially in view of the ingenious attempt on the part of the Finance Minister to make his proposal appear not only innocuous but positively beneficial to the corporate sector. His argument is that, without the proposed authority which the Government seeks, a minority of shareholders could create difficulties in the way of conversion and that the prospect that they might do so would discourage financial institutions, such as the LIC, IFC, NIDC, ICICI, or other international or Commonwealth institutions, like the International Finance Corporation and the Commonwealth Development Finance Corporation, from making loans or taking debentures with a view to their future conversion into equity. We should like to know what evidence the Government has to show that this discouragement has been or is being felt. On the contrary, there do not seem to be many instances where it has not been possible for a company to put through the conversion where the conversion has been provided for in the original loan agreements or debenture issue, or when a conversion has been subsequently negotiated as being to the advantage of the company.

Mr. Mahavir Tyagi, speaking in the Lok Sabha, made the exciting suggestion that the proposal was in fact a clever move on the part of the Finance Minister to carry the principle of the public sector into the individual constitution of every company in due course. This may or may not be Mr. Krishnamachari's notion of how democratic socialism should be built up, but the proposal in the Bill empowering the Government to effect conversion unilaterally, that is by its own decision, of loans or debentures held by it or by any agency specified by it, can only be regarded in the corporate sector as so obvious a Trojan horse that even the most optimistic Trojan cannot possibly have any illusion about it. It is a wonder that the Government does not realise that industry seeks Government loans or loans from Government agencies not because it enjoys doing so but because it is forced by the economic policies and the investment climate in this country to go out of its way in this manner to secure essential funds. If the capital market is alive, active and sufficiently extensive or if the banking system is free to respond to the demands of industrial expansion, or has built up traditions of term-financing of industries, the private sector would certainly not be over-keen on seeking loans from the Government. If it does so now it is surely because it has no alternative — and the present Bill only seeks to exploit its necessity in the most cynical fashion. If the Finance Minister could really believe

that this provision will actually inspire investors' confidence in the corporate sector, he would believe anything. We are afraid that, in its own way, this provision will deal as damaging a blow to investment psychology at home and abroad as the novel principle of the super-profits tax has done. We are, in principle, opposed to the Government or Government institutions making it a condition of their loan assistance that they should be allowed to participate in the equity capital. This would indeed be carrying the principle of mixed economy too far. After all, the Industrial Policy Resolution leaves certain areas of industry to the private sector. This principle should be honoured in the spirit as well as in the letter.

It is no doubt true that the Industrial Finance Corporation and the State Finance Corporations have occasionally assumed an interest in the equity of assisted companies. While as individual transactions effected by mutual agreement such arrangements may have to be accepted, we see no virtue in elevating them to the status of a general principle or policy. On the contrary, it is desirable that such loan assistance as may be rendered to industry by government agencies should be given without strings. The case of the International Finance Corporation has been cited. But the International Finance Corporation is not a creature of a government of one's country, and in its case the arrangement could be considered as a purely business transaction. We hope that this provision of the Bill is not an indication that the Government is working out a new policy whereby it will assist industries with finance only if it is allowed to own them in part. We would therefore earnestly urge that this proposal should be given up or at least not be worked into the law of the land through the hustled passage of the present Bill. At least time should be given for more careful consideration and we would, therefore, suggest that if the Government desires at all to proceed with this proposal it should defer it to the time when it is ready to go to Parliament with a more comprehensive amendment of the Companies Act of which the Finance Minister has spoken.

In any case, we just do not see what justification the Government has to seek retrospective effect for the authority to enforce conversion. We consider it to be highly unethical and a most injurious public policy to bring into the scope of this authority loan agreements or debenture holdings predating the passage of this Bill. Neither in the Finance Minister's opening speech nor in his reply to the debate has he explained why precisely he seeks this extraordinary authority. It should be interesting to know whether any special difficulties have arisen with regard to any loan or debenture transaction to which the Government is a party. Even if these agreements or arrangements have not worked out satisfactorily and the Government has any just cause for grievance, there should surely be some provision in the ordinary law for redress and it is certainly difficult to agree that, even in such circumstances there could be sufficient provocation for the violation by the Government of clear and definite contractual obligations entered into in the ordinary course.

Before we leave this particular provision in the Bill, we deem it necessary to emphasize once again that the authority for unilateral conversion could be a very strong deterrent to foreign collaboration, especially, financial, but also technical. No foreign industrialist or investor is likely to be exactly reassured by the prospects that at some unspecified date he might find the Government of this country a partner with him in his business without his having specifically bargained for it. We are convinced that, at this critical stage in this country's development, when so much depends on the increased inflow of capital and know-how from abroad, a false move such as this provision in the Bill could do very real and substantial harm to the nation's economic progress as against the vague and mystical socio-political virtue which may be attributed to it in some quarters.

Finally, the provision for divesting trusts of the voting

Investments by (Public Ltd) Companies

By Our Special Correspondent

NEW DELHI :

THE GOVERNMENT of India, in the Company Law Department, has formulated guiding principles for the investment of shares and debentures of other bodies by public Limited Liability Companies. Section 372 of the Indian Companies Act provides that such an investment can only be made after they had been sanctioned by a resolution of the investing company in general meeting in addition to Central Government's approval. The Government has framed the following guiding principles for its approval :

- (a) Although industrial and trading companies are not investment corporations and it is not their primary business to give financial accommodation to, or make investments in the shares and debentures of other companies, they should be allowed to make trade investments in other companies, namely, investments which are likely to create conditions conducive to the interest of the investing company, as well as to other companies' more economic working and betterment of production. An example in point would be an investment by a sugar company in a company which produces sugarcane with a view to supplying sugarcane to the sugar company.
- (b) A company should be allowed to make the investment only if it has adequate liquid resources for making the investments and if the depletion of the working capital which would result from the blocking up of the funds of the company in the form of investments would not adversely affect the company's own working ;
- (c) A company that has resorted to borrowing for its own requirements or intends to finance its investment by borrowing, should not be permitted to do so, except in the case of trade investments if the terms of borrowing are

commensurate with the return expected both directly in terms of dividend and indirectly through creation of conditions conducive to the interests of the investing company ;

- (d) Inter-company investments should not be permitted where there is a reasonable suspicion that they are prompted by a desire to gain control over the management of companies or are for speculative or for other mala fide purpose. Where, however, the proposed investment would make the company a subsidiary of the investing company, the investment should be permitted subject to the existence of a reasonable functional relationship between the proposed subsidiary and its holding company or between it and the other subsidiaries of the holding company ; and
- (e) Whether having regard to the considerations set out below the proposed investment may be regarded as sound :
- (i) The company in which the investment is proposed to be made should be in a sound financial position and, in particular, the depreciation provisions made should be adequate ;
- (ii) The financial structure of the company in which the investment is proposed to be made, after taking into account the proposed investment, should be a balanced one as otherwise idle capital or heavy interest charges would act as an economic drag in the working of the company .
- (iii) The company in which investment is proposed should have earned profits and declared dividends, in the past or should at least clearly be capable of making profits and declaring dividends within a reasonable period of time ;
- (iv) The purchase price should be reasonable and neither too

(Contd. on page 1176)

(Contd. from previous page)

powers for the shares held by them and vesting such powers in an officer nominated by the Central Government, is likely to cause some justifiable misapprehension. The Finance Minister has pleaded that this authority is necessary for the Government in order to counteract the facilities offered by trusts to monied and vested interests for the indirect control of companies through nominees. If the institution of trusts has been abused, the Government is certainly entitled to take remedial action. But there is nothing in the language of the Bill to show that the Government will exercise the authority sought by it only in cases where there is a history of abuse or only in circumstances when there is reason to suspect that the voting rights will be abused. Here too a desirable safeguard may be to provide that the Minister should satisfy himself that the need exists in a particular case for invoking this authority. The Bill brings even within its scope only those trusts which have a substantial interest in any given company. This is a very desirable limitation and we would suggest that it should be further tightened up. As at present proposed, whether the holdings of a trust and shares or debentures of a company exceed Rs. 5 lakhs, the law will apply to it although its stake may be less than 25 per cent of the paid-up capital of the company. Since the Government's purpose is only to prevent abuse of voting rights, it should be sufficient if the applicability of the law to a particular trust is defined only in terms of the proportion of the trust holding to the paid-up capital of the company. In other words, we would suggest that, while the present provision that where the trust holding does not exceed Rs. 1 lakh should stand, the further prescription should be that the provisions of this Bill will be attracted only where the trust holding exceeds 25 per

cent of the paid-up capital. In his speech introducing the Bill, the Finance Minister indicated that "genuine trust essential for safeguarding family interests or charitable or educational trusts" would be exempted. This should be made clear through the language of the Bill itself.

To conclude, we must reiterate our conviction that the Bill in its present form is unlikely to serve the purpose of speeding up economic development and the expansion of the corporate sector which the Government evidently desires to bring about. We are not convinced that a satisfactory case has been made out for the necessity of the harsher provisions of the Bill in their present form. It is absolutely necessary that these provisions, which have been discussed above, should be considered in the Select Committee not in terms of the prestige of the Government or the prejudices entertained in certain quarters against the corporate sector generally and big business in particular, but strictly from the point of view of reconciling the demands of demonstrable public interest with the right of every citizen in a civilized democratic community to equality before the law and the freedom to carry on his lawful avocations without fear of political persecution or bureaucratic harassment. While we are all for an effective instrument of company legislation which would offer necessary protection to shareholders or the society from the activities of predatory individuals, we are emphatic that if the present trend in company legislation continues, business management will have to be classified as a dangerous occupation, which surely is not the way to encourage the entrepreneur or inspire the investor with trust in the business community of this country. The industry and trade of this country are not as if they were naughty little boys to be knocked about for sneezing.

ANNOUNCEMENT

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT OF THE PROPOSED ISSUE OF THE CAPITAL. INTERESTED PERSONS MAY OBTAIN COPIES OF THE PROSPECTUS FROM THE COMPANY'S REGISTERED OFFICE, BANKERS, BROKERS AND UNDERWRITERS.

ENGEL INDIA MACHINES & TOOLS LIMITED

(Incorporated in India as a Public Company on 26th April, 1962 under the Companies Act, 1956.)
Registered Office: 6, Old Post Office Street, Calcutta-1.

SCOPE AND PROPOSED ACTIVITIES

A. Objects of the Company: The Company was incorporated on 26th April, 1962, with the following main objects as stated in the Memorandum of Association of the Company (a copy of which is available for inspection by the public):-

- To manufacture and deal in all kinds of machines, tools and die casting equipment.
- To manufacture and deal in all kinds of dies and moulds.
- To carry on business of manufacturers of and dealers in machineries and equipment required for plastic goods.
- To manufacture and deal in plastic moulding powders and compounds and all such articles and things as can be made therefrom or which can be used for or in connection with the manufacture thereof.
- To manufacture articles and things which can or may be manufactured from PVC compounds.

B. Location of Factory: The Company is setting up a composite plant at Calcutta to manufacture injection moulding machines and moulds required by the plastic industry. The factory will be located at Taratala Road, Calcutta on approximately 12 bighas of land in respect of which the Company has entered into a long term lease with the Commissioners for the Port of Calcutta. The factory site is within a highly industrialised area and is well served by good roads connecting the site to the Port of Calcutta and other engineering industries. The erection of the factory has been started and production is planned to commence by about mid 1964.

C. Technical and Financial Collaboration with

Ludwig Engel K. G., Schwertberg, Austria: The Company has entered into a technical and financial collaboration with Maschinenfabrik Ludwig Engel K. G. of Austria in terms of which the Austrian Company will subscribe for shares in the Company and will make available the necessary technical know-how and provide the other technical assistance required for the production of the machineries and moulds to be manufactured by the Company.

SHARE CAPITAL

Authorised:
10,00,000 Equity Shares of Rs. 10 each .. Rs. 1,00,00,000

Issued, Subscribed and Paid Up:

900 Equity Shares of Rs. 10 each, upon which Rs. 10 per share has been paid by the signatories to the Memorandum of Association and Directors of the Company 9,000
61,455 Equity Shares of Rs. 10 each Subscribed by Directors and Friends upon which Rs. 5 per share has been paid 6,14,550
62,645 Equity Shares of Rs. 10 each subscribed by Directors and Friends upon which Rs. 2.50 per share has been paid 6,26,450

Present Issue:
3,75,000 Equity Shares of Rs. 10 each 37,50,000
.. .. . Rs. 50,00,000

Out of the Present Issue:

1. Ludwig Engel K.G. of Austria have agreed to subscribe and will be allotted 75,000 Equity Shares of Rs. 10 each Rs. 7,50,000
2. 50,000 Equity Shares of Rs. 10 each have been reserved for allotment to companies and other persons connected with the plastic industry in India 5,00,000
3. NOW OFFERED AT PAR TO THE PUBLIC:
2,50,000 Equity Shares of Rs. 10 each 25,00,000
.. .. . Rs. 37,50,000

APPLICATIONS

Copies of application forms and prospectus can be obtained from the Registered Office of the Company or from the undermentioned Bankers, Underwriters and Brokers.

DATES OF OPENING AND CLOSING OF SUBSCRIPTION LIST

The Subscription list will open at the commencement of banking hours on 16th December, 1963 and will close at the close of banking hours on 24th December, 1963 or earlier according to the discretion of the Directors of the Company but not earlier than the close of banking hours on 18th December, 1963.

BANKERS

State Bank of India: Any branch or branches in Ahmedabad, Allahabad, Bombay, Calcutta, Howrah, Indore, Kanpur, Lucknow, Madras, Delhi and New Delhi.

(Contd. from page 1173)

- high nor too low, taking into account the net worth, prevailing market prices and future expectations of profit;
- (v) The proposed investment should normally provide an expected return on capital at least equal to the return on gilt-edged securities;
- (vi) Except in the case of trade investments, the shares or debentures proposed to be acquired should preferably be readily marketable.
- (vii) Investments by one company in the shares of another, where the first company is acting as or is proposed to be appointed as sole selling agents or sole distributors of the latter company should not ordinarily be encouraged unless the latter company will become, by virtue of these investments, a wholly owned subsidiary of investing company.

**

The Chief Ministers of eight States, specially called to New Delhi to discuss the financial outlook for the State plans in 1964-65, find themselves in a Micawberish position. What they plan to spend just does not tally with what they hope to raise and so the Centre — to change the fictional analogy — finds itself confronted with a straight row of eight Oliver Twists. Mysore wants Rs. 20 crores more to make up the deficit in its resources for its next annual plan; Assam Rs. 19.4 crores; Bihar Rs. 10.5 crores; Orissa Rs. 9 crores; Kerala Rs. 4.7 crores; U.P. (rather modest in comparison) Rs. 2 crores; and (rather suprisingly) Maharashtra Rs. 1 crore. These amounts adding up to Rs. 64 crores are to be in addition to the amount of Rs. 220 crores which the eight States together will normally be securing as Central assistance.

The Union Finance Minister, Mr. T. T. Krishnamachari, however, seems to have other ideas. He has written to all Chief Ministers, including the eight, that the Centre will not be able to add to the Rs. 438 crores already marked as Central assistance to States in the coming year for Plan purposes.

This firm attitude certainly puts the States in a tight spot. While their revenue sources are limited, their ingenuity or perhaps their political courage is even more so. Only a few days ago Bihar scrapped a proposal for levying a surcharge on land. This was in spite of the fact that the State Chief Minister had earlier informed the National Development Council that he would convene a special session of the State Assembly to have the Land Levy Bill passed to realise new revenue of Rs. 1 crore a year. But valour in New Delhi seems to have yielded place to discretion in Patna. Sensing that difficult (if not dissident) elements in his Party were gleefully waiting for the opportunity to make political capital out of the proposed measure, Bihar's Chief Minister reportedly wrote to the Prime Minister and got his consent to have the proposal shelved. This has no doubt brought relief to other anxious State capitals. But even apart from the retreat in Bihar, there are the instances of Madhya Pradesh, and U.P. where the first "popular act" of the new Chief Ministers was to rescind the surcharge on land.

**

A consequence of the financial stringency in the State capitals is that Central allocations are not always used for the purposes for which they are provided to the States. This

Banking by Bureaucrats?

From Our Correspondent

BOMBAY:

THE CHANGES proposed by the Finance Minister in the Banking Law Bill were generally on the lines predicted in this column earlier. They had a mixed reception in the banking community. While the restrictions proposed on non-banking companies were generally welcomed, those applicable to banks, especially the sweeping powers of appointment and removal of managerial personnel and the prescription of individual

has led the Union Ministry of Food and Agriculture to write to the States urging that funds meant for accelerating food production were not to be used for any other purpose. The Ministry of Health is now up against the problem of preventing Central funds meant for medical and health programmes getting disbursed in sectors such as irrigation, power or roads.

The Finance Ministry, which has reportedly been giving some attention to these problems is proposing to relate Central assistance with "specific programmes" in a flexible manner. This proposal has the interesting feature that it will allow State Governments some discretion in diverting funds to heads of higher priority, but not lower. Under this scheme the States will be allowed to ascertain shortfalls in expenditures in various sectors at the end of each year and permitted to divert enhanced funds to agriculture, irrigation and power. Meanwhile, it is being gradually realised that the fixing and refixing of schedules and priorities is leading to an increase in administrative work. It is, therefore, being asked whether certain obvious simplifications in procedures cannot be attempted. For instance, instead of State Governments being required to send returns of expenditure every quarter, they may be asked to do so every half year. Again, it may be possible to exercise some discipline on State Governments in the matter of spending Central allocations for the purposes for which they are intended if a policy decision is taken at the highest level to the effect that, where a State Government fails to spend the Central assistance given to it for the purpose, the amount thus unutilized might be transferred to some other State. It appears, however, that the Centre is not yet ready for such a drastic move.

**

The brief speech which the President made to welcome India's sixteenth State, and its smallest, into the Union cannot be improved upon; it reflected a fine awareness of the troubled past of its 370,000 people divided among 14 tribes and of their aspirations for the future. Equally, Mr. Nanda's brief message emphasized the promise of advancement which the future held. Nineteen per cent of Nagaland's population are at present studying in 700 odd educational institutions which include two degree colleges and 28 high schools. The State has been extremely fortunate in that it will be the first in the country which is thus able to tackle the problem of priorities of economic development in the right order. For education stimulates the expectaion of increased standards of life. But if there is nothing like material prosperity to enable one to leave one's unresolved past behind, the new State Government is at the same time confronted with the problem of achieving it expeditiously. That is, of course, a problem the new State shares with its older colleagues in the Union, but it starts off with a decided advantage in that the amenities it already enjoys in the sphere of transport, health and education, computed in per capita terms, compare very favourably indeed with conditions that obtain elsewhere in the Union. Mr. Shilu Ao, the Chief Minister, is no stranger to his problems, having persevered in finding a liberal and moderate solution of these over seven years, and his achievements, if they appear modest, have to be evaluated against the background of an extraordinary law-and-order situation.

limits in each case for advances were being viewed with misgiving. The fate of banking industry rests very much on the due care and circumspection exercised by the Reserve Bank. The new amendment bill, to put it in one word, "aims to substitute the present control of industrialists on banking by that of bureaucrats".

A bearish tendency has come to prevail on the Bombay Stock Exchange. The active scrips have been showing swift

December 6, 1963

declines due to selling pressure from both bulls and bears. The proposed amendment to the Company Law and the Banking Laws Bill seeking to vest enormous powers in the hands of Government had provided the main provocation for the selling wave. The selling wave brought down the share index by 5.3 per cent from the year's peak level to 115.2. In sympathy, the cash section also turned weak.

**

The Gold Control Bill has had no obvious or considerable effect on the mood of the bullion market. The provision requiring individuals to declare holdings of ornaments beyond certain limits which, as has been indicated by the Finance Minister, may vary from Rs. 10,000 to Rs. 25,000 has not caused any undue alarm, although the more circumspect sections would certainly wait to assess how the Government is actually using the extensive powers it is acquiring with regard to many aspects of the possession of and trading in gold.

The bullion trade has made a fresh bid to revive forward trading in silver. The Bombay Bullion Association has pleaded, in a memorandum to the Finance Minister, for an early resumption of forward business in silver. According to the Association, silver stocks in the country are at present worth about Rs. 3,000 crores and the annual turnover is around Rs. 12 crores. Silver plays an important role in India's economy. The industrial use of silver is fast increasing as the metal is required by jari, film, telephone, chemical and certain other industries. The Association has, therefore, emphasized that the Government should remove the ban on forward business in silver imposed in January last. There is no smuggling of silver into the country. Prices of the white metal prevailing now in the country are almost on a parity with those in international markets. Another strong point in favour of resumption of forward trading in silver is that forward trading (in silver) has recently been resumed at New York after a lapse of nearly 30 years.

**

Mr. M. S. Kannamwar, the energetic Chief Minister of Maharashtra, died suddenly at a time when he was eagerly

Looking for Oil

From Our Correspondent

MADRAS:

THE EXPLORATION of oil in the Kaveri basin is expected to be taken up vigorously in the coming months. Already, valuable data have been gathered through the carrying out of seismic and gravity-cum-magnetic surveys. The work in this connection will be carried out again early next year. Meantime, a well projected to a depth of 1,050 litres is being drilled near Pattukottai for obtaining sub-surface geological information. The Madras Minister for Industries visited the site some time back and examined samples of the various strata of mud and rock that were brought out during the drilling operations. Arrangements are being made for drilling an exploratory deep well in the Karaikal area and it is expected that the operations will commence in January next. It is too early to say anything definitely regarding the availability and extent of oil reserves in the Kaveri basin. Soviet technicians would however seem to be confident that there would be some rich strike in this area and, as in Cambay or Ankleshwar, early success might attend the drilling operations. Men with experience of exploration in Ankleshwar are now at Pattukottai and Karaikal.

**

It is feared by the owners of cashewnut processing factories in Quilon (Kerala State) that, without definite arrangements for growing larger quantities of cashewnut within the country, serious difficulties might be experienced by the factories in maintaining the rate of production. Unfortunately, the facility to import large quantities of raw nut from East Africa led to a sense of complacency especially as there

looking forward to several years of fruitful service. He became the Chief Minister during a period of stress when the country was suffering from the shock of Chinese attack. He succeeded in mobilising the resources of Maharashtra for a new defence build-up and productive effort. The strength of the NCC cadets was increased during the short period of his tenure, namely, one year, from 34,000 to 81,000. He raised nearly Rs. 10 crores for the National Defence Fund. Under a new agricultural programme sponsored, over 21,000 wells were dug in the first half of the current year. As many as five new industrial estates were set up in different parts of the State. He enjoyed the confidence of every section of the community and succeeded in carrying the Congress Party behind him. It is a good augury for the continuity of the smooth administration of the State that Mr. V. P. Naik, Revenue Minister in the Kannamwar Cabinet, has been unanimously chosen by the Congress Legislature Party to succeed the departed Chief Minister.

**

Mr. Ashoka Mehta, Deputy Chairman-designate of the Planning Commission, expressed the opinion that close political contacts would be very necessary to develop trade relations with other countries. Mr. Mehta returned after attending the session of the UN General Assembly and took the opportunity to meet a number of prominent men in industry and in the US Government. Later on he had talks in London and Paris before returning to India. He noted a 'lot of frustration' among the experts he met over the execution of development plans in India, particularly administrative delays and procedural complexities. While the Prime Minister's image abroad remained untarnished, the image of the country had suffered especially after the Chinese aggression. The Chinese were very active in Europe not only in doing propaganda work but in developing trade relations. The USA and the Western world were on the threshold of technological changes. The continental countries had become plan-minded. Mr. Mehta was of the view that India should seek the collaboration of some of the 'up and coming firms' in the USA instead of thinking only in terms of the big firms.

was a large trade in exports of cashewnut to the USA and the Communist countries and sizable profits are being earned merely through processing. The foreign exchange realised through exports is no doubt helpful. But it is now felt that, if the arrangements to process raw nut in Portuguese East Africa and elsewhere prove successful, it would be difficult to import the same quantities of raw nut as before. It is stated that an Italian firm will be establishing factories in Portuguese East Africa for processing raw nut. Though the quantities involved in the initial stages may not prevent the inflow of imports into this country, the acute dependence on these imports will be clear from the fact that against our production of 60,000 tons annually the quantum of imports is of the order of 1,00,000 tons, if not more. With the current yield of Indian crop, the factories in Quilon can operate only for 3 or 4 months in a year. There will thus be a problem of continued employment of a large number of workers, besides maintaining the present rate of exports, if imports of raw nut begin to decline.

Efforts have no doubt been made to expand cashew cultivation in different parts of Madras State, Andhra and Kerala. But the yield in some areas is rather poor while the new acreage has not started yielding results. It has, therefore, been suggested that the existing plants should be made to yield more while the programme of fresh plantation should be carried out more vigorously. Since the conditions for cultivating cashew trees are ideal in some areas in the southern States, the State Governments should give greater attention to these possibilities.

The moving finger writes

ALTHOUGH ALL of us may not have become socialists, a great many of us do seem to have become family planners. Whether this planning succeeds or, as in the case of our five-year Plans, it succeeds only partially, is of course a different matter. There is perhaps something to be said even for partial success in most cases — on the principle that half a loaf of bread is better than nothing —, but not surely in the case of family planning, where one either succeeds or fails. And that is the end — or is it the beginning? — of the affair.

There is, therefore, a lot to recommend in the decision of the Ministry of Public Health of the United Arab Republic to make family planning fool-proof even if not knave-proof. With this end in view, the Ministry seems to have rejected the idea of undertaking a family planning programme until a comprehensive investigation has been carried out first at the family level, second at the village level and third at the level of a group of villages to ascertain the social and psychological elements entering into personal attitudes towards family planning. In the course of this projected survey each couple in the selected families or villages will be provided — as is to be expected — with two forms, one for the husband and the other for the wife, for filling in such information as whether the couple is aware of the facts regarding conception and birth control and whether certain peculiar customs or beliefs would come in the way of their practising family planning. The U.A.R. Ministry of Health hopes that following these investigations, it would be able to take a final decision on the appropriate methods to be finally adopted for popularization on a mass scale.

★★

Meanwhile, it is interesting to note that the latest of the famous 'Which?' reports, published by the Consumers' Association in the United Kingdom, carried a 96-page Supplement comparing contraceptive methods and 165 named brands of contraceptives. The report is claimed to offer "unbiased information on reliability, safety, acceptability, convenience and cost based on laboratory tests and clinical experience". Normally this Supplement should become a best seller not only in Britain but in other countries as well; only its sale is restricted to subscribers of 'Which?'.

I may add, for the benefit of excitable readers, that the first reviews have been careful to point out that the language of the Supplement is "laconic, almost comically matter-of-fact". The 'New Statesman' illustrates this "language of non-advertisement" with this quotation: "Breast-feeding was sometimes prolonged with the idea that it would act as a contraceptive method. It does not." But if 'Which?' shatters some popular superstitions it certainly seems to confirm some popular impressions. Thus it comes to the rather commonplace conclusion that the combination of diaphragm cap and chemical contraceptive is tactically the most effective. A sheath aided by chemicals is rated next best. I must make it clear that, in the matter of effectiveness, the "birth pill" or "oral contraceptive" is put in a class by itself as being almost 100 per cent effective. Commenting on these findings, the 'Spectator' suggests that any women reading the 'Which?' report might come to the conclusion that, for reasons of effectiveness and aesthetics, marital life might be much more enjoyable if

she took over from the husband the main responsibility for family planning.

★★

If the extremely cordial "dialogue" of Ministers which I had the opportunity to listen to last week at the Ashoka Hotel at a Dinner which Mr. C. Subramaniam gave to Mr. Walter Scheel, the visiting German Federal Minister for Economic Co-operation, is any indication, Indo-German friendship and understanding must be gaining ground considerably. The Minister for Steel (etc.) struck the right note in an after-dinner speech in which he generously acknowledged all that Germany had done so far to further our economic development and tactfully suggested that more of the same would be most welcome. Mr. Scheel has the reputation of being both tough and clear-headed where Aid questions are concerned and it is of course no secret that he wishes German development assistance to take the form more and more of private investors supplementing government grants or credits. But I must say that I sensed no lack of warmth or any trace of bargaining in the observations he made on this occasion. On the contrary, he not only made it clear that India could continue to expect friendly assistance from West Germany in its development but, in a charming phrase, suggested that he for one would not care to describe India as a "developing" country. And he went on to point out that, although India may have to catch up with Western countries in certain areas of industry, science or technology, India is also in many respects one of the most developed countries of the world — and that not only in the field of culture. Mr. Scheel mentioned the iron pillar before the Kutab Minar which he had seen earlier that day and asked whether it was not a fact that the Indian know-how in metallurgy was centuries-old.

★★

While the visit of Mr. Scheel has certainly come at a time when a frank and friendly exchange of views on many issues of interest to West Germany and this country has become not only desirable but necessary, I cannot help wondering whether the Government of India for its part is always adequately conscious of West German sensitiveness to issues of national prestige. I have heard it said, for instance, that the omission of any Rourkela representative from the expert committee on the Bokaro project report has not merely irked but offended feelings. It is being argued that if Soviet and British steel men, reflecting the presence of the U.S.S.R. and the United Kingdom at Bhilai and Durgapur respectively, could be included in this committee, it is courtesy as well as common sense that a West German steel man with Rourkela experience should also have been found a place, especially as the pattern of end-products planned for Bokaro would be most akin to that of Rourkela.

GETS AROUND PIPES AT GLAXO

The pipes at the GLAXO Fine Chemical Factory live through the most exacting conditions with a sense of security. No wonder. THERMOCOLE protects them against temperature variation and moisture—the scourge of all low-temperature piping.

There are many organisations in India that know and use THERMOCOLE for vessel and pipe insulation and GLAXO is one of them.

THERMOCOLE is foamed polystyrene—the lightest rigid insulating material in the industry. It has a very low thermal conductivity and is resistant to moisture. Available in handy, close-fitting sections, THERMOCOLE is the ideal material for pipe insulation.

COMPANY MEETING

DELHI CLOTH & GENERAL MILLS COMPANY LTD.

SPEECH BY LALA BHARAT RAM

Chairman, Board of Directors

At the 75th Annual General Meeting of the shareholders of the Company on the 2nd December, 1963, at Bara Hindu Rao, Delhi-6.

Ladies and Gentlemen,

I am happy to welcome you to the 75th Annual General Meeting of your Company. I cannot, however, help making a reference at the beginning of this meeting to the memory of my respected father, the late Lala Shri Ram. The growth and prosperity of DCM are largely the fruit of his hard work and devotion, and the inspiration his integrity and high ideals gave to the rest of us. No greater homage could be paid to his memory than that all of us should continue and carry on his great work with the same devotion and high integrity which he showed. We met last year under the cloud of the Chinese aggression. The Chinese aggression had various repercussions. There was on the one hand a spontaneous patriotic upsurge in the country, and on the other, various friendly countries extended financial and military assistance. Even though there is, at the moment, a ceasefire, the danger of aggression has not altogether receded. The country has to keep itself prepared for any eventuality and it would be dangerous to relax our preparation. The Chinese aggression was bound to have its repercussions on our economy. Some of our efforts had necessarily to be diverted from civilian needs to military requirements. It is however unfortunate that instead of there being a spurt in production, there has been a slowing down in the economy. The mid-term appraisal of the third Plan is a matter of concern, for it reveals that the economy is dragging at a time when it ought to be pushing forward with greater speed. The shortfall in the agricultural sector, which is not only a sizable component, but on which depends the productivity of the industrial sector as well, is reflected in the total national output. In the industrial sector also, while development effort has been larger and more broad-based, the general index of industrial production fell short of the average increase of 11 per cent visualised in the Plan to 6.5 per cent in the first year and 8 per cent in the second year. It would seem that the only effort that has exceeded the target is in the field of additional taxation, which is expected to be in excess by Rs. 1,100 crores by the end of the third Plan, the yield being at Rs. 1,000 crores as against Rs. 800 crores. I am sure, this excessive taxation is greatly responsible for the slowing down of the tempo of development.

Apart from the requirements of defence, with the fast growing population and the need for improving the standard of living of the people, we have before us a gigantic task. This can be accomplished only if the production increases considerably faster than the population. One of the most important factors affecting our rate of development is the perennial shortage of foreign exchange. While we should be grateful for the assistance which various friendly countries are giving to us in the form of loans and grants, we cannot with any certainty depend on the assistance continuing at these levels indefinitely. We must, therefore, depend on our own efforts to bridge the gap between our imports and exports.

To my mind, there is no other way except to work hard, produce more and export more. We must not think in terms of exporting only our surpluses. With the growing population and demand we shall never have surpluses except in a very few commodities. Therefore, we will have to restrict in many cases our own consumption so as to export. In order that we succeed in our export effort, we have to be competitive and produce goods of quality which would be acceptable in other countries. It is necessary to ensure that costs do not go up. The costs can remain low if output per man, whether in the industry or on the farm, increases. While I am not against increases in wages, I would emphasise that if there is not more than a corresponding increase in productivity per man, the costs will continue to go up and we will be wiped out of the world market. It is unfortunate that India's share in world trade has declined from 2.1 per cent to 1.1 per cent during the last decade of planning. When compared with other developed countries, the value of India's exports as percentage of national income works out to about 7 per cent as against 19 per cent for U.K., 21 per cent for West Germany and 12 per cent for Japan. I do not propose to spell out in detail here the various measures necessary to put our economy on an even keel, but shall only reiterate the important fact that the standard of living consists not of money but what the money will buy and money will only buy more goods and services provided the productivity per man increases.

In spite of all our efforts we shall still need more foreign capital and it is necessary that everything is done not merely to provide incentives to foreign investors but also to create a feeling of confidence in our fiscal policies. The stability in our fiscal policy is the biggest factor in creating confidence for the foreign investor. Frequent changes not only upset the programme of financing but also create a feeling of uncertainty.

I have every faith in the country's capacity for quicker growth provided we all work hard and our economic policies are practical and not affected by ideologies.

Coming back to the Company's affairs, although there has been an appreciable increase in total sales, profits have been lower due to rising costs of raw materials, stores and wages. In the case of sugar, unfortunately, like the rest of the industry, your factories also had a very short season which increased the cost of production and considerably reduced the profits. In addition, Government's fiscal measures like Super Profits Tax, Emergency Risk Insurance etc. have further reduced the profits. The Company has continued to follow a policy of expanding its activities. Our Project for the manufacture of plastics to which I made a reference last year is nearly complete. One of its products, namely, caustic soda, is already in the market and it is expected that PVC will be in the market within a short time.

Likewise, the Rajasthan Rayon's Project is also progressing satisfactorily and it is expected that the factory will start

producing high-grade rayon tyre-cord by about the end of 1964.

Last year I had referred to two major schemes of expansion. One, the spinning mill at Hissar, and the other, the expansion in sugar mills at Mawana. The extension of our Hissar spinning unit is continuing at a rapid pace and, it is expected that the capacity will increase from 37,000 to 63,000 spindles by the beginning of the next year. The expansion of the Mawana Sugar Works from 1,500 tons crushing capacity per day to 3,000 tons per day has been done. We are, of course, facing a few teething troubles, but I hope they will soon be over. Apart from these major expansions and new projects we have been continuing to renovate our existing equipment. I have no doubt that as soon as the new projects have come into production and the expansions have been completed the profits of the Company will increase.

The record of exports of your Company has again been satisfactory. While on the subject of exports, I would like to refer to a new Organisation which we propose to set up for handling our export business. It is proposed to set up a new export Company. This would be a subsidiary of your Company. While in the first instance, it would export the products of Delhi Cloth Mills, in course of time, it would take up the export of other manufacturers' products also. It would thus grow into a trading company, the benefits of which will accrue to our shareholders.

One of the problems facing the industry in the country

today is shortage of personnel. As your Company is also expanding its activities, it had also felt these shortages. The Management now is busy concentrating on training our management personnel at all levels. Today the science of management has made great advances and it has become a great science. Your Company has started a separate department for not only training fresh people but also to teach the modern techniques of management to the existing staff. In addition to starting our own department for training, your Company has been sending people to various management courses to other places. I am sure, this policy will pay rich dividends.

I am glad it has been possible for your Company to maintain the same rate of dividend as last year in spite of lower profits. In addition to this, the benefit of undistributed tax-exempt profit under Section 15(c) of the old Income-tax Act has also been passed on to the shareholders. In effect, 34 per cent of the dividend will be exempted from tax in the hands of the shareholders. Thus, most of the shareholders will get a higher net dividend than last year. I may, however, make it clear that this is in the nature of a windfall for this year only.

Before concluding, I would like to record our sincere appreciation of the good work of all our workers and staff whose efforts have enabled us to achieve satisfactory result during the year.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

CANADIAN DOLLARS FOR DEVELOPMENT

IN THE Canadian House of Commons, Mr. Paul Martin, Minister for External Affairs, recently stated that Canada plans to increase its foreign aid spending next year by between \$60 and \$70 million. The programme for the current year is approximately \$120 million, and for the fiscal year 1964-65 it will be between \$180 and \$190 million. The main new feature will be special lending for development purposes. Up to \$50 million will be loaned with such attractive terms as long maturity periods, liberal grace periods and little or no interest.

Canada's existing aid programmes will be continued in 1964-65 at their present level. However, in future grant aid will be devoted to the provision of assistance to development projects, technical assistance, and the supply of industrial commodities to developing countries. Separate provision will be made for a food aid programme and for contributions to the Indus Basin Development Fund, which were previously included under the bilateral grant aid programmes. The new programme will be flexible and designed to place Canada in a position to make an effective response to changing national and international circumstances. In particular, it will provide for: (a) higher levels of aid to Colombo Plan countries of Asia; (b) a more comprehensive and sizable Canadian programme for the Commonwealth countries of the Caribbean; (c) larger and more effective programmes for Africa, including the French-speaking States, and (d) further contributions to Latin American development, in close co-operation with the Inter-American Development Bank, through the availability of new additional lending resources.

BONN BUDGET FOR AID

The West German Government has now approved the draft of the 1964 Federal budget. The total volume of the budget is 60,300 million D-marks. The budget of the Federal Ministries and authorities alone amounts to 56,800 million D-marks. Though the budget for 1964, which now awaits parliamentary approval, exceeds that of the previous year, it is rated as an "economy budget". The original demands of the Federal authorities surpassed the 70,000-million D-marks limit.

As regards development aid, the Government draft says: "In 1964, too, the Federal Government will devote special attention to development aid. However, our means and resources available for this task are limited. This explains why the 1964 budget provides a slightly smaller amount for foreign aid than in the preceding year. However, the reduction is to be largely offset by the expected effects of the Law on Tax Privileges for the Promotion of Private Investment in Developing Countries which has been drafted and is now awaiting approval by the German Bundestag. The aim of the law is to encourage private initiative and to shift some of the emphasis of German aid policy from the public sector to private enterprise. By renunciation of tax receipts the law will, in fact, represent a kind of indirect increase in the Government's foreign aid contributions. Long-term planning which is secured by the Federal budget and the Law on the Encouragement of Private Investment in Developing Countries are to demonstrate the Federal Government's willingness to provide long-term aid for the developing countries.

"The amount of 400 million D-marks set aside for bilateral financial assistance to developing countries plus the contribution from ERP-counterpart funds are to be used primarily to cover development aid commitments entered in previous years. The total of these promises amounts to about 5,000 million D-marks. The new budget authorises the Government to enter new commitments of up to 750 million D-marks in the 1964 fiscal year. Bilateral technical assistance to developing coun-

tries which includes also social and educational aid projects and agricultural aid have turned out to be extremely effective. Therefore they will be given priority treatment in the future. A total of 200 million D-marks have been earmarked in the 1964 budget for that purpose. Furthermore the budget authorises the Government to promise another 200 million D-marks for the same purpose in order to enable the smooth continuation of technical aid projects in the coming years. Multilateral development aid requires Government contributions of about 275 million D-marks in 1964, taking into account the financial assistance granted to Turkey. The ceiling for export guarantees has been increased by 4,000 million D-marks to 23,000 million D-marks in the 1964 budget. The developing countries will profit from this measure in the first place."

CONSUMER GOODS FOR HUNGARY

Contracts for the export of consumer goods worth approximately Rs. 37 lakhs were signed in New Delhi last week between the State Trading Corporation and Konsumex of Hungary. They provide for the export from this country of woollen and cotton fabrics and knitwear, shoes and chappals, handicrafts and paper products. Paper product is a new item which is being introduced in Hungary for the first time. The Hungarian trade delegation which recently visited India had taken samples of razor blades and varieties of woollen and cotton textiles for examination in Budapest.

RUMANIAN ECONOMY

Industrial output in the Rumanian Peoples' Republic grew over 1.7 times during the period 1958-62. Machine-building and metal working branches grew from 10.2 per cent in 1958 to 26.3 per cent in 1960. Chemical output rose from 2.3 per cent to 7.4 per cent. The average annual increase in industrial gross output was 13.3 per cent during the period 1951-62. In machine-building industry there was an increase of 26 per cent, chemical industry 29.1 per cent, electric and thermal power 16 per cent. The consumer goods industry has also expanded a good deal. In 1960, the per capita output of cotton

"Well, the economy is getting streamlined!"

fabrics was 1.5 times higher than in 1950, while in France and Italy it increased by 11 per cent. In 1937, Rumania produced 21 per cent less sugar per head of population than Italy, while in 1960 the Rumanian sugar output was 20 per cent more.

In the domain of agriculture, Rumania left behind countries such as France and Italy in regard to cereal output per head. Whereas in 1950 per capita wheat output in Rumania represented 74 per cent compared with the level of production in France and 81 per cent compared with the level in Italy, in 1961, the level of Rumanian wheat output per inhabitant was 4 per cent higher than in France and 29 per cent higher than in Italy. The volume of Rumanian foreign trade was 3.8 times bigger in 1960 than in 1950 and trade was carried on with more than 80 countries. The average rate of increase in the national income which was over 10 per cent between 1951 and 1961 was higher than the rates reached in France, Britain, Belgium, Sweden and Italy during that period. With all the increase in population in Rumania, per capita national income was 2.7 times bigger in 1962 compared to 1950.

PROBLEMS OF TEXTILE INDUSTRY

At the second annual general meeting of U.P. Cotton Textile Millowners' Association, Mr. Padampat Singhania in his speech dwelt upon the various problems facing the textile industry. He pointed out that, while the prices of cloth have remained stationary on account of the voluntary price control in operation since the end of 1960, the cost of production has gone up owing to the increases in practically every item. Increase in the price of cotton, wages, the employers' contribution under employees state insurance scheme, custom duties, compulsory emergency risks insurance, etc., all combined have placed a heavy burden on the mills. In view of these rising costs, a revision of cloth prices, Mr. Singhania stressed, particularly of coarse and medium varieties, is urgently called for. If price control is considered indispensable in the existing circumstances, Mr. Singhania said it should be made flexible so that automatic upward or downward adjustments in prices could be made for fluctuations in the prices of various items of cost of production.

Referring to the consumption of cotton by mills, Mr. Singhania stated that though it has been steadily increasing, there has been no corresponding rise in the output of indigenous cotton. It is in the interests of all concerned, the industry, the grower and the consumer that higher returns on cotton should be secured through improved yield per acre rather than by frequent revision of the floor and ceiling prices. So far as exports are concerned, Mr. Singhania mentioned that unless the mills are enabled to modernise and equip themselves with up-to-date machines and produce goods that can prevail in the world market in both price and quality, our export target will remain elusive. Market research must be given proper attention because it is only through this method that a study of the tastes and the preferences of consumers in the foreign markets can be made. The Government of India should make it possible for the mills to buy and import machinery easily and quickly and import licences for machinery should be issued on a priority basis. It is gratifying to note that the restriction on the expansion of spindlage and loomage has at least been relaxed and it is now to be hoped that mills will take necessary steps to ensure that these new installations are completed as early as possible.

INTERNATIONAL MARKETING

A seminar on international marketing held last week in New Delhi covered a wide range of subjects. Principles and practices of international marketing, market research and sales promotion, cost reduction, standardisation and quality for export, publicity, packaging, transportation and Government measures for export promotion were discussed at length. At the seminar in Bombay organised under the joint auspices

of the Bombay Management Association and the Bombay Productivity Council, Mr. G. L. Mehta in his inaugural address pointed out that in a sellers' market, the role of marketing tends to be neglected. In an economy which is no centrally planned and directed such as India's, production cannot be undertaken irrespective of the consumers' choice. It has been found at regular intervals that the setbacks to production have occurred in periods when markets have failed to keep pace with production. What is called the Kenyesian revolution recognised the vital need of augmenting purchasing power to make the economy dynamic. We should, therefore, have plans, Mr. Mehta stressed, not only for production but also for consumption. The production pattern must be guided by overall income and within it the expenditure preferences of consumers.

PROTECTION CONTINUED

The Tariff Commission's recommendation to continue protection to antimony metal at the reduced rate of duty of 35 per cent ad valorem subject to a maximum of Rs. 85 per quintal for a period of five years ending December 31, 1968, has been accepted by the Government of India, subject to a review after three years. The Government has also accepted the recommendations of the Commission to fix selling prices at Rs. 3,550 per tonne or Rs. 3.55 per kilogram as a condition for the extension of protection to the antimony industry.

The Government of India has accepted the recommendation of the Tariff Commission that protection to the electric

motor industry should be continued for a further period of two years ending December 31, 1965. The Government has also accepted the Commission's recommendation that squirrel cage and slip ring motors and synchronous motors exceeding 660 HP and up to 3,000 HP and component parts of these motors should be brought within the scheme of protection at the existing rates of protective duties of 15 per cent ad valorem and 20 per cent ad valorem respectively.

EXPORTS OF GOLD JEWELLERY

Gold jewellery of purity of more than 14 carats manufactured before January 10, 1963, was allowed to be exported provided the gold content did not exceed 20 per cent of the value of the jewellery. The Government has received representations that some stocks of jewellery made before January 10, 1963 have still not been disposed of. It has now been decided to allow export of such jewellery manufactured prior to January 10, 1963 remaining in stock with dealers provided their gold content does not exceed 40 per cent of the total value. This concession will be available only up to March 31, 1964.

RE-EXPORT OF DRY FRUITS

Permits for import of dry fruits from Afghanistan will be issued to approved importers, subject, inter alia to the following conditions: the importer shall effect re-export of 20 per cent of the dry fruits in a processed form to any country other than Iran, Iraq, Afghanistan, Nepal, Bhutan and Sikkim within six months from the date of import. The aforesaid 20 per cent relates to the value of the imports and an importer will be free to re-export within this value any item/items of processed dry fruits of his choice. The approved importers will be required to furnish a bond to the licensing authority in a prescribed form, undertaking to effect the required re-export. The bond will have to be accompanied with a bank guarantee for an amount equivalent to the value of the re-export obligation. Non-fulfilment of re-export obligation on the part of any importer will render him liable to deregistration from the list of approved importers.

TRAINING OF CHARTERED ACCOUNTANTS

At a press conference recently Dr. R. C. Cooper, President of the Institute of Chartered Accountants of India, said the Central Council of the Institute of Chartered Accountants has accepted the following recommendations of the committee which aimed at increasing the number of chartered accountants without watering down the standards. The recommendations are that the system of charging premiums to articulated clerks should be abolished; members should voluntarily pay stipends to articulated clerks during the period of their training. The Institute should explore the possibility for providing hostel facilities to trainees at important centres in the country. In case of all graduates who secure 60 per cent marks at the degree examination and in the case of commerce graduates with accounting and auditing, who secure 50 per cent marks in the examination, remission of one year in the period of training (which is four years at present) should be given. The period of apprenticeship in case of audit clerks, paid trainees, etc. should be reduced from 8 years at present to six years; this period may further be reduced by one year in case of graduates having secured 60 per cent marks in the degree examination or commerce graduates with accounting and auditing getting 50 per cent marks. To expand training facilities, bigger firms of accountants having a number of qualified assistants on their staff should be permitted to take in more apprentices for training. The importance of an apprentice receiving a part of his practical training in industrial or commercial organisation was emphasised.

STC OFFICERS ABROAD

The State Trading Corporation has already opened an office in Western Europe and a special officer has been attached to our Embassy in Prague to represent the State Trading Corporation. It is proposed to appoint a similar officer in our Embassy at Moscow. It is also proposed to open an office of the State Trading Corporation in Japan in 1964.

HOW TO GET YOUR BANKING WORK DONE 70 MILES ABOVE THE EARTH

When you order the Union Bank to transact business abroad, they do things in double-quick time, using Telex. Telex transmits the message in radio waves to the ionosphere seventy miles above the earth, from where they bounce back and are picked up abroad, at the required station. The Union Bank is one of the few banks in India subscribing to Telex. Open an account with us to ensure that you get prompt banking service in keeping with space-age speed. The Union bank has correspondents in 50 countries, with 24,007 offices!

Company Affairs

ENGEL INDIA MACHINES

ENGEL INDIA Machines and Tools Ltd. will enter the capital market with an issue of Rs. 37.50 lakhs in 375,000 equity shares of Rs. 10 each. The subscription list will open on December 16 and will close on December 24 or earlier at the discretion of the directors, but not before December 18, 1963. Out of the present issue Ludwig Engel K. G. Schwertberg, Austria, the technical collaborators, have agreed to subscribe 75,000 equity shares. Another 50,000 equity shares have been reserved for allotment to company's directors and other persons connected with the plastic industry in India. The remaining 250,000 equity shares valued at Rs. 25 lakhs are offered to the public at par.

The authorised capital of the company is Rs. 1 crore made up of 1,000,000 equity shares of Rs. 10 each. Out of the issued capital of Rs. 50 lakhs, equity shares worth Rs. 12.50 lakhs have already been subscribed by directors and their friends. The whole of the issue offered to the public has been underwritten by Industrial Finance Corporation, Life Insurance Corporation, Jardine Henderson Ltd., West Bengal Finance Corporation, Canara Bank Ltd., Central Bank of India Ltd., Place Siddons & Gough (Private) Ltd. and Batliwala & Karani.

The company was incorporated in April 1962, with the object of manufacturing machines, machine tools and die-casting equipment and also to manufacture plastic moulding powders and components. The company is setting up a composite plant at Calcutta to manufacture injection moulding machines and moulds required by the plastics industry. The factory will be located at Taratala Road, Calcutta and will start production towards the middle of 1964. The company has entered into a technical and financial collaboration agreement with Maschinenfabrik Ludwig Engel K.G. of Austria in terms of which the latter will, besides participating in the capital, will make available the necessary technical know-how. Union Carbide India Ltd. will be the sole selling agents of the company.

INDIAN GRAFIC ARTS

Indian Grafic Arts Equipment Co. Ltd. will enter the capital market early next year for public subscription of Rs. 7.35 lakhs. The company has been started in Coimbatore in collaboration with the well-known American printing machinery manufacturers, Messrs. Miehle Gass Bexter (MGB). Besides a block capital of Rs. 75 lakhs, there will be equity shares of the value of Rs. 30 lakhs of which the collaborators will take Rs. 15 lakhs and the Indian partners Rs. 7.65 lakhs. The construction of the factory will start in January, 1964 and within a year the production of platten and cylinder printing machines valued at Rs. 1 crore will commence. In the second stage offset machines and in the third stage newsprint rotary printing machines will be produced.

CENTRAL INDIA SPINNING

The directors of the Central India Spinning, Weaving and Manufacturing Company Ltd. propose to revive the rights issue in view of the improvement in the financial and capital market. Last year the company offered to the shareholders 46,875 new ordinary shares of Rs. 100 at par, but this offer was withdrawn subsequently in view of the Emergency and the slump in the market. The consent order of the Controller of Capital Issues, which was valid up to May 30, 1963, was extended up to December 31, and has now further been extended up to June 30, 1964. There is, however, one change in the revived offer. As the Tata Trusts are no longer in a position to take up their full quota, the undertaking previously given by Tata Sons and associates to take up their quota of 31 per cent of the equity capital, will be modified to the extent

that Tata Sons Private Ltd. and the Sassoon J. David and Company Ltd. alone, who held about 14 per cent of the present issued equity capital, will now take up their full allotment of the proposed new issue. Both these companies have maintained their previous offer to accept at par such shares and additional shares as are not taken up by the other existing ordinary shareholders. These companies have advanced to Central India Spinning a total sum of Rs. 55 lakhs as unsecured short-term loan, a part of which will be adjusted against these shares. The proposed issue of additional capital of Rs. 46.88 lakhs will enable the company to reduce its borrowings besides finding money for rehabilitation of plant.

USHA SPINNING

Usha Spinning and Weaving Mills Ltd. proposes to raise a further capital of Rs. 35 lakhs for its expansion programme, which is likely to involve a capital outlay of over Rs. 1 crore. A sum of Rs. 45 lakhs will be raised by way of loans and another sum of Rs. 15 lakhs by deferred payment guarantee from the Industrial Finance Corporation of India. Machinery worth about Rs. 21.79 lakhs is to be imported and orders for indigenous machinery worth Rs. 24.50 lakhs have already been placed. During its working for the year ended June 30, 1963, the company recorded sales at Rs. 12.47 lakhs. After providing Rs. 2.16 lakhs for depreciation, it has incurred a loss of Rs. 3.55 lakhs. The company's mill is reported to have now gone into effective production and consequently the results are expected to be satisfactory during the current year.

ELGIN MILLS

Elgin Mills proposes to issue bonus shares in the ratio of one share for every two shares held, subject to the approval of the Controller of Capital Issues. This will mean the capitalization of a sum of Rs. 31.50 lakhs. The company's total reserves at the end of September, 1962, aggregated to Rs. 2.10 crores out of which, capital reserve alone accounted for Rs. 48.17 lakhs. Its paid-up equity capital now stands at Rs. 63 lakhs.

GENERAL TYRE

General Tyres Limited has received the consent of the Controller of Capital Issues for issuing a capital of Rs. 80 lakhs in 800,000 equity shares of Rs. 10 each in cash at par to the existing shareholders. It also proposes to take additional loan from the Industrial Finance Corporation. The Company is raising these funds to carry out its expansion programme. It received an industrial licence permitting substantial expansion of the installed capacity to the extent of 120,000 tyres, 120,000 tubes and 600,000 kgs. of camel black (rereading materials). After completion of the above expansion scheme, the company's total annual capacity will be 300,000 tyres, 300,000 tubes and 600,000 kgs. of camel black. It is expected that the tyres and tubes will be introduced to the market before the end of the current year. It may be added that the company during the year ended June 30, 1963, has incurred a loss of Rs. 1.83 lakhs against a loss of Rs. 92,882 in the previous year.

MAHENDRA MILLS

The directors of the Mahendra Mills Ltd Ahmedabad, propose to make capital issue of Rs. 43,12,500 divided into 43,125 equity shares of Rs. 100 each. The shares will be offered for cash at par or at such premium as may be fixed by the Controller of Capital Issues. The shares will be offered in the first instance to the existing shareholders in the ratio of one new share for every existing fully paid-up or partly paid-up share. As a large sum is involved in this issue, the directors intend to offer the shares simultaneously to the public after the quota shares and additional shares apply

for by the existing shareholders are disposed of. The partners of the Managing Agent firm have waived their rights to the extent of 3,750 shares, so that the new equity shares can be offered on 1:1 basis. The proceeds of this issue will be utilized to finance the expansion scheme of the company; it has been licensed to install 500 automatic looms.

UNION CARBIDE

Union Carbide India Ltd. has decided to apply to the Controller of Capital Issues for permission to raise its capital by Rs. 1.20 crores by the offer of 1,200,000 equity shares of Rs. 10 each to the existing shareholders in the ratio of three shares for every 7 held at par or at such premium as may be fixed by the Controller of Capital Issues. The present issued capital of the company is Rs. 2.80 crores and the additional capital is intended to provide a part of the capital expenditure for the expansion of chemicals and polythene capacity and the construction of an olefins plant at Trombay.

BATALA ENGINEERING

The Batala Engineering Company Ltd., a subsidiary of Mukand Iron and Steel Works, proposes to raise fresh capital through rights shares to finance its modernisation and expansion plans. It proposes to issue a share capital of Rs. 8,25,440 in ordinary shares of Rs. 10 each to the existing shareholders in the ratio of three new ordinary shares to five existing ones held, at par. It also proposes to increase its authorised capital from Rs. 25 lakhs (200,000 ordinary shares of Rs. 10 each and 5,000 preference shares of Rs. 100 each) to Rs. 80 lakhs (600,000 ordinary shares of Rs. 10 each, 5,000 preference shares of Rs. 100 each and Rs. 15 lakhs in unclassified shares). Special resolutions to approve the changes in the capital structure of the company and the issue of fresh capital will be placed before the extraordinary general meeting to be held on December 17.

GOODYEAR'S OUTPUT

Goodyear India achieved during the month of September a record output of 38,005 tyres against 15,324 tyres for the corresponding month of last year, at its Ballabgarh factory. It is stated that production improved in spite of various problems, such as power shortage, faced by the company. New planned production programmes, it is reported, have proved very successful. Modern techniques and large switchover to the finest raw materials have helped to improve the products of the company substantially.

JAY ENGINEERING

Jay Engineering Works Ltd. for the year ended March 31, 1963, has recorded higher production and higher sales, but this improvement has not been reflected in profits. Total sales were computed at Rs. 10.79 crores as against Rs. 9.43 crores last year. But the net profit after providing for depreciation and taxation is Rs. 26.05 lakhs against Rs. 32.79 lakhs in the previous year. This decline in profit was essentially due to an increase in excise and import duties on raw materials, increase in railway freights, emergency war risks insurance and provision for provident fund on production bonus earnings as a result of the Supreme Court judgment with retrospective effect from January, 1960. The company also registered a loss in its Hyderabad factory. Provision for depreciation has been raised to Rs. 32.51 lakhs and provision for development rebate reserve is also higher at Rs. 5.40 lakhs for development last year's Rs. 2 lakhs. The directors have proposed to pay a taxable dividend of 10 per cent on the equity shares.

The company has continued its extensive export drive and has registered a 20 per cent rise in export earnings which touched a figure of Rs. 1.1 crore. This figure could have been higher, but for continued import restrictions in certain countries. With regard to prospects for the current year, the directors have stated that the problem of power shortage continues to hamper production. The operations in Hydera-

bad company are still not satisfactory. In regard to the formation of a subsidiary company in Ceylon to be called Usha Industries Ltd. the directors have stated that assembly operations have already started although import restrictions imposed by the Ceylon Government are proving restrictive.

TUBE INVESTMENT

In spite of a drastic power cut and shortage of raw materials, Tube Investments of India Ltd. reported satisfactory results for the year to July 31, 1963. After providing Rs. 3.22 lakhs for development rebate reserve, Rs. 40.43 lakhs for depreciation and Rs. 45.25 lakhs for taxation, the net profit is Rs. 40.08 lakhs which is higher than last year's figure of Rs. 36.87 lakhs. The directors have provided Rs. 13 lakhs for general reserve, Rs. two lakhs for dividend equalisation reserve and Rs. 3.57 lakhs for the additional provision for tax liabilities in respect of the previous year. The ordinary dividend is maintained at 10 per cent, less tax, which will absorb Rs. 25 lakhs.

The directors have reported that the output of TI Cycles of India was about 10 per cent lower than in the previous year which was attributed to continued scarcity of steel skelp and strips and a severe cut in the value of import licences which in turn restricted the import of essential consumer stores, mostly chemicals. A drastic power cut which extended over a period of two weeks compelled the virtual closure of the factory. This was, however, the first year when the company used raw materials mostly from indigenous sources. Production of Tube Products of India Ltd. also suffered a similar setback for nearly the same reasons. The directors have complained that the steel supplied by Rourkela Steel Mill was not of the requisite quality, and the manufacturing defects became manifest only after the steel had been processed. The cold rolling mills produced good results in its first completed year.

TATA HYDRO COMPANIES

The Tata Group of Hydro Electric Companies has maintained the interim dividends at three per cent for the year ended March 31, 1962. The Tata Power Company Ltd. and the Andhra Valley Power Supply Company Ltd have each declared a dividend of Rs. 30 per share on the equity capital and the Tata Hydro-electric Power Supply Company Ltd. has announced a distribution of Rs. three per share.

NEW STANDARD ENGINEERING

New Standard Engineering Co. Ltd. has been advised by the Income Tax authorities that the benefit of exempt profits under Section 84 of the Income Tax Act, 1961, be made available to both preference and equity shareholders in the ratio of exempt profits to total dividends declared. The company, it may be added, had sought the advice of the Central Board of Revenue in regard to the claim of preference shareholders in exempt profits under the above stated Act. Pending further clarification from the Central Board of Revenue, the company had deducted tax at the standard rate of 30 per cent from the dividends on the preference as well as equity shares.

CAPITAL ISSUES

Four companies have been authorized to raise capital amounting to Rs. 1.38 crores. The consent of the Controller of Capital Issues is valid for 12 months.

Raj Prakash Spinning Mills Limited is to issue capital of Rs. 30 lakhs in shares of Rs. 100 each — Rs. 25 lakhs equity and Rs. 5 lakhs in 9.3 per cent preference shares — for cash at par. Equity shares of the value of Rs. 15 lakhs and entire preference shares will be offered to the public by prospectus. The proceeds will be utilized in the establishment of a spinning mill with a capacity of 12,000 cotton yarn spindles.

Wyman-Gordon India Limited, Bombay, is issuing further capital of Rs. 25 lakhs divided into 25,000 equity shares of Rs. 100 each for cash at par, to be issued to the existing share-

December 6, 1963

holders on rights basis. Out of this, shares of the value of Rs. 12.50 lakhs will be issued to Wyman Gordon Company of the U.S. The proceeds of the issue will be utilized for financing the expansion of the forge plant.

Gammon India Limited, Bombay, is to issue further capital of Rs. 73 lakhs consisting of Rs. 23 lakhs divided into 2,30,000 equity shares of Rs. 10 each on rights basis in the ratio of one for every 5 shares held for cash at a premium of Rs. 1.50 per share and Rs. 50 lakhs divided into 50,000 9.3 per cent redeemable preference shares of Rs. 100 for cash at par to be issued to the public by prospectus. The proceeds of the issue will be utilised for carrying on the business as civil engineers and contractors.

Sri Anjaneya Cotton Mills (P) Ltd., Devangere (Mysore), is to issue further capital of Rs. 10 lakhs divided into 200 equity shares of Rs. 5,000 each for cash at par, to be subscribed privately by the directors and their friends. The proceeds will be utilized for purchasing textile machinery.

LICENCES ISSUED

The following licences have been issued under the Industries (Development and Regulation) Act, 1951 during the week ending 23rd November, 1963. This list contains the names and addresses of the licensees, the articles of manufacture and annual installed capacity.

IRON & STEEL

Jessop and Co. Ltd., P.O. Box No. 108, 63, Netaji Subhas Road, Calcutta-1 (Sondlia, 24-Parganas, West Bengal) — Steel castings 6,000 tons. Shri Suresh Vakil, Bombay, Proposed name: M/s. Cambay Industries, 40, Veer Nariman Road, Bombay-1 (Cambay, Gujarat) — S.G. iron castings 900 tons. Kamani Engineering Corporation Ltd., Agra Road, Kurla (North) Bombay-70 (Jaipur or Bharatpur, Rajasthan) — Transmission towers 24,000 tons, Heavy structurals 6,000 tons, H.T. bolts and nuts 6,000 tons, Shifting of above capacity of 36,000 tons from Maharashtra to Rajasthan.

ELECTRICAL FANS

Steel Plant Private Ltd., "Shivaenum" 205, Dr. A Besant Road, Worli, Bombay (Maharashtra) — Industrial blowers 1,800 Nos.

ELECTRICAL LAMPS

Shri D. N. Bhowmik, 9, East Road, Jadavpur, Calcutta-32, Proposed name: M/s. Orissa Electric Lamp and Glass Industries Ltd. (Bhubaneswar, Orissa) — GLS lamps 6 million Nos.

ELECTRICAL EQUIPMENT

Semiconductors Ltd. Advani Chambers, Sir, P.M. Road, Fort, Bombay-1 (Poona, Maharashtra) — (i) Transistors and diodes 6 lakhs Nos. (ii) Thermistors 72,000 Nos.

WIRELESS COMMUNICATION APPARATUS

Philips India Ltd., 7, Justice Chandra Madhab Road, Calcutta-20 (West Bengal) — Tranceiver (wireless communication apparatus type DA/PRC/261 for meeting the requirements of Ministry of Defence) 1800 Nos.

AUTOMOBILES

Auto-Cy Machine Products, Ghelabhai Mansion, 34, Chowpaty Road, Bombay-7 (Bhavnagar, Gujarat) — Tyre tube valves for automobiles, (change of location from Bangalore Mysore State, to Bhavnagar Gujarat).

CEMENT MACHINERY

Walchandnagar Industries Ltd., Construction House, Ballard Estate, Bombay-1 (Walchandnagar, Distt. Poona, Maharashtra) — Complete standard plant having a capacity of 600 tonnes per day — one plant.

MACHINE TOOLS

Mysore Kirloskar Ltd., Yantrapur P.O., Harihar (Yantrapur, Mysore) — Automatic production lathes (Monomatic Model) No. 20H 18 Nos.

PLASTIC MOULDED GOODS

Synthetic Moulders Ltd., 53, Netaji Subhas Road, Calcutta-1 (42, Biren Roy Road (West) Behala, Calcutta, West

Bengal) — Plastic moulded goods-machine capacity one injection moulding machine-capacity 60 oz.

INSECTICIDES

Pesticides Ltd., 28, Sayani Road, Bombay-28 (Maharashtra) — Ethylene dichloride 3,000 tonnes.

DRUGS & PHARMACEUTICALS

Rallis India Ltd., Teddington Chemical Factory Division, 21, Ravelin Street, Bombay-1 (Maharashtra) — Annual Capacity: (i) Multivitamin with minerals—dragees—60,00,000 dragees, (ii) Emetine hydro chloride injections B. P. 30mg/ml — 72,000 x 1 ml ampoules, 60 mg/ml — 36,000 x 1 ampoules. (iii) Emetine and bismuth iodide — tablets 60 mg — 36,00,000 tablets. Rallis (India) Ltd., Ralli House, 21, Ravelin Street, Bombay-1 (Maharashtra) — Antacid tablet 60,00,000 tablets, Acrosal spray bandage 45,000 pieces.

WOOLLEN TEXTILES

Oswal Woollen Mills Ltd., Miller Ganj, Ludhiana (Punjab) — Automatic looms for manufacture of woollen textiles and barrack blankets 24 Nos. Shree Digvijaya Woollen Mills Ltd., Aerodrome Road, Jamnagar (Gujarat) — Automatic looms for manufacture of woollen textiles and barrack blankets 24 Nos. The Punjab Woollen Textile Mills, G.T. Road, Chheharta (Amritsar, Punjab) — Automatic looms for manufacture of woollen textiles and barrack blankets — 24 Nos. Kabir Woollen Mills Industrial Area 'A', Ludhiana (Punjab) — Automatic looms for manufacture of Woollen textiles and barrack blankets — 24 Nos. Bharat Woollen Mills Ltd., 11, Esplanade East, Calcutta-1 (Dulhipur, Mughalsara, Uttar Pradesh) — Automatic looms for manufacture of barrack blankets — 24 Nos. Model Woollen Mills, 4-C, Vulcan Insurance Bldg., Veer Nariman Rd., Bombay-1 (Thana Maharashtra) — Automatic looms for manufacture of woollen textiles and barrack blankets — 24 Nos. The Raymond Woollen Mills Ltd., Pokhara Road, P.O. Jekegram, Thana (Thana, Maharashtra) — Automatic looms for manufacture of woollen textiles and barrack blankets — 24 Nos. E. Sefton & Co. Private Ltd., Mirzapur, U.P. (Mirzapur, Uttar Pradesh) — Automatic looms for manufacture of woollen textiles and barrack blankets — 24 Nos.

SYNTHETIC FIBRES

Plastic Packaging (P) Ltd., Chowpatty Chambers, Bombay-7 (Maharashtra) — Nylon technical multifilaments 15 tons per month.

FIRE BRICKS

Shri S. Suryanarayan, C/o Srinagar Housing Syndicate, North Avenue, Srinagar, Guindy, Madras-15, Proposed name: "Ideal Brick Works" (Chithathur Hamlet, Sriperumbudur Taluk, Distt. Chingleput, Madras) — Bricks 3,60,00,000 Nos.

CHANGE IN NAMES (Owners or Undertakings)

During the week ending 23rd November, 1963
(The information pertains to particular licences)
From M/s. British Physical Laboratory India Private Ltd., Ernakuam to M/s. British Physical Laboratories India Private Ltd., Ernakuam.

LICENCES REVOKED OR SURRENDERED

During the week ending 23rd November, 1963
(The information pertains to particular licences)
M/s. Kishanchand Partabrai, Bombay — Electric resistance welded steel tubes. M/s. Central Automobiles Private Ltd., Bombay (Name of the undertaking) M/s. Ashok Auto Industries Private Ltd., Bombay — Thin walled bearings and bushes. Shri S. H. Kelkar, Poona (Name of the undertaking) M/s. G.K. Aromatics Private Ltd., Bombay — Aromatic chemicals and perfumery compounds. M/s. Surajmal Mehta & Co., Calcutta (Name of the undertaking) M/s. Delhi Oxygen Ltd., Ballabgarh — Oxygen and dissolved acetylene cases. M/s. Swaika Oil Mills, Calcutta — Cottonseed oil. Shri N. N. Banerjee, Bombay — Glass tubings. M/s. Rajasthan Ceramic Industries, Bombay — High tension and low tension insulators.

BOOKS BRIEFLY

The World of Oil

An Economic Geography of Oil: By Peter R. Odell; G. Bell & Sons Ltd., London; Price 22s. 6d. nett.

Reviewed by W. B. MATRE

THIS BOOK aims at a basic geographical analysis of the various activities of the oil industry throughout the world, together with their impact on national economy and deals with the pattern of world oil supply and demand, refining, transport and distribution. In discussing the various estimates of recoverable oil in the world, the author points out that opinion mainly in political circles that the world is running out of oil is not well-founded. However, some of the figures quoted for ultimate reserves seem to be too optimistic on the basis of our present knowledge. It is probably true that we could succeed in discovering all that oil provided someone can tell us exactly where it lies!

In discussing the importance of recovering more oil from the various pools, the author has traced the importance of secondary recovery and has drawn attention to the effect of crude production costs and price of crude. It is generally being realized in the USA that even a slight increase in the price of crude would enable operators to produce more oil which cannot now be economically produced.*

In the light of the present shortage of metallurgical coal in India to meet the requirements of the expanding steel industry, the reference to the new method of fuel oil injection into the blast furnaces, reducing the coke consumption by up to 30 per cent seems of particular interest to India and it should be worthwhile checking the claim that this reduces the overall cost of production of steel. The experience of Venezuela, Brazil, Argentina and Mexico, where steel plants based on the use of oil/natural gas are contemplated, should be of considerable interest to other countries with shortage of reserves of coking coal.

In view of the dearth of authentic information on the fuel efficiency of the various sources of energy, it seems unfortunate that this subject has not received much attention from the author. He, however, quotes that as a result of widespread replacement of steam by diesel traction on the railways, one ton of diesel fuel, which has the equivalent in heat value of about 1.5 tons of coal, can save up to 7 tons of coal and that as a result of rail dieselization the annual saving in the United States is of the order of 50 million tons of coal per annum.

In discussing the price of crude and its effect on national economies of the producing countries, the author gives some quite interesting information, including a reference to discounts of as high as an equivalent of Rs. 20 per ton representing a discount of about 30 per cent on the posted price.

It is to be regretted that this book, dealing with the world oil industry, refers only casually to the Indo-Pakistan sub-continent and China which together constitute a substantial part of this globe and are using oil in increasing amounts. The other countries in South-Eastern Asia and the Far East also do not receive much attention.

In view of the popular misconception that over a large part of the world the oil industry suffers from lack of com-

petition, it is interesting to read an unbiased opinion on the role of the major international oil companies and the 'independents'. As some one humorously pointed out recently, the hundreds of smaller independent companies help sharpen competition in petroleum to something comparable to Olympic standards. The role of USSR and ENI of Italy in bringing down the price structure in the oil industry is also discussed impartially.

The author is to be congratulated on the high standard of compilation and on the accuracy with which he has covered the vast statistical data on oil. The reviewer has, however, noted a few small errors which are discussed below.

The author states (p. 8) that "the deepest production is from a depth of 25,000 ft. compared with only 7,500 ft. in 1927." It is pertinent to record here that though the deepest well drilled so far is 25,340 ft. deep, commercial production of oil has not been obtained from depths below 21,470 ft.; this record holder was abandoned in 1962. The present deepest producer is producing gas from a depth of 19,895 ft. only. Similarly the deepest well in 1927 was 8,046 ft., whereas the deepest production at that time was from 7,591 ft.

There are also minor errors of punctuation on page 9 and page 11. However, these are relatively small points which detract only slightly from the quality and accuracy of the publication.

POLAND AS TRADER

Polish Exporter 2-3 (56-57) 1963: Published by the Polish Chamber of Foreign Trade; Pages 88.

THE POLISH Exporter, a quarterly publication in English and French, published by the Polish Chamber of Foreign Trade, is by now well-known for its basic information on Poland's economy, science and technology, the achievements and possibilities of foreign trade, latest production, export novelties etc. The issue under review carries information on the range of goods exported from Poland and the activity of the various Polish foreign trade firms. There are many interesting articles on subjects such as the development of economic relations between Poland and the Afro-Asian countries and machine tool exports to Africa and the Near East. The export of pneumatic tools, wood and paper articles, tyres and rubber technical articles, electric welding equipment, installation accessories, electrical equipment for hard coal mines etc. are dealt with separately in a precise manner.

It is interesting to observe that, while in 1959, Polish exports to Asia were running at some \$16.7 million and to Africa at a mere \$1.9 million, the figures had risen by 1961 to \$64.4 million and \$18.9 million respectively. The rate of growth in Poland's foreign trade turnover with these countries was much higher than the rate of growth of Poland's foreign trade turnover as a whole. If the purpose of this special issue is mainly to familiarize African and Asian leaders with Poland's export capacity, it has been well served. The get-up and lay-out are good, and it could well serve as a model for other countries doing publicity in export promotion.

* Robert L. Wood, then President of the Independent Producers' Association, had pointed out more than 15 years ago that an increase in price of crude of 50 cents a barrel would enable the industry to drill additional 9,000 more wells to reduce imports to USA totalling an equivalent of Rs. 600 crores a year and will yield 150 million barrels of oil, which would otherwise be lost on account of high cost of production. It was then pointed out that over 9,000 poor producers which were abandoned in 1945, on account of comparatively low prices then prevailing, could have economically produced an additional 345 million barrels of oil if the selling price were increased by 25 cents per barrel i.e. approximately half anna per imperial gallon. The figures for 50 cents and 75 cents increases were given as 1256 and 1825 million barrels (based on Uren's "Petroleum Production Engineering," 1950 edition, p. 24).

RECORDS AND STATISTICS

Mid-Term Appraisal of Third Plan

DURING THE past two years, India has made substantial progress in sectors like Transport, Power, Coal, Machine Building and basic industries. But the annual rate of increase in National Income in the first two years of the third Plan has been of the order of only 2.5 per cent, largely because of a setback in agriculture.

There has been, however, no proportionate setback in investment which has, in fact, increased steadily and has been at high levels in several strategic areas. During the first three years of the third Plan, the total plan outlay in the public sector is expected to be Rs. 4,198 crores. Over the five years of the Plan, subject to availability of resources, the total outlay is now expected to be about Rs. 8,000 crores.

Foreign exchange position continued to be difficult. Although commitments to the extent of Rs. 2,100 crores are now in sight, additional non-project assistance needed over the next two years amounts to Rs. 450 crores.

During the first year of the Plan, the general price index declined by 3.6 per cent and in the second year it rose by 3 per cent. But since March last it has risen by over 8 per cent. The bulk of the increase has been in food articles, especially rice, sugar and gur.

These facts are contained in the Report on the Mid-Term Appraisal of the third five-year Plan (1961-66) prepared by the Planning Commission, which was presented to Parliament on November 25.

NDC's Endorsement

The Report was considered by the National Development Council at its twentieth meeting held on November 8 and 9, 1963. The Council broadly agreed with the findings and recommendations of the Planning Commission and decided that the Central and State Governments should proceed, as a matter of urgency, to take all necessary steps to correct the existing deficiencies and ensure the realisation of the objectives and targets of the third Plan. The Council reviewed progress in agriculture and drew attention to some of the principal directions in which efforts to increase agricultural production should be intensified. It also proposed action in other fields, such as the speedy completion of projects likely to yield early benefits, supply of raw materials for small industries and steps to bring about qualitative improvements in education and to accelerate the programme for family planning. The Council also urged that special consideration should be given to the elementary needs of the people such as the supply of drinking water in rural areas, urgent social problems like slums and unsatisfactory living conditions, and the development of the more backward regions in different States. Finally, the Council decided that in the light of the Planning Commission's appraisal report, State Governments and Central Ministries should take specific measures to improve their machinery for planning, raise the levels of administrative efficiency and strengthen the implementation of development programmes in different sectors. The Council reviewed progress in the implementation of land reform and considered that the speedy execution of the programme of land reform was vital for increasing agricultural production and strengthening the rural economy. It called upon all State Governments to complete the implementation of their land reform programmes before the end of the third Plan. The Council constituted a Committee of Chief Ministers under the chairmanship of the Minis-

ter of Home Affairs to review at regular intervals progress of land reform in different States and to suggest measures for strengthening and improving implementation.

The Planning Commission's mid-term appraisal of the third Plan has also been considered by the Central Government who have generally approved of the suggestions contained in it. Among the suggestions approved are the following. Firstly, in all important fields project studies should be undertaken as part of continuing programmes of work. Early strengthening of technical organisations for project studies and designs is essential for ensuring that changes in cost estimates are kept to the minimum and construction schedules are maintained. This will also facilitate advance action in relation to future projects and make for greater continuity in planning. Secondly, the question of reducing costs has to be pursued systematically. For this purpose, besides high level technical committees for reduction in construction costs at the national and State levels, heads of major projects should be given the assistance of well-equipped cost reduction units. Thirdly, specific programmes for import substitution should be worked out in respect of components, raw materials and equipment in different industries. These have to be based on forward planning for the co-ordinated use of the available indigenous capacities and utilisation of the results of scientific and technological research.

To secure complete co-ordination between different agencies at the national level in matters relating to agricultural development, the Central Government have also decided to constitute an Agricultural Production Board under the chairmanship of the Minister of Food and Agriculture.

The Appraisal Report emphasizes that in the implementation of plans and policies there is need for greater emphasis on the social objectives of planned development, in particular, on bringing about reduction in disparities in income and wealth and ensuring the basic necessities to the weaker sections of the population. On these aspects of development, a number of proposals were set out in the third Plan, including those relating to expansion of opportunities for employment, development of education and social services, grants of scholarships and other forms of aid, provision of minimum amenities in rural areas, extension of social security and adoption of appropriate fiscal and other policies.

Effect of Emergency

The Report draws attention to the fact that for over a year the third Plan has been implemented against the background of a serious threat to national security and a continuing emergency which has brought new burdens and responsibilities. The National Development Council viewed the Plan as an integral part of the national defence and in November 1962, called for its successful and speedy implementation with the necessary reorientation to meet the emergency. Accordingly, the immediate priorities of the Plan were re-examined with a view to adapting it to the urgent requirements of defence. In particular, plans for industry, transport, power and scientific and technical manpower were stepped up and a larger agricultural effort was proposed. Economies in construction and in the use of scarce materials were also stressed.

Efforts to mobilise resources for development, which were already under way, were considerably enlarged under the

stress of the emergency. Against a target of additional taxation of Rs. 1,750 crores indicated in the third Plan, during the first three years of the Plan, the Central and State Governments have undertaken taxation yielding about Rs. 2,400 crores over the Plan period. Investment in many strategic areas has been at a high level and has also increased steadily from year to year. With assistance from friendly countries and from international agencies, foreign exchange requirements have been substantially covered in some sectors, notably in power, expansion of steel plants, railways, ports and oil. However, in a number of important fields there are still significant gaps and import requirements for components and raw materials are not being adequately met.

The first year of the third Plan was marked by power shortage and transport difficulties, specially in respect of coal. A series of short-term measures were taken to deal with these problems. At the same time, to avoid imbalance in the future, plans for the development of power and transport were augmented appreciably. From the beginning, efforts have also been made to intensify the programme for agricultural development and to improve its implementation. More recently, high level study teams were sent out to confer with the States and devise further measures for accelerating agricultural production. The progress of industrial programmes has also been closely followed and steps to improve the pace of utilisation of external assistance allocated to projects have received special attention.

Financial Position

Budgetary outlay of the Central and State Governments, covering both developmental and non-developmental expenditure, increased substantially during the third Plan period. Normal tax receipts have turned out more buoyant than estimated earlier. However, non-Plan expenditures, particularly those connected with national security, have also shown large increase. The tax measures taken so far by the Centre will yield roughly Rs. 1,900 crores, about Rs. 800 crores more than the target. However, the contribution of the States, indicated at Rs. 610 crores, would be short by about Rs. 185 crores on the basis of the measures taken in the first three years.

The cost of third Plan public sector programmes was initially reckoned at Rs. 8,300 crores against the financial provision of Rs. 7,500 crores. Since then some additions have been made in Transport, Communications and Power programmes. Considering the actual pace of implementation, however, the total outlay over the Plan period in the public sector, subject to availability of resources, might be close to Rs. 8,000 crores, out of which Rs. 4,198 crores is expected to be spent in the first three years. While efforts to mobilise resources have been on the whole encouraging, there are some States which are experiencing difficulties in raising resources on the scale envisaged in the Plan. Additional taxation undertaken in these States has been low in comparison with their initial targets. These States will find it difficult to fulfil their plans without further steps to strengthen their financial position.

Agriculture

In the third Plan the greatest emphasis was placed on agriculture, which obviously holds the key to rapid economic growth. During the first two years of the Plan, seasonal conditions were unfavourable, and the actual levels of production of foodgrains and other crops did not correspond with the efforts made to increase agricultural production. In the nature of things, in a country like India in which, over large areas, the volume and distribution of rainfall are a decisive factor in agriculture, it is difficult to achieve a steady rate of growth in agricultural production from year to year. This makes it all the more essential to secure high yields per acre

in areas with irrigation and assured rainfall. In the scheme of development, greater emphasis has to be given to the development of scientific and progressive agriculture in an intensive manner in areas with relatively favourable agricultural conditions. This approach is being followed in a number of areas which have been marked out for intensive development. Efforts are also being made to make available for agricultural development increasing resources in finance, supplies and personnel.

The index number of agricultural production which increased from 116.8 in 1955-56 to 139.6 in 1960-61 rose to 141.4 in 1961-62 and fell to 136.8 (provisional) in 1962-63. Foodgrains production which had gone up to 79.7 million tons in 1961-62 declined to 77.5 million tons in 1962-63. On present indications, in comparison with estimates in the third Plan, there may be a shortfall of the order of 3 to 5 million tons in the output of foodgrains. There may also be some shortfall in cotton and oil seeds. In respect of jute and sugarcane, however, the estimates of production are expected to be achieved. The estimates for rubber, coffee, tea and tobacco are also likely to be realised.

The Report notes that until recently organisational and administrative efforts and resources devoted to the implementation of agricultural production programmes have not been commensurate with the requirements of the Plan and makes a number of suggestions for strengthening the implementation of agricultural development programmes and intensifying production efforts, especially in areas with irrigation and assured rainfall and in those selected for the intensive development of different crops.

Achievements

Achievements during the first three years of the Plan include increases in the area benefiting from minor irrigation programmes by 7 million acres, soil conservation programmes 4.4 million acres, improved seeds 46 million acres, green manuring 12.3 million acres, plant protection measures 6 million acres and increase in the supply of nitrogenous fertilisers from 200,000 tons to 450,000 tons (in terms of N.). Intensive Agricultural District Programme now extends to 17 districts. Intensive development of rice and millets has been taken up in 40 and 76 districts respectively, and of cotton, jute and sugarcane in a number of selected areas. The number of community development blocks have increased from 3,100 to 5,183, thus covering almost the entire rural area. A number of steps have been taken to re-orient the community development programmes so as to secure greater concentration on agricultural production. The Rural Works Programme now covers more than 800 community development blocks and is proposed to be extended during the next two years to another 1,000 to 1,200 blocks.

Although the rate of utilisation of irrigation potential has steadily increased in recent years, there is still an unutilised potential estimated at 3 million acres. It is imperative to improve the utilisation of irrigation potential further by intensifying programmes of field channel construction and related measures of development.

The prospects for the current year's crop seem to be good and it is hoped that in the remaining years of the Plan the lag in agricultural production observed in the past will be overcome.

Industry

Since the beginning of the second Plan, valuable experience has been gained in planning for industrial development and executing industrial projects. The importance of co-ordination and inter-related planning for industry, power and

transport is fully appreciated, and the Ministries concerned and the Planning Commission endeavour to maintain a close watch on common problems in these sectors. It is also recognised that the provision of facilities for power and transport should be undertaken, to the extent possible, well in advance of actual requirements. These considerations have been borne in mind in implementing the third Plan and also in planning for the future. However, there are some aspects where the existing arrangements need to be considerably strengthened. Thus, in a number of projects, anticipated time schedules and estimates of cost have tended to be optimistic. To an extent, changes in these are inevitable, but it is essential that they should be kept to the minimum. This object can be achieved if careful technical and economic studies are undertaken at the stage of planning and systematic programming is undertaken in relation to all phases of a project. From this aspect, the main stress has to be on strengthening the existing technical organisations and, where necessary, establishing new organisations for preparing technical project studies and designs. In major fields, such studies should be undertaken as part of the continuing programmes of work. This would facilitate the correct selection of projects. It would also make for greater continuity in planning so that, as investigations are completed, new projects could be approved for necessary action.

Complementary Roles

In the plans of industrial development, public and private sectors have important complementary role. In the third Plan a wide range of important tasks were assigned to the private sector. However, progress on the part of private sector has lagged behind in a number of key industries. Shortfalls in these fields will have repercussions on future development and it is necessary to devise appropriate means for ensuring that major targets assigned to the private sector are in fact realised in keeping with the requirements of the economy and the scheme of the Plan.

General index of industrial production increased by 6.5 per cent in 1961-62 and 8 per cent in 1962-63 as against the average increase of about 11 per cent visualised in the third Plan. There was significantly larger growth of producer goods and basic industries (e.g. steel, aluminium, machine tools, fertilisers, caustic soda, etc.) compared to the general index. Compared to the level of production in 1960, the output in basic metal industry increased by 26 per cent, metal products by 60 per cent, machinery by 22 per cent and chemical products by 23 per cent.

Investment during the Plan period on public sector programmes is likely to be higher than originally visualised. Projects under Heavy Engineering Corporation, Hindustan Machine Tools, and Heavy Electricals, and the fertiliser plants at Rourkela, Alwaye and Trombay progressed satisfactorily. The three public sector steel plants have attained their targets of 1 million tons of ingot steel each. Work on their expansion programme and on the Bokaro Steel Project has, however, been considerably delayed. Fertiliser units at Naharkatiya and Gorakhpur are behind schedule. Projects for manufacture of ball and roller bearing and compressors are in initial stages. The Phyto-chemical Project (Kerala), Organic Intermediates Project (Maharashtra) and Heavy Plate and Vessel Plant (Wardha) have been considerably delayed.

In the private sector, during the first two years of the Plan, conditions were generally favourable for investment and licences to cover the third Plan targets were issued for a large number of industries. Progress in the private sector in several important industries like alloy tool and steel, aluminium, steel castings and forgings, machine tools, certain types of machinery, cement, fertilisers, paper and newsprint, etc. has been unsatisfactory.

Finished steel output by 1965-66 is likely to be 1 million tons less than the Plan target of 6.8 million tons. The production target of 8 lakh tons of nitrogenous fertilisers is not likely to be achieved mainly on account of the slow progress in the implementation of the private sector's schemes. Production in 1965-66 is likely to amount to 5 lakh tons.

The Report points out that there will be shortfalls in certain crucial sectors of industry and as a result full benefits envisaged in the third Plan will be available only after a year or two, and the fourth Plan will start at a comparatively lower base than originally contemplated.

Coal

Coal production in the last year of the Plan is expected to reach 90 million tonnes as compared to the Plan target of 98.6 million tonnes. This may be sufficient because the total demand is likely to be lower. The output of washed coal in the last year of the Plan is, however, likely to be somewhat less than the requirements.

Power

The installed capacity at the end of the third Plan is expected to be 12.5 million KW. against the target of 12.7 million KW. The Plan target of 45 billion KW hours generated is, however, expected to be achieved and possibly exceeded as a result of likely improvements in the utilisation of planned capacity. In order to mitigate power shortages in certain areas, some additional power schemes have been accepted in the Plan. Also a few schemes for the fourth Plan have been accepted for advance action. Special cells have been set up in the Ministry of Irrigation & Power and the Central Water & Power Commission to assist in implementation of these projects. Power development is now being considered on a regional basis and the recent inter-connection of Rihand Power System with the Bihar-DVC System is a significant development. Steps are being taken to expedite the construction of inter-State transmission lines. Out of 20,000 additional villages expected to be electrified during the third Plan, 7,770 villages have been covered in the first two years of the Plan. The target for rural electrification set for the third Plan is likely to be achieved and perhaps exceeded.

Transport

The transport situation which was difficult when the Plan was formulated improved considerably in 1962 and the improvement has since been maintained. There has been, in particular, improvement in the coal transport position. Substantial additions have been made in the programmes for rail-heads and roads and the estimated expenditure under these heads will now be about Rs. 450 crores higher than the Plan provision. In view of the emergency, road programmes have been considerably expanded. Production of wagons has been stepped up from 1,800 in 1960-61 to 32,000 in 1963-64 (in terms of four-wheelers). During 1964-65 and 1965-66 about 80,000 wagons are expected to be produced. The total road kilometrage was expected to increase from about 230,400 in 1960-61 to 270,400 in 1965-66. During the first two years of the Plan, the total kilometrage is expected to have reached 248,000. As regards shipping, the total tonnage has increased from 8.6 lakh GRT in 1960-61 to 10.6 lakh GRT in 1962-63 and is expected to reach the figure of 15 lakh GRT in 1965-66 as against the Plan target of 10.9 lakh GRT. Programmes relating to communication service have been augmented substantially in view of the emergency.

Exports

The Third Plan had visualised a substantial effort for increase in exports. The programme for exports is now being implemented as an integral part of the country's development plans. There has been already a measure of response, but to

raise the annual level of exports by about a third over the five-year period and to double exports by the end of the fourth Plan, are uphill tasks. In this connection, reference may be made to a problem, which affects production both in the private and the public sectors. There is at present an appreciable gap between the available capacities in a number of industries and the extent to which these are being utilised. In part this is a question of allocating foreign exchange to meet critical shortage of components and raw materials. This difficulty becomes easier to resolve to the extent to which exports expand and external assistance is available for non-project imports. At the same time, it is important that requirements of imported components and raw materials in the future should be kept to the minimum. This calls for systematic import substitution in each industry and forward planning for the effective and co-ordinated use of all available indigenous capacities.

Social Services

A steady expansion has been maintained in both general and technical education at all levels, and Plan targets are likely to be exceeded. At the same time, deterioration in standards is reflected by over-crowding of classes and unfavourable teacher-pupil ratio. Shortage of teachers for technical education and teaching of science is particularly acute. States have been urged to give more attention to measures for maintenance and improvement of standards of education. In view of the emergency, additional facilities have been created for technical education and it is expected that the Plan target of annual admission to technical degree courses will be exceeded by 4,000 and to technical diploma courses by about 10,000. The target of students in schools is likely to be exceeded by 4 million. The number of scholarships and fellowships under various programmes have been substantially increased.

Institutional facilities for medical care have substantially increased during the first two years of the Plan and some of the targets may be exceeded. Primary health units are, however, progressing slowly because of the shortage of doctors.

The number of family planning clinics at the end of the second Plan was 2,136 (1,379 rural and 757 urban). During the first two years of the third Plan, 209 urban and 660 rural clinics have been added, bringing the total number of clinics to 3,005. Facilities for free sterilisation operations have been made available on a fairly wide scale. It is reported that by February 1963, 3.35 lakh persons were sterilised. On the whole, however, total impact of the programme, specially in rural areas, has not been appreciable so far. A Committee has been set up to review and suggest ways and means for improving this.

Plan Implementation

In recent years a wide range of measures to strengthen administration have been taken or initiated, both at the Centre and in the States. Yet, in their practical aspects, problems of implementation are still of formidable dimensions and events since the beginning of the third Plan have further emphasised the need for concentrated and sustained action towards the attainment of high levels of performance, better training of personnel, systematic reporting and evaluation and a greater responsibility and initiative on the part of different agencies within the administrative structure.

A high level Committee on Administration has been constituted within the Central Government. Several States, e.g., Andhra Pradesh, Assam, Gujarat, Madras, Madhya Pradesh, Maharashtra, Mysore and Uttar Pradesh have taken concerted measures to increase administrative efficiency and to bring

close study to bear on their administrative problems. In the immediate post-war period extremely rapid expansion in the business of Government had led to a degree of dilution in personnel and lowering of standards in the disposal of work. For several years, therefore the major concern of Organisation and Methods Units was to improve the general procedures followed in Secretariat Departments and executive agencies.

Two significant developments have been the decentralisation of Central Secretariat Service and the introduction of a new scheme for financial and budgetary control which provides for enhanced delegation of powers to the Ministries. Work studies have been undertaken for simplifying and rationalising methods and procedures. All India Services for Engineering, Forests and Medical & Public Health are being constituted. A proposal for constituting an All-India Agricultural Service is under consideration. A recent study of State Administrative Services shows that in some States Administrative Cadres are inadequate and personnel requirements are frequently under-estimated. It has been recommended that a minimum of 50 per cent of posts in the State Administrative Services should be filled through competitive examinations and special training institutes should be set up for State Services. During the past two or three years, in a number of States steps have been taken to improve the system of reporting on Plan projects and schemes and of evaluation. Efforts have been made to give effect to some of the recommendations made in the third Plan about management of public enterprises. Though considerable advance has been made in terms of skill, experience and organisation, it cannot be claimed that time schedules, cost estimates, flow of benefits and returns on investment generally conform to the basic assumptions made when individual projects were approved. With the object of evolving suitable systems of programming and reporting on performance in projects of different kinds undertaken in the public sector, the Planning Commission is at present engaged in a study of 15 selected projects under industry, minerals, power and transport.

Strengthening States' Machinery

Existing Planning machinery in the States need early strengthening in view of the wide range of responsibilities being cast upon State Governments. The aspects to be specially emphasised are evaluation, manpower planning, mobilisation of resources, technical project studies, arrangements for obtaining statistical information and systematic reporting and review of progress.

In some States there has been recently a degree of pressure to shift funds as between different heads of development, thus departing from the scheme of allocations agreed under the five-year and the annual Plans. Such diversions are likely to cause set-backs in development in fields like agriculture and co-operation and may affect social programmes to which higher priority has been given. It is important that planning procedures in the States should be designed to avoid diversions of funds which may upset national and State priorities.

The Report emphasises that one of the main lessons of the emergency is that defence production and civil production have to be viewed together at each step in terms of a common and continuing economic plan, which comprehends production, transport, power, research, training and use of technical and scientific manpower as well as wider social goals. Already the third Plan had vast administrative implications and called for high standards of efficiency, co-ordination and concentration of resources at vital points and the participation of millions of people in the national endeavour. The emergency has further enhanced the significance of these conditions.

A Sop To Cerberus?

HAVING DECIDED presumably not to heed the raucous cry for the nationalisation of banks raised by certain individuals or groups within the Congress Party or other political parties, the Government evidently wants to place as high a price as possible on its moderation—for, it is clear that the only argument of any substance which can at all be advanced in favour of the further restrictions proposed to be imposed on the banking industry in the Banking Laws (Miscellaneous Provisions) Bill introduced in the Lok Sabha recently is that the alternative in demagogic terms to further regulation is nationalisation. We do not know whether this would be officially admitted in the course of the discussion on the Bill, but we would be surprised indeed if no awareness is shown in Parliament of the obvious truth that the additional powers which are planned to be given to the Reserve Bank are hardly functional.

The Reserve Bank is being transformed steadily into a vast policeman whose primary job would be to pry and probe into the detailed functioning of the nation's banking system. Clause 18 of the Bill places the Reserve Bank in the position of a direct and decisive disciplinary authority on the Directors as well as all other employees of the banking company. The Reserve Bank in essence will be a real employer with this difference that, while it will have the authority to hire and fire, it will not have the responsibility for finding the salary or getting the work done. Perhaps the position is even a little worse. Whereas an ordinary employer's right to hire and fire is severely restricted by law or contract, the Reserve Bank's authority in these matters in relation to management and staff of banking companies will be virtually absolute. Indeed—and rather ironically—the Reserve Bank will be more free in hiring or firing the employees of the various banks than it probably is in hiring or firing officials whom it carries on its own pay bill. This is indeed an absurd situation, and it is noteworthy that the Bill itself makes no serious attempt to stuff sense into it. On the contrary, by providing that any Director, Chief Executive Officer or other officer or employee of a banking company or indeed any person associated with a banking company could be removed in the public interest or for preventing the affairs of a banking company being conducted in a manner detrimental to the interest of the depositors or for securing the proper management of any banking company if the Reserve Bank considers it necessary or desirable to do so, the Bill has formally avowed its unashamed arbitrariness.

It is conceded by the Government that the Reserve Bank already has adequate powers for removing the Chairman or other Director, Manager or Chief Executive Officer of a banking company if he has been found by any tribunal or authority, other than a criminal court, to have contravened the provisions of any law in circumstances which make it undesirable for him to continue to be associated with a banking company. For any reasonable Administration interested only in safeguarding the character and integrity of the management of banking companies, these powers surely should have been sufficient. But it is precisely because something more is sought to be done than to disassociate from the management of banking companies persons who have been found to be unsuitable by duly constituted and independent authorities with a judicial bias that the wholly unprincipled provision is made in the Bill that the Reserve Bank, in its own judgment of who is worthy or who is not

worthy, can determine which citizens of this country can be associated with or even work for a banking company and which citizens not. It is all very well to say that these powers are not meant to be used lightly or as a matter of course and that they will be exercised only in grave circumstances calling for their exercise. If that were so, why should the law itself not use language which compels economy in the exercise of these powers rather than leave everything to the good sense of its minions?

In the contemporaneous Company Law Bill, where vast powers are being taken by the Government to remove persons from managerial positions in companies, there is at least a provision — for what it is worth — for an investigation of the grounds for removal by a tribunal and the added, if limited, safeguard that there could be an appeal to a High Court on points of law. But here, in this Bill, the Reserve Bank would be a veritable Hydra in the sense that it could be prosecutor, judge, jury and executioner, all rolled into one. It is important to note here that the Reserve Bank, under its Statute, is free from effective or detailed control by the Government at least with regard to much or most of its administrative functioning. Consequently, there is little real scope for Parliament to look into how well or wisely the wide powers it is being asked to delegate to the Reserve Bank are exercised by that institution. Thus a citizen who may be unfairly or wrongly penalized or punished by the Reserve Bank in terms of the powers conferred on it by this Bill can have no recourse to any remedy or redress.

We do not believe that there is any organ of the Government which can safely be entrusted with such arbitrary powers over the rights of citizens. As for the Reserve Bank, if its history and record are any indication, it is not an institution which can always be expected to use such powers with restraint or solely when public purposes demand their exercise. We do not want to say more here than to point out that, whatever may be the bare letter of the Law as it is, even without this amendment, in actual practice the Governor of the Reserve Bank has always had unnamed and unchartered powers of an informal, but for that reason not less effective, nature for securing the departure from the key posts in banking companies of individuals who are *persona non grata*. These powers moreover do not merely exist, but have been exercised. Finally, they have not always been employed justly or without *mala fides*. This being the case, if this part of the Bill, in its present form, is to pass into Law it will place all bank managements and bank personnel in a bond of servitude for which there is no justification whatsoever. It is true enough that the Reserve Bank will be required to record in writing the reasons for which it may remove a bank Director or official. But this is a poor safeguard since the aggrieved individual has no means of reopening the matter or reversing a decision already taken except perhaps

through a costly process of litigation. When it is borne in mind that the consequence of removal by the Reserve Bank is that the affected person cannot be associated with any banking company in any manner for any period not exceeding five years as may be specified by the Reserve Bank, it must surely be seen that the authority which is sought to be vested in the Reserve Bank is both offensive and excessive.

An explanatory note to Clause 18 says that there is no provision according to the Law as it now stands for the Reserve Bank to make appointments directly on its own initiative to the post of a Director or Chief Executive Officer of a banking company. We do not see why the Government or for that matter the Reserve Bank should make a grievance of this situation. If the purpose is merely regulation, a properly disciplined authority to remove persons who have violated the Law or have otherwise been guilty of conduct which, in the eyes of a judicial or quasi-judicial authority, disqualifies them for being associated with the management of a banking institution should be more than enough. For the Reserve Bank to take powers to appoint its own men to the management and even the staff of banking companies is simply not reasonable. It is a different matter that, in extraordinary circumstances, as a temporary measure and for the carrying out of a specific assignment, a supervisory or regulating authority, following recognized principles and procedures of law and justice, may appoint its own officers or agencies, but to assume arbitrary powers for appointing management or other personnel on vague and general grounds is surely a tyrannical gesture.

We have heard it said that the issue of control of banking establishments is in a special category since

Eastern Economist 20 Years Ago DECEMBER 3, 1943

WHEN IN August last the Government of India allowed the employment of women labour underground in the coalfields of C.P. and Berar, the step rightly invited severe condemnation from a public opinion shocked at the reintroduction of a nineteenth century evil, and from students of industry and trade who were unconvinced of the bogus arguments about coal shortage that were advanced in justification of it. Instead of retracing this ill-conceived step, the Government of India have now come out with an extension of this measure to the coalfields of Bengal and Bihar. They have, of course, accomplished this with their characteristic ease and perversity in such matters. As a sop to an outraged public conscience, the new notification lays down that all women employed underground shall be paid equal wages with men and that no woman shall be employed in galleries less than six feet high, and further promises to employ a woman welfare officer shortly—measures that are more provocative than allaying. The fact that a number of women will surely seek employment now in coal mines cannot alter the moral indefensibility of exploiting their poverty for a form of labour to which they are, by all civilized standards, unsuited.

those who control capital of a bank or even the general body of the shareholders could have only a small financial stake in the form of capital as compared with the far larger stake which depositors have in the form of working funds. We must confess that we are not impressed by this argument. The depositors are free agents. They have a wide choice of banks to which they can take their deposits. From the point of view of any individual bank they are not a permanent community but a floating mass and above all the reasons why they prefer bank 'X' to bank 'Y' for banking their money has surely something to do with the quality of that bank's management as they assess it and the trust they repose in that management. It is therefore neither intelligent nor fair to attempt to treat bank managements as interlopers who have no business to be where they are, to be doing what they are doing. While the Government certainly deserves full praise for dismissing uninformed and politically loaded demands for nationalisation of banks, it would surely be a short-sighted policy on its part to exploit the situation by imposing increasingly unnecessary and altogether unfair restrictions and prohibitions on the functioning of bank managements. This is not the way to promote higher standards of business initiative and enterprise or social responsibility in the banking system at a time when all those qualities are needed urgently and in a vast measure to serve the expanding needs of agriculture, industry and trade for credit facilities and promoting the habit of investment and saving among more and more people in

town and country.

There is an important chapter in the Bill which proposes to extend the authority of the Reserve Bank of India to regulate the working of (a) certain financial institutions, namely, firms, companies or other corporate bodies which are financing trade, industry, commerce and agriculture, and (b) non-banking institutions accepting deposits from members of the general public. The objects in view are (1) the supervision and control of the specified financial institutions in the interest of better or more effective control of credit, and (2) the regulation of the business of acceptance of deposits of these and other non-banking institutions in the public interest. Two valid arguments have been advanced for this extension in the Reserve Bank's jurisdiction. One is that, for purposes of an effective and integrated monetary and credit policy, the Reserve Bank should be enabled to exercise a certain measure of regulatory functions with regard to banking or quasi-banking transactions outside the organised money market. Secondly, even from the point of view of scheduled banks, it has been thought desirable that the Reserve Bank should take powers for regulating the terms on which non-banking institutions, such as manufacturing concerns, receive deposits directly from the public.

It is certainly desirable that these areas of financial transactions should be brought under the purview of the Reserve Bank and it is therefore not necessary to elaborate the need for the extension in the Reserve

EGYPTIAN COTTON

Bank's authority which the Bill contemplates in these directions. This is all the more so because, in the case of institutions such as hire-purchase firms, there is also need to protect the interests of the public and see that there is no exploitation of the ignorance or the helplessness of persons dealing with such agencies. Indeed, it may be necessary for the Central Government to undertake sooner perhaps than is supposed, model legislation for the benefit of State Governments for regulating the activities of certain categories of financial or quasi-financial institutions which are not now being effectively supervised by Law. Besides this, it is also more than likely that the Finance Minister has the feeling at the back of his mind that the extension of the authority of the Reserve Bank proposed here would help him in tracking down what he has been describing as "unaccounted money" and assist him in framing measures for dealing with this problem. This is not necessarily the place where the larger question of whether "unaccounted money" is as serious a problem as is being made out needs to be discussed. But it is only proper to concede that if

the Finance Minister really believes that there is a considerable amount of "unaccounted money" in the economic system, he should certainly take the initial step of empowering the Reserve Bank to explore and investigate this situation. But while the move to extend the area of financial transactions policed, supervised or disciplined by the Reserve Bank is to be generally welcomed, there is a genuine feeling that here again more powers are being taken than are necessary, over a wider area than may be justified. For instance, it has been suggested that under the Bill, as it stands, even a grocer's shop, having some stock-in-trade or allowing credit to customers, could be brought under the purview of the Reserve Bank. Since it is obvious that the Government does not contemplate this kind of situation, it should be possible for the relative provisions of the Bill to be narrowed down and defined strictly to serve precisely the purposes which the Government has in mind. It follows that the least that the Government should do at this stage is to agree to the Bill being referred to a Select Committee for hearing evidence.

Exports of Engineering Goods

THE INCREASINGLY important role played by the engineering industry in augmenting export earnings of the country was highlighted recently at the annual meeting of the Engineering Export Promotion Council held in Calcutta. The total export of engineering goods, excluding steel, during the period from April 1962 to March 1963 was Rs. 8.45 crores against Rs. 7.15 crores in the same period of 1961-62. The trend has since been even more promising in that export earnings from April to September 1963 have been placed at Rs. 6.34 crores as against Rs. 4.33 crores during the corresponding period of the previous year. Speaking at the meeting, the Council's Chairman, Mr. S. L. Kirloskar, expressed the hope that provided the present rate of progress was maintained, the target of Rs. 13 crores fixed for the current year would be well within reach. He said that the immediate aim of the industry was to export at least from eight to 10 per cent of its production and when that became a reality it would not be difficult for the industry to achieve an export earning of Rs. 40 to Rs. 50 crores which could be increased to about Rs. 80 to Rs. 100 crores by the end of the fifth Plan.

Despite the fact that the industry is a comparatively new-comer in the export field and notwithstanding the highly developed state of the engineering industry in western countries, the Indian industry has succeeded in making a successful debut in a number of sophisticated markets. Mr Kirloskar drew attention to a significant feature in the export trade in engineering goods over the past few years: India now exports a wide variety of engineering goods to a number of countries. While acknowledging that the headway in exports has been made possible by the increased assistance now made available to exporters, Mr Kirloskar opined there was room for streamlining such assistance. Supplies of raw

materials are still inadequate and the facilities by way of grant of foreign exchange to salesmen who go abroad leave much to be desired. An important point made by Mr Kirloskar was that a manufacturer's products should be governed by one standard only both in respect of items intended for export and those manufactured for the home market. He further said that the raw materials supplied to the industry should be of the highest quality available.

It would however appear that exporters of engineering goods and for that matter all exporters in the country will get all the help and assistance they will need provided they expand their exports. Addressing the Council meeting Mr Manubhai Shah, Union Minister for International Trade, referred to the steadily growing confidence in India-made goods in world markets. Till a few years ago consumers abroad were under the impression that Indian goods rarely conformed to the required standard but this is now slowly changing. The primary duty of our exporters is to improve "the image of Indian goods abroad." It will however be disastrous to underestimate the magnitude of this task because for most of the products which we export there is a buyer's market and a number of other producers of similar goods are vying with one another to sell more and widely. Two fundamental factors will for ever govern success in exports: quality and price. There is need for emphasising this because

This issue (dated the 13th December, 1963) is the last one for this year. The next issue, which will be dated December 27, will be "Eastern Economist" Annual Number, 1964. A separate announcement regarding the Annual Number appears in this issue.

despite the realisation that there is urgent need for initiating strenuous measures to promote exports, the price factor has not received the attention it must be given. Mr Manubhai Shah warned against complacency in export performance on the strength of the present encouraging trend but the warning should be first addressed to Government itself. For, despite the consensus that the country should continue to depend on its traditional exports for the greater part of its export earnings for a considerable time to come Government still seems to be unmindful of the fact that almost all our traditional exports compare unfavourably in price with those put on world markets by other producers of like commodities. Thus our sacking jute goods are priced out of most of its natural markets by Pakistan while our cotton textiles are losing in almost every market because of their lower quality and higher price. Tea is in much the same plight. These products suffer from a higher production cost and some from lower productivity due to outdated machinery as in the case of our cotton textile industry. As noted by Mr Shah, diversification of products is a 'must' but so long as the fundamental problem of price is not tackled satisfactorily our effort at maximising export may be confronted by serious obstacles.

The present position therefore is that in regard to a number of commodities and manufactures, exports are possible only at a loss because of the disparity between internal and international prices for these items. And it is hard to expect general response from the manufacturers to prefer selling abroad at a loss rather than to selling their products in the home market and reap a profit. It is therefore gratifying that at long last Government has realised that no exporter should be asked to sell his products abroad at a loss. Mr Shah indicated that with the conversion of the Export Risks Insurance Corporation into the broader based Export Credit and Guarantee Corporation, the present difficulty would largely disappear as the new body would be able to give the necessary guarantee to the exporters so that they could embark confidently on expanding their sales overseas.

Some constructive suggestions have also been made by Mr Shah in the implementing of which the industries need only their own co-operation. Referring particularly to some of the difficulties encountered by the Engineering industry, Mr Shah mooted the idea of raw material banks situated at central places in the regions where the engineering industry is concentrated. Evidently the buffer stock which has been working successfully in the case of the jute industry and the decision to have a similar buffer stock for the cotton textile industry should have prompted this proposal. The raw material bank proposal envisages the building of regional stocks of basic raw materials such as steel, pig iron and coal which can be loaned to needy producers who however will be required to replace what they have drawn from the "bank" as soon as they receive their quotas. The

capital for the bank is to be contributed by the producers themselves from their quotas. Such a bank will go a long way towards minimising the loss of production in any unit even if supplies allotted for that unit are delayed. Another very valuable suggestion made by the Minister for International Trade relates to the unhealthy competition among our own exporters in pushing their goods in world markets. Such a practice does only harm to all the exporters in the long run because the foreign buyer will take advantage of this lack of cohesion amongst our traders to depress prices to his advantage. It has been pointed out that one of the main causes of the low prices realised by our mica exporters is the presence of such unhealthy competition amongst them. Mr Shah has rightly pointed out that it should be the responsibility of the Export Promotion Councils to remedy this situation by fostering mutual understanding among exporters.

EASTERN ECONOMIST ANNUAL NUMBER 1964

This Annual Number will discuss the progress, problems and prospects of all the important industries of this country. Taking one major industry after another, it will study how it has grown in the past, visualize the rate at which and the lines along which it is likely to develop in the future and assess critically the limitations on its progress as well as the steps which will have to be taken to deal with the difficulties. We are confident that a study of our industries in these terms will be extremely useful at the present time when there is a justified and widespread disappointment over the failure in many industries to progress towards third Plan targets. Believing that the best service which an economic journal can do to this country now will be to study and state objectively the bottlenecks in development which have affected individual industries, it has been planned to collect, analyse and present a comprehensive picture of India's industrial progress and discuss the measures which need to be taken to promote the further growth of individual industries and ensure the steady march of the nation's industrialisation.

A special feature of this Annual Number is a section in which is presented a series of stimulating discussions on some of the important aspects of current national or world economic history.

The Special Numbers of "Eastern Economist" have always enjoyed a wide readership both at home and abroad and we are confident that this tradition will be maintained by the forthcoming Annual Number, 1964. The issue will be a sumptuous one and will include colour graphs, charts and statistical tables. Priced at Rs. 10 per copy, it will be available for sale direct from our office or from our Agents in the first week of the new year. Those who are already subscribing to "Eastern Economist" or others who enter their annual subscriptions before the 31st January, 1964 will receive the Annual Number free of charge.

Once he hears the call of the hills, there's no stopping Debdas Banerji!

'Camping's my first love,' he says enthusiastically. 'You live close to nature, cook your own food over open campfires, fend for yourself, and return a new man.' An active member of the Rover Scout Troop, Banerji enjoys his annual camping trip...the days of hiking, the many views of nature, treasured in memory and photographs when he returns.

BLUEPRINTS AND BUDGETS

A foreman at Burmah-Shell's Installation at Budge Budge, Calcutta, he is in charge of the drawing office. He prepares blueprints, estimates budgetary expenses, and

controls costs. He performs his responsible task with the knowledge and experience of years on the job.

TODAY, AS EVER, PEOPLE LIKE BANERJI ARE WORKING FOR YOU

Banerji is a happy man. 'Living at peace with your environment,' he says, 'is the only thing that matters.' He has the look of a man who has achieved it.

Banerji and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities

Highlights of the Week

A KING CALLS

THE DAILY round in the capital is unedifying to most, used as the people and the gentlemen of the Press have become to dignitaries visiting us amidst toast-drinking and pious expressions of goodwill or to conferences where the idle are bored and the others fret at being called away from their preoccupations or because they have too much to say which they cannot in such forums. The events themselves, like history and life itself, do often sound like a tale told by an idiot, but people neither in India nor in Jordan can afford to lose their freshness of response. History, which is in danger of passing the affluent by, will not let Indians and Jordanians rest. The young Hashemite King, Hussein Ibn Talal, who was with us last week, has had an eventful life crowded enough without fast cars and aeroplanes. Life began for him at seventeen, and he has survived not only the assassin's bullet but the terror of that moment. Yet he has retained his sensitivity; he could still declare at the Presidential banquet that he felt too bemused after his recent arrival in the country to express his feelings or more thoughtfully that he had often, in the course of an undoubtedly constructive rule, felt inadequate—a feeling which he had sought to overcome through renewed and fruitful dedication to the work of his people. The many problems that this young successor to a long, harassed house of hereditary monarchs—very few of them have survived in troubled countries elsewhere—has had to face serve to underline the effortless grace with which he has accepted their challenge. It is not only that he was among the first to commiserate with us when our territory was violated; he has other virtues besides.

Jordan, more than any of the Middle Eastern countries, started off with a legacy of utter dependence on the British, yet King Hussein summarily dispensed with Glubb Pasha, a power to reckon with in Jordan. He acted equally unhesitatingly when he set up diplomatic relations with Moscow or furthered his friendship with de Gaulle. To abandon, for the moment, a becoming stuffiness in the presence of royalty, a man who has been alone with a fast motor car will not isolate himself from his people; he passionately longs for Arab unity which his people so much want but will not accept relations with the Arab League except on terms of equality for Jordan. Having sensed the value of true freedom, he would not accept either the dominance or the zealous intolerance of new enthusiasms. He well knows that Jordan has most need of neighbourly help and understanding, for it has the largest population, in the Middle East, of politically conscious refugees. She is furthermore most proximate to Israel, and the unresolved Arab-Israel problem is a daily and ever present reality in the Middle East that just has to be lived with. King Hussein acted decisively with the defeat of the Rifai Government and the pro-U.A.R. riots that followed the announcement, on April 17, 1963, that Egypt, Iraq and Syria were constituting themselves into a federation. His choice of Sherif Hussein bin Nasser, his uncle, as head of an interim Government was endorsed in the peaceful general elections to the House of Representatives, held in July this year on the basis of limited franchise. As for economic problems, he has his hands full with an over-populated West Jordan Bank but the U.S.-aided Ghor Canal, east of Jordan, will bring significant relief. He evidenced rare maturity in one so young when he spoke in Delhi of "taking life as one found it" and of "sticking to one's principles...regardless of opportunities offered here and there". In fact, King Hussein has ridden out many storms with ease—and without brandishing ideology, the much favoured recourse of many who have to rule new democracies. It must also be

noted that our President, who well understands the traditions of both East and West, brings to bear on his ceremonial tasks not only a truly Roman "gravitas", suited alike to his office and temperament, but a warmth and an aliveness to individual occasion; unlike so many who, thanks to the "impediments" in their mind, can only understand the world around them through "systems", he had no trouble in singling out the virtues of this visiting King.

GOLD CONTROL

APPREHENSIONS that the powers which are being sought by the Government under the Gold Control Bill, currently before Parliament, to call for declarations of possession of gold ornaments beyond a certain limit may be exercised for putting a ceiling on possession of gold ornaments by individuals have been dispelled by authoritative sources. Anyone having gold ornaments in excess of the limit, if and when specified, will not be required to surrender the surplus ornaments. Acquisition of new ornaments beyond that also will not be illegal provided these acquisitions are declared if and when periodical declarations are called for. The prohibition of converting primary gold into ornaments of more than 14-carat purity is of course not affected.

The Informal Group, consisting of six top officials of the Union Government, set up in September last to report on the working of the Gold Control Order, in the meanwhile, has expressed satisfaction over the success achieved by the Gold Policy in its two primary objectives of reducing smuggling and curbing of demand for the yellow metal for acquisitive purposes. The Group feels that the task for the future is essentially one of preserving, consolidating and extending the gains of the past few months. It draws pointed attention to the three main difficulties encountered in making this policy a greater success. These are: (1) lack of concerted political support for the policy; (2) the absence of adequate machinery for its equitable enforcement; and (3) economic distress suffered by thousands of self-employed small goldsmiths who have lost the greater part of their custom.

The Group has expressed itself against the suggestion that the Government should import gold or use part of its reserves of this metal for supplying 14-carat purity bars to goldsmiths. It thinks that such a step will defeat the very purpose of gold control. The Group has also cautioned the Government that the 14-carat Rule for new ornaments is an important part of the long-term gold policy. Any going back on it would give impetus to the demand for gold and also marginally increase the scope for smuggling. This recommendation, however, was modified by the Group in a postscript to its report after a review of the position, at the instance of the Finance Minister, in the light of the distress caused to small goldsmiths because of the rehabilitation measures taking time in implementation. The outcome has been the concession allowed to self-employed goldsmiths to engage themselves in the work of "repairing or re-making old ornaments to a purity not exceeding the original". The relaxation, according to the Group, should be for such minimum period as is found really necessary. The fixation of a low ceiling on individual holdings of gold ornaments has also not been favoured by the Group on the ground that the country is not yet ready for accepting or administering such a suggestion.

The Group has called for liberalisation of the facilities obtainable at present for securing credit against investments in forms other than gold. Special steps might be taken to step up credit operations in the rural areas by land mortgage banks, co-operative societies and similar other institutions. It has also been suggested that as a supplement to gold control, suitable forms of investment should be devised and these should be endowed by law with the same quality of "street-dhan" which gold ornaments at present possess. As a social

reform measure, it has been recommended that the Government should make a categorical declaration that gold control has come to stay and, if anything, it would be implemented more strictly in future. It is only on such a clear statement of policy that goldsmiths, as a class, can be expected to turn of their trade by the Gold Control Order.

The Group suggests that the Central Government should prepare, in consultation with the State Governments, an overall scheme for the rehabilitation of goldsmiths displaced out of their trade by the Gold Control Order.

As regards enforcement of gold control, the Group has favoured the appointment of a Gold Control Administrator instead of Gold Board. To assist the Administrator, it has, however, suggested setting up of an advisory board or a committee, the chairman of which should be a non-official. The responsibility for the enforcement of the gold policy, the Group recommends, must continue to rest with the Central Excise Department. But suitable enforcement agencies of the State Governments should also be enlisted for this job.

FOSTERING CO-OPERATION

THE FOURTH Indian Co-operative Congress, held in New Delhi last week, has made a number of recommendations with a view to bolstering up co-operative activities in India. Most of these suggestions, of course, are not new; they have been repeated ad nauseam in the recent past. What attaches significance to reiterating them once again is the plea of the Congress that the share of co-operation in the total outlay in the next Plan should be increased substantially. There can be little objection to the stepping up of this outlay in view of the fact that the co-operative movement in this country has come to be diversified a great deal since mid-1950's. But higher allocations can have meaning only if there is a reasonable prospect of their efficient and judicious utilization. The past experience unfortunately shows that in various spheres of this activity (particularly industrial co-operatives) and in several States, the expenditure has not infrequently been falling short of the funds available.

It is encouraging that the Union Government is taking steps to de-officialise this movement. But, as the Congress has regretfully pointed out, there are many States which have not yet fallen in line with this policy. This is probably due to the paucity of non-official leadership in such States and also owing to the none-too-energetic steps being taken for imparting education and training in this field. The sooner this leeway is made up, the better it will be in the interests of strengthening and fostering the co-operative movement.

The Congress has paid particular attention to the development of co-operatives for consumers, for the weaker sections of the society and for improving agricultural production. Presumably in view of the rising cost of living, it felt that here was need to make large-scale efforts to organise consumer co-operatives, both in the urban and rural areas. Four suggestions have been made in this respect: (1) ensuring of adequate supplies of consumers' goods to co-operatives by persuading the private manufacturers to reserve a reasonable percentage of their production for distribution through consumer stores at ex-factory or ex-mill rate; (2) exemption of consumer co-operatives from multi-point sales tax; (3) full patronage by Government and semi-Government institutions to consumer stores by placing orders of their requirements with them; and (4) creation of a federation of wholesale stores at State levels for handling of supplies to the retail stores. The first and the last among these suggestions obviously are of crucial importance. Lack of adequate supplies at reasonable prices has been one of the principal reasons for the Consumer Stores not proving an unqualified success.

Three measures have been recommended for strengthening the agricultural co-operative movement. They are: (1)

liberal interpretation of the rules regarding financial assistance from the Reserve Bank in short and medium-term loans, where the special circumstances of certain States required; (2) making available of PL 480 and other such funds for meeting the medium and long-term requirements of these co-operatives; and (3) creation of a price fluctuation fund at the level of all marketing societies, to which the Government should make contributions in addition to what the societies themselves contribute out of their own profits. Along with this liberalisation of financial assistance, there is, however, need to tighten up the loans recovery set-ups of the co-operative societies so that effective use is made of the available resources. The Congress has also called for extension of the policy of price support to agricultural produce and fixation of "floor" prices on a realistic basis.

As regards industrial co-operatives, it has been suggested that the Government should earmark specific quotas of indigenous and imported raw materials, tools, etc., for these co-operatives. It has been further recommended that the maximum limit of dividends on their share capital should be raised to 9 per cent, as had been done in some of the advanced States of the Union. Both these steps should be in the right direction. For fostering co-operative farming, it has recommended that the land available with the Government should be allotted to the weaker sections of the society for undertaking cultivation in co-operation. Formation of forest co-operatives has been suggested for ameliorating the economic conditions of the forest tribes.

RAJASTHAN LAND REFORMS

THE RAJASTHAN Government can be legitimately proud of the steps it has taken in respect of land reforms in the State. It claims to have had completely abolished by August last, all intermediaries between the tiller of the soil and the State and taken over all the non-religious and religious jagirs as well as the zamindari and biswadari estates. The State Government has also implemented in right earnest most of the other directives of the Planning Commission regarding land reforms. The Rajasthan Tenancy Acts have afforded a good measure of security to tenants against ejectment. The wide diversity of tenancies and tenures that existed in the past has also been considerably reduced. With a view to bringing down agricultural indebtedness, powers have been taken to reopen all transactions carried on during the 12 years immediately preceding the last transaction or January 1, 1952, whichever is earlier. An Act has also been passed providing for compulsory consolidation of agricultural holdings and for prevention of fragmentation. Up to April last, a total area of 31,03,463 acres, situated in 1,746 villages, had been consolidated. In addition to this, over 7 lakh acres of land had been consolidated by the Director of Consolidation, Hanumangarh, and the Colonisation Commissioner. Considerable progress has been made in establishing village panchayats and democratic decentralisation. Rajasthan as a matter of fact is one of the pioneers in this field.

The one major lacuna that has been left, however, is in regard to the imposition of ceiling on land holdings. The delay in this matter has been caused by the complexities involved in verification of records and rights. Concerted efforts are now proposed to be made in this sphere too when the Land Ceilings Act passed by the State Legislature in 1960, is brought into force on December 15, 1963. The ceiling proposed is 30 standard acres per family of five members or less. The area in excess of this ceiling will be acquired by the State on payment of compensation and let out to landless and other persons for cultivation.

The progress made by Rajasthan in introducing and effectively implementing land reform measures should stand it in good stead for stepping up agricultural production when water is available to this thirsty tract from the Rajasthan Canal.

India's expanding economy requires more and more electric power to meet her industrial and domestic needs. Today, a vast network of electric power projects spans the country—projects for generation and utilisation of electricity. Through the years, Blue Star has supplied these projects with alternators, transformers, condensers, switchgear, rectifiers—everything needed to send power surging through the land. This is one of the many ways Blue Star serves Indian industry.

THIS IS BLUE STAR

The Man in the White House

By PAUL BAREAU

THE TRAGIC and immensely sad circumstances of President Kennedy's death open up a new chapter in the economic and political history of the United States. In the early pronouncements of the new Administration, the stress has, understandably enough, been laid on continuity and on unchanging broad lines of policy. The Johnson Democrats will, in the short period that is allowed them before the next election, follow the trail that has been blazed by the Kennedy Democrats.

But these two men were so different in character, upbringing and attitudes that it is difficult to believe that the transition from President Kennedy's to President Johnson's Administration will leave no mark on the course of American policy, even over the short period of the unexpired term of this Presidency. The cultured sophistication which had invaded the White House with the advent of Kennedy, his highly civilised wife and his immensely intelligent team of advisers, must make way for the homespun simplicities of the extrovert, larger-than-life Texan, who has now moved in. It has been noted as a strange, ironic echo of history that after the assassination of Abraham Lincoln in 1865, he was succeeded by President Andrew Johnson. He was a colourless man who left no mark on the history of his country. The same will not be true of the Lyndon B. Johnson who now presides at the White House.

There is one respect in which L.B.J. (as he has been and will wish to remain known) must not be under-estimated. It is in his knowledge of Congress and particularly of Senators, and in his familiarity with the techniques through which things can get done on Capitol Hill. This had been the main weakness of the preceding administration. After the death of John Kennedy it is natural and right that praise should be showered on his memory. But it should not be forgotten that in the matter of getting things done, of pushing bills through Congress, of translating his ideas into legislation very little had been achieved in his three years of office. In the past few months all the dynamism and idealism of the New Frontier had in fact drifted into the doldrums. The foreign aid appropriations had been slashed. The reform of taxation and the proposals to cut income tax in order to sustain the economy had been decisively rebuffed. The Civil Rights legislation to which President Kennedy had devoted so much effort and for which he had risked so much in political terms, was similarly deadlocked. The only major piece of legislation achieved during the past year was the Trade Agreements Act on the basis of which the 1964 "Kennedy Round" of tariff negotiations was due to be launched in Geneva; and that achievement with all its ideals of still freer international trade is now blocked not by Congress but by General de Gaulle.

Breaking Log-Jam

If President Johnson can break through this log-jam on Capitol Hill he will have achieved a great deal. All that can be said at the moment is that his personality and experience are better calculated to achieve that objective than were those of his predecessor. The new President, moreover, will be helped in this by the inevitable emotional reaction to President Kennedy's assassination and by the wave of sympathy which this has unleashed for all the causes which he had at heart.

Is there, however, more than this mere technique of "the Fixer" in the prospect opened up by the new Presidency? The main reservation on this score is the time available before the President is plunged into the overwhelming distractions, first of the Party Convention at which he will no doubt be nomi-

nated as Democratic candidate, and then of the Election campaign itself with its climax in November, 1964. This timetable leaves very little scope for major initiatives, particularly in the foreign policy field. This, however, does not imply that a gloomy view should be taken of the initiatives and policies which the United States will generate in the coming year. Presidents have been known to grow with their job. When Mr. Truman was pitchforked into the Presidency after the death of Mr. Roosevelt, his background as a small-town haberdasher, inconspicuous senator and Vice-President who had been totally ignored by his giant team-mate, did little to prepare the world for the effective leader he was to become. On superficial evidence President Johnson starts with far more powerful assets than did President Truman.

Immediate reactions to the transition from Kennedy to Johnson have been full of interest and significance, particularly in the spheres of finance and security markets. These are important because they reflect world confidence in the United States economy. The United States balance of payments was in deficit and the dollar therefore appeared to be highly vulnerable to a crisis of confidence. Such a crisis might well have been unleashed by the brutal circumstances of the assassination and all the uncertainties caused by the advent of the new and largely untried man.

Precautionary Measures

In fact, nothing of the kind occurred. Ample precautions had been taken some time ago to meet the difficult conditions that might arise in the event of sudden pressure on the dollar and other currencies. The central banks of the eleven largest industrial countries of the free world had exchanged mutual credit facilities which could be drawn upon at a moment's notice. They were ready to hand on November 22 when the news came through of the President's death in Dallas. The Federal Reserve Bank in New York had at its immediate disposal all the foreign currencies it needed to meet any selling of dollars. There were sales, but intervention occurred without allowing the rates of exchange to move by one iota. In a matter of minutes confidence reappeared; the panic seller of dollars rapidly retired from the market.

There was equal calm in the gold bullion market. In times of trouble and uncertainty the instinctive reaction of many investors has been to turn to gold. It happened again on this occasion though on a minor scale. Here, too, the authorities were ready through the International Gold Pool, to intervene in the market and to hold in check any panic rush. Complete calm was very soon restored.

The only market in which the immediate news of the tragedy caused some disarray was Wall Street where the index of stock values fell by 20 points in the few minutes during which dealings were allowed after news of the assassination became known on November 22. The markets of the world then closed. Those in Europe reopened on Monday and on that day and the greater part of Tuesday they had to operate without any guidance from Wall Street. They stood their ground firmly and their example may well have provided part of the explanation for the confident uprush of prices in Wall Street when the markets there reopened on Tuesday, November 26. On that day the index not only regained the previous Friday's loss but did so with 10 points to spare. In this technical and market collaboration lies the promise that on the wider field of economic co-operation, the Atlantic Alliance will not be disturbed by the change of President.

The Quest for Technical Dynamism

By ASHOK DESAI

WHAT DETERMINES the rate of technical advance in a country? Is it a matter of expenditure on research? Or of investment expenditure? Or of training scientists? Is it firms' expenditure on research that needs to be increased or expenditure on basic research in universities? These questions have attracted considerable attention in Britain for two reasons. First, the low rate of growth of the British economy in the 'fifties coincided with a low rate of growth of the working population — less than $\frac{1}{2}$ per cent per annum, so that the problem of faster growth was looked upon as one of a more rapid rise in the productivity of labour. Second, Britain has been having chronic payments difficulties; and success in exporting is based these days on either the possession of materials that other countries are badly in need of, or having a technological lead in the production of something. Since Britain — like India — does not have much luck in respect of the former, the increase of her exports must depend on her technical dynamism, a fact which has compelled recognition from both the main political parties.

In these respects, the experience of the National Research Development Corporation is illuminating. This Corporation was set up by the Government in 1949 to encourage the commercial exploitation of inventions. A striking feature that emerges from its annual reports is the small proportion of inventions that became remunerative. Of the 10,500 inventions communicated to it in 13 years less than $2\frac{1}{2}$ per cent earned a revenue; and much of the Corporation's revenue came from royalties on a few particularly successful inventions. This is perhaps not unexpected, since it is well known that research often leads one everywhere but where one set out to go. Scientists at the National Cash Register Company in the United States, for example, started looking for a more rapid printing process and instead found children's crayons that did not mark walls and facial perfume that could be applied from tissue paper!

Pays to be Free

This waywardness of the results of research would suggest that it paid best when it was free from close direction by the firm's management. Many firms employ research scientists for trouble-shooting, i.e. to deal with hitches that arise in production processes: perhaps this is not the best use scientists could be put to. The question then arises, how far should the firm insist on research that is of some use to it? If one looks far ahead enough the most basic research is potentially useful. It is unlikely that the technical dynamism of aircraft, vehicles, electrical and chemical industries is unconnected with the large body of knowledge that has been built up in physics and chemistry; and in general, one would expect that a corpus of established generalisations would reduce the need for experimentation in the solution of particular problems: the greater the heritage of knowledge the less the need for trial-and-error processes. From the point of view of the country, however, one can make a case for the concentration of basic research in universities and public laboratories on the ground that it is communicated and spread more readily than if it were done by firms which might have an interest in withholding results of commercial value. From the firm's point of view the answer would seem to lie, not so much in insistence on particular kinds of research, but in establishing close communication between its scientists and production managers, so that the former are aware of the latter's problems and the latter assimilate the ideas of the former.

Another conclusion of the NRDC is that the chances of success of an invention are much greater if the team engaged

in developing it comes to have a personal stake or faith in it. This is because snags very commonly arise in development and it would not be carried through without considerable doggedness on the part of the developers. It is easy to see that it is not enough for the scientists to persist: they must also be backed to the hilt by their firms. Only firms that put resources into research on a large scale can do this. Further, in view of the small proportion of research work that becomes remunerative, research can be profitable only if a large number of ideas are being given a run simultaneously: firms must be large enough to be able to spread their risks between many projects. This explains why over 85 per cent of the research expenditure, both in Britain and in the USA, is incurred by the 350 largest firms. As a study of the National Institute of Economic and Social Research points out, the recent mergers in the British aircraft industry were due to the high costs of development, and similar forces probably operate behind the growing concentration in car, electrical and chemical industries. It also brings out the high correlation between the proportion of the net output of the industry that is spent on research and its rate of growth since 1935.

Helps to Grow

This correlation implies, not only that industries that do more research have been more remunerative, but also that they have expanded their markets faster. To some extent this is because they include industries producing military equipment; but the main reason is that they have produced new products, products with a high income-elasticity of demand such as radios, televisions and cars as well as cheap substitutes for traditional goods such as synthetic rubber, synthetic fibres and alloys. The obverse of this is, of course, the decline or slow growth in the demand for traditional goods like natural rubber, copper and jute — a penalty that primary producers pay for their technical backwardness.

The case of jute, India's chief exchange earner, is particularly interesting. In spite of the enormous expansion of the world economy since the last war, the total consumption of jute is no greater today than before the war. This, as an FAO-NIESR study shows, is due to the fact that jute sacking is being replaced by multi-layer paper and plastic, and that grains, cement and fertilisers, the goods which were traditionally packed in sacks, are being increasingly handled in bulk. The consequent decline in demand has been cushioned by two factors. First, the industrialising countries of Asia and Africa, especially India and China, have increased their consumption. Second, jute is used as backing for carpets, and with increasing incomes, the people of Western Europe and America have been buying more and newer carpets. It is estimated that the increase in the purchases of carpets for every one per cent rise in incomes in the UK and the USA was 2.4 per cent. There is still a prospect of a considerable increase in the consumption of carpets in Western Europe; this will not, however, benefit jute exports proportionately because people are coming to prefer tufted carpets which use less jute than wool ones.

These trends present two striking aspects. First, the demand has been under the influence of powerful technological changes, none of which was pioneered in India. Second, even after the changes have arrived, there is no tendency to adopt them in India, e.g. to take up the production and export of carpets. The chemistry of jute, again, still remains to be explored for its commercial possibilities. If, for example, paper could be made out of it, a rapidly expanding market would be opened up; if it could be processed to make a fabric for human use, it might be a cheap substitute for wool of which India is short. It is possible that the jute industry is missing the bus in these directions.

**HARVEYS
STEP UP THEIR
INDUSTRIAL
FABRIC
PRODUCTION!**

Now they can serve more industries than ever!

Harveys' Madura Mills — India's largest producers of industrial fabrics — have to date been supplying leading manufacturers throughout the country with a wide variety of light, medium and heavy industrial fabrics. The installation of additional new high speed looms and up-to-date precision machinery — among the world's most modern — now enables Harveys to accept many more orders of varied character.

Why you should come to Harveys:

Harveys never compromise on quality. Harvey industrial fabrics are equal to the world's best. The most modern machinery... highly experienced and skilled technical personnel... and relentless testing at every stage of manufacture — ensure that all Harvey fabrics are of unbeatable quality.

Harveys can manufacture to a variety of specifications. Whether it's Rayon Warp Sheet for tyres, or Canvas for the Shoe, Tent and allied industries — Harveys can produce it! Every yard of Harvey industrial fabrics conforms rigidly to specifications — a fact that has won Harveys the confidence of manufacturers in India and abroad.

"The Frustration Squad"

By A. K. MUKERJI

NEW DELHI, Wednesday.

TALKING of mice and men in the same breath is never a sensible pursuit and doing so when dealing with such live subjects as the Plan and the Plan appraisal is worse still. And this is precisely what Mr. Nehru contrived to do during his intervention in the Lok Sabha debate on the mid-term appraisal of the third Plan.

Declaring repeatedly that his intention was not to go into the alphabets of planning, he did precious little else for most of the hour he was on his legs. Nothing was left out by him: how and when the idea of planning was taken up and why and by whom; the merits of and the need for perspective planning; the essentials of the general approach of planning that was an integrated affair; and the basic strategy and tactics these were based on and needed to be judged by. It was like drawing a long, long line the end of which was not yet clear in any manner even to the person drawing it.

Of course, Mr. Nehru also dealt with the shortfalls revealed in the Plan appraisal, admitted they were there and swung back to comforting gains in statistical percentages Mr. T. T. Krishnamachari had on Tuesday already quoted to stress the self-same point—that on the whole everything was nice as it could be, provided the entire Plan period was not kept out of reckoning. Neither of the two big guns which intervened in the debate seemed to remember the famous quip that on the whole and in the ultimate analysis all mortal things are dead.

However, even ignoring this aspect of the matter, what is it that Mr. Nehru really held out as the sum of expectations he was confident of being fulfilled not too late, even if not in the near future? First, the private sector never had it so good as under the two Plans and the first two years or more of the third Plan and that they would have it better still under the Plans to come. Secondly, for the vast majority of the people, the poor and the hungry, the position for another 15 to 20 years would continue to remain not very much different from what it is today. And yet Mr. Nehru said—as the Finance Minister had said earlier—that there was progress all round: intake of calories had gone up, people were wearing more clothes, education was expanding and the eye was on a socialistic goal!

Alice in Wonderland

It almost seemed after this that Mr. Homi Daji (Communist) was not wrong when he said that, like Alice in Wonderland, our planners were running without moving from where they were: that planning had failed because the planners were not properly politically oriented (on Communist lines?).

The suspicion is perhaps unjustified. But on the face of it, it looks as if T.T.K. thought likewise! (in his own vein) when talking of the difficulties of turning back from planning he remembered one who rode a tiger. A well-read man and well-acquainted with lore and legend, he surely could not have done this unless he thought of the hapless lady of Riga the end-result of whose tiger-ride was a smile on the face of the tiger. His declaration that the Government had no intention to dismount the tiger (planning) was in the circumstances almost akin to a stifled cry of despair.

In contrast to all this, a comparative junior in the Congress Party seemed to know his ropes better. Rightly anticipating by a day Mr. Nehru's plea for a "balanced appraisal", he concentrated in the main on the sectors in

which the Plan appraisal had noted considerable progress—health, education, coal and power, especially, and also the fact that the steel works were now working to capacity. For economic and political integration, there were the river valley schemes in the first place and the Community Development Projects which, despite innumerable defects, had achieved one thing—given an all-India direction and pattern to development activities at the grass-roots level of the villages.

But this was only a fortissimo. The major tunes came from Mr. Krishnamachari and Mr. Nehru and they both engaged themselves in dilating predominantly on fundamentals and ultimates while the debate was on what to do to save the Plan, to work out appropriate priorities (demanded by Mr. S. N. Dwivedi of PSP among others) and to have production placed at the centre of the Plan. This pre-occupation of theirs was so laboured and so prolonged indeed that it ended up by being primarily an assault major on Mr. M. R. Masani! The Swatantra leader should be happy after this. But what about stemming the rot threatening the Plan?

Social Security Programme

Mr. Krishnamachari at one stage reassuringly affirmed he would rather have concentration of wealth and production than no production at all to avoid concentration of wealth. He even sounded very earnest when he went on from this to hold out the promise of launching in the near future a social security programme for the aged and the infirm. The promise of a vigorous campaign for family planning was another. But even with all this the Finance Minister was careful to add an eloquent footnote. The third Plan was, he said, like a child slow in growth. Expect slowness, in other words, but do not be surprised if there is a sudden spurt in the child's height.

Not that the critics of the Plan appraisal did not at times speak as if they were talking through their hats. Added to this was grotesque overstatement and exaggeration. A case in point was Mr. Masani's description of the Plan as "910 days of wishful thinking, wasteful expenditure ... outdated dogmas." Another was when Communist Homi Daji took to quoting scriptures, sorry, George Orwell, to prove how the Government and the Planning had perfected the art of double-talk.

But some of the Congress Party's spokesmen were no better in some ways. Leave alone the Serajuddined Oil Minister, Mr. K. D. Malaviya, who, along with Mr. Bhagwat Jha Azad, talks almost the same language as the Communists. But Mr. Bhagat (who initiated the debate) and Mr. Harekrushna Mahatab were equally fatuous, though differently. In the face of the Plan appraisal's finding that the increase in national income was barely one-half of the target, they had no difficulty in describing it as a slight shortfall. Even the finding that the shortfalls were a concomitant of failure in agriculture, the king-pin of the country's economy, was for them, as if, no pointer of any consequence!

Mr. S. N. Dwivedi had used the devastating phrase, "frustration squad," for the Planning Commission in the main. It was left to the Government spokesmen — not excluding Mr. Nehru and T.T.K.—to make it appear a cap made to fit the Government as a whole.

All this would be no more than frustrating were it not that the doctor seemed completely oblivious of doing something expeditiously to save the patient on the point literally of collapsing. Notwithstanding the political faith of his party (which one may or may not accept), Mr. Masani was certainly dead right in saying, "Only two things have

registered increases during the Plan period—prices and taxes". The medicinemen seemed most intent on not bothering even to note these symptoms of serious distemper. That this should have been the case at a time when, in Mr. Masani's enunciation again, the Prime Minister and the Finance Minister have begun showing "a sense of economic realism" seems inordinately amazing, to put it mildly.

But with all this and everything else, the debate on the Plan appraisal was no patch on the heights of absurdity reached during the Food debate earlier. With most of the speakers of both the Congress and the Opposition the object of their preoccupation was not food supplies and prices as such but the price of sugar and sugarcane, especially of the latter. Mr. Swaran Singh, Food Minister, even improved upon this record by devoting as much as the good part of the first 40 minutes of his hour-and-a-half-long speech to sugar and "gur", particularly to "gur". But this was only a part of the joke (cruel, let it be added). The rest of the joke comprised shoalful of shibboleths and, for good measure, a bagful of statistics on which no one would really care to stake his shirt.

Balloon Flattened

Not to go into details, there was Mr. A. M. Thomas, Minister of State for Food, quoting official statistics to "prove" how comfortable the food situation was at present and was bound to be in the coming years. The balloon was neatly flattened when Mrs. Renu Chakravarty (Communist) pointed out how Mr. Thomas had quoted figures for the period November-March, the harvest season, when prices were usually low, and left out the period March-November. But did this matter? Not apparently to the former Food Minister, Mr. A. P. Jain, to whom the acute food situation was a "universal experience" — in the Soviet Union and in China, even in Holland. France was the only exception, he claimed. However, even this was some mercy. For eventually Mr. Jain ended up with a dangerous postulate: "A little marginal pressure (scarcity, high prices 'et al') is necessary to whip up the producers and to alert the consumer." Maybe, there is a substratum of truth in this statement. But it is devoutly to be hoped that the margin of Mr. Jain's marginal hypothesis does not extend to the limits of the horizon in the calculations of the Government. Mr. Swaran Singh, new to the portfolio, could give but little ground for sustaining this hope. But nothing seems to explain why he need have gone all out to paint a roseate picture all round. The Achilles heel of his brief showed clearly when he turned from wheat to answer a volley of questions on the position and prospects of rice. After this, even if one did not quite feel like joining the Communist group in the walk-out staged by it one tended to throw the arms up in despair.

To be fair, it must be recorded that Mr. Thomas rendered a valuable service, even if unwittingly. While dealing with prices, he said price had been rising since March last. More revealingly he went on to add that the high prices had followed in the wake of pressures exerted by the new taxes and other budgetary proposals. For this candid confession Mr. Thomas deserves a bouquet.

The Opposition cannot be said to have emerged in conspiracy to be an eloquent commentary that it contrived to do no better even during the debate on the Unit Trust Bill. Dr. Ram Manohar Lohia (Socialist) was about the worst. He not only suspected but even insinuated that the Bill was designed solely to feather the beds of the capitalists ranged behind the Congress. Not to let things rest at that, he quoted from the transcript of the Finance Minister's initiating speech in the debate to "prove" there was something unholy somewhere. The Communist spokesman, Mr. Umanath, was of course a greater whole hogger. The proposed Trust, according to him, was an instru-

ment meant to help the capitalists (cursed?) "to corner shares and make profits for themselves." Fortunately, T.T.K. was not the person to be rattled by this style of attack. And he earned the due premium in return when the Lok Sabha passed the Bill almost with acclaim, after incorporating Mr. Morarka's amendment amplifying tax rebates provided in the Bill for incomes received by unit holders. This further concession would exempt a slab of Rs. 1,000 from super-tax in marginal cases.

Opinion on the merits of the Bill will no doubt continue to be divided. But there is certainly much to be said in favour of an arrangement for providing to the people in the lower and middle income groups an opportunity to acquire prosperity in the form of shares whose base "will not erode but appreciate in value as years pass", in Mr. Krishnamachari's words. If the quantum of Rs. 100 crores he expects to raise annually through sale of units to small investors in the main gets collected there will be reason to be grateful, whether or not one shares Mr. Masani's view that it is improper to have the Trust in the public sector.

The Minister in the Ministry of Finance, Mr. Bhagat, however, was no candidate for contesting in this flash of sense and sensibility. On the contrary, he made a very poor speech while concluding the debate in the Rajya Sabha on the Income Tax (Amendment) Bill (which offers certain tax rebates by way of incentive for promoting investment on plant and equipment needed for modernizing the coal industry). SAVE FOR SECURITY

IN THE HAPPY WORLD OF CHILDHOOD

Lost in her dreams, this little girl expresses all the charm of children everywhere. She is a young Garhwali, but her dreams and hopes and happy games belong not to her particular region but to the separate world of childhood.

The children of India wear many costumes and colours, but all of them bring love and laughter into our lives. In their hands lies the future of our nation — a tomorrow that we, at the State Bank of India, believe to be bright with promise. Tomorrow, as today, the **State Bank of India** will serve the nation through its network of branches throughout the land.

SBIA'S-SS-80A-48

luck came to his rescue. Up got Mr. Bhupesh Gupta (Communist) at the end of the third reading of the Bill — and that after the Deputy Chairman had already sought a voice vote from the House — to dilate at length on a trade dispute pertaining to a particular colliery, an example, he averred, of others the Bill sought to give succour to. The point Mr. Gupta made was somewhat mystifying (except perhaps to himself) unless it were that he thought he too 'had' to contribute to his party's plea for immediate take-over of all the collieries in the private sector.

Much of this had earlier been expatiated upon by Mr. N. N. Govindan Nair, the Vice-leader of Mr. Gupta's team in the House, who, however, did not rest content with this. He went on to attempt an expert dissertation on how to improve coal production without offering gratifications to the tribe of private sector colliery owners. Nationalization was, of course, the key mantram with him too. But he sought to impress the members and the wide world outside by opening up the vista of profitable economies and expanding production through the simple device of consuming the 'middlings' for by-products manufacture. All that the Government and the industry needed to do for this purpose was to get a couple of washeries at the right places (as simple as that!) and at the right time by which he presumably meant right then and there. But the real piece of originality Mr. Nair displayed was when, on the authority of the experts he quoted, he "proved" how unnecessary it was to modernize the plants and equipment of our collieries. The rupee finance the Government was seeking to enable the private sector coal industry to raise for utilizing the World Bank's loans in foreign exchange was just not needed at all! Nothing could be simpler.

This extraordinary essay was an open flank Mr. Bhagat could and, should, have assaulted with advantage. But he did nothing of the kind. Worse still, in one breath he talked of Mr. Nair's theory on 'middlings' in terms that suggested concurrence with it and in another went on to point out (perhaps sarcastically) the absurdity of the theory so long as finance was, in the first place, scarce for developing the by-products manufacture and the bulk of the less than economic collieries were, in the second place, in no position to go in for them or even provide enough 'middlings' for them to get going. Nor were washeries the washing machines, as it were, that one could get off the counters at retail shops and set up at any colliery of any size or denomination — another point Mr. Bhagat was possibly too tired or unconcerned to drive home fully.

Taming the Tiger

According to Lobby talk, Mr. T. T. Krishnamachari "threatened", presumably in mock exasperation, that he would be compelled to sign Mr. Indrajit Gupta's Minute of Dissent should certain Members of the Select Committee persist in watering down the provisions of the Companies (Amendment) Bill unduly. The Finance Minister surely was exaggerating because despite the modifications recommended by the Select Committee, the measure retains much of the harshness and arbitrariness of its original formulation.

Perhaps the most important modification made by the Select Committee is that it has rejected the proposal that the Government may, by a mere notification, transfer the court's powers under the Companies Act to the Tribunal. Instead, the Select Committee has prescribed that in addition to the powers specified in the Bill, the authority to be conferred on the Tribunal should be limited only to two more sections of the Companies Act — S - 155 which enables a court to rectify a company's Register of Members and S - 240 which facilitates examination of any person by a court on the application of an Inspector.

The Select Committee has not succeeded in securing dele-

tion of the Clause relating to powers proposed to be taken by the Government for converting its loans to companies into shares by its own unilateral decision. A certain amount of hedging, however, has been done. Thus this power is to be exercised only when "in the opinion of the Central Government public interest so demands". Secondly, with regard to retrospective effect for these powers, it has now been provided that the Government could exercise them in the case of loans made before the commencement of the present Act only when the company in question has defaulted on the payment of principal or interest or has otherwise failed to observe the terms of the loan or debenture agreements.

With regard to the disciplinary and punitive jurisdiction of the proposed Tribunal over managerial personnel in the corporate sector, the Select Committee has recommended that action could be taken only in cases of persistent negligence or default. Similarly, certain checks have also been placed on the exercise of authority sought in the Bill over the voting rights of Trusts in respect of their holdings of shares of companies. Thus an existing trustee might in certain circumstances exercise the voting rights on behalf of a public trustee nominated under the proposed Law. He may also advise the public trustee against abstention from voting, but the latter is free to accept or reject the advice.

In fairness to the Select Committee, it must be added that a minority opinion was strongly in favour of even tightening up further the provisions of the Bill. While Mr. Masani and Mr. R. V. Bade, have certainly argued powerfully in the Minute of Dissent against the inherent arbitrariness of the provisions relating to the removal of managerial personnel or the restriction of voting rights of Trusts, Mr. A. N. Vidyalkar (Congress), and Mr. Indrajit Gupta (Communist), however, have in a joint Minute of Dissent, resisted the changes recommended by the Select Committee in the provisions regarding the conversion of Government loans into equity capital and removal of managerial personnel. Mr. Indrajit Gupta has additionally and in a separate Minute of Dissent, expressed scepticism about the effectiveness of the Bill in checking or punishing fraudulent practices or mismanagement in the corporate sector.

Other Highlights

Among the other highlights of the week the pride of place naturally goes to Mr. Nehru's statement in both the Houses on the overflight permission granted to the planes by which the Chinese Premier, Mr. Chou En-lai, and Foreign Minister, Mr. Chen Yi, are expected to go to Africa. The Opposition criticism of the permission "magnanimously" given was weighty but on grounds primarily, if not exclusively, emotional.

Next in importance was the Education Minister, Mr. M. C. Chagla's attempt to have the Informal Parliamentary Consultative Committee for his Ministry sort out the problem of the change-over from English to Hindi or the regional languages as media in the universities. No new points were made, apparently. But it should augur well that interest now seems to be shifting to the need for ensuring good quality for this country's higher education.

Lastly, there was the virtual barracking of the private member's motion made by Mr. H. V. Kamath (PSP) demanding annual disclosure by the Union Ministers of their movable and immovable assets. The Chief Whip of the Congress Party should have seen to it that this did not happen. Apart from other considerations, it was not politic to block Mr. Kamath's motion at a time when Congressmen of all sorts are attempting to set themselves up as knights in shining armour ready to give battle to all corrupting influences around them.

WINDOW ON THE WORLD

Assassination and After

From R. V. MURTHY

WASHINGTON:

"IT'S NOT hard to believe. It's just too hard to take." This is how a Paris Blues singer is reported to have reacted to the shocking news of the assassination of President John Fitzgerald Kennedy. That, I think, is how the common man all over the world reacted too to the abrupt passing away from the world scene of a young man of immense power and promise who, for a brief time, had occupied the Presidency of the United States of America in a manner which would have done credit to the greatest holders of that office.

Barely a month before, this writer, along with three other Indians had the privilege to attend a Press conference at which President Kennedy announced the Wheat Deal with Russia. After listening to his studied seven-minute statement on the subject followed by a twenty-three-minute sparkling question and answer performance—questions on all subjects under the sun were hurled at him—we all felt—and may I say I said then — "Here is one who will rise to the stature of Lincoln." Alas, before achieving so much more that he alone perhaps could have achieved for his country (whose destiny he described in the speech he intended to deliver at Dallas as "The watchman on the Walls of World Freedom") and for the world, fate snatched him away even as it did Lincoln on April 14, 1865. There is doubt among some thinking Americans here whether Lincoln would have achieved anything greater had he lived longer, but there is no doubt—at any rate not that degree of doubt—that Kennedy would have achieved a lot more had destiny spared him from the assassin's hand at Dallas. No Western head of State, certainly no American President had elicited such tribute from a Russian Premier as Kennedy did at the hands of Mr. Khrushchev. "The death of President Kennedy is a heavy blow to all people who cherish the cause of peace." Indeed, the cause of world peace has suffered an irreparable loss in this untimely and premature death of a great American.

Loss to India

Kennedy's death is a great loss to India. To quote Prime Minister Nehru, India is deeply grieved and shocked both for her own and for international reasons. As he added, the consequences will be far-reaching and they will seep down gradually. Meanwhile, the policies and programmes of the late President may be expected to continue. That is bound to be so at least for some time; in fact, President Johnson spelt this out in so many words. However, after he has had time to gather the threads of Administration into his own hands, the new President is bound to effect some changes, although they may not be such as to alter radically the Kennedy policies. Similarly, although there may not have been—or there may even not be—a general housecleaning, such as follows a shift of power from one party to another, there are

bound to be some changes in the ranks of Secretaries and Advisers to the President. For instance, there is already speculation whether Defence Secretary McNamara would enjoy the same freedom as he did under Kennedy. Questions are also being asked about what plans the Comptroller of Currency, James Saxon—a vigorous advocate of national bank expansion—and Attorney-General Robert Kennedy—an active anti-trust enforcer—might be having for a future in which the White House might well choose to want a somewhat different complexion. Secretary of State, Dean Rusk, is known to enjoy the new President's confidence but not so all the other people in the State Department—especially the academicians.

From forecasts in the American Press and from what this writer could gather from Mr. Lyndon Johnson's recent address to a Democratic Convention at Burlington-Vermont, it seems that the new President, while not deviating fundamentally from his predecessor, will soon bring to bear his own admittedly maturer and certainly more pragmatic personality on every sphere of policy-making. In so far as foreign policy is concerned, President Johnson will follow the same policy with regard to the leadership of the Free World and the confrontation with the Communist World, perhaps more firmly even than Kennedy. Likewise, although he has all but allowed the Civic Rights Bill to await a fresh mandate from the American people, the new President will push these programmes through more vigorously when he feels the time is opportune. Being no less ardent a believer than Kennedy in lower taxes, he may also be expected to put his full weight behind the tax reform programme. By reason of his close contacts with business leaders over the years, there is believed to be a better meeting of the minds as between the new President and businessmen, notwithstanding — this is somewhat strange—some rumoured differences with a few Texan businessmen or, to be more precise, the alleged mental reservations of certain Texan businessmen about Mr. Lyndon Johnson. Be that as it may, from the point of view of India, it is heartening to note that the new President is for pumping more money into foreign aid and that he favours moves to lower barriers against world trade. Even more so is the generally held view in the States that relations between the new President and the Congressional leaders will be closer and more cordial than was the case rather unfortunately these few months past, under Kennedy. It is also well known that the Massachusetts Democrat and House Speaker John McCormack is a fast friend of President Johnson for several years and that the two agree on most issues. However, all these are at best attempts at an intelligent forecast. The exact nature of things to be will become explicit only when the new incumbent makes his first State of the Union address to the Congress and that will be early in the New Year.

France and India

From Our Special Correspondent

PARIS:

ALTHOUGH THE assistance that France gives to developing nations is greater, in relation either to her population or national income, than that given by any other country (and even in absolute terms is second only to American), it has been directed almost wholly to African states that used to form part of her empire. This concentration of interest on a small group of beneficiaries (small, because although a score of states are involved, their total population does not exceed

that of West Bengal) was for a long time a political dogma, based on the conception of "Eurafrica" which found expression in two grand political designs. The first was the Gaullist "French Community" (1958-style) which was to hold together the French-speaking states of Africa and Madagascar, and France herself, in a sort of confederation headed by the president of the French Republic. The second was the special association between the Common Market and the former French colonies, which was to give the Africans preferential access

FULLER-KINYON REMOTE-CONTROL UNLOADER

for conveying bulk cement

In addition to the low cost of installation, operation and maintenance, it is the *only* conveying equipment which will:

- Unload cement from railway wagons and pump it directly to storage silos or sheds.
- Convey underground to avoid interference, normally experienced with railroads, highways, etc.
- Permit the use of simple weatherproof sheds for cement storage.
- Enable you to use equipment purchased for one job on any and all future locations.
- Unload barges, to take advantage of water transportation.

to the Continental market in tropical produce and to channel capital to French-speaking Africa from the six nations of the Common Market. As senior, founding member of both these associations, France would be the pivot of a vast Euro-African economic unity that would be more coherent than the Colombo Plan or the Alliance for Progress led respectively by Britain and the USA.

Given this overall design, the concentration of French assistance on Africa made sense for the future quite apart from continuing to develop the inheritance of the past in the shape of a common language and culture, and various acquired commercial positions. It excluded scattering aid to the four winds, in the manner of the Americans which is held here to have yielded disappointing results. Specifically, it ruled out any important French participation in aid to India, it entailed writing off intangible French assets in the former Indo-Chinese empire (thought to have been taken over by the USA) and it involved ignoring the possibilities of trade with China.

This plan has by no means been abandoned. French-speaking Africa still enjoys and will continue to enjoy preference in the allocation of French development assistance. But a number of facts have forced a revision of the Africa-first doctrine, a revision which has led immediately to greater French interest in India, China and other parts of Asia. In the first place, of course, the "French Community" evaporated before it was founded and the political links between France and her former African empire are by now quite tenuous. Associate status for these African states was indeed granted by the Common Market on French insistence, but against opposition that emptied it of part of its content. It is notable, for example, that the imports of the Six from their associates have increased very much less in the past five years than from other developing countries not so "favoured".

Paris Side-tracked

Furthermore, neither the African recipients of European aid nor the other members of the Common Market were willing to allow Paris to play the directing, controlling role she had allotted herself. The former sought aid wherever they could find it, and the latter took an interest in development in many other regions besides Africa; where they did business together, they preferred not to pass via Paris, and the business they did often led to a weakening of French positions in French-speaking Africa. Finally, development in Africa was disappointingly slow, the Negro states showing themselves unable to use all the capital that was available in West Europe—they took all the budget subsidies they could get from Paris, but this did no good to French industry which wanted the Africans to industrialise and not just boost their administrative outlays. The situation as French industrialists saw it was that French development aid was going to relatively unproductive (or only slowly productive) good works in Africa, French exports became increasingly concentrated on the neighbouring Common Market, while the other Common Market countries were monopolising the region's capital-goods business with promising markets like India.

No less influential in the new assessment of aid policies was General de Gaulle's more ambitious estimate of France's international role. The virtual end of the cold war and the coincidence of economic difficulties in Russia and the USA left room, he felt, for a wider-ranging display of independence for which France was prepared, economically by her own industrial renaissance, and politically by the freedom of movement gained with the conclusion of the long colonial wars. From China to Mexico, via India and Iran, it was time for Paris to make a 'rentree', or a first appearance. For once, French industrialists did not denounce these ambitions as excessive, since they considered it was more rational, economically, to choose profitable partners in capital-goods transactions all around the globe than to lavish aid on a small group of clients unable to import French equipment, whose external

markets had begun to contract.

It was in these auspicious circumstances that several Indian business missions arrived here last month, one led by Mr. G. D. Birla. Mr. Birla often passes by Paris and is attentively received but on this occasion interest in India was noticeably greater than in recent years. It had already been arranged that two French missions should visit India in the new year, but it has now been agreed that these contacts should be multiplied. Moreover, Indian possibilities will be assessed on the spot when the International Chamber of Commerce meeting in Delhi in February attracts French business men to that country on what will be for most a first visit. From the period of more intense acquaintance that has just begun there should emerge a series of fresh financial and technical links, for which the climate is propitious on both sides. On the Indian sides, awareness of French capabilities is much greater than in the 15 years after independence; it is now seen that several French specialities coincide with Indian needs, such as in nuclear and electronic apparatus, electric railway equipment, special steels, hydro-electric equipment and certain chemicals. On the French side, there is anxiety to keep these and other capital-goods industries fully employed at a time when the struggle against inflation has forced a curtailment of domestic investment and an increase in imports.

This revival of French interest in India needs, of course, to be set in perspective for one must guard against expecting it to assume spectacular proportions. France has been providing about 2.8 per cent only of total Western aid to India, and it will already be a notable event if this is increased by a point or two. More optimistic expectations were aroused in Iran when France this year displayed a similar revival of interest in that country's development, but the General was the first to moderate them, pointing out that France proposed to diversify her aid effort but nowhere outside French-speaking Africa had she the ambition to reduce dependence on America as the prime source of assistance. Exactly because she was seeking to diversify her connections with the developing world, mainly in order to safeguard her capital-goods exports and extend her political audience, she could not make

an impressive contribution to any one nation's industrialisation.

This is confirmed when one places the recent concern for India in the context of the new French policy in Asia. It was announced last week that Paris will install a permanent mission in Peking. This move is readily interpreted, no doubt too readily, as another Gaullist infidelity to the US-led alliance. In fact, it is not seen here as a form of de facto recognition of the Communist regime nor as a stage toward that, but simply as a commercial necessity in view of the Sino-French understanding to increase their mutual trade. But, given the circumstances and the inevitable misunderstandings that the rapprochement between de Gaulle and Mao must occasion, it is clearly not a mark of sympathy toward India. The French bid in China belongs, like the more sympathetic hearing now given to India, in the general drive to explore Asian markets long neglected because of the Africa-first dogma. So do the overtures in Cambodia and in Viet Nam, both north and south, in favour of a new policy of unity and neutrality which the French realise they would have to back with an increased quantum of development aid.

Nor is the quest for new clients for capital equipment limited to south and east Asia, for it coincides with France's reappearance in the Arab world where diplomatic ties have just been re-established and trade and aid pacts negotiated.

Arab Attitude to EEC

By JOSEPH B. ABBOD

BEIRUT:

THERE HAS lately been an obvious change, if not reversal, of the Arab attitude towards the European Common Market. Positive moves and bids for co-operation with the Market have replaced the old feeling of suspicion and negative attitude which prevailed in the Arab World only a few months ago. Calls for mutual co-operation with EEC instead of condemnation of the giant European economic organisation as a new form of colonialism are heard more and more in many Arab countries.

The Arab League Secretariat has urged member-States to establish closer commercial relations with the EEC. In a note circulated to member-States, the League Secretariat proposed that a number of officials concerned with Arab questions on the technical committee of the Common Market in Brussels should be invited to visit the Arab countries and study their economic conditions. The note invited the Arab States to alter their current negative attitude toward the EEC to a positive one "which would strengthen their commercial relations with the Market and prevent Israeli penetration into European markets".

The note pointed out that certain Common Market countries such as France and Italy were bound by economic agreements with Arab countries and were anxious to study Arab markets to make a choice between them and the Israeli market. The Arab League expressed high hopes that the proposed policy would be successful. It said that some Arab diplomats in Brussels had encouraging contacts with the concerned quarters on the subject.

The United Arab Republic, which once led the campaign against the Market, has quietly appointed observers at EEC and Cairo newspapers carried in inconspicuous corners a statement by a UAR economic source about the market which the UAR can have in EEC member-States for its rice and cotton.

North Africa's Morocco and Tunisia had initiated contacts with the EEC member-States for close association with the Market as their economies are so inter-dependent with that of France. The Libyan Premier expressed his country's interest in the EEC. He said his Government was following with interest all developments within the EEC. He added that his country would not take any definite stand with respect to

At the same time, a determined effort to explore the Spanish-speaking world has been begun with a loan of \$150 million each to Spain and Mexico. Both these countries asked Paris for much more (Spain for \$450 million) but the sums they received are still far in excess of anything so far committed in Asia. Finally, there is even an awakening interest for English-speaking Africa, long regarded as a British preserve. And of course the recent liberalisation of export-credit facilities is extended to all markets liable to be interested in French capital goods.

The very diversity of this new orientation of French aid policy shows its primarily economic motivation (specifically, the need to push capital goods exports wherever there is an opening), and also demonstrates the improbability of French aid becoming significant for any one recipient, given the limited resources at Paris's disposal. At the same time, its importance should not be under-estimated, for the abatement of the Africa-first prejudice guarantees a more sympathetic reception in Paris for any proposal from India involving loans for projects that offer a market for French capital goods. One can safely forecast that France will never provide assistance to India on the scale of West Germany, let alone of the British or Americans, but it is something to know that help is available in a new quarter, sometimes accompanied by technical capability of the first rank.

the EEC until this organisation had more clearly defined its own attitude to African countries. Libya, he said, would determine its attitude in co-operation with other Arab and African countries.

In the Arab East, Lebanon, before the UAR, took the initiative of seeking closer Arab ties with the EEC. Lebanon has appointed Dr. Nagib Sadaka, Lebanese Ambassador in Brussels, as its official observer at the Market Council. Secret negotiations have been going on between Lebanon on one side and France, Italy and Belgium on the other, aimed at defining the relations between Lebanon and the EEC. The negotiations are basically centred on the obstacles that stand in the way of Lebanese associate membership in EEC. Lebanon had long before applied for associate membership in the Market, but the EEC Council had rejected an earlier request by Lebanon for association. Lebanon is seeking either to conclude a single agreement with EEC as one unit or reach bilateral agreements with the member countries. One of these two alternatives would tend to create a more favourable balance of trade for Lebanon and help cut down the foreign trade deficit. The Lebanese Government is to continue its efforts for association with the EEC in spite of recent reports that the Market Council had rejected Lebanon's request for association. The Lebanese Foreign Minister, Philippe Takla, has expressed optimism regarding the possibility of concluding a co-operation agreement between Lebanon and the European Common Market.

And now Syria has made hints that she will also be seeking closer co-operation with the EEC. The view in Syria now is that Arabs would do better to try to establish association with the EEC before Israel does instead of just threatening the EEC if it admitted Israel. This view was endorsed by the Syrian Ambassador to Belgium, who was in Damascus last month for consultation with his Government on Syria's future relations with the EEC. The Ambassador said that the Arab States, in co-operation with the EEC, would not only block Israel's admission, but would also reap considerable economic gains. "All the Arab States must seek participation in the EEC to keep Israel out and to reap economic gains so that they may strengthen their international economic position," he added.

"PROFESSIONAL MEN LIKE US

have no leave and retirement benefits which the salaried people generally have."

A professional man — like a lawyer or a doctor—who is on his own, will not enjoy leave with pay; nor will he have a provident fund or a pension upon which to depend after retirement. He will have to create, by regular and adequate savings during his active professional life, his own "funds" — "House building fund", "Retirement fund", "Family Vacation fund" etc. It is a good idea to have separate Savings Bank Accounts for each purpose with THE BANK OF INDIA LTD.

What Is an Elephant Like?

By Our Special Correspondent

NEW DELHI:

THE AGRICULTURAL Production Board to which Mr. Swaran Singh has hitched his wagon seems to have become already earth-bound. The two meetings which the Board has held so far have reportedly proved singularly pointless. Discussions on those occasions are alleged to have borne a strong family resemblance to the celebrated effort of the Five Blind Men of Hindustan who tried to find out what an elephant was like.

Discussing what had gone wrong with agricultural planning and how to set the process right, Mr. Shriman Narayan reportedly was all for a whole-time senior officer to be attached to the Agricultural Production Board to ensure the implementation of its decisions. The Planning Minister, Mr. Bhagat, however, had other ideas. He urged that the Advisers in the Planning Commission should be made to shuttle back and forth between New Delhi and the State Capitals in order to see that State Governments took the Planning Commission seriously. But this did not satisfy Mr. S. K. Dey, who was not prepared to draw the line for Central supervision at the point of the State Capitals. He was for reaching down still further, in fact down to the ground level. Not unnaturally, the presiding dignitary, the Minister for Food and Agriculture, got more entangled mentally than enlightened by this plethora of planning wisdom and so he counselled, rather helplessly, that there should be a watch over the implementation of the Board's decisions and with a sigh of relief, if not satisfaction, got a Secretaries Committee appointed — to do God knows what.

Gad-flies Galore

And so the baby was passed on to the Secretaries who too met, talked and dispersed. It is difficult to see what else they could have done. The Planning Commission favours its Advisers being placed in charge of regions for implementation of agricultural development programmes, but the Central Ministries concerned do not like to part with any of their powers in this manner. To the extent that there was any agreement at all, it was that senior officers from the Centre should be let loose in State Capitals like so many gad-flies. Only, the State Governments seem to have quite different ideas. They are already resenting the ubiquity of too many Central officials visiting them too often on any little pretext or even none at all. At this rate, and if the Agricultural Production Board cannot soon function with better effect it cannot but meet the same fate as that of the Food and Community Development Ministries Co-ordination Committee, which has now been wound up.

Perhaps one should not be too hard on the Board — yet. On the importance of fixing prices for foodgrains, Mr. Swaran Singh seems to have been successful in getting agreement in Central Government that the Board should be able to fix prices for procurement without having to seek approval anywhere. At the present time, the maintenance of a reasonable level of prices for rice is of topical concern. The Minister for Food and Agriculture is reported to have secured the approval of his colleague in the Finance Ministry to the Government purchasing as much rice from the current year's harvest as might be needed for ensuring that the farmer obtains a remunerative level of prices. It is recognised that the Centre's measures in this respect will have to be properly co-ordinated with the activities of State Governments in

Orissa and West Bengal which are vying with each other in the procurement of rice.

★★

The Finance Minister is proposing to visit foreign countries early next year. Apart from attending the next meeting of the Aid-India Club at Paris, his tour might give him an opportunity of discussing with the members of the Consortium this country's requirements of foreign exchange for the fourth Plan. An estimate worked out in the Finance Ministry puts this figure around Rs. 2,500 crores, or about the same as has been estimated in the current Plan. It is recognised here that the US Government's continuing and unabated interest in India's development needs is very important for healthy aid prospects. Mr. Krishnamachari may, therefore, go to the United States for discussions with the new President, Mr. Lyndon Johnson, and acquaint him with the Indian case. There is a feeling in political and business circles here that such a meeting should take place as early as possible. It is also being suggested that the Prime Minister may consider whether it may not be useful to undertake a brief visit to the United States after the current session of Parliament.

★★

Fourth Plan needs apart, the Finance Minister has the immediate problem of having to find an extra Rs. 450 crores as untied aid for the last two years of the current Plan. The rise in the prices of imports and the delays in the execution of projects have led to higher costs which it would not be possible to accommodate within the original estimates. Moreover, out of a sum of Rs. 2,600 crores, so far promised for the third Plan by the Aid-India Club, only about Rs. 2,100 crores have been firmly indicated till now. This leaves a balance of Rs. 500 crores, the precise details of the availability of which have still to be settled. Meanwhile some of the members of the Club are reportedly seeking to adjust such balances against previous loans which are maturing next year. This will certainly create difficulties for this country and this problem too may have to be taken up by the Finance Minister in personal negotiations with members of the Aid-India Club.

★★

The Finance Minister, Mr. T. T. Krishnamachari, it is believed, recently explained at some length the Government of India's policy in regard to payment of royalty etc. to the foreign entrepreneurs collaborating with Indian companies. As it is known, there is no fixed rate of royalty; each case being considered on its merit.

Government feel that royalty as a source of income should not be treated differently from other sources of income for the purpose of taxation. The rate of tax on royalties payable under agreements entered into after 31st March, 1961 and approved by the Government of India has been reduced from 63 per cent to 50 per cent. Apart from royalty as such, a distinction is made in regard to payments attributable to technical assistance or research contribution. This research contribution is worked on the basis that the Indian company's payments should bear the same proportion towards the total expenses incurred by the foreign company for carrying on research work as the Indian company's output bears to the total output of the foreign company. Payments for technical services rendered outside the country are exempted from income tax to the extent the services are rendered outside India. Even as regards pay-

ment for technical services rendered in India, the actual expenses incurred by the foreign collaborator in rendering such services in India is deductible in computing the total taxable amount. It would be pertinent to point out that there has not been a single instance where negotiations between Indian and foreign collaborators have broken down because the royalty rate negotiated is rejected by Government as being too high. But in several cases India has negotiated successfully to bring down the rates of such royalty payments and has altered certain other conditions of the collaboration agreement, like the foreign company permitting the Indian manufacturer the right to export his manufactured article to neighbouring countries.

The figures of remittances on account of royalty payments to foreign concerns are not separately available but they are merged with the figures of payments for the use of trade-marks, copyrights and rentals payable for foreign machinery in the balance of payments data. The following amounts were remitted abroad to foreign concerns on accounts of royalty payments, patents etc. by the public and private sectors during the period 1960 to the first quarter of 1963 :—

Year	Rs. lakhs. Amount.
1960	226
1961	252

The Central Government, it is explained, is aware that certain British companies in India are finding it difficult to comply with the requirement of British Law which enjoins that every stock holder must receive a copy of annual accounts which in turn is opposed to the prohibition imposed on them by Defence of India Rules in this respect.

In reply to the representations made to it, Government has clarified that the directors of such companies in the United Kingdom may circulate copies of their annual accounts to their shareholders residing outside India or to any authority in the United Kingdom in order to comply with the requirements of the UK Companies Act.

Progress of Agricultural Credit

From Our Correspondent

BOMBAY :

THE MID-TERM appraisal of the third Plan had shown a more glaring short-fall in agriculture than in other sectors. Apart from the wide seasonal variations and the difficulty of organising the large mass of farmers of limited means, the lack of proper balance between various types of credit provided to agriculture proved a hindrance to step up production. There has been a steady increase in the amount of short-term loans but there has been no commensurate increase in long-term credit. While Maharashtra and Gujarat had made good progress in stepping up long-term credit to agriculture, the movement had not gained momentum in other States. The total of outstanding loans in land mortgage banks amounted to Rs. 67.8 crores at the end of June 1963 leaving a wide gap to reach the Plan target of Rs. 150 crores. It is against this background that a three-day conference of all-India central land mortgage banks was held recently at Ahmedabad.

Over 100 representatives of land mortgage banks, registrars and finance secretaries of State Governments and repre-

and the number of cases involved during the period 1st January, 1960 to 30th June, 1963 in the new companies and existing companies :

Year	New Companies		Existing Companies		Total	
	No. of cases	Amount (Rs. crores)	No. of cases	Amount (Rs. crores)	No. of cases	Amount (Rs. crores)
1960	110	11.20	94	8.33	204	19.53
1961	116	19.19	132	16.63	248	35.82

A large number of industries in the private sector have received foreign technical and financial collaboration from firms in the UK, the USA, West Germany, Italy, Switzerland, Japan, France, Canada, Austria, Holland, Sweden, Czechoslovakia and Poland which have resulted in the setting up of joint ventures. In the past four years the number of approved schemes of foreign technical collaboration and financial participation were as follows.

Year	No.
1960	390
1961	402
1962	299
1963 (up to 30th Sept.)	227

Collaboration cases approved by the Government in the past four years cover a wide range of large and medium size industries included in which were: Alloy and special steels; Steel castings; Steel forgings; Non-ferrous metals; Heavy structurals including cranes; Industrial machinery for textiles, jute, mining, washeries, cement making, paper making, sugar machinery; Machine tools; Shovels and earth-moving equipment; Automobiles and ancillaries; Ball and roller bearings; Electric motors and transformers; Cables and wires; Other electrical industries; Heavy chemicals; Miscellaneous chemicals; Fertilisers; Drugs and pharmaceuticals; Dyestuffs; Rayon and staple fibre; Paper, paper board and pulp etc.; Refractories; Plastics; Rubber manufactures (including synthetic rubber); Industrial gases; Cotton textiles; Industrial and scientific instruments; and Watches.

representatives of the Reserve Bank, the State Bank and the Central Government attended the Conference. The Governor of the Reserve Bank pledged adequate financial assistance to all productive programmes while inaugurating the Conference. He exhorted the land mortgage banks to display greater initiative in mobilising rural resources in addition to seeking increasing funds from institutional investors to meet the growing needs. Mr. Bhattacharyya expressed concern that the co-operative institutions appeared to take only limited interest in placing the surplus funds in debentures of land mortgage banks. Considering that these debentures are fully guaranteed by the State Governments, that they carry attractive rates of interest and that all financing institutions would be willing to buy or lend against the security of land mortgage debentures, a much more active policy of investment in these debentures would be justified. The Governor stressed the need for the closest possible co-ordination between the institutions providing short-term and long-term finance to agriculture. The State Government should recognise its financial responsibility in the matter and augment assistance to agriculture so as to

THE E.I.D. PARRY GROUP
1963

INDIAN SUGAR FOR CANADA

"The State Trading Corporation has concluded a contract for the supply of one lakh tons of sugar to Canada, during 1963. Half of the estimated sale proceeds of Rupees Four Crores will be utilised for importing fertilisers, newsprint and wood pulp. The other half will be a nett foreign exchange saving."

—News Item.

The five sugar factories of the E. I. D.—Parry Group, located at Nellikuppam, Pugalur, Pettaiyaythalai, Samalkot and Tiruvalla, produce 90,000 tons of sugar every year—the largest production from a single group in South India, representing one-fifth of the annual consumption in South India. In addition, 3000 tons of confectionery are also produced.

Both sugar and confectionery are exported, earning foreign exchange for the country.

The E.I.D.—Parry Group is also concerned with the production and distribution of substantial quantities of fertilisers and in 1963 the Group expects to supply about 200,000 tons.

This significant contribution is expected to be further increased when expansion programmes are realised.

Other manufactures of the Group include sanitary-ware, light railway equipment, acids, chemicals, carbonic acid gas and industrial and potable alcohol.

Started as a small trading concern in 1788, the Group today comprises nine companies of substance, offering employment to more than 10,000 people, and keeps on expanding its activities in pace with the nation's march to economic independence.

PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

keep pace with the expanding needs of agricultural development. The relatively slow growth of land mortgage banks in different States was due to legislative restrictions on proprietary rights in land, uncertain State policies in respect of land reforms, inadequacy of trained personnel and the precarious nature of the agrarian economy itself. The loans advanced are also utilised for liquidation of old debts and not necessarily for improving the productive facilities. The removal of the various impediments requires energetic action on the part of the State Governments.

Addressing the first Press conference after becoming the Chief Minister, Mr. V. P. Naik indicated that the Maharashtra Government was reconsidering its prohibition policy. The decision would be such that "by and large many people would like it, if not all." The Chief Minister had ruled out, however, a complete scrapping of prohibition. The Government would take its decision on the basis of a unanimous report submitted last year by a committee appointed by the Maharashtra Government to look into the question. Mr. Naik also said that the broad framework of policies outlined by the late Mr. M. S. Kannamwar for revitalising the administration would serve as a guide to the new Ministry. In regard to the State's third Plan, there was no difficulty about its implementation. The rural areas in Maharashtra which had not recorded satisfactory progress, according to the Chief Minister, deserved a concentration to increase the per capita income of the people. Mr. Naik expressed the opinion that the growth of agriculture was primarily handicapped by finance and it was necessary to ensure to the farmers full-scale monetary help both through

co-operatives and official channels. He mentioned the efforts made for securing higher prices for producers of paddy, jowar and cotton. The Chief Minister was confident of ushering in Socialism in Maharashtra much quicker than in the other regions of the country, especially looking to the swift progress recorded by the State in the field of co-operation in agriculture. At the beginning of the Press conference, Mr. Naik announced the Government's decision to release forthwith 61 political detenus arrested under the Defence of India Rules as a goodwill gesture of the new Ministry.

A working scale model of a Pratt & Whitney JT-3D-3B turbofan engine which will power Air-India's new Boeing 707-320B was presented to Mr. J. R. D. Tata, Chairman, Air-India, by Mr. George L. Estes, Vice-President, United Aircraft International, U.S.A. The presentation ceremony took place on December 2 at Air-India's Engineering Base at Santa Cruz airport, Bombay.

Speaking on the occasion, Mr. J. R. D. Tata said that this model was a welcome gift and will prove an excellent aid in training Air-India's engineering staff. Mr. Tata said that Air-India's Jet Engine Overhaul Plant had achieved "exceedingly good results" in jet engine overhaul and "I believe Air-India has the highest effective time between overhaul for its Rolls-Royce Conway engines among other operators in the world." He hoped that the new Pratt & Whitney engine would prove as good as its predecessor. Mr. George Estes complimented Air-India on its excellent financial results during 1962-63 and said "I wish to welcome Air-India to the family

of 48 airlines around the world now using the Pratt & Whitney jet power." He pointed out that the JT-3D-3B engine burns approximately 18 per cent less fuel than earlier jet engines and thus offers significant fuel economies. This, as Mr Tata pointed out, could facilitate greater range and payload.

Recent developments in East Africa, resulting in the resignations of nearly 1000 Civil Servants of Indian origin from the Common Services Organisation and their return to India has naturally caused anxiety in many circles. Shri Brihad Bharatiya Samaj, in a memorandum to the Ministry of External Affairs, has urged that adequate assistance should be rendered to such personnel who have returned and a special committee appointed to look into the problems of Indians abroad who number nearly 5 million. Among the many steps to rehabilitate these personnel, the Samaj has suggested that instructions should be issued to Government departments,

such as the Railways and Posts & Telegraphs, to give preference to service personnel who have returned from Kenya and other places in the filling up of the existing vacancies as also other new appointments in Government services as and when they arise. The Government may show such preference in the appointment of staff to Posts & Telegraphs Department and Railways. Besides providing employment in Government services, the Government could also explore the possibilities of assisting these displaced persons in setting up small-scale industries in the various States by giving them facilities of the nature of providing essentiality certificate, raw materials, machinery etc. The cases of persons having industrial establishments abroad and having returned now should be examined carefully and it should be made possible for them to bring such machinery and other equipment that they had over there. This would obviously involve concessions from the regulations governing the import of machinery.

Subramaniam's Reassuring Presence

From Our Correspondent

CALCUTTA:

MR. C. SUBRAMANIAM'S brief visit to this city over the week-end, principally for addressing the annual meetings of the Associated Chambers of Commerce and the Engineering Association of India, had a remarkably constructive effect on business sentiment in this part of the world. With honesty of purpose and clarity of thinking, the Minister for Steel, Mines and Heavy Engineering addressed himself to some of the main issues agitating the minds of such of us as are anxious about the slackening of the tempo of development and sincere about correcting the situation and speeding up the industrialisation of the country.

At the Assocham meeting, Mr. Subramaniam did not mince words in underlining the obstructive role played by the over-regulation of economic activity through too many controls of varying degrees of utility administered through slow-moving, bureaucratic procedures. He came out strongly as a champion of reform when he said: "I have no doubt whatever that after two decades of more or less continuous exercise of controls of various kinds the time has come when we should review thoroughly the operation of existing controls to make sure that they serve adequately the purposes of planned and equitable distribution without hindering at the same time the operation of those very forces which make for growth and the elimination of shortages and monopolistic tendencies. The very fact, I think, that considerable vested interests have developed around some of the present controls should put us on our guard in assuming that these controls serve primarily the interests of equitable and planned distribution."

On another controversial issue, viz., the place of so-called "big business" in industrial expansion, again, Mr. Subramaniam spoke with refreshing political courage. Dealing with "the important question of economies of scale — a question which assumes even greater importance in the context of our efforts to achieve a steady increase in our export earnings, particularly the export of manufactured products," Mr. Subramaniam said: "We cannot even for the sake of encouraging new entrants or for the sake of balanced regional development, encourage the proliferation of uneconomic units without rejecting the general progress of the industry in the country as a whole." It is important to note here that Mr. Subramaniam did not merely stop with expressing his opinions. He also indicated that he, as a Minister and the Government as a whole were, in fact, devoting serious thought to these problems and that an attempt would be made to solve them in a manner which would help the more rapid expansion of industries.

That this expansion should be vigorously planned and prosecuted Mr. Subramaniam was equally clear. He rightly

pointed out that there was no question of targets being pulled down; rather the policy should be to push up the economic effort needed to achieve targets. He came out as an advocate of planning for substantial margins of industrial capacities, a view which kindled a kindred spirit in a speech Mr. B. M. Birla delivered at a luncheon session of the Engineering Association. Mr. Birla went even further than Mr. Subramaniam in advocating a spacious economic and industrial programme without which, as he pointed out, there is no hope of even the basic needs of the people being met within a reasonable period. Pointing out how much headway our planning effort has yet to make, Mr. B. M. Birla said that the expansion of the machine tool industry, for instance, has been proceeding at a tempo which is grossly inadequate for the kind of ambitious programme of development of heavy industries to which the Government is enthusiastically subscribing. Mr. Birla pointed out that there was no point in talking about establishing the fabrication of industrial plants in this country or setting up machine-building industries unless high priority was given to the manufacture of machine tools in this country in increasing numbers and over a widening range and the Government would make it a policy to provide the foreign exchange needed for adequate imports of capital goods for manufacturing machine tools.

Encouragement to Corporate Sector

Mr. A. R. Foster, President, Associated Chambers of Commerce, in his address to the annual meeting pleaded for a taxation policy "which gives bold encouragement to corporate activity and stimulates the reinvestment of profits and the flow of savings into these dynamic forms of activity." While admitting the substantial concessions given to new companies, he pointed out that the level of taxation on established enterprises was heavy by international standards and did little to encourage development by companies or further savings by the investors. Mr. Foster emphasised the point that the Super Profits Tax, even in its modified form, remained a damaging impost. "The universal criticism with which the Super Profits Tax was received and the damaging effect which it has had since on the capital market and the flow of investment into new companies was mainly due," in his opinion, "to the realisation on the part of the investing public of the blow which this measure would deliver to capital formation and the belief that the Government were indifferent to these results."

Mr. Foster then said that the business community which he represented would place "a withdrawal of the Super Profits Tax Act, or a radical modification of its provisions high in the list of policy decisions necessary to revitalize the economy." Secondly, he urged the modification of the present arrange-

ments regarding the taxation of inter-corporate investment. The present system involves multiple taxation and it does discourage the investment by one company in another. "There is," Mr. Foster said, "I fear, a prejudice against this type of activity in India on what I consider the doctrinaire grounds that it tends to further the concentration of economic power. Bearing in mind the developments which have taken place throughout the world on the basis of the flexibility and progressiveness of this aspect of joint stock system, I am sure that this country would be well advised to encourage it; and since most foreign investments in India in future must come from foreign companies rather than individuals, the elimination of the multiple taxation of company profits is highly desirable."

Expressing satisfaction over the fact that foreign investment, particularly from Britain, has been able to continue to play a considerable part in the advance of industry in this country, Mr. Foster expressed the hope that this trend would continue. He added, "There are, however, serious tax problems involved, not the least the impact of taxation on expatriates employed in these concerns. Better rewards offered in other areas for highly-skilled managerial and technical employees make it increasingly difficult to recruit and retain men of calibre needed to maintain international standards. And since it is recognised that it is reasonable for foreign investors to wish to have a minimum of their own nationals associated with their investment, some recognition of this situation is urgently required."

Comparable Efficiency Standards

In an interesting part of his address, Mr. Foster dealt with the important question of productivity, a matter to which the Associated Chambers, under his personal guidance, has been devoting a great deal of attention. After referring to the fruitful visit to this country earlier this year of Mr. Russell Currie, President of the European Work Study Federation and Head of the Central Work Study Department of a large industrial concern in Britain, Mr. Foster claimed that it has been shown in some units in India that standards of productivity can be as high here as anywhere in the world. The Associated Chambers has issued a number of booklets describing in outline the techniques involved in productivity, work study and bonus incentives. These booklets have proved popular and have run into many thousands of copies. Mr. Foster also pointed out that bonuses paid monthly for increased output are beginning to gain popularity among workers and are acceptable to them, provided they are satisfied that they are soundly based on properly-designed productivity schemes. He expressed the hope that the Bonus Commission would give its support to greater use being made of such bonuses, as they could have an immediate impact on increased efficiency. Referring to the Industrial Truce, Mr. Foster said that it had made a notable contribution to the easing of tensions in industry; an assessment which must surely gladden Mr. Gulzarilal Nanda's heart.

In a series of Resolutions adopted at the annual meeting, the Associated Chambers of Commerce dealt with tax reform, development of agriculture and power and the regulation of prices. The Assocham expressed the view that, since tax collections were running in excess of budget estimates, there was scope for relief in such forms as the abolition of the Super Profits Tax and concessions in the matter of tax on inter-corporate dividends on bonus shares. It advocated the abrogation of the provision for disallowance for tax purposes of corporate expenditure on the remuneration of Indian nationals in excess of Rs. 5,000 a month per employee. Another Resolution advocated that thermal generating stations should be encouraged as a supplement to hydro-electric programmes. On prices the relevant Resolution squarely declared that the only solution was increased production which should be encouraged through an adequate return on capital to finance expansion and attract fresh investment. To the extent the Government did not find it possible to abolish controls on

HOW TO ORDER ABOUT 2476 PERSONS WITHOUT BEING AN EMPEROR

The moment you open a current account with Union Bank, you acquire the right to order about 2476 fully trained banking personnel in its many branches. "Pay my children's school fees regularly," you say. (Yes, Sir). "Pay my car taxes every quarter." (Yes, Sir). "Remit my insurance premiums yearly." (Yes, Sir). "Collect the dividends on my shares." (Yes, Sir)

Prompt, unquestioned and never-failing obedience to your wishes. Open a current account with Union Bank and feel like an Emperor.

a challenge well met

On the 3rd January, this year, the 'E' blast furnace at the Jamshedpur steel works was blown out for relining and enlarging. It was a big job involving 2,100 tonnes of refractories, 1,700 metres of piping, 7,600 metres of electric cables and 1,100 tonnes of steelwork and castings.

When the original schedule was halved from 180 days to 90, many thought it to be impossible. But a team of Tata Steel engineers, technicians and workers took up the challenge and completed the operation in 84 days, 6 days ahead of the drastically revised schedule.

The 'E' blast furnace, with an original capacity of 315 tons a day, was bought second-hand from

the U.S.A. 45 years ago. Its rated capacity has now been stepped up to 660 tonnes of pig iron a day without sinter burden, or to 725 tonnes with sinter and sized iron ore.

The record-breaking achievement is another demonstration of efficient team-work, technical know-how and sustained efforts to attain greater productivity with the minimum outlay that characterize a city like Jamshedpur, where industry is not merely a source of livelihood but a way of life.

industrial products, their prices, it was pleaded, should at least be realistically fixed taking full account of increased manufacturing costs.

★★

A welcome bit of news last week was the announcement made by the State Minister of Commerce and Industries, Mr Tarun Kanti Ghosh, that the State's third Plan provision for electricity development had been increased to Rs. 83 crores from the original allotment of Rs. 48 crores. Mr. Ghosh, who made the announcement at the twentyfirst annual general meeting of the Engineering Association of India, also referred to the West Bengal Government's decision to set up a high power Coordination Board with representatives of Government and industry with a view to giving a fillip to the State's industrial development. He pointed out that the main purpose of the State projects in the basic industries was to provide a strong base for the rapid growth of the engineering industry.

Already the engineering industry in West Bengal is of considerable proportions. This is not surprising because the State is the home of a number of industries of national importance. But the future development of the industry in West Bengal as elsewhere has become somewhat uncertain because of the shortage of raw materials. Referring to the prospects of the industry, Mr T. R. Gupta, President of the Engineering Association of India, said that some of the disquieting features of the raw material position were the fact that the third Plan steel target of 6.8 million tons of finished steel would not be achieved before the third year of the fourth Plan, and shortage of such materials as pig iron, alloy steel, aluminium etc. would continue. Two important suggestions made by Mr Gupta towards a speedy development of the engineer-

ing industry refer to foreign exchange allocation and incentives. He rightly pointed out that the engineering industry required maximum foreign exchange at the initial stages at that this peculiar feature should be borne in mind by the authorities in allocating foreign exchange for the industry. The second special feature of the industry is that its development depends to a large extent on the ability of the machine tool industry to meet its varied requirements. Therefore it is essential that special efforts should be made to foster the rapid growth of the machine tool industry as an essential part of the programme of the development of the engineering industry.

★★

Lyons Range has made a smart recovery towards the close of last week following bullish interpretation of some of the statements of the Finance Minister and the Minister of Steel, Mines and Heavy Engineering. Perhaps the only new point in Mr. Krishnamachari's statement in the Lok Sabha last week is that it refers to the Government's anxiety to ensure that approved private sector projects which are ready for implementation are not held up for want of rupee finance. For the rest the contents of his statement are already common knowledge: the granting of a loan of Rs. 10 crores each to the IFC and ICICI; the formation of the Unit Trust, intention to establish a development bank; the liberalisation of the RBI credit policy and permission to recognised stock exchanges to resume forward trading under certain conditions. Similarly Mr Subramaniam's statement that the private sector steel companies should repay their loans due to the Government before 1969 is taken to imply an increase in the retention price of steel and an assurance that the Government does not purpose to compel the companies to repay the loans before the stated period.

Southern States Short of Plan Money

From Our Correspondent

MADRAS:

sources in the most beneficial manner.

★★

THE ANDHRA and Mysore Governments would appear to be experiencing serious difficulties in implementing different Plan schemes on account of the paucity of funds. In spite of the fact that the Planning Commission has been impressing on the States that additional revenues should be raised and Plan projects implemented vigorously it is now felt that fresh taxation cannot be levied without inviting unpopularity. Indeed, the Chief Ministers of these two States have gone on record saying that taxation is already at a high level and it would be inadvisable to increase the burden on the lower income groups. The Andhra Pradesh Government has, therefore, suggested to the Centre that the Nagarjunasagar project should be taken over by the latter and immediate payment of interest charges should not be insisted upon. It was also suggested that there should be a liquidation of investments held by the State Government in the joint-stock companies while the Andhra Paper Mills should be transferred to the private sector. More than the difficulty in imposing additional taxation, the cost of the various schemes also has gone up appreciably due to higher cost of materials, higher wages, and other factors. It can, therefore, be expected that there would be further levies in the next two years and efforts would be made to implement the various schemes with increased assistance from the Centre. Only the Madras Government is not feeling any serious difficulty. Actually, it has been pointed out that the yield from the various taxation measures has been grossly under-estimated and if the implementation of projects does not come about at the desired rate, it will be due to the paucity of financial resources. The tax effort of Madras has no doubt been overdone though it is accepted that the State Government has been utilising available re-

It is clear that the Andhra Pradesh Government is seriously worried about the further mobilisation of resources for implementing various schemes in the remaining years of the third Plan. It has been estimated that there will be a gap in resources to the extent of Rs. 13 crores and that it would be necessary to hand over to the private sector the Andhra Paper Mills apart from reducing holdings in companies where the State Government has a majority interest. The minority share-holdings, of course, are proposed to be sold out. This policy is not considered retrograde as it would not serve any useful purpose to retain minority share holdings in respect of companies in which there is a large outside interest. There is a proposal to distribute shares, particularly those of sugar companies, among agriculturists. It has been indicated that the investments of the Government in shares or debentures of joint-stock companies, other than Government companies, was Rs. 4.13 crores at the end of 1961-62. The investments in Government companies were of the order of Rs. 5.31 crores and out of 50 companies, in both the public and private sectors, six companies with a total Government investment of Rs. 25.63 lakhs were under liquidation. The realisation of some part of the minority holdings and the transfer of the Andhra Paper Mills to the private sector should release for the State Exchequer over Rs. 6 crores when a gap of only Rs. 7 crores will remain.

The decision of the State Cabinet to hand over the Andhra Paper Mills to the private industrialists was criticised by the Opposition as there was a feeling that the transfer from the public sector would not be desirable in the general interest, but the Congress party in the State Legislature has given its approval. Since the running of the paper mills has

proved difficult latterly, it has been considered advisable to undertake expansion schemes, for which arrangements have reached an advanced stage, under private auspices.

The serious difficulties in the way of raising additional taxation will be clear from the fact that the additional land assessment tax, which is expected to fetch Rs. 3.7 crores in Andhra Pradesh, was criticised vehemently by the Opposition. There was indeed a walk-out in the Assembly on this question even though the Chief Minister explained that the rates of tax had been rationalised and there have been actually no increase over a period of years. The cultivator can certainly bear an additional tax on account of higher agricultural incomes. But since a large number of cultivators are involved and the increase in income has been neutralised to a great extent by higher prices for the commodities, the question of tax on land has become somewhat political in character. The State Government have, therefore, been emphasising the need for developing the industrial potential at a fast rate and providing employment for large numbers in the next few years. For this purpose, incentives on the lines of those granted by the Madras Government are proposed to be provided to private industrialists.

★★

After considerable thought, the Madras Government have indicated to the Kerala Government its preparedness to supply from Neyveli 20 kW of power for use during nights. With the commissioning of the fourth thermal unit in Neyveli and the very comfortable water levels in many of the hydro reservoirs, it is felt that the needs of Kerala can be met at least partially especially as the fifth set in Neyveli is expected to be completed before March next. The power supply will not be in any large quantity, but the sale of such a block has not been possible or attempted before. Except for the possibility of there being a difficult situation in the summer months next year, the Madras State Electricity grid would be in a position to sell power to the neighbouring States for a short period as many hydro-electric projects are expected to be completed shortly and in operation during the next south-east monsoon. There may also be a distinct improvement in Mysore and Kerala in the latter half of 1964 or early 1965 as the Sharavathi Project will start yielding results and construction work on the Sabarigiri Project in Kerala is also progressing rapidly. With the indication that the Andhra Pradesh Government would be accepting the offer of Dr. Dharma Teja for constructing a thermal plant, having a capacity of 200 mW, at Ramagundam and to be completed in a period of 30 months from the date of commencement of work, the recent developments relating to power generation may be considered more encouraging. The thermal stations at Kothagudem and Ramagundam will, however, be helpful to Andhra Pradesh only in 1966-67.

★★

Considerable concern has been expressed latterly about the slow off-take of fertilizers of different kinds. While the output of super-phosphate and compound fertilizers has increased significantly in Madras and Kerala, on account of the commissioning of new factories and the completion of the second stage of the expansion programme of the Fertilizers and Chemicals (Travancore) Limited, imports also have been coming in at a fast rate. Somehow the larger availability of nitrogenous and phosphatic fertilizers has not been reflected in a corresponding increase in the off-take. In fact, it has been complained in Kerala, Madras and Mysore that the demand for even nitrogenous fertilizers has not increased at the anticipated rate and that cultivators are not inclined to use freely calcium nitrate, ammonium chloride or even ammonium phosphate. They have been only accustomed to the use of ammonium sulphate. The Sindri Fertilizer Factory is not probably experiencing any serious difficulty in marketing its output on account of the preference shown by the ryot for this type of fertilizer. But what is more disturbing is the fact that ferti-

lizers produced and imported at heavy cost have not been freely absorbed and some excuse or other has been found by the State Government and Co-operative Societies for the absence of any pronounced increase in off-take.

It might be that the earlier accumulation of stocks in Madras was due to the receipt of supplies in the off-season. But even with the ready availability of stocks, the demand has not increased significantly. It was, therefore, suggested that the unenterprising character of co-operative societies was mainly responsible for the apathy shown by the cultivators and that permission to private agencies for marketing nitrogenous fertilizers and mixtures will enable the easier disposal of available stocks. It has been actually indicated by the Chief Minister of Madras State that there would be a change in official policy and that private agencies would be again allowed to enter the field for marketing nitrogenous fertilizers. As the output of nitrogenous fertilizers is expected to increase significantly in the next year and many superphosphate units have not been able to work at full capacity, it is desirable that there is a radical change in the methods of marketing and the cultivator is also allowed to enjoy the benefit of better credit facilities. It was only recently indicated by the Directors of an industrial unit in Madras that a newly erected superphosphate unit was not able to operate at more than 50 per cent of its capacity on account of poor demand for superphosphate and mixtures due to the failure of South-East monsoon. The factory had to be shut down for sometime. It is expected now that there would be an increase in the consumption of fertilizers of different types and that new steps might be taken by the State Governments to stimulate off-take.

★★

In Madras, fresh efforts are being made to hasten the phase of industrial development. While many new projects have taken shape and many more are under contemplation, there is a feeling that the textile industry, in both the organised and decentralised sectors, should be helped to expand its production facilities considerably. While many existing mills are expected to take advantage of the latest decision of the Central Government permitting expansion of capacity up to 7.5 per cent in respect of spindleage and up to 100 looms in the case of spinning units, many new medium-sized spinning units are proposed to be established in different districts. At the twentieth annual meeting of the Handloom Board, the State's Chief Minister pointed out that there were proposals for establishing 13 spinning mills on a co-operative basis as part of long-term policy to prevent recurrence of shortage of yarn supplies of particular counts. The intention is to establish a spinning unit in every district so that the weavers will have no difficulty in regard to their supplies of coarse and medium yarns. There are already three co-operative mills working and providing yarn to the handloom industry. Difficulty has been experienced in raising the required resources as the weavers were not in a position to subscribe liberally to the capital of the co-operative mills. It has, therefore, been suggested that the central banking institutions and other agencies should help the State Government to carry out this programme. The handloom industry is no doubt occupying an important place in the economy of the country particularly in Madras State. But in spite of the provision of numerous facilities, the weavers are not able to secure the required working capital. A Seminar is, therefore, examining how the pilot scheme in Salem for intensive implementation of the scheme of the Reserve Bank for providing working capital is operating. As a result of the investigations there may be some modifications in the method of institutional financing. It is comforting to know that in spite of the depression in the export trade, handloom products would be able to account for foreign exchange earnings of Rs. 14 crores for the current year.

The moving fingerprints

AMONG THOSE who have been "Kamarajed", the one who has gained most, surely, is Mr. Kamaraj. I am not referring here merely to his Congress Presidentship which he could have had for the asking, but to the tremendous increase in the people's respect and affection for him. I have, of course, in mind the people of Madras State, since, as a people's leader, Mr. Kamaraj has yet to make his personal impact on other parts of the country. Mr. Ramanathan Chettiar, M.P., who represents the Karur Constituency in Lok Sabha, was telling me the other day of the extraordinary mass enthusiasm which he witnessed when he accompanied Mr. Kamaraj on a recent tour of the Tiruchirappalli District. According to Mr. Chettiar, this experience is a significant proof that it is not necessary to be a Minister to be regarded as important by the people—a lesson which many of our politicians have yet to learn, despite the Kamaraj Plan.

I see that Food Ministers, past and present, have been having rather a tough time in Parliament. Mr. Bhupesh Gupta, adept always at flogging a dead horse, could not resist the temptation of dragging in Mr. S. K. Patil and accusing him of having left behind a "bagful of bluff and some American buffer stocks". But my own favourite quotation on the subject of Food Ministers is gathered from the Press, not from Parliament. "The Hindustan Times" Parliamentary Correspondent (Mr. C. P. Ramachandran, I presume) has compared Mr. Swaran Singh and his under-study, Mr. A. M. Thomas, to Micawber and another Dickensian character, the Fat Boy.

Mr. Swaran Singh, of course, is and has always been every inch a successful practitioner of Micawberism—something or the other has always turned up, somehow, from somewhere, to save him from awkward situations. He left the Steel Ministry just in time to escape being blamed for the arrears of steel development which were accumulating over the second Plan and into the third Plan. In the Railway Ministry he stayed just long enough to witness a decline in industrial production help to relieve the pressure on rail transport. No wonder he has come to the Food and Agriculture Ministry in the firm belief that his traditional luck would not let him down even if the monsoons do.

As for Mr. A. M. Thomas, he certainly is no lean and hungry Cassius which, I suppose, must in its own way be reassuring when excitable people tend to talk of near-famine conditions in Eastern India or elsewhere. But there Mr. Thomas's resemblance to the Fat Boy seems to stop. The Fat Boy, if one knows his "Pickwick Papers," was sleeping when he was not eating and eating when he was not sleeping. I must confess that I have never seen Mr. Thomas either making up for lost sleep or for missed meals while in Parliament. Mr. Thomas, in fairness to him, is an extremely alert young man who has certainly earned the promotion that came to him recently.

On the need for an Agriculture Commission views seem to be divided. The proposal was pressed in Lok Sabha, but was not found acceptable to Mr. Swaran Singh. I find that many M.P.s are nevertheless in favour of a Commission and they include some youthful and intelligent Congressmen such as Mr. K. C. Pant. That veteran of Indian planning, Mr. V. T. Krishnamachari, however, seems to believe that what is really hampering agricultural expansion is the play of political considerations in the pursuit of (or rather the failure to pursue) legislative or administrative measures even in

areas where it has been generally recognised and accepted that such action is necessary. Giving an example, he points out that many State Governments are still reluctant to legislate for the compulsory digging of water channels for linking the distributary systems of public irrigation works with fields and farms. He argues that this country has spent some Rs. 1,100 crores on irrigation projects since the beginning of the first Plan, but a good part of this vast investment is not bearing fruit because the irrigation potential is not being fully exploited at the farm level. In Mr. Krishnamachari's view, at least six million acres more of agricultural land could be brought under irrigation at the present time provided all State Governments pass the necessary legislation making it a statutory obligation for village communities to construct the link channels for carrying water from canals to fields.

The reporting of Parliamentary debates in the daily Press often gives the impression that the only voices heard on those occasions are those of the Left. It was, therefore, a refreshing change to read in "The Indian Express" of December 7, an account of a different kind on the proceedings in Rajya Sabha when a non-official Resolution calling for the nationalization of banks figured in the discussion. It appears that others, besides Communists, have something to say when economic issues are discussed in Parliament. One speaker after another—Prof. A. R. Wadia, Mr. G. S. Pathak, Mr. A. D. Mani, Mr. M. Anwar, Mr. S. Jaipuria and Mr. C. D. Pande—rose to rebut the argument that the nationalisation of banks would do good to the country. It is something to be grateful for that tub-thumpers and soap-box-orators are not having their own way.

There is world appreciation of Mr. Khrushchev's pragmatic approach to domestic economic problems. But how many of us know that a Soviet economic expert who attempted to teach Mr. Khrushchev and other Soviet leaders the facts of economic life way back in 1949-50 had to pay for it with his life by being executed on the orders of Stalin after being falsely implicated in the so-called "Leningrad Affair". It appears that the sin of the purged Economist, who was Nikolai Voznesensky, the Soviet war-time Planning Chief, was that he had authored an unfinished manuscript entitled "The Political Economy of Communism" in which he had committed such heresies as that "scientific socialism does not deny the importance of the Law of Value, market prices or the concept of Profit and Losses". Worse still, Voznesensky had actually dared to propose to Stalin some relaxation of the over-centralized Russian planning apparatus and other measures to restore the economy. When, as a result, Voznesensky was whisked away by the Secret Police and charged with seeking to restore capitalism in Russia, Mr. Khrushchev and several other Party leaders, it appears, went to Stalin to plead for the foolhardy planner on the ground that they themselves were inclined to agree with much of what Voznesensky was saying. But before the interview could get started properly, Stalin reportedly interrupted Mr. Khrushchev and others with the words: "Before you continue, you should know that Voznesensky was shot this morning".

It is true that, in this country, we do not yet shoot our Voznesenskies, but then neither do we allow them to get anywhere near Yojana Bhavan.

V. B.

Trade Winds

E.C.M. TARIFF CUTS

THE COUNCIL of Ministers of the European Common Market has decided to suspend or reduce import duties from January 1, 1964 on a number of Indian export items. The commodities on which duties have been suspended are red pepper, ginger, sandalwood oil, lemongrass oil, tobacco seed oil, citronelle oil, hockey and cricket equipment. The duty on cashew kernels has been halved from 5 per cent to 2½ per cent. Customs duty on castor oil has been cut from 8 per cent to 7 per cent.

It may be noted that these concessions were discussed much earlier when Britain was conducting negotiations to enter the Common Market. It is a pity that EEC has succumbed to the pressure from Madagascar and has not abolished the duty in full on cashew kernels. Madagascar's plea was that the European Economic Community should not give free access to Indian cashewnuts because a Madagascar factory was engaged in processing the product. India had sought complete suspension of duty on cashewnuts. Naturally, this has caused a great disappointment.

India exports Rs 1.05 crores worth of cashewnuts every year. Against this, exports of cardamom, ginger, lemongrass oil, tobacco seed oil, curry paste and powder, sandalwood oil, shellac and castor oil respectively fetch Rs. 10 lakhs, Rs. 6 lakhs, Rs. 6 lakhs, Rs. 18,000, Rs. 1.6 lakhs, Rs. 35 lakhs and Rs. 23 lakhs. Even in the case of castor oil, another major exchange earner, the EEC has not accepted India's demand for complete suspension. The Indian Ambassador in Brussels had pleaded with the EEC Council that all those concessions which the EEC had accepted during its negotiations with Britain, should be granted to this country because negotiations had broken down with Britain and not with India. The problem of exports of primary commodities produced by India remained unchanged even though Britain had not found it possible to enter the Common Market.

At a time when the EEC balance of payments position shows a substantial surplus in the current quarter, it is all the more disappointing that she should be unwilling to offer better terms to India or even to discuss proposals for widening the area of the present pattern of concessions. The EEC has managed to introduce an element of discrimination among developing countries by favouring Madagascar. In mid-October, the EEC Council of Ministers had announced its acceptance in principle of the proposal for a unilateral suspension of common external tariff on 18 Indian products. It was clear that the size and value of actual concessions would be ultimately subject to political pressures. There is no certainty that the national tariffs would be suspended simultaneously or that the changes would be continued indefinitely. The tariff withdrawals now announced are only for a period of two years. If EEC is in earnest about promoting world trade liberalisation, it will have to follow a much more liberal path than indicated so far.

AGRICULTURAL PROTECTIONISM

Mr. Orville L. Freeman, US Secretary of Agriculture, in a statement issued recently claimed that the United States is among the most liberal in the world in its agricultural import policies. The farmers of the United States carry out their production operations with far less protection from competitive imports than do farmers of practically all other countries. The reason for US concern over non-tariff import controls (such as import quotas, embargoes, variable levies, monopolies, preferential treatment, import licensing, bilateral agreements, etc.) is that they tend to be arbitrary national trade barriers. Their use does not necessarily mean that a nation does not

import agricultural products, but it does mean that such importing is at the discretion of the Government. Unlike fixed tariffs, the non-tariff controls in the past have been subjected to very little reduction as a result of international arbitration and negotiation.

Using non-tariff import controls as the criteria, a study prepared by a group of international economists of the US Department of Agriculture found selected countries to be protecting the following percentages of their domestic agricultural production from outside competition:

United States	26	Denmark	87
United Kingdom	37	Austria	91
Canada	41	West Germany	93
Australia	41	France	94
Italy	63	Switzerland	94
Belgium	78	Norway	97
Japan	76	New Zealand	100
Netherlands	79	Portugal	100
Greece	82		

AVOIDANCE OF DOUBLE TAXATION

The OECD has published the Draft Double Taxation Convention established by the Fiscal Committee of the Organization for the avoidance of double taxation with respect to taxes on income and capital between the member-countries of the OECD. On July, 30, the OECD Council recommended to the Governments of the member-countries to conform to this Draft Convention when revising existing bilateral Conventions between them or concluding new ones. The Draft Convention consists of 30 articles arranged in a number of chapters. For each of the articles in the Convention, there is a detailed commentary which is designed to illustrate or interpret the provisions. These commentaries are, thus, of substantial importance in the elaboration of international fiscal law. The report states that since the Fiscal Committee's first report in July, 1958, eight bilateral conventions have been revised and 15 new ones signed between the member-countries. In almost all the cases the articles established by the Fiscal Committee between 1958 and 1961 were either incorporated word for word in these conventions or adopted in their fundamental purport. Eighty-five bilateral conventions for the avoidance of double taxation with respect to taxes on incomes and capital, have been concluded between the twenty countries, now members of the OECD. In addition, 28 bilateral negotiations are proceeding, 15 of which are for the conclusion of new conventions. By means, therefore, of the articles established by the Fiscal Committee and the recommendations with the OECD Council, a further advance has been made in the extension and harmonization of the bilateral conventions between the member-countries.

The report points out that conclusion of the multilateral double taxation convention among the 20 countries of the OECD would have definite advantages, but that before this can be envisaged, various questions remain to be examined and resolved. In the meantime, however, it should be possible for certain groups of member-countries bound to one another by particular regional agreements to study the possibility of concluding among themselves multilateral conventions on the basis of the draft convention established by the OECD Fiscal Committee.

CANADIAN AID

Canada gave three loans last week totalling \$17 million for locomotives, a hydro-electric station and for an aluminium smelter being built by a private company in Kerala. The loans for locomotives and hydro-electric station are to the tune of \$8 million each and for aluminium smelter of \$1 million.

WHO CALLS?

CUZ-1940

Agreements on the loans are backed by Export Credits Insurance Corporation. The \$1 million loan is part of a joint financing transaction to supply foreign exchange for the \$12 million expansion scheme of the Kerala smelter and a foil mill being built in the Bombay area for Indian Aluminium Company. Another \$2,700,000 will come from Aluminium Company of Canada in Montreal. Its parent company, Aluminium Company Ltd., has 60 per cent control of the Indian Company. The Canadian company will act as general contractor to co-ordinate purchases from various Canadian supplies.

The \$8 million loan for locomotives will cover the purchase of 37 diesels and spares from Montreal Locomotive Works. The other \$8 million loan is to cover the purchase of Canadian power plant and sub-station equipment and Canadian engineering services by Rajasthan for use at one of three dams on a \$40 million power and irrigation project. All three loans are at 6 per cent interest.

The locomotives loan calls for repayment to start after three years and continue for 12½ years. The Rajasthan loan is repayable over 20 years, starting four years after it is made. The smelter loan repayment will start in the fourth year and continue for 15 years.

WORLD BANK—RED VERSION

The International Bank of Economic Co-operation established by agreement between the Governments of Bulgaria, Hungary, the German Democratic Republic, Mongolia, Poland, Rumania, the Soviet Union and Czechoslovakia, will start operating on January 1, 1964. In the first place it will conduct clearing operations in trade between IBEC member countries and credit operations connected with this trade. These operations will be conducted in convertible roubles. The authorised capital of the IBEC has been fixed at 300 million convertible roubles. Contributions to the capital will be made in convertible roubles which each State obtains by exporting goods to other IBEC member countries. Depending upon the wishes of the countries, these contributions can also be made in free convertible foreign currency or in gold. All the countries, irrespective of their shares in the basic capital, have equal rights in settling matters pertaining to the bank. The bank funds can be built up and supplemented by dividends and special contributions of the member countries.

The IBEC will conduct all its work on an international basis. First of all, it will carry out clearing and credit operations with banks of CMEA member countries, giving utmost assistance in developing further the economic relations among these States. Reciprocal trade is of tremendous importance in the economic relations between the CMEA countries. Its role is further enhanced under conditions of greater co-ordination of economic development plans and promotion of international division of labour, specialization and co-ordination of production. Foreign trade of the CMEA countries calls for the establishment of a smoothly operating system of clearing. The present day functioning system of bilateral clearing has played a positive role, but it is no longer conducive to further development of economic co-operation of the CMEA countries and in some cases even encumbers it. A new system of multilateral accounting is coming into operation with the establishment of the International Bank of Economic Co-operation. This system is being introduced between CMEA member countries which are simultaneously members of the bank. The system of multilateral accounting removes the shortcomings of the existing bilateral system and creates new favourable conditions for expansion of foreign trade among CMEA member countries and for further development of their economic, scientific, technical and cultural co-operation. The system of multilateral accounting is supplemented by the flexible system of crediting.

In the past the CMEA member countries could grant one

another short-term credits for overcoming temporary difficulties in the fulfilment of production and goods turnover plans only on a bilateral basis. Now with the establishment of the International Bank of Economic Co-operation, its members can pool their financial resources and will be able to get credits through the bank, if necessary. At present, the construction of enterprises is being done jointly in which a number of CMEA member countries are interested (Druzhba Oil Pipeline, Mir Power Supply System, etc.). In the future the construction of such enterprises will be expanded. The International Bank of Economic Co-operation can render greater assistance in this matter by concentrating financial resources of the interested States.

Undoubtedly, in the near future the bank will start developing relations with its counterparts in other countries. According to its charter, the bank, along with making operations in convertible roubles, has a right to perform accounting, credit, deposit, arbitration, guarantee and other operations in freely convertible and other currencies, as well as operation in gold. The growing economy might of the CMEA countries, their broad international economic contacts, the possibility of other countries joining the bank create favourable conditions for rapid development of its international business contacts.

SHIPPING CONFERENCE

The Fifth Shipping and Shipbuilding Conference will be held in Calcutta between 10th and 14th February, 1964. A large number of foreign delegates representing shipping and shipbuilding interests are expected to attend. The conference will provide a valuable forum for an exchange of ideas on design, construction, operation and maintenance of ships and problems relating to shipping and shipbuilding in India and other parts of the world. A large number of technical papers have already been received from individuals and organisations in India and abroad. The conference was first organised by the Naval Architects Society of the Indian Institute of Technology, Kharagpur in 1958. The next two sessions were also held here. Bombay was the venue of the fourth session.

SHIPPING TONNAGE

The Indian shipping tonnage in July 1963 totalled 1,211,139 g.r.t. showing an increase of 198,273 g.r.t. over the year and forming 0.83 per cent of world tonnage compared with 0.72 per cent a year before, according to the tonnage statistics issued recently by the Lloyd's Register of Shipping. Thus, India has maintained her rank as the 19th biggest ship-owning country. World tonnage too registered an increase of 5,883,650 g.r.t. at 145,863,463 g.r.t. in July 1963 when compared with the position a year before.

The Indian fleet of 309 ships consists of 182 steamships totalling 569,134 tons and 127 motorships totalling 642,005 tons. Of the steamships, 117 vessels totalling 450,246 tons are fitted for burning oil fuel. A size-wise analysis of the tonnage has shown that 56 ships of 387,566 tons are of between 6000 and 8000 tons each, 34 ships of 307,957 tons of between 8000 and 10,000 tons each, 48 ships of 247,919 tons of between 4000 and 6000 tons each and 5 ships of 106,818 tons of between 20,000 and 25,000 tons each. One ship is of 10,350 tons and the rest totalling 150,529 tons of below 4,000 tons each. Nearly 58 per cent of the Indian tonnage is under 10 years of age and of this again, more than half is under 5 years of age. About 30 per cent of the tonnage is between 10 and 20 years old. Only about 14 per cent of the tonnage is 20 and more years old. It is stated that the increase in world shipping was mainly accounted by the principal maritime nations with Norway and Japan outstanding. Norway's tonnage has increased by 1,158,000 tons and Japan's by 1,107,000 tons. The USSR has moved up from the eleventh to the eighth place. During the period UK and American tonnage have gone down mainly due to scrapping.

Company Affairs

DELHI CLOTH MILLS

WHILE ADDRESSING the annual general meeting of Delhi Cloth and General Mills Co. Ltd., its Chairman, Mr. Bharat Ram, highlighted the decline in India's share in the world trade during the last decade which, he thought, was essentially due to comparative stagnation in exports. One measure of this stagnation, he said, was that India's exports as percentage of national income worked out to only seven as against 19 for the U.K. and 21 for West Germany. He emphasised that the perennial shortage of foreign exchange could be met only through higher exports which had to be stepped up even by restricting consumption of exportable goods at home. Another important factor in exports, he pointed out, was the cost of production, which had to be kept as low as possible to enable the Indian products compete in terms of prices and quality in the foreign markets. He added that he had no objection to wages going up provided they were accompanied by a corresponding rise in productivity. In an attempt to concentrate on exports of Indian products, a new company is proposed to be set up which will handle, in the first instance, the exports of Delhi Cloth Mills' products and in course of time would take up the export of other manufacturers' products too. These attempts made by D.C.M. management to explore new markets for its products need to be followed by similar other institutions.

Mr. Bharat Ram also outlined at this meeting the expansion schemes which alone could assure a rising productivity in an era of increasing efficiency. He indicated that the company's project for the manufacture of plastics was nearly complete; caustic soda was already in the market and PVC will be in the market shortly. Similarly, the Rajasthan rayon project has also progressed satisfactorily and the factory was expected to start producing high-grade rayon tyre-cord by the end of 1964. The spinning mill at Hissar and sugar mill at Mowana were also in the process of expansion. The capacity of Hissar spinning unit will increase from 37,000 to 63,000 spindles by the beginning of the next year. The expansion of the Mowana sugar works has already been executed from 1500 tons of crushing capacity per day to 3,000 tons per day. Apart from these major expansions, the Chairman indicated that the policy of overall renovation of the existing equipment has been pursued consistently with the result that the company has been able to record increasing productivity. Special attention, he said, was being paid to the problem of training management personnel which was another measure of increasing efficiency. The company has started a separate department not only for training fresh people but also to impart modern techniques of management to the existing staff. It has also been sending people to various management courses to other places. These efforts at expansion and improved efficiency were likely to be reflected in the coming years.

JAY ENGINEERING

The factors that led to a reduction in profits and dividends were brought to the notice of the shareholders of the Jay Engineering Works Ltd., by Mr. Charat Ram, the Chairman of the company, who addressed the annual general meeting recently. Many escalating factors bearing on the cost of production, he pointed out, had resulted in comparatively adverse results. The situation in terms of costs continued to worsen as a result of higher incidence of excise and import duties on raw materials, increased railway freights and rising wages. He added that there had been considerable talk about 'holding the price line', but the bulk of increase was essentially due to the official imposts or increase in costs of government sponsored services like transport. These inflation oriented measures hardly left any

alternatives with the producers but to follow the general trend of rising prices.

The Chairman referred to the Supreme Court decision which stated that the company must make provident fund contributions on a part of production bonus payments made to the employees. As this provision had to be made retrospective from January 1960, it has meant a considerable addition to the costs. Commenting further on labour costs, he desired that a greater sense of responsibility should prevail among the labour leaders. Better jobs and improved wages along with better working conditions were possible only if the industry could increase its profitability through improved efficiency. This indeed is a sound advice and labour leadership should participate more earnestly in the attainment of higher standards of productivity.

Mr. Charat Ram was very hopeful of improved results during the current year when the operations in the Hyderabad factory were expected to be more satisfactory. This factory commenced operations quite recently and had to face initial troubles which had partly reduced its overall profits. Moreover, overall production of the company was higher; sewing machines registered an increase of nearly 20 per cent over the last year and the output of fans also was higher by about 10 per cent. This performance, the Chairman added, would have been still better had not the production been hampered by power shedding in Calcutta. He informed the shareholders that the automatic zig-zag sewing machine called 'Ushamatic', marketed during the year, was well received by the consumers. On the export front also, the company recorded an improved performance and total exports exceeded Rs. one crore. In order to step up exports, an independent division, called 'Usha International', had been set up by the company.

MOHATTA AND HECKEL

Mohatta and Heckel Ltd., a new company formed to undertake the manufacture of steel wires and wire ropes at Khapoli will shortly enter the market with an offer of equity shares worth Rs. 28.70 lakhs and preference shares worth Rs. 15 lakhs for public subscription. The company has plans to manufacture annually 5,000 tons of steel wire and wire ropes for which it has already received licences and sanctions for the import of plant and machinery. The production is expected to commence by the end of 1964.

The total capital outlay on the project, including the working capital of Rs. 27 lakhs, is estimated at around Rs. 125 crores. The company proposes to issue equity shares worth Rs. 50 lakhs out of which shares worth Rs. 10.70 lakhs will be taken up by the promoters, directors and their friends. Georg Heckel GmbH, the West German wire rope manufacturers, will be their collaborators and will subscribe shares worth Rs. 10.60 lakhs. The balance of the equity issue amounting to Rs. 28.70 lakhs and the entire preference issue is to be offered for public subscription. The ICICI has agreed in principle to grant the company a rupee loan of Rs. 35 lakhs.

BORAX MORARJI

Borax Morarji Ltd., a company promoted by the Dharamsi Morarji Chemical Company Ltd., Bombay, and Borax (Holdings) Ltd., London, will enter the capital market with a public issue of Rs. 9 lakhs on January 6, 1964. The subscription list will close on January 15 or earlier but not before January 8. The authorised capital of the company is Rs. 1 crore divided into 200,000 equity shares of Rs. 50 each. The issued capital is Rs. 30 lakhs, out of which shares worth Rs. 7.50 lakhs have been allotted to Dharamsi Morarji Chemical Co. and Rs. 13.50 lakhs to Borax (Holdings) Ltd., the collaborators. It proposes to offer 17,991 equity shares of Rs. 50 each at par. The entire public issue has been underwritten. The company has been licensed to manufacture 17,000 tons of borax and

DONATE LIBERALLY TO THE NATIONAL DEFENCE FUND

STEPPING OUT TO TOMORROW

Day by day, month by month, the face of India changes fast. Mighty steel penstocks guide the rushing river waters to turn the turbines to produce electric power. Massive generators, dotted across the country, send this power vibrating along wires to turn the wheels of industry. Electric lamps are switched on in village homes. Long lines of steel pipes girdle vast stretches of land, carrying water to thirsty villages and liquid gold to refineries. Automatic signals guide rolling wheels along a criss-cross of steel tracks. Radio waves race across the skies to help mighty Jet planes land on our soil with their precious cargo. And thus a nation steps out to tomorrow.

As electrical and mechanical contractors and maintenance specialists on behalf of leading West German manufacturers, we too are contributing our bit towards building a new India.

DEC. 13, 1963

3,000 tons of boric acid every year. The factory is to be located at Ambarnath in Maharashtra. The technical collaborators will supply necessary technical know-how and designs etc. for the plant and will help in obtaining plant and machinery. The company has been licensed to import essential components of the plant and machinery valued at Rs. 7.96 crores.

LAKSHMI MACHINES

Lakshmi Machine Works Limited will enter the capital market in the middle of January, 1964, with a public issue of Rs. 1 crore in equity shares of Rs. 100 each. It has an authorised capital of Rs. 3.50 crores; Rs. 3 crores in equity shares and Rs. 50 lakhs in nine per cent cumulative preference shares. Its subscribed capital is Rs. 112.20 lakhs and a further capital of Rs. 17.87 lakhs will be subscribed by its technical collaborators and Rs. 20 lakhs by International Finance Corporation, Washington. The entire public issue will be underwritten by financial institutions, banks and share brokers.

The company has been formed to manufacture textile machinery of all descriptions in collaboration with Rieter Machine Works Ltd., Switzerland. The factory is to be located near Coimbatore for which land has already been acquired. Import licences worth Rs. 34.91 lakhs have already been received to import the required machinery. A part of the machinery will be available from indigenous sources. The capital outlay on the project for the first two stages, to be taken in hand upto 1965, is estimated at Rs. 5.95 crores.

MAHINDRA'S EXPANSION

Mahindra and Mahindra Ltd. proposes to set up two new projects in Bombay for the manufacture of alloy steel and tractors. The company will enter the capital market early next year. A new company known as Mahindra Ugin Steel Company Ltd. has been formed to manufacture alloy steel in technical collaboration with a French firm. The factory will be situated at Khapoli near Bombay and will involve a capital outlay of nearly Rs. 7 crores. Its annual production capacity will be 25,000 tons of alloy steel and the plant is expected to go into production towards the end of 1966.

The manufacture of tractors will be taken up by the company known as International Tractor Company of India Ltd. in technical collaboration with International Harvester Company of Chicago. The capital outlay on this project, to be located at Kandivli, near Bombay, is estimated at Rs. 2.5 crores. It will have an installed capacity of 3,500 tractors a year with a turnover of about Rs. 5 crores. Actual production is expected to commence during the first half of 1966.

Meanwhile, the construction of new factory buildings at Kandivli is in progress to house the entire automobile division. The company hopes to reach the licensed production capacity of 10,000 units before the end of 1965. The indigenous content of the vehicles produced by the company is expected to be stepped up from 80 per cent to 90 per cent shortly. The company has received permission to earmark a part of its production for civilian consumption with effect from next month. It has also sought the approval of the Government to allocate a part of the new issue of capital to the existing shareholders.

MYSORE ELECTRO CHEMICALS

The Mysore Electro Chemical Works Ltd. engaged in the manufacture of storage batteries is planning an expansion programme for which it has entered into technical and financial collaboration with a West German firm, Accumulatorenfabrik Sonnenschein, GmbH, that will also participate in the share capital of the company. This expansion programme will facilitate the production of a range of automotive batteries, traction batteries, stationary batteries, heavy duty batteries and motor cycle, scooter and aircraft batteries, besides other types of batteries for electronic flash units, wireless equipment and transistorised equipment. The company hopes to start operations on the expanded capacity by April, 1964, with a phased

programme to step up production. Most of the plant and machinery has already been ordered from West Germany in consultation with the collaborators. The company has at its disposal sufficient space to accommodate the new equipment which includes the hard rubber container plant. The company will be coming into the market with a capital issue of Rs. 25 lakhs out of which a part of the preference issue will be reserved for the collaborators and the rest will be offered to the public.

TELCO LOAN

The Tata Engineering and Locomotive Co. will receive a sum of Rs. 6.5 crores as loan from the US Agency for International Development for its expansion programme to manufacture 18,000 Mercedes-Benz chassis annually. The current target of 12,000 chassis a year, it may be added, has already been reached.

ASSOCIATED CEMENT

The directors of the Associated Cement Companies Ltd. have proposed to maintain a dividend of 12 per cent for the year ended July 31, 1963. This is the fourth year in succession for which the distribution is being repeated after having been raised from 11 per cent paid for the year 1958-59.

CAPITAL ISSUES

Five companies have been authorized to raise Capital aggregating Rs. 1.88 crores. The consent of the Controller of the Capital Issues is valid for 12 months.

York India Limited, Delhi, is to issue Rs. 30 lakhs capital in equity shares of Rs. 10 each. Of these, shares of the value of Rs. 15 lakhs will be allotted to Borg-Warner Corporation, Chicago, Rs. 7.50 lakhs to be subscribed privately, and the balance of Rs. 7.50 lakhs to be offered to the public for subscription. The proceeds will be utilized in the manufacture of refrigeration and air-conditioning equipment.

Bajaj Tempo Limited, Bombay, is issuing Rs. 65,27,100 equity capital in shares of Rs. 10 each to be issued at par. Of these, shares of the value of Rs. 17,77,100 will be allotted to non-residents against supply of plant and machinery, Rs. 20.20 lakhs value of shares will be offered to the resident existing shareholders of the company and Rs. 27.30 lakhs will be offered to the public for cash. The proceeds will be utilized on the company's expansion programme for the manufacture of Tempo-3-wheelers as also the manufacture of Tempo Viking 4-wheelers.

Raghubir Singh Felt Mills Limited, is to issue capital of Rs. 25 lakhs divided into 7,000 9½ per cent preference shares of Rs. 100 each and 1,80,000 equity shares of Rs. 10 each. The capital is required for the establishment of a felt mill in Ludhiana.

Chittor Textiles Limited (Cotton Spinning Mills), Bangaripalyam (Andhra Pradesh), is to issue capital of Rs. 25 lakhs divided into 25,000 equity shares of Rs. 100 each for cash at par. Out of this, shares of the value of Rs. 21 lakhs will be offered to the public. The money will be utilized for the construction of factory building and purchases of machinery etc.

The Mahendra Mills Limited, Ahmedabad, is to issue Rs. 13,12,500 in equity shares of Rs. 100 each, to be issued for cash at par. The capital will be utilized for installing 500 automatic looms.

LICENCES ISSUED

The following licences were issued under the Industries (Development and Regulation) Act, 1951—during the week ending 30th November, 1963. The list contains the names and addresses of the licensees, the articles of manufacture and the annual installed capacity.

MINERAL OILS

Shri B. P. Moady, Hindu Family Building, P-13, Mission Row Extn., Calcutta-1. Proposed name: **Victor Union Grease Mfg. Corporation Ltd.** (Tehsil Paharpur, Distt. 24 Parganas.

West Bengal)—Mineral lubricating greases, cup greases and specialised greases—96,00,000 Lakhs Kgs.

ELECTRONIC EQUIPMENT

Indian Telephone Industries Ltd., Dooravani Nagar, Bangalore (Mysore)—Special High quality Ferrite Cores required for Telecommunication and Entertainment purposes 20 tons of professional type and 12 tons of Entertainment type per year in the first stage and to be doubled in the second stage after 3 years.

AUTOMOBILES

Motor Industries Co. Ltd., P.B. No. 93, Bangalore-1 (Mysore)—Heater plugs 2,50,000 Nos. Heater Plugs resistors 2,50,000 Nos. Heater Plugs indicators 2,50,000 Nos. Connecting Insulators 2,50,000 Nos. Wheels India Ltd., 37, Mount Road, Madras-6—(Madras) (1) Road wheels for tanks 2,880 Nos. (2) Top Rollers for new tanks 1,440 Nos. (3) Centurion Tank Bogie wheels 2,000 Nos.

METALLURGICAL MACHINERY

Gansons Private Ltd., 6, West View, Dadar (Central Railway), Bombay-14 (Maharashtra)—Industrial type of ore dressing equipment: (a) Crushing & Grinding Machinery; (b) Sizing & Classifying Mixing and Blending Machinery (c) Gravity Concentrating Machinery (d) Agitation Conditioning and Flotation Machinery; (e) Process and Auxiliary Machineries; (f) Thickness and Dewatering Machinery worth Rs. 20 lakhs.

CONVEYING EQUIPMENT

S. B. Joshi & Co. Ltd., Examiner Press Building 35, Dalal Street, Bombay-1 (Panvel Kolaba Distt., Maharashtra)—(1) Electric overhead Travelling cranes, (2) Winches, (3) Derricks—800 tons. Alcock, Ashdown & Co. Ltd., 16, Bank Street, Bombay-1 (Mazagon, Bombay, Maharashtra)—Cranes and winches 300 tons, Forging 600 tons.

AIR AND GAS COMPRESSORS

SIM—Maneklal Industries Ltd., P.O. Box No. 285, Ahmedabad-1 (Vetua, Ahmedabad, Gujarat)—Rotary Air compressors 100 Nos. (on double shift basis).

MACHINE TOOLS

New Standard Engineering Co. Ltd., Carroll Road, Bombay-13. Proposed name: M/s. Indabrator Ltd., (Goregaon, Bombay, Maharashtra)—Shot Blasting Equipment Rs. 40 lakhs worth.

HAND TOOLS

Dhanda Engineers Private Ltd., Industrial Area, Faridabad (Punjab)—(1) Milling Cutters of all types 2,640 (nos.); (2) Inserted blades for milling cutters including tungsten carbide type 9,600 (nos.); (3) Reamers 3,600 (nos.); (4) Taps and Dies 9,600 (nos.); (5) Tool Bits 18,000 (nos.); (6) Single point carbide tipped tools 1,200 (nos.); (7) Gauges 3,600 (nos.).

INORGANIC HEAVY CHEMICALS

The Indian Electro Chemical Ltd., Yusuf Building, Mahatma Gandhi Road, Fort, Bombay-1 (Ahmedabad, Gujarat)—(1) Sodium Hydrosulphite 1560 tonnes (2) Rangolite 'C' 330 tonnes.

DRUGS AND PHARMACEUTICALS

Alembic Chemicals Works Company Ltd., Alembic Road, Industrial Area, Baroda (Gujarat)—(1) Ephedrex N-Capsules 1,00,000 x 25 Capsules; (2) Hydroxo-Cabalamine Injections (a) 500 mcg/ml. 25,000 x 25 ml.; (b) 100 mcg/ml. 50,000 x 5 ml.; (3) Algesin Injection 3,00,000 x 3 ml. Ampoules; (4) Alvite Forte Tablets 1,50,000 x 25 tablets; (5) Zeet Expectorant 2,00,000 x 110 ml.; (6) Zeet Injections 3,00,000 x 1 ml. Ampoules.

COTTON TEXTILES

Gokak Mills Ltd., Forbes Building, Homè Street, Bombay (Gokak falls, Distt. Belgaum, Mysore)—3.57 million lbs. or 1.62 million kgs. of cotton cycle tyre cord. Central Studios Private Ltd., Textiles Department, Trichy Road, Singanallur Post, Coimbatore, 5. (Village Uppilpalayam Distt. Coimbatore, Madras)—1,200 spindles for the manufacture of cotton waste yarn. Modi Spinning & Weaving Mills Co. Ltd., Modinagar, (Lucknow, Uttar Pradesh)—25,000 spindles for manufacture of cotton yarn. Raza Textiles Ltd., P.O. Jawalanagar, Rampur (Jawala-

nagar, Rampur, Uttar Pradesh)—12,000 spindles for the manufacture of cotton yarn. Jaipur Spinning and Weaving Mills Ltd., Podar Park, Statue Circle, Jaipur (Rajasthan)—4,520 spindles for the manufacture of cotton yarn. Moonlal & Sons, Civil Lines, Jhansi (Uttar Pradesh)—12,000 spindles for the manufacture of cotton yarn. Lord Krishna Textile Mills, Saharanpur (Uttar Pradesh)—12,500 spindles for manufacture of cotton yarn. India Waterproof Ltd., 13, Brabourne Road, Calcutta-1 (West Bengal)—12,500 spindles for manufacture of cotton yarn. Bharat Commerce and Industries Ltd., Nanjangud (Mysore)—12,000 spindles for the manufacture of cotton yarn. Rajasthan Spinning and Weaving Mills Ltd., 23-24, Radha Bazar St., Calcutta-1 (Bhilwara, Rajasthan)—7,000 spindles for the manufacture of cotton yarn.

NEWSPRINT

The National Newsprint and Paper Mills Ltd., Nepanagar, (Madhya Pradesh)—(i) Newsprint 45,000 tonnes; (ii) Pulp 45,000 tonnes.

MISCELLANEOUS WARE

General Enamel Products Private Ltd., 4/5, Mahashwar Niketan, Peddar Road, Bombay-26, (Thana, Maharashtra)—Enamelware articles such as Bath Tubs, Wash Basin, Water closets, Kitchen sinks etc. 1,680 tons.

POLYPROPYLENE PATENTS GRANTED TO MONTECATINI IN THE U.S.A.

On November 26, 1963 the U.S. Patents No. 3.112.300 and 3.112.301 have been issued, concerning product claims on invention of Isotactic Polypropylene, made by Prof. Natta and co-workers almost ten years ago.

These patents are assigned to Societa' Generale Montecatini.

Isotactic Polypropylene is already commercially produced in most industrial countries. Its most useful applications are in the fields of fibres, films and plastics.

A special cement which resists the corrosive action of acids and chemicals

ACCOCID

is recommended for setting acid-resisting bricks and tiles or acid-resisting natural stone slabs for acid storage and pickling-tanks, acid towers and fume-stacks, reaction-vats and tanks, laboratory benches, floorings etc.

ACCOCID is supplied in two parts:

- (A) a powder packed in 50 kg. special jute bags with polythene liners, to be mixed with
(B) a liquid packed in 15-litre G.I. drums.

Technical literature sent free on request.

SUDDEN DARKNESS

In hospitals sudden darkness can be a danger to life. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual

main failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for hospitals, factories, schools, banks and public places.

BOOKS BRIEFLY

ECAFE Against Odds

The United Nations Economic Commission for Asia and the Far East: By David Wightman. Published for the Carnegie Endowment for International Peace by the Yale University Press; Pp. 400; Price \$7.50 or 56 Sh.

Reviewed by Dr. R. N. MITRA

MR. WIGHTMAN's history of ECAFE from its inception in 1947 to 1962 narrates vividly the conflict between the hopes aroused for regional co-operation by a unity of political feeling in Asia on the one hand, and the policy of the Western Power, in the early years of that organization, to frustrate this hope by concentrating power in New York and of circumscribing the functions of ECAFE not to develop beyond those of research and disseminating information. The Asian hope was further frustrated by emerging political divisions among Asian countries themselves and by the Cold War (which had its effects on the internal stability of the area), which magnified and exploited the slightest internal strains to achieve the interests of the two Big Powers with the help of pressures and baits.

No one, who reads this book, can fail to be impressed by the highly competent and illuminative account of the Commission's hopes and aspirations no less than its shortcomings and failures since ECAFE came into being. It is a moving and profound story. The book has highlighted with full documentation the obstacles, difficulties and frustrations which the Commission faced in its earlier years despite its brave efforts to march forward.

Asia Recognised

The resolution of the United Nations Economic and Social Council establishing ECAFE "represented the first important admission of the United Nations that the world included Asia in its own right and not simply as a responsibility of a few colonial powers." But this admission had to be fought for fiercely by Asians. Even after the establishment of ECAFE on the instructions of U.N. General Assembly, the Economic and Social Council did not give ECAFE that final and comprehensive terms of reference which it gave to its European counterpart namely, Economic Commission for Europe. "Nor did it decide there and then to give ECAFE the all-important authority to recommend directly to member Governments and set up subsidiary bodies. What had been immediately created was, in effect, a purely research organisation of very limited Asian membership". That explains why the Indian representative reminded the first session of ECAFE in June 1947 that: "We, who belong to Asia, are not looking for palliatives and short-term remedies, for our problem is not one created by war, but one of longer standing".

The Asian hopes and aspirations were championed by the first Secretary-General of ECAFE, and the author's statement that the U.S. "Department of State mistrusted Lokanathan politically" was the greatest tribute paid to this organisation's political stance. The Western Powers wanted ECAFE to first chief executive. The Western Powers wanted ECAFE to be a mere research institute and not to act. The bitter and the hard struggle that the first Secretary-General of the ECAFE had to fight for obtaining the co-operation of Asian members in the field of industry, agriculture, development of natural resources (especially the way the Mekong Project was handled by the Americans), transport, international trade and even social problems, makes interesting reading. The study even brings out the fact that the Western Powers are invariably interested in giving aid so long as their power and influence are disseminated to the recipient country through their own organisations or through organisations where they have the largest control; they are not interested in channeling aid even through an international organisation of recipient countries

(that is, ECAFE) where Asians have real powers and control over its affairs. Actually, the first 15 years' history of ECAFE showed that the Western Powers fought tooth and nail to frustrate, delay and put all sorts of obstacles to the Asian control and management of ECAFE — a region to which none of the Western Powers belongs.

Britain hoped that the Colombo Plan would replace ECAFE as the chief international agency for economic development in the region and that the Commission would die of uninitiation and be abolished when it was due for review by the Economic and Social Council in 1951. The United States was equally unsympathetic and aloof and its policy was no less negative. The U.S. Government tried to outline a programme of work for ECAFE which involved the Secretariat only in studies, economic surveys and technical documentation. It resisted every effort made by the Executive Secretary to establish subsidiary bodies consisting of representatives of member Governments to identify their region, economic problems and to see in what ways their mutual efforts might reinforce each other.

Operational Responsibility

In addition, both the U.S. and the U.K. did everything possible to deny ECAFE any positive or constructive work. According to them the mandate of the Commission did not permit it to assume operational responsibilities. When the technical assistance programme was launched in 1949, the Executive Secretary, Dr. P. S. Lokanathan, pressed for the Commission to be given an opportunity to play an active role not only in the planning and programming of technical assistance but in channeling aid to the Asian countries as well. But a high degree of centralisation at the Headquarters was planned and the Commission was denied opportunities of playing a part in the technical assistance programme of the region. It took several years before this narrow reactionary view was altered under the pressure of the General Assembly. It is only since 1961 that Regional Commissions have been given tasks in respect of technical assistance programme which are commensurate with the Commission's status and capabilities. Thus, the position of the Commission and its first Executive Secretary has been fully vindicated.

Even if Britain and the United States had been more co-operative, the ECAFE region would not have found an easy way to organise. Compared with Europe or Latin America with large contrasts in levels of economic development and in the capacity of Governments to make good use of ECAFE, it has not been easy to select problems or provide guidance of practical relevance to most Asian countries. For long isolated from one another, the economic ties between these countries are weak. Their traditional links have been with the developed countries that dominated their economies. International communications of the region were also attached to this matrix of enforced bilateralism. The task of ECAFE has, therefore, been not only to foster new economic relations but also to organise existing ones more rationally. The political conditions and political influences made the task even more difficult.

Moreover, ECAFE like other Regional Commissions also suffered from the indifference of the specialised agencies, for example FAO and ILO. It was a hard and an uphill task to get them to take interest in the problems of development in agriculture, manpower and other sectors of the economy. Further, Western Powers and even Headquarters thought that Functional Commissions organised on a world basis — not Regional Commissions — were the answer to the problems of economic development. As events demonstrated later, this

policy amounted to swimming against the current of compelling historical forces.

The history of ECAFE from its inception in 1947 to 1956 is also the history of the bitter struggle that the first Secretary-General of the ECAFE had to fight both with the Western Powers as well as with the United Nations Secretariat. Mr. Wighuman poses a very interesting question: What would have happened if instead of Dr. P. S. Lokanathan being the first Secretary-General of the ECAFE there had been some trained official bureaucrat like Mr. Ne Win in his place? The author concludes that in the latter event the relationship between the U.N. Headquarters and Great Britain and the United States on the one hand and the ECAFE Secretariat on the other would perhaps have been more smooth and cordial. But the stature of the ECAFE would not have been what it is today. The first Secretary-General was by no means an obsequious man or a 'yes man' of the U.N. Secretariat. He championed the interests and aspirations of the countries of the region and in doing so, he did not care for American or British susceptibilities or opposition. This is the reason why the book is as much a commentary on Dr. Lokanathan, the first Secretary-General of ECAFE, as on the Organisation.

Against this background, if the Economic Commission for Asia and the Far East has not yet fulfilled all the hopes which Asia had reposed in it, it should not be a surprise. The wonder rather is that the Commission has done such a good job. The Commission has to its credit a number of highly competent technical studies. It has succeeded in bringing together government experts and specialists of the member-countries for an exchange of ideas, the identification of their problems and the making of recommendations for follow-up action through its various subsidiary bodies.

But this certainly has not added up to the integration of Asian economies or even to co-ordination of the economic plans of Asian countries. Governments' co-operation on fundamental issues of economic co-operation is yet to be achieved in a large way. The potentialities for regional co-operation have not been fully exploited. The domestic matrix of most Asian countries is not large enough to support effectively industries in which economies of scale are so important. The gap between the capacity of Asian countries to import the volume of imports needed and to maintain a reasonable rate of growth is widening; external aid can bridge it to some extent but the real answer lies in conceiving and executing a

policy of trade co-operation among members of the Region on a broad basis. This can be done by preferential trade arrangements which might discriminate against outside supplies, encourage regional specialisation and permit economies of scale. Asian countries need to plan their economic development and arrange their industrial production together, not separately in the long run; national economic development and regional co-operation are intimately linked — each is an agreeable complement to the other.

When Western aid came to Asian countries in substantial quantity, it hindered rather than permitted regional co-operation. In the field of aid and trade, the West encouraged direct bilateral negotiations with the further advantage of strengthening their political and military relationships with the aid-receiving countries. Thus, in the words of the author, "although colonial rule was rapidly liquidated in Asia, the matrix to enforce bilateralism, especially by colonial power, has actually been sustained by foreign aid". Again preferential trade arrangement, as existing in the Region, largely favoured trade with outside countries.

Fortunately, there is no rival to ECAFE. Neither the Bandung Conference nor the SEATO with its economic programme, has produced a machinery which might be a competitor. But this is poor consolation. Unless Asian countries display a greater interest and show more awareness of the challenges, their achievements will not be substantial. The author has rightly pointed out: "Every step taken by Asian States towards their solidarity is thus a step towards an improvement in their bargaining power with economically strong countries". Will ECAFE face up to this task?

The establishment of an Asian Development Institute under the auspices of ECAFE is a welcome step in Regional co-operation. But, what ECAFE needs is greater political imagination and a sense of solidarity. National economic self-interest should not be permitted to be overshadowed by political inhibitions, suspicions and animosities.

This is a book which should be read by all those interested in contemporary history and in the economic development of a region where nearly half the total population of the world lives. The analysis of the ECAFE Region's complex problems under various heads such as planning for economic development, international trade, industrialisation, etc. should be of interest to academic planners as well as executors of development policies. The author deserves to be congratulated on a most penetrating and illuminating analysis of the problems.

Readers' Roundtable

LATE IN THE DAY

Sir, — It is heartening to see that after eight years of experimentation with the socialist ideology, the question of how far it is compatible with democracy has now come to the fore.

If there is considerable disillusionment in the country over socialism, it is only because of its results. Under socialist planning, prices have risen and inflicted untold suffering on the fixed income groups; there is virtual rationing of sugar, and scarcity of basic necessities like rice and educational facilities; the State unnecessarily touches the life of citizens at every point as a result of which the people have to put up with a vast, growing and arrogant bureaucracy which enjoys power without accountability, and makes nonsense of all fine phrases like "individual dignity"; huge State monopolies like IAC and LIC and semi-monopolies have been set up thus concentrating power in the hands of a few bureaucrats, and ministers, the only semblance of public control being hurried debates in Parliament; in the private enterprise field, not only are rigid controls hampering economic growth, and putting up the cost of product for the consumers, but are also making

conditions difficult for newcomers and small people (as the Ford Foundation Report has observed); high taxes, direct and indirect, have siphoned off the savings of the people only to be wasted on an unproductive bureaucracy, on by the large inefficient Public Sector, and non-developmental projects.

Slogans of class hatred and class warfare have poisoned public life. Protestations at Jaipur that socialism did not mean class warfare were belied by fiery speeches of class hatred and mutual sniping by the leaders at the same session!

The fact is, socialism and democracy are incompatible. And, as a system of economic development socialism has failed. Russia and China have built up War Machines under it, but agriculture is lagging seriously behind and consumer goods are scarce. In European countries, socialists have lost faith in nationalisation and State ownership, and are alarmed by bureaucratic accretion of power. It is clear that further attempts to implement this imported ideology, which is contrary to Indian traditions of love and harmony, will only bring more suffering to the common man and create a State monopoly of political and economic power, thus destroying democracy.

ARISTIDES

E.R.W. BOILER TUBES

LOCO

We supply E.R.W. loco boiler and superheater tubes from our Jamshedpur Works to meet the bulk of the Indian Railway's demand. These tubes meet all the technical requirements of Indian Railways.

MARINE

Our E.R.W. tubes meet all the tests specified by Lloyd's Register of Shipping. Indian Tube is on Lloyd's Register of Shipping's list of approved manufacturers.

LAND

Our E.R.W. tubes for land boilers are accepted by the D.G.S. & D. and comply with the Indian Boiler Regulations. We also carry ready stocks of this category at our Warehouses.

INDIAN TUBE THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE

ITC-56

For trouble-free steam raising in all applications calling for rigid specifications, Electric Resistance Weld tubes are in every respect equal to corresponding seamless tubes. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish.

COMPANY MEETING

THE JAY ENGINEERING WORKS LIMITED

HIGHER COSTS AFFECT PROFITS: EXPORTS IMPROVE

Need for Reasonable Return on Investment Capital

LALA CHARAT RAM OUTLINES FACTORS FOR INDUSTRIAL GROWTH

The following is the text of the speech by Lala Charat Ram, chairman, board of directors, the Jay Engineering Works Ltd., delivered at the 26th annual general meeting of the shareholders of the company on December 5, 1963, in Calcutta.

Ladies and Gentlemen,
I have great pleasure in welcoming you to the 26th annual general meeting of the company.

END OF AN ERA

As you are aware, Sir Shri Ram ji, who could well be called the father of The Jay Engineering Works, passed away on January 11 this year. This completes one era in the growth of our company, which started rather humbly in a motor garage. From such humble beginnings, to a widely public nation of the great entrepreneurial and management effort which Sir Shri Ram Ji brought to bear on the affairs of the company. I am fully conscious of the responsibility that rests on all of us now for continuing this process of growth, and the high traditions that we have inherited.

Before proceeding further, I should like to make a reference to the great international and national tragedies that have taken place during the last one month. The death of President Kennedy has removed from the international scene, a statesman and a personality recognized by all nations of the world, including those termed to be sitting in so called opposite camps, as a man of peace, vision and courage. The unfortunate accident, resulting in the death of five of our top defence personnel has certainly impoverished our country to that extent; each of these five officers of our defence forces had an admirable record of service to the country, and I take this opportunity of paying our humble tribute in their memory.

DECLINE IN PROFITS

The annual report of the company for the year ended March 1963, has been with you for some time now, and with your permission I shall take it as read. I owe an explanation for the reduction in profits which has necessitated a reduction in dividends, as well as in the remuneration of managing agents and the profit sharing bonus of the workers. I had referred in my speech at the last annual general meeting, to the many escalating factors bearing on the cost of production of industrial goods. The situation has continued to worsen during the year, and the incidence of excise and import duties on raw materials, raw material prices, railway freight etc. went up further substantially. Furthermore, the Supreme Court decided that the company must make provident fund contributions on a part of production bonus payments made to employees, and provision has had to be made for this liability, retrospectively from January 1960. The Hyderabad facility, which commenced operations during the year, suffered a loss because of the usual initial troubles, which has also contributed in reducing the overall profits of the company. I am glad to be able to state, that the operations of the current year as of date, are satisfactory, and the year should end with a much better showing, if no untoward happenings mar the

operations. My reference here is to the unfortunate reactions of labour to the reduction in their profit sharing bonus payable on the basis of subsisting terms which have been in operation for all these years. We are attempting to avoid any adverse reactions on this account, but it is uncertain as to what direction the labour leadership will take.

INFLATIONARY TENDENCIES

The "cost-price" squeeze situation, in which the company finds itself is typical of industrial operations all over the country. There is much talk about holding the price line, and everybody, whether it be the Government, or the labour, or the consumer, seems to be busy enlarging upon the responsibility cast on everybody else, for keeping prices down. The snag is that prices are not a function of surficial agitation, but of interacting economic forces which are not neutralized by the effusion of gratis advice. You will observe that the bulk of increase in costs in our, and for that matter any other operation, is almost entirely due to official imposts, or increase in costs of Government sponsored services like transport etc. I am not unappreciative of the need for additional revenue caused by the violation of our frontiers by mainland China, and for purposes of economic growth. I do hold, however, that the steps that are taken to meet these pressures, must not jeopardize the long-term economic strategy of a developing country, the foremost requirement of which is that inflation should not eat up the nominal addition to resources. It is my submission that prices will be held in check by abstaining from inflation oriented measures, and not by King Canutish decrees.

ATTITUDE OF LABOUR

Our relations with labour during the year under review have been good. I am however apprehensive of increasing tendency in the country to think of industrial labour as an absolute over-riding group in the community, instead of being an integral part of a homogenous whole whose interests are in definite alignment with those of other components of the community. The industrial worker community forms barely 1 per cent of the total population of the country, and in the national interest it would be worthwhile for this community to consider the impact on the total economy of its policies. Their leadership has led to shortsighted demands in the matter of annual emoluments and working conditions which have little relationship with the requirements of the country's economy. It is saddening to see the image of conflict of interest that is sought to be created between the employees and the industry of the country. It is forgotten that the interests of the two are identical and the primary challenge for both is to enlarge the size of the economic pie, rather than quarrel over one's share in a constant, or a diminishing pie. More and better jobs, improved wages, and better working conditions

are possible only if industry is productive and profitable. If planners and politicians are really to solve the problem of unemployment, there is need to understand how jobs come into being. Jobs exist not because of some impersonal automatic phenomenon called "consumer purchasing power", but because of growth of industry.

MOTIVATION OF INDUSTRIAL GROWTH

Entrepreneurs start new ventures, or expand old ones only when they see a prospect of profit commensurate with the risks. It is immaterial whether such risk taking entrepreneurial activity is sponsored by the State or by the people; that is a question of social liberty rather than of economics. What is important is to understand that an economic enterprise can perpetuate and expand itself only when it produces a reasonable return on investment for the service that it renders, and ploughs back a considerable part of such earnings. Anything that militates against this process of earning and plough back, cuts at the very roots of the concept of fuller employment. The shares of spoils of either an acquisitive business or an acquisitive labour force cannot sustain for any length of time by increasing the demands on the consumer. They must be generated within the enterprise by increasing productivity and lowering costs. This is the common task of business and of labour, and can only be discharged by an understanding labour leadership, unhampered in its decisions by political and agitational considerations. I am confident that Jay Engineering will continue to provide an example of an industrial enterprise in which industrial relations are governed by the larger interests of the consumer, and the industry.

One cause of the image of conflict of interest to which I have referred above, is the misrepresentation by certain elements that business is made up of a few giant corporations; these elements harangue the imaginary few giant corporations on their "social responsibilities" and "duties". Actually, this picture is quite false, and industrial ownership is increasingly becoming more and more broad-based. Far from being the cause of concentration of economic power, business, along with the intelligentsia, the professional people etc provides a counter-vailing force against the concentration of all power in the ruling apparatus of the country, and thereby helps to keep alive the concepts of individual liberty guaranteed by our Constitution.

Ladies and gentlemen, I have dealt at length on some of the basic influences relevant to business enterprise, because we ourselves are so intimately affected by those factors. I believe it to be the duty of business men, to draw attention to the existence of such basic truths which can be disregarded in policy making, only at the cost of economic stability and growth.

I will now refer to certain aspects of our company's operations during the year.

INCREASE IN PRODUCTION

Production of sewing machines registered an increase of over 20% over the previous year, while the production of fans increased by over 10%. The performance would have been better had not the production been hampered by power shedding in Calcutta. Current production levels are maintaining a rising trend. A notable feature of our current year's operations is that as a consequence of improved production planning techniques, the increase in production is not accompanied by corresponding increases in the capital employed.

USHA ZIG-ZAG INTRODUCED

Our automatic Zig Zag sewing machine under the name of "Ushamatic" was marketed during the year, and has been

well received in the market. This machine is being produced in our Hyderabad factory and steps are being taken to gradually increase its production. The operations of Hyderabad factory are however likely to take another two or three years to show satisfactory profitability.

HIGHER EXPORTS

Last year I had referred to a setback in our exports. I am glad that our exports in 1962-63 have exceeded the level of Rs. 1 crore, being about 20% higher than last year. Steps are being taken to reorganize our exports set-up for greater sales effort. As a step towards that, an independent division under the name of "Usha International" has been set up in our sales agency. As you know, Sir Shri Ram Ji always placed a special emphasis on exports as a measure not only of discharge of his economic responsibilities to the company, but also of his responsibility to the nation. We view with concern the phenomenon that the incremental rise in non-traditional exports of the country is far below the additional effort and expense that is going into export promotion measures. This underlines the need for some degree of persuasive compulsion, to which I had made a reference last year also.

MANAGEMENT AND PERSONNEL

We have of late been taking a fresh look at our management structure and personnel. It is not an unusual occurrence, that the growth of a company is not accompanied by commensurate development in its management organization. We have been particularly fortunate in that the personnel policies followed by Sir Shri Ram Ji created a devoted band of executives in Jay Engineering, which has borne creditably the burdens of growth of an expanding organization. It has however become necessary now to take a long term view of management requirements, and to bring about the necessary rationalization in the structure and staffing of the organization.

SLOW PLAN PROGRESS

A brief reference to the progress of the Five Year Plans of our country will not be out of place here. The Planning Commission has been undertaking what may be termed as an agonizing reappraisal of the progress of the third Plan. This appraisal has been revealing, and a matter of concern. Whereas increasing amounts of money are being poured in year after year, the resultant return on these investments are showing a decreasing trend. Productivity of investment capital is of vital importance, and if the fulfilment of an ideology is not more important than the provision of increased quantum of goods, the Planning Commission and the Government might consider reorienting the direction of the investments being made in the country. The general index of industrial production has so far been less than half of what was visualized in the Plan. We can usefully learn some lessons from the war devastated economies of Japan and Germany, for the economic growth and up-lifting of our own country. Increasing fiscal allocations in our Plan budgets would be of little avail, if there is a decreasing return from these. The important fact has to be realized that the standard of living is meaningful not in terms of money, but what the money will buy, and money will only buy more goods and services, provided the productivity of investment increases. The crucial question before the country is, as to whether our country is being directed towards the satisfaction of the ideology of a certain group of people, or for a system that will provide increasing quantum of goods for the consumption of the people now and hereafter.

N.B.—This does not purport to be a record of the proceedings of the annual general meeting.

Company Notices

UPPER GANGES SUGAR MILLS LIMITED

Regd. Office : 14, Radha Bazar Lane,
CALCUTTA - 1.

NOTICE is hereby given that the Thirty-first Annual General Meeting of Upper Ganges Sugar Mills Ltd. will be held on Monday, the 30th December, 1963 at 3 P.M. at 15, India Exchange Place, Calcutta for the following purposes :

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1963.
2. To declare dividends.
3. To elect a Director in place of Shri R. K. Kanoria who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS :

5. To consider and, if thought fit, to pass, with or without modification, the following resolution as Special Resolution :

"RESOLVED that the regulations contained in the draft Articles of Association submitted to the meeting and for the purpose of identification initialled by the Chairman be and are hereby adopted as the Articles of Association of the Company and shall come into force with immediate effect in substitution for and to the exclusion of the existing Articles of Association thereof."

By Order of the Board,
S. N. GUPTA,
Secretary.

14, Radha Bazar Lane,
CALCUTTA - 1, the 3rd December, 1963.

- NOTES :**
1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.
 2. The Register of Members of the Company will remain closed from the 21st December, 1963 to the 30th December, 1963 both days inclusive. Explanatory Statement has been forwarded to the Shareholders.

BHARAT SUGAR MILLS LIMITED

Regd. Office : 14, Radha Bazar Lane,
CALCUTTA - 1.

Notice is hereby given that the Thirty-second Annual General Meeting of the Bharat Sugar Mills Limited will be held at 15, India Exchange Place, Calcutta, on Monday, the 30th December, 1963, at 3-15 P.M. for the following purposes :

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1963.
2. To declare dividends.
3. To appoint a Director in place of Shri N. L. Kanoria who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS :

5. To consider and, if thought fit, to pass, with or without modification, the following resolution as Special Resolution :

"Resolved that the regulations contained in the draft

Articles of Association submitted to the meeting and for the purpose of identification initialled by the Chairman be and are hereby adopted as the Articles of Association of the Company and shall come into force with immediate effect in substitution for and to the exclusion of the existing Articles of Association thereof."

By Order of the Board,
S. N. GUPTA,
Secretary.

14, Radha Bazar Lane,
CALCUTTA - 1, the 3rd December, 1963.

- NOTES :**
1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.
 2. The Register of Members of the Company will remain closed from the 21st December, 1963 to the 30th December, 1963 both days inclusive. Explanatory Statement has been forwarded to the Shareholders.

NEW INDIA SUGAR MILLS LIMITED

Regd. Office : 14, Radha Bazar Lane,
CALCUTTA - 1.

Notice is hereby given that the Twenty-ninth Annual General Meeting of the New India Sugar Mills Limited will be held on Monday the 30th December, 1963 at 3-30 P.M. at 15, India Exchange Place, Calcutta for the following purposes:

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1963.
2. To declare dividends.
3. To elect a Director in place of Shri R. N. Khaitan who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS :

5. To consider and, if thought fit, to pass, with or without modification, the following resolution as Special Resolution :

"Resolved that the regulations contained in the draft Articles of Association submitted to the meeting and for the purpose of identification initialled by the Chairman be and are hereby adopted as the Articles of Association of the Company and shall come into force with immediate effect in substitution for and to the exclusion of the existing Articles of Association thereof."
